Mr. G. W. FOWLER (King's, N.B.). When the hour for Private Bills expired on Wednesday last, I was pointing out the advisability of extending the proposed branch line of the Grand Trunk Pacific to St. John by way of the St. John river valley rather than by the proposed route by Chipman. The advantages which I stated existed in favour of the former route were that it would be much shorter than the proposed route by way of Chipman, very much shorter to the nearest Atlantic port, and at the same time the grades would be very much easier than could possibly be obtained for the route by way of Chipman. I pointed out that the Chipman route would carry the road to the interior part of the province of New Brunswick, that part which forms the watershed of the rivers Tobique and Miramichi, and that that part of the country is very rugged and mountainous, and abounds in lakes, which would necessitate very wide detours, thereby largely increasing the mileage. It is beyond question the fact that the road, if carried by way of Chipman, would be at least 50 or 60 miles longer than by the St. John river valley route. Going from Edmundston the road would be shortened by not following the western sweep of the St. John river from that point to Fredericton, but striking off and making a straight line direct from Edmundston to Fredericton, and then following the valley of the river down to the city of St. John. This would give not only a much shorter line than the proposed line, but very much easier grades, which is the most important consideration perhaps in selecting a line for the transcontinental railway. The grades upon the other route proposed would be very difficult indeed, and much greater than they are at the present time upon the line of the Intercolonial. I do not suppose, Mr. Speaker, it is necessary for me to dwell any longer on these points at this stage. If we may judge from appearances, it is evidently the intention of the government to force this route by the way of Chipman. It is said to be by way of Chipman, but, as a matter of fact, following the route outlined by the Prime Minister, the main line will run some 30 miles from Chipman, which, of course, will place St. John at a still greater disadvantage than if the route went direct to Chipman. But the interests of St. John do not appear to be much considered by this government, nor do I think the interests of the country generally appear to be very much considered, because in considering the interests of St. John the government would be at the same time considering the best interests of the country with respect to this transcontinental railway. I therefore move this amendment:

That the said Bill be referred back to the Committee of the Whole, with instructions that they have power to amend the same by providing that a branch line be built from the proposed main trunk line of the Grand Trunk Pacific Railway, beginning at a point at or near where said trunk line crosses the Nashwaak river, and thence extending, by way of Fredericton and the valley of the St. John river, to St. John city.

Mr. L. G. McCARTHY (North Simcoe). Lest there might be some request for an explanation. I simply desire to say that the hon. gentleman (Mr. Fowler) moved the same

motion in Committee of the Whole House. It was debated for at least two hours, and at the conclusion of the debate it was voted down. I have not heard anything fall from the lips of the hon. gentleman in addition to what was said during the discussion in the committee, and, therefore, I do not think it is necessary that this should be discussed at this stage.

Mr. HEYD. Could the hon. member for King's, N.B. (Mr. Fowler) say what is the the mileage from Edmundston to St. John by his route ?

Mr. FOWLER. The mileage would be about 200 miles from Edmundston to St. John, whereas, by the route of the Canadian Pacific Railway it is 233 miles. This route would be shorter by at least 33 miles, as compared with the Canadian Pacific Railway, because, instead of following the bends of the river, we would strike across country direct to St. John.

Mr. C. E. KAULBACH (Lunenburg). What would be the difference between the direct line I suggested the other evening from Rivière du Loup to Newcastle, and thence to Moncton and the road that the hon. member for King's, N.B. (Mr. Fowler) now advises by way of St. John ?

Mr. FOWLER. I have not measured the distance which the hon. gentleman (Mr. Kaulbach) suggests from Rivière du Loup, and I could not say what the difference would be.

Mr. KAULBACH. The hon. gentleman knows quite well that Moncton is the dividing point between Halifax and St. John, that when the road reaches Moncton they then have the option of proceeding to Halifax or to St. John. To divert this road so as to parallel the Canadian Pacific Railway I think would be very absurd indeed. It would make a detour in the line of the road that would certainly not be advisable in the interest of St. John. I only want to have my hon. friend (Mr. Fowler) understand that an arrangement was made that Moncton was to be the point, and that any divergence from that would be an error on the part of any one advocating the route which he suggests.

Mr. FOWLER. Mr. Speaker——

Some hon. MEMBERS. Order.

Mr. FOWLER. I understand the hon. gentleman (Mr. Kaulbach) asked a question. I wish to state that in so far as any arrangement he speaks of is concerned in regard to Moncton being agreed upon, I had no part in any such agreement, nor was I invited to any conference that the hon. member for Lunenburg (Mr. Kaulbach) may have taken part in, nor was any Conservative member from the province of New Brunswick invited to such conference. I am not at all proposing to parallel the Canadian Pacific Railway as the hon. member from Lunenburg says, but I propose this route as an amendment to a very much worse scheme proposed by the hon. member for Westmoreland (Mr. Emmerson).

Mr. H. J. LOGAN (Cumberland). In the amendment of the hon. member for King's, N.B. (Mr. Fowler) he proposes :

That a branch line be built from the proposed main trunk line of the Grand Trunk Pacific Railway, beginning at a point at or near where said trunk line crosses the Nashwaak river, and thence extending by way of Fredericton and the valley of the St. John river, to St. John city.

Will he tell us what is the estimated distance between the point at which he would branch off the main line and the city of St. John ?

Mr. FOWLER. It is about 75 miles according to what the hon. member for Westmoreland (Mr. Emmerson) says. I have made the amendment read from the Nashwaak river or from the point near which the main line of the Grand Trunk Pacific Railway crosses the Nashwaak river.

Mr. LOGAN. I would like to remind the hon. gentleman that one of the objections that has been raised against the construction of this Grand Trunk Pacific Railway through New Brunswick is that it will parallel the Intercolonial Railway. According to the proposition as contained in the Bill, the line will be built to Chipman, thence to connect with another line which will give it communication with Norton, thus giving the run from there to St. John to the government railway. Now, the hon. gentleman is certainly not very consistent when he desires to cut out this traffic from the Intercolonial Railway. At the present time we are proposing to give the traffic to St. John to the Intercolonial Railway, but according to the amendment of the hon. gentleman we will take that away from the Intercolonial Railway and we will parallel the Canadian Pacific Railway down the west side of the St. John river.

Mr. FOWLER. For only a matter of 30 miles.

Amendment negatived.

Mr. F. D. MONK (Jacques Cartier). Mr. Chairman, I gave notice of an amendment that I wish to have made to this Bill, which will be found at page 769 of the Votes and Proceedings. I explained the amendment at the time I gave notice of it, and I think it is an amendment that will commend itself to the favourable consideration of the government. It is an amendment to this effect :

That the said Bill be recommitted to add the following after section 12, as amended in Committee of the Whole : 'The branch line from the main line of the Quebec section to Montreal shall be begun as soon as the company have entered upon the operation of said line, and shall

be completed to Montreal as soon as the main line is completed on the said Quebec section.

The object is to secure communication with the city of Montreal while the main line is being built and to make that construction obligatory upon the company, and not leave it optional as in section 12 as adopted in Committee of the Whole.

Mr. McCARTHY. This section was considered in Committee of the Whole and disposed of by the committee not adopting the suggestion of the hon. gentleman (Mr. Monk), but I would like to point out what seems to be an inconsistency in the matter, namely, that this branch line has to be begun and completed simultaneously with the Quebec line which is not to be operated by the Grand Trunk Pacific Railway Company until it is completed, so that you could not have the Montreal branch line begun at the time the company commenced the operation of the Quebec line, because it would be already completed. I do not think the hon. gentleman's motion is consistent. I would submit to the House, with all respect to the hon. gentleman, that it is not right to pick out one of these branch lines and make a motion of this kind when we have a number of similar branch lines provided for in the Bill. It is to be presumed that the powers of the company will be exercised consistently with the operation of the road on business principles under a business management, and I have not heard of a similar clause being inserted in the charter of any company which has hitherto asked for incorporation.

The MINISTER OF MARINE AND FISHERIES (Hon. Raymond Préfontaine). Mr. Speaker, as a representative of Montreal, I have no hesitation in saying that I propose to take a firm stand upon this question, and a stand against the amendment of the hon. gentleman from Jacques Cartier (Mr. Monk). As has been stated by the hon. gentleman who promotes the Bill (Mr. McCarthy), it is not right for us in the district of Montreal to insist upon some things, which, if they were granted, would certainly have the effect of inducing other districts to ask for the same things. You would have probably ten or twelve amendments of a similar nature with reference to branch lines to various points, and if adopted then, might have the effect of rendering the whole scheme impracticable. The business men of Montreal do not at all fear that this railway will not connect with their city. I have had communication with these gentlemen recently, and those whom I have met consider the Bill to be perfectly satisfactory. In view of the facts as they exist, there is no danger at all that Montreal will be neglected. You have the Montreal and Western Railway, for instance, which is built as far as Labelle at the present time, and which will be completed for 24 miles further on the 1st of October. Subsidies have been asked for another 35 miles so as to carry that railway as far as La Lievre. It is rather uncertain, of course, at what point the Montreal and Western can reach the new line, but from all the information I can gather and from the knowledge of the country which I have, there would not be more than 50 miles to build from La Lievre to connect with the government line operated by the Grand Trunk Pacific Railway, as proposed. There will of course be no danger whatever that Montreal will not have connection with the new railway. But even suppose that the Canadian Pacific Railway would not feel it in their interest to extend their railway so as to tap the new line, there is no doubt whatever that the Grand Trunk Pacific Railway would see its way perfectly clear, in its own interest, to connect with Montreal, and perhaps by a better route than that now existing via the Montreal and Western. Therefore, the Montreal district will have the benefit it is entitled to from this vast territory which is being opened up. As a representative of the city of Montreal, I have no hesitation in taking this stand on this question, and I am sure in advance that the business men of Montreal will support my view.

Amendment (Mr. Monk) negatived on division.

Mr. E. HACKETT (West Prince, P.E.I.) I beg to move the following amendment, of which I have given notice:—

That Bill No. 64 to incorporate the Grand Trunk Pacific Railway Company be referred back to the Committee of the Whole, with instructions that they have power to amend the same by inserting the following :—' The company may acquire and operate the railway from Sackville, on the line of the Intercolonial Railway, to Cape Tormentine, in New Brunswick ; and in the event of acquiring said railway, shall construct a pier at Carlton Point, in Prince Edward Island, place suitable steamships on the route, and maintain efficient communication, summer and winter, between Prince Edward Island and the mainland.'

I move this amendment for the purpose of endeavouring to obtain a measure of justice for the people of Prince Edward Island, who have laboured so long and so patiently and so uncomplainingly under the difficulties they have suffered for the last thirty years. Thirty years ago Prince Edward Island entered the union and it was guaranteed by the government of Canada that there would be established and maintained efficient steam communication for the conveyance of mails and passengers, summer and winter, between Prince Edward Island and the mainland. Little or nothing has been done by the government of Canada in that regard, and I believe that the present is a very opportune time for a movement to be made towards a partial fulfilment at least of the terms of union. I think it opportune,

Sir, because we find that the Grand Trunk Pacific Railway Company are obtaining a charter for the purpose of operating a railway from Winnipeg to Moncton, a distance of 1,800 miles, which will cost the people of Canada some $75,000,000 or $100,000,000. And while the people of Prince Edward Island will be called upon to contribute their share of that large expenditure, it is only right that they should in some way participate in the benefits accruing from that expenditure of money. There is no proposition now before parliament to meet any of the claims of Prince Edward Island. In that province we are unable to develop its resources because of the non-fulfilment of the terms of union. We have resources which may be developed to a very large extent; and while everything appears to be going to the west, while this expenditure of money is for the alleged purpose of developing the west and carrying the products of the west to the markets of the world, nothing is being done to assist the people of Prince Edward Island to carry their products to these markets in the winter season when they are shut off from communication with the rest of the world. I therefore claim that while the government of Canada is about to expend this vast sum of money for the purpose of affording transportation facilities to the people of western Canada, the least that can be expected is that the government will connect the province of Prince Edward Island with this system of railways which they are now about inaugurating. While I had the honour of bringing this motion before parliamen the other evening, I was told by the Minister of Finance that this was a charter for a private company, and that the government were not interested. I say that the government are interested. They are building this railway from Winnipeg to Moncton, and when the railway is built the trains are to be operated by the Grand Trunk Pacific Railway Company. The trains running over that system will pass Sackville, some 38 miles east of Moncton, on the way to Halifax. It is not intended that these trains should stop at Moncton; it is not a seaport, it is not an outlet for the products of the country, and so the trains will have to pass Sackville, summer and winter, on their way to Halifax. Now, Sackville is within 40 miles of Cape Tormentine, and from Cape Tormentine to Prince Edward Island it is eight or nine miles, so that in passing Sackville the trains of the Grand Trunk Pacific Railway will be passing within some 50 miles of the shores of Prince Edward Island. All that the people of that province ask for, and all that is required, is the construction of a pier at Carlton Point on the Prince Edward Island side. There is now a good pier at Cape Tormentine and a harbour sufficient to accommodate shipping, summer and winter. All that is necessary, therefore, is to construct this pier at Carlton Point, place suitable steamships on the route, and bring Prince Edward Island in direct communication with the railway system of Canada. This is quite a simple matter. When there are millions of money to be expended in other parts of the country, we should certainly have a small expenditure to afford to the people of Prince Edward Island that accommodation which they so much require. The government of Canada entered into a solemn compact with us to maintain this connection. They have not fulfilled those conditions, but to-day they are conferring a vast franchise and great privileges on a railway corporation, and expending a large amount of money in the interest of that corporation, so that it may become a question in the future as to whether the government of Canada, elected by the people of Canada, shall govern this country, or whether the country shall be governed by the Grand Trunk Pacific Railway Company. I think it is an act of prudence on the part of a representative of Prince Edward Island to see that this company, as well as the government, are bound. in order that we may have one or the other to fall back upon. A petition containing thousands of names, was sent from Prince Edward Island to the government of Canada, asking for the construction of this pier at Carlton Point, but no attention has been paid to it. I asked the hon. Minister of Marine and Fisheries a few days ago if he intended to construct another steamship to maintain that communication which was guaranteed to us at the time of the union, and his answer was no, that they were not going to do anything of that kind. Therefore, I regard the present as the opportune moment to bind this company to do something to connect the province of Prince Edward Island with this great railway system, which is supposed to bind together the whole of Canada from the Atlantic to the Pacific, and to allow the people of the province to benefit to some extent from this large expenditure of public money. I trust, Mr. Speaker, that the amendment which I have moved will be accepted by the promoter of this Bill and by this hon. House.

The MINISTER OF FINANCE. Mr. Speaker, my hon. friend from West Prince has quoted me as having said that the government had nothing to do with this matter. I am sure he did not intend to convey an erroneous impression, but he did so. What I said on a previous occasion was that there was no provision in this Bill for the expenditure of a penny of public money, and therefore that we were not in a position to discuss in connection with it the question of government aid. It is not a government railway Bill; it is a private charter. My hon. friend desires that there shall be a railway built to connect Sackville with Cape Tormentine, and that this company shall

establish a line of steamers to cross to Prince Edward Island and shall build some extensive piers ; and he says this is what the people of Prince Edward Island want. Within the last two weeks the people of Prince Edward Island sent a deputation to Ottawa to say that they wanted nothing of the kind. The deputation came before the committee, and all they asked was to be let alone, and to have the question of communication between Prince Edward Island and the mainland left between Prince Edward Island and the government, and they protested against any private corporation coming between the two. My hon. friend is mistaken, what the people of Prince Edward Island asked and what he asked was, let us alone.

Mr. J. J. HUGHES (King's, P. E. I.) Mr. Speaker, I would be glad to support anything brought forward by the hon. member for West Prince (Mr. Hackett) that would be for the real benefit of Prince Edward Island. There are many things that that province requires as well as the other provinces of Canada ; but to establish a ferry between the capes is, in the opinion of a great many people of Prince Edward Island, myself among the number, entirely impracticable ; and therefore I should have to vote against this amendment if it were put to a vote. Generally speaking, the hon. gentleman advocates what is reasonable and fair for the province he represents, and if I thought he were doing so now, I would heartily support him ; but the amendment he now proposes I must vote against.

Mr. HACKETT. Mr. Speaker, will you kindly allow me an explanation in reply to the hon. Minister of Finance and to the last hon. gentleman who spoke. With regard to the delegation which came from Prince Edward Island, I supported it against granting to a private company a monopoly of the waters between Cape Tormentine and Cape Traverse, and we had the Bill amended to meet the views of the people of Prince Edward Island.

The MINISTER OF FINANCE. There was no proposition for a monopoly.

Amendment of Mr. Hackett negatived, on division.

Motion agreed to, and Bill read the third time and passed.

QUESTIONS.

PAYMENTS TO MONTREAL 'HERALD' PRINTING COMPANY.

Mr. ROSAMOND asked :

1. Is it true that the Montreal 'Herald' Printing Company has received $113,000 from the government since 1896 ?

2. Is it true that the Montreal 'Herald' is being offered to subscribers through Canada for a sum barely sufficient to pay postage ?

3. If so, is there any connection between these two facts ?

The MINISTER OF FINANCE (Hon. W. S. Fielding). The sums paid to the Montreal 'Herald' Printing Company for advertising, printing, and lithographing since the beginning of the year 1895-96 have been as follows :

	Advertising.	Printing and Lithographing.
1895-96	$ 6 25	
1896-97	994 88	$ 604 79
1897-98	1,946 37	2,349 70
1898-99	2,800 58	12,208 42
1899-1900	2,766 90	22,358 61
1900-01	2,697 53	49,068 79
1901-02	2,490 57	13,341 39
	$13,703 08	$99,931 70
Total		$113,634 78

2. and 3. We have no information.

THE TRANSPORTATION COMMISSION.

Mr. BARKER—by Mr. Clarke)—asked :

1. When did Sir William Van Horne decline to act on the transportation commission appointed by the Governor in Council on May 19, 1903 ?

2. Had Sir William Van Horne been informed, previous to the time when he declined to act on such commission, that the government intended to enter into the arrangements set forth in the Bill intituled : 'An Act respecting the construction of a National Transcontinental Railway,' and in the schedule attached to said Bill, or into any arangements for such or similar purposes ; and did he, after receiving such information, decline to act upon the commission ?

3. Did the government ascertain Sir William Van Horne's views with regard to the government's proposed or contemplated arrangements; and did the government thereupon intimate to him that it was desirable that he should not act upon the said commission ?

The PRIME MINISTER (Right Hon. Sir Wilfrid Laurier) :

1. The last letter received from Sir William Van Horne on this subject, wherein he declined to act on the Transportation Commission, is dated, Montreal, the 20th of July last.

2. No.

3. No.

LEASE OF GRAZING LANDS.

Mr. ROCHE (Marquette)—by Mr. Ingram —asked :

1. Has the government granted a grazing lease of any lands in the North-west Territories to Mr. George McDonnell or his wife ?

2. If so, how much, on what terms, and what is the length of the lease ?

The MINISTER OF THE INTERIOR (Hon. Clifford Sifton):

1. No.

NOVA SCOTIA ELECTORAL LISTS.

Mr. BELL—by Mr. Maclean—asked :

1. Have the electoral lists for the province of Nova Scotia been printed by the Printing Bureau since they were revised in the current year ?

2. If not printed, have the changes necessary to correct these lists to date been set up in type ?

The PRIME MINISTER (Right Hon. Sir Wilfrid Laurier) :

1. No, with the exception of Guysborough.

2. The changes necessary to correct the lists have been made in a majority of the Nova Scotia lists, but they have not been printed off yet.

DR. MOREAU.

Mr. MORIN asked :

1. By whom was Hypolite Moreau, junior, of St. John d'Iberville, recommended as collector of the Chambly canal at St. John d'Iberville, and what is his salary ?

2. Is this Hypolite Moreau, the medical officer of the port of St. John ?

3. How much has the said Dr. Moreau received for his services as medical officer of the port of St. John for the year ending the 30th day of June last ?

4. Has Hypolite Moreau, junior, given security to the government, and of what nature ?

The MINISTER OF MARINE AND FISHERIES (Hon. R. Préfontaine) :

2. Dr. H. Moreau is employed by the collector of customs when the services of a doctor is required for sick seamen at St. John d'Iberville.

3. Dr. Moreau during the year ending 30th June, 1903, treated 125 sick seamen and was paid $412.50 for his services.

Questions one and four are not in my department and will have to stand.

SUSSEX ARMOURY.

Mr. FOWLER asked :

1. What was the contract price for the erection of the armoury at Sussex ?

2. Who was the clerk of works and overseer of the construction of said armoury ?

3. What special qualification had said overseer for the position to which he was appointed?

4. Was he a practical carpenter or mason ; or if a mechanic at all, to what trade or calling does he belong ?

5. At what rate per day were his services rewarded ?

6. When did his services as overseer begin, and when did they end ?

7. When was work commenced on the erection of the armoury by the contractors for the building, and when was the contract completed ?

8. Was the overseer retained by the government after the completion of the building ; and if so, for what purpose ?

9. If employed, what salary did he receive for his services, and how long did his employment last ?

10. How much has been paid altogether to said clerk of works or overseer, as such overseer from the time of his first employment to date ?

11. Has any claim been made by the contractors for extras ; and if so, with what result ?

12. Was the heating contract let by tender, or how ?

13. If tenders were asked for, who were the tenderers, and what were the several amounts of their respective tenders ?

14. Has there been any difficulty experienced with the heating apparatus in the armoury since its installation ; and if so, what and how caused, and what person, if any, was at fault ?

15. If there has been such difficulty, what has been the financial loss occasioned thereby, and who has paid for same ?

The MINISTER OF AGRICULTURE (Hon. Sydney Fisher). On behalf of my colleague, the Minister of Militia and Defence, I beg to reply :

1. $4,537.97.

2. J. R. McLean.

3. He was reported to have had considerable experience in work of the kind, and had been appointed by citizens of Sussex to oversee construction of large public school building there.

4. Have no knowledge as to his trade.

5. $3 per day.

6. Appointed in July, 1901—ended April, 1903.

7. In July, 1901. Final estimate passed in April, 1902.

8. Yes, to oversee the construction of the heating apparatus, waterworks, to supply military camp and military buildings, plumbing, &c., &c.

9. $3 per day, from April, 1902, to April, 1903.

10. $1,920. Note.—This amount covers the cost of superintendence of the construction of the armoury as well as that of the construction of the heating apparatus, waterworks, plumbing, fittings, &c., which works amount to $10,288.71.

11. Yes, but nothing has, so far, been allowed.

12. Yes, by tender.

13. H. H. Dryden, $992 ; Pierre Leclerc & fils, $1,221 ; S. S. White, $1,269 ; P. Campbell, $1,320 ; Wallace Bros., $1,400. Lowest tender accepted.

14. No difficulty experienced with heating apparatus. One of the windows was accidently blown in, during a severe storm and the apparatus frozen. It is supposed that the party that delivered the coal on the day preceding the night of the accident, had not properly fastened the window.

15. It cost this department $409.40 to put apparatus in working order, including additional plumber's work.

CANADIAN GOVERNMENT RAILWAYS.

The MINISTER OF FINANCE (Hon. W. S. Fielding) moved that the House go into committee to consider the following proposed resolution :

Resolved, that it is expedient to enact as follows :—

Advances may be made time to time, out of the Consolidated Revenue Fund of Canada, to the Minister of Railways and Canals, to enable him to purchase necessary materials and stores for the construction, renewal, maintenance, and operation of the Canadian government railways, and for the establishment and conduct of railway stores ; provided that the sums so advanced shall not exceed annually, for the Intercolonial Railway the sum of one million five hundred thousand dollars, and for the Prince Edward Island Railway the sum of one hundred thousand dollars.

He said : His Excellency the Governor General having been acquainted with the resolution recommends it to the favourable consideration of the House.

Motion agreed to.

MORNING SITTINGS.

The PRIME MINISTER (Rt. Hon. Sir Wilfrid Laurier) moved :

That, commencing with Wednesday next, and until the end of the session, the House shall meet on that day, and on each subsequent sitting day, at eleven (11) o'clock in the morning. That in addition to the usual intermission at six (6) o'clock p.m., there shall be also an intermission every day from one (1) to three (3) o'clock p.m.; and that government orders shall have precedence at all such sittings, members having still the right to ask questions on Mondays, Wednesdays and Thursdays.

Mr. F. D. MONK (Jacques Cartier). I would like to ask the right hon. gentleman what steps will be taken to secure the meetings of the standing committees, which still have work to do—the Committee on Public Accounts and the Railway Committee ? We are very anxious to hasten the business of the session, and perhaps the right hon. gentleman will indicate to us the general course of business to be pursued under this motion. Will we go on with the Grand Trunk Pacific contract until that matter is disposed of and then take up the Redistribution Bill ?

The PRIME MINISTER. The course of business will not be at all affected by the House meeting in the morning, but I am happy to inform my hon. friend that when we take up the government policy to-morrow we propose to go on with its discussion until that important subject is exhausted. After that I am not prepared to say what course will be adopted to dispose of the final business to be brought up by the government. As regards the committees, there is only the Railway Committee which has any important business. I did not know that it was intended to have the Public Accounts Committee sit again. It has had every opportunity to sit during the past four months. But there is one important matter before the Railway Committee which will have to be disposed of, and the only thing that can be done is to give it power to meet during the sittings of the House.

Mr. CLANCY. Are we to understand that no further provision is to be made for sittings of the Public Accounts Committee ? That committee has been waiting some weeks for the appearance of a witness, and I hope the right hon. gentleman will see the necessity of endeavouring to give that committee an opportunity to close its business.

The PRIME MINISTER. If a witness has been summoned and is going to appear, some provision will have to be made to meet a contingency of that sort.

Mr. MONK. There is one matter under investigation before the Public Accounts Committee which has not been closed. And it will be absolutely necessary for that committee to meet at least two or three times. Perhaps there may be other matters under investigation ; but the investigation of this subject has certainly not terminated, so that we must have sittings of that committee.

Motion agreed to.

RAILWAY ACT, 1903.

The MINISTER OF JUSTICE (Hon. Charles Fitzpatrick) moved the third reading of Bill (No. 21) to amend and consolidate the law respecting railways.

Mr. W. F. MACLEAN (East York). I desire to move that this Bill be referred to the Committee of the Whole with instructions to amend it by adding the following as subsection 4 of section 263 :

The maximum passenger tariff shall not exceed two cents a mile.

In this Bill there is a provision dealing with the maximum passenger tariff, but I propose that the Bill be made still more definitive in this respect so as to fix that tariff at two cents per mile. In Canada, in the older provinces, we have had railways for the last fifty years, and the passenger rate has been the same from the day railways were established until to-day. No effort has been made to reduce the passenger rates, although as I pointed out to the House before, all other forms of railway charges have been reduced time after time. Freight rates have been cut in two several times. And it has always been found that the effect of reducing the freight rates is to increase the business of the railway. Substantially my argument is that what applies to freight charges would apply also to the passenger charges, and if the passenger charges were reduced the railway would benefit and the public also would be advantaged. I have been in receipt of a great many letters on this subject; it is surprising the expression of public opinion which this proposal has evoked. As a matter of fact, many of the railways of Canada are charging people four cents a mile. I do not speak of the

new portions of the country; but there are old settled parts of Quebec in which a common charge for railway passenger travel is four cents a mile. I wish to give a few instances of such charges before I sit down. Here is a letter from Guelph :—

Re Railway Fares.

The rate should be reduced to a common level for every one. As it is now it is three cents per mile, but about two and a half cents if a return ticket is bought. Why should this be ? Why not have a level rate the same as New York Central Railway, or same price either for single or return ? They have also 1,000 mile tickets and commercial tickets. The plan has worked well on the New York Central Railway and should be tried here. The public are imposed upon by having so many special rates. Would it not be well to have a flat lowest rate adopted for all, even if you cannot get two cents, a two and a quarter or two and a half flat rate would be better than it is now.

Now, here is a letter from Ottawa :—

Mr. HEYD. We can take these for granted.

Mr. MACLEAN. The hon. gentleman (Mr. Heyd) evidently does not want to hear the facts.

Mr. HEYD. We can take such letters for granted; no doubt you got many of them.

Mr. MACLEAN. This letter is dated Ottawa, July 10th :—

I read with a good deal of satisfaction your efforts at securing a maximum rate of two cents for the public on our railways and I would call your attention to the fact that your statement that the Grand Trunk now charging us three cents a mile is not a statement broad enough to cover the facts. Between Montreal and Toronto, or Montreal and St. Johns, P.Q., and many other points the rate is three and a quarter cents. For a fraction of a mile between each station they add a full mile, and besides they are privileged to take from one cent to four cents on every ticket they sell. So, if the distance is 11 1-100 miles, they charge for twelve miles, thirty-six cents and add four cents to make forty cents, making a clear gain over their honest due of seven cents. When their trains cross the river at Detroit, and they take a passenger for one mile they are obliged to give three cents change out of a five cent piece. God speed your efforts for equity to the public. Whom shall we look to if not our representatives to compel these public franchise holders to deal with us on honest business principles ?

I was much interested in reading the report of the debate upon your motion calling for a two cent rate on Canadian railways. I think the arguments adduced by you in favour of lower passenger rates are powerful ones, and I hope your ideas may in the end prevail. To me it seems strange that the people of Canada, who have given very large subsidies to railway promoters, should in the end find themselves obliged to pay a higher rate for the privilege of riding upon the Grand Trunk in Canada than upon the same line in Michigan.

Let me suggest to you that if you fail in your efforts to get passed a law calling for a two cent rate, you should then bring in a resolution saying that no railway shall charge more than three cents a mile. Some may exclaim at once that there is no need for such a law, since none of the railways charge a higher rate in the older provinces, at least. Such is not the case however. According to the Canadian Pacific Railway time table it is fifty-two miles from Ottawa to Prescott, and a ticket from here to Prescott costs $2.10 which is over four cents a mile.

So that from the very capital of this country to the St. Lawrence river the charge is four cents a mile and that charge has evidently been approved by the government and by the Minister of Railways and Canals :—

I have travelled considerably on the Grand Trunk and its branch lines and never paid more than three cents a mile ; but the Canadian Pacific Railway, that railway which, having received enormous subsidies from the people of Canada should show its gratitude by giving moderate rates holds me up for four cents a mile every time I use its Ottawa and Prescott line. And every time this occurs, I wonder what our representatives in the House of Commons are doing that they allow such extortion in a line running into the capital of this country. It is only charitable to suppose they are not aware of this. As a Liberal in politics I write to thank you for your effort on behalf of those whose desire to travel is greater than their purse; on behalf of those, who, paying their way wherever they go, do not object to reasonable rates, but do object to the extortionate rates that the Canadian Pacific Railway is at present imposing on some of its branch lines. I wish you success and thank you for your interest on behalf of the travelling public.

I have here a letter from Cobourg, one of the oldest towns in Ontario :—

The distance from Cobourg to Toronto per Grand Trunk Railway is 59·60 miles, and the fare is $2.35, or at the rate of 3·38 cents per mile. There is no reason for any such charge. The people of Cobourg are pleased with the stand you have taken.

Here is another letter from Oshawa, from an old Liberal—I believe he is a Liberal, Mr. Thomas Conant :—

I want to spur you on in your efforts for the two cent rate. We can afford to disagree on some other matters, but in this I am with you, and I would urge your continued and persistent efforts. No let up.

And here is a letter from a government official :—

I notice that you have been speaking of passenger mileage rates on railways. Recently I had occasion to-day to buy a ticket on the Gatineau Railway from Ottawa to Gracefield and return. The distance is 59·1 miles each way, 118·2 in all. The return ticket cost, $3.90 being a fraction over three and a-third cents per mile. This is only another sample of what the public have to pay.

These are only a few of the letters that I have received from all over the country. The fact is these railways are charging the people of Ontario from three to four cents per mile, even the older provinces of Quebec and Ontario, and, I believe, also in

some of the lower provinces. And some of the greatest of these railways which have received enormous subsidies of public money and have been given great franchises, are carrying people in the United States for two cents per mile. The Grand Trunk has a large system through the state of Michigan and is carrying people on its lines there for two cents per mile. The Canada Southern, now the Michigan Central, which crosses the western peninsula of Ontario is carrying people through the state of Michigan at the rate of two cents per mile while charging Canadians three cents per mile. The Canadian Pacific and its Wabash connection is doing the very same thing. And the Grand Trunk is also doing it in the state of Michigan. Now, here are four great trunk lines crossing the province of Ontario, all of them having lines in the United States, and they are charging on their Canadian lines three cents a mile, while, on their American lines in the state of New York and the state of Michigan, they are carrying people regularly at two cents per mile. And there is something worse than that. Those American railroads are selling tickets across Canada, making connection at their eastern end and their western end, and they are carrying Americans through Canada for two cents a mile, and the Canadian who sits alongside of them in the car has to pay three cents a mile. Now, that has been going on for years, and apparently there is no cure for it but a parliamentary agitation and the adoption of a maximum passenger rate. I say now that if the Grand Trunk Railway carries people in the state of Michigan for two cents a mile, as they are doing every day on the New York Central or, as it is called, the Michigan Central, in Canada, if it is carrying people for two cents a mile in the States, they ought to be obliged to do the same in Canada. The Grand Trunk are doing it and the Canadian Pacific Railway are doing it. Not only that, but they are doing even worse, they are selling tickets all over the States for people to go to and from New York and Chicago, taking them across Canada, for two cents, and making Canadians who sit alongside of them in the same car pay three cents a mile. Yet these same roads have had subsidies, and are enjoying exemptions in the way of taxation that none of the railroads in the United States have. Every railroad in the United States pays large taxes for every mile of its line, and they pay other taxes through charges that our roads do not have to pay; and yet, with all these subsidies, and with all these exemptions, they discriminate against our own people.

Now, let me point out something else. They have a two-cent rate, as I have said, in the United States in many places, and they have got it in every case by agitation followed by legislation, and in some cases by decisions of the courts, and in other cases by competition. But the great lever that brought down the rates was specific agitation to that end. In the state of Michigan, where they have now a two-cent rate, the railways opposed it, having organized a powerful lobby in the capital of the state; they stated it would injure the roads, but the legislature passed the law, and the railroads are carrying people and making money out of it at two cents a mile. Let me for a moment show you what they are doing in Michigan in this direction. The other day when I was discussing this question, the hon. member for Hants (Mr. Russell) asked me what information I had upon which to base my statements. I made some general statements, which I said I gathered from various authorities on the subject, and he asked me for more information. Well, in order to supply him with that information, I may say that the management of the newspaper with which I am connected sent one of our young men into the United States to make an investigation, and some interesting letters from him have been published recently in that paper. Let me call attention to what he said about the Michigan railways:

> The Grand Trunk's main line through Michigan to Chicago is, in round numbers, 300 miles long. There is not a mile of this road that passengers pay to exceed two cents for travelling over. The moment this line enters Ontario the rate arbitrarily shifts to three cents and the rate is never reduced to two cents throughout the Canadian territory, but when the company passes again into the States to the east, once more the two-cent tariff becomes effective.
>
> The Michigan Central operates a main line in Ontario 229 miles long. Three cents per mile is the regulation local rate; that is, if a farmer desires to travel ten miles or twenty miles or a hundred miles, the rate is on the basis of three cents. The Michigan Central passes into Michigan at Detroit and operates a main line toward Chicago with a mileage of 291 in Michigan. Here the regulation rate is two cents, and the same farmer making the same distance in this state as in Ontario gets the service for one-third less than in the Dominion. When the Michigan Central's train gets through Ontario and crosses into the States again at Niagara Falls, the maximum rate is again applied, and the service is on a two-cent basis.

On the Wabash road it is the same, on the Canadian Pacific Railway it is the same in Michigan, on the Michigan Central it is the same. He also points out how the reduction of rates in Michigan was accomplished; it was only done by agitation in the legislature, and here is an item bearing on that point:

> It has been a recurring subject for legislation and debate. Each political party has made this question the slogan of its campaign. The present chief executive, Governor Bliss, came into power much through his known hostility to corporation domination. For more than fifteen years the main lines of the chief railroads operating in Michigan have been forced to conform to the maximum rate of two cents per mile for regular passenger rates.

Now, here is the Michigan law. Both parties, irrespective of politics, decided that the charges in that state for passenger traffic were too large, and that a reduction ought to be made in the passenger traffic rates, as well as in freight rates. After agitation in the community and in the papers, the legislature passed this law :

For a distance not exceeding five miles, three cents per mile ; for all other distances, for all companies, the gross earnings of whose passenger trains, as reported to the Commissioner of Railroads, for the year 1888, equalled or exceeded the sum of three thousand dollars for each mile of road operated by said company, two cents per mile, and for all companies, the earnings of whose passenger trains reported as aforesaid, were over two thousand dollars and less than three thousand dollars per mile operated by said company, two and one-half cents per mile, and for all companies whose earnings are less than two thousand dollars per mile, three cents per mile.

That law applies to every railroad in the state, with the exception of one or two in the northern portion, where the earnings do not come up to $3,000 per mile per annum.

Mr. HEYD. If that Michigan law was applied to the railways in Canada, how many would come under its operation ?

Mr. MACLEAN. Well, I will tell him of one.

Mr. HEYD. And that is all ?

Mr. MACLEAN. I will give him a case, it shows the great effect of the law of competition to obtain the rights of the people. The Michigan Central, by its returns to parliament here, shows that it earns over $3,000 a mile, and it therefore comes within the Michigan law. If we stated by an Act of parliament here to-day that any railroad earning $3,000 a mile for passenger traffic in a year was to give a two-cent a mile rate, irrespective of the fact whether the Grand Trunk or the Canadian Pacific Railway earned that much, they would all have to come to it. They would each give the two-cent passenger rate. In New York the New York Central was forced to do it over their road. Now, I cannot accept the figures in the parliamentary returns for Canada, and I have not seen the latest ones in those returns. The Canada Southern, according to its mileage and passenger earnings, earns $3,607 a mile in the year ; the Grand Trunk earns $2,073 ; the Canadian Pacific Railway, $1,261. I worked this out from the figures. Of course, the hon. gentleman can argue that because they do not come up to the Michigan earnings they should not be interfered with.

My answer to that is this : It has been proved in the United States that the earning capacity of a road does not go down because the passenger rate goes down, but that on the contrary, the experience in every case is that a reduction of the passenger rates stimulates travel and increases the earnings of the railway company. That is the point I wish to make, and I think if I have established that, the case is proven. If I have to go to a populous state for the proof of it, if I have to go to New York state and quote the results of the operation of the leading railway in the United States it may be said that this is an unfair comparison because New York is a populous state. Certainly, I answer, it is a populous state, but it is also populous in railway mileage, if I may so express it. There are thousands and thousands of miles of railway in the state of New York alone, and there is a great amount of railway competition in that state. But, I have for my contention the authority of the New York Central, of its passenger agent, and of its policy. Its policy above everything else goes to prove that when you reduce the passenger rate you stimulate travel and increase the earnings of the company. Some people will ask : If that is the case why do they not reduce the rate of their motion? I do not know why. Such action on their part is never voluntarily taken. You have always to wake up people to the demands of the public in order to get a reduction in anything. They have always argued that it would be against their interests to reduce the rates, but experience has invariably shown that when you reduce the cost of an article you increase the consumption of it, and everybody gets the benefit of it.

Hon. Mr. ROSS (Victoria, N.S.). Free trade.

Mr. MACLEAN. My respected friend from Victoria, N.S. (Hon. Mr. Ross) bears me out in that, no matter what we may call it. We have only to go to the Post Office Department for another proof of it. In the Post Office Department every time the rate of postage has been reduced the public have derived the benefit of the service and the post office earnings have increased. Another splendid instance is the case of the telegraph service in Great Britain. There was a time when you only got ten words for a shilling. They cut the rate in two and doubled the wordage ; that is, they made the rate sixpence and gave you twenty words at that rate with the result that it has proved a profitable business both for the people and for the post office service. There have been some deficits, but it should be remembered that the number of offices has been very much extended.

Hon. Mr. ROSS (Victoria, N.S.). The deficits have been caused by newspaper rates.

Mr. MACLEAN. Yes, they were caused by the newspaper rates. But, there is another instance of the effect of the reduction in rates, and the reduction in these telegraph charges was brought about by legislation. Of course, in England the government control the telegraph service, but they found it advantageous to the people and advantageous to the revenue of the post

office to reduce the rate. Let me give a little information upon this subject. In the state of Illinois they practically have a two-cent rate. They have made it compulsory for the railway companies there to sell a thousand mile ticket for $20, so that in that state they have a two-cent a mile service. In the state of New York they have a two-cent a mile service, and it was obtained by the adoption of one little act dealing with the New York Central, but by reason of that Act and by reason of competition, other railways in New York state were compelled to adopt the two-cent rate and the people have the benefit of it. A man can go from New York to Boston at two cents a mile. There are no return tickets. A ticket is made to read 'good both ways' and if you wish a return ticket you buy two of these tickets. They do not encourage people to buy return tickets by giving a cut on the return. People do not want that; they want a low level rate, so that they may return by whatever route they wish. A man going from Toronto to Montreal at the present time might wish to go by way of the Grand Trunk Railway and come back by way of the Canadian Pacific Railway, in order to transact his business, but as a result of the system now prevailing upon our railways he must return by the same road as that upon which he travels to Montreal if he desires to get the benefit of the reduction that is made on a return ticket. He does not want to return by the same road, he wants to return by another road, but if he wishes to do that he is obliged to pay so much per mile more. On the contrary, in the state of New York you can go by any line you wish and you can return by any other line simply by buying tickets at the rate of two cents a mile. In the state of Illinois practically the same condition exists when you buy a thousand-mile ticket. These thousand-mile tickets are good over any road, and surely, if they have conveniences like that for the travelling public over there, we should have the same here. Another great advantage that the railways of Canada have, which is an unfair advantage and one in regard to which great hardship exists and against which many complaints are made, and that is the advantage resulting from the law against the sale of railway tickets. The railway companies have an immense lever in that respect and they are using it to the disadvantage of the people in a great many cases. There is no such law in the United States. I do not believe in ticket scalping, and I would not like to see it justified, but if you have purchased one of these high priced tickets in Canada and you wish to go by another route, it is very hard to get your money back, and if you try to sell your ticket you are liable to be sent to jail. There is no such law in the United States that I know anything of. Hon. gentlemen opposite have always opposed paternal government, and yet we are pampering our railways in a way that is not thought of in the United States. In the United States they tax railway companies, they give them no subsidies, they prescribe a maximum rate and they oblige them to give a level rate for passenger travel. These things have been obtained as the result of agitation and legislation. Let me read a statement in explanation of the system in New York state:

The state law——

Of New York—

—does not compel a two cent rate on all lines here, but business sagacity on the part of the Central has resulted in this reduction. The other lines at competing points are forced to the same basis. Therefore, while wise business policy dictated originally this maximum rate in the Central management, other lines charging this rate in New York have come to the basis as a matter of competition. But in all cases it has proven a stimulus to business.

This company has been the pioneer in the two-cent rate campaign. It operates 78 passenger trains every 24 hours between New York city and Buffalo, covering four tracks.

The query is frequently made in railway circles why, if the Vanderbilt lines in New York state and Michigan find two cents so profitable and so stimulating in developing travelling, the officers should not enforce the same two cent maximun rate in Canadian territory. The company admits that its traffic on the passenger trains in Canada is very heavy. Then what is the secret of the higher rate there? There is active competition—four through-lines from Buffalo to Detroit through Canada. The reply is: the arbitrary agreement to keep up the rate to three cents in Canada.

In other words the New York Central, which is connected with the Michigan Central, would give the people a two-cent a mile rate over the Ontario peninsula were it not that they fear the antagonism of the Grand Trunk Railway and the Canadian Pacific Railway. They are willing to give it to-day. It is their policy to give a two-cent a mile rate over every road that they control, and they would like to give it over their road in Canada, and they are willing to give it, as far as I can gather, were it not for the fact that they fear that they would incur the traffic hostility of the Grand Trunk Railway and the Canadian Pacific Railway. American railway men speaking of this anomalous position in Canada say this:

Here is the reason as outlined by progressive railroad men in America; Canada has not insisted upon her passenger tariff being reduced since the era of railroad travel was introduced. The rate is the same to-day as half a century ago, when the Dominion possessed but the scantiest railroad mileage. Yet the expense of operation has decreased enormously and there is every economic reason why rates should have been readjusted every decade in Canada.

You cannot tell these officials that two-cent fares don't pay; that you can't enlist capital to promote railroad construction with a two-cent maximum rate. They know better, and so does all New York state know better. One pro-

minent New York Central man is credited with the assertion that his company contemplates establishing a two-cent maximum rate from ocean to ocean.

I saw evidence of it in one of the Ottawa papers last week. It was said that the New York Central, with its connections are forcing the two-cent rate through the south-western country, and that the great dream, or rather the great aim of the Vanderbilts to-day is to make a two-cent maximum rate across the continent. They say, and all their officers say, that the two-cent rate stimulates travel and makes it profitable to the company. Another official said in the state :

> The whole history of railroad progress shows clearly that rates seldom come down except when courts and legislatures order it.

That is the argument I have been making. I have never heard of a railway company in this country reducing rates unless it has been ordered to do so by the legislatures or the courts, except a few years ago when there was a war on between the Grand Trunk and the Canadian Pacific Railway, but just as soon as the war was over up went the rates. I have not many extracts to read, and I do not wish to weary the House, but there are a few expressions of opinion which may be useful as bearing on the discussion. A member of the New York State Railroad Commission, discussing the Canadian conditions, remarked :

> An easy method of relief for Canada, without absolutely declaring for a two-cent maximum passenger tariff, would be the adoption of a general law that would provide that the through rates on all lines in the Dominion shall be the sum of the locals. In other words, the passenger fare in that part of Ontario between the Falls and Detroit, as applied between stations, could not exceed the amount charged for a through ticket over those lines. Invariably the through rate, where such a law is not enforced, is less than the local fares between stations. Most states of the republic have such a law. From the Falls to Detroit the through rate is on a two-cent per mile basis. Competition forces this concession. Yet the fare by local rate between those two points is one-third more. There are few points in Canada that are not affected by the competition in the States on this through basis. The Canadians could secure the benefit of this competition at least, if they could not force a two-cent maximum pasenger rate.

Mr. George Daniels, General Passenger Agent of the New York Central Railway expresses his opinion as follows :

> Mr. George Daniels, general passenger agent of the New York Central, is authority for the emphatic statement that the two-cent maximum passenger rate his line enforced for twenty years has stimulated traffic enormously. Further, Mr. Daniels is one of the progressive passenger men of the country who assert unequivocally that the passenger business of a railroad company is a source of revenue, and proportionately exceeds the freight revenue. . . . .
>
> During the last ten days 'The World' correspondent has talked with state officials in the capitals of Ilinois, Michigan and New York, and without an exception they have declared that the only way to secure reduced passenger rates is to enact laws to that effect ; that the railroad companies uniformly unite to combat this legislature and plead the loss of revenue it would mean to them. One well-known New York state official declared that it was not the wisdom of New York Central officials that caused them to adopt the two-cent maximum rate, but the refusal of the legislature twenty years ago to permit the consolidation of the several systems, except on a two-cent passenger tariff basis. But the experiment proved profitable, and did stimulate business amazingly. No one seeks to deny this proposition.

Then he goes on to give the figures to prove the statement. I shall conclude in the matter of evidence by reading a short extract from a statement made the other day by Mr. J. D. Youmans, the senior member of the Interstate Commerce Commission of the United States. This is a body that was created by congress some years ago to regulate interstate commerce and to deal with the rates on United States railroads. Mr. Youmans is a man of the widest experience in connection with railroads and he unequivocally made this statement the other day :

> The lower the rate the more people travel. Low maximum passenger fares stimulate business enormously. These are but two propositions not to be disputed. . . . . The trunk lines of the east, of course, have the two-cent fare generally in effect by the purchase of mileage books, and the great suburban traffic is handled at even a cheaper rate by the commuter's ticket, but the rural communities are not favoured to this extent. I consider it almost an axiom that the lower the rate the heavier the travel. Therefore, the two-cent maximum passenger rate may be considered clearly as largely improving traffic, but it is a nice question as to whether the increased business will offset the loss of revenue incident to the two-cent maximum rate. It has been said that the New York Central, which has the two-cent rate generally, holds that the increased business does offset this loss of revenue. I do not know as to the correctness of this. . . . . .
>
> I understand, of course, that on through business across the continent the Canadian railroads are in accord with the lines in the States, but this would not apply to local business originating in Canada.
>
> Two-cent maximum rates follow more as the result of legislation than competition, though competition sometimes forces this rate into effect. As a result of the lower rate of passenger travel the business in the States has been enormously stimulated of late years. Lower rates stimulates travel. That is certain.

There is any amount of evidence that could be given on this point. It has been published by commissions, and the details of it are to be found in the debates in all the state legislatures where this question has come up. It has not been gainsaid, it is clear beyond peradventure, that the adoption of a two-cent maximum passenger rate has stimulated business, has increased the earnings of the company, and has been for the general benefit of the community. In

Canada for fifty years we have not had one single reduction; we are going on in the same old rut, and unless parliament acts we will be going on in the same way for fifty years to come. There is no means of providing a remedy except by inserting a clause in this Bill making the maximum passenger rate two cents a mile. In order to place the question before the House I propose to move a series of amendments. In the first place I will declare on the broad principle of a two-cent passenger rate. There has been something done in Canada to get a maximum rate of three cents a mile. First of all, let me say that the people's railway in Canada is the most friendly to the people in the matter of transportation. I have here the passenger tariff of the Intercolonial Railway which is to be found in the Orders in Council page 1017, and for 400 miles of its road the Intercolonial Railway is giving a two-cent a mile rate. It starts at three cents, but it grades down and the result is that the government road is carrying the people of Canada for two cents a mile over 400 miles of its extent.

The PRIME MINISTER. That is by Order in Council.

Mr. MACLEAN. Yes, that is the tariff as approved. The people of Manitoba were unable to help themselves until two or three years ago they made an agreement with the Canadian Northern Railway dealing with the whole question of railway charges and here is one clause in that agreement, chapter 39, Ed. VII., clause 10, which settled the whole business :

> Commencing when this agreement takes effect the company shall reduce its passenger rates in Manitoba to not exceeding three cents per passenger per mile.

That little clause in the agreement with the Canada Northern Railway set the pace, and the Canadian Pacific Railway came down from four cents a mile and made their rate three cents a mile. In the province of Ontario, and in the province of Quebec, the people are paying in many places almost four cents per mile for their travel. It is time we should put an end to that. Some of the members of the west, for what reason I do not know, stated in this House that they did not want cheap travel in the west and that they were glad to pay four cents a mile. Well, if that be the view of the west it is not the view of the east, and the provision made in Manitoba would seem to indicate that it is not the view in the west either. However, if the people of the west want to pay more money I am quite willing to have the two-cent a mile rate apply only to east of Port Arthur. I do not want to exclude the west, and therefore the first amendment I propose to make is :

> That Bill No. 21 be not now read a third time, but that it be referred back to the Committee of the Whole House for the insertion of the following clause in section 263 :—
>
> 'The maximum passenger tariff shall not exceed two cents a mile.'

Mr. JABEL ROBINSON (West Elgin). Mr. Speaker, I would like to have said a few words on this question, but the hon. member for East York has exhausted the subject, and I do not think he has left a word to be said that would not be a repetition of something that he has said. But if what he does say is true, the railway companies ought to extend their thanks to him for bringing the motion before the House, because, according to his argument, they would be benefited by adopting the lower rate. I think that is plainly shown every day by the fact that when there are excursion rates many more people travel. The Canadian people have friends living in various parts of the Dominion, whom they are anxious to visit ; and if the rate were lower, they would visit them more often than they do. A lower rate would facilitate business. People want to do business in different parts of the Dominion, but the rate being so high prevents them from going. The hon. member for East York referred to the passenger rate war, which I remember very well, between the Grand Trunk and the Canadian Pacific Railway, when they cut the rates in two, and more than in two. The consequence was that the travel became so enormous that the railways could hardly carry the people, and they made a great deal more money. As it is, the trains run on schedule time, and they start whether they have passengers or not, the trainmen have to be there, and they could just as well carry double the number they usually do, and in doing that they would make more money than they do now. Their excursion rates are sometimes as low as a cent a mile, and yet they make more money at these rates than they do at the ordinary rates. The government, I think, would be justified, for the benefit of the railway companies themselves, in inserting a clause in the Bill providing that in the older and more settled portions of the Dominion, at any rate, they shall carry all passengers for two cents a mile. In Great Britain every train is compelled to have a third-class carriage, on which the fare is a penny a mile, and the people of England nearly all travel third class. There are very few second-class travellers. There are some first-class passengers, noblemen ; but I have heard of a great many of them who travel third-class. I think we would be wise to do in this country as they have done in Great Britain—compel the railway companies to carry people at two cents a mile.

Mr. C. B. HEYD (South Brant). Mr. Speaker, it is a pity our two friends who have just spoken are not on the Canadian Pacific Railway and Grand Trunk Railway boards. Their experience in railway matters has been so extensive that they would be quite an acquisition to the management. Our friend from East York has apparently

paid a great deal of attention to this question. He has devoted a great deal of space in his newspaper to elucidating it, and he has more information to-day than he had a week ago, when he received so much that I thought he would abandon the project and would not speak of it again in this House. He was not aware then that the Michigan law, if applied to Canada, would bring only one railway under its operation. It is easy to talk of a two-cent rate and to read letters from people who would like to travel for nothing. I presume that if more people had known that their names would be immortalized in 'Hansard,' he would have got more names, and that if he would advocate a one-cent rate instead of a two-cent, he would have twice as many letters while, if he would advocate that every man who travels on a railway should be paid two cents a mile for travelling on it, he would have more letters still. There is a happy medium in this matter. Railways are not organized for philanthropic purposes, but for the purpose of making money for the people who put their money into them, and I take for granted that Mr. Shaughnessy and Mr. Hays know best whether a two-cent rate would be more profitable than a three-cent rate. If they do not know that, I would advise them to come to our two friends here in order to be properly informed how to run a railway system. Our friend from East York made us acquainted with the Michigan law, although he did not know, at the time he printed it, how it was going to operate. He has quoted it correctly to-day. He says that law demands a two-cent rate. There is not a law of that kind in Michigan. They have a law there providing that when a railway company earns $3,000 a mile on its passenger trains, the rate shall be two cents a mile, that when it earns between $2,000 and $3,000 a mile, the rate shall be two and one-half cents, and when it earns less than $2,000 a mile the rate shall be three cents. Now, the condition of that three-cent rate applies to every railroad in Canada to-day, except one. Would it be fair to apply the Michigan law to eighty different railways in Canada when only one comes within the condition of the law? I have selected two or three of our best railways in Canada to see how the Michigan law would work if introduced into Canada. The Canada Atlantic, with a mileage of 458 miles, earns $316,000, or at the rate of $700 a mile. It would require to earn just four times as much to come under the operation of the Michigan law. The Canadian Pacific, with its 7,321 miles, earns $9,000,000, or $1,300 per mile, which is two and one-half times as little as it should earn in orler to come under the Michigan law. The government railways, with 1,301 miles, earn $1,770,000, or $1,250 a mile, two and a half times as little as they should earn in order to come under the Michigan law. The Grand Trunk, with 3,142 miles, earns $6,500,000, or $2,100 a mile; the Canadian Northern, with 1,248 miles, earns $262,000, or $210 a mile; and the Canadian Southern, with 382 miles, earns $1,377,000, or $3,600 a mile. This is the only railway, out of the eighty railways which we find mentioned in the Blue-book, that earns enough to come under the operation of the Michigan law. Now, what is the status of the Canadian Southern Railway? It has a capital of $28,000,000, and its surplus, after paying its running expenses, is $519,000. The dividend on the $28,000,000 of capital is 2 per cent, and the price of the stock to-day is 62 cents on the dollar. If my hon. friends held that stock, would they think that the earning power of the road justifiel a reduction of the passenger rate from three cents to two cents per mile? I do not think they would. Even if we were all willing to adopt the Michigan system in this country, it would be of no earthly use, because it would only apply to this one railway, whose stock is selling at 62 cents on the dollar, and which only earns 2 per cent on its capital. It is very easy to place yourself at the head of certain popular movements, and, by considerable waste of gas and fuss and printers' ink, to create the impression that you are working in the interest of the great mass of the community; but some persons may be suspicious enough to suppose that the real object is to alvance the man who places himself at the head of these popular movements. And up to the present, the doubts which people entertain of the sincerity of the hon. gentleman cause them to look askance at these various popular movements simply because he puts himself at their head.

Mr. MACLEAN. I will follow you, if you will lead, and let you have the glory.

Mr. HEYD. I am not seeking notoriety. Besides it would not be in the interests of the country to apply the rule which the hon. gentleman advocates, because the conditions are different here from what they are in the thickly populated centres of the adjoining republic. If the Grand Trunk Railway charges two cents per mile in Michigan, it is not because it is compelled to do so by the Michigan law. It does not come under that law because its earnings in passing through that state only reach about $1,600 per mile; and if it charges a two-cent per mile rate, it does so because it is in competition with the Michigan Central and other railways, which come under the operation of the Michigan law, and charge a two-cent rate. In self-defence, the Grand Trunk Railway are compelled to do the same thing. But to compel Canadian railways to charge a two-cent rate instead of three, would simply beggar them. Before applying a rule of that kind, you should ascertain what effect it is going to have; and you will find that a rate which might be applied from New York to Buffalo would

not suit this country at all. There are 80 railways in Canada, comprising 18,730 miles of railway lines. The entire passenger earnings of these roads last year amounted to $22,600,000 or $1,200 a mile.

Mr. BELL. Passenger earnings ?

Mr. HEYD. Yes, the Michigan law only deals with passengers. The entire earnings were $22,600,000, or $1,200 per mile, or two and a half times too little to justify the imposition in this country of the Michigan law. In order that we might be in a position to apply such a law, it would be necessary for the Canada Atlantic Railway to earn $1,300,000, instead of $316,000. It would be necessary for the Canadian Pacific Railway to earn $20,000,000 instead of $9,231,000. The government railways would have to earn $4,000,000 instead of $1,770,000; the Grand Trunk Railway, $9,000,000 instead of $6,515,000, and the Canadian Northern Railway, $2,500,000 instead of $262,000. Or all the railways in Canada, which now earn $18,000,000, would have to earn $55,000,000. When that time comes, I shall then be prepared to support a resolution such as the hon. gentleman has now introduced, and I have not the slightest doubt that every other hon. member will do likewise.

Mr. CLARKE. Are there any railways in the state of Michigan which charge two cents ?

Mr. HEYD. They are not compelled to charge less than three cents unless their earnings are over $3,000 per mile.

Mr. CLARKE. Are there any which charge three cents?

Mr. HEYD. I do not know. There are railways in New York state which charge more than three cents per mile, but they only charge two cents in Michigan and where they are forced to do so by competition.

Mr. CLARKE. What is the law in New York state ?

Mr. HEYD. I cannot say. I have only learned what the law in Michigan is from my hon. friend's newspaper, and then I sought to ascertain how the Michigan law, which he wants us to adopt, would work out in Canada. It could not possibly work here. The only railway to which we could apply it would be the Canada Southern, whose stock is quoted at 62 cents in the dollar, and which pays a dividend of two per cent.

Mr. L. P. DEMERS (St. Johns and Iberville.) (Translation.) Mr. Speaker, the amendment introduced by the hon. member for East York has given rise to a discussion which is worthy of attention. It cannot be gainsaid that railway companies, in certain parts of the country have, at present, rates which are excessive, almost prohibitory. Thus, to limit myself to the constituency which I have the honour to represent here, the Grand Trunk Railway charge 50 cents for a twelve mile run from Stottsville to St. Johns. The fare from St. Johns to Montreal, a distance of twenty-seven miles, is one dollar. Fifty years ago, when the road was started, the fare from St. Johns to Laprairie and from Laprairie to Montreal and return, was only one dollar. To-day, the Grand Trunk own the Victoria Bridge, which, as we know, was built by means of the subsidies of the various governments, and yet the people in St. Johns are compelled to pay $1.50 for what used to cost $1. That is evidently an abuse on the part of the railway companies, and I congratulate the hon. member for East York on having brought the matter before the House. However, we should not lose sight of the fact that in the state of Michigan the earnings of the railway companies are taken into account. If the hon. member had introduced a resolution based on the Michigan law, I should have considered it my duty to support it. But I trust the Railway Commission will be instructed to inquire into that grievance and to remedy it.

The PRIME MINISTER (Rt. Hon. Sir Wilfrid Laurier.) We can all sympathize with the amendment proposed by my hon. friend from East York (Mr. Maclean) and supported by my hon. friend from West Elgin (Mr. Robinson). If we could travel upon the railways as we travel upon the King's highway, without paying toll to any body we should be glad to dispense even with this amendment. But, unfortunately, my hon. friend from East York will admit, and in this also I suppose he would be supported by my hon. friend from West Elgin, that if the public travels upon the railways they must pay some tolls to the company for the service they receive. The only point is, as has been stated by my hon. friend from East York himself, that we should pay a reasonable toll. We all agree upon that. But the difficulty arises as to what is a reasonable toll. My hon. friend wants to make a cast-iron rule for all cases that the rates shall not exceed two cents per mile. But, I desire to observe that it is not possible under the present circumstances to fix one rate, as he proposes to do by this amendment. There must be elasticity ; the rate cannot be the same in all sections of the country. Railway traffic, like all traffic depends for its profits upon the conditions in the locality in which it is carried on. There are some localities where a rate of two cents per mile would be very high ; there are some localities where a rate of three cents per mile would be very low. We must take account of the circumstances ; and the only way in which this can be done is that proposed in this very Bill. Instead of making a cast-iron rule from which the railways cannot deviate we leave it altogether to the commission

which is established by this Bill. I would call the attention of my hon. friend from East York, and also of my hon. friend from West Elgin, to section 257 of the Bill, which says :

> The board may disallow any tariff or any portion thereof which it considers to be unjust or unreasonable, or contrary to any of the provisions of this Act, and may require the company, within a prescribed time, to substitute a tariff satisfactory to the board, in lieu thereof, or may prescribe other tolls in lieu of the tolls so disallowed, and may designate the date at which any tariff shall come into force.

There is the remedy for the evil suggested by my hon. friend. For instance, if the gentleman who wrote to my hon. friend to complain of the rate from Ottawa to Prescott, instead of seeking to force upon the community an arbitrary rate of not more than two cents per mile, will apply to the board, the board will hear his complaint, will investigate the matter, and will say whether or not the rate shall be decreased. My hon. friend has said truly that competition brings traffic, and he has said truly that generally a decrease in tolls will ensure a larger profit. That is true generally, and it is true absolutely in the densely populated portions of the country. But my hon. friend knows that there are some parts of the country in which the population is so sparse that it would be impossible to carry out that rule. Now, I know for a fact that the population between Prescott and the city of Ottawa over what is now the Canadian Pacific road is very thin, and I am not prepared to say that a rate of two cents would be sufficient to give a profit to that railway carrying on this service. That would be a question to be investigated by the board. On the other hand, my hon. friend from St. John and Iberville (Mr. Demers) has told us of a rate of four cents a mile through one of the most densely populated sections of the province of Quebec, between Montreal and St. Johns. This rate of four cents per mile, I must say, seems to me extravagant, and, if it is found to be so, it will be reduced. The board would investigate such complaints, and in one case they might say the complaint is well founded and in the other it is not. That is substantial reason why parliament must come to the conclusion that such cases as have been referred to must be left to the board, which is empowered to deal with all such questions.

Amendment negatived.

Mr. MACLEAN. I desire to present another amendment.

Mr. SPEAKER. The hon. gentleman (Mr. Maclean), has exhausted his right to speak on this motion.

Mr. MACLEAN. That is, on the amendment just lost.

Mr. SPEAKER. On the third reading of the Bill. When the motion for the third reading is made, the hon. member has a right to speak. He spoke by moving his amendment, but if he were to speak again, he would be speaking twice on the same question.

Mr. MACLEAN. And, do you, Mr. Speaker, rule that I may not move another amendment ?

Mr. SPEAKER. When the hon. member has moved an amendment to the third reading, he has exhausted his right to speak on the motion for third reading.

Mr. T. S. SPROULE (East Grey). I would be disposed to move that the rate be 2½ cents per mile, if that was confined to Ontario. It seems to me that the hon. member for South Brant (Mr. Heyd) was not very fair in his remarks. He was not justified in trying to heap ridicule upon the hon. member for East York (Mr. Maclean) for making an effort to secure for the people of Canada the same rights as are enjoyed by the people in adjoining states of the American union under practically similar circumstances. It comes with very bad grace from one sent here to look after the interests of the helpless to abuse those who endeavour to do this, while the hon. gentleman (Mr. Heyd) himself does not try to do it. If the hon. gentleman were a solicitor for or an advocate for railway companies, I could understand him. But certainly this is not the duty he is sent here to discharge. The hon. gentleman said that because the Canadian railways did not earn as much as the railways in the United States, therefore, their rates should not be reduced to two cents per mile. But he seemed to forget one very important feature in connection with this matter, which is that, whereas the railways of the United States have received no state aid whatever, but were built with private capital, and therefore, must earn a reasonable dividend upon that capital, the roads in Canada, with which they are compared and which the hon. gentleman says should show as large earnings as the railways in the United States, were built very largely out of public money. So, if the earnings of the Canadian railways are not as large as those of the United States with which they are compared, that fact of itself is no argument in favour of a high rate here as compared with the low rate in the United States. I would like to ask the hon. member for South Brant a question. The state law in Michigan provides that railways whose earnings reach a certain figure shall not charge more than two cents per mile. Will the hon. gentleman say that only those railways whose earnings have reached this figure have made the reductions ? I am credibly informed that this is not the case, but that several other railways have made the reduction, notwithstanding that their earnings are not such as to compel them to do so. And I am informed also, that instead of that reduction

reducing their earning power, it has had the contrary effect, so that these railways have been benefited by the change. It does seem to me a clear case of hardship that the rates in Ontario should be higher than in Michigan on the same railways. Take the case of a man living in Chicago and travelling to Detroit. He travels over the Wabash system, 300 miles and pays $6. He enters Canada and travels over the same line 220 miles, paying two cents per mile or $4.40. But a Canadian gets on at Detroit travels on the same seat with the American for this 220 miles in Canadian territory, and pays $6.60.

Now, the Canadian pays $6.60 for travelling 220 miles, while the American pays 60 cents less for travelilng 300 miles, both travelling over the same road. The difference should be in favour of the Canadian, because that railway through Canada was subsidized by the state, whereas the same road through Michigan was not subsidized by the state. There would be no great injustice done to the railway company if we compelled them to give Canadians the same advantages that the party who lives in Michigan enjoys when he travels over that railway. While I do not think it would be fair to apply what the member for East York calls the flat rate of two cents a mile all over the country, I do think it would be no great injustice to the railways, especially those that run through the more thickly settled parts of Ontario, if we compelled them to charge no more than two cents a mile, or two and a half cents a mile. Therefore, I move that the Bill be referred back to the committee to insert a clause that the maximum passenger rate should not exceed two and a half cents a mile east of a meridian drawn from Port Arthur.

Mr. MACLEAN. I have listened to the answers that have been made to my arguments. I might refer to what the member for Brant (Mr. Heyd) said about me, and my desire for notoriety. I am very anxious for that notoriety, if he chooses to call it that, and I shall pursue it, irrespective of what his view may be. It is a pretty hard thing to fight the battles of the people in this country against some of the powers arrayed against you. There is no glory in it, it costs a good deal of money, and it is a very hard thing to fight your way through the mazes of parliament. You have to fight by yourself, you have no party behind you, you have no caucus behind you, you have to meet the derision of both sides, and sometimes an arrangement between both parties to side-track any progressive movement of that kind. I have fought for this reform for a good many years, and it is making headway. Take the question of government ownership. There was hardly a man beside myself to stand up for it, and I was said to be seeking notoriety. But the other day we saw the Prime Minister of this country stand up and make a proposition for a transcontinental railroad that implied so he said government ownership. So the movement is going forward, the idea is progressing, even against the wishes of a majority of the House, and I shall live to see it win out. I shall live to see this two-cent maximum passenger rate the law of the land, and when that time comes, if it does give me some notoriety, I do not care, because it is and idea that is worth fighting for. The people are all thinking about it, I could quote letters by the thousand about it. I have seen many letters written to the newspapers about it. This thing was worked out in the states, where it has been accomplished by agitation in the legislature. It was not worked out by a railroad commission, it was worked out by legislation wherever it has been accomplished. The legislature of the state of New York did it by a little amendment to a small Bill of the New York Central, 30 or 40 years ago, and all the other legislatures have come to it. The people of Manitoba have got it by a law of their legislature; in England they have got it, because they have got what is called the penny-a-mile rate, which is a parliamentary rate. They have it all over Europe. They have a one-cent a mile rate for passenger travel, and even less than that for labourers. In all these cases it has been obtained by an Act of the legislature, and not by an act of a commission. My right hon. friend is evading his responsibility, he is juggling with the question, and he has made no argument here at all. He says we have got a Bill before us, and there is a provision for regulating these charges, the commission will undertake to deal with it. I say they will never deal with it until they have parliamentary instructions to do so. We have given a large amount of consideration to this Bill. I compliment the premier and his government on this Bill, a great deal of consideration has been given to the commission and its duties. But, after all, it is only minor matters that are left to their discretion. For instance, we have defined what a railroad train shall be, and how it shall be equipped, with what sort of brakes. I say the time has come when we ought to define what the maximum passenger rate ought to be. It is easy to say that there are a lot of little railroads, as the member for Brant said, that cannot pay the axle grease by their passenger traffic. But their main revenue is from freight rates, and is it not fair to the people who travel in this country that if passenger rates have to come down, freight rates should go up a little? An adjustment could be effected in that way and the road would not lose a dollar.

If railroads running into thinly populated portions of the country are free to charge four cents, those sections will continue to be thinly populated. The Cana-

dian Pacific Railway want to get people into the North-west, and are carrying them from portions of the United States for one cent a mile into that country—so I am told; and they are charging them four cents a mile to get out. It is a good way to get them in, and it is a good way to keep them in. But they will never get population in that country until they are able to promise them not only a good country for raising wheat, but a good country to travel in, where they can go for two cents a mile. Then we hear a good deal about the Grand Trunk, and the member for Brant tells us it is a great, big corporation that spreads all over the country, and only earns a little over $2,000 a mile. The great bulk of its earnings come from the province of Ontario and the province of Quebec, and they are charging the people of those two populous provinces three and four cents a mile, and they say they have not got traffic. Why, sir, the traffic between the Detroit river and Montreal never was so great as it is to-day. They have not trains enough, they have not engines, they have not cars enough to handle the passenger traffic. Every train is overcrowded and belated by reason of the large traffic. Every night when you go from Montreal to Toronto you ask for a first-class ticket, and you pay three cents a mile at least, although every train between Montreal and Toronto, two and three trains a day, are loaded with people paying three cents a mile for that run. The company could carry them for two cents a mile and still make money out of it. Yet we are told that parliament should not interfere, that parliament should not make a maximum rate. I say again that there is a parliamentary way of getting reduced passenger fares. You could say to a railway company: If you give a cheap through-rate you must give a cheap local rate. I think I have proved my whole case. If you adopt the Michigan law it will settle the whole question. I would be quite willing to have the Michigan law applied to all roads that earn $3,000 a mile on passenger traffic, because, if the Michigan Central had to give a two-cent rate by reason of earning $3,000 a mile the Canadian Pacific Railway and the Grand Trunk Railway would give it next day. Yet, we are told by the right hon. leader of the government that we must not interfere with railway traffic because he has established a commission to do that. This reduction will never be attained except on the floor of parliament through the passing of an Act to that effect. What I would have liked to have heard the right hon. Prime Minister say is: This question is one that the people are talking about. We will instruct the commission to make a report upon it, to present the facts and then we will bring in a law. You can have a sliding scale applied to this question, either a geographical scale or a sliding scale based upon the earnings just as they have in Michigan, and the remedy can be accomplished in that way. But, we will not get that if we leave it to the commission. We could easily pass a law to-day on the lines of the Michigan law providing that any road that gives a two-cent a mile through-rate shall also give a two-cent a mile local rate. It need not be a very big Act of parliament. It could be put in three lines as they have it in Manitoba. Yet, the right hon. gentleman is going to give a hundred millions of dollars of the people's money to a railway corporation without imposing one condition upon that company. He came to parliament some years ago with the Crow's Nest Railway proposition and he said: I introduce a new doctrine into the legislation of Canada. I am the apostle of a new gospel and it is that when you give a railway company a great subvention you get some corresponding concession from it for the people. That is a good doctrine, but before you give the Grand Trunk Railway a single dollar for building a transcontinental railway you should say to Mr. Hays: One of the conditions of this concession is that you shall carry people in Ontario and Quebec for two cents a mile. If he did he would get it immediately. The Grand Trunk Railway Company having adopted that rate the Canadian Pacific Railway would be obliged to adopt it and the reduction would be brought about in that way. You could get it in a hundred ways, by diplomacy, by the exercise of political sagacity and by being ready to take advantage of every opportunity that comes. But when you say, merely; we are going to refer it to the railway commission you are not dealing with the question in a way which will bring about the remedy that we desire. If a man travels from Prescott and they charge him four cents a mile will he go to the commission and say that they have overcharged him and will the commission fix it for him? They will never do it, but a little political strategy in dealing with these companies when they are asking for great concessions would bring about this reduction in rates. You will get it in the way in which the Conservative government in Manitoba got it. The railway company came for concessions, they got their bonds guaranteed but the legislature of Manitoba said: We are dealing with you and we expect some return for the concessions that we are making and you must reduce the charges that you are imposing upon the public. The right hon. gentleman says that they are building railways, but you are not solving the transportation question by building railways. You are not solving the transportation question until you compel the railways to treat the great mass of the people reasonably in the matter of rates. Giving public money and public land away to the railways, running railways through inhospitable and unknown portions of the country is not solving the transportation problem, but you are solving it when you demand fair con-

sideration for the people and when you impose upon the railway companies the condition that they shall charge so and so. You give the Grand Trunk Railway Company $75,000,000, yea, $100,000,000 of the people's money and the same government that gives it to them allows them to charge, in the populous provinces of Ontario and Quebec, in some places, four cents per mile and in other places three cents per mile and yet does not impose a single condition upon the company. That is not a railway policy, that is not what the public expect and the public does not expect that any one who is stating his case, or at least is trying to state his case fairly in this House, will be subjected to the criticism or to the opposition that I have met here to-day. There is something else expected from this House. We are the guardians of the public interest, we are sent here to protect the rights of the people and we are not here to unload that responsibility upon a commission. Hon. gentlemen will find that the public expect that of them and they expect in some way that we in this House shall apply ourselves to the transportation problem and they do not expect that we shall give away more money without getting more concessions from the railway companies than we have. There is no other way to meet the situation than by dealing with these companies on a business basis and insisting upon concessions at a time that the agreement is made with them. It would only need three lines in a note from the premier sent to Mr. Hays to the effect that complaints have been made in parliament and that complaints have been made in the press about passenger rates in Ontario, that the people have been complaining especially that you carry people in Michigan for two cents a mile and carry them in Ontario for three cents a mile. How do you justify that? If he did so, the coon would have to come down. It does not need an Act of parliament; it simply needs an intimation from the leader of the dominant party in this country that if a reduction does not come then parliament will have to intervene in order to bring it about. Simply to dismiss this question by saying that it should be settled by a railway commission is not treating it as I think it ought to be treated by this House. The reduction should be brought about by a clause in the Railway Bill defining what the maximum passenger rate is. You can give it a sliding effect, either a geographical sliding effect or you can base it upon the earning capacity per mile of the road, or you can get it by agreement with the railways. In some way it can be done, the people expect that it shall be done and in order to test the question I am quite willing that the House shall vote upon my amendment.

The MINISTER OF JUSTICE. Did the hon. gentleman (Mr. Maclean) say that the Roblin government secured a two cent a mile rate in Manitoba?

Mr. MACLEAN. No, three cents a mile.

The MINISTER OF JUSTICE. Does the hon. gentleman say that that rate applies to the Canadian Pacific Railway?

Mr. MACLEAN. No, but by simply applying it to the Canadian Northern Railway the Canadian Pacific Railway adopts it and that is the object of that kind of legislation.

The MINISTER OF JUSTICE. Why did the Canadian Pacific Railway adopt it?

Mr. MACLEAN. They are carrying people at three cents a mile in Manitoba. My hon. friend said that it was four cents a mile all over the North-west.

The PRIME MINISTER. Competition, as was stated a moment ago.

Mr. MACLEAN. Competition based upon the agreement between the government and the railway company. That has been the effect in New York and Michigan. The law in Michigan is based upon an earning capacity of $3,000 per mile, but by reason of the competition they have a two cent per mile rate.

Hon. Wm. ROSS (Victoria, N.S.) I have listened with considerable attention to the two speeches that have been made by the hon. member for East York (Mr. Maclean) and I find in a great many instances that he is a greater reformer than the hon. member for South Brant (Mr. Heyd). The hon. member for South Brant speaks about undertaking to teach Sir Thomas Shaughnessy how to run a railway. We have nothing to do with anything of that kind, but what we have to do is to see that something is done in the interests of the people of Canada and that is to apply if possible the reform of cheaper rates to the railways of Canada. The hon. gentleman commenced, I think, by making a very fine free trade speech because he gave us the assurance that whenever rates are reduced there is an increase in the consumption and that is an increase in the consumption and that in this case there will be an increase in the traffic. When the subject of the government railway will come before the House I hope to be able to prove, that in the case of the government railways of Europe where a reduction in traffic rates has been made, the amount collected in six months was more than was collected during twelve months when the rates were high.

Mr. MACLEAN. Hear, hear. Was that reduction made by Act of parliament?

Hon. Mr. ROSS (Victoria, N.S.). I will get the particulars when the proper time comes. Now, we must not look upon the day of small things in the question of reforms. It took Wilberforce almost thirty-five years before he was able to secure the emancipation of the slaves, and people laughed at him in derision when he first brought that subject up in the parliament of

Great Britain. The greatest reforms begin with the smallest agitation, and while I disagree with my hon. friend (Mr. Maclean) as to the manner in which he seeks to bring about this reduction of rates, I think that public opinion will be able to operate on the government to such an extent that they will eventually call the attention of the commission to this reform. I think it would be very desirable that the government, in anticipation to the Bill that will be introduced some day, should have their eye on cheap passenger rates on this railway when it is constructed. While the hon. member (Mr. Maclean) may be called an agitator, and while it may be said that he is speaking and writing for notoriety, yet he is speaking in the interest of the public, and the public will take note of what he is saying. Anything that tends to increase the benefits to and the comforts of the people of Canada is bound to receive attention from the people of Canada. This is not at all a small question, but I do think that my hon. friend (Mr. Maclean) has not taken the proper way of bringing about the reform he desires.

House divided on the amendment (Mr. Maclean) :

YEAS :

Messieurs

Avery,	Kidd,
Bell,	Lavell,
Bennett,	Maclean,
Birkett,	McGowan,
Blain,	Monk,
Cargill,	Morin,

Amendment negatived, main motion agreed to, and Bill read the third time, and passed.

RAILWAY DEBTS.

House again in committee on Bill (No. 155) respecting the jurisdiction of the Exchequer Court as to railway debts.—The Prime Minister.

On section 4,

Mr. MONK. This Act is merely to apply to the future, I suppose ; it is not to apply to any proceedings already begun ?

The MINISTER OF JUSTICE. No. I move to amend this section by inserting after the word 'renewal' the words 'and completion,' and to insert the words 'of the' between the words 'and' and 'institution,' so that the clause will read :

The remuneration of the receiver shall be fixed by the said court, as also shall the expenses lawfully incurred by him as receiver, including the expenses of working, operation, maintenance, renewal and completion, and of the institution and defense of actions aforesaid, be a debt of the company.

Amendment agreed to, and section, as amended, agreed to.

On section 5—when company is insolvent,

The MINISTER OF MARINE AND FISHERIES moved :

That the section be amended by the addition thereto of the following words : 'But such transfer to trustees shall not exclude such railway from the provisions of the present Act.

Hon. Mr. HAGGART. Does the hon. Minister of Justice intend this to apply where a railroad has passed into the hands of trustees under the Railway Act ?

The MINISTER OF JUSTICE. That is expected by the section. The hon. member must bear in mind that this is not my Bill, but a Bill introduced by a private member. I do not know the effect of this amendment at present.

Mr. MONK. As I understand the section, a railway in the possession of trustees is excepted from the section as printed, but the amendment brings it back, and changes completely what is previously decreed in the section itself.

Mr. DEMERS (St. John and Iberville). Section 5 of the Winding Up Act defines acts of insolvency; and paragraph (g) of that Act says that the transfer by a company of its assets to trustees is an act of insolvency; but here we provide that this transfer, if done by virtue of section 94 of the Railway Act, will not be interpreted as an act of insolvency; and under the amendment suggested that will not prevent the company from coming under the terms of this Act.

Mr. MONK. I have not before me paragraph (g), to which my hon. friend refers; but this section says that that paragraph shall not apply to cases where possession of any railway has been taken by trustees for bondholders; and yet by the amendment it is said that such transfer shall not exclude the railway from the provisions of the present Act.

Mr. DEMERS (St. John and Iberville). Paragraph (g) of section 5 of the Winding Up Act says that the company is deemed insolvent if it has made any general conveyance or assignment of its property, and so forth. What we mean by this section is that the assignment will not be an Act of insolvency by itself; but by the amendment we provide that that will not prevent the company being subject to the provisions of this Act if it is otherwise insolvent.

Mr. MONK. Would it not be better to state that in the section? Because, as the section reads, with the amendment, I think it would appear that the assignment under paragraph (g) would take the company out of the operation of this Act, while further on the amendment seems to contradict this.

Mr. WADE. The provision of this section seems to be very simple. The effect of it is that all the provisions in section 5 of the Winding Up Act defining insolvency on the part of a company shall prevail except paragraph (g) and it shall be insolvent and subject to the provisions of this Act; but the conveyance of its property under paragraph (g) would not itself be an Act of insolvency.

Mr. MONK. Are there any companies in the hands of trustees to which this law would apply?

Mr. FRASER. If the section is a good section, it is indifferent to us whether or not there is a certain railway which is taken charge of by trustees of bondholders. There is nothing in the section which would hasten that if it were passed. That is to say, if this Act were in existence, it would not help them to take possession of it. They would do it as easily without this Act as with it.

Mr. MONK. It may be a very good section in itself, but it may not be wise to apply it to some company which is at present being administered by trustees for the benefit of bondholders. I do not know whether there is any such company. I have heard of the Atlantic and Lake Superior Railway or a portion of it being administered for the benefit of some bondholders in England. I believe there is a receiver acting on behalf of the bondholders and administering the railway for their benefit. It is only fair to ask if these bondholders, whose property is being administered under the existing law for their own benefit, will suddenly find themselves brought under the operation of this law.

The MINISTER OF JUSTICE. I know of two railways now in the hands of bondholders, but there is a very considerable difference between bondholders and receivers. The Témiscouata railway has been taken possession of by the bondholders because of the default on the part of the company to pay interest on the bonds. The Lake St. John railway is also in the hands of the bondholders and administered by trustees. Neither of these railways will be affected by this legislation unless they come under the operations of its provisions with respect to the Winding Up Act.

Mr. MONK. They are provincial railways.

Hhe MINISTER OF JUSTICE. I think the Lake St. John is, but I am not quite sure. It is entirely within the limits of the province, and it crosses the line of the Canadian Pacific Railway. But whether it has been declared a Dominion railway I cannot say.

Mr. MONK. Is the Atlantic and Lake Superior?

The MINISTER OF JUSTICE. I do not know. That also is in the hands of trustees of the bondholders. That, however, is altogether different from its being in the hands of receivers. The trustees are not receivers. A railway may be managed by the trustees of the bondholders in such a way as to escape the application of this Act.

At six o'clock, committee took recess.

After Recess.

Committee resumed at eight o'clock.

Mr. MONK. I have not had time to examine very carefully the amendment, but would like to call the attention of the committee to this section 5, which is being amended. In this section it is stated that a

railway company is insolvent in certain cases, but section 5 of the Winding Up Act is not to apply to cases where possession of any railway or any section thereof has been taken by trustees for the bondholders under the provisions of section 94 of the Railway Act. There must be some error there, because section 94 of the Railway Act does not seem to have any bearing upon this subject. It is more than probable that certain proceedings have been taken under chapter 44 of 62-3 Victoria, passed in 1899. That statute must have been intended to apply to some special cases where it was deemed necessary to protect the holder of mortgage bonds or debentures; and by that statute the jurisdiction is given to the Exchequer Court to order the sale of a railway and the placing of it in the hands of a receiver upon the demands of the bondholders. The effect of the measure now before the committee is to repeal the provisions of that Act respecting the jurisdiction of the Exchequer Court with regard to the rights of the bondholders. What I would like to call the attention of the government to is that if the amendment proposed by my hon. friend from Bonaventure (Mr. Marcil) is accepted and the statute of 1899 repealed, as it is by the following section, any steps taken by the bondholders for the protection of their rights under that statute will cease, and any railway company ordered by the Exchequer Court to be put under the sequestration of a receiver may, at the instance of any chirographic creditor, be put into insolvency and the conservatory orders made by the Exchequer Court to protect the bondholders and the other creditors may be interfered with. It seems to me that we have to be very careful about adopting this amendment, particularly as my hon. friend from St. John and Iberville (Mr. Demers), who prepared this Bill, inserted in it a special proviso, which says that the provisions of this section shall not apply to those cases where bondholders, under the direction of the Exchequer Court, have obtained possession of a railway which had made default in the payment of interest on the bonds.

Mr. WADE. Section 94 of the Railway Act is the section with regard to mortgage liens, enabling a company to secure its bonds and debentures by a mortgage lien on the assets and revenues of the company present and future. This section reads:

> A railway is insolvent within the meaning of this Act, in all cases which constitute insolvency under sections five and six of the Winding Up Act, except that paragraph (g) of section five of that Act shall not apply to cases where possession of any railway or section thereof has been taken by trustees for bondholders under the provisions of section 94 of the Railway Act.

Mr. FRASER. That is, relating to mortgages?

Mr. WADE. Yes. Section 94, subsection 2, of the Railway Act says:

> By the said deed the company may grant to the holders of such bonds, debentures, or other securities, or the trustees named, in such deed, all and every the powers, rights and remedies granted by this Act in respect of the said bonds, debentures, or other securities, and all other powers, rights and remedies not inconsistent with this Act, or may restrict the said holders in the exercise of any power, privilege or remedy granted by this Act, as the case may be.

Now, if hon. gentlemen will look back to section 84 and sections in that context, they will find that there are powers of bondholders——

Mr. MONK. Is my hon. friend (Mr. Wade) quoting from the revised statutes?

Mr. WADE. I am quoting from the Consolidated Railway Act, the Act of 1888. This is the section referred to in the Bill, and it is the law as it stands to-day. We do not know that the Railway Act which left this House this afternoon will ever become law, and we could not legislate on the basis of that. This simply refers to the powers which may be given to bondholders under trust deed to secure bonds and debentures under the Railway Act of 1888. The company has the power to create a trust with which to secure the debentures, and they have a right under that deed to give power to the bondholders to take possession of the road; and the whole machinery is complete within the Act for the bondholders taking possession in that way, and operating the road. It is provided that subsection (g) shall not apply to cases of that kind. Subsection (g) in the Winding Up Act gives the following as one of the proofs of insolvency on the part of a company:

> If it has made any general conveyance or assignment of its property for the benefit of its creditors, or if, being unable to meet its liabilities in full, it makes any sale or conveyance of the whole or the main part of its stock in trade or assets, without the consent of its creditors, or without satisfying their claims.

The effect of this section is that it virtually declares that a deed of trust given to secure the debentures or bonds is not a conveyance within the meaning of subsection (g); and the only thing we have to consider is what effect the words proposed have upon that section, because without the amendment, that is not an act of insolvency. A company may be insolvent for other reasons mentioned in the subsections from (a) to (h) inclusive. There is no exception with regard to the others, but with regard to subsection (g), it says in effect that the giving over or taking possession of the property by the bondholders under the provisions of a trust-deed does not come within the class or conditions named in the subsection. Then it goes on:

And except further that the delay to secure or compound allowed in the case mentioned in section six of the Winding Up Act shall be fifteen days instead of sixty.

And this amendment:

But such transfer to trustees shall not exclude such railway from the provisions of the present Act.

That is, the mere fact of having given such a deed, the mere fact that the bondholders have taken possession of it shall not of itself bring that company within the operation of this Act. If it is insolvent for other reasons, then the provisions of the Act are applicable to it. To my mind, the adding of these words do not make any difference. The exception certainly does not go beyond what it expresses, and, if that be true, it is almost unnecessary to have these other words. I suppose they are put in to guard against any uncertainty. This Act is operative upon a company that has given a deed to secure its bonds and the bondholders have taken possession of the road under the provisions of the deed, then if there is default in these unsecured debts or if the company have failed to operate the road for the period named in the section itself, the creditors in the first place or any member of the public in the other case, may come to the Exchequer Court and commence proceedings for a decree for the sale of the road. I suppose the court has absolute jurisdiction to do what is right, and any order to sell granted under such circumstances would have due regard to the rights of the bondholders. In a case of this sort, where the bondholders have stepped in and are operating the road for the purpose of obtaining the payment of their bonds or the interest on their bonds, I think the court would be slow indeed to order a sale at the instance of unsecured creditors, if that sale would accomplish any possible injury to the secured creditors, the bondholders.

Hon. Mr. HAGGART. Under the Act of 1899, the Exchequer Court has the power to order either a foreclosure sale, where a railway is insolvent, or it may appoint a receiver. Suppose they appoint a receiver instead of ordering the foreclosure or sale, would the judgment creditor, under this Act, or under the amendment proposed by the Minister of Marine and Fisheries (Hon. Mr. Préfontaine) have the power of superseding the order of the court and making an absolute sale?

The MINISTER OF JUSTICE. I do not think it would. I think I can point out to my hon. friend how we can make that clear, that nothing done now should interfere with any proceedings begun in the Exchequer Court under that Act. We might add to section 6 a few words so that it will read as follows:

Chapter 44 of the statutes of 1899, intituled: An Act respecting the jurisdiction of the Exchequer Court as to railway debts is repealed except as respects pending proceedings.

We might add these words 'except with respect to pending proceedings' to meet the difficulty I have suggested.

Mr. MONK. That proviso covers the objection which presented itself to my mind with respect to the section we have just adopted. But it is evident that the statute of 1899 was passed to provide for cases which were then presenting themselves. I suppose the wording of that amendment would cover not only proceedings actually pending, but, proceedings that had been adopted under the statute of 1899. A receiver having been named, the other proceedings would be continued. I have prepared an amendment in these words, but probably my hon. friend's is better:

But all proceedings begun under the provisions of the said Act shall be continued and terminated as if such repeal had not been enacted.

The MINISTER OF JUSTICE. I think that is better than mine, I accept that. That has been thought out. I understand that all proceedings begun under the Act of 1899 are to be continued as if the Act had not been repealed.

Mr. MONK. Just so.

The MINISTER OF JUSTICE. As I understand it, any proceedings begun under an Act should not be interfered with by subsequent legislation, because it would render our legislation absolutely unreliable to attempt to do anything of that sort. We cannot by legislation give a court jurisdiction, and, then repeal it to-morrow and render void all proceedings taken under it.

Mr. FRASER. Unless there are words contradictory in the Act, saying that all proceedings under previous Acts must be stopped, otherwise they must go on.

Section, as amended, agreed to.

The MINISTER OF JUSTICE. When this Bill was up before, the leader of the opposition made some observation with respect to our taking from the provincial courts a jurisdiction which is now vested in them, and I promised to consider the matter. I have prepared and submit now an amendment for the purpose of protecting the provincial courts in rights they now have respecting their jurisdiction over railway corporations. I move that the following amendment be added as a subsection to section 1:

Nothing herein contained shall affect the present jurisdiction of any court of a province in any such matters as aforesaid affecting railways or sections thereof wholly within the province, and the superior courts of a province now possessing such jurisdiction shall, as regards such railways and sections of railways, have concurrent jurisdiction with the Exchequer Court now possessing such jurisdiction.

My opinion was that this Act should not interfere with such jurisdiction as provincial

courts now have, but the leader of the opposition was under the impression that there might be some doubt, and in deference to his opinion, I submit this amendment. Perhaps it would make it still clearer if we were to make it read this way: 'Should continue as regards such railways and sections of railways to have concurrent jurisdiction.'

Mr. FRASER. My only difficulty is this: In passing this legislation are we not assuming that we can take away the jurisdiction of the provincial courts? We should not assume that we can by any act of this kind interfere with the powers of the courts within the provinces and say that we leave that which we could not take away.

Mr. MONK. We do not say that in the amendment.

Mr. FRASER. You assume that or else you would not pass it.

The MINISTER OF JUSTICE. The hon. leader of the opposition (Mr. Borden, Halifax) was of the opinion that in certain provinces the superior court had jurisdiction to deal with this matter. We want this jurisdiction to be continued but we do not want to add anything to it. We are creating a new jurisdiction in the Exchequer Court to deal with these matters that cannot be dealt with by the provincial courts. That is the intention of the committee as I understand it?

Hon. Mr. HAGGART. Yes.

The MINISTER OF JUSTICE. This amendment is merely to carry out the intention of the committee.

Section, as amended, agreed to.

The MINISTER OF JUSTICE. The committee will remember that when we were dealing with section 3 the last time this Bill was being considered the question was raised as to whether the receiver should have the right to make any expenditure in respect to the completion of the railway. I was asked to prepare an amendment so as to make it absolutely clear that the receiver should not have the right to do anything in respect to new works except under the direction of the court. I therefore beg to move for leave to insert a section between sections 3 and 4 which will be known as section 3a, as follows:

> The receiver may also, if the court so directs, either upon his appointment or subsequently do all acts necessary for the completion of the construction or equipment of the railway or any section

That is to make it sure that there shall be nothing done except under the direction of the court.

Section agreed to.

Mr. WADE. There is one matter that I would like to draw the attention of the hon. Minister of Justice to, and that is the question of the jurisdiction of the Exchequer Court and as to the advisability of extending the jurisdiction of the Exchequer Court especially in view of the last amendment which seems to put it beyond peradventure that the provincial courts are not to have jurisdiction in regard to a railway which is only partially in a province and which extends beyond it. Section 75 of chap. 135 defines the jurisdiction of the Exchequer Court. Subsection 2 of that section reads as follows:

> The Exchequer Court shall have exclusive original jurisdiction in all cases in which demand is made or relief sought in respect of any matter which might, in England, have been the subject of a suit or action in the court of exchequer on its revenue side against the Crown.

Section 76 reads as follows:

> The Exchequer Court shall also have concurrent original jurisdiction with the courts of the several provinces, in all other suits of a civil nature at common law or equity, in which the Crown, in the interest of the Dominion of Canada is plaintiff or petitioner.

Under section 76, if at all, the Exchequer Court would have the power of granting an injunction or the power of taking any extraordinary means of that sort. The wording of the section, as will be observed, is as follows:

> The Exchequer Court shall also have concurrent original jurisdiction with the courts of the several provinces, in all other suits of a civil nature at common law or equity, in which the Crown, in the interest of the Dominion of Canada, is plaintiff or petitioner.

If the provincial court has not jurisdiction over a road which runs through two provinces, then, under this section, the Exchequer Court would have no jurisdiction to grant this relief in respect to a road which runs through two provinces and its jurisdiction would be confined to that which is conferred by the provisions of this Act and that jurisdiction is confined to the matter of sale either upon the motion of a creditor, or upon the motion of a bondholder or mortgagee. It has not occurred to my mind until very recently, and I am not at all clear about it, but I would invite the attention of the hon. Minister of Justice to it and also to the subsequent provisions of sections 86 and 88 in regard to the enforcement of the judgments of the Exchequer Court by execution.

Mr. FRASER. Does the hon. gentleman think that the words in paragraph (a) of section 1 of this Bill 'at the instance of the Minister of Railways and Canals,' mean the Crown, because if not, there is no reference in this Bill to the Crown acting?

Mr. WADE. Then my argument has so much more force in that case. The creation of the jurisdiction which is conferred by this Bill as amended really is equivalent to

saying that the provincial courts have no jurisdiction in cases where the railway is partially in one province and partially in another; in other words, except within the boundaries of the province the provincial court has no jurisdiction.

Mr. FRASER. I would like to ask the hon. gentleman (Mr. Wade) if the section which he read declaring that the Exchequer Court shall have concurrent jurisdiction with the provincial courts does not relate exclusively to cases where the Crown is a party to the suit.

Mr. WADE. Of course it relates to cases where the Crown is a party to the suit.

Mr. FRASER. Only ?

Mr. WADE. Yes only. It says :

The Exchequer Court shall also have concurrent jurisdiction with the courts of the several provinces, in all other suits of a civil nature at common law or equity, in which the Crown, in the interests of the Dominion of Canada is plaintiff or petitioner.

The case I have in mind is one like this : suppose a company has a contract with the government to build a railway and the government is to pay a subsidy for the building of the road ; suppose the government had paid a portion of the subsidy and they wished to enforce the contract. The question in my mind is as to the Exchequer Court jurisdiction ; and if it is a road which is partly in one province and partly in another, is there any court now that has jurisdiction ? It is not desirable that we should beyond doubt clothe the Exchequer Court with jurisdiction ?

Mr. FRASER. It seems to me that the Crown would never want to sell the railway although they might take possession of it. I doubt if the government would ever sell a railway unless the contract was specifically made to provide that the government can sell it.

Mr. WADE. If the Crown was a creditor there would be no trouble about the Crown proceeding under this present Bill, but I submit to the attention of the Minister of Justice the case in which the Crown is not a creditor.

Bill reported, read the third time, and passed.

JUDGES' RETIRING ALLOWANCES.

House again in committee to consider the proposed resolution :

Resolved, that it is expedient to amend the Supreme and Exchequer Courts Act, the Exchequer Court Act, and the Act respecting Judges of Provincial Courts, and to provide as follows :

1. If any judge of the Supreme Court of Canada, or of the Exchequer Court of Canada, or of any superior court of Canada, resigns his office, His Majesty may, by letters patent under the Great Seal, reciting such judge's age and period of service, grant unto him an annuity equal to the salary of the office held by him at the time of his resignation ; to commence immediately after his resignation, and to continue thenceforth during his natural life ; provided such judge has (a) attained the age of seventy-five years, and continued in office as judge of one or more of the said courts, or as such judge and as stipendiary magistrate of the North-west Territories, for twenty years or upwards ; or (b) attained the age of seventy years, and continued in office, as judge of one or more of the said courts for twenty-five years or upwards ; or (c) continued in office as judge of one or more of the said courts for thirty years or upwards.

2. If any judge of the Supreme Court of Canada, or of the Exchequer Court of Canada, or of a Superior Court of any of the provinces of Canada, resigns or has heretofore resigned his office as such judge, to accept the office of lieutenant governor of a province, and if he serves, or has served as lieutenant governor, and is not otherwise eligible for any retiring annuity, as such judge, His Majesty may, at any time after the expiration of the term of service of such judge as lieutenant governor, grant unto such judge an annuity equal to two-thirds of the salary annexed to the judicial office which he held at the time of his resignation ; to commence immediately upon the issue of such letters patent, and to continue thenceforth during his natural life.

3. Every county court judge who has attained the age of eighty years shall be compulsorily retired ; and to any judge who is so retired, or who, having attained the age of seventy-five years, resigns his office, and who in either case has continued in office for a period of twenty-five years or upwards, His Majesty may grant an annuity equal to the salary of the office held by him at the time of his retirement ; or if he he has continued in office as such judge for a less period than twenty-five years, equal to two-thirds of such salary ; provided that to any such judge who is so compulsorily retired, or who so resigns within years after the passing of the Act based upon these resolutions, there may be granted an annuity equal to the full salary of the office held by him at the time of his retirement or resignation, irrespective of the number of years he has continued in office.

4. If any judge of a county court, after having continued in office for a period of thirty-five years, and become afflicted with some permanent infirmity, disabling him from the due execution of his office, resigns his office, His Majesty may, by letters patent under the Great Seal of Canada, grant to him a pension equal to the salary of his office at the time of his retirement; the said annuity to commence immediately after his retirement, and to continue thenceforth during his natural life.—The Minister of Justice.

On section 1.

The MINISTER OF JUSTICE (Hon. Charles Fitzpatrick). I may explain that the first clause makes provision for Superior Court judges, and the judges of the Exchequer Court and the Supreme Court : that they shall have the right to retire upon their full salary upon the occurrence of any one of the following conditions : That a judge shall be 75 years old and have 20 years

service ; or 70 years and 25 years service ; or 30 years service irrespective of age.

On section 4,

Mr. SPROULE. What difference do you make between stipendiary magistrates of the North-west Territories and other stipendiary magistrates ?

The MINISTER OF JUSTICE. I ought to say that this is a special provision made applicable to Mr. Justice Richardson, who went to the North-west Territories a great many years ago at the beginning of the organization of the territories and who served for many years as stipendiary magistrate. During the time he performed the duties of stipendiary magistrate he really was a Superior Court judge. He is a very old man and it would be unfair to allow others who have not performed any greater service than he has, to retire on full pay and not give him the benefit. This is to provide for the case of Mr. Justice Richardson, of Regina.

Hon. Mr. ROSS (Victoria, N. S.). What does the Minister of Justice propose doing in the case of judges who are not able to act, and will never be able to act, not because of old age, but because of infirmity. There ought to be some provision for a case of that kind. I have a case in my mind now in which a young judge has been striken with illness so that he is not able to, and will never be able, to sit on the Supreme Court bench of Nova Scotia again. There should be some provision for cases of that kind.

The MINISTER OF JUSTICE. I presume that my hon. friend (Hon. Mr. Ross) refers to the case of Mr. Justice Henry, of Halifax, and that is a case of very, very great hardship.

Hon. Mr. ROSS (Victoria, N.S.). It is to him I refer.

The MINISTER OF JUSTICE. Mr. Justice Henry is a very distinguished man who was appointed by Sir John Thompson a few years ago and who in recent years has been afflicted with an infirmity which makes it impossible for him to communicate his ideas or to perform his duties. It is one of those cases of hardship which I find it very hard to deal with, and I would prefer not to be asked to deal with it at the present moment in connection with this particular Bill. We all sympathize with Mr. Justice Henry, and I would prefer if my hon. friend would allow the matter to remain in abeyance for the present at all events.

Hon. Mr. ROSS (Victoria, N.S.). I am satisfied to leave the case in the hands of the Minister of Justice.

Mr. WADE. I also am quite satisfied that it should be left to the Minister of Justice to deal with the case, but I do not wish the matter to pass without saying a word in endorsation of the remarks made by the hon. member for Victoria (Hon. Mr. Ross). The case of Mr. Justice Henry is one of peculiar hardship. He is a comparatively young man who has not sat more than ten years on the bench, and I do trust that the Minister of Justice will see his way clear to give the greatest measure of relief he possibly can. Permit me to refer to the statement made by the Minister of Justice the other night, when he said that he did not propose to do anything at present with regard to the salaries of judges. I urge upon him now, as I have already urged upon a former Minister of Justice, the total inadequacy of the salaries that are meeted out to our judges in the province of Nova Scotia. They have only $4,000 a year, although they perform quite as important duties as the judges in the other provinces. I am at a loss to understand how any hon. gentlemen can defend the payment of only $4,000 a year to the judges of Nova Scotia, and $5,000 a year to judges in other provinces. It is absolutely unfair, and I think we can appeal to the sense of fair play and justice of members on both sides of the House, that these salaries ought to be readjusted.

The MINISTER OF JUSTICE. The other day my hon. friend from Elgin (Mr. Robinson) mentioned the case of Mr. Justice Hughes, of St. Thomas, and I beg to say to my hon. friend that I hope to be able to meet his views in connection with that matter.

Resolution reported, and read the first time.

The MINISTER OF JUSTICE moved that the resolutions be now read the second time and agreed to.

Mr. JABEL ROBINSON (Elgin). Mr. Speaker, I asked the hon. Minister of Justice to allow the case of Judge Hughes, of the county of Elgin, to stand until he had served his fiftieth year as judge of the county, and the minister promised to do so.

The MINISTER OF JUSTICE. The case of Mr. Justice Hughes was brought to my notice by the hon. member, and I expect at a later stage to make a statement on that subject; but in the meantime, I may say that I have consulted those in authority, and we consider that this application on behalf of Mr. Justice Hughes is a very reasonable one, and one which we hope to be able to meet.

Mr. ROBINSON (Elgin). Thank you.

The MINISTER OF JUSTICE moved for leave to introduce Bill (No. 243) to amend the Supreme and Exchequer Courts Act, the Exchequer Court Act, and the Act respecting Judges of Provincial Courts.

Motion agreed to, and Bill read the first and second time, considered in committee, reported, read the third time and passed.

PENITENTIARIES ACT AMENDMENT.

House in committee on Bill (No. 217) respecting penitentiaries.—The Minister of Justice.

On section 42—visitors,

The MINISTER OF JUSTICE. There is a slight change there. Under section 41 of the Revised Statutes of Canada, chapter 182, in addition to the persons mentioned in this section as authorized to visit the penitentiaries were the members of any local legislature. Now, the local legislature have no authority over our penitentiaries, and I thought it right to strike them out. I did not see why they should have authority to visit institutions that are under our exclusive control.

On section 45—receiving of convicts,

The MINISTER OF JUSTICE. I thought it necessary to make the change in that respect by the addition of the words 'unless certified by the surgeon of the penitentiary to be suffering from any dangerously infectious or contagious disease.' During the prevalence of small-pox at one time at St. Vincent de Paul we received prisoners suffering from that disease, and were put to a great inconvenience for that reason. Now, if the prisoner comes to the penitentiary suffering from a contagious disease, we thought we ought to have the privilege of refusing to receive him until he is rid of the disease, otherwise all sorts of inconvenience to the penitentiary will result.

Mr. FOWLER. I think it would be better to add some words to provide that in that case the prisoner shall be taken back to the place from which he came.

The MINISTER OF JUSTICE. I see that. We had better let that section stand.

Section allowed to stand.

On section 46, subsection 2—custody of convict from time of sentence,

Mr. FOWLER. I understand that this is before he has gone to the penitentiary. I would make that the certificate of the judge and not of the clerk of the court.

The MINISTER OF JUSTICE. This is intended to allow us to remove prisoners from a penitentiary which has become congested to some other. For instance, in Stony Mountain penitentiary we have more prisoners than can properly be taken care of, and it is necessary to remove some to St. Vincent de Paul. That is now beyond our control.

Mr. FOWLER. But suppose a man in the maritime provinces sentenced to the penitentiary and, instead of being taken to Dorchester, is taken to St. Vincent de Paul or Kingston. If the certificate is given by the judge it would be better than if given by the clerk of the court. The judge is the more responsible officer.

The MINISTER OF JUSTICE. My hon. friend (Mr. Fowler) will notice that this refers to a copy of the sentence taken from the minutes of the court and certified by the judge or by the clerk. That is the law as it now stands. I have no doubt there is a reason why it was made as it is, though I am not able to state the reason at the moment. I would not like to make a change without knowing more about it.

Progress reported.

SUPPLY—CONCURRENCE.

House proceeded to consider resolutions reported from Committee of Supply.

The MINISTER OF FINANCE. I propose to ask the House now to grant concurrence in the items of the supplementary estimates of the past year which remain undisposed of, so that we may be able to complete the Supply Bill. Not only has the year closed, but the time fixed for closing the books of the year is close at hand; it is therefore very desirable that we should give preference to this business.

Railways and Canals, chargeable to capital, Galops Rapid, deepening and widening, $25,000.

Mr. REID (Grenville). Mr. Speaker, I would like to ask the hon. Minister of Finance (Hon. Mr. Fielding) what this $25,000 is for. As I understand, these estimates are for expenditures that have been made between the 1st July, 1902, and the 1st July, 1903.

Hon. Mr. HAGGART. Before the hon. minister answers that I suppose my hon. friend (Mr. Reid, Grenville) will have the same opportunity of discussing this as in Committee of the Whole?

The MINISTER OF FINANCE. I have no objection. The item is to pay the Gilbert Company for work done in the Galops Rapid channel which was the subject of some discussion in the House a year ago. There appeared to be some misunderstanding as to the orders for this work. The minister stated last year that he had not authorized the doing of the work, and at the time it was held up for further consideration. However, although there was some question as to the authority for the work, and the minister stated he did not give the authority himself, it appears that the work was done, and the minister also appears to have come to the conclusion that inasmuch as the work was done and was likely to serve a useful purpose, the government should make provision for payment. Accordingly he placed that item in the estimates and had it submitted to the House. The theory upon which, I presume, my late colleague took that step was that a very large sum of money had been expended on the work, and that it was wise

to finish it. The work has cost, I understand, $800,000 or $900,000. It was begun as far back as 1881, under the advice of the late John Page, who was the chief engineer of canals at the time. It has been going on for a series of years, and recently the minister had made up his mind that it was wise to complete it. He therefore put in his estimates this sum of $25,000 to pay this past claim of the Gilbert Company, and he also proposed in the main estimates a further appropriation with a view of finishing the work.

Mr. REID (Grenville). I may say, Mr. Speaker, that I have raised objection to this work at different times in this House, but of course the present acting minister (Hon. Mr. Fielding) does not understand the position of affairs as well as the late minister, who had been in charge of the department. I wish to explain now the whole position of this matter. The contract was let by the government in power in 1878 (not in 1881) to make this channel through the Galops rapids. It was originally let to Wm. Davis & Sons, and they assigned it to this Gilbert firm. They continued this contract for a few years under the late Mr. Page and succeeded—at least as they claimed—in making a channel 200 feet wide through these rapids. When the Hon. Mr. Haggart took charge of the Railway Department he came to the conclusion, after examination, that it would be an impossibility for steamers to use this channel even though it were widened and deepened as proposed, and so he changed the plans and built a lock adjoining the rapids which steamers could use in navigating that part of the St. Lawrence. That lock has been used ever since its completion, a few years ago, and it has overcome the obstruction to navigation presented by these rapids. The whole trouble with the channel is that it has been constructed across the currrent, and even though it were the required depth, which I claim it is not, it would be impossible for large steamers to navigate that channel with safety. That statement can be verified by the fact that even though the channel were 200 feet wide and had a depth of 17 feet—which I claim it has not—no insurance company in Canada or elsewhere would insure any vessel navigating this channel. Let me give a little information as to what lead the Hon. Mr. Haggart to come to the conclusion that the construction of this channel was not a proper work. While this channel was being constructed the vessel men who used it were continually protesting against the work and advocating the construction of a new lock. I will read some of the letters of protest that were sent to the government. I have here a letter addressed to the Rt. Hon. Sir John A. Macdonald by Mr. Henderson, manager of the Montreal Transportation Company, which is one of the largest forwarders in this country. The letter is as follows :—

Montreal Transportation Company.
Kingston, October 21, 1879.

Sir John A. Macdonald, K.C.B.

Dear Sir, A circumstance has come to my knowledge this evening which I think is my duty to acquaint you of.

I was discussing with one of our best pilots the question of running the Galops Rapids with our barges and the difficulties attending same, and he mentioned that the government intended to commence work next spring and make a channel on the south side, and he remarked that it was a very expensive affair, and when made he would rather use the present channel as it now is, than attempt to take a tow through the new one when made, and the best improvement that could be made would be to remove a certain shoal that runs out on the north side of the present channel, which could be done at one-fifth of what the new channel will cost, and if that shoal was removed it would give them a straight run down, and they could take any reasonable number of barges down the Galops. This thing certainly should be looked into and we would recommend to you before undertaking the said improvement to call into your council a given number of the principal pilots that run the river. Engineers may be all very good in their way, but we would say that the pilots know best what would help the trade, and if you can make one dollar do more real good than five, by taking their advice why not do so ? Don't let this matter be overlooked for I would be sorry to see a repetition of the former blunders recently make in the board of works.

Yours very truly,
(Sgd.) P. K. HENDERSON.

Here is another letter from Mr. D. D. Calvin :

Kingston, Canada,
Garden Island, October 29, 1879.

Department of Public Works,
Ottawa, Ont.

Gentlemen,—I telegraphed the Board of Works on 27th in relation to the removing of the large rock in the channel of the Galops rapids (below Prescott) and as I have not received any answer I take the liberty of writing. What induced me to telegraph you was when I was in Ottawa a few days ago there was a man offered me two hundred and fifty thousand dollars to remove the rock. I wanted to find out if he had the right to let the job. There is no work on the River St. Lawrence that requires attention as much as the removal of that rock and in high water it is doubtful if it can be removed at all. The water now is three feet lower than an ordinary draft in midsummer, besides in midsummer it would block the channel to the injury of commerce. Excuse egotism but I think your ministry might be benefited by my presence before them for fifteen minutes to explain matters in relation to this subject.

(Sgd.) D. D. CALVIN.

I may say that the rock referred to in this letter was never removed; it is a different work altogether that was done. The following is a petition that was addressed to the hon. Commissioner of Works at Ottawa :

To the Honourable,
The Commissioner of Public Works,
Ottawa, Ont.

Dear Sir,—We are informed that the government contemplate deepening the Galops rapids on the southerly side of the river. Should this be done, we think it will prove to be an irretrievable mistake, as it will necessarily leave a wall on either side of the proposed channel varying from five to seven feet high, full of sharp, scraggy rocks protruding, and a wind across the river either way would drift a tow of crafts against this scraggy wall and sink them ; furthermore, the cutting of this channel would lower the water above from one to one and a half feet.

Now, there is already a channel on the north side of the river 400 feet wide and 13 feet deep, and the only obstruction in this channel is a large rock about ten feet in diameter and six or seven feet under water. To take out this rock would not disturb the depth of the channel above, and we trust that instead of cutting a channel on the south side of the river, the government will have this large rock removed and thereby furnish a good channel which crafts can navigate with safety.

Your obedient servants,

D. D. Calvin, J. A. Breck, Capt. S. Anderson, John Donnelly, Joseph Murray, John Gaskin, Folger Bros., A. Gunn, Hugh Scott, Montreal Forwarding Co. (Limited), James Stewart, agent ; St. Lawrence & Chicago Forwarding Co., John McFarlane, agent, D. Macphie, manager ; Montreal Transportation Co., Hugh McLennan, president.

P.S.—We would beg to refer you to Thomas Keefer's report on this subject whilst Hamilton Merritt was chief commissioner about the year 1841 or 1842.

Here are some other letters :

Kingston, November 1, 1880.

To the Honourable,
The Minister of Public Works,
Ottawa, Ont.

Sir, I have been a pilot on the River St. Lawrence ever since the year 1828, and I know what I am saying when I state that if the channel is made in the Galops rapids where your chain tug is now at work, it will certainly lower the water above. Even now the small amount of work they have done is decidedly noticeable and detrimental. To use a homely illustration, it has the same effect on a stream that the taking away of a mill dam would have. Now, instead of making a new channel where your men are working, if you let the chain tug take away the big rock that obstructs the present channel we could then take down ten or eleven barges instead of four as at present, It has been stated that the chain tug cannot be placed at the rock, but I would agree to place her there myself, and could furnish a guarantee that I am able to do what I say.

Yours truly,
(Sgd.) JOHN SUGHRUE,
Master Steamer 'Chieftain.'

I also have been a pilot on the St. Lawrence for thirty years, and concur in the within.

Yours truly,
(Sgd.) CAPT. S. ANDERSON,
Master Steamer 'Hiram Calvin.'

St. Catharines, June 1, 1881.

To the Hon. Sir Charles Tupper,
Minister of Railways and Canals.

Dear Sir,—After a long and careful consideration of the contemplated removal of the rock that obstructs navigation at the Galops rapids in the St. Lawrence river, I feel confident that if the work of removal be successfully accomplished, that the desired results will not be obtained, for the very reason, that in removing the obstruction out of the river, it will give the water a free course to run off that much faster, and as a natural consequence lower the river at the head of the rapids in proportion to the obstruction removed, and in place of eight or nine feet of water (as the case may be) at the entrance of the canal, as at present you will find that it will be reduced in proportion to the channel that you make for the escape of the water, I have, I believe, matured a plan which, if carried out, will give the desired depth of water on the rapids, and at the same time give you, from eighteen inches to two feet more in the head of the canal than you have at the present time—I should take pleasure in coming to Ottawa free of charge and explain to you my plan, if you think it worthy of consideration, which if adopted would I am certain produce the desired results, and at less than half the cost of removing the rock, which if successfully accomplished will not remove the evil complained of. All that I require is that if you adopt my scheme that you will give me the preference of doing the work. I have the honour to be,

Your obedient servant,
(Sgd.) ELI HIGGINS.

Kingston, August 15, 1884.

To the Minister of Public Works,

Dear Sir,—Our oldest tug captain has made a representation to me in such emphatic terms that I consider it my duty to communicate his opinion to you. What I refer to is the blasting forming a new channel in the Galops rapids. He says they are making a new channel the last six years in a place where the volume of water naturally does not run, and never can be made a successful channel to run down with a tow of barges. Some four years ago the writer addressed a letter to the same effect, a short time after the work was begun, but no notice was taken of the matter. Engineers may be all very well in their way, but we would suggest that pilots and parties who know about the river and its currents should have been consulted. This morning the matter was again pressed upon me, as the pilots say that during low water this new current is going to draw off some of the water from the natural channel and make it unnavigable for large tows. This letter is not sent in a fault-finding spirit, but with the best intentions. The new channel when finished can never be used for a tow of barges, as the current does not enter straight at the upper ends, and barges will tail down on the port side before they can be entered. Six barges now in the natural channel, but four barges cannot be taken down the new when finished. It will be a great calamity if you destroy this channel.

Yours truly,
(Sgd.) P. R. HENDERSON.

There is here letter after letter to the hon. minister protesting against this channel being made where it was, not only for the reason that it would be impossible for vessels to navigate it safely, but also because it was making a cut by which the waters of the St. Lawrence above would be greatly reduced in depth. I suppose that may have been one of the reasons which influenced the hon. minister in office at that

time to change the plan and put a very large lock at the head of the canal, so that vessels could enter the canal and lock through and go out again safely into the river, thus avoiding any chance of accidents in the rapids. The same thing applies to vessels coming up. However, I might say that these contractors proceeded with the work and handed it over to the government. While the work was going on there were rumours all through that part of the country that the contractors had not carried out their contract, or, in other words, that although they were paid in full for making a channel 200 feet wide, and although they stated that there was 17 feet of water clear in this channel, it was reported that they had left it, after dredging out part of the rock, with only 10 feet of water in the channel. In fact, the whole public believed that to be true. They left it in that way because they believed that no large vessel could ever navigate it safely, and because they had obtained another contract on the Cornwall canal from the government, thus having something to do. However, shortly after I was elected in 1891, parties who were on this work came to me and made statements to the effect that the contractors had left it in this state. The parties who made these complaints were honourable men, two of them government employees, one being in charge of the government vessel on that work. He stated to me that he wished to give me this information, because if any vessels did attempt to run that channel, they were sure to meet with mishaps. I asked him if he would give me the information under his own signature, which he did, and this is the statement he gave :

I, John Stitt, of the village of Cardinal, in the county of Grenville, caretaker of Chain Tug, do hereby declare :

1. That I was caretaker of this dredge during the last season (1888), that she was employed by Messrs. Gilbert Bros. making what is known as the Galops Channel.

2. That I was on the dredge during the time she was working in that season, and constantly and repeatedly saw the soundings of the work done on each shoal taken.

3. That the said dredge went away from the following shoals in said channel, leaving the work in the following way, viz. :

1. On or about July 16, 1888, she was working on North Shoal on cut No. 5, 169 feet east of O—she went away from here leaving a lump on which there was only ten feet of water. She never went back again and took it out, this is situated above what is called 'Island Shoal,' and below Adams Island and north of Caledonia Shoal.

2. On or about October 6, 1888, she was working on Island Shoal on cut Nos. 3 and 4, 250 feet east of O. She went away from here leaving only fourteen feet of water, she never went back again and took it out.

On same shoal 200 feet east of O, on cut No. 7, she went away, leaving sixteen feet of water. On same shoal cut No. 2, she went away leaving sixteen feet and two-tenths.

On September 19, 1888, on lower bar, on cut No. 6½, on three positions she went away, leaving it within two feet of being grade. On or about July 9, 1888 at the head of Caledonia Shoal there was a large stone the tug Gilbert struck.

On cut No. 8, Island Shoal 35 feet east of O, there is a large stone that was never taken out.

On both sides of the channel the dredge piled the rocks up so that in places there was not over four or five feet of water, these rocks were put there then, could be seen then, and can now be seen at any time.

4. I saw Mr. Rubidge with the steamer 'Alert,' at the Galops during the last three days and have heard he was there resounding this channel and it is currently reported here that he found the channel correct, and if the full depth of seventeen feet with nine feet of water on the mitre sill, notwithstanding these statements, if such have been made by Mr. Rubidge. I positively state the above statements are true, and a proper sounding will show them to be true.

At the time I saw said soundings taken, I made memos. in my book, which are correct. I give this information feeling an unjust claim is being forced on the government.

(Sgd) JOHN STITT.

Cardinal, May 25th, 1891.

I, Gideon Adams, have read the statements of John Stitt, and fully corroborate them. I have no hesitation in saying there is not seventeen feet of water in all of the new channel in Galops.

I was master of Messrs. Gilbert's tugs during the whole work, and never during the whole contract did Mr. Haycock take one sounding. W. A. Logan seemed to be the man who run the whole work. After the work was done and finally passed, I have struck on the sides of the bank with the tug 'Gilbert,' which only draws seven feet of water, and since the new channel has been made, I have been running the tug down through the channel and repeatedly saw bottom plainly, and I know from my experience that I could not see it if there was seventeen feet of water.

I also positively state that for one season G. H. Logan, a brother of W. A. Logan, who was chief man for Gilbert Bros., and who was getting a commission in the work dredged, took all the soundings and measurements himself (or his men), and no government man in it at all, when as we were informed this work was supposed to be done by W. A. Logan, they were never resounded, so that it was on these soundings, I believe that the government paid for the work.

(Sgd) GIDEON ADAMS.

In addition there is a long statement, showing the soundings taken and showing that they are not of the proper depth. This was after the work had been completed and taken over by the government.

The MINISTER OF FINANCE. What date ?

Mr. REID (Grenville). May 25th, 1891. As soon as these men made these declarations before me, I appealed to the hon. Mr. Haggart, then Minister of Railways and Canals, for a thorough investigation. I took the stand that if these statements were true and any vessels ever attempted to navigate that channel, they would meet with mishap and perhaps loss of life. Mr. Haggart then gave instruction to Mr. Rubidge to investigate the charges. Mr. Rubidge was the man who had been in charge of this work with engineers under him. However,

I said nothing until I got his report. He examined the work, and after examining it he could not take time to write a report but immediately telegraphed to Ottawa. 'Have finished the examination at Galops and have found no truth in the charge.' That was July 6th, 1889. Here is his first report after having made this examination :—

Cornwall, 16th June, 1891.

A. P. Bradley, Esq.,
Secretary Department of Railways and Canals.

Re Galops Rapids Improvements.

Sir,—In reply to No. 84,792, 13th May, 1891, inclosing a letter from D. J. Reid, Esq., M.P., re the contract with Messrs. E. E. Gilbert & Sons, for making the new channel at the Galops Rapids.

I beg to state, that from the 21st to the 23rd of May last, I was personally engaged in making preliminary tests of the new channel, with this result, that at several points bottom was struck at a depth of sixteen feet (lowest water) but that owing to the limited means at my disposal I found it impossible to ascertain, whether at the point so struck, the bottom was composed of solid rock, or of the debris from rock blasted fine—this latter I considered most probable—but in order to at once set the matter at rest, I have to suggest, that a further and more searching examination be made at an early date, to accomplish which I purpose applying to the Messrs. Gilbert to assist me, and to furnish their tug the 'Gilbert' together with her necessary appliances for controlling her in the rapids.

The estimated cost of the proposed examination is as follows, viz. :

Tug 'Gilbert,' fully equipped	800 00
Wire cable, 1,000 feet	150 00
Tug 'Alert,' including scows, &c..	300 00
Total	$1,250 00

The above sum of $1,250, or so much thereof as may be required, I respectfully request authority to expend, in order that I may be in a position to submit a full report to the chief engineer on the present state of the new channel.

It is proposed to commence preparations at once in order that the soundings may be completed during the present high stage of the river.

I have the honour to be, sir,
Your obedient servant,
(Sgd) TOM. S. RUBIDGE,
Supt. Engineer.

Mr. Rubidge got instructions to go ahead with the examination and expend $1,250. He then made this report :

Cornwall, 8th August, 1891.

A. P. Bradley, Esq.,
Secretary Department Railways and Canals, Ottawa.

Re Galops Rapids Improvements—Test.

Sir,—Referring to official letter No. 85211 of the 17th June last, authorizing me to proceed with the work of testing the character of the bottom of the new channel, but limiting the expenditure to my estimate therefor of $1,250, I beg to report :

1. That all points indicated by Mr. Reid, M.P., where obstructions were supposed to exist, were thoroughly examined by me under the direction of and with the assistance of Messrs. Stitt, Warner and McCartha, employees of the department, and Messrs. G. Adams, formerly employed by the contractors, and F. MacDonell, a young man representing Mr. Reid.

2. That this examination occupied three days and resulted in our failure to discover the obstructions referred to in Mr. Reid's letter of the 6th May last to the late minister.

3. That subsequently, and for several days, I was engaged in sounding with a view to obtain some characteristic cross sections of each of the shoals, in order to represent the present state of the bottom of the channel and compare it with that shows on the cross section upon which the final estimate was based.

4. The channel was further tested to a depth of sixteen feet at low water, by running the tug up and down several times on the range marks without striking.

The result of my testing operations was generally satisfactory, sufficiently so to convince me that the contractors had conducted their work in good faith, and had honestly endeavoured to fulfil the terms of their contract to form a channel 200 feet in width and seventeen feet in depth at low water, and also that the resident engineer and his staff had faithfully performed their duty. Nevertheless, Mr. Reid expresses great dissatisfaction with the test on the ground that it was not sufficiently extended, or was too hurriedly performed to disprove his charges.

For this reason, but more particularly with a view to obtain additional data whereby the contractor's unsettled claims may be intelligently dealt with, I respectfully ask to be authorized to make a thorough survey of the channel and its approaches embracing the banks on either side, and such other portions thereof as may appear to me to be necessary, also to ascertain the strength and direction of the various currents, and to lay down permanent anchorages for buoys, where required, and generally to perfect the ranges and other leading marks, in order to inspire confidence in its safety, and thereby bring the new channel into general use.

I have the honour to be, sir,
Your obedient servant,
(Sgd) TOM. S. RUBIDGE,
Supt. Engineer.

Now, at this time, the investigation was over, and I was complaining to Hon. Mr. Haggart that Mr. Rubidge and his staff were entirely responsible for this trouble, that they had not performed their duties satisfactorily, but had allowed these contractors to go away and leave the channel in this shape ; and I demanded and insisted upon a disinterested party being placed there to investigate and make a report which would not only satisfy me but would satisfy the public generally and set the whole question at rest. Accordingly, Hon. Mr. Haggart wrote to Mr. John Kennedy, the chief engineer of the Montreal Harbour Board, and asked him if he would undertake this work of investigation and thus give the public confidence in the channel. Mr. Kennedy undertook the work. I need not read the correspondence, but I will read his report.:

Montreal, January 16, 1893.

Collingwood Schrieber, Esq.,
Deputy Minister and Chief Engineer
of Railways and Canals.
Ottawa, Ont.

Sir,—The examination of the new channel of the Galops rapids of the St. Lawrence was continued after my report of 19th September last, and, excepting in some minor items, it was completed as far as proposed with the closing of navigation. The plans and calculations are now finished, and I beg to report the result :—

The method of conducting the examination was described in the former report but for convenience the description may be here repeated in brief. The elevation of the entire dredged bottom as it now is was ascertained by levels taken on cross section lines above twenty-five feet apart and at points usually twelve and a half feet apart on these lines, but at closer distances at the banks of the channel and other necessary places. The bottom grade line of seventeen feet below the surface of normal low water (which is when there is nine feet depth on the upper sill of the entrance lock of the Galops canal) was deducted from a profile of the water surface of the channel taken when it was very near the normal low water stage. Since the former report, and at the request of the hon. Minister of Railways and Canals an effort was made to ascertain what the bottom consists of, and whether loose or solid, by the use of such appliances as could be readily obtained and could be used with the surveying steamer. For this purpose two appliances were used. One of these consisted of a steel bar supported and guyed by tackle at the steamer's side in such way as to hold it against the current, and at the same time to allow its being moved in various directions by hand, so that the bottom could in some measure, be felt as with a common pole. The bar was two and a half inches in diameter, and its lower end was provided with a stout foot projecting six inches inside to one side. The other appliance consisted of a pair of stone grips or hinged grapples, of about four tons lifting capacity, worked by suitable tackle and steam winches. While either bar or grips were being used the steamer was moored by two anchors placed one ahead and one over one bow, with cables carried to steam winches in such way that the boat could be held still or slowly moved about at pleasure.

The chief items of general examination work are the following :—

Upper bar was cross-sectioned. A profile of the water surface was taken when there was nine feet and half an inch depth on the lock sill, for determining the bottom grade line. The bottom was swept over by the horizontal bar so as to find the areas clear for navigation at depths of 14 15, 16 and 17 feet at low water. The character of the bottom was tried at a great many points both by bar and grips.

The space between Upper Bar and the North and Caledonia shoals was tested for navigation by sweeping it over with the horizontal bar at a depth of seventeen feet at low water.

North and Caledonia shoals were both cross-sectioned, and the termination of the excavation at the sides of the channel was determined. A profile of the water surface was taken when the water was at 8·95 to 9·15 feet on the lower sill for determining the bottom grade line. The areas clear for navigation on Caledonia shoal were found by sweeping at depths of 14, 15, 16 and 17 feet at low water.

Island shoal. The examination work was detailed in the report of the 19th September last, but for convenience is here repeated in brief. The shoal was cross-sectioned and the sides of the excavation determined. The areas clear for navigation were found by testing to depths of 12, 13, 14, 15 and 17 feet at low water. The conditions for taking a profile of the low water surface on Island shoal were more favourable after the date of the September report than those which prevailed before, and a new profile was therefore made. This gives a grade line averaging about two inches higher than that deduced from the former profile, and also nearer by that much to Mr. Rubidge's grade line. In order to secure exactness in figures this new grade has been adopted and the excavation in Island shoal has been re-computed to agree with it, as hereafter noted.

The space between Island Shoal and Lower Bar was tested for navigable depth by sweeping it over with the horizontal bar at seventeen feet depth at low water. Lower Bar was cross-sectioned between the normal side lines of the channel. The side limits of the excavation outside the normal lines were not in all cases determined because the strength and irregularity of the current, as also the conditions of the banks made it impossible to do so without more time and more outlay for special appliances than appeared justifiable. A profile of the water surface was taken, when the depth on the lock sill was 9—1 to 9—15 feet— for determining the bottom grade.

The areas clear for navigation were found by sweeping with the horizontal bar to depths of 10½ and 12 feet at low water.

Lower bar extension was cross-sectioned throughout. A profile of the water surface for determining the bottom grade line was taken when the depth on the sill was 9·1 to 9·15 feet.

The areas clear for navigation at various depths were ascertained by sweeping with the horizontal bar at depths of 12½, 13, 14, 15, 16 and 17 feet at low water.

Quantities of Excavation.—In giving the quantities of excavation which follow there are conditions which require to be explained and noted.

1. The quantity of excavation performed is to be understood as being that which is measured by the difference between the original bottom as it was before excavation was commenced and the bottom as it is now found. There are no exact data for computing it otherwise, nor in any condition previous to the present.

2. It is to be particularly noted that the line of present bottom shown in the accompanying cross sections and from which the excavation is calculated, is its average height as ascertained by taking levels at the points indicated and drawing straight lines from point to point. This is a sufficiently correct factor for the computation of the quantity of excavations, but it must not be taken as having any relation to the navigable depth of water. The tests by the sweeping bar show that in large areas of the channel where the average depth is fully down to grade or even much below it, there are high grade points which make the depth available for navigation, or for any other present use to be very much less. These high points are in most cases more isolated rocks or stone snags, which count for nothing in cubic yards of excavation, because they only balance correspondingly deep holes, but they enormously affect the navigable depth of the channel. This suggests the desirability of some estimate of the contents or dimensions of these points alone, so

as to deal more intelligently with the problem of their removal down to grade, but this was not included in the scope of the examination, nor would it be practicable with accuracy or at any reasonable cost. Their location and the depth of water upon them has been found, and the areas of navigation which they affect are shown upon the plans accompanying this report, but more detailed measurement was not attempted. It is therefore to be understood that the quantities hereafter given are calculated from the average level of the bottom.

3. For computing the quantities of excavation the original bottom has been taken from plans furnished by Mr. T. S. Rubidge, superintending engineer of the St. Lawrence canals. These plans consist of cross sections showing all parts of the bottom which were above the grade line adopted by him, and of a plan of the soundings taken on the preliminary survey of the channel. These preliminary soundings have been used only to determine the original bottom level of certain limited areas which were below grade line and not shown upon the sections but upon which it was found excavation had been done. For all other parts, that is for all parts above Mr. Rubidge's grade line, the original bottom has been taken from the cross section. In the case of the island shoal preliminary soundings are now available which were not so in September last. These have slightly altered the quantities on that shoal and have contributed to the need for recomputation.

4. On lower bar the quantities outside the normal side lines of the channel, have not been computed because the banks were not fully defined as above noted. On lower bar extension no computation of the quantity below grade can be made, because of insufficient information as to the original bottom level, and this item was therefore omitted. The quantity outside of the normal side lines is also omitted because it cannot be satisfactorily defined and measured.

5. The grade line now used in defining the excavations is the new one ascertained as already described. It differs somewhat from Mr. Rubidge's, mainly no doubt because it was taken from the low water surface as now found in the channel, while his was taken before the channel was excavated. The quantities of excavation performed in the parts of the channel named as computed from the data described and divided under the required headings are as follows :

These, it will be noted, comprise the excavation of the entire channel except that below grade and outside the normal side lines in the extension of lower bar and that outside the normal side lines of lower bar.

Navigable Depths.—The sweeping of the channel with horizontal bar in order to find the areas clear for navigation at different depths at low water of nine feet on the sill, gives the following main results, viz. :

Upper bar is clear to fourteen feet deep at low water but is not clear for fifteen feet.

North Shoal, in common with Lower Bar, has the shallowest water in the channel and is at one point clear to only ten and a half feet.

Caledonia Shoal is clear to fourteen feet but is not clear to fifteen feet.

Island Shoal is clear to twelve feet with exception of a short piece at the south bank.

Lower Bar is clear to only ten and a half feet.

Lower Bar extension is not clear to fourteen feet but is all clear to thirteen feet except at one small place which is clear only to twelve feet. The spaces between the several bars and shoals are all clear to seventeen feet.

Now, the minister will see by that report that on every shoal where these men were working they went away and left it with, you might say, only ten feet and a half of navigable water.

The areas which are clear at different depths in each of the bars are shown on the accompanying plans. The lines inclosing these areas it must be noted are not ordinary contour or shoal lines ; they are merely the boundaries of areas in each of which there are points having less water upon them than the depth which the line signifies.

I may say that immediately on Mr. Kennedy's finding these spots—which were well known to Mr. Rubidge and the engineers, but on which they reported to have seventeen feet of water—they started a report in order to cover up their tracks, that these were spots on which loose rock had swept in this channel. Now here is what Mr. Kennedy states :

Character of Bottom.—The examination of the composition of the bottom with the steel bar and grips was not undertaken till November. The time which then remained to be devoted to such examination was necessarily brief and it was spent in trying the character of Upper Bar and Island Shoal as furnishing the best examples of two opposite conditions. The first was chosen because being at the head of the channel and well clear of any dumping ground it is a place where the bottom may be supposed to be least changed. The second was chosen because it is that into which loose stuff is most likely to have been carried and deposited by the cross current of the Gut. On the upper bar sixty-six places were examined by the steel bar. On probing as with an ordinary sounding pole the bottom almost invariably gave evidence of being rocky and firm ; nothing soft could be felt and very seldom anything at all loose. At some places the rock felt fairly smooth and level, at others jagged with small points and invariably on feeling over any considerable space high points of rock were found which might be either projections of the solid or large detached pieces. On putting the bar upon the bottom and turning it round so that the projecting foot when revolving might drop into interstices and move anything movable, it was very seldom that any such thing could be found. The foot often dropped into well defined crevices at a particular point of each revolution, sometimes being freed under strain and catching at the next revolution but often being held entirely fast until freed by being lifted.

The bar used in this way had much displacing power because the foot was only six inches long, and there was a cross bar above water of two and a half feet long by which the strength of two or three men could be put upon it. The indications obtained were almost always that the bottom was of rock too firm to be disturbed, but whether of solid bed rock or of very heavy detached pieces could not be distinguished. Masses of rock of every size and shape were met with.

Some were undoubtedly projections of solid rock, some had steep or perpendicular sides and others allowed of the foot of the bar being hooked under them. Of these latter some could be lifted up a foot or so before the hold was lost but in the majority of cases the bar hooked under something which could not be lifted but

from which the hold slipped on steam power being applied.

In a few instances the foot held fast and the rock could not be started with such lifting strains as could safely be used probably up to three tons. The indications of the bar are by no means clear or satisfying. As a whole, however, they lead to the belief that upper bar is of rock with practically no small loose stuff upon it, but having masses, some of solid and some of detached rock which project above the general surface and are the measure of the difference between the average bottom level found by sounding and the clear navigable depth found by sweeping with the horizontal bar.

The grips as already described have four feet breadth of opening and have gripping power sufficient to hold fast on a stone with parallel sides if of ordinary roughness. They were first used with two fingers on one arm and only one on the other, so as to give easy penetration into interstices of rock, and they were afterwards fitted with two fingers on one arm and three on the other so as to more easily scatch small stones. They were rigged so that they could be placed where desired in spite of current, and either held rigidly upright or allowed to suit themselves to the bottom, and so they could be opened at pleasure or closed with force while held hard on the bottom.

They were tried in these different conditions in some twenty-three different places on upper bar, and nothing whatever could be picked up. Generally they scratched over the bottom and got no hold. In a few instances they caught an imperfect hold and let go before much lifting strain was exerted. In two instances they got a better grip and held till the lifting strain reached three or more tons and then lost hold. It does not follow from this that there is nothing on the bottom which could not be grasped and lifted by a pair of four foot grips, but it shows that loose pieces of rock within their compass are so few that in about one hundred trials they got hold of none. Time did not permit of the grips being used elsewhere than on upper bar. On island shoal the bottom was examined with the steel bar and the indications were that its character is substantially the same as that of the upper bar, except that it is rougher and that in the spaces and holes between the masses of rock small loose stones are frequently felt. The composition of the bottom was not particularly examined in other parts of the channel, and the behaviour of the sounding rods and sweeping bar and the appearance of the cross sections indicate that it is all rough and rocky. Careful observations were made of the velocities and directions of the currents in different parts of the channel when the river was at about low water stage in 1891, and the results are shown on an accompanying chart.

Yous respectfully,

(Sgd.) JOHN KENNEDY, C.E.

I may say to the hon. minister that there is a report from a straight, honourable, disinterested man, after these men in charge have had an opportunity of examining the channel and making two reports, which are entirely opposed to what Mr. Kennedy has reported. However, after this had been investigated in this way an arrangement was made, as I understand, with the Gilberts that they were to clear out this channel and see that it was 17 feet in depth, and the government were to pay them so much per day for doing this work, but the Gilberts were not to be paid for taking out any rock they could find that was solid. So far as I can learn, they were paid for every day they were there, and they never gave the government to understand that there was any solid rock found. I protested against the work on this channel being proceeded with when I came to this House, I protested against these men being allowed to leave the channel in that condition, and I protested against the arrangement made by them that they were to take out what they would only admit was loose rock. I never can believe that the department made an arrangement under which they were to pay them by the day, and pay them such an enormous amount. The people there could not believe that any government would pay $425 a day for a dredge, a tug and a couple of scows. Statements have been made that it required special plant to do this work. The plant that these parties had consisted of a good tug and good scows, but the whole important part of that plant was a dredge, and that dredge is simply an ordinary small dredge. It is an old dredge. The whole plant to-day is not worth $15,000, and why the government would think of paying $425 a day for it is something I cannot understand. Of course, I believe that it has been pressed upon the government that there was this great danger, and that the Gilberts had a very expensive plant. If the hon. minister will take a look at that plant, I am sure he would not put it at any ordinary work. It has been there since a year ago last fall, and while every other dredge is busy the Gilberts cannot get any work for it that would pay the company, because the dredge, as I am informed, is not fit to do any work. Let us see what the government pay other parties for dredging plant. I find that in 1902, according to the Auditor General's Report, the government paid Mr. McAuliffe for dredging work at Trenton, done by a small dredge similar to that of the Gilberts, a tug and scows, $8 an hour, or $80 a day for ten hours, or $96 a day for twelve hours. W. E. Phin, for dredging at Toronto harbour, from June 3 to October 23, received $8 an hour, making $80 a day of ten hours, or $96 a day for twelve hours. I understand that 12 hours was supposed to constitute a day for the Gilbert Dredging Company. The Lake Erie and Detroit River Railway Company received for the services of the dredge 'Lockerbie,' from November 10 to December 2, 14 days, $100, and for 6 days $50. They also received for the use of the tug 'Vic' $9 a day for 20 days. Bowman & Company, of Port Elgin, received for the services of the dredge 'Hackett' $8 an hour, or $80 a day of ten hours. The Owen Sound Dredging Company received for the services of dredge 'No. 9' and plant, from May 13 to August 27, $8 an hour, or $80 a day of ten hours. The Owen Sound

Dredging Company received for the services of dredge 'No. 9' and plant at Midland harbour $10 an hour. The Marlton Dredging Company received for services of the dredge 'Arnoldi' and plant in Goderich harbour $8 an hour. Now, I come to the government dredges. First there is the dredge 'St. Lawrence,' which the hon. Minister of Public Works (Hon. Mr. Sutherland) stated the other night in this House cost new $15,364. The average cost per day for running that dredge was $76.82, and yet I should say that she was twice as large as the Gilbert dredge. Here is the dredge 'New Brunswick' a dredge similar in size to the Gilbert dredge and she cost $7,368, and the average cost for running her per day is $36.84. The dredge 'Challenge' cost $8,903, and the average cost per day for running that dredge is $44.50. The dredge 'Nipissing' cost $10,307 and the average cost per day for running her is $51. The dredge 'Ontario' cost $7,338, and the average cost per day for running her is $36.69. The dredge 'Sir Richard' cost $6,044, and the cost per day for running her was $30. I see here an account: paid A. D. Cameron for dredge 'Nithsdale,' tug and scows, 206 days at $40 per day. I see here an account of the Canadian Construction Company at Farren's Point, right on the St. Lawrence for a better dredging outfit than the Gilbert Company have: Use of dredge, 642 hours at $12 an hour; scows, 409 hours at $2 per hour; tug, 420 hours at $6 per hour, making $20 an hour for the whole dredging outfit. I see in the Auditor General's Report an account from M. A. Cleveland, who is working within half a mile of Gilbert, and who would be ashamed to admit that his dredge is not twice as good as Gilbert's; he gets $10 an hour for his dredge, $2 an hour for his tug, and fifty cents an hour for his scow, or $150 a day for his whole plant. I have met many of these contractors and I have asked them if they made any money at these prices, and they said of course they did and any one of them would be delighted to take this contract in the Galops at these prices. Here is an account from Larkin & Sangster who are working at Iroquois three or four miles from the Gilberts; they charge $7 an hour for their dredge, 75 cents an hour for their scow, and $6 an hour for their tug. William Davis & Sons who are working half a mile from the Gilbert people charge for their dredge and crew $7.50 an hour, dump scow, 50 cents an hour, and tug and crew, $4 an hour. Here is the government again, and the dredge 'Prince Edward' she cost $16,357; she is a very large dredge and it costs $81.88 a day to run her. The dredge 'New Dominion' cost $42,078, and it costs $60.39 a day to run her. Everybody knows that it is supposed to cost more to run a government dredge than a private dredge. The dredge 'George MacKenzie' cost $10,049.83, and it takes $50.24 a day to run her. The dredge 'Canada' cost $15,863 and it takes $79.31 a day to run her. I find in the Auditor General's Account for 1902, that T. F. Moore is paid an account for services of the dredge F. F. M., tug and scows, 504 hours at $8 an hour. I mention these instances to prove to the minister that these private dredges simply cost $100 a day for the whole dredging outfit, and that the highest cost per day of the government dredges runs from $35 to $75. In view of these figures the minister will see that $425 a day is an outrageous price to pay the Gilberts, and I may say that the people of that locality are complaining bitterly of this enormous extravagance. I find from the Auditor General's Report that the Gilberts got their draw back of ten per cent paid them last year, and as I understood, that settled up the whole claim in full. Last year the minister (Hon. Mr. Blair) admitted to me that the whole work was completed; and if these contractors went on after the 1st of July last year, they would do so at their own risk; that they should not have gone on without instructions from the department, and therefore if they did so, they are not entitled to this $25,000. I appeal to the minister and to the government in the interest of the country that this expenditure should not be continued. I have made this appeal in vain to the late Minister of Railways and Canals. The work is not necessary, and I am satisfied that if the deputy minister and chief engineer of Railways and Canals were put on his honour, he would not disagree with me. I believe that he would say that under the present conditions the vessels coming down the north channel through the Cleveland works and using the present lock going up; this work on the Gilbert contract is not necessary at all and will never be used. Why these contractors should be continued as a leech on the government at such an enormous cost to the country, is something that I cannot understand. It is time it should be stopped. I should like to hear from the acting minister whether the government intend to continue this extravagance. The work cannot be proceeded further this year, and the new Minister of Railways and Canals will have ample opportunity of going into the matter before the next session of parliament. I appeal to the government not to vote money for the work now so that the new minister may not be harassed by these people and their friends to proceed with the work. I believe in all sincerity that the government should drop any appropriation for the work until next session of parliament, between now and which time the new minister will have ample opportunity to look into the matter and be enabled to give his candid opinion upon it. I trust that the government, will take my suggestion on this. because I believe it would be in the best interest of the country that they should do so.

The MINISTER OF FINANCE. I have already spoken, Mr. Speaker, but with your

permission, I trust I may be allowed to say a few words. I think that my hon. friend (Mr. Reid) supposed that we are now dealing with the appropriation of the coming year which of course has not yet been reached, although I stated that it had been the intention of the late minister to proceed with this work during the coming year, and that an appropriation for that purpose is being asked for in the estimates. That, however, is not the particular item that is now before us. If the House at a later day should grant the sum which is in the main estimates, of course the Minister of Railways and Canals, whoever he may be, will have to consider all that has been said on the subject, and judge for himself whether or not he will deal with this work in the manner in which it has been dealt with in the past. The vote we are asking for now is entirely for the payment of past work, and although, as I have indicated, the minister had it in his mind to proceed with it, it does not necessarily follow that he is bound to spend the $75,000 asked for in the main estimates.

Mr. SPROULE. Did you go on with the work last year ?

The MINISTER OF FINANCE. Not last year. This is to pay for work that was done in a previous year, which was the subject of discussion last session, but for which no appropriation was taken. My hon. friend from Grenville has read a number of letters, most of them very venerable, from away back in the year 1888, which after all only prove that doctors differ. He has read letters from a number of people in the transportation business who do not think the channel is necessary. We could also produce letters from people in the transportation business who say that the channel is very necessary, and who are anxious that the government should continue it. That is a matter on which there is a difference of opinion. The hon. gentleman seems to be very much in the position of the juryman who said that he had never met with eleven such stupid jurymen in his life, because they would not agree with him. It is the hon. gentleman's misfortune to differ with all the engineers. That work was commenced by Mr. Page, for many years the chief engineer of canals; it was continued by Mr. Trudeau, his successor, and by Mr. Rubidge, than whom no man understands the St. Lawrence better. He has lived almost half a century on that river, and we ought to yield very much to his judgment. The hon. gentleman has appealed to the present deputy minister and chief engineer. All I can say is that the work is continued with the hearty concurrence of the deputy minister and chief engineer on the ground that whatever may have been the opinions with regard to it in the past, after so large a sum of money has been spent on the work, it is a wise course to proceed with it and finish it. My hon. friend read the report of Mr. John Kennedy, a very estimable engineer connected with the Montreal harbour board ; but all he said was not that the work was not very useful, but that it had not been completed. I think I am justified in saying that the work was suspended for a time under the impression that it was completed, but when it was found that it was not, further estimates were asked for, and we ask the present estimate in the light I have stated, that although there have been differences of opinion among the transportation people, and possibly among the people of the community, on the subject, it is the fact that many engineers who had the confidence of the government and who were high in their profession, recommended this work, and it has been carried on for years with the hearty concurrence of Mr. Rubidge. As to the charges, it is only fair to say, that these cover more than the mere dredge, and include a variety of other plant. I must confess that my own knowledge of dredging plant is not enough to enable me to say whether it is a fair sum or not ; but the minister who made the contract considered it a fair sum, and was advised that it was fair by Mr. Rubidge. However, in view of the immense sum of money, approaching $1,000,000, spent on that work, we think it is the part of wisdom to go on and spend the small sum necessary to finish it and make it available for the transportation of the country.

Hon. Mr. HAGGART. Has the plan been changed any ?

The MINISTER OF FINANCE. Yes, for the purpose of widening the channel from 200 to 300 feet.

Hon. Mr. HAGGART. When was that plan changed ?

The MINISTER OF FINANCE. Whatever work was done in recent years was done under that plan of 300 feet in width.

Mr. REID (Grenville). I understood that last year those parties went there with their plant, without any instructions whatever from the government, and, if so, they were there at their own risk. Then, I suppose the hon. minister is aware that this whole channel, where he is spending all his money, is on the American side of the river. It does seem strange to me that, if we are to depend on making a channel there, it should be done by the American government.

The MINISTER OF FINANCE. I am advised that this work is not on the American side. Some of the dam is on the American side, but this work is not.

Mr. REID (Grenville). I will tell the minister what gives me the impression that it is. The minister is, of course, aware that there is a duty on American coal coming into this country, and when this firm started

this work a number of years ago, they refused to pay any duty on the coal they used on it. They appealed to the Department of Railways and Canals, and that department, under their own signature, certified that this work was all on the American side of the river, and these parties never paid any duty on the coal they used on the work. I can prove that, if necessary. I know that, because I remember the appeal being made, and a certificate was given by an engineer of the government that this work was on the American side of the river. I think Upper Bar is on the Canadian side, but three-fourths of this work is on the American side. As for the work being of any use to marine men, I am quite satisfied that the hon. minister cannot produce any of the best marine men who will take one of the large steamers down. It is true, a very small steamer will run down there; but the large steamers run the old channel, which they have run for thirty or forty years.

There does not appear to be any more than nine feet of water. I understood that some little time ago the Gilbert people went around hawking a petition among the captains, asking them to sign it. This petition was for the purpose of getting this work going again for their benefit, and it can be easily supposed that some steamboat captains would sign the petition in order to help these people. I know for a fact that all the time that these parties were there they never expected that this work would be used. They always felt that they had a sinecure for life. It was suggested to me several times that if I would not do anything, they could keep this work going as long as they liked. I can quite well understand that the hon. minister is not aware of the condition of affairs, but I have lived all my life within a mile of the rapids and know what I am talking about. Of course, Mr. Rubidge has been on the river a great many years, but if hon. gentlemen heard the reports of these steamboat men, they would not have the impression that Mr. Rubidge knew it all. These men navigate the river and know exactly how the currents run. I must say that the work done in what is called the north channel is an excellent work. Nothing could be more needed. When the government undertook the work, it was very expensive, and one of the reasons given was that if the old channel were used, the steamboats would have to go through American waters. The engineers, therefore, took this very expensive route, which makes a splendid channel. to avoid going through American waters. But now that we have had all this expenditure made and got the channel into good shape, these people seem to be able to influence the government every year to continue placing a large amount in the estimates simply to keep them going. The north channel and the deepening of the old channel to the lock which was put in when enlarging the Galops canal to Iroquois is a good piece of work and one that will always be very useful. Why the government continue giving these people money every year I cannot understand. I have been making this appeal year after year, and was in hopes that this year the government would see its way clear to put an end to the expenditure. If they continue this expenditure, I will have to continue opposing it, and see if it is not possible to put an end to what the people in that locality consider an outrage and a scandal. I would rather see the government put an amount in the estimates to pension off this firm, because in that way the government would save from $100,000 to $200,000 per year. I shall therefore have to move that this item of $25,000 be struck out. I do not believe that this firm ever earned it. I am satisfied that if the government should place that other amount in the estimates and allow these people to continue, the government will have in the end a scandal in their hands. I have been urging the minister from year to year to drop this work, because it is no earthly use, and if he cannot see his way clear to do so, I can only continue protesting. I move that this item be struck out.

Hon. Mr. HAGGART. When was that contract changed?

The MINISTER OF FINANCE. Respecting the width, in 1897.

Hon. Mr. HAGGART. The width extended?

The MINISTER OF FINANCE. Yes, by the contract made in 1897. That contract refers to additional work, which must mean the increasing of the width. If that is not so, I will have to try and get information later.

Hon. Mr. HAGGART. The deputy minister should know that.

The MINISTER OF FINANCE. It was done under that contract in the time of the late minister. I cannot give the precise date.

Hon. Mr. HAGGART. I do not think the late minister changed the width at all.

The MINISTER OF FINANCE. I am advised he did.

Hon. Mr. HAGGART. The first contract was let by Mr. Mackenzie in 1878. The total prism quantities were 200 feet and the depth then perhaps would money out about $312,000. In 1896 there was paid to Mr. Gilbert by the department and on a judgment of the Exchequer Court, $629,000. The contract was not extended in 1897. For the prism quantities only the amount required was $312,000 in 1896. The amount paid by my predecessor and by myself and on the judgment of the Exchequer Court

was $329,000. These parties were paid in full, and they had no other claim. The contract has not been extended from that day to the present.

The MINISTER OF FINANCE. There was a new contract in 1897 to continue the work.

Hon. Mr. HAGGART. To clean it out and at a rate per day, which was paid before for the dredge, but the extra width was not contracted for in 1897.

The MINISTER OF FINANCE. The hon. gentleman's (Hon. Mr. Haggart) judgment ought to be better than mine.

Hon. Mr. HAGGART. But we ought to have accurate information about it. Let the Minister of Finance consider the facts for a moment. The contract price, with the quantities moneyed out, was $312,000. This contract was let in 1878. There was paid in 1896 on that contract $629,000. That included the judgment of the Exchequer Court and the amount that had been previously paid to Mr. Gilbert. The Minister of Railways and Canals continued the employment of these parties, and his justification was that he employed them at the same rate that I paid them. I had paid them $425 a day for the use of their dredge while Mr. Kennedy was making an examination of the channel; and the hon. minister continued the contract with them for the amount that I was obliged to pay for the use of the dredge for the examination of the channel. The expenditure was to cease in 1896, for the hon. member for Grenville showed the uselessness of the work, and, besides that, there was a lock built in the canal for the purpose of overcoming the difficulty and rendering any further expenditure needless. The Galops channel is not used by the big boats coming down to-day. It is used by the boats—just as it was before—in going up, if what I am told is correct. Every boat coming down goes down the canal to the new lock and out into the river below the rapids. The work, as originally contracted for by Mr. Mackenzie, which amounted to $312,000, was increased, if the deputy minister is correct, by 100 feet more. But that would add only one-third to the quantities, making a total of about $416,000. And what is the result of it all? The expenditure of nearly one million dollars. We have already paid $800,000, the hon. minister asks here for $25,000, and in the other estimates is an item of $75,000. And still we have no promise from the minister that this is the end of the work—an expenditure of a million dollars on a work which was contemplated originally to cost $416,000, and the expenditure still going on. And, as has been shown, the expenditure is entirely useless. More than that, we had the promise of the minister that there would be no more expenditure on that contract. The minister asked us for a vote of $50,000 last year, and for what? Not, as he said, for a work which had been authorized and done, but for the purpose of paying a percentage or drawback due to the contractors, and also a small sum of $15,000 to remove such rocks as had fallen into the prism of the canal. Here is what the minister said on May 1st, 1902:

> But simply for the purpose of removing the rock which has already been disturbed and is lying loose on the surface, and is, I am told, an obstruction to navigation. I cannot say that I see any particular advantage myself in having the work continued, since the canal will afford all the navigation that is necessary.

Then the minister, justifying the expenditure of even this small amount, said:

> The appropriation, I am advised by the chief engineer, is necessary—not for the purpose of continuing the work, I do not propose to ask parliament for any money beyond this, a part of which is needed to pay the drawback. There is the amount of the drawback which we have to pay out of that $50,000. . . . There is nothing in the estimates inserted with any intention to continue this expenditure or to continue this work.

I asked if any report had been received by the department or any estimates prepared for this work. I had the assurance of the minister that no account had come into the department for any work being done upon that canal or any certificate from the engineer. He gave the promise that the work would not be continued. But in spite of that, we have now a further expenditure of $25,000 asked for, and also $75,000 in the other estimates to continue the work.

The MINISTER OF FINANCE. The minister's statement last year with respect to continuing that work would not necessarily be at variance with this item, though it might be at variance with the item in the main estimates. The sum now under discussion is entirely for past payments. With regard to the statement that no work is being done and no certificate given, of course, that would be a grave matter. All I can say is that the engineer has reported that these people have done work to that amount, and has certified accordingly.

Hon. Mr. HAGGART. All I say is that I give the statement of the Minister of Railways last year, made on the authority of the chief engineer, that he had no demand for any claims on the work last year. The statement was made in this House that there was no work of that kind. This item, I understand, is for payment of work done last year, but, as I understand the minister, there is another item to come down for $75,000 for the continuance of the work.

The MINISTER OF FINANCE. It is already down.

Mr. SPROULE. Is the item now under discussion for work done last year?

The MINISTER OF FINANCE. For work done the year before last. It was the

subject of discussion last year, but the work was done the year before.

Mr. SPROULE. I was here when the discussion took place. The minister had no information that the work was going on, and distinctly intimated that, so far as he knew, no contract would be given in future. And now we are given to understand that the work is likely to go on. What reason is given for this change ? In view of the case made out by the hon. member for Grenville (Mr. Reid), and the facts he has presented here during the last two or three years, the continuance of this work by the government is a burning scandal, it is a disgrace to the government and to the country. When Mr. Kennedy, a disinterested and capable engineer, made the report he did, declaring that there was not the depth of water and there was not the condition of bottom that Mr. Rubidge had reported, and when, without making further inquiries or satisfying themselves of the truth or falsity of that report, the government go on with this work, we certainly have a condition things that the country would not have expected. For the government to continue it now, leaves an impression on my mind that there is something behind it that neither the country nor this House knows, as otherwise it would not be continued. Now it is said that the government engineers have reported on this from time to time. So they have, but as the minister says himself, Mr. Rubidge has practically lived on the St. Lawrence river for years : he has been doing the same work for the same contractors for years : and it is a fact that cannot be denied that we sometimes have engineers playing into the hands of the contractors in a way that is neither creditable to themselves nor in the interest of the country. Now, grave suspicions have been aroused that that may be the case at the present time, and I am justified in coming to that conclusion from the fact that Mr. Kennedy, an entirely disinterested party, made a contrary report. The minister himself has not said one word to discredit the professional ability of Mr. Kennedy, and his report is the very antipodes of that of Mr. Rubidge. Now in face of that fact the government is going to commence work again after telling us that last year it was closed up for the purpose of effectually wiping it off the books, and they were paying a percentage which up to that time had been held back for the due fulfilment of the work. Now we are told that the work is going on again.

The MINISTER OF FINANCE. There is nothing being done now.

Mr. SPROULE. There is a sum in the estimates for that purpose. Then why should we go on until we know more about it ?

The MINISTER OF FINANCE. We have not reached it.

Mr. SPROULE. But it must have been considered by council, and the minister is responsible for what has passed in council. These estimates are before this House, and in face of the allegations made by an hon. member of this House and who is in a position to know, in face of the letters that have been read from respectable captains who have been on that river for a quarter of a century, in face of the affidavits that have been read to this House, the government are going to go on with it, notwithstanding the burning scandal that exists. I say that if the government continue that work they will do it at their own peril, and an indignant public will rise up against them and condemn them.

The MINISTER OF FINANCE. With regard to what the hon. gentleman said about Mr. Kennedy, I hope there is no misunderstanding. Certainly I would not attempt to discredit Mr. Kennedy, for I have had the pleasure of knowing him for twenty years ; he is an eminent engineer, a gentleman of high standing. But I wish to point out that Mr. Kennedy did not report on the question whether the work was useful or not ; he reported that the work had not been completed, had not been done.

Mr. SPROULE. Did he not report that he found only fourteen feet of water where it was declared in this House there were seventeen feet, and where Mr. Rubidge reported there were seventeen feet ?

The MINISTER OF FINANCE. Even if he did, that might be the best possible reason why we should proceed to get seventeen feet of water.

Mr. SPROULE. Would it not discredit Mr. Rubidge who had made this report, and against whose report Mr. Kennedy reported after a careful examination that instead of seventeen feet of water there were only twelve, fourteen, fifteen feet, and in some cases not that much.

The MINISTER OF FINANCE. Then if it discredited the report of Mr. Rubidge it also discredited the late government. If Mr. Rubidge was a discredited official, why did they keep him there and continue him doing that work ? This report was made in the time of the late government, all these documents which the hon. member for Grenville has read related to the time of the late government, the whole transaction relates to the time of the late government. The hon. gentleman should be more careful about raising suspicions in that unpleasant way, he should not hit his neighbours in that unpleasant way.

Mr. REID (Grenville). I may say to the minister that though Mr. Rubidge's report was made in 1891, Mr. Kennedy's report was made at the same time. But after these reports were made the work was absolutely stopped right there. Mr. Rubidge had been

in the service of the government for, I suppose, forty years, and I presume the government felt that the men who were underneath him were to blame. The minister asks why did they not dismiss Mr. Rubidge.

The MINISTER OF FINANCE. I am not complaining.

Mr. REID (Grenville). I would like the minister to be fair. Mr. Rubidge was the engineer in charge of canals on the river from Montreal to Trenton. He had under him several contracts; he had two at Cornwall, one at Farran's Point, one at Morrisburg and a couple at Cardinal. On each of these contracts he had an engineering staff, that is, an engineer and two assistants. When this matter was brought up and my charge was proved, proved to the entire satisfaction of the minister, the hon. gentleman the Finance Minister asks why they did not dismiss Mr. Rubidge. Simply because the then minister brought Mr. Rubidge before him, and Mr. Rubidge threw up his hands and said: These men underneath me were doing the work; I had to depend on them, my work is from Cornwall to Belleville. But the engineers who were in charge of that work were promptly dismissed by the minister.

Mr. FRASER. They did not dismiss the right person, they should have dismissed Mr. Rubidge.

Mr. REID (Grenville). Mr. Rubidge was travelling and superintending the whole of them. But the other engineers in charge of the work, the men that should take the soundings, made reports to Mr. Rubidge from time to time, on which he acted. The only trouble was where Mr. Rubidge made an examination afterwards, that is where he was to blame and liable to censure. But the other engineers were promptly dismissed, and the work was promptly stopped. Now there is one great question about this work going on. There is a general complaint that if that work is proceeded with and more cuttings done there, it is going to lower the St. Lawrence above. Now there was a judgment of the Exchequer Court for $173,000. This firm sued the government for what they claimed was below grade. The government had paid and settled up with them in full for making seventeen feet of water, but in order to get seventeen feet they claimed that the dredge had to go a little below seventeen feet, and it was for this extra below grade that they were paid $173,000. They then assured the court and the government that there was not only seventeen feet but more than seventeen feet of water because they had to go below seventeen feet to get the required seventeen feet. Notwithstanding all that, it was found out afterwards that they had left a space of 10½ feet. The original contract was for 200 feet, and any person would reasonably suppose that a vessel would go through a channel 200 feet wide when the vessel itself was only thirty-five feet wide. But I wish to state to the minister, knowing the place thoroughly as I do, living on the spot, and being around these rapids all my life-time, that it is really an impossibility, and will be, no matter what we do, for these large vessels, to go down that channel. I meet at least every week men interested in the marine business, and there is not one of them that will admit to me that they will ever go down these rapids and take the chances, with a vessel of any size or with a load.

At the present time only small vessels are running down this channel. In fact, vessels go by way of the old channel just as much as they do by this one. I know exactly how this thing is brought about. These people have sufficient influence to get the government to give them something to do, and in making this expenditure the government are not only giving rise to a scandal but they are injuring navigation above that point. If they put that through it will lower the level of the water in the north channel, and they will have to have Cleveland's channel, which is a very good channel, deepened. It would be a very good channel to-day if they only made it 17 feet in depth, but by making another cut through the rapids it will result in increasing the flow and giving a lower depth of water in the northern channel. If any person will go through the Cleveland channel into the canal and then through the lock, he will see that there could be nothing more suitable to navigation than that. I sincerely hope that the government will consider the matter and not go on with the work, but in the meantime, knowing that the Exchequer Court has settled up this claim in full, and after hearing the statement of the minister last year that the amount was only required to pay the drawback, I insist that these people are not entitled to this $25,000, and therefore I have no hesitation in moving that the item be struck out.

Mr. TAYLOR. There is one question that has not been fully answered by the hon. Minister of Finance. The hon. member for Grenville (Mr. Reid) makes a statement that this money is being expended in the United States. He lives on the ground, and if that is correct I think the hon. minister should stay his hand until he is perfectly assured that no part of this money is being spent in American territory.

The MINISTER OF FINANCE. I am so assured. There are two or three different works going on in that neighbourhood. There is a dam being constructed in connection with the work in that vicinity, and one end of it is upon an American island, and possibly this has led to some confusion. At all events, I am advised that there is no part of this work being done in Ameri-

can territory, and that it is entirely in Canadian territory.

Mr. REID (Grenville). I can prove that a part of it is being done in American territory by correspondence in the department of the hon. Minister of Customs (Hon. Mr. Paterson). This dam was only proposed to be built within the last two or three years. It never was in the original contract at all. I know that for a fact, and I will guarantee to prove it by the correspondence in the Department of Customs. These parties wrote to the Department of Customs and got a statement that the collector at Cardinal need not charge the contractors duty if they procured a certificate from the Department of Railways and Canals. I make the statement on the floor of this House, and I am prepared to back it up that a portion of this work is in American waters, and that these contractors were relieved from duty on obtaining a certificate from the Department of Railways and Canals. I saw the certificate at the time. I know it was forwarded to Ottawa. I know that the customs officer at Cardinal had to get instructions from the Customs Department at Ottawa instructing him that it was all right for him not to collect the duty, because the certificate of the Department of Railways and Canals showed that the work was done in American waters.

The MINISTER OF FINANCE. I do not think a statement that the contractor submitted that it was in American waters would necessarily prove that we are wrong. I am quite satisfied that the channel is in Canadian waters, and I am bound to act upon that information.

Mr. REID (Grenville). Three-quarters of the work which is being done is in American waters. It is in the form of a large circle around an island. What is called the upper bar is in Canadian waters, while the other part is in American waters, and I know that if the hon. Minister of Customs will look it up, probably about the year 1888, or back there, he will find a certificate from the Department of Railways and Canals, or from the engineers of the department, proving that the work is in American waters. This certificate was forwarded to Ottawa and the collector got a letter back from the Department of Customs that in view of this certificate, they could not collect duty on the coal used on the dredge while doing the work.

The MINISTER OF CUSTOMS. About what year was that ?

Mr. REID (Grenville). During 1888.

The MINISTER OF FINANCE. But this work was done in 1902.

Mr. REID (Grenville). 1902 ?

The MINISTER OF FINANCE. Yes.

Mr. REID (Grenville). What work does the hon. minister mean ?

The MINISTER OF FINANCE. The work that we are taking this vote for.

Mr. REID (Grenville). That we are now doing in this channel ?

The MINISTER OF FINANCE. Yes, there may be one part on the American side and one part in Canada.

Mr. REID (Grenville). There are three-quarters of it in American waters.

The MINISTER OF FINANCE. The question is, is this work being done in American waters.

Mr. REID (Grenville). It must be. This was done for the purpose of clearing out these rocks that had drifted into the channel, and therefore if they were doing that, certainly part of it was in American waters and part in Canadian waters. I understand from general talk around there that these contractors were supposed to have cleared all this out. But these parties have not hesitated to say that they can handle the government, and they can get a contract to widen the channel, but they do not want anything said about it, believing that they could slide it through. I am satisfied that the government by doing this work are only going to injure the waters above. It is not necessary.

Mr. SPROULE. Could the hon. minister give us any idea as to what the depth of the water is now ?

The MINISTER OF FINANCE. No, depth of water it not what we desire now. Some blasting had been done, and rocks were left in the channel.

Mr. SPROULE. I understand the hon. minister to say that there has been no work done since last year?

The MINISTER OF FINANCE. That is true.

Mr. SPROULE. But the hon. minister told us that there were 17 feet of water.

The MINISTER OF FINANCE. I am afraid there is not 17 feet of water where these rocks are.

Mr. SPROULE. This matter has created so much suspicion that I think the hon. minister should stop the work until he gets a reliable report upon it. The government engineers, it has been proved by Mr. Kennedy, did wrong before, and the hon. Minister of Finance seemed to think that he had a good argument in the report that it was done by friends of hon. gentlemen on this side of the House, and that when it was brought to the attention of the minister he stopped it because he could not rely on the report of the engineer, and he sent out some other engineers to inquire into it. This would seem to be sufficient to arouse such

suspicion in the mind of the hon. Minister of Finance as to cause him to inquire into the situation. In addition to that we have the statement made by an hon. member of this House on his responsibility as a member, by one who lives right in the locality, who has been there all his lifetime and who ought to know the facts. Then, this hon. gentleman's statement is backed up by affidavits and letters from some of the most respectable, the most responsible and the most intelligent men who have been navigating the St. Lawrence for the last 25 years, many of whom I know personally to be men of integrity and truthfulness, and men who know what they are talking about. If the hon. minister, with all this information in his possession, insists on carryng out this work he will be doing something that will be a scandal and a disgrace to this government.

House divided on the motion (Hon. Mr. Fielding).

That resolution 296 for the deepening and widening of the Galops rapids, $25,000, be now concurred in.

Motion agreed to.

INTERIM SUPPLY BILL.

The MINISTER OF FINANCE. These items have been collected by the proper officers of the House and are found to amount to $2,977,053.73. I beg to move :

That the House resolve itself into Committee of Ways and Means to consider a supply to be granted to His Majesty.

Motion agreed to, and the House went into committee to consider the following resolution.

Resolved that towards making good a supply to be granted to His Majesty for certain expenses of the public service for the financial year ending 30th June, 1903, the sum of $2,977,053.73 be granted out of the consolidated revenue of Canada.

Resolution reported, read the first and second time and agreed to.

The MINISTER OF FINANCE moved for leave to introduce Bill (No. 241) for granting to His Majesty certain sums of money required to defray certain expenses of the public service for the year ending 30th June, 1903.

Motion agreed, Bill read the first and second time, considered in committee, reported, read the third time, and passed.

ADJOURNMENT—GOVERNMENT SYSTEM OF TENDERS

The MINISTER OF FINANCE moved the adjournment of the House.

Mr. CLARKE. I beg to call the attention of the government to the following cablegram which appears in the Ottawa 'Free Press' of this evening:

INJUSTICE IS OBVIOUS.

Canadian Method of Calling for Tenders Might be Better.

London, Aug. 8th.—The 'Graphic' to-day referring to the manner in which Canada invites tenders, says that the injustice of the arrangement is so obvious that the government can hardly fail to redress the grievance.

Is the Minister of Finance aware of what tenders this cablegram refers to?

The MINISTER OF FINANCE. No. I am not able to answer my hon. friend.

Hon. Mr. HAGGART. What is the business for to-morrow?

The MINISTER OF FINANCE. According to notice the Grand Trunk Pacific Railway Bill will come up on the resolution on which the Bill is founded.

Hon. Mr. HAGGART. Is there any notice that you will proceed with it de die in diem?

The MINISTER OF FINANCE. There has been no formal notice, but I think that is the intention of the Prime Minister.

The MINISTER OF CUSTOMS. The Prime Minister so stated this afternoon.

The MINISTER OF FINANCE. It was so stated to-day, I am informed.

Motion agreed to, and House adjourned at 12.10 a.m., Tuesday.

HOUSE OF COMMONS.

TUESDAY, August 11, 1903.

The SPEAKER took the Chair at Three o'clock.

SELECT STANDING COMMITTEES.

Mr. HYMAN moved:

That the following committees have leave to sit during the time that the House is in session: The Select Standing Committee on Railways, Canals and Telegraph Lines, the Select Standing Committee on Miscellaneous Private Bills and the Select Standing Committee on Public Accounts.

Motion agreed to.

FIRST READING.

Bill (No. 244) respecting the Western Assurance Company.

NATIONAL TRANSCONTINENTAL RAILWAY.

The PRIME MINISTER (Rt. Hon. Sir Wilfrid Laurier) moved that the House go into committee to consider the following proposed resolution:

Resolved, that it is expedient, in connection with the Bill now before this House, respecting the construction of a National Transcontinental Railway, to ratify the agreement set forth in the schedule to the said Bill, entered into on the 28th of July, 1903, between the government and certain persons on behalf of the Grand Trunk Pacific Railway Company, a company to be incorporated by parliament at the present session thereof, and to authorize the government to do whatever is necessary to give full effect to the said Bill and agreement.—(Sir Wilfrid Laurier).

Hon. A. G. BLAIR (St. John city). I do not, Mr. Speaker, find myself in any less unpleasant a position to-day than I occupied some two or three weeks ago in explaining the causes of my resignation from the ministry. It is a disagreeable task under any circumstances to criticise and perhaps condemn a measure introduced by a government of which one has so recently been a member, and there are, and there must always be, circumstances attending such criticism and such condemnation as will unfavourably affect many friends, many colleagues and many of those with whom one has been heretofore politically associated. I am pleased, however, Sir, to be able to avail myself of the present opportunity of exonerating the right hon. leader of the government (Rt. Hon. Sir Wilfrid Laurier) from the charge which has been frequently made against him since this difficulty has originated. The right hon. gentleman has been charged with having made a suggestion to me that I should, having the opinions which I entertain with respect to the railway scheme that the government have determined upon, remain a member of the government and should quietly and silently continue to act as a colleague with him in that administration. The charge which has been preferred is that this proposition was made by himself to me. I am bound to say, in justice to the right hon. gentleman, that the proposition did not emanate from him, and I make this statement, not at his instance, but as a matter of fair play to him and of fair play to myself. In the correspondence which ensued pending my contemplated resignation I referred, as you will remember, to the circumstance that such a suggestion had been made in Council, and I mentioned the reasons which I thought had rendered it impossible for me to favourably entertain such a suggestion. I did it because I thought that there were perhaps

members of Council who would think I was over punctilious in declining to pursue that course, and I was glad afterwards that I had mentioned it in the correspondence, because there are many warm personal friends on the government side who, between the time that my resignation was known and the time that the explanations were made, have criticised me because I had not pursued that very same course. I say, therefore, that I very gladly avail myself of the present opportunity to make that matter straight.

The right hon. gentleman has laid before parliament and before the country a statement of the reasons why he has presented this measure to the House, and the defence of that measure. He has given us to understand that this scheme is a scheme devised for the purpose of securing for the people of Canada a great transcontinental railway which will afford to the people of the east and west the shortest and cheapest route for the carriage of their traffic. And at the same time, and in the same connection, my right hon. friend, with a good deal of self-satisfaction I am sure, and with apparently much pride, told us that this great project was to be a grand national all-Canadian line. If such a policy well defined and well considered in all its bearings, and so studied that a just conclusion could be reached that it was a proper and necessary work in the interest of Canada, if such a project surrounded by these conditions were presented to parliament, then one might well be glad that such a venture should be entered upon by the government of the country, and it naturally would excite a very great deal of enthusiasm among the people of all shades of politics.

I followed the right hon. the Prime Minister in the statement which he made with the closest interest; and it is only fair to the right hon. gentleman to say that if the grace of eloquence, if the finest and choicest language, if eloquence coupled as I know it was with the sincerest conviction that the measure was a proper and judicious one; if these things could have carried conviction to the minds of members of parliament, then I say that members of parliament and the country generally would have been impressed by the Prime Minister's presentation of the case. But, Sir, speaking for myself and for myself alone, while I was impressed with the singular ability of the right hon. gentleman, and while I felt that all had been said by him that could be said by anybody, and much more than could have been said by any one else with the same effect; yet, I still felt myself absolutely and entirely unconvinced, and I still felt that the objections which existed in my mind against this measure almost in its entirety had not been removed except but in a very small degree.

Some hon. MEMBERS. Hear, hear.

Hon. Mr. BLAIR. The government of this country, realizing the enormous magnitude of this measure; realizing that it is perhaps a measure without parallel in the history of this country; realizing that no question so momentous in its nature, and involving such large responsibilities on the country had ever been presented to parliament since the confederation of the provinces of British North America; realizing also that this decision and determination to carry this project through, if it could be carried through this parliament, and if the assent of the country could be secured for it; realizing all this, my right hon. friend very naturally felt that the people of the country would expect that some satisfactory explanation should be furnished, as to why, with such unusual and such unexampled haste a measure of this magnitude and this character had been pressed upon them. My right hon. friend, realized this as any one with the same responsibilities and occupying the same position would have realized it, and therefore, we observe that the very first feature of this whole question to which the Prime Minister directed his attention, was to repel if possible the charge, or to answer if possible the accusation which must have entered into the mind of almost everybody from one part of Canada to the other, that this question had been sprung with undue haste and without due deliberation. The right hon. gentleman undertook an answer to that phase of the case, and I will give the House in his own words the answer which he gave. Let me tell the House in the first place, however, what the right hon. gentleman did not say in explanation of his course. He did not deny that there had not been deliberation; he did not affirm that the government of the country had availed itself of all proper sources of information, and had waited until they had exhausted all the means in their power to ascertain what the conditions were in the various portions of the country which this road was to traverse; he did not tell us the need which had arisen for us to jump headlong into a scheme of this kind; he did not tell us that he had summoned to his assistance the wisest counsels which the country could afford; he did not tell us that he had sought the assistance of experts in order to know what the traffic conditions were which would make this railway desirable; he did not even pretend to tell us that he had done these things; but, Sir, I will quote his own language as to what he did say, to repel what was almost a self-accusation. The right hon. gentleman said:

> Exception has been taken to the immediate necessity of building such a road, exception has been taken to the policy which we have to suggest for the immediate construction of such a road; but as to the idea itself I have never heard a word of opposition, nor do I believe that such a word will be heard in the debate. The first of these objections, that is to the im-

mediate construction of such a road, can be disposed of, I believe, with a single observation. To those who urge upon us the policy of to-morrow, and to-morrow, and to-morrow; to those who tell us, wait, wait, wait; to those who advise us to pause, to consider, to reflect, to calculate and to inquire, our answer is: No, this is not a time for deliberation, this is a time for action. The flood of tide is upon us that leads on to fortune; if we let it pass it may never recur again. If we let it pass, the voyage of our national life, bright as it is to-day, will be bound in shallows. We cannot wait, because time does not wait; we cannot wait because, in these days of wonderful development, time lost is doubly lost; we cannot wait, because at this moment there is a transformation going on in the conditions of our national life which it would be folly to ignore and a crime to overlook. . . . . We say that to-day it is the duty of the Canadian government, it is the duty of the Canadian parliament, it is the duty of all those who have a mandate from the people to attend to the needs and requirements of this fast growing country, to give heed to that condition of things. We consider that it is the duty of all those who sit within these walls by the will of the people, to provide immediate means whereby the products of those new settlers may find an exit to the ocean at the least possible cost; and whereby, likewise, a market may be found in this new region for those who toil in the forests, in the fields, in the mines, in the shops of the older provinces. Such is our duty; it is immediate and imperative. It is not of to-morrow, but of this day, of this hour and of this minute. Heaven grant that it be not already too late; heaven grant that whilst we tarry and dispute, the trade of Canada is not deviated to other channels.

Now, Mr. Speaker, it is only fair that I should call the grave and serious attention of this parliament and of this country to the statement which the right hon. gentleman has made. As I said, it is not a denial of the charge that there has been want of deliberation and undue and improper haste in this matter. It is not a denial of the charge that the government have not studied the question, and before I conclude my observations on this Bill, this resolution and this contract, I think I will convince the majority—well, I will convince the minds of the majority of this House at all events, that what is alleged against the government in this regard is absolutely and entirely true.

Some hon. MEMBERS. Hear, hear.

Hon. Mr. BLAIR. What does the right hon. gentleman mean when he says—

> The flood of tide is upon us that leads on to fortune; if we let it pass it may never recur again.

What does the right hon. gentleman mean when he says:

> If we let it pass the voyage of our national life bright as it is to-day will be bound in shallows.

What does the right hon. gentleman mean when he says:

> We cannot wait because time does not wait.

I think, Mr. Speaker, and I say it with all respect to my right hon. friend, that it would have been as correct if not so poetic for him to have said: We cannot wait because Senator Cox cannot wait.

Some hon. MEMBERS. Hear, hear.

Hon. Mr. BLAIR. What does the right hon. gentleman mean by saying:

> We cannot wait because in these days of wonderful development time lost is doubly lost.

What does he mean by saying: that to wait would be to destroy our future national life. Wherein is our national life going to be destroyed because perchance we take the proper time in order to study what we are doing, and in order to reach a wise and just conclusion with regard to an enterprise which is vaster, greatly vaster than any that has ever before engaged the consideration of this parliament. I fail to discover wherein we have to appeal to heaven against the possibility of a little delay in this matter. I know of no reason why the interests of Canada are going to be prejudicially affected because when we move forward we see the end, or think we see the end, to which we are looking, because we know the limits of the responsibilities by which we assume to be bound, and because we believe we understand the conditions under which we are operating. Why is it said by my hon. friend in this manner and in these terms, that we must not pause a moment to deliberate? Government may possibly not deliberate, but parliament has a right to deliberate, the country has a right to deliberate; and in my judgment, Sir, before we impose a burden of such great magnitude on the neck of the people of Canada, before we commit this country by an Act of this parliament to a scheme of such large and extraordinary proportions, it is only just to the people of Canada that they should have a chance to talk it over, and think about it, that the press should discuss it, and that everybody in the country should know what the government are contemplating. I cannot help feeling that it is rather a condition of hysteria than a condition of calm reason and judgment—I cannot help feeling that it is a condition of sentimental exaltation that has inspired the hurry and haste with which this measure is pressed forward; because I will not believe it possible that any other than a straightforward and honourable motive has inspired my colleagues in this transaction.

