OFFICIAL REPORT

OF THE

DEBATES

OF THE

HOUSE OF COMMONS

OF THE

DOMINION OF CANADA

THIRD SESSION—NINTH PARLIAMENT

---

3 EDWARD VII., 1903

VOL. LXI

COMPRISING THE PERIOD FROM THE TWENTY-NINTH DAY OF JULY TO THE TWENTY-EIGHTH DAY OF AUGUST, INCLUSIVE

OTTAWA
PRINTED BY S. E. DAWSON, PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1903

House of Commons Debates

THIRD SESSION—NINTH PARLIAMENT

HOUSE OF COMMONS.

WEDNESDAY, July 29, 1903.

The SPEAKER took the Chair at Three o'clock.

BANK ACT AMENDMENT.

Mr. D. HENDERSON (Halton) moved for leave to introduce Bill (No. 234) to amend the Bank Act. He said: The explanation is very brief. The object of the Bill is to limit the investing power of the banks by placing it, as regards foreign securities, largely in the hands of the shareholders.

Motion agreed to, and Bill read the first time.

QUESTIONS.

FALSE CREEK, VANCOUVER.

Mr. EARLE asked:

1. Has the government granted a lease to Robert Kelly and Frank Burnett of certain portions of False Creek, Vancouver, known as the 'Mud Flats,' as stated in letter of Robert Kelly and Frank Burnett to the mayor and aldermen of the city of Vancouver, dated May 13, 1903, a copy of which was brought down in answer to an address of the House of Commons, dated 4th and 5th of May, 1903; the terms of said lease being stated in that letter as for ninety-nine years at a rental of $100 per annum, to be increased to $500 per annum, notwithstanding the resolution of the municipal council of Vancouver, protesting against such lease?

2. If a lease has not been executed, is it the intention of the government to grant a lease; and if so, on what terms?

The MINISTER OF MARINE AND FISHERIES (Hon. R. Préfontaine):

1. No lease has been granted to Messrs. Robert Kelly and Frank Burnett.

2. Matter under consideration.

BINDER TWINE.

Mr. CLARKE asked:

How many pounds of binder twine have been imported into Canada from the United States in each fiscal year since 1897?

The MINISTER OF CUSTOMS (Hon. William Paterson). The quantity in pounds of binder twine imported into Canada from the United States in each fiscal year since 1897 was as follows:—

Fiscal Year.	Pounds.
1897	3,394,475
1898	8,679,823
1899	10,629,211
1900	8,016,354
1901	9,674,268
1902	14,927,302
1903	14,198,690

Mr. CLARKE asked:

What was the average price per pound paid each year since 1893 by the government of Canada for manilla used in the manufacture of binder twine at the Kingston Penitentiary?

The MINISTER OF JUSTICE (Hon. Charles Fitzpatrick). I beg to reply:

1893	None purchased
1894	$4 38 per cwt.
1895	4 13 "
1896	4 46 "
1897	4 26 "
1898	3 71 "
1899	5 39 "
1900	None purchased.
1901	$7 54 per cwt.
1902	6 00 "
1903	8 75 "

TRANS-CANADA RAILWAY AND G. T. PACIFIC RAILWAY.

Mr. F. D. MONK (Jacques Cartier). Before the Orders of the Day are called, I would like to ask the government what truth there is in the report which I find in the 'News' of Toronto, of July 28.

TRANS-CANADA IS TO SELL OUT.

Quebec Promoters to hand charter to the Grand Trunk.

To Safeguard Quebec.

Sir Wilfrid Reported to be looking after the Interests of his Constituents.

Quebec, July 28.—Alderman George Tanguay, M.P.P., chairman of the Trans-Canada Railway Company, left for Ottawa this afternoon in response to a telegraphic message received from the Capital.

It transpires that the Trans-Canada Railway Company, realizing that their Pacific scheme is non est on account of the Dominion government adopting the Grand Trunk Pacific Railway, has offered to sell their charter to the latter railway company.

They state that their only desire was to see a railway built from Quebec to Lake Winnipeg, through the northern section of the provinces of Quebec and Ontario, and if this is only accomplished by the scheme promoted by the Grand Trunk Railway and backed by the government, they will be absolutely content.