My hon. friend, having disposed of this question of want of deliberation, proceeds to take up another question which he regards as one of very grave and serious magnitude. With all the skill of an old parliamentary hand, with all the deftness and ability which we know he can successfully employ; my hon. friend, referring to Carnegie and his threats, quoting what was said by President Cleveland, reading from despatches, and otherwise, succeeded in working up our anxiety and arousing our

fears—and he must have succeeded in convincing many of our friends on this side of the House—that we were on the verge of a very grave calamity, that an awful abyss was yawning before us, that we were looking down a precipice, and were on the eve of being precipitated to its depths in everlasting ruin and disaster. And then, Sir, after my hon. friend had brought them up to the edge of that yawning precipice, he was to relieve them of their distress and anxiety by telling them, 'we have saved you by our measure; we have rescued you from the dreadful danger which was threatening you; we are going to give you an all-Canadian line, which is going to save you from the possibility of having your commerce destroyed and your business ruined by the action of the people to the south of you.' Let me refer to the language which the hon. gentleman used in that connection, in order that I may quote him with absolute accuracy. 'Luckily,' he says :

> Luckily, Sir, up to this moment, we have escaped the danger with which, on repeated occasions, we have been threatened. But, sir, what would happen if at any moment there should come one of those frenzies, one of those periods of excitement which we have seen sometimes amongst nations, the American nation included. At any moment we may be deprived of the bonding privilege which we have had up to the present. The only way whereby we can contemplate such a contingency with equanimity is to provide against it, and to have upon our own territory all the facilities by which we can get access to our own harbours. These are the reasons why we apply to parliament to give its countenance to the policy which I have outlined, a policy which will give to this new Transcontinental Railway at our own harbour, by an all-Canadian route to reach it.

Now, I want to ask the calm reason and judgment of this parliament—and, if need be, the appeal will have to be made to the calm judgment and sober reason of the people of Canada—when we have had the bonding privilege between Canada and the United States in existence for all these years; when, if ever there was a danger, that danger has been minimized; when the conditions existing in the United States are just as potent to prevent the possibility of any such action being taken by the United States government; when the number of American railways crossing our territory from one portion of that country to another, and the shipping which comes to the leading ports of the United States, are carrying to the merchants of Canada and from the dealers in Canada goods which are a profit to them; when they would be actually striking at and destroying their own trade and commerce if they adopted such a course—why my hon. friend should feel impelled at this late date, after all these years, and after we have been seven years in the government of this country and have never felt even a thrill by reason of that possibility—why my hon. friend and the government for whom he speaks should come to us now, in the frenzied rush, the impetuous haste, which has inspired this legislation, and tell us that we are in deadly peril, and in the utmost danger of having our commerce destroyed by the action of a friendly government ? I ask the members of this House why is this pretense put forward, or this argument—I will not knowingly use any term offensive to any of my hon. friends here—why is this argument put forward ? It must be because there is an absence of real, good, substantial argument to sustain the case itself, and my hon. friends feel obliged to appeal to the prejudices and feelings, and to arouse the passions of the people of Canada in order to carry through a measure which, on its merits, they would have no hope whatever of carrying. I noticed that when both this and the preceding defence were made by the right hon. gentleman, our friends on this side of the House were wild with enthusiasm. I do not know whether the enthusiasm was because of the relief which seemed to come to them after the period of strained anxiety was over, on account of the boundary peril or whether the real reason was that they felt great satisfaction in finding that even a flimsy argument could be made in support of the government's policy.

Now, Sir, what foundation is there, I ask, for the statement that our conditions, when this road is built, if it ever is built, will be any different from what they are to-day ? I want to know upon what foundation is the suggestion made that we are in deadly peril by reason of the possible action of a frenzied people, if frenzy should seize the people of the American republic. Why, Sir, we have to-day a railroad which traverses this continent; we have two railroads which run to the province of New Brunswick, with both of which connection could be made if need be; and we need not pass over American territory, even though the restriction were sought to be placed upon us by the American government. We could avail ourselves of those railroads, and they are just as transcontinental, just as Canadian, just as national, as any railroads we could construct in Canada. They are railroads on Canadian soil, and one of them at least is owned by the government of the country itself.

For myself I would have much preferred that this argument, at all events, had not been presented by my right hon. friend. I would have much preferred that it had been left to somebody else to declare to the world at large that the Canadian people are at the mercy of any other people. I am loath to acknowledge that we have not in ourselves to-day the means to protect ourselves against any such possibility, and I do not like to have the word go across the ocean and throughout the wide world that Canada is hemmed in by the United States and unable to protect herself, or, what is very much the equivalent, that it requires

the expenditure by Canada of one hundred and odd millions of money in order to get relief. I do not think that there is any such question to-day to be feared as the abrogation of the bonding privilege. The period when we might have feared it has long since passed away ; and whatever may be the merits or demerits of this government scheme which we are now discussing, I do trust that no man's judgment is going to be influenced in favour of what he would otherwise consider a defective and unjustifiable measure because this bogey of the abrogation of the bonding privilege has been raised.

The next leading proposition which the hon. gentleman presented was that we need an all-Canadian transcontinental line from ocean to ocean. Let me again quote the hon. gentleman's language, in order that I may be entirely accurate :

> We ask parliament to assent to this policy because we believe—may, we feel certain, and certain beyond a doubt—that in so doing we give voice and expression to a sentiment, a latent but deep sentiment, which is to-day in the mind, and still more in the heart, of every Canadian, that a railway to extend from the shores of the Atlantic ocean to the shores of the Pacific ocean, and to be, every inch of it, on Canadian soil, is a national as well as a commercial necessity. That such a road must be built, that it is, in the language which I have used, a national and a commercial necessity, that it is a corollary of our status as a nation, that it is a requisite of our commercial development, is a proposition to which, up to this moment, I have heard no dissent.

The necessary implication from that argument is that a road from ocean to ocean through Canadian territory does not now exist; and if we are to accept this inference, if we are to allow it to influence our judgment, then we will be misled—misled unquestionably, although I would be sorry to convey the impression that I thought my right hon. friend would wilfully attempt to mislead this parliament or the country. But certainly, if parliament were to accept this implication, it would be misled beyond all doubt and question. What constitutes an all-Canadian national line ? Does it mean a railway line spanning the continent from ocean to ocean and owned entirely by one corporation ? Well, we have such a line now. We have even, I might almost say, got two such lines. Then why should we be influenced by this implication ? We ought not to be influenced by it. If that is the sole necessity, and my right hon. friend said that were it not for this question of the bonding privilege he would not now be asking this parliament to assent to this proposition of a transcontinental road.

Finding the reasons assigned in support of the proposition inadequate, finding the ground giving way and the foundation dropping out, what is to be the outcome of the measure itself, if it is to be dealt with as similar measures, under other circumstances, would be dealt with by any deliberative body ? The line, my right hon. friend claims, is both a national and a commercial line, but yet he says it is not a commercial line in the sense that you are to count on a profit or loss. Well, Sir, what is a commercial line if it is not a line constructed according to the dictates of commercial needs and which involves, necessarily and inevitably, the idea of profit or loss? You may build a sentimental line, but if so, tell the people that it is a line which you are building for sentimental purposes. Or, if you are building it for commercial purposes, say so. But my right hon. friend does not seem to be willing to consider it entirely the one or the other. It is a compound of both. He says it is not, in the ordinary sense, a commercial line, but is an all-Canadian line. Well, unless there be some pressing need for it, I do not see why the people of this country should be saddled with an obligation of $100,000,000 of money and an addition to their liability, as I shall show, of an amount exceeding that. Unless there be something behind which has not been disclosed and which renders it necessary, I can see no reason now for the construction of this proposed national line. Both the Canadian Pacific Railway and the Canadian Northern Railway are national lines in the widest acceptation of the term. They do not traverse the whole country from ocean to ocean, but if you will look across the border, I think it will give you some difficulty to point to any transcontinental railway there in the sense mentioned by the right hon. gentleman. You cannot find any railway in that country which starts from the Atlantic and ends at the Pacific, and which is under one control. I do not know of any. Their great lines east and west meet about the centre of the continent, and are the result of a process of development. Our American neighbours have not been trying to perform any spectacular feat by spending a large amount of money unnecessarily. They have done what the business needs of the country called for. Less than that we ought not to do ; more than that we would be wrong in doing.

These are the four chief reasons which I gather from a careful reading of the right hon. gentleman's address why this measure should commend itself to our approval. But there is another, a general reason, which he gave. The country, he says, is crying out for another transcontinental railway. Mr. Speaker, my ears have been open, I have been a willing listener to any demand of this kind, and I am bound to say that I have not heard any great outcry for another transcontinental line from ocean to ocean. I do not know where the cry was made that it reached others. It was not made, at all events, so that it reached me.

I may have occasion, before concluding my remarks, to refer to this question again, and therefore will pass from it for the moment. Those who have been criticising this

measure, myself among the number, as an opponent of the Bill, are taunted with being timid, with being deficient in pluck, unable to grasp a large problem, somewhat provincial in our ideas, and incapable of appreciating the increasing growth and progress of Canada. I deny this charge, and, as far as my denial may be of any value, I want to make it emphatic. I am not open to any such reflection. I do not admit at all that a well digested, well considered scheme of railway development, a scheme called for by the needs of the country and to be proceeded with as soon as it could be reasonably proceeded with, would be opposed by me. I would not be found placing any opposition whatever in the way of such a scheme. I am as willing that the resources of this country should be taxed to the full ability of the country for the purpose of railway development, reasonably necessary to develop the illimitable resources of this great country, as any man in this House. But, Sir, I am not thereby prevented from saying to those who ask me to give my assent to this project: How do you reach your conclusions? On what information are you going? Have you exhausted the necessary sources of information, and where is this thing going to end? It is only the part of reasonable prudence for a man to do that. Nobody is worthy of the great trust which the people of the country is reposing in those to whom they have intrusted the administration of their affairs unless he is prepared to resist pressure brought on him to act hastily, and unless he is determined to give to the subject that careful study and deliberation which will justify him in assuming the responsibility of proposing the legislation asked for. I felt, Sir, as one, and particularly, as Minister of Railways in my hon. friend's government, that the country would expect me to apply my judgment to the questions which came up. Having somewhat more experience in the matter of railway construction and railway operation than many of my colleagues, and being charged particularly with the government's business in that regard, I felt that on me would rest a larger measure of responsibility; and I was entitled to know enough, and to see into the matter far enough, to justify me in asking parliament with a clear conscience and well settled conviction to give its assent to the proposition to be laid before it. Barely six months ago this question was first mooted. Six months is not a long time to consider and weigh and look into a project of this kind, which had not been mooted before; particularly when it is borne in mind that a large portion of these six months has been occupied by the sitting of parliament, when every minister has his hands full, when his thoughts are fully engrossed with the business of the session, and when some have particularly important measures pending before the House. In that, I speak for myself, because, as Minister of Railways, I was charged with the carrying forward of a piece of legislation which was very important, and which required the best thought and attention I could give it, in order that it might be perfected at every point. This being the case, was this the time for one to endeavour to comprehend and shape and advise upon, and think out a proposition of this magnitude? Why, you have only to dwell upon it for a moment to see how unreasonable such a suggestion is. Every session of parliament we put off things of the most trivial moment because we have not time to deal with them. Every session, Bills that are pressed upon us are put by until the following session, simply because we have our hands full. Yet, right on the eve of the sitting of parliament, after we had taken up large policies, after we had arranged to propose large expenditures, when it was known that we were going to have our best thoughts and acutest judgment strained to the utmost to do justice to the subjects with which we would have to deal, we undertake to grapple with a problem of this immensity and complexity, and one involving such great financial and other responsibilities. Well, Mr. Speaker, the bonding privilege up to that time had never impressed anybody; the imperious need of a great transcontinental all-national line had never forced itself upon anybody's mind. Within a few weeks of this sitting of parliament this thing is first mooted. And here we are now putting the final ratification—if we shall do it—upon a measure, which, when it is once passed is beyond recall, which, when once passed is so irrevocably done that the people of Canada will have no more to say as to whether this thing shall go on, than will the common council of any county in the land. My hon. friends have taken the precaution—I do not say they have unfairly taken the precaution, but the precaution has been taken—of making a contract with somebody representing the Grand Trunk Pacific, a company not even yet incorporated, somebody who undertakes to speak for the Grand Trunk Pacific as to what the company will so do, and also with somebody who undertakes to say what the Grand Trunk Railway Company of Canada will do; and they have signed this contract in all its details, with all its clauses and conditions, and they have put that upon the Table, and they say to us: Accept this or reject it; take it as it is, or leave it; you have but one alternative, to swallow the whole, or reject the whole.

Now, I want to know also, in all calmness and all frankness, from the members of this parliament, from whence comes this irresistible and compulsive pressure under which we must drive this thing through now? The thing was never mooted before, and the government took no action, until

the Grand Trunk Railway Company conceived that it would be in their own interest to have the railway project liberally aided by the parliament of Canada which they desired to promote. That is the secret of the whole business; that is where it originated. All the other considerations fell upon unheeding ears. All these dangers never struck our minds, never seem to have entered into our calculations; it never occured to us that we were under such imminent peril; it never was suggested by anyone that the great future of Canada, the very life of Canada was at stake—until the Grand Trunk Railway Company made a call and laid their proposition before my hon. friends and colleagues of the government. I make bold to say that there is no evidence that the people of this country demand this legislation. I will commence with the province of British Columbia and ask you: Is there any call, loud or weak from the province of British Columbia that another railway should be put through the passes of the Rockies and carried to Fort Simpson? If there is, I have not heard it. I would like to see the proof that can be brought in support of any such statement. Such a feeling does not exist. I have no doubt that the people of the province of British Columbia, if this railway venture is going on, would like to see it pushed through their province. But I know that when it comes to the question of railway aid and construction in that province, the files of the Department of Railways will show what railways they want; and among them is not included a transcontinental railway into that province. Go over the files of the department, and you will find that the railways that they chiefly want are those that will go through southern British Columbia and give means by which the mineral products of that country can be taken to market. That is what they are asking for. Therefore, I say that, from wherever else the cry may come calling for the building of such a line as my hon. friends propose, that cry does not proceed from the province of British Columbia. Well, have we heard any loud appeal from the sister province of Ontario? Have we heard even a whisper of it before this thing was suggested? Of course, I do not deny that the very moment it is known that the government of the country is determined upon carrying out this project, you will hear cries innumerable in favour of it. Then all the papers and all the men who are friendly to the government will take up that cry, if their judgment or their consciences will allow them to do so. When the project is announced, then the cry will exist; but it did not exist, there was no voice, there was no word of it before the suggestion came from our friends in Montreal. Now, is there any cry in the west for a transcontinental railway? I dare say I may be taking up a position which is singular to myself, because I observe very little in the public press suggesting a doubt as to the necessity or advisability of more railways in the West. I have studied the question somewhat, and I do not know just how soon or how far in the future the time might be when such a line as this would be called for by the West; but now or in the immediate future there would have been no demand for any such railway project as this.

Mr. McCREARY. Does the hon. gentleman mean on the Western prairies?

Hon. Mr. BLAIR. Yes.

Mr. McCREARY. I say there is congestion there through which the farmers of the country lost over six millions of dollars last year.

Hon. Mr. BLAIR. My hon. friend (Mr. McCreary) will find that I have not altogether lost sight of this question of the congestion of which he speaks; he will find that I have considered it. Whether I have reached a just and proper conclusion or not will remain for those who consider the subject——

Mr. McCREARY. Hear, hear.

Hon. Mr. BLAIR. Yes. I intend to present the argument. Let the arguments be dealt with, as they will be in the discretion of every one who hears them. I say, there has been no cry in the west for more railways, in the way of east and west long lines. My hon. friend (Mr. McCreary) says that there was a great deal of wheat remaining to be taken out last year. Was that because of the lack of another railway up through the undeveloped northern portion of that western country? No, Sir, that cry came not because there were not railways enough, but because the railways they had were not equipped with enough locomotives and enough cars. That is what the congestion arose from. These people have had no difficulty at all from any other cause than the shortage and shrinkage in the equipment upon these railways. If you have read carefully what has been said by these people, you will find that there is a general consensus of opinion that that was the trouble, and not because they wanted other railways to be constructed just now in the unpeopled territory. The traffic was congested, but I think the congestion will very soon be overcome. I think perhaps it may be pretty well provided against now. But I state now that the three railroads—and I am including the Manaitoba and North-western, for although they are branches they are still extending largely to the west and north-west—they are providing that country with all reasonable railway facilities that are needed at present.

Now, there has been no press agitation. Let me add that I have not heard of any agitation in the maritime provinces or in

the province of Quebec. In the city of Quebec and neighbourhood there is quite a feeling in favour of some assistance being given to a railway that was to travel over much this same route; and so far as that sentiment has been expressed it is entitled to consideration. I, myself, have been in sympathy with it, and I am going to state fully what my opinion is in that regard before I conclude my observations. But I do say that there has been no demand in the North-west for a grand transcontinental line from ocean to ocean; there has been none in the maritime provinces. I never heard of any, and I would have heard it if it existed. Nobody ever heard of this project, at all events, until this session of parliament was half way through; no one ever heard it mooted as a scheme that was under consideration by this government, or likely to be submitted to parliament for an extension of this line to Moncton. There has been no press agitation in favour of it during the last six months, no platform agitation, no discussion in parliament, nobody has risen in any numbers, or even in units, and said that we want another transcontinental railway, moving motions, urging the government to that course. Nobody has been calling for this, therefore it is a mistake, it is misleading, to say that there is a great cry in the country which impels this government to adopt the policy that has been determined upon. Moreover, Mr. Speaker, it is fair to add that when this matter did first come up for consideration, when the Grand Trunk Railway Company first moved in this direction, it was not for this scheme that they moved; they moved for a much more limited scheme, they moved for a scheme which involved aid to a railway to North Bay, as they told us publicly. That was their idea, these other features have been added since, and I suppose it was considered necessary by reason of the fact that these bonding privileges had been imperilled, and other direful consequences seemed to be imminent.

Now, Sir, when we consider all these facts, and other facts, it would seem to be almost incredible that, under such circumstances, no heed should be paid to an appeal that we should go slow, that we should see what we are doing, that we should carefully study the bearings of the question in all its aspects. I would have thought there is scarcely one minister in the government, burdened with all the duties which during a parliamentary session are cast upon members of the government, but would have hesitated to take a step of this magnitude during the present session. However, Sir we have the scheme before us, and we must deal with it as it is. I think that a different scheme might have been with greater advantage to the country devised. If we were to consider the interests of the country as being paramount to any desires or any wishes of any railway company, I think a different scheme from this could have been and would have been devised. The whole proposal strikes me as ill-considered. There are facts which should have been ascertained and which when ascertained would have sufficed to show us whether the step to which we were committing ourselves was one which we could safely take. The fact when available which would have given us confidence in either not moving at all or in moving forward in the direction we are now asked to take. But we are in the dark. We cannot say that things are not so, because we do not know; we cannot say they are so because we have not any information which would justify us in saying it. We may find, if this thing goes on, that it is a huge blunder, that is it a grave mistake. We may find when it is too late, that the best interests of this country would have been better served by waiting, by putting off till to-morrow, by delaying long enough to make a proper investigation and inquiries.

Now, we have this session—and I think that ought to be borne in mind—made large provisions for a western railway extending through almost the whole of the fertile belt, to Edmonton at all events. We are providing this year a guarantee of bonds for 600 miles, and another additional 100 miles in another direction. Now, that is a considerable thing for parliament to have done in one session, seeing, if I am not incorrectly informed, that the country through which that railway passes is not settled, that it remains to be settled, and we hope to invite settlement by means of it. That railway 600 miles long, benefiting a tract of country 15 to 20 miles on each side of it, will ultimately be settled, but it will take a great many people and it will take some time to settle it, even with all the railways to the south of it. It will be some time before you need to make a new railway to the north. I think the case is abundantly clear that we have done amply well this year, at all events, in the way of giving a guarantee amounting to $9,000,000 towards the construction of the Canadian Northern. We have done that after two years of consideration, and only came to a final conclusion during the present session of parliament. Now, my own view would be that if we wanted to pass railway legislation, if we wanted to do something of advantage for the transportation of the country, if we wanted to secure to our Canadian sea-ports the transportation of western products, we would have extended the Intercolonial to Georgian bay by acquiring the Canada Atlantic. Of course, Mr. Speaker, that involves a continuation of the principle of government ownership, a principle to which I know a great many people are hostile. It would involve the government doing something to which many people are not well disposed. I regret, I am sure, as much as any man can, that unfortunate visit which the right hon. gentleman paid to Depot Harbour on the oc-

casion which he mentioned in his speech. It left an ineradicable impression upon his mind, fatal to all ideas of government ownership, fatal to any progress in that direction. It is enormously regrettable, because that impression cannot be removed.

No amount of argument, no amount of reason, no amount of experience, could possibly lift from my hon. friend's mind the load of conviction that was brought to him by the visit on the occasion referred to. I know that some former colleagues of mine were not a bit more friendly to government ownership than he was; whether it was owing to a visit to Depot Harbour I am not at all clear, but I am not yet content to accept that explanation as to their attitude upon the question of government ownership. The impression that has been created upon my own mind is that they had made this question of the Intercolonial Railway so much a battledore and shuttlecock business between political parties in former times when they were on the other side of the House that they have become filled absolutely full of prejudice and it is impossible to enlighten them or remove this prejudice. If they wanted to do something which would give evidence of a response to the national aspirations they would have gone to Georgian bay and they would have found the great body of public opinion that would have justified and supported them in going there with the government railway. The opinion is that business can be brought from the western country by the lake route and down over the Intercolonial Railway which will never, perhaps, be brought by any other possible route that may be constructed in the country. When the Intercolonial Railway was extended to Montreal, I felt that that would be the next move that we would make. I felt that it would be a proper step to take. I have been four or five years struggling valiantly in order to achieve some success in that direction. The move will be taken though. Other views which are more potent, than mine have been will prevail upon the government, and it will adopt the policy because it has virtue in it, and it has hope in it, and it must become a means of realizing the national idea of using our own ports winter and summer for the carriage of the products of our own country. I am not going to undertake to enter, on this occasion, upon any elaborate justification of the policy of government ownership. I have, on many occasions, when I have been addressing the House in reference to my railway estimates, taken the oportunity of pointing the mind a little in that direction, and I have adduced arguments which, while not being put forward at the time as arguments in favour of government ownership, may have influenced the creation of a sentiment in favour of such a policy and I claim that whether it be due to any word that I ever uttered or to other causes, there has been a marked, strong, rapid growth of public opinion in favour of the extension of the policy of government ownership in Canada. I do not say that the government should own every railway. I do not say that the government should take up every railway enterprise which is proposed, but I do say that the government might very wisely own a trunk line here and a trunk line there, because it gives advantages to the people who use these lines and who use other lines, which they can never have in any other way.

The experience of the Intercolonial Railway, I think, so far from being an evidence that such a policy is an unwise and unsafe one and one which cannot be judiciously adopted by the government is directly and positively the other way, and I am only too sorry that so small a portion of our friends on this side of the House, and so small a portion of hon. gentlemen on the other side of the House agree with me in that view. Then, I will say that if our friends had been anxious to hear what the people of the western country had to say and what their wishes were in reference to this railway they would have heard that no policy would commend itself to their judgment so heartily or so unquestionably as the policy which will ensure the construction of a railway through the western country which shall be owned and operated by the government. Now, we have been told a good deal by my right hon. friend in regard to the disadvantages of the Intercolonial Railway by reason of its circuitous route, and what the right hon. gentleman said in that respect is absolutely correct. He said what I have said over and over again in explanation of why better financial results had not been accomplished over the road, but because it is a fact in respect to the Intercolonial Railway it does not follow that it should continue to be a fact in respect to any extensions which take place, because, in my view, the more territory you extend the road into which shall be productive, the better it will be for the Intercolonial Railway and the more it will equalize and bring up the general results. When you talk about building a road through the central part of the province of New Brunswick in order that you might get a cheaper and better route than the Intercolonial Railway, I point to the experience of the Canadian Pacific Railway, which crosses the state of Maine. What is the fact? The Intercolonial Railway has had a contest with the Canadian Pacific Railway—a contest in one sense—at all events, a test between the two roads has taken place. When did it take place and with what results? It took place last year when the Canadian Pacific Railway was barred, in consequence of the embargo laid upon cattle, from carrying cattle through the state of Maine. We were called upon on the Intercolonial Railway to carry these

cattle from the west, because as I have said they could not go by the Canadian Pacific Railway, we carried them, and what did we succeed in doing when we carried them ? The city of St. John is 259 miles further away from Montreal by the Intercolonial Railway than by the Canadian Pacific Railway ; yet, we hauled double as many cars to a train load over the Intercolonial Railway by reason of its good condition and level, easy grades, and we hauled them in less time than the Canadian Pacific Railway could haul their cattle trains over their own line 259 miles shorter in distance. That is a fact, and therefore I say that we can with good reason claim that the Intercolonial Railway can hold its own against the competition of any other railway which may be constructed in New Brunswick, except the railway which will run from Rivière du Loup directly down the valley of St. John to the city of St. John, which, of course, has very much more favourable grades than those on the Canadian Pacific Railway. I was going to add that it is clear from the information which is easily obtainable, and some of which I have in my hand, and which I would perhaps not be warranted in taking up the time of the House in reading, that there is a very large traffic done by the Canada Atlantic Railway in shipping from the head of Lake Superior, and that that business could unquestionably be increased. It follows then that it could have been, but as the officers of the Canada Atlantic Railway will tell you, they have been in need of additional locomotives and cars, and perhaps they have been at some disadvantage owing to the single track ; I am not clear about that. At all events, cars and locomotives are much needed by them if they are to increase their traffic, and if they did increase their equipment in that respect their business would also correspondingly increase. Now, then, the navigation at that point is very much later than it is through the canals. I understand from Mr. Booth that Depot Harbour is open at least a month or six weeks later in the fall, and some two or three weeks earlier in the spring, than is the navigation on the canals, so that they could take shipments across the lake during a period when the canal system is not opened. Therefore, you have advantages over that road which you cannot get in any other way, and you would be picking up the traffic at the points where it can be had, and from which it is seeking carriage. The traffic comes down to the head of the lakes on both sides of the line for the purpose of getting water transport, because they allege that water transport is very much cheaper than rail transport under any circumstances, and by this means you would be able to secure that traffic. Now, sir, so much for the Georgian bay.

It has been my first hope and my first desire that the government of the country should take up that question of the Canada Atlantic Railway and acquire it, as they could acquire it, I am pretty well satisfied upon reasonable terms, and the expenditure of a very moderate amount of money would have connected it with the Intercolonial Railway, and you would have then a railway which was running through our own territory, which was picking up the traffic just where the people wanted to have it picked up, and which would have given you an outlet and a gateway through our own ports.

Now, Sir, addressing myself to the present scheme of the construction of this railway from Quebec to the west, I am not going to say that it is a project that has not very much to recommend it, and perhaps a project which I would gladly see carried out, and which I would hold up both hands to support under proper conditions and in a proper way. If we could be satisfied that the country to be traversed by that railway from Quebec to the prairies is a fertile country which will invite and support settlement, and which will support a railway from a local point of view, then I should say, let us go ahead and build it as rapidly as the occasion arises as rapidly as the settlement of the country will call for it, and as rapidly as we can justify it under a proper administration of affairs. I would not put any obstacle in the way of the rapid construction of it, after you have possessed yourself of all information with regard to it ; after you have found out what it is going to cost, what is the limit of the liability you assume, whether or not you can get a suitable route, and generally possessed yourself of that information which any ordinary business man would put himself in possession of before he would embark in any such undertaking. So far as the construction of the Quebec portion is concerned, I would heartily favour its construction by the government, I would heartily favour its operation by the government, provided they had taken these proper precautionary steps, which, however, they have not taken. My quarrel with the government so far as this portion of the undertaking is concerned, rests almost entirely upon the consideration that they are plunging headlong into this thing, in a most unwise, injudicious, and unbusinesslike way, when by a little pause, by a year or two of delay to get information, we might be put in possession of facts which would justify us in proceeding. And surely a year or two is not a long time in the life of this Canadian nation ; surely Canada is not going to come to an end so soon that two years is a term of any importance to be considered in our national life. I apprehend that we would have needed two years in order to have obtained a thorough, complete, and correct survey and exploration of that whole country. And having that, the government could have come to parliament, and they could have gone to the country and given reasons for the faith that is in them,

and given substantial ground for asking the people to encumber themselves with a liability of $40,000,000, or $50,000,000 or $60,000,0000, or perhaps more for the construction of this railway. If you delay it in order to obtain this information, you could have come to parliament upon solid ground with your proposition, and if you had that solid ground the country would, I am sure, heartily and readily sustain you. But as you are going now, as you are plunging into it, you may possibly plunge into what is going to be a disaster. I cannot say; no man can say that that country is not of abounding fertility. No man can say that that country will not afford the amplest amount of traffic. No man can say that it is not rich in all the varied resources which distinguish other portions of Canada. No man can say that there would not be a mint of money made by any company that would operate a railway through that country. But the fact of the matter is, that we know nothing about it. We have no information about it. The government is not in possession of any information about it, or at all events if they are I have never known of it and they have not put this House in possession of it. And if it be that this country is not a fertile country. If it be that there is no local support for a railway; if it be that settlement cannot be successfully invited into the country; if it be that the rest of Canada will fill up with settlement before settlement will go into it; if there is nothing but pulpwood in that country which will not be hauled out until after all the pulpwood which is handier to the market is taken away from the other vast areas of Canada in which it is to be found; if there is no lumber there except the lumber that would enter into competition with the lumber of British Columbia which is much handier to get and better in quality; if that is all the business that a railway can take out of that country, what a calamitous plunge this government and this parliament would be taking in lending support to this scheme.

At all events, I am entitled to ask so far as I represent the people of my own constituency and the people of New Brunswick; I am entitled to ask as any other member of this House is entitled to ask, that I should have enough evidence before me, that I may be satisfied in order to arrive at an honest judgment, so that I shall feel that I am not by any possibility committing a grave and an egregious error which will deal disaster to the future of this country.

Some hon. MEMBERS. Hear, hear.

Hon. Mr. BLAIR. Now, Mr. Speaker, such a railway as I would favour could be used for colonization purposes of course, and for what ever other western traffic would be attracted over that road—whatever other western traffic would find its way there in preference to seeking an outlet from the head of the lakes. If all that our friends confidently expect and believe with regard to the future prospect of the advantages which would come to the west from that railway, is fully realized, so much the better, and we will all be able to appreciate such good results. But we do not know that there is any possibility of such beneficial results; we have no information that would lead us to form an opinion on the matter, and therefore I say that the government may fairly consider whether they ought not to pause in the project which they are asking us to approve.

Now, Sir, my proposition is this: We ought to have come before parliament as a government, and we ought to have said to parliament and to the country: We are favourably impressed with the importance of the early construction of another transcontinental railway; but, as business men, as prudent and cautious men, we think that the proper course for us to take is to get an appropriation from parliament in order that this whole country which it is proposed the railway shall traverse in so far as it has not been officially explored, and in so far as we have not been made familiar with its conditions; shall be ascertained and made known to the people of Canada, laid before parliament at a later day; and then if these reports are favourable it is our fixed purpose to ask parliament to authorize us to go along with railway construction in that territory. My idea would be that we should go as far as we could reasonably and as the necessities woull justify, and when we got through to the prairie, that we should then call a halt until the necessity arose for further extension through the western country. We would have our officials on the alert and they would see when the growing needs and prospects of the country would justify a further extension, and when that time came, then if nobody else entertained it, and even if they did, my idea would be that we should continue our road along; go right along through, go along just as we required to do it in the true interest of the country. Then this discussion, which I have said was so necessary, would have taken place. The public press would take the project up; the public platform might, perhaps, be used to some extent, parliament would discuss the matter in all its bearings, and you would get the ideas of the people as to whether government ownership and government operation, or company ownership and company operation would be the most desirable, and the arguments would be brought pro and con, and you would have the people of Canada put in possession of all the facts of the scheme which was to be adopted, before they were irrevocably committed to its adoption.

The points that I think ought to be inquired into are: Is there a feasible and practicable route north of the height of

land between Quebec and the prairies? What will the railway cost? What are the prospects of settlement? What are the natural resources of the territory? Is there a good reason to believe that there will be a local traffic to sustain the road? These, and cognate questions should, I think, be first inquired into before we are asked by the responsible government of this country to commit ourselves to a work of this magnitude.

Now, Sir, I am brought naturally to call attention to some features of the contract in connection with the observations which I have just made. On the first page of the Bill you will have discovered a special feature indicated by the language employed in the preamble:

> Whereas, by reason of the growth in population and the rapid development in the productiveness and trade of Canada and especially of the western part thereof, and with a view to the opening up of new territory available for settlement, both in the eastern provinces and in the west, and the affording of transportation facilities for such territory, and for other reasons, the necessity has arisen for the construction of a National Transcontinental Railway.

You will observe further on that it reads that you are to proceed to 'the construction of a National Transcontinental Railway to be operated as a common railway highway across the Dominion of Canada from ocean to ocean and wholly within Canadian territory.' It is to that particular feature that for a moment I desire to call the attention of the House. One of the fundamental grounds and bases upon which this scheme is founded—and you can see the consequences of this view later, when I further advance with my argument—is that it is necessary to furnish to that territory which we are opening up and developing a common railway highway.

Now, I apprehend that that language has been chosen for the purpose of conveying a specific idea. It is to be, not an ordinary railway in any sense, not a railway which could be owned and controlled by a corporation, although subject to all the powers of control which may be exercised through any tribunal which parliament may constitute but a government railway, to be used in a different sense from an ordinary railway—something in the nature of a highway, only with rails, so that every railway company which came along would have the right and opportunity afforded to it of traversing this railway with its trains; so that, as my hon. friend said in the course of his speech, a train could start at St. John or Halifax, run to Moncton, get on to this railway, and come out at Port Simpson; so that your locomotive, your train and your train hands could go on a long junketing tour across the continent from St. John to the Pacific ocean. That is to say, it would be a railway common to every railway company to use. That is the meaning, I apprehend, of the language used, or else there is no meaning in it at all.

Now, let me call attention to clause 24 of the contract, which contains two or three sub-clauses which point to the same idea: First, sub-clause (a), and next, sub-clause (b). On reference to these clauses--I need not read them—you will see that they fortify the idea that trains might come along and pick up this railway, and run along it in the ordinary way in which a man with a horse and cart may travel along the highway. To show that this is the idea that underlies the measure, I will read a brief extract from what was said by the right hon. leader of the government on this subject. At page 7692 of 'Hansard,' my hon. friend says this:

> So that under this agreement an Intercolonial train can leave St. John or Halifax and proceed all the way to Port Simpson. Under this agreement, a train of the Great Northern or of the Canadian Northern can enter upon this road at any point and go as far as the maritime provinces. So we have guarded this point in every way, and I believe that in this respect the provisions we have made will command the full satisfaction of the Canadian people.

If it were possible to produce the most conclusive and striking evidence that some features of this contract were framed without consultation with and without the advice or the opinion of anybody who knows anything at all about railroading, these clauses in the contract and this clause in the preamble afford that evidence. A more absolutely unworkable, and, in the opinion of every railway man in the country, a more senseless suggestion it would be difficult to make. The idea of commencing a scheme involving all the millions of expenditure which it is proposed that this scheme shall involve, and then saying you will do it in order to establish a common railway highway, so that 'a' company, 'b' company, 'c' company and 'd' company may have their trains travel thousands of miles over this railway. I have endeavoured to urge the view, but without the slightest success, that that was not railway usage or practice or possibility; but it is here all the same. I have no doubt that if my hon. friends had appealed to the honest opinion of the general manager of the Grand Trunk Railway himself, he would have pointed out to them the utter fallacy of such a suggestion as that—the absolute and utter impossibility of any such plan being worked out. Just look at it: What does it involve? It involves that a train shall leave the Intercolonial Railway, with its train hands, its locomotives and its cars, and shall start out. It runs its first day; what will it do? It has either to lie at some particular point over night, or get fresh men and a fresh locomotive. You have to have your locomotive looked after and repaired; you have to have your men sleep and your engine cooled, and other things attended to. Or, take your time and

stay on the road. In that case, you would have to pay your board, or be looked after in that way. You would have to provide rest houses for your men and engine houses for your engines. Every company would have its engine houses and its rest houses, and every one of its trains would have to lie over after it had gone as far as it could in a day, until it rested and was ready to go on again the next day. Would not that be a very comfortable way of conducting the railway business of the country? You could not do that, you say; that would be absurd. Well, what else would you do? There would have to be some authority in charge, which would have spare locomotives and spare men whom you could utilize to look after and repair them at every 120 or 140 miles along this railway. Then, that thing would have to be repeated all over the line. Why is that not done now? Because it is utterly impracticable. The only practicable way is to have some railway commission or some general tribunal deal with the matter. When different railways are anxious to use a road in common, they constitute themselves into a board, which board appoints its officers and employs its men, who will have general supervision over the common road so as to ensure its equitable use to all. This association would have to own the locomotives and manage everything in order to ensure fair play. But such a body could not operate a transcontinental line running its trains three thousand miles to the Pacific coast. Right of way is sometimes given by one railway to another over its line, but only for short distances. The Canadian Pacific Railway use the Grand Trunk Railway between Toronto and Hamilton. But that is a very short mileage; and when you talk of giving various railways the use of a line a thousand miles long, the thing is not possible. A common railway highway is not feasible. You cannot work out any such idea. The idea is however put forward, as one of the great merits of this scheme, that it will provide a common railway highway which may be used by all the railway companies that may desire to connect with this line across to the prairies. It is claimed that all these other companies may send their trains over it. That, Sir, can never be worked out. There are good reasons why the latter feature of this scheme, involving the leasing of this road to a private corporation, will defeat the possibility of this road being utilized to any extent by any other company doing business in the western country. The same reasons which would justify the construction of this road by the government call for its operation by the government. There is no other way in which the advantages which are supposed to accrue from government ownership can accrue to the people. When I speak of government ownership, I do not necessarily mean the operation of the road by the Railway Department. It does not matter a jot whether the road be in the control of a department of the government or some tribunal which the government may create, it must be operated by an independent tribunal which has no interest in any other railways that are competing for the same traffic. Therefore I say that when the government took the responsibility of building this line, it should also have taken the responsibility of owning and operating it. It should not have parted with it for a period of fifty years. Its leasing of it for fifty years is equivalent to their giving up its ownership during that period. It ought to own the road and operate it, and in this way confer on the country the advantages, whether great or small which follow from government ownership. The people would then enjoy those advantages which they will not do now under the system adopted. After going to the enormous expenditure of building this line, the government intend handing it over to the Grand Trunk Pacific Railway for fifty years. Thus during two generations this property will be out of their hands. But they say, 'Oh, we have put some very binding clauses in the contract, we have tied them up hand and foot, we have compelled them by agreement to do this thing and the other. That does not help the government in the least. I do not say that these restrictions will be of no advantage at all, but I say that there will be no advantage to the people from the construction of the road, after you once lease it, commensurate with the loss incurred by your parting with its control and putting the road into other hands. The Grand Trunk Pacific Railway is not in a position to attract a great deal of business to this road. If the tendencies were all, as my hon. friend thinks they are or will be, in favour of this road securing transatlantic traffic with equal advantage compared with any water route, when the government lease it to the Grand Trunk Pacific Railway, they give it into the absolute operating control of that company. You can not constitute any committee of investigation able to watch those men close enough to prevent their giving the advantages to their own company's traffic in preference to any other. No ingenuity you can display will enable you to provide yourself with safeguards sufficient to prevent the Grand Trunk Pacific Railway from giving the benefits and advantages to themselves and with holding them from others. The Grand Trunk Pacific Railway is practical owner. Every man engaged on that road will be in their employ, looking to them for wages and promotion, and anxious to win the confidence and goodwill of his employers. Every train despatcher, along this strip of 1,800 or 1,900 miles, will be naturally inclined to favour the company which pays him. It will be of the greatest importance to him to see that no delay occurs in the despatching of their trains

and the carriage of their traffic. He knows that if he does that, his people will appreciate his zeal in their interest, because they are keen competitors with all the other people who are supposed to want to use this railway line. What are the other railways that are going to use this great common railway highway? They will all be competitors with the Grand Trunk Pacific Railway, hauling grain in competition with that road, and they will be sure to suspect that they have not been given fair play. They will not send their business that way if they can find any other way. Those people will suspect, and they will act upon their suspicions even though these may not be well founded. Let me give you some of my experience as a member of the Railway Committee of the Privy Council. Five or six cases have occurred in which companies have come before the Railway Committee to have their disputes settled concerning the user of single or double tracks by two or three different companies, and the amount of jealousies, suspicions and difficulties experienced, in getting those companies to come to any sort of an agreement, whereby one of them was to be allowed to handle the trains and serve the others, one could hardly imagine. Even if it is only a few miles, the struggle for advantage, the time taken up, the controversies that arise, the suspicions that exist will not be allayed, they cannot be allayed—it is not in human nature. Therefore, I feel as though I am bound to say that it is perfect moonshine, it is misleading the people of this country, to try to make them suppose that they are to have a grand transcontinental highway at their disposal, to be used in common in the way this Bill declares and this contract contemplates. So, one of the bases on which this thing is being pushed forward now with this prodigious haste will bear no weight, by reason of the utter impracticability of working it out in actual railway practice. The way to do this, as I have said, would be, if you like, to put a commission in charge of the road. Then you might rest assured that, with a commission that has no interest in either of the competing railways, no interest in the traffic, would have the confidence of all the railways that might want to use the road. And the way they would use it, and the only way they could use it, would be by bringing their loaded cars up to the point of intersection and handing them over to the commission to be hauled over the road to the point of destination. But when we are told that we can pick up trains at this place or that and carry them, if necessary, with their own crews over hundreds or thousands of miles, we are being led in a kind of hysterical frenzy, it seems to me, to adopt ideas that are wholly and absolutely impracticable, and which show that a little thought and a little time, and a little more thought and a little more time, and still a little more thought and a little more time, would not have been wasted if devoted to the consideration of this scheme. Now, for these reasons, I am unable to understand, after we had adopted the principle of government ownership down to this point, what are the reasons, what are the cogent and convincing reasons why we should divorce the principle of public operation from the principle of public ownership and hand the road over to the operation of a private company. There is no reason to my mind which at all ought to commend this idea to one's reasonable judgment. Therefore, I complain of that feature of the scheme. I think it is in this respect, radically defective, and that it cannot be worked out successfully. I think it contains defects which will impair the successful working of the railway and which will prevent rather than promote the successful working out of financial results. And it will strike a blow, which I regret to see struck by the government of this country, at the principle of government ownership.

Of course, this contract contains a very great many clauses for the purpose of securing this and assuring that. But, I have yet to learn that you can frame clauses which will meet the ingenuity of company officials, or prevent a company which may be operating the road from having very much its own way in the premises. And when you consider that railway interest in this country has become so powerful, that even within a few weeks of the present session of parliament, they can get a scheme sprung upon the country involving many millions, what reasonable ground have you for expecting that, in these minor things which affect only individuals doing business with the road, you can enforce the clauses and provisions which you have incorporated in the contract in order to bind and hold them? I think we are building upon very slight foundations the hope which my hon. friend has expressed.

Now, passing from what is called the eastern section, I wish to make a few observations upon the question of the prairie section. A curious condition of things is developed here. The policy of even government construction and ownership is abandoned when you come to this portion of the line. Why should it be thrown aside here? I fail to understand—that is, I fail to reconcile it with any interest which Canadian people have in the matter or with anything calculated to serve the welfare of the general public. If it is simply because a railway company desires and prefers to own the prairie section that we think it is proper or if we think, on balancing the advantages and disadvantages it is better that a company should own and operate it, very well; I can see the force of that. But these reasons have not yet been made apparent. If it is a sound principle to own your railroad from Moncton to the prairies, to the confines

of that portion of the country where you hope the business will, in course of time, develop to a paying point, why should you virtually give away, and not only that, but also substantially aid, the line through this valuable and fertile country ? What are the compelling reasons ? I see none, none whatever. There is no reason in the experience of the Intercolonial which will justify the inference, that such a road being owned by the government and operated by a commission, could not be made as much a success, so far as the general interests of the country are concerned. It might not yield us large dividends, because you might not develop the same large amount of business. But the people of the country—and it is the people whose interests we are supposed to consider—would be far better served, their rights would certainly be better secured, by continuing a policy of public ownership and also carrying out the principle of public operation when you come to the fertile belt, that portion of the road which is going to create traffic for you. Now, on the very threshold of this question, I make this inquiry of myself : Is there now, or is there likely to be in the immediate future, any need for our embarking on another railway through the North-western country ? Are we not actually anticipating the requirements of that country by a considerable number of years ? Now, the idea, if it is entertained, that the whole western country can be filled with railways, and that it will attract innumerable millions of people to fill it up at once, is not well founded. Yet that is the idea that seems to underlie this proposition. There does not seem to be any impression that you may be putting a railway into that country long before the time when it need be put there. Are you or are you not doing that ? My hon. friends, if they have not information on that subject—and they cannot have it—might well have inquired into the matter. They might well advise the House as to what are the facts, and what are our own needs. Where are the men who are competent to speak who have advised this government that another railway through that country, north of the Canadian Northern, is required at this time, or that it will be required in the immediate future ? I have no means of knowledge myself upon that point. But is it not a natural query to raise ? How many transcontinental railways do you want to construct in one year ? One has already been sanctioned. Is there no limit, or is that limit only the number of demands made upon us by influential corporations ? Is that the limit ? Now, that is not a proper limit, that is not a legitimate limit, that is not a limit that this parliament ought to listen to, that is not a limit that this government should respond to for one moment. The question is, whether there is real need for another road through that fertile country. I can understand that if it was thought desirable to construct another government railway you might run it down between some of these roads that are now in existence, so as to have some effect upon their rates; but to run another railway north thirty or thirty-five miles from the first railway, will be to encroach on its territory. We ought to have evidence as to whether such a condition of things exists in that western country which renders it necessary for us to rush with headlong haste to authorize the construction at enormous cost of two lines of railway through that same country at the present time.

Now I wish to direct attention for a moment to the question of the location of this new railway. I have spoken of it as drawing to the north. I have heard it said by people who profess to know whereof they speak that the Grand Trunk Pacific have some assurance or expectation that they are going to be allowed to run south of the Canadian Northern, and through some of these other roads that are already constructed in that section. Well, if that be true, and I cannot believe it is true, I think I find evidence, conclusive evidence that it is not true—but if it is true, then I say unhesitatingly that no railway company that comes to parliament and gets a charter to construct another line between them, south of the northern line and north of the southern line, ought to get one dollar of money from the public exchequer, or one dollar of guarantee. I say it would be an outrage upon the people of Canada. After that country is beginning to be peopled, after a traffic exists in a rich country like that, if a company gets a charter, let it go in and build a railway with its own means and on its own financial strength, and not a farthing should pass from the treasury of this country in aid of its construction. If another railway was considered to be needed, it is the government that should put it there, if they are going to spend any money in railway construction at all. Now I have reasons for thinking that that cannot be so, and I will tell you why. I find this in the preamble :

> Whereas, by reason of the growth in population and the rapid development in the productiveness and trade of Canada, and especially of the western part thereof, and with a view to the opening up of new territory available for settlement.

Now you see lying at the very threshold of this whole measure is this solemn declaration that the object for which these enormous responsibilities are to be assumed is to open up new territory which is now unsettled. Then it must be beyond the reach and scope of the present settlements in that country, and so this question fairly arises : I want to know, you want to know, and the country will want to know, what is the extent of the country that needs to be served by railroads and which is still unpeopled ? What is the extent of that coun-

try, what are its capabilities in the way of attracting and retaining settlers, and how many years will it be before there will be need of their travelling further north in order to find places for settlement? That is information that we have not got, and yet it is vital for a proper and judicious consideration of this whole question. Now not only does the preamble of the Bill contain language which I think is open to the interpretation that I give it, but the contract does also. Let me read some lines of it, and I ask you if it does not mean exactly what I state:

> Whereas, having regard to the growth of population and the rapid development of the production and trade of Manitoba and the North-west Territories, and to the great area of fertile and productive land in all the provinces and territories as yet without railway facilities.

Now that is clear. So we have got to go outside the range of the country which is supplied with railway service, and where will that take us? I think that is a simple question, easy of solution—it must take us north of the Canadian Northern, after you get out of Manitoba, and perhaps before. As I say, when you run that road from Gilbert Plains through to Edmonton you cut through an unpeopled country, you have to go north of that again, and where are you as to the needs? Where are you as to the requirements of a railway? Where is the evidence of a need for another railway traversing that country, as the Bill itself declares?

Now there are some reasons which I think ought to influence this government or any government when a question of this kind arises for solution. You have a great unpeopled country in our western domain. Statesmanship requires that the government should exercise a guiding influence in the direction of settlement, so that it may take place in the best way for itself, that it may be located in the best interests of the country and of the people who are to settle there. In other words, it is the business of the government to see that when people go into that country they should not be encouraged to scatter in isolated settlements, far apart from each other. They ought to be brought together as closely as conditions will warrant. Many reasons require that they should not be scattered too far apart. The social conditions call for it, the comforts of life demand it, municipal organization and municipal government all call for the same thing. The educational needs of these people require imperatively that they should be settled as closely together as convenient; and when they begin to spread out, and fresh settlers come in, then further portions of the country can be opened up. But to build two or three different railways at one time through an unsettled country, and drop down the people here and there, 10, 50 or 100 miles apart, and continue that policy for a long period of years, when they must remain for an indefinite time without the advantages of roads, and schools, and the ordinary conveniences of life, is to my mind a great mistake, not only in the interest of that country, but in the interest of the settlers themselves; it is to make a serious blunder which will greatly injure the prospects of our western country. Therefore, when you are building another road in the west in addition to the one you are sanctioning this year, you are contributing to bring about these undesirable results; and I say the government should hesitate, if there was no other reason, they should pause before going further. They should be able to tell us what are the prospects, what are the reasons which have induced them to ask us to legislate in the proposed direction, and under the conditions as they exist to-day.

Now, in brief, my objections to the building of the prairie section are these: First, it is premature. I say it is premature because I have taken some pains to ascertain the facts. My own mind has been led to this conclusion because I have taken some pains to gather by conversations with people who ought to know something about this subject and who are familiar with the western country, some facts relating to it. The first fact which seems to be evidential is the fact that there is no settlement north of the Canadian Northern Railway, which we have authorized to be constructed during the present year. I have asked the question of a number of people from that part of the country: What are the capabilities of receiving settlers in the country between the two railways; that is, between the Canadian Northern Railway and the Canadian Pacific Railway? How many people can go there and find suitable land, can find desirable settlements within the area before settlement begins to overflow and spread further north? The lowest estimate that has been given me by any one individual to whom I have addressed the question has been five millions of people. I do not know whether that is right or wrong. I am giving it to the House frankly, just as it has been given to me. I have asked the question and the reply given to me is that five millions of people can be comfortably located within the area in that western country which these two railways, the Canadian Northern Railway on the north and the Canadian Pacific Railway main line can provide railway facilities for. If that is not true, I should think it would be capable of being very easily answered authoritatively and officially just what the capabilities of this section of the country for settlement are. If that statement is anything like the truth, then it is unreasonable to say that with room for five millions more to-day within that belt there can be no occasion for us to spend more money in order to provide

for settlement much further north at the present time. At the rate of 100,000 a year, as they are now going in, how many years will take to settle that country? Double that and you have over 25 years before you get your five millions of people in there. I hope it may be doubled and I hope it will still further increase beyond that, but at all events, many years must elapse before you will be required, it appears to me from what I can gather, to lay down any more railways in that particular section of the country for the accommodation of the settlers who will be going in. We have been told that settlers are teeming into this district. They may be teeming into a part of the country forty, fifty, sixty, seventy or eighty miles away from the railway; they may be teeming into another part of the country altogether. We are told that this country, which was once the home of the buffalo and wild tribes, is teeming with activity. If this activity is in another section of the North-west, and not giving any evidence of its existence in the particular section of the country through which this railway is to run, why build the railway now? It appears to me that our duty is plain now. Why are we rushing into this thing with such speed as if our very life depended upon it, as if the very existence of Canada depended upon it I want to ask is there any dark cloud overshadowing us that the ratification of this contract will immediately lift. If there is, I do not know it. Is there a well-grounded fear that the Grand Trunk Railway Company will not allow us, two or three years hence, to build and make them a present of this line, that they will not accept it? Is there any well-grounded justification for that fear? I think not. I think we will find them in just as receptive a frame of mind two or three years hence as that in which they are to-day. Is there any congestion away up in this country which requires a railway to be built? Is there any depression in business? We hear about the employment of the toiling thousands in the workshops and fields of Canada. They are, happily, now all employed, but is that a reason why we should start now to build another railway? I think not. It is not a cogent reason. I do not hear that labourers are seeking employment in vain, nor do I hear that there is any depression in the manufacturing industries of the country. I could understand that, if the conditions were entirely different, it might be desirable for the government to undertake a work a little in advance of the time that it was required to relieve, if possible, such a depressed condition in order that people might be occupied, but I never heard yet of a government feeling that they were in duty bound, when everything is booming, when times are prosperous and when men are employed, when wages are high and when conditions are as favourable as they ever have been or can be, to expend a large amount of money for such a purpose as this. Why not wait and be sure? If this is a wise policy, it will be wise two or three years hence; if it is a defensible policy, it will be easily defensible then. Then, it may be that one of those cycles which come about in all countries will appear, when business will become less active, when depressed conditions will occur, when the public exchequer may well be opened and when great works may be undertaken for the purpose I suggested a moment ago of helping to tide over the period of bad times until better times should appear? But I am told by one of the leading organs of public opinion in this country, which seems to be most extremely anxious to see this project go through, that we must build this road now or never. Now or never? What does this mean? Is it really a fact, now or never? What are the conditions which exist now which may not exist five, ten or fifteen years hence? Then, it says further that it matters not how we have drifted or have been drawn into it, we are face to face with a grave crisis. At the time this announcement was made by this leading organ, I thought it was striking, and I took it to ponder over, and I have pondered over it. 'It matters not how we have drifted.' If we had drifted we would not have moved with such celerity. We have more than drifted. We have been drawn into it. This editorial article says that we are face to face with a grave crisis, and therefore this railway should be built. It must be built from the east to the west, from ocean to ocean, even if $150,000,000 has to be expended upon it, because we are face to face with a grave crisis. I would like some one to tell me where or what the crisis is. Where is it located? Surely, if there is a crisis we would all like to know about it. If it is a tangible thing, we would like to feel it. Let somebody who does know locate it. If somebody has it in his pocket let him produce it. But, Sir, we have been left in blissful ignorance down to this very moment, that we were in the midst of any crisis. Somebody did try to make a little political crisis out of the recent changes in the Department of Railways and Canals, but that is a very small thing. This one we are speaking of, we are told, is a grave crisis; it is a grave crisis that we are called on to face, and because it is a grave crisis we must build this railway. I do not wonder, Sir, that such strained advocacy as this could find expression in one of the leading organs of opinion in this country, and that it ever could be considered as carrying any weight or impressing people successfully into the support of this project. I think, Sir, that the crisis ought be disclosed. If there is a crisis we should know the truth. If it does not exist now, but if it is impending, it would be well to warn us. If it is a crisis

of such grave character as it is said to be, and if it is liable to be attended with such disastrous results to the interests of Canada, then I for one, and I am quite sure the general body of this House will be prepared even to support a proposition of this character, if it is going to relieve us from such direful, consequences, rather than have that calamitous crisis come upon us.

Some hon. MEMBERS. Hear, hear.

Hon. Mr. BLAIR. We are further told from the same quarter that we have got to decide 'now,' whether we will go into the undertaking. Mark you; we have now to decide, or it will slip away from us to our inestimable and irreparable loss. Well Sir, I have heard expressions of that kind used in some of the auction shops, but I cannot imagine how any one can think that such kind of arguing will impress the mass of the intelligent people of this country. One would think that the credit of Canada at the present moment was such that we could incur a liability of this kind, but if we did not incur it at this very moment, or if we allowed a year or two to pass by so that we might obtain information to enable us to proceed understandingly with this project, we would then be in a position to carry it out. Well, that kind of reasoning is futile. To my mind, Sir, Canada will be all the stronger in the estimation of the financial men of the world, if before entering into a proposal of this character, Canada shows that she is moving in it with judgment and discretion.

Now, Sir, I come to a question which has something of a new character; something rather which is an appendage to the original proposition, and which concerns more directly the department of government in which I had been serving. I refer to the extension of this railway from Quebec to Moncton. Let me say, that while I do not profess to know anything with regard to these other things and can only conjecture as to what would be the result of them, I do profess to know something about the extension of the railway from Quebec to Moncton, and I do profess to know something about its effect upon the public interest in relation to the Intercolonial Railway. My objection to this railway being constructed to Moncton has been stated in general terms in my letter to the premier, in which I stated that it was paralleling the Intercolonial Railway. I trust that no person who read that statement in my letter imagined that I meant the word 'parallelling,' as used in the sense that having got away from the Intercolonial Railway for a short distance it maintained an equal distance from the Intercolonial Railway all the way through. What I meant was, that in its broadest sense it duplicated the Intercolonial. I meant that it was proposing to take away the traffic, the through traffic, the largest portion of the traffic which the Intercolonial would have, and which would be calculated to carry. I meant that it was going to be a competitor and a rival for much the same business as the Intercolonial Railway does. I meant that the government was setting up another railway, building out of its own means a railway whereby the present great Intercolonial Railway would be dismantled, and would be depleted of its business, and would be practically destroyed, and that all the prospects of the Intercolonial Railway, and all its hopes, and all the interests which naturally centre around it, would be materially prejudiced and impaired. That is what I meant, and that is what I think I can establish to the conclusive satisfaction of any person who may care to hear me. I am not going to say that the Intercolonial Railway ought not have competition in any form, because it has always had competition and new competing lines have been chartered by parliament and subsidized by parliament from time to time, much to its injury. All that has been done I presume in the interest of the people, and therefore nothing can be said, I assume and believe that in every case in which any little line or branch line diverting traffic from the Intercolonial Railway was authorized, there was reason behind it, or otherwise it would not have been done. But, Sir, I maintain that in respect to this duplication of the Intercolonial Railway by the extension from Quebec to Moncton, there is no necessity, there is no reason, there is no justification, there is no object good, bad or indifferent to be attained.

Some hon. MEMBERS. Hear, hear.

Hon. Mr. BLAIR. Yes; it is absolutely useless. It is a total and absolute waste of the public money. It is not only a destruction of the Intercolonial Railway, but it is a sheer unjustifiable squandering of the public money.

Some hon. MEMBERS. Hear, hear.

Hon. Mr. BLAIR. I cannot speak less strongly because I feel strongly with regard to this. I feel strongly because I can realize as no gentleman in this House can realize the efforts which have been made, and the successful efforts which have been made during the past few years to improve the character of that railway, to give it a better standing and a better foothold, and to promote its earning capacity as it never had been promoted before.

An hon. MEMBER. What do the Conservatives say to that?

Some hon. MEMBERS. Hear, hear.

Mr. GOURLEY. You fellows are trying to kill it.

Hon. Mr. BLAIR. We have expended upon that railway $70,000,000 of money, and now the government proposes to spend $15,000,000 more in order to make our ex-

penditure on the Intercolonial Railway less valuable, and less effective, and in order to injure materially the people who live along that line.

Some hon. MEMBERS. Hear, hear.

Hon. Mr. BLAIR. Yes, Mr. Speaker, I say in order to materially injure these people, because I take it that it is a matter worthy of some little consideration that the people who have been living on the line of the Intercolonial Railway, who have been enjoying the advantages of the service it affords and it has been a good service—these people have built upon the line of railway at different points in expectation that this condition of things would continue; but now the prospect is held out to them, that for the purpose of carrying out an idea, the origin of which I do not absolutely know and the purpose of which I have not been able to discover up to this moment; these people are to be deprived of those advantages and to be put as it were on a back street and on a local road, and deprived of these facilities on account of which they have invested their money in the expectation that they would always be permitted to enjoy the same consideration and advantages. And now, Sir, the people who live along the Intercolonial Railway are to be deprived of these advantages without rhyme and without reason, without a particle of justification and without a particle of warrant, and while the government is doing this, they are at the same time wasting a vast amount of public money in order to do it.

You will notice, Sir, that the Intercolonial Railway has greatly improved its business in the last few years. Seven years ago the total amount of business done on the Intercolonial Railway was about $3,000,000, and to-day, if my memory serves me right, it is nearly $7,000,000. The Intercolonial Railway came to Montreal to get business; it extended its line to secure through-traffic, and we expended a large amount of money and assumed considerable obligations in connection with that extension. We have expended $15,000,000 at least in extensions and improvements, in the betterment of the Intercolonial, in the modernizing of the Intercolonial. That has been the policy continued for seven years, constantly, without variation, uniformly, without a doubt expressed on this side of the House as to the wisdom of that policy until to-day. My hon. friend the leader of the opposition said the other night that we were reversing the policy which we had pursued during all these years. I go further; I say we are doing more; we are condemning that policy. We are not only condemning it, but we are writing our own condemnation in letters which will never be obliterated. We are saying that we did not know what we were doing—that we did not care what we were doing. It suits our purpose now to destroy entirely what we have done, and to belittle all that has been the result of our past policy. That is what is being proposed in this policy to-day. I protest against it. I think I can show this House that a little thought and consideration would have led to the staying of the hands of my colleagues who were determined that this thing should be carried out.

Now, Mr. Speaker, it is a curious question as to the origin of this idea. We had this grand, from-ocean-to-ocean, transcontinental, all-Canadian line; we had all that; we were told about that, and the newspapers were advised that the Grand Trunk Railway Company was going to make this application. When the transcontinental scheme from Quebec to the Pacific ocean was in contemplation, we had discussed it for a long time before we heard of the idea of this Moncton extension. When did we first hear of it? We first heard of it when the session was half through. It was first mooted when the Grand Trunk Pacific Bill came before the House. I am told by those who profess to know—I do not know myself, and if it is not true it can be contradicted—that the reason why the Moncton extension was proposed was that when the Grand Trunk Pacific Bill was going through the Railway Committee, it was thought by those opposed to that Bill that it could be defeated by a proposition of that kind, because nobody would swallow it, and the whole Bill would be thrown out. That is what I have been told. What is the fact? The fact is that the proposition first appeared on a motion to amend the Bill by requiring that the line should be extended to Moncton, and the further proposition that construction should commence on that section at the same time as on the other portions of the road. A few days, possibly a few weeks—I did not count the time—are all that are necessary to pass by until we have this Moncton proposition as one of the essential elements in a grand transcontinental, all-Canadian line—something that was never thought of before. What would have become of this scheme if the Moncton addition had not been made to it, I do not know. It would certainly have been wanting in what is now regarded as a most essential element in the whole scheme—the all-Canadian idea of it; and probably it was in this connection that the right hon. leader of the government found warrant for his fear of the withdrawal of the bonding privilege. So that idea was given birth to only after the session had been pretty well advanced, and within two or three weeks after that it is adopted solemnly and seriously by the government of this country as a part of their transcontinental scheme. Whatever time or thought may have been devoted, in quiet or in secret, to the character of the scheme generally, certainly before that time no thought was devoted to this feature; and we have this element of it determined upon within the short period

which elapsed down to the present from the moment when it was first introduced in the Railway Committee.

Well, Sir, where is it proposed to locate this line ? I understand, from the explanation that was made the other day by the right hon. gentleman, that the road is to run back from Lévis across the height of land until it gets somewhere between the United States boundary and the height of land south of the Intercolonial ; then it is to run easterly by some route to be hereafter determined until it reaches Edmundston ; and from Edmundston it is going to pass by as direct a course as possible through the centre of New Brunswick to Moncton. I know nothing about the section from Lévis east to Edmundston. I do not think the government does ; that is my impression. I have a suspicion—it is a little more than a suspicion, but I cannot verify it convincingly, though it has taken a strong hold upon my mind—that if my hon. friends proceed with the construction of the railway as they are now contemplating, they will administer to that grand all-Canadian transcontinental line a very black eye before they get through ; because I believe it will be found that in order to build a line at all capable of carrying any traffic, they will have to slip into the American territory, run down a bit, and come back into Canada, before they get through. That is my impression ; it is only my impression ; I would not like to give it as absolute verity ; but I venture to hazard the prognostication that the railway will not be built by any such route as is proposed. In the province of New Brunswick the great body of the population lies either to the north, along the Gulf of St. Lawrence, or to the south, along the Bay of Fundy, and along the valley of the St. John river on the west. So that this railway, in going through the centre of the province, is leaving the population far removed from it on either side. There are a few settlements here and there on the rivers which will be crossed, but these settlements are mostly all reached by railways constructed along these rivers. The country which is to be traversed is largely a wooded country, or has been wooded. Very much of the timber has been cut away. The lumbermen have been forced further back, and there is not much promise of a lumbering business, because lumber would not be taken by the railway, but by the rivers, as it is to-day. You would have, therefore, a railway crossing the river and the heights of ground at right angles, and you have to cross a great watershed which divides the Gulf of St. Lawrence from the St. John river and the other waters on the west. You can imagine what the difficulties will be in constructing a railway under those circumstances. You can imagine what is likely to be the expense, the character of the grades, and the disadvantages under which such construction will labour.

My hon. friend mentioned to us the other day that a survey has been made by a Mr. Davey, and he said that a very considerable saving in the distance could be made. I have only this to say with regard to Mr. Davey's survey. I think he made the survey for a private company, desirous of obtaining aid from the government, and whether a survey, under those circumstances, would be quite as certain to be as accurate and careful a survey, showing all the disadvantages under which the route will labour, as if it had been made by a government engineer, I leave the people to judge for themselves. I would be inclined to give the preference myself very strongly to a survey made by independent engineers, who had no interest in connection with any company that was seeking government aid. I do not therefore, without any disrespect to Mr. Davey, place quite the same value on his survey as I would on the work of a government engineer. Moreover, I think very little of that work which was done was by Mr. Davey himself. However, if his report be read, as I read it, you will not be able to conclude that this survey shows a saving of from 120 to 140 miles. I do not find that any such saving will be effected. Mr. Davey tells us that the distance from Moncton to Halifax via the Central New Brunswick road, which he has surveyed, will be 759 miles, and I am giving Mr. Davey the benefit of the ten miles which the right hon. gentleman says he could save. But the mileage from Montreal to Halifax by the Intercolonial Railway is only 836 miles, so that the saving by the New Brunswick Central, according to Mr. Davey, is only 77 miles and not 120 or 140. Mr. Davey's report is available, and if hon. gentlemen think that I have at all erred, my statement is capable of being corrected. Now, I attach no importance to a saving of 77 miles under the circumstances. I would not attach much importance to a saving of greater mileage under the same circumstances. It must not be forgotten—and I wish to emphasize this fact—that the Intercolonial Railway has such exceptionally favourable grades, is so well laid, and is such an exceptionally favourable road for traffic, running along the coast line, that it can haul heavier trains 259 miles further than the Canadian Pacific Railway in shorter time. You can therefore see how small a figure 77 miles would cut under such circumstances. I venture the opinion, without fear of successful contradiction that there is no new railway which can be laid out in the province of New Brunswick that can reach St. John under as favourable conditions as the Intercolonial Railway. You may save fifty or sixty miles in distance by building an expensive line, but the more favourable grades on the Intercolonial Railway will make that line very much shorter in its actual operation than this new road.

It is not a question of mileage. It is idle

for the government to say: We will ask the people to spend $15,000,000 to give us a line 77 miles or 120 miles shorter than another line, when you can make better time and carry heavier loads on the longer line. This proposal is absolutely unjustifiable, and the people of this country will not stand it. Not all the influence which the Grand Trunk Pacific Railway can bring to bear on the electorate will justify the outrage proposed to be perpetrated. The new line will have heavy grades and besides will go through an unsettled country, and we know how important an element local traffic is to a railway. How long will it then be before this government will have this railway thrown back on its hands and be told that it has made a useless expenditure which cannot be made productive, and whose only effect is to sacrifice the road we already possess. I say that a saving of 77 miles or 120 miles counts for nothing. There will have to be more intelligent reasons given to justify the government in pressing through this feature of the scheme. I regret that the Intercolonial Railway, which is the people's own road, has not a friend in the whole ministerial ranks. I propose at all events to stand by it while I remain in public life, and knowing what I do of that road, I will not permit its character and quality and services to be minimized or depreciated without entering my protest. I do not know why we should have this new road. Who wants it? We have had a resolution passed by the city council of Moncton. They think that they want it. But if I know anything about the possibilities and probabilities of the future, they will yet say that they wished they had never got it. Running another railway will not do them any good. There will not be another pound of traffic passing through that city which would not pass through it if the Grand Trunk Pacific Railway were never built. But, there will be this result. Moncton is now a great railway centre. Arrangements were in contemplation, in fact the buildings are partly up, for the manufacture of cars and locomotives and other plant required on the Intercolonial Railway, in that town. All the machinery that would be required has either been furnished or contracted for. What for? In order that we might employ the labour of our own people in providing cars and locomotives required for the Intercolonial Railway. But you are going to dismantle those works as a necessary consequence of this new scheme.

Some hon. MEMBERS. Oh, oh.

Hon. Mr. BLAIR. My hon. friends laugh. Don't you make any mistake; if this Grand Trunk Pacific is not going to be a total failure, you will have to do it. It is one or the other; one or the other of these is to be sacrificed. And will the government sacrifice its own infant? I do not think it is going to see its own well-beloved strangled. It is going to stand up for it, and the poor Intercolonial has got to suffer the penalty; there is no manner of doubt about that. I say that if you take away the through-traffic, as you would do, from that road, and leave it a local road, you make necessary the dismissal of a very large proportion—I would say half—of the men employed in the workshops in Moncton. My hon. friends laugh. There are many things that have occurred in this whole matter that would provoke laughter, but not laughter such as that of my hon. friends. Theirs is the laughter which suggests the want of knowledge of facts. And I say that want of knowledge exists. I appeal to my hon. friends every one of them, to know whether they ever took a single employee of the Intercolonial into their confidence, whether they advised with a single man of them as to what would be the effect of the construction of this line upon the business and interests and condition of that Intercolonial Railway. This whole matter was decided upon without a single Intercolonial official being called into conference and asked to say, calmly and of his knowledge, what would be the probable effect upon the Intercolonial of the adoption of such a policy as this. That is the conviction of the officials of the Intercolonial, and I think they ought to know. It is my conviction that it will dismantle the road. it will cut off its business, it will reduce the number of men employed. There would be no Grand Trunk Pacific shops in that locality. The people of Moncton ought to wake up to a knowledge of the facts that if they favour, as they appear to favour, the construction of this railway, they favour a policy which would be most injurious to their interest and which, under no circumstances, can possibly be of the slightest advantage to them.

Now, as to Halifax, I do not know what the attitude of Halifax is upon this subject. This much I do know—that nobody has better wishes for Halifax than I have, and nobody more wishes to see the traffic of the Intercolonial increase, and increase under such conditions that Halifax will get a fair share of that traffic. But I fail to see how the interests of Halifax can be in the slightest degree subserved by the policy proposed in these resolutions. There is not going to be more traffic over the two lines than there would be over one. I will show, before I sit down, why I say that. The conditions will be exactly the same as they are to-day as respects all the possibilities of traffic carried over the government railway. Now, you talk about the distances, and about the building of transcontinental railway. My hon. friend has said in his opening address on the introduction of this Bill, the great object they had in view was to get a railway which would give to the whole Canadian people the shortest and cheapest route between ocean and ocean. I want to know, if that is the object and the

design with which this great undertaking has been promoted, why he has not followed it out and effected the object to the fullest possible extent in his power. Why is it he builds the railway to Moncton, if his object is to get to the ocean by the nearest way ? What is he proposing to do with St. John ? St. John is a port, I apprehend of some importance and doing a very considerable business under existing circumstances, and capable of doing any amount more if increased business should offer. The harbour is open all the year round. No man questions the advantages of St. John as an ocean port. It is free from fog in the winter, a great source of trouble to many other ports. And it has also this great advantage, that there is a staple product which is always available to make up the balance of a cargo if required. You can always make up the balance of a cargo with lumber, if you cannot get other things. This is an advantage which St. John possesses in a greater degree than any other port on the Atlantic coast. Why is St. John passed over ? If the shortest line is the object why do you go 100 miles out of the way ? St. John is only 428 miles from Montreal by way of Lévis, Rivière du Loup and that St. John Valley. Buy that road if you want to get to the ocean, or expropriate it if you cannot buy. According to the shortest statement of Mr. Daveys, the distance is 150 miles longer by the centre line, but it is really 170 miles, as I shall show you. Why do you want to travel 170 miles further than is necessary ? There is no necessity for it in any business interest. St. John is passed by. The distance from St. John to Lévis by the line I have spoken of is, as I have said, 428 miles. From Lévis to St. John by the Intercolonial it is 578 miles. By the Daveys' line, taking his own figures to be correct, it is 501 miles. And from Lévis to Halifax by the Moncton and centre of New Brunswick line, is 597 miles. You have, therefore, 96 miles, by the best possible figuring you can make, by the Moncton and centre of New Brunswick line—96 miles further than there is any necessity for going or any justification for going. You are telling the western people : We are giving you the shortest and speediest route to the sea. Why tell them this, if you do not intend to give it to them ? If you do not mean to give them the shortest route, do not tell them you are giving it to them, do not spread it out in your Bill or announce it in your policy, but tell them the truth : It is not a commercial line, we are building, it is a political line. I do not object so much to these hon. gentlemen doing that if they think it proper, and if they think they are going to make friends in Nova Scotia by doing it. But let them not pretend to the people that they are giving them the shortest line and then withhold it from them by their own will and determination.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Hon. Mr. BLAIR. Mr. Speaker, as part of the new line which the government is proposing to construct from Lévis to Moncton, a portion of it, as the House understands, is to be built to the south of the Intercolonial Railway, between what might be described as the mountain range, if it is a mountain range, and the American boundary. On a portion of that line, I have been given to understand, though I do not speak from positive knowledge, there are considerable settlements, and a good deal of business could be done along that section, at all events railroad accommodation would be afforded to a number of persons who are now without it. It does not appear to me that in order to give railway facilities to the people in that section it is at all necessary to proceed with the extended line down to the centre of New Brunswick, because the people who would be served by such a portion of the line are people who would look altogether either to Quebec or to Montreal for their connections, and who would desire to reach these points to transact the business which would ordinarily call them in that direction. All the government would need to do, and to that I apprehend there would be no objection in parliament, would be to give such assistance to a railway, chartered for the purpose of building through that district of the province, such aid as is usual and customary, and which railway would serve, if it was part of a longer line or a portion of a transcontinental line, to the fullest necessary extent the people living in that section. I think, therefore, no argument can be used in this House for an extension of this line beyond the points to which this settlement extends.

I have stated to the House what was Mr. Daveys' estimate of the length of the road, and the number of miles that would be saved by the construction of that line through the centre of the province of New Brunswick to Moncton. I have taken the trouble to look up information upon that subject, which I think is available to everybody, and which perhaps some members of the House have already seen. It will be remembered that Sir Sanford Fleming and a corps or several corps of engineers were employed, under instructions of the government at Ottawa before confederation, to make numerous surveys to the centre of the province before the Intercolonial Railway was located through New Brunswick, in order to ascertain what would be the shortest and most desirable route for the railway to follow. Sir Sanford has furnished in his reports, and they have become parliamentary records, full and complete statements with respect to these different surveys. I desire to call the attention of the House to the records which there

appear, and which will more than confirm my estimate as to what, under the best possible circumstances, can be saved in mileage by the effect of this new construction. I quote from page 44, Sessional Papers No. 8, for the year 1865, referring to what he calls line No. 10:

> This is unquestionably one of the most direct lines between Halifax and Rivière du Loup and possibly it may be found practicable throughout; but it is impossible to speak with certainty without more information than is at present possessed.

Turning to page 49, I find these facts: That in 1864 no less than 10 different surveys of 10 different lines were made by the engineers down through the centre of New Brunswick, in order to find a route; and the result of all these surveys shows that, according to Sir Sanford Fleming, line No. 10 was the best line, and gave the shortest mileage. He says, at the page I have just named, that line No. 10 showed a total length from Rivière du Loup to Halifax of 496 miles. Now if that be a correct statement of the mileage on that route, and I take it, there can be no reason to doubt that statement after he had made so complete an engineering investigation of the capabilities of the central routes in New Brunswick from a railroad point of view, it appeared that he did not find anything better than 496 miles, which would add 14 miles on to the mileage or take 14 miles off the number of miles alleged to be saved according to the statement of Mr. Daveys. You would have, therefore, taking that line No. 10, a total of 63 miles difference between the mileage of the Intercolonial Railway, around a circuitous route as it is alleged, and the mileage down through the centre of the province. Now that is a very trifling saving indeed. You take the 115 miles off, which is the distance between Rivière du Loup and Lévis, and compare the result with the figures which Mr. Daveys has given. That still further reduces the advantages which the reduction in mileage would make, and it goes to show that any speculative statement as to 120 or 140 miles being saved, is quite unsustained, and is directly opposed to the result of all these investigations which were made by Sir Sandford Fleming. He gives the mileage of all these ten routes as running from 496 to 502, 536, 538, 552, 566, 572, 592, 574 and 616. From these figures I draw the conclusion that an engineer of the capabilities and standing of Sir Sanford Fleming, supported as he was by some of the best men that could be secured for the purpose of surveying that line of road, has given us the most favourable estimate which could be made of the mileage that could be saved between the proposed route and that of the Intercolonial Railway.

Now, Sir, this proposition, taken in connection with the operation of the Intercolonial Railway, is one which I think it will be impossible to defend or to justify. Both these lines after they are built will have to be maintained, both of these lines will undoubtedly continue to be a very heavy charge upon the exchequer of the country, because of the revenues of the Intercolonial Railway are not sufficient to pay the cost of operation, and the balance falls upon the exchequer. So in the case of this new railway, the maintenance of that road must necessarily be expensive, according to these grades there will be a loss, and whatever the loss is it will fall directly upon the exchequer of the country. The interest upon the money which is expended upon it by the government will not, in all probability, be paid when the road is being operated under the disadvantages which this road will suffer from.

In so far as the Intercolonial Railway itself is concerned, farther there is no earthly necessity for having another railway through that country. The Intercolonial Railway has been fully competent to take all the traffic that has been offered up to this date. The officials who are in charge of the Intercolonial Railway, and whom I have consulted upon this subject, while the improvements and extensions have been going on, having advised me that without having a double track, except at one or two minor points, the Intercolonial Railway can carry four times the amount of traffic that it is carrying to-day. Therefore, from the standpoint of the capacity to handle the traffic, that question is absolutely settled, and settled according to the judgment of men who are most competent to form an opinion upon it. You will have both of these lines operating and struggling one against another. Whatever business one may take it will take it away from the other. You will have the government in the anomalous position of owning both roads, of operating one and of being practically interested in the successful operation of the other, going in and destroying its own property, impairing the value of its own property, whether it be one or the other. Such a spectacle I do not think has ever been presented to the knowledge or observation of any human being since the world began.

It might be a fair matter for consideration: Where is this going to land the government of the country? What will be the consequences of such a step, which undoubtedly is going to entail an annual burden upon the exchequer of the Dominion? Will anybody be able to look forward with any hope or expectation of the Intercolonial Railway being able to pay its working expenses? We will relapse into the period of large deficits, because the heavier the opposition which is brought to bear against us by this new road the larger will be the deficits that they will have to face on the Intercolonial Railway. It requires no stretch of the imagination to conceive of the possi-

bility and of the extreme probability of the government and the people being called upon to make good these deficits to the extent of half a million or three-quarters of a million a year as the result of carrying out the policy which is now outlined and adopted; and of coruse, upon this new line they will be running a very great and very probable risk of not being able to pay interest. I do not care whether it is at an early period or not; it certainly would be at a remote period, if at all, that they were able to pay interest. Owing to the difficulties of operating a railway through that country, where there is no local business for it to do, winter being the only portion of the year when they will have any grain business at all to do, and with the disadvantages which it appears to me to possess from every point of view, put this question how you will, turn it over, turn it back, examine it right and left, inside and outside, it fails to present to me—I do not know how it may appear to other hon. gentlemen in this House—a single redeeming feature in any phase of it from beginning to end. I have yet to hear of the first man in the province of New Brunswick asking that this road shall be constructed. I do not mean to say that since it became the declared policy of the government people are not willing to have it constructed, but I say that prior to the time that this declaration was made I never heard of a single individual asking for its construction. We know that there has been a feeling—I do not know whether it continues to exist—in the province of Nova Scotia that they would like to have a shorter line of railway, and that they would be very glad if perhaps the shortening of that line, even by the construction of another railway, would bring that province closer to the western country. But when they have studied the situation, and when they have come to realize that there can be nothing done in the way of new construction that will give them better conditions than they have by virtue of the operation of the Intercolonial Railway, I think that if there is any enthusiasm over this project, it will rapidly abate, because there is no railway that can be constructed that can give Nova Scotia, or the port of Halifax, the same thorough, complete and advantageous service which they are getting and will get from the Intercolonial Railway, if left without this keen and destructive competition. You might go down to my own province of New Brunswick, where there are many men who are perfectly able to take advantage of such an opportunity, and I believe it would be utterly impossible to find one single individual who would be willing to invest one dollar in this enterprise if it were put forward in any shape and with any reasonable assistance that the government could give it as a commercial enterprise. They know there is nothing in it. They have never asked for it; yet we are told in some of the newspaper press that this railway will be a gift from the rest of Canada to New Brunswick. I disclaim the gift. I think I speak the sentiments of the great majority of the right thinking people, of people who are considerate and upright, in my own province, when I say that we do not ask for any such gift at the hands of the people of Canada. When we do ask for something, we will ask for something that has merit in it, for something that can be justified upon its merits. If we want a railway, we will ask for a railway which will serve the people, and which will not duplicate and destroy the roads there are. We have existing roads which are possessed and operated by the government, and therefore I have no thanks to offer to those people who say that we are getting this as a gift from the people of Canada. If I expressed my own mind, I would say: I decline the gift with thanks. We were also assured by the same authority that not a mile of the Intercolonial Railway will be disused or discredited if the new line is built. I answer: Disused, perhaps not; discredited, unquestionably. No doubt the road will continue to be used, no doubt the people living along the line will continue to be served, but with a much reduced and inferior efficiency, and therefore the railway will be operated and maintained, but that the road will not be discredited cannot be said by any one who has studied the situation or who knows the facts as they exist. We are told again, and I shall make one or two more references to the journal in question, that:

> The proposed trunk scheme will tend to benefit the Intercolonial Railway and all other railways by promoting the development of the provinces, increasing its population and infusing new hope into the whole community.

I would be very glad indeed if any such condition of things was brought about. I would be glad to see the province further developed, I would be glad to see its population increased, and I would like to see new hope infused into the community, but if we have to wait for this improvement in the condition of the province, in the hopes of the community and in the development of the province until that road is constructed, or until that road is able to bring about these ends, we will have to wait until the crack of doom. Then we come to the last assurance, which certainly is interesting to all those who have read it, but I think it will appear to be the product of some one who does not really know anything about the situation whatever. It is this:

> On this through-line through New Brunswick there will be both through trains and local trains in almost embarrassing abundance.

That is an illustration of the flimsy argument, of the stretch of poetic fancy that is relied upon in support of great propositions such as this before us, of great measures supposed to be promoted for the advancement of the country generally, that this

line through an unsettled country, with its heavy grades, with its many disadvantages, and only expected to be operated at a time when you cannot have access to the sea shorter than to cross through the province, is going to be furnished with trains both local and through in almost embarrassing abundance.

Mr. CLARKE. What paper is that from ?

Hon. Mr. BLAIR. Well, I do not like to single out one paper more than another——

Hon. Mr. ROSS (Victoria, N.S.) What paper is it ?

Hon. Mr. BLAIR. Well, it is the Toronto 'Globe,' if you wish to know.

Some hon. MEMBERS. Hear, hear.

Hon. Mr. BLAIR. But there is a final, and to my mind a conclusive answer to this whole proposition; one which was well within the power of the government, and one which was well known to all who were concerned in promoting this enterprise. In the course of the correspondence which I had with the Prime Minister, I called attention to the consideration I am now about to speak of; I did more, at an earlier stage when this question was first mooted I took occasion in the Railway Committee of the House to express the strongest and most decided objection to this enterprise being carried down through the center of New Brunswick to Moncton, and I stated there was no occasion for it, because, whatever traffic there would be brought over the Grand Trunk Pacific Railway to Quebec which was seeking an outlet by our Atlantic ports, there was a simple, and easy, and prudent method by which that object could be attained, and I was satisfied that there would be no difficulty whatever in arranging with the Grand Trunk Pacific Railway, if it came to that, the making of an agreement between the Intercolonial Railway and the Grand Trunk Pacific Railway for a simple exchange of traffic. It is possible and more than possible; it is probable and more than probable; it is absolutely certain that such a thing could be arranged. When this question was being discussed in the Railway Committee and when I was stating my objection to it, I took occasion to ask Mr. Hays, the manager of the Grand Trunk Railway, whether in his opinion there would be the slightest difficulty on his part or on the part of the Grand Trunk Pacific Railway Company in making a fair, and reasonable, and just arrangement with the Intercolonial Railway for the carriage of all traffic they might have to handle from Quebec to Halifax and St. John, and Mr. Hays's answer was : not the slightest difficulty in the world. Now, Sir, under that arrangement the traffic could be carried as advantageously for the Intercolonial Railway and as beneficially for all concerned; nay, more advantageously and more beneficially than it could be carried by any new railway that could possibly be constructed or by any other means than that of the Intercolonial Railway itself. There is no manner of doubt at all, that the Intercolonial Railway with its present splendid equipment, and with its officers and every form of machinery adapted for the purpose, could transfer this freight down at rates lower than is possible under any other new system, I do not care what it may be. If the interests of the country required that this traffic should be carried at cost, why, Sir, infinitely better is it to take the sum which might be required for that purpose out of the exchequer of the country, than to load us up with $15,000,000 or $17,0000,000 of debt in order to build another railway. If you wanted to enforce the idea of the utilization of the Canadian ports in the winter season as an outlet for western traffic, why not do it in that way by a subsidy, rather than by spending your money wholesale in a useless and unjustifiable manner. I believe, Sir, that an arrangement could be made without difficulty whereby a fair profit could be had perhaps, upon such business as did offer. I am not so sanguine about business to any extent offering in that way, but if it did offer the Intercolonial Railway would be able to take it. It would increase the tonnage of the Intercolonial Railway, increase its receipts, utilize its machinery which is available for the purpose and you would have no question of any responsibility in connection with such an outside undertaking as is now to be forced upon us by the policy of the government. I venture to say that that suggestion has not been made to the Grand Trunk Pacific Railway. I do not think it has ever been made to Mr. Hays other than as I made it in the Railway Committee of the House of Commons. I think that if it had been made to him he would have readily availed of it; he would have gladly accepted some such plan as that so as not to be compelled, under lease or otherwise, to operate this line of railway which is now projected. All that would be necessary to do would be to embody a clause in this Bill, or if you like you could come to an agreement before you committed the government irrevocably to the undertaking ; you could have come to an agreement with the Grand Trunk Pacific Railway and have the matter settled finally and definitely for all time.

I think it would have been well—and this is all that I shall say on this branch of the subject—if the government were impressed as they appear to have been impressed with the possibility of operating a railway to advantage to carry western traffic to the ports of St. John and Halifax, it would have been well for the government to have come to such an arrangement as I have suggested rather than to decide on the proposition which is now before the House. My right hon. friend in the course of his speech told us that commercial considerations were not

to be taken into account entirely. Let me use his very words so as to avoid the possibility of misquoting him. The right hon. gentleman said :

> But before I proceed any further, let me say that the conception which we have of this work which we are now contemplating is very different from the conception entertained of it by some of our critics. Most of our critics look upon the scheme simply as a commercial venture to be judged by the only rule of profit and loss. We look upon it as a work of a national character necessitated by the status of Canada in the year 1903.

The right hon. gentleman here announces that most of his critics look upon this scheme as a commercial adventure, and are judging it differently from the way in which the government are judging it, as the government look upon it from a national point of view. The right hon. gentleman dismisses to a very great extent, if not entirely, the commercial idea from consideration altogether. Let me tell the right hon. gentleman that it is absolutely impossible for him to dismiss the commercial idea from the consideration of this measure. If it is not to be founded upon business principles and on a commercial basis it will not stand at all. If it is not to be tested as to the results of profit and loss, how is it going to work out successfully ? Are not the people who are going to use it going to judge on the question of profit and loss ? Are not the western people going to judge whether or not they can use this road to advantage by the question of cost ? Are they not told by the declaration in this contract and in this Bill and by the assurance already given in the declaration of the hon. gentleman, that it is not only an all-Canadian route, but the speediest and the cheapest route ? If it is, then the question of dollars and cents, the question of profit and loss is necessarily bound up in the enterprise. If the government wanted to spend $15,000,000—and this portion of the road will cost that much, as I will show before I conclude—as a set-off to the maritime provinces against the enormous expenditures which are to be made in other provinces, I could suggest to my hon. friends ways and directions in which the money could be expended to some advantage to the maritime provinces directly, and indirectly to the whole of Canada. I could have pointed out to my hon. friend that he could have taken a portion of that money and improved one or two of the grades on the Intercolonial Railway, which would have made some difference in the matter of time, and would have made it somewhat easier than it is now for that railway to carry heavy loads. He could have taken a portion of that money to the harbours of Halifax and St. John and could have equipped those harbours so that they could have handled the traffic coming there for ocean shipment. He would have done some good with the money in that way. He will do no good with it now, except the temporary good that may be done while the money is in the course of expenditure. I say it was the bounden duty of the government, if they were impressed with the idea that $15,000,000 or any lesser sum should be expended in the maritime provinces, to take council as to how the people would most desire that money to be laid out, and as to the best results to be achieved by the expenditure. We know that in the port of St. John, and perhaps to a less extent in the port of Halifax, though to that port the same remark can be applied, the people have expended of their own means, have imposed obligations upon themselves, have contracted debts through their city councils for the purpose of making those ports suitable for the handling of ocean freights and the transaction of ocean business. They ought not to have been compelled to do it, but they had to do it or go without the business and the progress they were anticipating or desiring. But the government do not make that proposition ; therefore, they fail, it seems to me, in grasping the needs of the situation, and are giving the people something they have not asked for, and something they do not need and do not want, and are denying to them what they could with advantage receive and the improvements which they could make with that money if it were at their disposal.

I come now to the financial aspects of this scheme. On these I will not dwell at great length ; but I would like to present to the House what my view of that branch of the question is. First, I take the question of the cost of the line from Lévis to Moncton. I make that mileage 425 miles. If the road is ever built, which I very much doubt, that mileage will not be found to be excessive, but a reasonable estimate. The government estimate is made that it will cost $30,000 per mile. From what I can learn, the cost of building the line through a considerable section of the province of Quebec, before it reaches Edmundston, will be very great. For a portion of the distance it will have to cross mountains, gulleys and rivers, and I believe it will cost more than $30,000 per mile ; I would not be surprised if it cost $40,000 to construct that portion of the railway. But I am going to take an average between the two, and I think I am on safe ground when I calculate on $35,000 per mile. That will represent an expenditure of $15,000,000.

I next take the section between Quebec and Winnipeg. We are told that it is 1,400 miles, some say 1,500 miles. I will take the lesser mileage. The estimate is that that will cost $30,000 per mile. I have made some inquiry as to what the cost of that portion of the Canadian Pacific Railway north of Lake Superior was. That portion of the railway, as everybody knows, is

quite accessible from the lake ; and yet, its cost, apart from terminals, rolling stock and equipment, was $50,000 per mile. How can anybody say what this railway is going to cost 150 or 200 miles north of Lake Superior, where it is very much more inaccessible and probably therefore very much more difficult of construction than the Canadian Pacific Railway, and built at a time when wages are high, and when materials generally, with the exception perhaps of rails, are more costly than they were then ? What is going to be the cost of getting into that country and building this railway under these conditions ? It may possibly fall short of $50,000. No man knows. We have not the information, it is not laid before us, and we must take this leap in the dark. We will call it, if you will, $35,000 per mile. You see, I am only adding $5,000 to the present estimate, a very moderate computation, which makes the cost of those 1,400 miles $49,000,000.

Now, 1,825 miles from Moncton to Winnipeg, or to some point north of Winnipeg, wherever the line may be supposed to run to, will cost this country $65,000,000 upon the calculations which I have made. That may be somewhat in excess of the actual result ; but no man can say that the cost may not exceed the figures I have given, and it is a question which this House and this country may well pause and consider, whether such an obligation, incurred in the absence of information which I have tried to point out is so essential in arriving at a wise judgment on a question of this character, should be undertaken, and whether we can take the hazard of impairing the financial strength of Canada, to some extent at any rate, by undertaking an enterprise which may saddle us with an addition to our debt of $65,000,000.

The prairie section, we are told, will cost the country $13,000 per mile of guarantee. Then we have 600 miles of mountain section, which it is said will cost $30,000 per mile. Nobody, I think, is informed sufficiently to say whether that is very much of an underestimate, or whether it is an ample estimate. We know very well that mountain railway construction is expensive construction, although there are good reasons for supposing that this line can be built through one of those passes at substantially less cost than the mountains can be crossed at any point to the south of where it is proposed that this railway shall pass to the coast. I figure that $35,000 would not be out of the way. I want to make a fair and reasonable calculation. That means $24,000,000 of guarantee for the prairie section and $18,000,000 of guarantee in respect of the 600 miles through the mountain section. When we once have started on this enterprise, when we once have got into it——

An hon. MEMBER. We do not guarantee the whole of the cost.

Hon. Mr. BLAIR. My hon. friend says we do not guarantee the whole of the cost. That is quite true, I am going to make my statement covering that point and my hon. friend need not be in the least concerned. We have to see this undertaking through, when we once embark into it, even though it should cost a great deal more than is estimated.

Hon. Mr. ROSS (Victoria, N.S.). We will go through with it.

Hon. Mr. BLAIR. We will go through with it, says my hon. friend beside me. I have no doubt the country can do it, but you do not convince anybody by a statement of that kind unless you can show good and sufficient ground for calling upon the country to make this draft upon its resources. It is all very well to say the country can stand it. I have as much faith and confidence in the capabilities of Canada as any of my hon. friends, but I say that when you are incurring large obligations you should see that you are incurring them in the true interests of Canada.

I want now to examine for a moment clause 54 of this contract :

> Inasmuch as the bonds to be guaranteed by the government only made provision for a part of the cost of construction of the western division, the company hereby agree that the Grand Trunk Railway of Canada shall guarantee bonds of the company for the balance required for the construction of the said western division, exclusive of the said $20,000,000 required for first equipment, which the company is required to provide under paragraph 22 of this agreement.

There is a plain intimation, a plain expression of opinion by the government that the proceeds which would be supposed to be available ordinarily out of the stock and those which would be covered by the government guarantee, are not going to be sufficient to complete the undertaking on the basis of $30,000 per mile. The government estimates $30,000 per mile for the mountain section. $22,500 per mile of this is to be covered by the government guarantee and $7,500 per mile to be provided by the company. The company therefore puts up $4,500,000 in respect of such 600 miles. That disposes of the mountain section. Then we come to the prairie section, the estimated cost of which is $13,000 per mile. Of that amount the government guarantees $9,750 and the Grand Trunk Railway $3,250. Therefore the company puts up $3,250,000 for one thousand miles or $7,750,000 for both sections. This leads to the very proper and legitimate inquiry. What are the company's resources outside of the government's guarantee ? Well, they have $20,000,000 preference stock which is to be used for equipment, with the exception of $5,000,000 which is to be put up as a deposit to secure the carrying out of the contract. If you look at section 13 of the contract you will see this :

The government shall return the said deposit to the company on the completion of the construction of the western division and the first equipment of the whole line of railway, according to the terms hereof.

So, that you see the return of the deposit of $5,000,000 is provided, and it comes out of the $20,000,000 which is all the company engages to expend on equipment. I have pointed out that the $20,000,000 of preference stock goes to equipment, what else have we? We have $25,000,000 of common stock. Now the borrowing capacity on the Grand Trunk Railway guarantee, recognized by clause 34 of the contract, is necessary to furnish the balance over the government guarantee. One would naturally suppose that the $25,000,000 common stock in the treasury, in respect of which, if the company be prosperous, dividends would be expected to be paid, would have a value as an asset of the company, available for the purpose of building its line or for any other necessary purposes connected with the undertaking. But turn to clause 27, and what do we find? We find:

The company undertakes that the Grand Trunk Railway of Canada shall acquire and take the said common stock to the amount of $25,000,000, except shares held by directors, not exceeding 1,000 shares, and to hold the same during the term of the said lease, and so long as any of the bonds guaranteed by the government under the terms of this agreement shall remain outstanding and unpaid.

The agreement does not provide that the company shall subscribe for these shares, as everybody subscribes for shares, but that they may acquire and take them. That is a matter entirely of arrangement between the Grand Trunk Pacific Railway and the Grand Trunk Railway. The Grand Trunk Pacific Railway may hand over these shares for a mere song. The Grand Trunk Railway may put them in their pockets and draw the dividends and keep them there fifty years, in their vaults not available at all toward cost of construction. It will not be compelled to pay anything for this stock because the Grand Trunk Railway and the Grand Trunk Pacific are one and the same red-headed boy. They belong to the same family. We cannot conceive of a great deal of antagonism springing up between them in respect of the terms upon which this common stock will be acquired. They could make a snug comfortable arrangement between themselves.

An hon. MEMBER. Oh.

Hon. Mr. BLAIR. Somebody says Oh. I think that is only human nature. It is what they are invited to do. They are invited to acquire, take and hold, and I am at all events justified in this inference because the government, by this clause 34, has told us that there is no money to come out of the common stock. Every farthing outside of the government guarantee is to be provided for under the bonds of the Grand Trunk Pacific Railway, which are to be guaranteed by the Grand Trunk Railway. That is the language of the contract, and no one can gainsay it. So that we have this very nice little arrangement spread out right before the eye, so clear and plain that any man who runs may read. If there is any explanation of that, it should be forthcoming and I shall be glad to hear it because it is a matter that ought to be explained.

Now, I do not make any point of the fact that, so far as the present legislation extends, the Grand Trunk Railway Company has no power to give any of these guarantees or sign any of these obligations assuming liability as a company. They can get that power if their shareholders shall authorize them to do it; that would probably be only a question of time. But it is not capable of being harmonized very well with the declarations that were made at the annual general meeting of Grand Trunk stockholders last June, when the gentlemen who were promoting this enterprise took pains to assure the stockholders, as we know, that there was no responsibility to be assumed by the Grand Trunk Railway as a company, that their attitude was only that of a benevolent assisting party to the enterprise. They may change their minds. But, until they do change their minds, the inference is, and the fact remains, that there is no present authority, so far as we have been able to discover under which the Grand Trunk Railway Company can enter upon such obligations.

Returning to the question of the liabilities which the government assumes, on the eastern section it will assume $65,000,000. On the prairie section it guarantees $9,750,000, and on the mountain section $13,500,000. This will make a total on the three sections of $88,250,000. To this I add the 3 per cent interest on the cost, which for ten years on the eastern section would be $1,950,000 a year. I have taken this at ten years because that is the expectation of the contracting parties themselves. Thus is a railway which, for the carriage of western traffic, would only operatae through the Moncton end during the winter. So, I think we make no extravagant estimate when we say it would not be likely to pay sufficiently to enable it to pay interest until after the expiry, not of seven, but of ten years. So, we may assume that this interest will run for ten years. This will make a total of $19,500,000 to be added to the previous sum. Upon the mountain section interest will be borne for seven years, making $4,050,000 more. The interest on the prairie section for two and one half years, which would be half the time of construction, would be $750,000. The interest on the eastern section for half of eight years, or four years, would be $7,800,000 more. If, as is apparently the expectation of the government, the bonds or obligations to enable the government to

carry this large sum, may have to issue at a higher rate than three per cent, at say three and one half per cent, this would add a very large sum to what I have already given as the gross cost of this enterprise to the country. I only infer that it is regarded as possible by my hon. friend the Finance Minister that he may have to go into the market with bonds bearing interest at three and a half per cent in order to raise moneys he will require. If he has to borrow at that rate and get back three per cent only he will have to count on one-half per cent of a deficit during the life of this bargain, which is fifty years, to be added to this accumulated burden. If, you add $18,850,000 on this account, you have a total of $139,000,000 representing the direct and indirect liabilities which the government assumes in connection with this enterprise. But, even if you strike out this $18,850,000, I say you have a direct liability of $121,000,000 which this project represents to the country. That is a large proposition, I think a proposition of such magnitude that we may well think that some have seen visions and others have been dreaming dreams.

Now, we are told that it will be a very great thing to get the Grand Trunk Railway into the western country. I should have had no objection to have the Grand Trunk Railway in the western country long before this. I think that, with its large connections, with its network of railways through the province of Ontario and its railways in other provinces, it would have been very much to the advantage of the Grand Trunk Railway to have got into that western country years ago. But I think it is only fair to make this comment—that, if the Grand Trunk Railway gets in there, it will get in there very much more to its own advantage than to the advantage of the country. I think it is much more to their interest to get there than it is to the interests of the country to have them get there. That country, I say, is well served with railways now. With locomotives and cars in sufficient number the traffic would get in and get out, even if the Grand Trunk Railway never laid a rail there. Therefore, the need of getting the Grand Trunk Railway in is not so apparent. My hon. friends say: You are getting the Grand Trunk Railway in. But you are not. You are getting the Grand Trunk Pacific Railway in, which is a totally different organization, in a sense. True, the Grand Trunk Railway has the stock, $25,000,000, it has the voting power, and will control the Grand Trunk Pacific Railway Company. But it would have been infinitely better that the Grand Trunk Railway Company should get in there itself, than that it should get in there indirectly through a company which it controls, which has no financial strength of its own, and which may be thrown aside at any moment, in connection with any portion of the railway, when it suits the purpose of the Grand Trunk Railway to do so. There is no clause which can be written in the contract, as I understand it, which would protect the government against the influence, the natural and ordinary influences which operate upon a government and which are brought to bear by railway companies, not in great things, but in small. We do not want to antagonize companies in respect to points which they think vital, if it can be avoided. It is rather difficult to suppose that this or the succeeding government will be likely to stand for any close supervision as against the wishes or desires of the Grand Trunk Railway Company in respect to operating the road, as it would be necessary that they should do if they are to be kept up to the mark, and of the assurances which appear to be contained in this contract are going to be realized. Now, I do not know what may be the view which my hon. friend the Minister of Finance may take of the financial question as I have presented it. I have no doubt he has given it careful consideration, and I have no doubt he will furnish the House with a full statement of the conclusions he has arrived at in respect to this phase of the question. It seems to me that, as I have stated already and shall repeat again, the government should show that it is imperatively necessary that this undertaking should go on, before we incur this liability. If this is what the country needs, then, the country must bear the burden and carry the responsibility. But I want to get the opinion of the Minister of Finance whether he does or does not feel that adding this large sum to the obligations of Canada, direct and indirect, will, in a measure, perhaps in a large measure, seriously affect Canadian credit on the other side of the water.

I should be sorry to suggest that there was any foundation upon which the strength of our credit could be questioned. But you know how sensitive financial men are, you know how sensitive the financial market is; and you cannot add 120 millions of obligations—because they would aggregate that amount—to the current obligations of the government of Canada without startling financial men on the other side, without leaving them to ask, where is this thing going to end? But of course Canada's position financially is extremely strong to-day. Our revenue is buoyant, but these things are not always going to last. The man who thinks they are going to last is living in a fool's paradise. We will have our reverses. The time will come when our revenue will cease to increase, perhaps will not be maintained; the time will come when the money market will not be as favourable to Canada as it is to-day, when we will have an experience similar to that of the Australian colonies, which, no doubt moved by influences similar to those which are now moving this government, added to their obligations to such an

extent that they practically destroyed their credit in the money market of the mother country. I do feel that this is a consideration which might well give us pause, which the government ought to consider before they have committed this country to so gigantic an undertaking.

When my right hon. friend introduced this Bill he made a remark which I find it difficult to believe is shared by the members of the cabinet. Is it possible that because they have a surplus of twenty million dollars this year, they assume that they can spend 120 millions? My right hon. friend says this thing is going to cost us but twelve or thirteen millions. Well, that is an extraordinary calculation for him to make. I am sure that the hon. gentleman did not study the financial phases of this question or he could not have reached such a conclusion. We have got to spend at the outset sixty-five millions on the eastern section. Is not that going to cost us money? My hon. friend will say that we have the road. All right, we have the road but remember that we are adding to our obligations, and I think we would fall short in our duty if we failed to realize the importance of keeping this matter well in mind. There are large obligations which we are incurring for a number of projects this year, and others will be taken up later. All these things go to show that we are in a very generous frame of mind, that we are ready to expend large sums of money for one purpose or another. All these things impose a solemn and serious obligation upon this parliament to consider where they will naturally tend in case of our realizing a change in our conditions, a change to a less buoyant revenue than that which we now receive, and to a corresponding large expenditure increasing year by year.

Now, Sir, there is one other clause in this contract which I desire to call attention to, and I think that will pretty nearly cover all the references I propose to make to the contract or the Bill. Clause 42 says:

> It is hereby declared and agreed between the parties to this agreement that the aid herein provided for is granted by the government of Canada for the express purpose of encouraging the development of Canadian trade and the transportation of goods through Canadian channels. The company accepts the aid on these conditions, and agrees that all freight originating on the line of the railway or its branches, not specifically routed otherwise by the shipper, shall, when destined for points in Canada, be carried entirely on Canadian territory, or between Canadian inland ports.

Now, a little study of that clause might be usefully given, as well as to the following clause. I think some deductions can be drawn from them which will not support the conclusions which have been drawn by my hon. friends. It is said that goods not otherwise routed should be carried over Canadian lines, on Canadian territory, to Canadian seaports. Let me point out that if the company fail to do it you have not provided any penalties whereby they are going to be made to suffer for it. Why, you are simply trusting to the Grand Trunk Pacific to do what they say they will do. Well, I have no doubt that the gentlemen who are to-day associated with that enterprise would feel in honour bound to carry out this obligation. But, Sir, as time goes on, the feeling with regard to this clause will stale in recollection, and how long will it be before you will find that you cannot get this railway company to do anything more than you can compel them to do, and penalize them in case they fail to do it? There are no penal clauses or sanctions of any kind which would force them to an observance of these conditions. Then they refer to traffic that is not otherwise routed. Well, Mr. Hays very frankly stated to the Railway Committee when this subject was under discussion, that you cannot control the traffic of a railway, that people have a right to route it as they please. He frankly and openly made that statement. Now, I can imagine, and I need not attribute any improper conduct to the Grand Trunk Pacific Company either, I do not wish to make any unfair reflection upon anybody in this connection; but I can well imagine that while the Grand Trunk Pacific Company might be willing, as the result of a pious resolve, to adhere to this contract, the Grand Trunk would still have its agents at work in the western country routing this traffic. How? Not by Quebec, not by the seaports of the maritime provinces, but by North Bay and the Grand Trunk to Portland, and you could not stop them under any circumstances. You have only got an agreement saying that this shall be done, but the Grand Trunk Pacific is still in the hands of the Grand Trunk Company, and the Grand Trunk Company do not obligate themselves to do it, and there is no way of enforcing the obligation. And you are getting one step further away from the possibility of reaching the parties in the matter when you realize that this Grand Trunk Pacific Company are the people that have made this agreement. Now, let the Grand Trunk Company, as I have suggested, send their agents and solicitors for freight into that country, and what could withstand the pressure they would bring?

What is going to prevent them from exercising that pressure. I have had some little experience in connection with that important question on the Intercolonial Railway when we had our difficulties with the Canadian Pacific Railway. They sent their solicitors all over the territory which their agreement covered. They went after everything, freight as well as passengers. They threw their hands right and left upon everything. You could not stop them. People were routing as the Canadian Pacific Railway desired. They are a wealthy corporation and perhaps they could offer some in-

ducements to these people. We could not do as another railway might do ; we could not do anything of that kind in an underhand or concealed manner. But, we had this experience. You will have it over again with the result that the traffic which reaches the Atlantic will be outpouring itself at Portland and Boston and not at the two Canadian ports. Of course the Grand Trunk Pacific Company agree that they will not in any manner encourage the transportation of such trade by routes other than those provided. Of course, they agree to that and very possibly will adhere to the agreement as far as that is concerned. But they will say : We do not encourage the diversion of traffic. We have adhered to the letter of our contract. Whatever others may have done we have not done anything contrary to our agreement. These people have routed this traffic in that way and in that way it must go and I repeat you have the frank acknowledgment of Mr. Hays, that he would not undertake to control any traffic which would be routed in any other direction. All this, I think, points very clearly in one direction and one direction only that it emphasizes to my mind in a sense the position which I have taken for some time past and which I took in my opening remarks this afternoon in respect to this measure. It shows that if it were so important that we should spend $120,000,000 to try and get the western traffic to find its outlet through Canadian ports, then, it is vital that the government should not only own but operate the railway, because in no other way can you guarantee that the traffic will go through a Canadian outlet. We are spending the money and we are getting nothing for it. I know whereof I speak in this regard. I am satisfied that the position I take is sound and cannot be controverted. There is just one way of accomplishing this. Contracts will not bind. Contracts may be evaded ingenuity can be set at work, influences can be brought to bear, but with a government road you are safe and sure. The interest of the government is paramount, the interest of the government will carry out and be sure that the arrangement is carried out according to the wishes of the people whom they govern. I think that if we had all this money to spend there is another way in which we could spend it. If we want to spend it at once we could not spend it more usefully than to have it ensured that the inland ports in our great lakes should be so improved, so equipped and so provided with all the necessary facilities as to enable us to take the very best advantage of our canals and St. Lawrence system of navigation. Anybody who has examined the statistics and studies the facts knows that the business has increased very much within the year through the canals. That business will go on increasing, in proportion as the canals are less expensive, more attractive and better equipped.

If you do spend millions, as I dare say it is the intention to spend millions, you should make this expenditure for the purpose of equipping and improving the canals and the different harbours and points where grain and the other products of the west are received and handled and you should continue this work of improvement until you can present a route possessing advantages surpassing those of any route in the United States, so as to secure the traffic which you can secure by expending money for that purpose. You might go still further and improve the navigation of the St. Lawrence and the aids to navigation in the way of lighting which some people say are not entirely complete as yet. I know that there is quite a little opinion in the country which would favour your making free the two great ports of the St. Lawrence and the two great ports on the Atlantic seaboard. That may be a proposition in regard to which there are different opinions, but if the object which is professed to be sought after in this resolution is worthy of this effort, that object can be more largely attained now by making an expenditure for the purpose and in the direction which I suggest.

I will now bring my long, and I fear tedious observations to a close. I have endeavoured to put my position before the House as fairly as I could in defence and in justification of my own action in retiring from the administration upon this measure. I realize, and I regret that I do realize it, that as far as I may have made a strong presentation of the case against the government's policy just so far and to that extent what I have said will operate against and prejudice the status of many of my hon. friends on this side of the House. That I regret extremely. I wish it could have been avoided, but it was absolutely unavoidable. I had to justify myself and I have endeavoured to do so with no feeling of bitterness or of acrimony but with the determination to put the case as it has presented itself to my own mind and I am prepared, Mr. Speaker, to take the consequences of my action.

Some hon. MEMBERS. Oh, oh.

Hon. Mr. BLAIR. Some hon. members behind me make sneering references to the course I have pursued on this important question, but, I have this to say, that I, at all events, have the satisfaction in my own mind and conscience that I have simply done that what I consider to be my duty. I would be glad if any appeal which I might make would reach the ears of those who have to deal with this matter, because, in their own interest, I believe it would be well if they would pause before they press this measure farther. I would like to ask them to consider, for their own sakes, if not for the sake of others, what will likely be the consequences of their persistent de-

termination to press this matter through parliament and to press it upon the country, and I would appeal to them on behalf of the party with which during my whole life I have been actively allied.

Some hon. MEMBERS. Oh, oh.

Hon. Mr. BLAIR. My hon. friends may sneer. I understand the meaning of that sneer and I return it to them. I would like to have my record in public life compared with the record of some of these hon. gentlemen. I know that my motives will be misconstrued, I know that no man ever gets credit from a certain source for acting from a sense of public duty and I expect to have these aspersions cast upon me, but I have the consciousness of having done my duty. There are many on this side of the House of them who respect me and my action and whose opinions are not very far removed from those which I have expressed to-day and who will appreciate my attitude in this matter. And Sir, I would hope that they might bring to bear the great influence which they possess, to persuade the government not further to prosecute this Bill. I am satisfied that I have done my duty, and I leave the matter in the hands of the parliament and the people of the country. I do feel that every man in this parliament is just as answerable for the course which he himself takes as I am, and I am just as answerable as he is. Neither of us can shift upon other shoulders or cast upon the government the burden of responsibility which attaches to himself in our reception of a project of this character. I leave every man to act as his best judgment and his conscience dictates; and I claim the same privilege for myself.

Mr. JOHN CHARLTON (North Norfolk). Mr. Speaker, excuse the slight embarrassment resulting from changing seats, and from my resuming my usual position, from which I shall attempt to enunciate doctrines which are much more to my own satisfaction than those that have been promulgated for the last five hours from the seat which I now occupy.

We are engaged, Mr. Speaker, in discussing a question of very great importance. Never in the history of Canada has a question so important engaged the attention of parliament, and been brought before the people of this country. It is a question which we should attempt to discuss in a spirit of fairness, in a spirit of candour, in a spirit actuated by a desire to promote the best interests of Canada. This is a project which has to do with the future of Canada. It has to do with the future of our country far down in its history, and no individual in this House, no individual in this country has an interest in this matter different from that of other individuals. The interests of all are alike; all are interested in having a policy promulgated and carried out by this government which will be in the best interest of the country. There may be differences of opinion, honest differences of opinion. There inevitably will be such differences, and differences indeed have existed within the ranks of the Liberal party. This question has been discussed in all its phases within the ranks of the party. The most courteous consideration has been given by members of the government to the views presented by the members of the Liberal party with regard to this project. The policy has been thoroughly threshed out within the ranks of the Liberal party. There is nothing that has been presented here to-day by the hon. gentleman (Hon. Mr. Blair) that has not received consideration, that has not been fully considered and a decision reached with regard to it. The hon. gentleman (Hon. Mr. Blair) tells us that this measure has been urged with unexampled haste, that it has been sprung upon the country without due deliberation. Why, Sir, this question has been under discussion in the country and has received the attention of the public for months; for years almost.

Mr. BROCK. Almost.

Mr. CHARLTON. Yes, the question of another transcontinental line was dealt with nearly a year ago by the very gentleman (Hon. Mr. Blair) who has been addressing the House to-night.

Some hon. MEMBERS. Hear, hear.

Mr. CHARLTON. Yes, and I will read in due time what that hon. gentleman said, and I shall contrast with a feeling of pain the difference between his sentiments uttered a year ago and the sentiments which he uttered to-night. The question has not been sprung without due deliberation; the question has been thoroughly considered. Of course, parliament has been delayed by the consideration of this question; we have remained in session much longer than we would have done if this question had not been under consideration. I have approved of the delay and the country will approve of the delay. The government has decided not to enter upon a decision as to this matter hastily. They have weighed all the arguments and all the conditions in relation to this case, and they have arrived at their decision after due deliberation. Whether that decision is correct or incorrect it has not been arrived at hastily; it has not been arrived at without full consideration of every circumstance and condition that had a bearing upon the matter.

Some hon. MEMBERS. Hear, hear.

Mr. CHARLTON. My hon. friend (Hon. Mr. Blair) says that the Prime Minister held that the necessity for the construction of this road was imminent, and he presented that statement as a reflection upon the judgment of the Prime Minister, as an evi-

dence that the Prime Minister has acted hastily, as an evidence that the Prime Minister has been influenced by considerations that are not considerations of wisdom, and that in fact, the statement of the Prime Minister for the construction of this road was imminent, is an ill-founded assertion. The hon. gentleman (Hon. Mr. Blair) spoke as though the proposal was either to wait a little while, as he recommends, or to plunge into this project and have the road next year. Why, Sir, we are not to have the road next year; it is not a question as to whether we should have a transcontinental line immediately, but the necessity for it is imminent.

Some hon. MEMBERS. Hear, hear.

Mr. CHARLTON. This line cannot be constructed in less than five years. In the meantime, a great tide of immigration is pouring into the North-west. What will be the condition of things in that country five years from to-day? Its productions will have increased; they may be doubled; they possibly may by that time be quadrupled, and the government is simply taking time by the forelock, taking into consideration conditions not as they exist to-day, but as they will exist as soon or sooner than they can provide the means to meet these conditions. And so, I repeat, that the necessity is imminent. We shall need transportation facilities in the North-west as fast if not faster than they can be provided. Every bushel of wheat that is raised in that country; all the productions of its soil, must find their egress from that country by rail. It is not situated as are the western states of the United States, with great channels of communication, with rivers flowing to the sea, rivers that furnish outlets to commerce; but the productions of our west must reach the tidewater or the great lakes by rail. Our prairie region must have railway facilities for every farmer there is in it, and so the government is not only taking into consideration the circumstances that now exist but the conditions that inevitably will exist. The government has made a reasonable calculation as to what conditions they have got to meet five years from to-day; they have realized that these conditions will imperatively demand additional transportation facilities, and they have set themselves to work, not with undue haste, not prematurely, but they have set themselves to work at a time when it was necessary to take action and enter upon a course of policy which will result in meeting this emergency when it does arrive.

My hon. friend (Hon. Mr. Blair) in the course of his speech indulged in one remark which possibly, upon mature reflection, and when he is cool, and has a candid moment, he will regret, and that is, Sir, to attribute to this government the desire to please Senator Cox.

Some hon. MEMBERS. Hear, hear.

Mr. CHARLTON. Let my hon. friends on the opposite side cheer. I do not know whether such action is quite consistent with the course they have hitherto pursued, or whether it strikes them as a natural thing to do; but I do think it was an imputation unworthy of the hon. gentleman, applied to the colleagues with whom he had recently acted, and applied under these circumstances, when we are facing a great national emergency.

An hon. MEMBER. A crisis.

Mr. CHARLTON. No, not a crisis. When we are simply taking such action as prudence requires for promoting the interests of this young nation.

Now, Mr. Speaker, I would inquire whether our judgment as to this measure should not be governed by a careful examination into the character of the undertaking? It is a very easy thing to raise questions to befog a case; a very easy thing to appeal to prejudices, to ascribe motives, to bring in Senator Cox and other irrelevant matters. But what we want to examine into on this occasion is this: What is the character of this proposition which the government have laid before this House of Commons? I think, Mr. Speaker, that the proposition is a good one. That is my opinion. I have examined it carefully, and I have arrived at that conclusion dispassionately, simply because an examination of all the conditions bearing on the case forces that conclusion upon me. Other gentlemen may arrive at a different conclusion.

An hon. MEMBER. Sure.

Mr. CHARLTON. Some hon. gentleman says sure. Quite likely many of them will. Their conclusions may be just as honest as mine. Mine may be based on fallacious reasons; the same may be said of theirs. It is for us to sit down calmly and argue out this question, to avoid appeals to prejudice and to party spirit, if that is possible, and to judge this proposition upon its merits. It may be that the hon. ex-Minister of Railways thought he was doing this; but if he did, I do not think he grasped very accurately or very fully the merits of the scheme.

The hon. gentleman chose to make a quotation from the speech of the right hon. leader of the government with regard to the bonding privilege, and to belittle the fears expressed by the Premier—to assert that those fears were groundless, and that it was all nonsense to talk about the danger of the abrogation of the bonding privilege. Why, Sir, said he, the Americans cannot afford to abrogate the bonding privilege; it would injure them; self-interest would prevent them from doing it. Why, Mr. Speaker, the Americans have threatened to abrogate the bonding privilege, not once, not twice, but repeatedly. Whenever friction exists, whenever bad feeling is aroused, one

of the first things suggested in the United States is to bring this 'spoiled child,' as Senator Depew characterized Canada, to its senses by shutting it from access to the sea by the abrogation of the bonding privilege.

Mr. ROSAMOND. Nonsense!

Mr. CHARLTON. Nonsense! It is absolute nonsense to suppose that we are not in danger from this source, and it is nonsense to suppose that we are giving evidence of prudence and evidence of thought and care for our interests if we do not attempt to place ourselves in the position where we shall be independent of this threat, if our friends on the other side of the line choose to carry it into effect.

Mr. ROSAMOND. What is the matter with us now?

Mr. CHARLTON. There is nothing the matter with us now. We are going down to the sea all right, and if my hon. friend had his way, we would go to the sea through American channels eternally. What is the matter now is that we want an alternative route; we want to place ourselves in the position where we can defy the application of this threat if it is ever made in the future. The hon. gentleman (Hon. Mr. Blair) who addressed you is loathe to believe, he tells us, that the people of Canada are at the mercy of Americans. We are loathe to believe that. We do not believe it. But we simply want to take prudent steps to place ourselves in the best possible position in our relations with the Americans. We do not want to quarrel with the Americans. If the bonding privilege is abrogated, it will not be abrogated with our consent. They call it a privilege; and they hold that we are beholden to them for this privilege. But it is a privilege they can withdraw. They have threatened to withdraw it. That may occur again, and this threat they may carry into effect.

Mr. ROSAMOND. Not a bit of it.

Mr. CHARLTON. My hon. friend says not a bit of it. Well, he knows the American character better than the most of us. He knows their magnanimity. He knows the generosity with which they have treated this country for the past thirty-five years. He knows how impossible it is for the Americans to be guilty of such an act.

Now, Mr. Speaker, my hon. friend (Hon. Mr. Blair) characterizes this road as a sentimental road.

Mr. BROCK. Political.

Mr. CHARLTON. I do not know that he characterized it as a political road. He characterized it as a sentimental road. Well, it is a sentimental road. At the back of the proposition to build this road is a sentiment, and that sentiment is the freeing of Canada from the danger of being shut out from access to the sea. That sentiment is the development of Canada upon broad national lines. That sentiment is the building of a transcontinental road from ocean to ocean upon Canadian soil. That sentiment is the carrying to our own seaports, on our own roads, of the products of our own lands. It is a sentimental road. At the back of this road is the loftiest and noblest sentiment that can exist—the sentiment of patriotism, of love of country.

My hon. friend says that the question of profit and loss does not enter into the calculation. Well, we have carefully considered that matter also. While the road is a sentimental road, I think we shall be able to show that the question of profit and loss has received due consideration; and the conclusion we arrive at is that profit on the right side of the ledger will unite with sentiment in justifying the building of this road.

My hon. friend tells us that he would favour the building of a road under certain conditions. He says he would favour a well-considered line proceeded with at the proper time. He intimates that this is not the proper time, and he goes on to say:

> Now in the immediate future there is no need of another road not even on the prairies.

Compare this with the speech made by my hon. friend less than a year ago, on the 9th of October, in Vancouver. He had been waited on by the Board of Trade of Victoria two days previous. He had been presented with an address, and the Victoria Board of Trade had in that address recommended government aid to the Canadian Northern Railway for the purpose of securing an additional line across the territory of British Columbia to the ocean. Inspired possibly by that address he made, in a speech at Vancouver on the 9th of October, use of the following language:

> There is no country where the soil is more fertile than in the millions of acres in Canada which the plough has not yet touched, and which man has not yet invaded. Railways were necessary to open up these great fertile tracts. If we are to invite the people from the world outside to immigrate here, they have a right to expect that the government can assure them the means of transportation. That means a great many railways in many parts of Canada and we feel as a government that we have ample justification in going to all reasonable lengths to meet this need. The tide of immigration was just setting in full and strong towards Canada particularly from the south, and he believed the time was near when there would be a greater immigration than ever before to Canada from the motherland. This influx of settlers, he said must bring its problems.
>
> It meant an increase of soil production and necessarily of means of transport. We cannot long remain content with only one transcontinental line. I am ambitious myself to see another right away. It cannot come fast enough to satisfy me, and I am doing all I can, in my small way, without public pretense about it, to insure its construction.

How does that compare with the language used by the hon. gentleman to-night? Has

he come around, after giving utterance to these sentiments, to the position that we are using undue and indecent haste in spending a few months in perfecting a scheme to construct a road which cannot be ready for use before four or five years.

We have the hon. gentleman's words quoted also in the 'Daily News' and 'Advertiser' of Vancouver. He is there reported as saying :

> This influx of settlers he said must bring its problems. It meant an increase of soil production and necessarily a means of transport. We cannot long remain content with only one transcontinental line, I am ambitious myself to see another right away. It cannot come fast enough to satisfy me, and I am doing all I can in my small way, without public pretense about it, to insure its construction.

Then there is another report of the same speech in the 'Daily Province' of Vancouver. I quote these three in order to avoid the charge that the speech was not revised by the hon. gentleman and that his sentiments were not correctly reported. This report says :

> We cannot long remain content with only one transcontinental line. I am ambitious myself to see another right away. It cannot come fast enough to satisfy me, and I am doing all I can in my small way, without public pretense about it, to ensure its construction.

These were, I think, sound sentiments, and I endorse them. It is unfortunate that there was a difference in tone and in position compared with the position occupied and the language used by the hon. gentleman to-night. I am at a loss to account for the discrepancy. I would hardly suppose that the hon. gentleman could have had so radical a change of views in eight or nine months, as he has shown by his speech to-night compared with his speech of October the 9th last. It has been suggested to me that, in quoting from these newspaper reports, I have overlooked something. I find that the hon. gentleman gave utterance to the following sentiments in Vancouver :

> There are young men, perhaps middle aged men, who are listening to me who will see three or four transcontinental lines running through Canada. And they will not see more than enough.

Three or four transcontinental lines, and these will not be more than enough. Well, Mr. Speaker, I am at a loss to account for the difference in these expressions of opinions as indicated by these quotations and the speech of the hon. gentleman to-night.

Mr. HUGHES (Victoria). You would want to read the whole speech.

Mr. CHARLTON. I have read the essential part of it and will take another occasion to read the rest of it. There are some expressions in my hon. friend's speech, which perhaps indicate something that was not fully revealed, but persons skilful in such business may read between the lines and draw inferences. He says :

> As Minister of Railways I was entitled to know what was going on, I was entitled to know what the Premier of this Dominion thought about the matter, what he was doing about it. I was entitled to be consulted from day to day and step by step, if I was not entitled as Minister of Railways to dictate which course should be pursued.

Again he said :

> No Intercolonial Railway official was consulted about this matter.

I do not know what this means. It is not possible, I presume, that pique would have induced my hon. friend to resign. It is not possible, I apprehend, that a feeling of indignation because he thought he had not occupied that prominent position in shaping affairs in the councils of the state to which he believed he was entitled, could have influenced his conduct, but it was unfortunate that he introduced these illusions to the fact that he had not been consulted. Comparing his remarks to-night with his speech of eight months before, one is naturally led to look to some reason besides the one given that he left his position as minister of the Crown because the government had adopted a scheme for another transcontinental railway, much less radical and objectionable than the one he had proposed and advocated. He tells us in his speech that we want no railway, that there is no demand for it. How does that compare with his speech in Vancouver, where he tells us that we want railways to open up unoccupied territory, so that we may invite immigration ? The two positions are radically and diametrically opposed to each other. No demand for a railway through unpeopled regions ? I think I have heard that in the old Canadian Pacific Railway time. I think we ourselves made the mistake of using the same language, and I think we paid dearly for our lack of comprehension of the position of things. And we are not going to be led into that trap again. We are not going to take advice that will lead us into a line of action of which we have such unpleasant remembrance. The hon. gentleman tells us that there is no demand in Quebec for a transcontinental railway. Who promoted the project of the trans-Canadian line ? Was it a popular scheme in Quebec ? Had it no backing, no popular support there ? Why, Quebec was unanimous in favour of the transcontinental line, and the hon. gentleman's statement is absurdly unfounded. And, I may remark parenthetically, we are adopting a scheme that disposed of the trans-Canadian project with its demand of enormous subsidies in cash and land in favour of which there would have been pressure which it would have been difficult to resist.

Mr. CLANCY. How ?

Mr. CHARLTON. How is such pressure brought to bear ? Is my hon. friend (Mr. Clancy) a novice in political matters ? Has he been living in the cool shades of opposition so long that he has forgotten everything except what is true and righteous and in complete accordance with the principles of the moral law ? Mr. Speaker, when the speech from the Throne was delivered, my hon. friend (Hon. Mr. Blair) was a member of that ministry. That speech foreshadowed a transcontinental road. We had not reached, at that period, a definite conclusion as to how this thing was to be proceeded with, but there was a broad statement to the effect that a transcontinental line was deemed to be a necessity, and the government was about to proceed to consider the best method to adopt for the construction of that line. Why did not my hon. friend resign then ?

Hon. Mr. BLAIR. We got 600 miles of it authorized this very session. That is the thing that was in my mind.

Hon. Mr. CHARLTON. Now, the burden, of my hon. friend's speech was the question of government ownership. And I give the hon. gentleman credit of having honestly, energetically and without deviation advocated that principle of the construction of the road by the government. And I have this to say with regard to that matter, that I sympathized with that view myself. But I did not consider that my own views were entitled to be accepted by the government, as the ex-Minister of Railways and Canals evidently did in his own case. I presented my arguments in favour of that scheme and those arguments were received with courtesy and given careful consideration. Then I heard the arguments against the adoption of the scheme, and I felt a little doubt whether I might not have been mistaken. And had my ideas been adopted, and had I been responsible for the adoption of that scheme, I should have trembled for the consequence, and, no doubt, should have regretted it was done. Government-ownership has a seductive appearance. It appeals to the imagination. It would be a bold policy. It would be just the thing for this country, granted two or three conditions. The first condition is separation, total separation from political management of the road. The second condition is honesty of construction. The third condition is honesty and efficiency in the management on the basis of a well organized and well arranged railway. If we could have all these conditions, government-ownership would be a good thing in my opinion. But the danger is that we might not be able to secure these conditions. The members of the ministry possibly in arriving at a conclusion on this matter may have had the Intercolonial road in view and may have had some doubt, owing to the results of the management of the Intercolonial, whether it was best to extend the principle further. And I presume their doubts were well founded. Now, the hon. gentleman tells us that in his opinion we should have proceeded in a leisurely, careful, conservative manner. First of all, we should have secured an appropriation for surveys. Then we should have gone on and made the surveys, then, in due time, at the expiration of a couple of years, we might have proceeded with the construction; and, at the end of the next decade, probably, we would have had the road completed. And in the meantime, the congestion in the west would unquestionably have made us sorry that we had not got it sooner.

Now, with regard to exploration, we should not fall into the error of supposing that we are entirely without information as to the country through which this road will pass. We have a great amount of information. We have not actually located the line; we have not actually taken the level ? But we know what the general character of the country is between Quebec and Winnipeg north of Lake Nepigon. We have one survey made by Sir Sandford Fleming from the head of the Montreal river north of Lake Nepigon to Winnipeg. He tells us that it is a highly favourable line, with no grades more than one per cent and no bridges more than 300 feet in length and only a few of them; that the country is a level one and highly favourable for railway construction. With regard to the country east of the commencement of that survey to Quebec, we have abundant information which shows that it is of the same character as that reported on by Sir Sanford Fleming. This great country north of the height of land offers few impediments to railway construction. We know enough of the general character of that country to warrant us in definitely entering upon the scheme of constructing that railway. Then, with regard to the country form Winnipeg to Fort Simpson, through the Peace River Pass, that country has been traversed again and again not only by explorers but by engineers. The character of that country is thoroughly well known. For the whole territory from Winnipeg to Fort Simpson by way of Winnipeg, the government is in possession of all the information that is necessary to warrant it in embarking upon a scheme for the construction of this road. While they could not tell with definite accuracy what the road would cost, they could make an approximate estimate that would be within the cost per mile, and they knew definitely the character of the obstacles to be overcome in the building of the road.

Hon. Mr. HAGGART. Where is that information ? There has been no survey from the head of Lake Nepigon to Winnipeg.

Mr. CHARLTON. It is contained in a report of Sir Sandford Fleming. I think it is route No. 3. I will be happy to send the volume up to my hon. friend, I have it down at my room.

Hon. Mr. HAGGART. The hon. gentleman will find on looking at it that it is the route from the head of Lake Nepigon down to Lake Superior, not from Lake Nepigon to Winnipeg.

Mr. CHARLTON. My hon. friend is mistaken. Surveys were being made for the purpose of securing a route to Winnipeg, to Red River from the east, and this was one of these surveys, embracing the country between the head of Montreal river and Winnipeg, and pasing north of Lake Nepigon, with a description of the character of the country north of the height of land. Now, Mr. Speaker, my hon. friend—I am going somewhat discursively over the notes which I made at random while he was speaking—my hon. friend tells us that the idea of developing a large lumber business from this country between Quebec and Winnipeg for the supply of the prairies, is illusory; that the British Columbia lumber is much handier, and consequently we cannot expect to do very much lumbering from the east of Winnipeg. I have been over to Vancouver a few weeks ago, and being a lumberman myself, I naturally looked into that business a little. I found that nearly all the lumber manufactured in New Westminister, Vancouver and at all points in British Columbia accessible to a railway for transport to the prairies, went up through the canyons of the Fraser and the Thompson, went over the heavy grades between Kamloops and the Columbia, went over the Selkirk Mountains, went over the Rocky Mountains, went up the Kicking Horse grade, a grade of four per cent, where it takes a powerful locomotive to go up with three cars, and went out to the prairies at great cost. With a well equipped road of easy grades we can reach the prairie section with lumber from all parts of the region that this road will open in Ontario; and from the western portion of Quebec, we can reach the prairies, in my opinion, as cheaply as the lumber from Vancouver reaches that destination. A railroad man, if you ask him about the capacity of a road, and whether its capacity for business is measured by the length of the line, will tell you, no; he will answer that it is measured by the length of the line and by the steepness of the grades. The grades over the Selkirk mountains are 120 feet to the mile, over the Rocky Mountains 200 feet to the mile for four miles, and 120 the rest of the way. These grades are equivalent to adding four miles to the length of every single mile of the road. So the assertion that we cannot reach the prairies with lumber from this hinterland of ours, is not well founded.

Now, he tells us that we know nothing of this country. Ten exploring parties were sent out last year by the Ontario government for the purpose of ascertaining the character of this country north of the height of land in Ontario; and the report of these parties was to the effect that in Ontario, in that region of which we previously knew comparatively nothing, there are sixteen million acres of land in what is termed the clay belt, of good productive land, of rich land, with a climate which fits it for agricultural operations, land which lies south of the latitude of Winnipeg, every acre of it; sixteen million acres have been discovered already, and it is useless to talk about a road passing through a howling wilderness where there are no sources of business available, a road will run the whole 1,300 or 1,400 miles from Winnipeg to Quebec without having any local business whatever.

Then, the hon. gentleman comes down to the question of running rights, and there he has a point on the government—running rights over the roads, one road giving another road a right to use its road-bed. He refers to the sections that grants these running rights, particularly section 24, and he tells us that this whole thing is a delusion, he makes merry over it. Why, he says, the absurdity of supposing that a railroad is like a wagon road, that you can set a train on it as you can put a wagon on a wagon road and run it to its destination. Why, the supreme absurdity of it. He tells us that the Premier knew nothing of what he was talking about, that the thing could not possibly work. Then he gave himself away a few moments later by saying that when the system went into operation the Grand Trunk Pacific would take advantage of other lines that were making use of the road and would not give them fair-play in the adjustment of the rules and regulations, and the despatching of trains. Now, Mr. Speaker, pullman cars run all over the United States and Canada without any reference to a particular railway. A pullman car will often traverse three or four different lines without a change of porter, without a change of passengers, without any change whatever. A car will go from Boston to Chicago, it will go perhaps from Boston to San Francisco, pullman car after pullman car, traversing a great number of different lines. Freight will go in the same way. One of the great reasons for securing uniformity of gauge was to avoid the necessity of breaking bulk. Formerly we had a five foot gauge, a six foot gauge, a three foot six inch gauge, a four foot eight and a half inch gauge; and wherever one of these roads connected with another having a different gauge, the freight had to be transferred from one car to another, had to break bulk, as it was termed. Now, by uniformity of gauge, there is no breaking of bulk. A freight car is loaded at Los Angeles, or San Francisco, or Portland, and it goes through to New York, or Chicago, or Boston, or wherever its destination may be, without breaking bulk; and then it goes back again, perhaps loaded and perhaps empty. The business of running two roads over the same track has been demonstrated, and it is successful. I live on the air line of the Grand

Trunk Railway, a line of road extending from Buffalo to Detroit 229 miles in length. That road is operated by the Grand Trunk and by the Wabash. The Wabash sends its through trains from Chicago, from Kansas city, from St. Louis, over that road to Buffalo and back again. It sends its freight trains over that road, the Grand Trunk Railway does the same. They have their running arrangements, a joint system of despatching; agents at stations are paid by each company according to the volume of business that each transacts, and repairs are kept up in the same way. There is no hitch, there is no friction. They change engines on that route, they have a division 110 miles long from Detroit to St. Thomas, and a division of 119 miles long from St. Thomas to Niagara Falls or Buffalo. Each road has its engine house, each road has its repair shops, and they can work them jointly if they choose. They have their joint-system of despatching, and of payment of expenses. That system of things has been operated for three or four years, operated successfully, operated without the slightest friction at all, operated to the advantage of both these companies. They use the same bridge going into Buffalo, everything in common, the respective expenses, arranged amicably between the roads. The Flint and Père Marquette road, which is a Michigan system exchange their traffic at St. Thomas with the Michigan Central. They send their freight trains over their own road from Walkerville to St. Thomas and over the Michigan Central to Buffalo. They have a joint arrangement in the matter of despatching and the whole arrangement is working harmoniously, efficiently and to the satisfaction of both parties. The hon. gentleman has not been Minister of Railways and Canals long enough to learn his trade. He has not been Minister of Railways and Canals long enough to learn some of the elementarry principles of the business.

The MINISTER OF MILITIA AND DEFENCE. The Canadian Pacific Railway runs over the Intercolonial Railway between St. John and Halifax.

Mr. CHARLTON. Yes, and the hon. ex-Minister of Railways and Canals admitted that the Canadian Pacific Railway ran over the Grand Trunk Railway line from Toronto to Hamilton, but he said there was no change of engines and that they could consequently work that arrangement. If you can operate a road 229 miles long with two divisions and a change of engines between, you can have twenty changes of engines and work it satisfactorily. All you have to do is to have your despatching system properly organized and make your arrangements for the use of the road. In this instance the government steps in and acts as an arbitrator, and if any attempt is made to take an unfair advantage on the part of the Grand Trunk Pacific Railway, the government can see that the stipulations of this contract are carried out.

Hon. Mr. HAGGART. You want the same parties to own the roads?

Mr. CHARLTON. No, the same parties do not own these two roads that I am speaking of. The Grand Trunk Railway owns the road and the Wabash Railway operates its trains over it.

Hon. Mr. HAGGART. The same parties, the New York Central, the Canadian Southern and the Père Marquette own the road that the hon. gentleman is talking about.

Mr. CHARLTON. The same parties do not own the road. The Père Marquette, the Canada Southern and the New York Central do not own the road. The New York Central has the Canada Southern leased, and the Flint and Père Marquette road is entirely independent of both.

Mr. LOGAN. Another ex-Minister of Railways and Canals who has not learned his trade.

Mr. CHARLTON. The hon. gentleman (Hon. Mr. Blair) wants to know why we cut off government ownership at Winnipeg. Why put this section of the road west of Winnipeg on a different basis from the section east of Winnipeg? In one sense the government has the same control over the western division that it has over the eastern division. The arrangement secures to other roads the same rights from Winnipeg to Port Simpson as from Winnipeg to Quebec. It gives these privileges to every road from ocean to ocean and the government exercises similar control in this matter. That is one of the conditions of the contract, but the government retains ownership in the eastern division while it leases the road to the Grand Trunk Pacific Railway. Why does it retain it? Winnipeg is the great converging point of all the roads in the North-west Territories. Here the trade of that country concentrates and will do so for a long time to come if not perpetually. The government constructs a great trunk line from that point to tidewater, to an ocean port, for the purpose of securing Canadian trade for Canadian ports, and it does so because this is the great main artery into which will be poured, and over which will run the trade of the Grand Trunk Pacific Railway, of the Canadian Northern Railway, perhaps, and the Canadian Pacific Railway, possibly, and of any road that wishes to use it. Its use is free to all upon equal and equitable terms, and the reason for government ownership as far as Winnipeg is that Winnipeg is the great converging point, the great entrepot where the trade of the North-west Territories will concentrate and where the government road will bid for the transaction of the whole of the trade, or as much of it as it can do without reference to the other

companies whose trains may run down over this road.

Hon. Mr. HAGGART. Hear, hear.

Mr. CHARLTON. My hon. friend (Hon. Mr. Haggart) says 'hear, hear.' I think that is perhaps a good reason for having the road. The motives are all right and it remains to be seen how much traffic we can get for the road, but we cannot get anything unless we try. If we are to attempt to secure busines for our own seaports we must provide a road to get there.

My hon. friend (Hon. Mr. Blair), at this stage of his speech entered upon the Intercolonial Railway question. He really feels sore over that. The Intercolonial Railway is no doubt a pet with the hon. gentleman, and the brilliancy of the management of the road, of course, entitles him to feel doubly interested in its welfare. The people's money, he tells, will be squandered by the construction of a rival line, but he neglects to tell us that the Grand Trunk Pacific Railway promoters were in favour of building their short line, and making Moncton their eastern terminus and that they moved for this in the Railway Committee. He tells us that the building of this new line will save a very few miles of distance, that it will have heavier grades, that it will in every other respect be a less desirable road and that the whole thing is a supreme act of folly. I have never been over the line. He tells us what an excellent road the Intercolonial Railway is, how much business it is capable of doing, and in the next place he tells us that if we took some of this money that we are to expend on the short line and reduced the grades on the Intercolonial Railway, making it a first-class road, it might be able to do the business. What are the grades on the Intercolonial Railway ? There are 62½-feet grades and 50-foot grades to the mile. No road can claim to be a first-class road with grades more than one-half per cent or 26 feet to the mile. In the construction of this short line and in the construction of the line from Quebec to Winnipeg it should be an absolute condition that the road should be first-class in point of grades, in point of construction and in point of weight of rails. The rails should not be less than 90-pound rails, and the grades should not be more than four-tenths per cent, and if these conditions are complied with this road will compete with a water route or anything else. The object of the building of a short line from Chaudière Junction to Moncton is to correct the costly mistake that the country made when the Intercolonial Railway was constructed, and I regret not the correcting of the mistake, but the making of the mistake. All first-class railways in America for the last ten or fifteen years have been spending enormous sums of money in correcting the mistakes made in their first construction. The Pennsylvania, New York Central, the Grand Trunk Railway, and other first-class roads that I could name, have been pumping out money like water, quietly, without observation, for the purpose of reducing grades, correcting the alignment, taking out curves, and increasing the power of the road to do business and earn money. The Canadian Pacific Railway has built a short line from Ottawa to Montreal. It had a line already north of the Ottawa river. Why did it do that ?—because it was necessary.

An hon. MEMBER. No sentiment there.

Mr. CHARLTON. No sentiment there. It was business, it was necessary to have the best conditions they could obtain in order to secure the business. Why should we shorten, straighten and improve the Intercolonial Railway? It is simply because we have set out with the purpose of securing trade for our own seaports, and if we are to secure that trade we must have the best obtainable conditions with regard to our lines of transportation. We must not have to go away around by the sea 120 miles further than a short line would take us; we must not have grades of 62½ feet to the mile, but we must reduce the distance, reduce the grades, improve the efficiency of the road and secure the necessary conditions so far as it is possible to do so, in order to get the trade that we aim to get. That is why we dealt with the Intercolonial Railway. But the whole question is befogged by the course which the hon. gentleman (Hon. Mr. Blair) has pursued in talking about this line and that line, and about one line being 10 miles longer than it was represented to be, and about crossing so many gullies, and about this and that difficulty to overcome. We have got to overcome these difficulties; we are putting that road there for a specific purpose, and that purpose is to increase the capacity of the road, to reduce the cost of the transportation of the products of the west to our maritime seaports.

Some hon. MEMBERS. Hear, hear.

Mr. CHARLTON. That is the object we have in view. The hon. gentleman (Hon. Mr. Blair) tells us that the Intercolonial will have no business in case this is done except in the winter. Well, I do not suppose it ever had a local business that was a marked source of revenue to it. It is to be regretted that it was put where there was no business to do, and no particular use for a railway, and we have been pottering along with that road and paying deficiencies long enough, and now we want an efficient line of railway.

Hon. Mr. BLAIR. When does the hon. gentleman think I made that statement?

Mr. CHARLTON. What statement?

Hon. Mr. BLAIR. The statement the hon. gentleman has just attributed to me.

Mr. CHARLTON. What statement?

Hon. Mr. BLAIR. That the Intercolonial Railway had no local business.

Mr. CHARLTON. Except in the winter—would have, I said, in case this other line was built. The hon. gentleman (Hon. Mr. Blair) misunderstood me. The statement the hon. gentleman made was that in case this short line was built the Intercolonial Railway would have no local business except in the winter.

Hon. Mr. BLAIR. I said that this line would have no ocean shipping business except in the winter.

Mr. CHARLTON. That is the Intercolonial Railway.

Hon. Mr. BLAIR. Oh, no; the new line.

Mr. CHARLTON. I suppose that is so. I suppose it is intended that this transcontinental line shall lay down the products of the west at Quebec during the season of navigation, and when the harbour of Quebec is closed it is the intention to carry that trade to Halifax and St. John, and for that reason we want a good road.

Some hon. MEMBERS. Hear, hear.

Mr. CHARLTON. It has not been asserted that we are going to carry grain to these maritime ports while the port of Quebec is open, but Quebec is to be our national port, and while it is open it will do the business that the transcontinental line brings to it.

Now, I think the trouble with my hon. friend (Hon. Mr. Blair) is that his view is somewhat circumscribed. He has not yet got out of provincial ideas and a provincial range of vision; he has not ceased to be provincial; he has not become continental in his aspirations, in his desires, in his grasp of affairs. We regret that the Intercolonial Railway will be injured by this new line; we regret that it is necessary to spend some millions of dollars to rectify the costly mistake that was made years ago, but we are dealing now with a question of national importance. We are dealing with a question that is national in all its bearings; we are dealing with the question of securing for our own seaports the business that would naturally go to the seaports of another country, and whether we can do it or not I cannot venture to say, but I do venture to say that we cannot do it unless we construct roads of the very best character with the lowest possible grades.

In regard to that matter, as I was going over to Vancouver a short time ago, I sat in the rear car of the train as we were passing north of Lake Superior, with General Manager McNicol, two or three American railway magnates and a number of railway men, and the discussion turned upon the question of water transportation versus transportation by rail. The subject of discussion was whether railways could be made to compete with water carriers, and Mr. McNicol stated that if the Canadian Pacific Railway over which we were passing had grades of four-tenths per cent per mile (that is 21 feet and a fraction) and some improvement in its alignment, that it could do four times the business it was doing now, and that it could compete with the water route.

Now, Sir, if we build a line from Winnipeg to Quebec, say 1,400 miles long, and if we can secure four-tenths per cent grades; if we lay that road with 90 pound rails, if we put bridges upon it that will carry the heaviest locomotives and trains of cars, each car carrying a load of 50 tons, we can carry, in my opinion, grain from Winnipeg to Quebec for 12 cents a bushel and perhaps even less. The lowest rate that I have known for grain from Chicago to New York was 12 cents per hundred, or seven and two-tenths cents per bushel for a distance of 1,000 miles. Now, if it can be carried at that rate with a profit, and I don't suppose it was carried at a loss, it is a reasonable calculation to suppose that we could carry grain over this road for 12 cents a bushel, if it is the right kind of a road. But if it has 50 feet grades to the mile; if it has a light rail, if it is a second-class road we can secure no business, we cut ourselves off from the conditions that are necessary to secure business, and so we must bear that in mind when we are building this road.

My hon. friend (Hon. Mr. Blair) in the course of his remarks had a thrust at the Globe. He stated that the Globe had an article which said that when this new road was built there would be freight trains and passenger trains on the road passing each way in embarrassing abundance. Well, it is a matter of conjecture, of course, as to what kind of business this road might do. The writer of that article perhaps looked into the future, and he saw Canada with vast developments, with a great increase of population, with a great increase of production, with a great increase of business, with business largely attracted over the transcontinental line, and perhaps his forecast of the future was not so extravagant after all. We do not know what the result may be; we have been guilty, constantly guilty, of underrating the capacity of our country. This gentleman perhaps overrated a little, but we cannot tell, and I would rather have speculation in that direction than in the other.

Now, I do not know but that perhaps my hon. friend (Hon. Mr. Blair) would have looked with a somewhat greater degree of favour upon this scheme if the road had gone to St. John, and it would perhaps have served the purposes of the country just as well if it had. I do not know as to that, but the government were bound, in my opinion, to adopt a course that was fair and impartial. They could not properly discriminate between Halifax and St. John in

favour of the one and against the other, and they have adopted a plan which will serve the purposes of both, and if St. John wants to meet these conditions for reaching this business, let them promote the construction of a road up to this short line and nobody will have any objection to that.

Mr. TUCKER. There is a road to Chipman now.

Mr. CHARLTON. Let that road be improved and made first-class, and let them get the business at that point. The government, I think, acted with perfect propriety in placing the eastern terminus of the road at Moncton, from which point both St. John and Halifax will be accessible, though the advantage in distance will be in favour of St. John.

Mr. TUCKER. It increases the distance to St. John 89 miles.

Mr. CHARLTON. Well, you want to cut that off. Now, Mr. Speaker, a good deal of criticism has been indulged in by the hon. gentleman in regard to the increase of our debt. We are to add $15,000,000 to it by the construction of the section from Moncton to Chaudière Junction, and untold millions by the construction of the line from Quebec to Winnipeg, and by the guarantees of the line west of Winnipeg. I did not hear the hon. gentleman make anything of the fact that this was in reality a mere lease to a railway company, and that the company was to pay interest on the cost of the line. We shall have some little burden on the country, of course. We shall have interest to pay for seven years on the cost of the line from Moncton to Winnipeg, and probably some little interest to pay on our guarantee of a portion of the cost of the line west of Winnipeg. All this may amount to $14,000,000 or $15,000,000; but that is a small consideration in comparison with the benefit to the country resulting from the construction of this transcontinental line.

The hon. gentleman refers to the premier's statement with regard to this road as a national line, and intimates that the premier paid no attention whatever to the commercial side of the question—that this had no bearing with him, but that the national consideration wholly governed his course in the matter. This was not a fair presentation of the views expressed by the premier. The premier did, as he was entitled to do, lay due stress on the importance of the construction of this road from a national standpoint, for the purpose of having a railway on our own soil from ocean to ocean. He took high ground in that respect, a ground which I think the country will support him in taking. But he did not lose sight of the commercial aspects of the case—far from it. While dwelling on the national importance of the road, he pointed out at the same time that its commercial results would be in the highest degree important and satisfactory.

The hon. ex-Minister of Railways enters into a financial statement with regard to this road, and estimates its cost from Moncton to Winnipeg at $35,000 per mile. Well, it is impossible to say whether that estimate is a correct one or not; the probability is that it is excessive. You must bear in mind that this is a question of the construction of a railway without equipment. The cost of equipment adds very largely to the cost of a railway line. This line is simply to be constructed and handed over to the Grand Trunk Pacific Railway Company, and that company is to place the equipment upon it. I do not believe that this road will cost over $30,000 a mile from Moncton to Chaudière Junction, and I doubt very much that it will cost more than $30,000 per mile, or even that, from Quebec to Winnipeg. The hon. gentleman, in reckoning the burdens that will rest on the government in connection with the guarantee of the western section, assumes that the government guarantee will amount to the cost of building the road. He overlooks the fact that the guarantee of the government is to cover merely three-fourths of the cost of the road, and that when the government advances this guarantee, it takes over the security of the road and its equipment, including what the company has put into it, so that the security is ample.

The hon. gentleman refers at some length to the question of the stock. What is there about this stock question? There is to be $45,000,000 of stock. Of that, $20,000,000 is to be preferred stock, which goes into the equipment of the road, and $25,000,000 is to be common stock. The hon. gentleman would lead us to suppose that that will all go into the pockets of the shareholders and directors. What will it be used for? Why, Sir, the company will require money with which to build elevators, to improve the road, and for various purposes in connection with the operation of the road. It will require money to carry out its stipulation with regard to providing vessels and shipping facilities at each end of the road. That is what that stock is set apart for—$20,000,000 of preferred stock for equipment, and $25,000,000 of common stock to be used for these various purposes to which I have referred.

The hon. gentleman regrets that it is not the Grand Trunk Railway that is going into the west, but the Grand Trunk Pacific Railway. Well, it strikes me that there is a distinction without a difference. I think we shall be thankful if we get the Grand Trunk Pacific Railway into the North-west, with the stipulations and conditions with which it is hedged round—with all these stipulations which place it absolutely in the hands of the government, as to the operation of the road, as to its maintenance, as to providing facilities at each end of the

road for the transaction of business, and as to not discriminating against Canadian ports and in favour of American ports. The hon. gentleman asks what that condition about discrimination amounts to. He says the company will send their agents through the North-west, and will quietly secure freight and have it shipped with their own connivance to American ports. Well, this company enters into a solemn agreement not to discriminate against Canadian ports. But he tells us that we have no penalties by which we can enforce the fulfilment of this agreement. Is the whole thing ended when this Bill passes? We have to go on and perfect the conditions by a lease ; and what does this agreement say in regard to that ? It says :

The said lease shall also contain such other convenants and provisions, including proper indemnity to the government in respect of the working of the railway, as may be deemed necessary by the government to secure the proper carrying out of this agreement.

Does not that cover the ground ? The hon. gentleman surely could not have read that. The government have a most carefully prepared agreement here. After reading it over and over again, I cannot see any point that has been neglected. I pronounce it a perfect agreement. The time that has been devoted to the perfection of this scheme has not been mis-spent or wasted.

Now, Mr. Speaker, 'I have got through with a sort of rambling criticism of my hon. friend's speech, and I have my own speech to make yet. As it is now a quarter to eleven, and as the newspapers have not been able to insert anything that has been uttered here for the last hour, I beg to move the adjournment of the debate.

Motion agreed to, and debate adjourned.

On motion of the Prime Minister, House adjourned at 10.45 p.m.

HOUSE OF COMMONS.

WEDNESDAY, August 12, 1903.

The SPEAKER took the Chair at Eleven o'clock.

QUESTIONS.

RAILWAYS CONSTRUCTED WITHOUT GOVERNMENT AID.

Mr. SPROULE asked :

How many miles of railway have been constructed in Manitoba, North-west Territories and British Columbia, without Provincial or Dominion government aid in money, land grant or guarantee of bonds ?

2. By what companies built, and what is the number of miles belonging to each road ?

The MINISTER OF FINANCE (Hon. W. S. Fielding).

(1.) 150·65 miles.

(2.) In Manitoba, none.

North-west Territories—British Yukon Railway	57·97
In British Columbia—Bedlington and Nelson	15·20
In British Columbia—British Yukon	32·35
In British Columbia—Lenora Mount Sickar	11·50
In British Columbia—New Westminster Southern	24·10
In British Columbia—Red Mountain	9·53
	150·65

DR. MOREAU.

Mr. MORIN asked :

1. By whom was Hypolite Moreau, junior, of St. John d'Iberville, recommended as collector of the Chambly canal at St. John d'Iberville, and what is his salary ?

2 Has Hypolite Moreau, junior, given security to the government, and of what nature ?

The MINISTER OF FINANCE (Hon. W. S. Fielding). The appointment was made on the recommendation of the Minister of Railways and Canals. The toll having been abolished no security was taken.

LOUIS M. TROTTER.

Mr. MORIN asked :

1. Is there a person named Louis M. Trottier in the employment of the government at St. John d'Iberville?

2. If so, what is his employment, and by whom was he recommended ?

3. Is this employment new, or has it always existed ?

4. If it is new, for what reason was it created?

5. What is the salary of the said Trottier ?

The MINISTER OF INLAND REVENUE (Hon. M. E. Bernier).

1. Yes.

2. Temporary excise officer. He was recommended by Mr. L. P. Demers, member for St. John d'Iberville.

3. It is new.

4. Increase of excise work and relieving officer.

5. He is paid at the rate of $400 per annum.

NATIONAL TRANSCONTINENTAL RAILWAY.

The House resumed adjourned debate on the motion of Sir Wilfrid Laurier :

That Mr. Speaker do now leave the Chair, for the House to go into Committee of the Whole on a certain proposed resolution declaring :

That it is expedient, in connection with the Bill now before this House, respecting the construction of a National Trans-continental Railway, to ratify the agreement set forth in the schedule to the said Bill, entered into on the

28th of July, 1903, between the government and certain persons on behalf of the Grand Trunk Pacific Railway Company, a company to be incorporated by parliament at the present session thereof, and to authorize the government to do whatever is necessary to give full effect to the said Bill and agreement.

Mr. JOHN CHARLTON (North Norfolk). Mr. Speaker. At the close of my remarks last evening I had very nearly finished my review of the speech of the hon. the ex-Minister of Railways (Mr. Blair). I have only a word to add to what I have already said in that connection. I have thought over the position of that hon. gentleman ; thought it over carefully, and I am obliged to arrive at the conclusion that there was no sufficient reason for the course that he has taken. When I contrast his declarations in his speech made in Victoria last October, in which he asserted that we wanted another transcontinental road, that we wanted it right away, that we wanted to penetrate and open up new districts of country in the North-west and fit them for settlement—when I contrast that with his statement of yesterday : that we do not want a transcontinental road now, that we should delay in proceeding with the construction of that road, that the government were proceeding with indecent and reckless haste in the matter ; the two positions are irreconcilable, entirely irreconcilable. He puts me in mind of a story I read a few years ago as to the great riot in Chicago. A United States regiment of regulars who had been engaged in a winter campaign under General Miles against the Sioux Indians, were on their way to quarters in the east where they were to be granted a respite from their labours. They were ragged and toil-worn but they were veterans evidently, and as they were drawn up in line a person on the side walk said to the soldier nearest to him : you would not shoot us fellows would you ? He replied : I would not unless the captain told me to. Now, the difficulty with the ex-Minister of Railways is that he did not shoot when the captain told him to. It is necessary to have discipline in an army, it is necessary to have discipline in a party. Individual men may have very strong individual opinions—I belong to that category myself——

Some hon. MEMBERS. Hear, hear.

Mr. CHARLTON. But it is unreasonable for an individual to suppose that a party must accept his opinions and act upon them, and it is in the highest degree injudicious for that individual to kick over the traces because he cannot govern the party, for, in doing that, he destroys what little influence he might otherwise possess, and that is what my hon. friend the ex-Minister of Railways and Canals, I fear has done.

Now, as I have said, there is no radical difference between the policy that the hon. gentleman (Hon. Mr. Blair) advocates, namely a government road ; there is no radical difference between that policy and the policy adopted by the government, of a road partly of government construction, partly aided by the government, leased by the government to a private corporation, a road destined to serve the same purpose under the arrangement that is made that a road would have served if it had been strictly a government road—I say there is no radical difference between these two propositions ; no difference so radical between them as to warrant the hon. gentleman to resign his position as Minister of Railways, and to go against the government as he did most unmistakably and most bitterly yesterday. His position yesterday, lacking as it did that dignity which ought to pertain to the position of a gentleman who resigns on high patriotic and moral grounds, and the bitterness of his attack convinced me that there is something beneath and beyond the ostensible reason assigned for his leaving the cabinet.

Some hon. MEMBERS. Hear, hear.

Mr. CHARLTON. I repeat what I said last night, that the hon. gentleman in the course of his remarks gives us a clue to his feelings in regard to this matter, a clue to his action in this matter, when he tells us that he was not consulted, that no official of the Intercolonial Railway was consulted, that the government forsooth, that the Premier of this country and his advisers proceeded to organize and arrange a policy about which the hon. gentleman was not consulted and which he did not approve of. I imagine Mr. Speaker, that when that hon. gentleman resigned, he had arrived at the conclusion that he would make the captain shoot at his command instead of shooting at the captain's command.

Some hon. MEMBERS. Hear, hear.

Mr. CHARLTON. And the outcome was that the captain did not shoot, and that the rebellious member retired from the ranks, and he is out of the ranks. I am sorry for the whole incident ; I am sorry that the ex-minister (Hon. Mr. Blair) should have thought so highly of his own individual opinion ; should have decided that it was necessary for the government to accept his opinion and act upon it, and that if the government failed to do so he would leave the government in the lurch. Well, he has left the government in the lurch, if being deprived of the hon. gentleman's sanction could place them in that position. Now, Sir, the hon. gentleman (Hon. Mr. Blair) devoted a large portion of his speech to the Intercolonial Railway. As I said last night, I shall leave the detailed discussion of that matter to gentlemen better acquainted with the condition of affairs in the maritime provinces than I am myself.. Still, it is patent to me, and must be patent to any person who has a fair knowledge of the situa-

tion, that the hon. gentleman in his criticism upon the policy of the government with regard to the Intercolonial did not take the pains to put us in possession of all the facts. He laments the ruin of the Intercolonial. He laments that we did not adhere to the policy of attempting to create a business for our maritime ports by using a second-class road with an unnecessary mileage of from 100 to 140 miles, with heavy grades, and one that we know cannot fulfil the conditions that we must expect of it if the scheme of the government is to be made a success. He did not tell us that the Grand Trunk Pacific and the Grand Trunk are separate and distinct corporations. He did not tell us that the government had a contract with the Grand Trunk for 99 years to turn over to the Intercolonial at Montreal all freight the road brings to Montreal designed for points east of Quebec. The Intercolonial cannot be deprived of the business, one of the largest items of business it possesses. He made no calculation as to the great accession to this road of business at Moncton for Halifax and St. John. If the straightening of its line, if the reducing of its grades, if the increase in its capacity, which are making it first-class and shorter, will lead to bringing from the west of a large amount of grain for shipment at maritime ports, the Intercolonial must share in the benefit. The Grand Trunk Pacific ends at Moncton. There are 183 miles of the Intercolonial road to share in the business that will come to Halifax ; there are 89 miles from Moncton to St. John to share in the business. The gross business of the Intercolonial will inevitably be increased by the construction of this short line, owing to the large increase of traffic between Quebec and the maritime provinces ; and there is besides the retention to the Intercolonial of the trade which I have mentioned that pertains to it and that cannot be taken away from it. I will not dwell further upon the position taken by the hon. gentleman ; I will not criticise further his statements.

As I said last night, I have a line of argument to present with relation to this scheme of the Grand Trunk Pacific which I propose to enter upon briefly at this stage of my remarks. As to the question whether we need another transcontinental railway, the question has been answered by the ex-Minister of Railways (Hon. Mr. Blair)) at Vancouver. I can quote him as an authority. According to him, we need the road and we need it quickly. It cannot be proceeded with too soon. He said on that occasion that men were standing in the audience who would live to see three or four transcontinental lines across the continent. I have no doubt he was right. At all events, the construction of this road is not premature. We must bear in mind the fact that we cannot get this road at once. We are taking the initiative steps now towards getting it. We have to proceed with surveys, we have to locate the line ; we have to proceed with the construction of a road 3,030 miles long in an air-line, and it cannot be done at once. It will take several years to do it. In the meantime, population is pouring into the North-west, new acreage is being brought into cultivation ; its prolific soil will furnish a large harvest every year, and at the time this road will be completed, it will be a crying necessity. We have undertaken its construction none too soon. I estimate that five years from to-day with a continuance of the conditions that exist now, the grain products of the Canadian North-west will have increasced at least three-fold. The present means of transportation will prove utterly inadequate and this road will be imperatively called for. The government, I repeat, are not acting with undue haste, or proceeding with an ill-matured scheme. They are not entering upon an enterprise which they are not warranted in entering upon ; but on the contrary, they are entering upon a scheme which is called for and called for now.

I pointed out last night that our situation, so far as our great wheat producing region is concerned, and the situation of the United States when it was a young country, are entirely different. The United States had an outlet by the Mississippi to the Gulf of Mexico. There were navigable rivers scattered along the Atlantic coast—the Hudson, the Savannah and other rivers. At an early date a canal was constructed from Albany to Lake Erie, tapping the waters of the Great Lakes. The country was able to get along largely without railways. In 1850, when the country had 23,000,000 inhabitants, railroads had hardly become a factor in the transportation situation at all. But we are situated differently. We have no Mississippi to convey the products of our western fields to the sea ; we have no Erie canal ; we have no natural outlet, not even by access by navigable rivers to the Hudsoy bay; if we were to have a route, it would have to be provided by artificial means. The whole country, to as far north as the isothermal lines make it possible to produce cereals, must depend on railroads exclusively. For this reason our situation is different from that of the United States. We have to provide our North-west with the means of communication which are absolutely essential to its success and its prosperity. Consequently delay in providing these facilities is inadvisable, and I dismiss the assertion as to the action of the government in proceeding with this railway being premature as totally without foundation, as betraying a lamentable ignorance of the conditions that exist and the probable wants of the near future.

The government proceeded carefully to the consideration of this question. The speech from the Throne contained an allusion to the necessity for a transcontinental line. The government were evidently considering the

propriety first of constituting a transportation commission to examine into this question and to report as to the proper course to pursue. But it became evident that there was not time to wait for the slow operation of an investigation by a commission. It became evident that the time for action was now, and that if we could secure such knowledge as would place us in possession of the facts that would warrant us in taking action, we should proceed. Well, what was done? The government proceeded to consider several propositions. They considered a proposition of building a government road, considered it carefully, as I am well aware, and rejected that proposition—the proposition which my hon. friend the ex-Minister of Railways and Canals pins his faith to, the proposition upon which he has gone out of office because the government did not accept it. I say the government rejected that proposition for what I suppose I may fairly concede were good and sufficient reasons, although I was enamoured of it. The government realized that to make a success of a government road across the continent required the total severance of that scheme from politics. Can that be done in Canada ?

Mr. MACLEAN. Yes.

Mr. CHARLTON. The government thought not and so do I. It required, in the second place, honesty in construction.

Some hon. MEMBERS. Hear, hear.

Mr. CHARLTON. That would require the possession of expert knowledge in supervising and carrying on that work, which perhaps no gentleman in this House possesses. It required in the third place, honesty of management, capacity for efficient management and an amount of expert railway knowledge which we do not find among men in public life. I doubt whether my hon. friend from East York would fill the bill. It would require a man like Sir Thomas Shaughnessy or Mr. Hay, at a salary of $50,000 or $75,000 per year, to manage efficiently such a scheme. Whether the government were right or wrong, whether their reasons for rejecting the proposition were sound or not, they did reject it.

Mr. MACLEAN. Canada does not grow that kind of man ?

Mr. CHARLTON. It does, but they are not in this House. We have not many railway experts in this House. The government proceeded next to consider a proposition for the construction of the road in the old fashioned way, that of granting subsidies. There was a proposition to build a road from North Bay to the west, which involved a land grant of 5,000 acres per mile and a money grant of $6,400 per mile. Well, the government have never adopted the system of making land grants to railways, and wisely concluded that this was not a good time to begin it. So that proposition was dropped. Then a compromise proposition was accepted, namely, the construction of a road, over which the government should have supervision. One division of that road, estimated at 1,835 miles in length, was to be constructed by the government, but the company was to lease the road and was thus interested in having the cost of the construction kept down. The company is to have the right of investigating whether the government was doing the work economically or not and is given sufficient control to enable it to do so. This is the scheme which was adopted for the construction by the government of the eastern section. Perhaps it would have suited my hon. friend, the ex-Minister of Railways, better if he had had the disposal of the contracts for building that road, but I think it will be constructed fully as cheaply under the arrangement arrived at. Then we have the construction of a line from Winnipeg to Port Simpson by the company, the right being reserved to the government to audit the accounts and supervise the work and take any necessary steps to see that the work is done properly, and that the company is not stuffing its accounts so as to give a fictitious cost to the road, on which to secure the government guarantee of the bonds. By this scheme we are to have the eastern section owned by the government and leased to and operated by the company, and the western section owned by the company and operated under the supervision of the government, which is to have control of the rates. This scheme will serve the purposes of the country, I think, possibly better than the construction of a government road, even if a government road could have been constructed with all the conditions necessary for success which I have mentioned.

There were three schemes before the government, and taking everything into consideration, in my opinion they acted wisely and have adopted the scheme which is the safest and most likely to confer on the country great advantages.

The government were criticised for delay. My right hon. friend the leader of the opposition, every day or two, would inquire when this contract was to be brought down, what was the cause of delay, why we were kept dancing attendance while the government were shilly-shallying. They were asked : 'Why do you not bring your policy before the country ? What are you doing ? But yesterday we had my hon friend the ex-Minister of Railways telling us that they have shown undue and unseemingly haste.

Mr. BORDEN (Halifax). If my hon. friend will allow me, it had been announced in the government organs, over and over again, that a certain policy was to be brought down, and I protested against the House being kept from day to day and week to

week waiting for the government to announce its policy. I was not insisting on the government bringing down a policy, but insisting that, if they had any policy to bring down, they should bring it down at once.

Mr. CHARLTON. The government were probably in a position in which circumstances were arising that rendered them unable to say definitely how soon they would arrive at a decision. They had announced their intention of bringing down a railway policy, but they may have thought that they would be able to announce it earlier than they did. They took time however to consider and weigh carefully all the conditions before concluding finally an agreement with the Grand Trunk Pacific Railway. That agreement will stand as a monument of their sagacity. And they brought down their policy with celerity and despatch, if we consider all the circumstances attendant upon the case. It was proper that they should take careful action. We were at the parting of the ways. We had, on the one hand, the policy recommended of building a government road. On the other hand, we had the policy recommended of assisting the construction of a road in the old fashioned way of granting subsidies. Between these two policies, the government had one which is better than either, but which required time and careful consideration because there were vast interests at stake; and if, owing to the absence of due care and thorough consideration, mistakes became developed in the future, through the adoption of the scheme recommended by the government, my hon. friend the leader of the opposition would not be slow to say that they had acted too quickly and brought down their policy too soon.

In adopting this policy, the primary consideration which the government had in view was the national interest—the building of a national road to connect our Atlantic with our Pacific ports, and which would pass all the way through Canadian territory. That object they have kept steadily in view. They desired to secure trade from the North-west for our own ocean ports or as large a share of that trade as possible. I do not say this all-rail route will be able to compete successfully with the water route; but I do say that it will not, unless it be made first-class in every respect. I notice that the 'Mail' newspaper has an editorial contrasting my position with that which I took on the transportation question in a speech I made on May the 26th last. I took the position then that water transportation was cheaper from the North-west to the seaboard than transportation by rail, under the then existing conditions. I take the same position to-day. If this road from Quebec to Winnipeg is to be a road with fifty feet or sixty feet grades, with light rails, and of inferior construction, if it is to be no better than the other railways with which it will have to compete, it will be distanced in the race; and to that extent I endorse the position which I took in my speech of May the 26th. I was then discussing water versus railway transportation in the then existing conditions.

As I said last night, this road from Winnipeg to Quebec, if it is to serve the purpose which it is intended to serve, must be a first class road. It must have not more than half per cent grades, and should have four-tenths per cent grades coming east, or twenty-one feet to the mile. It should be laid with 90-pound rails, should have bridges that would carry the heaviest rolling stock in use, with a margin to allow for an increase in the weight of rolling stock; it should have engines of 100 tons weight without the tender and cars of 50 tons capacity of cargo. The road must be built with bridges capable of sustaining the weight of cars with a carrying capacity 50 per cent greater than is now required and with corresponding increase in weight of engines. And with a road of that kind, considering prospective improvements in railway material, I feel hopeful that the route will be able to compete with the water route. There has been a constant, a regular increase in the efficiency of railway transportation. We have had the introduction of the fish-plate joint, making practically a continuous rail. We have had the introduction of the steel rail in place of the iron rail. We have had the increase in the weight of the rail. We have had the increase in the firmness of the road-bed. We have had a great increase in the weight and hauling capacity of engines, and an increase in the carrying capacity of cars from 10 tons to 50 tons. Trains are run on first-class roads with a capacity of hauling 2,000 tons of cargo to the train without requiring any greater force of engineers, firemen, brakemen and other attachés of the train than were required twenty years ago for trains that carried 250 or 300 tons. And this progress and improvement still goes on; the efficiency of railways will be still further increased. And with the kind of road that I foreshadow—not the kind of roads that exist now in competition with the water transportation—it is my belief that we can compete with the water route. I know of a road with a maximum grade of 19 feet to the mile running from Buffalo to Detroit through the province of Ontario. The only limit to the size of their trains on that road is the question of their management—whether they are too unwieldy to be managed or not; they do not like a train that is over half a mile long. They can haul upon that road sixty or seventy loaded freight cars with the utmost ease. Compare that with a road on which the engine is struggling up a grade of sixty or seventy feet to the mile with twelve or fifteen cars, and you can see the difference between a

first-class road and a second-class road. We want a road from Winnipeg to Quebec thoroughly first-class in its construction and equipment; a road that, in the ordinary way of business, can carry trains with 2,000 tons of freight. If we get that kind of a road, in my opinion we can transport wheat from Winnipeg to Quebec for less than 12 cents per bushel. Now, the rate to-day from Winnipeg to Port Arthur by the Canadian Pacific Railway is 7½ cents per bushel. And, at the rate I have given as a basis of transportation between Winnipeg and the lakes, the transportation on this line will be cheaper than the present transportation partly by water and partly by rail.

Mr. McCREARY. The rate from Winnipeg to Port Arthur is more than 7½ cents a bushel; it is 14 cents a hundred.

Mr. CHARLTON. They have lately reduced the rate. I was speaking with Sir Thomas Shaughnessy the other day, and he told me they had reduced the rate to 7½ cents per bushel. With the kind of road I am talking about, it is my opinion we can carry grain from Winnipeg to Quebec in competition with the partly water and the partly rail routes that pass to the south. And at this point I wish to impress upon the government the absolute necessity of securing the construction of a road of this kind. If because of difficulties of engineering, if because of enhanced cost of the road, we permit ourselves to construct a road with grades of 50 or 60 feet to the mile, we shall defeat our own purpose; we cannot do what we desire that this road should do —that is, compete with the other routes. But with a road of the kind I speak of, we can in all probability transport freight to Quebec successfully. And I say this in the face of the arguments I used on the 26th of May last, comparing water rates with the rates on the now existing roads from the west to the east.

Mr. SPROULE. The hon. gentleman's (Mr. Charlton's) argument is the exact reverse of what he said then.

Mr. CHARLTON. It will be evident that when I am dealing with new conditions, when I am dealing with a road entirely different from the class of road we have now, I am entitled to say that the results probably will be different. An argument based upon the old condition of things will not apply to the new conditions.

Mr. BORDEN (Halifax). What is the hon. gentleman's (Mr. Charlton's) estimate of the cost of a road of that character?

Mr. CHARLTON. I am coming to that, and——

Mr. SPROULE. I thought the hon. gentleman (Mr. Charlton) was arguing the abstract question of carriage by rail and carriage by water.

Mr. CHARLTON. It will be conducive, I think, to the object of this debate to allow me to proceed without interruption. If, when I get through, there is anything I have not touched upon, I shall be happy to deal with it. Mr. Speaker, it is evident that the government comprehends the magnitude of this issue; for it is an issue of great magnitude; we have not been confronted with so great a one since the Canadian Pacific Railway debate. The government comprehends the magnitude of this issue and has conscientiously done its best. And I may be allowed to say to my hon. friends opposite that this is a question that affects the future of this great country, with its three millions of square miles of territory, with its enormous resources and potentialities and with its splendid future. We are considering the best means of subserving the interests of this country. This should not be a party question; there should not be objections raised for the mere purpose of making party capital; but we should get down to the consideration of this problem on business principles, and make up our minds on the basis of the evidence we have, and arrive, if we can, at a reasonable conclusion as to the probable outcome of this policy.

Now, the government has had in view in this matter a two-fold object, and it has not confined its attention to one or to the other. The first object is to provide an additional outlet for the grain of the North-west; the second object is to afford that outlet for the grain of the North-west in such a way as to direct the trade of that country to our own ports. These two objects the government have kept steadily in view in discussing, evolving and consummating the policy which it now places before the country. Now, we could have got over this question a great deal easier. There would have been no trouble about giving an outlet for the trade of the North-west with perhaps the expenditure of no money at all. We had only to allow these roads to reach Lake Superior. Perhaps we might have granted a little aid for that purpose. We had simply to allow the Jim Hill road and other American roads to come in without let or hindrance, without bonus or aid, and they would have furnished the North-west with an outlet and carried its grain to Duluth, Minneapolis, and Chicago, and so over American roads to the ocean. This would have been just as good an outlet as any other, so far as the mere interest of the farmer is concerned, but it would not have served a national purpose, it would have diverted the trade from our own ports and would have been a suicidal policy. The government have avoided such a policy. They have not counted a few millions as weighing against the fact that such a settlement of the transportation problem would have taken away from our own ports this great trade of to-

day, this trade which is to be so much greater in the future. So, due weight has been given to national considerations ; and when my hon. friends opposite belittle these considerations and make an effort to throw odium upon the government's policy and to show that what is claimed for this route cannot be accomplished. I do not think they are acting a patriotic part in the matter.

Now, I wish, Mr. Speaker, to refer to the physical features of the scheme. It designs to make Quebec the great seaport of the Dominion; that is the first great physical feature of this scheme. It will reach Quebec by a direct route from Winnipeg, it will reach the best harbour in the Dominion, or one of the best harbours; and the only drawback to it is that it is closed for some portion of the year. After having given Quebec a business that that port can transact during the season of open navigation, it is designed to carry that trade on during the winter to ports in the maritime provinces, to the port of Halifax, to the port of St. John. It proposes to give the very best conditions that are attainable for securing that object. It may be that it cannot be done, but we intend to attempt it, and to attempt it by using the best means in our power to accomplish the purpose. A first-class road from Winnipeg to Quebec and the maritime provinces for the purpose of securing the trade of the North-west for these ports—that is the object had in view by the government, that is the purpose they intend to attempt to attain ; and if our hon. friends on the opposite side wish to throw obstacles in the way of that purpose, why, I merely say that in that regard they are not patriotic.

Mr. BENNETT. From such a source.

Mr. CHARLTON. I remember, Mr. Speaker, some twenty-one years ago when the party that I belonged to at that time occupied very much the same attitude that my hon. friends opposite occupy to-day, belittling to some extent, casting aspersions upon, raising objections to, and magnifying the obstacles in the way of the construction of a transcontinental line. Well, some of our objections were well taken, but the general trend of our policy was not to our advantage. The country believed in a transcontinental line, and wanted it, and got it. We believe now that the country believes in another, and wants it, and is going to get it; and hon. gentlemen who stand in the way of consummation of that purpose will find that they have been poor politicians and still poorer statesmen.

The next physical feature of this road that I shall refer to is the fact that it opens up a vast unsettled area in Ontario and Quebec. It is a colonization road for 1,300 miles. It passes through our hinterland, opens it up, and while opening it up, goes over the best route for a direct line from Winnipeg to Quebec. This road passing through this hinterland, with a trunk branch running down the valley of the Nottawa river,—I presume some of my hearers have never heard of the Nottawa river, a stream about the size of the Ottawa, with what is supposed to be an extensive and fertile valley. This branch will go to a harbour upon James' bay, and will open up a vast section of country that will be tributary to this road. That is another physical feature. This road, through its connection with the extension of the Temiskaming road being built by the Ontario government will provide access to Ontario centres for all the country tributary to this Grand Trunk Pacific line. But this Temiskaming road will not serve as a line to divert traffic to other ports than the port of Quebec. The road will run from Winnipeg west largely through a new country, a vast unsettled region, a region supposed to contain the richest and most productive land in the North-west. It will open up a region from north of the Saskatchewan to Dunvegan on the Peace river ; and thence up the Peace River valley and through the Peace River pass to Port Simpson on the Pacific ocean. The road will cross the Rockies by easy grades. The summit of the Peace River pass, has an altitude about 1,800 feet above the sea. The construction of the mountain section, as it is termed, will be found to be much less expensive and much less difficult probably than is now anticipated. This western terminus will place the port that is its terminus much nearer to Asiatic ports in north China and Japan than any other port on the Pacific ocean. While the length of the road is somewhat greater than to Vancouver, the distance by the ocean to the ports named is very much less, and so this route will have important advantages in the overland and oriental trade over any other line. It will reach Quebec by easy grades, by a direct line, and in this respect will be superior to any other possible route from the west to that city. It will open up the great clay belt of this northern region, a clay belt that is supposed to contain sixteen million acres of arable land now lying unoccupied, not possible of being occupied, because it has no means of communication with the outer world. It will open up that clay belt, and it will open up all the timber resources, all the agricultural resources, and all the mineral resources of that great stretch of country, 1,400 miles in length from Quebec to Winnipeg.

Now, with regard to the route of this road, there were two propositions. The one proposition was to carry the road north of Lake Winnipeg. That was the route that would have been adopted by the Trans-Canada line. A good friend of mine in this House, whom I very highly esteem, thought that this line ought to have been adopted because it was 500 miles shorter than the other. Well, if there had been that differ-

ence in the distance it would have been a strong argument in favour of adopting that as the nearest route. To find the distances—but of course they are only approximative—I have calculated them by the map. I converted the geographical miles into statute miles, and made some allowance for deviation from the direct line in estimating the length, and the distances I obtained are as follows : By the Winnipeg route, from Quebec to Winnipeg, 1,380 miles; Winnipeg to Port Simpson, 1,650 miles; total, 3,030 miles. By the Nelson route, Quebec to River Nelson, 1,466 statute miles; from Nelson river to Port Simpson, 1,490 statute miles; total, from Quebec to Port Simpson, 2,956 miles. The difference of distance in favour of the northern route, north of Lake Winnipeg, is 75 miles. Now, I was surprised at this result myself. The two lines at their furthest points of divergence are three and a half degrees apart. But when you come to lay out, as I did, a sketch to ascertain the difference between the length of the hypothenuse and that of the base and the perpendicular of a triangle, it is less than one would naturally suppose. For instance, you lay out a line with a perpendicular of 400 miles and a base of 800 miles, and the hypothenuse is but a trifle more than one-fourth more than the length of the perpendicular line. So that showed this calculation was substantially correct.

Now, there is a reason why the Winnipeg route is preferable to the other. If there had been no such reason, the government would naturally have chosen the shorter line, even though the advantage to be gained was only 75 miles. But the Nelson route has less agricultural land upon it than the other. The distance is greater from Quebec to the River Nelson than it is from Quebec to Winnipeg, by about 70 miles. Then the unproductive country extends from the Nelson river west a long distance; while from Winnipeg, the productive country extends at least to the Peace River pass, and that is the reason for putting the road upon that line. Another reason is that at Quebec the road touches a point where all the business of the North-west converges, a great entrepot for the vast country west and north-west of it. It is so to-day, it will probably continue to be so, and a road reaching that point is in a position to compete for the business furnished by all these roads ramifying through the North-west in every direction, while if it had gone by the Nelson route it would have reached none of them, and could have competed for none of this business. For these reasons the choice of line by way of Winnipeg was a judicious choice.

I wish next, having dealt with physical aspects of this road, to call attention to its business prospects. We have dealt with the national question, with the necessity from a national standpoint of having a great transcontinental road upon our own soil, and it has been asserted by the hon. ex-Minister of Railways and Canals and by others, that, leaving out this view of the case, this road has nothing to commend it to us from a commercial standpoint. Well, Sir, the business prospects of this road are, first, that it will furnish an outlet to the North Saskatchewan valley, an enormous extent of country and a fertile and rich region of the Canadian North-west. It will furnish an outlet to the Athabasca valley by means of the navigation of the river bringing its produces down to the point where the road crosses and up the river to that point. It will furnish an outlet to the Peace river valley. These regions are to be peopled in the near future by millions of people, these regions are to be the heart of the productive region of the Canadian North-west, these regions are to furnish an untold amount of business—business that this one line will be incapable of performing, and the building of this road, as the hon. ex-Minister of Railways and Canals very properly said at Vancouver, through this new and wilderness country is an act of statesmanship, of good policy, and it will open this region to settlement. When this road has been built to Fort Dunvegan on the Peace river, the natural corollary is to extend the line from that point to Dawson City, in the Yukon. The line would be perhaps a thousand miles long. I have not measured the exact distance ; it may be something less than that. It would cross the Hay river, it would follow the Liard river and traverse those fertile regions. Not 300 miles of the length of that road to Dawson would pass through a country incapable of settlement and cultivation, and if we had this road to Dawson we would have done away with this question of the bonding privilege from Skagway over the White Pass. We would have done away with this question of the trouble about the Alaskan boundary so far as reaching the Yukon from the Pacific is concerned. We would have reached through a direct route the very heart of that region, we would have its entire trade and we could afford to place little store upon the Alaskan boundary question when that point was reached. The road will open up, in addition, the regions I have named, to Northern British Columbia. Recent discoveries have been made upon the Skeena river of enormous deposits of coal, of hundreds of millions of tons of coal of superior quality. We are just scratching the surface of the country, we are just learning about its enormous resources. It is a country rich in minerals, rich in coal, rich in iron, rich in precious metals awaiting development, to be penetrated by a railway and to blossom into commercial life. The road will build up a great city at Port Simpson, a city that will command an enormous trade with the Orient, a city that will command, when the Panama canal is completed, an enormous trade with Europe in grain.

Grain from the Peace river valley, when the Panama canal is constructed, can be taken to Simpson by this road, can be shipped to Liverpool from Simpson and shipped at rates that will set at rest the transportation question for that rich country by affording them cheaper rates than can be obtained elsewhere. It will afford an outlet for the grain trade and for the flour trade which is sure to be developed from that great western country with China and Japan. This road will have a great lumber trade. That will be another item in its business prospects. It will have a lumber trade from the forests of British Columbia to the prairies of the West. It will have a lumber trade from the forests of the hinterland of Ontario and Quebec, which will be traversed for a length of 1,300 miles by this road. Wherever the road crosses a stream every tree standing upon that stream above the line of the railway will be tributary to the railway, and lumber from this section of the country, as I pointed out last night, can be transported to the prairies as cheaply as lumber is now transported from Vancouver, where there are two mountain ranges to climb, offering grades of from 120 feet to 200 feet to the mile. This road, when it is completed, will be called upon in all human probability to handle 100 million bushels of grain annually by its line west of Winnipeg. As I have said, it will be the exclusive outlet of the clay belt. By its branch down the Nottawa river, with a good harbour on James bay it will command the business of that great mare clausum of Canada, the Hudsons bay, thousands of square miles larger than the German ocean, a sea with untold resources in fish, with enormous resources in minerals upon its shores, and near whose shore Philadelphia companies have been locating iron mines for the last two years, and I would counsel the hon. Minister of the Interior (Hon. Mr. Sifton) to look closely into this question and see that these people do not obtain enormously valuable properties at a mere fraction of their value. This road would command the business of this great inland sea, with its valuable fisheries, and it would command the trade in minerals that are tributary to it and the Nottawa branch. It will bring back to Quebec—and I am sure this will interest you, Mr. Speaker—its palmy days. Once that was the seat of an empire in embryo. Its adventurous explorers reached the far west, planted fortifications and military and trading posts, in the rear of the English colonists, at Fort Duquesne, near Pittsburg, at Fort Kaskaskia, opposite St. Louis, at Mackinaw and various other points in the country, and projected an empire that was to be tributary to France, but by the struggle on the plains of Abraham that dream of empire was shattered. But, with this road Quebec will reach out to the future again, Quebec will reach out to the commerce of this vast region with its untold resources, and it will command the trade of that sea and become a queenly city.

This project will practically straighten the Intercolonial Railway. I have dwelt upon that subject already—a necessary step to be taken if we are to furnish the maritime ports in the winter with shipments of grain. I pointed out last night that vast expenditures that have been undertaken by all the principal American lines in betterments of their roads, in reduction of grades, in improvement of alignment, in laying with heavier rails, and in giving better equipment. These vast expenditures were absolutely necessary. The roads could not perform the functions that they were designed to do and desired to do without these expenditures. If one road made these expenditures every rival road had to follow suit, and the result is that the capacity of these roads has been quadrupled by the expenditure of money made in the way I have mentioned. The same necessity rests upon us in regard to the Intercolonial Railway. It was built upon a wrong route, and it is not first-class in the matter of its grades. The straightening of the road, and the improvement of its grades will vastly increase its efficiency and will render it possible to give to the maritime ports a trade which, without this improvement of the line, could not be secured. If we seek to divert trade to the maritime provinces we must have the best tools, the best appliances. We cannot do it with an antiquated system and with an inferior and second-class road. This road will develop an extensive and valuable section of the country in Quebec and New Brunswick.

Another consideration, and a consideration of no mean importance, is, that it will remove the dread of the abrogation of the bonding privilege. The ex-Minister of Railways and Canals scouted the idea that there was any danger of such a thing being done. He told us: The Americans will never dream of adopting a course that would result to their own disadvantage; never would think of depriving themselves of the trade that now flows to their own seaports. Well, Sir, I do not know. The Americans have threatened to do this. Their President had power placed in his hands a few years ago to do it by his own proclamation without reference to congress, without being governed by anything except his own supreme will in the matter. It is a dangerous position for us to be in. We have had friction in our relations with the United States. They are pleasant and agreeable now because we are the spoiled child, and we stand spoiling all right. But the day may come, Sir, when friction may exist again. Our trade relations have got to be readjusted; we must have from the United States fairer trade conditions or we must apply to the United States the treatment that they apply to us. If we get fairer trade conditions it is all right, and there will be very little

danger of the abrogation of the bonding privilege; if we enter on the other line of policy, I would not guarantee that there would not be friction, I would not guarantee that there would not be talk of abrogating what the Americans call a privilege, and I would not be surprised if it were abrogated. And in any event, self respect, care for our own interests, respect for our standing as a country, imperatively demand that if we can place ourselves in a position where such a calamity cannot be visited on our heads, it is our duty to do so, and the construction of the Grand Trunk Pacific line will do it.

Some hon. MEMBERS. Hear, hear.

Mr. CHARLTON. I wish now, Mr. Speaker, to enter upon a consideration of the financial basis of this scheme. We have government construction from Moncton to Winnipeg. From Moncton to Chaudière Junction according to the best data that can be obtained, would be a distance by the new line of 378 miles, and by the present line it is 488 miles. The saving in the distance would be 110 miles. Estimates have been made of a saving of distance of from 120 to 140 miles, and I take this estimate of 110 miles saving, as being a moderate and reasonable one. Then we have from Chaudière to Winnipeg a distance by air line of 1,380 miles. I add to the air line distance, for deviations, slight deviations going north of Lake Nipigon and so forth, an increase of four per cent, which I believe is sufficient, and this would make the line from Quebec to Moncton 1,435 miles, and the line from Moncton to Winnipeg 1,823 miles. Now, these are approximate estimates. I arrive at them by careful measurement of the map, by ascertaining the number of geographical miles, by turning these into statute miles, by taking 69 miles and 900 feet and making that the width of each degree instead of 60 geographical miles. Now, the cost of this 1,823 miles—and we must bear in mind that this cost does not include the equipment—I estimate the cost of these 1,823 miles at $30,000 a mile. I think that estimate is not too high; I presume it is not too high for that section of the road, from Moncton to Chaudière Junction, but I believe it is too high for the stretch of road through that level country most of the way from Quebec to Winnipeg. But we will allow $30,000 a mile as the cost of a road 1,823 miles in length, or a total of $54,690,000.

Then we guarantee the mountain section and we are to pay interest upon that as well as upon the line from Moncton to Winnipeg. We guarantee the mountain section for not more than $30,000 per mile; the guarantee to be three-fourths of the cost of the line. That I believe is too high. I do not believe the line will cost $40,000 a mile through the Peace River pass and from that point to Fort Simpson, and I estimate the length of that mountain section at 450 miles. This would be a guarantee of $13,500,000. The total cost of the road, and guarantee of the mountain section which rests upon the same basis as the cost of the road so far as the payment of interest for seven years is concerned, would amount to $68,190,000. If we pay upon that sum three per cent interest for seven years that would amount to $14,319,000. Now, I have no doubt that the calculation of $13,000,000 by my right hon. friend the Premier is much nearer correct. I believe I have allowed sums in excess of what would be the actual cost of the mountain section and the actual cost of that stretch of 1,435 miles from Quebec to Winnipeg, but on the basis of this estimate we will pay $14,319,000. This will be equivalent to a bonus. Now, it was represented by the ex-Minister of Railways and Canals, and no doubt it will be represented again, the total cost of the eastern section represents an actual increase of our debt, that the burden that the country assumes is measured by this amount, that that burden is $68,190,000. It is nothing of the kind. After the payment of $14,319,000 we lease this road to a responsible company, we lease this road under guarantees and conditions highly advantageous to ourselves, we lease this road with a reversion of title and ownership in 50 years. We lease this road upon conditions that pay the interest on this sum year after year, and we hold ample security for it. We hold the rolling stock, we hold on the western division their own investments in the road in addition to our guarantee. All these we hold, and to assert that this is in addition to our debt, an increase of the burdens that rest upon the country is absurd. It is not honest; it is not a truthful honest presentation of the case.

Now, with regard to the western division from Winnipeg to Port Simpson, 1,651 miles in the air line, I estimate an increase in length of five per cent. Perhaps that is somewhat too little, but it will make the line in statute miles 1,733 miles. The government guarantees the mountain section. I assume that that mountain section will not exceed 450 miles in length. I do not believe that road will cost $40,000 a mile judging by the character of the country, but the guarantee at $30,000 a mile amounts to $13,500,000. Then there will remain 1,283 miles upon which the guarantee will be $13,000 a mile. The ex-Minister of Railways and Canals assumed that the road would cost the sum that this guarantee represents only. It is estimated that the road will cost between $17,000 and $18,000 a mile on the prairie section, and the government guarantee upon that will be $13,000 a mile. The mountain section will cost $40,000 per mile, and the government guarantee on that portion will be $30,000 per mile. This amounts to a guarantee of $13,500,000 for the mountain section and $16,679,000 for the

prairie section, a total of $30,179,000 of government guarantee applied to the entire line from Winnipeg to Port Simpson. If this estimate of cost is correct, the company's expenditure on this portion of the road will be $10,059,000, in addition to which they have to put on it $15,000,000 worth of rolling stock. So that the expenditure by the Grand Trunk Pacific of one-fourth the cost, and $15,000,000 on rolling stock, in addition to the guarantee by the government, will represent a value of $55,238,000 which we will hold as absolute security for our guarantee of $30,179,000. Is there anything reckless or prodigal or unbusinesslike in this arrangement? Why, the more I consider this agreement, the more I analyze its conditions, the better satisfied I am with the bargain. I would suggest that my hon. friends opposite also make a careful study of it, and see if that will not bring them to the same conclusion. The Grand Trunk Pacific leases this road from Moncton to Winnipeg for fifty years, and provides equipment for this eastern division to the value of $5,000,000. We hold the road, the equipment, and whatever betterments the company may place upon it as security under the lease; and at the expiration of fifty years the road comes back to us.

Now, Mr. Speaker, this is a bargain that could have been made, with any prospect of its being carried out, in no other way and with no other company in Canada than the one with which it has been made. No private company could take this agreement just as it stands to-day and finance this undertaking. No private company could raise on its second mortgage bonds the balance of the cost of the prairie section, over the amount guaranteed by the government. No private company could provide this road with $20,000,000 of rolling stock. It required the credit of the Grand Trunk Company of Canada, standing behind the Grand Trunk Pacific, to consummate this bargain. It could have been done, in no other way. We have the entire strength, resources and character of the Grand Trunk Company of Canada behind the Grand Trunk Pacific; the two are united together—a fortunate concurrence of circumstances, a rare opportunity which the government have had the wisdom to seize upon; and by seizing upon it they have secured the construction of a transcontinental line upon terms that are, to say the least, surprisingly favourable. The Grand Trunk Company has greater resources and appliances than any other company in Canada—perhaps greater than any other company in America. The Grand Trunk Company is associated with this new company, is in partnership with it, is interested in its success, and will carry it to a successful conclusion.

As I said before, the road reverts to the government at the expiration of fifty years. What will it probably be worth then? How many people will be in Canada fifty years from now? What amount of business will be done by this road then? There is a very carefully drawn provision here with regard to betterments and the keeping of the road up to a certain standard. The government have a right to compel this company to keep the road up to the highest standard that exists at any time. If improvements are made in railways, this road must be made to correspond with the character of those improvements. The keeping up of the road is an absolute condition of the contract. When this road reverts to the government at the expiration of fifty years, is it an extravagant calculation to suppose that it will be worth twice its original cost to the government? It is not. There is something marvellous about the increased value of railroads. Take the New York Central. It fell into the hands of Cornelius Vanderbilt about the year 1860. That road's stock was watered, and watered, and watered again, until every dollar of that stock to-day represents a cost of 25 cents; and yet the great volume of watered stock goes on paying dividends of 6 per cent per annum, due simply to increased value from increase of business. The same conditions apply to all the principal railroads. They will apply to this road. This road will inevitably increase in value. I think it is a very moderate calculation to suppose that this road, at the time it reverts to the government, will be worth twice its original cost. The agreement provides that if the government do not then choose to assume the road and run it themselves, the Grand Trunk Pacific Company shall have the right to lease it if it offers as good conditions as the government can secure elsewhere. Well, do you suppose that that road will be leased a second time at 3 per cent on its original cost—a road that will be worth twice what it cost? Is it unreasonable to suppose that the road will then become a great source of revenue to the government? It is a moderate calculation to suppose that while the government will continue to carry its bonds at 3 per cent, the company on the second lease will pay at least 6 per cent on the original cost. I do not know but that is a better arrangement than to rush into a scheme of government construction of railroads. At all events, it is an arrangement which will certainly enable the government to establish an efficient railroad from ocean to ocean, and leave that road under the absolute control of the government in every essential respect.

Now, I wish to refer to the matter of the management and practical basis of this scheme. The Canadian Pacific Railway distance from Montreal to Winnipeg, is 1,424 miles. The length of the Grand Trunk Pacific from Quebec to Winnipeg, if my calculations are correct, will be 1,435 miles, eleven miles longer from Quebec to Winnipeg than the distance on the Canadian Pacific Railway from Montreal to Winnipeg; and I doubt if, when the surveys are

made, the difference will be as much in favour of the Canadian Pacific Railway. The length of the entire road is considerably greater than that of the Canadian Pacific Railway, but that increased length is all but eleven miles of it west of Winnipeg, and it is a consideration that does not matter much, for every mile of it is developing a rich country, which will afford business to the line.

The government retains running powers on the road, or the right to give running powers over the entire line—over the line from Winnipeg to Moncton, and over the line from Winnipeg to Port Simpson or to Bute Inlet, whichever may be the terminus. The eastern division, from Winnipeg, is made a great artery as an outlet from the west, connecting with every road which comes from the west into Winnipeg; and, if it carries grain as cheaply to Quebec as it can be carried to Boston or Portland, it will divert to Quebec and the maritime ports all the traffic it can possibly handle. Was there any wisdom in the government retaining this right, and making these provisions for joint use and joint running powers? Certainly there was, and the question is, can this right be secured on reasonable terms for other companies? I answer, beyond question it can.

The criticisms made by my hon. friend the ex-Minister of Railways and Canals with regard to this matter betrayed an utter ignorance on his part of the conditions surrounding this question. As I said last night, the gauges of the roads in the United States have been made uniform for the purpose of exchange of freight and avoiding the breaking of bulk when one road connects with another. No bulk is broken now. Cars go from where they were billed to their destination over one or two or a dozen roads, and arrangements are made for the division of freight on the basis of mileage. And if a railway does not return the cars it has borrowed promptly, it must pay a certain rate per day for the use of those cars. The whole business is carefully systematized; and even where there is no special arrangement, if one road runs its cars over another, there is no trouble in ascertaining what it should pay. Traffic is carefully exchanged and the flux and flow of business goes on from ocean to ocean over all railway lines on a well recognized system. If the Northern Central or the Canadian Pacific Railway or any other line wishes to send its cars through to Quebec to be hauled by the Grand Trunk Pacific Railway, it is the simplest thing in the world to make a division of the freight; and if there should be any disagreement, the government can step in as an arbitrator and decide the dispute on a fair and equitable basis. But if these roads desire to make use of this line practically as part of their own lines, there will be no difficulty. We know that by practice already. I pass over a road almost every week which is used by two lines a distance of 229 miles. There is one division from St. Thomas to Detroit 110 miles and another division from St. Thomas to Buffalo 119 miles long. Each of the lines which uses this road has its own roundhouses, its own appliances, its own engines, and runs its own trains, and there is no friction between them. Their system of train despatching is arranged in the easiest manner. Passenger trains take precedence over freight trains, and stock freight takes precedence of ordinary freight. The whole business is conducted with the utmost system and works with the utmost regularity and without friction. If you can run a road where there are two divisions, you can run a road where there are three or four or a dozen divisions. The same system applies to many as it does to a few. The running of pullman cars and passenger cars is reduced to a system on all roads. A pullman starts from New York or Boston and goes to San Francisco, and it makes no difference whether it goes over two roads or half a dozen. The system is perfectly adjusted to the satisfaction of all the roads, and everything goes on smoothly. The same system can be introduced here, and it is absurd to say that it cannot. We have this further assurance in our own case, that while in the United States all these matters are subject to mutual arrangement, so that any road may defeat the working of the system by being too grasping or exacting, here we will have an umpire, the government itself, which can compel the faithful and equitable carrying out of the provision laid down in section 24.

This company, as an assurance of good faith, deposits the sum of $5,000,000 with the government, and that money is to remain in the hands of the government until the company has fulfilled its obligations. But if the company are within $3,000,000 or $4,000,000 of the completion of the work, then the government may allow the company to use the $5,000,000 deposit to complete the work. But the government holds this $5,000,000 in hard cash or convertible securities in addition to all these other conditions. The government controls the rates on this road and it has the right to audit the accounts at any time. At any time it may send its accountant to see whether the accounts of the company are properly kept, whether there is any stuffing of accounts and pay-rolls. It can ascertain exactly what the road is doing, what its earnings are, what its dividends should be, whether its rates can be reduced without injustice with the company. Contrast that with the Canadian Pacific Railway, which we cannot interfere with at all until its dividends are 10 per cent. Then this company is liable to taxation and the Canadian Pacific Railway is not. This company has neither land grants nor cash subsidy, unless

you can call the seven years interest on the guarantee on the cost of the mountain section a subsidy. Contrast this with the first proposal of the Grand Trunk Pacific Railway itself. That company came down to the government with a proposition to build a line from North Bay. It wanted a subsidy of $6,400 and 5,000 acres of land a mile, equivalent in value to at least $15,000. Contrast the present bargain with that demand. I believe that the government have pressed the Grand Trunk Railway to the last point. I believe Mr. Hay was ready to throw up the sponge, if one single concession further had been demanded. I am, I think, in a position to know that the government got the very last concession possible from the managers of the Grand Trunk Pacific Railway; and that it has got a good bargain the future will prove, whether it be admitted now or not.

I give great credit to the government for having refused the land grant and still greater credit for having made that its uniform policy. The government deserves well of the country to a greater degree perhaps in this respect than in any other. Contrast this with the policy of the late government. That government made land grants to railways to the amount of 57,087,000 acres—an empire thrown away recklessly. It threw away our heritage recklessly, with no apparent idea of the ultimate value of that land. It gave away our lands as freely as you would stones from a brook, and of this amount of 57,087,000 acres, 29,986,000 have been earned and have passed out of the hands of the country. Messrs. Mackenzie & Mann have been able to make a $12,000,000 sale of land, I understand.

Hon. Mr. HAGGART. Does that include the Yukon River Railway ?

Mr. CHARLTON. No. The railway is somewhat south of the Yukon. Our hon. friends opposite may claim all the credit they can extract from that policy. It has been a most wasteful one and I trust that the Liberal government will add the brilliancy of its record in this respect by continuing to enforce the old principle, which we advocated when we were in opposition, of the land for the settler and the settler for the land.

With regard to the question of subsidies, I do not know that I would take the position taken by many persons in Ontario. Subsidies, reasonably granted, are a proper thing. Railroads may be subsidized and their construction secured that could not otherwise be had, railroads that would be of great benefit to the country. And here again with regard to their system of subsidizing railroads, the government has adopted a principle which redounds greatly to their credit. They have adopted the principle that a railroad which is subsidized must carry the mails free, and, I believe, they must provide a mail car and a mail clerk—the Postmaster General will correct me if I am wrong—they must carry military forces free, in fact, they must perform all government services free to the extent of three per cent interest upon the amount of subsidy granted. Under these conditions, and with these provisions, I believe that subsidies granted within the limit of reason, granted to meritorious enterprises, and in moderate amount may be reasonably granted, nowithstanding the outcry that has been raised.

Mr. MONK. Are there any of these conditions in this contract ?

Mr. CHARLTON. There is no subsidy in this contract. Now, Sir, I desire to refer to the wise provisions in the public interest contained in this agreement. Great care has been taken in this respect. We have not a Minister of Railways and Canals with carte blanche in the construction of a transcontinental line. This would be a very pleasant position, no doubt, for a public official to occupy ; but in the construction of the eastern section, we have a joint supervision provided for on the part of the company and on the part of the government. The company is interested in having the road constructed as cheaply as possible, as it has to pay three per cent interest on the cost. It has joint supervision with the government in the letting of contracts and the construction of the line. This provision will secure—perhaps such a provision would be unnecessary with a government like this—economy of construction to the utmost attainable extent. Then, we have a provision in the public interest that the standard of the road, west of Winnipeg shall be equal to the standard of the Grand Trunk between Toronto and Montreal. That is a much higher standard than that of any road that the west now possess.

An hon. MEMBER. No.

Mr. CHARLTON. Yes. The Mackenzie & Mann road is laid with 60 pound rails. The Grand Trunk between Toronto and Montreal is laid with 80 pound rails, and in some sections 90 pound rails. It is a first-class road, with the best bridges and with low grades. And, if this provision in the contract is complied with and the Grand Trunk builds a road in the west that shall not be inferior to the Grand Trunk between Montreal and Toronto, it will build a road thirty or forty per cent better than any road now in that western country. Compare these conditions with those that were imposed on the Canadian Pacific Railway when it was built. That company was under obligation to build a road equal to the standard of the Union Pacific when it was first constructed— a road whose rails were laid on cottonwood ties two feet apart, ballasted with frozen dirt in the winter, and with grades as high as 90, or even 100 feet

to the mile. There are other important conditions in this contract. We have a provision in section 16 that the government may improve the eastern section. So, if this road is not kept in condition to answer the purposes of the government, in a condition to secure the trade for the maritime ports and Quebec, the government may step in and put the road in condition necessary for this purpose, and charge the cost to the company.

Hon. Mr. HAGGART. No, no.

Mr. CLANCY. The interest.

Mr. CHARLTON. Yes, to the company. It is capitalized at the cost of the company. The government is adopting provisions with regard to the eastern section, stringent provisions, that insure against the deterioration of the line, that insure its maintenance at the same standard of efficiency as the rest of the road. Then there is the provision I have already referred to with regard to the hauling rights, made in the interest of the shipper of the west and of the whole country, that will be vastly beneficial to the transportation interest of Canada. The government has a mortgage that covers the road-bed and the rolling stock and is ample security for all its advances by way of guarantee. Then there is a clause providing for the purchase of Canadian material. My hon. friends on the other side may say that this does not amount to anything, because the company is not obliged to purchase Canadian materials, unless it can get them advantageously as other materials. But I think this clause secures to us an important advantage. The time will come, and come very soon, unless we get advantageous trade conditions from the United States, when we shall have duties high enough to assure the purchase of materials in Canada ; and this condition that the company shall purchase its materials in Canada will prove a great boon to the manufacturing interest of this country. Then, the government has control of rates, which I have already alluded to. It has provision for continuous and efficient operation of the road, and it has that condition secured by a provision in the agreement which says that when the lease is drawn the government shall have plenary powers and powers of imposing penalties in the event of this condition not being complied with. This agreement provides that the rates on export trade shall be no greater to Canadian ports than to American ports. The road must absolutely place Canadian seaports on the same basis with regard to advantage as it places other seaports. It was said last night that that company could evade this provision by sending its agents to the west to secure freight routed to American ports. If it did this, it would violate clause 43, which provides that there shall be no discrimination on the part of a railway company in favour of American routes. Then there is a condition that the company shall provide ample shipping accommodation at Port Simpson, Quebec, Halifax, St. John or any other ocean port that its business reaches. The attempt was made last night to convey the impression that of the $45,000,000 of stock which this company is to issue, $25,000,000 was to be treated in some way so that the manipulators of this contract could put it in their own pockets—confiscate it. Why, the $20,000,000 of preferred stock is to secure $20,000,000 of rolling stock for the road. That is the purpose to which it will be devoted. The $25,000,000 of common stock is to be laid aside and put upon the market for the purpose of constructing elevators and other shipping facilities at the end of the route that the government stipulates that it shall furnish and other such purposes. So that we have in this contract ample security for all the stipulations that the agreement contains.

Now, to sum up the matter : Under this arrangement we are about to secure a transcontinental line. We have granted no land for it. We pay interest for seven years on the cost of the eastern section, and upon the guaranteed portion of the mountain section not exceeding $14,500,000. And, at the expiration of fifty years, when the value of this property will be greatly enhanced, it comes back into our possession. That, broadly speaking is the outline of this arrangement. I wish to contrast this bargain with the first bargain for a transcontinental road made in this country. I think there will be food for reflection in this contrast; and while doing this, I wish distinctly to disclaim that I have any reflections to make upon the management of the Canadian Pacific Railway. I admire the courage, the grasp, the energy, the push that characterized that movement from the outset. I criticise, not the Canadian Pacific Railway syndicate, but the government of the day. In 1886 I had a letter from the now Lord Mount Stephen, complimenting me, thanking me, for a speech I made in that year attacking the policy of the government and showing what vast franchises the Canadian Pacific Railway Company had obtained, what an enormous bargain they had from the government. This letter complimented me for having tried to act justly, and I was informed that it had been used quite efficiently in promoting the credit of the company. So I say now, that while I point out the recklessness of the government of that day, I utterly disclaim any intention of casting reflections upon the people that took the government in.

When that contract was made with the syndicate in 1881, it provided for the construction of a line from Calender to Port Moody. Of that line, certain portions were to be built by the government. The Lake Superior section from Lake Superior to Selkirk, 405 miles in length; the western section from Port Moody to Kamloops, up

through the canyons of the Thompson and the Fraser, 238 miles in length, a total of 643 miles that the government was to build and hand over free of cost or charge to the syndicate. The balance of the road was to be built by the syndicate. It was 1,906 miles long. Now, whatever subsidies, whatever grants of land, whatever gifts of completed railway the syndicate received were applicable to the construction of that 1,906 miles of road only. Let us see what they got. They got a cash bonus of $25,000,000; they got the 643 miles of completed road which cost, with the surveys, in round numbers, $35,000,000; they got 25,000,000 acres of land, worth at the least calculation $3 an acre, or $75,000,000. Their cash subsidy therefore for the 1,906 miles of road amounted to $13,100 a mile; their subsidy from the gift from the government of 643 miles, which had cost $35,000,000, amounted to $18,300 a mile; their subsidy from the 25,000,000 acres of land, worth $75,000,000 as the outcome proves, amounted to $38,300 a mile. So the syndicate, for the construction of 1,906 miles, the portion that was constructed by it between Calender and Port Moody, received in cash, in road completed and handed over, and in lands estimated to be worth $3 an acre, a total subsidy of $69,700 a mile. Now, I hope my hon. friends on the opposite side will make a note of that. That was a pretty reasonable subsidy—$13,100 a mile in cash, $18,500 a mile in the value of the road the government built for them, and handed over, and $38,300 in land worth $3 an acre.

Mr. McCREARY. What about the taxes ?

Mr. CHARLTON. We will come to that later on.

Mr. COWAN. Still there's more to follow.

Mr. CHARLTON. Now, compare that with this scheme that our friends are denouncing to-day. Here is a scheme that will cost us, in interest in lieu of subsidy, $14,500,000, or $4,060 per mile for the entire line, against $69,700 per mile for 1,906 miles. Does not the contrast startle my friends ? And can they, in view of their own record, rise in this House and condemn this moderate, judicious scheme, conceived in the interest of the people, and to be carried forward to its consummation at such a slight cost ?

Now, let us have a summary of these subsidies : Cash bonus to the Canadian Pacific Railway on 1,906 miles, $25,000,000; cost of road and surveys handed over to the company, $35,000,000; total value of 25,000,000 acres of land—and I may say here that part of that land was bought back at $1.50 an acre, $10,000,000 worth, but the average of the whole may be computed at least at $3 an acre—25,000,000 acres of land at $3 an acre, would be worth $75,000,000; total subsidies applicable to the 1,906 miles built by the Canadian Pacific Railway, $135,000,000. Contrast that with this scheme that is going to be denounced as extravagant and reckless. Aid to the Grand Trunk Pacific by way of interest, say $14,500,000; balance in favour of the Canadian Pacific Railway, $120,500,000. The statement seems incredible, but it is a cold hard fact, and I thought perhaps it would be well just to remind our friends opposite of what they have done in the past as an incentive to them to denounce what we are doing in future, granting about one-seventeenth as much to this line per mile as the Canadian Pacific Railway received from them.

At one o'clock, House took recess.

House resumed at three o'clock.

Mr. CHARLTON. Mr. Speaker, at the hour of recess I had just completed a comparative statement of the aids granted by the government to the Canadian Pacific Railway Company and to the scheme at present under consideration. I had given the value of the investment of the government in the roads that were handed over to this company, the amount of the cash bonus, and the value of land grant of 25,000,000 acres. It may be argued in regard to the land grant that its value was created by the construction of the road, and that we are not entitled to count this as being in the shape of a bonus in regard to the aids rendered in this line. Leaving that question aside, I may say in this connection, at least, that we grant no land bonus to the present scheme and that the increase in the value of the land consequent upon the construction of the land will be ensured to ourselves as a government and to the country and not to a railway corporation.

I shall now enter into other conditions of contrast between these two schemes as relates to the government's position in the respective cases, and the first one I will refer to, Sir, will be the exemption of the Canadian Pacific Railway from taxation. That exemption is contained in section 16 of the agreement of the company, and is as follows :

> The Canadian Pacific Railway, and all stations and station grounds, workshops, buildings, yards and other property, rolling stock and appurtenances required and used for the construction and working thereof, and the capital stock of the company, shall be for ever free from taxation by the Dominion, or by any province hereafter to be established, or by any municipal corporation therein.

That exemption, of course, is perpetual. I need not point out that no such condition applies to the Grand Trunk Pacific Railway scheme. There is no exemption of its property in this case, and whatever conditions a railway corporation may be liable to under the authority of the Dominion, or of provinces that corporation will be liable to. Then, the next provision that I would refer to in this contrast of conditions is the exemption of the land grant of the Canadian Pacific Railway from taxation, which

exemption is also contained in section 16, and is as follows :

And the lands of the company, in the North-west Territories, until they are either sold or occupied, shall also be free from such taxation for twenty years after the grant thereof from the Crown.

These lands were granted more than 20 years ago, no taxes have yet been paid, and the lands still are practically exempt from taxation.

The next condition and contrast that I would refer to is the transportation monopoly granted to the Canadian Pacific Railway covering the entire North-west Territories. The clause granting that monopoly is No. 15 of the agreement or contract, and is as follows :

For twenty years from the date hereof, no line of railway shall be authorized by the Dominion parliament to be constructed south of the Canadian Pacific Railway, from any point at or near the Canadian Pacific Railway, except such line as shall run south-west or to the westward and south-west ; nor to within fifteen miles of latitude 49. And in the establishment of any new province in the North-west Territories, provision shall be made for continuing such prohibition after such establishment until the expiration of the said period.

Here was a condition which gave the Canadian Pacific Railway an absolute monopoly of transportation in the entire North-west Territories. No line was to be built from the south of that road to within 15 miles of the American boundary line, no connection with any American road was possible under the provisions of this section. The Canadian Pacific Railway, by this provision of its agreement, enjoyed an absolute transportation monopoly in the North-west. Contrast that provision with the provision of the Grand Trunk Pacific Railway scheme and we find that no such monopoly is given, that no special privileges are given in regard to transportation, but that this road has to enter into full and free competition with all other lines without any intervention on the part of any government to aid it in any way in securing business.

The next point of difference is in regard to the admission of material for the construction of the road contained in section 10 of this Act. By this provision it was agreed that the government :

Shall also permit the admission free of duty, of all steel rails, fish plates and other fastenings, spikes, bolts and nuts, wire, timber and all material for bridges, to be used in the original construction of the railway, and of a telegraph line in connection therewith, and all telegraph apparatus required for the first equipment of such telegraph line ; and will convey to the company, at cost price, with interest, all rails and fastenings bought in or since the year 1879, and other materials for construction in the possession of or purchased by the government, at a valuation,—such rails, fastenings and materials not being required by it for the construction of the said Lake Superior and western sections.

Well, Sir, this exemption of material from duty was held later on to apply to the material used in the renewal of bridges years and years after the Canadian Pacific Railway had been constructed. The Grand Trunk Pacific has no such privileges, has no such exemption from the payment of duties ; it must pay duties upon all the materials it imports. That is another contrast between the conditions applicable to the roads.

Then the Canadian Pacific Railway was required to put up a deposit by way or security of $1,000,000. The Grand Trunk Pacific is required to put up a deposit by way of security of $5,000,000—five times as much as that required from the Canadian Pacific Railway.

Then, the Canadian Pacific Railway could not be touched in reference to the adjustment or handling of its freight rates until it was paying a dividend of 10 per cent. No interference on the part of the government could be made with the affairs of the company until it was paying a dividend of 10 per cent. That was provided in section 18 of this Act. The Grand Trunk Pacific Railway is liable to the intervention of the government in the regulation of its rates at any time at the pleasure and upon the judgment of the government without any reference to the maximum rate of dividends it may be earning.

Then, the Canadian Pacific Railway had three-quarters of the cost of the rails that it imported advanced by the government. This provision is contained in subsection (c) of section 9 of this Act, and it is as follows :

If at any time the company shall cause to be delivered on or near the line of the said railway, at a place satisfactory to the government, steel rails and fastenings to be used in the construction of the railway, but in advance of the requirements for such construction, the government, on the requisition of the company, shall, upon such terms and conditions as shall be determined by the government, advance thereon three-fourths of the value thereof at the place of delivery.

There is no such condition in reference to the Grand Trunk Pacific. All these conditions were peculiar in their application to the Canadian Pacific Railway—exemption from taxation, monopoly of transportation, exemption from duties, advances on the cost of rails, all these are special conditions granted to this company in addition to the enormous subventions I have referred to were peculiar to its case, and not applicable to the case of the Grand Trunk Pacific. Then, we have another contrast of the conditions between the two roads. When the government had paid this $25,000,000 in money, when it had handed over roads costing $35,000,000, and when it had given these 25,000,000 acres of land for the purpose of aiding in the construction of 1,906 miles of road, the control of the government ceased. The road may at any time

pass beyond the control of the government altogether. It may pass into the hands of foreign owners. It may be gathered in by a Morgan syndicate. There is nothing to ensure to this country the possession of the road as a Canadian highway. It may be secured by foreign companies at any time and there is no guarantee to prevent such a consummation. Such is not the case with the Grand Trunk Pacific. The control of the government over the Grand Trunk Pacific is continuous. The Grand Trunk Pacific is bound to remain a Canadian road. It can never be made anything else. It must continue under Canadian control and we ensure to ourselves the control of one transcontinental line at least, which is our line, controlled by ourselves, and which can never pass from our possession. Then, the Canadian Pacific Railway gave no running rights to anybody over any portions of its line—the Grand Trunk Pacific Railway must share its line from ocean to ocean at the dictation of the government, and under the direction of the government with other lines.

I repeat that in all this, no odium attaches to the Canadian Pacific Railway officials. They simply made the best bargain with the government they could. They made a good bargain, they displayed their astuteness in doing it. They have created a property of enormous value; it is the grandest railway speculation that was ever entered into; it is the most brilliant of successes in the railway history of the world. The Canadian Pacific Railway magnates, if I may term them so, the Canadian Pacific Railway managers, were not to blame; the odium, if any, attaches to the government that granted these conditions and failed to safeguard the interests of the people in granting them.

Of course, at the time the Canadian Pacific Railway syndicate bargain went through, the conditions were different from what they are to-day. The North-west was then largely a wilderness; the success of a transcontinental road was problematical, and it was useless to suppose that we could then secure terms as favourable as we can to-day when that country is better known, and after the fact has been demonstrated that a transcontinental line can secure business, and business adequate to the payment of dividends upon the cost of construction. Still, it was quite evident at that time, and it was maintained by the then opposition, that the terms which were given to the Canadian Pacific Railway were extravagant. It was pointed out then that we were practically building a road for the Canadian Pacific Railway and handing it over to them, and more than that, in point of fact that we might as well build the road ourselves and own it, and then sell it if necessary. The Mackenzie scheme was to build a road from Lake Superior to Selkirk on the Red river. They had that road nearly completed when this contract was made. They were proceeding to extend that road to the Yellow Head pass and 100 miles were under construction; they were building a branch line from Selkirk to Pembina to connect with the American lines. We held, in discussing the terms of this contract, that if the Mackenzie road were pushed vigorously to Yellow Head pass we would then be in a position to secure the construction of the entire line, and be able to pass over to the company as a bonus the portion of the road constructed. No doubt this could have been done. If it had been done the cost to the country would not have been one-third what it proved to be under the scheme that was adopted by the Conservative government.

Now, these are contrasts between the policies of the two governments with reference to a transcontinental line, contrasts as to the difference that exists between the subvention granted in the one case and in the other. In the one case $135,000,000, counting the land at less than its market value to-day—in the other case, $14,500,000 in round numbers; the excess in favour of the promoters of the Canadian Pacific Railway being $120,500,000.

Now, it was not necessary to have granted these conditions to the Canadian Pacific Railway. It was not necessary for the reason that we received a better offer. We received an offer at the time this contract was under consideration to build this road for 3,000,000 acres of land less, for $3,000,000 less subsidy, the road to be the standard of the Union Pacific as it then existed, instead of the standard of the Union Pacific as at first constructed, and the difference was very great. That offer asked no exemption from taxation; that offer asked no exemption from duty on materials; that offer left the road subject to the government control of its rates; that offer left the road subject to the purchase by the government on conditions favourable to the government. All these conditions in the second offer made it infinitely better for the country than the first offer.

Mr. CLANCY. That was a bluff offer made by the hon. gentleman's friends at the last moment.

Mr. CHARLTON. This bogus offer from a bogus syndicate was accompanied by a cash deposit of $1,395,000.

Some hon. MEMBERS. Hear, hear.

Mr. CHARLTON. It was $395,000 more than was required of the Canadian Pacific Railway, and the best way to have demonstrated that this was a bogus offer was to have accepted it and swiped in the money if it was bogus.

Some hon. MEMBERS. Hear, hear.

Mr. CHARLTON. Who made this offer?—W. P. Howland, of Toronto; A. R.

McMaster, of Toronto ; H. H. Cook, of Toronto.

Some hon. MEMBERS. Hear, hear.

Mr. CHARLTON. Yes, a gentleman of wealth and enterprise.

An hon. MEMBER. All Liberals.

Mr. CHARLTON. Yes, I am thankful to say they were—James McLaren, of Ottawa, a millionaire; William Hendrie, of Hamilton; John Stuart, of Hamilton; John Walker, of London; D. MacFie, of London; K. Chisholm, of Brampton; John Proctor, of Hamilton; P. S. Stevenson, of Montreal; A. T. Wood, of Hamilton; A. W. Ross, of Winnipeg; George A. Cox, of Peterborough.

Some hon. MEMBERS. Hear, hear.

Mr. CHARLTON. A gentleman of wealth, a gentleman able to subvent his undertakings to the extent of hundreds of thousands of dollars at any moment—P. Howland, Toronto; P. Larkin, St. Catharines; Allan Gilmour, of Ottawa, a millionaire lumberman; John Carruthers, of Kingston; W. D. Lovitt, of Yarmouth; Alexander Gibson, of Fredericton, a millionaire lumberman of New Brunswick; Barnet & McKay, of Renfrew. There were at least five names upon this list of gentlemen who were millionaires. This list of names could have furnished all the security and all the money that was necessary to carry through this project successfully with the aid they asked from the government. As an evidence of good faith they put up $500,000 in the Bank of Ottawa, $500,000 in the Bank of Commerce, and $395,000 in other banks. They put up that money as evidence of good faith, and they put up $395,000 more than the amount required by the government from the Canadian Pacific Railway syndicate. And yet, some gentlemen tell us that this was a bogus offer. Well, there is no other way to exonerate themselves from the odium that ought to attach to them for having refused this offer, except to put in that threadbare plea.

Some hon. MEMBERS. Hear, hear.

Mr. CHARLTON. Now, Mr. Speaker, as to the character of this second syndicate, how would it compare with that of the first syndicate. Let us see who were the signers of the contract with the Canadian Pacific Railway. There was Charles Tupper——

Some hon. MEMBERS. Hear, hear.

Mr. CHARLTON. Was he a very heavy millionaire at the time ? I suppose he could pay his debts; I do not know how much more he would have had then. There was George Stephen; George Stephen was probably a man of considerable means, connected with the Bank of Montreal. There was Duncan McIntyre; he was a millionaire afterwards, he was not a millionaire at this time; there was J. S. Kennedy, R. B. Angus, J. J. Hill (per pro George Stephen), Morton, Rose & Co., and Kohn, Reinach & Co. The second offer was made by a number of gentlemen all of whom were Canadians. Here we have in this first offer : Mr. Hill, an American.

Mr. HENDERSON. A Canadian.

Mr. CHARLTON. He lives at St. Paul—Morton, Rose & Co., English bankers; Kohn & Reinach, Paris bankers. This second offer was signed by men of greater weight, men of greater responsibility, men who were Canadians. In addition to the other things I have enumerated, that offer would have put this road under Canadian control, it stated that the directors should be British subjects, and it provided to secure the country in every respect with regard to the management of the road. Their offer was millions and millions of dollars better than the offer of the first syndicate. The stipulation that they should not be exempt from taxation would of itself have conferred enormous advantages on the settlers of the west. In every respect that offer was one that it would have been in the country's interest to accept. It would have left the company under supervision in the matter of rates, which were entirely beyond our control in the case of the Canadian Pacific Railway.

But enough, Mr. Speaker, of comparisons. All of these serve to prove the superiority of the Grand Trunk Pacific scheme over any other scheme that has been put before the people of this country, and to place that superiority in the most striking light. Now, Sir, in their criticism upon the obligations that are to be incurred under this arrangement, I ask my hon. friends, in the first place, to remember that the money expended on a road which is to be leased by a responsible company at a rate of interest that will carry the cost of its construction, is not an addition in the proper sense to our obligations. I ask them to bear in mind hat the guarantee of the bonds on the mountain section of the western division and the cost of the division from Winnipeg to Moncton, are not properly speaking an increase to our debt ; because we have, in the first place, the obligation of a responsible company to pay the interest, and we have at the end of fifty years, when that property reverts to us, a property whose value will be vastly more than the cost of the road or the obligations which the road represents. I ask these gentlemen to bear in mind, in the second place, that this is a country that is to have great expansion of its interests, its property, its population, its resources, its tax paying power, in the near future. We are providing, not for the present, but for the future. We are entering now upon obligations which will culminate five years hence, when the road which these obligations create will be great-

ly needed—will be, in point of fact, imperatively necessary ; and when the period of fifty years terminates, what may we reasonably expect will be the population of Canada ? If it increases at the rate of 20 per cent each decade, it will in 1951 be 15,000,000. If it increases at the rate of 25 per cent in each decade it will be 18,000,000. I see no reason why our population should not increase more rapidly than at the rate of 25 per cent in each decade. During the first four decades of the United States their population increased at the rate of not less than 30 per cent, and yet up to the year 1825 the addition to their population was very small, amounting to 250,000 in a period of two or three decades. We shall have the natural increase of a vigorous population, and in addition an enormous immigration from the British isles, from Scandinavia and other parts of Europe, and a still greater immigration from the middle and western portions of the United States. So that we are building for the future, and we are looking forward to the time when the resources and the population of this country will be three or four times what they are at the present moment.

What may we expect will be the increase of our agricultural productions ? This year the area in wheat amounted to 2,500,000 acres in Manitoba and 750,000 acres in the Territories, and we expect to reap from this land a crop of over 60,000,000 bushels. How much more wheat land have we ? At a most moderate calculation, we have 250,000,000 acres of wheat-land west of Lake Superior. If we produce 60,000,000 bushels this year from 3,250,000 acres of land, how many millions of bushels are we likely to produce when that country is populated and the greater part of the soil is brought under cultivation, and when we increase the cultivable area to sixty or seventy or perhaps a hundred million acres ? Let hon. gentlemen sit down and figure that out. We are confronting great changes in our condition, great expansion in our business. We cannot realize how great that expansion will be, and we are making provision for it in the most moderate manner, instead of recklessly and with undue haste. As I have said, that country is absolutely dependent on railway communication. It has no natural outlet to the sea. For all the productions of that vast region of 250,000,000 acres of wheat-land, we must provide transportation by rail, and if we are going to keep up with the procession, we must provide it pretty fast. I think the ex-Minister of Railways and Canals was right when he said that there were men in the audience which he addressed at Vancouver who would live to see three and possibly four transcontinental lines in Canada.

As to the question whether this railway will pay, I remember that question was debated when the Canadian Pacific Railway scheme was under consideration, and very grave doubts were expressed as to whether it would. Well, the Canadian Pacific Railway Company made its annual statement a short time ago. Its total earnings last year were $43,957,000, its expenses $28,120,000, and its net earnings $15,836,000. It has just declared a dividend of 6 per cent. I can remember a few years ago when its stock was worth 40. The day before yesterday, when the 6 per cent dividend was declared, its stock was worth 126, and that at a period when the bottom has been knocked out of stocks, and the best paying stocks are at a lower point than they have been for many years.

Mr. HYMAN. What was it sold at originally ?

Mr. CHARLTON. I think at 25 cents on the dollar, all but $5,000,000, which was sold at par. So I judge from this that the transcontinental line financially will have an assured success. It will secure the trade of the North-west to our ports, if that can be secured by any railway ; and if it is made essentially a first-class road, with a four-tenths per cent grade, heavy rails and perfect construction, it will be able to compete with the water routes in bringing down grain for shipment to Europe at our own seaports.

The contrast between the policies of the two governments, in relation to the first transcontinental line, and in relation to the transcontinental line now under consideration, is so marked, so striking, that I do not see how any man of dispassionate judgment can fail to approve of the scheme which we have under consideration. This scheme, Mr. Speaker, notwithstanding all that may be said in regard to it, has been thoroughly matured. It bears internal evidence of that fact. Let the ablest lawyer in this country scrutinize this agreement and seek to pick flaws in it, and they will be of the most infinitesimal character if he finds any at all. The interests of the government are safeguarded in the most perfect and complete manner. The only surprise to me is that a great railway corporation, with the resources which the Grand Trunk possesses, should have consented to be bound in the manner in which it is by the stipulations of this agreement. It is folly to contend that this is not a contract in the interest of the people of Canada. It is folly to contend that this is not a contract that reflects great credit on the gentlemen, whoever they are, who matured and perfected it. We are told that we should have waited for surveys, that we should not have been in a hurry, that we should have known more definitely where the road should go, and so forth. Sir, we have had surveys. We have a knowledge of the country in a general sense, and we know in a general way its character for railway construction. There was no time to lose in going forward. We

have to go on with surveys as it is, there is no doubt about that; but we have perfected an arrangement which we might not have been able to make twelve months hence.

We have got into this arrangement a great company, which perhaps might then see the matter in a different light, or possibly might not be in a position to take hold of the contract and enter into the stipulations it has done. When you have a good thing take it. Time and tide wait for no man, and if you neglect to take at its flood the tide which will lead you on to fortune, the opportunity may never again present itself. Do not be like the Irishman, who just after he landed in America, saw a dollar on the ground and passed it by with scorn because he was going to a section of the country where money grew on the bushes. I think that the perfection of this contract reflects unquestionably great credit on my right hon. friend the Premier of this Dominion. He may fairly claim, I apprehend, that this is his scheme. I apprehend that he may claim credit to a large extent for the consummation of this bargain with the Grand Trunk Pacific Railway. If that be the case, I believe that this will be such a monument as any public man might desire to have to his memory when he passes from this stage of action. The right hon. gentleman considered all the suggestions of the various schemes presented. He considered them courteously, fully and fairly, and I think I may say that in meeting these various presentations of these various schemes or opinions, he has left those who presented them satisfied that he was right, and willing to accept his opinion. This I believe to be the case in every instance except one—the case of my hon. friend the ex-Minister of Railways. The right hon. gentleman has shown throughout his firm belief in a national road. That has been with him the paramount consideration—a road which would serve national purposes, which would give an outlet on Canadian soil through Canadian ports for Canadian productions in the far west. It remains to be seen whether this road will do all that is predicted of it. If it be constructed in a thoroughly first class manner in every respect, I believe it will. And when both the government and the Grand Trunk Pacific Railway have to face the alternative that it be not so constructed, it will not accomplish what is expected, I believe they will see that it is built in such a way that it will be capable of producing the results we all hope for. No doubt there are many gentlemen who would throw cold water on our aspirations. We will perhaps have reason to compare these men with the late DeWitt Clinton, who, when in 1817, he was promoting the construction of the Erie canal, which revolutionized the commercial history of New York and made that city a great seaport, was ridiculed and assailed by lampoons and criticisms about Clinton's ditch from Albany to Buffalo. Well, Sir, Clinton's ditch was a nation maker. It affected the destinies of a great people in the west, just as the Laurier road will do for great districts of this country.

We are incurring, of course, heavy obligations, but they are moderate in view of what will be realized from the expenditure. In the abstract, however, they are heavy obligations, and we will become responsible for a large sum of money. But we will have an asset which will represent something. We will have an asset of great and ever increasing value in the transcontinental road. It will be money well expended. It will be a judicious investment which will not, after the first seven years, bear upon the resources of the country. The future will unquestionably justify this expenditure. We have in the past constantly underrated our potential sources of power. We have failed to realize that we have resources for the creation of a great nation. We have failed to realize that we have the room and the soil to produce food for 100,000,000 people. We have not allowed ourselves to rise to the level of the destiny that awaits us and the possibilities within our grasp. Today our conceptions of the future cease to be a dream, hazy, indistinct and, perhaps, fantastic. Conditions confront us, the outcome of which we can measure and determine—conditions as to the extent of our arable land, and mineral resources, and the certain influx of population from abroad. All these conditions we can measure and understand. We know that a judicious expenditure will be cheerfully borne by future generations, and that should we fail to do the work we are called on to perform, the future will blame us for our neglect to grasp the great possibilities of this immense country. Under all these circumstances, with a rosy future expanding before us—and we can look down the vista and see within a century fifty million or sixty million under our government—with this future expanding before us, are we not haggling in a penny-wise pound-foolish manner in standing here and criticising a policy which proposes to give this country a great national road from ocean to ocean—a road which will pass by a direct route from Quebec to the west, a road which will pass through 1,700 miles of rich and undeveloped territory, and from which branch lines will extend to the Yukon and in various directions for the development of this vast country. Shall we not be conscious of what is before us, shall we not realize our future and reach forth our hand to grasp our destiny by carrying out the sound policy now submitted to us?

Mr. F. D. MONK (Jacques Cartier). My hon. friend who has just taken his seat introduced some time ago a resolution, the object of which was to diminish the length

of speeches and abolish discursive speeches, even on important subjects, and I was much pleased at the time by the attitude taken by my hon. friend, and expected him to practice what he had preached. But after hearing my hon. friend far into the night yesterday and during the whole of this morning and a part of this afternoon, I have come to the conclusion that upon this subject, as upon many others, strong as may be the opinions of my hon. friend, they are liable to change.

For my part, I feel impelled to offer a few observations upon this very important matter, as one coming from one of the older provinces much interested, from the very foundation of this great commonwealth, in its future, and particularly in the problem of transportation and the settlement of our immense regions. And also, Sir, because the putting into effect of that measure involves this country, and involves the older provinces particularly, in very large expenditure. There is no member of this House who will deny that this subject is presented for our consideration under exceptional circumstances, circumstances embarrassing for us who have to criticise it and, I think I may say, without precedents in this parliament. We have to pronounce upon the merits of a great railway scheme, yet we have no report before us as to the utility, the availability of that scheme to meet the problem which is tormenting us, the problem of transportation and settlement. We had been induced to believe, in fact, we had been told authoritatively that this important subject of transportation would be referred to a special commission. That commission has not even been created, much less have we a report from it. A great part of this railway project is intended to serve the objects of settlement. I believe that in the conception of my right hon. friend—and that idea is expressed in the Bill which he has placed before the House—side by side with the question of transportation is placed the question of settlement. And, in regard to these vast regions for the settlement of which we are called upon to spend such a large amount of money, we have no information whatever of a positive nature. There has been no location of the line. Not one single member of this House, from the Prime Minister to the most humble member, can tell us with any degree of certainty where this line of railway is going to pass. There has been no survey of this line. I shall advert in a moment to the discussion that my hon. friend from North Norfolk (Mr. Charlton) carried on for more than an hour upon the determination of a similar problem made over a quarter of a century ago. But I may say immediately that, before the government of that time entered upon the execution of that project, it had caused surveys to be made, and the members of the House in that respect were not placed in the vastly disadvantageous position in which we are placed to-day. Neither have we any estimate before us of the cost of this great construction. This may account, to a certain extent, for the fact that those who have spoken already upon this subject, whatever care they may have devoted to the calculation, have not given figures at all approaching each other as to the amount of this expenditure. And I for one say this, that under the circumstances which I have just referred to and with the disadvantages which I have enumerated, it is eminently unfair for this government to ask this House to pronounce upon the merits of this scheme, brought in as it is at the very end of a long and protracted session.

But, Sir, there are, perhaps, one or two redeeming features to one of which the country at any rate, if not the hon. members opposite, will attach a very considerable importance. That circumstance is that a member of the government, and he the one to whom the charge of railway matters was particularly confided and who should have been adviser in such a project as this, at the last sitting of this House, with the greatest cogency, and with admitted force of argument which my hon. friend from North Norfolk has in no way met, condemned this scheme in its entirety. The objections raised by the ex-Minister of Railways and Canals (Hon. Mr. Blair) were so obvious, so elementary that I am sure, I may say truthfully that the objections had presented themselves to the mind of each and every one of us upon examination of the contract and of the measure laid before the House. The hollowness of the cry of the danger of our bonding rights; the erroneousness of the right hon. Prime Minister's estimate of an expenditure of $13,000,000; the duplication of the Intercolonial; the immense cost, and the uncertain cost of the government section; the handing over of the road built by ourselves as soon as it is completed to a private company; and, let me say as a member from the province of Quebec, the impotency of that road as an agency in the settlement of our country; these objections had presented themselves to each one of us even before we had heard the able argument of the ex-Minister of Railways and Canals. And, after having heard that hon. gentleman, is there any member of this House who will coincide with the observation made by the right hon. Prime Minister that when the late Sir John A. Macdonald consented to the carrying through of the short line from Montreal to St. John through the state of Maine, he did unwisely in listening to the advice of his Minister of Railways and Canals. And will anybody say that in the conception of this scheme and the completion of its details the right hon. gentleman (Rt. Hon. Sir Wilfrid Laurier) himself would not have done much better had he taken the advice of his Minister of Railways and Canals, his natural adviser in a matter of this kind.

Sir, it seems to me an admitted fact that the chief characteristic of the project submitted to us is haste. The right hon. gentleman himself has declared that this is not a time for us to deliberate. The ex-Minister of Railways and Canals has confided to the House the fact that this scheme was born scarcely two weeks before the opening of the present session, and that some of its most objectionable features have been added during the present session and even a few days before the introduction of this measure into this House. Is it necessary to go further in order to be satisfied that this project has been essentially marked by haste, and that that haste is, in itself, one of the great reasons why that project should be condemned. Under these circumstances, and after the hon. ex-Minister of Railways and Canals had made to us the exposé which he made last night of the objections which he, in common with many members of this House, entertained as to this project, I ask hon. members if they think it was fair for the government not to have immediately replied to the vigorous invective of that hon. gentleman and set aside, if it was possible to do so, the very strong objections which he had urged against that scheme. Instead of that these hon. gentlemen have put up to answer—with the weakness which we have seen this morning and this afternoon—the objections of the ex-Minister of Railways and Canals, a gentleman, Sir, who, fifty years hence, will be heard of in this country if for no other reason than for the extraordinarily lofty example he has set us in the public life of this country.

Sir, it is almost incredible to have heard this afternoon the hon. member for Norfolk enter into a very elaborate argument to show the possible superiority of railway carriage of grain over water carriage, in face of his own recent utterances. Allow me to quote the language used not very long ago by the hon. gentleman himself upon this most important question. He has told us to-day that we have all the data necessary for the purpose of deciding this question ; and yet, Mr. Speaker, not very long ago that hon. gentleman stated the exact contrary of that proposition, when he used these words :

> Whether the building of the St. Lawrence canal was a mistake or not, and whether or not a heavy expenditure at Port Colborne is necessary, I think we have gone far enough in that direction until we have more reliable data as to the effect of the improvements in railways and the reduction in cost of transportation by railways in Canada and the United States.

But still more pointed was the statement of the hon. gentleman in regard to the incomparable superiority of water-borne traffic as regards cheapness of freight compared with railway traffic. This is what the hon. gentleman stated :

> That trade will seek the waters of the great chain of lakes. Inevitably, during the season of navigation, that trade will be carried to Lake Superior, and improvements have been made in the construction of lake vessels and the deepening of channels between the head of Lake Superior and Buffalo, which enables forwarders to secure the shipment of wheat from Duluth, or from Port Arthur to Buffalo at a ridiculously low rate, as compared with rates prevalent a few years ago. For a cent and a quarter or a cent and a half per bushel, you can transport your wheat from Duluth or Port Arthur, and put it in an elevator at Buffalo.

Then the hon. gentleman added :

> So you have the possibility of carrying wheat from Port Arthur to New York for three cents a bushel, or at most four cents a bushel. Now these are conditions which render it, in my opinion, impossible at present to compete with that route. It is uselesss to think of hauling wheat from a point as far west as Port Arthur by an all-rail route to Quebec or to Halifax at prices such as these I quoted with regard to the American lines.

And further still :

> If, after having given to our seaports connections in the form of a railway to Quebec, right through the country, and a railway from Quebec for winter communication with Halifax and St. John, we attempt, in addition to affording facilities, and the best facilities that can be given—roads with low grades and great capacity for hauling heavy loads, such as the loads that can be hauled over the New York Central and Lake Shore of 2,000 tons to a train —to force trade over these roads we will make a mistake, because we have to allow this trade to find a natural outlet. We must simply make with care, and make efficiently, provision for securing this trade in our own seaports under circumstances which are possible, having regard to our natural facilities and natural advantages.

The conclusion at which the hon. member arrived is this :

> I do not believe that we are in a condition to-day, even if we decided to improve the Ottawa River Valley route, to decide what are the proper conditions upon which to proceed. For this reason I think the appointment of a commission to take this whole question under consideration is in the highest degree desirable—is not only desirable but necessary. We are now confronting conditions that require careful consideration. We are called upon to inaugurate a policy and to proceed in a direction that has for its purpose the affording to the great North-west of transportation facilities. It is beyond all things necessary that we should make no false step, and that we should proceed upon no false hypothesis or basis, and for that reason it is a wise thing to appoint a commission composed of men who are capable of examining this question and arriving at correct conclusions.

No doubt one of these commissioners was to be the hon. gentleman himself.

> We cannot do it here in an expert and scientific manner ; we must rely upon the service of men of the character of those who are to be appointed upon this commission. Let us wait until we have the decision of these men as to the proper course to pursue.

These are some of the contradictions to which my hon. friend, who holds strong opinions as he says, is nevertheless subject. The hon. gentleman has told us himself

that before this scheme was brought to the notice of this parliament he entertained strong opinions, opinions upon which I for one would congratulate him, because these opinions are in consonance with the modern ideas of the twentieth century. He entertained strong opinions as to government ownership, but those opinions, strong as they were, have been contradicted by the explanations which he has given to this House. Mr. Speaker, let us hope that in many other matters my hon. friend will not so easily change his opinion. However, I for one, as a representative from the province of Quebec, am prepared to congratulate him most heartily on the great change of opinion he has undergone within the last few years in regard to the present and the future of that great province. Members of this House are aware that not more that three years ago my hon. friend urged strongly, in a public speech, the necessity of placing a garrison in the city of Quebec in order to prevent the people of that province from rushing into rebellion. To-day it is pleasant for us to hear that hon. gentleman take such a warm interest in that province, and praise as highly as he has done to-day the character, the loyalty and the many laudable qualities of the people of that province.

Mr. CHARLTON. We will give Quebec wheat instead of a garrison.

Mr. MONK. Or perhaps soldiers brought down from the west to the city of Quebec, passing through sub-Arctic regions where this railway is contemplated. But, if my hon. friend was put up to answer the, in many respects, unanswerable arraignment of the ex-Minister of Railways and Canals, the public must not believe that hon. gentlemen opposite were absolutely idle. Whether they were able to answer on the spur of the moment that arraignment, or whether they deemed it necessary to concert together before that answer was given, it is certain that hon. gentlemen who sit on the treasury benches sharpened their pencils, and we saw them taking copious notes during the argument of the ex-Minister of Railways and Canals—except my hon. friend the Minister of Finance. I will admit that the hon. Minister of Finance whom the public credits with having combated this scheme from the beginning took no notes and judging from the expression on the hon. gentleman's face during the argument of the hon. ex-Minister of Railways and Canals, I assume that it was his skilful hand which inserted in the Bill now before the House the extraordinary provision, contained, I believe in section 20, which states that at any time the construction of the eastern section of this extraordinary and phantom railway may be stopped by the government. That is the life preserver upon which the hon. Minister of Finance rests, and I believe, after having seen the hon. gentleman yesterday during the long argument of the ex-Minister of Railways and Canals wearing the expression upon his face which Macduff had when they came to tell him that his family had been assassinated, that the hope that the hon. gentleman entertains is that it will be possible for him at any time with that saving clause to stop the construction of the railway once it has passed east of Lake Superior.

I wish to be as brief as possible, and I will certainly not take up any considerable time of the House at this stage by refuting the fallacious argument of my hon. friend from North Norfolk (Mr. Charlton) in regard to the contract made with the Canadian Pacific Railway Company more than a quarter of a century ago. The conditions at that time were totally different. Everybody knows what price we paid after confederation for the immense extent of land and all the rights accompanying it which we purchased from the Hudson Bay Company. Everybody knows that the conditions made at that time and under circumstances entirely different from those of the present day with the Canadian Pacific Railway were not unreasonable. I will ask my hon. friend and hon. gentlemen opposite how they reconcile the statement which they have repeatedly made that it was by opposing the conclusion of that bargain with the Canadian Pacific Railway that they deferred the time of their coming into office so many years with the statement made by the hon. member for North Norfolk to-day that that bargain was one which should have been condemned. But, to be short upon this subject, I think it is merely necessary for me to quote to the members of this House the offer made in the year 1874, by the late Hon. Alexander Mackenzie himself and those who in that year were ready to enter upon the immense work of constructing that railway and which they announced to the country. The offer is found authentically set down in our own statute which was passed under the direction of the then Liberal government, and supported, I am informed, by the hon. member for North Norfolk himself. That offer, generous as it was, was never accepted. It is to be found in chapter 14 of the statutes of 1874, 37 Vic. The House, I am sure will arrive at the conclusion on reading that offer that there is absolutely nothing in the contention which at so great length the hon. gentleman has developed to-day. The hon. gentleman stated that what was then contemplated was a railway from Lake Superior to the west. That is not correct. What was intended and what the offer was given for was a railway from Lake Nipissing to the Pacific Ocean, and further, there were to be two branches laid out and constructed under the same generous conditions as those contained in the offer. The first was :

A branch from the point indicated as the proposed eastern terminus of the railway to some point on the Georgian bay, both the said points to be determined by the Governor in Council.

And the second was :

A branch from the main line near Fort Garry, in the province of Manitoba, to some point near Pembina, on the southern boundary thereof.

But, this is the offer. It is to be found in section 8 of the Act :

That the total sum to be paid to the contractors shall be stipulated in the contract, and shall be ten thousand dollars for each mile of the section or subsection contracted for, and that such sum shall be paid to the contractors as the work progresses by monthly payments in proportion to the value of the work then actually performed (according to the estimates of the engineers designated for the purpose by the Minister of Public Works), as compared with the value of the whole work contracted for, including rolling stock and all things to be done or furnished by the contractors ; and except money arising from the sale of lands, as hereinafter provided, no further sum of money shall be payable to the contractors as principal, but interest at the rate of four per cent per annum for twenty-five years upon the completion of the work, on a sum (to be stated in the contract) for each mile of the section or subsection contracted for shall be payable to the contractors, and guarantees for the payment thereof shall be given from time to time to the contractors in like manner and proportion, and on like conditions, as payments are to be made on the principal sum above mentioned ; and the tenders for the work shall be required to state the lowest sum per mile on which such interest and guarantees will be required.

And this was the subsidy in land :

That a quantity of land, not exceeding twenty thousand acres for each mile of the section or subsection contracted for, shall be appropriated in alternate sections of twenty square miles each along the line of the said railway or at a convenient distance therefrom, each section having a frontage of not less than three miles nor more than six miles on the line of the said railway, and that two-thirds of the quantity of land so appropriated shall be sold by the government at such prices as may be from time to time agreed upon between the Governor in Council and the contractors, and the proceeds thereof accounted for and paid half-yearly to the contractors free from any charge of administration or management,—the remaining third to be conveyed to the contractors. The said lands to be of fair average quality, and not to include any land already granted or occupied under any patent, license of occupation or pre-emption right ; and when a sufficient quantity cannot be found in the immediate vicinity of the railway, then the same quantity, or as much as may be required to complete such quantity, shall be appropriated at such other places as may be determined by the Governor in Council.

There could be no doubt that at that time land in the North-west Territories was of really no value. The value was given to it by the railway which entered that region and the conditions which I have just mentioned—which were tendered at that time—by the government supported by the hon. member for North Norfolk himself is proof conclusive that the criticism which he has offered at such length is clearly not well founded. I, for my own part am not prepared to say that with the changes which have taken place and which I must say exercise a very potent influence upon my mind it would not have been preferable at that time for the government to have constructed the road itself. I have not been a very long time in this House but when I entered it in 1896, knowing the way in which the question of government ownership and management of railways was treated, and considering the immense progress during the last six or seven years that idea has gained not only in the minds of the people of this country but throughout the whole world, I, to-day, am of the opinion that as far as possible and particularly in this country where there is a question of transportation, where there is a question or a transcontinental line there can be no doubt that it is better for us ourselves as a nation not to delegate the carrying out of any such great works to private corporations or to individuals whatever may be their respectability, but to keep for ourselves and under our absolute control everything in connection either with the transportation or settlement of the country.

I am prepared to admit, Sir, that other members in this House are in a better position than I am to criticise the conditions with regard to the prairie section of this proposed line. I heard the ex-Minister of Railways and Canals (Hon. Mr. Blair) whom every one will admit is a competent man to treat of a subject of this kind, whom every one will admit is clothed with experience acquired during his term of office in the past seven years ; I heard that hon. gentleman state in very strong terms, that there was no necessity at the present time for a third line of railway in the prairie country. He mentioned that we had just afforded aid in the shape of a guarantee to a line which extends into a still unsettled region, and that the two lines that now exist in that country, are, according to the testimony that has been afforded him, sufficient to supply the wants of a population of over 5,000,000. However, Sir, I for one am prepared to be enthusiastic about that western country. I am prepared to take the optimistic and even poetic view of the Prime Minister with regard to it. I will proceed upon the assumption that this contemplated line will open up a great and fertile country which at the present time is being invaded by settlers as never before. I will admit with hon. members from the west, on both sides of the House, that an additional line is required to move the ever increasing grain crops of the west. I will admit that that new line will pay its way at once, and I will even admit, although I am not so sure on that point, that the new line will cause rivalry between railways which may result

in a reduction of rates. But assuming all that to be true, I wish to hear from some member of the government the reason why we do not apply to that prairie section of the line the principle which we apply to the eastern section. I wish to know why we do not construct that line ourselves, and why we confide the construction of it to a private company ?

Some hon. MEMBERS. Hear, hear.

Mr. MONK. If the prairie section is going to be a paying concern, if it will regulate rates, if it is the very best portion of the transcontinental line, why do we not build it ourselves ? It must be evident to every member of this House, it must be evident to even a novice in railway matters, that if we wish to control rates effectively, if we wish to resist the almost overpowering influence of great corporations which the ex-Minister of Railways and Canals described ; the only way to do so is for us to step in and supply a railway upon which we establish rates which will be beneficial to the people of the North-west Territories. What is our experience in the North-west ? Each and every one of the branch lines which we have constructed there has been absorbed by the main line, and it has been the experience of many countries that the construction of a number of railways does not of itself tend to reduce the rates. New railways will facilitate settlement and open the country, but when it comes to freight rates, these rival lines bind themselves together, and it is impossible to obtain the reduction in rates desired, except where the government intervenes with the object of benefiting the people and fixes a rate which will control the rates charged by existing lines through the same territory. In view of the large extent of line which the government is undertaking to build and the grave doubt as to the paying character of that line, it would have been far better for the government to have undertaken the building of this whole railway, and thus afford to the people of the North-west the undoubted benefits which low freight rates would confer upon them. Let me call the attention of the House to the fact that the theory is rapidly gaining in the American republic, that the time has arrived for governments to cease giving aid to railways, and in the constitution of a great majority of the states there is a provision against granting state aid to any railway. In Canada, where great reasons do not exist as in the present case, for the government intervening, we should refrain entirely from aiding railways in any shape or form.

The hon. member for North Norfolk (Mr. Charlton) has laid great stress upon the advantages of an all rail route for carrying grain. My information is that the vast bulk of the grain of the North-west is carried out of that country during the season of navigation, and it is an axiom in transportation that grain can be carried by water at a far cheaper rate than it can be carried on railways. It is a known fact that to-day grain is carried from the western part of Lake Superior to Depot Harbour, to Midland, in fact to the eastern side of the great lakes, a distance of over 600 miles, for 1½ cents, or, as I am informed, 1 cent a bushel ; whereas the cost of carrying grain from Winnipeg to the shores of Lake Superior, a distance of 400 miles, amounts to over 12 cents per hundred weight, although I believe it is to be reduced to 10 cents on the 1st of October next, under the arrangements made by the Roblin government, or six times the cost per bushel of what it is over the waterway. The bulk of the grain being carried out during the season of navigation, and the rates being as they are, it seems to me that it is impossible for any railway, even constructed under the most favourable circumstances, to rival the navigation route; and as a result of that state of things, we find that scarcely 6 per cent of the grain which comes from the North-west is carried by rail. As a matter of fact, almost the whole of that grain avails itself of the water route ; and therefore it is evident to me that the government, in the hasty course they have pursued in connection with this scheme, have failed to consider sufficiently the immense importance of the natural route which we have for the conveyance of that grain the moment it reaches the shores of Lake Superior down to the ocean ports within our own territory, whence it may be shipped abroad. I am informed that last year the amount of grain received by water in the city of Buffalo from the city of Chicago, a distance which could easily have been covered by rail, exceeded 74,000,000 bushels ; which is proof once more, if any proof were required, that the navigation method of carrying grain will for a very long period in the future be superior to the rail-carrying method. Under these circumstances, after having spent such large sums as we have spent in improving our water routes from the lakes down the St. Lawrence to the city of Montreal, after having spent millions in the construction of canals, with the great question still unsolved—but I hope not entirely abandoned, of a canal along the Ottawa river, that canal known as the Georgian Bay canal—it seems to me that the government have been very hasty in arriving at the conclusion involved in the scheme proposed by the right hon. leader of the House. When we reflect on the large amount we have spent on the Intercolonial Railway, when we recollect what the attitude of this government was in 1897, when that road was extended from Lévis to Montreal, the reasons advanced at that time by this government, and the hope entertained by the country generally that that step was only the first towards

carrying out the larger scheme of extending the Intercolonial Railway to the shores of the great lakes, it seems to me that in this project we are launching upon far too great an expenditure, an expenditure which the data at our command and under our observation does not in any sense justify.

Let us for a moment consider what is the cost to which we shall be put by the carrying of the railway through the mountain section. In this connection it is worthy of note—it has been stated already in this House—that there has been no demand in the province of British Columbia for the construction of this transcontinental railway. In regard to that province we have fulfilled every pledge to which we were bound when it entered confederation. We have never heard in this House any demand from that province for anything further in the way of a transcontinental railway; but we have heard many demands for railways within the province, and any one who knows anything about the condition of affairs there knows that in order to utilize the large mineral wealth which that province possesses, it is necessary to build within the limits of the province railways to which possibly aid may be expected from this government. But taking the project itself, I think we may fairly assume that in connection with the mountain section we shall be obliged to furnish the full extent of the guarantee which is contemplated by the contract, and that section will cover a distance of about 600 miles. Those who have taken the trouble to refer to the very able report made by Sir Sanford Fleming in 1877, will find in that report a reference at length to the pass which it is contemplated that this Grand Trunk Pacific Railway will cross when entering the province of British Columbia through the Rocky mountains. He will find that Sir Sanford Fleming estimated the cost of the construction of that line at over $50,000 a mile; and we may safely assume that under the present conditions of labour and the increased cost of materials, that estimate can be in no way reduced. We have, therefore, to furnish a guarantee of $30,000 a mile for a distance of 600 miles, amounting in the aggregate to $18,000,000. The interest upon that sum at 3 per cent for ten years, which is the time limit during which we may be expected to pay the interest, amounts to $540,000 a year, or, for the whole ten years, $5,400,000. That is the extent of our liabilities in regard to the mountain section, and I think the House will easily come to the conclusion by the time this discussion has advanced a little, that the estimate of $13,000,000 as being the total amount of cash payments which this government will have to make in connection with this contract, is far below the true mark. Five million four hundred thousand therefore is the amount which we will have to pay in connection with the regular mountain section, a section of railway for which no cry has been heard from the distant province of British Columbia.

Leaving the section of railway which traverses the prairie and the Rocky mountains and coming to that portion which the government is to build, what do we find? My right hon. friend has given us a most attractive picture of the region which that railway is to traverse on its way from Winnipeg to Quebec. Where did he get his information? Where does he find his proof that this region is rich in agricultural lands, mineral resources, water powers and forests? I have examined the report of Sir Sanford Fleming, and I do not find in that report anything to corroborate the glowing description given by my right hon. friend. The surveyors and engineers found here and there settlers who had grown vegetables. They found in places some rich agricultural soil, and they found trees in abundance, but we have no evidence whatever that the land is so adapted for settlement and that the climatic conditions are such as will justify our spending over $50,000,000 in the construction of a railway across that country. Nothing in that region, as far as I have been able to find, justifies in any sense the description given by my right hon. friend. And if we turn to later reports, there is one to which I may invite attention. I refer to the report of the survey and exploration of Northern Ontario in the year 1900. Although there is a rather flattering general summing up of the reports of the surveyors, who were deputed by the Ontario government to visit that region north of Lake Superior, it is impossible to go through these reports one by one and come to any other conclusion than that the greatest doubt exists as to the utility of that region as a place of settlement, which will justify the expenditure contemplated. I have no desire to belittle that region any more than I would the corresponding region in my own province, but we have not yet sufficient information to justify us in saying that it is one which should claim our attention at present in lieu of other regions which we know something about. The same remark will apply to that portion of my own province intended to be traversed by this railway. A very interesting movement has been in progress in the province of Quebec since several years. The exodus of the people of that province to the United States has not diminished in a noticeable degree, but within the past few years a group of patriotic men in the province of Quebec, irrespective of party, men who have no private interest to serve, who have only one object in view, the keeping of our own population within our province, have been at work obtaining the moral assistance and help of the citizens of the province of Quebec. And what have these men achieved? They have found back of the city of Montreal, in the great region

watered by the Saguenay river and Lake St. John and the rivers flowing into that lake, millions of acres which are unoccupied at present. But that region, to which we should at present devote all our attention, is not the region to be traversed by this railway. The region which this railway will cross is one unknown to us and unknown also to the right hon. gentleman. It is impossible for him or any member of the government to give us any precise information regarding the country where this railway is to pass, far beyond the height of land in the province of Quebec, over 200 miles from Montreal and 80 miles from the most distant settlements, such as St. Gerard de Montarville and St. Michel des Saints. This road will run fifty miles away from that region, and therefore will be of no help whatever to these men who are ready to lay before the government clear and precise information regarding this vast and unsettled region in the province of Quebec, to which they are seeking to attract our compatriots and prevent them from going to the States. That is the position with regard to the province of Quebec. There is not a man in the province of Quebec who has taken any interest in that great and noble movement inaugurated there some years ago for the purpose of settling the northern portion of that province and that portion from the shores of Lake Témiscamingue down to the centre of the peninsula of Gaspé, who would not stand dumfounded if you proposed to him, as a help towards the carrying out of that patriotic scheme, a line of railway passing over one hundred miles from any known region in that province. And upon that score, if upon no other, I, for my part, do condemn that part of the railway which it is alleged is intended to help us towards these settlements of the province of Quebec, but which can be of no help whatever. Mr. Speaker, that movement to which I have referred, which perhaps exists in some degree in the province of Ontario, but I think not in the same degree as it exists in our province, for the same conditions do not present themselves —that scheme of settlement of our province covers the whole valley of the Ottawa, it extends throughout the entire valley of the St. Lawrence, north and south, and, as I stated a moment ago, it extends down to the county of my hon. friend from Gaspé, where, as I was informed when I visited that region, a few miles from the coast in the interior of that great peninsula, there is a fertile plateau in which there is room for over fifty parishes of settlers. This being so, what are the present needs of the province of Quebec if we wish to stem that tide of emigration to the United States which has been flowing so long? What we need in our province is colonization roads to afford easy access to those regions which are known to us, and the only obstacle to the settlement of which is the want of proper means of communication. And I venture to say here that we do not need great expenditure. Let the government take this scheme to heart, not only in the province of Quebec, but in all the older provinces, which have done a great deal, and are ready to do still more, to help the settlement of the regions of the west. Help the west, but do not forget that something must be done for ourselves also. Let the government consider that by aiding roads in the province of Quebec, not to the extent of giving money, but by guaranteeing bonds for from thirty to forty years upon the many branch lines which are necessary if we wish to utilize our country, the country would incur less expense and would do a more patriotic and more legitimate work for the province than they are doing by spending over $50,000,000 in running a trunk line through a region with regard to which we know nothing, and which we are not ready to penetrate, because we must first cover the intervening ground. If I am right in my judgment that, as long as we have our natural facilities, as long as we have these splendid waterways which help to convey the products of the west to the sea and the merchandise of the east to the settlement of the west, we cannot compete by rail. 'Opposuit natura'—we cannot do it. We are driven to the conclusion then that it is the second part of this which is applicable in these regions, it is for the purpose of settling that we are opening them. Is it not the part of wisdom, then, before we spend—speaking more particularly for the province of Quebec—over $50,000,000 (over $65,000,000, I say) to build this line from Winnipeg to Quebec, to consider, if it is the settlement of the province that we want, whether it would not be better for us to incur a far smaller liability and a liability which we shall never be called upon to pay any more than we shall be called upon to pay our guarantee upon the prairie section, to afford facilities for this legitimate policy of colonization which has been inaugurated in our province, and which must be carried out if we wish immediately to contend against the flow of emigration to the United States. Holding as I do—I frankly declare it—that it would have been far better for us to take our own valuable property, the Intercolonial, and extend it immediately to the great lakes, believing that that could be done at a cost of less than $15,000,000, at a cost far less than will be necessary to construct the eastern section under this scheme, I must say I view with regret the determination of the government to spend such a large sum as $50,000,000 in constructing a line where, as I said before, looking at it as a member from the province of Quebec, it will not be half as useful as would have been the construction of branch lines within the limits of that province. Take up a map of

the province of Quebec, and you will find that on the south shore of the province the counties extending south are settled in the northern parts. Means of communication are required to reach fertile regions in the extreme portions of those counties. Take the northern shore, and the same condition is found. At the present moment, in the vicinity of Montreal, we have counties the northern parts of which are fertile, are known to be fertile, which have a few struggling settlements, but which require merely railway communication in order to become as productive, as rich and as prosperous as other parts of those counties. It would have been wise, it seems to me, to turn our attention in that direction rather than do what the government has done. And I have no doubt that, when we come before the electors of that province, and particularly those of regions that have a just right to ask at the present moment that something should be done to put them on the same footing as other citizens of this great country, that consideration will have some weight with these people, even if it has not the weight it deserves to have before this House.

Now, as regards the cost of that road, the eastern section from Winnipeg to Quebec, my hon. friend from North Norfolk has laid down the condition that it should be a perfect road, a road that should be able to haul something like forty or fifty cars, in fact it should be a road comparing favourably with the Grand Trunk between Montreal and Toronto. Well, if that is to be the standard of construction, I venture to say that the cost of that road from Winnipeg to Quebec will far exceed any of the calculations so far offered to this House. I venture to say that after you have given the necessary allowance for curvature—and there is a good deal of curvature, not only in this projected road but in the policy itself—after you have given the proper allowance of curvature, and all we know of that region is that it is filled with lakes, mountains and waterways, you will find that the distance covered by that line over which trains will run from Winnipeg to Quebec, will be no less than 1,600 miles. Now, if we are to make that road of the character that is to be required for it by my hon. friend, would it be possible to build it for less than $35,000 a mile ? The Intercolonial itself cost us more than that, and if it is to cost us $35,000 a mile for 1,600 miles, then the amount we will have to pay as regards interest upon expenditure will amount to $16,800,000. That is the amount which we will have to pay in interest during those ten years, if I am correct in the statement that the road covers 1,600 miles and that it will cost $35,000 a mile to construct it. If we add that interest to the amount we will be called upon to pay in connection with the mountain section, $5,400,000, we arrive at a total expenditure from which we cannot escape of $22,200,000, instead of the sum of $13,000,000 which was mentioned as the utmost expenditure to which we were liable according to the right hon. gentleman when he introduced this measure.

Now, Sir, no mention has been made of the expenditure which would meet us as soon as we arrive at the city of Quebec ; no mention has been made of the way in which we are to cross the river St. Lawrence. Poetic as was the flight of my right hon. friend, he did not go so far as to say that these trains of 50 cars would be able to cross the St. Lawrence with the help of the wind. We will require a bridge, and no mention has been made of that bridge so far, yet I think it has been thought of by those who projected this great scheme. What are we to do in regard to that bridge, Mr. Speaker ? What will it cost us ? So far that bridge has cost about $1,000,000. The city of Quebec has given, if I mistake not, $500,000, the province of Quebec has given, I think, a similar sum, or perhaps more. Are we going to buy that bridge the construction of which has been begun but has ceased, if I mistake not, through want of funds, I believe the bonds of the Bridge Company, the president of which is the Prime Minister of the province of Quebec and the friend of my right hon. friend—the bonds, if I mistake not, have been handed over at 60 to the contractor of the bridge in order to satisfy him to a certain extent for the amount of work done.

Mr. LEMIEUX. Does my hon. friend know that this bridge at Quebec was promised several years ago by Sir Charles Tupper ?

Mr. MONK. My hon. friend seems to assume that I am opposed to that bridge. He forgets that I took quite a different position when the question of voting money for a bridge at Quebec came up. I am very glad to see a bridge there.

Mr. LEMIEUX. Thank you.

Mr. MONK. At the same time, I think my hon. friend will admit that we have some claim for a bridge at Montreal also. He will not deny that, and I am sure he would be favourable to any project by which we could get a bridge.

Mr. LEMIEUX. You have one already, but I would object to any Armstrong scheme.

Mr. MONK. We have no bridge, but I hope we shall get one. Now, Sir, in my opinion, before we cross the St. Lawrence and touch the Moncton section, we will have to spend a very large amount of money upon the bridge at Quebec, and that item of expenditure has not been considered. I will not be rash, I think, when I say that before we have communication from the north to the south shore of the St. Lawrence at Que-

bec, we will be about $5,000,000 out of the treasury. If I am exaggerating, I will be be glad to admit it when that part of the transaction is carried through which regards the bridge at Quebec. I am not opposed to the bridge, I will be glad to see it finished, because at the present moment it is not being finished. But it will cost a good deal to finish it, and when we are considering a scheme of this kind, though we may neglect the consideration of hundreds of thousands of dollars, we cannot afford to neglect the consideration of millions.

Well, Sir, we cross the St. Lawrence and we come to the Moncton section. That part of the scheme has been fully treated by the ex-Minister of Railways and Canals, and therefore I shall not take up much time with it. But let me give to the House the distances that I find over that very expensive section of road which the government contemplates constructing. I have not found out these distances myself, but they are furnished to me by men who are not only conversant with that section of the country, but are railway men of experience. At present, as has been said, the distance from Lévis to Moncton is 488 miles. Now I assert, subject to contradiction by members of this House, that the distance from Lévis to Edmundston via the Temiscouata district, is 196 miles; and from Edmundston to Moncton via Chipman, it is no less than 204 miles. Therefore it is apparent that we are building this branch, which at no portion of its line is more than 50 miles distant from the Intercolonial, over the whole 400 miles—we are building it to save 88 miles. By the projected line of my hon. friend the distance is 400 miles, and by the Intercolonial at present it is 488 miles. Now I am informed that by building what is called a cut-off, or an air line from Rivière du Loup to Matapedia, we would save 65 miles, and from Matapedia to Moncton the line is not very straight, and can be shortened a good deal. Therefore, in building from Rivière du Loup via Matapedia we have a total distance from Lévis to Moncton, with the cut-off, of 423 miles; the distance from Rivière du Loup to Matapedia being 110 miles as against 177 by the existing line from Rivière du Loup to Matapedia. We have therefore a distance with this cut-off of 110 miles, passing through a country which is most desirable for settlement, a country through which my hon. friend from Gaspé (Mr. Lemieux) obtained a charter to construct a railway from the legislature of Quebec during the last session and here also at Ottawa. So necessary did my hon. friend think that line to be that he obtained two charters, one at Quebec and one at Ottawa, to reach that fertile region and where the construction is easy the line covering a distance of 110 miles, from which I am led to the conclusion that in order to save these 23 miles, because that is what it means by the cut-off, we are building a railway which is going to cost us at the very least $37,500 a mile for over four hundred miles of territory and we are going to do incalculable injury to our own property, the Intercolonial Railway. Whatever may be the expenditure of the government upon the new line, whether that expenditure amounts to $15,000,000 or not it would be better to grant a sufficient sum to improve the grades and the construction of the road by which we will be able to save these 23 miles in time. In other words we are expending $15,000,000 perfectly uselessly on the construction of a line and the effect of that construction, view it as you may, cannot but be a cause of injury to the Intercolonial Railway.

Mr. LEMIEUX. My hon. friend is under a misapprehension as to the charter obtained for a railway in the county of Gaspé. The line for which a charter was obtained will run from Causapscal to Gaspé Basin, but I think he refers to another charter which was obtained from the Quebec legislature during last session for a line running from Fraserville to Paspebiac. If he refers to that charter I can tell him that I am not interested in it.

Mr. MONK. I did not say my hon. friend was interested in it, but I am strongly of the impression that there are special charters given for a line running from Rivière du Loup or Fraserville—these places are very close to one another—and covering this country, because this is an admirable country for settlement and it requires a railway. By building that cut-off of 110 miles the distance will be shortened by 60 miles even if we left in Moncton. But we are building 400 miles of railway at a cost of $15,000,000 just to save 23 miles. Our own road is a good road. The road from Lévis to Matapedia and even to Moncton is a very much improved road as compared with former days and can carry very great loads of freight. I fail to see what can possibly justify us in rushing hurriedly into the construction of a line as to which we have no information. It is not located, we have no survey, we have no estimate, but we are safe in saying that line cannot cost less than $37,500 per mile. It crosses, I believe, three watersheds, a great number of hills, a range of mountains and it passes through a country where construction is very difficult; in fact, even with this expenditure, I question very much if it will be possible to give to that line the easy grades and solid road-bed that our own Intercolonial Railway has for 423 miles between Lévis and Moncton with the cut-off at Rivière du Loup. Now, I have promised to be short and I wish to conform to the precepts so well laid down and so ill-observed by the hon. member for North Norfolk, but I wish to say that it seems to me under these circumstances to be an immense expenditure. It seems to me that with an expenditure of $65,000,000 on the eastern

section of the road from Winnipeg to Quebec, say what you like as to our receiving interest upon that amount, we are borrowing the amount, we are increasing the public debt, and although we own the property—property as to the value of which I have grave doubts—still, we owe that amount and therefore I think it is right to continuously bring the attention of the House and of the country generally to this enormous expenditure.

I cannot refrain from expressing my regret that since the expenditure is to be incurred we have not reserved unto ourselves not only the ownership but the management of the whole line from the Atlantic to the Pacific. The ideas which my hon friend from East York (Mr. Maclean) expressed so often when I was first in this House, have gained ground to an extraordinary degree. They are occupying the public mind throughout the world and I have no doubt that before many years we will regret this transaction by which we have alienated from our control this transcontinental line for at least fifty years. I therefore view with regret that part of the contract. And, Sir, corporations have no souls. This road is passing under the control of a company whose capital is not in this country; it is English capital and that capital as employed in this country is entirely under the control of American management. I make no imputation whatever against the men who are leading in the management of the Grand Trunk Railway, but there is no doubt that the Grand Trunk Railway will control this corporation and certain it is that ultimately the control of this line will be in the hands of the Grand Trunk Railway and that management is American. They have vast interests in lines in the United States. They own lines in the United States and they have spent millions in improving their terminals at Portland and it would be very difficult for people who know something of that company to believe that they are ready to abandon these terminals. I believe myself that with the facility of outlet that they have they will find means of escape from the elastic clause in the contract in regard to Canadian commerce, Canadian ports and a Canadian highway, and under these circumstances and knowing with the limited experience at my command how difficult it is to control the operations of these great railway corporations I say it is a matter of regret for me that the control has been given to the Grand Trunk Railway Company and I believe that before long a very strong conviction will exist throughout this country, at any rate in my own province, that we would have done better if we had determined to take up our Intercolonial Railway where it is and to bring it at a cost of less than fifteen million dollars to the shores of Lake Superior, to improve our waterways, to improve our ports, to improve the St. Lawrence route, and spend the rest of the money which I claim we are going to waste in an unknown country, there instead of spending it in a region as to which we have insufficient data.

The MINISTER OF FINANCE (Hon. W. S. Fielding). Mr. Speaker. There is one ground upon which this great project may be opposed with some appearance of reason, and I congratulate my hon. friend (Mr. Monk) on having discovered it. We are submitting to parliament a proposal for the construction of a great transcontinental railway stretching from ocean to ocean through British territory, and about 3,500 miles in length. A portion of that line will run through the prairie lands of Manitoba and the North-west; a country which nobody questions is in need of railways. These prairie lands are fertile and fruitful, and we all recognize that they will supply traffic to a railway. But after all, that is only a small part of the scheme. This line starting from the very heart of the settled districts of the lower provinces, after leaving the city of Moncton will plunge into the unsettled interior of New Brunswick; thence, turning the corner of American territory, it passes through the settled lands of the province of Quebec, reaches the St. Lawrence at Lévis, and crossing the new bridge will pass through the historic ancient capital of Canada, and thence once more plunge into new and undeveloped territory. Again in the far west, it will touch Winnipeg, and once more plunge into new territory, and so on and on, always touching far as practicable at the large centres on the way, but always striking out again into new and yet undeveloped Canadian lands.

Now, Sir, if we were to believe that this vast area of Canadian territory is a miserable, worthless and God forsaken country; if we were to believe that such are the conditions prevailing in 3,500 miles across this Canada of ours, then hon. gentlemen opposite are right in opposing this measure. But, if on the other hand, we believe that this line will open up new districts valuable for agriculture, if we believe that it will open up valuable tracts of timber—more valuable to-day than ever before when we consider the fast diminishing forest areas of this continent—if we believe that it will open up rich mineral districts in Ontario, and Quebec, and through the mountains of British Columbia which are known to teem with mineral wealth; if we believe that it will bring into industrial use the vast water-powers of this Dominion which become more and more valuable every day as science advances; if we believe that throughout this 3,500 miles of country we have a territory worth owning, then we must believe that this is a good scheme, and, Sir, we are proud to proclaim ourselves as supporters of it.

Some hon. MEMBERS. Hear, hear.

The MINISTER OF FINANCE. We are told by hon. gentlemen opposite that we are approaching this project without information, and we are asked if there are any surveys. Let me ask these gentlemen: Did they require surveys when in the year 1871 the Conservative party accepted the responsibility of building the Canadian Pacific Railway, and of making it a part of the treaty with British Columbia? We have more information concerning this proposal to-day than Canada had in 1871 when she accepted the responsibility of that treaty. If there be any difficulty to be met with in this case, it is not because of lack of information, for there is abundance of information. The greatest difficulty which gentlemen opposite will experience will be in digesting the great mass of matter bearing on this question which can be found in the archives of the public library.

The eastern part of the line was surveyed many years ago; the country between Winnipeg and Quebec has been examined and reported upon to a very large extent by competent explorers. The prairies are no longer an unknown land. The mountain passes of British Columbia have been examined and their character is well known and understood. Though we may have no located line to assist us, yet as the Prime Minister said, there are mountains of information available to those who will take the trouble to seek it. To state that we have no information on this subject is absolutely unjustified by the facts.

I suppose, Sir, that if there is one part of this scheme which is being more strongly opposed than another, it is that part of the railway which it is proposed shall run from Moncton to Quebec. I have no doubt that in the western part of the Dominion we shall hear that talked of more frequently than any other section, but at the same time I have no doubt that down in the eastern provinces we shall hear a great deal about this worthless country in Ontario which we are going to build a railway through. And, notwithstanding the speech of my honourable friend the ex-Minister of Railways and Canals, I do not think we shall hear much in the maritime provinces against this project of a railway from Moncton to Quebec. However, I fully expect that when the time comes when we have to meet our opponents on the platform in the lower provinces, we shall hear a great deal about the wild country in Ontario in which we are to squander money. Be that as it may, we have to ask our friends in the east and in the west to give and take in this matter, and to believe that in both cases the country is not so worthless as it is represented to be, but that it is a country worth owning and worth developing. One would think from what has been said about this Moncton-Quebec section that it was absolutely new and unheard of, a mad and a crazy scheme. We are asked, who shall be so mad as to ask that another railway should be built from the waters of the St. Lawrence down to the lower provinces? Well, Sir, so far as this part of the scheme is concerned, the line upon which it is proposed to build this road to-day, is practically one of the three main lines that were examined, and reported upon, and recommended by the surveyors for the Intercolonial Railway as far back as 1864. And yet, gentlemen opposite seem to treat this project to-day as something new and unheard of. We have some information about it in the report of Sir Sanford Fleming, made nearly forty years ago. We are told to-day that this road will be of no value. At that time Sir Sanford Fleming pointed out that the shortest line and the most direct line for through-freight that can be obtained from the Gulf of St. Lawrence to the lower provinces, is by what was called the frontier line running close to the state of Maine, and then he said, that next to that there was the 'central line,' and the 'central line' of Sir Sanford Fleming's report is substantially and practically the line on which it is now proposed to build the railway. These are Sir Sanford Fleming's words:

> The central route would, next to the frontier line, be the best for the transportation of through-freight, and as a means of colonizing the country and developing its natural resources it would stand in the first position.

Some hon. MEMBERS. Hear, hear.

The MINISTER OF FINANCE. And, Sir Sanford Fleming also reported:

> The settlement of the province has naturally enough followed its navigable waters; on the south by the Bay of Fundy and its inlets; on the east by the coast and bays of the Gulf of St. Lawrence; on the west by the river St. John which extends and to some extent is navigable almost to the extreme north-westerly angle of the province. In consequence, New Brunswick may be said to be populated as yet only along its outskirts. There is a vast area in the interior unoccupied, not because the soil is so much more uncultivable than elsewhere, but because it has hitherto been, and is still, inaccessible.

That condition of affairs to a very large extent prevails to-day, although a great many years have passed since that report was prepared. In the lower part of the province the Canada Eastern line stretches from the River St. John across to the gulf, and there are here and there one or two small branch lines; but practically the great part of the interior of the province of New Brunswick described in Sir Sanford Fleming's report of that day is still inaccessible and not open to settlement; and the reason why it has not been settled has been, to use Sir Sanford Fleming's own words, 'not because the soil is so much uncultivable than elsewhere, but because it has hitherto been and still is inaccessible.'

Mr. CLANCY. That does not mean that the soil is not inferior by comparison.

The MINISTER OF FINANCE. By comparison with what ?

Mr. CLANCY. The hon. gentleman has just read that it is not by reason of it being so much more uncultivable, but by being inaccessible, which, of course, means that it is not as cultivable as other land.

The MINISTER OF FINANCE. Well, Mr. Speaker, all the lands of Canada are not equally fertile or valuable to the farmer; but even if they are not all equal to the lands of the prairies, there are millions of acres in Canada which we expect to be occupied by settlers, millions which are to-day occupied by settlers, even though they may not be what the hon. gentleman would call the superior lands. I will quote further from Sir Sanford Fleming's report of 1864. I may say that there are three routes described—the frontier route near the state of Maine, the central route, which is the subject of the present discussion, and the route along the Baie des Chaleurs, which was afterwards adopted for the Intercolonial Railway. Sir Sanford Fleming says :

> The central route will have the least population to accommodate immediately along the line. Indeed, between the Miramichi and St. Lawrence there is only one settlement, which consists of a few families on the Tobique river. By opening roads, however, to the east and west, the county of Restigouche and the valley of the St. John would be easily reached and a considerable portion of the trade of these sections brought within the influence of the railway. A line through the centre of New Brunswick would take the supplies for the lumber trade and would rapidly settle up the large tracts of cultivable land in this district.

You see, he considered it quite cultivable.

> A railway so situated would, as a line of communication, have similar effects on the trade and progress of New Brunswick as the River St. John has had, with this additional advantage, it would be open all the year instead of half of it.
>
> In much less time, it is believed, than has been occupied in settling and improving the lands which nature made accessible by the river, would the artificial means of communication result in populating the interior of the country through the greater part of its length, and thus develop and foster a traffic which does not now exist.

Such was the view held by Sir Sanford Fleming as far back as the year to which I have referred.

The cry has been raised that this line should be objected to because it parallels the Intercolonial Railway. We claim that it does not parallel the Intercolonial Railway; but for the sake of argument, we will assume that it does. Is that a conclusive argument against its construction ? Do we refuse to parallel lines in this country ? Have we not granted parallel charters and parallel subsidies all over Canada? Have we not, during this very session, laid down the policy in the Railway Committee that charters may be granted for parallel railways so long as they are thirty miles from other railways ? Where has this parliament laid down the principle that we shall not grant charters or subsidies or assistance of any kind to parallel lines ? If we are prepared to grant parallel charters and subsidies in other cases, why not in the case of the Intercolonial Railway ? What reason is there for treating the Intercolonial Railway in a different way from other railways in that respect ? Am I to be told that it is a good thing to parallel company roads, but a bad thing to parallel the Intercolonial Railway ? Am I to be told that because this is a government road we must nurse and protect it, and give it freedom from competition which private capital has to submit to ? Are we to tell investors in the railways of this country that they shall have their capital imperilled by charters and subsidies to other railways, but that we shall take care that our own road shall not be subjected to any such competition ? Surely we are not prepared to take that ground. Surely, if we grant charters and subsidies for parallel lines in which private capital is invested, there is no reason why the Intercolonial Railway, because it happens to be a government road, should be free from the competition which other roads have to submit to.

Suppose that instead of having built the Intercolonial Railway around the north shore, this favourable report of Sir Sanford Fleming had been adopted, and the Intercolonial Railway had been built by this central route, what would have been the position to-day ? Undoubtedly the towns on the north shore would always be of some consequence, on account of their accessibility to the ocean; but without railway communication they would not be in the flourishing condition that they are in to-day. Some of the prosperity that has come to them by reason of the railway communication they enjoy would have come to the people who would have settled along the central route, and that country would have been opened up and developed in the manner suggested in Sir Sanford Fleming's report. What then ? If the people of the north shore were coming to this House to-day and asking for a government grant of subsidy, or for government construction, or for some other means of giving them the benefit of railway communication, would we be able to meet them with the statement: 'Oh, no, we cannot give you a railway, because it will parallel the Intercolonial' ? Surely we would have been bound to extend to that section of country in the course of time the benefits of railway construction. And as in the beginning we built the Intercolonial Railway by the north shore and gave the people there the benefit of railway construction, surely the time has come, whether it will parallel the Intercolonial Railway or not—and I want to

deal with the worst view of the case—when we would be justified in building a railway through that unsettled country which has been described so well in the report of Sir Sanford Fleming.

Well, Sir, does the proposed railway parallel the Intercolonial Railway ? That question has been dealt with by my right hon. friend the premier, and there is no need of my dwelling upon it. From the way in which this expression, paralleling the Intercolonial Railway, has been used, one would think that because two roads start from a common point and end at a common point, they may be said to parallel each other, even though they go around the opposite sides of a circle. There is no paralleling of the Intercolonial Railway by this road. After it leaves Lévis it is out of the way of the Intercolonial Railway at once. The hon. member for Jacques Cartier (Mr. Monk) says that it never gets farther away from the Intercolonial Railway than fifty miles. I am advised by competent authorities that there are places where it will be 88 miles from the Intercolonial Railway.

Mr. SPROULE. Will it not take a large share of the trade which now goes over the Intercolonial Railway to Quebec ?

The MINISTER OF FINANCE. I am prepared to say that even if it does, that is no argument against the construction of the railway. When the Canada Atlantic Railway was the only line running directly from Montreal to Ottawa, and we were asked to aid the Canadian Pacific Railway to construct a line between these two cities, we did not consider whether the two roads paralleled each other or not ; and after the Canadian Pacific Railway line was built, the company proceeded to parallel their own line with another one. To-day you have four railways between Ottawa and Montreal, if I may include the road running to Prescott, all aided by the government of Canada, and nobody seems to be very much aggrieved over the question of any of them being paralleled. Whether the Intercolonial Railway is paralleled or not, and whether this new road will take traffic from it or not, affords no argument against building the new line, opening up a new section of country, and doing something towards settling the unoccupied lands of the province of New Brunswick. If a road starts from Montreal or Quebec and runs to a point in the maritime provinces, and another railway which it is proposed to construct between those points is to be regarded as a case of paralleling, what happened when the Intercolonial Railway was paralleled in that sense by the construction of the short line of the Canadian Pacific Railway ? Did the hon. gentleman stop to see whether it took any traffic away from the Intercolonial Railway ? No, that question did not count for anything then. There was no question then about paralleling the Intercolonial Railway, or about competition with the Intercolonial Railway. Nobody cared anything then about the rights of the Intercolonial Railway, and our hon. friends in opposition were prepared to spend money liberally in building another line, which was not even a line completely on British territory.

There was another phase to that scheme. When it was adopted by the Conservative government, it included a branch which was to run from Harvey to Salisbury. Salisbury is a station close to Moncton, so that the Harvey and Salisbury line was of the same character as the one we are proposing to build now. The only difference is that ours is to start in Quebec and go direct to Moncton, and the other was to start at a point further down on the line of the Canadian Pacific Railway and cross from Harvey to Salisbury. Why ? To serve the very purpose for which our projected road is intended to-day, namely, give another short line to the maritime provinces. There was no talk then about paralleling the Intercolonial Railway.

Mr. CLANCY. Was that a trunk line ?

The MINISTER OF FINANCE. I do not see that that makes any difference. It was a line which was going to carry freight, and might have taken freight from the Intercolonial Railway, but that never worried the souls of the hon. gentlemen who sat behind the government of that day. There is another view of the case. This so-called Harvey-Salisbury line was deemed to be of so much importance to the maritime provinces that I believe I am justified in saying that but for the putting of that section into the scheme the Bill would have never been carried through parliament. I am assured of that by people who were familiar with the facts at the time, and I do not believe that you would have had a member from the eastern part of New Brunswick or from the province of Nova Scotia, on either side of politics, who would have voted for that scheme at that time had they not the assurance that that line was to be built. Well, as in many other cases, the expectations created by hon. gentlemen opposite were not realized. The Harvey-Salisbury line was not built by the Canadian Pacific Railway. Then the maritime province members began to complain to the government of that day that faith had not been kept with them, that they had been misled, humbugged and deceived ; and in the efforts to conciliate, the government of that day brought forward a Bill to construct the Harvey-Salisbury line as a government work. That line was to reach the very point we are now reaching, because Salisbury is a station but a short distance from Moncton. Although the starting point was not the same the object was the same, namely, to get a short line to Moncton. What followed ? The Bill passed this House, but by some misfortune

it failed to pass the Senate, and there the matter ended. The good people of the maritime provinces were humbugged. They were humbugged first by putting the building of this line into the Canadian Pacific Railway arrangement, and afterwards by putting it into a special Bill, which was quietly so managed that the Senate threw it out. Is it surprising that from that day to this there has been, in a large portion of the maritime provinces, deep discontent on this question of the short line ? The maritime provinces have not been content with the short line which runs through the state of Maine. We have no objection to that line. We have no quarrel with the Canadian Pacific Railway. But we say that it would have been a wise policy to have had a short line on British territory. That which the government of the party opposite intended to give but failed to give, a short line on British territory, this government, after the lapse of these years, has undertaken to provide as a part of a great national scheme and to make amends for the wrong done to the maritime provinces in the manner I have described.

If we were to judge from what was said yesterday by hon. gentlemen opposite and repeated to-day, this is a very mad scheme, and one that was never thought of before. No engineer would ever contemplate such a line. No sensible person would ever dream of it. But I have already shown that it was recommended as a good line by Sir Sanford Fleming in the early days, and that the government of Sir John Macdonald deemed a short line to Moncton so important that they incorporated it first in their arrangement with the Canadian Pacific Railway, and afterwards made it the object of a special Bill. But that is not the whole history of this matter. Later on there were other negotiations respecting this road. After the government arrangement fell through, the Grand Trunk Railway came forward, in association with the people connected with the Témiscouata road. They asked for a subsidy for the building of a line from Edmundston, which is on the Témiscouata road, down to this very place, the city of Moncton. Yet we are told that the scheme was a mad one. One would imagine, to hear hon. gentlemen opposite, that no sane man would ever dream of such a thing. Well, the Grand Trunk Railway, under the management of Sir Joseph Hickson, believed so much in that scheme that they entered into negotiation with the government, in association with the Témiscouata Railway Company, to construct it over the very route we propose to-day, only they proposed to begin at Edmundston instead of at Lévis. They came here and sought a subsidy. I have information, on which I can rely, that Sir John Macdonald personally approved of that scheme and was willing to grant a subsidy of $10,000 per mile to the company to build that road. I have reason to believe that my statement is well founded, and the men to whom the promise was made can be found, if it be disputed. I do not say the government as a whole made the promise, because in the final settlement influences were brought to bear which led to the scheme being abandoned. But why was it abandoned ? Was it because it would parallel the Intercolonial Railway ? Not a bit of it. It was abandoned, not because it would parallel the Intercolonial Railway, but because it would compete with the new Canadian Pacific Railway short line. That was why the government of that day refused to grant the desired aid. I am not making any accusation against the government of that day, nor am I finding fault with the Canadian Pacific Railway. That company had recently built a short line to the maritime provinces, and thought it a little too much that it should be met immediately by an opposing line. We can make some allowance for the stand then taken by the Canadian Pacific Railway, but many things have passed since then, and I think the Canadian Pacific Railway have no reason to-day to view this scheme with disfavour. Any anxiety which they had in the beginning of the enterprise no longer exists, and we have no reason to suppose that they are hostile to this scheme. We are told that it is a mad scheme, one which nobody has ever thought of. Well, the board of trade of the city of Quebec passed unanimously resolutions in favour of that scheme and calling upon the government to aid it. The board of trade of Halifax also passed resolutions calling on the government to support that scheme with the public money. The board of trade of Truro passed similar resolutions. Were all these people mad ? I happen to have under my hand the resolutions of the board of trade of Truro, which I may quote as a sample of the public opinion which existed in the maritime provinces then in favour of the very enterprise which the government propose to-day. On the 14th of February, 1890, the board of Truro passed the following resolution :

Mr. FRASER. On what day ?

The MINISTER OF FINANCE. On the 14th of February, 1890, St. Valentine's day. They passed this valentine and sent it to their representative at Ottawa :

> Resolved, That the Truro Board of Trade learns with interest of the proposed extension of the Grand Trunk Railway system to the maritime provinces connecting with the Intercolonial Railway at or near Moncton, thus giving a competing line to the west as well as a short line and one on all British territory, and hereby requests the Dominion government to afford all possible aid to promote the success of the undertaking ; and further
>
> Resolved, That a copy of this resolution be forwarded to our Dominion representative at Ottawa for presentation to the government.
>
> G. CLISH, President.
> G. A. HALL, Secretary.

No wonder my hon. friend from Colchester (Mr. Gourley), whenever he stands up here, sounds a loyal note. He comes from a loyal town and this is a loyal resolution. As I had the pleasure of knowing both gentlemen, I desire to say in fairness to them that they are both good, staunch Conservatives of the town of Truro.

Mr. SPROULE. No doubt, that will add materially to the scheme that was outlined by the Tories first.

The MINISTER OF FINANCE. It was outlined by the government of Sir John Macdonald, but like too many outlines these outlines faded away as time passed on. The lines were obliterated. They lasted long enough for the scheme to serve in one or two elections in the maritime provinces, but the promises made were never realized. What I wished to call your attention to, Mr. Speaker, is that in all these negotiations to which I have referred, the same thing is seen. In the negotiations with the Canadian Pacific Railway in the beginning they were to have a line which was to include a line from Harvey to Salisbury, which is near Moncton, and the Bill was carried through this House to build the line from Harvey to Salisbury, near Moncton. And the Grand Trunk scheme that I have referred to was to build from Edmundston to Moncton. In all these negotiations Moncton was the objective point, as it is to-day. Why is Moncton the objective point? Some hon. gentlemen talk as if the great object, and the only object was to build the shortest and most direct line to the ocean. And my hon. friend the ex-Minister of Railways and Canals (Hon. Mr. Blair) asked yesterday if this government were going to build this Eastern line, why did they not build it by the shortest line to St. John. There was applause on the other side of the House. There are a number of reasons why Moncton is the right point. One of the reasons is that if you want to get the shortest line from the waters of the St. Lawrence to the Atlantic ocean, you will not go to St. John, because that is not the shortest line. My hon. friend from Charlotte (Mr. Ganong) will endorse this, because the shortest line from the waters of the St. Lawrence to the Atlantic is to the port of St. Andrews. Therefore, the idea that you must go to St. John because it is the shortest line is an entire delusion. I know that some hon. gentlemen have been influenced by that. The shortest line to the ocean is an important consideration, but it is not the only question involved. Other interests are entitled to receive consideration, and they did receive consideration in making this arrangement. There are various reasons why we should go to Moncton. In the first place, it is the centre of the maritime provinces, as near as we can get it. The actual centre of population is further east, probably in the county of my hon. friend from Cumberland, possibly further east in the county represented by my hon. friend from Colchester. But, to reach that centre you would have to parallel the Intercolonial; it would be an actual parallelling, and we do not propose to do that. Moncton is the most convenient centre of connection for the million of people in the maritime provinces. Now, important as the grain traffic is, and we all recognize its importance, it is only one object to be considered in the making of a national transcontinental railway. We may believe, we are bound to believe, that this million of people in the maritime provinces will have something to send back to the west, and besides, there is the passenger traffic which must be considered. We do not think it wise to single out one port and give it a monopoly. Moncton is the most convenient point, and from it all the ports in the maritime provinces are most easily accessible. It is convenient to St. John. It is nearer to St. John than it is to Halifax. So far as the ocean port is concerned, St. John is placed on at least equal terms; as I say, it is nearer to Moncton than Halifax is. We must leave the two harbours to argue the question as to their respective merits; but Moncton is chosen because it is the central point of all the maritime provinces. There are other harbours besides Halifax and St. John that are entitled to consideration. Those who had the pleasure and advantage of hearing the discussion of the Grand Trunk Bill in the Railway Committee will remember that Mr. Hays, the manager of the Grand Trunk Railway, when asked about the use of the harbours of the maritime provinces, said that if the western country developed at its present rate, as we have no doubt it will, the time is close at hand when we should need, not one, but three or four harbours to serve the traffic coming from the west. We are not building for to-day, we are building for the future as well as for to-day; and it was sound policy on the part of the government to take as their objective point a point on the Intercolonial Railway in the very heart of the maritime provinces, which gives easy access to St. John on the one hand and Halifax on the other, as well as to Sydney and Louisburg, both of which are on the line of railway communication, and to Country Harbour, which is the objective point of a line of railway now under charter, and to Whitehaven, one of the harbours in the lower provinces which will take its place some day as one of our prominent Eastern harbours. The policy of the government is not to select one port, but to select a central point from which access may be had to all the harbours in the lower provinces. I think our friends in St. John have no reason to regret this; I am sure that St. John will profit largely by the construction of this line. As I have said, it is nearer to Moncton than Halifax is, and when the trains come down

from the west they are as likely, if they want to go to St. John, to go over this road as they would be to go over the Intercolonial, which is much longer. The people of St. John have shown great enterprise in the past. They have invested their own money in providing harbour facilities for the Canadian Pacific Railway, and I rejoice to know that they are reaping the reward of their enterprise. But they are dependent wholly upon the Canadian Pacific Railway. They have connection with the Intercolonial, but we know that the Intercolonial and its connection, the present Grand Trunk, have no connection with the great west, and therefore the Intercolonial is not in a position to deliver at St. John the traffic of the western country. With this road built, instead of being dependent on the Canadian Pacific Railway only, St. John will have two strings to its bow. Not a pound of traffic that goes to St. John now will be taken away, and St. John will stand its chance of getting a fair share of the new traffic to be created by this road. Halifax, with its peerless harbour, will have advantages which it has not hitherto enjoyed. Surely, Sir, the time has come, after years of deception, humbugging and trickery about the lines to the maritime provinces, that faith should be kept with these people, and they should have a through line running on Canadian territory from ocean to ocean.

I have given you so much with regard to the history of the past. Perhaps, before six o'clock I may have time to say a word with regard to what is going on at present. We are told that this is a mad scheme, a wild scheme, that nobody would place faith in it, that no business man would believe in it. Let me read a resolution passed on the 23rd day of July last, relating to this scheme :—

Whereas, objection having been taken to that part of the Grand Trunk Pacific Railway scheme which provides for the building of the road from Winnipeg to Moncton, N.B., this board desires most emphatically to reaffirm its previous declaration (appended hereto) that no scheme of government transcontinental transportation will be either adequate or equitable to each province of the Dominion which does not ensure the carriage of Canadian products through Canadian ports in winter as well as in summer, and regards it as imperative that stringent guarantees to carry out that policy should be exacted by the government.

We further maintain that the construction of the road west of Quebec without ensuring its continuance east through Canadian territory would be manifestly unjust to the maritime provinces.

This board is also of the opinion that the building of the shortest possible line through Canadian territory from Quebec to Moncton, N.B., would be of immense advantage to the maritime provinces, as well as to the rest of Canada, and would secure for the road a large share of through freight and passenger business, which at present is done through United States ports.

(Sgd.) JAMES HALL, Vice President.
CHARLES M. CREED, Secretary,

This resolution was passed unanimously a few days ago by the Halifax Board of Trade.

I noticed that when my hon. friend the ex-Minister of Railways was referring yesterday to the danger of this scheme dismantling the Intercolonial Railway, doing harm to the Intercolonial Railway, his words were received with wild applause on the other side of the House. They were pained, I suppose, to hear that there was any danger of the Intercolonial Railway being starved or interfered with. My hon. friend the ex-minister must have experienced a new sensation when he received these cheers from the other side, for he must have remembered that session after session, and year after year, the efforts that he made to benefit the Intercolonial Railway, the efforts which this government authorized him to make and supported him in making, for building up the Intercolonial Railway, were opposed by the hon. gentlemen opposite. The hon. the ex-Minister of Railways said that we had better spend this money in equipping our harbours with elevators and terminal facilities ; and again the applause came from the other side. I think, Sir, if we could have read the mind of the ex-Minister of Railways at that moment we would have seen that he recollected the fact that when this government made a moderate provision for terminal facilities in his own city of St. John, when they put up a modest elevator in St. John, and another modest elevator in Halifax, instead of hon. gentlemen opposite supporting us and asking us to give further terminal facilities and equipment in the way of elevators, they declared that the money was wasted. Then my hon. friend the ex-Minister of Railways was very much disturbed by the fear that the workshops at Moncton were going to suffer, that the workmen were not going to be employed, that there was not going to be money enough spent down there. Again, Sir, the applause came from hon. gentlemen opposite, and the ex-minister must have thought to himself, why did I not have these cheers when I was providing the money for these workshops ? Why was it that for seven long years when this government was pouring out money liberally, and as hon. gentlemen opposite said, lavishly, for the upbuilding of the Intercolonial Railway, why was it that we had nothing but flouts, and jeers and sneers from the men who were cheering him yesterday ? Sir, I can assure the ex-Minister of Railways that he need not worry about the Intercolonial Railway, for it is safe in the hands of its friends, the present gov-

ernment; and may Heaven preserve it if the time ever comes when it has to depend upon the tender mercies of the hon. gentlemen who cheered him yesterday, and who for seven years have done everything they could to tie his hands and to prevent the development of the Intercolonial Railway.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

SECOND READING.

Bill (No. 244) respecting the Western Assurance Company.—Mr. McCarthy.

NATIONAL TRANSCONTINENTAL RAILWAY.

House resumed consideration of the proposed motion of the right hon. Prime Minister (Sir Wilfrid Laurier) to ratify the agreement between the government and the Grand Trunk Pacific Railway Company for the construction of a national transcontinental railway.

The MINISTER OF FINANCE. Mr. Speaker, when the House suspended its sitting at six o'clock I was making some reference to what is called the Moncton section of this proposed road—the road from Moncton to the city of Quebec. I endeavoured to point out that this road would serve a good purpose in opening up a country, the development of which is desirable and necessary. I endeavoured to point out that there were no particular difficulties in the way of construction and that while opening up a country which is capable of development we would at the same time obtain a shorter line through the province of New Brunswick which certainly is not a disadvantage, but in regard to which we may all agree in saying, I think, so much the better. I pointed out that Moncton had been chosen as the objective point because of its central position, because it affords by means of the Intercolonial Railway easy access to all of the important harbours of the maritime provinces. Moncton is in the eastern portion of the province of New Brunswick within a short distance, comparatively speaking, of the Nova Scotia boundary. It is very close to the point of communication with Prince Edward Island. There are two principal channels of communication between the mainland and Prince Edward Island. One is from Pictou in the province of Nova Scotia to Charlottetown and the other is from Point de Chêne in the province of New Brunswick across to Summerside. The crossing from Point de Chêne to Summerside is at a point quite near to Moncton. The traveller going down there and desiring to cross to Prince Edward Island would leave the Intercolonial Railway at a point a very short distance from Moncton. So, in locating Moncton as the central point we have a point in the eastern portion of New Brunswick, near the Nova Scotia boundary, in close touch with the communication with Prince Edward Island. In that way in so far as any one point can serve the purpose, Moncton seems to fill the bill better than any other place we could have named. I do not say in this connection that I agree with all that has been said with regard to the original location of the Intercolonial Railway. It is sometimes spoken of as a political location. I suppose that term may be used in a good sense or in a sense of reproach. I am inclined to think though that there were high political reasons which could be and were urged in favour of that location. For myself I do not hesitate to say that if to-day we could have only one line of communication between the upper and lower provinces, I should prefer to have the line of the Intercolonial Railway around the north shore. If you could have only one line then that line should be chosen not purely for commercial reasons but for larger national reasons, and I may say even for imperial reasons. The selection of the north shore route for the Intercolonial Railway at the time of confederation was to some extent based upon national reasons and to some extent based upon imperial reasons. It was deemed desirable that the line should afford a channel of communication between the east and the west and that it should be a sufficient distance away from the American boundary to make it what we sometimes call a military line. I think that is a reason which the whole country will sympathize with. Then, there was an imperial reason in connection with finance. Owing to Canada's splendid position to-day her credit is of such high standing that we need not look for a guarantor or endorser when we go into any transaction; our position is so good that we need not seek for an imperial guarantee or attach much importance to it. But, while that is the condition to-day with the magnificent prosperity which our country has enjoyed for a number of years, that was not the condition at the time of the union, and the imperial guarantee was then deemed of sufficient importance to play an important part in the transaction. It was deemed desirable that the imperial government should give a guarantee to assist the Intercolonial Railway. While I do not go so far as to say that they would have refused to give the guarantee if another location had been adopted, it is probably not too much to say that when the government did determine to locate that road around the north shore they knew it was agreeable to the imperial authorities who for imperial reasons favoured it. However, I take the position that if we could have only one line to the maritime provinces that one line should be practically the location near the north shore

of New Brunswick, and I do not join in the opinion of those who think now that a mistake was made.

My right hon. friend the leader of the government (Rt. Hon. Sir Wilfrid Laurier) in his reference to this Moncton line, dwelt for some time on what he regarded as an important feature in connection with the bonding privilege. He said that this line would make us more independent of our American neighbours. That view has been scoffed at by some hon. gentlemen who point out that we are not really dependent on our American neighbours because we have access to our own seaports by our Intercolonial Railway, and that there is also another line by which we can get down to the sea. Though we may be independent in a limited degree of our American friends, I think we ought to make it plain to them that we are determined to be even more independent than we are. There was no part of the eloquent speech of my hon. friend that I admired more than his statement to the effect that the best possible way to live on friendly terms with our brothers to the south of us is to have them understand that we are determined to be absolutely independent of them. It is true that in some respects that we have been more independent of them as respects the bonding privilege than perhaps they were aware of. But we have been told that, because the bonding privilege is a mutual one and because it is of advantage to American railways as well as to the railways of Canada, we need not be alarmed that any change will take place. I believe that the fact that a thing is of advantage to one set of people in the United States is not always conclusive evidence that that condition of affairs will continue. I have no doubt the high tariff of the United States is a burden to many people living in certain sections of the country, but, while the tariff operates with particular severity upon the people of this section, it is regarded with favour by the people of other sections and I have no doubt by the majority at large. So the people of any particular section are obliged to bear the burden for the common good, and I have no doubt that if it suited the policy of our American friends to carry out the threats they have repeatedly made of the abolition of the bonding privilege, the fact that such action would be injurious to one particular set of men or to certain railway companies would not prevent them from carrying out that policy. Therefore, I say it is desirable that we should give our American brethren to understand that Canada is resolved to work out her independence in these things, that the present proposal will promote this object, and that even if still another railway should be necessary we shall be prepared to construct it. The attitude that the government has taken upon this subject and the speech which my right hon. friend has addressed to the House on the subject has already attracted much attention across the border, and there is a much keener appreciation of Canada's independence than ever before. I read to-day in one of the great journals of the United States, the 'New York Journal of Commerce,' not a political journal, but a commercial journal:

> What more particularly interests and concerns us now is the determination of Canada, at whatever cost, to be independent of the United States for the means of reaching the eastern and western seas with the products of her territory. . . . . Our policy has been anything but liberal, though a liberal policy would have been as much to our advantage as to that of Canada. If we exclude or restrict her trade, keeping it from passing freely into and over our territory, we must expect her to provide for it elsewhere and ought to admire the spirit and determination with which she does it.

That, Sir, is a specimen of what is being said in the journals of the United States to-day. I agree with the hon. gentlemen opposite when they say that we have not been wholly dependent upon the United States for the bonding privileges. I believe we had some levers, but I am strongly convinced that these levers would not be powerful in the event of a great movement arising in the United States which might take the form of hostility to our country. Therefore in the interest of Canada to-day, as well as in the future, it is well that we should let our friends across the border understand, that whatever measure of independence of them we have now we shall maintain, and that we shall increase that measure of independence by the line that we are now proposing, and should the necessity arise, we shall not shrink from providing another.

Some hon. MEMBERS. Hear, hear.

The MINISTER OF FINANCE. I have no idea, Sir, that I shall be able to settle the dispute as to the saving in mileage between Quebec and Moncton. Whenever a line is not absolutely laid down there is always room for discussion on that point, but I shall assume for the present that the mileage between Quebec and Moncton is somewhat longer than it has been supposed to be by some hon. gentlemen. I am advised on good authority that an air-line from Moncton to Quebec—that is, if I may use the expression air-line, where you have to go down to the point where you turn the American territory, and then take another air-line to Moncton—taking the shortest air-line you have from Quebec, or rather from Chaudière, to Moncton, would be 351 miles, and to this you have to add for curvature 10 per cent, making it 386 miles. I do not fail to remember that my hon. friend (Mr. Monk) said there was a great deal of curvature in this road, and a great deal of curvature in the policy. I accept the compliment which my hon. friend of course

did not intend, because no doubt he forgot the fact that from the point of view of the artist and designer, the curve is the line of beauty.

Some hon. MEMBERS. Hear, hear.

The MINISTER OF FINANCE. Taking an air-line and allowing 35 miles for curvature, we would have 386 miles as against 496, which is the mileage from the Chaudière to Moncton by way of the Intercolonial Railway. That would give a saving of 110 miles. That is a little less than the saving claimed by some hon. gentlemen on this side, and a good deal more than the saving claimed by hon. gentlemen opposite. But while I give these figures upon competent authority, I am not disposed to stand strictly by them, and for the purpose of the calculation that I shall make later, I propose to treat the mileage of that road as being in round figures, 400 miles.

Mr. BORDEN (Halifax). Having regard to the natural obstacles, what does the hon. gentleman say the saving is?

The MINISTER OF FINANCE. I am advised that a line of about 400 miles will probably accomplish the distance. Taking an air-line and adding 10 per cent, as engineers do in an ordinary country, it would give 386 miles, but I am going to treat it for the purpose of my financial calculation as a mileage of 400, because I wish to be absolutely fair in any argument I shall make.

The section from Quebec to Winnipeg has also been the subject of much discussion, and efforts have been made to show that the country through which this road is to run, is a country unworthy of our consideration. I stated this afternoon that the only ground on which I think hon. gentlemen opposite could fairly oppose this road with some show of reason, would be upon the assumption that this vast territory is absolutely worthless. We differ from that opinion, and we think that the territory is deserving of development. We think also that the representations that have been made, as to the very expensive character of this section for railway building, are entirely mistaken. We believe that the information which is available justifies us in saying that that portion of the country, speaking generally of it, is not one of great difficulty for railway building, but is one through which a railway may be built at a very moderate expense, and that it has resources which we ought to develop in order that we may build up the Dominion at large.

In the course of the surveys that were made for the Canadian Pacific Railway, it was found that a railway north of Lake Nipigon could be built at a very moderate cost, but it served the purposes of the company to go along the shore of the lake, where the construction was very expensive. I believe that the records will show that the Canadian Pacific Railway could have been built at a much less expense if it had been built on the elevated plateau which lies behind Lake Superior and Lake Huron. The information we have on that subject is very clear. There is no difficulty whatever so far as we can learn, in obtaining a good location there, and the only reason that location was not adopted by the Canadian Pacific Railway was, that they wanted to avoid building a long branch down to Lake Superior. The reports all go to show that while on the lake shore the country is rough, rugged, and unsuitable for railway construction, when you go back a short distance into the country the conditions are much more favourable. In Sir Sanford Fleming's report of 1874, he says:

> Although the general aspect of the country east of Lake Nipigon as seen from Lakes Superior and Huron, is precipitous and rugged, to the rear of this wild and rugged frontier the surface descends northerly in easy slopes. So much is this found to be the case that in passing from Lake Nipissing to Lake Nipigon through the entire country the ascent to the summit level will actually be less than that which is experienced in passing through Toronto across the peninsula of western Ontario, by either the Great Western, the Grand Trunk, the Grey and Bruce, or the Northern railways.

That region was surveyed by Mr. James H. Rowan, in connection with the government survey of the Canadian Pacific Railway, and this is what he says of the condition of that country:

> The principal physical difficulties to be contended with in the construction of a railway throughout the whole section of country under consideration, are the great extent of water encountered on the route, its rocky character and inaccessibility It is nevertheless believed that a very direct line could be obtained with quantities of excavation and embankment not exceeding the average of railways already constructed in other parts of the Dominon. The last difficulty could be overcome to a considerable extent by means of the knowledge of the country already obtained. There are not many large rivers to be crossed on the line proposed, and of these not more than three or four will require bridges of 200 feet span. Timber of good quality and in sufficient quantity for the various purposes of a railway can be obtained either upon the line or in its neighbourhood. The gradients will be favourable too, in no case exceeding one foot per hundred, or 52·80 per mile. Of these maximum gradients the percentage will be small.

That is not so good a line as my hon. friend from North Norfolk (Mr. Charlton) hopes we will get, but it is as good as a number of the lines we have in Canada to-day. Again Mr. Rowan says:

> It is not a mountain range but merely an elevated plateau, and one remarkable peculiarity connected with it is in the numbers of lakes which occupy its summit, whose waters can easily be diverted and made to flow either the one side or the other.

Further on Mr. Rowan says :

The character of the country is very similar in the neighbourhood of either side of this elevated plateau, but outside that margin the difference as regards its adaptability for railway construction is very marked ; for while to the south it is broken up by hills of considerable altitude, with lakes intervening, of all shapes, sizes, and some of great depth, to the north it is comparatively level and swampy.

The greater portion of the country explored is covered with a dense growth of moderate sized timber, consisting of balsam, spruce, poplar, white birch, some tamarack, and occasional groves of white, but principally red pine, while at many points there are indications of valuable mineral deposits.

And in a foot note concerning mineral deposits, the report says :

Iron, copper, lead and gypsum in large quantities ; silver also has been found ; and the Indians say there is coal or lignite, which statement is borne out to some extent by a remark of Mr. Bell's in a geological report on the Albany river.

Now, if I wish to dwell a little further on the condition of the country between Winnipeg and Quebec, I do so because I am satisfied that by and by, in certain sections of the Dominion, we shall hear not so much about the Moncton section, but we shall be told, as we were virtually told today by the hon. member for Jacques Cartier (Mr. Monk) that that country is a sub-Arctic country, that it is not fit for settlement, and that we should not attempt to build a railway through it.

Mr. MONK. I do not think that my hon. friend is quite fair. I said that we knew nothing about the country, and that there was nothing in the reports to confirm the statements of the Prime Minister.

The MINISTER OF FINANCE. My hon. friend is mistaken. We know a lot about the country. I have been giving him information from the reports of the explorers and surveyors, who tell us what they know about it; and I am going to give him some more. The hon. gentleman says we know nothing about the country. Why, the whole country has been explored and surveyed for several years by parties sent out by the Ontario government, and here we have their published report. I shall not inflict a great deal of it on the House, but in order that those who have not access to it may know what they say about the country, I shall read some extracts from it :

The results of these extensive explorations, as detailed in the elaborate reports sent in by the surveyors, the land and timber estimators and the geologists, have fully justified the most sanguine expectations in regard to the natural wealth and fertility of northern Ontario and demonstrated the wisdom of the action taken, whereby some accurate knowledge of the character and extent of its enormous undeveloped resources has been acquired. It has been established beyond controversy that in the eastern part of the territory north of the height of land there is an immense area of excellent agriculture land, apparently equal in fertility to any in older Ontario, with an equable and temperate climate and an abundance of wood and water, which render the inducements it presents to those in search of homesteads as good as those offered anywhere else on the continent. The apprehension entertained by some that our forest resources were very limited has been contradicted by the exploration and estimation of extensive pine areas on the southern slope, as well as the location of great forests of spruce and other varieties of pulpwood north of the height of land, which will enable this province to take a leading position in the commercial world as regards the growing and remunerative pulp and paper-making industry. While the geological examinations have not resulted in any new discoveries of economic minerals (and it was scarcely expected they would), they have been of material service in identifying and establishing the character of the different rock formations and locating promising indications as a guide to closer investigations in the future. Analyses of the peat taken from the extensive deposits in Nipissing have conclusively shown its high qualities and economic utility, and established the value of this great natural store of fuel, which will probably make it useful in the industrial development of the country.

Then, under the head of Agricultural Lands, the report says :

The great clay belt running from the Quebec boundary west through Nipissing and Algoma districts and into the district of Thunder bay comprises an area of at least 24,500 square miles, or 15,680,000 acres, nearly all of which is well adapted for cultivation. This almost unbroken stretch of good farming land is nearly three-quarters as great in extent as the whole settled portion of the province south of Lake Nipissing and the French and Mattawa rivers. It is larger that the states of Massachusetts, Connecticut, Rhode Island, New Jersey and Delaware combined, and one-half besides of the state of New York. The region is watered by the Moose river, flowing into James bay, and its tributaries, the Abbittibbi. Mattagami and Missinabie, and by the Albany and its tributaries, the Kenogami and Ogoke. Each of these rivers is over 300 miles in length, and they range in width from 300 or 400 yards to a mile. They are fed by numerous smaller streams, and these in turn drain numberless lakes of larger or smaller size, so that the whole country is one net-work of waterways, affording easy means of communications with long stretches fit for navigation. The great area of water surface also assures the country against the protracted droughts so often experienced in other countries. The southern boundary of this great tract of fertile land is less than forty miles from Missinabie station on the Canadian Pacific Railway ; and the country north of the height of land being one immense level plateau sloping off towards James bay, the construction of railways and wagon roads through every part of it would be a comparatively easy matter.

Under the head of Climate the report says :

Another important fact established by the explorations is that the climate in this northern district presents no obstacle to successful agricultural settlement. The information obtained completely dispels the erroneous impression that its winters are of Arctic severity

and its summers too short to enable crops to mature. The absence of summer frosts noted by the explorers and the growth of all the common vegetables at the Hudson bay posts must disabuse the public mind of this erroneous impression. The 50th parallel of latitude passes through the centre of the agricultural belt, and the climate is not much different from that of the province of Manitoba, lying along the same parallel, with this exception, of course, that the winter is tempered by the great spruce forests and the presence of so large a proportion of water surface. The country, too, has an abundance of wood for fuel, building and commercial purposes, and plenty of pure water every where.

Mr. MONK. Will my hon. friend allow me ? I specially referred to that introduction to the reports, and I said that I had read the ten reports, and that it seemed to me that the very fine impression made by the introduction was not borne out by the reports themselves.

The MINISTER OF FINANCE. I will have to leave my hearers and readers to judge what is borne out by that which I have read from the official report issued by the government of Ontario.

Mr. CLANCY. Will the hon. gentleman say who that is signed by ?

The MINISTER OF FINANCE. It is published by the government of Ontario.

Mr. CLANCY. The hon. gentleman will find that there is no signature to it. It is a mere comment.

The MINISTER OF FINANCE. I did not expect that criticism. This is a document issued by the printer to the King's Most Excellent Majesty for the province of Ontario.

Mr. NORTHRUP. From Mr. Stratton's department.

The MINISTER OF FINANCE. It is not a blue book, but it is what is called a blue book, though in colour it is somewhat different from our blue books, and it is headed : 'Report of the Survey and Exploration of Northern Ontario, 1900; printed by order of the legislative assembly of Ontario.'

Mr. BROCK. Absolutely cooked.

The MINISTER OF FINANCE. We can stand the condemnation of that country from my hon. friend from Jacques Cartier, but we do not expect it from the member for Centre Toronto.

Mr. BROCK. I did not condemn that country. I condemned the report which the hon. gentleman was palming off on this House as a report from either the government or an individual. It is not a report. It is merely cooked up for political purposes.

The MINISTER OF FINANCE. Well, well, well. This report is three years of age. It was issued in the year 1900, and, although I have not followed the affairs of the province of Ontario perhaps as closely as my hon. friend has, I have never before heard any question raised as to the good faith of this report. It would be a marvel to me if an official document——

Mr. HEYD. Was there any objection made to this report by the opposition in the legislative assembly ?

Mr. BROCK. The whole thing is a humbug.

The MINISTER OF FINANCE. I cannot answer my hon. friend from Brantford (Mr. Heyd), but I am bound to say that when I find this report issued as an official report of the government of Ontario I give it the same faith and credence that I would give an official report issued by the government of any British colony. I hold in my hand a volume of the Geological Survey Reports for 1877-8. This particular report is by Dr. Robert Bell. It is headed 'The soil of the country between Lake Superior and James Bay.' :

> In my report for 1875, I gave a general account of the soil, &c., in the region between the great lakes and James' bay. Following the canoe route from Michipicoten to Moose factory, the country is more or less rocky as far as Missinabie lake, yet even in this section the proportion of rock-surface to the whole area may be comparatively small. But after passing the 'Swampy Grounds' north of Missinabie lake, the traveller cannot fail to be struck by the abundance and the general fertility of the soil exposed in the banks of the Missinabie and Moose rivers all the way to Moose factory. It consists mostly of a brownish, somewhat gravelly loam or earth, resting upon 'till' and sometimes upon stratified clays or the solid rock, which, however, is seldom seen, except at the principal rapids and falls. But in the central third of the section between Lake Superior and James' bay, or from the Brunswick to the Long Portage, a light-coloured clay usually forms the surface. I examined the country for a mile or two back from the river in several places for the special purpose of ascertaining the nature of the soil, and found it excellent in all cases, but tending to become more swampy in receding from the river in the Devonian region below the Long Portage. Samples of the soil were collected in a few places for subsequent examination. In traversing such a great extent of almost unbroken wilderness, one is apt to forget the possible value of this vast region for agricultural purposes. But the examples of the farms at New Brunswick house and Moose factory show, upon a small scale, what might be extended over a great part of the country. I have no doubt that at some future time this territory will support a large population.

It is a quarter of a century and more since that report was issued, and we think the time has come when that territory, capable of supporting a large population, might well be opened up by the construction through it of a transcontinental line.

As to the method whereby this road is to be constructed, although it may be a repetition, let me state what the plan of the government is. We propose that a railway

shall be built from Moncton to Winnipeg by way of the city of Quebec as a government work, and be leased for a term of fifty years to the Grand Trunk Pacific Railway. We propose that the western portion, from Winnipeg to the Pacific, shall be built by the company itself. We propose that guarantees be given to the extent of $30,000 per mile for the mountain section and $13,000 per mile for the prairie section. With respect to the construction of the eastern division, we propose that that shall be brought about by the government through the agency of a commission, and that this commission be composed of three members, who will have full charge of the construction. These commissioners will have large and ample powers, but there will be proper supervision by the government and parliament, as should be the case wherever public money is to be expended. My hon. friend from Jacques Cartier (Mr. Monk) called attention to what he calls an extraordinary clause in this arrangement. He said that there is a clause which enables the government to suspend operations on the eastern division. If that be an objection, he might as well have called attention to the clause which says that no money shall be spent until voted by parliament. Such an objection would be just as reasonable as the one he did make. It is the policy of the government to have the work done by the commissioners, but also to have the operations of this commission subject to reasonable parliamentary control. We provide that not a dollar shall be expended until the appropriations are voted by parliament from year to year. We provide further that in case anything unforeseen shall happen—which we do not anticipate—in case the operations of the commission be not carried on to the satisfaction of the government and parliament, the government shall have power to suspend operations until parliament meets and determines what further action will be taken. Yet this is the clause which my hon. friend says is a remarkable one, put in for the purpose of preventing the construction of the road.

What we regard as a very strong feature of the project is that it is to be carried out by practically the Grand Trunk Railway of Canada. In an editorial published recently in a Conservative paper, allusion was made to the old Grand Trunk Railway, with its $150,000,000 of assets. I have not stopped to ascertain whether the figures are correct, and am willing to accept the statement that the old Grand Trunk Railway is one of the solid institutions of this Dominion, with its assets of $150,000,000. Well, Mr. Speaker, whatever may be the solidity, strength and power of the Grand Trunk, we have it all in the undertaking we are now submitting to parliament. Hon. gentlemen who have attended the meetings of the Railway Committee may remember that when Sir Rivers Wilson addressed that committee he made the remark that the old Grand Trunk Railway would stand behind this enterprise. We have not been content that they shall stand behind it. We have required, and they have readily consented, that they shall be in it and of it and form the whole thing. We think it is to the advantage of this country to have the Grand Trunk Railway extended both east and west, and we think it is far better that this enterprise should be in the hands of the old Grand Trunk Railway than of promoters who could be characterized as irresponsibles. It is only within the last few days that we have had the views of hon. gentlemen opposite themselves, but we have been led to believe by criticisms in the opposition press that the ground upon which they expected to attack this scheme was that some promoters would make a great deal of money out of it. Well, if there be any means by which a promoter can make money out of this enterprise, I have yet to discern it in the Bill. Never was there a railway contract submitted to this parliament behind which there were men in a better position to undertake the work, and who gave better guarantees of their good faith and ability to carry it out.

We have required that the Grand Trunk Railway shall not only be behind this undertaking, but in it and of it. Every joint stock corporation is controlled by those who hold the common stock. So long as the interest on the bonds is paid, no one can take that control from them. We have provided that practically the common stock of this company to the full extent of $25,000,000, shall be held, not by promoters, not even by the old Grand Trunk Railway officials individually, but by the Grand Trunk Railway of Canada itself. There are 250,000 shares of commons stock, of which 249,000 will be held by the Grand Trunk Railway, in its corporate capacity, and 1,000 only are available for distribution among those who may be qualified as directors. I want to know where there is a chance for promoters when they can only hold 1,000 shares against 249,000?

We are not much concerned as to what price the Grand Trunk Railway pays for the stock. That has been a subject of discussion, but I do not attach great importance to it. If the Grand Trunk Railway acquired that stock at a comparatively small sum and afterwards floated it on the market at a higher sum, that would be a proceeding which might be open to objection. But the Grand Trunk Company must not only take this stock, but hold it for all time; they cannot put a dollar of it in the market. It is absolutely impossible to buy a share of that stock; it must be held by the Grand Trunk Railway Company itself and no person can buy or sell a share. Where, then, comes in the chance of speculation? We are not so much concerned, I say, as to what the Grand Trunk pays for it. They have to make some arrangements, and this stock will be one of the elements of the

transaction, one of the elements by which they must make some arrangements to raise a large sum of money. Be it noted that the Grand Trunk Pacific Railway Company must pay at least one-quarter of the cost of the road from Winnipeg to the Pacific. We do not guarantee the cost of that road. We do not pay for that road, as some seem to imply; we do not guarantee the cost of that road. We do not even guarantee a portion without limit. With respect to the western division, we guarantee three-quarters of the cost, not exceeding a certain sum. Our guarantee—not the cost of the road, but our guarantee—is limited to $13,000 per mile on the prairie section and $30,000 per mile on the mountain section. If the road costs less than the figures on which these guarantees are based, we only guarantee three-quarters of that cost, but if the road costs more—and some hon. gentlemen argue that it will be very expensive—we do not increase our proportion, but the company must provide the increased cost without limit so that the road may be finished. The Grand Trunk Pacific agrees to do these things. The next point to be considered, is how are they going to do this? The old company—Grand Trunk Railway Company of Canada is to obligate itself, it is to guarantee the bonds of the new company in order to accomplish these purposes—the old Grand Trunk with its $150,000,000 of assets, quoting again from the opposition paper, guarantees the bonds of the Grand Trunk Pacific for whatever is necessary to make up one-quarter of the cost of construction. They afford this assurance for the new undertaking. It is a new company nominally, but the more you look into it, the more you see that it is one company. I do not object to the statement made by the ex-Minister of Railways and Canals when he said that these two companies were all 'the same red-headed boy.' We are rejoicing in the fact that these two companies are practically one, and that when we submit this project to the people of Canada, we are not submitting a project of irresponsible promoters, but a project endorsed not only by the good will and pious resolve of the Grand Trunk, but the Grand Trunk put their guarantee and all their resources at the back of the undertaking of the Grand Trunk Pacific. And every dollar they put into the enterprise in that way becomes mortgaged to the government as its own security; and every man who puts a dollar into it in that way does it upon a second mortgage and with the full knowledge that the government holds the first mortgage. When you have a man proposing to invest some money in an enterprise on a first mortgage and when he is hesitating to do it another comes along and says: If you put in $15,000 on the first mortgage. I will put in $5,000 more on a second mortgage, that is a pretty good guarantee that the property is solid and reliable. Everybody connected with the Grand Trunk fully realizes that the government has the first mortgage on the whole undertaking, and every dollar put into the enterprise in the way of guarantee by the Grand Trunk in any way, is subject to the first mortgage of the government. Not only must the Grand Trunk, through this stock or by the issue of guarantee bonds, or in some other way—not only must this company, with the co-operation of the old company, provide one-quarter of the cost of the western division of the road from Winnipeg to the ocean, but it must provide $20,000,000 worth of rolling stock at its own cost. Not a penny of the guarantee of the government goes into this. The Grand Trunk and the Grand Trunk Pacific by their association must not only provide the money for one-quarter of the cost of the western road, or more if the cost of the road is higher, but they must provide at their own cost, raising the money as they may, $20,000,000 for rolling stock. We have heard a question raised with regard to the position of the rolling stock. When the Prime Minister (Rt. Hon. Sir Wilfrid Laurier) spoke of it the other day and referred to this $20,000,000 of rolling stock, the hon. member for South Lanark (Hon. Mr. Haggart) said it was a remarkable thing that only $5,000,000 of this was assigned to the eastern division, which would have the greater length, while $15,000,000 went to the other portion of the road. I think the hon. member rather missed the purpose of the assignment. It is not an assignment for operation; it is not that only $5,000,000 of stock will be operated on the eastern division. The eastern division is in close touch with the existing Grand Trunk Railway, and, no doubt, the rolling stock of the two will move freely to and fro; the rolling stock of the old Grand Trunk will be used on the new line more freely on the eastern than on the western portion. There is no limitation to the use of the whole $20,000,000 of the rolling stock—it may be used over the whole road. But this $5,000,000 of rolling stock is ear-marked for the eastern division, as special security for the rental and operation of the eastern division. It becomes liable with the other $15,000,000 worth as security to the country for the guarantee given, but beyond that this $5,000,000 becomes a special security for the operation of the eastern portion of the road. That is, we especially assigned this $5,000,000 worth of rolling stock to the eastern section, not because there is expectation that it will be used only there, but because, whether it is used on that section or goes elsewhere, it will be ear-marked practically as the property of the government of Canada, mortgaged to the government not only for the general obligation of the company under this contract, but particularly for the operation of the eastern division. I think, Sir, that in these transactions the Grand Trunk Pacific Railway and the old Grand Trunk Company have given us

ample evidence of their good faith. And when I add that, in addition to all this, the government will have one director on the board during the time that this arrangement continues, I think it will be seen that all reasonable precautions have been taken to protect the government's interests.

I come now to the question of the standard of the road. As to the eastern division, no special standard is made, because that is practically under the control of the government. They have to build the road and they can make it any standard they please, if they agree with the Grand Trunk. The Grand Trunk and the government will have a common object. The government will desire to build as cheaply as possible in order to save money, and the Grand Trunk will want to build cheaply, because they have to pay the interest. But the Grand Trunk will desire it to be built substantially and there is no reason to doubt that the government and the company will come to an understanding as to the standard of the eastern division. As to the western division, the standard is to be remarkably high. It is to be that of the old Grand Trunk between Montreal and Toronto. Now, I regard that, upon the information I have received, as one of the very highest standards of railway construction on the continent of America. I do not think we could have selected in the Dominion a better standard than this. In a railway contract there are two ways of dealing with the character of the road. One is to make out elaborate specifications providing exactly how it is to be constructed. That may be conveniently done in the case of a short line. But, in the case of a long line, like this, it is better to have a standard accepted, and let the construction be tried by that. When the Prime Minister read from the contract that the standard was to be that of the Grand Trunk Railway between Montreal and Toronto so far as that was practicable in the case of a new road, hon. gentlemen opposite laughed as if the qualifying words materially altered the condition. I am sure that on reflection those of the hon. gentlemen who have special knowledge of railroads will see that those qualifying words are absolutely necessary. It would be quite impossible by the expenditure of any money to produce a railroad equal to the Grand Trunk between Montreal and Toronto within the space of five years. There are some things that can come only with the maturity of time, and a fully completed railroad is one of them. All you can do is to create a standard to which you will move up all the time; you seek to get a railway which, on final completion will conform to the standard. It is in the case of a landlord renting his house. The house is finished and the tenant occupies it. In a year or two the house becomes seasoned, and the landlord can do things that he could not do in the beginning.

Now, we know that in the construction of a road, in the anxiety to get a railroad built, some things are done which may be regarded almost of a temporary character. In one place you put in a trestle which, five or six years later you will fill up and make a permanent road. In another place you put in a small wooden bridge; in time when it commences to weaken you put in a steel structure, and so on. The road is not finished when its nominal completion takes place, but it may be finished as time progresses. The qualification which is put in in that respect does not differ from the condition made in the case of the Canadian Pacific Railway. We had a standard there which was the standard of the Union Pacific Railway of the United States, but not of the Union Pacific Railway as it stood at that time. It was the standard of the Union Pacific as it was first constructed. I understand that the standard maintained between Montreal and Toronto is a higher standard than that which was required in the contract with the Canadian Pacific Railway. At all events, any railroad man will recognize that you cannot, in the construction of a new road, provide that it shall come up to the condition of an old and matured railroad; but you can lay out your plans and do all that it is possible to do to that end, and as time goes on you gradually bring the road up to that standard.

Well, we hear some hon. gentlemen opposite say that the government would have to maintain the eastern section—coming back to that for a moment. Sir, that is not correct at all. The government provide that the company shall not only maintain the western division which they are to build, but they shall maintain the road which we lease to them in the east. We will give them a completed road so far as any new road can be made so; but as years roll on, if the government, being in the same position as the landlord to whom I referred, desired to make improvements on that road, if they desired, having regard to the permanency of the road, to take out a wooden bridge and put in a steel structure, if they desired to fill up a trestle, or do one of the many things which hon. gentlemen opposite who are familiar with railways will understand better than I do, then the government will have the right to do that in the way of betterment; but it is entirely a matter of discretion for the government, and if they do that the cost of it is added to the capital of the road, and the Grand Trunk Company have to pay interest on that capital.

A point of some importance will be the dividing line between these several sections. The point of division between the eastern and western portions of this road is of course clearly defined. The government will build from the city of Moncton to the city of Quebec and then on to Winnipeg. From Winnipeg the western division of the

road to be built by the company begins, and runs out to the Pacific ocean. But there is to be a susdivision of the line, because the guarantee is only to be $13,000 per mile on what is called the prairie section, while on the mountain section the guarantee is to be $30,000 per mile. Now, the point at which the prairie section ends and the mountain section begins is not determined in this contract. It did not seem possible to determine it, but the contract sets forth the principle upon which it is to be determined in the event of any dispute. The point of division will depend to some extent upon the location of the road. We think, and I am going to assume for the purpose of the remainder of my speech, that that road will enter the mountains through the Pine River pass. If it should enter by any other pass the effect would be a difference or variation in the distance as respects the mountain section and the prairie section. The point becomes of some importance, as I have said, because we only guarantee $13,000 a mile on the prairie section, and the $30,000 a mile begins with the mountain section. The provision is made that engineers should determine the point at which the facilities of easy construction incident to the prairie road should end and those of the more difficult section of the mountain section shall begin. That is to be determined by the engineers, and in the event of a dispute, it will be a matter of arbitration. But it is purely an engineering question, and therefore we do not think we can do more than refer it to the engineers.

Much has been said in the discussion regarding the running powers that are given to the government, as respects the Intercolonial, and to other companies. I think we may fairly claim that by this proposal we practically extend the Intercolonial Railway from the city of Quebec to the city of Winnipeg. We provide that the government, as the owners of the Intercolonial, shall have the right to run its trains over this road which shall be leased to the Grand Trunk Company, and we may, if we wish, run our trains out to Winnipeg. We may even run them further than that, because even over the company's western line there are running powers. But inasmuch as the company will be our lessee as respects the road from Quebec to Winnipeg, we can provide for the running of Intercolonial trains, if we so desire, from the city of Halifax or the city of St. John out to the city of Winnipeg. Now, it has been said by some that there can be no such running powers as are there described; other gentlemen have said there can be. To my mind it becomes largely a question of economy. I do not think there is any difficulty in doing it, it is a question of whether it will pay to do it. The Intercolonial will have a perfect right to apply to the controllers of the Grand Trunk Pacific and say: We want to run a train daily from Halifax or from St. John, or a joint train as they do now; but instead of stopping at Quebec, we propose to run over this leased line out to the city of Winnipeg, and the Grand Trunk Pacific Company would be obliged to give us the privilege of running that train over the road upon fair and reasonable terms.

Now, it has been shown in this discussion that running powers are exercised over lines of some considerable length. If you can exercise running powers over a line 100 miles long, then, if you duplicate your force, you can run over one 200 miles long, and so on, just as often as you duplicate your force. It might not be economical to do so, unless the amount of traffic which you expected to do was large. But you might have, as in the case of the Intercolonial, to establish all along the line coaling stations, water stations, and all the other facilities and necessary attendants. It might pay you to do that as is done to-day, I understand, by some short lines. Unless the volume of business is very large I do not think it would pay the government to do that. But the knowledge you have of the right to do it and the power to do it, gives you a leverage in dealing with the Grand Trunk Company to make fair and reasonable terms for the interchange of traffic, and that we regard as the strong feature of this agreement. There is a running power and there is something which is not exactly a running power but which is described in this contract as haulage rights. That is to say, that if the Intercolonial should bring its train up to Quebec, and if it did not think it was economical to exercise its running powers by sending that train out to Winnipeg, it would turn over the train to the Grand Trunk people at Quebec, deliver the train to them in a perfect condition, and provide that that train, without breaking bulk, should be hauled out to the city of Winnipeg. You might not send the same locomotive, you might not send the same officials, you might deliver only the train over to the Grand Trunk Pacific Company; but the knowledge you have of the power to demand that right, gives you a leverage whereby you can make satisfactory arrangements with the Grand Trunk Pacific Company to carry your train over with their own locomotives and with their own staff, if, in your judgment, that would be a more economical proceeding than the other. I believe that is practically the way the thing will work out. I do not think, though, it would be economical to do that, but we have the power to do it, and the possession of that power will enable us to make fair and reasonable terms for the exchange of traffic.

We have been dealing with the main line, and reference has been made here by several hon. gentlemen to the question of branches. One hon. gentleman says: Why haven't you a branch to this point? Why haven't you a branch to another point? Why

haven't you a branch to this city ? That, Sir, is an appeal that is made from a sectional point of view. A city along the line within reach of this road, or within the possibility of reaching it, might easily be disturbed by being told that it is being sidetracked and shut off without any branch. You must first build your main line before you build branches. You first build your trunk line, and when that is built your branches will go out in all directions. Branches will undoubtedly be constructed out in the far west. Branches will be constructed to reach settled communities which are not on the main line. A branch will undoubtedly be constructed to reach Lake Superior. A branch will in all likelihood be constructed to connect with the Ontario government road at Temiscamingue, giving connection with North Bay and the whole Ontario system of the Grand Trunk Railway. A branch will undoubtedly be constructed as we come further east to reach the city of Montreal. A branch will undoubtedly be constructed, or may be constructed, if the Grand Trunk Railway recognize the need, to the city of St. John. I think if it is their desire to reach St. John by a quicker line than by way of Moncton, they can have a branch from Chipman to St. John, either by constructing a new road or by acquiring the road now there. The air-line of this road from Quebec to Moncton line will pass within measureable distance of Chipman, and engineering conditions may oblige the line to go to the village of Chipman. Even if it should not go to Chipman, connection between the main line and Chipman will be very easy, and there is no doubt that if the argument that has been advanced in favour of a quicker line to St. John by way of Chipman is found to be strong enough, the branch will be built to St. John by that route. While all these questions are important, no doubt, to the communities to be served in the different sections of the country, they can wait for the present. We can build the main line and then take up the question of branches as different communities call attention to them.

There is another view of the question, and that is the truly national character of this line. The old Grand Trunk Railway has never been, in the best sense of the word, a national line. I find no fault with the company for that. The old Grand Trunk Railway was built before confederation, and at a time when Portland seemed to be the most convenient port for the connection between old Canada and the ocean, and the Grand Trunk Company invested large sums of money in this connection at Portland. They would naturally be inclined to utilize these terminal facilities at Portland. I do not blame them for that. But the Grand Trunk Railway has had to recognize the fact that the Canada of that day is not the Canada of the present time. I recall the fact that when the Intercolonial Railway was completed and when it was proposed that we should have a measure of independence of the United States by having steamers take our mails from Halifax instead of from Portland, there was quite an agitation before it was brought about. I remember that many good people of the upper provinces said: You cannot take the mails in that way, you cannot get there in time, you cannot rely on your connections. These were some of the reasons which were urged why, notwithstanding the union of the provinces, notwithstanding that we had built the Intercolonial Railway and had put the road into operation, we should still send our mails through the American port of Portland. It seems to us a simple idea to go to a Canadian port for our mails, but that idea was regarded as a very grave and serious one at that time, and there were many men in the upper provinces who shook their heads gravely at the idea that we should take our mails through Halifax. But the mails came through Halifax, and they have continued to come through Halifax throughout the winter season. I have from time to time had conversations with gentlemen connected with the Grand Trunk Railway Company, and I have tried to point out to them that the time had come when the Grand Trunk Railway should take a more truly national position. I have tried to point out that the changes brought about in the condition of Canada were such that even if they had to sacrifice some interests at Portland, if they expected to receive the sympathy and co-operation of the Canadian people in large transactions, they must respond to the national aspirations of the Canadian people, and recognize the wishes of the Canadian people. Again and again, as opportunity has occurred, I have humbly ventured to point out these things to gentlemen connected with the Grand Trunk Railway. Well, I rejoice to know that not by virtue of anything I have said to them, but by virtue of this scheme which we are now presenting to parliament, the Grand Trunk Railway has recognized its national obligation, and has declared its intention to be a truly Canadian road. We cannot ask it to give up its Portland connection. It has its investment there. Still, part of its trade will undoubtedly go there. We must be reasonable. But we have said to the Grand Trunk Pacific Railway Company : If you come forward and ask for aid for a great enterprise, if you ask us to pledge the money or the credit of the government of Canada to assist you in this enterprise, you must put it upon a ground which will enable us to go before the people in any province of this Dominion and say that the scheme we are proposing to them is not a sectional or local scheme, but a scheme which appeals to the people of Canada from ocean to ocean as a truly national one. This we have obtained in the contract which is now before us. The Grand Trunk Pa-

cific Railway Company in one of these sections, has stipulated that all the traffic that occurs on that road and on its branches shall be, when not specifically routed elsewhere, carried through Canadian territory or by Canadian inland ports or to a Canadian port on the ocean. My hon. friends on the other side of the House have rather scoffed at this. They have asked what guarantee we have that they will do this. Well, I grant you that it is somewhat difficult at times to bind a railway company. I have not more confidence than most people in corporations; still, I do not believe that gentlemen connected with corporations generally are pirates, and I do not believe that the people connected with this company have deliberately entered into this obligation with any intention of evading it or deceiving the government. I believe that the obligation they have given to us was given to us in good faith, that they have accepted the national responsibility which this condition involves, and that they mean to live up to the contract, and I am satisfied that we can find means if necessary to make them live up to it. We may be told that we have not provided enough. Fortunately, we have a good test. We have the pleasure of knowing what hon. gentlemen opposite consider is a sufficient provision to make of that kind. While this matter was still occupying the attention of the government, while we were working out the details of this measure, there was before the Railway Committee a Bill respecting the Grand Trunk Pacific charter, and when it came from the committee to this House we had the pleasure of listening to a resolution moved by an hon. gentlemen opposite setting forth what kind of guarantee would be necessary to secure the national character of this road, what kind of a guarantee would be necessary to secure the shipment of this trade through a Canadian outlet. The hon. member for King's, N.B. (Mr. Fowler) moved a resolution in this House and it was voted upon. This is what hon. gentlemen opposite have declared is a proper way to obtain this safeguard. They say: Put this clause, not in the government contract, but put it in the Grand Trunk Pacific charter, and all will be well. Here is the clause:

That the order for the third reading of Bill No. 64 be cancelled, and the Bill be referred back to the Committee on Railways, Canals and Telegraph Lines, in order that the following section may be added to the said Bill—'All freight originating in Canada, and received along the line of the Grand Trunk Pacific Railway, intended for export across the Atlantic, shall be shipped through Canadian ports, when the route is not otherwise specially indicated by the shipper; and that the Grand Trunk Pacific Railway shall carry all such freight to the eastern Canadian seaboard as cheaply as to any American port on the Atlantic seaboard.'

That is what hon. gentlemen opposite said should be done. Well, at the very time that these hon. gentlemen were preparing this as the embodiment of what was necessary to secure that purpose, we were placing not in the charter, but in the contract itself a clause to serve the same purpose, and there is not a line, or a sentiment, or a word in it that is not expressed, and better expressed, in the contract we have made. I have read the proposal of the hon. member for King's, N.B. (Mr. Fowler), and I have no doubt the House has carefully taken in its purpose. Permit me to quote the provision in section 42 of the contract and the section following:

42. It is hereby declared and agreed between the parties to this agreement that the aid herein provided for is granted by the government of Canada for the express purpose of encouraging the development of Canadian trade and the transportation of goods through Canadian channels. The company accepts the aid on these conditions, and agrees that all freight originating on the line of the railway, or its branches, not specifically routed otherwise by the shipper, shall, when destined for points in Canada, be carried entirely on Canadian territory, or between Canadian inland ports, and that the through rate on export traffic from the point of origin to the point of destination shall at no time be greater via Canadian ports than via United States ports, and that all such traffic, not specifically routed otherwise by the shipper, shall be carried to Canadian ocean ports.

Here is an absolute undertaking on the part of this company that they will do everything that any reasonable man would ask in this connection. Ah, but we are told, they may dodge and evade this, you will allow them to ship traffic through American ports which is specifically routed; you don't prevent that. Neither does the motion of my hon. friend (Mr. Fowler). He recognized that the shipper can route his traffic as he pleases. The suggestion is thrown out that this company will humbug us and deceive us, and will take care that the freight is specifically routed so that it will not come to Canadian ports. That is the suggestion which has been made by some hon. gentlemen, but what does section 43 say?:

43. The company further agrees that it shall not, in any matter within its power, directly or indirectly advise or encourage the transportation of such freight by routes other than those above provided, but shall, in all respects, in good faith, use its utmost endeavours to fulfil the conditions upon which public aid is granted, namely,—the development of trade through Canadian channels and Canadian ocean ports.

In this we have the fullest possible guarantee that can be given, we have every guarantee that was included in the resolution that hon. gentlemen opposite voted for, but expressed more fully, more thoroughly, and more effectively. In the first place, the company guarantee in good faith to do this thing; in the second place they guarantee that they will not evade it in the way suggested, and in the third place, they put away temptation to divert

the traffic by providing that the rates via Canadian ports shall be as low as the rates by any American port. I admit, Sir, that if the rates were not to be the same there might be a temptation, for in this export business I have no doubt that men will shape their actons on business principles; but here we distinctly provide that no temptation shall arise for diverting this traffic, and we say that the rates via Quebec or Montreal, or St. John, or Halifax, shall not be greater than the rates which are charged at the same time by that company for export by way of the United States. I venture to say that in no contract that has ever been submitted to parliament have there been such guarantees given in respect to the handling of this export traffic.

Some hon. MEMBERS. Hear, hear.

The MINISTER OF FINANCE. My hon. friend the leader of the opposition asked: What penalty was there provided? Well, there are all the penalties that there were in the opposition clause. These gentlemen opposite had thought this thing out, and they did not think penalties were necessary. But in this agreement there are penalties, and my hon. friend (Mr. Borden) who is a lawyer, knows perfectly well that where the company have agreed to do this thing, if they deliberately violated their agreement, or if they evaded it in the way that has been suggested, there would be methods found to compel them to carry it out. My hon. friend could find these methods very readily, and I am sure that he could bring the company to justice. I say that they could be so worried and harassed by legal proceedings for the evasion of that agreement, that it would not pay them to do it, even if we could believe that they were deliberately resolving to break faith with the country. I would like to have my hon. friend (Mr. Borden) employed to punish the company, for I am quite sure that he would find a way to do it.

Now, some comparisons have been made between this contract and the contract made with the Canadian Pacific Railway. I certainly shall not refer to the Canadian Pacific Railway contract with the intention of casting any reproach upon the policy of the previous government, but by way of illustration, I may make some comparisons in order that the public may more clearly understand the nature of the contract we have made. In the first place, it is worth remembering that the contract that was made with the Canadian Pacific Railway Company was not a contract for a transcontinental railway at all. It was a contract for a railway which began about 850 miles from the Atlantic tide water. This is a contract from ocean to ocean; this is a contract which begins at the ocean at Moncton—because, although Moncton is not a deep water port it is an Atlantic port, and the men who start from Moncton on the trains will hear the murmurs of the ocean as the Bore comes in from the Bay of Fundy. This, Sir, is an ocean to ocean contract; a contract for a truly transcontinental railway, and the other was only a contract for part of a transcontinental railway. Let us remember that.

Mr. BORDEN (Halifax). This is a pro-Boer contract.

The MINISTER OF FINANCE. Oh, no. My hon. friend must not cast any reflection upon that Bore of Moncton. It is one of the things which recommend it, and under this contract we will take thousands of people there to see the marvellous waters of the Bay of Fundy.

Some hon. MEMBERS. Hear, hear.

The MINSTER OF FINANCE. Under this contract, let us bear in mind that we are giving nothing like the grants and exemptions that were given in the Canadian Pacific Railway contract. In the Canadian Pacific Railway contract you gave 25,000,000 acres of land, the value of which I shall not enter into now. You gave to the Canadian Pacific Railway Company in cash or by way of completed railways $62,000,000. It is worth while remembering, and it is a very important point, that we are giving no exemptions whatever from taxation to this company. We are not giving them an acre of land except for the purposes of the railway. The Canadian Pacific Railway Company not only got the land necessary for railway purposes, but great tracts of land were donated to them besides. I am not arguing whether that was wise or unwise, but I am pointing out that under this contract we do not give an acre of land to this company except that we give them the right of way through any government lands, and also whatever lands that may be necessary for railway purposes. Then the Conservative government gave to the Canadian Pacific Railway exemption of taxation in the way of customs for a large portion of the things they needed for the construction of the road. For many years after the Canadian Pacific Railway was constructed, under the term of 'original construction,' the Canadian Pacific Railway received either free admission of goods at the customs, or they received what was still more, bonuses to compensate them for the goods that were made in Canada. We give no exemption of any sort in this contract. In the case of the Eastern road, the government will build it themselves and it will stand in that respect exactly like any other government work. If the government imports materials for the Intercolonial Railway to-day the government do not go through the form of paying money into the customs house. If the government find it necessary to import any materials for the construction of the road from Winnipeg to Moncton, they would, in accordance with

the practice, not go through the form of entering the goods at the customs house. But, Sir, as this road is to be built by contractors, and the contractors will have to tender for the work, they will receive no exemption whatever. Therefore any man who has anything to do with the construction of that road, if he imports materials, he will have to pay the duty, and if he buys the goods in Canada the Canadian manufacturer will have the benefit of the duty in so far as that is of any advantage to him. If you could imagine such a thing as the government bulding this road themselves, and if the government were importing materials, they would, as in the case of the Intercolonial Railway, not enter these goods at the customs house. They would be for the government service. But I say that even there we do not, as respects the eastern division, take any advantage of that, because we provide that it shall be built by tender and contract, and the contractors will not have any exemption, but will have to buy the goods in Canada or else pay the duties if they see fit to import them. When we come to the western division, we deal with the company. They will build the road, and will not have any exemption in any shape or form. They will not be at liberty to import a penny's worth of goods without paying the same duty that is paid by any private individual. The grant in the way of exemption from customs duties in the contract with the Canadian Pacific Railway Company was a vast privilege. I do not attempt to compute it in money, but I am sure that it would run into a vast sum. We do not give any exemptions of any sort.

Now, I come to the financial side of this question. We propose to build, by the government, through the intervention of a commission, from Moncton to Quebec, a distance which I have estimated at 400 miles. You will remember that I showed that an air-line, with an ordinary allowance for curvatures, would make a distance 368 miles; but in order to be on the safe side, I have put it at 400 miles. I am advised by competent authorities that, from the general knowledge possessed of that country, that road can be built at a very moderate cost. From Quebec or Lévis to near the point where the railway will leave the province of Quebec it can be built at a comparatively low cost. There is some expensive work in passing from the province of Quebec into the province of New Brunswick, and as you get into the province of New Brunswick, there are some portions which are moderately expensive. But I am informed that you can build a line through that country with maximum grades no less favourable than those on the Intercolonial Railway—though that is not as good a road as my hon. friend from North Norfolk (Mr. Charlton) wants—for $25,000 per mile. On 400 miles that would be $10,000,000.

From Quebec to Winnipeg I estimate the distance to be 1,475 miles. That is a larger mileage than some of my hon. friends have given. I am not trying in these cases to make the mileage small. I am advised by an engineer who has measured the distance, that in putting it at 1,475 miles, I am making a liberal allowance. I put that down at $28,000 per mile, which I am advised is a fair estimate. Remember that in both cases we are speaking of the road only, without equipment. That would make the cost of that section $41,300,000. Taking these two together, we have the estimated cost of the eastern division at $51,300,000.

Now, according to the principle which is laid down in the Railway Act, the interest paid during construction is a part of the capital. Every railway company constructs its road in that way. Therefore any money that we may pay during the course of construction is of course chargeable to the capital account, and the interest thereon is also added to capital. So that when the road is completed, it will represent in capital, not only the actual money which we have put into it, but also the interest which has accumulated in the meantime.

Hon. Mr. HAGGART. You have not got the interest during construction separate?

The MINISTER OF FINANCE. The difficulty there, as my hon. friend will see, is that you can hardly tell what amount will be expended in each year. I have had a rough estimate of that made, and it can only be a rough estimate. In the first year, we would spend only a very small sum. After that the expense would increase very rapidly. We would spend $12,000,000 or $13,000,000 a year. Distributing the amounts over the period of construction in that way, I estimate that at the end of the period, instead of the capital of the road standing at $51,300,000, it would stand at $54,609,676. The annual interest on that sum would be $1,638,290.30. We would be out of pocket that interest for seven years. There is another period of three years to be considered during which the company has to pay us interest if the road earns the interest. If the road does not earn the interest, then any deficiency that may arise is an addition to capital account. Although we lose our interest on that portion for the time being, in the ultimate adjustment we get it back in the shape of addition to the capital account on which the company would pay interest. Therefore what we are out of pocket is just seven years' interest on the amount of the capital as it would stand on the completion of the road.

My hon. friend the Prime Minister in the course of his speech said that we could meet the responsibilities of this contract by setting aside the present year's surplus which is roundly stated at $13,000,000. Hon. gentlemen opposite have thought that was a rash statement. I am convinced that the figures I shall be able to give to the House

will show that my hon. friend's statement is substantially correct. If at the close of the year, when we are making up the accounts, we lay aside the surplus which will have accrued as stated in the budget speech, and subject to the improvement which we hope will take place in the final adjustment of the accounts, and if, instead of using that surplus to build railways elsewhere, to reduce our debt, or in the many other ways in which we could use it, we place that $13,000,000 in the hands of financial managers, I hope to show the House that that money would meet every financial responsibility which the government of Canada have assumed under this contract. How is this brought about? We have to consider not the mere multiplication of interest for seven years. What we have to consider is what use we could make of that $13,000,000. You have to consider the present value, as ascertained by actuarial calculation, of seven years' interest on the money we invest or the guarantee we give. In the case of this sum of $54,609,676, which will represent the capital account of the eastern division at the time of its completion, the annual interest is $1,638,290, and we will be out of pocket that interest for seven years. Now, if you apply to any actuary of repute in the Dominion and ask him what sum of money it will be necessary to provide to-day to meet the seven years' interest as it shall accrue, he will tell you that for the sum of $8,853,502 you can provide for those seven years of interest. That is to say, if, instead of managing our money ourselves, we turned it over to an insurance company or a trust company, or any other company which deals in annuities, and it invested the money on the basis of three per cent interest half-yearly, it would provide for that seven years' interest if we would give them now the sum of $8,853,504. Whether the calculation be right or not, hon. gentlemen can have it submitted to the test of any actuary. What I state is—talking of what we might do with our surplus of to-day—that we might out of that surplus take $8,853,000, and managed in the way I have described, pay our seven years' interest, as it shall accrue from time to time on the construction of the eastern division of this road.

Hon. Mr. HAGGART. You are leaving out the Quebec bridge.

The MINISTER OF FINANCE. I am coming to that. I am speaking of things which are more definite. There is an indefiniteness about the Quebec bridge, but I propose referring to that later on.

The western division is divided into two sections—the prairie section and the mountain section. As respects the prairie section, we assume no obligation whatever, except the guaranteeing of the bonds, but my arguments are based upon the assumption that the Grand Trunk Pacific Company will carry out its undertaking, and I think that it has given a sufficient guarantee of its ability and good faith in the large sums it is putting into the enterprise. Assuming that the Grand Trunk Pacific Company fulfils its obligations under the contract, and that we shall only be called upon to do exactly what we have agreed to, we assume no obligation in respect of the prairie section, because the Grand Trunk Pacific Company agree that, from beginning to the end, they will pay the interest on that section. Then, Sir, we come to the question of the mountain section. Here we meet the difficulty of determining precisely where the mountain section begins. It is necessarily an indefinite point. It is a point where the easy methods of the prairie construction end and the difficult methods of the mountain section begin. That can be only determined later on by the engineer, but from the best information we can receive, it is probable that the easy facilities of construction which are afforded by the Pine River pass will lead to the railway being constructed through that pass. Assuming that the road will go through that pass, we are able to form a correct estimate as to what will be the particular point where the prairie construction would end and the mountain section begin. I am advised that should the road be constructed through the Pine River pass, the mileage on the mountain section will be 480 miles, on which we will provide a guarantee to the extent of 75 per cent on the cost of its construction, but no matter what the road may cost, our guarantee is not to exceed $30,000 per mile. We only guarantee our three-fourth, which may be less than $30,000 per mile; but if it costs more the company must pay the difference. We do not guarantee at the outside more than $30,000 a mile, and, estimating the length at 480 miles, our guarantee cannot exceed $14,400,000. On that sum the interest during seven years is to be paid by the government, and during another period of three years it is dealt with in the way I have already described. All we are under obligation to pay is seven years of that interest. At the expiration of the seven years, the company will pay its own interest, so that we will be out of pocket seven years' interest on the mountain section, or interest on a total of $14,400,000, being 480 miles at $30,000 per mile. We have now to ascertain, by the same process as I applied in the other case, how much money we would need to provide out of our surplus to meet this seven years' interest on the mountain section. I find, by actuarial calculation, obtained from an actuary, that the present value of that is $2,334,575.90. That is to say, if we take $2,334,575.90 and lay it aside now out of our surplus, under the same process as I explained before, that will provide for the payment of seven years' interest on the mountain

section, as that interest shall accrue from year to year.

My hon. friend (Hon. Mr. Haggart) has referred to the Quebec bridge. At present that bridge is in the hands of a corporation which intends to constitute a bridge and terminal company. They expect that the traffic over it will enable it to pay a fair interest on the capital invested. We have already assisted it to the extent of $1,000,000, and I assume we will have to grant further aid. Whether the Grand Trunk Pacific Company had made a contract or not, whether we ever should build a transcontinental railway or not, the Quebec bridge has become a national undertaking, and in one form or other this government has to see it through. As to what the government may do later, I am not in a position to say. Whether it would be wise to buy the bridge outright and make it part of the government system, or let the bridge company continue to manage it, will have to be arranged later on. But some part of the cost of that bridge is properly chargeable to the Grand Trunk Pacific Railway. Five or six companies will use it—the Intercolonial Railway, Canadian Pacific Railway, the Quebec Central, the Grand Trunk Railway and the Quebec and Lake St. John, and there are other railways the crossings and approaches, will cost it. I understand that the bridge proper, the crossings and approaches, will cost about $4,500,000. My hon. friend from Jacques Cartier (Mr. Monk) makes the cost $5,000,000, so that we are not very far apart. But his estimate would probably include some of the terminal facilities in the city of Quebec, which may be important as part of the general scheme, but are not essential as part of the Grand Trunk Pacific Railway scheme. What proportion of that would be fairly chargeable to this enterprise ? I am going to assume that out of what it may cost we may fairly charge the Grand Trunk Pacific Railway $2,000,000. I think that is a liberal allowance—too liberal in fact. I would not like the Grand Trunk Pacific Company to come and say that we have pledged ourselves to this figure ; but for the purposes of my present argument, we may assume that to be a fair amount. That is to say, that we will be obliged to give to the Grand Trunk Pacific Company, if they demand it, a crossing on that bridge, and that in connection with the general arrangement to provide a crossing $2,000,000 will be the outside obligation which we should charge to this scheme. Our $2,000,000 will stand as part of the cost of the railway upon which the Grand Trunk Pacific Company will ultimately pay interest in the same manner as on any other portion of the railway. For seven years we would be out of pocket the interest on that $2,000,000. Applying the same principle of actuarial calculation, we could provide seven years' interest on that bridge by the sum of $324,246. We have not exhausted our surplus yet. We have only provided some $8,000,000 for one portion and $2,000,000 for another, and there is plenty still left. If we provide further out of our surplus the sum of $324,246, we can make provision for the payment of interest on that $2,000,000 for seven years.

I add these items together. The present value, by actuarial calculation, of the cost of the seven years' interest on the eastern division is $8,853,502.47. Seven years' interest on the Quebec bridge represented by the present value, $324,246.65. Seven years' interest guaranteed bonds, mountain section, represented by $2,334,575.90. These sums making a total of $11,512,325.02. Why, we have some millions of a surplus left yet. Well, it was stated to-day in the argument that the eastern road that the government are obliged to build will be very costly. Of course, regarding the mountain section there is no possibility of increase, for our limit of $30,000 per mile is fixed and definite—but as regards the eastern section, whatever it costs we have to pay, there is no question about that. I have made an estimate of $25,000 per mile for one part, and $28,000 a mile for the other part, which estimate is backed by the reputation of an engineer of standing. But, if we are to have the high grade—perhaps I should say the low grade—road called for by my hon. friend from North Norfolk (Mr. Charlton) perhaps these estimates are not high enough. I am prepared that the millions of a balance should be devoted to the improvement of that road. I propose to add 25 per cent to the first estimate of the cost of construction of the eastern division, and so add 25 per cent to the present value of the seven years' interest of that portion of the road. That is an equivalent to an advance on the cost of from $25,000 per mile to $31,250 per mile for one part, and from $28,000 to $35,000 for the other part. That is a pretty liberal estimate, and ought to build even the fine road called for by my hon. friend from Norfolk.

Mr. CLANCY. Will the hon. gentleman (Hon. Mr. Fielding) allow me a word ?

The MINISTER OF FINANCE. Certainly.

Some hon. MEMBERS. Oh, oh.

Mr. CLANCY. Hon. gentlemen opposite ought to have a little civility and good manners. I merely wished to ask the hon. gentleman a question. He has spoken of estimates. Has he made the estimates out of his own mind, or from some data which he is prepared to lay before the House ?

Mr. COWAN. A pretty good mind to make them out of.

The MINISTER OF FINANCE. No, with all my presumption, I would not venture to make these estimates without proper information from reputable quarters. I did

not make these estimates out of my own mind. They are worth more than if they had been made in that way. Now, I submit these figures for discussion. I think there is no mistake in them. Of course, there is a possibility of mistake, but I can say with perfect certainty that they are made in good faith, and made by capable people. Adding all the various sums together—the present value of seven years' interest on the eastern section, first on the basis of $25,000 and $28,000 per mile, which is the way the figures are made up; seven years' interest on the Quebec bridge represented by its present value; seven years interest on the guaranteed bonds in the mountain section represented by its present value; and then 25 per cent addition for the cost of the eastern section to meet the views of my hon. friend from North Norfolk, and I reach this conclusion, so far as figures can prove anything: If we had a surplus of $13,725,706—and we have it and more—and if, instead of investing that in the various purposes of government, if, instead of doing the various things which the House has authorized, if, instead of reducing the debt of the Dominion as we shall do during the present year—though I do not make any great boast of that—if, instead of applying this money in any of these ways, you take that sum and give it to a trust company or insurance company accustomed to dealing with annuities, to invest it at three per cent per annum payable half-yearly, I undertake to say, on the authority of an actuary, that they could pay every cent of obligation we assume under that contract.

Mr. HEYD. Except the redemption of the bonds at the end of the fifty years.

The MINISTER OF FINANCE. Of course at the end of fifty years if we pay the bonds we take over the road. But I am dealing with the interest. What we pay is seven years' interest, and that is provided for as I have described. And as a pledge of their good faith in this matter, the Grand Trunk Pacific Railway Company agree, within thirty days of the passing of this Act, to place in the treasury of Canada $5,000,000. When was such a sum ever before offered to the government of Canada as a pledge of good faith? When the Canadian Pacific Railway contract was made, the company provided $1,000,000, and it was thought to be a large sum. And so it was. Sir, the Grand Trunk Railway Company multiplies the pledge of the Canadian Pacific Railway by five, and the amount so pledged will be in the treasury of Canada within a month of the passing of this Act.

Mr. BRODER. Will that be in actual cash or in bonds?

The MINISTER OF FINANCE. It will be in actual cash, or government bonds, as good as cash. And, while the government holds the money, we will pay the company 3 per cent interest if it is in cash, and if they deposit bonds—they must be government bonds approved by this government, bonds of some recognized government, and not of private corporations—whatever rate of interest they may bear will be paid to the company so long as that deposit remains. That money will remain until the completion of the western division—save and except $5,000,000 worth of final work on the western portion of the road—and also the full equipment of the whole road to the amount of $20,000,000. When they have so far advanced their road that $5,000,000 more will finish it, and when they make a satisfactory arrangement with the government of Canada, then this $5,000,000 that is in the hands of the government will be paid over, from time to time, as satisfactory evidence is given that the money is being put into the road for the completion of the contract. How could we ask for a better guarantee for the carrying out of a contract of this sort? I believe the announcement of this contract has been a surprise to the country. I believe it has been a surprise, above all, to hon. gentlemen opposite. They are surprised indeed that the government of to-day is able to make a contract with a great railway company like practically the Grand Trunk Railway Company of Canada with its $150,000,000 of assets, to quote again the Conservative paper. Hon. gentlemen opposite are surprised, and no wonder they are surprised when they compare what is being accomplished by this contract with anything ever accomplished before in the history of Canada. The very mention of a transcontinental road is calculated to give persons an idea of a work of great magnitude, and well it may. Even if we had had no experience in the responsibilities involved in such an undertaking, the mere mention of the work brings to our minds the thought of large responsibilities. When we think of the great sums of money paid out before to get part of a transcontinental road compared with what we are paying to-day to get a real transcontinental road from ocean to ocean, it is no wonder that there is surprise in the country. But, Sir, we give them this contract, made in good faith, not with empty promoters, not with people who are irresponsible, but with men who are the most capable railway men in Canada, with men who have given every guarantee of good faith, with men who are prepared to back their undertaking in a manner no company ever did before.