It is also learned from reliable authority that Sir Wilfrid Laurier is looking after the interests of the Trans-Canada directors, and is de-

termined to see that their charter is purchased, so as to recoup them for all the money which they expended in surveys, &c., in connection with the scheme which the Grand Trunk Pacific Railway has made impossible.

The PRIME MINISTER. What is the particular point on which the hon. gentleman desires information ?

Mr. MONK. I desire to know whether the government is making or has made any arrangement for the transfer to the Grand Trunk Pacific Railway of the charter of the Trans-Canada, and the terms of such arrangement ?

The PRIME MINISTER. The government has not made and is not making any arrangement for the transfer of the charter of the Trans-Canada to the Grand Trunk Pacific Railway.

SUPPLY—QUESTION OF PRIVILEGE—RAILWAY FACILITIES IN TWO MOUNTAINS.

The MINISTER OF FINANCE (Hon. W. S. Fielding) moved that the House again go into Committee of Supply.

Mr. J. A. C. ETHIER (Two Mountains). (Translation.) Mr. Speaker, before you leave the Chair, I wish to draw the attention of the House and of the government to a question of the greatest importance which interests the county of Two Mountains and the neighbouring district. Every one admits that that part of the province of Quebec which borders on the Ottawa river from St. Andrews, in the county of Argenteuil, to Cartierville, in the county of Jacques Cartier, and which comprises such beautiful and thrifty parishes as St. Placide, St. Benoit, St. Eustache, St. Joseph du Lac and St. Dorothée, is favoured with the most fertile soil and an exceedingly well-to-do and reliable community of farmers and business men.

Before the long and important work of this session is over, I think it is incumbent on me to recall to this House some of its actions in past years, as regards the county I represent, and to request from the government some help and efficient protection on behalf of the farmers of the county of Two Mountains and vicinity in the same way as railway charters are granted throughout the country and especially in the county of Two Mountains. Unfortunately some ill-advised or unscrupulous opponents, certain papers opposed to the government and to the member for that county have thought fit, a few days ago, to publicly announce that I was not in sympathy with the plan of building a railway through the counties of Argenteuil, Two Mountains, Laval and Jacques Cartier. I need not name those papers, as everybody knows 'Le Journal' and 'La Patrie.'

I protest, Mr. Speaker, against the false statements and misleading comments contained in the article of 'Le Journal,' dated July 25, 1903, under the title : 'The Monk Bill' : and in 'La Patrie,' of July 24, 1903, under the title 'A Railway.' Notwithstanding what those papers say and print, I have always been, and am still in favour of building a railway along the location I have just mentioned.

But prior to the interests of individuals, prior to the interests of shameless stock gamblers and speculators, who unfortunately heretofore have made themselves conspicuous in the history of railroad building in Canada by the scandals and thefts which we know, there stands the public interest which the Railway Committee and the House are in duty bound to protect.

In perusing our federal and provincial statute-books, I have come across charters and subsidies granted to various companies : the Baie des Chaleurs Railway Company, the Atlantic and Lake Superior Railway Company, the Great Eastern, the Montreal and Sorel, the Montreal Bridge Company ; and in all of these, I find as promoter, director, president or largest shareholder, a man known, unfortunately, throughout the country : C. N. Armstrong. And considering the use which has been made of these charters and subsidies obtained under that man's patronage, I can only congratulate the House and the government on having rejected all further application made by him.

The facts connected with the building of the railway from St. Andrew's to Lachute, in the counties of Argenteuil and Two Mountains, are too recent, Mr. Speaker, to have been forgotten. It is known that Mr. Armstrong received $52,000 for the building of that road, seven miles long, and that, to the detriment of the public, he appropriated these $52,000, in order to pocket them, by abandoning a railway which had been in operation only a very short time, thus causing much trouble and great losses to that district. It is a matter of surprise, and the public may well wonder, that individuals of that stamp should succeed in securing the assistance of men of worth. Fortunately these speculators are known ; the Railway Committee and the House of Commons are acquainted with their achievements. Both the committee and the House have realized that as long as Mr. Armstrong was connected with a public undertaking of any kind, the matter could not be considered seriously ; and that was my ground for taking the stand I took recently.