And how is it received by hon. gentlemen opposite? I am afraid the tables are to be turned. I am afraid that in the clear light of 1909 these gentlemen are going to make some of the mistakes which may have been excused in the

early dawn of twenty years ago. We have made some comparisons with the contract made with the Canadian Pacific Railway Company. I do not do that with a view of casting reproach upon anybody. No doubt some things occurred in the early history of that great enterprise, before the contract was made with the syndicate, which we all desire to remember, if at all, only with regret, for they were not creditable to the government, to the parliament, or to the people of Canada. But let that pass. When we come to the actual contract made with the Canadian Pacific Railway Company, I think it will be admitted even to-day that perhaps some mistakes were made. Perhaps there were some mistakes of location, perhaps some mistakes in the land policy, and in the clearer light of to-day we may be able to see that things were done then which had better been left undone. I am disposed to think that perhaps those things may after all have been only incidental to the difficulties of the time and to rapid construction. I for one do not hesitate to say, in the light of experience, that the Liberal party did entertain alarm and anxiety, which have been proved in the end not to have been fully justified. I for one have no disposition unfairly to criticise to-day. I frankly admit, as one who was then a young man, that I was led to entertain alarm and anxiety. To-day I say that the policy of the Conservative party, subject to these qualifications which I have mentioned, has been justified, and in that respect the Conservative party has made a record which they can look back to with pride.

But while there was some excuse for doubt and hesitation in 1871 and 1887 there is none to-day. Are these gentlemen to learn nothing? We Liberals have learned something by experience. Are these gentlemen to be as the Bourbons, who learn nothing and forget nothing? Are they to take up the role of carping criticism which they complain the Liberals took up in 1881? No, they should not do that. They should go on with us in this great movement, they should remember that the Canada of to-day is different from the Canada even of 1871 or 1881. In 1871, when the Conservative party made the treaty with British Columbia and accepted the responsibility of building the Canadian Pacific Railway, what was the condition of Canada? In 1871 the population of Canada was 3,547,000; in 1881, when the contract with the syndicate was made, the population was 4,324,000. To-day the population of Canada is put down at 5,500,000. Things which we should hesitate to do in 1871 we can undertake with confidence with the larger resources and in the clearer light we have to-day. In 1871, when they assumed the responsibility of building a railway to British Columbia, the revenue of the country stood at $19,250,000; in 1881, when they made the contract with the syndicate, the revenue stood at $29,500,000. This year the revenue will be $66,500,000. In 1871, when the contract with British Columbia was made, the total trade of Canada was $170,000,000; in 1881, when the contract with the syndicate was made, the total trade was $203,000,000; in this present year, the year just closed, the total trade of Canada was $467,000,000. In 1871, the bank deposits, including the savings banks of Canada, stood at $62,250,000; in 1881, when the contract was made with the syndicate, they stood at $99,500,000. In 1903, the bank deposits, including the savings banks, stand at $439,000,000. With these statistics, showing the growth and progress of the country, why should we fear? Why should not hon. gentlemen opposite feel as confident as we feel in this matter? I am glad to know that all the Conservatives are not going to take that narrow view which I am afraid some of my hon. friends are being tempted to take. I am glad to know that this policy is going to be supported by the great mass of the Liberal party, and I believe by many Conservatives as well. I have in my hands a public letter from one of the most respected Conservative merchants of the city of Montreal, Mr. Robert Reford, which I ask permission to read. Mr. Reford, a citizen and merchant of Montreal, does not propose to be drawn away by the cry that Montreal is to be side-tracked and not have a branch. He knows that all these branches will come as a natural consequence of the construction of this road. Mr. Reford writes as follows:—

As a Canadian, hopeful that the Dominion of Canada will one day be the peer of the United States in population, prosperity and power, I highly approve of the action of the Dominion government in introducing the Railway Act, whereby the Grand Trunk will be enabled to extend its great system through the unopened portion of our great west, now without a railway, and badly in need of one, opening up fertile farming and rich mineral districts, a new port on the Pacific for promotion of trade with Asia and Australia, and a short and much needed new route to the Atlantic and the important ports of Halifax and St. John, which should greatly benefit them, and give them a summer as well as a winter trade. The Grand Trunk has in the past done much for Canada, and that at a time when Canada badly needed it, and was not in a position to do much in the way of railway building for herself. It has not been a bonanza for its shareholders; the bulk of the original ones, I think, died without seeing a turn of a penny for their investment, consequently I think that the Grand Trunk is well entitled to liberal terms in the present contract. Why the Act should be opposed I am at a loss to understand, seeing that the opening up of such new territories and the investment of so much capital must be for the benefit of the country. It is possible that disappointment may arise in the working, building or earning power of parts of the road, but that is to be expected in such a gigantic enterprise, and should not for a moment be allowed to discourage its projection. Nothing could have been more dis-

couraging than the prospects of the Canadian Pacific at its inception, many well-informed railway people saying that it would never pay for the grease used on the axles of its cars ; and yet that railway now stands almost at the head of the earning railways of the world. From all reports the Grand Trunk projected railway runs through a much more easily built and possibly richer section of country, and there is little reason to doubt that it will prove as good a paying railway as the Canadian Pacific is, and do much in the development of Canada. Had the Laurier government ignored the claims which the Grand Trunk has upon the country, refused to listen to them, or unduly delayed the building of this great transcontinental railway, future generations would, I feel sure, have branded them as men unworthy their position as rulers of Canada, and rightly so.

I am sure that that opinion of one of the merchant princes of the city of Montreal, a life-long Conservative, is likely to be only a specimen of the opinions which many of the most broad-minded and enlightened members of the Conservative party will have when they come to study this contract and learn all that is provided in it. I feel sure that we have reason to submit this contract to the country with the fullest confidence that it will meet with public approval. Some one has said, Let the country make the railways and the railways will make the country. That is the doctrine we are proposing to carry out now. I regret that we cannot have in a larger degree the co-operation of hon. gentlemen opposite in it. I regret we have had again to-day, from an acknowledged leader of the Conservative party, a declaration that they will not support any form of subsidies. We have had that from the hon. member for Toronto West (Mr. Osler) two or three years ago in his reply to the budget speech. We have it renewed to-day. Sir, we take issue with those hon. gentlemen. There are times when subsidies are proper, there are times when guarantees are proper. In this instance, we have no subsidies to propose, we propose a guarantee. There are other parts of the country in which the Grand Trunk is not prepared to come forward with its great resources and take up railway construction; those sections of the country have claims upon us, and we must be prepared from time to time to deal with every one of those sections on their merits, and even to grant subsidies in proper cases. However that may be, we recognize the position the hon. gentlemen take. We say we are prepared to go before the people to-day with this policy in the fullest confidence that it is a policy which has been wisely considered, that its provisions will stand investigation, that the cost to the country is very moderate, and that we firmly believe we will be able to give to the Dominion of Canada one of the greatest achievements in its history.

Mr. SAMUEL BARKER (Hamilton). Mr. Speaker, I was not present when the hon. member for North Norfolk (Mr. Charlton) made his speech, but, I understand that he made some reference to running powers and sought to refute the statement made by the ex-Minister of Railways and Canals (Hon. Mr. Blair) yesterday on that subject. The hon. Minister of Finance (Hon. Mr. Fielding) has alluded to the same matter this evening, and I desire to say that I think the hon. member for North Norfolk has hardly been candid with the House in the reference he made to certain railways which are exercising running powers in Ontario. The hon. gentleman alluded particularly to the Wabash, a railway exercising running powers for a couple of hundred miles over the Grand Trunk Railway, but the hon. gentleman neglected to tell the House that while the Wabash is exercising running powers it does not do and it is not allowed to do local traffic. All that the company has power to do is to carry through traffic from the Detroit river to the Niagara river and if the hon. gentleman in his county wanted to send a ton of traffic to any point in Canada he could not send it by the Wabash although this road is exercising running powers.

Mr. CHARLTON. I beg to correct the statement which the hon. gentleman (Mr. Barker) has made that the Wabash is not allowed to do any local business while running between Detroit and Buffalo. It does local business. I have shipped by that line myself local freight and it is perfectly untrammelled in picking up business upon this line and thus competing with the Grand Trunk Railway and all other lines for local business.

Mr. INGRAM. I would like to differ from the hon. gentleman (Mr. Charlton). I know that what he says is not a fact.

Hon. Mr. TISDALE. I also know it is not a fact.

Mr. COWAN. I do know that Wabash tickets are for sale in every ticket office on the line of the Grand Trunk Railway Company.

Hon. Mr. TISDALE. A Grand Trunk Railway ticket is not good on a Wabash train.

Mr. COWAN. Nor is a Michigan Central ticket good on a Wabash train.

Hon. Mr. TISDALE. You can buy a Wabash ticket but you cannot use it on any train.

Mr. BARKER. I referred to freight. I said that the hon. member for North Norfolk could not send a ton of freight in any direction by the Wabash.

Mr. CHARLTON. I have done it. I have shipped lumber by the Wabash road to Buffalo.

Mr. BARKER. I am speaking of what can be done generally by people along the

line. If the hon. gentleman has on some exceptional occasion or under exceptional influences obtained the privilege of doing that he knows that the public cannot do it. Take the Canadian Pacific Railway running between Hamilton and Toronto, they must run through trains and they cannot do local business, and the line over which they have running powers is only 40 miles long. Take for instance the Canadian Pacific Railway running to North Bay; they cannot do local business. I would ask the hon. gentleman what earthly good running powers over the 1,400 miles between Quebec and Winnipeg would be, if the various companies alluded to by the ex-Minister of Railways and Canals which were attempting to use this railway as a common highway, as it was put in the contract, could do nothing but through business. What advantage would it be to say that a railway using this common highway could pick up a passenger anywhere ?

Mr. COWAN. The Wabash can pick up passengers.

Mr. BARKER. They have a special arrangement, but has been stopped at times owing to quarrelling about it.

Mr. COWAN. Wabash tickets are on sale in every Grand Trunk Railway ticket office on the road over which the Wabash runs.

Mr. BARKER. I am perfectly aware of that and when it does not work well the arrangement is stopped. They do it by the favour of the owning line. I would ask what value that would be over the 1,400 miles which is to be subjected to the Grand Trunk Pacific Railway Company. This is a freight line that we are talking about. Passengers are not going away north of the height of land when we have routes through more settled portions of the country for passengers. We are now talking about freight.

Mr. COWAN. Is that not a question of agreement ?

Mr. BARKER. I suppose the hon. member for Essex (Mr. Cowan) will be addressing us presently and if he will reserve his arguments until we get through, I think the debate would proceed more satisfactorily. I am simply referring to the question which was raised by the hon. ex-Minister of Railways and Canals yesterday. There is not a railway man in the whole of America who would contradict his statement that it would be utterly impracticable to exercise running powers over a long line such as this. The Minister of Finance to-day has tried to put it in a different light by saying that there may be haulage, that practically one company will haul the whole of the traffic but that is a different thing from making a common highway free to all companies and I have simply referred to the matter, because it was made a point of, that this railway could serve every company in the land. The hon. Minister of Finance dwelt at some length on the western portion, or what is called the mountain section of the Grand Trunk Pacific. The hon. gentleman did what his leader did the other day; he dwelt very fully upon all the characteristics of that portion of the line. I do not know, Mr. Speaker, that it is necessary for us to criticise anything that has been said or that may be said about that section. That section will not be constructed by the government but by the Grand Trunk Pacific Company and judging by the successful manner in which its representatives negotiated this contract with the government I think we may safely entrust them with looking after their own interests in building that part of the road. What we are anxious to know now is what information the government has as to what is called the eastern division which they have undertaken to build. We want some information about that, and I noticed to-day that the hon. Minister of Finance, like his leader the other day, in dwelling upon the portion of the road between Winnipeg and Quebec passed very lightly over many hundreds of miles, using general words and expressions and giving as little information as is possible. The hon. Minister of Finance to-day alluded to some surveys in the Nepigon district; and as to the section from Abbittibbi to Quebec we had from him some vague reference to explorations which have been going on for the last two hundred years, the result of which seems to be very meagre because a few years ago the province of Quebec caused further explorations to be made. It is quite clear that none of them have any information that would justify defining where a track could be put. The hon. gentleman dealt with the Moncton end of the line, with which, of course, he is more familiar, and he tells us that that line was practically surveyed in 1864 by Sir Sanford Fleming. He says there was a survey made in these days of the frontier line; the centre line—which he says is practically the one they are adopting to-day—and the north line. Now, it is quite true that Sir Sanford Fleming in 1864 did survey that central line, but is there a gentleman in this House or in this country who supposes for one moment, that any company proposing to build a railway would contract to lay it in a particular line based entirely upon a survey thirty-nine years old. Why, Sir, the information that was obtained by surveyors in these days was for an entirely different purpose than for the construction of the railway that is necessary to-day. Who, in 1864, supposed that the railway they were contemplating would ever be carrying the grain of the great North-west to Halifax or St. John. No such thing was ever thought of then. That cheap kind of traffic, the necessities of it, that were comtemplated at that

time, and a line that might have been considered satisfactory then would not be accepted for a moment to-day.

The hon. gentleman refers to Sir Sanford Fleming's reports. I have had the advantage of talking to Sir Sanford Fleming within a week, and that gentleman assured me, that it is not possible to obtain a line suitable for old grain traffic where the Minister of Finance says this line is to be put.

Some hon. MEMBERS. Hear, hear.

Mr. BARKER. Sir Sanford Fleming at that time reported that the best line was near to the frontier, and that the next best line in view of matters as they stood in 1864, was over the heights through the centre of New Brunswick. Sir Sanford Fleming told me that that line through the centre of New Brunswick would perhaps shorten the distance seventy miles, or perhaps a little less, as against the present line of the Intercolonial Railway, but he added that the high gradients and the curves would more than compensate for the shortening. It would be far better, he said, to continue the traffic over the present line than to attempt to send it through the centre of New Brunswick over the height of land. He said also, that if you want another line ; utilize the existing lines from Edmundson to Fredericton, or to some point in that section, and thence on east and south. These lines, he said, will give you as good a road, practically as short a road as the government is proposing to build, and it will be the best line obtainable. Why then undertake to build railways when we have them in existence to-day ? Why do we want to duplicate our railway line simply in order to run a track, as the Minister of Finance says, in an air-line to Moncton. He takes the map I suppose and runs a pencil across it and enters into a contract to build a railway. That is practically what the government is doing in this case. And yet, the Minister of Finance is astonished that any criticism should be made of such a line. He even says it is extraordinary that any objection should be made to building a line competing with the present Intercolonial Railway. Surely, if the duplicating line is not going to be an improvement on the existing line, we are more than justified in our criticism, and so far as we know and so far as the minister knows the present line is better than the one which he proposes. The hon. gentleman (Hon. Mr. Fielding) told us that it is a common thing, and that we every day see a company building a railway to compete with the railway of another company. Yes, but you never heard of a company building a line to compete with its own line, and that is what the government is doing in this case. They have an excellent line now, but they want to build another one to compete with it. If they want to go south to St. John, and east by Chipman, they have roads in existence, and surely they don't want to build new roads where ample railway accommodation already exists. The hon. gentleman cites as an instance supporting his contention, that the Canadian Pacific Railway some years ago proposed to build a line from Harvey to Salisbury near Moncton, and he thinks that because they proposed thus to get to Moncton it is an excellent reason why the government should get to Moncton. But when the Canadian Pacific Railway proposed to get from Harvey to Moncton it was because they had no connection with Moncton. The government have got a line to Moncton, but they are not content with one, they want another, and they tell us that the two cases are analogous, and that it is an excellent argument for the building of two lines by the government where one is necessary. Then the Finance Minister jumps off into what he calls the objection of the opposition to the improvement of the Intercolonial Railway, as if that, even if it were true, would have any bearing upon the question we are debating. Suppose that we most unjustly and most unfairly oppose improvements on the Intercolonial Railway, what on earth has that got to do with the question whether they are going to build another line or not ? We are treated to a long dissertation on that subject, as if the country were to be affected by such an argument. I deny that there has been any criticism or any such objection on the part of the opposition. I have been in this House three years, and I have heard all the criticisms relating to the Intercolonial Railway, and I have never heard a gentleman on this side say one word in opposition to any improvements that could properly be made on the Intercolonial Railway. No gentleman on this side of the House has ever objected to the strengthening of bridges, to the increased weight of rails, or to works of that character. But the Finance Minister thinks that because we have not swallowed everything that has been done we were objecting to improvements on the line. The truth is that the objection we were making was to the way in which the hon. gentleman was adding to his surpluses by creating pretended profits that never existed. The government instead of maintaining their line in the ordinary manner were putting down new rails and charging them to capital, when maintenance should have borne nearly all the charge. By that means the Minister was showing what a lot of money he was making and how prosperous the country was under the management of this government. Surely we had a right to point out that the hon. gentleman was not making the surpluses he was claiming. That had nothing to do with the legitimate improvement of the Intercolonial Railway. We are all glad to see the Intercolonial Railway improved and we never raised a question about it. The Finance Minister speaks of our criticism of

$1,000,000 being expended at St. John in connection with elevators and other things in order that the grain traffic should be carried to that port. But our criticism was this, that although they had spent $1,000,000 on that work, they had never carried a bushel of grain there, although the money had been expended for the very purpose of promoting the grain traffic in that direction. That is the nature of the criticism, and that is what the hon. gentleman thinks indicates a desire on our part to crush the Intercolonial Railway. I think the Intercolonial, if it could speak, would say, save me from my friends.

Then, the hon. gentleman took up that awful bugbear, the bonding privilege, which his leader dwelt upon so eloquently the other day. The hon. gentleman must know that the question of the bonding privilege has been hammered this way and that way for years, and we are just where we always were in that respect. The bonding privilege does not stay for our good. It does not exist to-day, any more than it has existed at any time, for our convenience. It does not exist because the United States are afraid of us or are friendly to us. It remains there because the New England states insist upon it, and the United States government cannot remove it without hurting their own people far more than they would hurt Canada. That is the truth of it, and the hon. gentleman knows it. What do people who understand the question show by their conduct? Take the Grand Trunk Railway Company of which we hear so much. The Grand Trunk Railway Company owns a railway in the States from Port Huron to Chicago. It owns besides several hundred miles in Michigan. It owns a long railway in the state of Maine. In Vermont it controls, practically owns, the Central Vermont from the boundary line to Long Island Sound. Some of these lines it has acquired recently. Would the Grand Trunk Company risk all that if they thought there was any danger of the bonding privilege being taken away? Are they afraid? Are they shutting off business or building other lines through fear of it? Not at all. Within two or three years they have actually taken the ownership of the Chicago and Grand Trunk into their own hands, and it is now the Grand Trunk Western. They are not afraid, and why should the hon. gentleman be afraid? Suppose the bonding privilege were stopped to-morrow, what would be the result? Would the grain traffic that is now going by Portland go that way, or would it go over the Intercolonial? Perhaps the hon. gentleman did not consider that. If the bonding privilege were stopped to-morrow, it might hurt the Grand Trunk, the Canada Southern and some other lines; but what hon. gentlemen opposite have been seeking, that the grain traffic of the country should go over the Canadian route, would be the inevitable result. It would have to go to Halifax and St. John by the Intercolonial Railway. And yet the hon. gentlemen are going to build another line through fear that that would happen. That is the argument of the hon. gentlemen. They are actually going to spend millions now; they will not wait an hour or a minute. Now is the time—we cannot wait, because this bonding privilege may be stopped at any moment, and we must be independent of the United States. If the bonding privilege were stopped to-morrow morning, would it prejudice the Dominion of Canada as regards the ports of Halifax and St. John? Not one iota. It would send the traffic that way. It is an argument against what the hon. gentlemen propose; and yet it has been bravely put forward by the First Minister and the Minister of Finance, as if it supported their view of the question. Now, I beg to say, that even if there was anything in that, it would be far better for us to stand as we are, and take the chance of having to haul the grain for a few years over that sixty or seventy or one hundred extra miles, whatever it may be, around the Intercolonial and for the country to pay the extra expense of that, and so cheapen the rates to the public, rather than go into enormous expenditures now, and pay interest in anticipation of a trouble that will perhaps never come. The hon. gentleman wants to spend this money now lest some day or other the bonding privilege will be stopped. Why not wait, if that is the point? We can afford for a time to carry the traffic over those sixty or seventy miles without charging for it much more easily than we can pay interest on the railway from Quebec to Moncton. Surely there cannot be any question about that, and I think the hon. gentleman must know it. I have never met anybody who seriously looked on that bonding privilege question as a factor in the matter.

The hon. Finance Minister tells us, with a great deal of satisfaction to himself, that the Grand Trunk, with all its assets, is behind this scheme. I do not wish to say one word against the Grand Trunk. I do not think it is in the interest of the country to say anything against any corporation such as the Grand Trunk, the Canadian Pacific Railway or any other railway in the country. I believe in backing them up and saying a good word for them at all times. But when the Finance Minister uses the arguments we heard him use to-day about the Grand Trunk being behind this project, all I can say is that the Grand Trunk is behind it by getting $25,000,000 of common stock for nothing. That is the only way it is behind it that I can see. The Grand Trunk will guarantee something on the prairie section. That section I think it would be very easy to get anybody to guarantee.

There is a peculiarity about the argument of the Finance Minister contrasted with the argument advanced by the First Min-

ister the other day. The Finance Minister told us this evening that the Grand Trunk are paying one-fourth of the cost of the western section. Well, the Grand Trunk, as I understand it, are guaranteeing twenty-five per cent of the cost, and the country is guaranteeing seventy-five per cent. The other day the First Minister told us that the country was not paying one cent. If the country, in guaranteeing the seventy-five per cent, is not paying one cent for the road, how can the Grand Trunk be paying one-fourth of the whole cost ? I leave the hon. gentleman to explain that. Then, as to the eastern section, the First Minister told us that we are not paying anything for that. I have always been under the impression that if I borrowed say $10,000 to buy a piece of property and build a house on it, I incurred a debt of $10,000, and added that to my obligations even if I was going to rent the house. And when this country expends $60,000,000 or $70,000,000 or more on that eastern section, and gives its own securities for fifty years for it, and contracts with the public to pay both the principal and the interest, it does seem to me that we shall be paying something for that road. If not, I shall like to pay my debts and obligations in a similar way.

Let me say further that the Grand Trunk Railway guarantee comes after its bonds and debentures. These amount to $100,000,000, and they are all ahead of this guarantee. Within four or five years, as the hon. gentleman knows, the Grand Trunk Railway came to this House for a Bill authorizing it to charge up to capital a portion of the interest on its securities which it had been unable to pay. That was only five years ago. I do not mean to say that it has not improved since then. It has improved, and will go on improving, but it is idle to talk of a company like the Grand Trunk Railway as being of such material value as a guarantor. Whether the Grand Trunk Pacific Railway will be able to sell its bonds on the guarantee of the Grand Trunk Railway at par, and at three per cent interest, I do not know, but I very much doubt it. I think it will have to submit to considerable discount, which will add to its obligations, and which the public will have to pay interest on, just as they will have to pay sooner or later dividends on that $25,000,000 of common stock to be held by the Grand Trunk Railway, though the Grand Trunk Pacific Railway may never have received a cent for it.

As regards the rolling stock, section 22 provides that the company shall equip both divisions with modern and complete rolling stock and that the first equipment shall be of the value of at least $20,000,000, of which not less than $5,000,000 shall be supplied for the operation of the eastern division of the said railway, and the said $5,000,000 worth of rolling stock, together with all renewals thereof and additions thereto, shall be marked as assigned to the said eastern division. I take it that that covenant will be sufficiently complied with by the Grand Trunk Pacific Railway hiring the rolling stock. I am quite aware that there is another section concerning the purchase of supplies and equipment in Canada, but that section will be sufficiently complied with if they hire the rolling stock in Canada. Let me refer to section 14 :

> For the purposes of this agreement, the expression 'working expenditure,' as applied to the eastern division of the railway shall mean and include all expenses of maintenance and all such tolls, rents or annual sums as are paid in respect of the hire of rolling stock let to the company as part of the equipment of the said eastern division.

There are two aspects of that. One is how careful the Grand Trunk Pacific Railway is to have everything charged to maintenance, so that the government will not have much chance in the ten years of getting any profit. There will not be any profits on that line when all these charges are so carefully heaped up against the gross receipts. And I think you will find that probably all the rolling stock that will go on that line will be old rolling stock of the Grand Trunk Railway, made in Canada, of course, but sent up there on terms profitable to the Grand Trunk Railway, and that the company will make quite sure that the government will not get interest in the three years, any more than they will in the first seven.

Then the hon. gentleman made out his $13,000,000 as the actual cost to the country in respect of interest, &c., during construction. It is quite true that the ex-Minister of Railways yesterday made up to some $19,000,000 or $20,000,000 ; but the Minister of Finance cuts it down to $13,000,000. He works it out, with the help of an actuary, thus : He takes the items spread over seven years. These he says represent a present cash value, being discounted, of only $13,000,000, which he therefore claims to be the whole cost to us. But if we should advance that $13,000,000 in cash now, and receive nothing in return for seven years, we would have to take into account interest for the seven years. And if you take other items into account, as well, I fancy that the ex-Minister of Railways was not far out in his little computation of $19,000,000, as the sum we are paying in the way of interest.

When I was referring to the Moncton end of the road, I omitted to remind the House how cocksure my hon. friend the Minister of Finance was about this line. It was practically an air-line, right from somewhere near a point where they turned down along the Maine frontier, to Moncton. He knew all about it. He had been reading in the archives, and he had plans and reports, and it was all right. However, he was less cautious than his leader, who in his speech, said :

> From the town of Edmundston the railway will proceed eastward to the town of Moncton;

it is impossible to say at this moment by what route, perhaps by Chipman, or in the vicinity of Chipman. At all events, from this point it is impossible to exactly locate any precise line, or to say where it will be ultimately. Suffice it to say that we desire to have the best and shortest line between Lévis and Moncton.

That was all the First Minister could say.

An hon. MEMBER. That was three or four days ago.

Mr. BARKER. Yes, they get light very quickly on the treasury benches, and I am not astonished that my hon. friend the Finance Minister should now know exactly where the road is to be.

But I think it is perhaps desirable that we should have a little inquiry as to how it has come to pass that this government has glided into this tremendous natioal and transcontinental railway scheme. Now, Sir, it appears fairly certain that up to the opening of the session the government had no thought of anything of this kind. That appears very clear, if you take the speech that the government deliberately put into the mouth of His Excellency at the opening of the session :

The great influx of population into our Northwestern Territories and the very large additional areas of fertile land which are being brought under cultivation combine to further press upon us the need for increased transportation facilities for the forwarding of our grain and other products to the markets of the world, through Canadian channels.

This is the very subject we are discussing. And this is how the government proceeded, in March last, to deal with it :

The whole question of transportation and terminal facilities continues to occupy much attention, and my government will immediately appoint a commission of experienced men to report on the subject.

This was exactly five months ago—this subject was continuing to occupy attention, and the government were immediately to appoint experienced men to report. What followed ? On the 6th of April the Minister of Public Works (Hon. Mr. Sutherland) brought in a very carefully prepared report —another department you see; they had two of them at it. And that report—after careful consideration by the cabinet, of course—was approved by the Governor General on the 19th of May last, less than three months ago. And what did that report say? It is a very important report, and I will take the liberty of reading it, because it conveys a great deal to the public :

On a report dated April 6, 1903, from the Minister of Public Works, stating that he has under consideration questions affecting the transportation of Canadian products to the markets of the world through and by Canadian ports with a view of placing the Canadian producer in a position to compete, and compete successfully, through all Canadian channels with the producers and exporters of other countries.

The minister submits that it may be assumed that grain and other products will naturally seek their markets by the cheapest routes, and therefore the method of attaining the object desired should be to make the Canadian routes cheaper and more convenient than competing routes.

That the development of North-western Canada has manifested the inability of existing Canadian transportation agencies to take care of Canadian products.

That our agricultural exports can only command the prices over seas to which their natural excellence entitles them when they cease to be confounded and confused with the inferior and often adulterated articles produced elsewhere; and to preserve their separate identity they must go through Canadian channels.

The minister further states that the questions to be considered are complicated and involved, including among the objects to be sought the transportation of western products from place of production to the markets of the world.

This involves the consideration of their transportation :—

From place of production to Canadian seaports.

From place of production to the western ports of Lake Superior.

From the western ports of Lake Superior to Canadian seaports.

From Canadian seaports to Europe.

From place of production through Canadian ports on the Pacific.

As it affects the products of the eastern provinces of Canada it involves their movement :—

To the seaports.

From the seaports to Europe.

It is obvious that before any satisfactory conclusion can be reached upon these questions a thorough and comprehensive inquiry should be made regarding :—

The conditions of original shipment and the possibilities of improvement in the conditions surrounding such shipments.

The storage requirements of lake, river and ocean ports.

The harbour facilities of the inland lakes, rivers and Atlantic and Pacific ports.

The conditions with regard to the navigation of the St. Lawrence route, and, generally, any improvement, enlargements, or other matters affecting the more economical and satisfactory uses of any Canadian channel of transportation by land or water.

The minister further states that in making such investigation attention should not be confined to routes and facilities which are at present utilized, but, if necessary, new surveys should be made to determine whether any more economical and satisfactory channels of transportation by land or water can be opened up.

The forces operating against the attainment of all Canadian transport, namely:—

Competition by United States railways ;

Competition by United States vessels from Lake Superior ports ;

Diversion of Canadian products through eastern outlets to Boston, Portland and other United States ports, should be investigated, and the best and most economical methods used by our competitors should be carefully studied and reported upon.

The minister apprehends that in these circumstances it devolves upon the Dominion government to consider and adopt the best possible means of promoting such measures as may enable Canada to control the transportation of its

own products, and it is thought that the most efficient method of conducting such an inquiry and obtaining the required information is by means of a commission of competent and experienced experts who may be appointed and authorized under the provisions of chapter 114 of the Rivised Statutes of Canada.

Then the Order in Council goes on and names the commissioners. Now, this is all within three months of the present time. Yet, what a change! This commission has been sidetracked; it has gone no one knows whither; and instead, these hon. gentlemen opposite have constituted themselves the experts. They have even set aside the Railway Department; the Prime Minister has become the 'competent expert,' and they have decided upon the expenditure of something like seventy millions of money without a moment's hesitation and with the absolute confidence which was attributed to Lord John Russell, who, it was said, would, at a moment's notice, take command of the channel fleet. Surely the government, when they made that report and put it in His Excellency's hands, could not have had under consideration any such project as this. If they had had such a scheme under consideration, the Order in Council appointing a commission would have been an absolute farce. What possible use could there be in such a commission when the government had determined not merely to send out surveyors and survey a line, but actually to enter into a contract with a number of gentlemen and bind the country as to where the line shall be? And this we are asked to confirm. The country is asked to commit itself to this, although we are told that the 'inquiry must be thorough and comprehensive' into the 'complicated and involved question,' and that 'it should be made by competent and experienced experts.'

I think I may call attention here to the way in which, as it appears to me, the government tumbled in to this affair. It would not be accurate to say they drifted into it, they seem to have tumbled into it headlong. In January last, several railway officials and other gentlemen intimately connected with the Grand Trunk Railway published a notice in the 'Canada Gazette' that they were about to apply for a charter authorizing them to construct a railway from the Pacific ocean either to North Bay or Gravenhurst. At that time they proposed to build a branch from their main line to Winnipeg, but shortly afterwards they altered that to make the main line run through Winnipeg. To appreciate the significance of that notice, which seems to be the very beginning of this contract, it must be borne in mind that the Grand Trunk Railway to-day connects all the more important centres of Ontario, Quebec and the maritime provinces with Gravenhurst and North Bay. That company has also two ports on the Georgian bay, Collingwood and Midland; and the project for which notice was given was to bring the Grand Trunk Pacific Railway from the Pacific ocean to connect at those points and ports with the Grand Trunk's eastern system. Now, there we had a project devised by experienced railroad men, men thoroughly competent, none more so in this country. Those gentlemen, understanding thoroughly the requirements of the country, and how the best line of railway could be constructed to afford transportation facilities, determined that the point where the eastern and western divisions should meet was at Gravenhurst or North Bay, coupled with their own ports of Collingwood and Midland. Gravenhust is a point from which they would be able to run their railway south of Lake Nipissing across the French river, and thereby make some saving of mileage as against the route by North Bay. The importance of that point is shown by the fact that the Canadian Pacific Railway has already made several surveys between Gravenhurst and Sudbury, for the purpose of getting the very best line. I may say that the Canadian Pacific Railway, instead of moving as rapidly and rashly as hon. gentlemen opposite have done, have, I believe, surveyed that line at least six times in order to get the best route, and that has been going on for two or three years.

Now these are very significant indications, as they strike my mind, showing what competent and experienced men regard as the real points for the connection between the western system and the east.

Well, these Grand Trunk gentlemen went on with their application for a charter, and unfortunately for themselves they soon found that there was an agitation at Quebec for a trans-Canada line, and to meet that they apparently were obliged to say they would extend their line to Quebec. I do not believe they ever intended to build it, but they put that in their Bill, and their line was to go on from Gravenhurst or North Bay to Quebec. Then, as the Bill got into committee, some hon. gentlemen, seeing how easily Quebec got a line to the city of Quebec, said to themselves, we must have one to Moncton. And so they pressed, and they fought, in those sultry days, and Mr. Hays, in the blandest manner, said, Oh, yes, we will go to Moncton. Why, he would have promised to go to Newfoundland and build a tunnel to get there, provided he could get his charter. That is what he was after, and he promised them whatever they wanted. Well, while this was going on, and while the members in the Railway Committee were fighting day after day, and week after week, over the clauses of that Bill, what was going on in the closet? What was going on between the First Minister and Mr. Hays? All the morning the Railway Committee and Mr. Hays were fighting over the Bill, and at night those two gentlemen were down below, closeted together,

tearing the Bill to pieces. The Railway Committee supposed they were going to get the Grand Trunk to Moncton, for Mr. Hays agreed to put it in the Bill. The Bill was kept before the Railway Committee, while the First Minister, throwing aside his Minister of Railways, behind that gentleman's back, took upon himself, as he says, to conduct negotiations with Mr. Hays. And lo and behold it turned out that the government were undertaking everything, not merely between Gravenhurst and North Bay and Moncton, but all the way from Winnipeg. So Mr. Hays is left with the cream of the whole thing ; the government has got a bone without any meat on it, so far as we see. That is the way this thing seems to have come about. It may not be so, but I cannot see any other explanation. What was the meaning of the farce that was going on in the Railway Committee ? Mr. Hays promised everything, he was the most obliging gentleman any Railway Committee ever had before them. But he knew all the time that he would meet the First Minister downstairs, and the harder the committee made it for Mr. Hays, the better terms he seems to have got from the First Minister. Now, Sir, I think that, having regard to the circumstances, we ought to assume that the project as it came before the Railway Committee was never a serious one, it was all a piece of by-play. I am sure we must absolve the members of the Railway Committee of any suspicion that they were not perfectly square in their action. Why, they fought so strenuously that we thought that Bill would never get out of committee at all. They were sincere, they thought the Grand Trunk Railway was going to do all this work. There was a gentle hint that the Grand Trunk Railway might expect something from the government in the way of guarantee or favours, but that the company was not going to build to Moncton never entered any man's mind.

Now, at this time the House was startled by the resignation of the Minister of Railways. It came upon us like a clap of thunder, and then we had explanations. The ex-Minister of Railways refused to hold his position. He gave up an honourable position in the government, one that he must have been proud of. He had worked seven years in that department. While he was responsible to the country for that department, was the minister responsible for matters connected with all railway operations, he found that his leader had thrown him aside in these negotiations. The First Minister, utterly inexperienced in railway matters, had undertaken to fight alone and unassisted against the wiliest and most expert railway man in Canada, and we have the outcome in this contract. That is the position. No wonder that the Minister of Railways resigned. The right hon. gentleman thinks that the objection to the immediate construction of a railway negotiated under such circumstances requires but a single observation. I am surprised at the right hon. gentleman's moderation.

There were rumours in the press of these meetings, but nobody knew what was being done. The secret seems to have been well kept. The ex-Minister of Railways was apparently as much in the dark, at first at all events, as the rest of us. Then, the right hon. gentleman endeavours to rush this thing through. He makes a speech in this House and scornfully speaks of the policy of tomorrow, of those who say consider, calculate, inquire. You must not consider, you must not calculate, you must even inquire. No, he says, this is not the time for deliberation ; yet, less than two months before he had made up his mind to enter into this negotiation he was a party to an Order in Council which says that the subject requires the utmost consideration, information, and even experts to report and advise. Yet, the right hon. gentleman expects this country to adopt his scheme simply, apparently, because the government have committed themselves to this arrangement. I repeat the words that appeared in that report :

> That the questions to be considered are complicated and involved.

Yet, we must not pause ; we must not hesitate.

> It is obvious that before any satisfactory conclusion can be reached upon these questions a thorough comprehensive inquiry should be made.

And :

> If necessary, surveys should be made to determine whether any more economical and satisfactory channels of transportation by land or water can be opened up.

Surely that is common sense. Surely there cannot be any more reason now for haste than there was then ; yet, the right hon. gentleman has cast aside the Order in Council and the commission, and instead we have this scheme in which the fine hand of Mr. Hays appears. Mr. Hays has the prairie country, he has the mountain section and the right hon. gentleman has the district which produces poplar, jack pine, and spruce. The government do not show the grade it is going to get through that country of jack pine, poplar and spruce. In so far as the hon. Minister of Finance has referred to surveys, I gather that the grades would be 52 feet to the mile. Does not the hon. gentleman know that this will not be a satisfactory grade for grain traffic ? Does he not know that the Canadian Pacific Railway cannot haul, as against the water route, on the north shore of Lake Superior ; yet, he is going away up north of the height of land to carry grain 1,800 miles to the sea by an all-rail route, competing with a line which has 550 miles of water route, competing with a line which runs through a country with large commercial and manufac-

turing interests and millions of people to furnish the road with business and to fill up the trains. Furthermore he is going to have a line without return traffic. What traffic does he expect to carry back over this line from the sea to the prairies ?

An hon. MEMBER. Lumber.

Mr. BARKER. Lumber ! Does he know that he will find a tree bigger than a man's leg in that country for 1,400 miles of the route. He may get pulpwood, but there is enough pulpwood below the height of land to supply the wants of the country for fifty years. We do not need to spend $80,000,000 to get into the pulpwood north of the height of land.

The line that is proposed would have to compete with railways further south which enjoy traffic both ways, both freight and passengers and which have the great advantage of a water-route. It is impossible for a line to be successful unless it has the very best grades and the most satisfactory curves, and can hon. gentlemen say that there is any evidence that it is possible between Quebec and Winnipeg to get such a line ? I admit that it is possible to make any grade you like if you only spend millions enough but you will not get it even with such an expenditure as the hon. Minister of Finance has spoken of to-night. There is not the slightest shadow of evidence that it is possible to get that line with grades of 21 feet or thereabouts per mile. Without that, what use is the line ? The fact that the Canadian Pacific Railway unloads all its traffic at Port Arthur leaving it to vessels to carry it by the water route to the ports of Georgian bay is the strongest evidence you could get that the all rail route must have favourable grades before the traffic can be profitably carried. The line to the north must have favourable grades or it cannot hope, even with all other conditions equal, to compete. I have taken some notes from the speech of the right hon. leader of the government as it appeared in ' Hansard ' and I will quote them here. I do not give his exact words, but the substance of what he said. He says as to the district west of Lake Abbittibbi that twelve or thirteen years ago the Ontario government sent a party of gentlemen into that district. Their report is the one that the hon. Minister of Finance read from to-night. They were a few members of the local legislature and some others. One of them was Mr. Charlton, a brother of the hon. member for North Norfolk, and, I think it is understood that that gentleman had a good deal to do with the writing of the report. These were the explorers of that unknown land. They said in the report, as quoted by the hon. Minister of Finance, that they were not expected to make a thorough exploration. In a modest way they reported that there were 24,500 square miles of good fertile land. They were up there for a few weeks. What travellers they must have been, and what travellers' tales were told ! The wonder is that these gentlemen who wrote that nice report did not get up a syndicate on their return to Toronto and buy the whole thing, but I can assure hon. members of the House that every acre of it is still open to purchase. Pine timber is commercially valuable but that pine will be floated down to the Canadian Pacific Railway, it lies to the south of the height of land. Really all that the hon. gentleman has beyond the height of land is spruce, jack pine and poplar. That is what these gentlemen reported, and the hard facts about the timber are of more use to us than their very general remarks which were read by the Finance Minister. Such general observations are no doubt eminently satisfactory to the first minister, but that a great railway line should be forced upon the country upon such evidence is simply astounding. I can hardly believe that the government is seriously intending to build that line. I think there must be more in that clause 21 than the Finance Minister would lead us to believe. The government have put that in as a safety-valve. They have thought perhaps that after all they are a little premature about this thing, and although they have entered into this contract with the Grand Trunk Pacific Railway, they put in the Act a clause to enable them to suspend operations.

There is another feature of this line that I would call attention to. Suppose the line is constructed through this section, where does the government hope to get its supplies, say of fuel. The First Minister is not going to burn spruce or poplar on his engines. He must haul coal a very long way into that country, over 1,000 miles, to get fuel for his locomotives. I do not suppose the right hon. gentleman is going to turn the muskegs into coke or peat. He will find authority for that in some of his reports perhaps, but I do not think that any practical railway man would recommend the adoption of that system. The line is going to run through stunted woods; there will be a little black birch or white birch and much poplar and spruce, but that would be a sad sort of fuel to run a railway with. So the hon. gentleman must take coal up there to run a line from Winnipeg to Quebec, a distance of 1,400 miles. It is a pretty serious undertaking, and the right hon. gentleman should have asked some of these experts to consider that feature before he committed himself to a contract binding him to build a railway through such a district.

And there is another feature that I wish to call attention to, it strikes me as a very important one. The Grand Trunk Pacific will be able to construct and complete hundreds of miles of the prairie section long before, perhaps years before, the government can complete

the 1,800 miles of the eastern section. It must be apparent to everybody that before that 1,800 miles is fully completed from end to end, there will be hundreds of miles of the Grand Trunk Pacific Railway in operation on the prairie section. The hon. gentleman cannot compel the Grand Trunk Pacific Railway to take over one mile of the 1,800 miles until every inch of it is completed? What is he going to do with the portions that are completed from time to time. Is he going to work them? If so, there will be a handsome loss. There will be no through traffic and certainly no local traffic. If he does not work them, he will have to spend large sums of money in maintaining the portions built, because nothing goes to pieces so quickly as an unused railway. There will be an enormous amount of money, which the Finance Minister has not taken into his calculation with his actuary, to spend year after year in that way, while the Grand Trunk Pacific Railway in the west is enjoying the fat of the land, and the government is struggling to finish its 1,800 miles through the muskegs. That is the position. But what then? What is the Grand Trunk Pacific Railway going to do with all this grain at Winnipeg that will come over the prairie section that it has in operation? What does the Prime Minister suppose the Grand Trunk Pacific Railway will do? Does he know that the Grand Trunk has a line from Chicago, running to Buffalo, and running also to Portland, Maine. Does the hon. gentleman suppose that the Grand Trunk will not send its grain down to Chicago, and over its Chicago line and its line in Ontario to Buffalo for the grain that is going that way, and to Portland for the grain that is going in that direction. The government can hardly insist that the Grand Trunk Pacific Railway must send its grain by this great continental line until they have completed their 1,800 miles. Therefore, by these ill-digested arrangements the country will assist the Grand Trunk Pacific Railway in making a route for traffic by way of Chicago. That will be the result of this contract, the inevitable result of it. The right hon. gentleman may remember that last summer there were rumours that the Grand Trunk Railway was negotiating for a line from Chicago up to the boundary. But whether that be true or not, there are plenty of American lines who would be delighted to carry that traffic down to Chicago, and the Grand Trunk Railway will probably make more money on its traffic going that way than it will in any other. The west-bound traffic, merchandise and manufactures will go back through Chicago up to the North-west, and you will establish a trade there that it may take years to reverse. That is the result of the government's undertaking. But the Grand Trunk Railway will have another opening, and if they choose they can send their traffic from Winnipeg to Port Arthur That will be the way to do it, probably in the interest of Canada. They can send it thence by water to their port at Midland, anl carry it from Midland to Niagara and Buffalo, or Portland. There is nothing in the contract that can prevent them until the government has completed the 1,800 miles, and even after that, as I think I will show presently, they cannot be prevented from sending the grain by what route they please, even to American ports. And yet the right hon. gentleman cannot wait a day or an hour, because he is afraid that traffic will go to the United States.

At this point I wish to say a few words upon clause 42 of the contract. This is the wonderful clause that the Finance Minister referred to, by which the Grand Trunk Pacific Railway agrees to forward its traffic through Canadian ports. Mr. Hays was perfectly frank when he was asked by the Railway Committee if he would bind himself absolutely to do that. He said: 'No; would you have me ignore the wishes of the shipper?' That was a frank and proper thing for him to say, and the committee understood perfectly what it meant. What is the clause here? Let us see what it is: It is limited to 'all freight originating on the line of the railway or its branches.' In the course of ten or fifteen years from now, I presume there will be a great many railways in that country, if it fills up as we expect it to do, and there will perhaps be Grand Trunk branches or branches bought up by it, quite apart from the Grand Trunk Pacific. It can by such means get plenty of traffic that will not originate on this Grand Trunk Pacific line, and the clause is limited in that respect. But it agrees 'that all freight originating on the line of railway or its branches not specifically routed otherwise by the shipper shall when destined for points in Canada, be carried entirely on Canadian territory, or between Canadian inland ports—and that all such traffic, not specifically routed otherwise by the shipper, shall be carried to Canadian ocean ports.'

Now I do not pretend that there is any deliberate intention to evade that clause or to act in bad faith. But does the hon. gentleman seriously suppose that on a railway, either the Canadian Pacific Railway, the Grand Trunk or any other, a station agent is going to wait for orders, or that he does not know what the interests of the company are? Why, the youngest billing clerk on a railway knows perfectly to what destination traffic should go so that the company he serves shall make the most money. If he does not know that, he had better seek some other vocation, because he will not remain long in that service. They do not want a boy or a man who does not thoroughly understand the interests of his company. And let the president or the vice-president of the Grand Trunk send printed orders out once a week

to every station master and billing clerk on the line that they must send freight through Canadian ports, that they must not send it to Portland, and the agent will send it to Portland just the same. He will understand. If he were to begin shipping say to Halifax for money which the Grand Trunk could get for carrying the shorter distance to Portland, that young fellow would know he was not acting in the best interests of his company ; and does any hon. gentleman in the House, who is accustomed to shipping goods or grain, believe that one man in a hundred who ships goods cares what is written on the bill ? If the billing clerk says : 'This can go most quickly, I think, on such a road,' the shipper would say, 'send it that way.' If he is shipping to an ocean port, and he wants to send his goods to Halifax, the billing clerk may perhaps say : 'Certainly, sir, we will send them to Halifax. There is not a steamer there this week, but there will be one at Portland, and you can take your choice.' The man says : 'Then my choice is Portland.' There is not a person in the country who does not know that. Mr. Hays could not prevent it. The boys would take the risk of being discharged for acting in the true interest of the company.

This is a very good clause, and very nicely drawn. The hon. member for North Norfolk (Mr. Charlton) said, in complimenting the legal gentlemen, the contract is drawn in a manner to do them credit. I am sure they would be extremely gratified with the commendation of the hon. gentleman. He is a good judge of legal work and I hope the hon. Minister of Justice will convey to them the approbation of the hon. member for North Norfolk in that respect. It would be very much more satisfactory to the House and the country, however, if the hon. member for North Norfolk could point to the work of some surveyors on this line. The mode in which the legal gentlemen do their work is not the important thing. It is not that we are discussing. The objections we are raising are that the government have not the information that is necessary before we determine the location of the railway ; and as to this routing clause, however drawn up, that it will be of no practical benefit—that it will not be of the slightest advantage to the government or the country. Take a practical case. I am not sure whether the right hon. gentleman understands it ; but in any train that goes into Winnipeg, or Brandon, or any of the towns in the west, there will perhaps be cars of ten different companies. The cars lie empty at a station. A man comes along and wants five or six of them. The station agent says: 'All these cars have come from Chicago, and they have to go back that way ; the companies that own them do not wish them to go to Halifax. If you wait till next week, we will have cars that will be going to Halifax.' The man will say : 'No, let them go as you please.' They will send them where the interest of the company requires, the grain will be routed that way and by the order of the shipper. There is no question about that, and you need not inpute any dishonesty to Mr. Hays, Sir Charles Rivers-Wilson or anybody else. It will be inevitable, and it cannot be helped. That is all I have to say on that.

Clause 44 is a significant clause. It provides that through rates shall be apportioned in percentages between the Intercolonial and the Grand Trunk Pacific—a very proper provision. But what about the percentage division of through rates to be taken by the Grand Trunk ? The Grand Trunk can make arrangements to take the lion's share of the rates, leaving the lean share to be divided between the Grand Trunk Pacific and the Intercolonial.

Then it must be obvious to the hon. gentleman that while he has clauses in this Bill enabling the government to see all the books and papers of the Grand Trunk Pacific in order to ascertain the net earnings, charges, tolls and rates, it would have been far more serviceable to have a provision entitling the government to inspect the books, papers, and rate bills of the Grand Trunk itself. The Grand Trunk Pacific will not be heard of a month after the whole thing will be completed. It will be the Grand Trunk, so far as business is concerned. No one hears of anything but the Grand Trunk on the Atlantic and the St. Lawrence, which runs to Portland. It is the Grand Trunk that gives the orders from Montreal to Chicago, and so will it be with traffic for our North-west. It is impossible to make any thorough investigation or to find out anything that is going wrong in these matters unless the government have power and authority to examine not only the books of the Grand Trunk Pacific, but the books of the Grand Trunk Company. The whole thing will be conducted in the name of the Grand Trunk Company from the Pacific to the Atlantic.

In conclusion I can only say had the government taken time to deliberate instead of acting in this impulsive way, had it submitted this question to a commission of experts, it would have been able to devise a scheme far more serviceable to the country and more beneficial to the Grand Trunk. It could have arranged to carry the traffic from the North-west by the water route in summer and by a land route in the winter, when the lake harbours are not open. It could have done all that and besides have provided for every need in the way of development. Had the government taken this course, it would have saved millions which it proposes to spend and I think waste now. It would have done more good to the North-west, it would have done more for our undeveloped territories and the whole Dominion than can be done by this wild and reckless scheme. I say that advisedly. I do not wish to use rash language, but I

firmly believe that this scheme will never be practicable. It is an experiment on which millions are to be spent. The government has no information, it has not attempted to get any information that would justify what it is doing. I would impress on hon. gentlemen opposite, but I am afraid they have committed themselves too deeply, the necessity of withdrawing from this scheme. My hon. friend the Finance Minister spoke of the murmurs heard at Moncton from the sea, but he will hear more murmurs throughout the Dominion than he imagines if he attempts to carry out this project. The right hon. the First Minister has lost, I consider, the finest opportunity of his life, in not having proceeded with that commission which he advised His Excellency to appoint and submitted to it this whole question of transportation.

The MINISTER OF THE INTERIOR. I hoped that I would be able to make the remarks which I have to make on this Bill this evening, but in view of the fact that it is now twenty minutes to twelve, and that we have been listening to a continuous flow of oratory since eleven this morning, I think the House will appreciate the suggestion that we should adjourn. I move the adjournment of the debate.

Motion agreed to, and debate adjourned.

On motion of the Prime Minister, House adjourned at 11.40 p.m.

HOUSE OF COMMONS.

THURSDAY, August 13, 1903.

The SPEAKER took the Chair at Eleven o'clock.

QUESTIONS.

LECTURES ON AGRICULTURE.

Mr. LEMIEUX (Gaspé) asked :

1. What are the names of the lecturers on agriculture for the Department of Agriculture ?

2. In which counties of the province of Quebec were these lecturers employed during last year

3. What salary is paid to these lecturers ?

The MINISTER OF AGRICULTURE (Hon. Sydney Fisher) :

1. The following officers of the department, in addition to their other duties, deliver lectures on agriculture :

Experimental Farm branch—Dr. Wm. Saunders, LL.D., director ; Dr. Jas. Fletcher, LL.D., entomologist and botanist ; Mr. F. T. Shutt, M.A., chemist ; Mr. Wm. T. Macoun, horticulturist ; Mr. J. H. Grisdale, B. Agr., agriculturist ; Mr. A. G. Gilbert, poultry manager ; Mr. A. T. Charron, assistant chemist ; Mr. J. L. A. McMurray, Mr. John Fixter.

Branch of the Commissioner of Agriculture and Dairying—Dr. Jas. W. Robertson, LL.D., commissioner ; J. C. Chapais, assistant dairy commissioner ; F. W. Hodson, live stock commissioner ; J. A. Ruddick, chief of the dairy division ; W. A. Mackinnon, chief of the fruit division ; George H. Clark, chief of the seed division ; Frank Hare, chief of the poultry division ; A. W. Woodward, official referee for butter and cheese ; Alex. McNeil, fruit inspector ; Elmer Lick, fruit inspector ; P. J. Carey, fruit inspector; J. F. Scriver, fruit inspector ; E. H. Wartman, fruit inspector ; Richard Burke, fruit inspector ; Geo. H. Vroom, fruit inspector ; F. L. Déry, fruit inspector ; J. J. Philp, fruit inspector ; Barton Gandy, fruit inspector ; Freeman Fitch, fruit inspector ; Maxwell Smith, fruit inspector.

In addition to the foregoing, the following persons have been specially engaged at various times to deliver lectures : T. G. Raynor, Daniel Drummond, Henry Glendenning, J. E. Orr. Mrs. I. E. Tilson, Prof. H. H. Dean, Robert Thompson, Duncan Anderson, John Jackson, Jas. Shepphard, G. C. Cottrelle, J. M. Gardhouse, Gus Boyer, C. W. Nash. R. F. Holtermann, Robert Ness, G. W. Clemons.

2. Brome, Beauce, Compton, Drummond, Megantic, Richmond, Wolfe, St. John, Iberville, Rouville, Missisquoi, Shefford, Sherbrooke, Stanstead, Arthabaska, Terrebonne, Montcalm, L'Assomption, Joliette, Berthier, St. Maurice, Champlain, Argenteuil, Chambly, Chioutimi, Jacques Cartier, La Praire, Laval, Lotbinière, Maskinonge, Nicolet, Richelieu, St. Hyacinthe, Two Mountains, Vaudreuil, Verchères and Yamaska, Portneuf, Quebec, Quebec (city), Montmorency, Dorchester, Huntingdon, Bagot, Bellechasse, Chateauguay, Kamouraska, L'Islet, Montmagny, Rimouski, Temiscouata, Charlevoix, Lac St. Jean, Matane, Montreal, St. John, Wright.

3. The officers of the department are not paid anything for lecturing in addition to their regular salaries. Other persons engaged by the department are paid at the rate of three dollars per day.

MILITARY RIDING SCHOOL AT ST. JOHN D'IBERVILLE.

Mr. MORIN—by Mr. Taylor—asked :

1. Has the government had a military riding school built at St. John d'Iberville ?

2 If so, to whom was the contract awarded, and at what price ?

3. Were tenders previously called for by public notice ? If not, why not ?

The MINISTER OF MILITIA AND DEFENCE (Hon. Sir F. W. Borden). There is no riding school at St. John.

TRADE WITH JAPAN.

Mr. CLARKE—by Mr. Taylor—asked :

1. Are goods and merchandise of the same classes and values, manufactured in Canada and the United States, respectively, subjected to the same customs duties upon being entered for consumption in Japan ?

2. Are exports from the United States to Japan admitted into the latter country on more favourable terms than exports of a similar character from Canada ? If so, why is the discrimination made ?

The MINISTER OF TRADE AND COMMERCE (Rt. Hon. Sir Richard Cartwright):

1. As regards some classes of goods they are. As regards others they are not.

2. Certain specified articles exported from the United States to Japan are admitted into that country on more favourable terms than exports of a similar character from Canada, the reason being that there exists a special preferential treaty between Japan and the United States, which also contains the 'most favoured nation clause,' while no such treaty exists under which Canada could claim preferential or minimum tariff.

NATIONAL TRANSCONTINENTAL RAILWAY.

House resumed adjourned debate on the motion of Sir Wilfrid Laurier for the House to go into Committee on a certain proposed resolution respecting the construction of a national trancontinental railway.

The MINISTER OF THE INTERIOR (Hon. Clifford Sifton). Mr. Speaker, the debate in which we are engaged at the present time has now reached such a stage that we may fairly say that the House is seized in a general way of the views put forward by the government in favour of the proposition which we are discussing, and that it is seized in a general way of the objections which are put forward by our friends on the opposition side. We have, therefore, made some progress, and if the debate at later stages is to be illuminated upon the subject it will be necessary for us to confine ourselves more to the points which prove to be at issue between the parties, instead of discussing the general features of the scheme, which are now well before the country as well as the House. We have had exhaustive statements from both sides. We had an eloquent and able speech from the right hon. leader of the government, in which, with that ability which on both sides of the House, I think I can fairly say, we all admire, he placed before the House and the country his views respecting this great project. He was followed by my hon. friend the leader of the opposition. That hon. gentleman did not, it is true, have the printed contract before him sufficiently long to enable him to give a mature and detailed criticism of its contents, and therefore he may fairly ask that this House and the country shall hear him again. But, in so far as the general features of the scheme were concerned, they had been reported in the press without dispute ; they had been brought before the members of the government following in caucus, and, with that enterprise which characterizes our friends of the press, had been fully and completely reported to the readers of the newspapers. Therefore, I think my hon. friend the leader of the opposition, probably knew as well, when he came to listen to the Prime Minister's deliverance, the general features of the scheme which he should be called upon to criticise, as he knows at the present time. He did not shrink from the task which was imposed upon him, but he spoke vigorously and at length on behalf of himself and his party, and placed himself on record respecting this proposition. Then we had an address from my hon. friend from South Lanark (Hon. Mr. Haggart), who, by reason of his length of service in this House, his service in the late government, and the position which he occupies in the public life of the country, is well qualified to speak for the Conservative party of the province of Ontario in this House; and I think I do not misstate my hon. friend's position when I say that it was one of uncompromising hostility to the proposition of the government. Then we had from my hon. friend the late Minister of Railways and Canals (Hon. Mr. Blair) a lengthy and exhaustive discussion from the standpoint of an opponent. My hon. friend and late colleague spoke with all the knowledge of a gentleman who had been a member of the subcommittee who were instructed to prepare the details of this scheme. Therefore, he could not claim that his information was not full and complete or that he had not sufficient time to go into the subject with great fullness since the speech of the right hon. the Prime Minister. So that we may take it that what he has said is the worst that can be said, so far as he is concerned, with respect to the scheme before us.

Then we heard yesterday from the leader of the Conservative party in the province of Quebec the hon. member for Jacques Cartier (Mr. Monk, and I think I am safe in saying that his attitude was one of uncomproming opposition. We heard also from the hon. member for Hamilton (Mr. Barker) last night, and his attitude was equally one of uncompromising opposition. So that we have this fact thoroughly well settled, that from every portion of the Dominion represented by our hon. friends on the opposition benches, except from the west—we have not yet heard from our friends from the west—we have uncompromising opposition to the plan of the government in connection with this transcontinental proposition. From our side we have had a very able and convincing speech from my hon. friend from North Norfolk (Mr. Charlton), and last evening we had from the Finance Minister a speech characterized by that ability and eloquence which

causes us all on this side to be so proud of him. Leaving aside for the moment the presentation originally made by my right hon. leader, the different phases of the subject were dealt with by the hon. member for North Norfolk and the Finance Minister in such a convincing, exhaustive and conclusive manner that would be mere impertinence for any one at this stage to undertake to amplify the argument and reasons which they gave. But if I may be permitted, I will devote a few moments to a consideration of a few of the objections which have been raised by our hon. friends on the other side to this contract.

My hon. friend from Jacques Cartier spoke to us yesterday afternoon at considerable length, and the chief ground he took for opposing the Bill was that we had no information about the country through which we proposed to run the line from Winnipeg to Quebec. I understood him to take the position that it was unwise and imprudent to undertake to build a railway without first having had an actual survey made of the route. But it has been pointed out that the position taken by the hon. gentleman, and which has been reiterated on that side, is contrary to all business experience and practice. When people undertake a railway enterprise, they usually come to parliament for authority to go on, before making an actual survey of the route. They get first a general knowledge of the country, such a knowlelge as justifies them in the conviction that a railway of the character they intend to build, can be built, and then proceed to get the requisite authority to make a survey and decide on the exact location. That is what was done—in fact I do not know that quite as much was done when the Dominion undertook to build the Canadian Pacific Railway. Information was at the disposal of the government which enabled it to say that the railway could be built and they undertook to build it and they did build it.

And after the government entered into a contract for the building of the Canadian Pacific Railway, that railway did not follow the line of the survey which had been made at all, but went hundreds of miles away from where, according to the survey, it was intended the road should go. It will not be found, in all the practice regarding the initiation of great railway enterprises, that complete surveys are required before a decision is arrived at to go on with the work.

My hon. friend from Jacques Cartier raised another objection. He said the province of Quebec required colonization railways, and he made that statement in such a way as to indicate that the argument or proposition he was advancing was an argument against the scheme we were discussing. Well, I am wholly unable to see what it has to do with the proposition we are discussing. If the province of Quebec requires colonizataion railways, if there are districts in that province through which the building of colonization railways can be justified, then this parliament is prepared to deal liberally with any proposition for development of that kind when it is brought before us. My hon. friend has been a member of this House for six years, during two of which he has occupied the position of lieutenant of the leader of the opposition, and up to this moment he has not brougt before us a single scheme looking to the building of a colonization railway in his province. I do not see therefore how he can say how there has been any lack of disposition on the part of this House to deal liberally with his province in that respect. There is absolutely no connection between the two propositions. We stand in the same position with regard to the province of Quebec upon that subject as we do with regard to the other provinces of the Dominion. As a member of a government I have never had any sympathy whatever with the agitation which has arisen and been fomented in certain parts of the older provinces against the bonusing and encouraging of railways.

I take the position that it would be an act of folly, that it would be disastrous for the parliament of Canada to lay down any principle contrary to the encouraging of railway construction in this country. I have suffered politically somewhat for my faith, because in certain parts in the western country which are fairly well served with railway facilities, the people have been persuaded that the policy of bonusing railways should cease. But I am convinced that the view which I entertain is sound and will appeal to the solid business judgment of the people in the long run. We are prepared to give effect to the policy of encouraging railway construction in the provinces of Quebec and Ontario, and the other provinces of the Dominion, including the old province of New Brunswick, where additional facilities are required.

The hon. member from Hamilton (Mr. Barker) has addressed some criticisms to this contract. I am sorry he is not in his place, because he has been placed by our hon. friends opposite in the position of a railway critic and as being in some sort, after the hon. member for Lanark (Hon. Mr. Haggart), the railway expert of the opposition ; and we are therefore to pay some considerable degree of attention to what he says. My hon. friend criticised the provision of this contract regarding running powers. I regard that provision as most essential and important, as a fundamental provision, without which this contract never could have been made. That is the importance which the government attaches to that provision of the contract, and therefore when it is attacked we find it necessary to meet the attack. And when this debate is over, I do not think that hon. gentlemen on that side will be able to say that any attack was made on this particular phase of

the question which has not been thoroughly met. My hon. friend from North Norfolk dealt with that question fully.

The allegation is made that the provisions respecting running powers are not practical. In broad, general terms, that is the proposition that is laid before the House. It is said: Your idea about a railway highway, your idea about running powers is a good enough idea, but it won't work. What did my hon. friend from North Norfolk say? He showed that it is actually working. He said: It is of no use for you to say it won't work; here is a road where it is actually working now. And what is the answer to that? I am free to say that I do not know. It was said that the arrangement could not work where the road was more than one division long, say more than 75 or 100 miles, for you would have to have engines, shops and changes of crews. And my late colleague, the ex-Minister of Railways (Hon. Mr. Blair), excited the mirth of our hon. friends on the other side by the humorous description he gave of the difficulties that would arise in endeavouring to carry into effect what he represented as a ridiculous and impracticable idea. Now, humour is a very good thing, and a very entertaining thing—but it is not argument. And when, after my hon. friend's humorous address, the hon. member for North Norfolk said: Your argument is very well for a lawyer, but here are the facts, here are two railway companies doing this very thing which you say is ridiculous and impracticable; what have you to say to that? And we ask hon. gentlemen on the other side what they have to say at this present stage of the discussion? My hon. friend from Hamilton (Mr. Barker) has an answer to it, and to that answer I desire to draw attention. Let the House observe that the hon. member for North Norfolk spoke in the morning, and the hon. member for Hamilton, who is a railway man—I understand he has been a railway manager—a man with expert knowledge of railroads and familiar with the road to which my hon. friend from North Norfolk referred, and the country through which it runs, spoke in the evening. And what was the only argument he could bring against the facts stated to this House by the hon. member for North Norfolk? Why, the only thing he could allege, after a whole day's consideration of this most important phase of the question, which goes to the root of the whole contract, was that the dominant railway, the Canada Southern, did not permit the junior railway to compete with it for local traffic. That was all he could think of saying. It turns out then that even that is not correct. My hon. friend from North Norfolk says that, so far as freight business is concerned, the dominant railway does permit competition for local traffic, for he says he has shipped the freight. There can't be very much mistake about that. And my hon. friend from South Essex (Mr. Cowan) says that, so far as passenger business is concerned, they do permit competition, because he has bought the tickets. There cannot be very much mistake about that. So the alleged facts put forward by my hon. friend from Hamilton do not appear, so far as the testimony at our disposal is concerned, to be very conclusively established. But, supposing they were established, supposing that what my hon. friend says were perfectly true, and the railway company which owns the fee of the Canada Southern did not permit, and was not permitting, the junior road, the leasing road, the road co-operating with them in the use of the line, to compete for local business; will my hon. friend from Hamilton, or will the hon. member for South Lanark (Hon. Mr. Haggart), when he follows me, say how this affects the provision of the contract that we have now before us? The arrangement in the case of the Canada Southern is a voluntary arrangement; the dominant railway can allow competition for local traffic if it likes, or it can refuse to allow it if it likes. Is that the case in this contract? This contract provides that the government shall decide the terms and the running powers. It is not a voluntary question; the Grand Trunk has nothing whatever to do with the subject; but the government, or the railway commission, or whatever authority the government may provide, will decide the terms on which these running powers shall be used. Therefore, let the House understand and mark well, that this futile, absurd and ridiculous objection is the only answer that can be made to the conclusive argument of my hon. friend from North Norfolk upon this question.

Now, my hon. friend from Hamilton undertook to lecture the Minister of Finance (Hon. Mr. Fielding) as being a very innocent and easily gulled person, because, forsooth, that hon. gentleman relied to some extent upon the survey of Sir Sanford Fleming, made about thirty years ago. I would have gathered from the remarks of my hon. friend from Hamilton that there was great danger that the physical features of the province of New Brunswick had changed within the last thirty years. He did indeed make the suggestion that the surveyors of thirty years ago were not as careful and particular in gaining information as are the surveyors of the present time. Well, Sir Sanford Fleming, be it remembered, was the chief engineer of the Canadian government. He was instructed to procure the necessary information for the purpose of locating the Intercolonial Railway line. As was pointed out by the Finance Minister, he made three surveys for the purpose of locating three practicable and reasonably good commercial lines, any one of which might have been adopted by the government of Canada for the location of the Intercolonial Railway. And what

the hon. member for Hamilton, in his answer to the Finance Minister, asks us to believe is that, because that was done thirty years ago, and the report is an old report, and because the government ultimately decided that for political, military and imperial reasons, they would decline to take the better route, which Sir Sanford Fleming, though he did not recommend it, evidently thought was the better route, we are not justified in believing that that route is there at the present time just as much as it was thirty years ago. Well, it would be painting the lily to answer an argument of that kind. My hon. friend from Hamilton then proceeded, being somewhat restless under the remarks of the Finance Minister respecting the attitude of the opposition towards the Intercolonial, to rebut, with some degree of warmth, the suggestion that the opposition were not friendly to that road. There is an old line asking a question which seems appropriate here :

> Perhaps it was right to dissemble your love.
> But why did you kick me downstairs ?

Our hon. friends on the other side have dissembled their love for the Intercolonial very successfully for the last five or six years. They have been kicking the Intercolonial downstairs and the late Minister of Railways and Canals with it, on every occasion that they got a chance. They say they have not been hostile to the Intercolonial. Well, when we came into power we found, as has been very truly said, the Intercolonial Railway ending in a ploughed field. We brought it into the city of Montreal and made a modern and businesslike railway out of it. We have spent millions of dollars to bring the Intercolonial up to date and make it a modern railway, and give the people of the maritime provinces a railway service that they have a right to be proud of and to be satisfied with. This government, and the united force of the members of parliament behind this government, enabled the Minister of Railways and Canals to come down to this House and make this proposition for the purpose of carrying out what we believed to be a sound and businesslike policy in regard to that railway. But where were the gentlemen on the other side ? Why, Sir, year after year they have fought that proposition, every proposition, that we brought forward, inch by inch, tooth and nail, every day and every hour of the day, to the greatest extent of their ability. And not only that, but while this has been going on, year after year they have denounced the late Minister of Railways and Canals ; they have attacked the late Minister of Railways and Canals, they have hounded the late Minister of Railways and Canals all over Canada, in their press and upon the platform. And, Sir, we have the astounding spectacle within the last two or three weeks, after the culmination of their attacks, of the whole Conservative party joining in enthusiastic applause while the late Minister of Railways and Canals addressed the House from his desk ; and we find them endeavouring to show to the country that this gentleman whom they have been hounding year after year, whom they declared to be incompetent, and corrupt and incapable, is the greatest railway authority in the Dominion of Canada.

Now, the hon. member for Hamilton (Mr. Barker)—and I am devoting some attention to the hon. member for Hamilton, because he has been put forward early in the debate, he has been put forward before the late Minister of Railways and Canals in the Conservative government, my hon. friend from Lanark (Hon. Mr. Haggart), he has been put forward even ahead of the leader of the opposition, to declare the railway policy of the Conservative party in connection with this contract. My hon. friend from Hamilton took violent exception to what has come from this side of the House in advancing the argument that this railway is required in view of the possible withdrawal of the bonding privilege. I am not going to discuss that question, because in my judgment it has been discussed sufficiently. The Prime Minister, the member for North Norfolk (Mr. Charlton) and the Minister of Finance have given very fully the views of this side of the House on that question, and I do not propose to repeat the discussion. I propose to devote a moment or two to the criticism of the hon. member for Hamilton. If I understood him aright, his answer to the suggestion that another railway was necessary and would be a convenient safety valve in case of the withdrawal of the bonding privileges, was this: That if the bonding privileges were withdrawn it would simply have the effect of driving the traffic to Canadian ports over the Intercolonial, and that we ought to feel gratified that such should take place ; and we should devote ourselves to building up the Intercolonial instead of building another line of railway through New Brunswick for the purpose of helping to take care of that business. I do not think I misstate the position of the hon. member for Hamilton. Let us examine his proposition for a moment or two. At the present time the Intercolonial Railway has certain equipment, certain switches, certain station yards, certain engine houses, certain terminal facilities. My late colleague, the ex-Minister of Railways and Canals, says the facilities are not sufficient for the purpose of doing the business that we have to do at the present time. We have large appropriations before parliament at this session for the purpose of improving those facilities. We have been improving them by spending millions of money every year since we came into power. We are told by our late colleague that the facilities are not sufficient as yet, and that some millions more will be

required to enable that road to cope with the business which it has to meet under present conditions. Well, I do not know whether that be correct or not; I do not know enough about the Intercolonial to say; but I think perhaps we may all agree over that which we do know, which is a matter of common knowledge, that the Intercolonial has had all the business within the last year or two that it could do, and that its facilities are not more than sufficient to enable it to do the business which it has at the present time. The Canadian Pacific Railway has a short line to the city of St. John, it has large facilities for doing business there and along that line. The Grand Trunk Railway has a line from the city of Montreal to the city of Portland. It is a magnificent line of railway, well equipped in the best modern style, and it has terminal facilities which I am credibly told have cost from $20,000,000 to $25,000,000. We are told by the Grand Trunk people that the facilities which they have for doing business between Montreal and Portland are not sufficient now to cope with it.

Now, what is the proposition of the member for Hamilton? It is that the Intercolonial, with its barely sufficient equipment to do the business which it has now, shall take three or four times as great business of the Grand Trunk, that it shall take the business of the Canadian Pacific Railway, and that the business of these railways shall be suddenly precipitated upon the Intercolonial Railway, and that that railway shall be expected, with its insufficient facilities, to do the business of the whole three. And my hon. friend says that that is a consummation to be desired. He says we should not be alarmed at a prospect of that kind, that it is something which will help the Intercolonial and which does not at all call for any action upon the part of this government for the purpose of preventing the consequences which might flow from it. Why, Mr. Speaker, has he considered for half a moment what would happen in such a case as that? Why, we would have in the traffic of Canada confusion worse confounded, we would have a blockade which would throw into the shade the wheat blockade which took place during the last couple of years in the North-west; we would have the business of the country disorganized, because the business of Canada depends upon its export trade, and we should have millions upon millions of money of the people of Canada annually wasted on account of our inability to do the business which ought to be done over these railways. That, Mr. Speaker, is the contribution to the discussion of the railway question which is made by the railway expert of the Conservative party.

There is another contribution which my hon. friend from Hamilton made. He pointed out with some detail and with great accuracy that the prairie section of the railway was easier to build than the eastern section; and that inasmuch as the Grand Trunk Company would probably start up first to build, and would complete it as rapidly as they could, they would have that line of railway in the western portion of Canada, or a considerable portion of it, hundreds of miles of it, I think he said, constructed and graded to do business before the government would have built the eastern section between Quebec and Winnipeg. My hon. friend then proceeded to show that the result would be that the Grand Trunk Railway, long before the government line to Winnipeg was built, would be hauling out wheat from Manitoba and the North-west Territories, and bringing it down to the lakes and sending it to the markets of the world. I may be excused if I do not regard that as a very alarming proposition. If the proposition is that before we get the line built to Winnipeg the Grand Trunk Railway Company will be relieving the congestion and raising the blockage in the west by taking the grain out by way of the lakes, the way our hon. friends say it ought to go, that is not a very alarming criticism of the proposition before us. We trust that that will be the case. We trust that the prognostications of my hon. friend from Hamilton will come true that at an early date the Grand Trunk Pacific Railway Company will to a considerable extent be able to relieve the congestion in the west. As to this argument against the immediate construction of the Winnipeg-Quebec line, I would say that if it proves anything it proves that we should have started to build the line to Winnipeg two or three years ago so as to be there in time. It certainly does not prove that we should not start now. I just note in passing that my hon. friend from Hamilton, like some other members on the other side of the House, argues in favour of the construction of another line by way of North Bay instead of going to Quebec or to the eastern provinces. I note also that my hon. friend from Hamilton, who perhaps thinks it is necessary for him to do something to bring about better relations with the late ex-Minister of Railways and Canals than he has been having during the last few years, entered into an argument for the purpose of justifying my late colleague for leaving the government and I think that my hon. friend was rather unfortunate because he justified my late colleague for leaving the government on the ground that he was not sufficiently consulted by the right hon. Prime Minister, but he forgets that that is not the statement of the late minister himself. My late colleague says that that is not the reason at all. He says that his resignation only had relation to the question of the policy of the government. So that, if my hon. friend from Hamilton thinks to pay court to my late colleague I am afraid he will find that this effort has not been successful. I

note also that almost every hon. member on the other side of the House who has spoken has suggested that this line of railway will not have any return traffic and that the amount of business it will do is extremely problematical. I hope to say a few words upon the subject of traffic before I finish my remarks. I just note now for the purpose of marking the objections that have been made that this is one of the objections which has been raised very generally by our friends on the other side of the House. Then, Mr. Speaker, I note also that our friends on the opposite side of the House, particularly my hon. friend from Hamilton and my hon. friend from Jacques Cartier (Mr. Monk), took strong objection to the accuracy of the Ontario government reports in regard to the country which we have to deal with and through which we are going to build this railway. I have had some experience in connection with the sending out of exploration parties and the organization of parties and I have made an examination of the reports of these parties to which reference has been made. I have taken the trouble to look into the organization and constitution of these parties. I have read the instructions which were given to the various members of these parties and I make the statement without any hesitation and without any fear that it will be successfully contradicted that these parties were organized in a most comprehensive and in a most businesslike way. If there is any reason why these reports are not reliable that reason has not been made evident to this House and that reason is not open to the ordinary observer or to the person who ordinarily examines these papers. We have every reason, I submit, Sir, to entertain the belief that these reports are in every respect completely accurate, and completely reliable in so far as they have gone. But, if our hon. friends on the other side of the House are not satisfied to take the reports of the Ontario government, if they are not satisfied to take the reports prepared when the party with which it does not agree politically, was in power, I think we can furnish them with a large amount of information prepared and procured by the government of Canada when their own party was in power which deals very fully and very comprehensively with the questions which are at issue in regard to the quality and the nature of this country, and I shall take occasion before the conclusion of my remarks to indicate briefly the nature of these reports and the method by which that information has been procured.

Just now I desire to call attention to what I regard as a somewhat important criticism of the contract which is before us. When the hon. leader of the opposition (Mr. Borden, Halifax) addressed the House in reply to the right hon. Prime Minister, one of the important points which he made, one of the points upon which he laid great stress was the allegation, since supported and amplified by the hon. ex-Minister of Railways and Canals that the contract was an abrogation and an abandonment of the policy that the government inaugurated and carried into effect when it brought the Intercolonial Railway into the city of Montreal. That statement has been made, my hon. friend the leader of the opposition has attached great importance to it, has put it in an important place in his remarks upon this important subject when he was addressing the House and the hon. ex-Minister of Railways and Canals has amplified it at considerable length. Let us for a moment or two examine the question as to whether that suggestion or statement is justified or not. It is an important point, it is a point that ought to be settled, and today, therefore, some consideration may properly be devoted to it. We have spent a large amount of money in bringing the Intercolonial Railway into the city of Montreal. We inaugurated an important line of policy when we did it and we say that we are not abandoning that policy. We say we were successful in carrying that policy into effect, that it has brought about the results which were anticipated that we are not abandoning that policy at the present time and that in no possible respect does this proposition affect that policy. The hon. leader of the opposition said that if this policy meant anything its logical conclusion was that we were going on with the Intercolonial Railway to the great lakes. I make the statement that the hon. gentleman has not made out the truth of that proposition. That is an assertion which an examination of the facts does not warrant. The Intercolonial Railway, as a matter of railroading was brought into the city of Montreal for the purpose of bringing it into the commercial metropolis of the country in order that it might be able to do business in competition with the Canadian Pacific Railway and the Grand Trunk Railway upon equal terms. It was not brought there for the purpose of enabling it to do the grain traffic of the west. It may be a proper thing some time to do it, but the two propositions are entirely distinct. There is no connection between the two. The hon. leader of the opposition suggested further—I think his words were—that if that policy meant anything it meant that the Grand Trunk Railway was to hand over at Montreal to the Intercolonial Railway its proportion—I took note of the word used—its proportion of the traffic for the seaboard. It depends upon what my hon. friend meant by the word 'proportion.' If he meant a rateable proportion, if he made a half, or a third, or a quarter, or any fixed proportion then he was entirely wrong, because there is nothing of that kind in the contract. The traffic contract obligates the Grand Trunk Railway to hand over to the Intercolonial Railway

the traffic which is routed by shippers over the Intercolonial Railway. That is what it requires it to do, and if the contract which we are now discussing is carried into effect the position of the Intercolonial Railway will not be altered in the slightest possible degree in any way, shape or form. Since that contract went into effect what has been the position ? The condition has been, that the Intercolonial Railway is competing for through-traffic between Montreal and St. John with the Canadian Pacific Railway short line, and with the Grand Trunk Railway still shorter line to Portland. It was able to do during the last year, 1903, $1,739,545 worth of through business. That was the through business of the Intercolonial Railway done in competition with the Grand Trunk Railway short line and the Canadian Pacific Railway short line. The local business of the Intercolonial Railway was $4,327,626 or a total of $6,067,000. What does that prove ? It proves, first of all, that the predictions of hon. gentlemen on the opposite side of the House, that the policy of extending the Intercolonial Railway to Montreal was an absurd policy, and that their assertion that the railway would do no business was absolutely foundationless.

Some hon. MEMBERS. Hear, hear.

The MINISTER OF THE INTERIOR. And, Sir, I venture to assert that the criticism which they are making now, that the railroad which we propose to build will not do any business, will prove to be equally foundationless when the facts are known. The figures that I have given prove that the Intercolonial Railway was able to do a substantial amount of business, and that the Intercolonial Railway was able to do it in competition with the Grand Trunk Railway and the Canadian Pacific Railway; both lines much shorter than the Intercolonial Railway ; both lines—and this is the point I wish to emphasize—both lines shorter than the new Grand Trunk Pacific Railway line will be. Then, Mr. Speaker, if the Intercolonial Railway under its traffic agreement can compete with the short line to Portland and with the short line to St. John, why in the name of common sense cannot it compete with the new line by way of the Chaudière Junction ? When you come to sift the arguments presented, when you come to look into the actual facts, there is absolutely nothing in the business position presented in connection with the traffic of the Intercolonial Railway, which even suggests the idea that this transcontinental railroad is going to do any harm to the Intercolonial Railway, so far as the through business is concerned.

It is said that the Quebec and Moncton branch of this railway will injure the Intercolonial Railway, by taking business away from it in a local way. I would suggest, Mr. Speaker, in that connection, that members of the House should direct their mind to the illustration which is in their own experience in matters of this kind. I believe, Sir, that if they do address their minds to this experience which they can recall, they will come to this conclusion—a conclusion which I venture to say is justified by all railway experience on this continent—that the building of additional lines of railway where there are any considerable natural resources does not have the effect of injuring the business of the first line. Experience will show all over Canada and the United States that the railways that are doing the worst business, the railways that are the poorest, the railways that are prospering the least, are the railways that are alone. That is the experience all over this continent, and that always will be the experience, mark you, in a country where there are any considerable natural resources and which has any capacity to develop trade. Of course, if you run a railway through the desert, or if you run it through a region of rocks where no traffic can be got, that would not be the case. But where you run a railway through a country that is capable of development and capable of sustaining a population, a new road, according to all experience, builds up its own business, and in addition to building up its own business, by its drawing power and general effect in building up the country, it promotes the general business so that the old road will do more business than it did before the new road was built.

Some hon. MEMBERS. Hear, hear.

The MINISTER OF THE INTERIOR. Why, Sir, the Canada Atlantic Railway has not done any worse since the short line from Montreal was built by the Canadian Pacific Railway. I am told they are doing better. If you take the position of the Grand Trunk Railway in Canada, everybody knows that the Grand Trunk Railway Company never began to prosper until the Canadian Pacific Railway was built, and came down to the province of Ontario, and invaded the city of Montreal, and put new life into the business. The Grand Trunk Railway has prospered in a greater degree ever since. And what is going to happen in the province of New Brunswick and in the province of Nova Scotia when this railway is built, and when through business is carried to a large extent—to I believe an enormous extent—through these provinces ? In the first place we are going to have, even while the railway is being constructed, an enormous demand for the products of the industries of Nova Scotia and New Brunswick.

Some hon. MEMBERS. Hear, hear.

The MINISTER OF THE INTERIOR. We are going to have business done in Nova Scotia and New Brunswick upon a scale and upon lines that have never been attempted before. And, Sir, what is going to be the first institution that is going to

prosper by the increase of business, and by the increase of general prosperity in these provinces? Why, Sir, the railway is the very first institution that will prosper, and I venture to say that the first effect of this prosperity and this increased business in Nova Scotia and New Brunswick will be to benefit the Intercolonial Railway. I am not in the habit of making predictions, and I am not generally very sanguine in matters of this kind, but I venture the statement—and time will show whether my statement is correct or not—I venture the statement that the inauguration and carrying out of this enterprise will be the first step which will go towards placing the Intercolonial Railway on a paying basis and making it a good and a revenue-producing property. I have never been able to comprehend the position of my hon. friend (Hon. Mr. Blair). I have never been able to follow his argument; I have never been able to see that there was any argument of any kind whatever in a business way, in the contention which he advanced with respect to the Quebec-Moncton line.

I want to say upon that point just another word, and if I speak at such length on this question of the Quebec and Moncton line, it is because of the fact that it has been made the point of resistance, the point upon which the attack of our friends of the opposition, and their press all through Canada—with the exception of the press of Nova Scotia and possibly a part of New Brunswick—it is the point upon which they have centred their attacks. I would not say anything further were it not for the fact that as a representative of a far distant portion of the country, I wish to express my view on the proposition to construct that line. I entertain the view in the first place, that it is very surprising to me that the people who are going to be served by this new line should have stood being treated as they have been treated, so long. I express the opinion very emphatically, that if these people were animated by the same spirit as the people that I have the honour to represent in this House, and that my hon. friends from the west have the honour to represent, they would have had that railway before now.

Some hon. MEMBERS. Hear, hear.

The MINISTER OF THE INTERIOR. They would have had the promises which have been repeatedly made to them and repeatedly broken, carried out. They would have had these promises implemented and carried out, or somebody would be made to suffer very severely in consequence. Therefore, I am surprised, I am extremely surprised that this railway which upon every possible ground of reason and common sense the people that are going to be served by it are entitled to get, I am surprised that it should be the one part of this proposition that is attacked with the utmost venom, and that it is held up as being wholly indefensible and wholly absurd. If we were being asked in this House at the present time to build a branch line of the Intercolonial Railway into that part of the country; if we were being asked to subsidize another railway there, who would raise his voice in objection? There is not a man on this side of the House, and there is not a man on the other side of the House, who would raise the least objection to the construction of that line; and if a single man did raise an objection, the railway history of the Dominion of Canada would be the answer to that objection.

References have been made in the press—I need not multiply them now—to cases in the province from which I come, in my own county, where there are railway lines ten, twelve, thirteen and fourteen miles apart. Nobody talks about the infamy of paralleling railway lines there; and we are getting on pretty well, and the railways are getting on pretty well too. Take the position in the province of Ontario, with the Canada Atlantic and the Grand Trunk running on the average not further apart than this line.

Mr. COWAN. The Canadian Pacific from London to Windsor, for 110 miles, does not run more than two miles from the Grand Trunk, and we subsidized it to do that.

The MINISTER OF THE INTERIOR. We subsidized a portion of that line in this House, and was there a man who took the responsibility of dividing the House on the question or of saying that we were wrong?

Hon. Mr. HAGGART. What part of it did you subsidize?

The MINISTER OF THE INTERIOR. A part that runs not more than five miles from the Grand Trunk. I know that, because I scaled it on the map.

Hon. Mr. HAGGART. When was it subsidized?

The MINISTER OF THE INTERIOR. Three or four years ago; I cannot give the exact date. I remember it being discussed in council, and I remember the subsidy being passed in this House. I cannot remember the local name of the line. Now, Mr. Speaker, consider a few more cases. It may seem that we are wasting time on this point; but we are not wasting time when we are showing that the principal objection which has been raised to an important part of this scheme is an objection that is perfectly absurd, and has not a particle of foundation. The Grand Trunk Railway and the Canadian Pacific Railway parallel each other from Montreal to Toronto. How far are they apart? I looked at the map the other day and scaled the distance, and I do not think they are more than forty miles apart anywhere.

They are not as far apart on the average as 62 miles. The Canada Atlantic and the Grand Trunk, running down from the Georgian bay are no further apart on the average than these two lines that we are speaking of. Why, when Mr. Booth built the Canada Atlantic Railway he was hailed as having achieved something which entitled him to be ranked as one of the great men of Canada, and I think that is right. I admire Mr. Booth because of his achievements, and I think he is entitled to respect and credit at the hands of the people of Canada for what he has done. But if Mr. Booth is entitled to credit for having built a railway to the Georgian bay paralleling the Grand Trunk to get a share of the same business, how is it that when you propose to build another railway in another part of the province you are infamous, and too much cannot be said against your proposition? I venture the statement that the longer that particular objection to this proposition is discussed, the more our hon. friends on the opposition side will wish they had never raised it.

I do not know whether we are safe in saying that the leader of the opposition party is against this contract or not. I have listened with some degree of care to the addressses which have been delivered, and I have not heard anything from the other side of the House in favour of the Quebec-Moncton line. I have heard a very great deal against it from the different gentlemen who have spoken, including the hon. ex-Minister of Railways and Canals. I do not suggest that he undertakes yet to speak for our hon. friends on the other side. From the hon. member for Jacques Cartier (Mr. Monk), from the hon. member for South Lanark (Hon. Mr. Haggart), from the hon. member from Hamilton (Mr. Barker), we have received word of what I take to be uncompromising opposition to the Quebec-Moncton line. Our hon. friend the leader of the opposition has not yet spoken clearly on that question. We invite him to speak.

Mr. BORDEN (Halifax). You will hear him all right.

The MINISTER OF THE INTERIOR. We invite him to say whether he, speaking as the responsible leader of the Conservative party, is prepared to endorse what the gentlemen sitting behind him have said, and what they are saying in the country with regard to this proposition. The people whom my hon. friend represents have a right to know where he stands. Sometimes, Mr. Speaker, there are difficulties and responsibilities in connection with the position of a leader of a great party which are very embarrassing; but my hon. friend will have to face the embarrassment, and he will have to tell us whether he elects to stand with the people of New Brunswick, the people of Nova Scotia and with the people, so far as the rest of Canada is concerned, who are supporting this government, or whether he elects to stand with those members of his party and a small remnant of the people of Canada who have undertaken to block a meritorious proposition. We shall listen with interest to what my hon. friend has to say on that point.

Mr. BORDEN (Halifax). You will hear it all right; do not be alarmed.

The MINISTER OF THE INTERIOR. I desire to refer to one criticism which my hon. friend the leader of the opposition made, and which requires to be mentioned and cleared up at some stage of the debate. My hon. friend referred with fine sarcasm to a provision in this contract which relates to the question of security. He read the clause with reference to the deposit of $5,000,000, and spoke somewhat sarcastically of this clause as a statesmanlike provision. I will quote his own words:

> In other words, the company guarantees to build a railway as to which it receives a guarantee of $13,000 per mile for one portion of it and $30,000 per mile for the rest; and it deposits with the government $5,000,000 as security that it will use the bonds guaranteed by this government.

If the company were depositing $5,000,000 as security that it was going to use the government guaranteed bonds, the sarcasm of my hon. friend would be perfectly justified. That would be not a statesmanlike provision, but a most absurd, a most futile, a most ridiculous proposition; and I wonder that it did not occur to my hon. friend the leader of the opposition, in the hasty examination which he made of this contract, that it would be safer, in his preliminary criticism, to give the lawyers of this government, including my hon. friend the Minister of Justice, credit for a little common sense and a little brains in drafting the document which they submitted to the consideration of parliament. If the hon. gentleman would give us credit for a little common sense and intelligence he would not put that construction upon this document. The hon. gentleman read the clause and therefore could hardly claim that he was not aware of its contents. By reading the clause, he made this perfectly clear, that the $5,000,000 are put up for the purpose of securing that the company shall build and equip the railway in accordance with the terms of the contract. What does that mean? It means that the company shall use the bonds guaranteed by the government and the bonds guaranteed by second mortgage in order to procure money for the construction of the railway and also for its equipment to the extent of $20,000,000, and we shall have a mortgage on the whole. I leave my hon. friend to explain this discrepancy between his version of what the contract provides and the actual facts. An off-hand statement as to what a clause

in a contract means must be made with some degree of caution or serious mistakes will occur. It is not, I presume, a thing that can be lightly passed over, that when a contract of this description is made, when the utmost care is taken in the drafting of its provisions, when legal counsel are employed to draft, with the utmost care, security clauses, and when a large and substantial security is being put up, a gentleman occupying the responsible position of the leader of the opposition should wholly distort and misconstrue the effect of this important provision. My hon. friend must remember that the great Conservative party throughout this country will look with respect to what he says on this question, and therefore he cannot afford to entirely mislead them in regard to one of its important phases.

I have tried, in the remarks I have made up to the present, to advert more particularly to what I consider the important feature of the contract. I spoke of the question of running powers, and I said that that was so important a feature of the contract that in all probability, if that provision had not been there, the contract would not have been concluded. There is another provision of equal importance. It is one to which reference has been repeatedly made. I refer to the provision which relates to the question of routing traffic by Canadian ports. Certain criticisms have been addressed to that particular part of the contract. I may say that I agree largely in the view expressed by my hon. friend the Finance Minister, when he said that inasmuch as we were making a clear, distinct and unambiguous contract with a responsible company, with a respectable institution which might reasonably be expected to implement its obligations, we should have a good deal of confidence that every reasonable effort would be made by them to carry out the contract. There is much more to be said on the question, and I desire to call attention to the nature of the criticisms on this point. I think that the criticism of my hon. friend, the leader of the opposition, was perhaps the most reasonable. He said that this is a provision which you can evade and he left it there, except that he suggested that there was no penalty provided in case the Grand Trunk Railway failed to meet its obligations in this respect. Upon that I shall speak in a moment or two. Then my hon. friend and former colleague, the ex-Minister of Railways and Canals (Hon. Mr. Blair) suggested a most elaborate method of getting around the contract. He suggested that while the Grand Trunk Pacific Railway would not know that the contract was being violated, the Grand Trunk Railway would send up agents over the Grand Trunk Pacific Railway stations to induce people to route their traffic by the Grand Trunk Railway to Portland instead of to Quebec and St. John. That was the suggestion given by the ex-Minister of Railways and Canals as a reason why he does not think this is a good or effective proposition. My hon. friend from Hamilton (Mr. Barker) has another reason. He says that the Grand Trunk Railway would issue instructions to its officials not to interfere with the routing of the traffic but to let people route traffic at the same rates by St. John and Halifax, if they wanted to, but the Grand Trunk Railway would take care not to promote any official who would permit that to be done. Are the opponents of this measure driven to such absurd reasons as these against a provision of this kind in a solemn contract made between the government and the Grand Trunk Pacific Railway? I would like to see my hon. friend the leader of the opposition or the ex-Minister of Railways and Canals sitting upon a bench, as the sole arbitrator between the government of Canada and the Grand Trunk Railway to adjudicate on a complaint that the contract was being violated under such circumstances. If evidence were given on behalf of the government that the agents of the Grand Trunk Railway went through the stations, communicated with the people, and induced them to send their traffic down to Portland, I would like to see the officials of the Grand Trunk Pacific getting up and declaring that they knew nothing at all about such proceedings. How long would a judge, with any common sense, listen to such an absurd, ridiculous plea. If it were a criminal case, there is not a court or a jury in Canada who would not convict the accused of guilty knowledge. We cannot put upon the interpretation of the contract any such ridiculous reasoning. How great a penalty would the hon. gentleman want? Would it do if we fine the company $1,000? Would it do if we fine them $10,000? Or would it do if we fine them $1,000,000? If hon. members will look at section 35, they will find the follwing words:

> For the purposes hereinafter in this paragraph respectively defined the company may and shall create mortgages to trustees as follows:—

Then, in subsection (c):—

> A mortgage which shall be a charge upon the rolling stock constituting the equipment of the eastern division next after the charge mentioned in paragraph 35 (a)——

That is, our own mortgage, not another——

> —to secure to the government the rental payable in respect of the eastern division, the efficient maintenance and continuous operation of the said eastern division, and the observance and performance by the company of the terms of this agreement.

Upon that line of railway there is to be $5,000,000 of rolling stock under a mortgage to the government to secure the performance of the terms of the agreement.

Mr. BORDEN (Halifax). May I ask my hon. friend (Hon. Mr. Sifton) a question? I suppose he is very familiar with this con-

tract and could give me in a moment the information I want. Is there any provision in the contract which requires the Grand Trunk Company to own the rolling stock on the eastern division? Would it not be possible for it to merely lease it?

The MINISTER OF THE INTERIOR. I will deal with that in a moment.

Mr. BORDEN (Halifax). I should be glad if the hon. gentleman would do so.

The MINISTER OF THE INTERIOR. The point referred to was one passing through my own mind, because it was adverted to, I believe, by my hon. friend from Hamilton though I did not hear him very distinctly. It is an important point to be considered. But just now I was calling attention to the fact that upon $5,000,000 worth of rolling stock the government of Canada has a mortgage expressly provided not only to secure the operation of the eastern division, but to secure the performance of the terms of this agreement. And one of the terms of this agreement is that this clause shall be fully and completely carried out. If it is a fine our hon. friends want, there is a fine provided, amounting to the respectable sum of $5,000,000. But I go further, I would not consider it at all advisable to put in this contract a penal clause, a clause that would provide, for instance, that a fine in the ordinary sense should be levied against the Grand Trunk Railway for the violation of the clause. It would not, in my judgment, be an appropriate or proper way of arriving at the end we desire to reach. In drawing this contract, we are not making an amendment to the criminal law, we are making a contract between parties. If the contract were between two private parties there would be no penal clause. Any lawyer will agree that while sometimes such a clause as a liquidated damage clause is inserted in a contract, yet, in ninety-nine cases out of a hundred, contracts between private parties simply state what the parties agree to and they are left to their ordinary remedies in the courts. In this case, the contract is being made between a great railway corporation and, in effect, the parliament of Canada. The parliament of Canada has plenary jurisdiction over the other party to the contract. There is no body that has jurisdiction over the parliament and over the railway company too, and we cannot place ourselves in exactly the same position as that in which private parties stand. The company trusts in our good faith that we will deal reasonably and properly with them, and they are perfectly safe in so doing. If there is any doubt about the meaning of any clause in this contract, they may fairly say to us: Do not pass an Act of parliament to decide what this means, but submit the matter in some way to a judicial and impartial tribunal, in order that it may be decided. In such case, we should not have the right to legislate upon a question that was fairly and reasonably a subject of dispute between us. But if we come to a clause which is absolutely clear, about the meaning of which there is no possible dispute, and a state of fact arises in which it is clear beyond doubt that the company is wilfully, deliberately violating the terms of this agreement, will the leader of the opposition, or will the ex-Minister of Railways and Canals, tell this House that the parliament of Canada has no remedy in the circumstances? Sir, the proposition is the most absurd that could be brought before a deliberative body. It would be the duty of parliament, in case of such a state of facts arising, to apply every remedy within its power; and it cannot be doubted that its power is ample and complete with regard not only to the Grand Trunk, but with regard to the Grand Trunk Pacific. I can see no possible ground for argument that, in case of a wilful violation of this clause, parliament would not have power, properly and without the violation of good faith, or proper practice in the premises, to take any steps necessary, in the exercise of its supreme legislative jurisdiction, to enforce the carrying out of the terms of the contract.

Now, I have dealt with what seemed to me to be the main criticisms which have been addressed to this contract by our hon. friends on the other side. Looking over the trend of what has been said up to the present moment, I gather that hon. gentlemen opposite are opposed to this proposition, they are opposed to it with unanimity and, apparently, they oppose it with vigour. They have certain grounds upon which they base their opposition. First, they say that this railway is not a pressing necessity at this time. Second, they are opposed to the Quebec-Moncton branch—except my hon. friend the leader of the opposition (Mr. Borden, Halifax), and we shall hear from him later on. Third, they are opposed—and this is a point to which I wish to direct a little attention later on—to our construction of the Quebec-Winnipeg line. The hon. member for Jacques Cartier (Mr. Monk) tells us that the proper method of developing the outlying districts of the province of Quebec is by colonization railways running out from the older parts of the province, and my hon. friend from South Lanark (Hon. Mr. Haggart) expressly takes the position, so far as Ontario is concerned, that that province, he believed, would favour the development of the newer portion of the province, not by a through line, as we suggest, but colonization lines running out from lines already in existence. You will see, Sir, that I am trying to define the issue. As I understand, these hon. gentlemen take issue as to the necessity of this work, and as to the method, and say that their method would be better and more in accordance with the necessities of the case. These are the issues between us. They say that

the road will not have enough business to justify its existence or its construction. And lastly—I think these three or four points that I mentioned would cover the main ground upon which they object to our proposition—lastly, they apparently decline to accept the reasoning which we have presented to them from this side of the House upon the financial phases of this scheme.

Our hon. friends opposite view apparently with some degree of amusement the reasoning which has been presented to them, and the statements which have been made in respect to the financial effects of this contract, and the amount of money which it will take to implement our obligations in regard to carrying it out. My hon. friend the Finance Minister—and I may perhaps ask that particular attention be given to this phase of the question, because I think it is the most important in the whole discussion—my hon. friend the Finance Minister took the provisions of this contract in so far as they relate to the financial features, and he went over it from end to end. He made a close, and a careful, and an exact calculation as to the amount of money which we should have to pay if the Grand Trunk Pacific carries out its contract. That was the nature of the calculation which was made by the Finance Minister. If the Grand Trunk Company carries out its contract, then there is no escape from the conclusion which was placed before this House by my hon. friend. You cannot get over it by laughing, you cannot meet the argument by jeering at it. There is only one way of meeting the argument that he presented to this House, and that is by showing that the Grand Trunk will not be able to carry out this contract. That is the only way you can meet it. If the Grand Trunk Company carries out its contract, then we will pay just what the Finance Minister said, not one dollar more not one dollar less. We have therefore to discuss the question upon that basis. I intend later to say a few words in regard to the question of traffic, but in the meantime I desire to point out one important consideration having reference to the question whether the government are taking sufficient guarantees that the company will carry out its obligations. In the first place, we have to consider what was well suggested by the hon. member for Brant (Mr. Heyd), who asked what would happen when the railway bonds mature. Upon that point I am not going to enter into a lengthy argument, because I do not think it is necessary. I will, however, say this, which I think will meet with the immediate assent of every member on this side of the House at least, and I hope of every member on the other side, that so far as the payment of the bonds at maturity is concerned, either upon the eastern section or upon the western section, we are perfectly satisfied that fifty years of development in Canada will make that railway worth a great deal more than the face value of the bonds. Therefore we may dismiss from consideration, we need not bother our heads about the payment of the bonds. The railway will be able to do much more than take care of the principal and the bonds when it is called upon to do so.

As to the payment of interest in the meantime, what you have to consider is the immediate security the government has for the obligations which are incurred. The security which the government has for the fulfillment of these obligations is this: In the first place, the Grand Trunk Railway Company have to find the additional quarter of the money for the construction of the western section; they find $20,000,000 for rolling stock, and they put that $20,000,000 under our mortgage; they put under our mortgage $30,000,000 of their money which they provide as an additional security for the general purpose of carrying out this contract. I think, as my hon. friend the Finance Minister well said last night, when he so fully, so clearly, and so ably discussed the financial phases of this question, that no parliament, certainly not the parliament of Canada, was ever asked to assent to an important financial proposition which was so buttressed with security, so impregnably fortified by all the securities that were required, as this proposition which we are dealing with at the present time. And yet, we are asked to believe that after a little while the Grand Trunk will fail to carry out its contract, and it won't go on. What does that argument amount to? What is the Grand Trunk going into this scheme for? It is because it has a magnificent system of railways in the eastern portion of Canada, because there is an enormous and growing traffic in the west, and the Grand Trunk wants to get in there, and by means of this railway it is going to get in. Moreover, its thousands of miles of railway all over Canada are going to be connected with the growing trade in western Canada, and they are going to do a large and profitable business in consequence. Yet, Sir, the suggestion is made that after a little while, after they have got that trade built up, after they are making millions of dollars out of it, they are going to stop operations on this transcontinental road, throw it all up, and withdraw altogether from the business, as they will do, if they do not carry out the terms of this contract, and it is only by carrying out the terms of this contract that they can get any business from the west, or over the western line. So I think it must be clear that we may feel ourselves reasonably safe and reasonably well protected.

A word upon another point, and I would like my hon. friend from Lanark to direct particular attention to it; I would like him to give his view as to what is likely to happen as a result of this enterprise. I

would like my hon. friend, with his knowledge of this country, to say if he does not himself know, and believe in his heart, that this is going to be a great and a successful enterprise. My hon. friend once had faith in the country, I do not know whether he has lost it or not. He told us some time ago, in fact, that he used to have faith in the Intercolonial and in its management, but that the management of the Intercolonial under the late minister had destroyed any prospects which might have once existed of advancement in the policy of government ownership of railways. Now, the real question on which we are at issue with our friends opposite is the necessity of this railway, the immediate necessity of it. My late colleague, the ex-Minister of Railways and Canals, entertained the House at some length in discussing this question of the immediate necessity of the railway. He said that if there had been any demands made for that road he would have heard them. Well, I thought if what my hon. friend said was true that he had not heard any demands made, that he must have been suffering from deafness even worse than I am myself. I thought he must have been emulating the example of that celebrated character Rip Van Winkle, he must have been asleep, and he must have been sleeping very soundly, or he would have heard the many and insistent demands, a very few of which I shall refer to, for the construction of a new railway to afford greater transportation facilities to the country in general.

But what I desire to advert to is not so much the attitude of the late minister, which was fairly well dealt with by the member for North Norfolk, but the attitude of our friends upon the other side, because, when the late Minister of Railways and Canals said there was no immediate necessity for this railway, his remarks were received with the greatest of applause by hon. gentlemen on the other side of the House. We are, therefore, justified in assuming that they approve of the position taken by the late Minister of Railways and Canals, when he stated that there was not sufficient necessity for this road and that he had heard no insistent and strong demand for its construction. It is necessary that we should make our position upon that point clear. This is not a thing that can be passed over with a wave of the hand. It is a serious and important matter of business, and if the allegation is that twelve or thirteen members of the government have gone into the council chamber, locked the door, discussed this matter, and have, after a little talk with the railway managers, brought out a scheme for building a transcontinental railway involving an enormous expenditure of money, when the people do not want the road, and when there is no demand for it, it is a pretty serious allegation and it is an allegation that we have to meet. What are the facts in regard to that point? I think the testimony will be found to be absolutely conclusive.

At one o'clock, House took recess.

House resumed at three o'clock.

ROYAL ASSENT.

Mr. SPEAKER. I have the honour to inform the House that I have received the following letter from His Excellency the Governor General's secretary:

Sir,—I have the honour to inform you that His Excellency the Governor General will proceed to the Senate Chamber on Thursday the 13th instant at four o'clock p.m., for the purpose of giving assent to certain Bills which have passed the Senate and House of Commons during the present session.

I have the honour to be, sir,
Your obedient servant,

F. S. MAUDE, Major,
Governor General's Secretary.

NATIONAL TRANSCONTINENTAL RAILWAY.

The House resumed adjourned debate on the motion of Sir Wilfrid Laurier for the House to go into committee on a certain proposed resolution respecting the construction of a national transcontinental railway.

The MINISTER OF THE INTERIOR. I desire, Mr. Speaker, in passing, to call attention again to the fact to which I made reference this morning respecting the bonusing of a certain line of railway in Ontario which was a very short distance from another line of railway. I made the statement that this line was four or five miles distant from the other, and I think that is admitted. As to the question whether we bonused the line or not, I refer hon. gentlemen to the Subsidy Act of 1899, in which it will be found that this country gave a bonus to a railway to parallel the Lake Erie and Detroit Railway, and that these two lines are not more than five miles apart, as my hon. friends from that part of the country will know. There we have a striking example of the bonusing of parallel lines of railway, lines coming closely into competition with each other and going through almost the same territory. That, therefore, is a matter which depends on the necessities of the trade of the district in a particular case, and it is not to be settled by any general proposition that no parallel line should be constructed. That principle is so well recognized in this House that no one will undertake to dispute it.

I want to call attention to some other points on which there has been some misunderstanding. If we are to proceed with this debate upon intelligent lines, then there should not be so much discussion about matters in respect to which there can be no dispute. In the Conservative press and in the addresses made by some of our hon.

friends—my hon. friend from South Lanark amongst others, but I do not blame him, because when he spoke he had not time to read the contract—in considering the cost of this enterprise the government is charged with the interest upon the cost of construction, and which, if it should not be charged with, would mean a very substantial difference in the total amount of the liability. My hon. friend (Hon. Mr. Haggart) will by this time have discovered his mistake and may correct it, but in the speech that was made by the ex-Minister of Railways (Hon. Mr. Blair), who certainly had every opportunity of reading the contract with care and deliberation, he also charged us with interest upon the cost of construction in his calculation. Now, if you read the contract, you will find that the interest on the cost of construction shall be part of the cost of the road, and is provided for as capital in the ordinary way. Any person of ordinary intelligence will see that in the contract, so that there need be no dispute about it. Therefore, when we guarantee interest upon a maximum of $30,000 per mile in the mountian section of this railway, the interest on the cost of construction, as it goes on for the five years, is included in that $30,000 per mile, and that is the maximum of our liability. We have no charge for additional interest, to the interest upon that $30,000. That is covered by the capital account when the capital account is closed, and it is the same way with regard to the cost of construction of the eastern division. I call attention to that, because in the opposition press calculations are made which should be lessened to the extent of some millions of dollars on account of this manifest error into which they have fallen.

I want to say a word on the question of running powers ; not for the purpose of demonstrating the practicability of carrying out this provision in the contract, but for the purpose of showing my hon. friends from the eastern portion of the country how important we who represent western Canada believe this clause with regard to running powers, is. Gentlemen who live in the eastern provinces, and who do not know what it is to be cut off by thousands of miles from the seaboard, have no idea how helpless such a community is to alter the conditions of transportation without assistance of a very important and of a very extensive character. The prairie community west of Red river is in the position that they may develop their population and their trade to a very large extent, that there may be abundance of trade for independent lines of railway, in addition to these already constructed in the prairie country, but you cannot get anybody to consider the advisability of constructing lines of railway, simply by reason of the fact that they cannot get out of the country for want of an outlet. In the other provinces you can get people to engage in a railway enterprise, but the opportunity to do that does not exist in the west, for the simple reason that a railway of 50, or 60, or 200 miles, is liable to be confiscated at any minute by the conditions which a through line of railway may impose upon it. Therefore, it is that we who come from the west feel that this clause in the Bill which provides for running powers is very important to us. That clause can be so worked out that other lines of railway can make use of it, and it means that it will place the people of the west in a position of independence that no other scheme possibly could.

Some hon. MEMBERS. Hear, hear.

The MINISTER OF THE INTERIOR. I want to say a few words on the much discussed question as to how these running powers can be carried out. It was discussed by the hon. member for North Norfolk, and later on by the Minister of Finance. My hon. friend the Minister of Finance touched a point which causes me to make another remark. He suggested that there was very little doubt about the possibility of carrying out this clause with regard to running powers, and that it would be simply a matter as to whether it could be economically done, and whether in the matter of business it would pay to have it done. It will suggest itself at once to the members of the House that when the country develops, as it will develop, when the time comes that the Intercolonial Railway, for instance, may desire to make use of that eastern section, and when the Canadian Northern Railway, or other lines which may be built in the western country, desire to make use of that eastern section main line, there is nothing to prevent the forming of an operating company, just as a terminal company is formed in the city of Chicago, or any other place, and have that operating company put its staff along the line of railway, as is done in the case of the Canada Southern ; and that operating company will act for the benefit of all the railway companies that may desire to participate in the advantages afforded by that main line. That is a simple matter which requires only to be stated in order that it may be perfectly clear that the bugaboo that has been raised in regard to this clause about operation is absolutely unfounded in fact, upon the question being examined.

My hon. friend from Hamilton (Mr. Barker) indulged in criticism of some provisions of this contract, and I am bound to say that if the hon. gentleman were not a man of age and discretion, I should not have been disposed to take him seriously; I should have thought that instead of addressing an argument to the House he was making a joke. My hon. friend's argument, as I understand it, was based on section 14 of the contract. I suggest to my hon. friend from Hamilton that in reading this contract, it would be better for him to enter-

tain the idea that it is a serious business contract, intended to govern transactions in a business like way, and not specially drawn for the purpose of concealing some nefarious plot to be palmed off on the public. If I understood my hon. friend's argument aright it was that section 14, which defines working expenses, as including in respect to the eastern division, money paid in respect of the hire of rolling stock, was put in the contract in order to enable the Grand Trunk Pacific Company to borrow or rent the $20,000,000 of rolling stock, instead of purchasing it and putting it on the railway according to the terms of the contract. That is my hon. friend's suggestion. If you read this clause, you will find in it a definition of the expression 'working expenses,' and the obvious purpose of that provision, in respect of the hire of rolling stock, is this, that if the company—as it will, as every company does, from time to time—has the use of rolling stock belonging to other companies, the rent which is paid for the use of that rolling stock goes into the working expenses as part of the cost of running the road; and I am not aware of any other provision that could be made to cover the case.

Mr. BARKER. May I ask the hon. gentleman a question? Does he not find in the 14th clause that the rent is to be charged on the cars furnished for the equipment of the eastern division?

The MINISTER OF THE INTERIOR. My hon. friend's argument, if I understand it aright, is that that clause is intended to let the company put rolling stock on the eastern division without owning it. They are going to borrow or rent that rolling stock, and what are they going to do with it when they get it there? Under the provisions of this contract, they are going to put a mortgage on it. That is my hon. friend's argument. Now, I do not know whether my hon. friend's attention has been much given to criminal law or not; but if it has, he will know that to mortgage property which does not belong to you is considered a serious offence, and I do not think it probable that this company will do that under this contract.

Mr. BORDEN (Halifax). Might I ask the hon. gentleman a question? Is it a criminal offence for a lessee of property to mortgage his interest in it?

The MINISTER OF THE INTERIOR. If his mortgage of the property is under such circumstances as to be an unlawful conversion of the property, it might be; and I think my hon. friend as a professional man will be able to recall numbers of instances in which that point has been under consideration. But, as I said, if my hon. friend had not addressed that argument to the House with the elaboration and care which he did, I would not have thought that he meant it seriously.

My hon. friend the leader of the opposition has asked me to devote some attention to the question of the ownership of this rolling stock, and I intend for a moment or two to refer to it. Section 22 of the contract provides:

> The company shall equip both divisions of the said line of railway with modern and complete rolling stock suitable and amply sufficient for efficient operation and the handling of all classes of traffic to the satisfaction of the government, and the first equipment for the completed road shall be of the value of, at least, twenty million dollars, of which not less than five million dollars worth shall be supplied for the operation of the eastern division of the said railway, and the said five million dollars worth of rolling stock, together with all renewals thereof and additions thereto, shall be marked as assigned to the said eastern division and shall be held to be and form part of the equipment of the eastern division of the railway during the said period of fifty years and shall be used as the equipment appertaining thereto, according to the ordinary practice of railways during the said period of fifty years.

The first reflection that occurs to any one after reading that section is that if the company borrowed the rolling stock, they would have to borrow it for fifty years, and a loan of that kind would be somewhat extensive in its period. But, apart from that feature of the case, I may say that, while it is not my business to advise the government on questions of law, that being the duty of the hon. Minister of Justice, and while the counsel who were associated with the Minister of Justice in the revision and examination of this contract were clear in their opinions as to the meaning of it, those of us who are lawyers may nevertheless express an opinion as to the meaning of that section; and I venture to give the opinion, without any doubt at all as to its correctness—and lawyers know that we cannot always give an opinion without doubt as to its correctness—that no court in Canada would hold that the company complied with the terms of that clause if they did not own the rolling stock and put it on the road as the property of the company. If there is any doubt about that, look at section 35, which says:

> For the purposes hereinafter in this paragraph respectively defined, the company may and shall create mortgages to trustees, as follows:
> (a.) A mortgage which shall be a first charge upon the railway, undertaking equipment, and property.

The company is declared by this Act to have the power to put a mortgage which shall be a first charge upon the property; and subsection (c) of the same section says:

> A mortgage which shall be a charge upon the rolling stock constituting the equipment of the eastern division next after the charge mentioned in paragraph 35 (a) to secure to the government the rental payable in respect of the eastern division, the efficient maintenance and continuous operation of the said eastern division, and the observance and performance by the company of the terms of this agreement.

Well, Mr. Speaker, I do not think we need apprehend that any court that is called on to construe this agreement could by any possible construction of this provision, hold that the company could borrow their rolling stock and send it there for the purpose of complying with the terms of this contract. I was speaking at one o'clock of the fact that our hon. friends opposite take issue with us upon an important phase of this question. They take issue with us as to the necessity for the railway, and I adverted to the fact that they loudly applauded my former colleague when he expressed himself as having been wholly oblivious of any demand for the construction of an additional transcontinental line. I, therefore, think it is wise to advert briefly to the evidence of such a demand and to the evidence of the fact that the government, in coming to the conclusion to which it did, is not submitting a proposition which is without public support and unwarranted by public sentiment. Well, I venture to express the doubt as to whether any member of this House can recollect any important proposition ever brought before the parliament of Canada which was received with such unanimous approval from all quarters as the proposition that the Grand Trunk Railway should build to the Pacific. Whether the people would approve of the method proposed, is matter for discussion, but there can be no doubt as to the opinion of the people of Canada regarding the necessity for a new railway across the continent. We find the evidence in all shapes and forms. In the fall of last year, the board of trade of Winnipeg—that city which is the entrepot of the trade of the great west and which, in my judgment, will remain so and achieve great growth as the result of the development of that country—passed a resolution, most unqualified in its terms, as to the necessity for additional transportation facilities. In this resolution the board of trade said that the railway service had become so unreliable on account of being overtaxed that relief was absolutely needed. The passenger service had become so irregular, unreliable and apparently demoralized, that much loss was inflicted on business men. Then they spoke of the congestion with regard to freight traffic and other difficulties affecting transportation, and wound up by saying :

> Therefore this board respectfully urges the Dominion government to take such immediate action as shall remove the grevious disabilities under which the people of Manitoba and the North-west Territories labour, and to take such further measures as shall effectually prevent a recurrence of the conditions herein described.

I find that the North-west territorial assembly, in the fall of 1902, passed a very strong resolution, in which they recited the many difficulties under which the people of the west were labouring in the matter of transportation, and wound up by saying that :

> The prospective increase in the volume of traffic, which largely increased cultivation and settlement of lands in these territories will certainly create, will further tend to congest traffic between these territories and the provinces of the east, and unless it is held desirable to divert part of such traffic through foreign channels, adequate facilities for transportation must be immediately provided. That this assembly does therefore humbly pray that Your Excellency may be pleased to take such action as may be necessary or expedient to insure that the people of these territories are provided with an efficient transportation system as contemplated by the contract made between the people of Canada and the Canadian Pacific Railway.

It will be remembered that this is an address or memorial, passed by the representatives of the people of the North-west Territories, coming from all portions of the territories, and fully aware of the facts and circumstances as they existed at that time. I find that last winter the Grain Growers' Association of the North-west Territories passed a strong resolution, in which they say that the country is not only being retarded, but the residents are suffering much deprivation on account of the scarcity of fuel and building material, owing to the lack of transportation facilities.

I see in the 'Regina Leader'—not an editorial item—but a news item, stating that :

> For many weeks past, first one merchant and then another has in vigorous language drawn the attention of the 'Leader' to the fact that the condition of railway traffic in the west is continually getting worse. The situation last year was bad enough, when for days and sometimes weeks, merchants were completely out of certain lines of goods, because the railway could not get them in. This year it is infinitively worse, for many business houses have been completely sold out of certain lines for weeks and months, notwithstanding the fact that their orders were placed in plenty of time and the goods promptly shipped by wholesalers in the east.

I find in last December an opinion given by a gentleman, with whom I have had long personal acquaintance, and who is better qualified to speak of the railway situation in western Canada than any man living. I refer to Mr. William Whyte, a prominent officer of the Canadian Pacific Railway, and for many years general superintendent of that western division. Last December he said :

> There is lots of room for the Grand Trunk Railway in the North-west. I'm glad to hear they are coming. You must remember that the Grand Trunk Railway is a national road, and it is far better to have it than an American road. If the people of the east had any idea of the rapidity with which the country is settling out there, they would not be surprised to hear me say : 'There is room for the Grand Trunk Railway and others as well.' The condition of affairs has completely changed even since a year ago. The traffic is not only abnormal east-bound but also west-bound. It is this fact which has simply rendered it impossible to handle the crop with the despatch which was necessary.

Again he said :

In 1895 we had a large crop, as you remember, which was handled satisfactorily, simply because we could rush the cars back, and reload. To-day all is changed, and I don't suppose we are getting within 35 per cent of the use of our cars for grain haulage we did last year, simply because they are used in other ways. The people are rich, they are purchasing in the east, and what we call our lake trade has increased 95 per cent over last year. Then the fuel situation has changed ; they are consuming more fuel as they become richer, buying more groceries, provisions, &c., in the east, so that the abnormal increase has been in both east and west-bound, and in local trade.

My hon. friend from Macdonald (Mr. Boyd) made a remark last May. He said :

Still, as I have said, there is no denying the fact that they have not met the requirements of that country——

That is, the railway companies have not——

——and that, if they are going to remain in the country and if the country is going to make the progress we all feel it ought to make, either the company must voluntarily do more than it has done, or else this government or whoever is responsible in the premises, must take steps to meet the emergency which now arises.

And my hon. friend from East Grey (Mr. Sproule) said this year :

Now with the influx of population to that country which has taken place lately, what will it be two or three years hence when you have 400 million bushels of grain ? Why, even twelve or fifteen railroads could not handle it.

Some hon. MEMBERS. Oh, oh.

Mr. SPROULE. I am afraid the hon. gentleman (Hon. Mr. Sifton) has not completed the quotation. My remembrance is that the rest of the sentence is something like this : 'in the short time the farmers expect it to be handled in the fall of the year.' Let the hon. gentleman give it all.

The MINISTER OF THE INTERIOR. House of Commons 'Hansard,' May 5th 1903—that is where the hon. gentleman (Mr. Sproule) will find what he said. I have here a resolution from the council of the Toronto board of trade. As you go along and pick up just here and there a little of the evidence on this point as to the demand for this railway, the assertion of some hon. gentlemen that they never heard anything about it is slightly humorous. However, we have the resolution of the Toronto board of trade, passed on June 23rd of this year :

Whereas, the board realize the necessity of an outlet by the shortest and cheapest route for the fast increasing productions of the Northwest country and the advisability of competition without the extravagance of the duplication of lines.

Be it therefore resolved that this board urges strongly upon the government of Canada the construction by the Dominion of a line from Quebec to Winnipeg traversing the clay belt of northern Ontario and passing north of Lake Nipigon to Winnipeg, the use of such railway being permitted to all railroads under proper regulation.

Has the Toronto board of trade gone mad? Are these business men all fools?

Mr. KEMP. May I ask the hon. gentleman a question? Will he make it clear that that was not a resolution of the Toronto board of trade, but of the council of the board of trade ?

The MINISTER OF THE INTERIOR. I shall not attempt any answer to my hon. friend (Mr. Kemp). He desires this House to take knowledge of the fact that there is a distinction between the most prominent men of the city of Toronto, selected by the business men of Toronto to be the council of the board of trade and their constituents.

Mr. KEMP. If the hon. gentleman will allow me——

The MINISTER OF THE INTERIOR. Well, now, perhaps my hon. friend will permit me to proceed——

Mr. KEMP. I will not interrupt the hon. gentleman if he does not allow me to.

The MINISTER OF THE INTERIOR. I am referring to a question of fact about which there is a dispute. It has been alleged in this House that nobody ever heard of the demand for this railway before. It is alleged that the government go into the council chamber, discuss this matter by themselves, then come out here and launch upon this parliament a mad, stupid, crazy scheme not worthy the support of any man of sense or reason. What do we find? We find that the council of the Toronto board of trade, the selected representatives of the business men of Toronto, next to Montreal the commercial metropolis of Canada, have solemnly put themselves on record as advising this very thing. If my hon. friend (Mr. Kemp) had been desirous of accentuating this bit of evidence, he could not have done it more effectively than by calling attention to the fact that it was not a big mass meeting, perhaps acting without any very great deliberation, but a meeting of the council of the board, prominent men, responsible to their constituents, and giving their advice upon this question deliberately. Well, I find the Winnipeg 'Tribune,' my old friend, says that it is a good thing to have the Grand Trunk go west. The Winnipeg 'Telegram,' equally friendly to myself, says :

The same confidence in the west we still have, and we have no more doubt that the west can support a third system of railway than we had in 1901 that it could support a second system.

This was on the 27th of November. Two days before they had a long article in which they said that if the Dominion government make satisfactory arrangement the railway should be a good thing for the country, and the country could sustain the road. The 'Mail and Empire' had something to say on the subject on November 25th last. My hon.

friend the ex-Minister of Railways and Canals (Hon. Mr. Blair) was good enough to point out that, of course, when it is known that the government has made up its mind to do a particular thing, the party press throughout the country naturally falls into line and is disposed to advocate the idea of doing this thing which the government has already determined to do. The suggestion of my hon. friend was that the knowledge that the government was going to take a certain course had considerable effect upon the mental attitude of the members of the press. I may be excused for doubting that the knowledge on the part of the managers of the 'Mail and Empire' that the government was likely to take up this project would very much influence them in its favour. Therefore, I quote the 'Mail and Empire' as one of the few newspapers not likely to be subject to government influence in the way suggested by my late colleague. The 'Mail and Empire' said :

Last year the crop was more than the Canadian Pacific Railway, exerting all its great resources, could handle before the close of navigation. This year, the crop is still larger, and though the hauling power of the road has been very greatly increased, milions of bushels will remain to be carried after Fort William is closed by ice. Yet the traffic of our North-west is but in its beginning: Instead of 70,000,000 bushels of wheat grown this year, five times that quantity may have to be looked after before the Grand Trunk Pacific is ready for business. Production will greatly thicken in the zone traversed by the Canadian Pacific and the Canadian Northern. But the wheat belt has been proved to be much wider than that zone. Far north of the country served by existing lines, the finest hard wheat can be produced. There is plenty of room for another railroad in the prairie country. The completion of the Canadian Northern and the Grand Trunk Pacific will not prevent the Canadian Pacific Railway continuing by leaps and bounds along its career of prosperity.

And I find that on the 24th of November last the Montreal 'Star' said :

That the great North-west needs additional railway connections with Eastern Canada is obvious.

Mr. Thomas Crawford, Conservative member of the Ontario legislature for a Toronto division, a large cattle dealer, an experienced and capable business man, said, as reported in an interview in the Toronto News, on November 27th :

That to his mind, as a cattle man, it would be a good thing for Canada which would be a boon to the country and give us an assurance of good times for twenty years. 'The time has come,' said he, 'for such a line, and to-day if it were in operation it would do well. To-day there is such a traffic in our trade in North-west cattle that some of them have now to be shipped in by Chicago.'

Then a leading official of the Canadian Pacific Railway, Mr. H. P. Timmerman, general superintendent, according to the Toronto 'News' of November 25th, said this :

I believe the Grand Trunk Pacific will be of great advantage to the west. It will certainly not injure the business of the Canadian Pacific Railway, for the output of produce is so vast that the question of competition will not be considered for many years hence.

I find that Mr. J. R. Booth, an able and experienced railway man, whose opinion has great influence in this House and throughout the country, in an interview accorded to the Ottawa 'Journal,' is reported to have said :

There is room enough for all in the trade which is to develop in western Canada. I certainly think it is a good thing for the country, and in fact I don't see how they have got along without a transcontinental line so long. They certainly need it to feed their large capacity at the shipping ports of Montreal and Portland.

That is what Mr. Booth said when he had before him the original project, when the Grand Trunk intended to apply for a charter, and announced that they were going to build to North Bay and make their business tributary to their present outlet. But as the House will have seen, we have changed all that. I find in the 'Globe' newspaper of November 25, an opinion of Mr. E. F. Clarke, M.P., who is quoted as saying :

He thought that the proposed extension was second only in importance to the building of the Canadian Pacific Railway some twenty odd years ago. He believed that the development in Manitoba and the Territories would go on so rapidly that even this third transcontinental railroad would find abundance of traffic awaiting its completion. The fact that it was to pass through the Peace River district gave some idea of the immensity of our country, for this district was fully 800 miles north of Toronto. He believed the project to be of the greatest importance, not only to Toronto and Ontario, but to the whole Dominion.

In the 'Mail and Empire' of November 24, Mr. J. R. Booth is again interviewed, and expressed himself in favour of the project. In the 'Globe' newspaper of November 25, I find the opinion of Mr. W. R. Brock, M.P. This paper, I believe, is on fairly good terms with my hon. friend, except politically. This is what he is reported to have said :

The new road will be the grandest possible thing for Canada. The Peace River district, through which the railway is to run, will be our future granary. The engineer who first surveyed for the Canadian Pacific Railway desired to go the route now proposed by the Grand Trunk Railway. There can be no question about the proposed route, being a succees in every sense, and an inestimable boon to Canada. It is better to have such a road as the Grand Trunk build the new lines, because it will ensure competition.

Now, I do not wish to misrepresent my hon. friend, or anybody else. This opinion of his was expressed on November 25th, before it was decided and announced that the line was to be built from Quebec to Winnipeg. These gentlemen were then in favour of the project. I wish them joy of

it, I want them to take the responsibility of it, and I ask them to put themselves on record again. These gentlemen must therefore be taken to approve of the project of a transcontinental line, and of the route of the Grand Trunk Railway from North Bay westward to the prairies to bring its business down to Portland.

Mr. BROCK. Does the hon. gentleman contend that great quantities of wheat from the North-west will go over the route they are now proposing, instead of over the route that I approved of ?

The MINISTER OF THE INTERIOR. I will discuss that with my hon. friend later on. I have not the slightest hesitation in discussing that ; we expected to discuss it when we brought in this Bill, and we are going to discuss it. I have here a whole list of important men of business, speaking on November 24, who expressed favourable opinions with regard to the construction of this railway, and to the necessity of its construction. I need not give them more in detail. I find in going over this symposium of testimony, the views of the ex-Minister of Railways and Canals, not only in the Victoria papers to which reference has been made by the hon. member for North Norfolk, but in the 'Toronto Globe' after he got back from his trip, after he had seen the west and had breathed the invigorating air of the prairies. The 'Globe' represents, and no doubt truly, my late colleague as saying :

> There is room for several railways in the west. With the business that will be created by the rapid settlement of the country, I venture to say there will be room for railways within twenty-five or thirty miles of each other. He said the extension of the Grand Trunk would be a good thing for the country.

Generally his views were favourable to the project. Later on my hon. friend the ex-minister was represented by the Montreal 'Star,' I do not know whether correctly or not, as saying :

> I am free to confess that in my judgment the development of the Canadian North-west and British Columbia will be so rapid the next few years as to afford ample traffic for three transcontinental lines, and I am glad to know that the Grand Trunk Railway Company seeks to share in that development.

I simply mention that to show that the view which my late colleague entertained at Victoria, when he was in favour of three transcontinental lines, did not evaporate on the way across the continent, and that he still entertained it when he got here. Mr. Alexander McFee, president of the Board of Trade in Montreal, an important business man, doing a large business in that city, said on November 24 :

> The building of a transcontinental route by the Grand Trunk Railway means a good deal to the Dominion of Canada, east and west. The announcement means that one of our great needs is to be supplied. It assures the development of the Canadian North-west along Canadian national lines. The new railway is required. The North-west is ready for it. The country is in a state of rapid development.

The 'Montreal Herald' of November 24, reports Mr. J. G. Garneau, member of the council of the board of trade, as expressing a favourable opinion. In the 'Montreal Herald' of the same date, Mr. W. I. Gear, president of the Montreal Corn Exchange, when interviewed, expressed himself as follows :

> In the projected line of the Grand Trunk, competition cuts no figure. The country can support a new line and more than one. Besides, a little competition is a good thing for all parties, and a very good thing for the country. There is a lot of the North-west that has not been opened to settlement. The proposal of the Grand Trunk, I believe, is to open new country, and aid in filling the North-west. The benefit to the country of such a line as the proposed one cannot be estimated at the present time, but it is bound to be very great. The east and the west will alike share in the benefit.

Hon. Richard Turner, member of the legislative council of Quebec, Mayor White, of St. John, Mr. Jas. Carruthers, a prominent grain man of Montreal, commenced the building of a new railway. Mr. H. D. Metcalfe, ex-president of the Corn Exchange, and a prominent grain dealer in Montreal—expressed a strong opinion in favour of the proposition for the building of a railway to the west by the Grand Trunk. Although these statements, of which these are a few picked out at random without any special care, were published broadcast through the press, the position is taken in this House and before the country that no necessity exists for the construction of this railway.

I have a word to say on my own behalf as to the question of the future. We gave last year 31,000 homesteads. That means 31,000 farms taken up, and we expect to give the same number or a larger number next year. If hon. members will take the trouble to stop and think what it means to have 30,000 or 40,000 fertile farms taken up every year they will have some idea, though only a small idea, of what is going on in the west and what it is necessary to provide for. I think we can safely say that if we continue our present efforts in the way of immigration we will probably be able to keep the movement of population up to somewhere in the neighbourhood in which it is now, for a considerable number of years and if we do that we shall inevitably increase tremendously the production and not only that, but as I have pointed out and as the testimony which I have read points out conclusively, there will be an enormous amount of grain from the west and there will be an enormous amount of general merchandise to go back to the west and which this proposed line of railway may

be absolutely unable to handle. The Montreal 'Gazette' of August 13—that is to-day—practically admits the necessity of a further outlet. In attacking the provisions of the government proposition, it says :

A line from North Bay to the Pacific, with such branches as the company thought it commercially wise to construct, would have been defensible and commendable and no one could have successfully attacked it.

ROYAL ASSENT.

A message was delivered by the Gentleman Usher of the Black Rod as follows :

Mr. Speaker, I beg to inform you that His Excellency the Governor General desires and awaits the attendance of your honourable House in the Chamber of the honourable the Senate.

Accordingly, Mr. Speaker, with the House, went up to the Senate chamber.

And having returned.

Mr. SPEAKER informed the House that His Excellency the Governor General had been pleased to give, in His Majesty's name, the Royal Assent to the following Bills :

An Act to incorporate the Guelph and Georgian Bay Railway Company.

An Act respecting the encouragement of the construction of Dry Docks.

An Act for the relief of Florence Lee Gray.

An Act respecting the Kettle River Valley Railway Company.

An Act respecting the Kingston and Pembroke Railway Company.

An Act to incorporate the Marconi Wireless Telegraph Company of Canada, Limited.

An Act to incorporate the Algonquin Lumber and Power Company, Limited.

An Act to confer on the Commissioner of Patents certain powers for the relief of the Woolf Valve Gear Company.

An Act to amend the Acts relating to the Naturalization and Aliens.

An Act respecting the Manitoulin and North Shore Railway Company.

An Act respecting the Canada Central Railway Company.

An Act to incorporate the Dominion Gas Improvement Company.

An Act respecting the Western Alberta Railway Company.

An Act respecting the Midway and Vernon Railway Company.

An Act to incorporate the Columbia River Improvement Company, Limited.

An Act to incorporate the Missionary Society of the Church of England of Canada.

An Act respecting the Toronto, Hamilton and Buffalo Railway Company.

An Act to incorporate the Canadian Yukon Western Railway Company.

An Act respecting the Brandon and Southwestern Railway Company.

An Act to amend the Post Office Act.

An Act to amend the Act respecting the Safety of Ships.

Hon. Mr. SIFTON.

An Act respecting Government and Post Office Savings Banks.

An Act respecting Dominion Notes.

An Act to amend the Act of 1899 respecting the City of Ottawa.

An Act to amend the Steamboat Inspection Act, 1898.

An Act to incorporate the Citizen's Bank of Canada.

An Act respecting the Rathbun Company.

An Act respecting the Century Life Insurance Company.

An Act to incorporate the Montreal-Longueuil Bridge Company.

An Act respecting Infectious or Contagious Diseases affecting Animals.

An Act to prohibit the importation, manufacture or sale of adulterated, process or renovated Butter, Oleomargarine, Butterine, or other substitute of Butter, and to prevent the improper marking of Butter.

An Act to amend the Fisheries Act.

An Act to confer on the Commissioner of Patents certains powers for the relief of George M. Depew.

An Act to incorporate the Niagara, Queenston and St. Catharines Railway Company.

An Act to incorporate the Chatham, Wallaceburg and Lake Erie Railway Company.

An Act to incorporate the Berlin, Waterloo, Wellesley and Lake Huron Railway Company.

An Act respecting the Medicine Hat and Northern Alberta Railway Company.

An Act to incorporate the Brandon, Saskatchewan and Hudson's Bay Railway Company.

An Act respecting the Red Deer Valley Railway and Coal Company.

An Act to amend the Patent Act.

An Act for granting to His Majesty certain sums of money for the public service of the financial year ended the 30th June, 1903.

THE NATIONAL TRANSCONTINENTAL RAILWAY.

The MINISTER OF THE INTERIOR. I have one other authority, just one as to the necessity for a transcontinental railway. It would be undesirable that I should omit to mention that the leader of the opposition on the 26th May last, brought this subject to the attention of the House, and pressed upon the attention of the government a resolution of the Halifax Board of Trade which is sufficiently important to be again referred to in this debate. The hon. gentleman (Mr. Borden) placed before the House and the government particularly, the resolution in which it was stated as follows :

Whereas, application has been made to the federal government for a charter to build a line of railway known as the Grand Trunk Pacific Railway, from Quebec to Port Simpson, or Bute Inlet on the Pacific coast (said line to run south of Lake Winnipeg), and no provision has been made in application for the shipment of the traffic originating on said line through the maritime province ports in the winter season.

And whereas, members of parliament representing maritime province constituencies at Ottawa, have urged that the charter be granted only on the condition that the Grand Trunk Pacific Company agrees to build the line from the Pacific coast to the town of Moncton, N.B.

Therefore resolved, that this board approves of the stand taken by the representatives from the maritime provinces.

The resolution then goes on to deal with the necessity for an arrangement by which the railway shall be built entirely through Canadian territory, that the rates of freight should be controlled and placed upon an equality; that the railway company shall be compelled to proceed with the construction of the eastern section simultaneously with the western section, and they recommend that the railway be built north of Lake Winnipeg, which is not quite so wise as the other provisions of the resolution, but which is no doubt due to the fact that the Halifax gentlemen are not as familiar with the country up there as some of the rest of us. Then they go on to say that the government be urged to adopt this route for a new transcontinental railway seeking government assistance, and the board also desires to express its opinion that the interests of Canada demand that the Intercolonial Railway be extended to the grain producing centres of the west. There is further on a telegram somewhat on the same lines which was sent by the Halifax Board of Trade to the late Minister of Railways and Canals. The leader of the opposition having knowledge of the fact that this resolution had been passed by the Board of Trade of the city of Halifax in his own constituency, very properly brought it before this House and proceeded to ask if the government were then in a position to say to the House and to the country in what way they proposed to deal with this transportation problem, and

Was the government able to disclose to the House and to the country any really comprehensive national policy by means of which it may be able to deal with this question of transportation in the west and in the east also.

I recommend these words of the leader of the opposition to my hon. friend from Lanark :

We know that not only in the west of Canada, but in the east of Canada as well, it is of the utmost possible importance to the people, it is vital to the interests of the people that they should have means of transporting their products to the foreign market equally as cheap and equally as available as those which are enjoyed by their competitors to the south of us, and we know that it is otherwise impossible for our people in the east or in the west to compete on fair conditions with their chief competitors, the people of the United States of America.

Now, has the government any policy upon this matter which it is prepared to disclose to the people of this country, and if it has not any policy at the present time, when may we expect that its policy shall be announced to the country.

Why, Mr. Speaker, if the Prime Minister had been forcasting the policy which we have laid before parliament he could not have done it in more explicit terms than those announced by the leader of the opposition in this House on the 26th May last.

Mr. BORDEN (Halifax). Would my hon. friend permit me to call his attention to one paragraph which he has omitted :

I would submit to you, Mr. Speaker, that on a question of this kind which touches the whole future history of the transportation question of this country, the government ought not to take any leap in the dark, it ought not to take any step at hap-hazard. If the government proposes to appoint a commission it should have appointed that commission long ago, and that commission should have been at work dealing with and studying the very problems of transportation which are now confronting the government in regard to this matter.

The MINISTER OF THE INTERIOR. I do not think that anybody will dispute that the government ought not to take a leap in the dark. We are not taking a leap in the dark. We are taking a leap exactly on the line and over the route suggested by the Halifax Board of Trade, by the business men that my hon. friend represents, on the exact route which they suggested, and which my hon. friend (Mr. Borden) not knowing and not supposing that the government did purpose to bring this policy down at this present session of parliament, brought to our attention, and practically endorsed some months ago. My hon. friend (Mr. Borden) gave an intimation in another way that he had not a very decided opinion that the government was likely to adopt such a policy as it has adopted, and that he had in his mind the idea that possibly the government would adopt the policy of encouraging the construction of the Grand Trunk Railway from North Bay. Therefore, my hon. friend (Mr. Borden) in addressing the Conservatives of Ward 2, in the city of Toronto on March 25th, 1903, as reported in the 'Mail and Empire,' spoke as follows :

While this great question of transcontinental railway extension——

I stop for a moment to refer to that in connection with the suggestion of my late colleague (Hon. Mr. Blair) who never heard anything about the necessity of a transcontinental railway. My hon. friend the leader of the opposition heard about it and heard about it so often that he was making it a subject of discussion before his party friends who were assembled to hear him in the city of Toronto.

While this great question of transcontinental railway extension is before parliament and before the country, we must see to it that the public rights are guarded. The Postmaster General in his address of last evening expressed views which were sane and sensible.

Flattering to my hon. colleague the Postmaster General.

At last he has realized that this country is a great one and can only be developed by a strong railway policy. In the past Mr. Mulock and his friends said that the Canadian Pacific Railway would never pay——

We have heard something about railways not paying, for the last day or two :

—and that British Columbia was merely a waste of mountains, but their views are changed, for which he should be thankful. I am glad to hear of Sir William Mulock's noble and patriotic words. I am glad to hear of his conversion, but we as Canadians must ask some questions Shall we take care to so guard any franchise we give that it must be exercised alone in the public interest. Shall we see that any railway receiving public assistance forms part of an all-Canadian route ? But gentlemen, the record of the government is not such as to lead us to believe that these questions will be regarded with the importance they deserve. If assistance is given to any transcontinental railway it must be an all-Canadian line, which will take Canadian products to Canadian ports, where they will be shipped abroad.

That is the testimony of my hon. friend the leader of the opposition.

Mr. BORDEN (Halifax). I do not think you will get much consolation out of that.

The MINISTER OF THE INTERIOR. My hon. friend (Mr. Borden) succeeded in making his meaning very clear. Now, there is some testimony since this project was launched, I find that Sir Sanford Fleming—a gentleman of great experience in connection with railway matters, formerly chief engineer of the government and chief engineer when the Canadian Pacific Railway and the Intercolonial Railway surveys were made, a man who has taken a great interest in the development of Canada ever since—I find he is reported in the Winnipeg 'Free Press' of August 3rd as having given to the correspondent of that paper in Ottawa an interview heartily endorsing the general scheme which is before parliament at the present time. In the 'Globe' of August 6th Mr. James H. Ashdown of Winnipeg is reported as having given the correspondent of the 'Globe' an unqualified endorsement of the government scheme. I attach a very considerable degree of importance to the opinion given by Mr. James H. Ashdown. Mr. Ashdown is perhaps the ablest business man that we have ever had in Manitoba or the North-west Territories. He occupies the position of being recognized as an especialy able, keen, capable business man, and probably the wealthiest citizen and most successful business man of the west. Mr. Ashdown has been a member of both political parties. He was formerly a Conservative; later he became identified with the Liberal party; but he is not a man of strong party feelings, and has never had any very strong affiliations with either party. But he is a man who knows more respecting the trade conditions of the North-west, its importations and exportations, than any other business man in the west; and he gives his opinion in a most unqualified way in endorsement of this proposition.

So, Mr. Speaker, I conclude with the testimony in favour of this proposition ; and I think I may venture to remark that the testimony in favour of the immediate construction of a transcontinental railway may be regarded as tolerably conclusive. Sir, the congestion of traffic in the west has not been the congestion of wheat traffic only. Reading the discussions in the newspapers, and hearing what has been said upon the subject, persons not familiar with the local situation would naturally be led to the conclusion that it was a congestion which arose altogether by reason of the rush of wheat during a few months in the fall. That would be an entire mistake. The congestion during the last year or two has occurred not only during the months when wheat was pressing upon the railways, but during other months when the railways have been choked with cars loaded with general merchandise; and when the wheat season has come on they have been caught with their yards full of cars loaded with general merchandise which even then, before the wheat began to move, they have been unable to handle. Let it be understood that every carload of freight that goes to the North-west, wherever it may have originated, has to be taken care of by the railroads there, and the congestion has naturally arisen from the lack of complete facilities to handle the accumulation of traffic from various agencies. While that congestion was not serious in the early stages of the development of the country, it has now, according to the testimony of competent observers, reached a stage when it is absolutely necessary that effective relief should be given. I wish to point out to this House, in connection with the situation there, a most important circumstance. You have a large and important part of Canada so situated that it is a thousand miles away from the other portion of the country with which it has political and business affiliations; and you have immediately south of our western territory a well-developed, well-peopled district, with vigorous and capable railway systems. Immediately to the south of the boundary line between Manitoba and the states of Minnesota and Dakota there are four or five of the finest railway systems in the world—the Burlington, the Chicago and North-western, the Great Northern, the Northern Pacific, the Chicago, Milwaukee and St. Paul —strong, well-equipped, vigorous systems, thoroughly versed in everything that pertains to the management of the railway business on the prairies. They are only a few miles away from Manitoba and our prairie district in the North-west Territories ; and do you expect that you are going to allow the traffic to be congested year after year,

the grain to be held up, and the merchants to be left with their shelves empty, for lack of transportation facilities, and that these railway systems are not going to go in there and take this business to the south? It is contrary to experience and common sense. I am bringing this aspect of the case to the attention of the House because it is naturally my duty to do it. Hon. gentlemen from eastern Canada have not had their attention directed to this particular phase of the situation, and you would properly say to me that I had failed in my duty to the House and to my colleagues if I had not brought it strongly and seriously to the attention of the House. No person who has any knowledge of the situation will for an instant throw any doubt on this statement, that if arrangements are not made for relieving the congestion of traffic, not only in wheat, but in cattle and produce of all kinds for shipment outwards, and in general merchandise for shipment inwards, and if those arrangements are not made soon, as surely as the sun shines, the greater portion of that trade will go south to the United States. It is going now. Mr. J. T. Gordon, of the firm of Gordon & Ironsides, the largest cattle exporters, I believe, in Canada, states that that firm sent last year 3,000 head of cattle by an American line because they could not get shipping facilities over the Canadian line. That is what is going on now. In the agricultural implement business, the makers of eastern Canada are handicapped for the same reason. A few hundred miles to the south there are implement makers with first-class shipping facilities, and the means of filling orders promptly when they come; and even if there is a slight difference in price, or if the difference is equal in amount to the duty, you will find that the inability of the Canadian dealer to fill orders, largely due to lack of shipping facilities, is going to result in the business being taken away from him by his competitors to the south. So our duty is to relieve this congestion of traffic, and provide for the future, not only for the purpose of enabling the great products of the country to be exported, but for the purpose of enabling the manufacturing towns and villages and the industrial centres of eastern Canada to be put in communication with our fellow-citizens upon the prairies, so that mutual benfit may bring mutual profits to all concerned.

Now, having decided—and I think the reasons given are conclusive in favour of our so deciding—that we should build this railway, we had to decide whether we should own and operate it ourselves, or whether we should deal with a company, and allow that company to undertake the task. I do not propose to discuss at any very great length the question of government ownership of railways. I have never been an advocate of that principle. I have never seen anything in the experience of the government of Canada to induce me to become an advocate of it. What has been our experience of the Intercolonial Railway? We have a length of line of 1,510 miles; the total expenditure of capital to June, 1902, was $68,310,619; it is over $70,000,000 now; all the surpluses since 1876 to the 1st of July last added together amount to $445,647; and the deficits since that time, if you subtract the surpluses, amount to $5,281,000. That is the position of affairs, financially, resulting from the operation of the government railway in Canada.

Now, Sir, let me not be misunderstood. I entertain no feeling of hostility to the Intercolonial Railway. I recognize, as I said this morning—and I believe every man on this side of the House, and I have no doubt every member on the other side recognizes—the fact that the building of the Intercolonial Railway was a part of the terms of confederation, that Canada owes it to the people who accepted the terms of confederation that that railway shall be maintained and operated properly, and not only that, but that it shall be kept up to date, and that the people of the maritime provinces shall have a good, liberal, up-to-date service, a service which they will have reason to be satisfied with and proud of. I believe that it is true. I am in favour of doing that which is necessary for the purpose of giving effect to that proposition, but I see no reason why the fact that we are prepared to implement our obligations honourably should oblige us to enter into other obligations of a similar character and which we believed to be totally unnecessary under the circumstances. So far as we know anything about the operation of government railways, there is nothing in what has happened to induce us to place upon this country at present the burden of operating a line of railway across the continent. A moment's consideration with regard to the railway management of railway properties, must show us that there are good reasons—apart altogether from the question of honesty or dishonesty, or corruption or political influences, which we all know are serious enough in matters of that kind—why it is difficult, if not impossible to have a railway managed by a government as effectively and economically as by a private individual.

If you will consult railway men, they will tell you that the interference even of boards of directors is detrimental to the proper running of a railway. American railway managers have found that they cannot effectively conduct their railways with a board of directors which will interfere with the men who are running the road. The same experience has been felt by Canadian railway companies. The result has been that the system has now become general of giving the president practically undivided power and control. It has been found that divided power and divided authority make

it impossible for a road to be effectively administered. Under our system what have we? We have a Minister of Railways who has to submit to parliamentary criticism every time he wants to spend $5 or $10 on anything connected with the whole railway system. He can never conduct the enterprise with the same confidence, energy and vigour, when he knows that every item of his administration has to be dealt with and discussed as a matter of politics, as he would if he were serving a private corporation, confident that he would be backed up by the board of directors. That is one of the main reasons why it is wise for us, in a case of this kind, where we desire that the country should be opened up by an active, aggressive policy, not to load ourselves with that task, but to commit it to a private corporation.

We are not committing it to a company that we know nothing about. So far as the sentiment in favour of government ownership is concerned, I believe it is largely due to the fact that Canada has been behind the period in the matter of railway legislation. But we are remedying that every year. We are providing legislation which will have the effect of removing the grievances of which our people complain.

We have passed a railway Bill which is the first effort of a Canadian parliament to provide an effective means by which the public may get redress from railway companies. I am satisfied that the effect of that railway legislation, if administered, as I have no doubt it will be, in the spirit in which it is intended, will be to remove the feeling of distrust against railway companies due to the fact that the people have had unredressed grievances from year to year, and also the sentiment in favour of government ownership due to their belief that if they had to deal with a government their grievances would be more easily redressed. Having decided that we were not going to operate this railway line as a government system, the question arose which company we should deal with. I have not heard any attack made on the decision of the government to deal with the Grand Trunk Railway; and inasmuch as that proposition is not attacked, I need not defend it. If we come then to the terms upon which the railway is to be constructed, what criticism can be offered? My hon. colleague the Finance Minister discussed it in detail last week and so did my hon. friend the member for North Norfolk (Mr. Charlton). Both showed that the terms upon which the western division is to be constructed practically amounted to this, that we guarantee the bonds, and as security for our guarantee we obtain a first mortgage on a property which is going to cost from $55,000,000 to $60,000,000. We shall have a railway which with its rolling stock will have a value of $55,000,000 at least and inasmuch as our guarantee will not exceed $30,000,000, we will have that guarantee secured by a mortgage on a property of about double the value. That is surely as good a bargain as was possible, and certainly no attempt at detailed criticism has been attempted on the other side.

As to the eastern section we have two alternatives, and I come now to a point where there seems to be a line of cleavage between some hon. members opposite and ourselves. Whether that cleavage exists all the way across the opposition, I am not yet in a position to say. We had in the beginning one proposition and to that proposition there was an alternative. The suggestion was made that we should assist the construction of a line from the end of the North Bay branch of the Grand Trunk Railway northward and around to the city of Winnipeg and further westward to Fort Simpson. If we had carried through that scheme, we should have, if they went by the route originally contemplated, about 600 miles of railway on a route practically alongside the Canadian Pacific Railway, or very near to it, which would have been, to all intents and purposes, absolutely useless except for the purpose of making connections. That, however, was not a necessary incident of the scheme, because they might have gone north to the clay belt and around to the city of Winnipeg without very much increasing the distance. We had, therefore, the project of a railway from North Bay west to Fort Simpson, but without eastern connection except that which exists by the Grand Trunk Railway at present. We declined to agree to a proposition of that kind. We declined to assist the Grand Trunk Railway to go westward and build up its business in such a way that, in so far as the winter business is concerned over this line, it would necessarily go to Portland. We declined to assist the Grand Trunk Railway upon those terms, and I would like our hon. friends opposite to say, before this debate is through, whether they support that proposition or not. If they are in favour of it the country has a right to know it. The country has a right to know whether they support the position we took in that respect or are opposed to it.

We decided on the other plan. We said that we could not agree to that proposition, but would insist on a line being built from Winnipeg to Quebec and from Quebec to a central point in the maritime provinces, with the result that we will get a road which will open up, for the first 400 miles east of Winnipeg a territory where there is some fertile land and a good deal of timber readily available; a road which then goes through the clay belt of the province of Ontario, which is somewhere in the neighbourhood of 500 or 600 miles long, a road which would furnish the shortest available line to the Canadian seaboard and furnish us, at the same time—and this is a point which,

I think, ought to be marked—with just as short and just as good a road through the provinces of Ontario and Quebec by the communication which will be opened up when the road is built. We have the Quebec to Winnipeg line north of Lake Temiscamingue; and with the connecting line to North Bay and down to Toronto, as short a route from Winnipeg to Toronto as exists at the present time by the Canadian Pacific Railway, or within a few miles of it. Practically, the distance will be the same; according to some scaling the distance is rather in favour of the new line. So, while we have the advantage of the through line, and of a line going through territory that requires settlement, yet, at the same time we have the advantage of just as good and short a route to every town and village in Ontario and Quebec by the old Grand Trunk system. So, we give what our hon. friends say we were going to give in the first instance, the line from North Bay, and we give the other line under conditions which will assure the carrying out the stipulations with regard to it.

Mr. BORDEN (Halifax). May I ask the hon. gentleman a question in that connection? He has referred to the through line to Quebec and a branch to North Bay. Has he made any approximate estimate of how much grain is likely to go by the all-rail route, and how much by the North Bay branch?

The MINISTER OF THE INTERIOR. I am about to deal with that in a few minutes. We are being asked—and that point was referred to by my late colleague (Hon Mr. Blair) in one of the letters he wrote to the Prime Minister—why we build the expensive section of the line from Quebec to Winnipeg ourselves, that is, the government furnish the money to build the line, but we hand over the western section, the profitable part of the line, to a company to operate. The stating of the argument in that form is an intimation that we are keeping the unprofitable part and losing money on it, and handing over the profitable part to a company to make money out of it. But a cursory examination of the proposition before parliament must show any person that that is the exact opposite of what we really do. It is true we furnish the money to build the eastern section, under financial conditions which I shall not further discuss. But we make it a condition, mark you, with the Grand Trunk Railway, that if we assist them in the construction of the line of railway westward over the prairies and to the Pacific ocean, they agree to take from us the eastern section and pay three per cent interest on its cost, and that is one of the conditions of the whole enterprise. So, the scheme we place before parliament is a completed scheme, a scheme under which we place the profitable and unprofitable parts under one management, and make it an enterprise which will not place a burden upon anybody. In no other way could we have so arranged it that the business of the line would be managed in such fashion as to prevent any burden falling upon us. It is not a case of handing over to the company the profitable part of the line and keeping the unprofitable; but we bind the two together and make the profit of the whole line pay for the cost of construction of the whole line, so that no loss will rest upon anybody. I have no doubt that the Grand Trunk Railway Company would have preferred to get a good liberal bonus, pretty nearly enough to build the line from North Bay to Winnipeg, without any harassing or embarrassing stipulations as to what they shall do with their traffic, but under conditions, such as railway companies like, leaving them free to do just as they please. That might have suited the Grand Trunk, but it would not suit the government, and it would not suit the Canadian people—and we are well within the judgment of the people in that respect.

I desire to say a few words in regard to the character of the country through which this Quebec to Winnipeg division is to pass. I shall try to make my remarks on that subject as short and as little tiresome as possible. It has been said with a good deal of insistence that we do not know much about that country, that the explorations have been few and vague. A good deal of discredit has been thrown upon the official reports of the Ontario government on that country. I never heard before that those reports were unreliable. The reports were brought down to the legislative assembly of Ontario, the Toronto newspapers published excerpts from them and referred in glowing terms to the great domain shown to be owned by the province of Ontario, and congratulated the people of that province upon their possession. Nobody ever heard that these reports were not reliable until this debate opened, and it was found that this government was going to build a railway through that country. Then, suddenly, our friends of the opposition become very sceptical as to the value of these reports. Well, we have some reports which they got themselves, or which the Dominion government at various times have got. I wish to ask hon. members to look at a map which I have here which represents the territory through which the railway will run. The green lines, which hon. members will see are pretty numerous, represent the routes of exploring parties of this government which have from time to time passed through that territory. These lines have been traversed by exploring parties of the Geological Survey, to say nothing of the provincial examinations which have been made, and of the surveys and other explorations made from time to time. These lines show that the country has been traversed from end to end, so that we practically know all about

that country. Thinking this an important point, I have had some definite information collected upon the subject from the reports which are available, and I have here a memorandum prepared under my instructions. I told these officers : Divide the line into twelve sections and tell me the character of the country through which each section passes, from the reports which are available. Sir, we have reports in regard to every one of the twelve sections, showing with a fair and reasonable degree of accuracy what the nature of that country is. My hon. friend from South Lanark (Hon. Mr. Haggart), when he was discussing this question the other night, made use of the following statement with regard to the road north of Lake Superior :

No. It will be built—it must be built—in that section north of the height of land reaching to the plateau which borders Hudson's bay and which, at the verge of the plateau, drops to the extent of three or four hundred feet. Between that drop and the height of land, the land is totally unfit for any purpose known to civilization, a land of low scrubs and unfathomable muskegs crossed by granite ridges.

Let me read to my hon. friend from an official report some facts regarding the character of that country.

In a northwesterly direction from the city of Quebec it is not difficult to reach the St. Maurice. The Lake St. John Railway runs in that direction quite a distance, and from the point near Rivière à Pierre a northwesterly direction towards La Tongue and Iroquois Chute. Thence to the height of land there are no obstacles of any account, a general level plateau is struck which can be followed in a westerly direction for 800 miles not varying 200 feet in that distance.

That is on the question of grades. The St. Maurice division comes next :

Country less hilly as we proceed towards head waters of St. Maurice and Rouge rivers. Good agricultural land in numerous areas, 3,000,000 acres fit for settlement.

This is the part of the country which my hon. friend from Jacques Cartier said was no good, and would not enable us to do any colonization work.

Farming by Hamilton Bros., ten miles up the Range river, successful. Well timbered country. Red and white and jack pines, spruce, tamarack and birch. Climate is not any more severe than that of Quebec. Hills disappear at the height of land. At 380 miles from its mouth, the St. Maurice is still a large river. Above Grand Piles station, last station up the St. Maurice valley, navigation is good for seventy miles. Numerous surveys by Richardson, Ingall, Bouchette and other surveyors and explorers and geologists, have been made.

That is about the worst part of the country, or nearly so.

Division No. 3, the Upper Gatineau.

Above 100 miles from mouth of Gatineau, country is generally level, rocky hills occasionally seen. Soil, sandy loam. Oats, barley, pease, spring and fall wheat under cultivation. Excellent reports from all sources. Timber abundant. Spruce, balsam, fir, white birch, black birch, white and brown ash, also maple, besides white and red pine. Minerals, nickel, copper, iron, limestone, &c. Water power, excellent. Character of crops grown indicate nature of the climate.

Surveyed by James Richardson, 1870, from Desert river to height of land, head waters of the Gatineau. Head waters of the St. Maurice on to Lake Mistassini, revealed a flat undulating plain, with good flats of farming land throughout the country.

Upper Ottawa division, No. 4.

This division comprises a good portion of the unorganized country of the county of Pontiac. Country generally flat or undulating plain, part of Hudson bay basin. The southern portion hilly and rocky. Middle portion, through which the line traverses, is flat and easy grade. Soil —large areas of dry clay soil extend around the height of land. Although the district as a whole in its southern portion cannot be said to be suitable for agricultural purposes, still in many places considerable areas of good land are known to exist.

I may say that from the northern slope of the height of land the southern part of the clay belt is well timbered, the waters running down to the northward. The railway must run along the northern part of the clay belt if we are to put it in such a position that the timber can be got out. Every man who is familiar with lumbering knows what I mean when I say that the timber can only follow the flow of the river, and the railway must cross the lower region, otherwise the timber cannot be driven down and reach the railway. A branch railway must go on the northern side of the clay belt so as to take in the lower region of the river and enable the timber to be driven down, so that the large timber resources of the province of Ontario lying along the northern slope of the height of land may be rendered available for commerce.

Timber on the lowlands mostly spruce, tamarack and fir. On the high land, birch, poplar spruce and red pine. The country has been many times surveyed, and traversed by explorers since the early part of last century. Gold, gypsum, lignite, have been discovered.

Mr. CLANCY. Will the hon. gentleman say what page of the report he is reading from ?

The MINISTER OF THE INTERIOR. I am reading an abstract from information in the Geological Survey, which has been made at my request and by my instructions, by Dr. H. M. Ami, a member of the Geological Survey, who will be responsible for the correctness of the information which he has taken from the official survey.

Mr. BORDEN (Halifax). The suggestion was that if he would give us the pages of the reference as he goes along, it would be convenient to this side of the House.

The MINISTER OF THE INTERIOR. I cannot do that for the reason that this is collected from a large number of reports in different places ; but I will leave upon the Table of the House what I am reading

from, so that it can be consulted from time to time. I will leave also further references which will give an indication as to where they can be obtained.

Surveys by the geological surveys of Canada, by the Crown Land Commissioners of Ontario and Quebec, as well as by the officers of the Ontario Bureau of Mines, afford valuable information on the resources of this division, who all state favourably.

Division No. 5. Abbittibbi division.

Minerals—Iron, copper, magnetic iron pyrites and steatite are reported, and inasmuch as the great Huronian belt of metalliferous rocks traverses this region further discoveries are anticipated.

Timber—White and red pine found over the whole region. On the north side of the height of land pine trees measure from eight to nine feet in circumference.

I heard a statement made, I think by the hon. member for Hamilton, last night, that there was not any timber up in that country any larger than a man's thigh. We have here an official report which states that there is timber there ranging from eight to nine feet in circumference. Our hon. friends have a very contracted idea of the resources of their own provinces.

Soil and climate—The whole country northward from the mouth of the Montreal river is pretty correctly described as a level clay plain with rocky hills protruding here and there through it. Mark the distinction between this region and the country south. Clay appears to be uniform throughout the whole region. Several acres of this clay soil are cultivated at the Hudson Bay Company's post at Abbittibbi. All the ordinary cereals cultivated on the St. Lawrence can be cultivated at Abbittibbi.

I may here mention that in 1896 or 1897 seed which had been sent to a point called Lake Wawanisipi 80 or 90 miles north of Lake Abbittibbi by Dr. Robert Bell, of the Geological Survey, was planted and successfully ripened.

Division No. 6, Upper Moose or Mattagami division.

Character of country—Fine agricultural land, clay and sandy loam forms part of great clay basin of Moose river and its numerous tributaries which take their rise near the Canadian Pacific Railway line north of Lakes Huron and Superior, and even south of the line. The head waters of the rivers in this division are well timbered, and the country is well described as an undulating, rolling plain, gently sloping towards James' bay.

Soil is good for farming throughout the greater portion of the country.

Division No. 7, Kabinakagami river division.

Character of country—Generally level plain, slightly inclined to the west, very easy grade, practically level. Soil, clay for the most part. Land low and swampy in places, needs drainage. Rolling land, heavily timbered.

Timber—Good spruce, tamarack, banksin pine, poplar, red pine, cedar, reported throughout this division, besides white birch, balm of Gilead.

Then we come to division No. 8, the 8th division out of the twelve into which the line was divided.

Division No. 8, Long Lake division.

Character of the country—Fine agricultural land. Level and rolling country. Partially dissected plane. Rocky in the southern portion. Flat and generally level along the projected line. Soil—Very productive. Abundant vegetation everywhere. Good timber.

Division No. 9, Nepigon division (in Thunder bay district of Ontario).

Character of country—In part level and undulating and part rocky. The Nepigon region constitutes a dissected plane. Good agricultural land, clay soil and clay loam and sandy loam. Timber—A little north of Lake Nepigon the country is heavily timbered with spruce, banksin pine, poplar and balsam, with occasional birch, also tamarack.

Then we have sections 10, 11 and 12 at the other end of the line, which do not constitute a country which we can call an agricultural country. The last 300 miles, or probably 400 miles, of the line is in a country which it cannot be successfully asserted is likely to be a country which will amount to very much as an agricultural country. There are occasional patches of good land along the water-courses, but they are not large in extent. This is a country which is largely timbered, which will produce a very considerable amount of business for many years to come by reason of the fact that the railway, if it is constructed as suggested, will go along on the lower reaches of the river and will in that respect be in an exactly converse position to that occupied by the Canadian Pacific Railway now. The Canadian Pacific Railway, unfortunately for it, in being built from Port Arthur to the Red river, was built in such a way that it runs along just at the southern end of the rivers which run northward and the timber which is situated near the head waters of these rivers cannot be driven to the line of the Canadian Pacific Railway, because the flow of the water takes it the other way. The result is that the Canadian Pacific Railway between Port Arthur and Winnipeg practically has no lumber business at all except what comes to it from the south by way of the Lake of the Woods. The fact that it touches the Lake of the Woods so that American timber that comes from the Rainy river and across the Lake of the Woods can be shipped by it is the only thing that enables it to do any timber business at all. This line that we are proposing to build will go further north and the timber will be driven down the streams and a large business will be created in that way. I do not know that I need say anything more upon that phase of the subject. I have taken the trouble to have this report prepared, because I thought that the House was entitled to something more than mere fragmentary statements in regard to this matter, and that it was entitled to a systematically prepared statement by a responsible officer of the government which would

give us that information and would give it to us in a form that could be relied upon.

We are at issue with our hon. friends on the other side of the House upon an important question of policy in regard to colonization. The hon. member for Jacques Cartier and the hon. member for Lanark have taken the position in this House that in regard to the great and important question of opening up the unsettled portions of the provinces of Ontario and Quebec the sound and statesmanlike policy to follow is to run colonization railways from the older parts of the provinces and they put the position against the position we take when we say that the sound and statesmanlike method of opening up these unsettled portions of the country is to put a through line of railway through those territories so that we shall be enabled by means of that railway to make it at least probable that settlement will take place. Let us understand each other. The hon. member for Jacques Cartier and the hon. member for Lanark, one representing the province of Quebec and the other representing the province of Ontario, the two provinces that are most concerned in regard to this proposition, say that it is wrong because we propose to put a through line through the northern part of Quebec and through the northern part of Ontario, instead of building colonization railways up from the older portions—and stopping there. Stopping in the woods, stopping nowhere. The policy which is advocated by these hon. gentlemen, if pursued, would, in our judgment, not result in the settlement of that country for many years. I ask the House to compare these two lines of policy. If you cannot do any better in opening up the northern parts of the provinces of Ontario and Quebec, build a colonization railway up there. It will help. The Temiscamingue Railway is a meritorious enterprise. It will develop the country, slowly, it is true; it will help towards the development of the country, but I ask hon. members of this House to contrast the development that is likely to take place from two lines of railway, one running from Quebec and the other from Ontario in these respective provinces, to contrast the development that is likely to take place under the policy advocated by my hon. friends with what is likely to take place if we send a transcontinental railway longitudinally through that district, and if we place that district not upon a back street, not away in the woods where nobody can see it, but on the main artery of travel, upon the transcontinental line. When the trade of this line is developed the staff of men who will be required to operate this important railway will be of itself an important nucleus of settlement within that district and the supplies which would be required of one kind or another and the work which gathers around the operation of a great railway will be the very best nucleus of settlement, the very best stimulus, and it is certain that settlement will take place rapidly. I think when the matter is placed before the House there will hardly be any difference of opinion that we will see these northern territories of the provinces of Ontario and Quebec settled much more quickly under the policy which we propose than under the policy which our hon. friends opposite have adovcated. Then, my hon. friend from Lanark—I was rather surprised at him criticising this scheme—asked: What is to become of my province, the province of Ontario? I do not know what my hon. friend considers to be a grievance. We have in Ontario a great undeveloped territory, almot an empire, a territory as long as from Windsor to Montreal and as wide as the fertile portion of the old province of Ontario. We have in the St. Maurice valley in Quebec one million acres of land open for settlement. Ontario is confronted with the task of developing the great territory to the north, she is confronted with an enormous task, a task by which the resources of a provincial government will be taxed in order to carry it out successfully and this government, without asking for a dollar from Ontario, except such as is her share of the general contribution, inaugurates a scheme to put a transcontinental line of railway right through the heart of that territory; yet, my hon. friend from Lanark has nothing to say in regard to that proposition except that there is a grievance on the part of the province of Ontario. If my hon. friend thinks that is a grievance on the part of the province of Ontario—he is generally a man of pretty good sense—I think he will find he has made a mistake this time and I think he will find that the people of Ontario, when he goes out amongst them, will not agree with him in regard to that proposition.

It has been suggested to me at various times that I should make a remark or two about the question of the wheat traffic on this line. Manifestly, Mr. Speaker, no man is called upon to make any definite or specific predictions in regard to the wheat traffic. When the hon. leader of the opposition made the statement the other day that the Canadian Pacific Railway had handled last year forty million bushels of wheat and that only two and a half million bushels went all rail, I queried the statement and I made up my mind that my hon. friend had not been properly informed. I took the trouble to telegraph to the grain commissioner to get the figures, and I find that during the last year the total amount of grain from Manitoba and the North-west of all kinds that came east was 45,087,413 bushels, and that the amount that came all rail was 5,823,000 bushels, so that the percentage of the total that went all rail was

12·9 or practically 13 per cent, instead of 2½ per cent, as the leader of the opposition has been informed.

Mr. BORDEN (Halifax). I did not say two and a half per cent; I said six per cent, and these figures I believe are reliable.

The MINISTER OF THE INTERIOR. The figures given by the commissioner officially to me, show that the amount that went out by rail was 13 per cent. It is difficult to get correct figures in matters of this kind, and I suppose when my hon. friend made the statement that the return which he had got was in some sense a partial statement and that he had been misled in that way.

Mr. BORDEN (Halifax). Might I ask the hon. gentleman whether the whole of the 5,500,000 bushels he refers to went north of Lake Superior by the Canadian Pacific Railway ?

The MINISTER OF THE INTERIOR. That is not stated. I have simply the returns of what came to the east by rail.

Mr. BORDEN (Halifax). My hon. friend will remember, because he wants to be perfectly fair, that what I was speaking of was the quantity that went by the Canadian Pacific Railway north of Lake Superior. What is the name of the commissioner who made this statement ?

The MINISTER OF THE INTERIOR. Mr. Castle. The statement I have is a statement of the amount of grain that went from the west by rail as compared with the amount that went by water, and that is the point with which we are concerned and with which we have to deal in connection with this argument. Now, the figures I have given do not include the shipment of flour, and the advantage which wheat has in shipment by water is not applicable to flour in the same degree. I find in the Inter-State Commerce Commission report for 1901 (page 13) that the subject is fully discussed, and it is pointed out that when it comes to the shipment of flour, the water route has not the same advantage over the rail route that it has in the shipment of wheat. It is well known by those who ship these commodities, that the water route cannot compete in the same degree with the all rail route in the shipment of flour. I do not think there is a difference of opinion as to that. Now, a very large quantity of flour will be shipped from the North-west Territories and Manitoba as time goes on. I do not think that it ever can be said that any large percentage of the crop will be shipped in the shape of flour, but no doubt an enormous quantity of flour will be shipped, a quantity which will furnish an appreciable traffic for a railway. I find further in connection with these shipments, that there is a very substantial amount of wheat that goes from different points by rail as opposed to the water route. I will give these figures, not with the object of showing that the facts will be paralleled in connection with the railway we are speaking of, but I will give the information because it bears upon this discussion, and as I think, because it will lead to a certain conclusion in connection with it. From the city of Chicago in the year 1901, 31,523,000 bushels of wheat went by lake and rail, and 13,969,000 bushels went by all rail. In 1902, from the city of Chicago 22,000,000 bushels went by lake and rail, and 8,190,000 bushels went all rail. This will show that the lake and rail route even when most advantageously situated has not by any means yet a monopoly of the business. Now, let us take the shipments of flour. In the year 1902, 1,086,000 barrels of flour went from Chicago by rail and lake, and 4,752,-000 barrels went all rail, showing that when it comes to the shipment of flour the railway has a great advantage.

We have some times very indefinite ideas as to what rates could be made by railways when they want to make a good rate, and when they get down to a competition basis and find they cannot get any more. I shall give two or three rates as an illustration of what railways can do. I am not going to say that this new railway will open with a rate of this kind, I am not going to say that this railway will carry all its business on a rate of this kind; but the railway we are going to build is going to be a good railway; it is going to be just for the express purpose of carrying heavy loads and giving low rates, and being able to compete with a low rate. Therefore it is proper for us to consider what low rates have been given and can be given on similar commodities as those which we shall haul, in other parts of the continent. I find that the average distance from Kansas city to Chicago by the three roads: The Santa Fe, the Burlington, and the Rock Island is 488 miles. By the report of the Inter-State Commerce Commission for 1901 (page 15) there was in the previous year a rate of five cents per hundred pounds between Kansas city and Chicago. If you take the distance from Winnipeg to St. John via the Grand Trunk Pacific Railway you will find that the equivalent rate from Winnipeg to St. John would be 11½ cents per bushel, and if they can haul wheat for 11½ cents a bushel they can get plenty of it to haul. The Inter-State Commerce Commission report for 1900 (page 22) points out that there had been previously a rate from Buffalo to New York of two and a half cents per bushel. That is not the average rate upon which the wheat is carried, but that was a rate which obtained and under which immense quantities of wheat were carried, and which the railway companies were prepared to maintain if circumstances did not alter. The average distance from Buffalo to New

York by six routes is 443·12 miles, and on this basis the rate from Winnipeg to St. John would be 10·56 cents. Now, to come nearer home, during the past four years the Canada Atlantic Railway has hauled grain from Depot Harbour to Montreal as follows: highest rate four and a half cents; lowest rate two and a quarter cents. There is a break in the route from Depot Harbour to Montreal. It is all rail to Coteau and then there is from 42 to 45 miles of water carriage to Montreal. This rate is what the Canada Atlantic Company charged to haul it over the all rail route and then transhipped it and take it down the 45 miles and deliver it at Montreal. The transhipment and the handling and the carrying for the 43 or 45 miles was certainly as expensive to them as it would have been if they had their own line into Montreal and had taken it through by rail. I fancy there is no doubt that if they had their own line into Montreal they would prefer to carry it in, rather than tranship it and take it 45 miles by water. The comparison therefore is a fair comparison. The distance from Depot Harbour to Montreal is 388 miles, and as I have said, the Canada Atlantic Railway during the past four years has hauled grain from Depot Harbour to Montreal; highest, four and a half cents a bushel; lowest, two and a quarter cents per bushel. If you take the lowest rate of two and a quarter cents, then on that basis the rate from Winnipeg to St. John via the Grand Trunk Pacific Railway would be 10·85 per bushel. Now, I want to compare that. I talked with a prominent member of the Winnipeg Grain Exchange the day before yesterday, and I asked him, how that 10·85 cent rate would compare with the rates which he is now paying from Winnipeg to New York by lake and rail. He tells me that, taking into account the rate by lake and the rate by rail, and a small additional charge for extra insurance which they have to pay by reason of this mixed carriage, the rate to-day from Winnipeg to New York is 16¼ cents. And, mark you, if the proposed railway can haul wheat as cheaply as the Canada Atlantic line, it can carry it from Winnipeg to St. John for 10·85 cents per bushel. My hon. friend says in emphatic terms that this railway is not going to haul any wheat. I do not say whether it is or not; but the hon. gentleman must get over these figures before he can convince the public that it is not. They are set forth in the official report, except as regards the Canada Atlantic, which I procured privately, and, as they are in accord with the information received respecting the Canada Atlantic, there can be no question of their accuracy.

When I speak of the traffic which this railway is going to handle, I point to the fact that 1,000 miles of this line from Quebec to Winnipeg are going to be in the province of Ontario and the whole merchandise traffic which now goes by rail from Grand Trunk points in Ontario and Quebec, except that on the new line west of the city of Quebec, will go via North Bay and Temiscaming over 1,000 miles of this useless line, and through the fertile clay belt to Winnipeg. In the face of that fact it is childish to talk of this railway having nothing to do. Within a week after the railway is opened, it will be busy hauling merchandise from eastern Canada. Let me call attention to the fact that the distance, as estimated by an expert officer of my department, from Toronto to Winnipeg by way of Chicago and the American lines over which much of the traffic has gone of late years—especially before the last two years, when the Grand Trunk and the Canadian Pacific Railway made some arrangement about taking the freight northward—is 1,400 miles by one line, and 1,394 by another. The distance from Toronto to Winnipeg by way of the Grand Trunk line to North Bay, from there by the Temiscaming line, and around by the projected line, is estimated at 1,171 miles, or some 200 miles shorter than the main route by which the great business was done for many years by way of Chicago. It may be that the estimated length of the new line is a little short. It is difficult to estimate exactly what it will be, but certainly it will not be more than 1,200 miles. If you take the route by the Canadian Pacific Railway from the city of Toronto to Winnipeg, you find that the distance from Toronto to North Bay is 226 miles, and the distance from North Bay to Winnipeg is 1,060, or a total of 1,286 miles, as against 1,200 miles by the projected road. So that, making a fair allowance for deviations, the length of the new line will be substantially the same as that of the Canadian Pacific Railway. Therefore, we have the city of Toronto placed in communication with the west by this system as directly as it is now by the Canadian Pacific Railway. We have that competition and its increased facilities established. From the city of Montreal and from the city of Toronto the distances will be practically the same. So that we have these connections established on the most favourable terms.

There is another line of trade to which just one word of reference may be made. It is the cattle trade. I want to call the attention of this House to a fact or two with which I think they are not acquainted, because they are not likely to have ever been brought to their attention. I want to call attention to the fact that one of the great industries of the North-west Territories is grazing cattle, as contrasted with raising cattle. Last year we imported into the North-west Territories no less than 50,000 head of what are called stockers, that is, young cattle, bought by the ranchers for the purpose of being finished and perfected for the English market. Where did they get them? They got 25,000 from the good province of Ontario, and our friend Mr. Craw-

ford, the Conservative member for one of the Torontos in the provincial legislature, says they have not at present facilities for sending their cattle to the North-west, and he wants the Grand Trunk Pacific built so that they will have more facilities. Where did they get the rest ? They got them from Mexico. Cannot the farmers of the province of Quebec and the maritime provinces raise cattle to supply the stock grazers on the Northwestern plains ? Why, Sir, it only needs to be stated for us to understand what a profitable business it would be for the farmers of the eastern provinces, who can raise cattle, but who are not able, on account of the want of pasture facilities, to finish them for the English market. Here we have 25,000 stockers in one year coming from far away Mexico, because we have not the shipping facilities to take them from eastern Canada. Not only have we not the shipping facilities to take cattle in, but we have not the facilities to take the cattle out; for I find that Mr. J. T. Gordon, in an interview says that his firm had last year to ship no less than 3,000 head by an American line because they could not get facilities over the Canadian line. And the cattle business in the North-west Territories is simply in its infancy. Last year we shipped out 42,000 head of cattle. That in itself is a pretty substantial business; but it is only a trifle as compared with what is coming. A necessary part of this business is the handling of stockers, and this is a business which the new road will do on an enormous scale, and in which it will be difficult for any other line to compete with it. It will pass through a northern country which will abound with cattle and through which they can be easily and favourably shipped. So we have in that business a large and important item, which will prove a great and substantial source of revenue to the new railway when it is constructed.

I want to say a word or two in regard to the prospects of this enterprise from a financial standpoint ; and I speak as one who has had a considerable personal knowledge of the development of the western country, and of the differences that have been produced in the financial conditions of the railway companies owing to that development. The net profits of the Canadian Pacific Railway during the year ending the 30th of June, 1902, were $14,085,000, and last year its net profits were $15,000,000. The company have made of their railway enterprise a magnificent success, and if they were called upon to-morrow to incur the liability to pay back every cent of public subvention which they have received, and all the money which they have received for lands, notwitstanding that, the Canadian Pacific Railway Company would be a good, sound, and solvent concern. Compared with that enterprise, the route from Quebec to Winnipeg by the Grand Trunk Pacific Railway is a better route. For perhaps one-half of the way there will be a considerable business, particularly in the line of timber, which will constantly contribute to its revenue. And throughout that district, there are good agricultural lands from which we may expect, within a reasonably near future, a fair amount of traffic. The Canadian Pacific Railway, on the contrary, was built around the north shore of Lake Superior. It was built through a rocky country which did not then, and does not now, produce a single pound of traffic, and which is difficult to operate on account of its grades and the sharpness of its alignments and curves. The Canadian Pacific Railway along the north shore of Lake Superior is absolutely unproductive. Then speaking of the Canadian Pacific Railway line across the prairies, it runs through the very worst portion of the territories. You could not select a line that could be very much worse unless you got right down close to the international boundary. But this new line of the Grand Trunk Pacific Railway will run from Winnipeg to the Mountain pass through a territory, every mile of which is fertile and productive. It is hardly conceivable that such could be the case, yet the information in the possession of the government amply justifies the statement I have made. There is no such fertile stretch of country in the world. Now take the British Columbia part, for some reason best known to themselves, which nobody has ever been able satisfactorily to explain, the Canadian Pacific Railway chose the Kicking Horse pass, which is the worst pass in the whole lot, and it went through a line of territory which perhaps, of all the different belts that could be opened up through the Rocky mountains is the least productive. And it suffered in consequence. For years it got no traffic, except what its own construction gave, out of that portion which goes through the eastern part of British Columbia. The Grand Trunk Pacific, on the other hand, will go from the Rocky Mountain pass to the coast through as rich a timber and agricultural country as there is in Canada—a country rich in timber, mineral and soil. Then we must not forget that when the Canadian Pacific Railway was projected, there was no movement of settlement from the outside. There were no farmers coming to Canada in 1881 from foreign countries. At any rate their number was inappreciable, and the Canadian Pacific Railway suffered from that fact. That company had dozens of agents out trying to initiate movements of population into our western country but did not succeed to any considerable extent, and for years later there was practically no immigration of any serious volume into the North-west Territories or upon the lands from which the Canadian Pacific Railway had to draw its traffic. What movement of population there was came almost entirely from the eastern provinces. But what is the position now ? We had an immigration

into the North-west of 125,000 people last year. If it keeps on at that rate for the next ten years, think what that will mean for the Grand Trunk Pacific Railway. Think of the difference in the position of that company as compared with that of the Canadian Pacific Railway, which went travelling on for years and years before there was any appreciable influx of settlers. Let it be remembered also that when the Canadian Pacific Railway started business, it had no connections with eastern Canada and no way of getting business. What had it to do ? It had to go to Montreal and set to work at an enormous sacrifice to parallel the Grand Trunk Railway by connections all over Canada. The Grand Trunk Pacific Railway, on the contrary, will start with a magnificent system of connections, ready to open business the very day the road is finished. What does that mean ? It is impossible for us to conceive the difference that will make in the volume of business which the railway company will do. Consider these facts. Consider the prospects of this railway, and ask if there is the slightest reason why any sane, reasonable man should think this company will fail in its obligations to the government.

I have extended my remarks, Mr. Speaker, at much greater length than I had anticipated and must apologize. I have only one point further to call to the attention of the House. We have had in the North-west Territories, ever since this government has been in power, a state of affairs, under which the great bulk of odd-numbered sections of public lands have been held locked up by our obligation to furnish large quantities to railway companies. Many years ago the system was adopted of surveying the country into odd-numbered and even-numbered sections, and of holding the odd-numbered sections for railway purposes, to be given to railways as government land grants. The even-numbered sections were kept as homesteads. We have not been able to deal with the odd-numbered sections in the Territories or Manitoba, because of the fact that we had large obligations outstanding binding us to furnish certain specified quantities of land to various railway companies, under arrangements made by the previous government. I am not expressing any opinion as to whether that was wise or not, but that was our position. But we are now arriving at that position when, I fancy within the next two or three weeks, a final arrangement will be closed, under which the railway companies which have claims for land grants, including the Canadian Pacific Railway, will have those claims finally settled. I am pleased to say that as a result of this, an enormous quantity of odd-numbered sections will come back to the government and be available for disposition in any way which the government may be authorized by parliament to adopt. We shall have no doubt in the neighbourhood of 50,000,000 acres of odd-numbered sections to dispose of in such manner as parliament may authorize. I propose at an early day to submit a measure providing for the disposition of these lands. The first principle will be that the actual settler on an even-numbered section alongside an odd-numbered section shall have the preference in buying that piece of land at a price to be fixed in the manner provided in the Act. But I would point to the fact that we shall enter upon the business of selling something like 50,000,000 acres of land in the territories in a short time, and if we watch the manner in which the business of selling land by railways and land companies, has been going on, we have no reason to doubt that, if we choose, these lands will be disposed of with some degree of rapidity. What I desire to say is this : There is probably, out of that 50,000,000 of acres of odd-numbered section—the even-numbered sections are kept for the poor man's homestead—20,000,000 or 25,000,000 at present so far removed from communication as to be absolutely of no money value whatever. But in my judgment, within ten years from the time this railway is completed, 20,000,000 acres of land owned by the government at present will have acquired a value at least of $3 per acre. That is not a thing about which there is any question. We have seen it happen before, and we know it will happen again. I have quoted this to the House to show that, so far from the railway costing the people anything, the fact will be that the enhanced money value of the property of the government will be four times as great as will be necessary to pay for the road. I simply desire to add that whether you consider this scheme in its broad outline, or its comprehensive and careful details, or whether you consider the manner in which it achieves great results with a minimum of cost, I am satisfied it is a scheme which ought to commend itself to the enthusiastic support of this House.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Hon. JOHN HAGGART (South Lanark). Mr. Speaker, some days ago, on the introduction of the Bill, I made some remarks in reference to the question now before the House. I dwelt upon the points of the scheme laid before us as well as I could, considering that I had only had an opportunity to see the Bill after the right hon. gentleman (Rt. Hon. Sir Wilfrid Laurier), who leads the House, had risen to move the first reading. I have had an opportunity since of looking into the whole Bill, and I intend to supplement the remarks I made by a brief statement, as brief as I can make it, of the reasons which induce me to oppose the measure. Before entering upon

a discussion of the general merits of the Bill, however, I may be pardoned if I make reference to statements made by the Minister of the Interior (Hon. Mr. Sifton) and some other hon. gentlemen who have taken part in this debate. The Minister of the Interior prefaced his remarks with a criticism of the speech of the ex-Minister of Railways and Canals (Hon. Mr. Blair). I shall go more fully into the history of this measure later on, but, without doing so now, I may refer to one point. The ex-Minister of Railways and Canals stated that he had heard of the Bill only a couple of weeks before it was introduced in this House —that is the measure of the Grand Trunk, which was discussed at full length in the committee. He afterwards said he never heard of the proposition to build to Moncton until nearly the middle of the session, and that this was tacked on to the original proposition of the Grand Trunk, which was to build the road from North Bay or Gravenhurst to north of Winnipeg, or to Winnipeg, passing over the prairie section and through the mountains to Port Simpson, and a branch from the main line to Lake Superior. To my astonishment I hear now from the Minister of the Interior that the hon. gentleman (Hon. Mr. Blair) had the full proposition of the Grand Trunk Railway before him, and was appointed a member of the sub-committee of the council for the purpose of drafting the Bill which is at present before the House. If the hon. gentleman were a party to the whole scheme, he must have known of this line from Winnipeg to Quebec and Quebec to Moncton. The hon. gentleman gave the most emphatic denial, at any rate, to that part which includes the building of the line from Lévis to Moncton. The whole proposition arose out of a request of the Grand Trunk Railway for power to extend their road so as to get the trade of the prairie region of our country. To that proposal I do not suppose there would have been any serious objections by any member of this House. It might be duplicating lines, it might be passing over a section of country over which we are now subsidizing a line, but the feeling of the country was that if any road was to be built into the prairie region, the Grand Trunk Railway should have an opportunity of extending its lines to that country. But, to our astonishment, after the Bill had been delayed from day to day before the Committee on Railways, Canals and Telegraph Lines, there was tacked on to the proposition of the Grand Trunk a line from Winnipeg to Quebec and from Quebec to Moncton. The necessity of that road and the probability or the possibility of its being utilized as a commercial undertaking has never been explained. It is evident that, as the first element, if that proposition is to have any chance of success, it must observe the conditions suggested by my hon. friend from North Norfolk (Mr. Charlton). If that road is to command traffic, it must be a modern road, with easy grades and curves and heavy construction. Over this section of the road we have no survey at all. The possibility, or, if possible, the cost of constructing a modern road through that country has not been explained by any gentleman on the other side. We have had a great deal of poetic talk about the development of the west, the teeming myriads of people going to settle upon the prairies, the millions of bushels of grain which are to be taken out of that country and poured into the eastern market—but we have had no statement from any authority as to the possibility of building a commercial road through that country. The hon. Minister of the Interior tries to explain the matter. He states that the modern way of building roads is to apply to this House and get a charter and then go into the undertaking. Let me show him the difference between that and the present proposal of the government. It is true there may be a walk over a section of the country. The possibilities of the road may be considered by the incorporators, and they apply to this parliament for a charter for the purpose of building it. But they have had surveys made before they go into the undertaking. In the present instance parliament is asked to grant an enormous sum of money for the construction of a road of which not even a preliminary survey has been made.

The hon. gentleman who preceded me, and the right hon. gentleman when introducing the Bill, tried to show that there was abundant information before the government in reference to this proposed plan. They stated that explorers had gone through the country and had made a partial location, that Sir Sanford Fleming had made an accurate location of that portion from Lévis to Moncton which the government propose to construct. I propose first of all to deal with these statements of the right hon gentleman and of the Minister of the Interior. The present distance from Lévis to Moncton was stated by the Finance Minister as 497 miles. The estimated distance by Sir Sanford Fleming from Chaudière to Moncton was nearly 400 miles, or, adding ten per cent for curvature, nearly 440 miles, or a saving of nearly 60 miles. He read to the House what he said was information which justified him in adopting this route. He read extracts from a report Sir Sanford Fleming made in 1864 describing the country, but he carefully eliminated from that, any description of the curvature or gradients. The route proposed in the Bill runs from Lévis paralleling the present Intercolonial as far as Rivière du Loup, or perhaps Rivière Ouelle. The shortest point of departure on the Intercolonial Railway for the purpose of making a detour to Moncton around the upper part of the state of Maine, would be at a distance of nearly 100 miles

from Lévis. Then the road from Lévis to that point 100 miles away must pass at a distance of not more than fifteen miles from the presently constructed Intercolonial. A line from Rivière Ouelle or Rivière du Loup to the boundary of the state of Maine, or to the impassable lakes that lie directly to the north of the state of Maine, would be at a distance less than fifteen miles from the Intercolonial. Then he proposed, according to the statement of the Prime Minister, to pass around to Edmundston and from Edmundston by a route which he described as passing at or near Chipman, and thence to Moncton. Sir Sanford Fleming, in his report, shows the absurdity of passing from Edmundston to Moncton. The only possible way of constructing that line is to run down by a road which is at present constructed from Edmundston to Woodstock. When you arrive at Woodstock you must make a turn easterly to a place called Gibson, where there is a road at present constructed, and from Gibson to Chipman and thence to Moncton. If you will take that line and scale it from Point Lévis round these points down along the valley of the St. John river at or near Woodstock over towards Gibson, from there by Chipman to Moncton, you will not shorten the distance of the present Intercolonial Railway by one mile. In the surveys that were made in the construction of the Intercolonial Railway, we all remember that the Grand Trunk Railway had a road constructed to Trois Pistoles, and the New Brunswick government were building the European and North American road, and had it built to Moncton. The Nova Scotia government had a road constructed at that time to Truro. Then these were the objective points to make a connection between Moncton and Trois Pistoles, Rivière du Loup or Rivière Ouelle, cutting off a portion of the Grand Trunk Railway to make connection from Truro to Moncton. This line would constitute nearly an isosceles triangle between these three points. There were numerous surveys made over the northern slope of the St. Lawrence for the purpose of finding a route to Moncton. There were numerous surveys made for the purpose of making a connection between Truro and Moncton. After all the surveys were completed, the present line of the Intercolonial was found to be the most practical. Let me read the information procured by Sir Sanford Fleming upon the subject, since the Finance Minister and the Prime Minister gave him as an authority for the location of this particular line of road. He says :

> An air line drawn from Moncton to Rivière du Loup passes entirely within British soil, although near Little Falls it comes within two or three miles of the American boundary. This line is 260 miles in length.

Hon. Mr. ROSS, (Victoria, N.S.). What does he say about the road from Truro to Moncton ?

Hon. Mr. HAGGART. Truro to Moncton—I heard the hon. gentleman speak about that subject. I heard the hon. gentleman remark that he could locate it more accurately with his eye. I heard the hon. gentleman state that the engineer told him in conversation that there would have been a better location from Truro to Moncton than the one at present, if it had not been for the powerful influences of Sir Charles Tupper who diverted the line in the direction of Springhill. It is curious that the hon. gentleman did not find it out till seven or eight years afterwards.

Hon. Mr. ROSS (Victoria, N.S.). Would the hon. gentleman excuse me ? I knew the history of that road and everything connected with it before I had a seat in this House at all.

Hon. Mr. HAGGART. The hon. gentleman was in the House in 1872 and 1873.

Hon. Mr. ROSS (Victoria, N.S.) Yes, and in 1867 too.

Hon. Mr. HAGGART. From 1867 up to that date. The Hon. Sir Charles Tupper whom he accused of diverting the line of the Intercolonial Railway to the injury of the people of Nova Scotia had no warmer supporter than the hon. member from Victoria, N.S. (Mr. Ross).

Hon. Mr. ROSS (Victoria, N.S.) Again you are wrong.

Hon. Mr. HAGGART. Notwithstanding the accurate engineering eye that the hon. gentleman talks about with which he describes that section of the country, Sir Sanford Fleming reports that the road as at present constructed has the best possible location that could have been decided upon to reach Moncton. Then we have any amount of information, I am glad to say, in the surveys that were made in 1864 as to the practicability of this short line road which was so graphically described by the right hon. leader of the government (Sir Wilfrid Laurier). He says that the day is past when men will travel fifty or sixty miles more than they ought to do for the purpose of reaching an end. We want short line communication, we live in a quick age, we have to pass quickly from one place to another. One would think, then, that there was no difficulty in constructing the road over that section of the country, that it was possible to get a line as the hon. Minister of Finance (Hon. Mr. Fielding) says at least sixty miles shorter, or as the hon. member for Westmoreland (Mr. Emerson) says, 205 miles shorter than the present line of the Intercolonial Railway. Let us see what Sir Sanford Fleming says in reference to that. Most accurate surveys were made from Moncton to Edmundston for the purpose, if possible, of getting a quick line of communication between Moncton and Edmundston :

An air line drawn from Moncton to Rivière du Loup, passes entirely within British soil; although near Little Falls it comes within two or three miles of the American boundary. This line is 260 miles in length.

He says that the construction of these lines, of which this is one, is quite impracticable. Then he goes on:

There are many engineering difficulties on each which render it necessary to depart materially from the straight course and if practicable for military reasons the building of an Intercolonial Railway on either of these lines touching as they do near the American frontier is pronounced by military authorities objectionable.

The construction of the line, therefore, is quite impracticable.

Beginning at Rivière du Loup and following the line laid down at the prescribed distance from the main boundary to the city of St. John, we find that in passing over the mountainous ridge, which separates the St. Lawrence from the Restigouche, not only is a maximum elevation of nearly 2,000 feet above the sea reached, but the surface passed over is of a very broken character; minor ridges nearly all crossing the line in a right-angled direction are constantly met with; these attain elevations ranging from probably 1,000 feet to nearly double that height above the sea and are separated by low lying water channels, of which may be mentioned, Lake Temiscouata, River Toledi, Squatook lakes, besides the branches of Green river. Several of these waters will not exceed 500 feet above sea level.

It goes on to state that:

The exploration similarly undertaken between the St. Lawrence and the Restigouche during the winter 1863-64, although it added to the information previously gathered, proved unsuccessful in the main object in view.

Here is the report of Sir Sanford Fleming. He gives the elevation for the road. What would the hon. member for North Norfolk (Mr. Charlton) think of a railway built in that section of the country on which in some sections seven or eight miles in length there would be no possible gradient under seventy feet to the mile one way and sections with similar gradients for six or seven miles the other way?

Mr. EMMERSON. I understand the hon. gentleman is speaking of the survey from Rivière du Loup to Edmundston and down the River St. John?

Hon. Mr. HAGGART. I am speaking of the surveys from Rivière du Loup to the Restigouche river. I am speaking also of the surveys from Edmundston over to Moncton. Edmundston must be the objective point of this line of railway. There is no other possible way. From a point fifteen miles south of River Ouelle or Rivière du Loup it must pass sharply round the state of Maine to Edmundston and go over from Edmundston to Moncton. We were originally told that there was a possible line from Edmundston to Moncton. What I am saying is that Sir Sanford Fleming has shown that that line is totally impracticable, and if you read this report in full you will see that the only line that he suggests there is a line down the St. John river to a point at or near Woodstock, then turning easterly in the direction of Gibson or to a point opposite. Fredericton, from Fredericton to Chipman and from Chipman to Moncton. The only practicable route that I know of in that section of the country is as long as the line of the present Intercolonial Railway with worse gradients and worse curvatures. Now, we are called upon in this scheme to spend a large sum of money for the purpose of making this road, according to the idea of the hon. member for North Norfolk, what? A first-class freight road with not more than four-tenths per cent gradients or a gradient of about twenty-one feet to the mile. That hon. gentleman (Mr. Charlton) stated in his speech yesterday that after having had conversation with Mr. McNicol, of the Canadian Pacific Railway, and other experts in regard to railway traffic, he was satisfied that with such gradients it was possible to contend with water communication, and that was one of his reasons for changing his mind in reference to the difference between water communication and all rail comunication. What have we expended on the Intercolonial Railway? According to the hon. Finance Minister, $68,900,000 to which is to be added the capital account of the present year. According to the hon. Minister of the Interior, $70,000,000 and according to the ex-Minister of Railways and Canals, the capital account is nearly $72,000,000. What would be the result of building this new road? As described by the hon. ex-Minister of Railways and Canals from the point of departure it will run parallel with the present Intercolonial Railway to near the River Ouelle. What is the necessity of that? Then you are building a road for what? To assist the freight on the Intercolonial Railway? Will it bring a single ton of freight to the Intercolonial Railway? No. What would be the result of the building of a short line, such as has been described by the right hon. the leader of the government or by the hon. Minister of the Interior? What would be the result as regards traffic if you were to utilize the Chipman branch, or if the Grand Trunk Railway were to build a new line for the purpose of connecting Chipman with the point thirty-three miles north of St. John where this branch would connect with the Intercolonial Railway? You would utilize the Intercolonial Railway for 33 miles from St. John to Chipman and you would abandon the rest of it. Not a pound of freight originating in St. John would pass over the old Intercolonial Railway to Lévis. All that portion of the country through which the Intercolonial Railway runs, Temiscouata, Bonaventure, Matane, &c., would be deprived of efficient railway service. You would not run the same number of passenger or freight trains over the Intercolonial Railway because if you did

you would be duplicating your service, and so if you build that new railway it means the abandonment of a large portion of the Intercolonial Railway. If your new line is a shorter line with easier gradients, the traffic will go from Halifax to Lévis over it, and vice versa. If your new line to Moncton is all that is promised by the Prime Minister and the Minister of the Interior, the traffic will go over it, and no wonder that the ex-Minister of Railways and Canals (Hon. Mr. Blair) protested against the injustice that would be done to the people who have located along the line of the Intercolonial Railway. You will not only destroy a road in which we have invested $70,000,000 on capital account, but you will injure every private individual who has invested along that line of railway. We have accumulated deficits on the Intercolonial Railway for a number of years to the extent of $1,500,000 a year, if what should be charged to revenue was charged to revenue and not to capital, and now you want to make it so that the people of Canada will have to pay increased deficits on the Intercolonial Railway. A madder scheme never entered into the mind of man.

Some hon. MEMBERS. Hear, hear.

Hon. Mr. HAGGART. I do not believe it possible, I do not believe it probable, that when the government get correct surveys they will ever build that portion of the road. Why, the surveys on which the Prime Minister relies prove conclusively that that country is impracticable for a railway; impracticable for a modern railway nowadays. When Sir Sanford Fleming reported more than thirty years ago, he was talking of a railway which it was possible to use with 70 feet gradients and a greater curvature than is possible on a modern railway. But for a modern railway such as is talked of by the member for North Norfolk, not all the money and the credit that the government possesses could construct it from Moncton to Lévis by that route. What would be the use of a road nowadays with 75 feet gradients going up and five or six miles of similar gradients going down? Why, you have only to mention it to show the absurdity of this scheme, and the improbability of such a road ever being constructed and used as a commercial highway. The Finance Minister presumes that this section can be constructed for $8,000,000. It can not be constructed for anything of the kind. If the gradients to be observed in the construction of that road are anyway modern, it cannot be constructed for anything like that amount, and railway construction through a similar country demonstrates it. If such a railway as the hon. member (Mr. Charlton) speaks about were built there, the country would stand aghast at the amount of money it would cost. On the next section of the line we pass over the bridge and into the city of Quebec. We are told that the bridge has contracts at present with half a dozen railways. The Minister of Finance estimates that the share of the transcontinental line in the user of the bridge would be about $2,000,000. I suppose that would be a fair amount. I do not know anything about the cost of construction or the expenditure on that bridge, but if this line uses the bridge I suppose it will have to pay for it, and the assertion is that when the bridge is finished it will cost between $5,000,000 and $6,000,000. The Finance Minister estimates it at $4,500,000, and the user by the government railway would perhaps be fairly compensated for by $2,000,000. Then the railway goes from Quebec westerly to Lake Abbittibbi. We have had a wonderful description of that country from the Prime Minister and the Minister of the Interior. The Minister of the Interior has put upon the Table a map showing the routes which his officers have traversed, dividing it into twelve zones, and giving a description of each on the authority of Dr. Ami, an officer of the department. Let me tell the minister, in the first place, that this road from Quebec to Lake Abbittibbi does not pass over the height of land. The height of land drops a little towards Lake Abbittibbi, and the dividing line between the St. Lawrence and the Hudson bay is about the objective point which the road will take. Now, every man who has travelled in the northern section of this country knows it to be diversified with granite ridges, with little lakes in abundance and large lakes in every section. I wish from the bottom of my heart that that section of the country should prove to be the Eldorado which is described by the Prime Minister. It is a most difficult country in which to build a railroad on modern lines—a road equal to the Grand Trunk Railway, a road with modern gradients, a road with 90-pound rails, a road of that kind through such a country would cost an almost incalculable sum of money. I hope that the minerals that the hon. minister described may be found in that country. I hope that the potentialities of the waterfalls, described by the Minister of Finance, may be applied to modern science; for the potentialities would need to be vast indeed to make that road any kind of a safe commercial enterprise. I am not decrying the country, and perhaps some of it may be covered with timber which might be of more value than the same number of acres in the most fertile part of Ontario.

I hope, and it is the hope of every man in this country, that minerals of an economic character may be found in that section of country; but we have no information on that subject except the bald statement of the hon. Minister of the Interior that the officers of his department have found on the shore of Lake Abbittibbi, iron, gelena and soapstone or steatite. That is the only information we have on that subject. Pass-

ing westward from there you cross the height of land, and some of the largest rivers, probably, in the Dominion of Canada. It is not necessary to give their names, but there are seven or eight rivers which it would cost enormous sums to bridge. Continuing westward, you pass another lot of rivers which run into James bay, constituting the sources of the Moose river, most difficult to cross. The Minister of the Interior says there is here a district of arable land capable of sustaining a large population. The statement which I made when the Bill was introduced is the fact—that the granite ridge which occurs in that section of the country extends on the Quebec side up to James bay; and from that ridge there is a drop of 300 or 400 feet. From James bay to that dip is a distance of only 50 miles. In that section there may be arable land, and it may be a somewhat level country. Having a level so much lower than that of Winnipeg, I think that perhaps the fact of its being so much further north does not count much as to climate; and it may be that in the future that country, as far as Brunswick House, will sustain a large population. Does this railway go near there? It goes about 50 miles south of Lake Abbittibbi, which is 170 miles from James bay, or 120 miles from the nearest fertile land. So that the railway cannot be of the slightest benefit in reaching that particular section of the country. Then, you go westerly across these rivers until you pass to the north of Lake Temiskaming. I believe it is proposed that this railway shall pass 70 miles north of the extension which the government of Ontario are building up to Lake Temagami. What sort of country is it in that direction? We have no report. Are we near the arable plateau of James bay? No, we are far from it. This road does not run near it at all. It runs between the plateau and the height of land, and over that granite ridge of 300 or 400 feet high, which is continuous in that circle, and through a country which, notwithstanding the statement of the Minister of the Interior, is incapable of sustaining a population; a country of ridges of granite with muskegs between them. The hon. gentleman produces a map here on which you will notice that all the lines run north and south. They are drawn in that way because the man who prepared the map was very careful of his reputation. He divides the country into twelve zones which are made by the tracks of the explorers along the banks of the various rivers. As I have heard from geologists who have been in the country again and again, there is a fringe of wood along each river, which extends for two or three miles on each side of the river; but between that and the next river are impassable morasses and muskegs, which unless drained, are totally unfit for cultivation. Then passing to the north of Lake Nipissing, we go on to the north shore of Nepigon. There have been surveys made in that section, starting at a point 35 miles north of Lake Nepigon, and going westerly towards the Montreal river and westerly towards Winnipeg. A description of the surveys was in the department. They were made in 1872, but I think the records of them were burned in 1873. However, I had the privilege of conversing frequently with engineers who were in that section of the country. A surveyor named Keating had the surveying westerly. The surveyor of the country easterly was named, I think, Thompson. One of the men under him was Mr. Secretan, of this city. I have had from these men descriptions of that country, and the description I gave in my address a few days ago was strictly accurate. The hon. Minister of Finance and the hon. member for North Norfolk stated that we had surveys from the north of Lake Nepigon westward towards Winnipeg. I stated in an interruption that after passing the north shore of Lake Nepigon, the survey took a southerly direction until it struck the line of the Canadian Pacific Railway, and went on from that point to Winnipeg. Suppose a line were run westerly to Winnipeg, where would it strike? We have no description at all. Will it go south of Lake Seul or Lonely Lake and along the shores of English river, or will it adopt the most feasible route, which has been adopted by the Canadian Pacific Railway from Wabigoon to Winnipeg? A road constructed by the shortest line from the head of Lake Nepigon to Winnipeg would duplicate the line of the Canadian Pacific Railway for 242 miles from Wabigoon to Winnipeg. What would be the use of a road of that kind? The only possible use of it to the Grand Trunk Company would be for the purpose of making a connection with their terminus at North Bay and for building a road from that line to Lake Superior.

Now, the section of the country I have been speaking of is without surveys. There is simply a charter for a railway obtained by the Grand Trunk Pacific Company. We are asked to enter into an undertaking which will cost an enormous sum of money. Do the Grand Trunk Pacific Company ask for it? Was it mooted in the request with which they came before this House? No, they could not get a simple charter for the purpose of obtaining connection with Manitoba and the North-west without being loaded down with the useless undertaking to build a railway from Winnipeg to Quebec and from Quebec to Moncton. The Minister of the Interior asked: Would you allow them to build a road to the head of Lake Superior? Would you allow them to build a road for the purpose of making their connections with North Bay? If you did, what would be the result? And he turned around and appealed to his followers as he asked this question. The result would be, he

said, that the enormous traffic, which would otherwise go to St. John and Halifax, would pass down to the Gdanr Trunk Railway to Portland. Well, Mr. Speaker, let me say that it would pass down first of all to Montreal, and if Montreal had the accommodation and was the seaport it ought to be—from thence into the ocean steamers. Is it necessary then to load down the undertaking with this useless expenditure ? And all for an idea ! Fancy a man representing the North-west Territories and Manitoba making it a condition, in behalf of Manitoba and the North-west Territories—a purely patriotic condition—that this expenditure should be incurred because of the possibility of thereby preventing freight going down to Portland and sending it instead to St. John and Halifax ! We have not had a statement from any minister as to the gradients on that road and as to the lines on which they intend to construct it. The hon. member for North Norfolk (Mr. Charlton) said that if we build it, it must be built on commercial principles, up to modern requirements. Is that possible ? Is it possible to build a road from Winnipeg to Quebec and from Quebec to Moncton on modern principles, or with a gradient of twenty-one feet to the mile ? Has it ever entered into the idea of the ministers what an enormous sum will be required for the construction of that road? Let me give you an instance. Let me take a road, which is comparatively easy for the greater section of it, compared with the one contemplated. I refer to the road from North Bay to Fort William constructed by the Canadian Pacific Railway. Well, Sir, that road cost $60,000 per mile. To build a road from the head of Lake Nepigon to Winnipeg and from Winnipeg to Quebec, of even the character of the Canadian Pacific Railway from North Bay to Fort William—which is not a modern road, the gradients on which are fifty-six feet to the mile and more—would cost $60,000 per mile.

Mr. COWAN. Why be so modest ?

Hon. Mr. HAGGART. What about ?

Mr. COWAN. Making such a modest calculation.

Hon. Mr. HAGGART. I am giving the facts. Does the hon. gentleman contradict them ? Does he know that my statement is incorrect ? I am giving it on the authority of parties who are at present on the road and are running the Canadian Pacific Railway, that that section from North Bay to Fort William cost them $60,000 per mile. But suppose we take the statement of the Finance Minister or of the right hon. gentleman who introduced the Bill, that the cost will be $35,000 per mile. Is there any justification even for that expenditure ? Of what practicable utility will be that road ? Can any sane man tell me that there will be a carload of wheat taken from Winnipeg to St. John ? The hon. the Minister of the Interior gave half a dozen instances of railways carrying grain to Chicago. He gave the distance and the rate per bushel, and applying the same calculation to a railway constructed from Winnipeg to St. John, he said we will be able to carry wheat from Winnipeg to St. John for ten cents per bushel. I am not sure whether he did not say ten cents per hundred pounds, but he certainly said ten cents per bushel. Well, take the cost of carrying wheat from Winnipeg to Lake Superior. The distance by the Canadian Pacific Railway is 420 miles, and by the Canadian Northern Railway it is about 439 miles. The Manitoba government passed an order in council reducing the rate for the carriage of wheat from Winnipeg to Lake Superior to ten cents per hundred pounds. A modern car has a freight capacity of about 60,000 pounds, which would mean for the carrying of a car of wheat from Winnipeg to the head of Lake Superior, $60. Add to that the cost of bringing back the car, as it would not use more than one-third its freight capacity on the return trip. Take one-third off, 420 miles, and add the balance to 420, and you will have 700 miles. They are therefore carrying a carload at present 700 miles for about sixty dollars. That is the cheapest rate at which it is possible to carry it, and I do not believe that either the Northern or the Canadian Pacific Railway are able to realize any profit at that rate. You pay about six cents per bushel from Winnipeg to the head of Lake Superior ; you pay one-and-a-quarter to Midland ; you pay, as the Minister of the Interior said a short time ago, from two and a quarter cents up to three and a-half cents, and as much as four cents from Midland to Montreal. What would it take from there to Quebec ? A very little sum of money. Is it possible then that any railway can be constructed from Winnipeg to Quebec which would compete with that route ? If carriage by rail is cheaper than carriage by water, why is it that 45,000,000 bushels of wheat go by water from Chicago to Buffalo ? Why do not they send it by rail ? The distance is two and a half times greater by water than by rail. They send it by water for the simple reason that railways, even with the most modern appliances and gradients cannot compete with a water navigation. If you want to utilize the surplus products of the North-west and Manitoba by shipping them through your own territory, the seaport of the North-west and Manitoba is the head of Lake Superior. Utilize your means of communication from Port Arthur down through the St. Lawrence canals. If the St. Lawrence canals are not adequate for the purpose, the money you are about to spend in this useless undertaking would give us all the water communications we require. The Georgian Bay canal project, I believe, is the best. By that system of communication from the Ottawa river and Lake Nipissing to Montreal, you

would have a system equal to that from Lake Superior down to Buffalo and Chicago and the other American ports. I am with the right hon. gentleman to this extent, that I believe with him that the country is on the top wave of prosperity, and there is a feeling amongst the people that this is the propitious time for the development of our resources. There is a feeling in the country that we are lagging behind in the race, and that, to use the expression of the right hon. gentleman, we are, compared with our rivals to the south, like the toad under the harrow.

The people feel that now is the time to develop, as quickly as possible the resources of this immense country, looking to the day when we shall be an independent nation not dependent on any people or any country on the face of the Globe, when we have a population of twenty or twenty-five million. But the right hon. gentleman has not seized his opportunity, he has not brought forward the policy by which that opportunity may be improved. As I said, we duplicate the Canadian Pacific Railway from Wabigoon to Winnipeg. And then, in order that the Grand Trunk may carry their scheme into practical effect they must have a road to the head of Lake Superior. Why do they not abandon that idea if they intend to bring the surplus products of Manitoba and the North-west to the Atlantic seaboard by rail? They know that they would not be in the race if they did not use the modern means of communication by bringing the grain to our seaport at the head of Lake Superior, there to be shipped to the place of consumption in the eastern world. It is a necessity for them to have this connection at the head of Lake Superior. West of Winnipeg, for the purpose of opening up those fertile plains described so graphically by the Minister of the Interior, we assist them to build a line through a country to cover which with a line of railway we have already arranged to loan $9,000,000. In building from Winnipeg to Port Simpson, this line will go to Edmonton. Why dupulicate the line which has already been assisted ? Where is the necessity for having two lines of railway between Winnipeg and Edmonton ? There is none whatever. The extension of the road from Edmonton to Port Simpson will develop the country. I hope to see developed upon the Pacific, not merely the harbours of Victoria and Vancouver, but also that of Port Simpson, and to see those harbours thronged with ships bearing the products of the east to be exchanged for the products of our country. It may be that for seven or even for ten years that section may not pay, but eventually it will pay, and it will not only greatly help the development of the North-west, but it will benefit the whole country. No man on this side of the House has opposed such a proposition. Never has a Liberal-Conservative party failed in its faith in the country. Ours is the party that built up the country, and we have never opposed even a lavish expenditure where that expenditure carried with it a reasonable hope of benefit for Canada. But I fail to see a scintilla of evidence that the eastern portion of this road proposed by the right hon. Prime Minister will be of any use. It would have been a gratification to my old leader the late Rt. Hon. Sir John A. Macdonald, could he have been present and heard the praise bestowed by hon. gentlemen opposite upon his policy which in his lifetime they condemned ; to hear his acts cited as examples and excuses for the government of the present day ; to find that in everything he is imitated by the very men who did the best they could to thwart his aims and to make impossible the carrying out of this policy. Everything that the right hon. gentleman (Rt. Hon. Sir Wilfrid Laurier) and his friends condemned when we were in power and they were in opposition, is being adopted by them to-day, even to the policy of protection which for so long they resisted and denounced. But the hon. member for North Norfolk while he praised the acts of the late Sir John Macdonald, could not resist criticising them almost in the same breath. He could not resist having a fling at the Canadian Pacific Railway and the terms under which it was built. He condemned the scheme of Sir John Macdonald in regard to the building of the Canadian Pacific Railway as extravagant. But he forgot to say that his own friends, when in power in 1874, put upon the statute-book of this country a proposition to build that road on terms far more extravagant than those which were afterwards secured by the Conservative government. They offered $10,000 a mile to begin with, the contractors to receive a sum per mile in excess of that amount which sum was to be agreed upon and to be paid in twenty-five years with interest at four per cent. Besides this the contractors were to have 20,000 acres of land per mile. But the hon. member for North Norfolk forgot to mention that. In his estimate of what the Canadian Pacific Railway, as built by the Conservatives had actually cost, he estimated $62,000,000 in cash and railway works completed, and he took the land grant as being worth $5 or $6 per acre—some very high figure——

Mr. COWAN. Three dollars an acre.

Hon. Mr. HAGGART. Yes—$60,000 per mile, and added this to the $62,000,000 given to the construction of the road. Why, when this land grant was given it was worth no such sum as that. It is useless, valueless, without railway communication. We bought the whole country for somewhere in the region of a million dollars——

Mr. SPROULE. A million and a half—three hundred thousand pounds sterling.

Hon. Mr. HAGGART. Yet, though the land was worth nothing until the road was

built, the hon. gentleman has estimated it at the price which it might afterwards have brought. He forgot to say also that the Canadian Pacific Railway are taking from the Canadian government as part of their land grant nearly 2,000,000 acres of land in a country which was arid, upon which hardly a blade of grass would grow, intending to spend some $7,000,000 or $8,000,000 in irrigating it, and so giving it value and making it useful. In giving a land grant, we were doing exactly what the people in the United States did—giving a part of the land in order to have it all developed. We did it successfully. The Finance Minister did not say a word about it, he did not say one word finding fault with giving the land for the purpose of building that magnificent work of which we are all so proud.

Now, I may be asked, What scheme do you propose? We are told that the people of Canada are ambitious, that we are on the top of the wave of prosperity, that we are anxious to develop every section of the country. In my opinion, the transportation question is the most important one to settle. Cheap means of communication are essential to our development. I may be asked: What scheme do you propose instead of that submitted by the right hon. gentleman. There are a great many propositions, but none of them involve the absurdity of the proposition of building a line from Winnipeg to Quebec and Quebec to Moncton. It is alleged that we need to do justice to the Grand Trunk Railway Company, which has been a great benefit to the country, and has expended large sums of money for which its stockholders have received no return. If it is necessary to give that company an opening to the North-west, if it is necessary, as north-western men say, to correct what they allege are excessive rates, for goodness sake, let us adopt a sensible plan instead of that proposed by the right hon. gentleman. Let it be left to experts to decide upon which is the best plan and most likely to develop our resources. Let us have some engineer to report upon the subject. Let us not go into this enterprise without any figures, without a single survey, without any technical knowledge of the country. Let us, before making this jump, obtain the fullest possible information. If the Grand Trunk people wanted to get into that section of country, their first proposition was the most sensible one, namely, the extension of the Ontario system of railways to Winnipeg and from Winnipeg to Port Simpson. I think the company's proposition had some merits to commend it, but the government loaded them down for no other reason but political reasons. Why did they force the Grand Trunk Railway Company, if they wanted to go in and develop Manitoba and the North-west, to build a railway to Quebec? Why did they force them to take over the Quebec bridge? Why did they force them to build useless lines of railway in New Brunswick and Nova Scotia? Do the company want to do so? Is it in the interest of the people of the North-west? No, the people of Manitoba want to get the highest possible price for their grain, they want the cheapest possible mode of carriage for their wheat to the point of consumption. They do not want to load down the people of this country with the enormous debt which is proposed by the right hon. gentleman. What is the debt? The distance from Lévis to Moncton, as stated by the Prime Minister, is 425 miles.

The MINISTER OF MILITIA AND DEFENCE. He estimated it at 400 miles, not 425.

Hon. Mr. HAGGART. But he added the curvature, and his statement was that from Chaudière Junction, giving what he called a liberal estimate, it was 425 miles. Estimating the cost at $35,000 per mile, you get $15,000,000. The distance from Quebec to Winnipeg is 1,400 miles, and estimating the cost at $35,000 a mile, you get a total amount of $49,000,000. Then there was the little calculation in reference to interest that has to be paid on cost of construction. When I made a statement the other day, I had not read the articles of agreement, I thought the government would pay interest on the money during the construction of the road, and that that was an expenditure not to be calculated in the amount of 3 per cent to be charged to the company. I find upon looking at the agreement that the debentures are issued and guaranteed by the government as the road is constructed, and that the company become liable for the 3 per cent on the expenditure on the eastern section from the time the government pay over the money. That was the statement of the Minister of the Interior to-day when he corrected me in my calculation. Take the calculation of the Finance Minister. Making a moderate estimate of $35,000 per mile for both of these sections, it amounts to an expenditure of $50,000,000. They have to pay interest. Never mind about our glorious surplus of $15,000,000. By making an actuarial calculation and applying that money we have in hand at the rate of 3 per cent or 3½ per cent interest, what will it amount to? The Finance Minister forgot that he lost interest on it from the time of payment to the time that he expended the money. There is 3 per cent upon $49,000,000.

Mr. COWAN. You are wrong. He allowed for that.

Hon. Mr. HAGGART. I do not know what the hon. gentleman says?

Mr. WADE. He included the interest in his calculation?

Hon. Mr. HAGGART. The three per cent payable by the company commences seven

years after the construction or the handing over of the work and after the company commences to operate. Then, for seven years we have to pay interest on the amount ourselves. During the next three years if the company earn the amount they are obliged to pay the interest, but if they do not earn it, the unpaid interest for three years is capitalized at three per cent. Then the hon. Minister of Finance calculates the distance in the mountain section to be about 450 miles which, at $30,000 per mile, would cost $13,500,000. For seven years we pay upon that amount. We pay the full amount of the expenditure for the purpose of constructing the road from Winnipeg to Quebec, we pay the full amount of the expenditure for the construction of the road from Quebec to Moncton, we hand the road over to the Grand Trunk Railway Company and pay the interest upon the cost of construction for seven years, and if the Grand Trunk Pacific Railway Company are not able to pay the interest during the three years succeeding the seven years term, we add that to the capital account and charge them three per cent upon it. How that obligation is going to cost the people of this country $13,000,000 or $15,000,000 is the most extraordinary thing I ever heard of. Surely we are expending the money in the construction of the road. We pay out the money for the interest upon it for seven years and these sums of money put together will impose an obligation upon us, as I calculate it and as it is calculated by the hon. Minister of Finance, of $70,000,000. Then, for the purpose of gratifying the people of Quebec who do not really want the road, which will be of no public utility to them, and for the purpose of expending $15,000,000 in the province of New Brunswick we are called upon to add to the debt of this country in the next seven or ten years an amount equal to more than $75,000,000. I will venture to say that when the road is completed you will find that the sum of money expended for the purpose of carrying out this contract with the Grand Trunk Pacific Railway Company will not be $75,000,000 because, as I said before, it is impossible that the road can be constructed for that amount. Having the experience and the knowledge that we have at present as to what roads cost in that section of the country and knowing that the expenditure of the Canadian Pacific Railway for the construction of the road from North Bay to Fort William was $60,000 per mile, I do not think it is possible to leave that road in the first-class condition which it is proposed to do with ordinary gradients, not gradients of twenty-one feet to the mile, but ordinary gradients of fifty-two feet to the mile, for less than $125,000,000. What could we do with an expenditure of $125,000,000 ? What works for the development of the country could we construct with that money ? We could have a road, as the Grand Trunk Pacific Railway originally proposed built to Fort Simpson. We could have our waterways enlarged to meet modern requirements which call for a depth of twenty feet, we could have the Georgian Bay canal built, we could have communication between the port of Montreal and the city of Quebec and the whole navigation of the St. Lawrence put in first-class condition. I will leave it to the people of this country to say which they prefer. If it is the question of transportation that is first in the minds of the people, if that is the all absorbing question, if it is a question as to what will tend to the development of this country more than anything else, seizing the present moment and making, if you like, a lavish expenditure for the purpose of developing the country upon the lines I propose will accomplish more to render the resources of Canada available than anything else. Cheap transportation will divert the trade of any country from one road to another. We have the experience of the United States. A half a cent a bushel will divert the trade from New York to Baltimore, or to Philadelphia, or to Boston. The expenditure for the building of the Georgian Bay canal would be justified by the results, the parties who built the canal would get a good return for their investment and you would be enabled to transport to Montreal wheat delivered at Fort William or Port Arthur for five cents per bushel which is nearly the present rate. The whole scheme of transportation ought to be thought out. The government of the country ought to appoint their experts for the purpose of doing it. They ought not to jump in with wild cat schemes for the purpose of developing the country as they pretend it is for that purpose, but there ought to be a thorough investigation, first, to ascertain what the results of any such scheme would be. I am confident that if a commission of experts, men who have studied the question, commercial men, engineers, looked into this proposition not a single man from one end of the country to another would be in favour of the scheme as proposed by the right hon. the leader of the government. We are told that boards of trade are petitioning in favour of it, that the Board of Trade of Toronto and the Board of Trade of Halifax have petitioned for it. I have a great deal of respect for the boards of trade but I have more respect for the intelligence of the people of this country either as exemplified by representatives on this side of the House or by the right hon. gentleman and his supporters on the other side of the House. I have a great deal of respect for boards of trade. Is there any feeling in the country in favour of this proposition Was there any agitation in the country in favour of it ? The hon. Minister of the Interior read letters in favour of it. I could read letters to the contrary. He quoted partial remarks by newspapers and he quoted my hon. friend from East Grey

(Mr. Sproule) as a supporter of transcontinental roads. He quoted my hon. friend from East Grey as saying that it would require fifteen or sixteen transcontinental roads in the prairie section of the country. What the hon. gentleman said was that to meet the requirements of the people of that section of the country and to carry out their grain in a couple of months it would require fifteen or sixteen transcontinental roads. Do they require anything of the kind ? For the purpose of the trade of that country it would be sufficient to erect elevators in the different sections of the country and large elevators at the ports on Lake Superior at which the grain is received to be shipped out for consumption in foreign countries. That is the proper system to adopt. No railway will put upon its road rolling stock sufficient to move the whole crop of the country in two or three months. It would pay no company in the world. If there was proper rolling stock, and if the elevators were sufficient to store the grain, there is sufficient railway accommodation in that section of the country at present. The commercial requirements of that country when they arise will be satisfied by railroads which are in existence, and by other railroads which will be developed by the people themselves. There is no necessity for the government entering into such a project. It may be necessary to develop new parts of the country to build railways, but there is no part of the Dominion so well served with railways now as Manitoba and the North-west. I venture to say that there is not 1,000,000 bushels available for sale in that section of the country which has not at present been carried by railroads to the point of shipment. The Minister of the Interior said that the Montreal 'Gazette' had stated that it was in favour of a line from North Bay to the Pacific, with such branches as the company thought it commercially wise to construct, and that the 'Gazette' stated that no one would have successfully attacked such a proposition. The Minister of the Interior gave that as the opinion of one of the leading commercial papers of Canada, the Montreal 'Gazette,' in favour of this scheme, but he forgot to read this portion of the 'Gazette's' article :

> This wild project should be dropped until there is time to find out what it means in the country financially and when that is made plain and thought over by prudent men it will be probably dropped altogether. It is to be regretted that the Grand Trunk project has had these political features appended to it.

That is exactly the view of a great many members on this side of the House. The Grand Trunk Railway came to parliament with a plain commercial proposition. They were anxious to enter into the North-west to compete for the carrying of the immense products of that fertile country. They came with a proposition of their own, but for political reasons, and for political reasons alone, they are loaded down with two useless propositions, namely, the road to Quebec and the road to Moncton. I hope yet that the right hon. gentleman will drop the scheme. I appeal to him not to risk the financial position of the country in an expenditure so ridiculous. If the country north of Quebec has the resources he thinks, let us develop it as we have been developing it in the past, and as Ontario has been developing the Temagami district ; let us develop it locally by roads through that section of the country. I have proved conclusively that there is no necessity for this road in New Brunswick. It is a useless appendage. It is a destruction of property at present owned by the government of the country. It will entail on us a loss of nearly $60,000,000 out of the $72,000,000 we have invested in the Intercolonial Railway. You are destroying one portion of your property by erecting a new property. You are giving no better line to accommodate the commerce of the country. Your scheme is ridiculous.

The Minister of the Interior talked about other railways having running rights over this line. The ex-Minister of Railways fully showed the absurdity of that. One would think it was a new power that was given to railroads. Why, the Railway Committee of the Privy Council can grant running powers to any railroad in Canada on any other railroad. What was the object of putting it in this charter and agreement, when it is in the law of the land already ? And yet, the Minister of the Interior told us that the agreement would never have been signed if that clause were not in it. As the Minister of Finance truly said, this power may be used as a lever for the purpose of making proper freight arrangements with other roads. It enables a company that has running powers over another road to make satisfactory arrangements for the carrying of their freight or the exchange of traffic.

Mr. DAVIS. Have we the power to grant running rights over the main line of the Canadian Pacific Railway to another company ?

Hon. Mr. HAGGART. Yes.

Mr. DAVIS. Under the contract ?

Hon. Mr. HAGGART. You have it in the statute, and it is embodied in the new Railway Bill. The Railway Committee of the Privy Council have the power to grant running rights over any road in Canada to any other road on such conditions as they think right and equitable, and the Railway Committee of the Privy Council has frequently exercised that power. Independent of that, some railroads have it in their charters. You will find it in the new Railway Commission Bill.

Mr. DAVIS. The new Railway Commission Bill does not interfere in any way with

the main line of the Canadian Pacific Railway. It does not claim to interfere with their freight rates.

Hon. Mr. HAGGART. I am not talking about freight rates, I am talking about running rights. The Railway Commission Bill interferes with the Canadian Pacific Railway as much as it does with any other railway, except that a portion of the Canadian Pacific Railway is exempted in regard to its freight rates. Their schedule of rates was approved by the Governor in Council from Lake of the Woods westward for a certain distance, and the Canadian Pacific Railway's contention was that that exhausted the power of the government to alter or amend their rates under the terms of their contract. Under the new Railway Bill a portion of the Canadian Pacific Railway is exempt as regards freight rates, but that has nothing to do whatever with the power to grant running rights or make arrangements for the exchange of traffic over their road.

With regard to the question of routing, one of the special conditions is that freight routed in a particular direction is to be carried in that direction. Another condition is that the company will not discriminate against Halifax and St. John in favour of Portland, or, in other words, that freight which is given to them for the purpose of being carried to a specified seaport is to be carried to its destination, and they are not to use any influence for the purpose of diverting it to another point. The Intercolonial Railway once had an arrangement with the Canadian Pacific Railway in reference to routing freight from Montreal to Halifax and from Montreal to St. John. We made a bargain not to discriminate against them, but to let any one who chose to ship over their line to do so. What was the consequence ? Any office boy on the Intercolonial Railway knew, without any instructions. knew what was in the interest of the railway, and wherever possible he would send the freight along the Intercolonial Railway, and give it the advantage of the haul. You cannot help that. My hon. friend from Hamilton (Mr. Barker) said that a shipper at Winnipeg who wanted to send some material to Liverpool would go to the Grand Trunk Pacific office there for the purpose of routing it. As long as the railway sends the material to Liverpool, the man who sends it as a rule does not care which way it goes so long as it is sent. He is asked, 'What route do you want to send it by ? There are three routes—to Portland, to Halifax and to St. John.' 'I want to send it to St. John.' The official tells him, 'I will be glad to accommodate you, but you will have to wait a day or two for a car to that port. We have a car to-day going to Portland, and if you will send it there you will have the advantage of having a ship ready to take it to Liverpool, whereas if you send it to St. John it might have to wait a week or ten days before it would get a ship.' The smallest boy connected with the railway would see without any direction that every pound of freight is routed where it is most in the interest of the company to send it. That clause in your agreement is not worth a cent.

The clause with regard to the rolling stock I do not clearly understand. I do not understand whether the rolling stock on this road may be hired, or whether a company may not be formed to rent to the Grand Trunk the rolling stock that is to be placed on this road, without coming under the mortgage that is to be given to the government. Clause 22 of the agreement provides :

> The company shall equip both divisions of the said line of railway with modern and complete rolling stock suitable and amply sufficient for efficient operation and the handling of all classes of traffic to the satisfaction of the government, and the first equipment for the completed road shall be of the value of, at least, twenty million dollars, of which not less than five million dollars worth shall be supplied for the operation of the eastern division of the said railway, and the said five million dollars worth of rolling stock, together with all renewals thereof and additions thereto, shall be marked as assigned to the said eastern division and shall be held to be and form part of the equipment of the eastern division of the railway during the said period of fifty years and shall be used as the equipment appertaining thereto, according to the ordinary practice of railways during the said period of fifty years.

I do not clearly understand whether a company may not be formed for the purpose of leasing this stock to the Grand Trunk Pacific Company, and whether the railway company would not be performing the conditions of this obligation by putting that rolling stock on the road, and whether that stock would be liable under the mortgage, or only the residuary interest which the company has in the stock. My own impression is that a subsidiary company could perform the conditions of this contract by purchasing the stock and leasing it to the Grand Trunk Pacific Company. If that is not so, and the company has to purchase the stock outright and put it upon the road, I would like to have an explanation of how this condition appears in section 14 :

> For the purposes of this agreement, the expression 'working expenditure,' as applied to the eastern division of the railway, shall mean and include all expenses of maintenance of the said division, and of the stations, buildings, works and conveniences belonging thereto, and of the rolling and other stock and movable plant used in the working thereof, and all such tolls, rents or annual sums as are paid in respect of property leased to, or held by, the company in respect of the said eastern division (apart from the rent of any other leased line), or in respect of the hire of rolling stock let to the company as part of the equipment of the said eastern division, but not including the rental of the said division payable by the company to the government.

This puts the hire of the rolling stock in the category of working expenses.

The MINISTER OF JUSTICE. There is no doubt about that—on hired rolling stock.

Hon. Mr. HAGGART. Why could not the whole stock be hired ?

The MINISTER OF JUSTICE. I do not want to interrupt my hon. friend, but if he will refer to section 35 he will see at a glance that it is not possible for the whole of the rolling stock to be hired.

Hon. Mr. HAGGART. I read that: 'A mortgage which shall be a first charge upon the railway, undertaking, equipment and property.' That is the only equipment that may belong to this company.

The MINISTER OF JUSTICE. If it belongs to the company my hon. friend speaks of, how could the Grand Trunk Pacific Railway give a first charge on it?

Hon. Mr. HAGGART. Will they be conforming with the conditions of this contract if they lease this equipment and put it on the road?

The MINISTER OF JUSTICE. Not for the $20,000,000 of equipment.

Hon. Mr. HAGGART. Not to the extent of the $5,000,000?

The MINISTER OF JUSTICE. Not to the extent of $20,000,000.

Hon. Mr. HAGGART. Then, I would judge from what has been said by the ex-Minister of Railways and Canals that they can do it to the extent of $15,000,000.

The MINISTER OF JUSTICE. They must be in a position to give on that $20,000,000 of equipment a first charge to the government. They may get the property as they choose, so long as it is once on the road, it is liable to the first charge of the government.

Mr. GOURLEY. How could it be unless they owned it?

The MINISTER OF JUSTICE. That is the answer.

Mr. GOURLEY. You are putting a supposititious case.

The MINISTER OF JUSTICE. If I am the owner of equipment or rolling stock and lease it to a company and agree to waive my charge in favour of the government, I have a perfect right to do it. It is a very simple thing.

Mr. GOURLEY. But the owner would not waive it.

Hon. Mr. HAGGART. Then we are to understand from the Minister of Justice that the Grand Trunk Pacific Railway have to put $20,000,000 worth of equipment on that road free from any mortgage, lien or anything else to any other company. If not, I am correct in my statement that they need not put on one cent of rolling stock except the $5,000,000 worth which will be liable to the government lien.

The MINISTER OF JUSTICE. If my hon. friend be correct, then the contract is badly drawn. That was not the intention of the parties.

Hon. Mr. HAGGART. The intention of the parties is another thing. The Minister of Justice says that under this clause the Grand Trunk Pacific Railway or transcontinental railway, have to put $20,000,000 worth of stock upon that road, which will go, without any other incumbrance, as security to the government.

The MINISTER OF JUSTICE. That is right.

Hon. Mr. HAGGART. I am glad to hear that such is the case, because that is a further security for the expenditure of $13,000 per mile and $30,000 per mile. I have no doubt that that was the intention, but I doubt very much whether the agreement covers it. We may take it for granted that the Grand Trunk Railway are obliged to put $20,0000,000 of stock upon the road, which will be security to the government for the loan of $13,000 per mile from the prairie section to Winnipeg and the loan of $30,000 per mile upon the mountain section. Then I see another clause which provides that $24,000,000 of common stock shall be taken by the Grand Trunk Railway, for which they may not pay a dollar, and be held by it as security for any advance or any endorsation or any agreement which they enter into. They get that stock for nothing, and it may be necessary to be held by them for the purpose of controlling the stockholders of the transcontinental railway. I hope that the government will take proper means to see that every dollar the company expends is accurately shown, so that the government guarantee will not cover more than 75 per cent. But that is a very difficult undertaking, for we know how railway companies and contractors whip the devil around the post, to use a popular expression. The government have no security at all that the Grand Trunk Pacific Railway will carry out its agreement except the guarantee of the Grand Trunk Railway. The hon. Minister of Finance has said that the old Grand Trunk Railway, with its enormous properties, with its assets to the extent of $250,000,000, is at the back of the concern. Well, the obligation of the Grand Trunk Railway to the government of this country is to be valued by the measure of the Grand Trunk Railway stock. What does it sell for in the market? Does this bargain have a preference over the stockholders, the debenture-holders, and the bondholders? Not at all. You have no security, therefore, with reference to any part of this agreement. All you have is the promise of the Grand Trunk Railway, whatever the value of that may be. Long

ago we advanced a sum of money for the purpose of constructing the old Grand Trunk Railway, which that company was to return. Our claim was superior to everything else on the road, but we found it necessary to put it behind all the other securities except the common stock. To-day the Grand Trunk Railway owe the people of this country a sum, with interest, in the neighbourhood of $30,000,000. That sum we never intend to collect. It is a virtual gift to the Grand Trunk Railway. We could not collect it if we wanted to, and might just as well make it a present. If we could not collect this sum, of what value is the promise of the Grand Trunk Railway ? I hope and expect that the Grand Trunk Railway will carry out its agreement. It has an excellent agreement. It will have a road from Quebec to Winnipeg which will cost it nothing for the first ten years and from Quebec to Moncton, and it will have nearly all the money required for the construction of the prairie and mountain sections. All it will have to raise is sufficient money to build a branch from its main line to Lake Superior, and I suppose it may build a line to North Bay, or it may connect with the Temiscamingue road, which is being built by the Ontario government. That portion of it is a good investment. I think they will have no trouble in raising money on the security of that portion of the road from Winnipeg to Lake Superior. I hope the Grand Trunk will be in a position to carry out that part of their contract. Their original proposition for a connection with their Ontario system and the making of a transcontinental road in that way would, I believe, have been in the interest of the country. But, I must protest, as I said before, against the enormous expenditure into which the government seeks to force us. My hope is that when the engineering parties examine the New Brunswick section and the Quebec section, their reports of the cost of building a commercial road there will be so alarming that the government will be compelled to back out of that portion of the scheme. And, if that should occur, I am sure that none will be more rejoiced than the Grand Trunk Railway Company. It would take two years to locate the line from Winnipeg to Moncton, before a dollar can be spent in construction. Hon. gentlemen speak of having the road built within five years after it is located. If the expenditure is to be in the neighbourhood of $35,000 per mile, and if the work is to be carried on under government supervision in a country where they can only commence the work at the two ends—taking the supplies up the Canadian Pacific and commencing construction near the Montreal river, and, on the other hand commencing construction at Quebec—it will require, under the system of contracts and with the contractors which the government can employ, not less than seven years to build that section of the road. So, it will be nine years and possibly more before the road will be in a condition to be handed over as part of the Grand Trunk transcontinental line. Interest must be paid on the money used on construction during that time. The parts that are built must be kept up, and, if possible, used. It is an enormous undertaking ; and, as I have said, I hope the the government, on looking into it, will grow alarmed and that the road will not be built. And when the facts are known to parliament and to the people of this country, I feel sure they will never allow such a gigantic expenditure for so useless a purpose.

Mr. HENRY R. EMMERSON (Westmoreland). Mr. Speaker, I should be loath to interject myself in this discussion after the very able and exhaustive speeches to which we have listened, were it not that I come from a province that has been represented for a long time in the councils of the country by the gentleman who has the leadership of the criticism of the project now before the House. And I would the more hesitate to take part on account of the fact that that hon. member has been for many years my political leader, not merely in the arena of Dominion politics, but in the more restricted arena of provincial politics in the province of New Brunswick. However, I must deal with this question. I trust I shall deal with it briefly, and I hope to deal with it on broad national lines. I shall endeavour to deal with it from the standpoint of Canada and not merely from the standpoint of the province from which I come. And, in so dealing with it, I shall not have reference to persons, except in so far as they may have relation to facts stated, principles enunciated and conclusions drawn. We are told that this scheme has been precipitated upon the country, that it has been forced headlong into the arena. I think that before dealing with that, I should, for a moment, refer to the speech of my hon. friend (Hon. Mr. Haggart) on that question of precipitation, I shall be called upon to cite one ex-Minister of Railways and Canals against another ex-Minister of Railways and Canals. It will be a case of the city of St. John vs. the riding of South Lanark. We have listened to a long, a somewhat long, discussion of this subject by the hon. member for South Lanark (Hon. Mr. Haggart). In arising to address the House that hon. gentleman said he proposed to briefly give his reasons for opposing the Bill. I would not wish to say anything derogatory of that hon. gentleman, but I am sure that his speech showed a poverty of argument, while it was resplendent with affirmation and assertion. On the question of precipitation, at the very outset I would invite the attention of hon. members to a speech delievered by the hon. gentleman himself. We are told that there should have been delay, that

there should have been deliberation, and then more deliberation, that the country is not prepared for this scheme, that parliament receives it unprepared, and that the scheme itself has not been matured as it should have been before being brought before the House. In the speech to which I refer, delivered in this House on the 26th of May last, the hon. member for South Lanark made this statement:

The Grand Trunk Railway has done a great deal towards the development of this country, and the stockholders of that concern have had but meagre return on the amount they have invested. Anything the Canadian people can do in return for the great benefits that that company has yielded to this country ought to be done, other things being equal. If they propose to build a road which will open up a new territory in the North-west and make a connecting line with Quebc, I would rather see it assisted than any other scheme I hear proposed.

Mr. TAYLOR. I rise to a point of order, the hon. gentleman is referring to a previous debate. The Prime Minister applies that rule every time he gets an opportunity to hon. gentlemen on this side of the House, and I ask that you apply it now.

Mr. DEPUTY SPEAKER. The rule is well known to the House that no hon. member can quote from a previous debate. We are all quite conversant with that rule.

Hon. Mr. HAGGART. Would you allow him nevertheless to go on and make his quotations ?

Mr. EMMERSON. I think it would save time if I were permitted to read the extracts which I have before me, they are in print. Perhaps I could state from recollection what the hon. gentleman said, but as he has given me permission, I will read it, because it will recall to his mind what he did say, and said very well at that time.

There is no necessity for a commission as to railways. That commission might have been appointed before this session and the government might have formulated some policy, because now is the time to formulate a policy and to build the works that are necessary. The day of depression may come within a year or two, because this country cannot always be in the position which it is at present, and it should take advantage of the tide. A few years is a great deal in the history of a country, as it is in the history of a manufacturing enterprise We should take advantage of the opportunity at the present time to divert the traffic into this section of the country while the routes are being formed, because once you have traffic going in a certain direction it is almost impossible to turn it into another channel. Take advantage of the present tide in our favour. Canada is in a better position now than she will be for a number of years to come to adopt a definite transportation policy, because this is a state of affairs that cannot continue for a number of years. Take advantage of the present, formulate some policy which is destined to build up this country, take advantage of the opportunity which nature has afforded us, because we are now in the best possible position to secure for ourselves a place amongst the foremost peoples on the face of the globe.

I might also say that those words uttered by my hon. friend from South Lanark were the very words which were uttered by the right hon. leader of this House, in his speech explaining the scheme now before the House. Another extract which I am sure will be of interest to the House, is this:

My opinion is that if the government should decide to give any assistance for that purpose, the company which is entitled to the preference is the Grand Trunk Railway Company. That company has done a great deal to open up this country, they have spent a great deal of money, and have received very little returns for it. It may be the fault of the mangement of the company, but the fact remains that for the vast sums of money which that company has invested and which have had the effect of developing this country more than any other railway except the Canadian Pacific Railway, it has received very little return in the way of profits. I think the policy of the government should be to have this road built as far north as possible, to pass as near as possible to the height of land in order to tap a region of country which has not been opened up at present.

These words uttered by my hon. friend were prophetic. Little did he realize then that the government perhaps had under consideration just such a policy as he approved of, just such a policy as he deemed in the interest of the country. To-night we have listened to him discussing, first the section between Quebec and Moncton, and then the section between Quebec and Winnipeg. At that very time the Railway Committee were discussing the very scheme which is involved in this Bill. There was involved the completion of a railway from Quebec to Winnipeg, and my hon. friend, by his then spoken words, approved of that policy, the policy which has since been adopted by this government. It is true the hon. gentleman has taken exception to that portion of the scheme between the city of Quebec and the city of Moncton. He has done so in a very laboured way, I am bound to say, and he has done so, it seems to me, on false premises. In the first place, he has called to his assistance certain statements made by Sir Sanford Fleming, issued in 1864, and he has endeavoured to show that these reports confirm him in his objections to the route which is now proposed. Bear in mind, Mr. Speaker, that the route between Moncton and Quebec is a line of railway which extends back from Lévis to Edmundston, then down the River St. John, to about the centre of the province, and then, down one of the tributaries of the Miramichi, crossing the Nashwaak river, and thence on to Chipman and to Moncton. My hon. friend has stated here that according to the report and survey of Sir Sanford Fleming the line thus traversed was one that, to use his own words, would not be one mile shorter, that is, the distance between Lévis and Moncton would not be one mile shorter by that route than the distance between Lévis, or Quebec, and Moncton by the Intercolonial. Has he taken us into his confidence, so far as to

explain to this House that the surveys to which Sir Sanford Fleming made reference were the surveys made between Rivière du Loup and Edmundston and Moncton? An entirely different route, a route that lengthens the line by nearly one hundred miles. He has not taken into consideration the fact that Rivière du Loup is situated 123 miles from the Quebec bridge and he has not taken into consideration the fact that when you travel down by the present line of the Intercolonial Railway to Rivière du Loup, or formerly the Grand Trunk line between Lévis and Rivière du Loup, you travel a distance of 123 miles and that thence you cross over the intervening territory, a distance of 85 miles to Edmundston. He has sought to show by these reports that it was an impracticable line, that it was one which would be condemned and was condemned by the engineers. I am sure that if he had sought information from Sir Sanford Fleming he would have found out that he did not know in very truth that the short line to which he refers is the line between Rivière du Loup and Edmundston, that when you leave Rivière du Loup and travel out over the Temiscouata railway, because that railway traverses one of these routes, you go out seven or eight miles and reach a point on that railway where you have to climb 1,300 feet over the height of land, that you have to do that in sixteen miles, that on reaching the height of 1,300 feet you have to travel down again within a distance of sixteen miles and then you are on the same level from which you started seven or eight or nine miles out from Rivière du Loup. That is all the explanation that is necessary in reference to the statement that is made as to the impracticability of the route between Rivière du Loup and Edmundston and down the river. Now, my hon. friend has not disclosed to us the fact that there was, later on, in the year, I think, 1890—I am not sure as to the date—an application before the government of Canada, then led by the late Rt. Hon. Sir John Macdonald, for assistance for a railway from Montreal down through the centre of the province of New Brunswick to Moncton and that there was a survey made. Some twenty-five years after the survey made by Sir Sanford Fleming, there was a survey made from Edmundston to the city of Moncton and that survey was made by the Temiscouata railway company in conjunction with or under the direction of the Grand Trunk Railway Company and that survey located a splendid line. I have had information from eminent engineers, two of them whom I could name, that the line that was then located is one of the best lines, and would prove to be one of the best lines that there is in the province of New Brunswick, and that it will prove to be one of the best lines there is in Canada. I have received within the last two or three days a letter from an engineer who was engaged in that survey confirming the statement I have made and this route does not follow down the valley of the river St. John as stated by my hon. friend. He has quoted from the report referred to showing that any line between Edmundston and Moncton must necessarily follow down the valley of St. John, and he took us down the present location of the Canadian Pacific Railway to Woodstock, then he took us either by the back country or by the river route following the curves of the river down to Fredericton. He could reach Gibson by either route. No doubt these routes are excellent ones. I do not call them in question, but, I do know these are not central routes. Neither is a central route through the province of New Brunswick, neither is the shortest route, and neither of these routes which are condemned by Sir Sanford Fleming is the route to which I make reference, the one that was surveyed in 1890, the one that is capable of being on a line for through traffic and on a line for opening up a vast extent of rich country. I shall not refer particularly further to the route between Quebec and Moncton. I shall reserve that for observation a little later on in connection with some other remarks, but, I am only referring to it to show how illusory were the remarks of the hon. member for South Lanark in respect to his condemnation of the present scheme—the scheme to build a line of railway back of the Laurentian hills, or what you will call the Laurentain rocks back from Lévis, through that rich section of country, through the counties of Bellechasse, Montmagny, and other counties upon the borders of the province of New Brunswick, skirting around that projection of the state of Maine which comes up too far, alas for the good of Canada into our territory, going down to Connors' station and following down the river St. John to Edmundston, going from thence down to Grand Falls and on through a section of country splendid for the building of a railway, because I speak whereof I know, having travelled over ever foot of it myself. I have driven over the road in my official capacity as Chief Commissioner of Public Works in New Brunswick. I know the topography of the country, and I know whereof I speak. More than that, it is a land rich in its agricultural resources. Along that line are to be found some of the richest sections of country that are to be found in the whole province of New Brunswick. Then, in that section there are to be found rich timber lands which will be tapped by this railway. I think that the hon. member for the city of St. John in referring to this section of the country did justice neither to himself nor to the province which has for so many years honoured him when he said that that section of the country was not worthy of consideration. or he said that in effect because he said that when you skirted the

northern section by the Intercolonial Railway and skirted the southern section by the Canadian Pacific Railway, you traversed the only sections of the province that were worthy of receiving consideration in the way of building railways. There is that great central part of the province of New Brunswick that is practically untouched by the hand of man. There is that great section of country from the Nashwaak bridge on towards Moncton. I have had occasion to travel through what is known as the Gaspereau valley and I venture the assertion that it is one of the richest valleys, one of the most promising agricultural sections, one of the most beautiful spots that I have ever visited in the province of New Brunswick, and I am sure that the Annapolis valley does not present a prettier picture than the valley of the Gaspereau situated in the heart of one of the finest agricultural sections of the country. It was at one time in the history of the province occupied by people, but the people did not expect that railways would be built and many of them deserted that section because they had no railway facilities. I am sure that it certainly cannot be said of that section, near as it is to rich coal fields, that it is unworthy of the consideration of the parliament of Canada, that it is unworthy of being considered in the way of development by the construction of railways. But, perhaps I have digressed from the course of my remarks in speaking of this. I have spoken of it because of the knowledge that I have of it and I have spoken of the feasibility of that route by reason of the fact that I have information from men who are eminent in the engineering profession, from men who know whereof they speak, and I think that their report is worthy of consideration.

The hon. gentleman (Hon. Mr. Haggart) has said that the line via Edmundston and Woodstock will not shorten the distance to Moncton by one mile as compared with the Intercolonial Railway. The hon. gentleman should apologize to the House for having misled it. He should apologize for attempting to make out that the route surveyed from Rivière du Loup is identical with the route to be followed by the Grand Trunk Pacific Railway. Another feature of the speech of the hon. gentleman (Hon. Mr. Haggart) was that it echoed the cry that the Intercolonial Railway was to be denuded of freight, and he asked the House : How about the competition with the Intercolonial Railway in the carriage of freight from St. John when this new road is constructed ? Well, let me in turn ask the hon. gentleman : How about the competition between the Intercolonial Railway and the Canadian Pacific Railway from St. John to Quebec and to Montreal ? He alleged that the Intercolonial Railway would be injured because the new line will shorten the distance between St. John and Montreal and Quebec, as compared with the Intercolonial Railway. It is true that the distance will be shortened. But did not the building of the Canadian Pacific Railway short line through the state of Maine shorten the distance between St. John and Quebec and Montreal, and has not the Intercolonial Railway ever since been obliged to compete with the Canadian Pacific Railway for freight and passengers. Did the Conservative government in the eighties think of the competition that would be afforded to the Intercolonial Railway when they subsidized the Canadian Pacific Railway short line, even though that short line traversed the state of Maine. I wonder what the hon. gentleman (Hon. Mr. Haggart) thought about that. Well, at this date, there need be no alarm, because if the Intercolonial Railway during those years has successfully competed against the Canadian Pacific Railway, it surely can compete against the Grand Trunk Pacific Railway. The hon. gentleman (Hon. Mr. Haggart) described the line from the Chaudière to Moncton as a mad scheme and as an impracticable scheme, and as a squandering of the money of Canada. I do not know whether the hon. gentleman was a member of the Conservative government in 1890, but whether or not it must be within his knowledge that negotiations were pending and promises made by the government of Canada, represented by its then distinguished leader, Sir John A. Macdonald, that there should be constructed a line from Edmundston to Moncton through the centre of the province of New Brunswick by way of Chipman, practically over the route which is now contemplated. Was that a mad scheme? Was that scheme unworthy of consideration? It received the promised support of the government, but it met its fate like the Harvey and Salisbury line, whether in the Senate or not I am not aware, but it certainly did not materialize.

Hon. Mr. HAGGART. No; it was refused by the government; I remember it well.

Mr. EMMERSON. But it was promised by Sir Hector Langevin on the floor of parliament.

Hon. Mr. HAGGART. It was objected to by Sir John Macdonald for the simple reason that it was a competitor with the Intercolonial Railway.

The MINISTER OF FINANCE. With the Canadian Pacific Railway, you mean.

Hon. Mr. HAGGART. There was no subsidy given to it.

Mr. EMMERSON. Well, it might have been a competitor with the Canadian Pacific Railway, but isn't it a wonderful thing that the Canadian Pacific Railway was not refused entrance into New Brunswick because it would be a competitor of the Intercolonial Railway. My hon. friend, in a

fine frenzy, almost agonizingly asked : What was the use of building this railway through the provinces of New Brunswick and Nova Scotia. The hon. gentleman must have forgotten that this line will not reach within hailing distance of Nova Scotia. There is a tradition in the provinces by the sea that the hon. gentleman (Hon. Mr. Haggart) was Minister of Railways and Canals for a number of railways, and that he once travelled over the Intercolonial Railway. It is said that he travelled through on a private car with locked doors, which was thought to be a reflection upon the people whom he might meet, although these must necessarily have been his own political friends. It is also rumoured that in the city of Moncton, where the general offices and the great workshops of the railway are situated, the hon. gentleman actually remained for one half hour. If that be true, and that was the only time the hon. gentleman went over the Intercolonial Railway, he may be pardoned for stating to-night that this new railway is to be forced through the provinces of New Brunswick and Nova Scotia.

Some hon. MEMBERS. Hear, hear.

Mr. EMMERSON. The hon. gentleman has spoken of the debt to be incurred by reason of the construction of this line between Moncton and Winnipeg. But he has apparently not listened with any spirit of receptivity to the statements which have been made with regard to that matter. The hon. gentleman must know that it was clearly shown by the Prime Minister when he presented this measure to the House, and as clearly shown by the Finance Minister later, that the obligations on the country involved in this scheme will not exceed $14,000,000. The hon. gentleman (Hon. Mr. Haggart) does not discriminate between the guarantee of the bonds and the expenditure of money. It is true that there is to be an expenditure of money in connection with the building of the line between the city of Moncton and the city of Winnipeg; but it is also true that after a certain period the interest on that expenditure is to be paid by the Grand Trunk Pacific; and it is also true that the guarantee of bonds on the prairie and mountain sections is simply an endorsement by the government, and not an obligation which will fall upon them. It is simply tantamount to the government of Canada taking collateral security and becoming responsible for an amount which they will never be called upon to pay.

After expressing the opinion that the indebtedness of the government would be very great, the hon. gentleman calls upon the government to halt. He wants time for the whole scheme to be thought out, and he asks the government not to jump into it with precipitation. He thinks there should be a transportation commission ; and yet his utterance of to-night was contradicted by his utterance on the floor of this House on the 26th of May last, to which I have already referred.

I do not think there is anything further in the utterances of my hon. friend upon which I need dwell, and I will turn my attention to the remarks which I have to make apart from the hon. gentleman's participation in the discussion.

We ought to realize that there is involved in the proposal before this House a really revolutionary action on the part of governments with respect to aid to railways. We are all familiar with the past history of railway subsidies. We are all familiar with the fact that heretofore the Dominion parliament has granted subsidies to assist in the construction of railways throughout this Dominion, which were supplemented in some of the provinces at least, by provincial aid. I know that has been true with respect to the province from which I come—that year after year the government of Canada aided the construction of railways in that province, and the province almost impoverished itself in endeavouring to aid these railways. I will not refer to the history of the Dominion in connection with the Canadian Pacific Railway. That has been referred to many times, and is fresh in the minds of all. But I think I can take you into my confidence in respect to what has transpired in the province of New Brunswick, where many lines were aided by this parliament. I do not think what is known as the New Brunswick Railway was aided by the parliament of Canada. It may have been. That is the line of railway running from Edmundston down to Woodstock, thence to Fredericton, and also from Woodstock out to McAdam junction. But this particular line from Edmundston to Newburg junction, and thence to Gibson, opposite the city of Fredericton, received from the province of New Brunswick aid to the extent of 10,000 acres of land per mile. The best lands in the province of New Brunswick to-day are owned by the New Brunswick Railway and Land Company or its successors. Reference was made to the fact that the proposed railway from Quebec to Moncton traverses this extensive area of land formerly owned by the province and given as a subsidy, and these lands are now the subject of negotiation between the company which owns them and the government of the province. I believe there is an option on these lands—why ? Because they are splendid settlement lands, and because they are richly timbered, and the line of railway proposed in this scheme will traverse that extensive area of rich agricultural and timber lands. The lines of railway which were aided by this parliament and by the province were as follows : There was the Albert Southern, a line some twenty miles in length, in the county of Albert ; there was the Harvey branch ; and there was the St. Martin's and Upham line. These three lines, though aid-

ed by the government of Canada, and though contributed to by the people of the province, are to-day closed, and are nothing but streaks of rust; there is no evidence of their running. There were other lines—the Elgin and Havelock, which is running; the Albert Railway, the Kent Northern and the Short Line, which runs from the city of St. John on the west side, down through the county of Charlotte to St. Stephen, paralleling, by the way, to use the term as it is now understood by our hon. friends opposite, another line of railway running from the city of St. John to the town of St. Stephen. These two lines join the same cities, just in the same way as the Intercolonial and the proposed line will join Moncton and Quebec. The lines to which I have made reference have all been foreclosed and sold out under the order of the Equity Court. There are other lines in the province—the Caraquet, the Central and the Moncton and Buctouche—which are now practically held by the bondholders. I want to ask, with respect to these lines which are absolutely closed and are of no value to the country or the province, where are the subsidies, and what has been the net result? These are but illustrations of the consequences which have followed upon the system which was adopted by the Dominion and the province of subsidizing railways, and I am very glad indeed that these illustrations teach us a lesson. They teach us, so far as the province of New Brunswick is concerned, that it was fatal to subsidize railways by giving them grants of public lands. While the lands were given to the railways at the nominal value of a dollar an acre, equal to $10,000 per mile, they are to-day held at a valuation, I understand, of $7, and even $10 in some sections, per acre. That certainly proves that the province of New Brunswick would have been wiser had it borrowed the money at that time and held on to its land. With respect to these others, they squandered our subsidies and have not a dollar to show for them, which only shows in contrast the benefits of the scheme adopted by this government.

I do not propose to go over the ground traversed by hon. gentlemen who preceded me, but I want to say this. For a long time there has been throughout Canada a demand for another transcontinental line from ocean to ocean on Canadian territory. Such a road has been advocated in the newspapers and on the public platform. In the province of New Brunswick its construction has been frequently urged. Throughout Canada the feeling has taken root that we should have a transcontinental line right through Canadian territory from a Canadian seaport on the east to a Canadian seaport on the Pacific. To paraphrase a line in one of the psalms, the idea was that Canada shall have the 'dominion from ocean to ocean, from the river to the end of the land.' The time has come when we can realize the aspirations of our people. If in 1871 we could undertake to build a transcontinental line of railway, we would be justified to-day in undertaking to build two or three such lines. There is prosperity on every hand, there is a feeling of hopefulness everywhere, and if we want to keep pace with the aims and aspirations of the people of every province, we will have to push forward this railway scheme. It would be criminal not to do so. The hon. member for South Lanark (Hon. Mr. Haggart) sounded the alarm when he said that unless we did something now, traffic would seek other channels, and we all know that once traffic has found a certain channel, it is almost impossible to divert it into others. It has been very truly said that the world was born again with the introduction of railways, and I am sure that the Dominion of Canada would almost experience a new birth, if this line were completed and we were in a position to put it into operation. There would then be such a tide of immigration, such a volume of traffic, that another line of railway would be a paying investment. There are so many changes in industrial, commercial, social and political relations, following the establishment of railways, that one can hardly tell, from one year to the other, what the conditions may be twelve months hence, and we have to adjust ourselves to the new and varied conditions. The extension of a railway into new and remote territory increases the value of our lands and other resources. New sources of supply are tapped, traffic increases, and with the increase of traffic there is not only a rise in value of the property along either side of the railway but an increase in the value of other property as well.

One thing which cannot fail to strike anyone who gives any study to this scheme is that it will be the greatest immigration agency Canada ever had. When you realize that the old Grand Trunk Railway, with its tens of thousands of shareholders in the old land will become an active immigration agency, when you realize that each of these 40,000 (I am told that is the number) shareholders will be an immigration agent for this country, you will have some idea of what benefit this policy will be to the Dominion. Every one interested in the Grand Trunk Pacific Railway and the Grand Trunk Railway and their securities will advertise Canada's resources; and both the Grand Trunk Railway and this company will be the greatest colonizers Canada has ever had—far more so than the Canadian Pacific has ever been. In this respect this scheme will be worth all the money Canada will have to expend upon it. There is another feature. We must all realize that the extension of a railway into new and remote districts increases the value of our public lands. Take the Canadian Pacific Railway as an example. The value of the lands bordering that railway justify alone the expenditure incurred in the construction of that road.

With the permission of the House, I would move the adjournment of the debate.

Motion agreed to, and debate adjourned.

ADJOURNMENT—GERMANS IN CANADA, AND NAVAL SERVICE.

The PRIME MINISTER (Rt. Hon. Sir Wilfrid Laurier) moved the adjournment of the House.

Mr. T. S. SPROULE (East Grey). Before the House adjourns, I would like to draw the attention of the Minister of Militia (Hon. Sir Frederick Borden) to an item in the Montreal 'Gazette,' concerning the arrival of a German war vessel in the harbour of Montreal and the recruiting of officers and sailors for the German navy. The item reads as follows :—

On the occasion of the visit of the 'Gazelle,' however, an exception is being made——

——with regard to recruiting arrangements——

——and the young Germans residents in Canada are to be afforded an opportunity of entering upon service with the 'Gazelle' without the necessity of going to one of the German ports. The announcement has been made by the imperial German consul that a medical examination of young Germans as to their fitness for military service will be held by the surgeon of the warship on Saturday, at 2 p.m., at the German consulate, 100 Sherbrooke street. No previous notice is necessary ; the young men should bring along their papers. He also states that Germans who wish to do their military service with the German navy may enter upon service right here with the 'Gazelle.'

What I wish to ask is if it is customary or right to allow recruiting by a foreign country in Canada, and, if not, whether the minister's attention has been drawn to this item ?

The PRIME MINISTER (Rt. Hon. Sir Wilfrid Laurier). I cannot warrant my information on this subject, but I think I am not far astray in what I am about to say. There is no recruiting by the 'Gazelle' of any officers or sailors for the German navy. So far as that point goes, I am pretty sure I am correct in saying that this refers to young Germans in Canada who are still German subjects and are here only temporarily. According to the laws of Germany these young men, German subjects, are liable to conscription and to serve when called upon in the military or naval service of their country. As I understand it, these young men are taking advantage of the presence of German man-of-war in the port of Montreal to pass an examination which otherwise they would have to go to their own country to pass, because, if they did not pass this examination they would be liable to some penalty. That is the information I have received to-day. I have had no opportunity of conferring with my hon. friend the Minister of Militia and Defence, but I observed the statement in the press, and we have been making inquiries to ascertain whether my information on the subject is correct or not. We shall have full information in a short time.

Motion agreed to, and House adjourned at 11.05 p.m.

HOUSE OF COMMONS.

FRIDAY, August 14, 1903.

The SPEAKER took the Chair at Eleven o'clock.

NATIONAL TRANSCONTINENTAL RAILWAY.

House resumed adjourned debate on the motion of Sir Wilfrid Laurier for the House to go into committee on a certain proposed resolution respecting the construction of a National Transcontinental Railway.

Mr. H. R. EMMERSON (Westmoreland). When the debate adjourned last evening, Mr. Speaker, I was speaking of the benefits which will result to the country, in the way of colonization, from the scheme now under discussion. I was pointing out that the lands along the route of the proposed railway would be very much more enhanced in value, and I propose to dwell for a moment on this point of the question more particularly as regards that portion of the route with which I am familiar. I know that in the province of New Brunswick the sections which will be opened up by this railway are very rich in agricultural and other resources and only require greater railway facilities to become centres of settlement. In those districts there are rich forest preserves, which have as yet scarcely been touched. Only those portions near the streams have been worked, leaving vast regions from which immense stores of wealth can be taken. There are besides abundant mineral resources and a soil well adapted for agriculture. In the constituency represented by my hon. friend from Queen's and Sunbury (Mr. Wilmot) there are rich coal deposits, which only need to be brought into touch with the market. So that from whatever point of view you choose to look at it, the projected line through that province cannot fail to promote settlement, to enhance the value of land, and aid in the development of rich forest and mineral resources. Coming to the province of Quebec, with which I am of course not quite so familiar, I have been fortunate enough to have had placed in my hands a reference, which I think will prove that the portion of that province to be opened up by this transcontinental railway is a very promising one. For many years there has been a strong desire on the part of people living in that section, who are familiar with its fertility and resources, for railway facilities. In 1884, the then member for Bellechasse in the

Quebec legislature, the late Faucher de St. Maurice, who was one of the leaders of the Conservative party of that day, and far more patriotic than any possessed by that party to-day, read in the Assembly a letter from the Reverend Mr. G. Boulet, parish priest of St. Magloire, in which that clergyman said :—

I see by the press that you and your friends are working to have a railway built which will pass along the southern front of the county of Dorchester, Bellechasse, Montmagny, L'Islet and Kamouraska. That would be a grand and patriotic undertaking, a most happy conception, one that should long since have been realized.

That is exactly the line to be taken by the Grand Trunk Pacific Railway except that it crosses the county at Lévis instead of Dorchester.

In rear of the above named counties there is a magnificent valley, most suitable for the construction of a railway. It is neither hilly nor rocky. Starting from Metgermette, sloping down to Edmundston, there is a regular and fertile plain. Any company that would undertake to build a railway there would find all the necessary material on the ground. Cedar and spruce abound.

Well, Sir, Edmundston and the valley that extends to it in New Brunswick, is exactly the land over which the new line is proposed to be built.

Why do not our governments direct their colonizing and improving energies in that direction. The soil is suited to all kinds of cultivation, the climate is milder than the northern one of the Saguenay region.

This is exactly what my right hon. friend the Prime Minister proposes doing, but which the Conservative party of to-day—unworthy descendants of men like Faucher —will have none of. It was Mr. Faucher de Saint Maurice who said :

From the south shore of the St. Lawrence is the frontier of Maine, the land must be rescued from its unvisited isolation, and that heart of New Brunswick must be opened, but by an artery that will send its pulsations east and west to give life to the commerce of our country. But it is the federal, not the provincial government that must accomplish the work.

Further on he said :

Unfortunately my influence, humble as it is, goes not beyond the provincial sphere, but some day, men of large views and iron nerves will arise to accomplish the patriotic task, which the letter I have read so recommends, and whomsoever they may be, future generations will bless them.

These were the utterances in 1884 of one of the Conservative leaders of that day, and an eminent littérateur, in whose footprints the Tartes, the Casgrains, the Monks and others of our day were ever proud to follow. This shows the opinion held at that period of the rich resources of that section of the province of Quebec, which hon. gentlemen opposite are now so anxious to decry. From Moncton to the interior of New Brunswick, through the counties of Queen's, York, Carleton, Victoria, Madawaska, on into the province of Quebec, there is a long unbroken line of country, rich in agricultural mineral and forest wealth.

I do not look upon this scheme as merely one for the purpose of finding an outlet for the rich products of the west. If it were necessary, it would be well perhaps to have it for that alone. But when you combine the other attractive feature, the development of the country, with that of colonization, it certainly is a scheme which must commend itself to the people of our day in Canada. It certainly will receive the plaudits of those who are to come after us, of those who will enjoy the rich benefits which will result from the accomplishment of this great project.

Now we are told that in northern Quebec there are conditions very similar in character to the conditions which exist in that section to which I have just now referred. There always has been, and is to-day, I believe, a great desire in the province of Quebec to colonize its undeveloped country. Away back in 1853, and from that time down, the cry through that province has been, Colonize. The national poet of French Canada gave the watchword to the people when he said, 'Let us take possession of the soil.' He wanted them to enter the forest, to open up roads, to establish settlements, and to turn a desert region into gardens of plenty. For fifty years the people have been called upon to push forward colonization projects, but they could not respond to the call. It was easier for their young men, as it was easier for the young men of New Brunswick and Nova Scotia, to cross over into the borderland, to go into the great neighbouring republic, and as a result the New England States contain to-day, I might almost say, millions of the bone and sinew, of the brawn and brain of our maritime provinces and of the province of Quebec. This is more true of those provinces than it is of the province of Ontario, because in Ontario the people have enjoyed the developing influences of railways. It is true, they have made many sacrifices to obtain these railways, they have adopted schemes of bonusing railways by the municipalities, and they have had great assistance from their national and provincial governments. But even there the blighting influence of these enticing calls from the southern republic has been felt, and this is further true in the maritime provinces and the province of Quebec. If these young men could have been kept in our country, they would have helped to build up Canada, they would have found means of earning their way into the vast regions of our northern country. This railway now contemplated will do all this for our young men who are now living here ; it will do more, it will invite people from abroad. It will estab-

lish settlements, it will broaden out our settled area, and it will increase the value of our great domain. This railway will create a highway through the heart of a region which possesses untold resources, the wealth of which, for petty political reasons, the opposition of to-day are willing to deny. They are ready and willing to hold their country up to the wide world as a land confined to a few valleys, the greater portion of which is as barren as the Tartar steppes. I was pained to hear my hon. friend the ex-Minister of Railways refer to his province of New Brunswick in the way he did. He was willing to hold up that province as one the greater portion of which did not contain resources worthy of consideration. It seems to me he has not, in that respect, done justice to his own province.

Speaking in a general way, the line from Quebec westward will pass along the northern slope, as I understand it, of the Laurentians, and that dividing line will cut through the vast valleys out of which spring the Batiscan, the St. Maurice, the Gatineau, the Coulonge, the Desmoines, and the Ottawa rivers. From the best sources of information that is from men who have travelled over and over again through these great sections, the resources of that country are three-fold—forest, mineral and agricultural. On the Batiscan, away north beyond the parish of St. Narcisse, there are forests of spruce which extend westward and northward all along that line, in addition to the pine and spruce forests north of the rivers I have just mentioned.

Mr. HUGHES (Victoria). May I interrupt the hon. gentleman to ask what report he is reading from ?

Mr. EMMERSON. I am not reading from a report.

Mr. HUGHES (Victoria). I thought he was reading from some clergyman's report.

Mr. EMMERSON. My hon. friend will pardon me, I am only giving him some information which I am sure will be of benefit to him, because it relates to the province of Quebec.

Mr. HUGHES (Victoria). I am delighted, Mr. Speaker, to hear his remarks, but I thought he was reading from some clergyman's report.

Mr. EMMERSON. Well, it would certainly be much better if it were from a clergyman's report.

The PRIME MINISTER. The hon. gentleman would appreciate it all the more.

Mr. EMMERSON. My hon. friend, I know, likes things tinged with theology ; perhaps he would appreciate still more anything that was tinged with religion, but in this case I am not drawing for him a religious picture. The proposed line will run through a region of country that will supply the pulp industries of the world for a century to come. The reports which have been read to this House, containing the information which I am endeavouring to give at this moment, are confirmatory of all that has been said in regard to it in official documents. The province of Quebec have sent out many exploring parties into that section of the country, and in the archives of the province are records showing the great value of the resources of that region, giving full information as to its topography and as to its mineral, agricultural and forest wealth. We cannot shut our eyes to these facts. It is all very well to say there is no information; it is all very well to refuse to accept the information which comes to us from all these sources. In the days when the Canadian Pacific Railway was projected we did not have any such information with regard to that proposed line as we have to-day with respect to the projected line now under discussion.

I think one hon. gentleman stated in the House that in all that region you could not find a tree as large as a man's leg. That is an assertion tending, as I think, to mislead the country. And it is easy to make such assertions. It is easy to deal in a spirit of levity even with important matters like this ; but that spirit should not characterize the utterances of hon. members of this House, especially when dealing with a project of this character. For this is not a question merely of and for to-day. This is a work for the future of our country, and it is one that is fraught with great possibilities, not merely for us, but for our children, and not merely for us and for our children, but for those who shall come into this country. We are putting forth our best efforts day by day and year by year to influence the best citizenship of other countries to come to our land, where they can build for themselves homes under conditions that offer them every hope of prosperity and happiness. Now, as I understand, there is in the Crown Lands Department of Quebec, information of an official character which refutes the insinuation covered by remarks such as the one to which I have just referred. And, while it may be asserted in this House for a purpose, that that country has no rich timber resources and offers no opportunity for industry, we know that the statement is refuted by the actual conditions prevailing in the province of Quebec. Annually the government there have their sales of timber limits ; and what values are placed by the business men engaged in the great lumber and pulp industry upon the privileges offered at these sales ? We know that the highest prices are obtained by the Quebec government for these timber limits. Business men, looking for investment for their capital, attach greater value to the resources of that country than hon. gentlemen opposite seem to do. The fact that these men place so high a value upon the timber resources

of that region would alone justify the government in deciding that this land must have railway facilities, apart altogether from the grander scheme of furnishing 'spout,' as it is called, for the great grain reservoir of the west through Canadian territory to Canadian seaports. The government should not lose sight, and I am sure does not lose sight of the importance of settling and peopling that timber region, and developing and working the resources of sections which are now, in a sense, isolated and removed from civilizing influence of railways and centres of population. It is objected that these timbered lands are watered by rivers which flow towards the markets of the country, and that they afford channels by which the timber can be more readily and cheaply brought to market than can be done by railway. That may be true of certain strips of land bordering these rivers. But we all know that there are heights beyond, that there are sections somewhat remote from these rivers which the lumberman cannot tap, so that their rich timber resources lie dormant. We know that that country has these great timber resources, or whence come the vast quantities of pine that float down the Gatineau, the Colounge, the Desmoines and Black rivers ? For a hundred miles beyond the timber limits now leased and worked, there are pine and spruce forests, as I am informed, but they cannot be worked, because there are no railway facilities, and because, as they lie north of the height of land, the rivers flow northward, and so carry the timber away from and not to the market. As I understand it, this railway will be on the northern side of the Laurentian range, and it will be to the northern side what the rivers I have named are to the forest wealth of this side of the slope. I am also informed that there are rich mineral deposits, particularly of phosphate, as well as deposits of precious ores. This is, perhaps, in a sense, conjecture. The value of an undeveloped mineral country is, after all, a matter of conjecture and speculation ; until you have your mines actually working, even the fairest prospect cannot be counted upon as a certainty. The geological formation of the Laurentian does not change as you go north ; it is the same great upheaval, and the same conditions prevail. What is to be found in its strata on this side of the range is to be found on the other side also, but in what proportion remains to be discovered. All this will be discovered when this railway shall have made it worth while for the prospector and the miner to undergo the toil and incur the expense necessary. The road, as designed, will pass along a chain of lakes that extends, link by link, from Lake St. John, in the east, to Lake Abbittibi, in the west. That the Lake St. John country is an agricultural region no one can deny. Only those who know nothing about will venture to deny it.

The land is exactly of the same character as the land to the westward. The soil is watered by a similar source, and enjoys similar conditions conducive to fertility.

Mr. GANONG. Is this road supposed to go from Quebec to Lake St. John ?

Mr. EMMERSON. No.

Mr. GANONG. Then why is Lake St. John included in the description of the route of this road ?

Mr. EMMERSON. It does not go to Lake St. John. There is a road now to Lake St. John. This road goes from Quebec. I refer to Lake St. John as the eastern extremity of a region which is rich as an agricultural section, and I say that there are continuous links of lakes running eastward from Lake St. John, that the Lake St. John region is known to be rich and that the country surrounding the other lakes to the westward is of the same character.

Mr. BROCK. You are all wrong.

Mr. EMMERSON. My hon. friend from Toronto (Mr. Brock) shakes his head. Anybody who knows nothing about it is in a position to deny, but those who understand it, those who have information upon the subject, are not in that position. There is one thing that is known and known to a verity, and that is that there are very many rich farms to the north of us on the Gatineau river, along the Desert, and on the Baskatonge. Even to-day, without these facilities, the pioneer has gone in and he has demonstrated that there can be carved out in that region rich and flourishing sections of agricultural country. I am informed that only the other day there left the city of Montreal a colonizing expedition to visit this rich, this fertile, this splendid section of country, and I fancy that the very anticipation of this line of railway is what has induced these adventurers to go into that section of the country. They want to pre-empt the land for future occupation, they have gone there for that purpose, and already the fruits of this scheme are becoming evident in the province of Quebec. There are away north in sections of the country not penetrated by others than the explorer fine farms that have been snatched from the wilderness by the lumber operators. These farms are well situated, only that they require facilities for marketing. They are situated on the shores of lakes or streams or on the slopes of the hillsides. All this is evidence of the fact that there are in the provinces of Quebec and New Brunswick—I shall not refer to the province of Ontario as we are all familiar with what has been said in respect to that province—lying alongside the proposed route of this road lands rich in forest wealth and having prospects of rich mineral resources. These require development, and in their development settlements will be established and new constituencies created. In the province of

New Brunswick we are complaining and suffering to-day from the fact that we are losing at this redistribution a seat in this House. In the province of Ontario, they are losing, I think, six representatives, and if it had not been for the results of the Canadian Pacific Railway in the Algoma district, Ontario would have lost more than six. Now, these provinces, in order to retain their representation, must have the development of those sections of country which are now lying dead and dormant. The hope of New Brunswick lies now upon its great interior, in the development of its mineral resources, in making marketable its rich forest wealth and in the creation of rich agricultural districts. Decade after decade they are losing their representatives on the floor of this House. There must be something done to arrest this decay, and the same is true in respect of Ontario. If the Canadian Pacific Railway could establish settlements and assemble population to the extent of thousands and tens of thousands in the Algoma district to the north of the Nipissing, surely these other provinces by reason of this scheme, this railway, being projected through them can establish settlements, can make additions to the population, and effect the maintenance of the status of the provinces in the Dominion. Now, Mr. Speaker, I am sure that where so much has been said on this subject I will be only wearying the House and worrying myself if I were to attempt to elaborate more on this subject. It is fruitful of discussion, and I am sure, in a sense, very profitable, but there are other features of this scheme with which I desire to deal, and they are practically the features which while it is not sectional, will affect in a marked degree the constituency from which I come. I have said that the leadership in the criticism and condemnation of the Bill now under discussion comes from a gentleman who has for many years been the leader from New Brunswick in the councils of the executive of this Dominion. A gentleman who has held a very high position not only in his own province, but in the cabinet of the Dominion, and who has wielded a very marked influence, and I am bound to say worthily wielded that influence. The very fact that he criticises and condemns this measure, as hon. members know, must necessarily have an influence.

Mr. BROCK. Hear, hear.

Mr. EMMERSON. My hon. friend (Mr. Brock) says 'hear, hear,' and quite true. It would be very strange if it were not so and yet I think it is due to the members of this House that they should inquire into the character of that criticism and condemnation. The fact that he has criticised and condemned the measure caused a great upheavel amongst gentlemen opposite. I could see a glow in their countenances. At the conclusion of the speech these hon. gentlemen so delighted with the utterances of the ex-minister, were forgetful of the past. I could not hear an echo of anything that had occurred with respect to that hon. gentleman in the very recent past, nor could I see any evidence of memory on their part, as to what they had been saying about him for the past seven or ten years. I realize that when men die nothing but good is said of them, and that in many instances they are sainted. When a Liberal departs from the ranks of his party and gives comfort to our opponents, these gentlemen canonize him, and we hear from them not a hint of Drummond steals or of Tarte traitors. That is all forgotten, and these gentlemen cherish the idea that there can be wiped out from memory for all time, that which they have done and said. It was amusing to see our Conservative friends cross the floor of the House at the conclusion of that speech and congratulate the ex-Minister of Railways and Canals. Their leader headed the phalanx and one after another they crossed the floor to felicitate their former opponent.

It is my purpose to consider and to discuss the utterances of that hon. gentleman (Hon. Mr. Blair) particularly in connection with the features of this scheme between Moncton and Quebec. In the first place, the hon. gentleman said that there should not be a railway constructed from Lévis to Moncton over the route indicated, because it would parallel and duplicate the present Intercolonial Railway, and in his letter to the Premier the hon. gentleman stated that it was practically because of that proposal that he resigned his portfolio. In taking that high moral ground, as he claims conscientiously, he has perhaps unconsciously ascribed to himself a monopoly of all the conscience and high moral tone which may appertain to members from the province of New Brunswick. He insinuates that those who differ from him are not actuated by the same high moral attributes which he possesses. Indeed, the hon. gentleman (Hon. Mr. Blair) went so far as to say once in this House, that there was no one in the province of New Brunswick who favoured the proposed railway between Quebec and Moncton except those who hoped to profit by the expenditure of the money. A more unworthy stigma was never cast upon the people of New Brunswick, and coming from so high an authority it is worth inquiring how far it may be true. The hon. gentleman admitted that the city council of Moncton passed a resolution favouring the scheme, but he said in effect, that they would not have passed that resolution if they only waited to learn all about it from him. Let us remember that the Moncton city council is constituted without regard to federal political lines, that there are Liberals and Conservatives in that council and that the mayor of the city is a Conser-

vative. That council unanimously passed a resolution favouring this scheme in its entirety, and favouring it unequivocally and without reservation. Later on, the Moncton Board of Trade discussed the matter as they had discussed it six or eight months before, at which time they favoured by resolution practically the scheme which has been adopted. In their recent resolution the board of trade declared strongly in favour of the scheme, but not unanimously. There were actually two who opposed the resolution. One of them, I believe, is the managing director or president of the board of directors of the 'Times' Publishing Company, a newspaper which neither at the present time nor in the past has supported anything that savoured of Liberalism. The other opponent of that resolution was the editor of that newspaper. These two were against the leading Conservative business men, and against the leading Liberal business men, and against the citizens of Moncton generally. These two gentlemen stand on record, the lonely two in the city of Moncton, opposed to the construction of that line between Moncton and Quebec. However, they do not count, and therefore it may very well be said that the Moncton Board of Trade is unanimous in favour of the government scheme.

The first objection made by the ex-minister (Hon. Mr. Blair) to that line, is that it parallels and duplicates the Intercolonial Railway. It seems to me, however, that it is possible that two lines of railway may connect at the same points, and at the same time one need not necessarily be a paralleling or a duplicating of the other. It is a new idea that because two points are connected by a certain railway there shall consequently be no other railway built to connect these same points. Why, Sir, the records of parliament are teeming with illustrations antagonistic of that principle. For years in New Brunswick we have been practically doing the same thing as is now proposed, and the same rule has been applied throughout the Dominion. I am informed that the Department of Railways and Canals administered by the ex-minister in 1899 bonused the Lake Erie and Detroit River Railway to parallel the Michigan Central from Ridgetown to St. Thomas, a distance of 44 miles, and that these two railways only varied in distance from each other, from a few rods at the minimum to about four miles at the maximum. The government gave that bonus on condition that the Lake Erie Company could not secure adequate running rights over the Michigan Central. When the ex-minister stated that the proposed line from Quebec to Moncton would parallel the Intercolonial Railway, I am sure that my hon. friend from Bothwell (Mr. Clancy) was one of those who applauded. And yet, in 1899 when the Lake Erie and Detroit River bonus was under consideration, the hon. member for Bothwell moved to strike out the proviso in the resolution, so that the bonus would be given without any condition being attached. He not only spoke, but I find by reference to 'Hansard' that he was on his feet thirty times in his efforts to have that proviso struck out. More than that, he divided the House on the question. He claimed that the fact that the railway was runiung alongside of another was no reason why the government of Canada should withhold aid if it were serving the interests of the country. I will not take up the time of the House in quoting from the speeches in that connection. One of the reasons he advanced why there should be no conditions, was that the Lake Erie road afforded an outlet to the lake shore townships; and yet hon. gentlemen opposite claim that the railway now under consideration, going eastward in the same direction as the Intercolonial, should not be aided by the government of Canada, even though it affords an outlet for the rich and unlimited products of our western country. Then, the Canadian Pacific Railway line was chartered from Toronto to Windsor, although from London to Windsor it runs less than two miles from the Grand Trunk Railway, and for a considerable portion of the way these two railways run side by side like a double track. That principle has been established throughout the Dominion time and time again; it has been established in this parliament; and yet this objection is brought forward as something that should constrain the parliament of Canada to prevent the construction of an all-Canadian railway to Canadian seaports. In the case to which I have referred, my hon. friend from Bothwell urged the repeal of the condition upon which the subsidy was granted, even though the two railways ran practically between the same fences, whereas in the case before us there is beginning a short distance from Lévis a range of hills separating the two railways entirely. The Intercolonial serves a very good purpose on the northern slope of these hills, and the proposed railway will serve a like good purpose in furnishing facilities to the residents of the country on their southern slope.

I have referred to the paralleling of the Intercolonial Railway by the construction of the Canadian Pacific Railway. The hon ex-Minister of Railways and Canals, speaking of paralleling, claims that this railway will dismantle the Intercolonial Railway, and the words are repeated by the hon. member for South Lanark (Hon. Mr. Haggart). While the hon. gentleman wishes to take very high moral ground in reference to this question, he does not refrain from indulging in a line of argument which I consider is a very great descent from the high moral altitude which he had assumed. He has referred to the construction of the proposed railway as a dismantling of the Intercolonial Railway, and he has claimed that it will not only

injure the traffic of the road, but will simply depopulate the city of Moncton, where the workshops of the Intercolonial Railway are situated. It is all very well to offer an argument of that kind, but it must be based upon such facts as will support it. The hon. member, in the days when he was Minister of Railways and Canals, did not refuse to bonus a railway running from the town of Campbellton, N.B., crossing through the province, and connecting at the St. John river with the Bangor and Aroostook. The railway to which I refer is known as the Restigouche and Western. It commences at Campbellton and runs up the waters of the Restigouche to Matapedia; thence up the Restigouche to the Upsalquitch, thence westerly to the waters of the Tobique river, which it crosses; thence to St. John river at or near Edmundston; on the other side of the river it connects with what is known as the Bangor and Aroostook Railway system, which communicates with the city of Bangor, in the state of Maine, and thence with the city of Boston by the Maine Central. If the aiding of railways in New Brunswick would injure the Intercolonial Railway, there never was aid given to a railway that would do more damage to the Intercolonial Railway than that one. Because, what was the object of that railway? It was in order that the people living at Campbellton and along the shores of the Baie des Chaleurs down to the Gaspé coast should be brought nearer to the American market. They send their fish, their lumber and all their other products to the American market. They seek such a market over the Intercolonial by way of Lévis and across through Vermont. This line when completed will afford them railway facilities direct through New Brunswick and through to the state of Maine to the cities on the American seaboard. And yet there was no cry against that railway on the ground of injury to the Intercolonial. The necessities of trade and the interests of the people, it was deemed, demanded its construction, and no cry of that kind was raised. But because to-day, from a national standpoint, it is deemed necessary to have a trunk line of railway from the east to the west, forsooth the Intercolonial must stand as a barrier against it, even though the Intercolonial may not be in a position in any way to carry out the objects designed by the project under discussion.

In this connection, I might say that the hon. ex-Minister of Railways and Canals, when he made the statement as to this road dismantling the Intercolonial, neglected to explain to this House that a few years ago he, as Minister of Railways and Canals, entered into a contract with the Grand Trunk Railway Company whereby that company, for a period of ninety-nine years, or during the existence of that contract, should hand over to the Intercolonial Railway the freight which they gathered in the western country which is tapped by the Grand Trunk. This freight was to be handed over at Ste. Rosalie or at Montreal, and he failed to inform the House that although the Grand Trunk Pacific Railway may be projected into the maritime provinces, although the section between Quebec and Moncton may be completed and in operation, yet that traffic thus covenanted to be given over to the Intercolonial Railway by the Grand Trunk Railway at Ste. Rosalie and at Montreal must continue to be given to it during ninety-nine years or during the continuance of that agreement. Then will the establishment of this line take away one jot or title of the freight which the Intercolonial Railway receives from the west to-day? By no means. Did he tell the House that the traffic, which is to be carried by the proposed line of railway between Moncton and Winnipeg, is a traffic which is not yet in existence? Did he say that the Intercolonial Railway receives to-day or has ever received any portion of the traffic from the extreme west? He knows that the Intercolonial Railway has never received such traffic. He knows that although we have spent millions in the extension of the line from Lévis to Montreal, it was not designed to get traffic from Manitoba and the Territories but to get the Ontario traffic. The object was to get the Intercolonial Railway into the metropolitan city of Canada, to gather there all the freight possible from the province of Ontario and carry it over the Intercolonial Railway. It was a very wise scheme which time has justified. But this project will in no way interfere with that traffic. Supposing this line were built from Winnipeg to Quebec and stopped there, do you think that the Intercolonial Railway would ever receive any portion of the traffic brought from Winnipeg to Quebec? Only one who is insane would think so for a moment. We know that it would not. But what we do know is that the construction of this new line from Quebec to Moncton will add to the prospects of the Intercolonial Railway getting a portion of that traffic. From the city of Moncton to Halifax and St. John, there must be necessarily an increase of traffic by reason of the construction of a short line to Moncton. When the traffic has been brought to Moncton, it must go thence either to St. John or Halifax; and the strong probabilities are that it will necessitate the construction of another track between Moncton and Halifax. Nor did the hon. gentleman say anything with respect to the traffic that may come from the west, and which can continue over the Intercolonial Railway as far as Truro and then down to Sydney. All this shows that the hon. gentleman was endeavouring to excite the animosities, prejudices and passions of the people of Moncton. The people of that city have pronounced unanimously in favour of the project before us; and as a representative of the county of

Westmoreland and having some knowledge of the neighbouring counties, I say that the people are to a man almost unanimously in favour of the construction of this line. They realize what benefits will come from it. They realize that Canada requires to-day a transcontinental line truly Canadian, and they know that the only way to have that is by carrying out to its full fruition the project under discussion.

There is another feature which the hon. gentleman held up as a menace. The shops at Moncton, he predicted, are to be demolished. Well, Sir, the shops of Moncton were there almost to the same extent as they are to-day before the Intercolonial Railway was extended from Lévis to Montreal. And engines are now being built at the machine shops connected with the Intercolonial Railway at Moncton. The hon. gentleman knows that the necessities of the road will require that to be continued. He knows further that the Grand Trunk Pacific Railway itself will require a terminal at Moncton. He knows that Moncton will be doubled in population in the next ten years by virtue of this scheme. He knows that the train hands by the hundred reaching that terminal point at Moncton will have to build homes there. He knows that workshops will have to be established there, and yet he tries to excite the passions and prejudices of the people of that city. He desired to have a line from Rivière du Loup over a 1,300 feet summit down to St. John by the valley of the St. John river, and he appeals to the prejudices of that city because forsooth this scheme does not contemplate such a line. The Intercolonial Railway, he says, is to be injured by a railway from Quebec to Moncton. But according to the hon. gentleman, the Intercolonial Railway would not be in any way injured by the construction of a line from the city of Quebec to St. John. Although he has the welfare of the Intercolonial Railway at heart to such an extent that he resigned his position and would almost go to death for it, he voted in the Railway Committee to have a line established and constructed by the Grand Trunk Railway from Quebec to St. John. But if any railway would injure the Intercolonial Railway, such a railway would do it, because no portion of its traffic could by any possibility go over any part of the Intercolonial Railway.

And in that very attitude, it seems to me, he shows an inconsistency which would almost lead one to conjecture that the real cause of his resignation was not the building of another line from the city of Quebec to the maritime provinces. If it is wrong to build to the city of Moncton because of the Intercolonial Railway interest, it would be doubly wrong to build from the city of Quebec to the city of St. John, because it would add to that damage tenfold, aye, a hundred fold. I utterly and absolutely deny that there would be any diminution of the traffic now enjoyed by the Intercolonial. The western traffic does not come to the Intercolonial to-day. What traffic is handed over by the Grand Trunk, under agreement, to the Intercolonial will continue. And I say there will be no diminution of the local traffic between Lévis and the city of Moncton. I have greater faith in my own province than to even harbour a suspicion that there will be any diminution of that traffic. Take the great fisheries of the Baie des Chaleurs, take the great and flourishing Miramichi district, with its untold wealth of timber and its great fisheries at the mouth of the Miramichi and down all along the north shore. Are these to be wiped out because, forsooth, there is a short line of railway established in the interest of Canada between Quebec and the city of Moncton? I say nay. I say that the development of the north shore is only in its infancy. I say that the increased value of timber lands in that section of the province, the great output of lumber, the establishing of industries based upon the great mineral wealth along that line, will all tend to make the Intercolonial what it is destined to be, a blessing, not merely to those living along the line, but to all New Brunswick, and, to an extent and proportionately, to the whole Dominion. I do not think that the Intercolonial has ever had a better friend than I, in my humble way, have endeavoured to be. And I would be very sorry indeed, by act, or vote, or word, to do anything that would in any way interfere with the prosperity of the Intercolonial Railway or the people along its line. I recognize that the Intercolonial has done more for Canada than any other agency. It has cemented the eastern and western provinces together as nothing else has been able to do. But I say also that the establishment of this new line will clamp together as in a vice the western and eastern provinces. It will make it possible for the people in the extreme east to exchange their products with the people of the west, to their mutual advantage. It will not merely bring us the products of the western prairies, but it will take back to the people there the manufactured products of such centres as Sydney, Halifax, St. John and Moncton. Why, I know as a verity that, to-day, in the city of Moncton, there is an industrial establishment which has increased its capitalization from a quarter of a million to a million of dollars. And with what object? With the object of manufacturing in their line of industry for the extreme west. They are already establishing a branch in the city of Montreal and another branch in the city of Winnipeg. And this railway bringing the city of St. John two hundred miles nearer to the city of Quebec and to the city of Montreal, and bringing the city of Moncton at least one hundred and forty miles nearer to the city of Montreal, will enable this company, as it will enable others, to carry on their

business to greater advantage. And surely these are considerations which should move us. I am willing, even if we did not gain any local benefit at all, to vote in favour of the people of Canada contributing of their means for the building of a national highway through our own territory to our own ports. I am not voting or speaking in any selfish or local spirit. But I do realize that the advantage to be gained through this road will be mutual; I realize that the greater facilities for transportation that it will offer to the producer of the west and the manufacturer of the east, will enrich every section of the country and the country as a whole.

There is one thing to which I feel I should make reference, although I do so with some hesitation, because I know, that, in a sense, the matter is treated as merely academic. Those who have paid any attention to the course which I have pursued in relation to this railway project, if any have done me the honour to observe that course, will know that I have advocated, not merely in this House, but in the Railway Committee, the extension of the Intercolonial Railway into the west and the operation of railways by government. The government owning and operating that road could assemble the western traffic, bring it to the city of Quebec, and pass it along over their Intercolonal Railway, even at the longer haul, assuring to our own eastern ports that traffic, even though this were done at a loss. I was honest in my conviction, and am very strongly in favour of the ownership and operation of railways by governments. But I found that when I made that suggestion, even before the Railway Committee, it did not meet with any hearty response from any section. I did not find hon. gentlemen opposite very enthusiastic in their approval of that idea. And I have had sufficient experience in public life to realize quite clearly that, however strong the view I may entertain, however conscientious, sincere and earnest I may be, my view cannot prevail against the views of the majority. Government is a matter of compromise, and when we could not have that which I advocated, as I stated before that committee when this matter was being discussed, I accepted the next best thing, and I considered that the next best thing was the government construction and ownership of the spout from the wheat fields of the west to the shores of the Canadian Atlantic.

Now, what does that accomplish? It insures the regulation of rates, it insures a control over the traffic, it makes it possible for the government, while not suffering the disadvantages of government operation, to enjoy the other advantages incident to the government ownership and operation of railways. I realized this when that measure came before the committee. It will be remembered that the proposition was to build a railway from the west to the city of Quebec, where it was to stop; and I realized that if that were done the maritime seaports during the winter months would not in any sense participate in the traffic that would be brought through. Why? Because it would be a company-owned road and a company-operated road down to the city of Quebec, which port they would utilize during the season of navigation, and that at the close of the season they would seek ports more to their advantage, even though those ports were in the United States.

Mr. GANONG. Could they not be tied up just the same?

Mr. EMMERSON. They are tied up already, and there are provisions in the lease which will bind them hand and foot so that they cannot do more than that. We have done more, we have not merely tied them up by reason of what is contained in that contract, but we have made it to their interest to bring this traffic over to the maritime provinces. It would not be to their interest, having reached the city of Quebec, if they were obliged to pass over the Intercolonial, or if they were to have themselves running rights over the Intercolonial, it would not be to their advantage or interest to carry their freight some 600 or 700 miles when they could dump it right on board ship within 300 or 400 miles. But by building this short line we bring them 200 miles nearer to one of the best seaports in the maritime provinces, a seaport that is now being utilized to the advantage of the Canadian Pacific Railway and to the advantage of Canada; I refer to the port of St. John. By the operation of this Bill we bring that seaport 200 miles nearer to the seaport of Quebec and the proposed terminus of the road; therefore, we enable this company to take its produce from Quebec to St. John, which they would not do if it were a matter of passing it over the Intercolonial.

Now, I discriminate between the Intercolonial being extended at the expense of Canada, and bringing freight down over the Intercolonial to the seaport; I realize the distinction between that and a company-owned road which stopped at Quebec and then attempted to use the Intercolonial with respect to its winter traffic. Realizing that, I feel that the present arrangement is one that brings to the Canadian people practically all the advantages of government ownership, and it removes from the people the disadvantages which are incident, certainly in the opinion of many members on both sides of this House, to the government operation of railways. Now, this question of government ownership is one of vast importance, and I know how strongly the people in my own section of the country feel in favour of that idea. I am also conscious of the disadvantages connected with it. I know that while the govern-

ment could own the road and perhaps operate it to the city of Winnipeg, yet when they came to operate a road from Winnipeg westward they would be met with obstacles which are, as they have been presented to us, almost insurmountable. Take the history of the Canadian Pacific Railway. In order to make their railway successful they have been obliged to establish hotels all along the line. Every one who has gone over that line through the Rockies and around the prairies, has found in all the large cities hotels established and run by the Canadian Pacific Railway corporation. Could a government do that? There is not enough elasticity in government mangement to enable a government to do that. It would be necessary also, having reached the extreme west, to establish a line of steamships for the Orient. Would it be possible for the government to engage in operations of that kind? I know the difficulty which has been experienced in government management of the Intercolonial. If a new business were proposed to be established along the line of the Intercolonial, or if it were necessary to seek some concessions necessary, creating business for that road, some rates that would be reasonable, some provisions to make connections, the first thing the promoter of that scheme would do would be to come to the general manager and explain it. The general manager would say, I will consult the Minister of Railways and Canals. He would consult the Minister of Railways and Canals, and perhaps after a long period of time, the matter having been forgotten, another interview would be arranged, the promoter, the minister and the manager would meet together, and perhaps they would finally arrange upon some plan. But time would go on, parliament would have to be consulted, the proposals would be made by the minister, opposition would come from hon. gentlemen opposite, who would look with suspicion upon them, who would criticise them and oppose them, with the result that the man, wearied by the delay, would perhaps go over and make an arrangement with the Canadian Pacific Railway. Why, Sir, I know that has been the case in many instances. I remember an occasion when there was a derelict vessel in the port of Halifax not able to carry its cargo to the destination, and application was made—this was some years ago—to the management at Moncton for a rate that would enable them to take that cargo by railway to its destination. The reply came back from Moncton, we will refer to Ottawa. It was referred to Ottawa, and six months afterwards a reply came to the city of Halifax. Is that elasticity? Does that show that government management of railways is of a satisfactory character? We realize the fact that the Canadian Pacific Railway and other great railway organizations have a corps of specialists going through the territory through which their railways run, instructing the farmers in the establishment and operation of creameries and dairies with the object of creating a traffic for these roads, advocating the interests of the railways, it is true, but, incidentally advancing the interests of the country at the same time. They are in this manner building up and advancing the trade of the country. Could the government do that? Would the government do it? Strong as I am in favour of government ownership, I recognize the advantages incident to the operations of corporations in that direction. In the province of New Brunswick the gentleman who has been for a period superintendent of the Canadian Pacific Railway, Mr. Oborne—I think he has since been removed—has actually had established a stock farm or depot for the purchase of cattle in order that the railway should have the benefit of transporting these cattle to the ranches of the west, as was indicated by the hon. Minister of the Interior in his speech. That industry is being carried on to-day by the Canadian Pacific Railway in New Brunswick. I know, as a matter of fact, that when I was connected with the government of New Brunsick, the superintendent of the Canadian Pacific Railway frequently consulted the government in respect to the assistance that should be afforded in the establishment of dairies and creameries, in building up traffic along the line, and in the creation of traffic, and I am glad to say that in some slight measure, at least, the government was then, as it has been since that day, in a position to aid in the upbuilding of that traffic. It is all necessary, and while government ownership has its advantages there are connected with it some disadvantages which we should not lose sight of. However, I have felt that when you cannot get the best thing, or what you think the best thing in the interests of your constituents and in the interests of the country, it is always wise to accept the next best thing, and I am proud that this scheme involves all the elements that it does. I think, while it has been described as a hybred scheme, it is one that combines the advantages of government ownership, escaping its disadvantages, with the advantages of private ownership where private ownership can help to build up the country in a way in which the government could not do, thereby developing the trade of the country, opening up the country colonizing the country and in every way conducing to the advantage of the country. Our country is so great, its resources so varied and exhaustless and there are so many new things to be done, that it makes this problem of public ownership a very difficult one indeed, and if you can combine the advantages of the one with those of the other you have surely measureably gone in the direction of solving the problem. It is not an easy one. The whole question is one of

such collosal importance that you cannot simply bind yourself hand and foot to a question of government ownership. I wonder how many hon. gentlemen opposite there are who would subscribe to that doctrine. I wonder if the hon. member for South Lanark (Hon. Mr. Haggart) would follow the leadership of the hon. ex-Minister of Railways and Canals in the direction of pubilc ownership. The hon. ex-minister in speaking of this subject, spoke with a vehemence and with a passion in his onslaught on the government which did not characterize his speeches in times past in this parliament when defending the government. Strong advocate though he has been of government ownership, he was yet willing, as shown by the letter he wrote to the right hon. leader of the government, that this scheme should be aided in its entirety to Quebec from the west in the same way that it has been aided on the western sections. As I understand it, although opposed to the scheme as it has been modified, he was willing that there should be a subsidy given in that direction and that the road should be under the control of the Grand Trunk Pacific. He was willing to accept that as an alternative. Surely, as an advocate of government ownership, if he got the measure of government ownership which this scheme provides he should have been willing to have accepted it in its entirety ; with its features of private ownership with government aid by way of a guarantee. I feel that I have perhaps wearied this House in the discussion of this question, which, as I intimated a few moments ago, may be considered an academic one, but, we must remember that we are making history. We must remember that we are establishing a principle which may be followed in future years and that it is well for us not to lose sight of the main discussion as to whether we have followed a proper and expedient course, because, after all, this question of public ownership is a question of expediency. The scheme which has been agreed upon by the government is one which they deem to be expedient in the interests of the country. In it they combine the two systems. The old system has passed away in its entirety, the new system has been ushered in, and we must understand as to where that new system will lead us. It would be a matter of impossibility for Canada to acquire all the present systems of railway and to operate them. The government could not undertake to conduct their vast operations by direct agency nor could it be expected to extend the service with the rapidity which would be needful. The question perhaps after all may be ranged with that of the speculative as to government ownership, but we have to inquire as to whether we are not having by the proposed scheme many of the advantages if not all the advantages that must be secured to us if Canada were in a position to acquire all the other systems of railways now within its borders, or leaving that alone, leaving that as too colossal a thing to undertake, if Canada were undertaking to make this new road a government road from east to west. There is, not only in the rapid advancement which displays itself on every hand, not only in the methods of industrial production, but in the aims and aspirations of our people, justification for the departure which has already been made and for the policy adopted by the government in this connection.

How much further the trend of events may lead us in this direction, only the future can disclose. But certainly, as representatives of the people we must realize that in going so far we have taken a step in advance, and accomplished some good to the people of Canada. It has been said that private opinions and judicial utterances are at one in concluding that railways are on a plane with the highways of the country. So they are, but only in a sense, because the highway can be used and operated and taken advantage of indiscriminately, whereas, the railway has to be controlled in its operation, and to that extent there is a vast difference between them. At all events, it behooves the people of Canada to consider the matter from the economic point of view, and considered in that light there is only one answer—from an economic standpoint this scheme is unrivalled. It gives government aid and support, and yet it does not inflict burdens on the people; in other words, it lends government credit to a government controlled road, although not a government operated road. There are so many objections to government operation of railways, as we saw in the discussion before the committee, that those who hold views in favour of government ownership and control may very well hesitate as to the soundness of these views. The political objections to government operation are very great. I can see at once the weight of these objections, and though they are not easily answered, yet there are answers to them. The danger of party control is not in my judgment so serious after all. It certainly is not sufficiently serious to enable us to decide the question on that consideration alone, and especially when we take into consideration the fact that we must all recognize that large railway corporations have a great political influence. By this scheme of the government we have curbed to a certain extent the political influence that may be exercised by private corporations. Look at the history of the Canadian Pacific Railway. We built the Canadian Pacific Railway, we equipped it, we paid for it, we gave them the money to run it, and they have been running it and making their millions, but the country does not own one cent in it. We all must recognize the influence which that great corporation has wielded in Canada since 1881. Its influence is felt to-day; its influence I believe is being felt in the discussion of

this question in parliament, and its influence has been felt since the project was first spoken of in the newspapers. Of course, under private ownership there is competition, but there are also formidable evils. There is the possibility of discrimination in favour of the few as against the many. How many times has this parliament considered the question of discrimination, not merely as between individuals in the matter of tariff rates, but as between communities; as between the long haul and the short haul; as between the carriage of wheat and the carriage of flour; as between the interests of the east as compared with the middle east in connection with freight rates; as between the interests of the west as compared with the middle west; as between local communities and as between those living in the same community? All these difficulties are incidental to private ownership, and these evils are curbed, controlled, and regulated by this scheme which the government has asked parliament to approve of. The existence of secret and preferential rates on the railways has been such in the past that they have militated against the interests of the country; they have militated against our industrial advancement; they have militated against the industrial advancement of particular communities, and they have created havoc to private enterprise. This scheme which we are now considering, in a measure controls these things, allied as it is with the legislation introduced by the government in the Railway Commission Bill.

Another disadvantage of private ownership lies in the precarious securities which are floated upon the market, and the injury that ensues in financial circles. These securities are 'beared' and are 'bulled,' and to-day a railway stock may have an apparent value which to-morrow may have dropped to zero. The scheme proposed by the government is such that there cannot be any such fluctuation of values in connection with it. We know the havoc that has resulted in the United States in connection with speculation in railway stocks. This will be prevented by the government guarantee, because we know that government guarantees have an established value and do not fluctuate between extremes. There is a confidence in them on the part of the people which tends to the preservation of their financial standing. That is something that ought not to be overlooked in Canada.

At one o'clock, House took recess.

House resumed at three o'clock.

Mr. EMMERSON. Mr. Speaker, at the hour of recess I was referring to the relationship between government ownership and private ownership, and their relative effects upon railway securities. I was showing that by reason of the sudden and extreme changes in the quotations of railway stocks, there was in private ownership danger of a disturbance in financial circles; and I was pointing out that by the scheme propounded by the government this danger was removed, in as much as the securities placed on the market had a government guarantee, and were therefore more stable and less fluctuating. But this perhaps is a field that should be traversed by the moralist or the economist; and while it may be food for thought for us, it comes more properly within the purview of their inquiry. There is one thing in connection with government ownership which I am sure is apparent to all, that is, that government service necessarily costs more in proportion than private service. I think hon. members of this House without distinction of party will concede that; and to that extent it is an argument against public ownership, and certainly against the government operation of railways. Given the same efficiency in management, the same energy and economy—and all this must be assumed—there certainly could not be any objection to the government operation of railways. Another feature of the government embarking in a general scheme of ownership of our lines of railway would be the questions that might arise in the future as to the construction of additional lines and of branch lines. There would also be involved, by reason of the pressure that might be exercised upon parliament, the question of the duplication of railway lines. There might be too tight a rein exercised, or it might be too free. It would all depend on the political pressure that would be brought to bear. To the extent that this might operate either in the one direction or the other, it would be productive of injury to the public interest. You could not be too stinted; and it would not be in the public interest to have too free a hand. The interest of communities not served by railways, or not having the advantages of government lines, would always be brought to the front and parliament would be besieged time and again for the duplication of lines, in order that these communities might share in the advantages of government-owned railways. All this would be launched into the arena of political warfare. Even the fair adjustment of rates as between different communities, and the rates that could fairly be charged upon the different articles of traffic, would be a football for political parties. That would be a matter of the highest consequence, as there would be depending upon it commanding commercial interests. Of course, we must all look to the future to furnish a more acute condition with respect to railway rates. Such will become more and more controlling, as modern industrial methods are applied and perfected, as business is conducted on a more expansive scale, and with a lessening margin. This feature is not an alarming one, perhaps, and should not be considered as very serious at the

moment, and yet it is one the importance of which should not be minimized. Another argument which is advanced against government ownership, one in which I do not share very largely, is that it restricts the field of private activity, and narrows the scope for individual effort and achievement. A test of the utility of public ownership by the experience of other countries affords nothing convincing either one way or the other. If you take as illustrations the cases of Europe, Australia, or Africa, all of them presenting different conditions, you find nothing to convince you. In the older countries such as Switzerland, Germany and France, the results achieved are certainly not convincing. They are not on the whole against government ownership. Taking the experience of South Africa and the different states in the Australian commonwealth, and of New Zealand, you have nothing that is positive. But, we could not be governed by the results there, even if they were very marked and convincing, as their conditions are entirely different from ours. It makes no difference whether the government is monarchical or democratic ; the results vary with the conditions. In England we recognize the fact of private ownership; but the prevailing geographical conditions have governed the policy pursued by that country. Each railway in Great Britain seems to serve a certain area ; each railway has its own particular sphere of influence ; and the same difficulties are not presented in that country that are to be found in Canada and the United States.

Now, Sir, I am sure that I would not be doing justice to the House if I were to pursue this subject further. I have simply touched on the fringe of the subject, and I leave it to be elaborated by hon. members for themselves. But there is one thing I do wish to say, and that is in connection with the proposition made by the hon. ex-Minister of Railways and Canals (Hon. Mr. Blair) in regard to the extension of the Intercolonial Railway to the Georgian bay, in order that that railway might participate in the traffic which comes over the lakes. I have a strong sympathy with that idea : but, I recognize that this scheme is in no sense a barrier to the final carrying out of that great project. It in no way affects the future in that connection. The government of Canada will be free—it may be in the remote future, or it may be within a reasonable distance from now—if it deems that course wise in the interests of Canada, to acquire a railway connecting with the present system of government railways. That may be for the future to determine ; but if I can at all judge of the disposition of parliament to-day, I do not think it would be possible to carry such a scheme through. But the day may come when it will be in the interests of Canada that it shall be done. However, those living in the maritime provinces must recognize that if that scheme were carried out, it would not mean the carrying of the traffic from the lakes to our seaports in winter. It would simply mean that traffic would be carried from the lakes during the summer season down to the port of Quebec, and it would in no sense have a relationship with the present system of railways in the maritime provinces.

Passing from that subject, I ask the pardon of the House if I refer again to the route between Quebec and Moncton. I have observed the criticism to the effect that surveys had shown that there are impenetrable barriers obstructing that route. The hon. ex-Minister of Railways and Canals referred to a survey made by an enginner by the name of Davey. The hon. gentleman refers to a route extending from Rivière du Loup diagonally and in a south-easterly direction across the province of New Brunswick to the valley of the River St. John. The survey which was made by Mr. Davey was not —I would ask the House and the country to remember that—a survey over the present route back of Lévis down to the valley of St. John near Connors station, and thence following that valley to Edmundston, and thence on down reaching Chipman. It is not a survey of that route, but has reference to a route across the divide, from the shores of the St. Lawrence to the valley of the River St. John ; and undoubtedly any engineer would experience difficulty in the crossing of this divide, whether in the province of Quebec or whether an attempt were made to cross diagonally through the New Brunswick area. There is a number of divides, and I shall not weary the House with naming them, but that is a proposition distinct from the one under consideration. The illustration I gave last evening with respect to the Temiscouata route bears out what has been stated by Mr. Davey regarding his survey. The Temiscouta meets one of these barriers in its route to Edmundston, but the proposed line of railway at Quebec goes back of that divide. It does not run diagonally, but follows through the valleys until it reaches the valley of the St. John. It has no divides to cross, and when it reaches the St. John river it follows that river down until there is a natural opening, leading across to the valley of the Tobique. Then there is a river with an unpronounceable name, a tributary of the Tobique, and through the valley of that river you go until you come to a tributary of the Miramichi, and you follow that until you go on to Chipman, and thence to Moncton. You cross none of these divides, and the engineers to whom I have referred say that that route is a splendid one, that they are not obliged to cross any of these barriers, and it is practicable, in every sense of the word, from a commercial standpoint. Therefore, the criticisms which have been made in that connection are wholly unwarrantable.

I would be pardoned perhaps if I give to

the House some distances in connection with the route which may be followed to reach the city of St. John or Moncton, commencing at Quebec. In the first place, we have the present route of the Canadian Pacific Railway to St. John through Maine. I commence at Quebec because that is the starting point of the proposed Quebec and Moncton section. Going over the present route of the Canadian Pacific Railway from the city of Quebec by way of Megantic, thence on down to Mattawampkeag and to Vanceborough and Macadam to the city of St. John, you travel a distance of 422 miles. If you were to travel over the route from Chaudière by the Intercolonial Railway to Rivière du Loup, from Rivière du Loup, by the Temiscouata road, to Edmundston, then from Edmundston to Woodstock, and from Woodstock to Macadam, and thence to St. John, you would travel 452 miles, or 30 miles longer than the present route by the Canadian Pacific Railway between Quebec and St. John. If you were to travel over what is known as the St. John Valley Railway—the one which was advocated by the hon. member for South Lanark (Hon. Mr. Haggart) last evening—you would start at Chaudière to reach Rivière du Loup, a distance of 123 miles, thence to Edmundston, 81 miles, from Edmundston to Newburg Junction, 109, from Newburg Junction to Fredericton, 59, and from Fredericton to St. John, 67 miles, or a total distance of 430 miles. Then there is another route, starting from Chaudière by the back country—I mean the country back of Lévis—to Connor station, and thence to Edmundston and Fredericton, by the river route on the west side of the St. John river, and thence to St. John, you would travel a distance of 403 miles. Showing clearly that if St. John were your objective point, going by the proposed route of the Grand Trunk Pacific Railway to the city of Fredericton, by the river valley, you would travel a distance of 403 miles. Then there is the route, which was surveyed in 1890 by surveyors of the Temiscouata and the Grand Trunk Railway Companies. The distance by that route to the city of St. John will be 383 miles, going down by Chipman, showing conclusively that by the route proposed, the central route by the Grand Trunk Pacific Railway to reach St. John you would travel a shorter distance, by at least 17 miles, than you would have to travel by any of the other routes which I have mentioned.

Now, this must be borne in mind that by the Intercolonial Railway from Chaudière to Moncton, the distance is 488 miles, or nearly that, and to the city of St. John by the Intercolonial Railway is 89 miles. I was informed only very recently by an official of the Intercolonial Railway that the actual mileage from Moncton to the city of St. John is ninety. That makes the whole distance from Chaudière to the city of St. John, by way of Moncton and the Intercolonial Railway 588 miles. So, if the route projected is followed, the central route through the province of New Brunswick by way of Chipman to St. John, you have a saving of distance of at least 200 miles in round numbers, bringing the winter seaport at present used, nearer by that distance to the city of Quebec than it is now by way of the Intercolonial. Surely that is a matter of consideration, a matter of importance, not merely to the citizens of St. John, but to the people of the west and to the people of all Canada in view of the vast traffic that must exist in years to come, indeed a matter of supreme importance, and one that the parliament of Canada should not disregard at this stage. All this shows that the government has been wise in selecting this route and that, even without regard to sectional opinion, without regard to the interest of this or that local community, the aim and object of the government has been to afford facilities in the interest of all Canada. It is claimed that the government should build branch lines from the different points. I say it would not be in the interest of Canada as a whole that this should be done. While personally, as a citizen of New Brunswick, I should like to see such a branch line from Chipman, connecting at Norton for the city of St. John, yet I do not think that that would be a matter of interest to the people of all Canada. If this were done there, it would have to be done at other points. Trade will seek its appropriate channel, and, according to my idea, the appropriate channel for heavy freight traffic from the west to the Canadian seaboard in winter is the route I have named. The company have taken power and authority to make connection with St. John, and it will inevitably follow that that connection will be made. And it is in the interest of all Canada that she should have it. More than that, it will be in the interest of the Grand Trunk itself, because it will be in their interest to get the best, the closest possible connection and run by the best and shortest route. Now, all this question of route is one which must be determined by the engineers. I recognize the fact that distance is not the only element to be taken into consideration. Gradients, curvatures and alignment of the road are of equal importance. They are all of supreme importance in considering the necessities of modern railway transportation. The road must be of a character to allow traffic with the heavy engines and immense trains which are seen on our great systems throughout Canada and the United States. There is another thing which must not be lost sight of, and that is that whatever the railways cost under this scheme, the expenditure will be among the Canadian people and upon Canadian soil. I am sure that will not be lost sight of by the people of Canada when they come to determine upon this question,

when it is submitted to them for their approval.

I fear that I have wearied the House in going over so much and repeating, as I have been obliged to do, a great deal of what has been said before, and very much better said. But I would like to emphasize this one point, that if you remove from this discussion the speech of the hon. ex-Minister of Railways (Hon. Mr. Blair)—and he built up his argument by taking an extreme view and using what I may characterize, without offence, as very extreme and extravagant language—you find that nothing has been said against the bargain that has been made between the government and the Grand Trunk Pacific. I have listened to all the speeches delivered by the gentlemen on the other side, and they have in no sense assailed the bargain. They have not punctured it in even one little essential. The bargain is recognized to be in the interest of the people of Canada, and hon. gentlemen opposite cannot show to the contrary. If they have made any argument at all, it is against the character of the railway and the route. That is an argument which might have been used, and which may be used, by the shareholders of the Grand Trunk when they come to consider the question whether they will confirm and approve the agreement entered into with the government. Hon. gentlemen opposite have not even brought into issue the discussion of the benefits which are to accrue to Canada if this project is brought to a successful completion. They have attempted in small ways to say the route is not the proper one. But bear in mind that that is a question that is to be determined by the engineers and by the government later on. The best route is to be followed, and the best course is to be taken, in attaining the object it is desired to attain. There was another feature. It had been heralded abroad that the government is doing an improvident thing in building the road from Winnipeg to Moncton and handing it over to the Grand Trunk Pacific under lease for fifty years. Hon. gentlemen opposite attempt to excite the prejudices of the people by saying that the government is building this road and giving it to a company for a period of time. Now, they fail to tell the country that for the whole cost of that road no burdens will be placed upon the people, because the company will repay every dollar of interest after a certain period of time. And yet, while this impression is being—not made, but attempted to be made by hon. gentlemen opposite, my hon. friend from South Lanark (Hon. Mr. Haggart) last night made a most remarkable statement. He said, speaking of that portion of the contract providing for the construction of the road between Winnipeg and Moncton, that the company would be glad to get rid of this section of the great transcontinental line.

Now, if this is a great boon to the company, and if we are asked to deplore the fact that the Grand Trunk Pacific is given a lease and management of the road for fifty years, surely the boon is to the company, else why the complaint? Yet the hon. member for South Lanark says that the company will be glad to get rid of the obligation of running that road, will be glad to get free from that portion of the agreement. Surely these two positions are entirely inconsistent, surely hon. gentlemen are wrong in the one contention or in the other. It seems to me they are wrong when they claim that we ought not to give these powers to the Grand Trunk Pacific, because the Grand Trunk Pacific has entered into this agreement, and I feel sure that when men of the business skill, men having all the qualifications to carry on a great enterprise like this, are willing to enter into this agreement, it is because they expect to carry it through. Certainly, it is an agreement for the benefit of Canada. Sir, if there is one thing for which I shall have reason to be thankful for hereafter when I look back over my life, it will be that I had some little share in contributing towards this great achievement. I believe it will be a great achievement without any parallel heretofore in the history of Canada. I believe that it is the crowning achievement of a great life. I believe that Rt. Hon. Sir Wilfrid Laurier, the First Minister, when he comes to look back over his life, a life that has already been fruitful of great good to Canada, will look upon this as the crowning achievement of the most successful career in the history of Canada.

Mr. T. S. SPROULE (East Grey). In attempting to occupy the time of the House in continuing this debate, I am aware of the fact that at the present stage of it I am unable to add anything very new, very spicy or very attractive. The ground has been travelled over so often, and the subject has been criticised so thoroughly, that I cannot hope to say very much new upon it at the present time. I had the pleasure of listening to an hon. gentleman that might be regarded above all others as the one who would be likely to give us some information as to the wisdom of this scheme, and its importance. I listened to him for the purpose of finding out the strongest arguments that could be advanced in favour of it by one who is said to be destined to fill the position lately occupied by the late Minister of Railways and Canals. I congratulate the country and his party as well upon the acquisition to their ranks when he reaches that post. The hon. member for Westmoreland (Mr. Emmerson) started out by saying that he was reluctant to speak unkindly of the ex-Minister of Railways and Canals, who had been in a measure his political godfather, who had brought him into public life, and to whom he was largely indebted for whatever success he had achieved in political life. Yet I re-

gretted to notice that when the hon. member for North Norfolk (Mr. Charlton) intimated, as I think unfairly, that the ex-Minister of Railways and Canals might be in his place yet if he had been allowed the privilege of handling the contracts in connection with that road, he was cheered to the echo by my hon. friend from Westmoreland. I thought how unkind human nature is sometimes.

Mr. EMMERSON. The hon. gentleman is incorrect in his statement.

Mr. SPROULE. Then my eyesight must have deceived me, for I certainly thought I saw him cheer most vigorously that statement of the hon. member for North Norfolk, as well as many other statements criticising the ex-Minister of Railways and Canals.

Mr. EMMERSON. I do not want to be placed in any false position. The hon. gentleman, I am sure, will take my word when I say that I did not do so. If I had, I would readily acknowledge it, but I did not.

Mr. SPROULE. Certainly I accept the hon. member's statement, because I do not wish to do him any injustice. But I do think, even if I had not credited him with that exhibition, that I saw quite enough last night and to-day to justify the same conclusion in the adverse criticisms that he has indulged in against the man to whom above all others he is indebted for his position in public life to-day.

Mr. EMMERSON. I think perhaps the indebtedness is mutual.

Mr. SPROULE. Well, I am glad to know it. He referred to the hon. member for South Lanark (Hon. Mr. Haggart) and said that his speech was characterized by a poverty of argument and a strength of assertion. Well, there is no doubt whatever, after listening to the variegated and kaleidescopic way in which he handled this subject, that it was at least very different from that of the hon. member for South Lanark. What I heard reminded me of one of my Celtic friends, who, I think, came from the place where the hon. member for Guysborough (Mr. Fraser) came from. He was located on a small ten-acre farm in our part of the country, and some of his neighbours who had moved out west, induced him to move to Manitoba. He went up there and bought a 50-acre farm, and when he came back he was asked how he liked it. He said that he enjoyed it very much, that it was so big that he could just wander over it all day like a goose enjoying himself. And so the hon. member for Westmoreland wandered over the subject, like that farmer who enjoyed himself wandering over his new farm so different from the one he had here. But whether the hon. gentleman contributed to the literature of the subject or the strength of the arguments advanced on that side, I will leave to the judgment of the country at large. He followed that up by saying that the total outlay to the country in connection with this scheme would not involve more than $13,000,000 or $14,000,000, and he referred to the statement made by the Minister of Finance as being absolutely correct. Now, it has always staggered my comprehension to understand how such a conclusion was reached, because every one admits that the government is bound to build the eastern section, and according to the fairest calculations made with regard to the cost of that section, it ranges from $55,000,000 to $75,000,000. Hon. gentlemen opposite admit as well that the money must be borrowed by the government from some source, that it must be expended in the construction of that road, and then for them to say that we are going to incur an expenditure of only $13,000,000 or $14,000,000 on the whole undertaking from Moncton in the east to Port Simpson in the west, is something that I cannot understand. I want one of these hon. gentlemen to go up to the province of Ontario, appeal to one of the Ontario farmers and try to convince him with that kind of reasoning. I am inclined to think that the farmer would answer this way: I do not understand your reasoning. If I were to apply your reasoning to one of the ordinary operations of life upon the farm it would be something like this. I have a farm. I want to improve that farm, I borrow a couple of thousand dollars, I put up a magnificent building upon my farm, I put up good fences upon it, I make roads, and I provide the other conveniences of life, but to do that I have to put a mortgage against my farm for $2,000. The interest upon this $2,000 at three per cent, will only cost me $60 a year. Therefore, all these improvements have only cost me practically $60. Now, he would say that if your reasoning is correct I do not owe anything on the mortgage, the mortgage will be paid by somebody, I do not know when or how, but I do not even concern myself about it, because if I take the intelligent reasoning of the hon. Minister of Finance I do not owe the amount of that mortgage, I only owe $60 a year. I have paid that, I have paid everything and in fact I have only incurred an expenditure of $60 to accomplish all that I have done. That argument would be just as reasonable and just as logical as the argument presented to this House, that this new railway scheme is to be accomplished and that we will only incur an expenditure of $13,000,000 or $14,000,000 and that that is all the country is committed to. That argument is not logical and will not hold water. The hon. member for Westmoreland said that the policy of the government is a revolutionary action in connection with this scheme. I agree with him that it is a revolutionary action. We have nothing to equal it. It is

something new. It at least has the merit of novelty. Then the hon. gentleman went on to struggle with the question of whether the railway can be built through central New Brunswick and he referred to some engineer's report which he did not quote, who the engineer was he did not tell us, when the survey was made is unknown to the House, as far as anything he told us was concerned ; yet he observed that it was a better route than could be found in any part of New Brunswick and that if the road were built by that route it would be a valuable one for trade. Throughout the whole of the hon. gentleman's argument I noted one thing. He came back again and again to the hon. ex-Minister of Railways and Canals (Hon. Mr. Blair) and he said some very unkind things as to that hon. gentleman decrying his province stating that he had said that his province is a poor province, that the land in the centre of it is no good, that it contains mountains and valleys over which railways could not be run, but I noticed throughout his whole argument that the gray spectre which confronted him, the nightmare which was troubling his dreams was what the hon. ex-Minister of Railways and Canals said in his argument in criticism of the Bill. He referred to that hon. gentleman seven times, but as soon as he took hold of the subject he dropped it as though it were a piece of hot iron. The thought that was passing through my mind was that he hesitated to proceed because of the consciousness of the ingratitude he displayed towards the hon. ex-Minister of Railways and Canals or because he knew that there would be a day of retribution in the future. But, he came back to the subject again and again; it was like Banquo's ghost that would not down. He made seven attempts to down it but he did not succeed, and when he tackled it for the seventh time he was as unsuccessful in rebutting the arguments of the hon. ex-minister as he was upon the first attempt. He gave this House no argument whatever to refute the strong and logical statements made by the hon. ex-Minister of Railways and Canals that this project was a most unwise one and that it was one which was altogether uncalled for. I have said that the hon. member for Westmoreland went back seven times to deal with the hon. ex-Minister of Railways and Canals. He tackled the hon. member for South Lanark (Hon. Mr. Haggart) five times and he was quite as unfortunate in rebutting his arguments as in meeting those of the hon. ex-Minister of Railways and Canals. Then he travelled over New Brunswick six times. He went on to tell us about the wealth of central New Brunswick, of northern New Brunswick, of southern New Brunswick, and of the Tobique valley, rich in mines, in clay, in forest and fisheries, but he never told us how a railway could be built across it by any except the one line which he advocated. Then he came back to northern Quebec and travelled over the country four times, and then he went from Lévis down to Edmundston. He told us about the Laurentian range, about its geological formation on one side, about its flora, and how rich its trees were, and he told us that the other side of the Laurentian range was exactly the same. Then he led us away up to Lake St. John and told us about that beautiful sheet of water and went over the rich agricultural prospects of that region. Then, he said that all the other sheets of water were equally good for agricultural purposes west and north of that. I thought he was going to supplant the Minister of Agriculture. Then, he brought us back again, travelled up the mountain and travelled down again and finally came to the question of the government ownership of railways. His speech reminded me of a trip that I took last fall to Rossland. Travelling over the Canadian Pacific Railway you leave Robson and you discover that the engineers have adopted a peculiar way of getting up these mountains. They had to overcome a rise of several hundred feet so they built the road up a little then back again and up a litle higher, then back again, and then a little higher still. You are carried upwards for a time and then you are carried back again.

Mr. COWAN. Just like Jack and Jill.

Mr. SPROULE. Yes, something like Jack and Jill. You are carried back again on what is called the switch-back and each time you rise a little higher and the engine is puffing and panting and toiling ever on and up until it rises to the top of the mountain just like the hon. member for Westmoreland. He went back and forth seven or eight times until he led us up to the top of the mountain and when he looked down from it along the road there was nothing but hills upon hills, desolation and the remains of trees that had burned, under growth and vegetation which had come up afterwards. He said that there were rich mines below but we had not unearthed them yet, and he spoke of the unlimited wealth that we were likely to bring to light somewhere but he did not tell us where it was or when it was to occur, and in this performance I think he displayed a strong resemblance to the locomotive carrying us to the mountain top. He did not present one argument in favour of the contention which he was advancing and he left it at last in despair. Then, last night he occupied the floor for forty-five minutes. He first gave us a very nice introduction and then he proceeded with a reading of thirty minutes duration. The reading was not very attractive, I suppose, because the light was bad, but after forty-five minutes he collapsed for want of breath or argument. I do not know which. He tackled it again this morning and he gave us another exhibition of his reading qualities and this was better because the light was better, but

he finally abandoned that and dealt with some other questions in a manner which he was pleased to represent to the House as argument.

The hon. gentleman (Mr. Emmerson) announced that there would be no difficulty whatever in building a railway through New Brunswick, but he could not exactly say where this railway was going. However he thought it would reach St. John ultimately, indicating that St. John was the most important point for that railway to reach. When he spoke before in the House, he told us that the new railway would shorten the distance by 200 miles, which was a much more generous estimate than that ventured by the Minister of Finance or others on that side, but to-day the member for Westmoreland did not risk saying how much the distance would be shortened. The hon. gentleman admitted that government ownership of railways was a failure and that the experience in European countries would show this, but at all events he was certain that any work done by the government would cost more than if done by private individuals. I could not help picturing the contrast between this language and the language he used in the Railway Committee, when he was strongly advocating the extension of the Intercolonial Railway to the Georgian bay with the object of ultimately continuing it to the west. Then he was defending the scheme of the ex-Minister of Railways for all he was worth, but now that hon. gentleman (Hon. Mr. Blair) and he are not in accord. I wonder whether the portfolio of Railways looming up in the distance had anything to do with so suddenly changing his logic and his arguments. The hon. member (Mr. Emmerson) also reminded us that he was painfully making history in his two-hours speech. Well, we all know that he was doing something painfully, and if it was history he was making, I can tell him that it will never be read to the credit of himself or the party he supports in this project. It is history he will regret, and when generations yet unborn come to read it, they will treat it as a record of folly on the part of this government.

Mr. HUGHES (Victoria). Do you mean to say that any one yet unborn would read that speech ?

Mr. SPROULE. Possibly they may read it out of curiosity. Perhaps the hon. gentleman (Mr. Emmerson) was excusable if he had the idea that he was making history, but he certainly was grinding out history at a fearful cost to the finances of the country and the feelings of the people who listened to him.

The hon. Minister of the Interior (Hon. Mr. Sifton) presented the strongest argument from the government benches in defence of this extraordinary scheme, and I wish to refer for a moment to what he did say. The most noticeable thing about his speech was the manner in which he dodged around knotty points. Here is an example which will serve as a fair illustration of his procedure. To strengthen his contention that it was desirable to have another all-rail route to the west, he quoted me as saying that if the possibilities and probabilities of that great west were realized, we might expect that there would be 400,000,000 bushels of grain to handle, and that to carry this it would take not one railway or two railways, but a dozen railways. He tried to justify himself from this statement, in his proposal to build another railway. I drew the minister's attention to the fact that this argument was very unfair to the member for East Grey, and that it had no foundation in fact. The truth is that what I did say was, that if the hopes of the people of the west were realized, as to the rapid influx of population to the west and the expansion of agricultural life, they would in time raise 400,000,000 bushels of grain, and if they required to have that immense quantity hauled within the two or three months between the commencement of the harvest and the closing of navigation, twelve railroads would not be able to accomplish the task within that short period. I pointed out that it would be impossible to handle such a production of grain in the short time within which they are anxious to rush it out, and I went on to say that even suppose a dozen railways could do it, it would not be the part of wisdom for them to try to do it, because it would be unprofitable, inasmuch as during the balance of the year these railways would be lying idle. That is a fair sample of the mode of argument which the Minister of the Interior pursued. He reminded me of the Artful Dodger in one of Dickens' novels. We know that the Artful Dodger was an adept in dodging around here and there, and making people believe there was something happening that never did happen ; one time he was in your pocket and another time out of it, and again he was under your arm or behind your back, but you never could know exactly where to place him. The minister gave us a great many quotations, but if they were all as fallacious as those which I personally know to be fallacious, then we can pin very little faith in his statements. He treated the member for Centre Toronto (Mr. Brock) just in the same way as he treated the member for East Grey. His arguments were notoriously weak and notoriously unfair as well. The hon. minister proceeded to tell us that when a railway company applied to parliament for a charter, they didn't have surveys and plans and specifications. That may be true, but when they are applying for an Act of parliament they are not commencing to build the road, and before they spend a single dollar in construction they will have their plans and their surveys and their estimates made as to what the road will cost, and all this information will be submitted

to the board of directors beforehand. Have we not a right to ask the government to give us that information which the engineer of any railway company would give to his directors, before they would deem it wise or unwise to embark in the scheme. But he gave that as a reason why the government were justified in taking up this scheme without the information we ought to have to enable us to judge of it wisely.

He says he is prepared, as a matter of government policy, to liberally subsidize railways, even colonization railways. Well, we want to know where he stands on that question, because, so far as I can judge, the sentiment of the great agricultural classes of my province at least is opposed to subsidizing railways liberally; and the hon. gentleman is not in accord either with the sentiment of the farmers of his own province, if I may judge by what I see in the press, nor the sentiment of the farmers of the province of Ontario. When the government give us a policy of this gigantic character, they ought to give us the information we desire to have.

The hon. gentleman, dealing with the objection that we cannot successfully have running powers over the line from Winnipeg to Moncton, said that was effectually disposed of by the hon. member for North Norfolk (Mr. Charlton). How did he dispose of it? He told us that the Canada Southern and the Grand Trunk were running over the same section of road for 220 miles in western Ontario. The hon. member for Hamilton (Mr. Barker) pointed out the other night that while through freight might be carried over a short line of railway, it could not be carried equally well over a long line, because it would be necessary to change the engines and provide a fuel and water supply, a double set of hands, round houses for the storage of engines, and many other things, that would not be required on a sh rt line. The hon. Minister of the Interior reminds us that it was claimed that the railway might take through freight, but it could not take local freight, and he said the hon. member for North Norfolk had disposed of that by saying that he himself had shipped local freight on the line I have referred to. Did the hon. member for North Norfolk say that it was a matter of common occurrence that the people of the country could use that railway for handling local freight? The hon. member for Hamilton declares that they do not; the hon. member for East Elgin (Mr. Ingram), who lives in the locality, declares that they do not. Therefore, there is no conclusive argument to show that it is possible for the Grand Trunk Pacific Company to give running powers over 1,800 miles of railway to other companies.

The hon. gentleman went on to say that the arguments addressed to the House by the hon. member for Hamilton were futile, absurd and ridiculous—why? Because he said that if you parallel the Intercolonial, you are going to injure its earning powers. In answer to that the hon. gentleman declared that the earning powers of a railway are generally increased by the construction of another railway through the same part of the country; and as an evidence of that he stated that the property of the Grand Trunk Railway was never so valuable until after the Canadian Pacific Railway was built, and therefore he expects us to conclude that if the Intercolonial Railway from Montreal to Moncton is paralleled, its earning powers will not be impaired nor the value of the property reduced. Well, to say that is to say something that the experience of life does not bear out. We will suppose that there are 10,000 tons of freight from the west to be carried from Lévis to Moncton or St. John. If that is carried by one railway to-day and two railways carry it in the future, will the earnings of the two roads not be what were originally the earnings of one? It is true, the freight will be somewhat increased; but a portion of the freight of the first road is of necessity taken from it. If the development of the western country brought more freight to Quebec to be taken eastward, would it not be handled by the Intercolonial Railway, and would not the earnings of that railway be increased to that extent by this new road, if it is ever built, and if it is a success?

The hon. gentleman refers to the statement that this policy is an abandonment of the government's policy in extending the Intercolonial Railway to Montreal, and he holds that it is not, because the Intercolonial was not brought to Montreal to enable it to get a portion of the grain traffic from the west, but for the purpose of reaching one of the great commercial centres for commercial purposes. We were told, over and over again, when we purchased the Drummond Counties Railway and brought the Intercolonial Railway to Montreal, that it was for the purpose of increasing its earning powers by securing additional freight, so that instead of having deficits in the running of that railway, every year we would have a surplus. Was not that the argument advanced by every hon. member on that side of the House? I say it was.

The hon. gentleman said that the first proposal of the Grand Trunk Pacific Company, which was for a railway from North Bay to the west, was not a good scheme, and that he would not support it. Why would he not support it? Because if that railway succeeded in bringing trade from the west, it was trade that was going to Portland. My answer is, could the government not just as well have made it a condition that the trade brought over that line should go over the Intercolonial in the future as to make the agreement we have to-day? They could do it quite as easily and as effectually. That would make the Intercolonial a more valuable property to Canada and give

us an all-rail Canadian route. The hon. gentleman said : 'We tie the profitable portion of the line—speaking of the western section —to the unprofitable part of it, and condemn the Grand Trunk Pacific Railway to take the bad with the good and operate the two together.' Well, I propose to deal with that point later. He further said : 'The building of another line of railway as a competitor does not injure the present railway. If the Grand Trunk Pacific Railway carries out its contract, it will cost us no more than what the hon. Minister of Finance has said. The Grand Trunk Railway is worth more to-day on account of the building of the Canadian Pacific Railway.'

And he went on to argue that the high standing of the Grand Trunk Railway was undoubtedly guaranty that it would be able to pay the interest on the bonds and on the cost of the eastern section. But if the Grand Trunk Railway is worth so much to-day, how is it that it has never been able to pay us back anything on the $15,000,000 we gave it in 1855 or 1857 ? Why is it that from that day to the present, it has never been able to pay the interest on that loan ? Away back in 1855 or 1857, we loaned the Grand Trunk Railway $15,142,000. The simple interest on that amounted, at confederation, to $10,457,000 of which not a dollar has ever been paid. What does the debt amount to to-day ? There is an accumulation of interest since confederation of $32,708,000, making a total interest of $43,165,000. and a total indebtedness of $58,308,000 due the 30th June, 1903.. If it cannot pay us a dollar on that debt, is it any more likely to pay us any interest upon the heavy expenditure we must incur to build that road from Winnipeg to Moncton ? Remembering what has happened in the past, it does not seem to me that the outlook for our getting anything from the Grand Trunk Railway in the future or the Grand Trunk Pacific Railway very promising. We often hear it said how munificent we have been in our gifts to the Canadian Pacific Railway. But, if we compare the two companies, we will find that we have done much less for the Canadian Pacific Railway than for the Grand Trunk Railway, and we have had some return from the Canadian Pacific Railway which we are never likely to have from the Grand Trunk Railway.

What has the Grand Trunk Railway received from the public ? It received first the original loan of $15,000,000 on which there is an accumulation of interest since amounting to $43,165,000, making a total due in principal and interest of $58,308,179. In addition to these sums, the Grand Trunk Railway and its amalgamation have received :

Aid from the Dominion government..	$ 2,850,843
From Ontario, provincial aid..	2,671,333
From province of Quebec, provincial aid..	1,354,797
From Ontario, municipal aid.....	$5,723,954
Province of Quebec, municipal aid..	293,774
Total..	$12,894,701

The amount given to the Great Western in 1869, when debt was compounded, was $1,152,568, and to the Northern Railway, in 1877, owned and run by the Grand Trunk Railway, $3,258,760. Or in other words, we have given to the Grand Trunk Railway up to date $75,614,208, of which we have never received a dollar in return, either principal or interest. Yet we are told that the Grand Trunk Pacific Railway will surely pay the immense obligation it is undertaking, that Canada will be recouped every dollar, that Canada need not be afraid of the expense, because we have the Grand Trunk Railway behind the scheme. The Grand Trunk Pacific Railway, says the Minister of Finance, may be men of straw, but we have the Grand Trunk Railway, with its assets of $150,000,000, behind it. Therefore we can feel perfectly safe. We are in the hands of a company which will pay back every dollar to Canada. Well, I cannot say that I share this confidence.

I wish for a short time to direct my attention to what may be fairly regarded as the first and only policy ever initiated by the present government. It is a policy which is entirely its own, and by which it must either stand or fall. The wild, hilarious enthusiasm with which its advent was hailed was something seldom seen in this House. In its incoherency and unmeaningness it resembled the paroxysms of hysteria. One could not understand the enthusiasm, the joy, the acclaim with which that policy was hailed. The scene could only be likened to what is occasionally witnessed by a medical man in private families. He goes on a medical visit and has to remain a long time in the house. A number of women are present, a great interest is felt, and finally when the happy event is over, all is confusion and admiration and joy and sorrow all mixed up. What is the cause of it all ? It is because of the advent of a young heir. After ten or twelve years of married life, it is the first and only one. Unbounded is the general joy and great the general admiration, as the young hopeful is dangled before an admiring world. See what a rising star of the east has appeared, and just think what it shall do when it grows to be a man. Think of its future possibilities. In like manner, hon. gentlemen opposite admired this bantling of the government, looked upon it and at each other, and cheered and wondered that ever so much was accomplished. I leave it to the dry-nurses to handle it for the next few years, and after that, I will pass it over to the tender mercies of the electors of Canada, and I am quite sure they will deal with it. But what does it mean to Canada, this political monstrosity that has been born into the world, and at whose birth there has

been such clapping of hands, such admiration, and such joy, and such sorrow, that these emotions seem the result of hysteria ? Time alone can tell. But, in the first place, let me say that its advent was at the most inopportune time that it could possibly present itself——

The POSTMASTER GENERAL. They always come unexpectedly.

Mr. SPROULE. There is another strange resemblance that I had not noted. It comes at the time when we should naturally begin to think it could never come—at the tail end of a long session, after the House has been struggling for five months to get through its duties, and when we might reasonably have expected to end our arduous labours and be free, each of us, to look after his own business. But this proposition comes before us at the end of a long session, when there is no time to consider it, no time to deal with it. It is altogether too important a matter to be forced on us in this way. And yet, we are told, that we are to have morning sittings. The excitement of the closing of the session is started so that we may rush it through without proper consideration and without affording the people of the country time to size it up through the press, and to understand what it is they are being committed to. The next question I ask is whether there have been any demands from the people in any section of the country for another transcontinental railway? Have the boards of trade asked for it? I do not know of a single one, except that one resolution was said to have been passed by a few members of the Toronto board of trade, a resolution engineered by my hon. friend from West York (Mr. Campbell). What gatherings of farmers have asked for it? What province has been clamouring for this scheme? Was it demanded in the west ? I do not think so, for hon. gentlemen opposite have been unable to show us that there has been any such demand. Has Ontario called for it? No, for I say distinctly that the sentiment of Ontario is against the subsidizing of railways.

Mr. JOHNSTON (Cape Breton). Hear, hear.

Mr. SPROULE. That is the sentiment of Ontario; I say that without any hesitation. Was it demanded by New Brunswick? Well, we did not hear anything of it until this Grand Trunk Pacific scheme was launched. Was it called for in Cape Breton ? My hon. friend (Mr. Johnston, Cape Breton), who speaks of it, had not a word to say about it before this scheme was broached. He was in favour of extending the Intercolonial to Georgian bay. But, as to this new scheme, he was as dumb as the proverbial clam in his own part of the country. Was it demanded by the labour organization? By no means. The government party have engineered through a few resolutions by those bodies since the scheme was proposed, but nothing was heard of it from that quarter before. From what class, then, does the demand for this road come ? From one class only—the grafters and exploiters; the same class of men who engineered the Crow's Nest pass scheme, and who profited by it so well; the same class of men who are forever hanging about parliament and the party in power trying to get something out of the state for which they give no return. True, we have had the clamour from that class. I see in one of the newspapers that this scheme is headed by Senator Cox, which leads another newspaper to speak of this as the march of Coxey's army. In view of that, I thought that there was a peculiar appropriateness in the words of the Minister of the Interior (Hon. Mr. Sifton), that we had come to the parting of the ways. It will be remembered that Coxey organized a great army of tramps and set it travelling through a part of the United States and scattering desolation in its path. These tramps had their last grand rally at a certain point, where Coxey addressed his hearers. He said : We have come to the parting of the ways; we had better divide here; half the army had better follow the course of empire and go west, and the other travel east where the wise men came from, or if they don't like that they can go to Halifax. I think that when this Coxey's army divides, a large part of it will go to Halifax, when the people size them up.

Now, in connection with this scheme, we have no mandate from the people to undertake the building of a transcontinental railway, and they add to the debt of the country for that purpose a sum not less than $125,000,000. No government in Canada before has attempted such a gigantic scheme without first gaining the consent of the people. We are told that we built the Intercolonial, and that we decided to build it before surveys had been made. True, but we built that road carrying out an agreement of confederation. We commenced to build the Canadian Pacific Railway without a complete survey, but again we were carrying out an agreement of confederation. We had undertaken these tasks in order to gain the advantages that would accrue to Canada from the union of the west with the east and from the union of the maritime provinces with the provinces of Ontario and Quebec. But we had the mandate of the people for these works. In this case, there is no such mandate. This, it is said, is an attempt to solve the important problem of transportation which has been engaging the attention of the government at various times since they came into power. For seven years we have heard about the great problem of transportation and about what hon. gentlemen opposite were going to do

with regard to it. They were making our canals and improving our harbours, and doing a great deal, as they told us, to solve that great transportation problem. Is this Grand Trunk Pacific scheme a wise attempt to solve that question? Is it a scheme to which the government have given sufficient careful consideration before presenting it to this House? Had the government such information before them as would justify them in undertaking this gigantic work? It seems quite clear that they had not. They told us themselves in the speech from the Throne that they had not that information, for one of the subjects to be brought before us was the appointing of a transportation commission for the purpose of taking this question into consideration. And I have here a copy of a return brought down to this House on the 19th of May of a report dated the 6th of April last. In this the Minister of Public Works states—

> That he has under consideration questions affecting the transportation of Canadian products to the markets of the world through and by Canadian ports with a view of placing the Canadian producer in a position to compete, and compete successfully, through all Canadian channels with the producers and exporters of other countries.

Then he goes on to outline the information that we required to enable us to deal intelligently with this question in the future. He says:

> The minister further states that the questions to be considered are complicated and involved, including among the objects to be sought the transportation of western products from place of production to the markets of the world.
>
> This involves the consideration of their transportation:—
>
> From place of production to Canadian seaports.
>
> From place of production to the western ports of Lake Superior.
>
> From the western ports of Lake Superior to Canadian seaports.
>
> From Canadian seaports to Europe.
>
> From place of production through Canadian ports on the Pacific.
>
> As it affects the products of the eastern provinces of Canada it involves their movement:—
>
> To the seaports.
>
> From the seaports to Europe.
>
> It is obvious that before any satisfactory conclusion can be reached upon these questions a thorough and comprehensive inquiry should be made.

And for the purpose of making this comprehensive and thorough inquiry he proposes that a commission shall be appointed. Then the minister recommends that a commission be appointed consisting of Sir William Van Horne, John Bertram and Harold Kennedy, of which Sir William Van Horne shall be chairman and convener, for the purpose of making such inquiry and obtaining such evidence and information. They were to make such reports and recommendations as they might think requisite, and subject to any further instructions which might be given by the Governor General in Council. The minister further recommended that such commission be authorized to employ such scientific and professional assistance as its members may desire, and that the duration of the commission should be during pleasure. Then the minister goes on to recommend that this commission be appointed. Therefore, am I not justified in saying that they have undertaken this scheme without that information which was considered so necessary? Why do we require that information? To enable us to move intelligently, to enable us to formulate a scheme that will not only include transcontinental lines, but include as well our waterways, our harbours, our inland marine, that will include transportation of the products from the west to the east and stuff from the east to the west, that will enable us to map out a scheme that will do no injustice to our waterways but help them to implement the railways, and the railways to implement the waterways; that will do no injustice to Ontario but will assist Ontario when the sclieme is carried out; that will do no injustice to the west but will help the west as well; that will do no injustice to Quebec but will be valuable to Quebec as well as to Ontario and to the maritime provinces as well as to the western provinces. Then, to sum it all up, we would be able to crystallize all these desiderata into one grand transportation scheme that would include all the advantages that we possess from waterways, and railways, and from inland marine, from inland transportation, as well as from land transportation—it was to include the whole of them. It was to be one comprehensive scheme drawn up along intelligent lines, so that when we built a railway we would not be injuring a canal, when we deepened a canal we would be assisting a railway. It was to be a grand national scheme of transportation that would be valuable for Canada in the future, and defensible by the government. But we could not do that intelligently, we were told by the government, until that commission was appointed, until that commission had time to inquire, until that commission reported, until that commission's work was analyzed so that intelligent men would be able to deal with the problem of transportation in the best interests of the entire Dominion. Sir, we have had none of that information. We were told that it was not only desirable but important that we should have it, that without that information we would be going it blind, we would be doing what was the part of unwisdom, we would not be acting like intelligent business men, such as those claim to be who are controlling the destinies of Canada. I say in face of the fact, I am justified in the contention that this was information which the House and the

country ought to have, which the government ought to have before they determined upon undertaking this gigantic scheme that commits the country to such a vast sum of money. Then I say there was no justifiable reason for committing the country to such an undertaking at the present time, in the absence of this information, without a matured policy, without the data that was requisite, without the services of explorers, without scientific knowledge. Without all these things we could not, as the right hon. minister said who moved that resolution, reach a conclusion that we ought to reach intelligently, one that would justify them in undertaking a scheme that would be a real solution of the transportation problem for the future.

Now, my hon. friend undertook to deal with the arguments of the ex-Minister of Railways. In my view those arguments were so strong, so logical, so convincing, so comprehensive, because they covered every point that could be suggested, that in my judgment the members of the government had not a leg to stand on, or a justification for the scheme, after he was done. I do not wonder that they felt a little sore over it, that they directed the vitriol of their eloquence against him, because he did them a great deal of harm. He showed up, not only their inconsistency, but the unwisdom of their action, and the unreasonableness of which they are guilty in committing the Dominion of Canada to this enormous expenditure. Let us examine for a short time the reasons they give to justify this undertaking. The first is the urgent need of the west for increased facilities to handle its grain. Now, this brings up the question whether such urgent need in the west exists to-day. Where is the urgent need for this new railway in the west, a need so urgent that, as the Premier says, we cannot wait another day, another hour, we cannot put it off till to-morrow, we have not a moment to spare; and he expressed the hope that we had not waited too long already. Now this suggests the question, How are the products of that country handled to-day? Is there such urgent need at the present time? I do not think so. If we look into it carefully, I am sure we will not come to that conclusion.

Mr. DOUGLAS. Let me tell the hon. gentleman that it took five months to get a carload of grain from my ranch to the lakes; it remained all the time in the hands of the Canadian Pacific Railway. Surely, there was need for additional facilities between that country and the lakes.

Mr. HENDERSON. I desire to say a word in answer to the hon. member for Assiniboia (Mr. Douglas), who told me not very long ago that he did not care whether the Grand Trunk Pacific was built or not, because he had all the railway accommodation he wanted.

Mr. SPROULE. I was going to inquire how they handled their products now. They had between sixty and seventy million bushels of grain last year. From the commencement of the season of transportation of that grain until the 1st of July, there were forty-four million bushels came eastward, and the balance of it was either sent west or was consumed in the country. It was handled by one railway then only partially equipped, and every bushel of wheat was taken out of the country by the 1st July this year. The balance of the wheat either remained in the country or has gone westward to China and Japan. Now, if with their present facilities, which are acknowledged to be very imperfect and which are being improved every day, they handled the bumper crop which was raised in that country last year and they had it out of the country by the first of July, it does not seem to me, although, there may have been some local blockade, that there was such trouble in getting the grain out of the country. If it be true that the crop was handled by one road which had given a contract for 20,000 additional cars and which had only got a fraction of that number for their needs during the season when the grain was handled; if it be true that it was handled by one road which had given a contract for twenty-five additional locomotives and which had only got three or four; if that one road, only partially equipped and in an imperfect condition successfully handled that crop, admitting that there may have been local blockades with which I shall deal later on, then, I say the urgent haste will not be so apparent for additional transportation facilities between the east and the west as hon. gentlemen say. We are told that they will not have a greater crop this year than last year. In what position will the railway be this year? The Canadian Pacific Railway will have a great many more cars to handle the produce of the west, it will have a great many more engines, it will be better equipped for the work. The Canadian Northern has got into the country in the meantime and it is also tolerably well equipped to handle the produce. If one railway got the grain out by the first of July this year—the first one better equipped than it was last year, and the second one tolerably well equipped—will there be any great difficulty in them handling the same amount of grain this year—because it is not contended that there will be any more grain this year than last? That does not justify the contention that there is an immediate and urgent need for further transportation facilities for the purpose of handling that grain. Let us inquire how that grain is handled? First it is sent to the elevators in the country. There was elevator capacity for twenty-five million bushels last fall. They have 13,500,000 bushels of elevator capacity at Port Arthur and Fort William or they will have this fall. There are addi-

tional elevators being erected in the west this year, we are told, that will store 10,500,000 bushels of wheat at least. In addition to that at different ports on the Georgian bay there is elevator capacity for about 5,000,000 bushels of grain. What does that make in the aggregate ? It makes an aggregate of 54,000,000 bushels of grain, or 10,000,000 bushels more than were sent out of the country last year and they do not expect to have a larger crop this year than they had last. What will be the ordinary course in the handling of that grain ? It will go first into the country elevators. The railway will be moving it eastward to the great inland port of Fort William and Port Arthur. Vessels will be carrying it to ports on the Georgian bay and south of the Georgian bay. As fast as the train can carry it from the west it will be landed at Port Arthur and Fort William, the elevators will run it out to the vessels and they will take it to the Georgian bay and the ports south of the Georgian bay and these elevators will be gradually filled up. This grain is moved eastward all the time and by the time the grain is threshed in the latter part of the season and by the time navigation closes about the middle of December a large portion of the grain will have gone eastward. Perhaps eight or ten million bushels will have been carried eastward and forty or fifty million bushels will be in the elevators of the west, in the elevators of Port Arthur and Fort William, and in the elevators on Georgian bay, and during the winter that grain will be distributed. With these facilities for handling the grain, what do we require ? We require more elevator capacity in the west, at the lake ports on Lake Superior and on the Georgian bay. We can always get vessels enough to handle the grain after it reaches Port Arthur or Fort William, and the grain will be moved eastward all the time. We require proper facilities for bringing that grain from the elevators in the west to Port Arthur and Fort William. We are getting improved facilities every day. It is easy to provide them for the future without the expensive outlay which is involved in this scheme. That is the way the grain will be handled in the near future. How will it be handled in the distant future ? The grain produced in the eastern section of the prairie country will be sent eastward on the lines I have indicated. The elevators will have it stored ; from those elevators it will be taken to the lake ports, and it will be carried eastward all the time. But we will have a very valuable and increasing trade westward with China and Japan. A magnificent trade is being rapidly built up with these countries and we will send millions of bushels of grain and barrels of flour to feed those 450 millions of people in that great eastern country who must depend in future on what we will be able to send them for a large portion of their food supply. Then, we will have another route in the future. Where will the grain go from the Peace river district, the Edmonton district, the Prince Albert district, and away north and westward ? In the future that grain will be sent out by way of Hudson's Bay route. I have no doubt whatever of it. That is our great inland port. Just as sure as we are standing in this House to-day—I have said it before after carefuly analysing the conditions of that western country and the conclusion is more firmly fixed in my mind to-day—this will be one of the great routes of the future. Then, we will still have an increased amount of grain going eastward for two purposes—for the purpose of supplying food to the eastern provinces and even to the province of Ontario and for the purpose of transportation out of the country. We will have these routes in the future handling all the products of that great western country; China and Japan will be one route, the Hudson bay will be another route and the route by way of Port Arthur and Fort William will be the third. When you divide the amount of grain to be shipped out between these three routes there will not be the congestion that a great many people fear even if the development of that country in the future should be as great as most of us anticipate. Then, I say, we cannot and will not be able to utilize this scheme to carry grain from the Peace river country away through to Moncton, to transport it to St. John and load it on vessels to take it to Europe. It is an impracticable scheme. It never will be carried out in so far as carrying grain is concerned because no railway in the world can carry grain for 2,800 or 3,000 miles, and we have no example, as far as I know in the history of the world where grain has ever been carried for that distance on a railway. A large share of the grain will come east but there will be another disposition of that grain in the future which is not perhaps thought of much at the present time. The farmers in that country will change their system of farming.

They will do as they do in Ontario ; they will feed a large percentage of the grain they raise on their own farms, convert it into beef and pork, and send it out of the country in that profitable form. Half the wheat consumed in Ontario to-day is brought from Manitoba and the West. We raise more grain in Ontario than would feed our people if it were used for that purpose, but we have changed our system of farming, and we are feeding our grain to cattle, to hogs and to fowl, and we are conducting a profitable industry in that way. The people of the west will sometimes discover that the constant cropping of grain will impoverish their farms, and that they too will require to keep stock and feed that stock with a large proportion of the grain which they raise. If a proportion of the grain raised for export were stored in the elevators

at Port Arthur and the Georgian bay, there would be this great advantage, that during the winter season, when the railways were not otherwise amply employed, they could take carload after carload of that grain east. That system will also have the advantage of distributing the grain to the millers of Ontario, who are now using immense quantities of it. The manager of the institution at Peterborough told me the other day that in a short time when his factory would be running to its fullest capacity, they would be using from 10,000,000 to 15,000,000 bushels a year, in connection with the manufacture of cereal food. He told me that most of that grain would come from Manitoba and the West, and in addition to that they are going to build a large flour mill for the purpose of grinding flour in bond. The grain will be stored in their elevators on the Georgian bay, and as they require it, it will be brought to Peterborough by rail and ground into flour and shipped eastward. This is the means by which grain will come out of the West in the future. We have no reason to apprehend grain blockades. The fact is that taking all the possible conditions into consideration, even with the greater production in the West, we will not in the future have the difficulty in handling it that we experience to-day. I was for a short time engaged in the milling industry, and we found that for ten months out of the twelve our mills had to be supplied from the West. Notwithstanding that we are raising more grain in Ontario now than in times past, nearly half of the grain ground in our mills comes from the West. But it comes from the elevators on the Georgian bay. We bring it in the summer from Port Arthur to these elevators, and then it is distributed to the mills in Ontario. Not only do we use it for grinding into flour, but we use it for feeding our stock. It is also a fact that we get an immense quantity of bran and shorts from the West, because the supply of feed for our stock in the great province of Ontario requires that we should do so. We have no reason to fear that the grain of the West will not have sufficient facilities to find its way to market.

We are told, as another reason for the building of this railway, that it will afford a short route to the seaboard, and that it can carry traffic at the cheapest possible rates. According to the Finance Minister, this railway will be 2,800 miles in length to the foot of the Rockies. What railway can carry grain for 2,800 miles and make it pay? There is no railway in the world that can do it. Neither can grain be carried at a profit from the more easterly points of Regina, Moosejaw or Prince Albert. Grain is being carried to-day from Winnipeg to Montreal for 11 cents a bushel, or it will be on the first of September. Why, if that railway were built to-morrow it could not carry grain at 11 cents a bushel for 1,400 miles. We may, therefore, dismiss that as a reason why this railway should be built at the present time, because there is no doubt that this railway cannot carry it as cheaply as it is being carried to-day by part water and part rail route. As another reason for the construction of this railway we were told that we should have a railway to an ocean port on all-Canadian territory, so that we would be independent of the Americans and the bonding privilege. Well, we can accomplish all that by building a line from Rivière du Loup to Edmundston, and thence to Moncton, a distance of 209 miles. We have the Canadian Pacific Railway, which is an all rail route through Canada, except where it crosses the state of Maine for a short distance. We have the Grand Trunk Railway going westward, and we have the Intercolonial Railway going eastward, and if we filled in that link from Rivière du Loup to Edmundston and thence to Moncton, we would have an all rail Canadian route, and we would be as independent of the Americans as this new railway can make us. That reason will not appeal to the Canadian people as a justification for the government undertaking this enormous expenditure. We are also told that the influx of immigration to the West makes it necessary that we should provide railway facilities for the future. Well, they are building new railways in the West every day. The Grand Trunk Railway proposed to get into the Western territory if the government never adopted this scheme at all. They have their road now to North Bay, and their first proposal was to go through to the West. They would have done that whether the government interfered or not. Again we are told in support of this project that it will open up new territories for settlement in New Brunswick, Quebec and Ontario. We have had settlement going into these new parts of the country for many years and has any one pretended that the existing lines are over taxed in supplying the needs of the settlers. We have a railway running from Calgary to Edmonton for ten years, and until within the last two years I am told that it never paid a cent upon the investment, and that it is only paying two per cent to-day. Has the settlement in that part of the country overtaxed the capacity of that railway? Not at all. There is comparatively little settlement along that 198 miles of railway. I passed over it last fall, and the settlement was very sparse. It has never been a paying road. Then, what has become of the Regina and Long Lake Railway, which has been built ten or twelve years? Has the settlement along the line of that railway overtaxed its capacity? It has never yet paid anything on the money invested in it. The portions of that country through which these railways run are not half settled to-day. You might put hundreds of thousands of people, without overcrowding

them, in the districts where we have transportation facilities already without overtaxing the capacity of the railways. I say that the supply of railways in many portions of the western country is ample, whereas, in other sections railway accommodation is badly needed. The Canadian Northern and the Canadian Pacific are building more railways every year.

Then we had that magnificent scheme for development of that country, devised and launched last year by the premier of Manitoba in his deal with the Northern Pacific and Canadian Northern, by which he secured to the country the advantage of 1,800 miles of railway—one of the most valuable deals, in my judgment, ever carried out in this country. Did he saddle the country with an expense of $125,000,000 to do it? Not a dollar. We are told that we must incur that expense to have control over the freight rates of this proposed line; but the premier of Manitoba secured control over the freight rates of those railways for ever without adding another dollar to the debt of Canada. We are told that we require to provide railway facilities for Manitoba and the North-west; but he secured those railway facilities and reduced the cost of transporting grain out of the country without incurring a dollar of expense. I am glad the hon. premier of Manitoba is here to grace this floor with his presence to-day. I say he has done more for the west by that stroke of statesmanship a thousand times over than will ever be accomplished by this proposed scheme of the government.

I understand very well that our North-west is a great country; I do not underestimate its value and importance. I know that the great future of Canada is bound up with the west, and I believe it will be necessary in the future to provide for a development that has been unparalleled in the history of this country. But we claim that that can be done without the unwise expenditure or the heavy increase in the national debt involved in the scheme before us to-day. We know it can be and will be by other schemes less onerous and equally valuable, which will be initiated and carried out by the Conservative party in the future. What have we already done for that country? We built the Canadian Pacific Railway. We are told that that great undertaking cost this country over $65,000,000 of cash and 25,000,000 acres of land. Was it an unwise expenditure, considering the condition of the country at the time? We were told last night what that country had cost us, and the value that had been given to it by the construction of the Canadian Pacific Railway. I say that in proportion to what the Minister of the Interior says that great country is enhanced in value by that expenditure, in that proportion he justifies what the Conservative party has done in the past for the benefit of that country. We have given assistance to the Grand Trunk Railway for the same purpose, and we are willing to give it assistance in the future, though we do not endorse this scheme, because we are as anxious and willing to provide for the future of that great country as the present government is. We have very lavishly subsidized the Canadian Northern, because we had control of the freight rates of that railway, and because we desired to increase the size of the spout that was carrying the grain out of the country. It would be an easy matter to double the tracks of the Canadian Northern and the Canadian Pacific, as I have no doubt it will be necessary to do in the near future, and in that way double their capacity for handling freight; and it could be done at very much less expense than this scheme will involve. We have made very heavy expenditures upon our canals. We have been told by the government from year to year that they were perfecting our canal system to provide a means of transporting the grain from the west to the seaboard. Last year they told us what wonderful things they had accomplished—they had finished the canals, which their predecessors had been dabbling with for years, and had provided a continuous water-course from Lake Superior to the St. Lawrence, through which the grain of the west would float along in palatial steamers to the ocean carriers, the bottle-nosed ships which were going to carry it to the markets of Europe. They claimed that they were developing every highway of commerce at once, unlike the Conservatives, who developed one and left the others, and that they had finally settled the great transportation problem. They had finished our canals, deepened our waterways, and provided more lights along the St. Lawrence. But now we are told that all this is futile, and that they have to devise another scheme. And the urgency of it is so great that they cannot wait even a few months until the next session of parliament, but must introduce it at the end of the present session. What will this scheme involve to Canada if it is carried through? It will involve an addition to Canada's debt of at least $125,000,000. I have listened very carefully to the estimates made by every hon. gentleman who has spoken on the other side of the House, and I say that if you build such a road, having regard to its alignment and its gradients, which the hon. member for North Norfolk says must be equal to those of the New York Central, which handles 2,000 tons in one train, I say that $125,000,000 will be added to the debt of Canada by the eastern section alone. I say that $125,000,000 will be added to the debt of Canada by the construction of that eastern section, and in saying that I am within the mark. I make the prophecy that provided we build the kind of railway declared to be neces-

sary for the carrying of grain in the future, we will add to the debt of Canada $125,000,000. No $13,000,000 will do it. How do we stand to-day? We have spent up to the present on railways $258,800,000, and we have never grumbled at that expenditure, because it was for the development of the west and the east. On our canals we have spent $103,484,000, or on the two combined we have spent $362,345,000. We have at present, in round numbers, a national debt of $268,000,000, and by this project we will add to that debt at least $125,000,000. What will be our position then? We will owe about $400,000,000. I want the Canadian tax-bearer to understand what we are being committed to.