I wish to state that I am most anxious that a railway be built between Grenville and Montreal. A section has already been built under a charter granted to the Grenville and Carillon Railway Company. I shall favour the application of any bona fide company having the means requisite for the carrying through of such an undertaking. But I am against the idea of leaving it to a man like Mr. C. N. Armstrong to carry

out. I deemed it part of my duty, as representative of the county of Two Mountains, to resist the proposal to put that prosperous district in the hands of such a man; and so deep is my belief, that I would not hesitate in case of need to take once more the same stand.

In conclusion, I beg of the government to revote the subsidies already granted and lapsed. They are as follows:—

First, 49 Vic., cap. 10, p. 74, which reads: 'For a railway from St. Eustache to St. Placide, county of Two Mountains, 18 miles, a subsidy not exceeding $3,200 per mile, and not exceeding altogether $57,600.'

Secondly, 51-52 Vic., cap. 27, p. 98, as herewith: 'To the Carillon and Grenville Railway Company, for 12 miles of railway from St. Eustache to Sault au Recollet, a subsidy not exceeding $3,200 per mile, and not exceeding altogether $38,400.'

Thirdly, 55-56 Vic., cap 5, p. 47, as herewith: 'For a railway from St. Placide to St. Andrew's, 8 miles, a subsidy not exceeding $3,200 per mile and not exceeding altogether $25,600.'

The first grant, that for $57,600, was voted in 1886, and revoted in 1892. By reviving that subsidy as well as the two others I have mentioned, the government would only be doing justice to the farmers of the counties of Argenteuil, Two Mountains and Laval, and would facilitate the building of the railway asked for by that part of the country. As I have already stated in this House and before the Railway Committee, the carrying through of this undertaking has become a necessity, in view of the remarkable progress and development which have taken place in these localities of recent years. I am confident that by so doing, that is by reviving these grants on behalf of any company having a charter and sufficient means or of any other company which might be formed and would offer the same security to the public, there would not be wanting reliable men, such as those with whom we are negotiating, who would be in a position to carry out the undertaking, and thereby, satisfy the just and legitimate ambition of the people of the county of Two Mountains.

Mr. F. D. MONK (Jacques Cartier). (Translation.) Mr. Speaker, I do not rise for the purpose of vindicating the papers which my hon. friend has criticised so harshly. I read the articles which appeared in 'La Patrie' and 'Le Journal.' They comment on the stand taken by my hon. friend regarding the Bill which I had the honour to submit to the consideration of this House. Likely, the criticism contained in these articles reflecting on the stand taken by the member for Two Mountains (a stand which cannot be defended on any ground), was very much to the point, and on that account, and also in view of the uneasiness and discontent prevailing in his constituency, my hon. friend has thought proper to make a further attempt to explain his point of view, but without success.

The hon. member states that he is favourable to the building of a line of railway similar to that outlined in the Bill which I submitted to the consideration of the House. He was in favour and he is still to-day in favour of that line.

Mr. J. A. C. ETHIER. (Translation.) I never said that I was in favour of the Bill introduced by my hon. friend. I stated before the Railway Committee,—and my hon. friend must remember,—that I would support the motion of the hon. member for East Grey (Mr. Sproule), in order to enable the hon. member for Jacques Cartier to obtain the required information to answer the objections raised by Mr. Armstrong's name being mentioned in the Bill. That was on June 30th last. I stated before the committee that it was only fair that the promoter of the Bill should be allowed to get the information required by those who had put him in charge of it; and I requested that the consideration of the Bill be postponed for a week, reserving my right to resist later on the application of its promoters.

Mr. MONK. (Translation.) The hon. member stated that he had asked for time to inquire into the merits of the promoters of this Bill.

Mr. ETHIER. (Translation.) I did not ask for time to inquire; but I requested the committee to grant time to the hon. member, promoter of the Bill, to examine it and obtain information.

Mr. MONK. (Translation.) At any rate my hon. friend reached the conclusion that the promoters of the Bill were shameless speculators. I am unable to thank my hon. friend. He considers me evidently as a shameless speculator. The same would apply to the hon. member for Laval (Mr. Leonard), who, surely, was interested solely as member for Laval, being anxious to have this railway go through his county. And the stigma would attach to the name even of the member sitting by his side; the hon. member for Argenteuil (Mr. Christie) who supported the Bill.

Now, does my hon. friend contend seriously that the list of shareholders certified by the secretary of the company contains the names of shameless speculators only? Does he consider that Mr. McMullen, an American, who holds much the larger part of the shares, is a brazen-faced speculator? Far from it, Mr. McMullen is a respectable citizen of the neighbouring republic, a man occupying a high position which surely puts him beyond the reach of my hon. friend. Mr. McMullen has had interviews with the government and with the right hon. the Prime Minister himelf, and I have reason to believe that he was very well received. If actually he was a man connected with all kinds of suspicious speculations, how is it

that not a word was said about it heretofore ?

The other gentlemen who are concerned in this plan which I submitted to the House are citizens of the United States, Messrs. Richardson, Stevens——

Mr. SPEAKER. (Translation.) I would call the hon. member's attention to the fact that he is not allowed to discuss a measure which is not before the House.

Mr. MONK. (Translation.) I am not discussing the Bill ; but I am going over the reasons which induced the hon. member for Two Mountains to vote against the Bill of which I was the promoter before this House. The hon. member stated that he had voted against the Bill because those interested in it were shameless speculators.

Mr. SPEAKER. (Translation.) I took it that the hon. member for Two Mountains was content with laying down the general principle, in stating that he was in favour of the building of a railway in that part of the country, provided the undertaking was in the hands of a bona fide company, and that he did not refer to the Bill which the hon. member for Jacques Cartier is discussing. I must call the hon. member's attention to the fact that he has no right to discuss a Bill which has already been under discussion. I am confident that it will suffice for me to call his attention to the matter, and that he will readily comply with the rules of the House.

Mr. MONK. (Translation.) But after my hon. friend from Two Mountains has stated that he was not in favour of a company made up of shameless speculators, it seems I might well be allowed to vindicate the perfect respectability of the promoters of the scheme. It is not my intention to discuss the merits of the Bill which I had the honour to submit to the House ; but I wish to show that I was not acting for and in the name of shameless speculators, for these are the words which my hon. friend used just now.

Mr. SPEAKER. (Translation.) I must state the rule which forbids to re-open a former discussion. When a matter previously disposed of by the House is taken up once more, it seems clear to me that the rule is being disregarded. I state the rule, and I hope the hon. member will kindly conform to it.

Mr. MONK. (Translation.) I willingly comply with your request, Mr. Speaker. In answer to the remarks made by my hon. friend from Two Montains, is it allowable, I say, to brand as shameless speculators men such as the hon. senator R. Thibaudeau, or Mr. Raphael, a reliable and thoroughly respectable business man of Montreal, and besides, an enthusiastic supporter of the Liberal party ? Mr. McLaren, manufacturer, is also one of the shareholders ; and I am exceedingly surprised, as, no doubt, will be all the citizens of Montreal, when they learn of it, to hear my hon. friend from Two Mountains call this business man a shameless speculator.

My hon. friend may complain of what he terms the unfairness of the papers which have taunted him for his stand in the matter, but he will have difficulty in explaining his conduct in connection with a Bill intended to benefit the county he represents ; especially when it is taken into account that the company which these gentlemen had formed undertook to begin the work within a year and to finish it within three. Moreover, that company promised to comply with the requirements of the House regarding the amount of work to be carried out in the short space of a year.

I have given the names of the shareholders. I have shown that they are well known gentlemen. They are the only holders of shares, and my hon. friend has the proof of that. Under the circumstances, I fail to understand how my hon. friend has reached the conclusion that Mr. Armstrong alone was at the bottom of this scheme.

For it is for that reason, among others, that he refused to give his approval to that measure so important for his county. Today my hon. friend chatters about a man who was not a party to the Bill. My hon. friend has not given any proof of it ; he has not been able, in any way, to detract in any way from the value of the authentic certificate signed by the company's secretary-treasurer.

Mr. ETHIER. (Translation.) The certificate referred to has, I understand, been contradicted by a sworn statement of the hon. senator Thibaudeau, contained in the report of the Railway Department.

Mr. SPEAKER. (Translation.) As regards the matter of this certificate, I must say that I fail to see how it can be properly taken up at present in this House. That matter has previously been discussed before the committee.