Mr. COCHRANE. We will be bled white then.

Mr. SPROULE. Yes. This present year we have $9,733,000 of debt falling due, which must be provided for by another loan. Next year we will have $20,926,000 falling due, which must be provided for in like manner. In 1905 we shall have $4,866,000 falling due that must be taken up. In 1906 $12,166,000 will be due and will have to be met. So that up to the year 1906, when it is not claimed that this road will be finished, we shall have to provide for an amount falling due of $47,693,000, to meet which we will have to borrow money. In addition, we will have to provide $155,000,000 to carry out this undertaking. Add that to the debt we are carrying, and what will become of our credit? Will we be able to borrow money at as low rate of interest as to-day? I am very much afraid we will not. We are to-day on the wave of prosperity. Cycles of good and bad times follow each other as regularly as day and night, sunshine and cloud. And I am very much mistaken if the demoralization of stocks does not indicate that we are now on the verge of hard times. Let shrinkage of values continue, let there be decrease in our importations and reduction in our revenue as the result, and where will we be? Remember that we must raise inside of those six years very close on $200,000,000 by borrowing, and let me ask the hon. Minister of Finance what will then be the dilemma in which he will find himself, and how he will handle it? My right hon. friend the First Minister smiles. Is it at something that is passing in his own head that he is smiling?

The PRIME MINISTER. It is what is passing through the head of my hon. friend that amuses me.

Mr. SPROULE. If the problem with which we are to be confronted amuses the right hon. gentleman, he is welcome to all the amusement he can derive from it. But careful, thoughtful business men will study out these things in their own mind, and will ask what solution the right hon. gentleman proposes, and he will be obliged to answer that inconvenient question. But it is said that this heavy expenditure will tide us over the hard times. I admit that it will do some good, but it will be at an awful cost to the people, and whether the benefits we will receive from that heavy expenditure will make up for the additional burden of taxation caused by this heavy outlay, is something I am not prepared to even guess at.

I have said that the sentiment of the country, in Ontario at least, is against the subsidizing of railways largely in the future. Has the government had any mandate from the people to put through this project? No. I challenge the Prime Minister to-day to dissolve this House and go to the country upon this scheme. Dare he risk it? He dare not. If he should do it, and if the people should return him to power, then he may carry out his scheme and I shall not offer any objection. But when does he propose to appeal to the people? Not until the die is cast. Not until it is too late for us to back out. Not before we are committed to one of the most gigantic follies ever proposed. We will not be able to get rid of this scheme by paying $328,000, as we did for our indiscreet railway venture into the Yukon. We will have to carry out the scheme in some way in the future and my sympathy will be, not for the right hon. gentleman, because I do not think he will be returned to office, but with the men who will be elected to office and on whom will fall the carrying out of this measure. Who wants this scheme? The west do not want it. They do not consider it the best scheme. They do want more railways, but they say they do not want this railway. Does Ontario want it? We have had no voice from Ontario calling for it. Who then wants it? It is the Grand Trunk Railway and the grafters attached to that company, the men who have always been trying to exploit the country. But do the Grand Trunk want the eastern portion of the scheme? We know they do not, for their proposition first was to build up from North Bay to the west. They very reluctantly allowed that eastern line to be tacked on to the one that they proposed. My honest opinion is that they neither want it nor believe that it will be carried out. Why do I say so? Because there is a very convenient clause in this Bill which I think was put in there for a specific purpose. The Grand Trunk want to get into the west and, under this arrangement, they will get into the west. But they do not want to go into the maritime provinces at all, and do not want to be obliged to build eastward of Montreal, nor do they want to build a new line from North Bay to Montreal. Section 21 of this Bill provides:

> The Governor in Council shall have the power at any time to suspend the progress of the work on said eastern division until the then next session of parliament.

This is a very convenient section for a political scheme like this. The hope is that

this will carry the maritime provinces for the government, by holding out the hope of the expenditure upon another railway. It is hoped that it will carry Quebec on the same cry, and especially by the assistance of two or three millions that we are going to give to the Quebec bridge. In Ontario—why, no one knows what we are going to do in that northern country, building a railway through the great clay belt. The proposed expenditure in Ontario combined with the gerrymander, it is hoped, will carry that province. And, of course, the scheme will be in favour in the west. It is a political scheme, designed for the purpose of carrying elections and give the government another term of office. But I am inclined to think that, should they succeed, they will have their engineers report that this eastern section is an impracticable scheme, and so the government will submit the question to parliament. Don't you think you had better drop it ? In the meantime, the Grand Trunk will have its line in the west. It is to be subsidized west from Winnipeg by the guarantee of bonds to the extent of $13,000 a mile on the prairie section and $30,000 a mile in the mountain section through to Port Simpson. With this they will have all they wanted, and they are hoping that the eastern section will be dropped. If all this results in giving the government another term of power, I do not think we shall hear much more about the eastern portion of the road. It is a purely political scheme. What advantage is it to the people of Canada to build a railway and then give it away ? We are told that the people of Canada will continue to own it. What advantage would it be to a farmer to build a house and barn on his farm, and then hand it over to another person for ten years without interest and for forty years after that at three per cent on the money ? I think the farmer would say : That is a bad investment for me ; better sell my farm and go into some other line. It is very well to say that the people of Canada will own this line. They tell a story of a little boy who was asked by a visitor, who owned a colt that was in the barnyard ? 'I do,' said the boy, 'but father does as he likes with it.' This road would belong to the government, but the Grand Trunk would do as it liked with it. We own the road, but we give it away for fifty years, and, in my judgment, to give a railroad away for fifty years is to give it away for ever. We are assured that we shall get the interest on the money. Well, I have given you an account of what the Grand Trunk has done with us in the past. No man can say with certainty that they will pay that interest any more than they have paid the interest which they undertook to pay us years ago. We loaned them $15,000,000 to build the Grand Trunk Railway. Have they paid three per cent on it ? Have they paid two per cent on it ? Have they paid even one per cent on it. They have not paid a solitary dollar. We are told that their road is worth twice as much as it was before the Canadian Pacific Railway was built. Has this enabled them to pay that interest ? Not a cent. And if this road is built and passed over to them, we shall receive no return, the interest will accumulate and will stand against the country for the time of the contract and for all time in future. A great deal is made of the argument that the right is retained in the government under this contract to allow other companies to use this road on equal terms. Well, we have heard enough argument on that subject to convince me, at all events at least, that this is utterly impracticable. Let me add an instance to those already given. When we were chartering the Canadian Pacific Railway it was found necessary to establish a connecting link between it and the roads of western Ontario. So we built the Gravenhurst and Callender line, subsidizing it to the extent of $11,000 a mile so that it would be independent and all roads could have running powers over it. We surrounded it with every safeguard that able lawyers could devise, so as to assure the rights of all these railways. But it was thought necessary to give it into the possession of one road to handle, because we could not run it by a commission. What road should we give it to, was the question. There was the Canadian Pacific Railway at one end and the Grand Trunk at the other. We decided to give it to the Grand Trunk, so as to have the greatest assurance of competition with the Canadian Pacific Railway. But, under the conditions established, the Grand Trunk was to give full running rights to all other companies. The Grand Trunk entered into a contract with the Canadian Pacific Railway to use that road, and the Canadian Pacific Railway did use it for a few years. But has that arrangement been satisfactory ? Why, there was a dispute a few years ago when, for a whole summer the trade of Ontario was hampered and inconvenienced because of the failure of these two roads to agree. We had freight coming from the North-west to Toronto down by way of Carleton Place, carried over two hundred miles of road more than was necessary merely on account of the disagreement between the roads. And this, notwithstanding that we had surrounded the independence of that link with every safeguard that the ablest lawyers in this House could suggest. This is pretty good evidence that we are not likely to receive much benefit from retaining the nominal control over the proposed road that the hon. Minister of the Interior and his colleagues tell us that we shall retain. This idea of a number of roads using one line in common is a delusion and a snare. If we could not, as in the case I have given, secure the independence of a road 198 miles long, how shall we secure the independence of a road 1,800 miles long ? There is not the slightest

chance of it in my opinion. But these are the arguments that are used to justify this proposal that the government shall build the expensive part of the road and then give it away for the benefit of the company—for, as I say, to lease this road for fifty years is practically to lease it for ever, and the interest will simply accumulate, as the interest has accumulated on the money we have already loaned the Grand Trunk. That money was loaned in 1845 and not a dollar of interest has been paid yet. Is there any guarantee that they will pay the interest upon this ? In my judgment there is not.

Then there is another thing. We have a juggling between three companies that seems to be inexplicable, unfathomable, and that we cannot properly analyze, an agreement between the Grand Trunk, the Grand Trunk Pacific and the National Railway belonging to the government. The government agree with the Grand Trunk Pacific, and the Grand Trunk Pacific has nothing behind it except the stocks they are going to subscribe. But the government tell us they have the full weight and power of the Grand Trunk behind them, and they say that the Grand Trunk Pacific may arrange to amalgamate with the Grand Trunk. We will have the government railway amalgamating with the Grand Trunk Pacific, and we will have the Grand Trunk Pacific amalgamating with the Grand Trunk. We will have two sets of stockholders, playing into the hands of the stockholders holding the stock of the Grand Trunk Pacific, and playing into the hands of the same stockholders that are holding the stock of the Grand Trunk, and they can manipulate it as they like, the contracts, the stocks, the bonds, the sales, or anything else, and no man in Canada to-day can say what will be the operations of these three companies combined in the future. No analysis of them can be made to-day, no intelligence in this House can explain it to-day. I say, therefore, it is unwise, it is improvident and it is improper. Our past experience with the Grand Trunk justifies the belief that it would be unwise for us to undertake that scheme at the present time, and, therefore, I am opposed to it.

What does this scheme mean to the province I represent ? Suppose we build that road, and it is a success. Suppose it carries all the grain from the west to the east, and the stuff from the east to the west, what does that mean to Ontario ? It means that in proportion as you make that road a great success, you impoverish the transportation routes we have to-day. You take away the trade that comes to-day to our Georgian bay ports in the east, that comes from Port Arthur and the head of Lake Superior in the west. It takes away the earning powers of the Canadian Pacific Railway, the Canada Atlantic Railway, the Grand Trunk Railway, and of the Ottawa and Parry Sound Railway. It reduces their earning powers to the same extent as you make this other line a success. You must, therefore, do it at their expense. You must do it at the expense of our harbours, at the expense of the towns and villages along the line of the Georgian bay, at the expense of Collingwood, of Midland, of Penetanguishene, of Parry Sound, of Meaford, of Owen Sound, of Kincardine, of all those lake ports that are handling that trade to-day. You will do it at their expense, you will sidetrack all the populous towns and cities in western Ontario. You will take the grain trade of the country away from them, and leave us hundreds of miles off this great artery of commerce, if it turns out to be what its sanguine supporters claim it will be. I say that the Ontario electorate will not view it with pleasure, because if you make it a success you are handicapping Ontario to that extent. We were told from the government benches the other night, that the road is going to carry cattle from Ontario to the west. We were told with a great flourish of trumpets by the Minister of the Interior that 25,000 head of cattle last year were carried from Ontario to the west, and so many thousand head of cattle came in from Mexico. Why ? Because they have not facilities to carry more cattle from Ontario. I never heard of a single animal being stalled for want of railway facilities to carry more cattle from Ontario. Our present facilities could have carried five times as many as they did. But he takes the cattle that were brought in by the settlers, by the ranchers who were driving them out of their own country, and he uses these as an argument to justify the expenditure on this new line. That shows how the hon. gentleman is handicapped for arguments. I say we are sidetracked in Ontario, you are doing a great injustice to the people of Ontario. What does this mean to every Ontario farmer to-day ? I say if this railway is built, the eastern section will cost $125,000,000, including what will be paid for the first seven years on the guarantee that we give for the western section. There is no doubt whatever it will cost us that sum in the next ten years.

The POSTMASTER GENERAL. How do you reach these figures ?

Mr. SPROULE. I say the eastern section of 1,800 miles cannot be built, if the railway is made up to the standard to that described by the member for North Norfolk for one dollar under $125,000,000.

The POSTMASTER GENERAL. Could the hon. gentleman give us a little closer estimate ?

Mr. SPROULE. I can give you the cost of the sections of the road that are already built through a somewhat similar country.

Mr. TALBOT. But the hon. gentleman said just now that he knew nothing about the country, that nobody knew anything about the country.

Mr. SPROULE. The government themselves say that. I am basing my reasoning upon what we know of the cost of railways that have passed through a country similar, according to the reports of engineers on this very section, what it would cost to build a railway of this character. I say it will cost 125 millions, and that sum must be piled on to the debt of Canada. What does that mean to the Ontario farmer? There are said to be in Ontario 455,000 families, and this will mean an addition of $125 of debt imposed on every family in Ontario. Let them think of that in the future. According to the population of Ontario, her portion of this heavy expenditure will amount to $45,525,000. This I say is an addition to our debt, it is another mortgage against every Ontario farmer, and every Ontario family of five persons, it represents a mortgage of $125 registered against every Ontario family, the interest upon which they must pay for all time to come until that debt is wiped out, and it will never be wiped out in the life of the youngest member of this House. Let them think of that for a moment, and then triumphantly claim what this great achievement means that the present government propose to accomplish. Let them ask themselves whether they will be justified in endorsing that undertaking, that baby policy, that monstrosity of politics, that has been launched upon the world in connection with this scheme. When the people of Canada have digested this policy properly I am quite sure what the result will be. Sir, once more I dare the government to dissolve this House and appeal to the country to-day. Dare they ask a mandate from the electorate for this heavy undertaking? They dare not do it, I challenge them to do it. We will willingly accept the result on this side of the House. I warn the government that if they still insist upon carrying out this policy, it will stand as a monument of folly to their credit. They are writing a page of history, as the hon. member for Westmoreland said, and they are writing a page of history which will be read in future, and which will not be complimentary to them, or creditable to their statesmanship, to their judgment or to their business ability. They are building that monument to themselves and that monument will stand in commemoration of what they have done. I am willing to abide by the results, but I have only sympathy for the poor rate-payers who are to-day being plunged into the dreadful abyss. They cannot see what is before them in the future, the thraldom of the yoke is imposed upon them, and chains are shackled around them which cannot be unfastened for the rest of their natural lives by virtue of the great policy which was introduced and upon the advent of which we all heard such an hysterical acclaim as was given when the right hon. leader of the government gave it to this House, to this country and to the world.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. RODOLPHE LEMIEUX (Gaspé). Mr. Speaker, I must first of all apologize to you and to the House for attempting to speak in a language that is not my mother tongue, but I feel it my duty as a Canadian holding a mandate from the people, to express in as concise and clear a manner as I possibly can my opinions on this question of national importance. I shall not detain the House at any length, because I am well aware that already the arguments on this question, pro and con, have been fully adduced. It has been my privilege to sit in this House since 1896, and during this comparatively long parliamentary period no question has ever been brought before this parliament to compare in magnitude with the present proposal. Indeed, one must go back to the old days of 1878 and 1879, when the Canadian Pacific Railway contract was explained to the House by Sir Charles Tupper, then Minister of Railways and Canals, to find a parallel to the present situation. Sir Charles Tupper, in 1879, presented his famous motion by which the Canadian Pacific Railway contract was to become a government measure. It reads as follows

> That engagements have been entered into with British Columbia as a condition of union with Canada; that a line of railway to connect the Atlantic with the Pacific shall be constructed with all practical speed. That the Canadian Pacific Railway would form a great imperial highway across the continent of America entirely on British soil, and would provide a new and important route from England to Australia, to India and to all the dependencies of Great Britain in the Pacific; as also to China and Japan.
>
> That reports from the mother country set forth an unprecedented state of enforced idleness of the working classes, and the possibility of a scheme of relief on a large scale being found indispensable to alleviate destitution.
>
> That the construction of the Canadian Pacific Railway would afford immediate employment to numbers of workmen, and would open up vast tracts of fertile land for occupation, and thus would form a ready outlet for the over-populated districts of Great Britain and other European countries.

And, Sir, again to-day, notwithstanding what has been asserted by my hon. friend from East Grey (Mr. Sproule), the countay demands that a new transcontinental railway shall be built with all practical speed, as 25 years ago it demanded the construction of the Canadian Pacific Railway. A quarter of a century ago the announcement was made that a transcontinental railway should be built as an all-Canadian route, and to-day

Canada demands that this promise be implemented by the construction of a second national line, thereby giving employment to numbers of workingmen and opening up fertile lands to the tillers of the soil. It has been said Sir, that time is a great healer, and it may also be said that time is a great educator. Who amongst the old parliamentarians who sat in this House in 1878 and 1879, could have then ventured to predict that the day would come when the question of a new transcontinental would become a live issue in Canadian politics? Much as we may differ on details of this Bill, much as we may differ as to some of its features yet the necessity in which the government finds itstlf to present such a measure to the House and to the country at this juncture must indeed be regarded as a happy necessity. This policy is not a monument of folly, as was so inaptly said by the member for East Grey. It is a bold and it is an aggressive policy, but one which is sanctioned by the Canadian people. I fully recognize that hon. gentlemen on the other side would be remiss in their duty if they did not criticise the details of this measure as members of His Majesty's loyal opposition. Governments, after all, are only human; we all know the truth of the old Latin maxim, 'humanum est errare'. The Oposition, under our parliamentary system, exists for the very purpose of preventing the adoption of any measure which may not be desired by the people, and one of its attributes is to criticise in every detail any proposal of the government which it may consider is unduly pressed before the House. It is the duty of an opposition to discredit the economy and show the weak points of such a measure. But in my judgment there are broad propositions in this enactment which should rally the unanimous support of the House, as they will rally the unanimous support of the country.

First, as to the necessity for providing new transportation facilities there is no question. We are all unanimous on that point. As to the imperative need of keeping Canadian trade within our own control instead of permitting it to flow year after year into American channels, there is no difference of opinion. As to freeing our country from commerical bondage, as to the expediency of opening up the ports of our Atlantic sea-boards, as to the wisdom of developing new Ontario, new Quebec, the prairies of the west, and the great lone land on the north of the Canadian Pacific Railway, we are all of one mind. This policy of the government is a broad one, and its very essence makes for Canadian solidarity, Canadian unity, Canadian commercial independence and Canadian stability.

I listened with much pleasure to my hon. friend from East Grey (Mr. Sproule), and if I speak to-night after him, let him not think it is because I can compare my ability with his. I am too young a member of this House to attempt to answer his very able speech, but, Sir, I am fully aware that when he says for instance that this policy is a monstrous policy, that it is a monument of folly, I know that he exaggerates just as he exaggerated in 1898, when he denounced the Yukon railway contract, submitted by the ex-minister (Hon. Mr. Blair), whom he now extols to the seventh heaven. The hon. gentleman (Mr. Sproule), as a result of this scheme, told us this afternoon that the country would incur an indebtedness of $125,000,000. I could not but smile at the fantastic figures presented by the hon. gentleman. Did he not to-day, as he did some years ago, obey the dictates of his imagination? To-day the hon. gentleman (Mr. Sproule) has done his best to run down the great lone land of the Canadian west. He and his friends represent the country through which this railway shall run as a country of muskegs and rocks; but in 1898, when the ex-Minister of Railways and Canals came before this House and sprung upon it, as the members of the opposition said, a contract which had been signed before parliament assembled, the hon. gentleman (Mr. Sproule) represented the acres of snow in the valley of the Stikine river as being able to produce recurring crops of gold year after year. Sir, I have his speech from which I quote the following:

> In the first place, Mr. Speaker, we will suppose that 500,000 free miners went into that country and located the various claims comprised in these 4,000,000 acres. Two years would be a very moderate estimate of the time required for this.

Sir, I ask my hon. friend, whose honesty of purpose I shall not discuss, where are those 500,000 free miners to-day? At that time my hon. friend, for political motives, wanted to extol the richness and wealth of the Stikine river valley, the projected route of the Mackenzie & Mann railway. He and his political associates are given to such exaggerations when it suits their purpose. This afternoon the hon. gentleman issued his challenge to the right hon. leader of the government. 'Dissolve the House,' said he, 'and appeal to the people.' Well, Sir, I will not play the part of the plumed chevalier of olden times, and pick up the gauntlet which the hon. gentleman has thrown across the House; but I can tell him this, that if to-day parliament were dissolved, and an appeal were made to the electorate on this very bold and aggressive policy, the country from one end to the other would support the present ministry. The government has been charged with hasty action in this matter. We are told that public opinion is not ripe, and that this scheme has not yet been matured. Let me tell the hon. gentleman, as a French Canadian, that if there is one thing which early in my political life I came to recognize, it was the pluck, the

grasping power, the grit of the British people ; and this is a measure which in its very essence shows these British characteristics, because the government realize quickly and sharply that it was wanted by the country. Let me recall to the hon. gentleman a historical incident. On the 26th of November, 1876, late at night, one of the editors of the London 'Times' called on Lord Beaconsfield, who was then the Prime Minister of England, and told him that he had learned during the day that the then Viceroy of Egypt, being in financial straits, was looking for a syndicate to purchase his shares in the Suez canal. At once Lord Beaconsfield, without consulting parliament, summoned the few colleagues he could gather together in the city of London, and the result was that that very night he pledged the credit of Great Britain to a very large amount for the purchase of those shares. It was a bold stroke, and it was bitterly criticised by some members of the opposition ; but, Sir, the people of Great Britain knew what was pluck, what was energy, what was true statesmanship, and posterity will for ever declare that Lord Beaconsfield, a man of foreign extraction but of British citizenship, like our own premier, rendered a most valuable service to Great Britain for the part she has to play on the European continent.

My hon. friend this afternoon stated that there was no demand for this project, that public opinion had not pronounced upon it, except some railway grafters. You are aware, Sir, that some years ago this project was presented to parliament by some well known gentlemen; and, if I have to refer to them as grafters, it is because this is the expresssion used by the hon. gentleman and he will be much surprised to find amongst those so called grafters some of his most prominent political friends. Let me quote the names of the late Senator Francis Clemow, Mr. Victor Chateauvert, candidate for the Conservative party in Quebec West, and the late Hon. Mr. Dobell, who had been a Conservative, but who joined the Liberal party because he thought his principles would be in safer hands with that party than with the Conservative party. This scheme was known as the Trans-Canada Railway, and it received the approbation of all the large public bodies in the province of Quebec. My hon. friend from Bellechasse (Mr. Talbot) can state that during last year he travelled from Quebec to Vancouver, and that from every board of trade the unanimous consensus of opinion was in favour of this scheme. The Board of Trade of Quebec represented by its President, Mr. Tanguay, came before the honourable the Prime Minister on the 10th of February, 1901, with a petition in favour of this scheme, which concluded as follows :—

> On this financial basis the promoters of this enterprise would be prepared to suggest the following advantages to Canada, advantages which have never yet been offered to the country by any other railway corporation :—
>
> 1. To construct the entire road with steel rails and steel bridges of Canadian manufacture, thus offering to the new steel and iron works at Sydney, Midland, Sault Ste. Marie and Hamilton an immediate market for an immense quantity of steel.
>
> 2. To give free transportation from Quebec to any point on its line for all immigrants and bona fide new settlers and their effects.
>
> 3. To carry wheat from all points on its line in the province of Manitoba to the ocean steamer at Chicoutimi or Quebec for nine cents per bushel, thus saving the farmer of Manitoba about seven cents per bushel on present freight rates to the seaboard.

But there is more than that. If the hon. gentleman says that this scheme is only promoted by grafters, what will he think of my hon. friend who represents the county of Colchester (Mr. Gourley) ? Last winter, that hon. gentleman came from the great city of Truro to the small city of Quebec to attend the meeting of the Board of Trade, and there delivered an eloquent speech in favour of this very scheme. As far back as 1884 the Quebec legislature adopted resolutions in favour of a similar policy. This new transcontinental line will develop the resources of new Quebec to an extent which I cannot describe. The right hon. the first minister was taunted by the leader of the Opposition and the Conservative press for having made an oratorical display in presenting this measure to the House. Well, I have read very carefully the reports which have been published on the new district to be opened up by this railway and according to these reports the northern region of Quebec will benefit to an extent it is difficult to overestimate. If you will permit me, I shall read opinions given by people who were in a position to know, of the nature of the soil, of the minerals found and the other resources of these vast domains. In the great speech which he delivered, the Prime Minister spoke of the missionaries, the voyageurs and the trappers, who, in the olden days, explored the vast prairies of the west. He spoke of La Verendrye, whose sons were the first to climb to the summit of the Rocky mountains. This, Mr. Speaker, was no oratorical display, but an unvarnished statement of plain facts. This was a lesson in history to the young generation, who, in days to come, will be travelling through those distant regions in railway cars, those regions where 200 years ago the only white people ever seen there were those pioneers—men of my race and blood, and of whom I am justly proud. If you wish to know what is the nature of the soil you have to refer to the accounts given by those very men who crossed those vast plains many years ago. Here in the city of Ottawa you have the university conducted by the Oblate Fathers. As my hon. friends from the west know, the missionaries of this order have been the pioneers in the west. I have read the reports given by them and describing the Pine river valley,

the Peace river valley and Hudson bay district, and all these reports tend to show that there is in that distant land quite a new country just as rich and fertile as the southern part of Manitoba and the North-west Territories. Amongst others I have read a report from Father Nedelec, an Oblate Father, and an Indian missionary, who answered several questions put to him by Mr. Scott, the secretary of the Trans-Canada Railway. Father Nedelec says :

The country is generally habitable, except a few places, chiefly along the coast. Along the east coast the fishing is good. All kinds of grain, except wheat and buckwheat, also fruit and vegetables, are, as a rule, grown with success, except a few scattered places along the coast. I find it difficult to say what population might be supported in this territory. There is room for millions with improved agriculture and the development of industries. In some places the climate is better than that of north of Germany, better than Norway, north of Scotland. Lake St. John, Newfoundland. In some parts the natural resources are magnificent, and others not so good. As a general rule it resembles Quebec and the district of Lake St. John. All I can say is that the country is larger and more habitable than can be imagined. The soil is generally of a clayey nature. Between Lake Temiscamingue and height of land, white and red pine, spruce, soft birch abound; on the other side of the height of land spruce, soft birch and cedar.

Another Oblate Father whom I know personally, who was one of my professors at the Ottawa University, gives similar evidence. I refer to Father Paradis, former missionary at Moose Factory. He says :

This territory is very suitable for settlement and the land is first-class. From Lake Temiscamingue which is 650 feet above the sea, the Moose factory, a distance of 300 miles is one black clay plain, very suitable for grain, and well wooded with maple and other hard woods. At the height of land, 920 feet above the sea, pine is found in abundance also some very large poplar. From Lake Abbittibbi to James bay the finest spruce in America is to be found, and on the south side of the mountain some red pine.

He then speaks of the temperature, after which he discusses the produce.

The best possible potatoes and all root crops are grown here. Grain has not been tested to any great extent. I think wheat would succeed as well as in Manitoba. Oats, hay and barley would certainly succeed. Natural hay, excellent for cattle raising, is very plentiful. Excellent beef is raised here.

Then he comes to minerals, and refers us to Dr. Bell's report. He said :

See Dr. Bell's report. I find him very conscientious is his reports, gypsum abounds at the mouth of the Abbittibbi river. I think there is coal and petroleum under the river. Iron is plentiful. Mineral springs abound.

I think this country might be compared to Germany in Europe and the Fort Albany district with Russia.

The climate resembles that of Kamouraska, with the same flowers, wild fruits, such as gooseberries, strawberries, juniper berries and cranberries.

Let me now refer to the report of Dr. Bell, head of the Geological Survey Department, on this same region :

A considerable portion of the territory southward of James bay is fit for settlement. My own explorations have not extended eastward of the basin of Moose river. In that basin a great deal of good land is found between the watershed of the great lakes and the commencement of the low level country to the south-west of James bay. The soil is mostly brownish, gravelly loam and light coloured clay, with sand in some parts. In the coniferous forests, when the ground is level, the surface is apt to be covered with deep moss, but when this timber has been burnt off and replaced by deciduous trees the ground is dry. The summer and winter temperature resembles those of the county of Rimouski—the summers not so hot, nor the winter so cold as at Winnipeg. The average snow fall is about three feet or a little more, still not quite so great as about the city of Quebec. Potatoes and all kinds of root crops have been found to do remarkably well. Hay also grows luxuriantly. Barley would, I think, be a sure crop every year, and rye could also be grown with advantage.

I have had experiments made at New Brunswick House and at Norfolk on the Abbittibbi river, with a great variety of field and garden seeds and the results proved that this region is capable of growing anything which can be raised, say in the county of Rimouski. I regard the region as well suited for stock raising and dairy farming and it is not unlikely to prove fit for grain also.

Minerals are to be found in this region ; nearly all the metals are to be looked for in the Huronian formation, a belt of which is believed to run all the way from near Lake Abbittibbi to the south of Lake Mistassini, and this would be crossed by any railway from Quebec to James bay. Iron and gypsum are abundant to the north-west of Moose Factory.

We have also the report of the Rev. Mr. Bompas, the Anglican Missionary at Hudson's bay. But foremost, is the report of Mr. Henry O'Sullivan, F.R.G.S., a man well known in the province of Quebec, and a surveyor of great reputation. Mr. O'Sullivan, as chief surveyor of the Quebec Lands and Forest Department, has surveyed that region three times, and I beg to quote some of his conclusions :

1st. What proportion, approximately, of the territory in question, south of East Main river, and west of Lake Mistassini, would you consider to be fit for settlement ?

A. From what can be seen by following the principal watercourses and occasional runs inland, I may say that over two-thirds of the land area should be fit for cultivation, for there are no mountains of any great extent, and the land generally rises in easy swells from the lower levels of the river basin, and unless extensive swamps may exist in the level plains between the main waterways, there is no reason why the greater part of the country would not be fit for settlement, should climatic conditions prove favourable.

He speaks of the climate and then goes on to a description of the grain and other crops :

4th. What description of grain and root crops do you consider could be profitably raised

if there were railway communications through the centre of this territory ? And is the country suitable for raising live stock ?

A. Oats, barley, pease and buckwheat. Wheat has been raised at Waswanipy, about the centre of the region in question, and the grain grown from seed raised there succeeded as well as from the seed sent there by Dr. R. Bell, director of the Geological Survey, from the experimental farm.

5th. Is the country well timbered, and with what kind of timber ?

A. The country is, in general, well covered with spruce, the chief marketable timber ; poplar and bouleau (white birch) are also found in abundance, wherever forest fires have made their marks. Banksian or jack pine is seen in the forest districts, but there is no white or yellow pine beyond the height of land, with the exception of a few scraggling groves in the neighbourhood of Lake Abbittibbi.

Now, the right Rev. W. Carpenter Bompas, Bishop of Selkirk, who has lived nearly all his life in the territory says :

The approach of your railway to Hudson's bay I think most valuable in every way, both in the way of commerce and in defence of the Dominion, if needful. Your further course, by way of Norway House, Green lake, Athabasca Landing and Lesser Slave lake, I deem very advantageous in the way of commerce and partly for settlement of the country, and especially as a route of communication with the far north country of Mackenzie river and the far northern lakes, Great Slave lake and Great Bear lake, with their fine fur country and the rich timber and soil country of Athabasca.

Then you come to Peace river, which I deem one of the chief gems of the whole Dominion. I think it certain to be settled up as soon as your railway reaches it. It has been a shame that so fine a country should remain unsettled only for want of some means of communication with it.

Permit me, Sir, to quote also from a very eminent man employed by the Department of Lands and Forests in the province of Quebec, Mr. Crysostome Langelier, who has written a book on this section of the province of Quebec, under the title 'Le Bassin Meridional de la Baie d'Hudson. He says :

In all the southern basin of this bay no mountains nor continuous highlands are to be met. Properly speaking, there are no basins, the river is simply running across vast plains level almost with the general surface of the soil. * * * In the region nearest Hudson's bay the ice has left no marks of erosion.

* * * * * *

What has just been said indicates that there are no mountains in the southern basin of Hudson's bay. A few hills here and there can only be noticed. They are of such small elevation above the general range of the ground that they seem to have been placed there simply to make one remark the general uniformity of these Silurian plains. One cannot even see there, those small hills formed by masses of gravel or other diluvian compounds, which are to be met in the plains of the Saskatchewan, where they have been gathered up in mounds by the currents which ran between the Caribbean sea and Hudson's bay. The area of good farm land comprised in this region is immense. The soil is formed of that clay which in our province supplies the most fertile tracts. Nearly in all directions the clay lies in thick strata, which form an arable land of inexhaustible fertility. These layers of clay are sometimes intermingled with sand or gravel, which only adds to their value as land fit for cultivation. This clay is sometimes to be found in compact masses, but in general it has been brought there by the action of the water combined with that of the ice, and in that state it is far more friable and of far more easy cultivation.

These clay lands stretch from Lake Mistassini to Churchill river, in all that flat country which surrounds the southern part of Hudson's bay. That is to say, that they cover an area of about 250,000 square miles. It is in this region, drained by Moose and Albany rivers, that they find their greatest development and seem to offer the best soil. This is nearly the opinion of Dr. Bell, who, during several years, has explored that country, as a member of the Geological Survey. * * *

What has just been said can give a fair idea of the lands around James bay, and which stretch north of the Laurentian plateau, from Lake Mistassini to the source of Albany river. In the vicinity of Lake Mistassini the soil is equally good, as it is averred by Mr. James Richardson's report, a man whose experience and competency are well established : 'The land is composed of rich soil, mixed with sand, well suited to agricultural purposes. This country lies on calcareous stratas, whose decomposition has resulted in forming a rich soil. The surface is level, not rising more than 30 feet above the lake, which fits that region for agricultural enterprise.' A soil just as good, if not better, is to be found in the region of Lake and River Abbittibbi. 'Lake Abbittibbi is surrounded on all sides by land formed of clay ; it is level region.

Here, I have given you the information of men who know, of men who have travelled in that country, of men who have studied the geological features of that country. It is also well known that the plateau where the Rivers Ottawa, Gatineau and Lièvre meet, contains at least 10,000,000 acres fit for agriculture. We have the reports in the Department of Land and Forests of the province of Quebec showing that this land can sustain at least half a million people. Our lumbermen will tell you—and there are some of them who sit in this House—that the water-powers are immense, splendid, and that country offers a great future for our pulp industry. Railways have wonderfully developed our timber resources of late years. They have also greatly helped our colonization movement. Let me quote what was said not long ago by the Quebec 'Chronicle' speaking of the Lake St. John district, where, as you are aware, there is a railway heavily subsidized by the government of Canada and by the government of the province of Quebec. A few weeks ago the directors of that railway went into that district to inspect the road and they reported that the movement of colonization was perhaps the most gratifying of all. The Quebec 'Morning Chronicle' of August 1st, 1903, may be quoted as follows :

The movement of colonization is perhaps the most gratifying of all. The new townships north and west of Lake St. John are being rapidly filled up in consequence of the generous policy of the railway company, which carries all new settlers and their effects free of charge. In Normandin nearly all the lots are taken, and new settlers now have to go further, into the townships of Girard and Albanel, some settlers being now as far as 75 miles from the railway. The surveyors on the line of the Trans-Canada Railway have discovered some magnificent land further west, and if this new railway goes on, as the whole population of the Saguenay ardently desires, we may look for a great colonization movement in that direction.

It will be remembered that the province many years ago gave large subsidies—some people thought too large—to the Lake St. John Railway. The wisdom of that policy is now amply justified, not only by the progress and development of the country, but by the fact that the provincial treasury is to-day receiving a revenue from the lands and lumber trade of this district sufficient to pay the interest upon the subsidies granted. It is not often that governments get so direct a return for aid to public works.

From all these facts it will be seen that this beautiful country is progressing in a marvellous manner, and it is not to be wondered at that the directors of the railway have returned from their annual inspection much gratified with what they have seen, and full of confidence as to the future of the road.

Sir, for many years past, the government of the province of Quebec, and indeed the government of the province of Ontario, have been clamouring for better terms. Better terms for what? Better terms because the provincial governments had not sufficient means to develop colonization. I make bold to say that with this transcontinental railway traversing as it will the northern part of Ontario and the northern district of Quebec, the question of better terms will be partially solved. You thus give to colonization a new impetus, and you indirectly remit to the provinces what they have expended so liberally in the past, and which has benefited directly the federal government.

Mr. SPROULE. I understood the hon. gentleman to say that the provinces of Quebec and Ontario have been clamouring for better terms for years. Might I ask him when the province of Ontario asked for better terms except at the last conference to which it was invited?

Mr. LEMIEUX. My hon. friend is not conversant with history. If he will go to the Library he will find the resolutions adopted by the Quebec conference in 1887, which was presided over by the Premier of Ontario, no less a man than Sir Oliver Mowat.

Mr. SPROULE. Was there a request from Ontario at that time for better terms?

Mr. LEMIEUX. Certainly, my hon. friend must be aware of that. One of the principal resolutions adopted at that conference referred to the better terms which have been demanded from the federal govrnment.

Mr. SPROULE. By Ontario?

Mr. LEMIEUX. By Ontario, by Quebec, by Nova Scotia, by New Brunswick, by all the provinces except British Columbia. The same demand was repeated last winter, and the question is indeed a vital one for Ontario and Quebec. The reason why these provinces are clamouring for better terms is that they have not sufficient revenue to enable them to promote colonization. I repeat again that the construction of this railway in New Ontario and in New Quebec will partially solve the question of better terms. Coming now to the contract, I find that the government has made a bargain most advantageous to Canada. Compare this contract with the one passed between the Dominion government and the Canadian Pacific Railway. Compare the resources of the country in 1880 with those of to-day—and you will admit with me that the bargain with the Grand Trunk Pacific is an extraordinary good one. In rough figures—and excluding all subsidies given the Canadian Pacific Railway—in recent years, we can say that this company has received from Canada: 1. $25,000,000 in cash. 2. $35,000,000 is completed works. 3. 25,000,000 acres of land.

The Grand Trunk Pacific receives no land grant. The land—at least under a reform government—will remain the property of the settler. The Canadian Pacific Railway was exempt from taxation. The Grand Trunk Pacific will be subject like all other corporations to taxation. There were monopoly clauses in the Canadian Pacific Railway contract. It nearly threatened the Dominion with secession on the part of Manitoba.

This controversy of historical importance was carried on for several years between the Dominion and Manitoban governments regarding the terms and operation of what was called the 'monopoly' clause. The rights or restrictions which were so obnoxious to the provincial government are found in clause 15 of the Canadian Pacific Railway Company's charter as follows:

> For twenty years from the date hereof no line of railway shall be authorized by the Dominion parliament to be constructed south of the Canadian Pacific Railway, from any point at or near the Canadian Pacific Railway, except such line as shall run south-west or to the westward of south-west, nor to within fifteen miles of latitude 49. And in the establishment of any new province in the North-west Territories, provision shall be made for continuing such prohibition after such establishment until the expiration of the said period.

There is no such monopoly embodied in the present contract. Bygones are bygones—but one cannot help saying that the Canadian Pacific Railway has been royally treated by the Canadian people. The great company has certainly been quite a factor in

the making of modern Canada—but Canada has done her duty in no half-hearted manner.

What are the principal features of this contract ? The company is to build its own line from Winnipeg to Port Simpson, but the government will pay interest on certain of its bonds for seven years. The government will build the line from Winnipeg to Moncton, but will not charge the company any rental for seven years. The net outlay by the country on these two items will be about $13,000,000. The section from Moncton to Winnipeg will cost money. We will incur a large expenditure, but let us not lose sight of the fact that as soon as constructed this line will be taken off the government's hands by a responsible company, which will pay in rental a sum equal to or more than the government pays in interest. In return for its outlay on construction, the country will possess advantages almost incalculable. 1st. It will own a first-class road from the Atlantic to Winnipeg ; 2nd. It will lease that road to a great and powerful company during a term of fifty years ; 3rd. It will dictate rates not only to the Grand Trunk Pacific but control also those of competing routes ; 4th. It will be in a position to give all other railway lines running and haulage powers, not alone from Moncton to Winnipeg, but right through to Fort Simpson.

These are only a few of the many advantages drawn by the country from that contract. But there are others.

1st. The security for the bond guarantee is to be found in mortgages which may be foreclosed by the government in case of default.

2nd. The control of rates is a powerful weapon in the hands of the government—a weapon which will protect the people against extortion by this company or its rivals.

3rd. The running powers over the line reserved to other companies will prevent these from asking any subsidies for new roads.

4th. The company will provide shipping accommodation on the Atlantic and the Pacific termini.

5th. It will purchase its material in Canada.

6th. It deposits $5,000,000 as a guarantee of its good faith.

7th. It accepts the proposition that the aid extended to it is given for the purpose of encouraging the development of Canadian trade, and the transportation of goods through Canadian channels.

But I go further and say, the bargain is also advantageous to the Grand Trunk Pacific. It must be so, because the company would not have engaged itself (a) to build the western section; (b) to operate the whole line; (c) to pay 3 per cent per annum on the cost of the leased property; (d) to submit to government control of rates; (e) to concede running rights; (f) to quote as low rates to Canadian ports as to American ones; (g) to ship all unrouted freight to Canadian ports. To have accepted those conditions is the evidence on the part of the company that it is convinced that there is a vast business to be done and done at a profit.

Let us not forget that our North-west has become the promised land of the immigrant, and that the last few months have witnessed a marvellous influx of population from foreign countries into those territories. Let me quote a few statistics. According to the report of the Immigration Commissioner at Winnipeg, dated June 30th, 1902, the arrivals of immigrants at that city in the year 1900 numbered 31,510, and in 1901, 32,005, whilst in 1902 they numbered 55,261. Let us take now the land sales. According to the report of the Deputy Minister of the Interior for the year 1902, the fiscal year recently ended, has shown sales of 2,201,795 acres, or 1,580,768 acres in excess of 1901.

The combined area of land disposed of by the government under homestead entry, by sale, &c., and by the railway companies, amounted to 4,954,847 acres, showing a very large increase over the figures of 1901.

Not long ago the Minister of the Interior, speaking at the Metropolitan Church in Toronto, made the following significant statement :—

> The tide of population is only beginning to rise—I am not one of those who are inclined to undue optimism. I am in the habit of looking at rosy and exuberant predictions in a somewhat cold-blooded way ; but having regard to the sources of information at my disposal, I should not be at all surprised if by the first day of July, 1905, there were about 750,000 people in Manitoba and the North-west Territories, and perhaps a million.

And the minister added :

> Here, then, we have the situation in a nutshell—a vast and productive territory becoming quickly occupied by a throng of people who will be called upon to take up the duties of citizenship almost at once, whose successful pursuit of agriculture will make them financially independent, and who in a short time will constitute a most potent factor in the national life of Canada.

But, Sir, in connection with this immigration pouring, as it does, into our great west, there is a future which, in my judgment, clearly establishes the fact that the movement of population will not cease until there are millions settled on the prairies of the far west.

We are all aware that up to the middle of 1902 the proportion of new settlers in the west was not much over half American, but after that date it was considerably greater.

We are also aware that during the last three or four years immense tracts of Canadian lands have been secured by American capitalists. Sir, what is the cause of this sudden American migration towards Canada ? Are the tables turned ? Shall the United States pay, as we did ere long, a tribute to Canada ? Sir, the cause, the rea-

son is obvious. The Americans have reached the limit of the good land in their own territory and are coming into Canada in thousands. The reports they are sending back will for many years to come result in increasing immigration from the United States, because the land they are settling upon is admittedly better than that of any of the states west of Iowa.

This is not a dream, this is not the whim of an imaginary mind. The day is not far distant when the west will be thickly settled by the vast army or foreigners which is now and for many years to come, invading it. Amongst those welcome invaders the Americans will figure amongst the most numerous.

Permit me, Sir, to read the extract of an interview published in the month of September last, in which Sir William Van Horne expresses his opinion on this new invasion :

> The homestead lands immediately along the railway track have been taken up, but you must remember that the territory is enormous, and that when all the homestead lands are taken up, the population will be numbered by millions, and the railway mileage will be increased tenfold. In Manitoba, I suppose, practically all the homestead lands have been taken up, and practically all the railroad lands have been sold. This is also largely true of Eastern Assiniboia, but as you go further west, of course, the unoccupied areas increase. I regard this as a permanent movement. It is not stimulated by speculation as the earlier movement was. The great majority of the people are coming with the intention of remaining permanently as farmers, and not for the purpose of buying up lands for an advance The greater part of them are people from Iowa, Minnesota, Nebraska and others of the better western States, who have been successful, who originally bought their lands very cheaply, or took up homestead which they are now able to sell at very high prices, and who are coming to the Canadian North-west to repeat this operation.

If the rush of population goes on at such a rate, if our prairies are becoming the great wheat fields of the world, is not the government doing their duty towards Canada in securing at once the transportation facilities which are already or will soon be of urgent necessity ?

Sir, this project has been bitterly criticised by a man from whom you might expect better, and who once was amongst the leaders of the Liberal party in this House. The argument of the ex-Minister of Railways was not a criticism, it was a bitter attack. It was not reason ; it showed too much temper. In fact the temper that permeates the whole speech of the ex-minister shows that the true inwardness of his resignation has not been yet revealed to us. His speech is full of dread and alarm, as it is full of bitterness. It is an onslaught on his colleagues, and it would reflect on the Prime Minister, if we did not know the Prime Minister and his colleagus as well. I listened very carefully to the speech of the ex-minister (Hon. Mr. Blair) and knowing what we have done to support him in days gone by, I could not help but think that the old French adage is still true : 'Gratitude, thou are written on sand ; ingratitude, thou are written on brass.'

The speech of the ex-minister (Hon. Mr. Blair) is a tissue of contradictions. First he condemns the Winnipeg-Quebec section, and then he announces in the same breath his personal predilections for it. He is against a line from Quebec to Moncton, but he would favour a line from Quebec to St. John. He condemns the government for giving the Grand Trunk Pacific Railway the prairie section, or what he calls the fat section, and he says that not until there are 5,000,000 people settled in the southerly portion of the North-west, perhaps when fifty years have elapsed, will there be some settlements in the northern territory. He says that it will injure the Intercolonial Railway if this line is built in New Brunswick, but at the same time he says that the grades to be overcome would keep the new road from being able to compete successfully with the Intercolonial Railway. He told us that a measure of this importance requires a long preparation, but what about the Yukon Railway contract, which we Liberals in this House supported in 1898 ? It was sprung upon the House during the first days of the session, was prepared by the hon. gentleman (Hon. Mr. Blair), and I well remember the onslaught of the opposition, how they clamoured, and how they appealed to the Liberal party to respect parliamentary government. In these days gentlemen opposite represented the ex-Minister of Railways as Cromwell himself, ordering away the mace from the House of Commons, but to-day, in their estimation, the ex-Minister of Railways is a great man in the country, and his words should be taken without cavil by the people of Canada. Let me now quote to the House some extracts from an interview which the ex-minister (Hon. Mr. Blair) gave to that book of books the 'Mail and Empire.' on the day this scheme was launched by Mr. Hays, on the 24th of November last. I will present that interview in all its nakedness : naked as a silver plate, naked as a church wall. Here it is :

> Ottawa, Ont., Nov. 23.—The announcement of Mr. Hays of the intention of the Grand Trunk Railway Company to apply at the forthcoming session of parliament for the incorporation of the Grand Trunk Pacific Railway has aroused great interest here, although the intimation was not unexpected. In recent speeches in British Columbia Mr. Blair, Minister of Railways, alluded to the wonderful development of western Canada, and the necessity of keeping abreast of the times in regard to transportation facilities He referred then to the possibility of one or more new transcontinental lines being constructed.
>
> The 'Mail and Empire' correspondent asked the minister to-night if he had at the time in his mind the possibility of the extension of the Grand Trunk Railway to the Pacific coast. Mr. Blair replied :

'Well, so long as the subject is one new of public knowledge I may frankly say that I knew what was coming. Mr. Hays has discussed the matter with me on several occasions, but until a definite conclusion was reached by the company I did not feel at liberty to speak of it. I am free to confess that in my judgment the development of the Canadian North-west and British Columbia will be so rapid in the next few years as to afford ample traffic for three transcontinental lines, and I am glad to know that the Grand Trunk Railway Company seeks to share in that development. To build a railway from Gravenhurst or North Bay through New Ontario, across Manitoba and the Territories to the Pacific coast via the Pine or Peace river passes—the route which, I believe, the Grand Trunk Railway contemplates to adopt—cannot be less than 2,500 miles. It is a pretty big undertaking, but it has been done before, and can certainly be accomplished again.'

Mr. BROCK. There is nothing about Moncton there.

Mr. LEMIEUX. No.

Mr. CHARLTON. That relates to Toronto chiefly.

Mr. LEMIEUX. Let me remind my hon. friend (Mr. Brock) that he himself is quoted by Mr. Castell Hopkins, a good Tory of Toronto, as saying :

Mr. Brock, M.P., said that it would be an inestimable boon to the country.

Mr. BROCK. What would be ?

Mr. LEMIEUX. In all frankness, I must say, however, that my hon. friend (Mr. Brock) explained to me last night that he meant another route. I do not know if it was further north or further south, but he meant some other route than the one contemplated in the present Bill. I accept the explanation of the hon. gentleman. I only hope he does not decry this route because it has originated in the mind of the Liberal party.

You have also probably heard, Mr. Speaker, of a gentleman well known in my province, the Hon. L. P. Pelletier, the would-be leader of the Conservative opposition in the legislature of Quebec. Not long ago this gentleman made a speech in one of the dining rooms of the House of Commons, in which I believe, he invented the phrase, that the people would consider this scheme as 'Coxey's scheme.' Speaking in Toronto, on Wednesday last, the same gentleman——

An hon. MEMBER. Who is that?

Mr. LEMIEUX. Mr. L. P. Pelletier, the organiser of the future victories of the Conservative party in the province of Quebec, in Toronto the day before yesterday, he is reported as having spoken as follows :

Yesterday he had the pleasure of hearing Mr. Blair denounce the government on the Grand Trunk Pacific Bill. It was grand the manner in which Mr. Blair asked Sir Wilfrid why he could not wait. It was Senator Cox who could not wait. The proposed road was to be built through a country the birds only knew about. The building of the road was an outrage. An enormous amount of money was to be expended for the construction of a road from which the country would receive no benefit whatever.

But, Sir, the same Mr. Pelletier—I have the paper here—oh ! that my enemy had written a book—on the 28th of November, 1902, speaking at a banquet, where my hon. friend the able Minister of Justice was present, spoke as follows—I repeat his statements verbatim :

Gentlemen, you will before long spread your wings and look for a future in this province which is yours ; if you wish her to be prosperous she must prosper with you. An immense project has not long ago been traced on the map of Canada. We are to go in the districts of Keewatin and Athabaska to exploit the natural wealth which the Canadian Pacific Railway has not yet attained. To this we applaud with both hands—and the statesman who conceived the gigantic scheme of the Canadian Pacific Railway must thrill with joy in his grave.

But we say : Will this be done for the greatest advantage of Canada or to the benefit of some American ports ? We have in the northern region of this province seventy million acres of land—as good, as fertile as the western lands. We are able—by an all-Canadian railroad—which will be the shortest route to develop our own resources as well as the western ones.

This is the same gentleman who spoke to my Tory friends about 'Coxey's scheme,' and who now appeals to the electors of Ontario against it.

Let me come back to the ex-Minister of Railways and Canals. We have not only to look at the interviews he gave some months ago. Human nature is liable to contradict itself after such a length of time. But let us read the statement which he made before this House when the ministerial explanations were given as to what I will call the causes of his resignation ; but, as I have said, these have not been clearly revealed to me as yet. In that speech, which he delivered on the 16th of July, he quoted from his letter to the Premier as follows :

As I have said, I am in favour of the whole line being built and owned by government ; but having abandoned any expectation in that regard I am equally in favour of the whole line being a company line, if any portion of it, or a substantial portion, is to be a company line, and therefore I am prepared, since Council has determined to go forward with this undertaking at once, to co-operate with my colleagues in guaranteeing the bonds over the whole line to an extent not exceeding three-quarters of the cost of the construction of the railway.

Therefore, the ex-Minister of Railways and Canals, who threw so much ridicule on the project the other evening, who said that it was one of Senator Cox's schemes, and that his conscience would not allow him to stay in the government and defend it—that same gentleman said not many days

ago that he was in favour of a company building the whole line, extending from Quebec to Port Simpson, with the government guaranteeing three-fourths of its cost.

Now, Sir, what, according to the hon. ex-Minister of Railways and Canals, is the cost of the construction of such a line? He puts it at $139,000,000 for the whole line from Moncton to Port Simpson. Let us deduct $19,000,000 for the portion from Moncton to Quebec, which he is not willing to assist in constructing, and for the other portion there remains a balance of $120,000,000. Three-fourths of that amount makes $90,000,000, which the hon. gentleman was ready to guarantee.

Mr. BARKER. Will the hon. gentleman allow me to ask him a question? Is he under the impression that the government is guaranteeing three-fourths of the cost of the eastern section.

Mr. LEMIEUX. No, Sir, I am repeating the words of the ex-Minister of Railways and Canals, which show that he is not consistent in the declarations he has made.

Mr. BARKER. Will the hon. gentleman answer my question? Is he under the impression that the ex-Minister of Railways and Canals, was speaking of guaranteeing only three-fourths of the whole cost, and does he say that the present scheme is to guarantee three-fourths of the whole cost? The hon. gentleman says the whole cost is $120,000,000, three-quarters of which is $90,000,000. He forgets that we provide the cash for the 1,800 miles of the eastern section.

Mr. LEMIEUX. One would require to make a whole speech on the question brought up by the hon. gentleman. As you are aware, Mr. Speaker, the government is at present very bitterly attacked by a leading party organ of the Conservative party, the Montreal 'Star.' It is interesting to read what the 'Star' said on November the 3rd, 1902, on this subject:

THE GRAND TRUNK PACIFIC RAILWAY.

As announced by a special cablegram from our London correspondent on Thursday, a second railway to the Pacific coast in Canada is to be constructed in connection with the Grand Trunk system. The work will involve the building of 2,500 to 3,000 miles of railway, and the expenditure of from $75,000,000 to $100,000,000. That the great North-west needs additional railway connections with eastern Canada is obvious. The recognition of this fact and the construction of a second Pacific line under the auspcies of the statesmen who so boldly proclaimed that the first could never earn enough money to pay for its axle grease is a splendid vindication of the policy which brought the pioneer road into existence.

Of the merits of the particular scheme adopted for providing western Canada with the required additional railway facilities it will be impossible to judge until further details are announced. It is to be hoped that provision will be made by parliament for ensuring that the immense traffic of the new transcontinental line shall always find its way to Canadian ports.

The 'Star' of to-day materially differs from the Montreal 'Star' of the 24th November last. Let me quote also a statement made by the Conservative premier of the North-west Territories, Mr. Haultain. In an interview with that gentleman, published in the Montreal 'Star' of the 27th of November last, he is reported as having said:

I believed that at the end of five years, if there were two transcontinental railways, they would have all the grain they could carry, that is, so far as the Territories are concerned. At present there is a serious blockade, and the farmers are accordingly losing 10 cents a bushel on their grain. I have letters from the west complaining that buyers have taken advantage of the situation and reduced the price 10 cents a bushel below what it is at Fort William, leaving out the ordinary railway freight rate. I intend to see Sir Thomas Shaughnessy and ascertain whether it is not possible to obtain relief in some way.

What did Sir Thomas Shaughnessy, president of the Canadian Pacific Railway say on this subject? I find that in an interview on November 27th, 1902——

Mr. COWAN. What paper?

Mr. LEMIEUX. Montreal 'Star' of course, Sir Thomas Shaughnessy said in reply to the question: 'How about the Grand Trunk Railway proposed invasion?

There is plenty of room for another road north of us, but, at the same time, the settled districts are already well served by lines. As a matter of fact, I should estimate that there is not a fifth or a sixth of the land within 10 miles of the lines up there which are under cultivation. If the Grand Trunk goes in as a colonizer, there is plenty of work ahead for it and for other roads as well. It is a big, growing country, and is only beginning to develop.

I could quote Sir Sanford Fleming, I could quote the hon. leader of the opposition himself.

Mr. INGRAM. Could the hon. gentleman quote any Conservative papers since the scheme came out?

Some hon. MEMBERS. Oh, oh.

Mr. LEMIEUX. My hon. friend is really too innocent. He expects too much from the Conservative papers. Mr. Meighen, who is ardently interested in the Canadian Pacific Railway and who is a brother-in-law of Lord Mount Stephen, said:

Another point: In granting a charter for a transportation company of this character, it should be specifically mentioned that the terminals, both on the Pacific and the Atlantic, should be on Canadian territory. We do not want to furnish transportation for American railway and shipping companies. We want to develop our own country and its ports.

Mr. Gear, president of the Montreal foreign exchange, gives this opinion in the Montreal 'Star.'

I think there is ample room in the west for not only the Grand Trunk Railway, but other

lines as well. The Grand Trunk Railway will open up a country of great agricultural promise, abounding in mineral resources and forest wealth.

This is taken from the 'Star' of November the 24th, 1902. In that same paper Senator Forget, one of the leaders of the Conservative party in the province of Quebec, in fact the financier of the Conservative party in that province, is quoted as saying:

The establishment of a second transcontinental railway by the Grand Trunk is the best thing that could happen to Canada. It is the one great thing that will cause settlers to have great confidence in the west, and by doing so will especially benefit the Canadian Pacific Railway from the very time that such an announcement was made.

Mr. BARKER. Can you find something about the line from Moncton to Winnipeg?

Mr. LEMIEUX. I shall try and gratify my hon. friend. Mr. Reford was quoted a few days ago by the Minister of Finance. Let me quote another authority on the transportation question. Mr. H. Montague Allan, of the Allan Line. Mr. Allan said:

Mr. H. Montagu Allan, of H. & A. Allan, shipping agents, said: 'I am strongly in favour of the Bill as a whole, but have not had time as yet to take it up in detail. The shortening of the route from Quebec to Moncton will not, in my estimation, have a detrimental effect upon the Intercolonial. What we want is the shortest possible through route.'

An hon. MEMBER. What politics?

Mr. LEMIEUX. He is a well known Conservative.

An hon. MEMBER. Who was his father?

Mr. LEMIEUX. The father of the Canadian Pacific Railway. Let me now quote Mr. Thomas Harling, of the Canadian Lake and Ocean Navigation Company. Mr. Harling said:

Mr. Thomas Harling, of the Canadian Lake and Ocean Navigation Company and the Canadian Ocean and Inland Line, said: 'Although there are some features to which objection might be taken, I think that on the whole the Bill is favourable to the development of the country. As regards the question of paralleling the Intercolonial, I would say that the shorter the line can be made to the seaboard, the better the chances to obtain business. The long line debars business at present, and cannot compete with the shorter lines to Portland and Boston.'

Mr. Alexander McFee, a good Conservative from Montreal, and ex-president of the board of trade said:

Mr. Alex. McKee, ex-president of the board of trade, said: 'The proposed shortening of the route from Quebec to Moncton must be a part of this scheme. The Intercolonial should not be taken into consideration at all, for it being in touch with these centres, is the commercial needs of to-day. The government should enable the Grand Trunk Pacific to make its part of the undertaking a financial success, so that it will not be hampered in providing rolling stock, &c. What is of the greatest importance, after the rails are laid, is proper facilities for handling all the freight that offers. The Grand Trunk has shown admirable enterprise in double-tracking its present lines, and it is for the people to encourage it. There are no two opinions about it, that if we are to bring the products of the industrial centre in the east in touch with the west, the Grand Trunk, being in touch with these centres, is the company that should be supported. In speaking of the east, Ontario, Quebec and the maritime provinces must be considered together, and consequently this transcontinental railway must bring the Atlantic seaboard in touch with the west.'

This gentleman is a well-known Conservative of Montreal. He has appeared before our committees several times. He belongs to the Albany Club of Montreal, if there is any Albany Club there. His opinion under the present circumstances is highly valuable to the government. But, Sir, these are not the only pebbles on the beach. Let us read what Sir William Van Horne says. I quote from the New York 'Evening Post':

'Canada,' he said, 'has been adding sides to her hopper for a long time——

This, you will see, is quite a historic interview.

—but has neglected to enlarge the spout. She has for years been spending millions generously in the development of the interior and her railways, but has neglected her outlet to the Atlantic. Her crops and industries have grown and the hopper is simply full to overflowing, and the outlet at Montreal is not large enough. Her exports take the easy routes by the great lakes and the Erie canal to Boston and New York, simply because Canada sits comfortably by and does not see what she is losing. . . . The position of the Canadian Pacific Railway is absolutely unassailable. For that reason, it is our policy never to oppose anything. The trans-Canada road has started with better prospects than the Canadian Pacific had once. When the Northern Pacific road was built, everybody thought it was way up north beyond nowhere. Then the Great Northern was built, and people promptly forgot thinking of the Northern Pacific as far north. Then came the Canadian Pacific, and that seemed to run through the Arctic regions. We would hail with delight a parallel route from Atlantic to Pacific to help us develop the country. There is enough of it up there for us all.

The next question is, will the construction of this road hurt the Intercolonial Railway? And here I desire to accept the challenge made by the hon. ex-Minister of Railways (Hon. Mr. Blair). He said this scheme was an outrageous scheme, and that neither he nor any of his officers had been consulted. If any of the officers of the Intercolonial Railway had been consulted, he was sure that they would have condemned the whole scheme. Well, Sir, I have a friend on the Intercolonial Railway. We have had very few friends on that road, we of the Liberal party. I have asked my friend if the construction of this road would injure the Intercolonial Railway. I have his answer here. Mark my words, this gentle-

man, whose name I am not at liberty to give, but whose name I will give to any hon. member, provided he will not divulge it——

Mr. BROCK. We will take your word for it.

Mr. LEMIEUX. Thanks—this gentleman is one of the highest officers of the road, one who has handled the freight and passenger traffic for twenty years. He writes me under date of August 10th, 1903, as follows :

I take the first chance to give you a synopsis of my ideas as to how the Grand Trunk Pacific Railway—when built—will affect the Intercolonial Railway.

While many of our opponents are factious enough to believe that the Intercolonial Railway will be ruined and merely become a local line, I for one, do not believe so, and to any moderate and reasonable man not affected by 'too much' party—who will take sufficient time and interest to look into this matter—I think he will find, in my judgment, that instead of the Intercolonial Railway being ruined, that its earning powers will be greatly increased.

For many reasons which I can adduce, among which is the fact that the public should understand that the Grand Trunk Railway and the Grand Trunk Pacific Railway will be two distinct corporations traversing two different parts of Canada, and in no way connected with each other, except in their mutual stock interest. That the government have a contract at the present time for 99 years with the Grand Trunk Railway whereby they are to hand over, and do hand over to the Intercolonial Railway at Montreal, all eastbound freight routed east of Quebec and Lévis, and I understand that this contract can only be cancelled by the government giving to the Grand Trunk Railway twelve months' notice to that effect.

Now if what I say is correct, I fail to see where the Intercolonial Railway will lose any of this eastbound freight that they are now getting, and I take it when the Grand Trunk Pacific is finished through to Moncton, that the winter export business, which the Intercolonial Railway does not get now, and are not likely to get in the future ; so that instead of the Intercolonial Railway losing business, rather it will gain largely in its earnings on what I call the two Atlantic divisions from Moncton to St. John, N.B., and Moncton to Halifax, as this new road will hand over at Moncton, train-loads of export stuff, which will reach the trans-Atlantic steamers at the two points named, so that the earning powers of the Intercolonial Railway will be greatly increased on these two divisions, more than making up for any deficit that might occur on its main line between Lévis and Moncton, but I do not admit that any decrease will take place even on that section, for the reason that, as already stated, the Grand Trunk Railway handing over their traffic freight from Ontario and the west to the Intercolonial Railway, owing to the increase of traffic caused by the opening of that section, which will give the Intercolonial Railway much more freight than they receive at the present time, so that I cannot see why these gentlemen can say that the Intercolonial Railway will be ruined.

It is a well known fact that in 1867, when the Intercolonial Railway was built, it was not talked of as a transcontinental road, but considered a link in the confederation chain between the east and west. Besides, at that time the line was looked upon as being more a military road. This was a strong argument for its being built by the north shore of the St. Lawrence, owing to any trouble that might arise in case of war with the United States, which was then a very much discussed subject.

Again, it will be noted that the Grand Trunk Pacific will pass through a fine section of the province of New Brunswick. As a matter of fact this section is considered almost a virgin forest, well wooded with timber, pulpwood, &c., &c., and will open up fine farming lands, splendid water-powers, &c.

Now as to the comparative distances from Lévis to St. John, N.B., and Moncton via Intercolonial Railway and the Grand Trunk Pacific, the following statement I believe was pretty near the mark, viz. :—

	Miles.
Lévis to Moncton, by I.C.R...	488
Lévis to Moncton, by G.T.P...	368
Saving in favour of G.T.P...	120

Mileage from Lévis to Moncton by Grand Trunk Pacific made up as follows :—

	Miles.
Lévis to Connors, N.B..	130
Connors to Edmunston, N.B..	32
Edmunston to Nashwaak	123
Nashwaak to Chipman..	32
Chipman to Moncton..	51
Total	368

Lévis to St. John, N.B., by Grand Trunk Pacific as follows :—

	Miles.
Lévis to Chipman, as above..	317
Chipman to St. John, N.B., to be built..	66
Total	383
Lévis to St. John, N.B., by I.C.R...	577
Saving in miles by G.T.P. to St. John.	214

I am quite well satisfied that looking into this matter calmly, and what I know of that section, that the building of this line from Winnipeg to Moncton will eventually redound to the credit of the Laurier government.

Here you have from one of the leading officials of the Intercolonial Railway, a man who has managed the freight and passenger department at St. John, at Moncton, at Montreal and at Quebec, the statement that instead of lessening the earnings of the Intercolonial Railway, this new road will greatly increase them. He says also in his letter that the Intercolonial Railway was built as a military road. I need not recall to the House—I have been speaking too long already—that the Intercolonial Railway was constructed from an imperial point of view. I need not recall here the early history of its construction. The House is familiar with it. The long route known as the Robinson trace, was selected in preference to others, because it was considered the safest in the event of war with the United States, and because, at all seasons, the troops could have access to our Canadian ports.

Let me read, Sir, a few extracts from a memorandum presented by Sir John A. Macdonald to the imperial authorities at the inception of the Intercolonial Railway, and you will see that as far back as 1858 the people looked upon the Intercolonial, not as a commercial venture, but as a purely military route, built for the only purpose of protecting Canada against any contemplated aggression on the part of the United States. The fears entertained by Sir John Macdonald, of our neighbours were not received with the same levity, as the fears expressed the other day by the premier were by our hon. friends opposite. I find the following in his memorandum :

We would further mention some facts which show that while the means of resisting invasion are in no way increased, the facilities for accomplishment are daily becoming greater. There are now no less than seven American railways terminating directly at the Canadian boundary, and a far greater number touching the waters of the River St. Lawrence, and the Lakes Ontario and Erie which divide Canada from the United States. All these roads may be said to form together a continuous line, running parallel with, or in easy proximity to, the provincial boundary ; and by their means, America would be enabled to concentrate, with the utmost expedition and ease, all her forces upon any quarter, and to choose her own point of attack.

Was this a bogy, as stated the other night by the ex-Minister of Railways ? Sir John A. Macdonald spoke of a possible invasion, just as the leader of this government spoke of possible complications with the United States, which might bring about the cancellation of the bonding privilege. Sir John added :

It may be urged that war with America is impossible, or at least an event so unlikely and remote as to justify no expenditure in anticipation of it. Admitting that the character and moderation of the federal government afford assurance of continued amity, it is not to be forgotten that there are other elements, not subordinate, whose influence may at any time become too powerful for control. The best safeguard against aggression is the power of repelling it.

Sir, this is a state paper well worthy the name and the pen of Sir John A. Macdonald:

The knowledge of our weakness and exposure to attack may do much to precipitate that which, were our strength understood, would never be undertaken. It is now well known that, being cut off from England, the province cannot make her resources and strength available should the necessity for their exercise unhappily come to pass ; and when the occasion does arise, it will be too late to provide the means. The road cannot be constructed without a due regard to reasonable economy for several years, and experience shows how impossible it is to foresee what events within that period may interrupt the friendly relations with a country the peculiar constitution of which vests so much power in a class whose interests or passions may, at any time, prompt them to acts which would necessarily lead to a rupture. While, therefore, the commercial or material advantages to Canada which would follow the construction of the road are comparatively unimportant, she feels it her duty to urge the high national considerations which demand that the work should be undertaken.

I could quote also from the address sent by the Canadian people to the Queen in August, 1858, bearing on the same subject. But I have quoted enough to show conclusively that the Intercolonial was built as an imperial highway, as a military route, and was not considered from a commercial point of view. Will the new road from Moncton to Quebec parallel the Intercolonial Railway ? We have been told that it will. Sir, I am familiar with the district through which it will pass, and I am only sorry to say that this road will not traverse the beautiful counties of Gaspé and Bonaventure. But I will not belittle this great question with local or selfish interests ; I will have an opportunity of speaking to the government, and of speaking loudly, when the time comes for the government to implement the promises that have been made by the previous Conservative administrations to the counties of Gaspé and Bonaventure many years ago. I say that the new line will not parallel the Intercolonial. There are points of divergence which range from 70 to 80 miles. As the leader of the government said the other day, there are mountains between those two lines. But what if the two lines were parallel ? We all remember that when the Canadian Pacific Railway was first constructed between Ottawa and Quebec it was contended that it would ruin the Richelieu Navigation Company, and also the Grand Trunk Railway Company, which runs south of the St. Lawence. What has been the result ? The Richelieu and Ontario Navigation Company has never paid higher dividends than since the Canadian Pacific Railway was constructed. The Grand Trunk Company has doubled its traffic, and the part of the Canadian Pacific Railway line between Montreal and Ottawa and Quebec is that part which pays the best. Moreover the Canadian Pacific Railway between Ottawa and Montreal has not only constructed a line on the north shore of the Ottawa river, but it has constructed the short line. We have added to the Intercolonial the Drummond County Railway, which was so vigorously oposed by our friends opposite, in order that more transportation facilities might be provided for the growing traffic of the Intercolonial Railway, and the Drummond Railway parallels the Grand Trunk.

Will this new line be a wheat carrying road ? Sir Wm. Van Horne and others have expressed grave doubts as to the probability of this road carrying any wheat east of Lake Superior. It has been said that an all-rail route could not compete with our water route as regards rates. I will admit that our water route will always give the harvests of the west a cheaper

transportation, provided we equip wisely and intelligently our harbours and channels, but no one can deny that we have a winter, and that during five or six months our river is closed. But this road will not only be a wheat carrying road. There will be in a near future an enormous traffic of the widest variety between the east and west. The wheat output must not only rivet our attention—far from it. Has there not sprung up a cattle trade ? Will not the western ranches increase year by year ? Who could deny that this cattle trade does not and shall not depend chiefly upon an all-rail route ? Besides, this new road through its connections in Ontario and Quebec, will afford our manufacturing interests an easier access to the western market.

I am not an extreme protectionist, but I can presume that some day or other our tariff may possibly be raised against the United States.

Mr. BROCK. Why not at once ?

Mr. LEMIEUX. Time will tell.

Mr. BROCK. But time will not wait.

Mr. LEMIEUX. Let me tell my hon. friend that when the tariff is raised, when we have duties as high as he desires, the whole country, Ontario and Quebec chiefly, according to his own statements, will be teeming with industries, and our manufacturing interests will be largely developed. Then, Sir, will my hon. friend be satisfied with the water route and will he not prefer to expedite his products and merchandise to his North-west consumers by the all-rail route ? But, I have been told that the all-rail route can successfully compete with the water route. Of course, I may be wrong, I do not wish to prophesy upon such a doubtful subject, but I am told that immense quantities of wheat are sent from Chicago to New York by the all-rail route and that the proportion is even sixty per cent of the western wheat harvests ; that though the Chicago shippers have the option of the lake route in summer, the railways get their share of the traffic; that they hold their own and that they pay large dividends, although their lines are far from direct. What are the rates ? By the all-rail route from Chicago to New York the rate is 8·4 cents per bushel, the terminal charges are 1·25 cents a bushel, making the total rate 9·65 cents per bushel. To-day the Canadian Pacific Railway charge for carriage on their rail and lake route from Winnipeg to Montreal, is 13·4 cents to 15·4 cents per bushel. Then, the American railways on an all-rail haul succeed in getting the rate nearly 4 cents below the Canadian Pacific Railway with its lake and rail route, and as I said a minute ago they pay dividends. This is done by easy gradients as was explained the other night by the hon. member for North Norfolk. Therefore, if such is the case, we can safely hope that this new national transcontinental road may become a wheat carrying road.

Sir, the right hon. Prime Minister referred in his speech the other day to the possible hostile attitude of the United States. The hon. ex-Minister of Railways and Canals ridiculed the idea, and he added that during the seven years he had been in the cabinet he had not heard a thrill on this subject. Has he forgotten the attitude taken by the United States about our Yukon Territory ? Has he forgotten the attitude of the United States upon the Alaska boundary question ? I need not refer to our many baptisms of blood in former days not to speak of the filibustering raids before and since confederation, but can he forget the McKinley tariff and the Dingley tariff—which are an illustration of what a policy of discrimination can be towards a friendly neighbour ? Has he forgotten the Washington treaty of 1871, or how it was carried out by the United States ? Has he forgotten the draft treaty of 1874, a treaty which was prepared by the late Hon. George Brown, the father of the Liberal party in Ontario, a treaty signed by the British ambassador, by the Canadian representative and finally rejected by the United States Congress ? Has he forgotten the draft treaty of 1888 ? Has he forgotten their treatment of Canada in the Behring Sea award ? The right hon. Prime Minister said that a time may come when complications, which God forbid, might arise, which would bring about the cancellation of the bonding privilege. This statement was hailed with derisive cheers, and I was surprised to see with what levity, nay, with what scorn, such an announcement was received from hon. gentlemen opposite and from the Conservative press at large.

Sir, is it possible that in our day and generation, the hon. gentlemen should be, to that extent, at variance with themselves, and their principles ? I remember the day, not far distant, when our leaders were loudly accused of disloyalty because they advocated reciprocity with the United States. I remember those inflammatory speeches in which the Liberal party was roundly abused on account of its so-called annexationist proclivities. We were charged with disloyalty, nay worse, with treason. The echoes of the memorable campaign of 1891 still ring in my ears.

Times have changed, and the history of the last eight or ten years has proven how utterly false and despicable were those charges. But, Sir, where do the extreme loyalists of yore stand ? The idea of an all-Canadian route is despised ; a policy of 'Canada for the Canadians' is received with contempt ! Yet, Sir, is not the danger

pointed out by the Prime Minister a tangible one ? It may be argued that the bonding privilege is of mutual benefit to both countries. This I readily grant. But I make bold to say that the cancellation of the bonding privilege would injure Canada to a greater extent than the United States.

I can safely assert that not an insignificant portion of the American press and a very large body of aggressive American politicians—for reasons we can easily detect—are decidedly opposed to that bonding privilege. The New York 'Sun' has been quoted, I could refer to the 'American Expansionist ;' the presidential message of Cleveland has been read, I could recall the deliberations of a special committee of the Congress appointed in 1890, to study the commercial relations with Canada. Has not the Canadian Pacific Railway itself been threatened many a time with the American hostility ? There are not a few who in the United States consider the Canadian Pacific Railway as a great military highway for the benefit of the imperial government.

Sir William Van Horne took it upon himself to go to Boston and deliver a speech upon that very question. Speaking on December 12, 1892, he said :

> It is pretty clear from the evidently inspired utterances of a section of the public press, and from the reported presence of a powerful lobby at Washington, that an organized attempt is to be made to secure legislation restricting or destroying the competition of the Canadian railway lines ; and in support of the movement the most absurd mis-statements are put out, calculated to excite prejudice against the Canadian railways. The Canadian Pacific Railway particularly is made to appear as an arm of the British empire sustained and kept alive by unlimited subsidies for the purpose of destroying American commerce.

I have quoted this speech in order to demonstrate how uncertain and how frail is this bonding privilege. We are practically at the mercy of our powerful neighbour. Complications which I do not anticipate, but for which we may not be directly responsible, may at any time, put an end to the bonding privilege. Such being the case, apart from the purely commercial aspect, I say that the construction of a new transcontinental railway, binding together as it does those rich and vast territories and traversing Canadian soil from sea to sea, freeing us from any foreign bondage should any complications arise in the future, is a project of national importance to Canada.

Sir, can we afford to build a new transcontinental railway ? Let us compare the condition of Canada fifty years ago with what it is to-day, and let us from that, judge what Canada will be fifty years from to-day, when this contract shall be at an end. The following is a comparative statement showing the advancement of Canada in the matter of population, foreign trade and railways and also showing the enormous growth of the three cities of Montreal, Toronto and Ottawa :

	1850.	1900.
Population..	1,842,265	5,371,315
Foreign trade.. ..	$34,000,000	$448,000,000
Railways, 66, 18,140 miles worth..		$1,100,000,000

	1860.		1903.
Montreal	90,000	with suburbs	300,000
Toronto..	44 000	"	250,000
Ottawa	14,000	"	70,000

The following figures will indicate the progress we have made since 1896 :

	1896.	1903.	Increase.	Per cent.
	$	$	$	
Imports entered for consumption.	105,361,161	224,816,612	119,000,000	113
Exports, the produce of Canada	109,707,805	214,401,675	105,000,000	97
Total trade.	215,068,966	439,218,287	224,000,000	104
Revenue	36,000,000	66,000,000	30,000,000	90
Railway earnings	50,000,000	83,000,000	33,000,000	60
Exports, the produce of the mines	8,000,000	34,000,000	26,000,000	325
Exports of manufactures	9,000,000	20,000,000	11,000,000	120
Bank assets.	316,000,000	581,000,000	255,000,000	80

Canadian unity, Sir, has been accomplished by the patriotic, by the unfaltering work of three generations of men. The story of the marvellous change of which we are to-day the happy witnesses falls into three periods each with its own special watchword. The historic struggle for responsible government—for Canadian liberty, marks the first period. Then came confederation, binding together the several British provinces scattered over the North American continent. The third period bears witness to the long looked for unity of the Canadian nation, a unity brought about, not only by the obliteration of racial and religious prejudices through the social intercourse, but also—and in a large degree—through the civilizing influence of commercial relations, so highly

developed by this great agent of civilization —the railway.

Responsible government, confederation and Canadian unity, these are, Sir, the successive ideals which followed each other in a natural process of historic development. Before resuming my seat I can not help expressing the opinion that the launching of this second transcontinental railway will, in the eyes of history, be considered as the crowning act of the Prime Minister's parliamentary career. To him, as well as to his great rival, Sir John A. Macdonald, will be due the two great Canadian highways. Meternich's bitter phase in reference to Italy : It is but a geographical expression : shall never apply to Canada.'

Mr. FRANK OLIVER (Alberta). I believe that Canada's further national development and welfare demands a second transcontinental railway. I believe that government ownership throughout of such a railway would be in the best interests of the country and people, both present and future. But as it has been shown that only one member of the cabinet, as it was, supported government ownership throughout, and as the feeling in parliament in its favour is confined to a few members on the Liberal side, to wait until belief in government ownership had grown sufficiently to ensure the building of a transcontinental railway as a government work, would mean leaving the western country without a competing outlet, either east or west, too long for the good of either west or east. If we cannot get what we want, the next best thing is to get what we can, on the best terms we can. That being the case, I support the present arrangement. Because it doubles the industrial and productive area of Canada. Because it doubles opportunity for every man in Canada. Because it offers the shortest and best all Canadian line from tide water to tide water, summer and winter. Because it is the only all-British railway across the continent under one management. Because it is so situated as to be most secure from foreign invasion ; giving depth, and therefore, strength to our country, to the advantage of both Canada and the empire. Because it gives development and competition in transportation to 1,200 miles of grain growing country in the west, as compared with 400 miles of such country developed by the Canadian Pacific Railway. Because it develops vast coal fields on the Saskatchewan, Athabasca, and Peace rivers, for the supply of fuel to the prairies. Because it gives the most northwesterly part of the prairie region, which is furthest from the Atlantic, a short outlet to the Pacific. Because it connects the railway system of Canada with 2,000 miles of steamboat navigation on the Athabasca, Peace, Liard and Mackenzie rivers, their great lakes, and the Arctic ocean. Because it develops mining and lumbering in northern British Columbia and provides facilities for profitable interchange of mutual necessities between the prairies and mountain regions of the far west. Because it ensures a third railway outlet from and through the wheat fields to the lakes. Because it develops a thousand miles of northern Ontario and Quebec, at present unknown and inaccessible. Because it cuts nearly 200 miles off the present Intercolonial distance between Quebec and Canada's nearest winter port, St. John. Because by government ownership and control of rates, with modern construction, and adequate equipment, it provides an all-year-round outlet for western grain ; and gives the merchants and manufacturers of eastern Canada profitable access to the market of the great west. Because it does this without land grant, tax exemption or provincial or local aid of any kind. Because it induces the investment of one hundred millions of British capital in Canada ; and correspondingly interests the British public in Canada's welfare. Because co-operation with the Grand Trunk Company secures effective, satisfactory and business-like operation ; ensures fulfilment of all engagements, provides business from the start, and secures the government from payment on its guarantee. Because by that co-operation all principal points in eastern Canada are put in direct connection with the west without extra cost. Because it transfers the through-traffic interests of the Grand Trunk, from the western states, to western Canada. Because it provides against over capitalization for effective government control of rates, and secures running rights to other roads throughout its whole length. Because an Atlantic outlet for the Canadian Northern, and extension of the Intercolonial to the wheat fields, is provided for without a cent of additional public cost. Because it gives maximum public control for a minimum public outlay, and absolute security for the financial responsibility assumed.

Mr. HAUGHTON LENNOX (South Simcoe). Mr. Speaker, as it is pretty late in the evening, and as a number of our members have gone to their homes, I move the adjournment of the debate.

The PRIME MINISTER. Mr. Speaker, though it is yet somewhat early in the evening, as I am sure my hon. friend has an important speech to make, and as the attendance in the House is rather slim, I feel inclined for my part to agree to the motion of my hon. friend. But I would like to intimate to the House—and in this I hope I shall have its support—that commencing on Monday next our sittings ought to be more extended in evening than they have been up to the present time this session. I think—and in so saying I believe I also express the feeling of the House—that it is time we should think of such a thing as prorogation.

Therefore, I propose that on and after Monday next the House should sit late, and even pretty late.

Mr. A. B. INGRAM (East Elgin). I may say that the reason why a speaker on this side did not follow the hon. member for Gaspé (Mr. Lemieux) this evening was owing to an arrangement which we had that he would speak about one hour, and that the hon. member for Wentworth (Mr. Smith) would have an opportunity of beginning his speech not later than a quarter to ten; but as the hon. member for Gaspé spoke till about ten minutes past ten, the hon. member for Wentworth was precluded from making his speech this evening. I think this explanation is due to this side of the House.

The PRIME MINISTER. I have no fault to find.

Mr. S. E. GOURLEY (Colchester). I wish to say, in answer to the Prime Minister, that I would like to listen, to the debate and understand it, and I can assure the right hon. gentleman, that sitting in the House from eleven o'clock in the morning till twelve at night, imposes upon any one, who cares to listen and understand, what is going on, a great mental task; and if he has anything to do beyond that time, he is driven from morning till night. Therefore, I would ask the Prime Minister, whether eleven or twelve o'clock, is not the latest hour, to which we shoull be called upon to sit ?

The PRIME MINISTER. I do not know my hon. friend's feeling, but I may say that my mind is made up—I am ready to vote.

Mr. J. CLANCY (Bothwell). I assume that the right hon. gentleman has of course consulted the leader of the opposition, as I think he would be entitled to do, before he made this announcement. The right hon. gentleman knows that we have commenced two sessions per day; and, while we all devoutly hope for an early prorogation, at the same time, he knows that we have entered upon the consideration of a class of legislation that should occupy the greater part of an ordinary session, and I hope he will defer committing the House to an understanding that we are to sit very late. He must see that that has somewhat the appearance of forcing the measure through at a time when members are not in the same trim that they are earlier in the session.

Hon. Mr. ROSS (Victoria, N.S.) We are in splendid trim on this side of the House.

Mr. CLANCY. In a word, I wish to call the right hon. gentleman's attention to the fact that his announcement will not be very well received.

The PRIME MINISTER. I have only to point out to my hon. friend, who is an old parliamentary hand, this fact, that this session we have not followed the rule which prevailed in my earlier days, when I first came into this parliament, not to adjourn before twelve o'clock, sometimes not till one o'clock. I do not intend to force the discussion. On the contrary, I think the opposition should have every latitude. But, on the other hand, my hon. friend must admit that we should not adjourn at half past ten, but should sit later.

Mr. CLANCY. The right hon. gentleman knows that if we have been adjourning early, it has been at the instance and for the convenience of his own supporters. I am not at all complaining of that, but I would like the right hon. gentleman, before he comes to a final conclusion, to consult the leader of the opposition. It is only fair, I think, that that should be done.

Mr. GOURLEY. And at the time the right hon. gentleman first came to the House, the strenuous life was not as popular as it is now, and it depends on food and sleep. In those early days members of parliament had a stimulant of some kind, which enabled them to maintain an all night session, and which we do not have.

Motion agreed to, and debate adjourned.

On motion of the Prime Minister, House adjourned at 10.25 p.m.

HOUSE OF COMMONS.

MONDAY, August 17, 1903.

The Speaker took the Chair at Eleven o'clock.

NATIONAL TRANSCONTINENTAL RAILWAY.

House resumed adjourned debate on the motion of Sir Wilfrid Laurier for the House to go into committee on a certain proposed resolution respecting the construction of a National Transcontinental Railway.

Mr. HAUGHTON LENNOX (South Simcoe). I have noticed that several hon. members much more competent to deal with this question than I am, and much more accustomed to speaking, have made apologies for the length of their remarks. Let me say, while possessed of all reasonable modesty, that I esteem it to be my duty to be guided rather by what I think is proper and necessary to be presented to the House than by the question of the time which my remarks may occupy. The question that is presented for our consideration is one so broad, so far-reaching that, if we had months to consider it, aye, if we had months to debate it, there would yet remain aspects of the question which would be useful to be presented and valuable to be considered. But I will endeavour, having regard to the importance of the case, to confine my remarks and my criticism to as reasonable a space as I can. I believe in the future of Canada. I have as great confidence in the future of Canada, perhaps, as any hon.

gentleman in this House. I belong to a party that has always had faith in the prosperity and achievements of Canada. As firmly as I believe in the rapid advancement of any part of it, I believe and look for the rapid advancement of the great west. I believe that, as representing a constituency, and as representing also the interests of Canada as a whole, it is my duty and the duty of every hon. member of this House, irrespective of politics, to see to it that the west has reasonable facilities for transporting to market its enormous product. And I will not be behind any hon. gentleman in conceding reasonable facilities to the west, or any other part of Canada, consistently with our duty in administering honestly and fairly the resources of the Dominion and in controlling the federal exchequer.

The Speaker, who closed the debate, was the hon. member for Alberta (Mr. Oliver). I have greatly admired the manner in which the hon. gentleman presents his arguments, although I have not often been able to see the cogency of his argument. I admire very much the forcible, earnest and sometimes, if I may say so without offence, the almost dictatorial manner in which he presents, as the ultimate conclusion of the matter, the view he happens to take of it. However, I do not propose, on this occasion, to deal with the manuscript which the hon. gentleman presented the other night. It contains five introductory sentences, and twenty 'becauses'; or four introductory sentences with one 'because,' and one other sentence containing twenty 'becauses,' as you prefer the punctuation. If his reasons are good, his statement is unanswerable. But the strength of his 'because' depends upon the cogency of his proposition. If one of them is good and broad enough to cover the whole proposition, the proposition is sustained. It is like presenting a number of reasons to the Court of Appeal—if you have one strong one, you may abandon the rest. I do not consider that the time of the House would be well occupied in discussing these 'becauses.' And the reason is 'because' all the hon. gentleman merely gives is twenty texts. He advances not one proposition, not one argument, not one fact in support of these twenty texts. It would be as easy to formulate forty texts, and I believe you can subdivide these forty into forty others in dealing with a great proposition such as that before us. It reminds one of the case of puss and the fox. I do not remember the story very well; the younger members of the House who have been more lately under instruction than I, will recollect it more clearly. But as I remember it, it was something like this: Puss, with her usual modesty said she had one method of getting clear of dogs. But the fox said he had ten in hand and ten times ten in a bag. Just then the baying of a hound was heard. Puss ran up a tree; and from the top of the tree she had the satisfaction—I presume it was a satisfaction, because we all condemn boasters—of seeing a dog's nose very close indeed to the fox's brush. Now, these reasons or texts of my hon. friend from Alberta, I am afraid, are somewhat the same as the fox's methods. I am afraid that, if put to the test, they would hardly answer. For instance, take the hon. gentleman's because' of two miles of shortened distance. I am afraid that, upon investigation, that would hardly bear criticism.

Now, I come to the speech of the hon. member for Gaspé (Mr. Lemieux). If there is an hon. member of this House whom I enjoy listening to, an hon. gentleman who, I think, delivers his addresses in a graceful and pleasing manner, one who makes the most out of a bad case, if he happens to have a bad case—and sitting to your right, Mr. Speaker, he very often has a bad case—it is the hon. member for Gaspé. But while, like the hon. member for Alberta, the presentation of his case is admirable, I fear that also like the hon. member for Alberta, his logic is not always conclusive. An hon. friend near me suggests that it is very limpy, and so it is. Let me refer to some of the hon. gentleman's statements in support of that proposition. The hon. gentleman says that under our parliamentary system, the opposition exists for the very purpose of opposing any measures which are not desired by the people. Now, I forgot to say that it will be my pleasing duty to concur in a great deal of what has been said by hon. gentlemen opposite, and I give my full concurrence to this proposition of the hon. member for Gaspé. He says that the function of the opposition—and he stated that he did not blame us for discharging our function—is to oppose any measure which might not be desired by the people. That is exactly what this measure is. Canvass this country from one end to the other, go where you will and the preponderating voice is, and the overwhelming voice will be when the scheme is fully understood, absolute condemnation of this measure. The hon. member for Gaspé says it is also the duty of the opposition to criticise any measure which may be considered as unduly pressed. It was evident that the right hon. leader of the House (Rt. Hon. Sir Wilfrid Laurier) realized the weakness of his case in this respect and sought to defend himself by urging the immediate necessity for relief and the demand of the public. My hon. friend from Gaspé also realizes that this measure, which he himself describes as the most momentous that has been introduced into parliament since confederation, and which is introduced at the eleventh hour, at the very end of a long session, should not be brought before us now. It is unduly pressing the measure; it is unduly exercising, not the right, but the power of the administration, when a measure of this kind is brought in at this stage and pressed through parliament.

Now, the hon. member for Gaspé says that the policy of my hon. friend from East Grey (Mr. Sproule) is to run down the great lone land of the great North-west and the policy of his friends is to represent the country through which this railway shall run as a country of muskegs and rocks. Let me just interject, in passing, the question: What does the hon. gentleman mean by 'the great lone land' through which this railway is to run. I thought that the proposition of the leader was to build a road to carry out the millions of bushels of grain awaiting transportation and to alleviate the congestion that exists. A great lone land, forsooth. And yet the hon. gentleman talks in this way as regards a great proportion of this enterprise. A great lone land for the present it certainly is, in northern Quebec and northern Ontario, along the borders of Lake Huron and Lake Superior; a great lone land it is as concerns the mountains west of Winnipeg, a great lone land it is from the mountains to the Pacific ocean, and it must necessarily be so for many years to come. But I refer to this because the hon. gentleman, and other hon. gentlemen upon the government side of the House, have been, to borrow his own language in reference to the member for East Grey (Mr. Sproule), indulging in imagination. They have been imagining that which they wish to exist, they have been trying to show that members on this side of the House have been belittling the west. Why, Sir, I challenge the hon. gentleman, I challenge any hon. gentleman supporting the government, to show one instance where one hon. member on this side of the House, either in this debate or in any previous debate in the House of Commons or out of it has decried or made little of the land which the Conservative party opened up and developed. But what are facts. Is it a fact that the member for East Grey did decry the great lone land? It will be in the judgment of the House whether it was the hon. member for Gaspé or the hon. member for East Grey who did so. The hon. member for East Grey, in the course of his magnificent presentation of the case, made this statement:

> I understand very well that our North-west is a great country. I do not underestimate its value and importance. I know that the great future of Canada is bound up in the west, and I believe it will be necessary in the future to provide for a development that has been unparalleled in the history of this country.

Is that decrying the west? Is that withholding from the west those legitimate means of transportation which it has been the policy of the Conservative party in the past to give, and which it will be the policy of the Conservative party in the future to give. If 'the Conservative party should, ever renounce that policy, I would cease to remain a member of it. He says too that is the policy of 'his friends.' Well, if it is I think I have answered it pretty fully, if not effectually. Is it the policy of his friends in the great lone land he refers to? Sir, is it the policy of the man in the west who more than any other man in the Dominion of Canada, the Hon. Mr. Roblin, a gentleman who sat upon the floor of the House the other day, and who has been instrumental in obtaining for the west a policy which is magnificent beyond description, a policy which has done much to solve the great transportation problems in the west.

The hon. member for Gaspé announced, with what he meant to be a flourish of trumpets, that he had a mandate from the people upon this question, and I believe that some hon. members supporting the government are foolish enough to imagine that they do have a mandate upon this question. I would like to ask thoughtful and considerate members on either side of the House whether any one of them—of course we know the right hon. leader of the government said he had a mandate—I would like to ask whether if any hon. member of this House has really a mandate from the people in regard to the proposition that is before us at the present time. Why, Sir, it is known that this scheme was created, it was born, and I think it was stillborn, within a few hours, or a few weeks of the time it was presented to this House. Not one hon. member, I venture to think, has ever presented the question to his constituents. Nay, I may say upon the authority of the right hon. leader of the House, that not one member on his side has presented this question to his constituency in any shape or form, for the right hon. gentleman announced that his own following did not know what the policy was. A mandate, forsooth. Then, the hon. gentleman refers to the challenge, as he called it, made by the member for East Grey. He says that if the government accepted it they would win out. He says that from one end of the country to the other the people would rally to their support. Well, Sir, why not accept the challenge? Call it a challenge, call it a request, call it a prayer, if you like, on behalf of the people of this country, in justice to the people of this country, in the name of fair-play to the people of this country; I ask the question, and at the same time I make the request, why not give the people a chance, why not give them a chance to say whether this vast expenditure shall or shall not be incurred by the government. It is right, it is constitutional, it is fair-play; the opposite course is not in harmony with the constitution, not in harmony with the equitable working out of the principles of responsible government. I invite the leader of the government to consider this proposition. He says he has no ear for those who say, To-morrow, and to-morrow and to-morrow'; he has no ear for those who say, 'Wait, wait, wait': he has

no ear for those who say, 'Pause, consider, deliberate.' The hon. gentleman can give this oportunity to the people without losing one hour of time. He can, in the meantime, fortify his position if it is tenable at all; he can in the meantime send properly equipped exploring parties into the country and give us that adequate information which we are now denied. Hon. gentleman tell us of the vast resources in northern Quebec and northern Ontario. I do not deny them. They make rosy pictures, I do not dispute them; they give glowing accounts, I do not dispute them. I merely say I do not know, and I echo the sentiment, the honest sentiment, of the majority of the members of this House, when I say so. Remember that you have not the whole intelligence of the country represented in this parliament, you have not all of the true sentiment of the great body of the electorate who sent us here to be their servants. And I again ask the right hon. leader of the government, would it not be wise, would it not be judicious, would it not redound to his credit in the future, if he accepted the request of the hon. member for East Grey and gave the country an opportunity to pronounce upon this great question?

But the hon. member for Gaspé is too zealous, and like all too zealous friends, he proves too much. The right hon. leader of the government gave us to understand that this was a new proposition; the hon. member for Gaspé gave us to understand that it is not a new proposition. He gives us to understand that it is identical with the trans-Canada Railway. He says that was endorsed years ago by the government of the country, as I understood him. Well, this is news to us. But I question both his facts and his conclusion. I do not think this scheme is identical with the Trans-Canada. There is no proposition there to go to Moncton, there is no proposition there for this system of half government ownership and half company ownership, there is no proposition there to form a partnership, and a very questionable partnership it is, between the Dominion of Canada, and the Grand Trunk Railway Company and the Grand Trunk Pacific Railway Company and Senator Cox—there is nothing of that kind. But on the other hand, there is this in the Trans-Canada, that they made promises, according to the hon. gentleman's own quotations, which were of vast importance to this country if implemented, and which are not to be found in the proposition now before the House. Their first proposition was—

To construct the entire road with steel rails and with steel bridges of Canadian manufacture, thus offering to the new steel and iron works at Sydney, Midland, Sault Ste. Marie and Hamilton and immediate market for an immense quantity of steel.

Hon. gentleman on the other side will take nothing for granted, it appears, at the present time. They say: Oh, but there is the same thing in the agreement between the government and the Grand Trunk Pacific Railway Company as with this other company.

Mr. COCHRANE. No.

Mr. LENNOX. My hon. friend (Mr. Cochrane) says no. Any schoolboy fifteen years of age will say no, and the country will say no, but, my word for it, hon. gentlemen on the other side of the House will say yes, because they have said it before. But the fact is that it differs in this particular:

To construct the entire road with steel rails and steel bridges of Canadian manufacture——

——in so far as we can, in so far as it is possible. These contracts differ in this most important degree.

To give free transportation from Quebec to any point on its line for all immigrants and bona fide new settlers and their effects.

That is a pretty fair proposition, because that scheme was launched as a colonization road, and that was its main purpose, as this one is if you reduce it down to its essence, and the only thing it really is. When reduced to its proper proportions, it is a colonization scheme only. This is a sample of the kind of argument which, with all its grace and all its beauty, the hon. gentleman presented to the House, and this shows what it amounts to upon being analysed. But the hon. gentleman has not yet displayed his great weakness. Here is a better specimen of it. He is not far behind the right hon. leader of the government in that respect. The right hon. leader of the government said: We have mountains of information, the people are entitled to what information we have, they are entitled to know just where we stand in this regard. I am not attempting to repeat the graceful sentences of the right hon. leader of the government, because the right hon. gentleman, I need not say, has a manner of turning his sentences which it is hard to equal. I am only giving the substance of his argument. He says: I will give you the proof, and then the right hon. gentleman proceeds to give the proof, and he gives us instances of a number of gentlemen who, from 1700 and something down to 1793, had made explorations in the west. The efforts of these devoted men, these men of self-sacrifice, of great endurance and of heroic purpose, are not to be discounted within their sphere, but the right hon. gentleman fails to give us that data and the only data from which we can form any intelligent conclusion, that is actual surveys made upon the ground, actual measurements of the heights and the depths over which we have to pass, that reliable information which would guide intelligent business men in considering whether this proposition is a feasible one or not. I do not stand second

to the right hon. gentleman in admiration of the distinguished men whose names he has mentioned, but, when it comes to a railway matter, as the right hon. gentleman was speaking of a time before railways were known, aye, before Watts, if it was Watts, discovered the powers of steam, and before Stevenson had invented the steam engine, before railways were thought of in the Dominion of Canada, to bring proof of this kind before this House is to acknowledge the weakness and fallacy of the proposition. The hon. gentleman with whom I am particularly dealing now follows in the same strain. He tells of the vast resources of northern Quebec and northern Ontario. I am not disputing that what he says may be all correct. I am saying that we do not know. But he calls as witnesses, whom?—surveyors, engineers, experts? Not at all. He calls as witnesses gentlemen whose veracity, whose fairness, whose candor or integrity, will be questioned—clergymen—four clergymen, or five—it does not matter about one or two clergyman, more or less, upon a question of this kind. He calls as a witness a learned doctor, too, and upon this he rests his case. Is this not showing the weakness of his case? I submit that no greater condemnation of a scheme could be afforded than is afforded by this hon. gentleman. But let me refer to one gentleman who might be considered an authority cited by my hon. friend. He is Mr. Henry Sullivan, F.R.G.S.

Mr. BENNETT. Not 'Cap.'?

Mr. LENNOX. No; I will refer to the 'Cap.' afterwards.

Mr. BENNETT. 'Cap.' will be in for a contract.

Mr. LENNOX. This gentleman is only speaking of a small section of the country, and he says:

> From what I have seen by following a number of the water courses and occasional runs inland——

That is not a very extensive exploration—'occasional runs inland.' Then, omitting that which is irrelevant, he says:

> Unless extensive swamps exist on the level plains between the main waterways there is no reason why the greater part of the country would not be fit for settlement should climatic conditions prove favourable.

In other words, the qualifications are much more important than the main proposition. He says he made 'occasional runs inland.' How far or for what purpose we do not know, and he says: If there are no extensive swamps. There are likely to be extensive swamps, and then he says that if climatic conditions are favourable he sees no good reason why there should not be settlement. Hon. gentlemen opposite were charmed with the untested generosity of the hon. Postmaster General (Hon. Sir William Mulock) the other night. Suppose he says: I am going to give you, by reason of your services, $1,000 less $999. That is about the meaning of this report. Having gone over the hon. gentleman's quotations, I am inclined to think that he hardly did justice to the case. I want justice done in northern Quebec and northern Ontario, and when we read these reports the conclusion of the whole matter is that there is a good deal of pulp wood up there, that there is a chance that we can raise potatoes, that we can raise oats, and that in some regions we can raise barley, and stops there and leads to the conclusion that the conditions of northern Ontario and northern Quebec are not better than that, I protest. I believe they are better. I am not behind my hon. friend, I am ahead of him, in appreciation of the resources of this northern country; but I say, granting all that has been said, there is no basis upon which we can form a conclusion as to whether the possibilities of the future of that country are such as to justify the government in rushing in with mad haste to construct an enormous work of this kind. So far I have been in harmony with my hon. friend. I see very much along the same lines as he does. I have not endeavoured to entice him from the beaten path, but my hon. friend makes a proposition here that I am inclined to agree with again. I agree with every word of it, almost; I agree entirely with the conclusion of the matter. Let me, before referring to that, refer to a peculiar coincidence. I said that the hon. member for Alberta (Mr. Oliver)—it is only just to that hon. gentleman that I should refer to his speech or to his manuscript—divided his becauses under twenty heads. My hon. friend with whom I am dealing divides these advantages thus: 1, 2, 3, 4; then again: 1, 2, 3, 4, 5, 6, 7; then again: a, b, c, d, e, f, g; total 18. This is not quite coincident with the speech of the hon. member for Alberta (Mr. Oliver), but it shows such a remarkable family likeness as to lead one to infer that perhaps these two speeches were prepared in the same camp.

Mr. BROCK. In the same caucus.

Mr. LENNOX. In the same caucus my hon. friend suggests. Another hon. gentleman suggests by the same man. But that is not the gist of the matter with which I have to deal. The hon. gentleman said—and I agree with him in his conclusions: 'But I go further and I say the bargain is advantageous.' Advantageous to whom? To the country? Oh, no, that is not what he said. 'But I go further and I say the bargain is advantageous to the Grand Trunk Pacific.' Does anybody deny that? The Grand Trunk Pacific people, call them what you will, are at all events shrewd business men, and you may bet your last dollar that

the bargain will be advantageous to the Grand Trunk Pacific and to all who are allied with them. The hon. gentleman says: 'It must be so, because the company would not have engaged itself'—then comes the subdivision: '(a) to build the western section; (b) to operate the whole line.' Let me transpose these for the purpose of directing the sense of the House to the great cogency of this argument: 'It must have been advantageous, otherwise the Grand Trunk would not have agreed—to operate the whole line.' What marvellous self-denial! A company willing to operate the whole line and willing to build the western section. If they had been willing to build, and if the government had been astute enough, and had been enough alive to the interests of the people of this country, to require them to build the eastern section, then the hon. gentleman would have had some foundation for talking. But they are to build the prairie section, in the country which is to be inhabited in the almost immedate future by teeming millions of people, the country which the hon. Minister of the Interior describes as unequalled, not in Canada, but in the world. Go in and possess that land. And they have agreed to operate the eastern section, which is to be built for them without the expenditure of a single dollar, and placed under their control. I have always thought that if you were making an absolute gift to a person, it was not good manners for him to ask the price or to pry into the question where you got it, or to say, I will go and select the article myself. But here we have a government making an absolute gift, in reference to this eastern section, of nearly $70,000,000 to this company, and this company, according to the hon. member for Gaspé (Mr. Lemieux), has engaged to operate it but only upon condition that they supervise the construction. What magnanimity! And they have agreed '(c) to pay 3 per cent per annum on the cost of the leased property'—from fifteen years from now, barring strikes, barring delays, barring quibbles at the end of the construction period; for, when the work is completed there will be a delay of another year and the company will say, it is not yet completed. About sixteen years from now the people of this country will be in a position to demand a balance sheet, and a final settlement of the account, and then God knows what an amount this country will have been committed to. They have also agreed, the hon. member says: '(d) to submit to government control of rates.' My hon. friend is a lawyer and a most astute politician—an old member of this House. Does he not know that all railways in this country, except the government railway, have to submit to have their rates controlled by the railway commission? And yet he advances this statement as an argument. They also agree, he says: '(e) to concede running rights; (f) to quote as low rates to Canadian ports as to American ones.' I hope my hon. friend does not show any particular astuteness as a lawyer, because lawyers are all honourable men, and are particularly candid. But he shows the astuteness of a politician when he says that this company has agreed—not to carry produce at the same rates to Canadian as to American ports, but to quote rates as low to Canadian ports as to American ports. One day when I asked an old Irishman who was collecting an account, what he had to say about a fraudulent entry made by his opponent, he said 'Why, paper won't refuse ink.' And this paper of the railway company will not refuse the quotations which the master hand of the railway enterprise shall see fit to put there. But quoting rates and giving fair terms are two different things; in other words, the control of discrimination and the stoppage of discrimination are entirely different propositions from the mere matter of quoting rates. But I come again to the part with which I agree, completing the connection. The hon. gentleman says: 'But I go further, and I say, the bargain is advantageous to the Grand Trunk Pacific. It must be so, because—to have accepted those conditions is the evidence on the part of the company that it is convinced that there is a vast business to be done, and done at a profit.' I agree with that. I agree that it is a profitable bargain for the Grand Trunk. I agree that it is a bargain likely to result in the further enrichment of the millionaire who is engineering this thing through at the present time, and his camp followers who are supporting him in the measure. But what I call the attention of the House and the country to is that it is going to be too profitable to the promoters of the scheme and vastly too unprofitable and unfair to the people of the Dominion of Canada.

Now, what is the price? I have a little book here. It is not a Bible, but it is a good book; and from it I get the price. I am glad I have this book. Hon. gentlemen upon the government benches, the hon. members of the government, the right hon. leader himself, have failed to give the House that enlightenment or the country that information, which it reasonably demands on this important question: What is to be the price? But I am within the fact when I say that the hon. members of the government had in their possession this little book, which was presented to them as the initial move in this vast transcontinental, all-Canadian line; and if they had consulted this book, or if they had seen fit to see what is in it, we would have known better at this stage what the price is to be. This is a book issued by the Grand Trunk Railway or the Grand Trunk Pacific, I do not know which. Where any hon. member can draw the line between these two companies I do not know. It is also issued by 'the interests,' whatever they are,

which are promoting the scheme. Whether that means Senator Cox or not I do not know. Hon. gentlemen are as able to form their conclusion as I am. Hon. members of this House will remember the assiduity with which members of the Railway Committee endeavoured to elicit from those who were promoting the scheme in the committee whether or not a subsidy was required. They were dumb as a porcupine, somebody says.

You would think that they had not formed a conclusion, that in their innocence they had come to the railway commission without having thought of the matter, but back of that, when this matter was first discussed in the newspapers, in November last, this pamphlet was issued. It may have been ready before that, but I have no reason to suppose that it came to the notice of the government before that day. It is headed: 'government aid or subsidy required.' The hon. Minister of the Interior tells us that throughout the Dominion there is a demand for another railway, that there is an outcry in the west and in the centre and repeated right down to the sea for an additional railway. There is a demand, no doubt, a demand which is at the back of this whole matter, and to which it owes all its impulsion, and that is the demand of Cox & Company on the government for a subsidy, as set forth in this pamphlet. Before setting forth in the pamphlet this demand, these gentlemen tell us of 'the Dominion's needs.' Evidently they thought the government did not know. These railway promoters have evidently not a very high opinion of the government, and they perhaps know and understand the members of the cabinet better than we do. Under the heading I have mentioned, this little pamphlet goes on to say:

> The unanimous report of all explorers who have travelled over the territory north of the Georgian bay and Lake Superior, is to the effect that it will not in the immediate future furnish business sufficient to support a railway, and it would not, therefore, be a business proposition to build one there.

That is what we find in this pamphlet. But it is a business proposition I am after. If the proposition be not a good business one, I do not care whether it emanates from the Grand Trunk Railway or anybody else. I shall not support it. If this be not a business proposition, it will not work out with the business men of the west. These men are sharp to look after their own interest, they are bound to progress, and if my hon. friend thinks he is going to gain favour with the people of the west by an unbusinesslike proposition, if he thinks he is going to secure their support by appealing solely to sentiment, I am inclined to the opinion that he is reckoning without his host. This pamphlet gives a black picture of the country through which this projected railway is to pass—a picture altogether out of harmony with the glowing one given by my hon. friend from Gaspé (Mr. Lemieux). It proceeds to say:

> It would not therefore be an unbusinesslike proposition to build one there unless it was used as a link to reach the more fertile lands of Manitoba and the North-west; the mileage through this unproductive section is estimated as 1,000 miles.
>
> The line from Winnipeg to the Rocky mountains for a distance about one thousand miles, will pass through a fertile territory but without population, or business, which must be created, but which is undoubtedly capable eventually of sustaining a very large community. It is, therefore, considered, by the interests presenting this proposition, as not unreasonable for the government to assist in the undertaking, which will guarantee the road being built in a first-class manner, and up to modern standards in all respects, as to roadbed, bridges, stations, equipment, &c.; and assure the development of as virgin and as more extensive section of country north of the Canadian Pacific Railway than was opened for settlement by the construction of that railway, and extending north of the boundary line.

Here is the point as to the subsidy:

> It is, therefore, quite as much in need of, and entitled to aid from the government, on its merits, at this time, as the Canadian Pacific Railway was at the time it was constructed, about eighteen years ago.

Here we have a definite proposition from this company at a time when they did not intend to run that unprofitable branch from Lévis to Moncton, and they demand from the government, as a condition of their constructing the line, a subsidy equal to that granted the Canadian Pacific Railway. This will be, I submit, a measure of the cost which we may expect to incur in the construction of this road, now that practically the whole burden of construction is assumed by the government. What did the Canadian Pacific Railway cost the country? $65,000,000 in cash and $75,000,000 in land, is about the lowest estimate of hon. gentlemen opposite. I am not disposed at present to controvert their figures. I might, if I wished, show that they are valuing the land at more than it was worth at the time the company obtained it. But let that go. $140,000,000, we will say, is the amount paid to the Canadian Pacific Railway, and definitely and specifically this new company was formed on the proposition that they should receive equal aid. What do the facts go to show? Do they go to show that this undertaking will cost the government as much as $140,000,000? I shall again appeal to the authority of the Grand Trunk Railway, taken from this pamphlet, in support of the proposition that the road will cost every dollar of $150,000,000 before it is completed. I attach no importance to the fact that, as to the western section, there is only a guaranty, whereas the eastern section is to be paid for directly by the country. The government assume the total liability, and it is not to be supposed that it will ever be wiped out. The government build the eastern section, and three quarters

of the prairie and mountain section, and the total outlay, the total guarantee of the government, is the proper measure to be used in estimating the liability of the government expense to the country. But the First Minister and the Minister of the Interior answer us that the government have absolute security and absolute immunity from the possibility of having to pay. They point to the fact that the Grand Trunk Railway assets amount to $150,000,000. Well, admit the $150,000,000, and I am still doubtful. I do not like the way this thing has been launched. I do not think it is open and above board. With whom are we dealing? We have been told time and again that we should not deal with a company which is not in existence. But we know that we are dealing with such a company. Worse than that, we are dealing with two companies, the Grand Trunk Railway and the Grand Trunk Pacific Railway, and no man on earth can discover the line of demarcation between them. It is like the case of: heads I win, tails you lose. This is a cover which is always used when men want to reap the profit, if profit be made, and slink out if loss be incurred. It is the sleeping partner business. It is not profitable to the country. It may be profitable to the company; but should there be disaster, that disaster will be loaded on the country. What is the security of the Grand Trunk Railway? If a man comes to me and wants to borrow $1,300 and I ask him for security, and he says he will give Mr. Brown, and if Mr. Brown borrowed from me $1,500 in 1865 years ago, upon which he has paid neither a cent of capital or interest, would I not be justifiable in refusing to take him as security? Could you blame me? It is said that a man will pay his own debt when he will not pay a suretyship debt, it is a common tendency in such cases for the man to say: I am not called upon to pay; let the creditor lose who took the profit. Then, what is the position in which the country stands in relation to this proposition? We are offered the security of the Grand Trunk Railway Company of Canada. In 1865, they borrowed $15,000,000 from the people of this country. They have not paid it back. Worse than that, like the debtor I have spoken of, they have never paid a single cent of interest, and, on the 30th June last the amount due stood at $58,308,179. I have no word to say against the Grand Trunk Railway Company. I recognize that, side by side with the great Canadian Pacific Railway, they have done much to develop the interests of this country, and, of course, they have done it to their own great advantage. But when it is put forward as a business proposition by any hon. member of this House, when it is put forward by the right hon. leader of the House and the chief members of his cabinet that we are secure in a contract of this kind because we have the security of the Grand Trunk Railway Company, I ask what reason is there in believing, what common sense is there in believing, that the position and action of that company will be better in the future than it has been in the past? What guarantee have we that we shall be better treated in the future and in this new deal than we have been in the past? And if the treatment accorded us should be the same, at what untold millions will the amount of their indebtedness to the people stand? Now, I have a further word to quote from this little book of facts; —bear in mind, 'facts'—not theory, but cold facts as set forth in this book issued by the Grand Trunk Railway Company itself, the company that has the certificate and endorsement and guarantee of the government. You cannot dispute the honesty of your own witness; you cannot cavil at the respectability of the man you put in the witness box. And I know the government will dispute the testimony of this veracious chronicle.

Mr. HUGHES (Victoria). Voracious?

Mr. LENNOX. Veracious and voracious too. We are told here that the railway from Quebec to the Pacific coast will be 3,025 miles long. This is made up by specifically giving the distances five hundred odd miles to North Bay, and the remainder for the western stretch. At that time, that is what the railway company contemplated building; and it should never be forgotten by members of this House who wish to give an honest, fair and full consideration to this measure that we are dealing now not with a proposition of the Grand Trunk Railway Company, not with what they wanted to do, but with that proposition and an unprofitable tail tacked to it, forced upon them reluctantly, forced because of political exigencies and political necessity, as a means, as the hon. member for Westmoreland (Mr. Emmerson) would have us understand, of rallying under his banner and to his support, as against the ex-Minister of Railways (Hon. Mr. Blair) in a solid phalanx, the voters of New Brunswick. We shall see how it will work out. I do not wish the hon. minister—no, he is not a minister yet—I do not wish the hon. member for Westmoreland any worse luck than he had in the delivery of that speech; I do not wish him any worse luck than he will have when he meets the ex-Minister of Railways, if that hon. gentleman thinks it worth while to lift him up, shake him a little and drop him into one of the bottomless ravines over which this new railway from Lévis to Moncton is to pass. We have no absolute guide as to what the length of the Lévis to Moncton road will be. I will not take the extreme. The right hon. first minister said that it will shorten the distance from 80 to 120 miles, as compared with the Intercolonial. The hon. Minister

of Finance (Hon. Mr. Fielding), I think, put it at sixty miles. The ex-Minister of Railways puts it at 77 miles. The distance by the Intercolonial is 488 miles. Let us take about the average of these estimates of saving and take off the odd 88 miles. This would leave us with 400 miles of railway to construct here, making a total construction of the whole railway from Moncton to the Pacific coast of 3,425 miles. Now, I have to refer to another key to unlock the hidden mystery which contains the secret of what this railway is to cost us. The government has not seen fit to tell us what it will cost, so we have to find out the facts for ourselves. The interests presenting this scheme—'scheme,' I think that is the very proper phrase used—further states :

According to the reports of the Department of Railways and Canals for the year 1901, the present railway, with a mileage of 1,301 miles, and a capital account of $63,640,028 cost the country, $48,900 per mile. On this basis, to extend the government railway through to the Pacific coast as has been proposed in some quarters, would cost the country $141,810,000, entailing an annual interest charge at three per cent rate paid by Canada of $14,254,000.

This is a business proposition. The voice of the people from all quarters had not been heard by the right hon. Prime Minister at that time. He had not felt the throb and beat of the heart of this country, of which he speaks. They are dealing with cold, hard propositions of fact. Does the government want to throw doubt upon the word of this member of the Senate ? For the Senate is not what is was in years gone by. Time was when, according to gentlemen opposite, it was useless, worse than useless, a drag upon the interests of the country, a menace to our best interest that ought to be wiped out and a clean slate made. All this we were told by hon. gentlemen opposite at one time. But the Senate is all right now. We have the certificate of the right hon. leader of the government that the Senate is the very thing required. As rapidly as Conservative Senators die out, the Senate is filled from the ranks of the truly elect. So the government will hardly say that this is a sham and a fraud, that it is a hold-up, that it is intended to intimidate the government, and that it is for this reason it is stated that, at the rate the Intercolonial cost the country, it will cost over $141,000,000 for the government to extend its railway, not from ocean to ocean, but from Quebec to the Pacific. The government dare not say that these gentlemen were doing otherwise than presenting a conservative and reasonable estimate of cost, as they were bound as honest men to do in endeavouring to make a deal or bargain with the government representing the people of Canada. The government will not dispute the testimony of this witness. So, you have a mileage of 3,425 miles from Moncton to the Pacific coast. At the rate given by the promoters of this scheme, $48,900 a mile, you have a total cost of $167,482,500. The company undertake to pay one-quarter of the cost of the western section from Winnipeg to the Pacific. If we estimate this at 2,000 miles, we get a total cost for that section of $97,800,000, and one quarter of this would be $24,450,000. And, deducting this amount from the total cost, we find that the government's share, according to the estimates of the Grand Trunk Railway 'Facts,' to be $143,032,500. Leaving a total cost in excess of the 25 per cent which was paid by the company as estimated by the Grand Trunk Railway Company, of $143,032,500, coming pretty close to their figures when they demanded that they should stand upon the same basis as the great colonization road, the great iron link between the provinces from the east to the west, the Canadian Pacific Railway—$140,000,000 on the one hand, and $143,000,000 to be paid by the government on the other, and a paltry and miserable excess of 25 per cent upon the western branch to be paid by the Grand Trunk, and which is alone to be paid by them.

But this is exclusive of a lot of things that they would naturally like to leave out. To get the true amount we must consider them. I am not going to take into consideration the fees which we have to pay to the London agents in negotiating a loan, the expenses of the Finance Minister in his journeyings from Canada to London and from London to Canada—at an enormous expense to this country—in endeavouring to float this loan; but I am going to count the interest. Now, five years is the time estimated for construction. We will not want the whole of the money at once, but we will want some of it almost at once, and we will want all of it before the road is completed, so I average it at half the time. So that instead of charging five years' interest at 3 per cent, I charge two and a half years' interest at three per cent, and we have on that account—and those who are familiar with matters of this kind can correct the figures if they are wrong, but they are approximately correct—we have $10,625,000 for that interest account. That brings us down to the time when it is supposed that the road will be completed. But we have to take into account the prevalency of strikes and setbacks of that kind. We have to understand that in a scheme so gigantic as this, it is hardly conceivable that it will go along without a hitch ; so it is questionable whether it will be completed at the end of five years. But let it go at that. Say at the end of five years we will have expended on principal and interest account, $153,657,000. Does it end there ? The right hon. gentleman said, when he was adducing his proof the other day—which turned out to be of a fallacious character, of the ornamental character that I have referred to—he said, 'This is not all.' Let me say, this is not all. You have to add the interest at

three per cent lost on the seven lean years, which equals 21 per cent for the period. You have to compound it. Why? Because you have to borrow every dollar of the money required, and when a man has to borrow he cannot pay back, and whether you call it additional interest on principal or interest upon interest, it all comes out of the same treasury and comes to the same result—it will not cost less than 25 per cent of the funded amount at the end of the construction period, namely, $153,657,500, not less than a quarter of that sum to carry it through those seven lean years—and I do not think there will be any fat years in this case—the years while the government is allowing this company nominally and actually to have this property for nothing. That brings us to a total of $38,414,375. Talk of $13,000,000 as being the outlay to this country! I have shown—and the figures, though they may not be right in detail, in principle they are incontestable—I have shown that down to the end of the time when the company say that possibly they will begin to pay, down to that time we have expended in interest account alone not less than $48,000,000. Well, 'this is not all,' as the right hon. gentleman says. We have three years during which the company may or may not pay something on account. We do not know, no one knows, the government do not know; the future alone can tell. But we have to stand idly by for fifteen years from to-day and keep pouring our money into what may prove to be a bottomless pit, and at the end of fifteen years when the account is made up, then for the first time the country will know and realize what an enormous expenditure this has been of the resources of the people.

Now, 'this is not all.' It may be said—and in dealing with a proposition of this kind I am determined not to say one word beyond what I actually believe, I will not stretch one argument beyond what I believe, and history, the great vindicator, will verify what I say—it may be argued, I say, and fairly argued, by the government, that we won't have to pay $48,000 a mile for the western section, because the guarantee is limited to $13,000 a mile for the section from Winnipeg to the mountains, and $30,000 a mile for the section west through the mountains. I have, however, preferred to make the account on the first view of the matter advisedly, for this reason, that there is no man who has even a limited knowledge of politics, or parliamentary government, whether parliament be led by the right hon. gentleman or whether it be led by the hon. leader of the opposition—who will soon be on the other side of the House—I say, let it be led by one party or the other, once this scheme is launched, you cannot invoke the condition as to $13,000 and $30,000 a mile as the limit of our liability. Why? Because once they have enjoyed in construction and reached this limit, the company says, We cannot go on, we must have more money—why, then it must have more money, the absolute cost will have to be met by the people of this country. So I am right in presenting the proposition as it is presented by the friends of the government and by the company which is negotiating this project, and I am right in availing myself of their figures.

But in order that I may make no mistake, in order that I may be quite fair, I put it the other way. It has been said by a good many hon. members that the distance from Winnipeg to Moncton is 1,800 miles. The figures I have, show 3,025 miles of the original mileage by the Grand Trunk from Quebec to Port Simpson, and it is 400 miles as I have mentioned, from Quebec to Moncton. I estimate the 1,800 miles from Moncton to Winnipeg at $48,900 a mile, what the Intercolonial cost. This is a fair account of the known difficulties, the peculiar difficulties of the new line, of the haste with which it is going to be constructed, and on the basis of the statement made by experts of the Grand Trunk Railway. This makes $88,020,000. I said when I was beginning that the useless branch, that worse than useless branch, the branch that is going to militate against the interests of the Intercolonial, would cost not less than $70,000,000. Now, the 1,000 miles of the prairie section at $13,000 a mile, makes $13,000,000, and 625 miles of the mountain section at $30,000 a mile, makes $18,750,000, so you have a total expenditure far beyond the line suggested by the Grand Trunk Company, of $119,770,000. Add the two and a half years' interest on construction account, compounded equal to say 88½ per cent, equal to $10,080,450, and you bring up the sum that is to bear interest to a total of $129,850,450, at the end of the construction period. This will have to bear the interest for the next seven years, during which, the railway will be absolutely and admittedly unproductive to the people of Canada. I count the interest as amounting actually to twenty-one per cent which, capitalized, will be not less than twenty-three per cent, or $29,865,603, making the total capitalized amount at the end of the seven year period $159,715,083. Then comes the period of uncertainty. If the railway begins to pay, if it pays enough to pay all its officers, to pay all the contractors and all their needs and all the incidentals it will then begin to pay the government, but there will be the question of the construction account and accounts of that kind and this company will not begin to pay if they have in their minds what I think they will possibly have in their minds at the end of the ultimate period. There is $14,374,357 that it will take to carry the account at simple interest, for the three years of uncertainty, making the total $174,089,440. Will hon. gentlemen say this is speculation. It is, but it

is speculation upon a sub-stratum of facts greater than any presented by any hon. gentleman from the government benches. It is speculation and computation based upon the best information available in the House of Commons to-day. It is computation based upon the figures of the gentlemen with whom the government is dealing. It is computation based upon the figures of a gentleman who can do no wrong to Canada—a senator of Canada. There cannot be any doubt about it. Now, Sir, let it be uncertain; its range is somewhere in the neighbourhood of $200,000,000 down to $150,000,000. What may happen ? Where are we at then ? That is what no man can tell. The right hon. leader of the government says : We had to construct the unprofitable end of the road and we had to give them the land of promise so that we might be able to control the rates. I have not heard the criticism of that feature of the scheme answered yet, and I do not think I will hear it answered unless I hear it in this which perhaps is the key to the whole situation. Those who have the immediate control of the matter find themselves subject to forces that stand behind the throne in the matter of elections, they find that party exigencies, in view of the fact that elections are coming on, compel them to submit to those who are in a position to dictate their terms and to say to the government : That is what you have to do. Give us a subsidy equal to the Canadian Pacific Railway, give us a contract—upon the basis we have presented to you, upon the basis of the Intercolonial Railway. Take the unknown section along the shores of Lake Superior, take this section which we refuse to construct, take the section from Lévis to Moncton and we will take that which has been well described as the garden, agriculturally speaking and minerally speaking as respects a certain portion of it, perhaps, of the world. The government say that they have confidence that these gentlemen will redeem their pledges. I have no confidence. The right hon. gentleman says that they have taken the unproductive sections so that they can control the rates. Could he not have taken the western section just as well as the sections east of Winnipeg ? Sensible thinking men outside of this House—you never can convince some men in this House—sensible men outside of this House will fail to respond to the argument presented by the right hon. gentleman. You could, as my hon. friend from Bothwell (Mr. Clancy) says, control the rates if you took over the other end. Every member of parliament knows that, and every man in this country, before the elections come on will know it as well or the Conservative party will be recreant to their duty to the people of this country. The company are given the productive end; they have the reservoir, they have the fountain source of supply. It is not very far down hill from Winnipeg to the international boundary. The American boundary is riddled with railways and southern Manitoba is in the same state. Where will the right hon. gentleman be and where will his government be—thank God they will not be in power fifteen years hence—but where would they be if the company should say at the end of fifteen years : Take your key, take your controlling section, take your bloomin' 'spout,' take your eastern section, keep it, we have the source of supply, we are the masters of the situation, we have the cards and we will play them as we have played them before; take your bloomin' end, take that or take a compromise of twenty-five cents on the dollar or we will switch the products of the land we have developed in the west, we will ship the products of the garden of the west, not by your line, not by the unpaying line which you forced us to take against our will, but through the United States to American ports. Who comes down ? The coon comes down. You are powerless. I attribute no wrong to any government which may be in power at that time. It matters not whether it is the Conservative or the Liberal party which are in power at that time, the situation is inevitable, and those who are then in control will have to succumb ? That is what in all probability will happen, and that is what, I venture to say, is in the minds and hearts of hon. gentlemen opposite. The right hon. gentleman talks about the heart of the people; that is what is in the minds and in the hearts of these gentlemen at the present time.

Now, I will come to what I have said in reference to the question of better terms raised by the hon. member for Gaspé (Mr. Lemieux). I am sorry he brought up that question but he did bring it up. He spoke of the colonization question and also of the question of subsidies to local railways. I do not propose to say that under no circumstances will I consent to subsidies. I will wait until a definite scheme is proposed. I do not say that under no circumstances will I join in granting money for colonization purposes, but I do say that it appears to me that the question, for instance as respects northern Ontario or northern Quebec, of granting subsidies to railways for the purpose of colonizing these portions of the country is one that should not be favourably entertained by the members of the Dominion government without good cause clearly shown. It is local in its nature and whilst we have necessity for every dollar we have for the development of Canada as a whole it seems to me that we should not apply ourselves so vigorously as in the past to the subsidizing and promoting of colonization railway schemes. Now, that is the more manifest when we consider that we have awaiting us in the west vast untenanted tracts of prairie which will return a rich reward to all who go in there to settle. But, I am not in any case

in sympathy with better terms. It was said by the hon. gentleman that Ontario had joined with the other provinces in the raid for better terms. I say all the more disgrace to Ontario's premier, if Ontario did. Ontario surely knows that the larger proportion of that which is given by way of better terms comes out of Ontario itself. Ontario does not want better terms for the purpose of colonizing or building railways if the resources of the province are fairly administered. I had no sympathy with the leader of the Ontario government when he announced the scheme that he did announce with such a flourish of trumpets on certain political platforms in the campaign in North York. If they had fairly and honestly administered the resources of the province of Ontario, if they had not rejected the appeals of Sir William Meredith and others to conserve the timber interests of the province, if they had not squandered its resources on the Captain Sullivans and American citizens and men of that stamp, the province of Ontario would not to-day be taxed as it is. The government would not be taking her railways for provincial purposes to the detriment of the municipalities; taxing her insurance companies, and so to an additional extent depleting the pockets of the insured, taxing dead men in their estates; taxing the people by all sorts of devices for the purpose of raising money to administer the affairs of the province, which if properly administered would not require any better terms or any of these illegitimate ways of raising a revenue.

The hon. Minister of the Interior corroborates the hon. member for Gaspé in saying that the Grand Trunk Company and Senator Cox have a snap. I think it is only just to the hon. Minister of the Interior to give his exact words; but, like the hon. member for Gaspé, he is very zealous, and he proves too much. He proves that the country through which this railway is to pass is such a garden that it is the most iniquitous proposition to give the company a subsidy. It is not denied that we are giving them a subsidy. It is not denied that we are giving them $13,000,000. Why $13,000,000 is mentioned more than any other figure I do not know, because it has not come out in any computation that has yet been given.

Mr. COCHRANE. An unlucy number.

Mr. LENNOX. An unlucky number as my hon. friend says. This railway according to the hon Minister of the Interior, is projected through a fertile country, the best part of Canada, with the best immigration swarming into it that has come into any country in most part, so that if there has ever been a case where a railway should be self-supporting, where there should not be a subsidy, it is this case. The Americans have not granted aid of any kind in support of their magnificent railway development since 1871; and if they can forego that very expensive luxury and still have a magnificent system, it is time for Canada to pause and consider where it shall draw the line. Although I do not say that it should be drawn hard and fast in every case, I shall scrutinize every scheme very closely before I consent, as representing the county of Simcoe, to giving one dollar of the hard earned money of the people for the promotion of a railway of this kind. The hon. Minister of the Interior said:

> The net profits of the Canadian Pacific Railway during the year ending the 30th of June, 1902, were $14,085,000, and last year its net profits were $15,000,000. The company have made of their railway enterprise a magnificent success, and if they were called upon to-morrow to incur the liability to pay back every cent of public subvention which they have received, and all the money which they have received for lands, notwithstanding that, the Canadian Pacific Railway company would be a good, sound, and solvent concern. Compared with that enterprise, the route from Quebec to Winnipeg by the Grand Trunk Pacific Railway is a better route. . . . . The Canadian Pacific Railway, on the contrary, was built around the north shore of Lake Superior. It was built through a rocky country which did not then, and does not now, produce a single pound of traffic.

Then, speaking of the Canadian Pacific Railway line across the prairies, he said:

> It runs through the very worst portion of the territories. You could not select a line that could be very much worse unless you got right down close to the international boundary. But this new line of the Grand Trunk Pacific Railway will run from Winnipeg to the Mountain pass through a territory, every mile of which is fertile and productive. It is hardly conceivable that such could be the case, yet the information in the possession of the government amply justify the statement I have made. There is no such fertile stretch of country in the world.

Hon. gentlemen probably thought I was rather exaggerating when I was talking of gardens; but I am taking the cold, calm, deliberate, judicial statement of the hon. Minister of the Interior. With regard to the route through the mountains, he said:

> Now take the British Columbia part, for some reason best known to themselves, which nobody has ever been able satisfactorily to explain, the Canadian Pacific Railway chose the Kicking Horse pass, which is the worst pass in the whole lot, and it went through a line of territory which perhaps, of all the different belts that could be opened up through the Rocky mountains is the least productive.

So that we have all the cream left. The Canadian Pacific Railway took the skim milk, and the cream is to go to the Grand Trunk.

> And it suffered in consequence. For years it got no traffic, except what its own construction gave, out of that portion which goes through the eastern part of British Columbia. The Grand Trunk Pacific, on the other hand, will go from the Rocky Mountain pass to the coast through as rich a timber and agricultural country as there is in Canada—a country rich in

timber, mineral and soil. Then we must not forget that when the Canadian Pacific Railway was projected, there was no movement of settlement from the outside.

Then he points out the vast influx of settlement that there is to-day and the teeming millions we must expect in the future, and he sums up by saying :

What is the position now ? We had an immigration into the North-west of 30,000 people last year. If it keeps on at that rate for the next ten years, think what that will mean for the Grand Trunk Pacific Railway.

I need not pursue the matter further. What plausible reason can the most fertile imagination suggest why we should give to the Grand Trunk Pacific admittedly $13,000,000, probably $150,000,000, besides entering into an unknown liability, in the face of this testimony from a man so prominent in the counsels of the party, and one who should know the west and what it can produce, if any man in the government does ? Why should we give a subsidy at all in such a case ? We have the hon. Minister of the Interior showing the vast resources of the west, which are fully capable of sustaining any railway, and we have, on the other hand, but upon another branch of the case, the most capable and qualified member of the government as it existed until a few weeks ago, the hon. ex-Minister of Railways and Canals, denouncing the scheme as wholly indefensible upon the financial side as well as upon all others. And we have the most meagre information as to those parts of the railway about which it is important to have information—the passes in the Rocky mountains and that section which extends along the northern shores of Lake Superior and Lake Huron.

At one o'clock, House took recess.

House resumed at three o'clock.

Mr. LENNOX. When you left the Chair at one o'clock, Mr. Speaker, I was dealing with some statements made by the Minister of the Interior. I was pointing particularly to the fact that he, in common with many supporters of the government, had painted the west and the future of this country in glowing colours. In that respect, I entirely agree with the hon. gentleman. It would be strange indeed if I did not. I would be forgetting the principles I have imbibed during a long period of years from the history of the Conservative party. I am not a whit behind the hon. gentleman in believing that there is a great future for this country. If the affairs of this country are administered as they ought to be, that great future is not far distant. And if I am impressed with the progress and the development which are at hand for the older provinces, I am equally sensible of the great future, the great prosperity, the great aggregation of wealth—'wealth beyond the dreams of avarice'—which await the sturdy, energetic and capable settler of the great west. With regard to a statement made by the Minister of the Interior, which he seems to take great pleasure in repeating time and again, that the members on this side show uncompromising hostility to the scheme before the House, let me say this : I have no brief to speak for hon. members on this side. I have no mandate to express their sentiments. I am merely voicing my own opinions. But I have ears that can hear and a modicum of understanding, and I have failed to find any utterance on this side which bear the construction given by the hon. gentleman. But what I recognize is that, taking all the facts and circumstances into account, there cannot fail to be, to a large extent, uncompromising hostility to the scheme before us. But there is a most important difference between uncompromising hostility to this particular scheme—and I notice that hon. gentlemen supporting the government, with remarkable unanimity, speak of it as a scheme—and no better word could be used to describe it—and hostility to a well devised measure for the relief of our great west. While there may be uncompromising hostility to this particular scheme, I am not aware that there is any hostility in the ranks of the Conservative party, in or out of this House, to a carefully considered policy for the development of this great country as a whole. One and all, we recognize that the providing of every reasonable facility for bringing to the markets of the world the produce of the great west is of paramount importance and necessity. The hon. member for Gaspé (Mr. Lemieux) asked, in concert with the Minister of the Interior, whether Canada was able to bear the expense of this scheme. Let me say to the House that Canada can afford to pay for everything she needs, for everything that will tend to her development, for everything for which she will get a fair return. Therefore, speaking for myself—and I believe I am in harmony with the consensus of opinion on this side—I am prepared at any time to support any expenditure so long as it makes for the general development of this country. My hon. friend the Minister of the Interior, and my hon. friend the member for Gaspé (Mr. Lemieux) are close partners in another regard, and partnership, Mr. Speaker, is the order of the day. We have in this scheme the most complicated system of partnership ever devised in connection with parliamentary government in this country. Each of these hon. gentlemen by a singular coincidence, unearthed all the newspapers of last November to show that several gentlemen of prominence, of commercial standing, whose opinions are weighty, have expressed the opinion that a properly devised and financed scheme for the speedy development of the west would be in harmony with their views. They quoted the hon. member from Toronto (Mr. Brock)—and there is no

gentleman in this House for whom I have a greater regard. What they quoted from that hon. gentleman had the merit of brevity. But I imagine there must be a context to it, and I would like to hear the whole of it; but even if that hon. gentleman had declared himself unreservedly in favour of the present scheme, if he had not merely limited himself to saying that he would endorse anything that made for the general development of the country, I would still, without any abatement of my regard for his sincerity refuse to go with him to that length. But even if hon gentlemen opposite could quote hon. gentlemen on this side as endorsing the scheme before us—and they have not so far succeeded in so doing—that would not be a convincing proof of its merit. One swallow does not make a summer; and taking the word in another sense, one swallow, even if it be $13,000, as announced by the right hon. leader of the government, will not satisfy the insatiable thirst of Senator Cox and his camp followers.

I now come to a question upon which my hon. friend the Minister of the Interior stands alone, so far as I have been able to observe. He tells us a story about the Mexican cattle.

Mr. BENNETT. That is the Texas Steer.

Mr. LENNOX. Yes, the one-eyed steer. He tells us that the west required last year 50,000 stockers, and that 25,000 were obtained in Ontario and the other 25,000 had to be sought for in Mexico. Why? Because of the lack of adequate railway facilities. If I am not mistaken, he said they could not be got in the province of Quebec because we had not the requisite railway facilities. We could obtain 25,000 in Ontario, but not the other 25,000 in Quebec. Of course, we must give the hon. gentleman credit for veracity. We must credit him with a desire to tell the truth, and we want to give him credit for an ordinary common sense. But it is difficult to account for his making the statement I have just drawn attention to, except on the hypothesis that he had been led astray by an exuberant imagination. Have we not the same facilities for transport from the province of Quebec that we have from the province of Ontario? The assertion is a mistake. It is found upon investigation that the hon. minister is not correctly informed—for I certainly assume that it is only owning to incorrect information—and even a little study of the situation would have set him right. Here is the statement:

> There is another line of trade to which just one word of reference may be made. It is the cattle trade. I want to call the attention of this House to a fact or two with which I think they are not acquainted, because they are not likely to have ever been brought to their attention. I want to call attention to the fact that one of the great industries of the North-west Territories is grazing cattle, as contrasted with raising cattle. Last year we imported into the North-west Territories no less than 50,000 head of what are called stockers, that is, young cattle, bought by the ranchers for the purpose of being finished and perfected for the English market. Where did they get them? They got 25,000 from the good province of Ontario, and our friend Mr. Crawford, the Conservative member for one of the Torontos in the provincial legislature, says they have not at present facilities for sending their cattle to the North-west, and he wants the Grand Trunk Pacific built so that they will have more facilities. * * Where did they get the rest. They got them from Mexico. * * Here we have 25,000 stockers in one year coming from far away Mexico, because we have not the shipping facilities to take them from Eastern Canada.

I am not personally acquainted with Mr. Crawford. I have known him as a public man; I have had the pleasure of reading his speeches. But if speeches are an indication of men's minds—and if they are, God help some of these hon. gentlemen on the other side—if a man's speeches are a measure of the calibre of his brain, I take Mr. Crawford to be a sensible, intelligent, practical man. That is the reputation he has. I know that in a county where I was stumping—some hon. gentlemen will say that what I am about to say is no great certificate of Mr. Crawford's ability—it was recognized, where I and some others were going to speak, that if we could get Mr. Crawford, we should have an exceptionally strong man.

Mr. CLARKE. He is a good man.

Mr. LENNOX. Do you think that Mr. Crawford ever, in the Ontario legislature or elsewhere, was ass enough to ask the people of Canada to build a railway costing from $150,000,000 to $200,000,000 for the purpose of carrying stockers from Ontario to the great west? My hon. friend says that the difficulty about the carrying of cattle was a want of cars. We know something in this House, and the people outside know a good deal more; and I am quite willing to leave it to the country to say whether the hon. gentleman's information is correct when he leads us to understand that there is shortage of transportation facilities from the east to the west. If there is, we have never heard of it. I have understood—and I have some reasons to know something about it—I have understood and known, that the freight cars are going back to the west empty. Our great measure of prosperity will be attained when that western country is so thickly settled that return cargoes by land and water will be carried from the east to the west. In the same line the hon. gentleman tells us of congestion in the west which has retarded the trade of merchants there. He would have us understand that, these merchants having bought their goods in Europe, or in the great wholesale houses of Montreal and Toronto, the movement of west-bound freight has been so great that there has been a blockade and the merchants could not get their goods. I do not doubt the

honesty and good faith of my hon. friend. He is in a worse position to judge of this measure than even some other members of this House. He has been away for the greater part of the session. He has come in in a hurry. He has taken his food, as it were on the wing. He has not digested his argument. And it is asking the people too much to ask them to digest some of the arguments he used. Congestion in westward bound freight upon the railways? I will be glad enough when that is realized. That will be the acme of our prosperity, when, upon the great lakes and upon our railways, it is found they are as busy in returning goods to the west as they are in carrying out the products of the west. Any one who has studied the question, any one who has read the article a few months ago—or it may have been even a year or more ago—in the 'Canadian Monthly' by Edward Farrer, must see the importance and the significance of the fact, which I trust the hon. members of the government will take note of, and the time when we shall have complete control of our carrying trade and complete satisfaction in it, the time when we shall be able to reduce the cost of carriage by land and water—that is by land and water combined, which, I say, is to be the ultimate scheme for carrying the products of the west to the east—will come when we have the return cargoes to be taken to a large population in the west.

Now, the Minister of the Interior attempted to show what the first Minister found it important to show, but failed in showing—that there is a demand and a need for the construction of a railway such as they propose. When I come to that, I will produce my proof, and I do not intend to advance anything of which I shall not present proof, or, if not absolute proof, evidence which it is reasonable to present to a deliberative assembly. Before I deal with this point of the Minister of the Interior I want to say a word with reference to the older provinces. I say, and I have said before, that we are prepared to do justice by the west, we are prepared to do even more than justice to the west, as we are ready to act in anticipation of the strides they are making. The people of the west do not want proof of this for they have faith in that Conservative party as was shown in the recent election in Manitoba. For the record of the Conservative party is an unbroken record of good faith of belief in the country and of earnestness and liberality in carrying out what they have professed. But while I say that for the east and the west, and speaking as I do in a sense for the centre, I want to say something for the older provinces of Ontario. I want to say that the fortunes of the west and the east are bound together. In the larger sense there is no east and there is no west, there is no north or south, it is one combined country, and the sooner you obliterate those boundaries, the sooner we make one bold, grand fight like Britons for the general good of all, the sooner we will bring about a realization of the roseate pictures which have been drawn for us by hon. gentlemen opposite.

Now, we have forty-five cities and towns served by the present Grand Trunk system. By the census returns, which I dare say are not padded in the interest of the province of Ontario, those cities and towns have a population of 1,000,940 people. Among them are some Quebec cities. For instance, there is Three Rivers, the only debateable one in reference to my proposition. But I want to say that in those forty-five cities and towns, aggregating over a million people, aggregating almost a million people, if you take out the province of Quebec with its 68,840, if you push through a scheme providing for the shortest route for the raw material out of Canada by this new line without breaking bulk, if that is the policy rather than the policy inaugurated in 1878 to develop a varied industry, to develop agriculture as the handmaid of commerce, and commerce as the handmaid of agriculture, I say if you are to develop that policy, you will give the go-by to these forty-five cities and towns and leave them and their artisans, and their skilled mechanics, and their merchants, without the profit that should come to them mutually by a turn over of this commerce. Have hon. gentlemen opposite lost sight altogether of the fact that the west is not going to be solely an agricultural country? The people of the west have the energy and the pluck to build up tall chimneys, a large population is going in there to consume the products of the west. It is not by taking the shortest route to the seaboard upon a 3,000 mile haul that you are going to encourage the development of varied industries. Mining, for instance, will furnish an enormous home market for a portion of our products. The great scheme developed in 1878 by Sir John A. Macdonald did not mean a mere tariff policy—and that is where my hon. friends make such a great mistake—it meant not only a protective tariff, but a development of all the great industries which were adapted to the circumstances of this country. Therefore, I do not want a policy which will have the effect of crippling a vast portion of the wealth-producing class in the Dominion of Canada. We have our cities and our towns to consider in Ontario and Quebec, and in a large measure, to the extent of a million souls, the effect of this policy will not be to develop, but to injure, the cities and towns I have mentioned.

The government saw the weakness of the scheme later on. You will recollect, Mr. Speaker, that this Bill of the Grand Trunk Pacific has been so altered and mutilated that its political godfather, the hon. member for North Simcoe (Mr. McCarthy) can now hardly recognize it. As the government proceeded with it they endeavoured to make off-shoots, and try to satisfy the various

cities and towns to the south of the proposed line. Well, I venture to say that this policy will not be very beneficial. You may as well try to cut off a rapidly flowing stream by digging a trench at right angles as to try to control the through traffic over that railway, as the hon. gentleman suggests it shall be controlled by aid of the branches to these towns. As a measure it will go through, but the effect will be felt, and I call the attention of the champion of the labour element at this stage to the disastrous effect the government scheme will have upon the workingmen. While I desire to help the hon. gentleman as far as I can, my policy would be to strengthen the centre, to build up the country as Britain built up the empire, by bringing the product of all her colonies and dependencies into the centre, to benefit each other by an interchange of commerce. Now, in that view the Conservative government inaugurated its policy. They deepened and widened our waterways, upon which a large expenditure of money has been made. We have, since the construction of the Canadian Pacific Railway and since extending our shore line along Lake Superior to Lake Huron, continued to develop our waterways and to expend enormous sums of money. Shall we now have to right-about-face and do away, to a large extent, with the results of that expenditure of money ? I say no, for the locality I represent, I say no, for the localities in which I am interested—I need not say perhaps for the town of Collingwood, because I see my hon. friend from North Simcoe (Mr. McCarthy) is here, and I have little doubt that he will realize the importance to Collingwood of the scheme that is proposed. I know my hon. friend has been longer in the House than I have. I know he occupies a unique position, I know he is the leader of a great party—the McCarthy party. My hon. friend, I understand, rather laughs at me because I adopted the leadership of my hon. friend from Lincoln (Mr. Lancaster), when I said I was proud to be under the leadership of a gentleman who fought as long and persistently as he did in favour of a certain question. It is true that my hon. friend's party is smaller than it was. Mr. Stubbs has gone to his reward. The other hon. gentleman who was at one time a supporter of his, is a gentleman for whom I have the greatest respect, and I will not further refer to him.

But my hon. friend has the satisfaction of leading a united party. They all vote the same way and when you get a party in the House of Commons that all vote solidly that is the balance of power. Talk about the balance of power in the old days ! Still there would be stragglers, there would be those who would not follow party lines. But, my hon. friend occupies an exceptional position, a position that is unique in the history of parties. Therefore, I would not, I suppose, be wasting time if I endeavoured at this stage to try to win my hon. friend and his party back from the pernicious course they have adopted, a course which is detrimental to our county as a whole, a course which will rob Collingwood of the benefit of every dollar that has been expended on its harbour, a course which will make a sham and a delusion of every dollar that is spent there, a course that will rob this county of every dollar of the benefit which otherwise would result from the subsidy granted for the construction of vessels granted last session. I can hardly believe that my hon. friend, although he does not think as well of me as I could wish, although he deplores my acceptance of the leadership of a gentleman probably who is not as old as myself, will turn a deaf ear to my appeal. If he is deaf to my entreaties I hope he will not be indifferent to the interests of the county which I in part represent, a riding which did him the honour to elect him when he was quite a young man and which did him that honour in a large measure—and I say it without any disrespect to the hon. gentleman—because of the respect and esteem in which that county held the late gifted Mr. Dalton McCarthy. I speak of this because I want to get the whole party.

Mr. McCARTHY. You got enough of the party in 1896 to suit you.

Mr. SPEAKER. Order.

Mr. LENNOX. The hon. gentleman has taken occasion to refer to 1896, and I do not pretend that I do not know the significance of the reference. The hon. gentleman refers to the election of 1896, when I was a candidate and was woefully defeated. The hon. gentleman refers to the election of 1896 when the late Mr. Dalton McCarthy, whose memory I greatly honour, although I did not see politics in the same light as he did, was a candidate and when he was strong in the personal affections of the people of North Simcoe, whose affections he had earlier secured for advocating a grand policy for this country. There was a triangular fight in which you do not know where you stand. Mr. Stewart, the present superintendent of the forestry branch, was a candidate of the reform party, so-called.

Mr. SPEAKER. I do not like to interrupt the hon. gentleman (Mr. Lennox) but I think this is a little outside of the question before the House.

Mr. LENNOX. It is a good story.

Mr. SPEAKER. Order.

Mr. LENNOX. Mr. Speaker, I know you would not stop me were I not going beyond the limits of the question. I will only say that I received the support of some of the best men of the Conservative party in North Simcoe and that I am proud of my achievement on that occasion. I was

beaten, but the people know better now. They now know how to recognize a good thing when they see it, and I venture to state that when the elections come on again that they will recognize a good thing and that it will not redound to the benefit of the hon. member for North Simcoe. But, I am not a man who bears resentment. I remember the hon. gentleman in other days and speaking as regards the attitude of the hon. member for North Simcoe upon this question I confine myself to a suggestion which I think will be in harmony with the views of all hon. members in this House. I have to admire the consistency with which 'the party' I refer to has followed the present power. I do not know that it is inconsistent with anything the hon. gentleman has hitherto done or said. Independence, in the sense in which the hon. gentleman professes it, generally means independence of the wishes of the electors, independence of traditions because I have no doubt that my hon. friend bears no resentment to this side of the House from which in the past he derived great political advantage. I have no doubt that when we come to power again we shall have a large measure of support from him. Notwithstanding what has happened may I hope that my hon. friend will desert for a time the Grand Trunk Railway interest and vote in the interests of North Simcoe? I have the right to speak upon that question. Will he do this or will he deny the interests of North Simcoe and rob Collingwood, the large township of Nottawasaga and the surrounding territory generally of the benefits that have been conferred upon it by the Conservative government in the past and by the present administration in more recent times? The labour interests are represented by the hon. Minister of Labour (Hon. Sir. Wm. Mulock). The interests of the city of Toronto are identified to a large extent with the interests of the large constituency of North York. The hon. Minister of Labour represents that constituency and he also represents the labouring classes in this country. Will he vote for this measure which will not only be detrimental to the city of Toronto, and to the constituency of North York which he represents, but detrimental also to the great labouring classes whose champion he should be?

I said that the hon. Minister of the Interior had attempted to show that there was a demand for and a need of this railway policy that the government have propounded. I have referred to the fact that in support of that contention he has confined himself to quoting extracts mainly from the papers of November last. I prefer a better source of information. I want to go as much as I can to the best source to find out what are the needs of the west. I have been out west recently, and I have communicated with many gentlemen in the west. I have also what to my mind is the authority of probably a gentleman best qualified to speak for the west, a gentleman who has proved himself to be capable of grappling with the transportation problem as it affects Manitoba and the west. I refer, of course, to the Hon. R. P. Roblin. On the 10th August he granted an interview to the 'News' in which he said:

> The people of Manitoba and the Canadian west are strongly opposed to the governmet of Canada granting one dollar of the public money or an acre of land to the construction of the Grand Trunk Pacific Railway as an all-Canadian route from coast to coast because they do not see any material advantage in its construction to the people of Western Canada.
>
> 'It appears to be an undertaking in the interests of Senator Cox and others,' said the Hon. R. P. Roblin, Premier of Manitoba, to a reporter of the 'News,' at the King Edward Hotel this morning.

This gentleman has been through a recent election in Manitoba, he is in constant touch with the people of the west, and he if any one ought to know the feeling in the west. He says the people there do not see any material advantage in the measure, and if they do not, how can the government see a bonanza in it?

> Continuing, Mr. Roblin stated that the feeling in the west was for the extension of the Intercolonial Railway from Montreal to Depot Harbour, by government purchase of the Canada Atlantic. They further favoured the construction of an addition to the Canada Atlantic from a point near Parry Sound to a point on the Canadian Pacific main line, near Sudbury, in order to shorten the all-rail trip between Ontario and Manitoba. The view of the west regarding the extension of the Intercolonial was exactly expressed by Hon. Mr. Blair in his speech in the House of Commons yesterday. The people of Manitoba were 'commercial' in their ideas, and the proposed construction of the Grand Trunk Pacific Railway had failed to awaken any great public interest, simply because the people could see nothing in it for Manitoba.

Speaking of the railway from the Canada Atlantic near Parry Sound to Sudbury, I may say that on the very day of this interview I was at Sudbury, and I found the promoters of that railway actually on the ground. The engineer was there organizing the office, and he told me that some sixty miles of that railway would be constructed this autumn.

> But would not its construction as a competing line to the Canadian Pacific benefit the eastern merchants and manufacturers as well as the western merchant, by lowering the the freight rates between Ontario and Quebec, and Manitoba?' asked the reporter.
>
> 'I do not think so,' replied Mr. Roblin. 'The road would, to all intents and purposes, be a Grand Trunk one, in spite of the statements of the government to the contrary.' He went on to say that there was not the slightest indication on the part of the government that the freight rates would be in any manner improved except by the natural course of events.
>
> 'Where is the demand for the construction of this road,' continued the Premier of Mani-

toba. 'I fail to find it anywhere.' Manitoba to-day needed no more railways, for the average distance from the farmer to the railway in Manitoba was but five miles. The Canadian Pacific and the Canadian Northern would be quite able for the next twenty years to supply all the railway necessities of the west. What was wanted was an increased equipment, especially in rolling stock.

Now, I will give the House some statistics on the matter of rolling stock. Railway authorities agree that the measure of a railway's capacity to perform the service for which it is created is gauged by its ability to provide suitable equipment. Taking the returns for 1902 as given in 'Facts' by the promoters of this scheme, we find that all the lines of railway in Canada, combined, had the following equipment :

	Total in Canada.	No. per 100 miles.
Engines	2,344	12
Passenger cars	2,644	13
Freight cars..	68,875	365

The freight cars were distributed among the great railways of Canada as follows :

	No. of Freight cars.	No. per 100 miles.
Grand Trunk Railway..	24,462	775
Intercolonial Railway..	9,689	774
Canadian Pacific Railway..	21,342	291
Canadian Northern.. ..	1,760	141

The equipment of engines was as follows :

	No. of engines.	No. per 100 miles.
Grand Trunk Railway.. ..	705	22
Intercolonial Railway.. ..	280	21
Canadian Pacific Railway	745	10
Canadian Northern..	47	4

I propose for a moment to analyze these statistics. The Canadian Pacific Railway, taking its total length, is 146 engines short of the average of engines possessed by all the railways of Canada; and when you reflect on the many little local lines which have only one or two engines in some cases, you realize the necessity that exists for increased equipment on the Canadian Pacific Railway. The Canadian Northern is 100 engines short of the average. The total shortage of these two companies in this respect is 246. In the matter of freight cars the Canadian Pacific Railway is below the average by 5,402 and the Canadian Northern by 2,800, making 7,202 in which these two companies are below the average equipment of the railways of Canada. Is there any reason why the equipment of these two great lines should not and will not in the near future equal that of the Grand Trunk ? We have the Intercolonial in equipment side by side with the Grand Trunk, a magnificent asset, purchased, I admit, at a very considerable expense to the people of this country, to begin our work of developing anew the products of the west. The Canadian Pacific Railway, to have an equipment in the matter of engines equal to that of the Grand Trunk, requires 883 more engines than it has, and the Canadian Northern requires 225 more engines, or a total between these two companies of 1,108. The Canadian Pacific Railway freight equipment is below that of the Grand Trunk by 33,872 cars, and the Canadian Northern freight equipment is below that of the Grand Trunk by 7,925, or a shortage between these two railways of 41,794 cars. Looking at the congestion and the delay in transporting the products of the west, is there an hon. gentleman here who is not convinced that even if the Canadian Pacific and Canadian Northern Railways obtained a tithe of this equipment, there would be abundant facilities for transporting the products of the west for many years to come ?

You will have then 1,900 instead of 792 engines upon those lines, 64,900 cars instead of 23,102, or you will have practically the present rolling stock of those two railways multiplied by three. Let me not be misunderstood. In giving these figures I am not casting the slightest reflection upon either the Canadian Pacific Railway or the Canadian Northern Railway. The Canadian Northern Railway is in the process of rapid development. It is showing an energy perhaps unexampled in the history of Canada. It has hitherto been devoting its energies to construction rather than equipment, but it is now coming to the front; and by the time we next meet in this House, no doubt the rolling stock of the Canadian Northern Railway will be vastly increased. Then as to the Canadian Pacific Railway, although it has not cars equal to the Grand Trunk Railway in mileage, it has an aggregate of freight cars and engines almost equal to the Grand Trunk Railway. When we reflect that the Grand Trunk Railway has been in existence over half a century and the Canadian Pacific Railway only comparatively a few years, and that it operates in a country which is full of engineering difficulty—difficulties that were declared by hon. gentlemen opposite to be absolutely insurmountable—when we take these things into consideration, we must give the Canadian Pacific Railway credit for the position in which it stands to-day. We have been told that the Canadian Pacific Railway have ordered 2,000 additional cars and two hundred and twenty-five additional engines. These are probably in its service at present, and will relieve to a great extent the congestion in the west. What is wanted it not additional roadbed, not to multiply the roadbeds and to duplicate the expense of the system, but to consolidate, as far as possible, and to provide efficient equipment upon all these great trunk lines—equipment at least equal to that of the Grand Trunk Railway.

I have read the well considered statement of the hon. Mr. Roblin, who emjoys the confidence of the people of Manitoba to an extent seldom accorded to any public man. I

hardly think, however, that the government would care to adopt Mr. Roblin as a witness. There is not a bond of concord between them, but I shall produce a witness between whom and the government there is a strong bond—a gentleman whose authority they dare not dispute, a gentleman whom the right hon. the leader of the government publicly announced as the best railway authority in the Dominion of Canada or on the continent of America, a gentleman whom the government desired as chairman of the Transportation Commission. I refer to Sir William Van Horne. What does he say? He says:

> The Canadian Pacific Railway, the Grand Trunk Pacific Railway, or any other all-Canadian route will never voluntarily carry a carload of wheat by the all-railway route around the great lakes to an eastern Canadian port for shipment abroad, for the simple reason that it will never pay any road to do so. Nor will the transportation problems in the west ever be solved by the construction of an all-Canadian route from coast to coast.

I cannot conceive what testimony could be more convincing than that of this gentleman who was selected to solve the transcontinental problem. His declaration I take to be a condemnation, as square and fair as you can imagine, of the government's scheme. Sir William Van Horne went on to say:

> That the Canadian Pacific Railway shipped every carload of wheat that it was possible to ship by their steamship lines on the great lakes from Fort William to Owen Sound, and thence east by rail, or else by way of Buffalo and the Erie canal. The long haul around the great lakes was dreaded, because it was unprofitable and the bulk of the grain brought by that route was carried during the winter months, and used by the millers of Ontario to keep their mills in operation during the cold season. There was altogether too much talk of an all-Canadian route by people who were entirely ignorant of the situation.

That is rather cold justice meted out by Sir William Van Horne to the right hon. gentleman who leads the House. He further said:

> He considered that in discussing the all-Canadian route, a great mass of the people seemed to forget what it cost to construct a road through such a country as that around Lakes Huron and Superior. They also seemed to forget that such an unprofitable piece of road had to be maintained and kept in the best of order. Such a piece of construction was like a bridge; there was no profit in it, but it had to be constructed and maintained. The Canadian Pacific Railway had been practically forced to expend their $25,000,000 grant from parliament in constructing their line through the rough country, and part of the money derived from the sales of their lands in addition.
>
> Sir William declined to say anything upon the fast Atlantic service, or directly on the railway situation at Ottawa, 'in fact,' he said, 'I simply don't read what is written about the Grand Trunk Pacific Railway project.'

Mr. LENNOX.

Let me direct the attention, especially of hon. gentlemen on the government benches, to where we are at. We have Mr. Roblin claiming that this scheme is not demanded, 'not needed,' says Mr. Roblin, 'not effective even if constructed.' That covers the ground pretty well. The only point hon. gentlemen have to ascertain is whether Mr. Roblin is in a position to judge. 'It is not a solution,' says Sir William Van Horne, 'not practicable, not reasonable.' No one can doubt Sir William Van Horne's competency in these matters. He has been giving his attention to railway matters for years. He was requested to take the chairmanship of the commission which was to solve the transportation problem.

I have another source to quote from, and this ought to be testimony, if not for the cabinet, at all events, for the following of the cabinet—a gentleman whom these hon. gentlemen were accustomed and proud to look up to, the ex-Minister of Railways. He too joined in saying that, while he severed his connections with great reluctance and without a vestige of reason except the question of the interest of the country and the difference of the policy of the government, while his relations with his colleagues were friendly and all that could be desired in that regard, and while he appreciated the position he had, yet he was forced to resign from his position because he had come to the conclusion, that, to use his own words, the scheme was absolutely and utterly indefensible. Nor is that all. We have the statement of the promoters of this railway. I will not read it again, it covers practically the same ground as that which I quoted you this morning. But what I quoted then with regard to another point will apply to this, that there is no population in what we will call the lake section, there is no population in the prairie section, and there is no population, while there are great engineering difficulties, in the extreme western section. In all these statements, there is not a suggestion of relieving any congestion in the territory served by the Canadian Pacific Railway and the Canadian Northern. The road is launched as a colonization and immigration road. It is pointed out, how much the Canadian Pacific Railway has done to people the west, and it is suggested that this railway would have the effect of increasing the rapidity of inflow of population into the country served by this road. Now, am I right——

Some hon. MEMBERS. Oh, oh.

Mr. LENNOX. If hon. gentlemen opposite, Mr. Speaker, are through with their interruptions, I wish to say that there have occurred instances of men shouting before they are out of the bush, and I am inclined to think that those who shouted a few days ago, when this measure was introduced, will raise a different note when they face the electors. I do not think they will feel

quite so hilarious. I see the hon. member for North Simcoe (Mr. McCarthy)——

Mr. GOURLEY. Hit him again.

Mr. LENNOX. No, I am only going to appeal to him. I see that hon. gentleman always in the front rank of those who wish to interrupt me. I suppose that his interruptions proceed from the best of motives. I suppose it is to give me encouragement. I know it must proceed from some worthy cause. But he leads the interruption. I wish him merriment of it when he comes to North Simcoe again. There, as suggested by the hon. member for East Simcoe (Mr. Bennett), he has got rid of his native town of Barrie.

Mr. BENNETT. The electors there would have given it to him.

Mr. LENNOX. I was going to say: Am I right in concluding from the facts that the question of blockade in the west, as the cause of the government proposed like the question of bonding privileges, was an afterthought and a myth? I think that those who study this question in cold blood, not answering to a party lash, will come to the conclusion that both the suggestion of a blockade in the west and the suggestion of our being on the eve of losing our bonding privilege are afterthoughts and makeweights, a padding in the effort to defend the scheme, which, as the ex-Minister of Railways has said, and proven, is absolutely indefensible. I like to give my hon. friends of the government credit for the best motives. I notice that the hon. member for Gaspé (Mr. Lemieux) claimed that the ex-Minister of Railways had shown in the debate great warmth and a spirit of hostility. I am not concerned with that. I have only to say that we have the certificate of the Minister of the Interior (Hon. Mr. Sifton) that absolutely no motive actuated the Minister of Railways but the loftiest motives and the desire to promote what he believed to be the best interest of the country. I leave the Minister of the Interior and the hon. member for Gaspé to fight out that question of motive. I want to know, do the government know they are on the wrong track?

Mr. JOHNSTON (Cape Breton). No.

Mr. LENNOX. Well, they will know it in a few minutes, and on very high authority. There is a good deal the government do not know, and when you travel from the ministry to some of their following, it is across the mountains and over vast ranges of country. Hon. gentlemen can go on interrupting if they think fit. I say the government does not know that except in equipment, we have ample facilities for the carriage of western grain, and that this fact has been definitely stated by ministers of the Crown. Then, where are we at? Are we going to have another resignation? A minister who was in the House this morning, and a strong member of the cabinet, has said so. We have lost two of these strong men this session, and three before this session. The late Sir Oliver Mowat went out while it was perfectly safe. Sir Louis Davies went out for a safer and better position. And we lost the late Hon. David Mills, who was promoted to a position on the bench. I do not refer to men who died in harness, but those who left the cabinet voluntarily. This session we have had two men who have left the cabinet because they did not find the policy of the government such as they could support. Are we going to lose another? I said he was a strong man. I presume the House has anticipated of whom I speak, for you naturally pick out these men. I refer hon. gentlemen to the debate on the 7th of May, last session, an excellent speech had been made by the hon. member for North Perth (Mr. MacLaren) on the question of transportation, more particularly as affecting the waterways. I refer to the reply of the Minister of Agriculture to that speech. He is the strong member of the cabinet, who, I think, will probably be forced to resign unless he has changed his opinions since then. He says at page 4377:

> The waterways of Canada are far superior to to those of the United States. . . . . But that the government have already taken steps to remedy, and to-day there are large contracts being carried out for the improvement of Port Colborne, at the completion of which I venture to think that port will seriously rival the port of Buffalo in the facilities and advantages which it will afford for the transhipment of grain and other products from the ships plying on the great lakes to those which ply on the canals. . . . . This fact of itself makes our waterways far superior to the waterways of the United States where no such cargo can be carried from the interior of the continent to the seaboard without breaking bulk at Buffalo and transhipping into smaller vessels to pass through the Erie canal.

That is only introductory. Now the hon. gentleman makes his confession, and he then and there deliberately proclaimed that we needed no more railways and no more shipping facilities, no more improvement to our waterways, but that what we wanted was rolling stock and ships. He went on to say:

> But putting politics aside entirely, let me say that Canada as a whole, both this government and its predecessors, has devoted enormous sums of money to the solving of the transportation problem and has never shrunk from doing what the country thought necessary in order to provide transportation facilities. Our canal system is probably the greatest on the face of the earth. Our government railway, the Intercolonial, and the Grand Trunk Railway and Canadian Pacific Railway, both of which have been largely assisted by this country are probably, in proportion to our wealth and population, the greatest railroad system on the globe. Canada has borne, and is to-day bearing the burden, by paying the interest on the debt incurred for the purpose of perfecting

our transportation facilities. These facilities are not at all utilized to their full extent. Our canal system is not at all utilized to the one-hundreth part of its capacity. If the enterprising capitalists of this country would undertake to supply the necessary vessels, there is nothing to prevent our canals being utilized in a way hitherto undreamed of, and I have no doubt that the investment would prove profitable both for the promoters and the country.

Under these circumstances I venture to think that neither the government or the people of Canada can be looked upon as recreant to this part of their duty or lacking in enterprise and determination to advance along the lines of material progress. If these facilities have not been utilized to the utmost possible extent, it is because the people of Canada have been devoting themselves to other things—the farmers to the production of goods, the merchants to selling these goods to advantage, and now they are beginning to see and understand that greater facilities in the way of transport are necessary, not in the shape of canals, not in the shape of railway tracks, but in the shape of improved rolling stock for the railways, and of ships for the utilization of the canals which now exist.

I need not refer to any more of the remarks of the Minister of Agriculture. I commend them to that hon. gentleman, and I hope he will digest them before he records his vote. I say deliberately that it will be a pretty sharp turn for the Minister of Agriculture to take, after expressing these views only a year ago, to vote for this railway deal now, to take back all that he said then, unless he is willing to confess that he was wrong then and that he is right now.

Now, other gentlemen have spoken in support of the government and have been replied to pretty fully, as a rule. I wish to refer to one gentleman who stands in the relation, we may say, of parson to the party, and of parson to the government, a gentleman of extreme moral attainments, a gentleman who, whenever there is a difficulty, steps in and smooths the troubled waters, and gives good advice, gives us the benefit of his long experience in the House, a gentleman who has, I think, occupied pretty nearly every side of every question that has been presented to the House of Commons for a number of years—I refer to the hon. member for North Norfolk (Mr. Charlton). When that hon. gentleman tells us what we ought to do, and gives us facts and figures, his record is such that I like to look carefully into the matter before I decide to accept his facts. I will not say a word against that hon. gentleman, but I will quote his own language and give his own description of himself. Speaking on the budget debate in 1902, I find his saying, on page 1523 of the Debates :

> There is one thing in connection with that administration which I think the administration in power may properly take into consideration. We had in Canada in the early years of the Mackenzie administration, a strong protectionist feeling.

Mr. LENNOX.

They never let it out for a long time. The hon. gentleman was giving a warning to the Finance Minister of the present administration, calling his attention to the mistake they made in 1876 or 1878, and urging him not to repeat that mistake. He goes on to say :

> There were in the Liberal party, among the supporters of Mr. Mackenzie, a number of members who believed that the duties should be advanced and that the government should adopt a protective policy of a moderate character and to a limited extent. This policy was advocated by the members for the city of Hamilton who were supporters of the government, by the members of the city of Montreal, who were supporters of the government, by the members of the city of Toronto, by the member for South Brant and by myself.

We never heard of it. He goes on to say :

> These demands, it is not necessary to say, were of the most moderate character. There were good reasons for adopting this policy. The revenue of the country was insufficient to meet the expenditure even with the careful and economical administration of Mr. Mackenzie.

He then goes on to point out that certain gentlemen coming from the maritime provinces, Mr. Jones and others, threatened the government if they raised the duties, and that the government surrendered to the threats of the members from the maritime provinces. He goes on :

> Our chances were thrown away. I fought for an increase in the duties, for I believed that the salvation and existence of the Liberal party depended upon the government taking the course that my friends and myself then advocated. We failed. The duties were not increased. . . . . I went to my constituency——

Let me pause here. The hon. gentleman has shown us that he had a conviction in favour of a protective policy, that many other members of the Liberal party held the same conviction, but that a different policy was adopted. Now we come to see what he does. Does he, as an honest man, go out and announce that he is a protectionist ? Let him speak for himself :

> I felt it. I went to my constituency and held meetings for the two years that elapsed before the elections. I held twenty or thirty meetings in each year, because I felt that my position was in danger. I felt that as a supporter of the Mackenzie government I was liable to be defeated, and in June, 1878, I wrote to the Hon. Alexander Mackenzie. I had previously implored our friends to go into the field, to hold meetings to combat this new principle, and I had warned them if this was not done they were in danger.

That is the description that the hon. gentleman gives of himself. He says while he believes in protection that for two years he held twenty or thirty meetings in each year and that at these meetings he proclaimed free trade and denounced protection. He was deceiving the people, and his speeches were being quoted from one end of the

country to the other as the speeches of an honest man. Then the hon. gentleman goes on :

Now, the mistake of the government of that time was simply this. They underrated the force of the currents of public sentiment that pervaded the country. They did not realize how strong a hold this doctrine of protection had taken upon the public mind. They failed even to take advantage of the circumstances they might have taken advantage of, by combating vigorously in every riding in the Dominion this so-called heresy. They failed to do it, and they were beaten.

This moralist, this hon. gentleman who comes to guide this House, is the same hon. gentleman who for twenty-five years occupied as false a position, politically speaking, as an hon. gentleman could assume, and yet this hon. gentleman comes now and asks us to accept his doctrine and facts and conclusions upon a matter as important as this. He continues :

Now, I am afraid I shall be considered an inconsistent man.

Mr. EDWARDS. There is no trouble about that.

Mr. CHARLTON. My hon. friend says there is no trouble about that. I must confess that I cannot hold on to the doctrines of absolute free trade, as my hon. friend does, in the light of the experience I have passed through and the knowledge I have obtained.

Mr. SPEAKER. I am afraid the hon. gentleman (Mr. Lennox) is not discussing the question which we have to examine. I would remind him that we are discussing the question of the transcontinental railway.

Mr. LENNOX. This is along the same lines, but I will be guided by you, Mr. Speaker. However, I had about concluded my remarks on that point. I was referring to this matter for the purpose of informing the country who it is that is giving it advice and information upon these matters of grave importance. It is important that we should be in a position to judge whether we should take that hon. gentleman's statements without any question or not. The hon. gentleman is not without a record upon the immediate question before the House. The hon. gentleman attended the Railway Committee of this House on the 3rd June last, and he spoke upon that occasion. He has since spoken. The other day when he spoke I understood from what he said that he endorsed with much praise the policy which is now proposed by the government, including the extension from Lévis to Moncton. What did the hon. gentleman say, and he said a good deal more that I will not bother with ? On the 3rd June, 1903, in the Railway Committee, in the presence of hon. members who may be here in the House, the hon. gentleman said :

I do not believe in saddling five or six hundred miles on the Grand Trunk Pacific Railway to make a connection at Moncton, to compete with the government railway making that property valueless.

A pretty sharp turn.

The hon. member for Westmoreland (Mr. Emmerson) commented upon the fact that hon. members on this side of the House applauded the hon. ex-Minister of Railways and Canals (Hon. Mr. Blair) when he was outlining what he believed to be the proper policy in regard to railways and was criticising the present policy, and showing that it was not in the interests of the country. Why should we not applaud ? Has the ex-Minister of Railways and Canals become suddenly wicked and bad ? He was an honourable man until a few weeks ago. Everybody then on the other side of the House would applaud him. He could not speak without rounds of applause from the government benches. Have hon. gentlemen on the other side of the House not only no toleration for anybody who is speaking, but no toleration for any man who differs from them in his views and who once belonged to their party ? I am inclined to think from the moment that any hon. gentleman of their party asserts his independence he is to be drummed out of the House. He is to be avoided, calumniated and defamed, and he is not even to have the consolation of the Conservative party applauding him when his words commend themselves to the sound sense of the Conservative party. The hon. member for Westmoreland made rather a long speech, but not too long, and I will tell that hon. gentleman that if he will begin to talk good, sound, common sense in the interests of the country, although he has been a great transgressor, we will applaud him too.

Now, I come to a point which it is not pleasant for me to deal with, but in connection with matters of this kind we are not to be guided by our heart, but by our common sense, and we are to discharge our duties in the light in which we deem to be in the best interests of the country. Nobody can sit in this House without having a great deal of admiration for the great ability and the very unique powers of expression possessed by the right hon. leader of the government, but in this case there is a very great question involved in the attitude of the right hon gentleman. Referring to the bitterness which is said to have characterized the speech of the hon. ex-Minister of Railways and Canals, let me say, on the other hand, that the hon. ex-Minister of Railways and Canals has gone out of his way on all occasions to certify to the bona fides and good intentions of the right hon. gentleman, as I am quite aware, when he opened his speech in the way in which he did. It showed great generosity and an inability to be petty or small. But I occupy a different position, as regards the duty I am called upon to discharge, and I have the right to place before the country the position, so far as the record shows it, in which the right

hon. gentleman stands in regard to this question which is now before the House. The hon. ex-Minister of Railways and Canals, in his remarks the other day, referring to the question of his not remaining in the cabinet at a time when it was desired that he should remain in the cabinet, directed attention to the letter which he wrote on the 10th July to the right hon. First Minister. In that letter he says :

The suggestion which was made to me when I stated to council my inability to become responsible for the policy which the government was apparently determined to adopt with reference to the transcontinental railway project, that I might delegate to some other minister, or that you yourself might take charge of the carriage of the resolutions and measures in parliament, appears to me more impracticable the more I consider it. It does not seem to me possible that, while declaring myself in Council as disapproving strongly of the government policy on this question, and therefore unable to support the same in parliament, I could retain my position in the cabinet and avoid the public advocacy of a proposition which it would be especially my duty as Minister of Railways to present to parliament and defend before the country. This course of tacitly accepting a measure which my judgment strongly condemns I consider, on reflection, as neither fair to the government as a body nor just to myself.

The hon. gentleman says that he exonerates the right hon. gentleman from having in person asked him to remain. There can hardly be any hon. gentleman so obtuse to what is due to himself as a member of parliament as to say for one moment that the offence is to be condoned of asking or urging or consenting to a member of the cabinet remaining in the cabinet when it is known in the cabinet that his views are diametrically opposed to those of his colleagues on a large question of policy which is about to be introduced. Therefore it is important to the country to know just where the cabinet stands in regard to that question. Did the cabinet or did the cabinet not desire that the hon. ex-Minister of Railways and Canals should remain in the cabinet, knowing his views to be hostile to the measure, and so desire to deceive the public during the entire passage of this Bill ? The hon. gentleman (Hon. Mr. Blair) said :

I am pleased, however, Sir, to be able to avail myself of the present opportunity of exonerating the right hon. leader of the government (Rt. Hon. Sir Wilfrid Laurier) from the charge which has been frequently made against him since this difficulty has originated. The right hon. gentleman has been charged with having made a suggestion to me that I should, having the opinions which I entertain with respect to the railway scheme that the government have determined upon, remain a member of the government and should quietly and silently continue to act as a colleague with him in that administration. The charge which has been preferred is that this proposition was made by himself to me. I am bound to say, in justice to the right hon. gentleman, that the proposition did not emanate from him, and I make this statement, not at his instance, but as a matter of fair play to him and of fair play to myself. In the correspondence which ensued pending my contemplated resignation I referred, as you will remember, to the circumstance that such a suggestion had been made in Council, and I mentioned the reasons which I thought had rendered it impossible for me to favourably entertain such a suggestion. I did it because I thought that there were perhaps members of council who would think I was over punctilious in declining to pursue that course, and I was glad afterwards that I had mentioned it in the correspondence, because there are many warm personal friends on the government side who, between the time that my resignation was known and the time that the explanations were made, have criticised me because I had not pursued that very same course. I say, therefore, that I very gladly avail myself of the present opportunity to make that matter straight.

The hon. ex-Minister of Railways and Canals has made the matter perfectly straight, as to whether the suggestion originated with the right hon. leader of the government or not; but that does not alter the position of the matter. I regret to have to say, that if the leader of the government sits in the cabinet council and hears a nefarious proposition such as this enunciated, silence is not enough. That public morality, or the semblance to it, shall be maintained, requires that any member of the cabinet who respects his position, and much more the leader of the government, shall at once rise in his place and say, so long as I am a member of the cabinet, so long as I am the leader of the government, no such thing can be or will be tolerated by me. That is all I wish to say on this subject. It is not a pleasant subject, because in many ways I have the very highest esteem, personally speaking for the right hon. leader of the government; but it is a matter of public importance that I should refer to it.

Now, it would perhaps be virtually an impertinence on my part, at least it would be assuming a great deal, if I attempted to criticise the able speech delivered by the right hon. leader of the government, recognizing as I do that our esteemed leader is to speak upon this question. I would be arrogating to myself a position which can be much more ably taken, not only by our leader, but by others who are to speak after me. But there are some matters in the right hon. gentleman's speech that are so easily answered that I may perhaps refer to two or three of them. Speaking of the question of the proposed line from Lévis to Moncton paralleling the Intercolonial, I do not want to discuss whether in the strictest sense it is a case of paralleling or not. I assume that the hon. ex-Minister of Railways and Canals has dealt with that question; and if he has, that is a sufficient reason for me not attempting to improve upon what he no doubt ably handled. This is not a question of a play upon words; it is not a question whether there are two lines

at equal distances. It is a question of whether this new road, as a transcontinental line, will or will not divert a large or some considerable proportion of through traffic from the Intercolonial Railway. Can there be any doubt about that? Can any hon. gentleman on the government side of the House argue that the effect of the construction of this railway will not necessarily be for a long time to come—for all time to come—to divert that western traffic to which the Intercolonial would otherwise be entitled, a large proportion of it at least, to the new line? I am not at all concerned with the argument of the right hon. leader of the government in regard to the large mountain ranges which he says lie between the Intercolonial and the proposed location of the new line. That may well be. From what I hear, and from what I have been able to read, I think there are plenty of mountains thereabouts. There may be dividing mountains, and I think there are mountains that will present almost insuperable difficulties to the passage of this proposed line. But that is not the question. It is not the local traffic we are talking about. It is the question of the great transcontinental trade; and the inevitable result of this policy must be, as hon. gentlemen who are candid must admit, largely to divert the traffic of the Intercolonial Railway.

Now, let me refer to an incident which I think will become historical, that is, the right hon. gentleman standing on the shores of the Georgian bay at Depot Harbour in 1896. Depot Harbour is situated on an island, and I can almost imagine the scene of the right hon. gentleman looking out upon the waters as being a parallel to that of the great Napoleon when he stood looking out from his lonely island. The incarceration of Napoleon on the island of St. Helena had a very marked influence on the history of Europe, and the cogitations of my right hon. friend upon the occasion when he looked out on the angry waters of the Georgian bay, are going to have a very important influence—a very disastrous influence I think—upon the destinies of this great Dominion, unless the people stop it. I hope they will stop it. I am not going to indulge in any pious exclamations. I am not a particularly pious man. I am sorry for it. I will not say, 'grant heaven that it may not be too late.' But I will say, in all candour and all earnestness, that I hope the hon. gentlemen who usually support the government will study this question so fully, will give it such unprejudiced consideration, that it will not be too late to prevent this measure being pressed through this House at this time. I do not want it to be permanently stopped in one sense. All I want is that the people shall have an opportunity of pronouncing upon it. Stay it for the present. Do you think time will be lost? The right hon. gentleman refuses to listen to those who say to-morrow, and to-morrow, and to-morrow.

He turned a deaf ear to those who asked him to wait. He repelled the advice of those who counselled deliberation and care. There is no time for that, he said, this is the time for action, this day, this hour, this very minute must be taken advantage of. It is all very well for the right hon. gentleman to become dramatic, but I claim that investigation here is action in its very highest form, the highest act of which moral man can be capable of is a well considered, deliberate system of thought, and evolving from thought a great measure which otherwise would not be given to the world. This is a time for action, but action of the mind rather than of the hand. The time for that kind of action which would bring together in one focus all the information that can be got upon this gigantic scheme. Then if it be demonstrated—and I do not believe that possible—that this scheme is a good one in the interests of the country, in the name of all that is reasonable let it be carried out. But I do urge the right hon. gentleman to reflect and deliberate. I say that until we have proper information as to where this line should be located, as to what are the difficulties we have to surmount, as to what it shall cost, we ought to delay taking action.