Mr. MONK. (Translation.) I shall not discuss any longer, Mr. Speaker, the question of the certificate or its value in connection with the list of shareholders.

Now, my hon. friend appears to be very anxious that a line of railway be provided for his county. He states it is time that the government should grant subsidies for the building of a railway through his county ; it is time, he says, we should obtain from the Treasury a grant to build such a railway. How can he reconcile that proposition with his refusal to grant delay to a company which did not ask for any charter or grant from this House, but merely requested the power to extend its line already in existence, and which would have run through his county as well as through those of Argenteuil, Laval and Jacques Cartier ?

It will be a rather difficult matter for my hon. friend to explain his inconsistent action under the circumstances.

Motion agreed to, and House went into Committee of Supply.

Department of Trade and Commerce—salaries including Mrs. S. S. Cox at $650, notwithstanding anything in the Civil Service Act, $12,800.

Contingencies, notwithstanding anything in the Civil Service Act, $7,000.

The MINISTER OF TRADE AND COMMERCE (Rt. Hon. Sir Richard Cartwright). The committee will see that in salaries there is a slight reduction as compared with last year. The amount was $13,790, and it is now $12,800. The only increases are statutory increases of $50 each and one of $10 to a messenger. The reduction is chiefly due to the death of the late Mr. Nutting, who had attained the highest salary in his class. As to contingencies the amount is the same, but printing and stationery has been increased and sundries reduced.

Mail subsidies and steamship subventions—ocean and mail service between Great Britain and Canada, $150,000.

Mr. CLARKE. What is the arrangement under which this service is being carried on ?

The MINISTER OF TRADE AND COMMERCE. It is carried on by the Allans. The only difference between the former arrangement and the present one is that a different sum is paid according to the quality of vessel employed, ranging from £500 to £1,000 per round trip. The maximum is paid in the case of the fast vessels, the 'Bavarian' and the 'Tunisian' for the winter service. The summer service for these vessels is £750.

Mr. SMITH (Wentworth). Is the entire sum paid for carrying the mails, or do they render some other service ?

The MINISTER OF TRADE AND COMMERCE. No other service. They carry freight in the ordinary fashion.

Mr. SMITH (Wentworth). How is it that some vessels get $750 and some get £750 ?

The MINISTER OF TRADE AND COMMERCE. No, £500 sterling is the lowest sum paid for the round trip.

Mr. SMITH (Wentworth). A vessel getting £500 carries as much mail as one getting £1,000 ?

The MINISTER OF TRADE AND COMMERCE. No doubt, but she would not carry it as fast, and is not as good a vessel. I should greatly prefer to have four vessels of the size and class of the 'Bavarian' and 'Tunisian' than those we have.

Mr. CLARKE. What is the speed of these two vessels ?

The MINISTER OF TRADE AND COMMERCE. Fourteen knots is the average speed of the 'Bavarian' and 'Tunisian.'

Mr. CLARKE. How long has this contract to run? Is it made annually ?

The MINISTER OF TRADE AND COMMERCE It is made annually at the close of the winter navigation. I think it runs until April, 1904.

Mr. CLARKE. Has the right hon. gentleman (Rt. Hon. Sir Richard Cartwright) anything in his mind's eye with respect to securing faster vessels for this service ?

The MINISTER OF TRADE AND COMMERCE. Yes, we have ; but I am afraid that, owing to various circumstances, we cannot very profitably enter upon a discussion of the fast service if that is what my hon. friend (Mr. Clarke) refers to. We received, as he is aware, a couple of tenders —but neither satisfactory to us—for a service of twenty-one knots and of sixteen knots. But they may serve—they are serving —as a basis of negotiotion in some quarters. I have some expectation that we will be able to come to terms. But the demands of steamship owners and our ideas were rather far apart.

Mr. CLARKE. Are negotiations going on now with any company ?

The MINISTER OF TRADE AND COMMERCE. Yes, with two or three.

Mr. CLARKE. In the hope of securing a fast service ?

The MINISTER OF TRADE AND COMMERCE. To ascertain if we can obtain one on reasonable terms.

Mr. CLARKE. I thought the matter was practically dropped as there was nothing in the estimates——

The MINISTER OF TRADE AND COMMERCE No, it is not dropped. We have a statutory vote, as the hon. gentleman knows.

Mr. CLARKE. But there was a great divergence of opinion among the ministers themselves as to the utility of the service. That is the reason I asked if the right hon. gentleman has anything in view.

The MINISTER OF TRADE AND COMMERCE. There are negotiations going on, but they are not in such shape that I can communicate anything.

Mr. CLARKE. So, we shall have to be content in the meantime with the fourteen and twelve-knot service.

The MINISTER OF TRADE AND COMMERCE. Yes, that is the best we can have for six months.

Mr. KEMP. I understand that the larger portion of our mail to and from Great Britain goes and comes via New York. Is there any expense to this government for that service ?

The MINISTER OF TRADE AND COMMERCE. The steamship company receives,

I believe, a proportionate sum from us and a proportionate sum from the British government, according to the amount of mail matter they carry. Of course, the hon. gentleman (Mr. Kemp) is aware that there is a vessel out of New York nearly every day, so, of necessity, the greater portion of our mail goes that way. We could not possibly confine the mail to a weekly service.

Mr. KEMP. Then, the larger portion goes by New York ?

The MINISTER OF TRADE AND COMMERCE. Decidedly the larger portion.

Mr. KEMP. And I understand the government pay these vessels no subsidy.

The MINISTER OF TRADE AND COMMERCE. No regular subsidy, but the post office has to pay them a certain sum. I rather think it is paid through the British government. The New York steamers do not carry the mails for nothing, but they do not charge a heavy rate.

Mr. KEMP. Where do we find the figures showing these payments ?

The MINISTER OF TRADE AND COMMERCE. The payments are made by the post office. It is entirely outside of my department.

Mr. KEMP. It is not a very large sum ?

The MINISTER OF TRADE AND COMMERCE. I believe not. Of course, the Postmaster General can give my hon. friend full information as to the amount paid.

Mr. KEMP. We seem to be paying a very large sum for carrying the Canadian mails to Great Britain and bringing mails from Great Britain by these twelve and fourteen-knot vessels, while, as a matter of fact, for very little expense the greater portion of our mails is carried by way of New York. What is the object, in view of the fact that we get so much quicker service by New York, of paying these large sums to old-fashioned and out-of-date vessels ?

The MINISTER OF TRADE AND COMMERCE. As a matter of course, the hon. gentleman knows that faster vessels will be very much more expensive. We could have the faster vessels if we paid for them, but, up to the present time the sums demanded, as I have stated, have been very heavy, perhaps more than the House would care to pay. With respect to the use of this service, I may point out that the utility to Canada is very considerable in the winter season. These vessels go from St. John and from Halifax, and if the subsidy was discontinued there would be no service from Halifax to England. That service has been going on for a good many years, and I think the House would be loath to deprive the maritime provinces of the service of these vessels. This is an old service which, as the hon. gentleman knows, was established before confederation. In those days it went from Portland and from Montreal ; now it goes from Montreal and Quebec, and from St. John and Halifax. Without this, we could hardly maintain a service from the maritime province ports.

Mr. KEMP. I understand that this service is maintained chiefly for the maritime provinces. This service may have been going on since confederation, but I quite recognize that we have not kept it up to date, and it is a question whether the service is worth that much now. These vessels have fallen so far behind that they are slow as compared with the regular mail vessels that ply between this continent and Europe. In view of that fact it seems to me, unless these people can give a quicker and better service, the existing contract should be reconsidered.

Mr. SMITH (Wentworth). A copy was brought down last session of the agreement with the Donaldson firm, by which they carry the mail for $750, the round trip between St. John and Glasgow. I was wondering whether the thousand pounds that is paid here is not partly a subsidy to these vessels in order to secure their running.

The MINISTER OF TRADE AND COMMERCE. It is paid as a subsidy to Montreal, but not in the case of the other ports, to St. John and Halifax. The £1,000 is only paid during the winter, and is only paid to two vessels. The other subsidy of $750 is paid for a fortnightly service, and they only go during the winter season.

Mr. SMITH (Wentworth). It is paid for each trip, though.

The MINISTER OF TRADE AND COMMERCE. It is paid for each round trip. But these vessels are very much smaller than the Allan steamships.