Standing at Depot Harbour and gazing at the vast expanse of waters to be seen from that harbour, the right hon. gentleman reversed the policy of his life. Up to that time, he had a strong bias for government ownership; but he tells us that on looking upon these waters, he found adequate reasons for reversing that policy. Mr. Booth there told him that he had to create trade, that he had to build elevators, and that he possibly might have to build hotels, and the right hon. gentleman concluded that these things could never be done by a government. Yet we find Mr. Booth, although single-handed and alone, and wearied after the exertions of building a most magnificent railway enterprise, willing to renew his efforts and do what the right hon. gentleman shrank from doing. The right hon. gentleman, backed by such an able galaxy of cabinet ministers as assembled here in 1896, was frightened at the prospect he described the other day, and what has been the result? The result has been a complete reversal of the policy of the government on the transportation problem. Ever since 1896, we have been expending money at a very rapid rate in the development of our waterways. In 1896 we expended on canals and waterways, out of capital account alone, $2,477,000. In the subsequent years, we spent as follows:

In 1898	$3,419,000
" 1899	4,225,000
" 1900	3,093,000
" 1901	2,941,000
" 1902	3,885,000

Making an aggregate of upwards of $20,000,000 expended out of capital alone. I have not included 1903 or 1904. We have made the expenditure to 1903 and are committed to the expenditure of 1904. To what end have we expended this money in deepening our canals, improving our docks, enlarging Fort Colborne and improving our waterways generally, sums vastly exceeding what I have mentioned, because there are large sums paid out of consolidated revenue as well? To what purpose all this expenditure, if we are to adopt this policy, which will thoroughly cripple, for all time, the development and utilization of our waterways? This is not all. We have expended upon the Intercolonial Railway in these years an amount aggregating $14,000,000, making a total expenditure on these two sources of about $35,000,000, or if you included the expenditure on these two sources of 1903 and 1904, you will have an amount reaching nearly the figure of $50,000,000. I say in all earnestness, if the right hon. gentleman at that time, when he knew that this great transportation problem was before the people of this country, when he knew that thoughtful men had realized that perhaps more than another question worthy of the attention of the greatest minds of this country was the question of transportation, when he knew that the money of the people was being expended with a generous hand upon the development of waterways and the equipment of the Intercolonial Railway, so that to-day the Intercolonial Railway stands side by side, in equipment and in every particular, the peer of the Grand Trunk Railway, making a part of a great chain by which we hope in the near future to relieve any congestion in the west—I say if the right hon. gentleman then intended to change his policy, was it not the part of reasonable prudence that he should have given some indication of his change of heart to the House before we arrived at this stage of things?

I was referring to the matter of the Intercolonial Railway, which brings me to the question of an all-Canadian route. I have referred to that in connection with another branch of the matter, and I may say, speaking only for myself, that whilst I realize that it is very desirable that we should have an all-Canadian route, I recognize too that we have an all-Canadian route. We have, in fact, two all-Canadian routes. We have the Intercolonial Railway from Montreal, we have also the railway operated by the Canadian Pacific Railway, which leaves Rivière du Loup and proceeds down to St. John, so that we have only to double the track from Lévis to Rivière du Loup, and we have two complete and perfect all-Canadian routes. I would prefer to have a Canadian route, with no portion of it in American territory. Yet, the matter that seems to me most important is not, as the right hon. minister says, that it shall be every foot and every inch upon Canadian soil, but that its ports shall be Canadian. I recognize that it cannot be just as profitable to us to have it pass through American territory. I recognize that it is to our interest in building up our various industries and promoting the wealth and progress of this country. But, as to whether a few miles of it shall be through a foreign country, why, if that is a complete bar, then the policy of countries in Europe and elsewhere must be all wrong. Who has heard of any agitation in favour of such a principle among the protective countries of Europe? Certainly I have not. Of course, others may have had more experience than I, but I would certainly be surprised if such a thing obtained.

This brings me to the question of the bonding privilege; and when I have referred to that—and very briefly—I shall conclude. And I shall do so without making an apology, because I rather committed myself to not making one when I began. Otherwise, I should certainly make an apology now for occupying so much of the time of the House. I will make a kind of apology, I will say that, whilst I do not regret dealing with these questions from the standpoint I have taken, and in the best way I could, I do regret that, having such magnificent material, I have not been able to present it better. I recognize that if I had handed to some hon. gentleman on this side of the House, the brief, if I may call it so, that I have here, and given them a few hours to look it over, probably a more effective service would have been done. But that is not practicable under our system. All that I have to do and all that any hon. member of this House has to do is to advocate those principles which appear to him in the best way which he can. And I think the House will exonerate me from any charge of having failed through lack of endeavour to do the best I could with the material I had, or through not having given time to gathering and selecting material. Now, as to the bonding privilege, I said that I disliked very much dealing with that question where I am to be followed by speakers, on this side of the House, such as I have referred to. But I have very strong convictions on this question of the bonding privilege. Let me tell the right hon. Prime Minister, that, when I find that the government have been in power for seven years, and when I remember that long before they got into power the accusation was made against hon. gentlemen opposite that they were too much hand-in-glove with our American neighbours; when I find that during their terms of power no intimation has been given of this matter; when I find that in the speech from the Throne this session, not one syllable of suggestion has been made that we had to grapple with what must be, should it arise, a very significant and important question; when I find that the ex-Minister of

Railways, who, above all, would be cognizant of the matter, declares that he has never heard a single syllable of suggestion, not only from the House, but even from the cabinet, or even from the right hon. gentleman who leads this House, that there was any danger in this respect; when I find that there is no evidence in the papers forthcoming that there has been negotiations or even communications between this government and the American government in recent times on this subject; and when I recognize that matters of this kind are matters of state record; and when I find, turning up the report of the Interstate Commerce Commission, the very document from which my right hon. friend quoted, that it is pointed out that the privileges are mutual, that there is advantage to the people of the United States as great as to the people of Canada, that this privilege is a mutual necessity and a necessity of commerce upon modern lines; when I find all this, I cannot help but conclude, even if I was not aided by this little book from which I have quoted, I cannot help concluding, reluctant as I am to do it, that this argument of the bonding privilege, is as I have said, an afterthought, a makeweight, for the purpose of trying to force through this measure, many features of which are, even as must appear to the ministry wholly indefensible. Now, what is the position of this question of the bonding privilege? Speaking from my own standpoint, I believe it is absolutely out of the range of possibility that there will be any trouble. I do not think it is consistent with the attitude of the United States or with the requirements of the United States. And I think that if it was not to be apprehended in years gone by, when there was a much less friendly feeling between the United States and Great Britain, and a much less friendly feeling between Canada and the United States, than there is today, we need not begin to apprehend trouble at this time. I have strong convictions upon this matter, and upon one aspect of the case I feel as competent to judge as the right hon. Prime Minister himself. And that is upon the expediency and propriety of introducing this matter into a discussion in this House. I think that no more disastrous statement could have been made by the leader of the government or a cabinet minister than was made by the Prime Minister on that occasion. It was an inviting of difficulties with the United States. And the only excuse that I can find, after thinking of it a good deal, is that the right hon. gentleman was so confident, beyond the possibility of doubt, that there was no danger of friction arising, that he thought it safe to mention it, as it would not do any harm anyhow. I said there were mutual interests involved. But there is more than that. We have built the Canadian Pacific Railway through the state of Maine. They have built their railways throughout our territory. We have built the Canadian Northern through the south of the Lake of the Woods, through American territory. There are other Canadian lines through American territories; and vast Canadian railway interests are centred in the United States, as there are vast railway interests of the Americans centred in Canada. Now, if the bonding privilege is abrogated, that abrogation works both ways. Supposing that we sent a despatch to Washington tomorrow saying that we suspended the bonding privilege, what would be the result? The result would be that after the American government remonstrated with us they would declare war against Canada, or we would have to back down or fight. Is there any hon. member of the House who doubts it? I take no lower ground for Canada. I say we have a just right to these privileges. We built the Canadian Pacific Railway through the state of Maine upon the implied condition of a continuance of these rights, as the Americans built their railways through our territory. And, although I am not slow to recognize the power of numbers in the United States, and the superior wealth of that country, yet Canada, like the little communities in Europe, the Swiss and others, is not to be gauged by numbers. While I throw out no defiant note, I say that Canadians should stand by their rights upon this northern half of the American continent. For my part, as a Canadian, I do not believe in acknowledging ourselves beaten until we are pretty nearly beaten. I am not going to tell the United States that we are afraid of them in respect of this question; I am going to say to the United States: We recognize in you people of the same race with ourselves; we recognize that you are engaged with us in building up a great community on this continent; we recognize that you and we are working together for the best interest of humanity, and we will expect from you just and neighbourly treatment. We cannot imagine that you would do such an act as was contemplated by the right hon. gentleman, if in fact he did contemplate it seriously.

As the clergymen sometimes say—I say in conclusion of this whole matter of the bonding privilege, and in conclusion of what I propose to say upon this railway question, that if there was any stage in the argument at which I recognized that the case of the government was absolutely weak—and you can hardly take up one argument in that case where weakness does not manifest itself—I say if there was a stage at which weakness was peculiarly manifest, it was in regard to the bonding privilege. Am I right in thinking that this is the opinion of many of the government supporters? It is a significant fact condemnatory of the action of the leader of the government, that so far as I can ascertain not one gentleman

who has spoken in support of the government yet has dared to deal with the bonding privilege, they drop it like a hot coal. They recognize that it was a mistake, a tactical blunder on the part of the right hon. gentleman. I sympathize with the right hon. gentleman, who has suffered from such momentous desertions in the past few months, in this additional evidence of the luke-warm support which he is receiving from his friends.

Mr. A. MORRISON (New Westminister). Mr. Speaker, I hope that I shall not take up anything like so long a time as the hon. member for South Simcoe (Mr. Lennox) has taken up in his speech. I shall not presume to refer to what is known as the eastern section of this Grand Trunk proposition, because that has been dealt with far more ably than I could pretend to deal with it. It has been covered fully by the able speeches of hon. gentlemen who have spoken on this side of the House, culminating with the very excellent summary made by the hon. member for Alberta (Mr. Oliver) on Friday night. After hearing that summary I would have concluded that the last word had been said in favour of this scheme, were it not that in my opinion there are one or two aspects of the case as regards British Columbia and the western portion of this proposed route that were not touched upon quite so fully as I would like. I listened with a great deal of patience to the speech which has just been delivered. The hon. gentleman, in his references to the route which it is intended this new transcontinental road shall take, reminded me very much of the character of the country, as he pictures it, which will be traversed by this road. The hon. gentleman, in his four and a half hour speech, travelled over mountains of distorted facts, he passed through canyons of ignorance of the facts of the present, he crossed plateaus of assurance, muskegs of plagarized statements of his political mentors, dreary wastes, not exactly of verbosity, but of reiteration, statements which were nothing else than parrot-like repetitions. He traversed lakes of the same old charges against the Liberal party, forests of the same old misstatements of existing conditions, and exhibited gusts of the same windy strain while he endeavoured to speak louder than his predecessors on that side. The whole was enveloped in a droning atmosphere of language which you would expect from a man who does not seem to realize the growth of a nation or the movement of events. Every unprejudiced, responsible person, having a knowledge of the facts surrounding this proposition, hold directly opposite opinions to those of the hon. gentleman who has just taken his seat and the gentleman who spoke before him from that side of the House. I repeat that every responsible and unprejudiced person having a personal knowledge of the route and of the facts connected with this proposition, state exactly the opposite of what these hon. gentlemen have stated. I shall not pretend to explain any of the absurd things that they allege as solemn truths, nor why knowing them to be untrue, they still continue to repeat them. I shall leave it to the public to decide whether their intelligence is at fault or whether it is their political honesty.

Now, a measure of opposition appears to have arisen in the province of British Columbia to this Grand Trunk Pacific scheme. As might perhaps have been expected, that opposition emanates from the party of hon. gentlemen opposite—not from all of them, because, as I shall show presently, a very important element of the Conservative party in that province, and perhaps the most important element in it, are supporting this measure. But in reply to that element who are opposing this measure and raising a factious opposition to it, I crave the indulgence of the House for a short time while I refer to the terms of the contract which justify me in saying that it appears to have been drawn with a single eye to promoting the interests of the province of British Columbia, so far as this measure is concerned. The whole contract discloses the fact that the Liberal party have apparently, for the first time recognized a cardinal principle which seems to underlie our constitution, and one which heretofore has been ignored by hon. gentlemen opposite, namely, the subordination of transportation corporations to the sovereignty of parliament. We find that principle crystallized in this contract which is placed before the House and the country, and which is being delayed in its execution by efforts such as the one we have just listened to. Paragraph 10 of this contract reads as follows :

> The work of locating and constructing the said western division shall be commenced forthwith after the ratification of this agreement by the parliament of Canada, and shall proceed with the utmost despatch, and shall be completed within five years from the 1st day of December, 1903.

Now, that is a reply to the statement circulated by some of the Conservative papers of British Columbia that the road will not be commenced within seven years, and that probably it will never be completed, and that there are no terms obligatory upon the government even to commence it or complete it. Clause 11 reads :

> The company shall lay out, construct and equip the said western division of the said railway to a standard not inferior to the main line of the Grand Trunk Railway Company of Canada between Montreal and Toronto, so far as may be practicable in the case of a newly constructed line of railway, but this section shall not be held to oblige the company to construct a double track railway.

There is a clause compelling the company to construct the Pacific division from the Rocky mountains west to Port Simpson, or

whatever the port may be on the Pacific ocean, in as workmanlike and as efficient a manner as the excellent piece of road between Montreal and Toronto, perhaps one of the best pieces of road on the continent of America. Section 12 reads :

The company shall, within thirty days after the passing of the Act confirming this agreement and of the Act incorporating the company hereinafter referred to, deposit with the government five million dollars in cash or approved government securities, or partly in cash and partly in such approved securities, at the company's option, as security for the construction of the western division.

13. The government shall return the said deposit to the company on the completion of the construction of the western division and the first equipment of the whole line of railway, according to the terms hereof.

Showing that not only are the terms put into the contract for the speedy and efficient construction of the road but that there is also a further inducement and incentive placed in the contract, nay, one of the terms of the contract, to urge the company to finish that portion of the road by the return of this $5,000,000 deposit upon completion.

18. The cost of construction of the western division shall include the like classes of expenditure as in the case of the construction of the eastern division.

Again, showing that no stone has been left unturned to have the western part of the road properly constructed.

22. The company shall equip both divisions of the said line of railway with modern and complete rolling stock suitable and amply sufficient for efficient operation and the handling of all classes of traffic to the satisfaction of the government.

24 (d). Securing to any railway company, desiring to make use of the same, running powers and haulage rights over the said western division, or any portion thereof, upon such terms as may be agreed upon between the companies, or, in case of their failure to agree, then upon such terms as may be deemed reasonable and just by the government.

28. For the purpose of aiding the company in the construction of the western division, the government shall guarantee payment of the principal and interest of an issue of bonds to be made by the company for a principal amount equal to seventy-five per centum of the cost of construction of the said division, as defined and ascertained in accordance with the provisions of paragraph eighteen hereof ; but such principal amount shall not, in any case, exceed thirteen thousand dollars per mile of the mileage of the prairie section, nor thirty thousand dollars per mile of the mileage of the mountain section, although seventy-five per centum of such cost of construction may have exceeded the said respective sums per mile.

34. Inasmuch as the bonds to be guaranteed by the government only make provision for a part of the cost of construction of the western division, the company hereby agrees that the Grand Trunk Railway Company of Canada shall guarantee bonds of the company for the balance required for the construction of the said western division, exclusive of the said twenty million dollars required for first equipment, which the company is required to provide under paragraph twenty-two of this agreement, and the company may issue a second series of bonds, to be guaranteed as aforesaid by the Grand Trunk Railway Company of Canada to be a second charge upon the property described in paragraph twenty-five (b) hereof, and to be subject to, and to rank upon, the said property next after the said bonds so to be issued and guaranteed by the government.

37. The company shall purchase all material and supplies required for the construction of the western division and the equipment of the whole of the said line of railway from Canadian producers, when the same are produced in Canada and when such material and supplies can be purchased in desired quantities and of equal quality suitable for the purpose required, and for prices and upon terms equally advantageous with those procurable elsewhere.

39. The rates and tolls to be levied and taken by the company upon any part of the said railway shall be under the control of the Governor in Council, or of such authority, commission or tribunal as is designated or constituted under any Act of the parliament of Canada for the regulation or control of the business of railways.

41. At all times during the terms of the said lease, the company shall continuously and efficiently operate both divisions of the said railway, giving due and sufficient service for the accommodation of all traffic to the satisfaction of the government.

42. It is hereby declared and agreed between the parties to this agreement that the aid herein provided for is granted by the government of Canada for the express purpose of encouraging the development of Canadian trade and the transportation of goods through Canadian channels.

43. The company further agrees that it shall not, in any matter within its power, directly or indirectly advise or encourage the transportation of such freight by routes other than those above provided, but shall, in all respects, in good faith, use its utmost endeavours to fulfil the conditions upon which public aid is granted, namely,—the development of trade through Canadian channels and Canadian ocean ports.

46. The government shall procure to be granted to the company, in so far as the same are vested in His Majesty in right of the Dominion of Canada, such lands as may be required for the right-of-way of the western division, and for all stations, station grounds, workshops, buildings, yards and appurtenances required for the construction and working thereof, and shall also procure to be granted to the company, upon such terms as may be agreed upon, in so far as the same are so vested in His Majesty, such lands fronting upon and covered by navigable waters touched by the line of the railway as, in the judgment of the government, may reasonably be required for the use of the company in connection with its operations. The right of the company to obtain such lands without compensation shall cease when the said division is constructed and equipped as required by paragraph twenty-nine hereof.

Mr. Speaker, reading that contract, it is impossible for any fair minded critic to allege that regard has not been had to the interests of the extreme western province of British Columbia. In addition to that and in order to reply to the criticisms from

the Pacific coast, I beg to refer to the 'News-Advertiser' of Vancouver of July 31, and I am quite sure that the hon. ex-Minister of Railways and Canals (Hon. Mr. Blair) will feel like modifying if not withdrawing the categorical statement which he made during the course of his speech the other day that the province of British Columbia did not want this road when he reads what the ablest Conservative writer west of the city of Toronto has to say on this matter. I refer to Mr. Carter Cotton, of the 'News-Advertiser' of Vancouver. In that paper on July 31st, he says :

The ramifications and connections with the Grand Trunk Company make it the most desirable railway organization that could undertake such an enterprise as far as the interests of this section of the Dominion are concerned, and it is fortunate for British Columbia that this particular corporation should have put forth its proposition at the time it did otherwise there is no knowing to what a reckless government and an incapable legislature might not have come into the province.

That refers to the crass and plantigrade policy of the late premier of the province of British Columbia and of his administration.

We must await the arrival of the Bill itself before we can be certain of all the conditions of the proposed agreement. It seems, however, that the government has taken rasonable precautions to secure the fulfilment of its contract by the company. While it may be quite true that a large part of the region to be traversed by the line between Moncton and Winnipeg may be of such a character that it will not be likely to yield much local traffic, the through traffic must pass over that section of the railway, and if the views held as to the probable future development of central and western Canada are sound, that implies a large traffic. Besides the history of the last twenty years should make any one cautious in declaring that any part of the Dominion possesses no natural resources capable of sustaining a population and of becoming the scene of industrial activity. Furthermore, if that part of the line is built under proper supervision and at the moderate cost at which such work on the Canadian Pacific road was done its capitalization should be low. As the railway will have to pay interest on the cost of the Moncton-Winnipeg section, it will be likely to scrutinize closely every item of cost. Assuming that the road will be built under thoroughly businesslike arrangements, securing full value for the money expended, and the fact that the company will only have to pay three per cent interest on the capital, we are inclined to think that fixed charges on this section will not be more than half what they are on a corresponding mileage on the Canadian Pacific Railway.

Also in the same paper of the 7th August, Mr. Cotton again deals with this proposition. The article which I am about to quote is in reply to an agitation that has been attempted to be raised against the extension of the road to Port Simpson by people in the southern part of British Columbia on the ground that it will create a rival city and destroy to a certain extent the progress of Victoria and Vancouver. Here is what Mr. Cotton, whose paper is published in Vancouver, says in reply to that :

That this will prove to be a very important factor in the opening up and development of the northern section of this province there can be no doubt. The foundation of another important seaport several hundred miles north of Vancouver will not, in our opinion, be at all detrimental to the progress and prosperity of this city. The new town and port will not only develop business for itself, but it will create new business and traffic with Vancouver and other coast towns. The Grand Trunk Pacific management will reach out for business, and there is no doubt that that of the Canadian Pacific will not be found napping in regard to the operations of its influential and aggressive rival. Although the coast termini of the two roads will be several hundred miles apart, the distance between them can be covered by the cheapest of all systems of transportation—that of water carriage. In the cost of carrying freight across the continent by railways, the charge for the carriage by water from Vancouver to Port Simpson (or wherever the northern railway's terminus may be), and vice versa, will be a comparatively small item. We are familiar with similar traffic methods in American freight from San Francisco brought from there by steamer to Vancouver, and then carried from here over the Canadian Pacific Railway to its destination in cities in the eastern states.

This, I submit, ought to be at present a sufficient answer to the objections to this proposition, so far as the Pacific coast is concerned.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. MORRISON. Mr. Speaker, when the House rose at six o'clock, I was referring to the statement made by the ex-Minister of Railways and Canals that there was no demand for the projected transcontinental railway from any of the provinces. Well, it may be that none of the provinces wanted the road in the sense of clamouring for it in the hysterical way in which some of the papers in the country and some of the hon. gentlemen opposite imagine that enterprises of this kind should be asked for ; but the fact is incontestable that every province of the Dominion of Canada requires this road, and perhaps more than this road. The province of British Columbia certainly not only wants it, but requires it. The value of any country to its inhabitants depends largely upon certain well-recognized conditions. The province of British Columbia, the western terminus of this road, has to a very great extent one of these conditions which are so essential to the progress of a nation, namely, a producing capacity. The capacity of the province of British Columbia to produce for the requirements of the people is very well known. The province is the largest province in area in the Dominion of Canada. The Dominion of Canada has a superficial

area of some 3,750,574 square miles. The province of British Columbia has one-tenth of that—372,630 square miles. There are 640 acres in a square mile, so that we can see by a ready computation that British Columbia contains some 300,000,000 acres of land, with a population that gives us something less than one person to the square mile. These figures show the vast territory that is there to be peopled, and the necessity that exists for something being done to give a larger population to that part of the Dominion. In this vast acreage, which is not by any means all mountains, as some people would like to have us believe, we have unexcelled water power—perhaps the most valuable water powers in the whole Dominion of Canada if not in the whole continent of America. We have limitless tracts of timber lands. We have millions of acres of rich agricultural land requiring no artificial treatment to make it produce abundantly. We have large water stretches abounding in edible fish and game. We have undeveloped mining regions. We have a variety of climate suitable for every condition of life. To satisfy hon. gentlemen opposite, who think there is a paucity of information about that country, I would refer to the numerous explorations that have been made from the remotest times in the history of this country. One of the most valuable reports pertaining to that country is the report of Mr. Marcus Smith, so well known as a surveyor and engineer. Then, we have the reports of Mr. Macoun, of the Geological Survey, particularly those made in 1877. We have the reports of exploratory and colonization surveys made by Mr. Gauvreau, Mr. Poudrier, Mr. Strathern, Mr. Thompson, Mr. Going, Mr. Cotton, Mr. Jennett, Mr. Corrigan, and numbers of others. All these reports are available. I will make simply a short summary of the reports of these men upon the very land which will be traversed by the proposed railway, showing beyond doubt that the country has not only been well known for many years, but is one of the most productive parts of the Dominion of Canada. Mr. Gauvreau and Mr. Poudrier, in their reports on this part of British Columbia, say :

In the immense district lying between the Cascade range and the Rockies, to the north of the Fraser, to which the name of New Caledonia has been given, immense opportunities exist for profitable settlement, there being large areas of good agricultural and, as well as immense reaches of grazing country. The district would supply a growing home market among the miners of the district, which district is rapidly opening up, as well as having open to it, as soon as a railway is built, the larger markets of the world.

Referring to one of the valleys along which this road will pass, they say :

The valley of the Skeena—,—

Which is practically the terminus of this railway on the Pacific coast——

—the benches above Quatsalix near Hazelton, the valley of the Kispyox, the upper branches, without counting the valley of Watsonka, and the part included in Mr. Gauvreau's field of exploration, after very careful computation, would give 300,000 acres of farming land, more or less wooded.

Then he goes on to say :

One of the half million acres would be about the correct estimate of the grazing land available.

Further on speaking of the other opportunities of that district to be traversed by this road, he says :

The Bulkley valley is wide and open, well watered by several mountain streams and well adapted for stock-raising or dairy farming down to the 66th-mile station. . . . A very large proportion is open prairie with luxuriant grass, and where there is timber it will be easy to clear. The soil is good and vegetables of all sorts and all serials except wheat could be grown. As grazing land, the district's areas cannot be surpassed, and where timber has been burnt the numerous varieties of grasses growing show that areas of pasture could be largely increased. . . . Along the river are good hay meadows which the Indians have utilized for years. Tremblay lake, of which Middle river is a principal feeder, offers very rich open lands, with good pastures. The soil is clay loam, covered with vegetable matter, while there are bluffs of poplar, small birch and willow ; from Tremblay to the small lake above, the country is open and grassy ; above that lake the land is thickly timbered with Douglas fir, balsam, spruce, cottonwood and poplar.

Then he goes on to describe the very important district of Omenica. Referring to that district, he said :

Mining is the industry of the district, and no doubt when mining operations shall have gained larger proportions, extensive tracts will be utilized for the growing of hardy grains and vegetables, and cattle-raising will become an important industry.

These reports date all the way from 1877 down to about 1897. Mr. Bell, who made his susvey in 1895, said :

The eastern flank of the coast range he pronounces to be pastoral land of exceptional excellence, the winter feed giving it a highly favourable character. This feed can be cut on the extensive natural meadows. Some of the land in this section only requires irrigation to make it admirable for farming purposes, and there are streams at hand to supply the water. Mr. Bell thinks that it is the lack of means of communication which keeps this section from being immediately occupied by settlers. . . . These observations cover the whole country between the coast range and the Fraser.

* * * * * * * * *

In the valley of the Klena-klena river, in the vicinity of Port Neville, considerable exploratory survey work was done in 1894 by Mr. A. F. Cotton, P.L.S., who found on his arrival at Knight's inlet on the sixth of June that oats and potatoes were already up and the season much further advanced than even in the Fraser valley.

In addition to that we have the fact that in 1866 the Western Union Telegraph Company,

in its attempt to extend its line of telegraph up the coast of British Columbia to Behring Strait to meet the Siberian line which was being projected across Asia, got as far as Skeena near the present terminus, when as you know, it got news of the successful laying of the Pacific cable and suspended operations. We have also the surveys of Gauvreau and Poudrier, made in the interests of colonization, and these gentlemen report that the foothills and the country generally were exceptionally rich and fertile. We have further advantage of the surveys and examination made by several local lines, which were projected in British Columbia, for instance the road known as the British Pacific which had explorations made in the early part of 1890, also the Pacific Northern and the Omenica Railway, another corporation, which made a survey of its own.

In addition to all these extensive tracts of productive arable land, the province of British Columbia has another justification for having this road extended through it, which perhaps would be sufficient if there were no other arguments in favour of the projected line. Take the fisheries of that province. The Fort Simpson, Skeena and Naas rivers are the great grounds of the fishing industry outside of the Fraser river in that province. This road will tap directly those important fishing grounds. As far as the deep sea fisheries of the province are concerned, those are the grounds, and they are practically unexploited to-day. It is estimated that the deep sea fisheries of the British Columbia coast are the most valuable in the world, and none the less valuable because they have not been exploited. You may be surprised to know that the capital invested in the British Columbia fisheries, exceeds that invested in Nova Scotia, which province, up to the present, took the lead in that respect by a long way of the other provinces. The total value of the vessels, gear and appliances of various kind in 1901, according to the report of the Marine and Fisheries Department in British Columbia, amounted to $3,360,000 in that province, whereas the value of the same property in Nova Scotia was but $3,319,334. The salmon fisheries which are the great fisheries of British Columbia, and which are to be touched by this road, are the most valuable fisheries, according to the same report, in the Dominion. That industry last year employed in our province 18,541 persons and preserved 59,000,000 cans of fish. The seal fleet of that province, consisting of 39 schooners, 139 boats and some 236 canoes, is valued at $370,000 and gives employment to some 900 sailors and hunters. The total value of all kinds of fish from the province of British Columbia, according to the same report, in 1902, was $7,942,000, as against $7,989,000 in the province of Nova Scotia. We are creeping up to the province of Nova Scotia. A few years ago we were milllions behind in the value of our fishing industry, but to-day we are within a few hundred thousands.

I wish, without being invidious, to refer to the fact that in some quarters it is claimed that the extension of transportation facilities to the Pacific coast will have to be done at the expense of the eastern provinces. We frequently hear, I am sorry to say, from the great province of Ontario, that the expenditure of federal money in British Columbia is mainly borne by that province, because that province is the greatest contributor to the federal exchequer. That, Mr. Speaker, is not according to the facts. In the one matter of fisheries alone, the revenue derived from the province of British Columbia in 1902, was some $42,000, whereas the expenditure by the Dominion on that industry was only $18,000. The revenue derived from the province of Nova Scotia for the same industry was only $6,000, whereas the expenditure was $32,000, showing an inexplicable difference between the revenue from and the expenditure in that province as regards this industry. As far as the general expenditures in the province of British Columbia are concerned, I find that from 1885 to about the time when the Canadian Pacific Railway was built, the excess of revenue from British Columbia to the federal exchequer over expenditure by the federal government, amounted to some $16,000,000, or on an average, to over $1,000,000 a year, and that excesssive revenue over expenditure has been increasing every year since, until now we have an excess of revenue derived by the federal government for the province of British Columbia over expenditure, of some $2,709,000.

From 1872 up to 1901 the Dominion government received $42,375,000, and paid back to us in the various expenditures I have referred to only $28,968,000, leaving a balance in our favour of about $13,500,000. When you are told here by the right hon. leader of the government and by other hon. gentlemen on this side that the Grand Trunk Pacific will cost this country only $13,300,000, we can see that the surplus revenue paid into the exchequer from the province of British Columbia will a little more than cover the amount. Therefore, it is not true to say, if hon. gentlemen are disposed to say it that the province of British Columbia is to get this extension of the great trunk line at the expense of the eastern provinces, and, incidentally I may say that this great increase of revenue from 1885 up to the present time is perhaps, directly attributable to the building of the Canadian Pacific Railway, and the incidental development of mines and lumbering since that date. Therefore, I can fairly argue that that great development and increase of revenue to the federal government arising since 1885 being attributable to the extension there of the Canadian Pacific Railway, our revenue will be doubled and perhaps trebled within ten years in consequence of the con-

struction of this new line, so that it is quite justifiable so far as this province is concerned. Our conditions in justifying the extension of this road are not confined to the two elements I have referred to. We have the lumber industry. With as accurate an estimate as can be made by reputable authorities, it is clear that British Columbia has the largest compact area of merchantable timber on the North American continent. One feature of that resource is its density. As high as 500,000 feet of lumber have been taken from a single acre. Those not familiar with the lumber industry will be surprised to know that in Ontario and the eastern provinces generally 20,000 feet to an acre is a good average. It is estimated that there is in sight in British Columbia from 40,000,000,000 to 50,000,000,000 feet of lumber. Now these are not idle figures. As I stated, it is a matter that can be estimated with almost a mathematical exactness. When you consider that only 1,175 square miles of timber is under lease and that, according to the Dominion returns there remain 285,554 square miles, you can fancy what a tremendous source of revenue and what a tremendous opportunity for development remain in the timber of that province. In order to get out that tremendous wealth which we have at our door you can see the absolute necessity for at once furnishing even more facilities than are proposed in this measure. Then, I come to the great industry of the province, and the one that is always associated with the name of British Columbia, the mining industry. We have that yet practically undeveloped. The province has gone through a severe test; it has been the vicarious victim of stupid inexperienced speculators from eastern Canada and the old country. We have had the misfortune of not having the attention of reputable investors directed to the province up to this time to the extent we deserve. The fault was not with the province, but with those who have attempted to take advantage of the great mineral wealth there. And I refer, of course, in these remarks, to the gold mining side of the industry. We have great coal areas in that province second to none in the Dominion. The two companies operating on the coast of British Columbia have a monthly pay-roll of $230,000, or an annual pay-roll of $2,760,000; I do not include in this the Crow's Nest and Fernie coal mines. The value of gold, silver, copper and lead mined in British Columbia in 1901 was $13,500,000. So again I am justified in saying that this development is mainly attributable to the transportation facilities we have been afforded up to the present time. Generally, apart from these sources of wealth in British Columbia we have every evidence of tremendous resources west from Winnipeg to the Pacific coast. I will refer particularly to a few statements made by independent and unprejudiced parties concerning the prairie country and British Columbia. One authority says:

> If I were a young man, with such opportunities within my reach as are offered in the Canadian North-west, I would make all possible haste to get a plough into the rich soil of these fertile prairies and would soon be reaping the fruition of my labours in 40-bushel-to-the-acre wheat and in herds of the finest cattle the world ever saw. I believe that region is the very acme of God's best gifts to man in the soil and climate, and in health, wealth, and comfort-giving opportunities, upon the face of the earth to-day.

That, Mr. Speaker, has reference to a part of the country through which this Grand Trunk Pacific will pass. Sir Richard Cartwright, in a speech he made in 1901 stated:

> The Red River valley, the Saskatchewan valley, the Assiniboine valley, and the Peace River valley are realities, and the progress Western Canada has made is a reality, too. We have room for a population of at least 50,000,000. We have marvellous water power, the value of which we are just beginning to realize; we have immense mineral resources; all we need is men. I believe that the record of the next five years will surpass that of the last five years, good as it has been, as fully as the record of the last five years has surpassed that of the last fifteen years.

Sir Richard Cartwright in making these statements made them with the full knowledge of the facts. That hon. gentleman is Minister of Trade and Commerce and was in council when this Grand Trunk Pacific was being discussed. That being the case, the accusation of hon. gentlemen opposite that the members of the cabinet rushed into this with lack of knowledge, without knowing what they did, apparently falls to the ground. Another authority is quoted as saying:

> One who has not studied the matter can have no conception of the great natural wealth of the Canadian North-west and of British Columbia. Almost everything ministering to the comforts and necessities of mankind is found there—some of the finest forests in the world; inexhaustible sources of iron and coal; gold and silver, and, in addition to all this, the finest grain-growing district in the world is in Manitoba, Alberta, Saskatchewan and Assiniboia, while the whole of the Canadian North-west is adapted for small farms and cattle ranches. In fact, the capabilities of the Canadian North-west with its magnificent pastures and unlimited quantities of natural hay, to produce the very highest type of animal life—horses, cattle, and sheep—are practically unlimited.

A prominent American authority says:

> Canada has resources equalling, if not exceeding, those of the United States, in agricultural and mineral wealth and in industrial possibilities. It has millions of acres of fertile farming land, rich mineral deposits, and transportation possibilities far ahead of ours. . . It does one good to see the crops they are raising up there. Wheat, barley, and oats are raised in immense quantities, and occasional patches of good corn. . . . Canada will develop pro rata the same way as the United States has grown.

Then we have the authority of the Department of the Interior for the following :

Wheat has been successfully raised at Fort Simpson in latitude 62 degrees north, which is as far north-west of Winnipeg as Winnipeg is north-west of New York. Rye and oats are grown 200 miles farther north, and 200 miles still farther north barley and potatoes are successfully produced.

I stated that one of the conditions for the welfare of the inhabitants of the country is the producing capacity of the country. Another is its exporting capacity. The province of British Columbia has that capacity to a very large extent. Not only has it large exporting capacity, but it has great facilities as regards foreign commerce. The ports of Vancouver, Victoria, New Westminster, Port Simpson, and whatever other ports may be opened by the extension of this road have advantages far in excess of those of Puget Sound ports, Oregon and San Francisco. When I show you the extent of the exports from Puget Sound and the Oregon and the California ports, which are not so favourably situated so far as the wheat belts are concerned as are our Pacific coast ports, you will readily see the tremendous advantage to the western ports of Manitoba and the North-west Territories which will be conferred by the Grand Trunk Pacific road. The wheat exports from the Pacific coast ports in 1901 amounted to some 36,000,000 bushels; the flour exports from Puget Sound and from Seattle and Tacoma amounted to some 2,000,000 barrels. Full particulars of these exports can be found in the American Trade and Navigation Returns of this year. From Montreal, Portland and St. John during the same period, 30,941,000 bushels of wheat were exported. From San Francisco alone there were 14,000,000 bushels exported. Those of you who are familiar with the geography of the western part of the continent will recollect that the Coast and the Cascade ranges of the Rocky mountains are further removed from the American coast than they are from the Canadian Pacific coast. As you go north the range converges to the Pacific coast, not only converges to the Pacific coast when it gets into the province of British Columbia, but it gets lower in altitude, affording an easy access across and low grades, and it comes within a few hundred miles of Port Simpson. So that the great wheat belt of the North-west Territories extends to within a few hundred miles of Port Simpson as against a distance of some thousands of miles from the western wheat belts which are tributary to the ports of San Francisco and Puget Sound and Oregon. It is therefore obvious that the great cost of the exports of western wheat of the United States to the Pacific coast ports is far in excess of the cost of the export of wheat of the Canadian belt to the Pacific coast and from there to the foreign ports. The competition that will be afforded by the Grand Trunk Pacific in rates will enable the great wheat belt of the North-west Territories to be tapped. The wheat and grain belt of Canada will be within easy and cheap distance of the markets of the world. The Asiatic market we all know is growing in importance. The Puget Sound ports export large quantities of produce raised in territory similar to that of British Columbia and along which this road will traverse. They are exporting large quantities of their products to China, Japan and other ports of Asia. The port of San Francisco last year sent to China products of the value of $16,703,000, and to Japan, valued at $4,000,000. China, Japan and the Asiatic ports are five or six hundred miles perhaps a thousand miles nearer us than they are to the American ports which have this splendid export trade already. All we want is some cheaper means of getting our wheat to the Pacific coast. It is absurd to say that by the Canadian Pacific Railway, great as are the advantages which it affords to the coast, you can haul wheat across the Rocky mountains and over the grades which characterize this road in competition with the Great Northern and the Northern Pacific roads. There is no question that an impetus will be given to the exports of wheat by way of the Pacific ocean that is almost inconceivable at the present time. In addition to all the other advantages to which I have referred, we have open ports the year round; so that I am not over sanguine in expecting that within ten years the bulk of the export of grain from the Dominion of Canada, and perhaps from the American continent, will be by way of the Pacific coast and by our own Pacific ports.

Mr. BROCK. In what way will the building of a road from Winnipeg to Moncton decrease the expense of sending wheat from the wheat belt to the Pacific ocean?

Mr. MORRISON. As I stated in my opening remarks, I am quite satisfied to leave the justification of the action of the government respecting the Moncton and Winnipeg branch to the gentlemen who have preceded me. It would be a work of supererogation on my part to add one word to what has been so ably said by the gentlemen who have treated that point. There is still another justification for the extension of the road to the Pacific coast and that is the matter of freight rates. The province of British Columbia is suffering at the present time, and unless this Grand Trunk Pacific road is extended or we have some other line to the coast, we will continue to suffer from excessive freight rates. To-day you can send farm implements or any other products to the Antipodes cheaper than you can send them to Vancouver or to Edmonton. That is a condition of affairs that ought not to exist, and the present administration are proceeding to remedy that grievance. The passenger rate in British Columbia from station to station is five cents, while east of

Manitoba and as far as Nova Scotia, passenger rates are only three and two cents.

Mr. BROCK. Did the hon. gentleman vote for a two cent passenger rate to the Pacific coast that was moved here the other night ?

Mr. MORRISON. I have always had regard, in a matter of that kind, to the methods by which a thing is introduced into the House, and particularly to the individual who introduced it. So, having regard to both those circumstances, I thought it was not incumbent upon me seriously to consider the proposition made by the hon. gentleman at that time. Now, in addition to these considerations to which I have referred, there is another very important element in our favour, and that is the climate. Between latitude 49 and 59, which embraces pretty nearly the whole province of British Columbia, we find Great Britain, the Northwest of France, Belgium, Holland, North Germany, Prussia, Denmark, South Sweden, the Baltic provinces, the coast of Russia and the Gulf of Finland. I suppose there is no man in this House but knows what that means, that within these latitudes on the continent of Europe is contained what is said to be the cradle of civilization, producing the sturdiest types of humanity. There is no reason in the world why, with the influx of people which the Minister of the Interior is assuring us in that province, and the facilities afforded by the government of which this project is merely an earnest, we will have in that province the most populous and most prosperous part of the Dominion of Canada within a very short period.

Generally speaking, we will not only render assistance by the construction of this line in the development of that important part of Canada, but by the development throughout the whole of Canada which will result from the adoption of this proposition we will bring back some if not all of the 1,183,225 Canadians who are in the United States to-day, according to the census returns of the United States of last year. There are 1,183,225 Canadians in the United States, 787,798 of whom come from provinces outside of the province of Quebec, while 395,427 are from the province of Quebec. There are 1,183,225 stalwart, worthy Canadians who want to return to Canada and who will return if the resources of this country are made known and facilities are provided for their development. I shall not take up the time of the House any farther. I should like extremely to dilate upon the very alluring topic of the position of the province of British Columbia in relation to the other provinces in the Dominion of Canada, but in view of the long speeches that we have already heard and in view of the fact that there are a number of hon. gentlemen who wish to speak, I will conclude by reciting a piece of advice that was given many years ago by that eminent philosopher Bacon. He said :

> That which is past is gone and irrevocable and wise men have enough to do with things present and to come ; therefore they do but trifle with themselves that labour in past matters.

I, therefore, trust that hon. gentlemen on the other side who may see fit to address the House will let bygones be bygones, and devote a little more time to present conditions, and to the future.

Mr. SAM. HUGHES (North Victoria). Mr. Speaker. The hon. gentleman (Mr. Morrison) who has just addressed the House, like a number of his predecessors, seems to make a point of discussing everything except the resolution before the House. He has given us a very beautiful description, in part, of British Columbia. Other hon. gentlemen have portrayed in choice language the beauties of parts of the provinces of New Brunswick and Quebec. Extracts have been read from clergymen's essays and reports have been presented covering the ground all the way from Labrador coast to James bay, and hon. gentlemen have discussed everything but the merits of their measure. These hon. gentlemen seem to take it for granted that they have discovered there is a climate in Canada, that there is soil, and that there is an opportunity of building another transcontinental road. I am not surprised at the language we now find them indulging in. These hon. gentlemen have for many a long year been engaged in belittling this country, and in providing speeches to be used by our friends in Texas, Oklahoma, Kansas and other southwestern states to deter emigrants from going to Canada, and it is, therefore, difficult even yet for some of their own friends to have faith in Canada. I want to point out to these hon. gentlemen, however, that it is quite unnecessary for them to speak to the country upon this topic as far as the Liberal-Conservative party is concerned. I am merely one member of the Liberal-Conservative party, but I want our hon. friends to recall to mind what they must well know, that the Conservative party have always pointed out the advantages of Canada, that they have always had faith in our great North-west, that they have always recognized that there is a large tract of fairly settleable country in the northern parts of Ontario and Quebec, and that it is possible to get a line—I will not say a short line—of railway from Lévis south-westerly or easterly down through the province of New Brunswick. These hon. gentlemen are very far behind the times. If they go up to the Railway Committee room and look at the map they will see that there are at least a dozen charters authorizing the construction of railways by routes which are marked across the continent of North America, showing that for many a long year there are men in Canada who

have had faith in the country, and who recognized the fact that at some future date there will be another transcontinental line running across the Dominion. My hon. friend from British Columbia, as I said, has devoted himself chiefly to a description of his adopted province, and I must congratulate him upon his effort. But, how the southern part of British Columbia will be benefited by the construction of a railway three or four hundred miles north is something that I fail to see. I also fail to see what his quotation from the Vancouver newspaper edited by Mr. Cotton has to do with this matter. Mr. Cotton, as he himself says, had not read the contract and practically knew nothing about it. What Mr. Cotton speaks of is what every man in Canada who is cognizant of the advantages of this country should welcome and that is a proper scheme of opening up our own country. But, Sir, in discussing the development of the country we are not at all endorsing the iniquitous contract which is now before the House. The last speaker remarked that this contract was drawn with an eye single to promote the interests of British Columbia. I regret that he did not show where the single eye was, but I am glad that there is one part of the Dominion of Canada that the contract is drawn with the object of benefiting. It certainly is not the province of Nova Scotia, it is not the province of New Brunswick, it undoubtedly is not Quebec nor Ontario, it cannot be the North-west Territories ; therefore, as our hon. friend says, it is singly drawn for the benefit of British Columbia, and he regrets the delay in the execution of the terms of the contract by speeches such as that which has been delivered by my hon. friend for South Simcoe (Mr. Lennox). I do not think that my hon. friend from South Simcoe has occupied any more of the time of this House than the hon. member for North Norfolk (Mr. Charlton) or the hon. member for Westmoreland (Mr. Emmerson) on the other side of the House. One of these hon. gentlemen took about two days of the time of the House, and the other a day and a half, and I am satisfied to leave the country to judge between the speeches of these three hon. gentlemen. If there is not more solid logic, more fact and more criticism in the speech of my hon. friend from South Simcoe than in the defence of the measure contained in the two speeches of these hon. gentlemen, I will let the hon. gentleman's remarks pass unchallenged. My hon. friend from British Columbia took up the contract and he read a few paragraphs from it. One section of which he spoke particularly was section 10, and he also referred to the deposit of $5,000,000. However, as I propose to take this matter up as I proceed, I will not now refer to his remarks upon that point at any further length. I want to point out to our hon. friends opposite that the Liberal-Conservative party is not criticising the route of this railway. The Liberal-Conservative party has long been upholding the advantages of the Dominion of Canada and the various advantages both of the east and the west. It is not the question of route, but it is the question of the terms of the contract and the effect this contract will have upon the finances and the development of the country that we are basing our criticism upon, or at least I am criticising that feature of the proposition, and I think in that I voice the general sentiment of the friends of the Liberal-Conservative party, both in the House and out of it. We are not belittling the soil of the province of New Brunswick, of Quebec, or of Ontario—very far from it. On the contrary, the Liberal-Conservative party has been the leader in this House in drawing attention to the advantages of this country. For many long years our hon. friends opposite were unfortunately engaged in belittling Canada. We are not criticising the climate of this country. I myself took the liberty last year and the year before of pointing out why I thought the North-west Territories and the northern part of British Columbia were well adapted for settlement, and I have on other occasions pointed out why I think that northern Ontario, in future, when opened up from the colonization view point, will afford homes and employment for many thousands of people. Nor have we criticised the people of the country as some hon. gentlemen have endeavoured to do. We recognize that the people of the maritime provinces and of Quebec as well as of the whole of Canada are amongst the best that the world has produced with rare exceptions from the immigration view point in recent years, which I shall not refer to here. Therefore, I shall proceed to show the objections that we have to this scheme.

Nine months or a year ago an item appeared in a Minneapolis paper—and I think it was telegraphed to some of the Canadian papers—to the effect that the Senator referred to by the hon. ex-Minister of Railways and Canals was about to exploit a new scheme. It was stated that he had attempted to become a member of the Canadian Northern Railway Company, and that, having failed in that attempt, he was going to launch a scheme which involved the extension of the Grand Trunk Railway from its connections with St. Paul and Minneapolis into Winnipeg, from which point it would carry its main line to the Pacific coast, with branches all over Manitoba and the North-west Territories. Application was made to the legislature of Manitoba, and the newspapers in the city of Winnipeg, one with its whole front page, I remember, showed the plan of this great railway scheme ; and the name of the Hon. George Cox was mentioned publicly in the press and on the streets as being prominently connected with it. The reasons why that gentleman had

formed an alliance with the Grand Trunk and was pressing forward this scheme were almost semi-officially given. The plan was that the railway was to be entirely independent of either of the great western Canadian roads, the Canadian Northern or the Canadian Pacific. It was to extend from the Grand Trunk terminus in Chicago to Minneapolis, by controlling one of the American roads ; and, if the facts were known, I have no doubt that it would be found that the Grand Trunk Railway has to-day control of a line into the city of Minneapolis and into the city of St. Louis. It would not be politic to let it be known, however, that the Grand Trunk is so near the Canadian border in the North-west until this Bill is passed. There was to be a branch built from the line between Minneapolis and Winnipeg to Duluth, to connect by a fleet of steamers with the Midland system of the Grand Trunk, and become their principal grain line. It was announced at that time that the project was to have the endorsation of the Canadian parliament, almost identical with the endorsation this scheme is receiving here to-day. I want to say that I regard that as a very good scheme. I have no objection to it whatever. If the Grand Trunk Company would be content to accept a fair endorsation of a scheme which is only partly Canadian, I am not one to oppose it. I do not think, however, that such a scheme should get anything like the support that would be due to a scheme which would to a greater extent develop the Dominion of Canada. Some said that the object of all that demonstration was merely to force the Canadian Northern Railway Company to surrender.

Mr. CLARKE. No surrender !

Mr. HUGHES (Victoria). No surrender was their motto, I believe, and I understand that no surrender is their motto to-day. Hon. members know that during this session items appeared in papers in the United States and also in the Montreal papers, to the effect that the Canadian Northern was about to surrender ; and this rumour was kept constantly before the public until only a few weeks ago. But, Sir, they came to the conclusion that the Canadian Northern Company could not be got to surrender, and they tacked on the patriotic end of the scheme, and the next move was that the Grand Trunk Company were going to extend their line from North Bay or Gravenhurst, paralleling the proposed line of the Canadian Northern to Winnipeg, and proceeding thence across the country to the coast. Still the coon did not come down. I presume that the hon. Minister of Justice happened to get wind of what was going on ; and, not content with the line from North Bay to Winnipeg, he saw a chance to secure some benefit for the friends of the Quebec bridge and some little encouragement for the province of Quebec ; and the next proposition was that the line should run from the city of Quebec, through northern Quebec and Northern Ontario, to Winnipeg. Still another move was made, and our friends the enemy from the maritime provinces took a hand in, with the result that we now have the proposition for a road from Moncton to the city of Winnipeg, and thence onward to the coast. This is called the short line extension to Moncton. I regret that the right hon. First Minister is not in his place. I have always had the highest respect for that right hon. gentleman, both as a citizen and as a member of the House of Commons ; and when I heard that some transcontinental railway scheme was being evolved, I had perfect confidence in my own mind that the right hon. gentleman, in whose patriotism I have always had faith, though I never knew what his business capacity was, would produce a scheme that would at all events have a few clauses in it to commend it to this House and the country. I regret, Sir, that I have been disappointed. So far as the Grand Trunk Railway is concerned, I am not opposing that company. I regard Mr. Hays, its general manager, as one of the greatest railway men in the world ; I regard our old friend Mr. Wainwright as one of the most genial of men ; I regard Mr. McGuigan as one of the ablest railway construction men in North America ; and the venerable Senator is a life-long friend of mine. So that if my personal feelings were to decide the matter, they would certainly lead me to support any scheme with which these gentlemen were connected. But I find in this scheme a pretense to build up our Canadian seaports, when I will show before I get through that its traffic will go to Portland, Boston and other American centres. They profess to reduce rates, when I venture to say that those who live ten or fifteen years hence will bear out my statement that not one cent per bushel will be taken from the cost of the transportation of wheat through this proposal. They profess to solve the transportation problem, when they only confuse it. They profess to serve the interests of Canada, when they will load the people down with a burden which our children's children will not be free from, and which will tie the country up for many a long year to come. Many see in this scheme all sorts of jobs. It undoubtedly means the ruin of the Intercolonial as a national work. It means the burdening of this country with many hundreds of thousands of dollars annually for the maintenance of that road, because its earning power will be greatly diminished as soon as this new line is constructed. We see in this proposed line an attempt to make the Quebec bridge profitable ; and, if I am informed aright, that bridge has already cost as much money as the plans and specifications indicated that the whole bridge would cost, although the

piers are scarcely above the water yet. I wonder what the upshot will be when the government blow a few more millions into it. It will undoubtedly be well watered. By this scheme they are side-tracking the city of Toronto in the province of Ontario, as well as the city of Montreal and all the southern part of the province of Quebec; and yet, when the facts of the case are known, the city of Quebec will not receive from it so much benefit as the gentlemen would have us believe. The question naturally arises, who has perpetrated this job? Who has delivered this gold brick to the Prime Minister? There is undoubtedly a certain clamour about the transcontinental road, but I do not think that alone would be sufficient to justify the celerity displayed by the right hon. the Prime Minister and a number of his colleagues, in whom many of us have had every confidence. The ex-Minister of Railways and Canals (Hon. Mr. Blair) said that the fact of the matter was that Senator Cox could not wait. Well, where was our friend the Minister of Labour and Postmaster General (Hon. Sir William Mulock)? Some suppose that he, rising above postage stamps and dabbling in labour problems, looks about for a vaster field in which to exercise his great genius, and has visions of being the leader of the great Liberal party in Canada in the near future. Some suppose that he is endeavouring to supplant the Minister of Finance and is really the father of this scheme. Others maintain that it is the Minister of Justice (Hon. Mr. Fitzpatrick) who, with the energy of his race, wishes not only to be the leader in his native province, but the leader of the party in the Dominion. Certainly we have not yet any precise knowledge as to who the father of the scheme really is.

The scheme, at all events, is devoid of merit. It consists of two branches. The branch to the east from Winnipeg will not be constructed for at least ten years. It will not benefit Ontario or the city of Montreal or the maritime provinces, and I would, therefore, appeal to the Postmaster General to take the first minister in hand—if the hon. gentleman is not endorsing the scheme as its father—and induce the right hon. gentleman to withdraw it before the country is irrevocably committed to it. What are the details of the scheme? There is to be nominally a government road from Moncton, in the province of New Brunswick, to Winnipeg, passing by the St. John valley, crossing at Quebec, onward through the northern part of Quebec and the northern part of Ontario, as far as Winnipeg. This section is to be built and owned by the government, but leased to the Grand Trunk Railway. It will pass 250 miles north of Montreal, over 400 miles north of Toronto, and from 120 to 180 miles north of Port Arthur and Fort William. That part of the road will be 1,900 miles long, and it will cost anywhere from $60,000,000 to $80,000,000 to construct. Then the next division, from Winnipeg to the Rockies to be assisted to the extent of $13,000 per mile, and through the Rockies to the coast to the extent of $30,000 a mile, and the government is to pay all the interest for a period of ten years, and give the company all the station lands, frontage, ports and harbours and terminals it requires. This section from Winnipeg to the coast will be absolutely the property of the Grand Trunk Pacific Railway.

After fifty years the lease of the eastern part terminates, and supposing this to be the honest scheme, hon. gentlemen opposite would have us believe it is, at the end of fifty years the Grand Trunk Pacific Railway will find themselves with a line stopping at Winnipeg. But the fact is that this is only a pretense, and the real scheme is as I shall show. The Grand Trunk Railway is now in the city of Chicago, and undoubtedly has arrangements made whereby it can readily get entrance into Minneapolis. It will then only be 470 miles from Winnipeg. It purposes building into Winnipeg, and will own a through-line from Portland, in Maine, to Port Simpson, on the Pacific coast. It will have a branch to Duluth, and that branch will connect with the Port of Midland, as a lake and rail route for grain. Now, the distance is not so very terrible after all, and it will be a magnificent road with a perfect road-bed, and I doubt whether it would be possible to get a finer transcontinental road. From Portland to Montreal the distance is 298 miles, thence to Chicago 840 miles, thence to Minneapolis, 420 miles, on to Winnipeg, 471 miles, and thence to Port Simpson, 1,600, making a total mileage from Portland to Winnipeg of 2,029, from Montreal to Winnipeg, of 1,731, and from Portland to Fort Simpson, of 3,600 odd miles. There is the transcontinental Grand Trunk Railway scheme. It is a scheme that I would heartily endorse, were it not that I object to the price we are paying for it. The North Shore line is absolutely not in the mind of the Grand Trunk Railway. The Grand Trunk Railway do not care a farthing about it. That company may put up its little guarantee, but it never intends running a line north of the lakes. Our hon. friend who preceded me pointed out, as one of the grand clauses of this contract, section 10, which provides as follows:

> The work of locating and constructing the said western division shall be commenced forthwith after the ratification of this agreement by the parliament of Canada and shall proceed with the utmost despatch and be completed within five years from the first day of December, 1903.

What does that mean? One year from that date, or one year from the passage of this Bill, the Grand Trunk Railway will have a certain number of miles of its own road built. What will it do with its freight?

Store it in Winnipeg? At the end of two years, it will be a good way on to Edmundston. What will it do with its freight? In three years it will be over the mountains. What will it do with its freight? And in five years, when it will have reached the Pacific ocean, what will it then do with its freight? As regards the road north of the lakes, from Moncton to Winnipeg, the surveys will not be completed at the end of the five years, much less the road constructed, and in the meantime where are you going to deliver all the freight that will have gathered along the line in the west? The grain freight will simply go down by the Grand Trunk Railway to Duluth, and the passenger and ordinary traffic will go via Chicago to Portland. That is the plan of the Grand Trunk Railway. The only thing I object to is that these men have not the honesty to tell the House that that is their plan. I am surprised the Grand Trunk Railway do not come up and let us know that that is their honest plan. The advantages of this route are many. In winter time, from one end to the other, with the exception of a very few miles at this end and in the mountains of British Columbia, it will be free from snow. From one end of that road to the other, by the time Mr. McGuigan gets his grades completed throughout the province of Ontario—and he is about done with them now—the Grand Trunk Railway will have a small grade of about one-half per cent, and the finest road-bed in the world. From one end of the road to the other, there will be local traffic passing from Boston and the other cities on the sea coast and the cities and towns of Ontario and the interior of the United States—especially the great city of Chicago—and with its lines to St. Louis, the Grand Trunk Railway transcontinental system will be able to originate at local points more traffic for a through-line than any other transcontinental road on the continent? It will also be a through-route, and there is no other route crossing the Rocky mountains in the United States which could begin to compare with it in distance and speed on account of the magnificent road-bed which it will have. More than that, from one end of that road to the other, coal and other necessary railway supplies would be found close by, and that, Sir, is a matter of great importance to a railway company crossing the continent. There is the scheme. No man who knows anything about the business believes, for one second, that anything else is the scheme; and the government need not attempt to befool us into believing that the Grand Trunk Railway Company would commit themselves to such a job as the general tenor of the resolutions would lead us to suppose. That is really estimating the intelligence of this House at too low a standard. If the Grand Trunk Railway, instead of building its line to Duluth, would build it to Port Arthur or Fort William, I would be willing it should be liberally assisted. If the Grand Trunk Railway wanted assistance for a line from Wininpeg to Port Simpson, even a line that would not be looked upon as a national road, I do not believe that this country would object to giving it legitimate assistance.

Of course, I presume that the promoter of the road, the master mind, the genius, whoever he may be, who is behind this whole business, whether it is the senator or one of the ministers, or the man in control of the Grand Trunk, will be quite willing to accept a railway 1,900 miles long, built by the people of Canada, and maintained by them for fifty years, as a little gift. But that is not the main scheme. To show what their intention is, I have referred to section 10 to show that the western end must be built in five years and they must find an outlet for their traffic. I will now turn to section 42 to show that in it these gentleman show their hand to some extent. Section 42 says:

> It is hereby declared and agreed between the parties to this agreement that the aid herein provided for is granted by the government of Canada for the express purpose of encouraging the development of Canadian trade and the transportation of goods through Canadian channels. The company accept the aid on these conditions, and agrees that all freight originating on the line of railway or its branches——

Mind you this line originates in Canada and does not touch foreign soil from Port Simpson to the Atlantic seaboard.

> —not specifically routed otherwise by the shipper, shall, when destined to points in Canada be carried entirely on Canadian territory, or between Canadian inland ports, and that the through rate on export traffic from the point of origin to the point of destination shall at no time be greater via Canadian ports than via United States ports, and that all such traffic not specifically routed otherwise by the shipper shall be carried to Canadian ocean ports.

Will you tell me, Mr. Speaker, how they are going to carry it any other way if they do not intend to have a route through the States. How are they going to get it there any other way or how are they going to get it to any other port unless they intend to have a route through the United States? Undoubtedly, clause 10 and clause 42 together show clearly as the sun that they intend to have an American road. And it is equally clear that the government lawyers or the cabinet must have been very dense in making this contract, or else they are a party to it all. I have already pointed out the time it will take to construct this eastern road. I venture to say it will be ten years before it will be constructed, after which they have it free for seven years, and after that for three years, the amount they are to be charged for interest will be added to the capital account. I presume, Mr. Speaker, that you and I will be taking a perpendicular look at the business by the

time they are ready to begin paying anything.

Mr. CARGILL. Up or down ?

Mr. HUGHES (Victoria). Down, always down. I shall not at the present time refer to the clause respecting running rights other than to say that any one who knows anything about railroading sees through it and smiles at it. But I will venture to say that, in case the northern line is constructed, and the Grand Trunk Pacific operates it—I am at liberty to put in these provisos, because one of the chief clauses of the contract I find punctured with provisos—the charges for freight in Grand Trunk cars and Grand Trunk Pacific cars running over the government section will more than pay the rental that would be charged against the company. Section 37 was pointed out by my predecessor, who said this was a specially strong clause in the contract. I would like my hon. friend from Centre Toronto (Mr. Brock) as a Canadian manufacturer to consider, and I want all Canadian producers to consider, how they are going to be benefited by this clause.

The company shall purchase all material and supplies required for the construction of the western division and the equipment of the whole of the said line of railway from Canadian producers——

And when the hon. gentleman had read that far, he looked around as though to say, ' This is the place for you to cheer me.' And then he read the rest :

—when the same are produced in Canada and where such material and supplies can be purchased in desired quantities and of equal quality suitable for the purpose required, and for prices and upon terms equally advantageous with those procurable elsewhere.

How much are our Canadian producers going to sell on that western section if it does not suit these gentlemen to buy ? But that point has been handled before. I shall not take it up. Now as to the clause guaranteeing the running rights. Is it to be supposed for a second that the Grand Trunk owning a line absolutely from Portland to Winnipeg, and owning a line of the Grand Trunk Pacific from Winnipeg to Port Simpson, are going to ruin their property or cause its deterioration by running a pound of freight over the road owned by the government and in which they have no interest, sending the freight to Moncton, and thence under a separate agreement to the sea ? It passes my comprehension how any ministry in this enlightened period of the world's history can bring down such a measure and lay it before the people and expect them to be bamboozled by it even for a moment. I would again suggest to the government that they should withdraw this scheme in the best interest of the country. They make a great pretense that this scheme is in order to get out wheat from the west to the seaboard. As I shall show you in a little while the distance from Winnipeg to Moncton, which is not the seaboard, is 1,900 miles. Let us assume that that is the distance to St. John. On the other hand from Winnipeg to Port Simpson the distance is 1,600 miles. If the railway is to be a grain-hauling institution why not haul to the Pacific ocean. And I can tell you that the freights from Pacific ocean ports, San Francisco and Puget Sound ports vary from $4.50 to $8 per ton. Wheat going in large quantities can be profitably carried from Port Simpson around Cape Horn to English markets, as it is now carried every year from American ports to Great Britain. But, Sir, it will be a very few years before there is a road constructed to Hudson's bay, and then the grain from our prairies and that of the American west will be sent by that route to Liverpool by the time it would reach the city of Montreal coming down this way. Now, in order to put the figures before the House, I shall give the mileages computed as carefully as possible from the statistics available. In giving the distance from Quebec to Winnipeg I have taken the great circle distance which is by all odds the shortest, as any one acquainted with geography knows. I have allowed only from ten to twelve per cent—depending upon the section of the road—for loss of distance occasioned by curves in avoiding obstacles. The usual percentage through a country like that is fifteen per cent. I shall take the Grand Trunk Railway scheme before the House, which is from Portland to Winnipeg. I wish to treat the House fairly, and undoubtedly that is the scheme before it. Well, from Portland to Winnipeg by Chicago and Minneapolis is 2,029 miles. From Montreal to Winnipeg via Chicago is 1,731 miles, I take Winnipeg as a common point. The Canadian Pacific Railway from Montreal to Winnipeg by the north shore of Lake Superior is 1,424 miles. Here let me point out that in the long haul the question of the difference of mileage of even 300 or 400 miles counts for nothing at all. If that statement is disputed, I can show you that the rates from Chicago to the seaboard on the same identical grain hauled in the same cars—the long-haul grain—are just the same whether it is taken to Montreal, Quebec, Portland or Boston. These four cities constitute one group, and cars by the hundreds are hauled weekly to Montreal and on through to Boston, the rate being exactly the same whether they go through to Boston or whether they are stopped at Montreal. It is 1,424 miles from Montreal to Winnipeg via the Canadian Pacific Railway, by the same road from Montreal to Halifax, 756 miles. From Montreal to St. John is 481 miles ; therefore from Winnipeg to Halifax via the Canadian Pacific Railway and the Intercolonial is 2,180 miles, and from Winnipeg to St. John by the Canadian Pacific Railway is 1,905 miles. The new line through the north of Quebec and Ontario, supposing

it should ever be built, will be 1,450 miles long from Quebec to Winnipeg, or nearer 1,500 miles when it is constructed, and allowing 12 per cent for curvatures. From Quebec to St. John by the new line I am allowing 450 miles. So the total from Winnipeg to the city of St. John via the city of Quebec and this new line all through, is 1,900 miles. From Winnipeg to Quebec by the new line is 1,450 miles, from Quebec to St. John by the Intercolonial, 577 miles, making a total of 2,027 miles, within two miles of what it is from Portland to Winnipeg by the Grand Trunk and Chicago.

The next route I will take is from Winnipeg to Quebec by the new line, 1,450 miles; from Quebec to Halifax via the Intercolonial, 673 miles, total 2,123 miles. The next route is from Winnipeg to Quebec via the new line, 1,450 miles; to Halifax by the new line and the Intercolonial, 636 miles, total 2,086 miles from Winnipeg to Quebec via the new line. But there is an alternative route, the Grand Trunk has in case they should find it convenient to operate that North Shore road. Portland is over 100 miles nearer than St. John. From Winnipeg to Quebec via the new line is 1,450 miles; from Quebec to Portland over the Grand Trunk's own line, making the shortest road from Winnipeg to Portland, is 1,767 miles. From Quebec to Portland, 96 miles to Richmond, and from Richmond to Portland 221 miles, total 317 miles. Therefore, by this new road the distance will be nearly 150 miles less to Portland than to St. John. Supposing they build the road, is any one simple enough to think they are going to depreciate their millions' worth of property in the city of Portland for a fifty years lease, for a moonshine scheme like this? No, Sir. The nearest route is to St. John, 1,900 miles via the North Shore, that is taking the new road to Quebec and any road to St. John; the shortest distance is to Portland, 1,767 miles; therefore Portland is 133 miles nearer by their own pet scheme than is St. John, and 200 miles nearer than Halifax. Yet we are asked to swallow a scheme like this.

Now, the Finance Minister pointed out that this new route was the 'central route.' He said that Sir Sanford Fleming had designated three routes. I will read what the hon. gentleman said. His speech was a marvellous production. I knew the Minister of the Interior could fix the thing up about right, but I never dreamed the Finance Minister was possessed of ingenuity sufficient to make such a fair presentation of so abominable a scheme. He says:

> I may say that there are three routes described—the southern route near the State of Maine, the central route, which is the subject of the present discussion, and the route along the Baie des Chaleurs, which was afterwards adopted for the Intercolonial Railway.

Then he goes on and tells us what Sir Sanford Fleming said. Now, I will show you what this 'central route' of his is like. It starts from a point eight miles south of Trois Pistoles on the Intercolonial and runs to a place called Apohaqui on the St. John river, fifty miles from Moncton. The distance is 337½ miles from the point of starting. Add the eight miles, and you have 345½ miles via this great central route, and plus 50 miles, makes it 395 miles to Moncton. But by the old Intercolonial it is only 346 miles from Trois Pistoles to Moncton, a saving by the present Intercolonial of 49½ miles. The present Intercolonial is 49½ miles shorter than the line that the Finance Minister calls the great central route. I want to point out that the central route as surveyed and referred to in the report of Sir Sanford Fleming, if the figures that are given here are correct——

Mr. TALBOT. The hon. gentleman is not at all following the route that this proposed scheme is going to follow.

Mr. HUGHES (Victoria). I do not know who is the boss, whether the Finance Minister or the member for Bellechasse. I know where the proposed route is. I presume there is not a parish, either in Bellechase, Dorchester, Temiscouata, Kamouraska, L'Islet in any of the counties along the border of Maine, that will not have a road running right through it. But I am here stating what the Finance Minister said himself, speaking as a member of the government, and the hon. gentleman will find it on page 8549 of 'Hansard,' revised edition. The hon. gentleman must not blame me, he must blame the Finance Minister of the Liberal party. And what is that central route? It is 50 odd miles longer than the present Intercolonial. On this famous central route, these are some of the grades which will be found: It rises 1,575 feet, goes down to 1,105, goes up to 1,533, and down to 465; a few miles further it rises to 1,105, goes down to 415, then up to 1,100 and so on—a beautiful road. It would almost do for a bucksaw. I am reading from the official report, page 105, of the altitudes in Canada, taken from the official surveys in the Department of Railways and Canals. Now the grades on the Intercolonial from Halifax to Quebec reach only 700 feet at two points. But this central route climbs up mountains and down again a hundred times; at a hundred points on that road it will be higher than at any point on the old Intercolonial from Lévis to the seacoast. Yet they tell us this is a fast short line railway.

Mr. ROCHE (Halifax). Would not the track be all down hill?

Mr. HUGHES (Victoria). I do not know which track the hon. gentleman refers to. I have not the slightest doubt that these hon. gentlemen will endeavour to make it appear to the people that the track will run down hill both ways. Those two points that are 700 feet high are in the Matapedia val-

ley. Now, will the hon. member for Bellechasse himself tell me that it was not the central route that they had in mind.

Mr. TALBOT. It was fifty miles from there.

Mr. HUGHES (Victoria). The hon. member for Bellechasse himself corrected the hon. Minister of Finance and told him he did not know his business.

Mr. TALBOT. The hon. Minister of Finance never said that; he never alluded to it.

Mr. HUGHES (Victoria). I am merely stating the facts from the hon. gentleman's remarks. The hon. Minister of Finance said: We are taking the central route. There is his speech and the hon. member for Bellechasse can find it in 'Hansard.' The hon. member for Bellechasse does not occupy any ministerial position, but he gets up and tells us that the hon. Minister of Finance does not know his business and that the road is going by way of the Maine border route. Well, we will deal with the Maine border route. The Maine border route traverses the counties of Lévis, Dorchester, Bellechasse, Montmagny, L'Islet and Kamouraska, in Quebec. Then it turns into the province of New Brunswick, and follows the valley of the St. John river. Any one who has ever been at Lévis knows what the country is like in that neighbourhood. The people of Canada know what it cost to construct a little line eight or ten miles long to connect the Lévis station with the Intercolonial Railway at St. Charles Junction a few years ago. We know what it cost to construct that little line through the hills to St. Charles Junction. I want to call the attention of the House to the topography of the country. The highlands between the waters flowing into the Atlantic and the Bay of Fundy and the waters flowing into the St. Lawrence——

An hon. MEMBER. Order.

Mr. HUGHES (Victoria). I do not mind. These hon. gentlemen are squirming because they are hurt. The topography of the country is this: The rivers some distance east of Lévis flowing into the St. Lawrence flow in a north-easterly direction from the mountain range such as the Rivière du Loup, River Ouelle, and all those other streams flowing in a north-easterly direction. They do not flow north or north-westerly. The trend of the valleys is north-east and south-west. All you have to do is to look at the map to see that. The rivers on the other side of the mountain range flow in a converse direction. They flow almost due southerly until you reach the border of New Brunswick, when they flow southerly. What that means is that if the railway travels in a south-easterly direction it will have to cross at right angles the valley of every stream. As I have pointed out, the route runs from Quebec not in an air-line at all, as our hon. friends try to locate it. It will run southerly from Lévis thence it trends off south-easterly and thence trends off easterly, thence north-easterly until it gets round the point of Maine and thence easterly again. The Geological Survey reports state that the mountains are very rough, that hills are cigar-shaped and piled in irregular heaps. Even the eloquence of my hon. friend from Westmoreland cannot take the tops off these mountains and place them in the valleys. As this is rather an important discussion, I shall take an opportunity of placing on record from official reports of the surveys of the United States survey department a statement as to the topography of the country. Unlike the British and Canadian governments, the United States is alive to this question, and at the present time I venture to say they have a topographical map of Canada. We know that the Canadian government and the British government never do get anything except they get it from some other source. The American government, many years ago, made a very accurate topographical survey of the northern part of Maine and of the province of Quebec north of Maine right up to the shores of the St. Lawrence. I will take Kamouraska county first, and deal with it by townships. I will deal with the counties by townships and will give the passes and elevations in each case:

	Elevation feet.
Kamouraska—	
Parke tp., near pass of River Verte..	2,231
Pohenagamook, north-west corner small lake. This is near extreme end corner of Maine..	1,662
Chabot tp., south of pass and mountains north-east corner..	1,849
Woodbridge tp., north of pass, south-east corner..	1,878
Painchaud centre, Manix River pass..	1,936
Chapais tp., near Lake Ste. Anne, pass..	1,868
L'Islet—	
Lafontaine tp., north-west part River du Gue pass..	1,600
Garneau tp., north-east corner over pass..	1,898
Fournier tp., south-west corner, eight miles from St. Lawrence..	1,440
Arago tp., north-east corner over mountains..	1,410
Arago tp., east of Lac d'Apique over mountains..	1,567
Arago tp., west of Lac d'Apique, pass	1,664
Montmagny—	
Patton tp., over mountains..	1,403-1,720
Montmagny tp., east part, pass.. ..	1,727
Bellechasse—	
Roux tp., north-east part..	2,358
Roux tp., lot 35, concession B..	1,972
Dorchester—	
Ware tp., lot 5, concession XIV.. ..	1,995
Lake Etchemin, surface..	1,213

From Lake Etchemin and River Ouelle, minimum 1,306, maximum 2,854.

I may point out that there is a good deal of farming land in the townships just north of the Maine border. The mountain range

runs through the Canadian counties and the settlers are shut off entirely by the mountain ranges from the Canadian railways. If we had a colonization road by taking a circuitous route we could reach that part of the country and could even get a freight route through there. There is no reason why such a road should not be built, but it is not going to be an air-line. No engineer will tell me that you can get a railway through a country like that and construct an air-line reaching to the sea. That is the point I am making. These hon. gentlemen are trying to bunco the country by telling them that they are going to save 200 miles, or 140 miles, or 100 miles, or even 90 miles, between Quebec and Halifax by constructing this road. The Temiscouata Railway from Rivière du Loup to Edmundston makes an ascent of 1,324 feet. In the early days the British government had a route from Halifax via St. John up through Fredericton and passing by way of Edmundston and they tried all the passes that I have mentioned and found that the only feasible route was that through the Temiscouata pass. They also followed the border of the State of Maine until they struck the Etchemin river and then came down that stream and also the Chaudière. This was an old military road and the only route which they found at all feasible was through the Temiscouata pass, which is 1,324 feet high. This fact is reported in books in the library, and these reports show that this is the only pass at all available in the entire route.

Coming to New Brunswick, I will take the liberty of pointing out that the country north of the Miramichi and the Nashwaak is very rough. Here is a description of it, at page 160 of the official report, which gives the cross-section of the country running north in the direction which this proposed road will run. Starting at Pickard's Mill, twenty-five miles further up the height of land between a branch of the Nashwaak and Tay rivers is 1,133 feet, then down to 640 feet, up to 1,550 feet, down to 760 feet, up to 1,660 feet, down to 1,000 feet, up to 1,540 feet, down to 316 feet, up to 1,000 feet, and so on, then down to 400 feet at Fall river.

What we want to get are the facts of the case; and when hon. gentlemen stand up in the House, as did the right hon. First Minister and the hon. member for Westmoreland (Mr. Emmerson), and tell us that this line is going to save 140 miles as compared with the Intercolonial Railway, I tell them that they are talking nonsense, and there is no use of attempting to deceive the public. Here is what the report of the Geological Survey, volume 12, for 1902, says of that country :

The areas of Lower Carboniferous rocks in the Becaguimice and Tobique valleys exhibit surface features which are less diversified than those in the localities just described, but at the northern limits of the latter the Blue mountains rise upwards of 1,720 feet above the sea—a prominent mass of eruptive rocks.

The third area which presents a different topography and has a different elevation from those above referred to, is that occupied by rocks mapped by geological survey as Silurian and Cambro-Silurian which underlie a large portion of the country within the western and north-western limits of the two maps-sheets. The general surface of this area may also be characterized as rolling, though sometimes rising into ridges and mountains. The average height, in and near the St. John valley and west of it, is from 400 to 500 feet, but towards the north and north-east it is from 800 to 1,000 feet or more. The most noteworthy of the higher elevations are Hainsville ridge, Howland ridge, Pole hill, Golden ridge, Kincardine and Birch ridges east of the St. John and Magundy and Blaney ridges, Dorrington hill, Carroll and Pocowogamis ridges and Oak mountain on the west. The soils over a large part of this area are good.

Traversing this area in the north-east and south-west direction are wide belts of granite and pre-Cambrian rocks which usually have a greater elevation than the formations on either side. Hills and ridges, lake basins, boulder-strewn moraines, and a coarse stony soil are the prevailing characteristics of these granite areas. The country through which they extend is mostly in a forest-clad, widerness condition and unfit for settlement. The northern part of the region embraced in the two map-sheet is largely occupied by these granite and pre-Cambrian rocks and rises into rugged broken plateau from 1,000 to 1,500 feet high or more, the elevation of which increases northward beyond the limits of the Andover sheet. No well defined range of mountains exists in this part of the province, but denuded remnants of that spur or lateral extension of the Appalachian system across it in the north-western part and are to be seen in Mars hill, just west of the International boundary, 1,688 feet above sea level according to the boundary survey, and Moose mountain, east of the St. John, 1,490 feet in height, with other hills about the sources of Munquart river and to the east. At and beyond the northern limits of the Andover sheet (No. 2 S.W.) we reach the south-westerly extension of the interior high lands of the province which trend from here away to the north-east in an irregular range or series of elevations to the headwaters of the Tête-à-Gauche and Jacquet rivers, attaining altitudes in some parts of 2,500 to 2,700 feet above the sea.

The northern part of the Andover sheet covers an area which is still under forest and to a large extent a terra ignota. The south-west Miramichi river and its tributaries drain the north-eastern part, while the Tobique drains the north-western. The country here is, generally speaking, broken and elevated, with an average height of 800 to 1,000 feet above the sea, but a number of hills and ridges reach an elevation of 1,200 to 1,500 feet. Mr. Wilson, who examined the south-west Miramichi valley along some of the lumbermen's portage route, says : 'The north branch of the south-west Miramichi flows through a broken, wilderness country, with high hills bordering its banks. The average elevation of the country about the head waters of Burnt Hill and Clearwater brooks is from 800 to 1,000 feet, with hills rising 200 or 300 feet higher, and the height along the portage road from Pleasant ridge settlement to the

Dungarvon is 800 to 900 feet. Along the main river the banks are comparatively low in many places, but there are numerous high peaks which stand out conspicuously above the surrounding land such as Louis, Otterslide and Todds mountain. At the junction of the north and south branches the elevation is about 800 feet, where the portage road from Green hill crosses it about 700 feet, and at Boiestown, 195 feet.' A large part of the area drained by the south-west Miramichi and the Upper Tobique is unfit for settlement. Beaufort and Golden ridge, which were at one time supposed to be thriving settlements, have of late been nearly deserted.

I do not point this out for any purpose except to meet the absurd statement from hon. gentlemen opposite that this road is going to save 140 miles. I have seen the saving put at 170 miles by some of their papers. I am free to say that a road leaving Levis and running south-easterly, and crossing the corner of Bellechasse near Dorchester, and by the best route that can be found through the passes, would strike the valley of the St. John river just north of Maine, which is practically cut off from the Intercolonial Railway by the mountains. But it would have to cross every river almost at right angles. In order to maintain a grade sufficiently low to make the road a good, fast freight road, it will have to be increased in length at least 15 per cent beyond the air-line distance; and that being the case, the length of the road from Lévis to Moncton will be from 453 to 455 miles. The hon. member for Westmoreland controverted the statement made by my hon. friend from King's (Mr. Fowler) in reference to this matter. The hon. member for Westmoreland stated that the road from Chipman to St. John via Norton was the shortest route to that city. The contention of the hon. member for King's was that the shortest route was down the valley of the St. John river. The distance from Fredericton to Chipman is 42 miles; from Chipman to Norton is 44 miles, and from Norton to St. John is 33 miles, a total of 119 miles, whereas the route from Fredericton to St. John direct is 65 miles, making a distance of 54 miles in favour of the contention of my hon. friend from King's as against that of the hon. member for Westmoreland. So that if this road goes down that valley it cannot be regarded as a short air line route. In order to have grades over which heavy freight trains can be hauled economically, its length must be increased in order to decrease its grades. From Quebec to Moncton by the Intercolonial Railway is 489 miles, whereas the shortest route that can be found for the new line is from 453 to 455 miles, a gain of only 36 miles, and in two or three places it will have to climb from 1,300 to 1,900 feet to get over the mountains; and every time you send a train over a grade so high, you have to use so much extra steam. Under these circumstances, this line, as compared with the Intercolonial, cannot be claimed to be a fast freight line in any sense of the term. The central route referred to by the Finance Minister makes the distance 538 miles, making a saving in favour of the Intercolonial of 49 miles.

Now, we will transfer our attention to the west. We are told that the west is up in arms for this transcontinental road. What is the agitation about ? We had good crops for the last two or three years in the Northwest, a great many new farmers went into the country, and very few of them had granaries. The railways and the grain buyers had very few elevators at the stations, and as a consequence there was a glut in getting the grain out, and there was a great outcry in the country. I think it is a good advertisement for the country in that way, and perhaps those who are interested in the development of the west may not be sorry for it. However, the chief causes of difficulty were that we had abundant crops and the farmers who had more recently settled had not granaries built for its accommodation, so that they had to market the grain in the fall and the railway facilities were not sufficient to get it out in a rush. These grievances have to a large extent been removed. Many of the farmers have in the last two or three years improved their facilities for warehousing grain, and the elevator men have built elevators all over the country sufficient to accommodate many million more bushels of wheat than was formerly the case. It is also a fact that the railways have greatly improved their transport facilities, as well as their facilities for handling grain at Lake Superior ports. In consequence there will not be any great difficulty in handling grain in the future. There is another condition of things which bears to an important extent on the question of the marketing of our grain. I find from the United States report of the Bureau of Industries that in the year 1900 they produced 522,000,000 bushels of wheat, and yet on the first of March, 1901, the farmers held in their granaries out of that crop 128,000,000 bushels, which shows that the farmers in the United States do not rush out their grain in the fall, or in the winter, or even in the early spring, but that they keep it and watch for a rise in the market to sell it to advantage. At the date I have mentioned there were 87,000,000 bushels of grain only in the elevators east of the Rocky mountains, and in this calculation I do not include the 36,000,000 that are raised west of the Rocky mountains. Another point in connection with the shipment of grain is this. There is no use shutting our eyes to the fact that grain does not ripen in Manitoba or the North-west as early as it does in Kansas, and consequently the people of Kansas are able to market their grain ahead of us. I maintain that it would be to the advantage of our grain dealers in the North-west, and of the farmers as well, that they should hold the grain until after the

period when the market is glutted with grain from the countries in which it ripens earlier than in Canada. Taking one period with another, there may not be much difference, but if you take one year with another, especially in years of abundant harvests, the price of wheat is depreciated just about the time that our farmers would be selling their grain if they marketed it immediately after the harvest. The following countries have their grain ready for the markets of the world previous to the month of June in each year: Mexico, producing 9,000,000 bushels; South America, 87,000,000; Asiatic Turkey, 30,000,000; Cyprus, 2,000,000 bushels; Persia, 15,000,000; British India, 245,000,000 bushels; Africa, 45,000,000 bushels; Australia and New Zealand, 67,000,000 bushels; total, 500,000,000 bushels. I am quoting these figures for the year 1901. Now, the countries that market their grain in the month of June are: Roumania, 72,000,000 bushels; Bulgaria, 24,000,000 bushels; Servia, 10,000,000 bushels; Greece and Montenegro, 3,000,000 bushels; Turkey in Europe, 22,000,000 bushels; California, 35,000,000 bushels; Spain, 108,000,000 bushels; Portugal, 8,000,000 bushels; Italy, 146,000,000 bushels; Oregon, 18,000,000 bushels; Alabama, 1,000,000 bushels; Georgia, 3,000,000 bushels; Kansas, 99,000,000 bushels; Colorado, 8,000,000 bushels; Missouri, 31,000,000 bushels; total of grain marketed in June, 588,000,000 bushels. The countries that market their grain in July are: France, 304,000,000 bushels; Asiatic Hungary, 184,000,000 bushels; Southern Russia, 402,000,000 bushels; Nebraska, 42,000,000 bushels; total marketed in July, 932,000,000 bushels. The rest of the world markets its grain during the latter part of August and September and the last months of the year. I know that merchants have to be paid and that the farmers have to meet their obligations, but I believe that our North-west farmers should, as far as possible, hold their grain until a favourable market; and, generally speaking, it would be to their interest to go in for a system of storing their grain rather than to rush it out when the markets are unfavourable.

Now, a word in connection with the question of rates, and let me draw the attention of the House and of the country to the policy that has been inaugurated recently by the Conservative government of Manitoba, led by the Hon. Mr. Roblin, in controlling, not owning railways—controlling railways, mind you. If I were to have an option as between government ownership on the one hand and government control on the other with private ownership, I would go for the government control. The result in Manitoba demonstrates that private ownership of railways with government control is what the people of Canada should have. Last year there was left in the pockets of the farmers of Manitoba, on account of the reduced rates on the grain carried by the Canadian Northern Railway alone, a sum of $400,000. This was the beneficent result of government control of that railroad. I had a conversation with Mr. Roblin a few days ago, and owing to the fact that the Canadian Pacific Railway has been obliged on account of the competition to reduce their rates—the result of this government control over this Canadian Northern Railway will mean, on the estimated crop, that the farmers of Manitoba will be the gainers by $1,500,000 on account of the reduced rates secured by the Roblin government. I take the Duluth rate, and if our country develops as we expect it will develop, that rate should prevail in Canada; I find that the rate from Winnipeg to Port Arthur is 10 cents a hundred pounds, or 6 cents a bushel; from Port Arthur to Buffalo 2 cents; from Buffalo to New York, via the Erie canal, 4 cents, which makes a total of 12 cents from Winnipeg to the city of New York. The ocean rate varies from 2 to 7 cents, depending on the season of the year; but, at all events, if you take the ocean rate of 4 or 4½ cents, you have your grain transported from Winnipeg to Liverpool for 16 cents a bushel, and the people of the town of Lindsay pay very nearly that for the grain which they ship to the city of Montreal. The point I want to make is that freight rates are not controlled by railways, but that the water routes are the controlling influences in connection with freight rates. The rate from Chicago to Buffalo, all rail, in 1902, was 11½ cents per 100 pounds, or 7⅕ cents per bushel. Compare that with the all-water route from Chicago to Buffalo, one and three-fifths to two and three-eights, or an average of one and a half cents a bushel, and you find that the grain by the water haul is five and seven-tenths cents per bushel from Chicago to Buffalo. Take the all-rail route from Chicago to New York during 1902, which was from seventeen and a half to twenty cents per hundred pounds. The exact figure for that year, as given by the Chicago Board of Trade, was 10·62 cents per bushel. That is the exact cost by the all-rail route from Chicago to New York. Take the water route, and I want to point out that the low figure is brought about by competition with the Lake Erie canal. The lake route from Chicago to Buffalo and the rail route from Buffalo to New York make an average of 5·89 cents per bushel. That was the rate from Chicago by water to Buffalo and by rail thence to New York. Now I will take the water all the way. From Chicago to Buffalo, and thence by Erie canal to New York was 5·26 or just about half a cent less than the water and rail route. The lake and canal route was a half a cent a bushel less in round numbers than the lake and rail route, and the reason is this, that the railways were forced to come down owing to competition with the Erie canal. It is pointed out that

the Erie canal only hauls 7,000,000 bushels, and the train for Buffalo hauls some 14,000,000 bushels. But all that western grain comes into Chicago before navigation closes, and is carried to Buffalo by those large steamers, and there placed in the elevators. One hundred and thirty-two million bushels of grain were placed in the elevators at Buffalo last year. All that has to be hauled by rail in the winter when the canal is frozen. But in summer the canals haul infinitely more than the railways.

Take the all-rail route from Chicago to Montreal, its rate is the same as to New York or Portland or Boston or Quebec. They are all classed in the one grade, and they will haul a train clear through to Boston from the city of Montreal, over Victoria bridge, and they will not get one farthing for hauling it all the distance from Montreal to Boston. In addition to the lakes and canals, what other factors are at work to cut down the freight rates in winter? From St. Louis to New Orleans by steamer the rate for carrying grain is ten cents a hundred pounds for grain in sacks. For grain loaded in bulk it is four and a quarter cents a bushel to the Gulf of Mexico, and the rates from the gulf ports to the markets of the world are very little more than from the port of New York.

I have here the reports of the industrial commission of 1900. I find on page 578, the evidence of a prominent merchant of Chicago, by the name of Carter. On being questioned by representative Lorimer, he said :

Q. (By Representative Lorimer.) (Interrupting.) Just state them in your own way.—A. As to our water transportation I would say this, first of all, that the future growth of the industries of this country, I believe, and the opportunities for our people to compete successfully in a fair race for the commerce of the world, requires that they should have the best and cheapest methods of transportation throughout this country; and I think I can place before you a few facts which bear directly on this question, and which show conclusively that water transportation furnishes great advantages to the people of this country over the best that the railroads are able to furnish. I find in the records of the annual report of the secretary of the Board of Trade of the city of Chicago these figures : For the year 1897 the average rate of freight on corn from Chicago to New York city, via lake and canal, including the charges at Buffalo, was 4·53 cents per bushel. That was the average rate during the season of navigation ; and the average of rail rate for the year, taken from the public schedules, was 11·43 cents per bushel from Chicago to New York. The average rate by lake and canal on wheat for that year 1897, including the charges at Buffalo, was 12·5 cents per bushel. In 1898 we were not able to obtain the charges at Buffalo. They were very irregular, running from three-quarters of a cent to nothing, so I have to exclude that in the calculation of the carrying charges. The charge by lake and canal for the year 1898 was 3·81 cents per bushel on corn and 4·45 cents per bushel on wheat all the way. The all-rail charge that I have for 1898 was 9·8 cents, and on wheat 12 cents. From these statistics it is very easy to deduct these facts, that on the grain that was exported by the producers of this country in the year 1898 the difference between the charges for carrying by rail and water would approximate $25,000,000 in favour of water carriage.

To show the benefit of the New Orleans and the Galveston rates, I might point out that all through the report you can see the influence which the Mississippi steamers and the railway route to Galveston, but especially the Mississippi river, exert on grain freights :

Q. You say that the rates to New Orleans and the Gulf ports affect the Atlantic sea-board rates. To what extent do they affect them?—A. The largest grain-producing states are Nebraska and Kansas, I believe, Iowa, Nebraska and Kansas, particularly of corn. The rates on grain from Illinois south to Kankakee and New Orleans at the present time is 12 cents per hundred for export. That would naturally make the rate from the same territory to the South Atlantic ports. The average difference in the ocean rate is about 4 and a half cents per hundred ; that is, the ocean rates are four and a half cents lower at Atlantic ports than at New Orleans and Galveston under natural conditions. Of course, this varies with the demand for tonnage. Every rate from the west of the Mississippi river up to the Platte river, to a certain extent the north line of Nebraska, is affected by Gulf competition ; that is, more or less of all grain that originates west of the Missouri river and south of the north Nebraska line, and in Iowa west of Des Moines and south. The Chicago, Burlington and Quincey, leading from Des Moines to Omaha, is affected by Gulf competition, and all of Illinois on the line of the Illinois Central only ; that is, I mean it is the only business which does actually move south from Illinois that affects other territory to a very great degree. Prior to the [illegible] of the Gulf ports, prior to 1889, immediately at the close of navigation at Chicago, the rate on corn to the eastern seaboard was advanced to 25 cents per hundred pounds. The rate I have just given you for export is considerably less, and the rate has not advanced to the eastern seaboard within the last five years after the close of navigation.

Q. By reason of Gulf competition ?—A. By reason of Gulf competition.

Q. Has business through the Gulf ports increased to your knowledge during the last five years ?—A. Very greatly. Galveston has increased in grain more than 1,000 per cent in the last five years.

So that we find that the old Mississippi river boats perform an important part. And when my hon. friend the hon. Minister of the Interior quoted a rate of 5 cents from Kansas City to Chicago, I want to tell that hon. gentleman that I hunted every book on transportation rates in the library and in the city of Ottawa, and I cannot find any such rate. But I can point out to him that the Transportation Committee in the Interstate Commerce Report in 1902, No. 480, page 141, on appeal to the Interstate Commerce Commissison, their ruling is :

The charge of twenty cents on the one hundred pounds of corn and oats from the Missouri river to Chicago——

—that would include Kansas city, because Kansas city is on the border—

—and five cents less to the Mississippi, is excessive——

—that 5 cents is to catch the steamers going down the river—

—is excessive, and to be reasonable should not exceed seventeen cents to Chicago and twelve cents to the Mississippi river, east side.

No. 483 would look as if they want a little more than 5 cents a bushel on grain from Kansas City to Chicago, because, on the haul there of 240 miles they charged 46 cents per hundred. In the same book, No. 483 :

The rates of forty-six cents per one hundred pounds on grain and fifty-one cents on flour and meal between the grain region in Kansas and a large district in Texas are the same for distances shorter than 250 and longer than 800 miles, and are unreasonably high for the longer and grossly excessive and extortionate for the shorter distances.

So it will be seen that these 5-cent rates are not known in that part of the world. Now, the reports of the Chicago board of trade and the Buffalo board of trade, both of which I have here, show that the export rate is considerably less than the local rate in shipping to New York. We find that by rail and ocean, that is, by rail and then by steamer to Liverpool, the rate was 20 85-100th cents per hundred, or 12 51-100th cents per bushel. From Chicago to Glasgow the rate is 21 75-100th cents per hundred, or 13 5-100th per bushel. The same rate is quoted from London. And when we find that the rate from Winnipeg to Liverpool is 16 cents per bushel, we find that our good friends in the North-west have nothing like the reason to complain that the farmers have in the province of Ontario. If our farmers in the North-west had a little better transportation facilities—and undoubtedly they will have them in a year or two—if they had more granaries and elevators at the stations, and if there was not the same need for selling the grain in the winter time, this rate of 16 cents from Winnipeg to Liverpool—I am not speaking of the rate from country points to Winnipeg—compares very favourably with the rate from Chicago to Liverpool, and is far more favourable, considering the distance, than the farmers in my own county of Victoria or in any part of western Ontario can get on their grain by Toronto or Montreal. I claim, mark you, that this is where government action should come in. With every road the government assist, they should make a hard and fast agreement under which they would have the right to reduce rates as in their judgment may be deemed necessary, subject to certain appeal. As was pointed out before, through action of this kind on the part of Premier Roblin and the Conservatives of Manitoba, the farmers of that country last year saved $450,000. And this year the Canadian Pacific Railway, in sympathy with the lower rates of the Canadian Northern, has been forced to reduce its rates from 7½ cents on grain to Fort William, which will save to the farmers of that country this year no less than $1,500,000. Now, another reason why this northern route, in case it is ever constructed, cannot compete with the Grand Trunk and other routes all-rail to Chicago is this: Observe a freight train going out of any of the eastern centres for the west, and you will see that it is laden with merchandise of one kind or another. The cars come east loaded and they go west loaded. If they cannot carry anything else, they haul coal and commodities of that nature. Where will our northern road have return freights ? They may undoubtedly have, in time, and I hope they will have, freights from the old land to the west. But for many years they cannot depend on any local freight west. They will not be able to haul a ton of coal from the far east of Canada to our western centres, for the coal can be got more cheaply from the west. Therefore, this is another reason why it is absolutely impossible for this great transcontinental road which these people are talking of constructing, becoming a great freight-hauling road at reduced rates. They may haul the freight, but not at reduced rates. When the Minister of the Interior spoke of a rate of 15 cents from Winnipeg to the seaboard, to use a vulgarism, he was talking through his hat. Now, to show him that he is not posted on the question of rates, I will point out to him the rulings of the Interstate Commerce Commission with reference to rates to points on a number of great roads, and the names will show at a glance that they are important roads : Chicago, Milwaukee and St. Paul, Chicago and North-western, Chicago, Minneapolis, St. Paul and Omaha. Burlington, Cedar Rapids and Northern, Minneapolis and St. Louis, and Illinois Central. These are the rates that were determined by the Interstate Commerce Commission as applicable to the freight lines leading to Chicago, Milwaukee and Minneapolis. I may say that the Illinois Central was generally from 2 to 4 cents lower :

For the first 160 miles 15½ cents ; up to 200 miles, 17½ cents ; 240 miles, 18½ cents ; 280 miles, 19½ cents ; 320 miles, 20½ cents ; 360 miles, 21½ cents ; 400 miles, 22½ cents ; 440 miles, 23½ cents ; 480 miles, 24½ cents ; 520 miles 25½ cents.

These are the rates which the hon. gentleman will find at page 497 of the Interstate Commerce Report, volume 8, from September, 1896, to May, 1898.

Now, reference has been made to the abrogation of the bonding privilege. And I wish to say a word on that. I am not

one of those who sit up at nights worrying about what our neighbours to the south are going to do. But I know from association with gentlemen in the United States of America, particularly in western centres, that if the United States government abrogated the bonding privilege or attempted to do so, I do not say that they would go in for annexation to Canada, but I do say they would raise such a row with the authorities of that country as has not been heard since the days of the civil war. More than that, the Chicago board of trade alone would not tolerate it a minute, and that is one of the most powerful organizations on the continent of America. The city of Boston would not tolerate it for a moment, because a large portion of its traffic goes through Canadian channels. I will show you what the report of the Buffalo Merchants' Exchange says on a kindred question :

While at the present time trade conditions with our neighbours to the north are exceedingly favourable to this country——

'Exceedingly favourable to this country.' I wish some of the lieutenants of the right hon. gentleman would make a note of this.

—there is a growing sentiment in Canada that present conditions should not continue and that the sentiment of 'Canada for the Canadian manufacturers' by the adoption of a protective tariff, is rapidly growing. In view of the fact that Canada is the third best customer of the United States and that our exports to Canada are more than our combined exports to all the countries of South America, it would seem to be a good reason that the United States should adopt a policy more friendly to our neighbour, and that negotiations should be opened through the Joint High Commission for a treaty that would continue friendly and promote better commercial relations between Canada and the United States.

Similar resolutions would be the mandate of every commercial city north of the 42nd parallel of latitude on the continent of North America. Last year the city of Buffalo alone exported to Canada some $15,000,000 worth of goods. Such a hold has the transportation question upon that city that the state of New York had an appropriation Bill to improve the waterways of the state, that is the Erie canal, the Oswego canal and the Champlain canal. The Erie canal connects with Lake Champlain, and they had an appropriation to give that a thousand ton barge capacity and they were willing to vote $31,000,000 to improve the waterways of that state, that is the Erie canal, the Champlain canal and a little slip into Oswego. None of these canals are open any longer than ours. These people have learned by hard experience the value of waterways, and they know that the only controlling influence you can exert over the railways is to improve the waterways and keep them in good order. Let me show you what they are doing. The city of Buffalo alone last year imported by lake 124,626,000 bushels of grain. Of flour—I wish the Minister of the Interior were here—he said only 4,000,000 barrels of flour were shipped by lake routes last year—the city of Buffalo alone brought in by lake last year 12,026,616 barrels of flour; of iron ore, 2,386,767 tons; of lumber, 216,842,573 ft. Buffalo exported 641,071 tons of coal; 642,040 barrels of salt; 3,492,000 barrels of cement; and 2,451,000 barrels of sugar. The exports to Canada from Buffalo in the year 1902 amounted to $15,874,453. Yet they tell us that the lake traffic amounts to nothing. I want to point out still further that the people of Buffalo value their waterways and are improving them all the time as this extract will show :

The committee, realizing that by securing an improvement at the head of the Niagara river so as to accommodate the modern, deep draught vessels navigating the great lakes upwards of fifty miles of water front along the Niagara frontier could be opened to such industries, secured in the River and Harbour Bill in 1902 an appropriation for a preliminary survey.

A survey of their harbours is now being made, and I want to point out to the Minister of Militia and Defence that all the harbour service and improvements in the United States are controlled by the Militia Department. Therefore I trust he will assert himself, and bring his department to the front, and see that when these harbours are constructed they are laid out with military skill and intelligence.

Now, it has been pointed out that this expenditure proposed by the government will exceed $100,000,000. A few millions here and there are nothing with these gentlemen, so I will put the expenditure at the round figure of $100,000,000. I want to point out to these gentlemen that by good business management they could accomplish all that they are seeking to accomplish and a great deal more, by one-half that money, or at most two-thirds of it. In the first place, I make the suggestion that the roads in Ontario, for instance, the Grand Trunk Railway, the Canadian Pacific Railway, and any other road now running, should be given the option of reducing its rates in return for assistance in reducing its grades. They should make a contract with the government to reduce the rates in return for money assistance. The government could assist the roads to purchase rolling stock, as my hon. friend from South Simcoe pointed out this afternoon in the case of the Canadian Pacific Railway and the Canadian Northern. These roads as well as others are short of rolling stock and terminal facilities. They are improving them as fast as they can, but money is tight, and one can understand how these things are not progressing as rapidly as might be desired. I would suggest that a part of this money, in place of being squandered as it is proposed to do, should be utilized in improving railway facilities between Winnipeg and the east, and in two or three years you will have a control of rates similar

to that obtained by the Manitoba government. If the railways would not do it, then it would behoove this government to consider whether they should not extend their own line as a freight controller into the great west. They could also extend the Intercolonial up to the Georgian Bay, and thus bring through our own channels the grain of the west, and it would hardly make a hole in this hundred million dollars that they are going to blow into the rocks away to the north of us. I would give existing roads a fair show in a proposition to reduce the rates, and if they would not do it, if they would not come to terms as the Canadian Northern was brought to terms by the Roblin government, then the government would have the whip in its own hands and could compel them. Years ago I suggested in this House that the grades and curves on the old Intercolonial should be improved. When that road was first built it had one of the best roadbeds on the continent. I venture to say that less than $5,000,000 of the $100,000,000 they are going to hand over to the Grand Trunk Pacific, would place the Intercolonial roadbed in such a condition that it would be second to none on the continent, so that trains of 2,000 and 2,500 tons could be hauled by one powerful locomotive from one end of it to the other.

What is fifty miles when you have a good road-bed as compared with a road with heavy grades on it? Who among us has not seen in the old days a locomotive struggling up a grade with six or eight cars, whereas, with a level road it could readily have hauled five times as many cars and could have made time and money. Then, I would be in favour of opening up, if it is at all possible, that section of country on the south-easterly side of the mountains near the state of Maine, provided it was demonstrated by a survey that you could get a road-bed sufficient to haul your trains, and thus afford our friends there and in the St. John valley the opportunity of striking the sea at the nearest point. I am not saying that I would go into building this as a government road, because I require a little more training to convince me that national ownership of railways on such a large scale as this is advisable. The Intercolonial Railway stops half way. It should go to some central point where it could tap the grain trade of the great lakes. I believe it would be a good proposition to carry the Intercolonial Rail way to some place where it would have an opportunity of competing with the other railways and getting a share of the grain traffic. At the present time it cannot do so. I am satisfied that there are companies that would be delighted to have an opportunity of building a road down the St John valley, if they got a guarantee of their bonds that would never cost this country one cent. I would like to call attention to a fact pointed out by Mr. Roblin the other day, that the province of Manitoba has reduced the grain rates to the farmers of that province, and has put $450,000 in their pockets last year without it costing the province one farthing. The government might take a little of the money proposed to be expended on this scheme instead of squandering it away up north, and continue the Intercolonial Railway westward from Quebec and Lévis, with branches to Montreal and Toronto, because I am satisfied that if the road were properly built, if it were built without so much rush as that which is characterizing this scheme, you would save half the expenditure; or even better still, you might have government control and individual ownership, the same as the government of Mr. Roblin has in the province of Manitoba, and the country would not have to pay one single dollar for it. I am surprised that hon. gentlemen opposite have not turned their attention to the water-ways of the country. I have shown the effect that the water-ways of the United States and those along the Canadian border have in the control of freight rates. I am surprised at these hon. gentlemen going into such a scheme when they might better have devoted some of these millions to the improvement of the Welland canal route. I pointed out that the state of New York last year passed a Bill providing for the expenditure of $31,000,000 for the improvement of the canals of that state, and that the United States government are spending $4,000,000 for the construction of a break-water at Buffalo. Four million dollars. That is all I ask for the Trent canal, which would shorten the route from Georgian Bay to Montreal as against the route by the Detroit river by nearly 300 miles. I would like to see the right hon. leader of the government use $3,500,000 of this hundred millions they are squandering so as to complete the Trent canal, so that it could carry thousand ton barges.

The MINISTER OF MILITIA AND DEFENCE (Hon. Sir Frederick Borden). I am afraid the hon. member for Centre Toronto (Mr. Brock) does not endorse that.

Mr. HUGHES (Victoria). I have converted my hon. friend from Centre Toronto. I am delighted to be able to announce to the House and to the country that I have a convert in my hon. friend from Centre Toronto, as to the virtues and benefits of the Trent valley canal. In addition to that, I would say that when hon. gentlemen are squandering this money, I cannot see why they should blow it in in one place, where it could do the country no good. I cannot see why they do not take part of it to build the Ottawa and Georgian Bay canal, and in place of making it a twenty-foot channel, what is wrong with making it a fourteen-foot channel, and making long locks? A barge 300 feet long and drawing 14 feet of water will handle a lot of grain. I do not see why

they do not do something in that way and thus reduce the freight rate to the farmers, and in this way also assist to build up the eastern part of the country. I do not see why they do not take a little slice of this hundred million of dollars that they are squandering and construct the St. Andrews locks below Winnipeg. This would benefit the city of Winnipeg a great deal. They could then have free access to the extreme end of Lake Winnipeg. At the same time the government might take some of this money and improve the Assiniboia river, so as to give steamers an opportunity of competing with the railways for 300 or 400 miles away up this magnificent old stream. Then another little touch of it might be taken for constructing locks from the Saskatchewan river in the rapids near where the Saskatchewan river enters Lake Winnipeg. Then steamers could start from the foothills of the Rocky Mountains and bring grain down the north and south Saskatchewan rivers, Edmonton and Medicine Hat. The Saskatchewan river is navigable for 50 or 60 miles above Edmonton, and the farmers could send their grain by way of the river, land it at Winnipeg and thus compete with the railways from the west. I cannot see why they are handing the cash all over to the Senator. We can hardly pick up a newspaper at the present time in which we do not see that a steamer is aground in Montreal harbour, or on the end of Anticosti island, or in the Straits of Belle Isle. Steamers are going aground every day in Canadian waters and this is a lovely advertisement for Canada in the eyes of the world. I do not see why the hon. Postmaster General (Hon. Sir William Mulock) and the right hon. Minister of Trade and Commerce (Rt. Hon. Sir Richard Cartwright) do not take hold of this question and see that the Canadian waterway from Montreal to the sea is made such that we are not a disgrace in shipping matters to the commerce of the world. Instead of wasting all this money as they are wasting it, I would like to see a little of this hundred millions diverted for this purpose. I think it would do no harm if a school for the instruction of pilots were established in this country I remember once coming up the St. Lawrence. It was at the time that the right hon. leader of the government was returning from the old country. We were out in the channel, and we expected to meet the mail steamer. I was a little anxious because I wanted to catch the train. We waited for hours and no steamer came. We could hear them firing cannon on shore, and we noticed the flash from each gun, we took the time between the flash of each gun and figured out the distance, and I remember drawing the attention of the right hon. first minister to the fact that the pilot was seven miles out of his course in the middle of the St. Lawrence river. I think it would do no harm if we had a school for instructing pilots who are employed upon the St. Lawrence. Therefore, a slice of that hundred millions could be expended in that way to the benefit of the Dominion of Canada generally. Then, it has been my privilege to visit the maritime provinces, and I am proud of the magnificent harbours we have there and the future prospects of that country. I would like to see not only the grades of the Intercolonial Railway improved, but I would like to see the docking and shipping facilities of St. John, Halifax, St. Andrews, Sydney, and all those other magnificent ports improved so as to assist in the development of the maritime provinces. Now is our time to start, and instead of spending money at the order of a man that cannot wait—for a Senator who cannot wait—in place of obeying his order, let the government assert its authority and power, withdraw this Bill and bring in a measure that will be of benefit to the people of Canada.

One point more and I have done. The hon. member for North Norfolk (Mr. Charlton) referred to the Hon. Mr. Blair in very uncomplimentary terms. He said, speaking of the ex-Minister of Railways and Canals :

> He puts me in mind of a story I read a few years ago as to a riot in Chicago. A United States regiment of regulars who had been engaged in a campaign under General Miles against the Sioux Indians, were on their way to quarters in the east where they were to be granted a respite from their labours. They were ragged and toil-worn but they were veterans evidently, and as they were drawn up in line a person on the side-walk said to the soldier nearest to him : you would not shoot us fellows would you ? He replied : I would not unless the captain told me to.

I want the Postmaster General to note this :

> Now, the difficulty with the ex-Minister of Railways is that he did not shoot when the captain told him to. It is necessary to have discipline in an army, it is necessary to have discipline in a party.

Remember that, those back-benchers, please :

> Individual men may have very strong individual opinions—I belong to that category myself—but it is unreasonable for an individual to suppose that a party must accept his opinions and act upon them, and it is in the highest degree injudicious for that individual to kick over the traces because he cannot govern the party, for, in doing that, he destroys what little influence he might otherwise possess.

The hon. member for North Norfolk was as dumb as an oyster for 18 years, and he voted steadily in this House against his own convictions. He obeyed the party lash; he showed the servile spirit that is in him. Let me read this extract from Dicey, the famous author, on the English constitution, and I trust that the rank and file of the Liberal party will see from it what is the spirit permeating British mili-

tary law. I see the legal light from Hants smiling.

Mr. RUSSELL. I had no intention of smiling at you.

Mr. HUGHES (Victoria). I trust that the spirit that permeates British military law may actuate these gentlemen over there in their civil capacity as representatives of a free people. Dicey at page 295 says :

Every subject, whether a civilian or a soldier, whether what is called a 'servant of the government' (such for example as a policeman) or a person in no way connected with the administration not only has the right, but is, as a matter of legal duty, bound to assist in putting down breaches of the peace. No doubt policemen or soldiers are the persons who, as being specially employed in the maintenance of order, are most generally called upon to suppress a riot, but it is clear that all loyal subjects are bound to take their part in the suppression of riots. It is also clear that a soldier has, as such, no exemption from liability to the law for his conduct in restoring order. Officers, magistrates, soldiers, policemen, ordinary citizens, all occupy in the eye of the law the same position ; they are, each and all of them, bound to withstand and put down breaches of the peace, such as riots and other disturbances ; they are, each and all of them, authorized to employ so much force, even to the taking of life, as may be necessary for that purpose, and they are none of them entitled to use more ; they are, each and all of them, liable to be called to account before a jury for the use of excessive that is, of unnecessary force.

I would like this to sink into the mind of the hon. member for North Norfolk, and I would like to remind him of this further extract from Dicey, page 308.

The POSTMASTER GENERAL. What has this got to do with the subject ?

Mr. HUGHES (Victoria). I will explain to the Postmaster General what it has to do with it if he has the patience to wait. I dare say that he has got the hon. member for North Norfolk under his thumb, so that he cringes and bows under the rule of the government, but I trust that there are men sitting behind the Postmaster Genereal who will not be so servile. I trust that there are men sitting behind the government who will assert their right of citizenship and manhood, and who will teach the government that they will not stand such an iniquitous proposition as that placed before them. Dicey at page 308 says :

When a soldier is put on trial on a charge of crime, obedience to superior orders is not of itself a defence.

This is a matter which requires explanation. A soldier is bound to obey any lawful order which he receives from his military superior. But a soldier cannot any more than a civilian avoid responsibility for breach of the law by pleading that he broke the law in bona fide obedience to the orders (say) of the commander-in-chief. Hence the position of a soldier may be, both in theory and practice, a difficult one. He may, as it has been well said, be liable to be shot by a court martial if he disobeys an order, and to be hanged by a judge and jury if he obeys it.

I am afraid the member for North Norfolk would be hanged. I dare say many an honester man has escaped the gallows.

His situation and the line of his duty may be seen by considering how soldiers ought to act in the following cases.

An officer orders his oldiers in a time of political excitement then and there to arrest and shoot without trial a popular leader against whom no crime has been proved, but who is suspected of treasonable designs. In such a case there is (it is conceived) no doubt that the soldiers who obey, no less than the officer who gives the command, are guilty of murder and liable to be hanged for it when convicted in due course of law. In such an extreme instance as this the duty of soldiers is, even at the risk of disobeying their superior, to obey the law of the land.

An officer orders his men to fire on a crowd whom he thinks could not be dispersed without the use of firearms. As a matter of fact the amount of force which he wishes to employ is excessive, and order could be kept by a mere threat that force would be used. The order, therefore, to fire is not itself a lawful order, that is, the colonel or other officer who gives it is not legally justified in giving it, and will himself be held criminally responsible for the death of any person killed by the discharge of firearms.

Soldiers might reasonably think that their officers had good grounds for ordering them to fire into a disorderly crowd which to them might not appear to be at that moment engaged in acts of dangerous violence, but soldiers could hardly suppose that their officer could have any good grounds for ordering them to fire a volley down a crowded street when no disturbance of any kind was either in progress or apprehended. The doctrine that a soldier is bound under all circumstances whatever to obey his superior officer would be fatal to military discipline itself, for it would justify the private in shooting the colonel by the orders of the captain, or in deserting to the enemy on the field of battle on the order of his immediate superior. I think it is not less monstrous to suppose that superior orders would justify a soldier in the massacre of unoffending civilians in time of peace, or in the exercise of inhuman cruelties, such as the slaughter of women and children, during a rebellion.

So much for the argument of our hon. friend from North Norfolk. I do not think it is necessary even to order him into line. I have noticed for some time that that hon. gentleman has kicked over the traces very frequently; but as soon as he sees a little notice in the papers that the Joint High Commission is about to meet in the course of a few weeks, he forthwith comes back and we see him crawling at the feet of the Prime Minister and the Minister of Labour. He does not wait to be told to shoot, but he goes off at half cock.

Mr. Speaker, the question is a large one, and I could dwell upon it at a greater length; but I hope that before the matter proceeds much further the House and the country

will be treated by the Prime Minister in the proper way, by his coming forward and apologizing for having placed such a proposition before them, and withdrawing it like a man.

Mr. BENJAMIN RUSSELL (Hants). Mr. Speaker, I have read somewhere or heard the story of Douglas Jerrold who was at one time recovering from a severe fit of fever. A volume of Browning's 'Sordello' was put into his hands to interest him while in a convalescent state. He began reading it; but as he could not understand a word of it, he had terrible apprehensions as to his mental condition. Great beads of perspiration stood out on his forehead. At last he passed the book to his wife who was sitting at the head of his bed and asked her to read it. She read a few lines, and then threw the book away in disgust, saying, 'It is perfect and absolute nonsense.' 'Thank God,' said he; 'then I am not mad.' I must confess that I passed through a somewhat similar experience when I was trying to discover what connection there was between my hon. friend's quotation from Dicey on martial law and the subject of the Grand Trunk Pacific. Not being, like my hon. friend opposite, a man of military aspirations or martial tendency, I turned to my hon. friend the Minister of Militia and Defence, and asked him if he could explain it to me. 'No,' he said, 'I cannot see any connection whatever.' 'Thank God,' said I to myself, 'then I am not mad.'

Mr. HUGHES (Victoria).

Oh, wad some power the giftie gie us
To see oursels as ithers see us.

Mr. RUSSELL. If the hon. gentleman sees me in that light, I will accept it as conclusive evidence of my sanity. I must confess that I rise with some degree of trepidation and alarm to measure swords with the hon. gentleman, because I have read an autobiographical sketch of the hon. gentleman, from which I learn that he has in his veins the blood of the two great martial races of the world, of which this great nation of ours is composed—the blood of the old courageous gentlemen of Enniskillen and the Boyne, and also the blood of some French ancestor who served under Napoleon Bonaparte.

Mr. HUGHES (Victoria). Nothing diminutive about that crowd.

Mr. RUSSELL. No, nothing diminutive, but the fact is calculated to inspire a small person with a great degree of alarm and terror,and I am sure that nothing should be added to that terror and alarm that one feels by the hon. gentleman's interruptions. I have illustrations of the hon. gentleman's prowess in various lines, gathered from his autobiography. Among these he gives the following :—

As athlete, victory almost ever followed any team I led or played with. As one chronicler of Canadian athletics wrote, in speaking of my 'inspiring influence' on the men, the cry was :

Hughes, Sam Hughes, the war cry rattles,
As rang 'Old Fritz' in Europe's battles.

As a rifleman the hon. gentleman has his record, and also as a politician. As a man of learning and science he has his record too. But most of all, as a miracle-worker he stands so high that it would be almost profane to institute any comparison. He says :

On two occasions I received within an hour and despatched within the same period of time in the evening, by trains and boats, upwards of twenty-five thousand persons.

Mr. HUGHES (Victoria). Orangemen, too.

Mr. RUSSELL. I did not know that; that should have been mentioned.

There was no hitch, no accident. These vast crowds too, were fed within a period of two hours without confusion in a town of less than seven thousand.

I am sure nothing of that sort has ever happened since the time when I do not know how many loaves and the two small fishes were used to feed a great crowd.

Mr. HUGHES (Victoria). Keep it up. Don't go back on it.

Mr. RUSSELL. I do not, and I hope my hon. friend will not feel the slightest temptation to go back on it.

Mr. HUGHES (Victoria). Not at all; I am not ashamed of it.

Mr. RUSSELL. The hon. gentleman is a great teacher as well. He is able to teach the farmers of this country how to harvest their wheat, how to gather it into barns, how to garner it, how to deliver it on the market. I am a very humble sort of person, and I am willing to take my lesson from him as to the proper time of the year for the farmers to deliver their grain on the market, and I learn from him that the proper time is somewhere about March or April. In those months, the lakes are closed to navigation, and if the grain is to be carried to the markets of the world, the right way and the only possible way to carry it is over a railroad. And I suppose that if the grain of those farmers of ours in the North-west is to be carried over a railroad, the only question for us to consider is whether it is to be carried over Canadian or over American railroads. The policy of the government, I understand, is that we shall have our Canadian grain carried over Canadian railroads, and the hon. gentleman admits that this is a good policy. I should not forget to say that the hon. gentleman is by his own account the father of this policy. I have his own word for it, and if it is necessary I can give it. He says :

Among the many plans originated by me and carried, or being now carried, into successful execution may be named : The introduction of

military drill in schools; the second great transcontinental Canadian railway to the Pacific.

This is the railway we are talking about, because it is the second great transcontinental Canadian railway to the Pacific. He also tells us in the same paragraph that he originated 'the policy of upbuilding Canadian ports instead of foreign ones;' and that is the sole purpose for which the present measure is brought before the House. Therefore I have a right to claim the hon. gentleman as the father of this measure for the securing of a second great transcontinental line to the Pacific and the upbuilding of Canadian ports instead of foreign ones.

Mr. HUGHES (Victoria). I do not call this a great transcontinental system at all.

Mr. RUSSELL. It is big enough for us. We are quite satisfied with the size of it. The hon. gentleman said, in the course of his opening remarks—although his later comments belied rather what he started out with—that he had no objection to make to the line, no objection to the route, no objection to the soil—all these were all right; and he threw overboard, as he went on, nearly every hon. gentleman on the other side who had opened his mouth with reference to this matter. He destroyed at one fell blow, the hon. member for South Lanark (Hon. Mr. Haggart). He left no argument to that hon. gentleman, for that hon. gentleman's whole argument was based on the defective character of the soil, the route and the line. But to none of these things has the hon. member for Victoria (Mr. Hughes) any objection. All that he objects to is the iniquitous contract, and on the iniquity of it he did not give us one scintilla of light.

He has given us, however, the evolution, according to his idea, of this great contract. He said it began in a Minneapolis paper. It began with something concerning the Canadian Northern Railway, for which, I suppose, he holds a brief. Then he said it expanded from North Bay to Winnipeg. Then it went a little easterly, and the Quebec bridge was drawn in, and it was going from Quebec over to Winnipeg and the west. Later on, the maritime provinces were brought in, and now it is a transcontinental railway from the maritime provinces over the bridge to Quebec, and from Quebec to Winnipeg, and from Winnipeg to the Pacific coast. So that by the process of evolution the hon. gentleman has proved conclusively to himself the origin of this project. Well, Mr. Speaker, it does not make very much difference where it comes from. Modern science teaches us that the greatest results ever achieved in the world have come from the minutest possible origins; and I do not care from what minute origin in a Minneapolis newspaper the hon. gentleman evolves this scheme. Here we have it, and we are not going to cavil at its origin. If it is going to be a great Canadian and all-British railway, I care not whence it comes or how small its origin.

The hon. gentleman told us that he was going to criticise this contract. Well, how did he carry out his promise? He did not complain of one thing in the contract. I listened carefully to the hon. gentleman, and I could not gather from his remarks what iniquity there was on this contract on which he based his opposition to it. He read two passages of it, and only two, clauses 37 and 42. Let me refer, first, to clause 37. He seemed to discover that in clause 37 there was no security for the Canadian purchasers of goods; and the hilarity of my hon. friends on his right and left as he made this discovery was something very delightful indeed. Well, will he be surprised to learn—I do not know whether he ought to be surprised, because I am sure it has already been pointed out in this House—that the very section in this Bill which has excited the hon. gentleman's criticisms and his friends' hilarity, is exactly the section which was moved by the hon. member for Cornwall as an amendment to the Bill incorporating the Grand Trunk Pacific Railway. I shall read the two sections side by side, and I give my hon. friend the benefit of the comparison; and if he can show anything in this Bill, which is more of a limitation than what is contained in the resolution of the hon. member for Cornwall (Mr. Pringle), then I will do what he himself offered to do a moment ago, and resign my seat and let him come and have it, if he wants it.

An hon. MEMBER. And can get it.

Mr. RUSSELL. Of course, always subject to that limitation. Clause 37 of the contract reads:

> The company shall purchase all material and supplies for the construction of the western division and the equipment of the whole of the said line of railway from Canadian producers, when the same are produced in Canada——

I want to know if the hon. gentleman thinks the company should be obliged to purchase them in Canada if they are not produced in Canada.

> —and when such materials and supplies can be purchased in desired quantities and of equal quality suitable for the purposes required——

I do not suppose that the hon. gentleman would want to have the railway company bound to purchase materials and supplies from Canadian producers when they are not produced in Canada, and when they are not suitable for the purposes required. No one is going to consent that goods, whether Canadian or American or from any other part of the world, may be put into the railway unless suitable for the purposes required:

> —and for prices and upon terms equally advantageous to those procurable elsewhere.

Would it be reasonable to ask this company, which is putting its money into the building of 3,000 or 4,000 miles of railway, that they should purchase their supplies in Canada when such supplies were not suitable for the purposes required and could not be got for prices and upon terms equally advantageous with those procurable elsewhere? Surely those are entirely reasonable and proper qualifications on which to impose on the company the obligation of purchasing goods in the Canadian market. But if there be anything wrong in this clause it is taken directly and absolutely from the resolution moved by the hon. member for Cornwall (Mr. Pringle.)

Mr. BROCK. Read the resolution of the hon. member for Cornwall.

Mr. RUSSELL. I am about to read it. It is as follows:

In the event of any subsidies being granted to the said company, they shall be subject to the conditions that the company shall, as far as practicable——

Now, if the shoe were on the other foot, how we could ring the changes on that. You can take any meaning you like out of it. What is the meaning of 'as far as practicable'?

—construct, equip and operate their line or lines of railway with railway supplies, structural iron and steel, railway fastenings and cement and rolling stock of Canadian manufacture, whenever such railway supplies and rolling stock can be procured as cheaply and upon as good terms in Canada as elsewhere, having regard to quality and price among other things.

Which is the most hazy and indefinite? This one leaves the decision to the arbitrary discretion of the company, and I do not hesitate to say that clause 37 leaves less open to the company than this clause 40, which was to be added to the Grand Trunk Pacific Railway Bill.

Mr. BROCK. In one of them the articles are defined and not in the other.

Mr. RUSSELL. That is true; I was forgetting to mention it. This proposition of the hon. member for Cornwall only relates to particular articles, but the clause we have put in the contract applies to any articles of any kind. That distinction was in my mind, but I forgot to mention it, and I am very grateful to my hon. friend for having reminded me of it. It certainly shows that the clause we have inserted is more comprehensive than the other.

There is another section of this Bill to which the hon. gentleman refers, and that is the one which, of all others, he says shows the cloven hoof. That is section 42:

It is hereby declared and agreed between the parties to this agreement, that the aid herein provided for is granted by the government of Canada for the express purpose of encouraging the development of Canadian trade and the transportation of goods through Canadian channels. The company accepts the aid on these conditions, and agrees that all freight originating on the line of the railway or its branches, not specifically routed otherwise by the shippers, shall, when destined for points in Canada, be carried entirely on Canadian territory or between Canadian inland ports.

Ha, ha, the hon. members say. Just look at that, does not that show the cloven hoof? If they were not intending to have the control of roads on the American territory, why would they have put that there? It is a circumstance of the greatest possible suspicion that they have it there. But then it would have been cited as a circumstanc of the greatest possible suspicion if they did not have it there; so, it does not make much difference, so far as that is concerned, whether they have it there or not. If we had said nothing about sending it over Canadian territory, the hon. gentleman would hav said: Why do you not have a clause providing that this traffic is to be carried al together over Canadian territory? The Minister of Justice properly and naturally put it there, and now it is regarded as terribly suspicious that it is there. I have never heard or read of an argument of thi character since Sergeant Buzfuzz showed the unutterable things that were concealed in the message about chops and tomato sauce. Now, just one word more on this point. I want to know why the hon. gentleman did not finish the reading of that clause. It would have been fair and just that he should have read the two lines at the end of the section:

—that the through rate on export traffic from the point of origin to the point of destination shall at no time be greater via Canadian ports than via United States ports, and that all such traffic, not specifically routed otherwise by the shipper shall be carried by Canadian ocean ports.

I think that if the hon. gentleman had been desirous of making a fair and just statement of the contract, if he had not been desirous of quibbling and endeavouring to pervert the meaning, if he had not desired to find some faults that did not exist, he would not have failed to go on, as he easily might, to show how clear and manifest the intention of the government was to compel them to make this road what it is destined to be, an all-Canadian route for the purpose of building up Canadian ports. And he would have read another section immediately after, which is to the effect that:

The company shall arrange for and provide, either by purchase, charter or otherwise, shipping connections upon both the Atlantic and Pacific oceans sufficient in tonnage and in number of sailings to take care of and transport all its traffic both inward and outward, at such ocean ports within Canada upon the said line of railway, or upon the line of the Intercolonial Railway, as may be agreed upon from time to time, and the company shall not divert, or, so far as it can lawfully prevent permit to be diverted, to ports outside of Canada any traffic

which it can lawfully influence or control, upon the ground that there is not a sufficient amount of shipping to transport such traffic from or to such Canadian ocean ports.

Now, I say that these two clauses taken together make it absolutely clear that this is to be a Canadian line to be worked in the interest of Canadian ports. And I say that all that is necessary to make it a truly Canadian line, and all that it is necessary for us to assume as existing to ensure its complete success are, in our eastern ports, some little degree of push, and in our western country some little degree of patriotism. With patriotism at the western end and push at the eastern end, it is absolutely certain that this will be a transcontinental line that must build up the ports of our country. Because the patriotic man in the west will route his traffic through Canadian ports, and the Canadian ports will provide the means and facilities to handle it, and in this way the line cannot fail to be a truly Canadian transcontinental railway, serving well the purpose which it is the intention of the government and of this House that it should serve.

But my hon. friend (Mr. Hughes, Victoria) says that they are not going to work this line at all. Apparently the hon. gentleman has not thought of the fact that they cannot help working it. He seems to think that this is something that they can take or leave at their own will. He evidently does not know any more about the terms of this contract than do some of his legal friends who criticise it. The company is bound under contract to take the lease of this road for fifty years—there is no option on their part. They are bound not only to take the road, but to work it. But he says that Mr. Hays is a far-seeing man, there is no limit to the amount of his brain and the length of his head ; and Mr. Hays has deliberately entered into an agreement looking ahead for fifty years, and at the end of that time, is going to throw up his road and then carry the grain to Minneapolis, or Chicago, or Philadelphia, or Portland, or wherever else it is the hon. gentleman suggests—somewhere that is not a Canadian port. Well, I knew that Mr. Hays was a pretty long-headed man. He certainly has that reputation. But if he is so long-headed that he is entering into this contract thinking of what he will do fifty years hence when most of us will be in our graves, he is longer-headed than even the greatest of admirers gave him credit for being. The hon. gentleman was even a little more imaginative, and told us he was not going to work this road. But the contract says they must take it and they must work it. Of course, one point I will concede to the hon gentleman—we do not expect the company to work this road until the road is ready We all must admit that. Nobody supposes that they can be called upon to run their trains over the road until the sleepers are down and the rails laid. But when the road is ready, the contract obliges the company to work it. And the hon. gentleman himself has shown in the most conclusive way that they can work it, because he has demonstrated that a matter of three or four hundred miles more or less in the length of a great railway does not make any difference in rates. That is the fact. Anybody who knows anything about railroads has had that fact brought to his attention. For instance, Portland is a northern port. It is further from the great centres of distribution than Boston. Farther still from those centres than New York, and farther still than Baltimore. Yet, an added distance of two or three hundred miles—the hon gentleman said three or four hundred miles—does not make any difference in the rates on the long haul. If that be the case—and it is the case when you come to continental distances, such as three or four thousand miles. That is exactly why this great transcontinental railway company would be able to carry this grain over the road we are going to build for them. Even if Halifax or St. John may be much farther away from Winnipeg or Port Simpson than Portland will be, yet it will be practically the same thing for them to carry to Halifax or St. John over the long distance as to carry to Portland. And we rely for the proof of that proposition upon the very demonstration which the hon. gentleman has made that this increased distance is a negligible quantity.

Some hon. MEMBERS. Then why don't you use the Intercolonial ?

Mr. RUSSELL. The Intercolonial is a different thing altogether. It is a short piece of railway which does not connect with the grain centres of the west, and the principle does not apply to a short line as it does to a long line.

The hon. gentleman referred to the matter of running powers, but dealt with it with extreme lightness—as lightly as light could be. He said that so far as running powers were concerned, every body has read that provision, and every body smiles at it. But every body does not smile at it. Some people think it a matter of very great importance. Mr. Hudson wrote a book on railways to demonstrate the great inequality and difficulties and injustices connected with the administration of railway systems in the United States, and he said that the right method for removing these difficulties and extortions was to restore the original theory of a railway highway, as is being done, to a large extent, in this very Bill. My hon. friend from North Norfolk (Mr. Charlton) the other day demonstrated from actual fact that the railway highway theory is not an impracticable idea ; he demonstrated that it is not only a workable theory, but a working theory. This writer shows why he had a working theory, and these are his words :

Manifestly, to let any one run engines or cars over any railway, free from supervision or direction, would produce hopeless wreck and disorder.

The Duke of Wellington said we must never forget the analogy of a highway. Railways in England were built upon the analogy of highways, and this argument is that if we are going to have a proper definition of a railroad, we must work back to the old theory of the highway.

Such a proposition would be presumptive of lunacy. But when we inquire whether a plan cannot be perfected which shall retain all needful precautions, and enforce by law the authority of the central officer over trains in motion, while giving to carriers the right to compete in the carriage of freight, the question assumes a very different aspect. What is there in these methods which cannot be preserved without the exclusive privilege of carrying freight over the track ? The maintenance of schedules need not interfere with the freedom of competition. The carrier wishing to run a train of his own could be required to run a regular train on schedule time, or to follow a regular train with an extra, just as extras are now run on every railroad in the country. The control of the trains in motion must be given to a train-despatcher ; but the trains thus controlled may be owned, loaded, and forwarded by different carriers.

He did not see anything impossible about it.

If the law secures implicit obedience to the orders of the train-despatcher, while the trains are on the railway, can it make any difference to the safety and speed of the service that one train is owned by A, another by B, and that both carry freight at such rates as are fixed by free competition ? Cannot the authority which controls the trains be made as absolute and unquestioned as now, or even more so, without vesting the monopoly of transportation in a single company ? Cannot the obedience of the men in charge of the trains, and their intelligence and care, be secured in as high a degree if competing carriers are allowed to use the same track ? And cannot the use of safe rolling-stock and its maintenance in good repair, by frequent inspections, be enforced just as well under a system of competition as under a system of monopoly ? These are the questions which must be answered, in order to determine whether the idea of competition in transportation over the same track is practicable.

This proposition does not contemplate sending a number of trains under conflicting control upon the same track. It simply proposes that the right of outside carriers to load their trains, at whatever rates they choose, and to send them over the tracks of the railway, shall be established, under whatever regulations are necessary for the preservation of speed and safety ; and asserts that all these regulations can be enforced consistently with the practice of free competition. The first condition that it assumes is, that all such competing trains would be started on schedule time, and run either as regular trains, or as extra trains following the regular ones. It next supposes, as a vital condition, that all trains will be under the control of the train-despatcher from the moment that they come upon the track until they reach their destination. All the details of reporting the progress of each train, at every telegraph station which it passes, of keeping the record of its location in the central office, and of governing its movements by telegraphic orders, can be enforced as well, whether the trains are owned by a single corporation or by a dozen. Let the law, or the rules of the railway company, provide absolute control by the train-despatcher, of trains in motion, and the efficiency of that officer need not be in any respect diminished by the fact that the trains are owned and laden by competing carriers.

Mr. Hudson goes the whole length of saying that any number of companies can run their cars over the same road, but his theory is that that road ought to be owned by the state. I do not press the theory that far, the government does not press it that far. All they are saying is that one or two companies can have the use of this road besides the Grand Trunk Company; that all the great companies that want to carry grain out of the North-west or anything else may feasibly and advantageously be allowed to use it on fair and equal terms, and that is what the government propose to do between Winnipeg and Moncton.

Mr. CLANCY. Have any great railway experts adopted those views ?

Mr. RUSSELL. Here is one who has adopted that view.

Mr. CLANCY. He is not a railway expert, he is a railway theorist.

Mr. RUSSELL. What are experts but theorists ? I will give my hon. friend another opinion, that of a gentleman who has considered the railroad question seriously and technically, and that is ex-Governor Larrabee of Iowa, who says :

The adoption of Mr. Hudson's plan would simply be a return to the first principle of railroad transportation. It has already been shown that the first English charters permitted the public to use their own vehicles and motive power upon the railroad track, but that shippers and independent carriers could not avail themselves of these provisions of the early charters because it was in the power of the railroad companies to make their tolls prohibitory. There is but little question as to the practicability of Mr. Hudson's plan from a purely technical standpoint, and its adoption might be advisable if it should be demonstrated that a monopoly of the track is inconsistent with the operation of the railways for the public good.

That is to say, ex-Governor Larrabee sees no technical difficulty in the matter at all, he considers it feasible but doubts if it would have the beneficial effect which Mr. Hudson anticipated from its operation. Now, I give the opinions of these two authorities. I do not think that railway experts would go the length of saying that it would be desirable or safe that everybody should be allowed to pass a train upon the track and at a fixed toll. I do not think that would feasible. But in the estimation of two such eminent authorities as Mr. Hudson and ex-Governor Larrabee, what the hon. member for North Norfolk said is

amply justified when he showed from actual experience that it is feasible for more than one railway authority to send its cars over the same line of road, as we know it is.

Mr. INGRAM. The hon. gentleman has quoted the member for North Norfolk as making a statement about the Wabash Railway, a statement which I deny.

Mr. RUSSELL. It does not make any difference if the hon. gentleman does deny it, I am reasserting it. I have just as much faith in the hon. member for North Norfolk as I have in the hon. gentleman.

Mr. INGRAM. I may further state——

Some hon. MEMBERS. Order.

Mr. INGRAM. I am asking the hon. gentleman's permission to make a statement.

Mr. RUSSELL. I do not think it is worth while for us both to try to speak at the same time. There is one other matter that I wish to refer to, and that is the information the hon. gentleman gave us about the central route in the province of New Brunswick. Now, he has absolutely misunderstood, I think, the speech which was made by my hon. friend from Westmoreland (Mr. Emmerson). My hon. friend from Westmoreland made it clear that the route which was being referred to in Sir Sandford Fleming's report was a route that went up to Rivière du Loup and over a chain of mountains, while the route that is proposed or contemplated by this Bill, is to be taken through the province of New Brunswick, and all the references that have been made to Sir Sandford Fleming's report and to the cross sections he mentions, are entirely beside the mark. It was made clear by my hon. friend from Westmoreland that the route which is contemplated runs from Quebec back of the mountains, which skirt the south shore of the St. Lawrence river, and passes around the border of the state of Maine and down through the central part of New Brunswick, which is an entirely different line from that which is criticised in Sir Sandford Fleming's report. I have some more observations to make about that subject, but in the meantime, lest hon. members should go away with a false impression, I want to point out the fact that there was always a contention between Mr. Wilkinson, the provincial engineer of the province of New Brunswick, and Major Robinson, on whose report, to a large extent, Sir Sandford Fleming relied when he gave his account of this central route which ran partly through the province of New Brunswick and partly through Quebec, where we do not propose to go in this Bill at all. This road takes an entirely different course. So that the evidence my hon. friend quoted he has quoted to no purpose at all, and he might just as well have quoted from a book of logarithms. Mr. Wilkinson, in criticising the circuitous route that the Intercolonial Railway takes around the northern part of New Brunswick, in his contest with Major Robinson says :

> Were a proposition now for the first time offered, that the intercourse between Halifax and Quebec should not pass through New Brunswick, except by the most circuitous route that could be made, it might justly be expected to be repugnant to both Nova Scotia and Canada. But it has, I trust, been shown, that such a proposition would be at least equally objectionable to New Brunswick, and that it is for the common interest that the inter-communication should be as direct as the natural facilities of the country will permit.

There is Mr. Wilkinson's evident impression. Mr. Wilkinson's impression and opinion which is evidently the opinion of the people in New Brunswick shows that the route which Major Robinson had recommended and along which the Intercolonial Railway now goes was a circuitous route, was too long a route, was longer than need be and that a route through the central part of New Brunswick was one which would give us as direct a route as the natural facilities of the country would permit. Now, Mr. Speaker, with this reference to the question of the location of the Intercolonial Railway and the saving to be effected by running it through the centre of the province of New Brunswick I have no further remark to make in regard to the speech of the hon. member for North Victoria and with the permission of the House I beg to move that the debate be now adjourned.

Motion agreed to, and debate adjourned.

On motion of the Postmaster General, House adjourned at 12 a.m.

HOUSE OF COMMONS.

TUESDAY, August 18, 1903.

The SPEAKER took the Chair at Eleven o'clock.

NATIONAL TRANSCONTINENTAL RAILWAY.

Mr. WILSON. Before the Orders of the Day are called, I would like to ask if there has been a sufficient number of copies of this Bill printed with reference to the Grand Trunk Pacific Railway, so that members may distribute them in their various constituencies. I sent up the other day for half a dozen and only got one. I think it is desirable that we should have sufficient quantities printed so that it may be freely distributed.

The PRIME MINISTER (Rt. Hon. Sir Wilfrid Laurier). The usual number of copies of this Bill have been printed. I am not aware that the government has any authority over this question, though I am not sure. I think the House itself is the party to manage that.

Mr. WILSON. I want to say another word, I do not want to cast any reflection upon the gentleman who is at the head of that department, for I have always found him courteous and willing to do what he could to accommodate members, but I do think we should have a sufficient number of these Bills, so that we may distribute them among our constituents.

Mr. SPROULE. The House ought to take it up, because we have had several applications for copies of this Bill that we could not supply. It seems to me the House ought to give its consideration to this matter, and order an additional number printed. It would not be very expensive.

House resumed adjourned debate on the motion of Sir Wilfrid Laurier for the House to go into Committee on a certain proposed resolution respecting the construction of a national transcontinental railway.

Mr. B. RUSSELL (Hants, N.S.). I referred last night to the views of Mr. Hudson, an authority on railway questions, who had advanced the theory of the railway highway as a remedy for the difficulties which have been experienced by shippers to the United States. I took care in doing so, to say that I was not prepared to agree with his proposition to the whole extent to which Mr. Hudson carried it. I did not put it forward for the purpose of expressing agreement with it, but for the purpose of saying that this view had been seriously adopted by a man who had given a great deal of thought to the subject, and his views had been confirmed by ex-Governor Larrabee, another high authority, so that it can no longer be considered as a mere crotchet, but as a subject that is worthy of fair consideration. Now the government in this Bill do not go anything like so far as Mr. Hudson proposes, and as ex-Governor Larrabee endorses. We do not profess to say that this railway should be a highway for all the roads in the Dominion, but that it will be possible for several lines to use it if necessary for them to do so. There cannot be at the utmost more than two or three railroads that will require to use it, perhaps in the fifty years which is the lifetime of the lease which is to be made.

When you go into a depot such as the Fitchburg in Boston, before the consolidation of the northern depots, or into any of the great depots in England and find trains going out from these depots in rapid succession, almost like bullets out of a rifle, and when you come down to the proposition of two or three freight trains creeping along a road 1,800 or 1,900 miles in length, perhaps 25 miles apart, you cannot say that there is anything remarkable or unsafe or impracticable about that. I could easily conceive that a short line of railway, such as the portion of the Intercolonial Railway running into Halifax, where two distinct systems of trains are accommodated, might be a more dangerous contrivance than a railway 1,800 miles long built for the accommodation of through freight. I think this is all I have to say in reference to that subject and I only mention it because incidentally it came up in connection with the remarks I made last night.

A question was put to me last night, which at the time I did not apprehend the meaning of. I was emphasizing the point made by the hon. gentleman who preceded me, that that which appears in a smaller distance to be a large quantity, appears in a greater distance to be a disproportionately smaller quantity, and that what may be, speaking of the railway system as we have it in the maritime provinces, a matter of importance as affecting a railway some hundreds of miles long, when you get down to the question of a transcontinental railway 4,000 miles long, is practically a negligible quantity. The question was put to me, which I did not at the moment apprehend the meaning of: Why not then use the Intercolonial Railway. I thought the question was the one which has often been agitated in Halifax. Why do we not have western cargoes coming over the Intercolonial Railway, and the answer which has often been made by the Halifax Board of Trade to the suggestion is that as long as the Intercolonial Railway is destitute of western connections it is impossible for it to be a through road, and the very thing that is necessary to make it a through road is to afford it a connection with a western system of railways. It has been suggested that this was not the question that was asked me, but the question was, why, if a hundred miles is a negligible quantity, is it necessary to decrease the mileage of the Intercolonial Railway by constructing another railway through the central part of the province of New Brunswick? That is a fair question, but the hon. gentleman who asked it, and I do not know who it was, will see that it is a question that applies equally well to the American railways of the present day. Why is it, if the railway line to Baltimore is shorter than the railway line to New York, and if by virtue of the principle that in a long haul such a difference in distance between the two lines of railway is a negligible quantity, that the New York Central straightens out its curves and reduces its grades? It is because of that which has been pointed out by one of the highest railway authorities on the continent—I refer to Mr. Fink, who is cited by all the railway authorities who discuss this question—the rate on through-freight is made up not merely to the sea-board, but the through-rate is made from the source of supply to the markets of the old world. It is because the through-rate is made from Chicago to Liverpool by way of New York, Baltimore or Portland, and not from Chicago to New York and New York to Liverpool, and the ocean rates adjust themselves to the land freights. If the hon. member takes that into consideration,

he will see why it is we want the Intercolonial Railway to be a through-road, to be in a position to carry traffic from Winnipeg to the Atlantic ocean. It is because we want to put our maritime ports on the same footing as the ports of Portland, Boston, New York, Baltimore and other American ports ; it is because we want to enable our ports to get the benefit of their natural advantages for ocean traffic ; it is because we want our roads in so far as we possibly can secure it, to get the land carriage in order that our superior ports, as we conceive them to be in the long run, will have the benefit of the ocean carriage, and in order that we may be able to give a rate from the ports of the Dominion of Canada, and particularly from the Atlantic ports, which will enable us to obtain the business in competition with the great arteries of commerce which flow through United States to Liverpool and the old country. If any hon. gentleman will take section 45 of this contract which I read last night and which I will not repeat this morning, he will see that this company undertakes to provide ocean tonnage upon both the Atlantic and Pacific oceans for the purpose of taking care of and transporting all its traffic both inward and outward at such ocean ports in Canada, and if he will read that in connection with section 42, which was not read in full last night by the hon. member who preceded me, and who very carefully abstained from reading it in full, he will see that the contract makes ample provision for safeguarding the interests of Canada in this matter. The full purport of this section has not even been grasped by a great many hon. members on this side of the House who are the warmest partisans and the most earnest advocates of this contract. The company agrees :

> That the through-rate on export traffic from point of origin to point of destination shall at no time be greater via Canadian ports than via United States ports, and that all such traffic, not specifically routed otherwise by the shipper, shall be carried to Canadian ocean ports.

That means that the Grand Trunk Pacific Railway Company will not be able to make a rate from Winnipeg to Liverpool through Canadian ports higher than it makes the rate from Winnipeg to Liverpool via Portland or any other port. What on earth any contract could do more than that, and what any government could do more than to stipulate that when the freight is carried through Canadian channels across the ocean and to the ultimate point of destination the rate shall be the same by Canadian ports as by American ports, even though the haul may be longer through Canadian ports than American ports is something that I cannot understand. I do not see what else could be done to secure to our maritime ports the benefit of the natural advantages which they possess, or to secure to the people of this country the commerce that now flows through the United States and across the ocean to the markets of the world.

Now, I am not sure that I should have considered it necessary or desirable to delay the vote on the question before the House with another speech, if I had not some few years ago advocated a proposition which has been mentioned in the course of the discussion as a possible alternative to the policy propounded by the government. Shortly after the acquisition of the Drummond County Railway, a report obtained currency that the government was about to purchase the Parry Sound road for the purpose of still further extending the Intercolonial Railway, and pushing it forward in the direction of the grain fields of the west. It seemed to me at the time that this was a logical sequence of the steps already taken in the extension of the road to Montreal, and I publicly advocated the adoption of the policy in the interest of the maritime provinces and of the city which I then had the honour, in conjunction with the hon. leader of the opposition, to represent in parliament, and in the interest also of the Intercolonial Railway itself. If it were not for the immeasurable superiority of the proposals now before the House, I suppose I might still be advocating the extension of the road to Parry Sound, but I am sure that I would do so with some very great misgivings.

In the first place I should be inclined to despair of ever securing the assent to such a proposal of the other provinces of the Dominion. The construction of the Intercolonial Railway was a fundamental condition upon which the provinces of Nova Scotia and New Brunswick entered into union with their sister provinces, and without which there could have been no such political unit as the Dominion of Canada. The other provinces, and especially I speak of the province of Ontario which had least to gain from the construction of the Intercolonial road, have accepted that condition in good faith, and there is no man in Nova Scotia or New Brunswick who can lift up his voice to say that the terms of that compact have not been lived up to in a fair and honourable spirit by all the parties to the arrangement.

Mr. EMMERSON. They get a greater benefit from it.

Mr. RUSSELL. I do not say whether Ontario gets a greater benefit than Quebec. it is immaterial ; at all events I would think it extremely doubtful if the province of Ontario and the province of Quebec which have faithfully and loyally lived up to the terms of that compact under which the Intercolonial Railway was built for the benefit of all the colonies and more particularly for the benefit of the maritime provinces ; I would not think it very singular if the provinces of Ontario and Quebec were willing to enter upon a further experiment in the operation of a government

road. We of the maritime provinces might have considered it desirable, and we should have been within our rights in urging every argument, by which such a proposition could be supported. But how would the argument have stood? If it be true as the hon. member for South Lanark has informed the House that the Intercolonial Railway is responsible for a capital expenditure of $43,000,000, if there is any semblance of truth in his further statement that during the past six years the road has been run at a loss to the people of Canada of $2,500,000 a year; if we regard this statement as misleading and extravagantly pessimistic, and strike off fifty per cent of the deficit as stated by the hon. member for South Lanark (Hon. Mr. Haggart); if we go still further and accept the statement of the ex-Minister of Railways and Canals that the road during the term of the present administration has not only held its own from year to year, but has been earning a substantial surplus, but bear in mind that these may be years of exceptional prosperity, that the road may have been having the benefit of an exceptionally prudent and progressive management, and that it is entirely beyond dispute that in former years and under other management the road was being run with annual deficits of a quite substantial not to say serious and alarming character, I ask, Sir, taking all these circumstances into our consideration, and putting ourselves in the position of hon. gentlemen who are not primarily interested in the maritime provinces, whether it would have been reasonable to complain if the other sections of the Dominion, which had honourably redeemed every obligation resting upon them in connection with the Intercolonial Railway, had been unwilling to take upon themselves the burden of another extension by the government road with all the risks that such an undertaking would involve, of a further series of deficits, differing from those they had been accustomed to only in the greater scale upon which they must be reckoned. Will the hon. leader of the opposition be prepared to present such a proposal for the acceptance of his friends in number 6 as an alternative to the proposals of the government? If so he will be met by all the cogent and, I fear, controlling considerations to which I have referred, but he will also have the still further objection to dispose of which I may have to refer to more fully in another connection. He will have to deal with an objection based upon a proposition which I venture to put in the forefront of this discussion as one that cannot be controverted and one that controls the situation in which we find ourselves to-day. My proposition is this: That there is not now, there never was, and until the nature of human beings and of human society undergoes a miraculous change, there never will be in any democratic state a case of a line of railway owned and operated by a government in successful competition with a railway owned and operated by private capital. If we had extended the Intercolonial Railway to Parry Sound; if we had made the best bargain imaginable with the owners of the Parry Sound road, a better bargain by far than any that was ever made by any government with any individual for the purchase of a piece of property; if we had been able to operate the system with entire freedom from the waste and leakage that everybody except the hon. member for South Lanark (Hon. Mr. Haggart) regards as the inseparable accompaniment of government operation; if all these impossibilities had been concurrently accomplished in the case of the Parry Sound purchase, we should yet have been obliged to compete with other lines of railway operating in the same field with ourselves and competing for the same traffic. Now the right hon. gentleman who introduced this Bill has given in a most strikingly familiar and convincing manner one of the reasons why a government cannot enter into competition with a private individual or company in the operation of a railroad system. I will not repeat his words for they were altogether too striking and vivid and convincing to need restatement. But I refer to them by way of noticing that a very zealous advocate and champion of government ownership affects to make merry with what he pretends to consider the simplicity of the view presented by the Premier upon this aspect of the question. The versatile editor of the Toronto 'World' writes:

> It was pitiable in the extreme. He stood on the shore of Parry Sound and after Mr. Booth had shown him his new road to that point, the thought came to him that not only had Mr. Booth to build the road but he would have to find traffic for it and perhaps have to build hotels for travellers over it, and even to send envoys to other lands to seek commerce for the project.

Now whenever anything of this kind appears in the columns of the 'World' we may rest in the confident assurance that we will sooner or later have it all over again from the place of an hon. member in this House. A traveller in Europe who went to see the miracle-play at Ober Ammergau once gave a very interesting account of the performance, mentioning among other drolleries the circumstance of Adam crossing the stage preparatory to being created. The hon. member for East York (Mr. Maclean) in like manner in his capacity of statesman and economist makes his daily appearance on the stage of the Toronto 'World' preparatory to the miracles of creative genius that he displays from time to time to the wonder and admiration of the House of Commons. Now, I do not know whether to refer to him as the

honourable editor of the Toronto 'World' or the hon. member for East York.

Mr. GALLIHER. The editor of the honourable Toronto 'World.'

Mr. RUSSELL. Well, I could hardly put it that way either. However, the hon. gentleman in his capacity of economist continually rehearses his performances in the columns of the Toronto 'Globe'——

Some hon. MEMBERS. The 'World.'

Mr. RUSSELL. Yes, of course; God forbid he should have anything to do with the editorship of the 'Globe.'

It was no surprise then to hear in the course of the speech of which the hon. member was in such a hurry to disburden himself that he pumped it into the House under a motion to adjourn, when he could not ask us to receive it in the usual way under any of the regular methods of procedure, the very same line of criticism with which we had been favoured through the columns of the Toronto 'World' and the very same ridicule of the Prime Minister's illustration. It was no surprise, let me repeat, as coming from the hon. member for East York, but it was certainly a very great surprise to hear his hollow laugh re-echoed by the ex-Minister of Railways and Canals, who is usually a sensible person, and this in a serious speech delivered under most serious circumstances as a serious indictment of the policy of the government. There is a kind of laughter that a wise man has said is like the crackling of thorns under the pot, and the laughter of the ex-Minister of Railways and Canals at this point will help the House to appreciate the importance of his sneers at the expense of his former leader in connection with other aspects, as well as this of the argument presented to the House on the introduction of the measure. We do not need in this House or in this country any proof of the political genius of the right hon. gentleman who leads this House and who for many years to come is destined to lead this country. But if any illustration were needed, I would not ask for a better one than the fact that the very same idea that flashed itself upon his mind in a moment of insight is reduced to the form and terms of a definite economical proposition by one of the most luminous economic writers of the present day. I refer to a work on 'l'Etat moderne et ses fonctions,' by Paul Leroy-Beaulieu, a member of the Institute and professor in the College of France. In the chapter in which he states the arguments pro and con on the question of the operation of railways by the government of the country, he points out the difference between the operation of a railway and the conduct of those undertakings such as the post office and the telegraph, which may be hopefully undertaken by the state. His words might almost have been taken for those of the Premier himself. The idea and the argument is exactly that of the right hon. gentleman. He shows how necessary it is for the railway manager to cater to the variety of tastes that he finds in the community which he attempts to serve, how entirely different is the operation of a line of railway from the uniform and routine services performed by the telegraph or the post office and how absolutely essential it is that there should be an individual and personal initiative such as it is entirely unreasonable to expect from a government official. 'It is not sufficient for the road to wait for traffic. It must hunt it up, must create it, must attract it. Experience proves that the profits of a line of railway depend on all these conditions.'

The 'young lions' of the Conservative press may find amusement in the convincing illustrations of the Premier, and the hon. ex-Minister of Railways may display his ignorance by joining them in their fool's laughter; but I can assure them one and all that the men who know what they are talking about and who have had experience or profited by the learning of those who have had experience will be struck with its appositeness and cogency.

The ex-Minister of Railways really has no excuse for joining in the laugh, for he has himself had experience of the very difficulties connected with the administration of a government road to which the premier has called attention. How often have I heard him bewailing his impotence in this very matter of commanding freight for his road? Has he forgotten the speech he delivered in the immigration building in Halifax a few years ago, when the organs of my hon. friend the leader of the opposition were denouncing him as the bitter and malignant enemy of Halifax who spent his days and his nights devising means to compass our destruction; when his picture appeared in the 'Morning Herald' as the destroyer of the city, and his name was coupled with the name of Judas Iscariot. He will recall with what painful conclusiveness he demonstrated the impossibility of the Intercolonial Railway ever, under its present conditions, handling any considerable portion of the traffic of the west. The Canadian Pacific, he told us, would not give him any freight. They would carry their freight by their own road over the short line to St. John. The Grand Trunk would give him none. They would carry theirs all to Portland. And I remember well how amusingly and graphically he pictured himself in the absurd performance of climbing into a tree at the western terminus of his road, and shouting over the land for freight to swell the receipts of the Intercolonial. Now the question that presents itself is whether he would have been any better off if he had secured the road to Parry Sound. Suppose he had bought this road from Mr. Booth; suppose he had gone further, and built or

purchased elevators at Parry Sound to operate in connection with the road, would he not still have been left open to the proposal to climb into a tree, if there are trees upon the barren shore of the Georgian Bay, and send out his imploring cries over the blue waters of Lake Huron ? He might indeed in this way seek to call spirits from the vasty deep ; but we may be permitted to be as skeptical as Hotspur as to the prospects of their coming when he called them. He would find that he must have his line of steamers in connection with the road ; and after all this had been done, which is surely the farthest limit to which by any conceivable possibility public opinion would have permitted him to go, the question still remains whether he would have been in a position to compete with a company like the Canadian Pacific for example which can swell its receipts by promoting the construction of mills as at Lake of the Woods, by the erection of palatial hotels, as at Quebec, Vancouver and Banff, and which can enter into almost any line of business that it finds conducive to the creation of a freight or passenger traffic for its line. I greatly fear that we never could have successfully competed, that the acquisition of the Parry Sound Road, strongly as I was inclined to favour it with my own natural bias in favour of my own city and province, might have proved a failure, might have resulted in continuous and increasing deficits, might have subjected the maritime provinces to the criticism of the other members of the union and created a feeling of hostility towards them which must have materially militated against their comfort and self respect as consistent members of confederation.

I am very glad that the experiment has not been tried, and that the undertaking in a wiser and a better form has been unloaded upon the company that is to operate this national transcontinental line. I regard this portion of the scheme as one of the strongest features by which it is recommended to the favourable consideration of the House. When this subject was first discussed in connection with the resignation of the Minister of Railways, a letter from that hon. gentleman was read in which he described the government measure as a scheme by which the government was to build and own the lean section of the railway and provide a company with government credit to enable them to build and operate the fat section. It was a striking and a plausible statement of the case, and it was at once picked up by every unthinking critic and every Tory newspaper in the country. With his habitual shiftiness, the hon. gentleman had no sooner got them all committed to this view of the situation than he threw them all overboard, and he now presents the argument that neither the western nor the eastern section affords assurance of a paying traffic. Possibly he may have discovered on reflection the obvious fallacy of the way he was presenting the case in his letter. But this was the way he stated it, and the Tory papers have been ringing the changes ever since on the text that he has given them. Why, it has been asked, should the government give the Grand Trunk Pacific Company the end of the pudding containing all the plums, and reserve to itself the end containing nothing but the dough ? Well, Sir, if the government had proposed under this Bill to operate the road from Winnipeg to Moncton, as the hon. Minister of Railways now argues that they ought to have done, it is quite possible that the criticism would be just. In the hands of the government, I am very much afraid the line from Moncton to Winnipeg would have proved a far from profitable line to run. In the hands of the Grand Trunk Pacific, I believe that it will easily be made to pay. The reasons for this belief would not be relevant at this point or to the course of argument that I am now pursuing. On the contrary, I am taking the opponents of the measure on their own ground with respect to this eastern section of the road, and I so far agree with them in their opinion as to quite freely and fully concede that it is not this section of the road that would offer any inducements or attractions to a company. If there is a burdensome section of this great transcontinental project, it is the line from Winnipeg to Moncton, and not the end from Winnipeg to the western coast. The hon. ex-Minister of Railways in his letters assumed this to be the fact, the opponents of the measure take it for granted that it is the fact, the hon. member for South Lanark goes even farther than the rest, and demonstrates to his own satisfaction that the road from Winnipeg to Moncton will not and cannot be made to pay a profit but must result in continually recurring deficits. He has discovered that the whole country through which this railroad is to run consists of nothing but mountains and muskegs. But the men who have been over the country and know it best, the missionaries and hunters and surveyors, all tell a different story from that of the hon. member whose accuracy in such matters has never been regarded as one of his strong points. In this case he has certainly excelled himself in discovering impassable mountains and fathomless muskegs, where the officers of the Geological Survey find arable and cultivable land sufficient to support a large population, and furnish an abundant traffic. It is in this way that history always repeats itself. When George Stephenson projected his road from Liverpool to Manchester, it was the same old story, not so old then as it is now. It can be read in Fanny Kemble's introduction to the book in which she has recorded her impressions. There were the same sort of 'parliament men' in those days as the two ex-Ministers of Railways, with their

mountains and muskegs to prove the utter absurdity and impossibility of a railway from Liverpool to Manchester. 'There is a rock to be excavated to a depth of more than sixty feet, there are embankments to be made nearly to the same height, there is a swamp of five miles in length to be traversed, in which, if you drop an iron rod, it sinks and disappears. How will you to do this ?' Well, if the parliament men had had their way, it would not have been done at all. But it was done, as this will be done, in spite of all the gloomy pictures and dismal prophecies of the member for South Lanark.

But for the purpose of my present argument, I take him at his word and accept his demonstration that the road will be so expensive a one to build and so unprofitable to operate that it cannot ever be expected to be run without a loss. What, then, in view of his demonstration, is the proposition we are called upon to consider ? Is it a proposal by which, as the ex-Minister of Railways and Canals has most unfairly, uncandidly and perversely represented, we are handing over to a company the fat end of the road and retaining the lean end in the hands of the government ? Surely it is nothing of the kind. It is a scheme by which the government, in consideration of the support that they are giving to this company in the construction of the road from Winnipeg to Port Simpson, and which they might well have given without any consideration whatever, as they have this very session given similar aid to another company, and as the French government has given similar aid to all its great railway companies, has loaded the company down with an obligation to operate, for the benefit of the older provinces, the eastern and more burdensome section of the road. The hon. member for South Lanark has very frankly admitted this to be the nature of the scheme. Whether he made the admission intentionally or in a moment of unconscious frankness, I have no means of determining. But, that there may be no mistake about the matter, I take his words as reported in the official record :

> The Grand Trunk Pacific want the road from Winnipeg to the Pacific ocean ; they want also the road from Winnipeg to Lake Superior, and they may arrange for connection with their North Bay or Montreal system of roads. But it is no interest to them, it is a drag and a load upon them to compel them to accept the road from Winnipeg to Quebec and from Quebec to Moncton.

These are the words of the hon. member for South Lanark (Hon. Mr. Haggart). What is it that they prove ? Do they prove the proposition upon the strength of which the ex-Minister of Railways and Canals surrendered his portfolio, or do they not prove the very opposite of his proposition ? Surely, if the hon. member is correct and the acceptance of the line from Winnipeg to Moncton is a drag and a burden upon the Grand Trunk Pacific, it is a drag and a burden which the government have imposed upon them and compelled them to accept as the consideration for the valuable franchises and substantial pecuniary assistance which they secure from the government under the provisions of this Bill.

There is only one possible answer to this presentation of the case. It may be argued that the road will be so unprofitable that it will not pay the company to operate it, and that the contract is so weak that the government will not be in a position to compel its operation. If both these propositions can be shown to be well founded, the bargain is indefensible. Even should the last of them alone be true, the bargain is not as good a one as it should have been. What then are the guarantees that the country will hold for the efficient operation of the road ? Well, Sir, there are two distinct and separate kinds of guarantee, the one intentional and express, the other undesigned entirely as a matter of guarantee, but to my mind more effectual, if that were possible, than the one that is expressly 'nominated in the bond.' To my mind the best possible guarantee and the all-sufficient guarantee for the continuous and satisfactory operation of the road is the fact that it is in the covenants under which the company takes its franchise, and subject to the performance of which it will hold every mile of its road and every right that under this measure it will possess. This contract has been represented to the country as one of enormous value to the company. The government, we are told, has been gold-bricked into making such an improvident and thriftless bargain wih the promoters of the scheme. The concessions to the company were, in the judgment of the ex-Minister of Railways and Canals when he was preparing the statement of his reasons for surrendering his portfolio, so enormously valuable that he would compel the company to hand over perhaps a half, at all events, not less than a third of the net earnings of the enterprise as the price of the concessions. He appears to have changed his mind since then, or to have two minds upon the subject. In fact he has not been of one mind on any point connected with the subject for twenty-four hours together since he delivered his ultimatum. What his mind may be at this date as to the value of the franchise, it would be useless for me to conjecture ; but, everybody who has attacked this measure has agreed that it is enormously valuable and, we are told that it is to give us a new crop of millionaires.

Now, Sir, I should like to have it pointed out to me by what method of manipulation the company will be able to hold its franchise and realize all this affluence without continuously and efficiently performing its covenants for the operation of the road from Winnipeg to Moncton. Breach of cov-

enant results in debt, debts ripen into judgments, and judgments are followed by delivery into the hands of the receiver. The breach of the covenants in the lease does not merely operate a forfeiture of the lease. The company has no option to surrender its lease and be excused from the performance of the covenants. It is under covenant to continuously and effectively operate the road, and if it fails to do so it must also abandon the hope of earning the dividends which are the sole object of the company in entering upon the undertaking. It cannot continue to earn its dividends from its western traffic without continuously performing its covenant for the operation of the eastern end. In the nature of things, what better guarantee could the country ask for, and what more effective guarantee could possibly be given? Is it not clear beyond controversy that the company will be obliged to operate effectively every mile of the road from Winnipeg to Moncton in exact accordance with the standard efficiency demanded by the contract?

Now, what follows from the performance of this obligation? I venture to say that the exacting of this requirement is pregnant with consequences of the greatest possible importance to the seaports of the lower provinces. The hon. leader of the opposition said a very wise thing in connection with this matter; or if he did not quite say it, he came so near the mark that it would be a pity to deprive him of the credit of having hit the nail upon the head. He virtually admitted that no mere stipulations in a contract or a statute could divert the course of traffic from one channel to another. Be it so, you cannot by legislation or by contract make Halifax, for instance, the terminus of the Grand Trunk Railway in place of Portland. But what you can do is to locate your great arterial lines of transportation in such a way that it will be natural for their traffic to seek its outlet in your own ports, and that is what the government have done in the location of this road. They have kept it well to the north, they have by its means sought to broaden and deepen the area of the eastern provinces. This road, when once its traffic is established, and its local trade developed, will turn as naturally to Quebec in summer and to the Atlantic ports in winter as the Grand Trunk now turns to Portland in winter and summer alike.

They have obliged this company to operate the road throughout its whole extent continuously and efficiently. It cannot afford to run empty cars. It is driven by every impulse that can be brought to bear upon a company to find traffic for its road. It must and will see that the forests are felled, that farms are settled, that industries are established throughout this new Quebec and new Ontario, so that its traffic may be developed and improved. The local traffic originating in these new centres of industry will make a through-traffic profitable that could not otherwise be made to pay. I am no expert in railway economics, but, I think it is a matter of common knowledge that a through-traffic and local traffic over the same line may both be made to pay where either through or local traffic standing by itself would make a loss. In conversation with one of the officials of the Intercolonial some years ago as to the prospects of that road, he assured me that if he were free to handle the road according to his own ideas it would not be impossible for him to carry grain to Halifax for nothing. It seemed to me to be a paradox, but he elaborated his view in such a way as to make it seem entirely plausible. The present trains he said are running at a profit. Increase the power of your locomotives, double or treble the carrying capacity of your trains, and you add somewhat, of course, to the expense for fuel and to the wages of your men, but you gradually approximate the point at which the ratio between the increase in the expense and the improvement in the returns is so small that the increased expense account becomes a negligible quantity. All this was given me in good faith and seriousness by a former official of the road, who is one of the brightest and most clear-headed railway men in this country. I do not pass judgment on his views. It is not my business to understand railway administration. But when I hear the hon. gentlemen opposite, whose knowledge is not better than my own, predicting with brazen confidence that this road can never carry its through freights across the continent, I bethink me of the equally confident and pessimistic 'parliament men' that tried the soul of George Stephenson, the equally confident and pessimistic prophets of the early failure and ruin of the Canadian Pacific, and all the long and dismal succession of croakers and groaners who have stood in the way of every progressive movement that has ever been inaugurated.

If the opponents of this Bill are right in their predictions, if this policy does what the hon. leader of the opposition says that statutes and contracts cannot in themselves accomplish, then it is because no policy that can be adopted by this parliament can ever accomplish the task. It is a counsel of despair that our opponents offer us. The task is beyond the resources of statesmanship. Our dream of a national life realizing itself in conscious and genuine community of interests is destined to remain forever unfulfilled, and the soooner we acknowledge that our confederation is a failure and a blunder, the better will we be able to reconcile ourselves to the inevitable alternative. Now, I am not ready to adopt such a conclusion as this. I have said already, it is a counsel of despair. It is of a piece with the dreary pessimism of the ex-Minister of Railways and Canals.

It has no place in the new life and the new hopes that are springing in the heart and soul of this young Canadian commonwealth. I believe the day is bound to come when the cities of Halifax and St. John, each with its own peculiar advantages, and contending in friendly rivalry, will hold the same relation to the Grand Trunk Pacific that Portland now holds in relation to the old Grand Trunk, and that this will be brought about in good part by, if it is not almost wholly dependent upon, those provisions of the measure which I am next called upon to discuss.

The extension of the road beyond Quebec, eastward into the maritime provinces and to connect with the city of Moncton, has been attacked by the opponents of the measure as an unnecessary and improvident expenditure. As to this contention, let me point out, in the first place, how preposterously the relative importance of this expenditure has been overstated by the opponents of the Bill. If you will look at the map of Canada, you will see that the line from Moncton to Quebec is, roughly speaking, about one-fifth of the whole distance from Moncton to Winnipeg. (I rely upon dimensions as measured on the map.) It is about one-tenth of the whole distance from Moncton to Port Simpson, the western terminus of the road. Now, does it not appear to the House to be a question of small potatoes, when you are providing for a great transcontinental line from ocean to ocean, and there is a distinct national object to be served, a great national hope to be realized, a clear and strong national aspiration to be gratified, by the undertaking—does it not, I ask, seem to the House, and will it not, on due reflection, seem to the people of this country, to be a very small matter indeed, to cavil over the question whether we shall or shall not extend the railway a tenth part further than in the opinion of some of us it may be absolutely necessary. It is a matter of three hundred and fifty or four hundred miles of railway out of three or four thousand miles in all. It may involve an expenditure of perhaps ten million dollars. The ex-Minister of Railways and Canals even does not state it at more than $15,000,000, and his figures are extravagantly high. It may impose an outlay in interest of $300,000 or $450,000 a year. The government will have to pay this interest for seven years, when the load will be lifted from its shoulders by the company. The present value of these deferred payments may be less at the completion of the road than two million dollars, and cannot be more than three millions. And it is this expenditure of two or three million dollars that is going to bring ruin and disaster to the Dominion of Canada. The farm of every man in this country our opposition friends may be conceived as saying, is going to be mortgaged from this date; while grass grows and water runs, for the sum of fifty cents for the building of this road from Quebec to Moncton. Is it not a terrible outlook? Why the whole expenditure is less than we have made upon the mere terminal facilities that have been provided at Halifax and St. John. This expenditure is to be made, as the Premier has well shown, to redeem the faith of parliament pledged to the people of this country. The people of the maritime provinces have always held, the people of Halifax more particularly have been persistent in the contention, that the abandonment of the Harvey-Salisbury link of the short line railway was a clear breach of faith with the people who were interested in its construction. Now, surely, it will not be said that two or three million dollars of the money of Canada, a sum equal to from thirty-three to fifty cents a head of the population is an exorbitant sum to pay to redeem the honour of this parliament, and surely it is not an unreasonable sum for this House to vote, even if there were no question of honour in the matter, and the only question at stake was the hope of making the maritime provinces in fact, what they are now largely in form alone, an integral portion of the Dominion of Canada. Sir, if there were but one chance in twenty that this expenditure might result in giving the cities of St. John and Halifax the same position in this Dominion that Boston, New York and Philadelphia hold in the community of states that constitutes the American republic, there is no Canadian worthy of the name who would begrudge his portion of the outlay, and I fail to understand how any hon. gentleman from the provinces beside the sea can oppose this portion of the scheme without being untrue to the interests of the people that he represents.

But the hon. ex-Minister of Railways and Canals has objected to this part of the arrangement because it is proposed to parallel the Intercolonial Railway. Now, I do not wish to repeat any part of the argument that has already been addressed to the House; but I cannot refrain from referring in this connection to the exceedingly sensible and apposite comment on this part of the hon. gentleman's argument on the morning after the ministerial explanations were given to the House. The Morning 'Citizen,' speaking of the reasons given by the ex-minister for his procedure, said:

> The ostensible reason given is the objection of the minister to the clause in the Grand Trunk scheme which provides for the paralleling of the Intercolonial from Moncton north. Nobody who knows the Minister of Railways well would take seriously the report that he would object to the national expenditure of money entailed by the building of another government road from one end of his province to the other. There has been a good deal of talk of double-tracking the Intercolonial to increase its capacity so as to enable it to handle a transcontinental traffic. But the financial difference between double-tracking an existing

road and building a new line is not of such an extent that it may not be justified on the ground that a separate line will afford additional facilities for the province through which it operates.

I do not quote these words for the purpose, with which they were written, of prying into the motives of the ex-Minister of Railways and Canals, or discrediting the account that he has given to the House of the actual reasons for the steps that he has taken. I have no doubt that he has given us a truthful statement on that matter. We know, however, that he was smarting under a sense of the slight that he imagined had been put upon him. He felt this keenly enough to place it in the forefront of his letter to the Premier, when every possible consideration of policy would have counselled him to leave the facts to be revealed, if at all, by his biographer. We may well discount the value of a political judgment on a great national question when the mind of the judge was obscured by such a cloud as this. One of the greatest of poets has given us the picture of the wrath that can animate even a celestial mind under the sting of a wounded self-admiration; and the whole demeanour of the hon. gentleman since he abandoned his colleagues has been such as to confirm the skepticism of the 'Morning Citizen' as to the simplicity and singleness of the motive by which the hon. gentleman has been impelled. It may well be that no mere differences of opinion could have inspired the ferocity of his attack upon his former leader, or betrayed him into the mistake of sneering at the man whom this country delights to honour, and whose shoes' latchets the hon. gentleman might well consider himself honoured in being permitted to unloose. Nevertheless, I do not quote these words for the purpose of throwing doubt upon his motives; I quote them for their intrinsic value, for their great significance, having regard to the source from which they come, and for the sagacious view that they present, as to the comparative unimportance of the difference between the proposals of the government and proposals which it is understood the ex-Minister of Railways and Canals would not have been unwilling to entertain. They show that even to the mind of a convinced opponent of the scheme, the point on which the ex-minister has staked his political existence is not a vital point, nay, more, that it is in fact a meritorious element in the arrangement. Surely nobody in this country would have been thrown into convulsions of terror and alarm if the proposal had been made to double-track the Intercolonial as part of a scheme for a national transcontinental line of railway. Then, as this writer very properly points out, the difference between the cost of double-tracking and the cost of building an additional line of railway may well be compensated by the additional facilities afforded for local traffic to the portions of the country through which the road will be constructed.

But this is by no means all that can be said for the proposal. Everybody knows that when the Intercolonial road was built there were serious differences of opinion as to the proper line for its location. A writer in the 'Morning Chronicle' of Halifax, who is vouched for as a railway expert, and who certainly writes from copious and exact information on the subject, has given us the history of the dispute between Mr. Wilkinson, the government engineer of the province of New Brunswick, and Major Robinson, who was appointed by the imperial government to report upon the route. Mr. Wilkinson recommended a route through the centre of New Brunswick. Major Robinson favoured the present location of the road. Now, the hon. member for South Lanark (Hon. Mr. Haggart) has told us that the road recommended by Mr. Wilkinson was and is impracticable. He has read from the report of Sir Sandford Fleming to that effect. But as the hon. member for Westmoreland has clearly established, he has, I do not assume intentionally, distorted utterly the effect of that report. Moreover, even if this had not been shown, the hon. member should have noticed that Sir Sandford Fleming's report is largely based upon the surveys of Major Robinson, and Major Robinson was expressly commissioned to locate a military road. Mr. Wilkinson, who was the government engineer of the province of New Brunswick, never concurred in Major Robinson's opinion, and never ceased to contend for the central as against the northern road, which eventually, for military rather than for either commercial or engineering reasons, was the one adopted. Now, let us imagine that the views of Mr. Wilkinson had, in fact, prevailed, and that the line had been constructed through the centre of New Brunswick as he had recommended that it should be. Does any hon. member believe that we would have endured to this day without another line of railway running along the north shore of New Brunswick and the south shore of the River St. Lawrence? Does any hon. member imagine that the prosperous and thriving settlements along the present line of the Intercolonial Railway would have given this parliament any rest until they were afforded the same railway accommodation that other sections of the community were enjoying? A line of railway would certainly have been constructed corresponding substantially with the present line of the Intercolonial. It would have been constructed without criticism and with universal concurrence, and the condition of things would have become precisely such as will be brought about under the operation of this Bill. Why, then, the alarm and clamour? Why all these groans and lamentations over a proposal to bring about a condition of affairs

which would have been established with universal acquiescence if the course of history had only been a little different from that which it actually happened to pursue?

There is still another method of testing the propriety of this expenditure. Study the maps of New Brunswick and of the lower portion of the province of Quebec. This section of country will compare favourably in soil, in climate, in natural resources, and in everything that goes to make the home of a happy and contented population, with any of the New England states. Apart from the greater density of population, there is no reason why it should not furnish traffic for a railway mileage equal to that of any of the New England states. Now, what do you find to be the fact? Outside of the state of Maine, I believe you could not travel in a direct line in any of the New England states for more than twenty miles without crossing a railroad track, and in many places you would cross a number of them. How is it in New Brunswick? From the line of the Intercolonial on the north shore of New Brunswick across the province to the state of Maine, there is an immense area of country, from eighty to a hundred miles in width, without a single mile of railway. Why should this country not be opened up by a railway, even if the construction of such a road were not in the least degree essential as a link in a transcontinental road from ocean to ocean? I consider that this is a most important aspect of the question. Standing alone it might not, in the estimation of some hon. gentlemen, be sufficient, as it certainly would be in the minds of others, to justify the expenditure. But, taken as part of the consideration for the outlay, it is surely a most important element in the case. The older provinces of the Dominion have done much for the development of our national heritage in the west. We have voted our millions, not only without a murmur, but with unfailing cheerfulness and alacrity. The lower provinces in particular have derived hardly any material benefit from the heavy expenditures that they have been called upon to make for these great undertakings. With them it has been very largely a matter of patriotism and national sentiment alone. They have cheerfully seen their sons go forth from their midst for the peopling of the western lands, though the movement of population should leave their own fields untilled that once laughed with the harvest, and result in the reversion to forest of lands that were cleared a hundred years ago. These results of the opening up of the west were clearly foreseen, and there was a time when even Sir John A. Macdonald himself looked upon the movement with misgivings and apprehensions as to its effects upon the older provinces. But we have, all of us, outgrown these views.

Nobody in these days regrets what has happened in this respect or would wish that the course of events had been other than it has been. But it is not for the interest of the country as a whole that this movement of population should go beyond what is reasonable. We of the lower provinces desire most keenly to retain our relative position in the Dominion as long as it is possible to maintain it. It is in the interest of the country as a whole that the balance should not be needlessly or greatly disturbed. We desire to retain a strong, a vigorous and a continually increasing population within our borders, and it is certainly to the interest of the Dominion as a whole that we should do so. To my mind nothing in the whole history of the United States is more pathetic, and few things are more lamentable, than the extent to which the descendants of the original population of New England have given place to the children of alien races. The statues of the old Puritan founders are in their parks and gardens, their streets and market places. Their memorial tablets are in their churches and public halls, and their names are immortalized in towns and villages and hamlets throughout the old colonies. But the descendants of these men are, many of them, no longer there, and those that are there no longer control the destinies or direct the spirit of New England. Another race has come to fill the tenantless houses and occupy the abandoned farms, a people that, as Matthew Arnold says, does not strike its roots down lovingly into the soil and that has little in common with the ideals on which the New England commonwealths were founded. Now, if we can do anything to prevent the history of New England from repeating itself in New Brunswick and Nova Scotia, I am sure it is well worth while to make the effort. The construction of this road will be a step in this direction, and a step of the very greatest importance. Every railroad that is constructed, every new industry that establishes itself along its line, every new mail route that is opened up, every new church and school house that are built, help to make the country more attractive and more habitable, more likely to retain in our midst the population, without which we cannot hold the position which it is in the interest of the country as a whole that we should occupy as members of the confederation.

I think, moreover, that the hon. ex-Minister of Railways has been unduly alarmed as to the extent to which the building of this road will militate against the interests of the Intercolonial. Not that I concede for a moment that if it should have that effect it would be any the less our duty to proceed with the undertaking. The hon. gentleman has watched over the Intercolonial so long and, I may concede, so tenderly and efficiently as well, that it may have become a hobby with him, or, like golf or billiards, it has developed into a passion. Indeed, in his particular case, it seems almost to have assumed the appearance of a

new kind of disease, and certainly it has assailed him in a particularly acute and aggravated form. He naturally would be inclined to look with fear and suspicion upon anything that would threaten the sources of its trade. But for the rest of us the Intercolonial must not be a fetish. The railroads, as the Premier well said, are made for man and not man for the railroads. The Intercolonial, I suppose, was built to serve the country. The country was not formed primarily for the purpose of feeding the Intercolonial. Therefore, even if it had to be conceded that the Intercolonial was to be destroyed by the Grand Trunk Pacific, we would be only pursuing the policy that has, we are told, been the secret of the immense and marvellous progress of the manufacturing industries of the United States. When their actual machinery and appliances were not up to the highest standard of perfection they pitched them into the junk heap, no matter how recently purchased or installed, no matter how expensive. If the Intercolonial Railway is over a hundred miles longer than it need be, if its use involves unprofitable expense and unnecessary delay, if a shorter and better route can be adopted, then we must insist on its adoption, even if it should make scrap iron of the present road.

But on this point, as on others, the hon. gentleman has altered his views essentially since he stated the excuses for his desertion of his colleagues. If I understood his speech at all, he demonstrated that the superiority of the Intercolonial Railway was so great over the Canadian Pacific short line to begin with, and over any possible line that could be constructed through the province of New Brunswick, that no matter what the Grand Trunk Pacific might do it could not take away its traffic from the Intercolonial. Why then, under these conditions, he should have shed such bitter, scalding tears as he did and drop them in such profusion over the fate of the people along the line of the Intercolonial, because its traffic was going to be destroyed and the road dismantled, perhaps he would explain some other day when he experiences another of those sudden and incomprehensible changes of opinion that he has been so frequently undergoing ever since he left the safe anchorage of his position as a loyal minister of the Crown. I agree as to the merits and position of the Intercolonial more nearly with the opinions in his speech than with those of his letters. When he left the government because of his fears for the Intercolonial I believe he was unduly alarmed. He failed to consider, as he has since been evidently led to consider, that the Intercolonial will still have some resources left with which to meet the competition of the proposed new road. That road will simply cross the Intercolonial at Quebec. It will come to Quebec on the west through a wholly different territory from that traversed by the Intercolonial, and it will proceed eastward through a wholly different country. What reason is there for assuming that it will take any part of the traffic of the Intercolonial beyond that which originates in the vicinity of Quebec and Lévis? All the conditions of the situation as they exist to-day will remain unchanged, with the exception of this transcontinental road crossing the Intercolonial at a single point and reaching out both east and west through a country that the Intercolonial does not touch. Now, the traffic originating in Lévis and its vicinity and the traffic from the maritime provinces destined for Lévis and vicinity yields the Intercolonial Railway a very small proportion of its actual earnings, and whatever will be lost from this source of income to the Intercolonial will be more than compensated, will be compensated ten times over, by the traffic developed over the new line both west of and east of Quebec which must be carried over the Intercolonial to seek its outlet at the Atlantic ports.

Before I leave the subject of the Moncton section there is just one further remark I wish to make, because of the diversion which some hon. gentlemen in this House, and some very wise newspapers in the country, have derived from the argument of the Prime Minister with reference to the bonding privilege. I must, in all candour, say that there is hardly any other branch of this case on which the opponents of this measure, including the hon. ex-minister, who certainly is capable of better things, have talked more nonsense than they have on this phase of the question. The hon. leader of the opposition quoted from an old speech of his former leader to show that the bonding privilege could not be cancelled, because it was held under a treaty. But he had, just a few moments before he read this passage, been listening to the reading of a message of President Cleveland, in which he recommended that Congress should pass legislation for the express purpose of placing this matter in the arbitrium of the executive. And if ever a man was in earnest it was President Cleveland that was in earnest when he made this recommendation to Congress. My hon. friend was not leader of the opposition in those days. He was not then in parliament. He was, like myself, in his political short-clothes. I know not whether he read the newspapers then or not. But if he ever did, and if he took any interest whatever in the public affairs of the country, he must remember the apprehensions that existed throughout this country lest the threat of President Cleveland should be carried into execution.

The hon. gentleman, who has been followed in this contention by the hon. ex-Minister of Railways, has argued that the bonding privilege will never be cancelled, because it is in the interest of the United States as much as it is to our advantage that it should be retained. Sancta simplici-

tas ! Did anybody ever hear such an answer to a suggestion of grave national peril ? As if nations, when their blood is up, ever pause to consider their material interests. Was it in the material interest of the United States a few years ago to plunge into a war with England for the delimitation of a boundary line in Venezuela ; yet we were about as near to a war as nations ever go without the actual exchange of blows. Was it in the interest of the Boer republics to go to war with England over the question of the Uitlanders' franchise ? What is true in this respect of wars that are waged with rifle and bayonet thrust, is equally true of those that are fought with tariffs and trade privileges. Men do not 'pause on passion's fiery wheel to count the measure of their pulse.' The hon. ex-Minister of Railways did not pause to consider the tangled web of self-contradiction and self-stultification in which he was about to involve himself when in a moment, whether of keen resentment or of high conviction, it is not for me to judge, he threw up his portfolio, turned his back upon his colleagues and slammed the door in their faces. And nations are no wiser than individuals are. They do not pause to weigh the question of material or pecuniary interest when the national spirit is aroused over some real or imaginary grievance. If we had stopped to consider our pecuniary and material interests, I am not sure that we would have imposed the surcharge on the goods of Germany. But we did impose it. The national spirit called for the measure, and the national spirit will sustain the government, no matter whether it is conducive to our material interests or not.

Should the day come when the national spirit of the United States is aroused over any real or supposed unfairness in the conduct of this country, the bonding privilege may be cancelled with as little regard to questions of material and pecuniary interest as there was when the reciprocity treaty was abrogated. No truer note was ever sounded in this House than that in which the Premier asked this House to sanction this measure for this, among other reasons : to secure the independence of the country and render it indifferent to the whims and caprices of our neighbours. True enough, we are not absolutely at their mercy as it is ; we have the Intercolonial Railway. But every hon. member must have reflected that the Intercolonial Railway, under present conditions and in such an emergency would simply be a raft in a shipwreck. I well remember in a general way, what those to whom this line of reading and study is a specialty, will recall with fuller accuracy, the discussions that took place when the Intercolonial Railway was about to be constructed, and how it was even at that day represented by wise and high authorities that its chief use would be, not as a road for actual traffic purposes, but rather as a lever to keep the road open to Portland for the service of the people of this country. This very idea finds expression in the report of Sir Sandford Fleming, which has already been more than once referred to in this debate. The suggestions of the opposition on this subject are in accord with this line of policy. But we have reached a more advanced stage of public opinion and a more truly national conception of the proper attitude of this country. We do not simply want a little bit of national road with no effective connections and no continental trade. So long as we continue under those conditions the fear of the dislocations of business and the infinite loss and suffering that must follow the cancellation of the bonding privilege will for ever be a handicap to the government of this country, no matter of what its political complexion, in any contest for the rights of this country where their assertion may threaten the cancellation of the privilege. Neither the friends nor the enemies of this measure will do it justice if they fail to recognize it as a bona fide effort, a heroic effort, let it be conceded, but a well-meant effort, and one that is full of promise, to make this national transcontinental railway a main artery of commerce between the inland and the sea, and to build up within our own borders the cities through which the commerce of the nation shall flow to the great markets of the world.

I am afraid that I have dealt at somewhat inordinate length with the questions that I have been discussing. I have certainly done so, if the views are correct which are expressed by the editor of the Toronto 'World.' In his judgment all these questions that I have been considering are mere trifles. He has given us a description of a kind of criticism which nobody can read without realizing that it was meant for a summary of the reply delivered by his leader to the speech of the right hon. leader of the House in introducing the Bill, and he says that this sort of criticism is of no value. This, he says, is a great proposal and the criticism of it must be on big lines. The picayune criticisms of the hon. leader of the opposition he pronounces a failure. The opposition, he says, must discover an alternative to the government proposal, and that alternative is government ownership of the road. The hon. member for South Lanark appears to agree with him, and the hon. ex-Minister of Railways has told us that his first choice would have been as to this matter at all events to row in the same boat with the hon. member for East York and the hon. member for South Lanark. The hon. leader of the opposition has not quite made up his mind about the matter. He has heard a good deal of irresponsible chatter about government ownership of railways just as he has heard of free silver and faith healing and innumerable other fads and crotchets. But he is a prosaic and common-

sense sort of person with little imagination and no sentiment, and while these imaginative enthusiasts, like the two ex-Ministers of Railways and the hon. member for East York, are ready to put to sea, he shrinks into himself. He 'lingers shivering on the brink and fears to launch away.' I must confess that I am with him in his misgivings. When I heard the hon. ex-Minister of Railways read from his letter to the Premier the passage in which he expressed his first preference for 'a government-owned and government-operated railway' based upon the exploded theory of its 'equalizing and regulating influence upon all the other railways' with which it would come into competiaion, I must confess that his words produced the effect of a sudden shock. If they had been spoken by some raw young person like the former member for Lisgar (Mr. Richardson), I would not have been surprised. If they had come from the light-hearted visionary from East York who elaborates his theories of state policy on the wing, in the course of his hitherings and thitherings between his seat in parliament and his desk in Toronto, there would have been nothing in the circumstance to astonish the House of Commons. It would simply have been another illustration of what Mr. Ackworth has said that the movement for government operation is like the scarlet fever. It is liable to attack any community and at irregular intervals to become epidemic, but its attacks as a rule are severe, only in the case of the younger and more impressionable portion of the population. But when a hard-headed and practical person such as the hon. ex-Minister of Railways, who has had seven years' experience of government ownership and operation, and who must be presumed to have given some serious consideration to the subject, concurs in the views of the hon. member for East York and seems to be supported by the hon. member for South Lanark, the time has surely arrived for a calm and careful consideration of the question.

Now, I must admit at the outset, that I have a great degree of sympathy with the views those hon. gentlemen have presented to the House. I have been at times seriously threatened with the symptoms of the disease with which they are afflicted. When the theory of government ownership was broached in the Railway Committee by some hon. gentlemen in the discussion of the Grand Trunk Pacific Bill, my heart went out towards them, and if I had been able to dispose to my own satisfaction of the very serious difficulties and objections by which the proposition is beset, I certainly would have been pleased to find that I was able to join them in the advocacy of such a measure. I started with a very strong bias in favour of the proposition and I have on more than one occasion indicated my preference for some such solution of the railway question if it could be safely brought about. But I am compelled to admit that the authoritative voices are for the most part opposed to the proposal for which the hon. ex-Minister of Railways has expressed his preference. I have quoted parenthetically the views of Mr. Ackworth, whose position and authority will be recognized by everyone who has read the literature of the question. A more scientific writer is the one I have already mentioned, M. Paul Leroy-Beaulieu. In his work on 'the modern state and its functions' he has a chapter devoted wholly to the presentation of the arguments for and against the proposition under discussion. He shows that the two countries in which a moderate and qualified success has been achieved in the state operation of railways are not really modern states at all. They are not moulded on the democratic model. In Prussia the central power is practically independent of parliament, if not absolutely so, in the general direction of political affairs, at least it is so in the choice and conduct of the personnel of the administration. Even Belgium, although it approaches more nearly to the democratic model, differs in two essential particulars from a real democracy, namely, in the narrowness of its suffrage, and in the relative permanence of its administration. The political conditions in both countries are so entirely different from those prevailing, as he suggests, in France and the United States, and let me add, so entirely different from those prevailing in the Dominion of Canada, that it is utterly impossible to argue from the partial and qualified success of government operation in Germany and Belgium, that we would enjoy any similar exemption from failure and disaster here.

The analogy of the post office and the telegraph, he rejects as being inapplicable. The post and telegraph system in France represents a receipt of 180,000,000 francs. The corresponding figure for the railways in France is ten or twelve hundred million francs. In Great Britain and Ireland he states the gross receipts of the post office and telegraph system as a little over nine million pounds sterling, while the receipts of the railways amount to over seventy-one millions. Because in the narrow and restricted sphere of the post office and the telegraph the government has successfully taken possession, it does not follow that a staff of state officials would be found competent to conduct a business infinitely more extended. But this is not the only difference between the cases. The service of the post office and the telegraph is of a simple and elementary character. That of a railway is complex and difficult in the extreme. The question of tariffs, as we all know, is an exceedingly complicated one, requiring the highest quality of expert knowledge and experience. It is so difficult that the House will remember one occasion when the ex-Minister of Railways could not make his

predecessor, the hon. member for South Lanark, understand even the meaning of the terms used in the Railway Commission Bill to define the different classes of tariffs, with which the commission will have to deal. Whether it was from want of lucidity in the explanations or from defectiveness in the 'uptake,' it would be invidious to say. Possibly there was a little of both ; but out of respect for such high authorities we will assume that the trouble was due to the intrinsic difficulty of the subject.

The expenditures for material of every kind required for a railway call for a business knowledge that a political department cannot be expected to possess, and expose the minister to the constant suspicion of the country on the score of favouritism and boodling. Every political party when in opposition believes its opponents on the treasury benches to be guilty of these offences, and a large percentage of the common people believe both parties guilty. Even the high character and lofty integrity of Alexander Mackenzie did not exempt him from charges of this nature in connection with his purchases of rails for the road that was afterwards handed over to the Canadian Pacific. And if charges of this nature could be brought against Mackenzie, and be believed for a time by one-half of the people of Canada, what must be the suspicions that will rest upon public men whose reputations do not stand so clearly out as his, beyond the reach of any reasonable suspicion ?

The writer next refers to the enormous army of employees which under the system of government operation must be subject to the control of the administration of the day. In Great Britain, at the date of his writing, there were three hundred thousand of these employees ; in France about two hundred thousand, 'of whom the number is bound to be increased.' The smaller the number of state functionaries, the better the chance of preserving the precious boon of political liberty.

> When the number of employees of the state goes beyond five or six per cent of the electoral body political liberty is greatly endangered. When the state functionaries form ten per cent of the electors it ceases to exist.

Nothing could be better than his statement of the injurious political consequences that must flow from the great extension of political power which the government ownership of railways would involve. Let me quote his very words, or at least present a fair translation of them :

> The modern state, which belongs in a precarious fashion to a party, the personnel of which is changed from time to time as the chances of the ballot may determine, would be strongly tempted to transform the operation of the railways into an instrument of electoral corruption. It would have no power to resist the multiplication of trains, the increase in the number of employees, the removal of political opponents and their replacement by others. The modern state is almost completely delivered over to considerations of political expediency. This is a condition that applies to every branch of the public service, and for this reason it is well that the sphere of government operation should be as restricted as possible.

Such are some of the considerations, altogether apart from those derived from actual experience which he presents in opposition to the system of government operation. Coming down to actual experience, his demonstration is equally if not more cogent. Taking the system of government operation as he finds it at its best, in Germany and Belgium, he affirms it as a proposition not even open to debate that the system of government operation is more costly, less punctual, and more liable to accident than the system of company roads. Convincing statistics are presented on these points which it would be tedious to quote, and the author supports his argument in many of its details by citations from the reports of M. LeHardy de Beaulieu to the Belgian Chamber of Representatives.

I know that a question of this kind is not going to be determined by the marshalling of authorities, but I cannot forbear to cite the words of another writer who has made a more comprehensive presentation of the science of railroading than any other that I know of. I refer to Marshall J. Kirkman. I do not know how his authority is appraised by those who do not know, but he is described as one of the foremost railway men of the world, having spent his whole life in the service, besides having been, throughout his life, a diligent student of the railway question in its every phase. It should be a sufficient testimony to the value of his work that it has gone through at least five editions. How many more there may have been I do not know. He has presented the question in no less than twelve volumes, covering the whole service from the organization of the companies down to the coupling and uncoupling of the cars. His general remarks on the subject of state ownership are as wise as they are witty :

> When anything goes wrong in the world or seems to go wrong, the ignorant and thoughtless everywhere rise up and call upon the government to interfere, as if a perfunctory body made up of agents loosely selected at best were more trustworthy than the mass from which it derives its life. Government interference is 'the sine qua non' of young people, the hopeful, confiding and simple. It is the fancy of cranks and schemers.

I cannot undertake to assign to these several classes the hon. members who have advocated the policy in this House. They include the young and confiding, the cranks and the schemers. The ex-Minister of Railways will not be included among the young and confiding, and he has not heretofore been counted as a crank. Yet I will not draw the conclusion. Let me, rather, proceed with the quotation :

> It is never fully adequate. It lacks in intelligent interest, energy and adaptability. It more-

over has the effect of weakening personal interest and individual effort. Its substitute for private effort is to trade off the practical experience and enthusiasm of the nation for the service of hired men. Government management lacks the spirit of alertness and desire to please. It is at once meddlesome, slow, cumbrous and bumptious. In no case has the train service of railroads managed by governments kept pace with that of lines operated by private corporations either as regards safety or efficiency.

These I am aware are only opinions, and I freely concede that the ex-Minister of Railways could confidently present his management of the Intercolonial Railway as a set-off to some of the accusations that have been brought against this system of state ownership and operation. He has given us a brilliant illustration of the capacity of the governent road to compete with a company road in the case of the cattle that went over the Intercolonial after the embargo prevented them from going through the United States. It shows what intellectual paralysis may come upon even a clever person when he gets on the wrong track. Did it never suggest itself to the hon. gentleman that it was not very conclusive as to the competing capacity of the Intercolonial that it should be able to beat the Canadian Pacific when its hands were tied behind its back by an embargo? The fighting must usually take place under normal conditions, and under normal conditions the ex-minister, as I have said, has time and again bewailed his impotence.

I will refer to this point more fully in another connection, but in the meantime let me deal for a moment with the proposal that has been made by way of obviating the very palpable objections to the proposition that the roads should be operated directly by the government through a minister responsible to this House. Some hon. gentlemen have advocated the idea that the government should own the roads, but should not directly operate them. Let them be built by the government, they say, and operated by a commission. In this manner we secure the rights of the public, and at the same time avoid the political dangers resulting from the direct control of the roads by the administration. I am afraid that even this proposal offers no satisfactory solution of the question. We have had the suggestion made that we should place this continental road in the charge of Mr. Hays, or Sir Thomas Shaughnessy, or some railroad man of equally eminent position and ability. But the question immediately occurs, what money would we have to pay to secure the services of an efficient manager? The companies pay without compunction and without wincing, salaries as large as forty or fifty thousand dollars. Do you think the sovereign people would ever consent to install such a nabob as that, and pay for his services at such a figure? Every editor of a paper in this country, who gets one or two thousand dollars a year, would lift up his voice against the outrage. Every barnstormer in the back country would inveigh against the extravagance of the provision for the luxury of such a railway dictator. Fancy the hon. member for East Grey (Mr. Sproule) in the back concessions of his riding, with such a theme as this to dilate upon? What hurricanes of vacuous eloquence would he not bring to bear upon the devoted head of the unfortunate official? Would he not demand, with much show of reason, that his salary should at the highest not exceed that of the Premier? How long would a democracy, that thinks its first minister well paid at ten thousand dollars and its judges overpaid at salaries ranging from two to seven thousand, be willing to pay forty or fifty thousand dollars for the services of a railway magnate? We may be well assured that such an official would speedily become the most unpopular person in the country. His position would become intolerable. His powers would be assailed as an encroachment on the rights of the people, and the demand for direct and immediate ministerial control would become as clamorous and insistent as it was in Victoria, and would be followed by the same disastrous consequences here as there. We should pass through a period of wild and senseless experiments such as have brought disaster and virtual bankruptcy upon some of the Australian colonies until we were ready to call in the railway commissioner again, as Victoria has done within the past few months.

I have referred in passing to the railway question, as it has presented itself in the Australian colonies. Let me deal a little more fully with the history of the matter on the continent of Europe. I do so for the purpose of establishing two propositions:—first, that while government operation may not be feasible, government ownership is feasible, and the best method of managing the business, under a system of government ownership, is the method that has been adopted in the measure now before the House; secondly, that, as to government operation of the railroads, no matter what conclusion we may come to on the general question, it is well established that no system of government operation can be successfully undertaken excepting under two conditions, neither of which exists in the Dominion of Canada. The first condition is that the government must not simply possess itself of a single line of road to be run in competition with a number of other roads; it must have the whole or none. The second condition is that there must be a complete and perfect organization of the civil service, making it absolutely independent of political parties and absolutely free from the dictation of the government of the day.

Let me discuss these propositions briefly,

in the light of the actual railway experiences through which the European countries have passed. It will be no information to those who have made a study of this question, that in 1844 Mr. Gladstone secured the passing of an Act, under which the railways of the country might be acquired after the expiration of twenty-one years from the date of the enactment, under the conditions and by means of methods fully set out in the Act of parliament. In 1865 the time arrived when the option of the government could be exercised, but public opinion was not ripe for the adoption of the plan, and a commission of inquiry was appointed, under the headship of the Duke of Devonshire. It sat for many months and examined many witnesses. Its report is embodied in no less than seven huge volumes, which may be found in the library of parliament. I do not suppose that any hon. member of this House has ever read the whole of this report, and I doubt if life would not be too short to warrant one in undertaking such a task. But happily it would not be necessary, for the whole matter is summed up with the utmost lucidity in the conclusions arrived at by the commission. The argument against the proposal is embodied in the report of the majority. The argument in favour is presented in the strongest possible form by Sir Rowland Hill in a minority report. I do not propose to refer to either class of arguments. My purpose, in mentioning the matter, is to refer to the striking and convincing fact that neither the majority nor the minority of the commission ever dreamed, apparently, of any kind of government operation beyond such as is provided for in the measure now before the House. They do not seem to have considered it thinkable that the government should itself directly enter upon the experiment of running a system of state railways. I suppose it would have seemed to Sir Rowland Hill to be the wildest sort of midsummer madness to propose, as the hon. ex-Minister of Railways and Canals seems, from his own statement, to have proposed to his colleagues in the cabinet, that the government should own and operate this transcontinental road. They assumed that what the government would do would be to acquire the railways just as we are building the road from Winnipeg to Moncton and lease them to companies, as we are leasing this road to the Grand Trunk Pacific.

The experience of Italy is full of instruction also on this part of the question. It is nowhere better presented than by Mr. Hendrick in his essay on the subject of 'Railway Control by Commissions,' a monograph published by the Putnams, of New York, in their series of economical studies on questions of the day. Mr. Hendrick is described as a Ricardo Prize Fellow of Harvard University, and nobody can read his book without appreciating its lucidity and sobriety of statement.

> No country, he well says, has had an experience with railroads more worthy of study than Italy. . . . The working of government control in Italy has not only been clear but it has been brought into relief by the contrasts of the various systems she has tried one with another. She has tried the method of private enterprise with aid from the government, then the guarantee of interest to private companies in imitation of the system still prevailing in France, together with state construction of roads to compete with the private lines it was supporting——

This is the method submitted as his preference over all others by the hon. ex-Minister of Railways and Canals.

> —then for a period of five or six years, from 1879 to 1885, the state owned and operated all the roads, when this system in turn was abandoned in favour of the system now in operation.

While the roads were being operated by the state, a commission was sitting which had been appointed by the Italian government for the express purpose of determining what was best to be done for the settlement of a difficult problem. It was composed of fifteen members, six being senators, seven deputies, and the remaining two engineers. Its work, as Mr. Hendrick says, was without a parallel in railway history. The commissioners began by circulating throughout Italy among all classes who had any interest in railways, a series of nearly two hundred printed questions. Answers, oral and written, were invited to any or all of these questions, and they were made so explicit and precise that each who had a special bit of information might find a category for it. The commission sat in every large city of the peninsula, took oral testimony and invited essays from all who had, or claimed to have, any understanding of the question. So bulky was the information obtained by the commission that it was not until 1881 that it was ready to report. The gist of its report is given by this writer in the following words :

> That it was well for the state to own the railways but unwise for the state to operate them ; that it was wise to leave the whole railway system to private corporations. Their arguments were that this was the best way to strengthen the finances of the government and insure efficient public service, that by this arrangement two great evils would be done away with, the first, the demoralization caused by the appointment and control of an army of railway officials, the second, the centralization of the vast power of appointment and the burden of constant supervision to prevent its abuse.

The evils of government operation, as they developed themselves in Italy, are presented by Mr. Hendrick in striking colours. 'The railway system, according to the commissioners, had become a sort of general hospital for friends, relatives and hangers-on of the local deputies, and in the matter of rates there was the same situation. Annually a general scramble took place to fix the tariffs to suit local and special in-

terests. The rates came to resemble a congressional river and harbour appropriation.'

I will not go so far as to say that we have had a taste of these very evils in connection with the Intercolonial Railway. It is a comparatively small piece of government road. It has the exclusive attention of an able minister of the Crown, and unlimited liberty to call upon the taxpayers of Canada when it is in difficulties. It might be hoped that it would be administered with comparative freedom from the pressure of localities for concessions, of hangers-on for employment, and of political supporters for the privilege of furnishing supplies. We know, however, that every party that is in opposition believes the actual administration of the road for the time being to be characterized by all the evils described by Mr. Hendrick as attending the management of the state railways in Italy. Small as it is comparatively, it seems to have been impossible for the minister to secure a manager to his satisfaction or to retain the services of a manager once he has been selected. One after another they have come and gone, the Harrises and the Russells, and I know not how many others. They have come to the task with high personal hopes and large public expectations, but one after the other they have gone their way, leaving the old reliables in undisputed possession of the field; and I certainly have no fault to find with the present heads of the official staff or the present administration of the road. But let its proportions be extended to embrace a transcontinental system instead of a comparatively small piece of road connecting the maritime and inland provinces, and I fear it would require more than all the energy and ability of even the outgoing Minister of Railways and Canals to save it from the fate that has befallen other government roads in other countries. Even under the present conditions great resistance is required to keep up the staff. There is not a man who has broken down in other walks of life or proved his complete incapacity for effective work of any kind who does not look upon the Intercolonial Railway as the heaven-ordained sphere for his activities. 'The blind, the lame and the lazy' are all applicants for the privilege of serving the country in one capacity or other in connection with the government road. They may be resisted for a time, as I believe they have been effectually resisted by the ex-Minister of Railways and Canals, and the staff may be kept, as I believe it is at present, a competent and efficient staff. But the pressure is there and it will continue. Eternal vigilance is the price of safety. It is a good deal to hope that this vigilance will always be continued, even under present conditions. With the area enlarged, as I have suggested, I must confess I should despair of the situation. It would not be within the possibilities of human nature to resist the importunities of members, each in turn under pressure from his constituents, for employment for which the applicant was unfitted, for patronage to which the applicant was not entitled, for concessions which were opposed to the interests of the community at large. The road would become 'a general hospital,' not perhaps as in Italy, 'for the friends and relatives and hangers-on of the local deputy,' but certainly for all manner and degrees of official incompetency, backed up by political pressure upon the local representatives. No wonder that the Italian commissioners rejected this proposal, and adopted in lieu of it the method which the government has adopted in the present Bill for the management of the road from Winnipeg to Moncton.

This branch of the government proposal then, let me conclude as to this part of the case, is in line with the only system of government ownership regarded as worthy of consideration by the Duke of Devonshire's commission, the only system that seems to have been thought feasible by Sir Rowland Hill, who was a sincere and able advocate of government ownership. It is the very system hit upon by the Italian commissioners after the most uniquely thorough and comprehensive inquiry instituted by the Italian commission, and I may say that it is the system which I understand to have been recommended by a railway authority in this country, who has given a great deal of study and consideration to this question, who has been pronounced by the late leader of the opposition a profound and thorough student of the subject, and whose writings on this question, although not widely known, are known to some hon. members of this House as constituting a very careful, learned and thorough study of the problem. I refer to Mr. Powell, of Sackville, New Brunswick, who represented Westmoreland in the last parliament, and who, it was generally assumed, was to be the Minister of Railways and Canals in the cabinet to be formed by my hon. friend from Halifax (Mr. Borden) in 1900, had it not been for the little accident that befel him in his county and the greater accident that befel his party in the general elections. I believe that the former member for Westmoreland is almost the only public man in Canada who has ever made a serious study of this question, and I understand that his conclusions are in line with those adopted by the Italian commission, which, in turn, are exactly in line with the plan adopted by the government for the operation of the road from Winnipeg to Moncton. I will certainly have a right to be surprised if that gentleman is not an enthusiastic supporter of this portion at all events, of the measure now before the House.

The question has been very fairly asked by some hon. gentlemen: If this is a government system for the section from Win-

nipeg to Moncton, why is it not equally applicable to the road from Winnipeg to the Pacific coast ? Nothing could be easier than the answer to this inquiry. It is conceded on all hands, that there is not at present business, and there may not for years be business, for more than one new line from Winnipeg to Moncton. The whole stress of the argument of hon. members opposite is that there is not business for even one new line. West of Winnipeg the conditions are altogether different. It is almost universally conceded that there is practically no limit to the number of lines that will be wanted. The fertility of the western lands and the swelling tide of business in the western country warrant the government in two assumptions ; first, that private enterprise, at all events when aided with the usual modicum of government assistance, will be found sufficient to secure all the railroads that are required ; and, secondly that business will be found for all the railroads that are likely to be built. In the eastern section, the conditions are notoriously and admittedly different. If the government were to hold aloof, it may be that no company would be willing to undertake the task, and, in any case, as one road is sufficient for all the business, it is more economical that there should be but one line, with adequate provision for its use by all the others that may require an outlet. It does not in the least advance the argument to speak of this combination of methods as a hybrid scheme. It was a saying of Lord Beaconsfield's that the English people were governed by phrases, and the hon. ex-Minister of Railways and Canals seems to labour under the delusion that he is making an argument when he invents a nickname. He might as well call his costume a hybrid costume, because he puts a coat on his back and a pair of trousers on his legs. He adapts his garments to the purposes they are to serve, and we adapt our systems of administration to the different conditions and circumstances of the sections to which they are to be applied.

At one o'clock, House took recess.

House resumed at three o'clock.

Mr. RUSSELL. Mr. Speaker, I am almost ashamed of having occupied so much time in discussing the motion before the House, and I will promise not to be long in presenting the remainder of my remarks. Let me proceed with the consideration of my second proposition. I have said that the government cannot successfully operate a road in competition with a system of company roads, and that if it is determined to go into the railway business it must possess itself of the whole of the roads in the region in which it operates. The hon. ex-Minister of Railways and Canals has presented a most attractive theory which I presume he has borrowed for the occasion from the repertory of the hon. member for East York (Mr. Maclean), as to the great utility of a government owned and government operated road in the way of equalizing the freight rates on the company roads with which it would come in competition. Perhaps I do him an injustice. Perhaps he has had in mind the railroad history of the kingdom of Belgium in which this theory controlled for a time the railway policy of the country. Great praise has been given by almost every railroad authority to the wisdom and sagacity of Leopold I, who happened to be an exile in England at the time when George Stephenson was successfully accomplishing his great undertaking of making his railroad float upon Chat Moss. King Leopold was able to study the conditions of railroad enterprise in Britain, and apply the lessons that he learned to the situation in Belgium. He rejected the policy of private construction and was able to secure for the state at the very inception, the control of all the best paying territory in the kingdom. Undoubtedly his policy was brilliantly successful for a time, and it was exactly the policy described by the ex-Minister of Railways and Canals of having one central line of railways owned and operated by the state in such manner as to secure a controlling effect upon all the other railways of the country. If we had begun in this way there might have been some hope for the success of such a programme. If we had adhered to the policy of Alexander Mackenzie, I suppose this would have been the actual condition of affairs to-day. But I lay no stress on this, for I am well satisfied that next to the occupation in which the two hon. ex-Ministers of Railways and Canals have been engaged, of predicting the probable effect of a policy to which neither of them is capable of doing justice, there is no more futile occupation for the human mind than that of endeavouring to conjecture how things might have been if they had been otherwise than as they are. So many occult and incalculable factors enter into the case that it would require omniscience to determine what would have been the result if a different course had been adopted in any important particular from that which actually was pursued. We know what has happened. As to what would have happened under other than the actual conditions it is perhaps not easy to conjecture. In Belgium, as I have said, the policy which Mr. Mackenzie was working out for us was brilliantly successful. So enamoured of its success was Mr. Adams, the great railway commissioner of Massachusetts, that he at one time desired the state of Massachusetts to purchase the Fitchburg road for the purpose of running it in competition with the company roads of that state. But his proposal never was adopted, and Mr. Hadley tells us that he had good reason later to reverse his earlier opinion on the subject. The fact of the matter is, as Mr. Hendrick puts it, that whenever the state attempts to enter into

competition with the companies it is bound to get the worse of the competition. The time would fail me to refer to all the authorities that might be cited as to this contention. There are many of them, and so far as I am able to recall, they all speak with one voice. I will content myself with the remarks of Mr. Hadley, because he is the most fair-minded and the best informed of all the really competent authorities who have endeavoured to deal with railway problems in an unbiassed and scientific spirit. His testimony on this point is clear and conclusive :

> It is a curious fact, that in any such competition the State is not stronger than private companies, but weaker. Theoretically, it may have power to forbid private companies engaging in such competition. Practically, public opinion will not allow it to exercise that power. Nor can the State railroads exercise a dignified reserve. If the private railroads are run to make money, and succeed in doing so, the State railroads must be run to make money too, or else the authorities will have to face the criticisms of an indignant public. And in this money-making race it is impossible for the government to have the same quick elasticity of action as a private company. Thus it happened that in Belgium the competition was not quite even. The State had somewhat better routes, but the advantages possessed by private companies in a business fight just about offset this difference.

In another place, the same author, referring to this very proposition of the hon. ex-Minister of Railways and Canals says :

> The idea of government ownership of one among several competing lines attracted undue attention, owing to its supposed success in Belgium. The earlier reports of the Massachusetts commission, deservedly high authority, favoured the idea, but it was never carried to a successful conclusion in Massachusetts, and it was abandoned in Belgium, the government purchasing a large part of the private railroads. The competition with the private lines had been too onerous for the Belgian government, and had left it too little independence of action. The private lines regulated those of the government rather more than the government regulated the private lines. Experience is against the probability of success in the attempt on the part of the government to regulate either railroads or telegraphs in this way. To do anything efficient it must control not a few lines, but the whole system.

Now, Mr. Speaker, if even in Belgium, where everybody agrees that this system advocated by the ex-Minister of Railways and Canals and his leader in this matter, the hon. member for East York, could be tried with better prospects of success than in almost any other country in the world, in which the wise foresight of King Leopold secured for the government all the best paying territory and enabled it to enter into the competition with all the chances of the game in its favour, with a restricted suffrage and a government acting in comparative independence of the whims and caprices of the multitude and even the deliberate criticisms of those who knew, if, I repeat, even in Belgium it was found that instead of the government regulating the company railways, the company railways regulated those of the state, and the experiment had to be abandoned by the state taking to itself the whole system, as it was also found to be necessary to do in Prussia when the same influences operated to bring about the same results, I ask what hope would there be for us with our line of railway planted in the midst of keen competitors such as the Canadian Pacific and the Canadian Northern, with the greater elasticity and plasticity of their management, with their far more carefully selected staff, with their better paid officials, and with alert and active agents in all parts of the country, with all the immense advantages that a private company has already been shown to have in such a competition, and all the handicaps under which it is necessary for a government railroad to enter upon the race ? Does it need any very great acumen or anything more than a little modicum of common sense which was one of the distinguishing characteristics of the hon. ex-Minister of Railways and Canals before he surrendered his judgment to the control of the hon. member for East York, to see that the result of the competition here would be ten-fold more disastrous than it was in Belgium or in Prussia. In both those countries the testimony is complete that the government found it impossible to compete successfully with the private companies and was obliged in consequence to take over practically all the railroads of the state. If we are prepared for that issue, we may hopefully adopt the proposals of the ex-Minister of Railways and Canals. If we are not ready for so desperate a plunge let us adopt the sound and rational and truly conservative policy that is now before us for our acceptance.

It only remains to me to consider some views which I honestly believed before I heard the speech of the hon. member for Jacques Cartier (Mr. Monk) had no representatives in this House. I knew that those views, although I never had heard them voiced within these walls, had nevertheless obtained some currency throughout the country, for besides the hon. member for Jacques Cartier there are some people in the country who are opposed to the idea of government assistance in any shape or form. They do not oppose the present measure merely because of its particular provisions, but because they consider that the business of railway construction should be dealt with in the same way as every other line of business and left to shift for itself as best it may. They oppose this measure as they would oppose any other measure or any possible measure involving the assistance of the government because they object to the principle of state aid

to railway construction in any form whatever, whether by land-grants, or money subsidies, or guarantees of interest. It may well be that this class of objectors is not numerically important, but it is a class whose reasoning is not to be despised and whose contentions are not to be disposed of with a sneer. Its views are presented with great energy, with very considerable ability, with infinite pertinacity and with every appearance of deep and sincere conviction. I have seen these views from time to time presented in substance in an ably conducted journal, which I believe is mainly supported by the farming industry of Ontario, a journal which must be of very great utility to that industry, and which were it not for its prevailing note of pessimism and its occasional devotion to fads and crotchets, would be one of the most readable of Canadian organs of opinion. It seems to have imposed upon itself the mission of persuading, if possible, the farmers of this country that whatever may be the actual condition of their minds, they ought to be profoundly miserable, because, although they may delude themselves into the belief that they are among the most happy and comfortable people on the face of the earth, they are in reality an exceedingly oppressed and down-trodden portion of the community who are being put upon by every variety of imposition that the malice and craft of their representatives in parliament are able to devise for their destruction.

Hardly a single number of this able and influential journal comes from the press, in which we are not invited to contrast the policy of this country with respect to railway bonuses and railway taxation with the policy of the United States. Here, it is said, we bonus the construction of railways, sometimes with land, sometimes with money, and sometimes with land and money both. There they allow the roads to get along as best they can upon their own resources. Here our railways are for the most part exempt from taxation. There the taxation of the roads affords a substantial relief to the ordinary ratepayer. The contrast is certainly a striking one and I do not see how it can fail to make a strong appeal to the readers of the 'Farmers' Sun' who must, I should think, be among the most intelligent and influential members of the farming community of the province in which it circulates. If there were nothing to be said on the other side of the question it would certainly seem that we in this country have been pursuing an indefensible policy and that we should reverse it at the earliest opportunity.

But it is only fair to ask at the outset whether the comparison is just. Are the circumstances of the two cases at all to be compared? Is the problem of railway construction and railway extension in this country the same as in the American republic? Now, I venture to affirm that no such comparison can justly be presented. It is the comparison between the growing boy and the grown-up man. If the United States were in the circumstances in which we find ourselves to-day their policy would be the same as ours. It was the same as ours long after they had reached the stage in their national development at which we have arrived and I venture to predict that this country will have given its last subsidy for railroad construction, its last land-grant if it has not already done so, and its last guarantee of bonds long before we have secured either the population, or the wealth, or the condition of national development to which our neighbours had attained before they abandoned the policy of government assistance to their roads.

When this country is inhabited by seventy millions of people, when Quebec and Montreal are cities like New York and Philadelphia, when Winnipeg has the wealth and population of Chicago, when our fertile valleys and expanding plains are peopled to such a degree that we shall discourage instead of welcoming the immigration on which we now expend so liberally, when in other words our wealth and population are the same as those of the United States are now, our policy will be the same as theirs. Instead of running after the railway-builder or seeking to attract him to our projects with bonuses or grants of land as the United States did long after they had reached the present condition of this country, we may be demanding payment for our railway franchises or subjecting the exercise of them to taxation for the support of local and municipal burdens. The United States, as the right hon. Prime Minister well said, are in this position to-day. But they were not always so. Would anybody who reads the 'Farmers' Sun' believe that in 1850 when the population of the United States was—not barely six millions, as ours is now—but a shade over twenty-three millions of inhabitants, congress granted to the state of Illinois for the Illinois Central Railway, 2,595,000 acres of land. Ex-Governor Larrabee, of Iowa, in his work on the railway question, states that the total number of acres of land granted by congress to aid the construction of the Iowa roads was 4,069,942, and he estimates the total value of the gifts made to the roads of Iowa state, including railroad taxes voted by the counties, townships and municipalities, grants of right of way and depot sites, and public and private gifts of money at $50,000,000, or enough to build forty per cent of all the railways of the state. Between 1850 and 1871 there were granted for railway construction 197,000,000 acres of land, of which 35,000,000 were forfeited by subsequent legislation, leaving 162,000,000 acres, equal to 253,000 square miles, which is more than the area of the whole province of Ontario. The value of these lands has

been estimated by competent authority at $300,000,000 at the time when they were granted. What amounts they yielded to the companies at their improved values it is impossible to say, but the late Mr. Blaine estimated the total amount of advances to the United States railway companies, including gifts by towns, counties, states and the United States at $1,000,000,000. When we reflect for a moment upon these tremendous figures, so large that we can form no real conception of their meaning, which are in fact almost as bewildering to the ordinary intellect as astronomical magnitudes, and when we still further remind ourselves that the United States did not abandon the policy of making land-grants in aid of railway construction until after they had three great transcontinental railways assured, I think it will occur to most of us that we have not much to reproach ourselves with from this point of view and that no very powerful argument against the policy of aiding the construction of railroads with the capital or credit of the country can be drawn from the example of the United States. Having assured with national assistance the construction of three great continental roads, having secured a population of thirty or forty millions, the people of the United States might very well abandon the policy of government assistance and leave the railroads for the rest to work out their own salvation; but the comparisons in which the 'Farmers' Sun' indulges between the United States and Canada and which I have no doubt have made many converts to its views on this question, are none the less, for the reasons I have mentioned, the shallowest of fallacies. The doctrine of laissez-faire in the matter of railway construction may be a good one for the United States to-day, or for a densely populated country like England, with its teeming millions to afford a passenger traffic and its vast and diversified industries to swell the freight receipts. One would have supposed that the same thing would be true for France and that private enterprise without the assistance of the state would have been found sufficient to secure an adequate system of roads. But even in France, private enterprise was not found sufficient to cope with the situation. When France began effectively to enter upon the work of railway construction its population was six times as large as the present population of Canada, while as to the territory over which our present population is spread, which constitutes the very essence of the problem to be solved, there is absolutely no comparison whatever to be made. Yet Mr. Ackworth, whose name will be familiar to, and whose authority will be recognized by every one who has ever seriously studied the railway question, states that the French government has paid nearly two hundred million pounds sterling, equal to about $1,000,000,000 in capital outlay and is continuing to pay some millions annually in the form of guaranteed interest for the railway companies, and Mr. Hendrick writing at a later date says that up to 1895 the great companies had received from the state 22,800,000,000 francs. Mr. Ackworth's figure is the same as that stated by Mr. Blaine as the contribution of the United States to the railroads owned and operated by the railway companies. True enough, there is a difference between the two cases. The French policy contemplates a term of years, after which the roads are to become the property of the state. But the period is remote and no human being can pretend to say how much the government will still be called upon to pay before the reversionary interest of the state will become an estate in possession.

Now, if it be the case that a great and flourishing state like France with its compact and fertile territory and its population of thirty or forty millions, in the years of its great railroad activity, was unable to secure a satisfactory system without contributing in one form or another a thousand million dollars, if even the United Kingdom found itself compelled to subsidize the construction of railroads in Ireland, if the United States, down to the time when its population was in the neighbourhood of forty millions, continued the policy of aiding the construction of railways with the grant of lands and its people expended for this purpose in one form or another, as Mr. Blaine has stated, $1,000,000,000, I do not think it need be very surprising that we in Canada, with a population less than six millions, spread over half a continent, should have found that we could not have the roads that were demanded as the indispensible prerequisite to natural unification and the continuously progressive development of the country without either a liberal subsidy from the public treasury, or a generous tender of the public credit. Our government has chosen the latter alternative and I believe it has chosen wisely. We give this Grand Trunk Pacific Company a guarantee which costs us nothing but our good-will, and saves the company a large amount of money that must otherwise be wasted so far as this country is concerned in the payment of interest to foreign investors and capitalists. We enable them in this way to build their road on the most advantageous terms, we place its whole undertaking as we do all other railroads that we are allowed to control, under the regulation of a commission which has the power to prevent all unfairness and extortion; we avoid the difficulties and the perils that have been encountered in other countries by daring and dangerous experiments, we widen and enlarge the boundaries of old Canada, we relieve the congestion of traffic in our western country, we open up a new hope of enlargement to the maritime cities of the Atlantic seaboard, we bind the lower prov-

inces to the inland and the western to the eastern by the new and stronger tie of material interest and interprovincial trade, and we open up to the whole Dominion unlimited possibilities of expansion which the most sanguine among us could not find it possible to exaggerate.

Mr. R. L. BORDEN (Halifax). Mr. Speaker. Let me in the first place thank the Minister of the Interior (Hon. Mr. Sifton) for bringing to my attention an unintentional misstatement which I made to the House in speaking very hurriedly after the Prime Minister, a few days ago. I then said, that only 2,500,000 bushels of grain had been carried out during the past year by the all-rail route from Fort William and Port Arthur. I made that statement on the authority of a gentleman who was in possession of the facts. Since the error was pointed out to me by the Minister of the Interior, I communicated with that gentleman to whom I had written for information in the first instance, and he sends me in reply the following letter :

> We have been asked by several different members as to the all-rail shipments eastbound from Fort William ; in some cases the inquiries applied to wheat only, and in other cases to grain of all kinds. I may say that this led to some confusion, and that the figures given to you by me were not entirely correct. Our records show that during last year the all-rail shipments of grain of all kinds amounted to 5,697,695 bushels. Of this quantity about 3,100,000 were for export, and the balance went to local points in Canada. I intended to give you the quantity shipped for export, because local shipments play no part in determining the practicability of an all-rail route to the sea for grain. The expansion, if there is to be any, must be in the carrying by rail of grain for export. Apparently, I gave you the local figures, instead of the export figures, so that your statement was about 600,000 bushels under the mark. You may use this letter to correct error, if you choose to do so.

It is desirable that any statement of facts in the House should be correct, and therefore I am obliged to the Minister of the Interior for attracting my attention to this, and I take the earliest possible opportunity of correcting the statement which I then made.

Let me say further, that I am also informed that the circumstances under which some 5,600,000 bushels of grain went out last winter were altogether exceptional. The Canadian Pacific Railway required stiffening cargoes for their vessels, and there was also a pressure that the elevators at Port Arthur and Fort William should be cleared out, and in consequence grain went out last winter by the all-rail route which we could not reasonably expect would go out in that way under other conditions.

I would also like to say, that while I am thankful to my hon. friend the Minister of the Interior for correcting me in this respect, I am not particularly thankful to him for the manner in which he quoted my remarks of the 30th of July. He attempted to make it appear that in some way I misled the House as to the meaning of section 12 of the contract. I read that section to the House at the time and I made some observations which the Minister of the Interior quoted only in part. I corrected him as to one mistake he made—or one oversight—in regard to my remarks of the 26th of May, and I desire now to correct him with regard to his misquotation, no doubt unintentional, of my remarks of the 30th of July. I quoted section 12 on that occasion and I followed that quotation up by these words :

> Therefore, the company guarantees by the deposit of $5,000,000 to do something without which its enterprise would be of absolutely no moment at all.

That is to say, having built the line, of course the company might naturally be expected to equip it, and as the guarantee of $5,000,000 is for the building of the line and the equipping of the line, you are not very far from the mark when you say that it is practically a guarantee to do something without which the enterprise of the company would be of no moment at all. Then I continued :

> In other words, the company guarantees to build a railway as to which it receives a guarantee of $13,000 a mile for one portion of it, and $30,000 a mile for the rest, and it deposits with the government $5,000,000 as security that it will use for the construction of the railway the moneys derived from the bonds guaranteed by this government.

And practically, that is all that this guarantee amounts to; and I did not observe then what has been noted in this debate: that this very sum of $5,000,000 can be paid out to this company practically on progress estimates from time to time as it proceeds with the work. Then I continued :

> That is certainly a most remarkable piece of statesmanship, and I am not surprised at the plaudits with which the announcement of this clause was greeted by the right hon. gentleman's supporters. It is quite evident that they were kept as much in ignorance of the real nature of this clause as were the hon. gentlemen on this side of the House.

Permit me to say, before I go further, and before I forget it, that I would like to reassure my hon. friend the Minister of the Interior with regard to the people of the maritime provinces. That gentleman, in the course of his remarks, was good enough to say, in effect, that the people of the maritime provinces were a mean spirited and a weak-kneed people, or they would have had a railway through the centre of New Brunswick long ago. He told us in effect that if they had the spirit of the men of the west, we might have expected that they would have arisen in their might and demanded this railway years ago. I want to tell my hon. friend the Minister of the Interior, who of all men has the least cause to complain of plain speaking from the people of the

maritime provinces, that his own department has been somewhat in question down there, not only among the Liberal-Conservative papers, but among Liberal papers as well. There is a newspaper published in the city of Halifax called the 'Morning Chronicle,' which is owned by three gentlemen, of whom one is the agent of the Deputy Minister of Justice at Halifax, a very prominent Liberal, another is the Liberal member for the county of Colchester in the provincial legislature, and the third is president of the Liberal Association of the county of Halifax; and I have before me some plain speaking from that paper in regard to the hon. Minister of the Interior, so forcible and so personal in its character that I will not read it to the House to-day; but if any hon. gentleman wants to see whether the people of the maritime provinces are incapable of speaking out plainly and forcibly, let him consult the columns of the 'Morning Chronicle,' of September 27, 1902. If the hon. Minister of the Interior consults the editorial columns of that paper of that day, he will find something that suits even his craving for strong language in regard to the conduct of the government.

I must apologize to my hon. friend the member for Hants (Mr. Russell), because I shall not be able, I fear, to give very special attention to his remarks. I was unfortunate enough not to hear the whole of them. A greater part of what I did hear consisted of a personal attack upon my hon. friend from North Victoria (Mr. Hughes), which consumed about an hour of the three hours and a half in which the hon. gentleman condensed the remarks he made to this House. The other portion consisted very largely in somewhat slighting remarks with reference to his late leader the ex-Minister of Railways and Canals (Hon. Mr. Blair), and the imputation of unworthy motives to that hon. gentleman for his resignation from the government. But, in passing, let me ask my hon. friend why he is so extremely optimistic in regard to the prospects of the Grand Trunk Pacific Railway, and so extremely pessimistic in regard to the prospects of the Intercolonial Railway? I was under the impression, until I heard the hon. gentleman speak, that he was one of those who had voted for an expenditure of some $15,000,000—that is what in the end it amounted to—to extend the Intercolonial Railway to Montreal. We have been treated this afternoon to a long lecture, a long historical review of every country which has attempted the state operation of railways. The hon. gentleman, in dealing with the question, does not seem to realize for one moment that it is not a question of theory in Canada at all; it is a question of what we are going to do with the Intercolonial Railway. We have 1,600 miles of state-owned railway in Canada; what does my hon. friend propose to do with it? What does he mean by asking whether or not we shall enter into the state ownership of railways in Canada? Let me read, for his information, if he is not aware of it, a portion of a folder which is issued by the government which he supports, through good report and ill, and which points out that there is government ownership of railways in Canada at the present time; and that, to use a common expression, it is a condition and not a theory that we have to deal with in this regard:

> Perfect travel means good road-bed, good equipment, good secenery, which you have on your own line. The Intercolonial Railway of Canada is, in more senses than one, the people's line. As a government road, it is owned by the people, and in the operating of the line this principle is ever kept in view, so that the best available service will be given. In another sense it is the people's line, because it is popular as the great all-Canadian system and the only all-rail line from Montreal to the extreme points of the maritime provinces. It is equally popular as the great tourist and sportsman's route, and that by which the desirable places in the provinces by the sea can be most conveniently reached.

What is the logical outcome of the argument of my hon. friend from Hants? The logical and the only inference you can draw from his argument is that we should sell or give away the Intercolonial Railway at once. He has made a long-drawn out argument against undertaking government ownership in this country, when in fact we have government ownership now. I would like my hon. friend to go back to the people of Nova Scotia and tell them whether or not his argument means that the Intercolonial Railway is to be given to the Grand Trunk Railway Company, or to the Canadian Pacific Railway Company, or to some other railway company, and is to be no more the people's railway, and that state ownership in Canada is no longer to exist. It was somewhat amusing in this connection to hear my hon. friend giving a lecture to the 'Farmers' Sun' because it opposes the granting of subsidies to railways. Was not the song of hon. gentlemen opposite, of whom my hon. friend was one, through many weary years in opposition, that no railway subsidies should be given? To have my hon. friend stand in the House and discuss editorial articles in the 'Farmers' Sun,' and endeavour to bring that paper back from the supposed error into which it has fallen, an error in which the hon. gentleman himself participated and believed in in days gone by, is a spectacle that would have been more refreshing than it is if fortunately during this summer session we were not blessed with cool weather.

I do not propose, Mr. Speaker, to deal any more in detail with the argument of my hon. friend from Hants; but I think I shall, during the course of my remarks, answer two or three of the arguments which he, in common with other hon. gentlemen on

the other side of the House, have put forward in regard to this scheme. I do not know that we might expect that a policy such as this is, evolved by the government, as we are told by the hon. ex-Minister of Railways and Canals, without any assistance from experts, without any assistance or advice from the officers of the Intercolonial Railway, would be likely to commend itself to the country at first blush. The record of the government in the past with regard to these matters is not a very striking one in point of success. We know their proposals with regard to the fast Atlantic service. We know the story that was told throughout the country at that time, a story quite as glowing as that which was presented to the House by the Prime Minister the other day. We were told that the fast Atlantic service was absolutely accomplished. My right hon. friend the Prime Minister received a telegram at Toronto in the nick of time, for the purpose of reading it to a Toronto audience, stating that the fast Atlantic service was a fait accompli at last. Month after month and year after year have gone by, and we are no nearer the accomplishment of a fast Atlantic service than we were on the day he read that telegram. If you look at the record of hon. gentlemen opposite with regard to the Crow's Nest Pass Railway, you would not be inspired with any confidence in any project they may bring before the House, without advice, particularly when you realize that the policy they are bringing down is one that has led to the resignation and retirement from the government of the only man among them who during the last seven years has been studying this transportation problem, the man who during the past seven years they have been hailing as the ablest railway administrator that ever presided over the department. It is amusing—it is more than amusing, it is delicious—to see these hon. gentlemen, after cheering the ex-Minister of Railways and Canals for his administration of the Intercolonial Railway for seven years past, after supporting him by vote and speech on every occasion, now standing up in the House and belittling him as a statesman, and imputing unworthy motives to him; and when the hon. gentlemen on the treasury benches do not care to do that themselves, they put up some one like the hon. member for North Norfolk (Mr. Charlton) or the hon. member for Westmoreland (Mr. Emmerson), the pupil in political life, if I am rightly informed, of my hon. friend the ex-Minister of Railways and Canals, to show that that hon. gentleman never was a statesman, never was a man of broad views or a man of courage, and that he had not resigned from the cabinet on a question of policy, but really because he was subjected to some personal slight. Well, as I have said before, there have been rumours in this House that there were other gentlemen in the cabinet who were not one whit better pleased with this project than the Minister of Railways and Canals, the only difference between them being that he had the courage of his opinions and they had not.

The transportation problem of Canada beyond doubt is a very complex problem. Having had to give some special attention to this subject during the past four or five weeks, I have realized, more than ever I did before, the very great complexity which surrounds this question in Canada and the very great importance indeed of our not acting too hastily or not taking any leap in the dark, but procuring, before taking any action, the very best expert advice and assistance that can be obtained. In speaking on this subject in the city of Winnipeg, in October last, I used this laguage :

> It is the policy of the Liberal-Conservative party to grapple with this transportation problem from a national standpoint. We would not do it hastily, but would do it after taking the advice of experts and others familiar with railway problems and after fully investigating as to what would be the best course to pursue. In this the party should commend itself to the people, for railway transportation and other matters of this kind require the very best expert advice and assitance that can be secured.

I am glad to know that the Winnipeg Board of Trade endorsed that opinion by resolution during the past year in this language :

> That a thoroughly qualified expert in the management of railways be appointed to make a report on existing conditions, and what in his opinion would make the Intercolonial a paying concern and of the greatest benefit to the country, and also to study and make recommendations on the following alternative schemes for the consideration of the government and the people.

At the beginning of the session, a policy of that kind was promised by the government. It was not necessary that an announcement of that kind should have been delayed until the opening of this session. During last autumn, or immediately after the closing of last session, the government should have appointed that commission which they proposed this year in the speech from the Throne, and should have had the report of that commission ready for this House when it began to sit this year. If this government had, during the past year, taken the best advice which this continent can afford, we might have had a very different proposal submitted by the government this session; but this so-called businesslike government, with its unbusinesslike methods, procrastinated and dallied with this question until the session opened and then came down with a speech from the Throne, in which they used the following language—good, sensible, rational language. The only fault to be found with the government, in that respect, is their delay in taking the step which, in

the speech from the Throne, they promised to take :

The whole question of transportation and terminal facilities continues to occupy much attention, and my government will immediately appoint a commission of experienced men to report on the subject.

A good, sensible, proper view to take of the question, considering that it involves problems in Canada of a most complex character.

Well, Sir, the session opened on the 12th of March. Nothing was done from that time until the 19th of May, when an Order in Council was passed, which was subsequently brought down to this House, and which contains language startling in its character, when contrasted with the speech of the Prime Minister made on the 30th of July. Let us observe what that language is. This is the language of the government, affirmed by His Excellency, and put in the shape of an Order in Council brought down to this House, declaring the policy of the government on the 19th of May last :

That the development of North-western Canada has manifested the inability of existing Canadian transportation agencies to take care of Canadian products.

That our agricultural exports can only command the prices over seas to which their natural excellence entitles them when they cease to be confounded and confused with the inferior and often adulterated articles produced elsewhere ; and to preserve their separate identity they must go through Canadian channels.

The minister further states that the questions to be considered are complicated and involved, including among the objects to be sought the transportation of western products from place of production to the markets of the world.

This involves the consideration of their transportation :—

From place of production to Canadian seaports.

From place of production to the western ports of Lake Superior.

From the western ports of Lake Superior to Canadian seaports.

From Canadian seaports to Europe.

From place of production through Canadian ports on the Pacific.

As it affects the products of the eastern provinces of Canada it involves their movement:—

To the seaports.

From the seaports to Europe.

I call the attention of the House and country to these words :

It is obvious that before any satisfactory conclusion can be reached upon these questions a thorough and comprehensive inquiry should be made regarding :—

The conditions of original shipment and the possibilities of improvement in the conditions surrounding such shipments.

The storage requirements of lake, river and ocean ports.

The harbour facilities of the inland lakes, rivers and Atlantic and Pacific ports.

The conditions with regard to the navigation of the St. Lawrence route, and, generally, any improvement, enlargements, or other matters affecting the more economical and satisfactory uses of any Canadian channel of transportation by land or water.

Taking in, by those comprehensive words, the whole system of transportation in Canada :

The minister further states that in making such investigation attention should not be confined to routes and facilities which are at present utilized, but, if necessary, new surveys should be made to determine whether any more economical and satisfactory channels of transportation by land or water can be opened up.

The forces operating against the attainment of all Canadian transport, namely :—

Competition by United States railways ;

Competition by United States vessels from Lake Superior ports ;

Diversion of Canadian products through eastern outlets to Boston, Portland and other United States ports, should be investigated, and the best and most economical methods used by our competitors should be carefully studied and reported upon.

The minister apprehends that in these circumstances it devolves upon the Dominion government to consider and adopt the best possible means of promoting such measures as may enable Canada to control the transportation of its own products, and it is thought that the most efficient method of conducting such an inquiry and obtaining the required information is by means of a commission of competent and experienced experts who may be appointed and authorized under the provisions of chapter 114 of the Revised Statutes of Canada.

That was the attitude, the carefully thought out, well considered attitude of the government on the transportation question on the 19th of May. It was also the attitude of the government later than that, because there was no recession from that attitude, when I brought the matter to the attention of the House on the 26th of May. I would like the hon. gentleman on the other side of the House who is to follow me in this debate, to tell me what occurred which altered the opinion of the government on that point between the 26th of May and that day in June, when the government press, for the first time, announced that the government would bring down a policy of its own and that the reasons for the appointment of any such commission as I have referred to, had ceased to exist. What was the reason which caused this change of policy ?

On the 19th day of May, this question is one which requires the most careful consideration and deliberation. Words of caution are used by the government with regard to this subject. On the 30th day of July, the Prime Minister speaks in a tone of panic, telling us that a crisis has developed. What crisis developed, Mr. Speaker, between the 19th day of May and the 30th day of July ? Was there any crisis with regard to the bonding privilege on the 30th of July that did not exist on the 19th day of May ? It is true the Minister of the Interior (Hon. Mr. Sifton) came home in the

latter part of May, and it may be suggested that he had something to do with the crisis —brought it with him, perhaps. But there has been no suggestion of that kind up to the present time. Now, a grave change of attitude on the part of the government with regard to a question of such transcendent importance to this country as the transportation question requires some better explanation than any that has been given up to the present time. I will endeavour to examine, later on, the reasons which the Prime Minister gave on the introduction of this measure. In the meantime, if my right hon. friend, or the hon. gentleman who is to follow me, can tell me what crisis existed on the 30th day of July with regard to the transportation question that did not exist on the 19th day of May, it is only right and proper, and it certainly is desirable that the House and the country should be informed with regard to it.

Mr. Speaker, there is no use wasting words about it. We know that no such crisis did exist. We know that the Prime Minister, when he came down to this House on the 30th day of July, knew of no crisis before this country. He knew that the conditions were exactly the same on the 30th day of July as they were on the 19th day of May. He came down to this House with a bogey with which he might frighten some people with regard to the bonding privilege, and might appeal to certain national sentiment in Canada, which he was wont to condemn very much in days gone by, when he used to speak—I do not know whether on this side of the line or on the other—of his preference for the American dollar over the British shilling, and to point out to the people of this country that their natural interest would lead them to trade with the people of the United States rather than with the people of Great Britain.

The Prime Minister, in introducing this measure, rested his case mainly on three grounds, which I want to state fairly before the House. The first was that a transcontinental railway such as this is required to save Canada from the effect of the repeal by the United States of the bonding arrangement; second, it will have the effect of diverting to Canadian channels traffic which now passes through American channels and to American ports, particularly to Portland; third, a road built in the manner and along the route proposed is necessary for the development of the country. Now, I want to take up these grounds one by one and examine them.

First, let us deal with the question of the bonding privilege. I observe that, as this debate has proceeded, my right hon. friend has not received very much support from any of his colleagues who have spoken with regard to the bogey he raised before the House. In answering the right hon. gentleman on the spur of the moment after he had spoken, I took the ground, which I still believe to be the true ground, that the people of the United States are as much concerned and interested in the bonding arrangement as are the people of this country.

Mr. CLARKE. More so.

Mr. BORDEN (Halifax). An hon. gentleman near me says that they are more interested, and I would be inclined to go even to the length of that hon. gentleman's opinion, and say that the people of the United States are even more interested in this bonding arrangement than are the people of Canada. And I pointed out, as I still desire to point out to the people of this country, that it is an undignified thing for the Prime Minister of Canada to stand in his place in this House and practically tell, not only the people of Canada, but the people of the United States, that we are at the mercy of the United States in this matter. I say again, as I said then, that we are not at the mercy of the people of the United States. We can do without this privilege if need be, as well as can the people of the United States, and we can work out our destiny and our political future even if the United States should go so far as to commit the unfriendly act of repealing this bonding privilege. But how does the right hon. gentleman propose to save us from the effect of the repeal of this privilege? By building a line from Lévis to Moncton which passes within two or three miles of the American boundary. This will save, according to the right hon. gentleman, a distance of from 120 to 140 miles. My hon. friend from Alberta (Mr. Oliver), who has evidently not made much of a study of the question, went a little beyond that—he saw the right hon. Premier, and went a little better—saying that it would save 200 miles, I believe. The hon. member for North Norfolk (Mr. Charlton) says it will save 110 miles. The Minister of Finance (Hon. Mr. Fielding) says it will save 96 miles. Other hon. gentlemen say it will save from 50 to 70 miles. My hon. friend from South Lanark (Hon. Mr. Haggart) and my hon. friend from Hamilton (Mr. Barker), after having studied the reports of Sir Sandford Fleming, and after having discussed the subject with that gentleman, who is well informed on the question, say that it will save nothing at all if you build the road in such a fashion as to give the grades which are required for economical hauling. That is the way in which the right hon. gentleman proposes to save the people of this country. My hon. friend the Finance Minister does not go quite so far as the Prime Minister. He says that we shall build it—well, as an object lesson. Practically, that is what he says. We shall build this line so that the people of the United States, when they look across the border to ascertain the effect of repealing the bonding privilege, will say: Alas! it is too late; it is no use to repeal the bonding privilege; the Canadians have built

a short line from Lévis to Moncton, and we might as well leave the bonding privilege where it is. But, Sir, the Minister of the Interior really excelled himself with regard to this subject; and, in order that I may not do injustice to that hon. gentleman—whose absence to-day I very much regret—let me quote his mode of supporting the right hon. Prime Minister with regard to this point. I think that my right hon. friend (Rt. Hon. Sir Wilfrid Laurier), who has, even with regard to matters that are controversial in this House, a very excellent sense of humour, will enjoy this very much:

> The Grand Trunk Railway has a line from the city of Montreal to the city of Portland. It is a magnificent line of railway, well equipped in the best modern style, and it has terminal facilities which I am credibly told have cost from $20,000,000 to $25,000,000.

By the way, this is the line that the Minister of Finance proposes to nationalize in some not very easily understood way.

> We are told by the Grand Trunk people that the facilities which they have for doing business between Montreal and Portland are not sufficient now to cope with it.
>
> Now what is the proposition of the member for Hamilton. It is that the Intercolonial, with its barely sufficient equipment to do the business which it has now, shall take the three or four times as great business of the Grand Trunk, that it shall take the business of the Canadian Pacific Railway, and that the business of these three railways shall be suddenly precipitated upon the Intercolonial Railway, and that that railway shall be expected, with its insufficient facilities, to do the business of the whole three. And my hon. friend says that that is a consummation to be desired. He says we should not be alarmed at a prospect of that kind, that it is something which will help the Intercolonial and which does not at all call for any action upon the part of this government for the purpose of preventing the consequences which might flow from it. Why, Mr. Speaker, has he considered for half a moment what would happen in such a case as that? Why, we would have in the traffic of Canada confusion worse confounded, we would have a blockade which would throw into the shade the wheat blockade which took place during the last couple of years in the Northwest; we would have the railway business of the country disorganized, because the business of Canada depends upon its export trade, and we would have millions upon millions of money of the people of Canada annually wasted on account of our inability to do the business which ought to be done over these railways. That, Mr. Speaker, is the contribution to the discussion of the railway question which is made by the railway expert of the Conservative party.

Well, how opposite are the views of the right hon. gentleman and the Minister of the Interior? The right hon. gentleman wants to divert the trade of Canada into Canadian channels, and the Minister of the Interior pictures the horror and dismay which would overtake Canada if the trade from Portland should be diverted to the Intercolonial. Why, Sir, imagine the people of the United States considering whether or not they should repeal the bonding privilege. They would look over into Canada and they would say: There are some idle, good-for-nothing railways in Canada which are hardly employed at all; there is the Intercolonial Railway, which according to the statement of the gentleman who has been operating for seven years, could do four times the traffic which it does at present. Here we have railways which are actually overloaded, let us relieve our railways and send our surplus traffic over to the Canadians, and so punish them in that way, by means of repealing the bonding privilege, we will send all this traffic over to Canada.' But my hon. friend the Minister of the Interior, I suppose, had more particularly regard to the question of congestion. We would all deprecate any congestion of business in Canada. And what would be the logical way of dealing with this question if we were confronted with any such difficulty as that? Would it be to build more railways? No, but to equip the Intercolonial so that it could do four times the business it is doing at present, a business which the officials of that railway say it is easily capable of handling.

But when the Minister of the Interior gets as far as Moncton, I do not know how he would relieve the situation there. In the first place, how would he relieve the situation before he got to Moncton? Is he to keep the present Intercolonial up to the standard of a through railway, and is he to have two such railways from Lévis to Moncton? If so, he is going to run this country into a pretty big expenditure; if he does not do that, he has just one railway to Moncton as we have to-day, and after he gets to Moncton, what about the congestion? Is there any duplication of the line from Moncton to St. John? Is there any duplication of the line from Moncton to Halifax? None whatever. So the congestion so alarmingly pointed out by the Minister of the Interior would only be transferred from Lévis, or Quebec, to Moncton. There is one possible explanation, and that is that the Minister of the Interior, being misled by the Minister of Finance, thinks of equipping Moncton as an ocean port. My hon. friend the Minister of Finance, with great gravity, stood up in this House and stated that this was a true transcontinental railway, because it extended from the Pacific coast to Moncton; and he pictured the great number of passengers that were going to travel over that railway for the purpose of viewing the celebrated 'bore' of Moncton. Now, I know that the town of Moncton is an enterprising, active and progressive town inhabited by splendid, enterprising, progressive and industrious people; but I do not think the town of Moncton has ever claimed to be capable of doing business as an ocean port. Cer-

tainly, if it is to be equipped as an ocean port, I would expect my hon. friend from Cumberland (Mr. Logan) to put in a similar claim for Amherst, and my hon. friend from Colchester (Mr. Gourley) to put in a similar claim for Truro. As a matter of fact, this bogey about the repeal of the bonding privilege does not amount to anything at all. There is no danger of it, as was pointed out by my hon. friend from Hamilton (Mr. Barker). The very men who stand as the backbone of this undertaking, the men who are controlling the destinies of the Grand Trunk Railway to-day, are the men who are putting their money into enterprises which depend to a great extent for success upon the existence of these very bonding privileges.

Now, my hon. friend the Minister of the Interior was somewhat exercised with regard to my attitude concerning the Quebec-Moncton line. He had evidently been somewhat misinformed with regard to the condition of affairs in the maritime provinces, because he seemed to think that I was in a somewhat embarrassing position concerning that line. Let me assure my hon. friend the Minister of the Interior and the House, that I feel no embarrassment on this subject whatever. As he has invited me to state my view with regard to that, I will state it at once, though I might have left it to a later period in my speech, where it would more properly belong. But I will say at once what my attitude is with regard to that line. I say that if there is to be found a better and shorter line between Rivière du Loup, or any other point on the Intercolonial, and Moncton, a line the construction of which will give to Halifax and St. John and the Maritime Provinces generally a better fighting chance for western traffic than that which they have at present, I will support the construction of that line. But I will not support it with the object for which this Bill provides. I will tell my hon. friend how I will support it. I will support the construction of that line as part of the Intercolonial Railway. I do not believe in constructing that better and shorter line for the purpose of handing it over to the Grand Trunk Pacific or any other railway company; but I do believe in constructing it and keeping it for the people's railway. That is my position and it is a position which I am ready to discuss in the maritime provinces or anywhere else, with either the Minister of the Interior or any other hon. gentleman in this House. For what reason should we, having found a better route through the province of New Brunswick, having found a route by means of which another railway might compete with the Intercolonial, as the Intercolonial exists at present, for what reason should we construct another railway there and hand it over to a competing company for the purpose of destroying the Intercolonial Railway which belongs to the people of Canada? Build a railway, if it will give to the provinces of Nova Scotia and New Brunswick a fighting chance for the trade of the west, and when you have built it, keep it for the people of Canada, as part of that system which we have at present, and which I hope to see some day extended further west than at present. In all this, act reasonably, survey your country, consider the grades to be secured, consider the distance to be saved, consider the cost of haulage to be saved. Do not plunge into the thing rashly, do not undertake to build it upon a survey made 30 or 40 years ago when railway conditions were different from what they are at present. Go into the enterprise sanely, and after having obtained information which would justify you in believing that it would give a better chance for trade to the people of the maritime provinces, and to the cities of Halifax and St. John; build it, as I said before, by the people of Canada, for the people of Canada, and for the people's railway.

Some hon. MEMBERS. Hear, hear.

Mr. LOGAN. Why don't all the hon. gentleman's supporters cheer?

Mr. COCHRANE. Why didn't the hon. gentleman cheer himself ?

Mr. BORDEN (Halifax). My hon. friend is very curious. What would he think of the proposition which I suggest?

Mr. LOGAN. If I followed the hon. gentleman's argument, and if such a line would parallel the Intercolonial, I would be opposed to it.

Mr. BORDEN (Halifax). I am glad that I have elicited for my right hon. friend a very frank expression of opinion from the hon. member for Cumberland in opposition to the very project which he has brought down here. I assure my right hon. friend that it was quite unintentional. I was not aware before I spoke that the hon. member for Cumberland was on strike. There are, of course, many other things which would have to be considered in the expenditure of this money. Do not let any hon. gentleman in this House suppose for one moment that there is no room for the expenditure of more money in the maritime provinces for improving the Intercolonial Railway. The terminals at Halifax should be improved, the line between Truro and Moncton should be improved and there should be a better passenger service than there is at the present time between the maritime provinces and Montreal. I passed over the Grand Trunk Railway two years ago between Hamilton and Toronto, and I found that if the Intercolonial Railway could operate their express trains at the same rate of speed between Montreal and Halifax we would reach Halifax in twenty-one hours from Montreal instead of twenty-eight hours as at present. The train creeps along, stopping at every

station and makes very poor time for an express train. In many other matters there is room for expending money on the Intercolonial Railway, but notwithstanding that if the construction of this line through New Brunswick will give our maritime cities a better fighting chance I would be prepared to support an expenditure of money for that purpose. What are to be the grades of the proposed line from Moncton to Lévis ? Does any hon. gentleman know ? Is the maximum to be a grade of twenty-one feet in the mile, or is it to be a grade of forty-two feet in the mile, a grade of one per cent, or is it to be a grade of four-teenths of one per cent in the mile ? As has been pointed out by the hon. member for North Norfolk (Mr. Charlton) before we plunge into the building of a railway we should understand that thoroughly ; and I am glad that I have the support of that hon. gentleman who said that it would be of no use to build this railway unless we can get grades not exceeding four-tenths of one per cent, or not exceeding at most one-half per cent which, if I remember his remarks correctly, he said to be the highest possible grade over which any railway can haul grain successfully under modern conditions. Now, the hon. Minister of the Interior (Hon. Mr. Sifton) justifies the haste in connection with this railway because he says companies often get charters before they commence to build. There is no analogy between that and this. They do not make a charter to build. This is not a charter to build but it is a contract to build. Did you ever hear of a railway company contracting to build a line through a country about which it had no more information than the government have about this country ? Did you ever hear of a contractor undertaking to build a line through a country of which he had no more knowledge than we have about this country ? All that the opposition have said about this is that the government are not in possession at the present time of sufficient information to justify them in proceeding with the scheme without further surveys, and I am prepared to say further than that, that if a line is built it should be retained as part of the Intercolonial Railway.

My hon. friends the hon. Minister of the Interior and the hon. Minister of Finance both referred to the question of the paralleling of railways. The hon. member for Cumberland is troubled about this paralleling of the Intercolonial Railway. I would like to ask these hon. gentlemen and I would like to ask the hon. member for Cumberland, assuming that the building of this line through central New Brunswick means the paralleling of the Intercolonial Railway, means a better line, a line over which through freight will go, is it better to have the Intercolonial Railway paralleling itself by this better line or is it better to give that better line over to a company which will compete with the Intercolonial Railway ? If you are going to parallel the Intercolonial Railway by a better line surely the Intercolonial Railway had better parallel itself and use that better line for the traffic which otherwise would be carried over the railway competing with the people's railway.

Mr. LOGAN. No hon. member can make any such assumption. It would be an impossible assumption. You could no more parallel the Intercolonial Railway by building a line from Lévis to Moncton than you could parallel the two sides of a triangle by building across the base.

Mr. BORDEN (Halifax). I am glad my hon. friend has come back to the fold. A moment ago I thought he would not return, but now he says that the road does not parallel the Intercolonial Railway ?

Mr. LOGAN. I do not think my hon. friend wishes to misrepresent me. What I said before was assuming that the arguments put forward by the followers of the hon. gentleman were correct, therefore I drew certain conclusions, but I make no such assumption and deny that they are correct.

Mr. BORDEN (Halifax). I accept at once the statement of my hon. friend. I regret, I am sure, that I misunderstood him in any way. I certainly understood when he spoke a moment ago that he was opposed to any line which would parallel the Intercolonial Railway, and that he thought a line through New Brunswick would parallel it. I am glad that he and I are of the same opinion in regard to that and as that difficulty is out of his way now I would ask him again what he thinks of the people of this country owning the proposed shorter line through New Brunswick.

Mr. LOGAN. I will answer the hon. gentleman's question later on.

Mr. BORDEN (Halifax). My hon. friend the Minister of Justice (Hon. Mr. Fitzpatrick) came to the rescue of my hon. friend from Cumberland but it was too late to help him. The hon. Minister of Justice says they own it now. I suppose he means that they will own it under the conditions of the present proposed Bill ?

The MINISTER OF JUSTICE. They will own it under the proposed Bill.

Mr. BORDEN (Halifax). Yes, that is a perfectly fair answer. They will own it, but what will they do with it ? They will take that better line and hand it over to the Grand Trunk Pacific Railway Company. I see that the hon. Postmaster General (Hon. Sir William Mulock) is also going to interfere. Perhaps my hon. friend the Minister of Justice will deal with this matter later on and we are better not to have any more cross firing than is absolutely necessary.

The next point in the speech of my right hon. friend that I desire to deal with is that this road will bring and keep Can-

adian trade within Canadian channels. Well, there is no man on this side of the House who will not support the right hon. gentleman most heartily and most earnestly if he will bring forward a scheme that is likely to accomplish that result. In Canada to-day we are all at one in regard to that. No one doubts its desirability, but this is in contrast with the idea which was to be observed in certain of the right hon. gentleman's utterances years ago. Now, the trend of trade, according to his views, should be from west to east and across the ocean to the mother country, but in the old days it was to be from north to south, it was continental free trade, it was unrestricted reciprocity, it was commercial union, which the right hon. gentleman desired, and, I am sure no one congratulates the right hon. gentleman more heartily than the Conservative party upon the fact that he has come round to their view upon this question. However, I suppose it is a matter of legitimate inquiry to know how the right hon. gentleman proposes to accomplish that object. He proposes it by a clause in this agreement which provides that unrouted traffic shall be carried by Canadian ports. Let us read the clause and let us see to what extent it is likely, particularly in view of the utterances of my right hon. friend, to accomplish the desired object :

It is hereby declared and agreed between the parties to this agreement that the aid herein provided for is granted by the government of Canada for the express purpose of encouraging the development of Canadian trade and the transportation of goods through Canadian channels. The company accepts the aid on these conditions, and agrees that all freight originating on the line of the railway, or its branches, not specifically routed otherwise by the shipper, shall, when destined for points in Canada, be carried entirely on Canadian territory, or between Canadian inland ports, and that the through rate on export traffic from the point of origin to the point of destination shall at no time be greater via Canadian ports than via United States ports, and that all such traffic, not specifically routed otherwise by the shipper, shall be carried to Canadian ocean ports.

In section 43 the company further agrees :

The company further agrees that it shall not, in any matter within its power, directly or indirectly advise or encourage the transportation of such freight by routes other than those above provided, but shall, in all respects, in good faith, use its utmost endeavours to fulfil the conditions upon which public aid is granted, namely,—the development of trade through Canadian channels and Canadian ocean ports.

Now, Mr. Speaker, I took the point in my remarks on the 26th of May last, that I doubted very much the efficacy of a provision of that kind. After having submitted to the attention of the House a memorial from the Halifax Board of Trade, I said :

I must confess, that, having regard to the conditions as they are in Canada at the present time in regard to the Grand Trunk Railway, I have not been able to reach a conclusion that such guarantees as have been spoken of in the press and in these resolutions, can be very easily enforced or carried out. I should be glad indeed to see the Grand Trunk Railway taking its part in the solution of Canadian transportation problems, and I hope it will be able to do so, but we have to consider conditions as they are and we know that the interests of the Grand Trunk Railway to a very considerable extent are, of course, centred in a winter port in the United States in which it has expended a very large amount of money in terminals and shipping facilities.

I want to say with regard to this that it all depends, in the first place on what enforcement you can have of this contract ; and in the second place, on how much unrouted traffic there will be in Canada, and particularly in connection with the export grain trade of Canada. I will give later on some information which I have gathered to that which will indicate to the House that so far as grain is concerned, a covenant that unrouted traffic shall go to Canadian ports simply amounts to nothing at all.

Some remarks of mine were referred to to-day, by my hon. friend from Hants. I desire to declare to this House and to the people of this country my sincere belief and solemn conviction, that the only way to send Canadian traffic through Canadian channels and through Canadian ocean ports, is to make transportation by that means at least as economical, as expeditious and as advantageous to the shippers of Canada as any other means of communication. There is one way and only one way to accomplish that object, and that is the way I have stated to the House just now. I may be wrong with regard to that ; I do not claim to be infallible ; I may not meet the views of the majority of the people of this country—I do not know anything about that, but I declare it to be my most solemn faith and conviction, that the only means by which you can send Canadian trade through Canadian channels is by means of accomplishing a result such as that. Trade and commerce, and transportation as well, will flow along the line of least resistance, and I do not believe that by all the Acts of parliament in the world you ever can accomplish the result in any other way.

Now, let us see to what extent we shall have accomplished anything by means of these covenants upon which the Prime Minister and his supporters rely. This particular covenant, obviously will be of no value at all unless the products are to be carried by rail to Montreal, Quebec, Halifax or St. John. The Minister of the Interior argues that grain would be so carried, and he cites a rate in the United States from Kansas city to Chicago to establish a rate of 11½ cents a bushel to St. John, New Brunswick. If you take the rate from Winnipeg to Fort William and base thereon the rate from Fort William to Quebec or Montreal, you will find that from Fort William to Quebec, say 1,000 miles, the rate would be 23·3 per

hundred pounds, or 13·98 cents per bushel; from Fort William to St. John the rate would be 34·97 cents per hundred pounds, or 20·97 cents per bushel, and from Fort William to Halifax the rate would be 37 cents per hundred pounds or 22 cents per bushel. a railway carry grain for any such sum mer, Wolvin & Company are carrying grain from Duluth to Quebec for three cents and a half cents a bushel, and it has been as low as three cents. Can a railway carry grain for any sum as that? The rate from Fort William on the Canadian Pacific Railway is 20 cents per 100 pounds or 12 cents per bushel to Montreal as well as to St. John I believe, and they are not anxious for business at that rate, and they carry this grain out only for the purpose of providing stiffening cargoes for their vessels at the port of St. John. We must remember that in all these matters you cannot judge by any particular rate at any given time. A railway company may have ships chartered at a point on the Atlantic coast, and it may be absolutely necessary to make such an extremely low rate as to astonish one, simply for the reason that the railway must supply cargo for that vessel which it has chartered to carry cargo across the Atlantic. The hon. Minister of the Interior referred to the rates from Depot Harbour to Montreal giving the maximum rate of four and a half cents, and the minimum at two and a quarter cents per bushel. This would give a rate from Fort William to Quebec of about 12 cents maximum, and six cents minimum, but, as I have pointed out it has been carried by water from Duluth to Quebec, a greater distance, for three cents per bushel. Grain is now being forwarded from Fort William to Montreal via Depot Harbour for three and three-quarter cents per bushel. Over that Georgian bay route and by the Canada Atlantic Railway grain has been hauled this summer for three and three-quarter cents per bushel, and I ask whether it can reasonably be expected that grain would be carried that distance over an all-rail route north of Lake Superior for anything like the same sum? The railways have some chance of competing with canal transportation, because canal vessels take small cargoes, but when railways come to compete for 500 miles along Lake Superior with boats that will carry 300,000 bushels each, you cannot reasonably expect real competition by the railway against the water route. I am also informed that by developing our water ways, by providing proper elevators at Port Colborne and other lake ports, grain can be carried by lake, river and canal, from Fort William to Montreal for three cents a bushel and earn a fair, moderate profit. I am informed of that by a gentleman who has made a study of the subject and who I believe will probably engage in that business before very long. Let us remember in this connection that the lake and river route, and the all-water route of this country serve two distinct purposes; they are both necessary, and therefore we should look to the development of both. The canal navigation closes about the middle of November, and the Georgian bay does not close for navigation until the 15th of December, and those who are familiar with the navigation of the Georgian bay tell me that there is not the slightest difficulty in keeping up the navigation later than the 15th of December, up to the 1st of January and even the middle of January, if assistance were given in the shape of breaking the ice which forms near the shore. You would thus have the lake and canal routes operating up to some time early in November, and after that the railway and lake routes operating up to the 15th of January. These are complementary to each other, all serving a common purpose; because it is necessary that we should get a very considerable portion of the grain of the Northwest, not only to Fort William and Port Arthur, but to the eastern side of Georgian Bay, before the close of navigation, so that it may be transmitted to Atlantic ports by rail as soon as possible.

Now, let us compare the grain rates in the United States. Let us take some of the rail rates which have been established in the United States by the Grand Trunk Railway itself. The all-rail rate in cents per hundred pounds from Chicago and Chicago junctions to Boston is 20·3 cents; to New York, 18·3 cents; to Philadelphia, 16·3 cents; and the rate from Minneapolis and St. Paul to Boston is 29½ cents; to Now York, 27½ cents; and to Philadelphia, 25½ cents. Compare these rates with the quotations to which I have just been referring to, and consider, if you will, whether or not profitable rates can be established over this railway running to the north of Lake Superior. These railways in the United States are charging these rates in the presence of fierce competition, not only with other railways, but with the all-water route and the lake and railway routes as well. They are railways established in a thickly settled country, with heavy traffic in both directions, and largely supported by local traffic. Do you imagine that a railway running north of Lake Superior can make even as fair rates as those to which I have referred; and even so, are these rates which can compete with the lake rate or with the lake and rail rate which I have given to the House? Let us apply some common sense to this question, and consider for a moment whether or not a railway north of the height of land, having among other disadvantages to carry its coal a thousand miles into that country, having to compete for five hundred miles with vessels carrying 300,000 bushels, can make as good rates as the United States roads. If it can, it cannot possibly compete with the all-water routes or with

routes part rail and part water. Let us see what is said in the United States Industrial Commission report of 1900 in this regard. A very competent witness, whose evidence is cited in the report, gives the rates in the United States as follows :

For the year 1897 the average all-rail rate from Chicago to New York on corn (Indian corn, maize) was 11·43 cents per bushel. During the season of navigation of that year the average rate by lake and canal, including the charge at Buffalo, was 4·53 cents per bushel. For 1898 the average all-rail charge on corn was 9·8 cents, and on wheat twelve cents. The average charge by lake and canal, exclusive of charges at Buffalo, was 3·81 cents on corn, and 4·45 cents on wheat.

Now, compare the two rates in 1897, 11·43 cents per bushel on corn by rail, 4·53 cents per bushel by lake and canal ; in 1898, 9·8 cents per bushel by rail, 3·81 cents per bushel by lake and canal. On wheat in 1898 the rates were : By rail 12 cents, by lake and canal 4·45 cents. Then he says, further on :

On the amount of grain exported during the year 1898, the difference between the all-rail charges and the lake and canal charges would be about $25,000,000.

We have a report on this very subject ourselves. I do not know whether the members of the government, in dealing with this question, have thought fit to consult their own reports. If they did, they might find conclusive evidence on this point. Let them turn to the report of the Department of Railways and Canals for the present year, and compare the rates given in that authoritative volume for these different modes of transportation. I will give only the rates of wheat, although the rates on corn are given as well. The rates on wheat per hundred-weight by lake and canal have been as follows : In 1881, 8·67 cents ; in 1882, 7·23 cents ; in 1883, 9 cents; in 1884, 7 cents ; in 1885, 6·5 cents ; in 1886, 9·1 cents ; in 1887, 9·5 cents ; in 1888, 7 cents ; in 1889, 6·9 cents ; in 1890, 6·7 cents; in 1891, 6·9 cents ; in 1892, 6·4 cents ; in 1893, 7·6 cents ; in 1894, 5·1 cents ; in 1895, 4·8 cents ; in 1896, 6·2 cents ; in 1897, 5·2 cents ; in 1898, 4·4 cents ; in 1899, 5·8 cents ; in 1900, 4·5 cents ; and in 1901, 5·11 cents. So that you see a reduction in the cost of carrying wheat by lake and canal from 8·67 cents in 1881, to 5·11 cents in 1901, a period of twenty years. The rate on wheat per bushel from Chicago to New York by lake and rail was reduced from 10·49 cents in 1881 to 5·54 cents in 1901. In 1881 the all-rail rate from Chicago to New York was 14·4 cents per bushel, and in 1901, 9·88 cents per bushel. In the year 1901 the cost in the United States of carrying a bushel of wheat from Chicago to New York by these three different modes of transportation, was as follows : By lake and canal, 5·11 cents per bushel ; by lake and rail, 5·54 cents per bushel ; and by all-rail, 9·88 cents per bushel. If you look at the decrease in cost, you will find that the lake and canal and the lake and rail rates have decreased proportionately quite as much as the all-rail rate. This is a very significant circumstance, particularly when we consider that the people who are anxious that the state of New York shall undertake the deepening of the Erie canal to a depth of 14 feet, estimate that when that work is completed, it will be possible to have wheat carried from Chicago to New York for 2½ cents a bushel. They estimate that in this way : They say that the average cost of transportation from Chicago to Buffalo last year was 1½ cents per bushel, and that when the deepening of the Erie canal is completed, it will be possible to take wheat from Buffalo to New York for eight-tenths of a cent per bushel, thus making the rate from Chicago to New York practically 2½ cents per bushel. In view of these facts it is very difficult for us to believe that this project can be very successful, as regards the carrying of grain, and upon that the success of the whole project depends. Let us take the evidence given by an officer of the Grand Trunk Railway Company, given before a committee of the House in 1898. It is to be found in sessional papers, volume 33, appendix one, page 149. It is the evidence of Mr. Wainwright, a very able man, who was giving evidence on the question of railway transportation :

Q. As a railway expert what on ordinary freight is the charge per ton per mile that would pay expenses ?

A. That is a difficult thing to answer. It depends a good deal on the description of freight, the quantity you can carry and the distance of haul. In carrying coal for instance we do not calculate on a rate per ton per mile, we calculate what we can carry a train load at. It is carried in train loads and we can afford to carry it very much cheaper per ton per mile than in the case of other classes of freight.

Q. Take hauls of 400, 500 or 1,000 miles for instance, what would you regard as a satisfactory charge ?

A. We look upon a rate of ½ to ⅝ of a cent per ton per mile as satisfactory.

Q. That is a satisfactory rate ?

A. It is a covering rate if carried some distance in train loads.

Mr. Haggart :

Q. It is according to distance ?

A. Yes, entirely.

Mr. Powell :

Q. I am asking about long distance train loads. As a supplementary question, what proportion would be profit and what expense ?

A. That goes into the question entirely of working.

Q. Take a fairly economically managed road, take the Intercolonial for instance, what do you think would be a fair charge per ton per mile over that for long hauls under favourable conditions ?

A. I could not tell you as to the Intercolonial. On our own road at half cent per ton per mile under most favourable conditions we should not make more than one-tenth of a cent per ton per mile.

Further on he said three-tenths of a cent might cover the actual cost on a perfectly level road.

Coal, labour and materials have all increased in price since above evidence was given and consequently cost of haulage must have increased also.

In dealing with freight of this character, he puts down coal as freight which is carried cheaper than anything else. That would equal a rate from Fort William to Quebec of $4 per ton, or 11 cents per bushel, and from Winnipeg to Quebec of 16½ cents per bushel. There is more than that. I would like to read to the House a short memo. as to the relative merits of rail and water routes which I have obtained from a transportation expert. It is in these words :

The average all-rail cost from Fort William to Montreal during the past five years has been twenty cents per 100—twelve cents per bushel.

The average all-water, and lake and rail rate for the present year from Fort William to Montreal is five cents per bushel. The nominal lake and rail rate to-day is less than four cents, and grain is actually being carried at less than this. The rate via Midland to-day would be a little higher, about 4½ cents.

The Wolvin Company is at present carrying grain from Duluth to Quebec for 3½ cents per bushel.

By the all-water route from Fort William to Montreal, grain has been carried in large quantities during the present season at five cents less ¼ cent for elevating charges—4¾c.

By carrying in large steamers from Fort William to Port Colborne, there unloaded into elevators, reloaded into craft of the size suitable for Welland canal and forwarded to Montreal, the cost of transportation would not exceed three cents per bushel. Not more than ten per cent of the wheat is carried by the rail route and it is so carried only in times of necessity when it is absolutely necessary to bring the grain forward at almost any cost. In the United States the rail and water routes carry over seventy-five per cent of the grain of the United States and it must be remembered that the rail competition there is over railroads which run through a thickly populated country having large commercial interests and supported by very large local traffic. The conditions connected with the proposed Grand Trunk Pacific from Fort William to Montreal would be absolutely different.

I have other statements here comparing the cost of transportation in the western states with that in Canada. For example, from Earling, a town west of Chicago, 44 miles distant, the rate is 20 cents per hundred pounds and 12 cents per bushel. From Chicago to the sea-board, 908 miles, the rate is 14 cents per hundred pounds and 8·4 cents per bushel. The total distance is 1,349 miles, and the rate per hundred pounds is 34 cents, and per bushel 20·4 cents. That about corresponds with the distance from Winnipeg to Quebec. From White Earth to Duluth, a distance of 602 miles, the rate is 20 cents per hundred pounds and 12 cents per bushel. From Duluth to New York, 1,387 miles, the rate is about 20 cents per hundred pounds and about 12 cents per bushel. The total distance is 1,989 miles, and the rate about 40 cents per hundred pounds and about 24 cents per bushel. And so on, with many other illustrations of a similar character, with which I will not weary the House, as I fear I am taking up too much time. My hon. friend the Minister of the Interior referred to a rate of 5 cents per hundred pounds between Kansas city and Chicago, a distance of 488 miles, but that was obviously a cut-rate during a period of severe competition. I find that the rate between these two points has been as high as 19 cents, and to-day it is 14 cents ; the standard rate is 12 to 14 cents per hundred pounds, or nearly three times greater than the rate my hon. friend gave. My hon. friend quoted this rate of 5 cents to show that freight could be carried at 11½ cents per bushel from Winnipeg to St. John. But take the lowest standard rate between these two points, and you have a rate of 47 cents per hundred pounds from Winnipeg to St. John, or 28 cents per bushel. And, as I have said, these American rates are on roads running through thickly settled country with large local traffic, subject to control by commissions and to fierce competition, not only by other railways, but by water routes.

The provision in this contract regarding unrouted freight is of no importance unless there should be a considerable quantity of such freight. But what is the practice with regard to unrouted freight in the United States and Canada ? Have the government stopped to inquire ? Can any one on the government benches tell me how much unrouted freight is sent forward from Fort William ? It all goes to Fort William as unrouted. But thence to the coast, it is routed by men who know much more about this question than any member of the government—men who make this question of transportation an every day study, men who know ten times as much on the subject as nine-tenths, at any rate of the members of this House. Unrouted freight goes to Fort William just as it goes to Minneapolis, Duluth, and Chicago, and is routed thence for export to Europe. How is that done ? It is done in this way. The shipper, who has made a study of all possible routes, wires to one line and to the other, inquires as to rates, and when he has got the rates, he selects his own route. Does the government know that one man in Canada last year controlled the routing of 10,000,000 bushels of grain ? What does that provision regarding unrouted freight amount to unless you can show me that some considerable part of the grain of Canada will come within its scope ? What are the terms of the contract ? They are :

That all freight, not specifically routed otherwise by the shippers, shall when destined for points in Canada, be carried entirely in Cana-

dian territory, or between Canadian inland ports.

Where does that bring it to? To Fort William as it is at present. What happens then? It is routed for export. Will any hon. member point to one provision in this contract which will prevent the Grand Trunk Railway from competing at Fort William or Port Arthur or Midland or any of those ports on the Georgian Bay and securing that freight and carrying it to Portland? If there is I would like to know where it is. My hon. friend the Minister of the Interior would seem not to have read this contract, although he was put up in the House to defend it. Let me quote some of his language with regard to it. Referring to the hon. member for Hamilton (Mr. Barker) he said:

My hon. friend then proceeded to show that the result would be that the Grand Trunk Railway, long before the government line to Winnipeg was built, would be hauling out wheat from Manitoba and the North-west Territories, and bringing it down to the lakes and sending it to the markets of the world. I may be excused if I do not regard that as a very alarming proposition. If the proposition is that before we get the line built to Winnipeg the Grand Trunk Railway Company will be relieving the congestion and raising the blockage in the west by taking the grain out by way of the lakes, the way our hon. friends say it ought to go, that is not a very alarming criticism of the proposition before us. We trust that that will be the case. We trust that the prognostications of my hon. friend from Hamilton will come true that at an early date the Grand Trunk Pacific Railway Company will to a considerable extent be able to relieve the congestion in the west.

Well, we shall be delighted to have the Grand Trunk Pacific, when it gets to the west, remedy the congestion. But let us not suppose that there is anything in this contract that will prevent the traffic going to Portland. It would be brought, as the Minister of the Interior says, to the lakes, and then the Grand Trunk Railway, controlling as it does the Grand Trunk Pacific, will see to it that that trade at the lakes goes to itself. And when that traffic gets out of the lakes, is there any contract which forbids it being carried to Portland instead of to Halifax or St. John? I have not found that the Grand Trunk Railway Company of Canada is a party to this contract. Is it a party to the contract? The hon. Minister of the Interior seems to think it is. Let us look at his language:

Are the opponents of this measure driven to such absurd reasons as these against a provision of this kind in a solemn contract made between the government and the Grand Trunk Railway?

Does my hon. friend the Minister of Justice (Hon. Mr. Fitzpatrick) say that the Grand Trunk is a party to this contract? I have the document before me. It is not even a contract with the Grand Trunk Pacific, but is a contract made by certain gentlemen, Sir Charles Rivers-Wilson and others, 'acting on behalf of the Grand Trunk Pacific Railway Company'—not on behalf of the Grand Trunk Railway Company of Canada. My hon. friend the Minister of the Interior is referring to some imaginary contract between the government of this country and the Grand Trunk Railway Company. Where is that document? Why has it not been produced to the House? It is not a mistake, a slip of the tongue on the part of the Minister of the Interior, because he repeated it again and again. For instance, he says:

I would like to see my hon. friend the leader of the opposition or the ex-Minister of Railways and Canals sitting upon a bench, as the sole arbitrator between the government of Canada and the Grand Trunk Railway to adjudicate on a complaint that the contract was being violated under such circumstances.

And he says, later on:

But I go further, I would not consider it at all advisable to put in this contract a penal clause, a clause that would provide, for instance, that a fine in the ordinary sense should be levied against the Grand Trunk Railway for the violation of the clause. It would not, in my judgment, be an appropriate or proper way of arriving at the end we desire to reach.

How are you going to put a penalty against the Grand Trunk into a contract to which it is not a party? Then, later on:

If the Grand Trunk Railway carries out its contract, then there is no escape from the conclusion which was placed before this House by my hon. friend. You cannot get over it by laughing, you cannot meet the argument by jeering at it. There is only one way of meeting the argument that he presented to this House, and that is by showing that the Grand Trunk will not be able to carry out this contract. That is the only way you can meet it. If the Grand Trunk Company carries out its contract, then we will pay just what the Finance Minister said, not one dollar more or one dollar less.

And still later:

And yet, we are asked to believe that after a little while the Grand Trunk will fail to carry out its contract, and it won't go on. What does that argument amount to? What is the Grand Trunk going into this scheme for?

And so forth. Now, I respectfully point out to the House that the Grand Trunk is not a party to this contract. The Minister of the Interior is in error in supposing that it is a party; and the Minister of the Interior and the Minister of Finance have no grounds for their supposition that you can come to this parliament and get parliament to punish the Grand Trunk for the violation of a contract by which it has never been bound. When I pointed out that there were no sanctions in this contract, what were we told? We were told: Parliament will create the sanctions after the offence has been committed. I think it would be better for parliament to create the sanctions before the offence comes. That would be the fairer way. These hon. gentlemen seem to think it would not interfere with

the sanctity of contracts in this country to say: We will not put a punishment or sanction in this contract, but when there is an attempt to evade it, parliament will come forward and provide the punishment and sanction. But surely you are not going to punish the Grand Trunk for violation of a contract they never entered into. That is the argument, nevertheless, of my hon. friends the Minister of Finance and the Minister of the Interior.

The practice in Canada at the present time, the practice which has grown up in Canada as in the United States, is to route the freight from an interior point to a Lake Superior port, whence it will be routed by the best, most economical and expeditious line; and the Grand Trunk is at perfect liberty, under the terms of the contract, to carry to an American port every pound of freight which it thus secures at Lake Superior. In that way, has the government, by the expenditure of $100,000,000 attempted to secure the transport of Canadian products through Canadian ports. There is only one way to do that, as I said before, and I hope, before I sit down, to point out the means by which it can be accomplished in a somewhat surer way than that which the government have brought to the attention of the House.

The third point in the speech of the right hon. Prime Minister was that this road was necessary to develop the country for settlement. The opposition are ready to support any well-considered measure looking to that end. The Grand Trunk Pacific is entitled to build in the west. So far as subsidies are concerned, they should not be given where private enterprise will build all necessary railways. If we accept the statement of the Minister of the Interior, the government should never have granted assistance to the Grand Trunk Pacific. For that hon. gentleman pointed out that there was such a future before any railway building into that country that the enterprise would attract capital from all over the world. According to what the hon. gentleman says, railways will be built there without any assistance whatever. But I say, in respect to the development of the west, I would be willing to support the government in a measure for the building of further railways through that country for the purpose of opening up land for settlement and providing means of communication for the thousands of settlers who are going into that country. And I would not count the cost over-carefully in such a matter. But in the portion of the country where the Canadian Northern and Canadian Pacific Railway are stretching out their feeders, as they must do to supply their very important lines, I should think that private competition would do everything that was necessary. Therefore, I would think it the duty of the government to see to it that the Grand Trunk Pacific went north into the undeveloped country to provide means of communication for the people who are going in there and not send it through the country that is already served by rail. Now, so far as that part of the government scheme is concerned. I think that you might give to the Grand Trunk Pacific Railway Company, for some distance west at least, the assistance proposed by the government for the reasons I have mentioned, and for the further reason that you will, perhaps, by means of that—though I think you can do it in a better way which I shall point out later—bring the great railway systems of Ontario and Quebec into close and direct communication with the great railway systems of the west. What are the objects to be aimed at in dealing with the transportation question at this time?

1. To secure the lowest possible rate for transportation in order that our people may obtain a portion as large as possible of the price at which their products are sold in our domestic and foreign markets.

2. To secure the transportation of Canadian products through Canadian channels.

3. To promote trade and intercourse between the two great divisions of our country, the east with its great industrial future, its vast resources of the field. of the forest, of the mine and of the ocean, and the west with its vast plains capable of supplying the food not only of the empire, but the world, and beyond the province of British Columbia with its great mineral and other resources.

4. To take immediate steps for the relief of any congestion of traffic on Canadian lines of transportation.

5. To develop and utilize for transportation purposes our great national highway, the Intercolonial, on which we have expended more than seventy millions, as well as our great inland waterways, rivers and canals upon which we have expended quite as much. It is not possible to ignore this vast expenditure amounting to more than $150,000,000 in considering our future policy in regard to transportation.

6. To promote the development of our country by encouraging colonization and settlement in districts suitable for that purpose.

7. To firmly insist that any assistance given for the construction of railways shall be amply compensated for by equivalent advantages secured to the people of the country.

8. To act in concert with and not to restrain or discourage individual enterprise, but at the same time to prevent monopolies and to maintain effective control over great corporations.

9. In this connection it should be added that if, in the public interest, the whole or any portion of any great line of transportation can be more advantageously operated by the country than by a private corporation, then the same justification exists for

exercising the right of eminent domain, upon payment of due compensation, as that which permits the government of a great railway corporation to expropriate the business, or property, or undertaking of a farmer, of a merchant, or manufacturer.

My right hon. friend smiles, I do not know for what reason he would make any distinction between the two. The principle has been justified in the United States, in Great Britain and in this country, on the ground that it is in the public interest and in the interest of the whole country, and I say I know of no reason why it should not be exercised in the case I have mentioned with all due regard of course to private interests, because in such cases you must not only be fair, but you must be generous to the person whose property is taken against his will. But so far as the principle itself is concerned, I say that it supports action in the one case as well as in the other.

Now, taking these points which I have referred to, the government proposal, it seems to me, has nothing in it to ensure or even to render probable a reduction of rates, dealing with the first desideratum I have made. The present rates by lake and rail and by lake and river are much lower than those which can reasonably be expected from the line proposed by the government. The road in the west will be subject to less stringent control than that exercised over the Canadian Northern at present by reason of the agreement which has been made between that company and the Manitoba government.

Further than that, this company is to have a very large capitalization. I know there are many hon. gentlemen in this House, some of them on my own side, who do not agree with me that capitalization has anything at all to do with the control of rates. But the extent of capitalization has been raised in the western states, where it is relied on and made the basis of argument; and I feel that, taking human conditions as they are, dealing with human influences as they are exercised, you must come to the conclusion that over-capitalization will have some influence upon the fixing of rates. What is the capitalization of the line from Winnipeg to the coast?

Capital stock..	$45,000,000
Prairie section bonds $20,000 per mile for 1,100 miles..	22,000,000
Mountain section bonds $50,000 per mile for 600 miles..	30,000,000
	$97,000,000

$97,000,000 for 1,700 miles equals a little over $57,000 per mile. The $25,000,000 of common stock may be acquired by the Grand Trunk Railway Company for a consideration that cannot be regarded as more than nominal. Further than that, if the eastern section is built, with the grades which are referred to by the hon. member for North Norfolk, is there any gentleman on either side of the House that can give us any estimate at all of what that road will cost? The hon. member for North Norfolk says you must have grades not exceeding one-half per cent. He says that economical haulage would probably call for grades of not over four-tenths per cent. Is there any hon. gentleman who can give us within $10,000,000 an estimate of what that road will cost with grades of that kind? There is no one capable of answering that question to-day—and I dare say I might increase the amount within which I could ask them to name a figure. But I venture to say that there is no one who can give us that amount within $10,000,000, and support it by any data which would be regarded for one moment by any company undertaking to construct a railway in Canada. Well, what will your rates be? They will depend altogether on the cost of this road, because the country is to pay 3 per cent of the cost of the road, and does any one suppose that great corporations like the Grand Trunk Company and the Grand Trunk Pacific Company will not be able to see to it that such rates shall be fixed as will enable them to pay that rental without loss to themselves, or else they will throw over the road upon the government and say that they cannot operate it at all. There are some peculiar provisions in this contract by which the government can stop the construction of this road at any time between sessions of parliament. I did not exactly understand the explanation given by the Minister of Finance with regard to that, but possibly some hon. gentlemen on the other side of the House can give more detailed explanations of it.

Now, in the second place, as regards keeping the trade within Canadian channels, a majority of the grain, as I have said, will go to Thunder Bay ports, it will be carried by lake and rail, and eventually the greater part of it will be exported to Europe. The Grand Trunk Pacific, the Canadian Pacific Railway, or any other road, can go there and compete for this grain without fear or favour. The Grand Trunk Railway is not any more bound by this contract than is the Canadian Pacific Railway, so far as I can understand. Therefore, it is not bound in any way to carry it to Canadian ports. There is nothing in the present scheme specially calculated to promote trade between the east and the west. The greater portion of the heavy traffic will be carried as before.

Then what has been done to relieve the congestion of traffic. The present congestion is occasioned, not by lack of railways, but by lack of equipment. It is admitted and stated, not only by men who are concerned in this matter personally in the west, but by the newspapers all through the west, that there are plenty of railways, but a lack of equipment. I was astounded the other day on being told the amount of traffic

that the Great Northern Railway handles upon a single line. The two railways from Winnipeg to Fort William and Port Arthur can handle this traffic easily enough, there will be no congestion if they are only properly equipped, and the same thing, I have no doubt, might be said of the other lines from the west.

In the next place, if the scheme is successful, it is calculated to destroy the usefulness and opportunities of the Intercolonial. The Minister of the Interior took issue with regard to that, and I am prepared to take just as sharp issue with him. We spent more than $15,000,000 on the Intercolonial in bringing it to Montreal, and to improve it, and equip it after we brought it there. Now, is any one in this House prepared to say that that railway was not extended to Montreal for the purpose of capturing some portion of the trade of the west? The policy of the government with regard to that was announced at the time by the Minister of Railways, the mouthpiece of the government, and hearty cheers were evoked by the very language I am now about to read to the House, which was used by him on the 16th of June, 1897, and which is to be found on page 4286 of the 'Hansard' of that year:

> And, as I was saying a moment ago, if you examine the details of the contract which has been entered into between the government on the one hand and these companies on the other, you will perceive very clearly that we have been solicitous and careful, that every term and every condition should be introduced which would ensure us an opportunity to gain our share of the western trade. As you will see, we have engaged with the Grand Trunk to carry the freights for us from the west to Montreal and to deliver these freights to us when they get them there, not to take them around by the Richmond line or by Lévis, not to carry them off on the Grand Trunk, but to deliver them to us. So, when we send our canvassing agents through the west, as all railway companies do and ought to do, and those agents pick up traffic and make contracts, we may be sure that the business will fall into our hands when it reaches Montreal.

That was the policy of the government then. The right hon. gentleman had not then had the inspiration of his visit to Depot Harbour. He came to the conclusion that the government should send out agents to solicit business for the railway, and ask for the trade of the west, and it was on this ground that we extended the Intercolonial Railway to Montreal and on this ground almost alone, although of course, it was important that better communication should be in that way ensured to the maritime provinces. The great desideratum pointed out to the House and the country at that time was that the Intercolonial Railway should be prepared to reach out and obtain control of some of the trade of the west and for that purpose it should send canvassing agents through that territory. What happens now? According to the terms upon which my right hon. friend supports this scheme the grain trade of the west is to go over the eastern section of the Grand Trunk Pacific and is not to go near Montreal at all. Having expended $55,000,000 in the first place on the Intercolonial Railway and having expended $15,000,000 for the purpose of capturing some portion of the trade of the west we are now expending $100,000,000 in order that the Intercolonial Railway shall get no portion of that trade. Yet, the hon. Minister of the Interior stands up and says that it does not affect the agreement which was made in 1897. Does he not remember the elaborate traffic arrangments entered into between the government and the Grand Trunk Railway Company by which the trade secured by these canvassing agents and brought from the west by the Grand Trunk Railway would be delivered to the Intercolonial Railway for transport to Halifax—delivered to the Intercolonial Railway not at Lévis or Quebec, but delivered to it at Monreal? Now, these same bountiful products of the west are to be carried over the Grand Trunk Pacific Railway, over its eastern section to Moncton, by running powers to St. John and Halifax, and the Intercolonial Railway is not to carry one pound of that freight. Was my hon. friend the hon. ex-Minister of Railways and Canals right or wrong when he said that I did not put this matter strongly enough? I said it was a reversal of the policy which the government had entered into in 1897. He says that it is a condemnation of the policy of 1897. I am prepared to admit that the hon. ex-Minister of Railways and Canals was right because I do not think that even he used strong enough language to describe the conduct of the government as it affects the Intercolonial Railway. After spending $15,000,000 in 1897 to get a portion of the trade of the west, after having arranged to send out canvassing agents to secure it and to have it delivered to the Intercolonial Railway at Montreal, they are now spending $100,000,000 to take it over this proposed railway away from Montreal and away from the Intercolonial Railway altogether. They add to the national debt $100,000,000 for the purpose of undoing that which they spent $15,000,000 to accomplish in 1897. Look at what we have on our hands in Montreal at the present time. What did we do for the purpose of securing the trade of the west? We rented half of the terminals of the Grand Trunk Railway Company of Montreal. There was an investigation in connection with the proposal, and one of the Grand Trunk officials was asked the question: Do you not think this is a pretty big thing for the Intercolonial Railway to undertake—the renting of half of these enormous terminals of the Grand Trunk Railway Company in Montreal? His answer was: It is pretty large, it is like a newly married couple hiring a very large house but they will have use for it in the future. Well we have our terminals in Montreal and we pay $140,000

a year for them and we also paid during this last year $168,000 as our share of the maintenance of these terminals ; making an expenditure of $308,000 a year for the terminals at Montreal alone. Now we are to spend $100,000,000 more to take all the traffic away from Montreal.

I want it to be remembered in this connection that in offering this criticism of this project I am not at all offering any criticism of the proposal that the Grand Trunk Pacific Railway Company or the Grand Trunk Railway Company under that name shall get into the west. What I am criticising is the mode of doing it. It sems to me to be most extraordinary, most contradictory and a complete reversal and condemnation of the policy which the government adopted in 1897.

Then, what advantages are secured to the country for the assistance granted to this road ? The portion which the hon. minister says is a magnificent business proposition is the portion which is to be built with government assistance. There is no contract for the control of rates such as has been obtained in Manitoba. There is only the control that is exercised over railways generally. Are there any lower rates guaranteed ? None are guaranteed and how can you expect lower rates in view of the statistics which I have presented to the House and in view of the statistics of a similar character which have already been submitted. In addition to that there is, for the reasons that I have mentioned, no assurance that the trade shall be sent through Canadian channels. Further than that the Grand Trunk Pacific is given power to engage in almost every possible description of enterprise and in that way it may be possible in the future that individual enterprises may be dwarfed and curtailed when it may come into competition with this great corporation.

Mr. Speaker, the opposition might well content itself with stating generally the objections to the policy of the government, but, in view of the importance of the question it is essential that an outline of our policy should at least be stated. In the first place I say that I believe this is a question upon which any political party in Canada should obtain the best possible expert assistance and advice and it would be our policy, by commission or otherwise in the speediest possible way to obtain that advice and assistance so as to be able to act upon broad lines, upon reasonable lines and with due inquiry, with due promptitude and at the same time with due caution and deliberation. Subject to that consideration the policy which I think should be adopted by the country is, in the first place, as follows :

Canada has expended on the Intercolonial Railway over $70,000,000 and of that expenditure $15,000,000 pointed to further development, to a further extension of the road to the west. As I said before in answer to the hon. member for Hants (Mr. Russell), you have the Intercolonial Railway and you have to do something with it. Are you going to sell it, or give it away ? Are you going to let it stand still or are you going to develop and extend it ? Is it alone of all the great railways in this country to stand still, because we must remember that stagnation means in the end ruin ? I say that I am not one of the pessimists such as the hon. member for Hants who are afraid of the future of the Intercolonial Railway. The hon. gentleman talked about pessimists. Did you ever hear anything more pessimistic than the doleful account he gave of the prospects of the Intercolonial Railway and his expression of opinion that the people are not able to operate efficiently their own railway ? He spoke about croakers. I do not want to apply any terms of that kind even though they come from him, but I will ask when he is dealing with the Intercolonial Railway who the croaker is in this House to-day. What are we going to do with the Intercolonial Railway ? We are not going to give it away, I hope, we are not going to sell it, I hope, and we are not going to let it stand still, I hope. Other railways throughout the country are being developed and extended. Why not the Intercolonial Railway ? I say that I do not believe the Conservative party, the party which had the courage to build the Intercolonial Railway, the party which had the courage to build the Canadian Pacific Railway in the face of opposition of hon. gentlemen opposite, will shrink from extending the Intercolonial Railway to the shores of Georgian bay. That may be done either in the mode mentioned by the ex-Minister of Railways and Canals, or by some other way. The hon. gentleman (Hon. Mr. Blair) spoke of, and the public press of this country have discussed, the question of acquiring the Canada Atlantic Railway. I have no doubt that that railway is a very valuable line. I have made some inquiries with regard to it and I may give to the House and to the country some information as to what it has accomplished in the way of solving transportation problems in this country during the past six or seven years. The Canada Atlantic Railway extends from Depot Harbour on the Georgian Bay to Coteau Junction, a distance of 342 miles. In addition to this they have a line 57 miles in length between Coteau Junction and Alburgh Junction in the state of Vermont, making in all about 400 miles.

In order to obtain access to Montreal a line would have to be built from Coteau Junction to Jacques Cartier Junction, or a similar point, to connect with the Intercolonial Railway.

During the last year for which we have a report, over 19,000,000 bushels of grain were carried over this road, over one-half a million barrels of flour, 12,700 tons of live stock,

over 500,000 tons of lumber and wood and about 500,000 tons of manufactured goods and other articles. The total tonnage amounted to 1,545,000 tons.

Running east from Depot Harbour to Madawaska, a distance of 133 miles, the grades are about one per cent, but from Madawaska to Coteau Junction in no place do they exceed one-quarter of one per cent. At the present time their engines are hauling from twenty to twenty-five cars of wheat from Depot Harbour to Madawaska and from Madawaska to Coteau Junction they haul from sixty to seventy cars of wheat.

At Depot Harbour the Canada Atlantic Railway has an elevator capacity of 1,250,000 bushels. They have two warehouses 700 feet long by 90 feet wide, and the docks form an aggregate length of 3,000 feet and are built in 22 feet of water.

The harbour is about half a mile in width, and the water is of sufficient depth to accommodate the largest lake going steamer and perfectly safe in all winds and weathers.

In connection with the Canada Atlantic Railway, there is a steamer service known as that of the Canada Atlantic Transit Company. They have several very large steel steamers of 4,000 to 7,000 tons burden each which have a capacity from 130,000 to 275,000 bushels of grain, equal to from 175 to 275 carloads. Those steamers make trips between Fort William and Depot Harbour. They also run to Chicago, Milwaukee and Duluth, where they obtain a large amount of freight to and from. During the past season they carried 19,000,000 bushels of grain, there being generally two or three million bushels in transit.

Large quantities of package freight are shipped every season between New England towns and places in Manitoba and the west over the Canada Atlantic Railway.

The gross earnings of the Canada Atlantic Railway last year were $1,816,946 and the net earnings were $569,000 or a little over $4,000 per mile. Their net earnings last year were sufficient to pay five per cent on their capitalization.

They have forty-five passenger cars, about 1,000 box cars, over 500 platform and coal cars, besides the ordinary snow ploughs and other equipment, and sixty engines.

The steamers are not owned by the Canada Atlantic Railway Company, but by the Canada Atlantic Transit Company, and while there may be some difficulty about the crown owning steamers which ply for commercial purposes to foreign countries, I should suppose, though I did not consider the question very carefully, that a difficulty of that kind could be overcome by maintaining the present organization; or in other words, the legal title to the steamers would remain vested in the company, and the government could own stock in the company in the same way that the British government own stock in the Suez canal. Let me point out to the hon. member for Hants (Mr. Russell) who talked about the advisability of carrying grain from Montreal or Quebec to Halifax for nothing, that this is the scheme that suits him exactly. Here are 19,000,000 bushels of grain that he can capture in this way and bring to Halifax; here are 31,660 cars of grain, or from 800 to 1,000 trains. According to the view of my hon. friend (Mr. Russell) this could be carried to Halifax without appreciably increasing the cost of operating the Intercolonial Railway. Is not this a splendid opportunity to carry out the idea of my hon. friend (Mr. Russell) who I am sure will be the first on the other side of the House to stand up and regret that this matter has escaped his attention, and to assure me that a scheme of this kind will receive his absolute and unqualified support? The Canada Atlantic Railway is thus referred to in the report I have already mentioned of the Industrial Commission of the United States:

> A new and very advantageous route has recently been established in what is known as the Canada Atlantic Railway. This route is from Chicago via water to great lake ports, say Parry Sound, Ont.; thence by rail through Canada to a place called Coteau Point, where grain is transferred into barges and taken alongside vessels at Montreal. This route was built two years ago and has handled an enormous amount of grain. It has had a tendency to regulate to a certain extent the rates via the American all-rail lines. . . . . At present the Canadian routes are the cheapest, and during last season they have had all the grain they could possibly take care of at Montreal, and the lack of ocean tonnage has been the only thing which prevented Montreal from doing a much larger business.

Any hon. gentleman who likes to investigate the subject can see the evidence of the witness who gives the evidence referred to at page 412 of this report.

Now, Mr. Speaker, I am not wedded to the acquisition of the Canada Atlantic Railway. I am only propounding a policy which I think ought be followed, namely, the extension of the Intercolonial Railway to a Georgian Bay port. It may be that after expert advice has been obtained some other scheme may be found for carrying out that policy that would be better and more advantageous than the acquisition of the Canada Atlantic Railway. So let it be. If, however, the Canada Atlantic Railway commends itself to the judgment of experts, and from what information I can obtain with regard to it, I should think it ought to so commend itself, and I would think that the extension of the Intercolonial Railway from such a point as Jacques Cartier Junction to Coteau, and the acquisition of the Canada Atlantic Railway to Depot Harbour, would place the Intercolonial Railway in a very much better position than it is at present.

What would be the advantages of this proposal? It would place in the hands of the government a means of bringing to the

Intercolonial Railway a very considerable portion of western traffic, and thus absolutely secure in the country, transportation of Canadian products through all Canadian channels to a very great extent. There would be no gainsaying the question of all Canadian channels then. Here is a railway that carries 19,000,000 bushels of grain alone, and an enormous freight traffic besides. Go and acquire this railway; go to a Georgian Bay port and you would at once most assuredly and certainly bring to Canadian channels all that traffic so secured. In the second place, it will render the present Intercolonial Railway more valuable by obtaining a share of the western traffic; it would render it more valuable by giving it that through traffic which is so important for the reasons that have been suggested to-day by my hon. friend from Hants (Mr. Russell) in that cogent and forceful way in which he presents such matters to the House. In the third place, it will bring the people of the maritime provinces into close touch with the people of the west, and by this means the government railway—or as the Minister of Finance rightly described it, the people's railway—the people's railway will have taken one more step further to the west. It will connect directly at the Georgian Bay with the industrial life and increasing development of the great west. In the fourth place, this is the logical outcome of the extension of the Intercolonial Railway to Montreal. In the next place it is an advance step, not a retrograde step in the principle of government ownership. We should abandon government ownership altogether, or we should give to our system of government railways such extension and development as the business interests of the country demand. Is every other railway to advance, and the Intercolonial Railway to stand still? No, Mr. Speaker, I believe not; and I believe, that the Conservative party, having carried this railway to Lake Superior, as they will be in a position to carry it when they come to power at an early date; the Conservative party having thus extended this railway, will make it in the best sense the people's railway. The Conservative party which was not afraid to build the Canadian Pacific Railway and to bind together the scattered communities of Canada will not be afraid to carry this Intercolonial Railway to the Georgian Bay, and if the needs of the country demand it, to the distant shores of the far Pacific.

I do not expect my hon. friends on the other side of the House to be enthusiastic about this. I know how they were afraid of the Canadian Pacific Railway project in days gone by. I know that they will be afraid of this extension to the Georgian Bay. Let them have hope and confidence in the future of this country. Let them not be afraid that the people of this country will not know how to operate their own railway. Let them not be of that faint heart which showed itself so unpleasantly twenty years ago; let them come forward and adopt this principle of government ownership of railways as far as the Georgian Bay at least, with an extension some time in the future to the Pacific coast. Let them demonstrate to some extent that conversion which they claim from their faint heartedness, and lack of confidence of twenty years ago. Let there be no uprising of croakers or faint-hearts when this proposal is mentioned. Let us remember that this is the people's railway; let us remember that the people of Canada are capable of governing themselves; and let us remember that the people of Canada, if they are capable of governing themselves, are capable of operating this railway in a way which will free it from party political control, while maintaining over it political control in the broadest and best sense of the word. I know that strong men have failed in the past in dealing with this question, but I do not despair of dealing with it vigorously and efficiently and rightly in the future. I believe that some means can be found of freeing the management of the Intercolonial from that party political control which has done so much to keep it in the background in the past. Take away from it the party element, and retain in it the broad political element, namely, that it is the people's railway, operated by the government of this country for the people and under the control of the people. Taking our stand upon that broad principle, and not going upon theories of the King of Belgium or any one else, let us realize once and for all that we now have government ownership in Canada to the extent of 1,600 miles of railway.

The next proposal I desire to make—and I say again that it is a question on which I would ask the advice and assistance of experts—is this: There are in Canada two great natural divisions, the west and the east. These at present are in some respects two separate communities. They have business interests which, though different in some respects, should fit harmoniously into each other. These two great divisions of our country are connected in summer by a magnificent highway, the water-way of the great lakes; in winter they are separated by a thousand miles of uninhabited country, and there is some tendency, with excellent railway communication to the south of us, for the lines of trade to run north and south, instead of east and west, as they should. Now, we have in the west at the present time two great railway systems, the Canadian Pacific Railway and the Canadian Northern. We have in the east three great railway systems—the Canadian Pacific Railway, the Grand Trunk Railway, and the Intercolonial Railway. This great uninhabited country between the east and

the west—which I hope some day, so far as the northern part of it is concerned, may answer the expectations of hon. gentlemen on both sides who have addressed the House, and may become a prosperous and thickly settled country—is bridged over in the winter by the Canadian Pacific Railway. That railway, from Fort William to North Bay, is a line which doubtless could be improved, which has cost a great deal of money, and upon which some more money might advantageously be expended. The grades, I understand, are not bad; the curves are in many respects very favourable, but could be remedied at no very great expense. This railway undoubtedly is capable of carrying five times, or perhaps, with the improvements I have suggested, ten times the traffic which is carried over it at present. I say it would be a proper thing and a wise thing for this government to acquire that railway from North Bay to Fort William, and make it a national highway of Canada, and operate it by means of an independent commission, giving to the Grand Trunk Pacific, the Canadian Northern and the Intercolonial as well as the Canadian Pacific Railway equal running powers over it. I say that for this reason, that to build two railways or three railways where one railway, with running rights over it, will answer the same purpose, is economic waste. By the acquisition of this railway you can put the Grand Trunk Railway, one of the great railway systems of Ontario, into direct touch with the commercial life and development of the west inside of six months. For the purpose which I have suggested, the government can acquire either full ownership of that railway or the absolute control of running powers over it.

It may be suggested by some hon. gentleman on the other side of the House that what I propose is impracticable. I say it is not impracticable; and I have talked this question over with many railway men who are more familiar with the subject, I think, than any gentleman in this House, with the possible exception of my hon. friend from South Lanark (Hon. Mr. Haggart), who has given these subjects a great deal of attention. It is difficult to give to one railway effective running powers over a line which is under the control of another and competing railway. But if the government acquires this railway from North Bay to Fort William, it can establish and maintain an independent control over it and give to these three railways exactly equal running powers over it for which they shall pay in proportion to their user on a wheelage basis; and that object can be accomplished, as I have been informed by railway men, the highest in the country, without any difficulty and without any friction whatever.

I would not for one moment suggest that anything should be done that would break the continuity of a great transcontinental highway like the Canadian Pacific Railway. But this would not break the continuity of the Canadian Pacific Railway. The Canadian Pacific Railway Company at the present time owns that road, which has only one-fifth or one-tenth of the traffic it can carry. If you give to the Caadian Northern and the Grand Trunk, in common with the Canadian Pacific, equal running powers over that line, you will increase its traffic to some extent, but for many years to come you will have an avenue for all the trade that will be carried from the east to the west by means of a railway. You will not only bring the Grand Trunk immediately into touch with the commercial life of the west, and with it every village and town of Ontario, but you will also bring the west, by means of the Canadian Northern, into direct touch with the villages and towns of Ontario. I regard the Canadian Northern as being as much entitled to the status of a transcontinental railway as the Grand Trunk Pacific. Its object and aim has been to reach the Pacific coast, and its object and aim must be also to reach the Atlantic coast; and having received running powers over the Canadian Pacific Railway from Fort William to North Bay, there is no reason why that railway should not at an early day be extended to the shores of the Atlantic. Already it has a line under construction to the town of Edmonton; and with regard to a line from there to some further point in the west, I will give you my views before I sit down.

I have suggested the extension of the Intercolonial to the Georgian Bay. If we should acquire the Canada Atlantic Railway, we could build a line from that point or more probably from Scotia Junction to join the Canadian Pacific Railway at or near Sudbury. That country has already been surveyed five or six times by the Canadian Pacific Railway Company, once by the Canada Atlantic Company, and once by Messrs. Mackenzie & Mann. The cost of constructing a railway through that section is well known, or could be ascertained by the government in a few days. By that means the Intercolonial, besides being extended to the Georgian Bay, could be joined by a line about 105 miles in length to the Canadian Pacific Railway running north of Lake Superior.

The third proposal which I would submit to the consideration of the House, as a sound policy, is to assist in improving the grades of one or both lines from Winnipeg to Fort William, upon the condition that complete control of rates is obtained and that the Grand Trunk Railway, as well as the Intercolonial Railway shall have running powers from Fort William into Winnipeg. Such running powers might be exercised by joint operation; or if that were found unpracticable, owing to rival interests, then under an independent authority appointed for that purpose by the govern-

ment. This arrangement will bring the Grand Trunk Railway, with all its great system in Ontario and Quebec, into direct touch with the railway system and industrial life of the west, inside of six months or a year. What will be the advantages of this proposition ? In the first place, it will insure further competition with respect to rates in the west. In the second place, it places at the disposal of all our great railway systems the existing line from North Bay to Fort William, which can serve the requirements of all our great railways for many years to come. In the third place, it will give the people control over rates by the mere fact that the Intercolonial Railway has power to enter Winnipeg. It will place the people in a position to own and operate their own line through the west to the coast, in case of oppressive rates, or in case control of rates by the railway commission should not fulfil our expectations, or in case the development of the country, within a few years, may point to that as a desirable policy.

The fourth feature of the policy which I propose is this : I would assist the Grand Trunk Pacific Railway on reasonable terms, to build a line north of the Canadian Northern Railway and as far west as Edmonton or some adjacent point. This assistance should be coupled with complete control of rates and with all the stipulations now contained in the proposed contract as to carriage through Canadian channels and ports. Furthermore, the Grand Trunk Pacific Railway, as well as the Grand Trunk Railway, should covenant that traffic, as far as possible, shall be carried through these ports. We should not only have such a covenant from the Grand Trunk Pacific Railway, but also from the Grand Trunk Railway, if it be of any value. I do not regard it as of any great value, but I do regard it as of the utmost possible value to extend the Intercolonial Railway to the Georgian bay and thus to secure a considerable portion of the products of the west for transportation upon the people's railway to our own ports of Quebec and Montreal and the ports in the maritime provinces.

As far as the line from Edmonton to the coast is concerned, I do not believe that at present there is in Canada any call for two railways. We know that the Canadian Northern Railway is looking for extension to the coast. It has its charter to the coast and it has its line partly built to Edmonton and from Edmonton west. I repeat that you must regard the Canadian Northern Railway as one of the great transcontinental systems of Canada. At some point on this side of the Rocky Mountains, there should be a common point, a junction between the Canadian Northern Railway and the Grand Trunk Pacific Railway. From that on to the coast, there should be one line. That line should be built by these companies, under such an arrangement as would give them joint control. Reasonable assistance should be given by the government by a guarantee of bonds in aid of construction. Should there be any difficulty in coming to such an arrangement, the government should build that line itself and maintain control and give these railways for a terms of years equal running powers over it. There is no reason why we should build competing lines through the Rocky Mountains, but there is reason why we should build the Grand Trunk Pacific Railway into the west because the west is developing rapidly. But from some point near Edmonton to the Pacific ocean, there should be one railway. If these two great corporations, the Canadian Northern and the Grand Trunk Pacific Railway—or the Grand Trunk Railway, as it is in fact—had equal running powers over that line to the coast, under independent control, by that means you would have in fact three transcontinental railway lines in Canada, and I think you would have the transportation problem in Canada settled, as to its main features, for the next twenty-five years.

So far as the line from Quebec to Winnipeg is concerned, I am not disposed to minimize the possibility of that northern country. Looking at the history of the great west, there may be a great flood of settlement into that country north of Lake Superior, some day or other, at least up to a certain point west, but I do not think we know enough to justify us at present in saying that there will or will not be, because I do not know how far that country is capable of competing, in the early future, with the magnificent country we have in the North-west. I have some doubts as to whether or not that great northern country may compete as early as we would desire with the great western country. But I am not disposed to minimize its importance in any way, and to my mind the rational way of dealing with the proposed line from Quebec westward is this: First, thoroughly exploit and explore that northern country, realize and understand its capabilities and possibilities for settlement and colonization and build such railways as these conditions and requirements may demand. Build only after you have obtained the fullest possible information and obtain that information with the least possible delay. You may find curious conditions surrounding you when you get into that country. You may find that the road, which is the most direct line to the Pacific coast, will not be the road that will open that country for colonization. You may find it necessary to have a road running in one direction for colonization purposes while any future line to the coast must take a very different direction.

You may also find that lines running north from the settled portions of Ontario and Quebec will be required for the development of that country. You must go upon sufficient

information, upon sound and reasonable lines, and when you do that, give to that country all the development which the people require. Not only build that line, but operate it as a government line. A government line, it seems to me, would be peculiarly suitable to that country for colonization purposes, and I see no reason why the problem should not be solved in that way. If in the future the enormous development of the west should make another transcontinental line necessary and if through this northern country an economial and practicable route can be found, then extend that road to the Pacific coast? Build it as a government road from Quebec to the coast. Be not afraid to undertake that project, but do not undertake it until you have the information, the data and the necessity which will justify you to deal with it. I am not saying this for the purpose of unnecessary delay. I believe in going ahead with the work once you get the information and the data which are necessary and as soon as the development of the west justifies it.

The next feature to which I refer is one upon which I think there ought not to be two voices in this House or country. Thoroughly equip our Georgian bay ports, our national waterways, our St. Lawrence route, and our ports on the Atlantic coast. Give them the terminal facilities which shall enable them to compete with the American ports. Give them, if necessary to properly compete with the American ports, free terminals. Give them terminals on the Georgian bay, both on the east and west coasts, develop the waterways on the St. Lawrence route, develop the facilities at Port Colborne, exploit the harbour at Montreal and make that a national port, a free port in the true sense of the term. Do the same with regard to the port of Quebec, with regard to the port of St. John, with regard to the port of Halifax. The people of this country are not afraid of spending money, if it is spent in a sane and reasonable way. And I know of no better way in which the money of this country can be spent than by improving the great inland waterway, the St. Lawrence route, and our great national ports. And I am prepared to support this government, or any other government, that will spend money for this purpose, and spend it in such a way as will enable the people of this country to compete with the tremendous influences which affect this question of transportation to the south of us. There is no reason to be afraid of spending money. I am not afraid of spending money. And the country is not afraid of spending money. But let us spend it in a reasonable and proper way. And no saner or better way can be found of spending the money of this country than in providing these terminals on the lakes, developing the lake ports to which I have referred, improving the St. Lawrence waterway so as to make it as perfect as money can make it, and placing the ports of Montreal, Quebec, St. John, Halifax and any other national ports on as good a basis as any American ports. I have already explained my position with regard to a shorter line for the Intercolonial through New Brunswick.

It is very near six o'clock, but, if it is not asking too much of the indulgence of the House, I would like to finish what I have to say before you leave the Chair, Mr. Speaker.

The elevator question in the west, in connection with these terminals, is a very important one, and it is one that will have to be dealt with by the government, and dealt with under the best possible expert advice. We know that in the western states a farmer, on putting his grain in the warehouse, gets a certificate which is guaranteed by the state, and which is practically so much money to the person for whose benefit it is given. He can go to any bank and draw the amount at once. This is a matter that I have not studied or carefully considered; but it seems to me it would be a proper subject for this government to fully investigate, with a view to deciding whether some similar system could not be adopted in this country, so that the farmer of the west, putting his grain into warehouse would receive such a certificate, would, if necessary, have the whole faith of the country pledged to the accuracy of the certificate, and be able to realize upon his grain at once. It is a question not without difficulties, not without complications. But there are dozens of questions as important to the people of this country as this one, which this government does not seem to have investigated at all, but which would have been investigated and placed before the House in suitable form if the government had proceeded with the policy they brought down at the opening of the session and repeated in the month of May last. Do not let any man in this House or out of it believe that he understands the question of transportation thoroughly. I do not believe there is any one man in Canada who understands that question completely in all its aspects. You would have to get a number of the best railway men in Canada together in order to understand the complexities and difficulties of the situation, so as to be able to meet them. For example the Canada Atlantic Railway is competing at Duluth and Chicago for western grain. Matters of this kind should be considered and weighed as they affect the problem in the east. All the questions affecting the right of the farmers of the west to store his grain practically at the expense of the country, without charge, except as afterwards included in the railway freight rate—because, I believe, that is what is done in the western states, where the elevator charge for a certain period is not paid in the first instance by the farmer but is absorbed in the railway

charge—all those things should be studied. It may be found necessary for this government to take steps to relieve the congestion in the west, and, for the purpose of relieving that congestion, to exercise the running rights I have referred to over the Intercolonial to Winnipeg, and provide in Winnipeg additional terminals to those I have suggested on the shores of Georgian bay. I think that is a great possibility, a very serious possibility, and perhaps in the not very distant future. Because we shall have enormous grain crops in the North-west, and it would be an economic waste, it seems to me, for 100,000 farmers to build 100,000 barns or warehouses, when, by means of proper transportation facilities, their grain could be stored for a merely nominal charge in elevators erected as a common enterprise.

Now, let me say in conclusion, that this that I have stated is in outline the policy I would be prepared to adopt. I would take the advice of the experts in the department of Railways and of the best experts in Canada, and, if necessary, of the best experts that this continent or any other continent can produce. But, subject to that advice, I would be prepared to proceed along the broad lines I have proposed. Consider my proposal, as contrasted with that of the government :

1. It combines prompt action with deliberation and caution.

2. It develops and does not throttle the Intercolonial.

3. It takes account of the expenditure upon the Intercolonial and upon the inland waterways, and brings those great national highways into harmony with our project. The lake route, the St. Lawrence, the canals and our great railway systems are joined by the policy I propose in one harmonious whole, whereas the policy of the government ignores the waterways, takes no account of the lake communication—cuts off the very Intercolonial Railway on which this country has spent $70,000,000 —and on which this government have spent $15,000,000 for the purpose of doing the very thing which I am advocating in this House.

4. It develops transportation along the lines of least resistance, that is to say, by water and by water and rail.

5. While connecting at the same time all the great railway systems in Canada, it controls in the only effective way the carriage of Canadian products through Canadian channels, by enabling the people's railway to compete for this traffic.

6. It affords immediate relief to the congestion of the west by bringing the Grand Trunk Railway into Winnipeg without delay. And

7. It insists that further railway development in the west shall not only give necessary competition in settled districts, but shall open and develop new country.

This, Mr. Speaker, is an outline of the policy which I would submit as an alternative to that proposed by the government. It is a policy based upon an abiding and abounding hope and confidence in the future of this country ; a policy which looks to an enormous development in Canada within the next few years ; a policy which, I trust, is not unworthy of the traditions of that great party which made the North-west a part of Canada, which bound together the scattered provinces of Canada by a railway stretching from the Atlantic to the Pacific, and which, from first to last, has believed in and advocated a national policy, not only for the development of our industrial life, but also for the solution of the great transportation problems of this country.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

The MINISTER OF JUSTICE (Hon. Charles Fitzpatrick). Mr. Speaker, one of the most celebrated of modern French authors, I think it was Renan, when he wrote his first book, refused to hand over the manuscript to his publishers, because, he said, on reflection I have come to the conclusion that all I have written has been better said before I undertook to say it. Comparing small things with greater, that is to some extent the position in which I find myself to-night. I quite realize that it is almost impossible for me to contribute much that is useful to this debate. Having, however, been identified to some extent with the negotiations which led up to this agreement, and being technically, at all events, responsible for the form in which the contract comes before this House for consideration, I venture, Mr. Speaker, to claim your forbearance, upon the very solemn promise which I now give to you that I shall not trespass at too great length upon your patience.

I had intended at first to explain the scheme which is now submitted to the House ; but I think I may as well now deal briefly with some of the arguments put forward by the hon. leader of the opposition this afternoon. I shall venture to call his statement the alternative proposition put forward by the opposition. Why does that alternative proposition imply? First, government ownership in the abstract; then, the extension of the Intercolonial Railway to Parry Sound; the expropriation of the Canadian Pacific Railway from Sudbury to Port Arthur; running rights over the road from Port Arthur to Winnipeg; and the extension by the government of the Intercolonial over the proposed route from Quebec to Edmundston, and thence to Moncton.

Mr. BORDEN (Halifax). My hon. friend will pardon me. I did not suggest the extension from Quebec, I suggested the extension from a point in the vicinity of Rivière du Loup. But, of course, I would

be guided in that regard by the opinion of experts.

The MINISTER OF JUSTICE. I understood that what my hon. friend had in view was the use of the Intercolonial from Quebec to Rivière du Loup, then its extension, probably by way of Lake Temiscouata, to Edmundston, and then from Edmundston to Moncton. Now, what does all this imply? Let us begin with the acquisition of the Canada Atlantic Railway from here to Parry Sound for the purpose of extending the Intercolonial Railway. Some time ago an application was made by this company to the Railway Committee to obtain power, I think it was, to consolidate their bonding powers at all events, in connection with the application, the solicitor of the company appeared and told us that the Canada Atlantic Railway had up to the present time cost Mr. Booth $17,000,000. That is the expense in connection with the Parry Sound extension, and I apprehend my hon. friend does not assume that it will be possible for us to acquire this railway at less cost than the amount I have just mentioned.

Mr. BORDEN (Halifax). On the contrary, I said it could be acquired for about $12,000,000.

The MINISTER OF JUSTICE. The sum I have mentioned was the actual cost, as stated by the solicitor, Mr. Chrysler. Now, let us realize what it would mean, if we did not buy the Canada Atlantic Railway, but if we undertook to extend the Intercolonial system from Ste. Rosalie up to Parry Sound, Ste. Rosalie being at the present time the western terminus of the Intercolonial. It is true that we have running rights over the Grand Trunk Railway into Montreal, but the western limit of the Intercolonial is at Ste. Rosalie. Now, you would have to build from Ste. Rosalie, I imagine, to some place in the vicinity of Coteau. That intervening distance must be covered in some way. If you have to do that, let us consider what it means. My hon. friend told us this afternoon that the extension of the Intercolonial from Point Lévis to Ste. Rosalie and thence into Montreal had cost this country $15,000,000. What would it cost us to extend that road up to the point of intersection with the Canada Atlantic Railway ?

Mr. BORDEN (Halifax). I included betterment and equipments in that sum.

The MINISTER OF JUSTICE. Well, that is the estimated cost of the road in its present condition. Now, we could not afford to have an extension of that road up to the point of connection with the Canada Atlantic Railway that would be in any way inferior to the road we have got to Ste. Rosalie ; therefore, to secure that extension you would have to make an expenditure of $17,000,000 for the acquisition of the Canada Atlantic Railway, that being the very least figure, I think. But that is not all. You would then require to extend the road from Parry Sound to Sudbury and then to buy the Canadian Pacific Railway from Sudbury to Port Arthur, 500 odd miles. In addition to that, he proposes to acquire running rights over the Canadian Pacific Railway from Port Arthur into Winnipeg. From Sudbury to Winnipeg I believe the distance is about 1,000 miles—from Port Arthur to Winnipeg the distance is 426 miles, and from Sudbury to Port Arthur, 555 miles. What does that imply in the way of expenditure? At least $75,000,000. It seems to me, after listening to my hon. friend this afternoon, that new blood has been infused into the opposition. I think that my hon. friend from St. Mary's (Hon. Mr. Tarte) must have had some forethought of what my hon. friend was going to say this afternoon——

Hon. Mr. TARTE. Would the hon. gentleman permit me? I am just back from Montreal.

The MINISTER OF JUSTICE. Let me finish the sentence. It seems to me that my hon. friend from St. Mary's must have had some forethought of what the leader of the opposition was going to say this afternoon, when he told us a year or two ago, 'Wait till you see us next year.' I am afraid that next year has come for the opposition. The leader of the opposition, I think, has not quite realized what all this means, or at all events, he has been more faithful to the enthusiasm of his early political convictions than to the mature opinions of his later years. He has entirely forgotten what used to be the view of the Conservative party with respect to the government ownership of railways; he has entirely forgotten what Sir John A. Macdonald said in answer to those who, in 1880, at the time the Canadian Pacific Railway was being extended to the west, proposed that it should be done by the government. Listen to what Sir John said at that time :

> The government had every right to use all their exertions in order to relieve themselves and the country of the obligation of building this road and the still greater obligation of running it. Let any one consider for a moment what these obligations are and how they press upon the government. We see this in the Intercolonial and every public work. Why, Sir, it is actually impossible, although my hon. friend has overcome many obstacles with regard to the Intercolonial Railway, for the government to run that railroad satisfactorily. It is made a political cause of complaint in every way ; the men that are put upon the railroad, from the porter upward, become civil servants. If one of these men are put on, from any cause whatever, he is said to be a political hack. If he is removed, it is said his removal was on account of his political opinions. If a cow is killed on the road, a motion is made in respect to it, by the member of the House who has the owner's vote and support. The responsibility of the worry and annoyance having charge of special work are such that for these causes alone it was considered advisable to get

out of the responsibility. We have enough of evidence of that in this House.

That was the doctrine preached by the Rt. Hon. Sir John Macdonald, in 1880. How have the mighty fallen. What a change has come over the spirit of the dream of hon. gentlemen opposite. How they have gone back in their belief, and how complete has been the change of heart that has come to them. It will be no doubt for the hon. gentleman who follows me to explain.

Mr. BROCK. How about your own change of heart ?

The MINISTER OF JUSTICE. The change of heart is in the right direction with us. To show that the Conservative party does not follow my hon. friend, let me read from the Montreal 'Gazette' of August 13, an expression of opinion on this question of government ownership. In concluding an article upon government ownership, and its results, it says :

> This gives one an idea of the actual detriment government ownership is to transportation inasmuch as it destroys almost every inducement leading to the improvement of rates of travel, whereas under private ownership competition constantly renders improvement imperative.

Passing now to the matter in hand, what is the object that the legislation which the government has submitted to the House is designed to promote ? Is the project one of immediate and urgent necessity ? Have proper precautions been taken to carry out the object in view with due regard to the public interests ? The object which this legislation is designed to promote is to procure at the lowest possible cost to this country a common railway highway from ocean to ocean wholly within Canadian territory. As a result of the construction of this railway we will open up for settlement enormous areas in New Brunswick, Quebec, Ontario, Manitoba, the North-west Territories and British Columbia, and by opening up these territories, by giving this country breadth as well as length, we will give an answer to those who have said that Canada is a mere fringe of habitable territory on the northern frontier of the United States of America. It is not necessary for me to refer to the extent of country that will be benefited by the construction of this road, or to the resources with which nature has dowered this part of the Dominion. It would be an idle repetition for me to attempt to do anything of the sort after the exhaustive speech delivered by the hon. Minister of the Interior (Hon. Mr. Sifton) here a few days ago, and who has, we must agree, by that speech, established once more his right to speak with authority on the resources of this Dominion. In the words of the contract, it is our intention to construct a through-line of railway from the city of Moncton, in New Brunswick, to the navigable waters of the Pacific ocean. From Moncton to Edmundston the road runs through the centre of New Brunswick, and I was much struck the other day in listening to the hon. member for Westmoreland (Mr. Emmerson) when he described Moncton as the natural railway centre for all the maritime provinces. A very superficial glance at the map shows that not only is it the railway centre for the province of New Brunswick, but also for the provinces of Prince Edward Island and Nova Scotia. From Edmundston to Lévis the line is destined to serve a fertile country, partly settled, but which has been for years and years asking for additional railway facilities. It is within the knowledge of this House that the Intercolonial Railway skirts the shores of the St. Lawrence river, and that it is located on the old line of the Grand Trunk Railway, which location was first established over 40 years ago. Since that time settlement has gone on in many places between the line of the St. Lawrence river and the Maine boundary. There are settlements extending back, 40, 50, aye 60 miles, and these settlements back from the line of the Intercolonial Railway the distances which I have mentioned are to a large extent without railway communication. No man has lived in Quebec without realizing that the result of this has been to discourage settlement, and as a matter of fact that part of the province of Quebec has materially contributed to swell the tide of emigration that set in some years ago towards the United States. I can say that throughout the length and breadth of that portion of country, there is scarcely a single family that has not got one, two, three and even more members who are now residents of some of the manufacturing centres of New England. The people have cried out for a railway, and we have realized that it is a real grievance they complain of. To the best of my recollection, as far back as 1885 a discussion took place in the Quebec legislature, and at that time the Conservative government in power promised an investigation and give some assistance towards the construction of a line of railway through this country. The same thing occurred in 1890 when an exploration took place from Lévis to Edmundston, and as a result of that exploration it was ascertained that it is easy to build a line throughout that whole section of the country. Not only is that the case, but we in this House have incorporated a company to build a line from Lévis to Edmundston ; that company is known as the Quebec and New Brunswick Railway Company. Not only have we given a charter to the company, but we have subsidized the company to aid in the construction of the railway. That is not all. There is running from Quebec southward through the valley of the Chaudière, and thence by way of Thetford to Sherbrooke, a very important

railway, perhaps little known beyond the limits of the province of Quebec, which is known as the Quebec Central Railway. At the head of that railway is Mr. Grundy, one of the most competent railway men in this country, a man who is fully alive to the needs of his company, a man who has brought this railway to such a condition of perfection that at the present time it is looked upon as one of the best paying enterprises in the province. I have it from Mr. Grundy's own lips, that, having examined the conditions existing between Lévis and Edmundston, he is prepared, himself, with some measure of assistance from the government, to build a line of railway covering that part of the country. But, this is not all. Mr. Grundy has reason for his belief in the resources of that portion of the country which will be affected by this railway. For instance, the county of Beauce is one of the counties which is in the immediate vicinity of the projected line of railway. Mr. Grundy told me that last year his railway carried from the county of Beauce for export, ten million pounds of maple sugar. Now, there is one county of the five or six that will be affected by the construction of this road from Quebec to Edmundston. I do not mean to say that they are all equal in fertility or that they all possess the same resources as the county of Beauce, but they all in some measure at all events have the same resources as the county of Beauce. If one county has produced the results that I have mentioned what might you not expect from the six counties which extend from Quebec to Edmundston ?

When you come to Lévis you reach the harbour of Quebec. It is not necessary for me to enlarge upon the facilities for ocean trade which that port offers. Quebec possesses probably the finest harbour in the world, a harbour where the largest ships may float with safety, and we know today, the true solution of the question of transportation is to provide large freighters to carry our goods from this side of the water to the other. As it is necessary to have large freight cars for the purpose of carrying our freight upon our railways, so it is necessary for us to have large ships to carry our freight across the water. At the present time there are trading to the port of New York, vessels with a draught of 30 and 32 feet, and the harbour of New York is being dredged to a depth of 40 feet to provide for the vessels which are coming there. At Quebec nature has provided all these facilities, and it will not be necessary to make any expenditure for that purpose. All you have to do is to employ the facilities which nature has provided you with there.

In connection with this scheme, I have noticed some ill-natured references to the city of Quebec, which, however, were not made in this House, but which I think it necessary for me to answer. I say here and now, without fear of contradiction, that in recent years Quebec has been largely overlooked in the distribution of favours. What has happened ? The Intercolonial Railway, which had its terminus at Lévis opposite Quebec, has been extended to Montreal, and the result is that the goods are carried from Montreal to the maritime provinces at the same rate as they are carried from Quebec to the maritime provinces, although the distance is 180 miles greater. Here is another example. Coal is carried from the maritime provinces to the manufacturers of Montreal for the same rate as it is carried to the competing manufacturers in Quebec, but not only that, when the coal arrives at Lévis, it costs as much to freight it from Lévis to Quebec by the ferry as it does to send it around by Montreal and down over the railway, the ferry rate between Lévis and Quebec being four cents per 100 pounds. We do not complain, however. We accept the inevitable. We thought it was in the general interest of Canada that the Intercolonial Railway should be extended, and no complaining voice was heard in this House or outside of this House from the city of Quebec. We all know that the channel between Quebec and Montreal has been deepened at an enormous expense to the country, and that the deepening of the channel was done to carry the trade from the point where nature intended it should centre, up the river to Montreal. There has been no complaint from Quebec as to that. We did not make it a grievance, but let it not be said at the present time that because the dawn of the day of justice has come for Quebec, we are getting anything that we are not fairly entitled to, anything that is not justly our own, anything that we are not willing to give to any other section of Canada.

There is still more. Our canal system has cost Canada $83,000,000, and last year there was an expenditure for the staff of $317,838, and for repairs $263,768, so that we have to pay the interest on the $83,000,000 and in addition we have to pay something like $600,000 a year for the maintenance of our canals. Does that benefit Quebec ? Does that benefit any part of the eastern portion of Canada ? Sir, the result of that expenditure is to benefit Montreal, which is at the head of inland navigation, and to benefit the country that lies between Montreal and the great lakes. We did not complain. There was no voice of protest from Quebec when that scheme was launched. We accepted it because we thought it was in the interest of the country, and that which is in the interest of Canada is in the interest of Quebec.

Now, Sir, this proposed railway will extend from Winnipeg to Quebec, but does that imply that this road is intended exclusively for the benefit of the city of Quebec ? There must be connection with the

great lakes ; there must be connection with North Bay ; there must be connection with Montreal. We have no desire to prevent that ; we expect it. The interests of the country require it, and the people of Quebec hold up their hands for all these connections. All that we ask is that you should give us equal justice, and equal rights, and equal advantages, and let the result be what it may we shall abide by it. I am speaking now for the district of Quebec with which I am more particularly identified, and I say that we believe that the interchange of trade between Ontario and the west, must of necessity establish a community of interest which will tend to unite all parts of this country. Many of the settlers of the west come from Ontario, and we desire that they should keep in touch with their old home. We believe it is the work of patriotism to teach our young men when they go west, to keep their eyes turned towards eastern Canada ; to keep their trade for eastern Canada and as their sentiments will be affected by their interests, we want them to have their interests in Canada rather than in the republic to the south. We want this connection between Ontario and the west, because we know that good must come from it to Ontario, and that good must come from it to all Canada.

It was originally proposed that the Grand Trunk Railway should be extended from North Bay into Manitoba and the territories and if we may judge from the report of interviews with hon. gentlemen opposite, that scheme met with favour in their midst.

Mr. BROCK. Hear, hear.

The MINISTER OF JUSTICE. I am glad to know that it met with the approval of the hon. member of Centre Toronto (Mr. Brock). This was practically the scheme that was contended for by the leader of the opposition this afternoon—the extension of the Intercolonial Railway to Parry Sound, the purchase of the Canadian Pacific Railway from Sudbury to Port Arthur, the extension from Port Arthur to Winnipeg, would bring trade down by North Bay.

Mr. BROCK. It is a good scheme.

The MINISTER OF JUSTICE. It is a good summer scheme. It is a scheme that brings our trade to North Bay, and to Toronto and from Toronto to Montreal. It is a good scheme for the summer, but where is your winter port ? It brings the trade to Montreal and the winter port for Montreal is Boston, or Portland, or New York. These are the winter ports for Montreal from the month of November to the month of April, both months inclusive. We take issue with hon. gentlemen opposite who say : Benefit Ontario, benefit the particular section we are interested in, and then let the trade drift southward if it may. We take issue with these hon. gentlemen, and we say : benefit Ontario, give equal advantages to Quebec, and let the maritime provinces not be forgotten.

Hon. gentlemen opposite have made light of the argument used by the right hon. the Prime Minister when he spoke of the bonding privilege as being a reason why we should be independent of the United States for an outlet for our commerce. What is our position getting to be ? Each day brings us more directly in competition with the United States in the British market. Our great competitor in the English market is the United States, and for six months in the year, yes, for seven monthe in the year, we are depending upon our chief competitor for an outlet to that market for our Canadian products. Is that wise or is it prudent? How can you get out from Montreal in winter except by way of Portland or Boston or New York ?

Mr. BROCK. By way of Halifax.

The MINISTER OF JUSTICE. Halifax competing with Portland ? It is double the distance practically.

Mr. BROCK. What is the use of talking ?

The MINISTER OF JUSTICE. What is the use of talking ? Can we shut our eyes to geography ? Can we shut our eyes to facts ? How much of the trade of Montreal has gone to Halifax ? How much grain has gone from Montreal to Halifax or to St. John ? How much of our food products have gone that way ? Invariably they have gone to Portland or to Boston or to New York. As Portland is to the Grand Trunk Railway so Boston is going to be to the Canadian Pacific Railway. At all events, so long as we understand one another, and so long as the issue remains between us what it is—that is to say, an extension from North Bay into Manitoba and the North-west Territories, and then to let the trade drift where it likes after it leaves Ontario, as against our scheme to construct a line from Winnipeg to Quebec, giving opportunities to all the commercial centres in the intervening distance to connect with it, so long as we get equal opportunities to get the trade to Quebec in order that we may be able to compete there with Montreal or the other outlets—it is perfectly satisfactory. Let us see what the respective distances are. The distance from Winnipeg to Quebec by the Grand Trunk Pacific, taking the St. Maurice river as the outlet, is 1,364 miles. The distance from Winnipeg to the junction with the Temiscaming branch at Little Abitibi lake is 814 miles; from Little Abitibi lake to North Bay, 242 miles; and from North Bay to Quebec via Orillia, 662 miles; that is to say, the route which hon. gentlemen opposite favour covers 1,718 miles, whereas by the route proposed by us the distance is 1,364 miles, an advantage of practically 400 miles in favour of the route from Winnipeg to Quebec.

The scheme of the government means a Canadian national highway, with summer ports on the St. Lawrence and winter ports in the maritime provinces. We hold that the Canadian national highway is important, not only from the standpoint of mere carriers' profits, which are well worthy of consideration, but in order to keep for Canadians the handling of Canadian goods, whether travelling by land or water. In the language of the report recommending the appointment of the transportation commission, I say it is clearly impossible, so long as our grain, our fruit, our cheese, our butter and our bacon, are brought through American ports, that they shall preserve their separate identity in the markets of Great Britain. Our agricultural products will never command over seas that price which their natural excellence entitles them to, until they cease to be confused in the markets of the world with inferior and possibly adulterated articles produced elsewhere; and I add further, that I believe, in answer to what was said by the hon. leader of the opposition this afternoon with respect to water-borne freight, that for many years to come the river St. Lawrence will remain the great commercial highway of this country, and that Montreal will always be the head of river navigation.

And in this connection does my hon. friend realize what he means when he talks about extending the Intercolonial Railway to Parry Sound? This afternoon he showed us how the Intercolonial would be brought into direct competition with water routes. He told us that from Duluth, at the other end of Lake Superior, Mr. Wolvin was now carrying wheat to Quebec for 3½ cents a bushel. Where is the money to come from to pay for the extension of the Intercolonial when it will have such competition as that to face? We would be going right into the mouth of the lion. Can we pretend to be able to carry wheat from Parry Sound on the Georgian bay to the maritime provinces or even to Quebec, and to compete with such rates as that?

Further, when you get your line to Port Arthur, where are you going to get your freight for that line? My hon. friend this afternoon said that the Canada Atlantic Railway had carried last year 19,000,000 bushels of wheat from Parry Sound to Montreal. I venture to make the statement that not a bushel of that was Canadian wheat. The whole of it came from American points. If that be the case, how is this scheme to relieve the congestion in the west? And that freight was obtained by Mr. Booth under conditions which the government could not hope to imitate. The government could not possibly do for their railway what Mr. Booth did for his. The past is there to prove to us that private enterprise does more for the development of railways than government control can possibly do. A moment ago I gave Sir John Macdonald's view of government ownership and of the extension of our obligations with respect to the Intercolonial Railway. Not only did Sir John Macdonald express in 1880 the views which I read to the House, but in 1897, when the question of extending the Intercolonial Railway to Montreal was up for consideration in this House, Sir Charles Tupper spoke as follows:

> Sir, have we not sunk money enough already in connection with the Intercolonial? Is it not a sufficient burden upon the country already, without loading it down with a capital expenditure of $7,000,000 in addition to all that has already been expended upon it. I say that a more unwarrantable, a more unjustifiable project, it appears to me, could not well have been undertaken. . . . . .

Verily am I entitled to say that a new prophet has arisen in Israel. Sir Charles Tupper went further. He said:

> I do not hesitate to say that neither to the Intercolonial Railway nor to the people of any portion of this country is this undertaking of the slightest value whatever.

These were the views of Sir Charles Tupper in 1897. But we have more than that. We have the views expressed by Mr. Foster, who then was truly a prophet. Mr. Foster said:

> Now, I take this view, and I commend it to the House to be thought over, whether under these circumstances, it would not have been far better for the government to have the connection at Lévis with the Canadian Pacific Railway and with the Grand Trunk Railway, and that in view of the strong competition at Montreal that they knew they must have and always will have on account of the distance, whether there would not be a decided saving and a decided advantage by making a connection there at the cost of a million dollars or so, instead of pressing this scheme with an expenditure of $7,000,000 to which we are tied irrevocably.

These are the views that were held a few years ago by the leaders on the other side of the House.

Now, we have the Intercolonial Railway, with a mileage of 1,500 or 1,600 miles, which has cost this country about $70,000,000, with net deficits resulting from its operation of $5,281,000; and still hon. gentlemen opposite want us to go on extending it to Parry Sound. These figures speak for themselves, and furnish a complete answer to the suggestions of the hon. leader of the opposition.

I now come to the question as to whether or not this project is of immediate and urgent necessity. The argument put forward by the other side is that we are proceeding with undue haste, that we have not sufficiently considered this question, that we do not know where it is going to lead us and what the expenditure is going to be. Yet hon. gentlemen opposite do not hesitate to formulate a scheme, which would cost twenty times over the possible limit of any expenditure in connection with the scheme before the House.

Mr. BROCK. Twenty times ?

The MINISTER OF JUSTICE. Yes, at the very least. When the hon. gentleman considers the scheme, he will realize that I am not exaggerating. Is this project now before the House of urgent importance ? In that connection, the first witness I have to call is the Hon. Mr. Blair, the ex-Minister of Railways and Canals. He is now the prophet, from a railway standpoint of hon. gentlemen opposite. He is the only one who knows anything about railway development. He has apparently taken the place of the hon. member for South Lanark (Hon. Mr. Haggart) and superseded the hon. member for Hamilton (Mr. Barker). And when this afternoon, my hon. friend the leader of the opposition told us that he was struck dumb with amazement, that he was horrified to notice the way in which the ex-Minister of Railways and Canals was received by hon. members on this side when he made his speech the other day, I think we can fairly retort by reminding these hon. gentlemen of the manner in which they received the ex-Minister of Railways and Canals in the beginning of this session when he addressed the House on another matter. He was greeted with the jeers, gibes and flouts of the opposition. What has come over the spirit of their dream ? What has caused this radical change ? Is the ex-Minister of Railways and Canals to-day in a position to speak with greater authority than he has a few short weeks ago ?

Well, I was about to refer to what the Hon. Mr. Blair said less than a year ago, regarding the necessity for a transcontinental line. He said :

> We cannot long remain content with only one transcontinental line. I am ambitious myself to see another.

When ? To-morrow ? Next week ? Next years ? After pause, hesitancy and reflection ? No, he wanted it right away ; he wanted it that very evening. The needs of the country were so pressing that he could not wait. But we have another witness, who knows something about the North-west Territories and Manitoba, and whose authority no one will challenge. I refer to the high commissioner for Canada in London. The other day, when in attendance at the gathering of the Chambers of Commerce, he said : 'Such a road is now a necessity.' There is corroboration of the position taken by the ex-Minister of Railways and Canals, and it will have great weight in this country.

With reference to the ex-Minister of Railways and Canals, it seems to me—and I regret he is not here to-night—that he might have found some better explanation of the course adopted by the government than to suggest that we were moving forward at the beck and call of Senator Cox. It seemed to me that the hon. gentleman, when he used these words, said either too much or too little. He said too much, if he did not intend to imply something improper on the part of the government. He said too little if he really meant what he said and did not go any further. It seems to me that the hon. gentleman owes it to himself, owes it to this country, owes it to the respect his ex-colleagues bear for him, and which he is presumed to bear for them, to explain what he meant. We should stop here now this cry which has gone forward throughout the country that this scheme is one propounded by Senator Cox for his personal benefit. We should stop the suggestion, the vile, contemptible insinuation, that we are acting from unworthy motives. If the ex-Minister of Railways and Canals was serious, this is the place, and now is the time to make a charge, if he has one to make, and to prove it. It is unfair that that expression should be allowed to travel throughout this country and furnish a text for every Tory scribbler who wants to attack the Liberal party. I say now that I defy the hon. gentleman to make or successfully maintain any charge against the government in this connection, and I say that this is the place and now is the time to make good any charge if he has one to make. On the same day, when the hon. gentleman used the expression I have quoted in this House, in another place, under this same roof, a similar expression was used. One could understand that a gentleman, speaking at the time under the influence of the generous hospitality of the leader of the opposition, should so far forget himself in an after-dinner speech as to make use of an expression of that sort, but it is unpardonable on the part of an hon. gentleman who came here carefully prepared to deliver a speech, and in cold blood make such an unfounded insinuation. Let me remind the ex-Minister of Railways and Canals the position in which he was placed in this House at the time the Drummond County Railway bargain was up. He found it necessary then to use these words, speaking of the manner in which that bargain was attacked by hon. gentlemen opposite :

> It was called a flagrant job, and I am characterized as being a bold jobber and a corruptionist by reason of having made this proposition to parliament as a member of the administration.

Surely these words should have been remembered by him when he used the language I have referred to.

> Well, Sir, one would almost think that the experience which some gentlemen have had in the past with regard to charges of that description would have led them to exercise a little care, a little caution, and a little judgment before starting out on such accusations. We all know how very easy a thing it is for people to make charges of jobbery against governments, it does not require very much material to formulate these accusations, and it is very often by reason of the absence of any real solid objections against the proposals which are made.

I call upon the hon. gentleman to answer himself the charge he made, and I apply to himself the very words he used to others. But let us get back to this question as to whether or not this project is one of immediate necessity. All that is required, in order to realize how urgent it is, is to bear in one's mind the map of this country. You will find that there are about 750 miles of practically uninhabited country, which to-day separates Ontario and the other parts of eastern Canada from the west. You will find that in that country there are about 106,000 square miles, and that this territory has only a population of 100,000, or about one to every two square miles. On the other hand, we must bear in mind that the population from the south is pouring in and bringing with them the traditions of the country they come from and maintaining their business relations with the south. We must also bear in mind that these enterprising, intelligent men will become dominant factors in the centres in which they labour. Their natural inclination is to trade south, and we can see that from the south to the north, American railways are springing up and branching out like the fingers on a man's hand and to the east there is one single line. Now, it is time, it seems to me, that we should alter that condition of things. In January, 1881, Sir John Macdonald, speaking in connection with the contract of the syndicate of the Canadian Pacific Railway, said :

It was a great misfortune to the country that the bargain entered into in 1872 with Sir Hugh Allan to build the Canadian Pacific Railway had failed because of the Pacific scandal exposure. He said that the North-west instead of having but a small settlement in the east end of it would have been the happy home of hundreds of thousands—to use the smallest figure—by that time.

Then he went on to say :

Our Dominion is as big as all Europe, and we might as well say that the railways running from Paris to Moscow might supply the wants of all Europe as to say that this railway (the Canadian Pacific Railway) might supply the wants of the whole North-west. There will be room for as many railways in that country by and by as there are in Europe.

Now, the construction of this road will not only encourage immigration to the North-west, but it will also help us to settle the hinterland of Ontario and Quebec. Originally, as is well known, the lumbermen were the great colonizing force of this country, and the lumbermen rendered great service in opening up this country. The early settler wished to remain, as far as possible, within sound of the lumberman's axe. With the lumberman he got employment during the long winter months, and to the lumberman he sold the products of his farm in summer. The settler wanted to keep within sound of the lumberman's axe and within sight of running water. Now things have changed. The new settler desires to keep within sight of the railway engineer. The new country back of the height of land will support a large population. Explorations and surveys already made show this. And in this connection, I would draw attention to the report of those gentlemen who were sent out by the Ontario government in 1900 to learn the facts with regard to that country. The findings of these gentlemen were received with jeers and flouts by hon. gentlemen opposite. Let me, for the benefit of those who are willing to be informed, give the conditions under which these explorations took place : The report of the survey and exploration of northern Ontario shows that the work was in charge of ten licensed land surveyors, each at the head of a party of explorers. There were also twelve land and timber estimators and the same number of geologists employed in the work, each of whom made a report on the district assigned to him to the surveyor in charge, and attached to the report of each of those officers, excepting one land and timber estimator and two geologists, is an affidavit or solemn declaration attesting the statements made to be true and correct. Four of the surveyors made affidavits of like character, and one died before his report was completed. The other five surveyors do not appear to have sworn to the correctness of their reports, but they are all so well and favourably known throughout the province that their honesty and good faith will not be seriously questioned. They are Alexander Niven, of Haliburton; T. B. Speight, of Toronto; Walter S. Davidson, of Sarnia; H. B. Proudfoot, of Fort William, and David Beatty, of Parry Sound.

They tell us of the enormous resources of that country. They tell us how, north of the height of land, you find a country that will grow anything that can be grown in eastern Ontario. They tell us how, beyond the height of land, you find a soil in all respects similar to that in Manitoba and the North-west Territories, and more than that, that this country is rich in forest wealth. And, in that connection, let me remind the House how the pulp industry of this country has grown until it has assumed large proportions. In the decade from 1891 to 1901, the number of pulp mills increased from four to thirty ; the number of employees from 1,025 to 4,550 ; the earnings of the employees from $292,000 to $1,587,000 ; the value of the product from $1,000,000 to $6,176,000. If it were merely for the purpose of giving Canada an opportunity to get that district settled the expenditure in connection with this railway would be well worth making. But we have more than that. Hon. gentlemen opposite say that we are in a hurry about the construction of this road, that we have no information, that we move with reckless haste, without any regard to con-

sequences, without any idea of what the project involves. Let me tell these hon. gentlemen that the journals of this House will show that, in 1872, parliament, by a deliberate vote and by a very large majority, placed at the service of the government the sum of $30,000,000 and 50,000,000 acres of land for the construction of the main line of the Canadian Pacific Railway and an additional amount of 20,000 acres per mile for the Nepigon branch. Sir Charles Tupper said in 1880:

> At that time, Sir, I may remind the House that it was expected, as possibly may prove to be the case yet, that the line of the Pacific Railway from Nipissing westward would run to the north of Lake Nepigon; and provision was therefore made for a branch by a vote of 25,000 acres of land per mile for 120 miles to secure connection between Lake Superior and the main line.

But, more than that; speaking in 1872, thirty years ago, according to the official report.

> Sir Hector Langevin read from the report of survey to show that the best practicable line eastward from the head of Lake Superior was on the plateau north of the height of land.

A reference to the map shows that the height of land is north of Lake Nepigon. If we had that information in the public records then, are we to be blamed if, in this year of grace 1903, when we have become better informed, we are carrying out the project which was launched at that time? More than that, is it not important to this country to realize its obligations towards the west and Manitoba? Is it not important to realize how that country is growing? Take, for instance, some figures which enable us to compare that country as it was in 1901 with what it was ten years before. In 1891, the acreage under wheat was about 1,010,000 acres; in 1901, it was about 2,495,000. In 1891, the acreage under barley was about 64,000, and in 1901, 162,500. In the same time the acreage under oats had grown from 218,000 acres to 833,000 acres. Our surplus of wheat in 1901 was 45,000,000 bushels and in 1902, 50,000,000 bushels, we may expect that by 1906 it will have grown to 59,208,000 bushels, and in 1911 to 99,300,000 bushels. How are we to make provision for handling this surplus? This road will not be ready before 1908. Are we to allow these conditions to continue, are we to say to the people of our North-west: Keep your eyes turned southward; send your products to the south through the United States, for we will not offer you facilities to trade with eastern Canada.

I have now reached the agreement entered between the company, or those who represent the Grand Trunk Pacific Company, and the government, which provides that this line is to be built from Winnipeg to Moncton, and the Grand Trunk Pacific undertakes to lease and operate the line when completed. In effect, what does that mean? It means that the eastern section of the road will be built at the lowest possible cost and of the highest possible effectiveness. Why? Because the money to construct the road will be found by the government under the most favourable conditions, and because effective control will be exercised over the specifications and over the work that is done in connection with these specifications. That effective control will be exercised under section 7 in the contract, which provides that the work is to be so done as to be acceptable to the engineer of the Grand Trunk Pacific Railway Company as well as to the engineer of the government. So you have this dual control, which will ensure the highest standard of efficiency at the lowest possible cost. More than that, you will have no promoters' profits, you will have no construction company to make millions out of the contract, you will have no watering of stock, you will have no sacrificing of bonds, you will have no sudden growth in wealth of individuals at the expense of the general public. Dealing now with the clauses of the contract which have reference to construction, I will first draw attention to section 5, which provides:

> The said eastern division shall be constructed by, and at the expense of the government, upon such location and according to such plans and specifications as it shall determine, having due regard to directness, easy gradients and favourable curves.

Clause 8, provides:

> The construction of the said eastern division shall be commenced so soon as the government has made the surveys and plans, and determined upon the location thereof, and shall be completed with all reasonable despatch.

Clause 7 provides for general control of the Grand Trunk Pacific and of the government over the specifications and the work to be done. Clause 6 provides:

> The company agrees to construct, maintain and operate the said western division, and to take a lease of, maintain and operate the said eastern division upon the terms and conditions and in the manner hereinafter set forth.

Now, do these clauses imply recklessness? Do they imply undue haste? Do they imply disregard of the public interest? In the first place, you have the location fixed according to the plans and specifications to be made by the government; that is all to be done so soon as the government has made the surveys and plans, and determined upon the location thereof, and should be completed within reasonable despatch. There is no time limit, the government will proceed deliberately, will make proper investigation, will make proper inquiry, will be in a position, when this contract is let, to have proper specifications in order to have proper control over the work. Then clause 7, which I consider to be one of the

most important clauses of this contract, provides for joint control of the Grand Trunk Pacific and of the government. That joint control must necessarily result in effective control and in cheap construction. It must result in effective control and cheap construction, because if the Grand Trunk Pacific undertakes to pay 3 per cent on every dollar expended in the construction, they are interested in seeing that every dollar is properly expended, and that it yields 100 cents to the dollar in benefits to the company. Furthermore, it was necessary to provide in this contract for the construction of the western division and for the operation of the eastern division, it was necessary to provide that both these things should be done at the same time. It was necessary to make a condition of the aid that was given to them in connection with their western division, that the Grand Trunk Pacific Company should operate the eastern extension to Moncton. If the government did not construct that line from Winnipeg to Moncton, what would be the position with respect to the Grand Trunk Pacific? It would have been necessary for us to allow them to build their line from North Bay to Winnipeg; it would have been necessary to allow them to build that line to Winnipeg, because it was impossible to expect that they would expend their money in that western country without having means of communication with their eastern system in Ontario.

My hon. friend said some time ago that it was inconceivable that the government should undertake to build what they are pleased to call the lean section from Winnipeg to Moncton, and allow the fat section west of Winnipeg to remain in the hands of a private corporation. But what did my hon. friend say this afternoon when he proposed to buy the Canadian Pacific Railway north of Lake Superior? How fat is that section? What profits are likely to be derived from the operation of that particular section of the Canadian Pacific Railway? What comes of the argument that we are building the lean section and leaving the fat section to the Grand Trunk Pacific? I submit that the contract by which the Grand Trunk Pacific secure aid for the construction of their line through Manitoba and the territories on the conditions set forth in the contract, and that they should operate the eastern end, is in the interest of the general public. In that connection let me draw attention to section 14, which defines the meaning of the word expenditure as applied to the eastern section. Section 15 defines the cost of construction, and section 16 defines betterments. Now, you will find that in the cost of construction is included the interest on the money expended as the work progresses, so that when this work is finished the interest in the interval is added to the capital account; and what we guarantee is three-fourths of the cost of construction, the interest during the course of construction being part of the cost. Section 16 provides for betterments, that is to say, that as the road is operated it may be discovered that it is desirable to make certain changes in the road-bed, or to make certain improvements, which are to be charged to capital account. In that connection it is provided that no such changes shall be made without the consent of the operating company, but when changes are made they shall form part of the capital account, and the company will pay three per cent interest on this expenditure as well as upon the general cost of construction.

Then with respect to operation. Section 20 provides that when completed the eastern division shall be leased and operated for 50 years. Section 23 provides—and that is important, and I draw attention to it because it appears to have escaped the consideration of those who have discussed this contract up to the present time. It is to the following effect:

> The lease of the said eastern division shall contain all necessary and proper provisions required by the government for securing, during the entire term of the said lease, the efficient maintenance and operation of the said division.

Now, doubt has been expressed as to whether this company would operate the line from Winnipeg to Moncton, doubt has been expressed as to whether, after the company is put in possession of this portion of the line, and if they find it unprofitable, they will continue on and comply with the terms of their lease. Let me draw attention to this fact, that you have this security in the first instance, that they are obliged to set aside and to assign to the eastern division $5,000,000 out of the $20,000,000 which they agree to expend for equipment. The equipment to the extent of $5,000,000 under the terms of this contract is a guarantee to us that the company will operate the line between Winnipeg and Moncton. If they fail to operate that line from Winnipeg to Moncton it will be in our power to take this equipment to the extent of $5,000,000 that we will have on the eastern section and use this equipment for the purposes of the road. But, we have better security than that. We have a security which is absolutely perfect and depending solely on the regard which parliament has in the future for the interests and rights of Canada and it is this: Winnipeg is the eastern limit of the western extension of the railway. The Grand Trunk Pacific build and operate the line from Winnipeg to the Pacific ocean. The limit of the eastern connection in Ontario is North Bay. The intervening space which must be covered in order to operate these two systems together, the key of the whole situation, is in our own hands. We own the link which connects the two together, and if they cannot operate the line from Winnipeg to Moncton this parliament will see that they do not operate the line from Winnipeg to North Bay, so that we have the matter absolutely

in our own hands. The connecting link between the two systems is in our own hands, the key to the situation is under our control, and all parliament has to do in the future is to be true to the interests of Canada and this road must be operated.

Now, in his remarks this afternoon, the hon. leader of the opposition said that, of course, the grain would seek an outlet by the great lakes, and that after it reached Port Arthur it would go across the great lakes to Midland, Midland being a Grand Trunk Railway terminal, and from Midland to Montreal, and in that way the whole scheme of this contract would be defeated. Nothing of this sort will be the case. If the grain goes from Winnipeg to Port Arthur, as I believe it will go in the near future, thence across the great lakes to Midland and from Midland to Montreal, I have no complaint. There will be a literal compliance with the terms of this contract. Montreal is not a foreign port, Montreal is a Canadian port, Montreal is the commercial metropolis of this country. The prosperity of Montreal reflects the prosperity of Canada, and every pound of wheat from the North-west which finds an outlet by way of Montreal is so much done for Canada.

Mr. BORDEN (Halifax). What I suggested was that when the grain came to the sea-board of the west, that is Lake Superior, it would be routed from there and it might be routed either by Montreal or Portland without the slightest breach of any condition of this contract.

The MINISTER OF JUSTICE. I will answer the question of routing later on, but let me say that there are not going to be any two routings of this grain. As soon as proper facilities are provided in the North-west, there will be one routing between the place of production and the place of destination. When the grain is put through the warehouse there will be a through bill of lading from the place of production to the place of destination, and the grain will be carried through Canadian territory and by Canadian ships through Canadian waters, and thence to Liverpool, if the terms of this contract is complied with.

Mr. BARKER. I would like to ask the hon. Minister of Justice if he thinks there is going to be a through bill of lading for wheat that remains at Port Arthur all winter ?

The MINISTER OF JUSTICE. Wheat that remains at Port Arthur will go down across the great lakes to Midland and to Montreal, and we will be perfectly delighted if it does.

Mr. BARKER. It will be routed from Port Arthur.

The MINISTER OF JUSTICE. If there are two routings, but if there is one shipment by way of Port Arthur, it will go as I have said. However, I will deal with that question later on, because I do not regard the opinions of amateur railway experts as being as important as those of men who have knowledge of the subject.

Mr. OSLER. The hon. Minister of Justice is an amateur railway expert, I assume.

The MINISTER OF JUSTICE. No, I am not an expert, not even an amateur.

Mr. OSLER. That will explain the hon. gentleman's statement.

The MINISTER OF JUSTICE. When I come to the question of routing, I will have the opinions of men whose opinions will be valued by this House as highly as those of others who assume to speak with an authority they do not possess. I can assure my hon. friend that in respect to the operation of the eastern division, as I have already said, we have the remedy in our own hands. We have the security of the $5,000,000 equipment, and we have what is even better than that, the control of the ownership of the one connection between the Grand Trunk Railway in the east and the Grand Trunk Pacific Railway in the west, and that connection cannot be bridged over except with our consent.

From Winnipeg, or some point on the eastern division, the line is to be built to the Pacific ocean. There you have in connection with the western extension a division into mountain and prairie sections. The western division is to be constructed by the company according to plans and specifications which are to be subject to the approval of the government. The work is to be commenced forthwith, and is to be completed in five years from the 1st December, 1903. Then there is another provision that is one of the conditions of this contract, and that is that the standard of the railway from Winnipeg to the Pacific ocean is to be equal to the Grand Trunk Railway from Montreal to Toronto. That is something that is worth considering, and in addition we have a provision that the railway throughout its entire length from Port Simpson to the Atlantic ocean shall be fully equipped so as to meet all the necessities of the traffic. To secure compliance with the conditions of the contract you will find that there is to be a deposit of $5,000,000 as provided for in section 12. I will refer to that at some length, because this afternoon my hon. friend the leader of the opposition said that that $5,000,000 to be deposited as security might be paid out by the government on progress estimates as the work went on. Let me quote from section 13 of the contract:

> The government shall return the said deposit to the company on the completion of the construction of the western division and the first equipment of the whole line of railway, according to the terms hereof, provided, however, that, when it is shown to the satisfaction of the government that the application of the same will enable such construction and equipment to be completed——

Not as the work progresses, but that the $5,000,000 can be paid out to secure the completion of the work.

—and that the same will be so applied, the said deposit shall be released by the government in such instalments as may be from time to time agreed upon, but, if the company shall make default in the performance of the obligations of the company for the construction of the said western division and for the first equipment of the whole line of railway, under the terms of this agreement, treating the same as entire, then the said sum of money shall be absolutely forfeited to the government for the use of His Majesty the King.

That is not quite advancing the money on progress estimates. It has been suggested by the hon. member for Hamilton (Mr. Barker), and I think the suggestion was one that my hon. friend the leader of the opposition acquiesced in, that this equipment of $20,000,000 might be leased or hired equipment, and that it would not be available as security for the government at all. I must confess that if that proposition had not been put forth by an hon. gentleman of the high legal attainments of the hon. member for Hamilton and concurred in, as I understand it, by my hon. friend the leader of the opposition, I would have made bold to say in this House that the point was not arguable.

Mr. BORDEN (Halifax). What is that? I was not following.

The MINISTER OF JUSTICE. That the $20,000,000 of equipment may be leased or hired and not be the property of the company at all, and therefore not available as security.

Mr. BORDEN (Halifax). I do not think I dealt with that point this afternoon.

The MINISTER OF JUSTICE. My hon. friend did not, but he offered the suggestion in the course of the speech of the Minister of the Interior. My hon. friend (Mr. Borden) did not argue it this afternoon, and he is too good a lawyer to take the responsibility of arguing that seriously. Section 11 provides :

The company shall lay out, construct and equip the said western division of the said railway to a standard not inferior to the main line of the Grand Trunk Railway Company of Canada between Montreal and Toronto.

That says that they shall equip the line of railway to a standard not inferior to the Grand Trunk Railway. Section 12 provides :

The company shall within thirty days after the passing of the Act confirming this agreement and of the Act incorporating the company hereinafter referred to, deposit with the government, five million dollars in cash or approved government securities, or partly in cash and partly in such approved securities, at the company's option as security for the construction of the western division and for the first equipment of the whole line of railway, as provided for in this agreemnt.

There is the security that they are to equip the whole line of railway to the extent of $20,000,000, and yet it has been argued that they could comply with that condition by leasing the rolling stock, and putting it on the line. Section 13 provides :

The government shall return the said deposit to the company on the completion of the construction of the western division and the first equipment of the whole line of railway, according to the terms hereof.

Section 19 provides :

For the purpose of enabling the government to determine the cost of construction of the said railway, or of any portion thereof, or the cost of the equipment supplied, the government shall have the right from time to time, and at all times, to inspect all the books of account, pay sheets, contracts, correspondence and all other books, papers and documents, the inspection of which may be considered necessary for the purpose of determining such cost.

Here the government have the right to make an investigation for the purpose of ascertaining what was the cost of the equipment supplied, and still it is suggested that this may be leased equipment. Section 22 provides :

The company shall equip both divisions of the said line of railway with modern and complete rolling stock suitable and amply sufficient for efficient operation and the handling of all classes of traffic to the satisfaction of the government, and the first equipment for the completed road shall be of the value of, at least, twenty million dollars, of which not less than five million dollars worth shall be supplied for the operation of the eastern division of the said railway, and the said five million dollars worth of rolling stock, together with all renewals thereof and additions thereto, shall be marked as assigned to the said eastern division and shall be held to be and form part of the equipment of the eastern division of the railway during the said period of fifty years and shall be used as the equipment appertaining thereto, according to the ordinary practice of railways during the said period of fifty years.

And yet the suggestion is made that they can comply with the provision to equip the line with an equipment of the value of $20,000,000 and that they can comply with that provision by hire. Then section 34 provides :

Inasmuch as the bonds to be guaranteed by the government only make provision for a part of the cost of construction of the western division, the company hereby agrees that the Grand Trunk Railway Company of Canada shall guarantee bonds of the company for the balance required for the construction of the said western division, exclusive of the said twenty million dollars required for first equipment.

And then we have the final section 35 (a) :

(a.) A mortgage which shall be a first charge upon the railway, undertaking, equipment and property, tolls, rights and franchises of the company, including all equipment and property to be thereafter acquired by the company (but not including branch lines exceeding six miles in length or the revenues therefrom or

the franchises in connection therewith, or such additional rolling stock as may, with the assent of the government, be designated and marked by the company as constituting the equipment thereof, and not including ships or any municipal or provincial grants of land, by way of bonus or subsidy, to the said company other than for railway purposes) to secure the payment of the said issue of first mortgage bonds guaranteed by the government.

They bind themselves to give us a mortgage on the railway and the equipment of the company and the suggestion is that this provision may be complied with by having leased property. Section 35 (b) provides :