Mr. SMITH (Wentworth). Still, I presume they carry all the mail that is offered. I would like to ask if, in this contract where a subsidy is given, it is stipulated that the vessels should be ventilated ? These vessels all carry perishable cargoes, and it is necessary for the safety of the cargoes that the compartments in which they are carried should be ventilated.

The MINISTER OF TRADE AND COMMERCE. In a good many of them that is done. I think there are some thirty or forty steamers now sailing which do that, but they do that mostly under agreement with the Department of Agriculture, and not under the contracts they have with this department. There is one exception, the Furness Line, in which that stipulation is enforced ; but with the majority of them it is done through the Department of Agriculture.

Hon. Mr. TARTE. May I ask the hon. the Minister of Trade and Commerce what is the average duration of the trips made

by the steamers which are carrying the mail between Quebec and Liverpool ?

The MINISTER OF TRADE AND COMMERCE. I can speak better as to the trip between Moville and Rimouski. I presented this to the House the other day. The average duration is a little over seven and a half days in summer, and a trifle over eight days in winter, from Moville to Rimouski, and from Rimouski to Moville in the summer season, and from Halifax to Moville and Moville to Halifax during the winter.

Hon. Mr. TARTE. What was the duration of the fastest trips that have been made during this season ?

The MINISTER OF TRADE AND COMMERCE. The fastest trip that was made, I think, was six days and sixteen hours, I think about ten hours less than seven days, from Moville to Rimouski.

Hon. Mr. TARTE. How many fast trips, if I may call them so, have been made under seven days ?

The MINISTER OF TRADE AND COMMERCE. Answering my hon. friend from recollection, I think there were eight under seven days. But I may observe that the contract calls for an average. If they make a little better trip one time, that can count against the longer duration another time. The service latterly has been considerably better than it was a couple of years ago, that much I can say. I think there has been an improvement on the average of about twenty to twenty-four hours as compared with a year or two ago.

Hon. Mr. TARTE. If I remember right, the mail service is being entrusted to-day to several companies.

The MINISTER OF TRADE AND COMMERCE. We have tried several.

Hon. Mr. TARTE. May I ask if my hon. friend has the names of the boats under his hand ?

The MINISTER OF TRADE AND COMMERCE. The 'Pretorian,' the 'Bavarian,' the 'Tunisian.' I think are the boats stipulated in the first instance. In the event of a disaster occurring to these they are allowed to substitute the 'Numidian,' the 'Corinthian' and the 'Sicilian' and 'Ionian,' of course, under consent.

Hon. Mr. TARTE. May I ask whether steamers of some other lines have also been employed during this season ?

The MINISTER OF TRADE AND COMMERCE. Not during this season. Replying to another question of the hon. gentleman, I can give him the average time. From Moville to Halifax, it is seven days and twenty hours ; from Halifax to Moville, six days and twenty hours.

Mr. CLARKE. What is the distance between those points ?

The MINISTER OF TRADE AND COMMERCE. From Moville to Halifax it is between 2,300 and 2,400 knots : between Moville and Rimouski it is perhaps 2,500. It depends upon whether they take the south route or go via Belle Isle. But I think the shortest distance would be about 2,500 miles.

Mr. KEMP. I do not see the advantage of paying subsidies for carrying our mails from Rimouski to Moville. Letters from the district of Montreal and from the west will go to New York just as quick as they go to Rimouski ; and they would go from the maritime provinces to some ports in the United States as quick as they would go to Rimouski. As long as these slow vessels are on, what is the use of paying subsidies ?

Hon. Mr. TARTE. Is that the fact ? Let us take things as they are. When the hon. gentleman speaks of slow boats, perhaps he will remember that the steamers which are being used now are a great deal better than those used in the past. The 'Tunisian' and the 'Bavarian' rank among the best steamers on the Atlantic ocean.

Mr. CLARKE. That is as far as seaworthiness is concerned.

Hon. Mr. TARTE. I quite grant that they are not as speedy as a great many of the steamers that are plying between the old country and American ports, but let us not forget that the St. Lawrence route is the shortest route between the east and the west by nearly 500 miles. Even if we have not steamers just as speedy as the fast liners that our American friends and the German empire possess we are still able to compete with them. I would like very much to have faster steamers, but I cannot forget that the St. Lawrence is navigated to-day by improved steamers.

Mr. CLARKE. If the St. Lawrence route is the shortest route, as it is, why do you not put fast steamers on that route to accelerate the carriage of mails and passengers ? The great bulk of the people who go to England, as the hon. gentleman knows, go by way of New York, for the reason that they have better steamers there.

Hon. Mr. TARTE. I quite grant that during the winter months especially our Canadian route is not very much used, but if my hon. friend will look at the passenger lists of the steamers leaving the port of Montreal during the summer months he will find that there is not one available berth, not because our steamers are the fastest, but because our route has such magnificent scenery, which is a feature of the journey. I quite appreciate the efforts made by members of parliament who have given some attention to this question in

trying to get the hon. gentlemen on the Treasury benches to give us faster steamers, and I deprecate the idea of suppressing the very small amount that is now in the estimates to encourage our navigation companies in their work. They have an uphill work for the reason that the insurance rates have been higher on the St. Lawrence than on the American route. Let us recognize frankly that we have not done for our waterways what we should have done. We have not improved, especially our great St. Lawrence route as we should have improved it. We have not lighted or deepened it as we should have done, and let us not commit the mistake of discouraging our navigation companies. When I was a minister I remember very well that some of the navigation companies would decline to put their best boats on the St. Lawrence route. It was our fault. I do not speak in a party spirit. We had not provided in past years the necessary accommodation for trade and navigation. The St. Lawrence was not as safe as it should have been made. The amount in the estimates is a moderate one. I am sure that the great majority of hon. members will be ready to vote a larger sum fos faster steamers. But, we have a fine service this year. The 'Tunisian,' the 'Bavarian,' the 'Canada' of the Dominion line, and the 'Ionian' are very fine liners indeed. They are not as fast as I would like them to be, but in the meantime I hope that instead of discouraging——

Mr. CLARKE. We are not discouraging this service.

Hon. Mr. TARTE. I just speak my own mind and I do not make allusion to anybody—instead of contemplating the removal from the estimates of the very moderate sum of money that is there now we should try to get more money and a better service.

Mr. CLARKE. Would the right hon. minister tell us the average weight of the mail matter that is sent by these steamers ?

The MINISTER OF TRADE AND COMMERCE. Well, that is very considerable. Of course, the great bulk of newspapers, and mail matter of that description go by way of the Canadian route, while the letters are sent by way of New York.

Mr. CLARKE. Could the right hon. gentleman tell us the weight of the letters or of the mail matter generally ?

The MINISTER OF TRADE AND COMMERCE. I am afraid I could not do that very well. I will try and get the information if the hon. gentleman desires it.

M.r CLARKE. There must be some information in the department as to the weight of this mail matter ?

The MINISTER OF TRADE AND COMMERCE. That particular information is in the Post Office Department rather than in the Department of Trade and Commerce.

Hon. Mr. TARTE.

Mr. CLARKE. The right hon. minister is asking a vote for this service and I think it is not unreasonable for us to ask that we should have this information. It must be available.

The MINISTER OF TRADE AND COMMERCE. I have no doubt I could obtain from the Post Office Department a statement of the average weight.

Mr. CLARKE. If we had a statement showing the average weight of the mails carried on each of these trips, the average weight of mail matter sent by way of the Canadian route and by way of the New York route, we would be able to decide as to the appreciation which the Canadian people have of their own route.

The MINISTER OF TRADE AND COMMERCE. I could give in a general way information as to the proportion. I am quite sure that at least six-sevenths of the letters that go from Canada go by way of New York. Most of the mercantile correspondence westward of Montreal goes by way of New York. The mail matter from the maritime provinces goes chiefly from Halifax to St. John, but the great weight of the mails, that is to say, the newspapers, &c., goes by way of our vessels. Very little of that goes by way of New York.

Mr. CLARKE. Has the right hon. gentleman any figures under his hand or in his department showing the weight of this mail matter ?

The MINISTER OF TRADE AND COMMERCE. We have never looked upon it as a matter of so much per pound. I have no doubt as a matter of freight, if that is what the hon. gentleman wants to get at, that the price paid for the transmission of the number of tons of freight we send would be a very large one. But, that is not the reason for which this subsidy was originally given or has been continued. It was for the purpose of encouraging navigation from Canadian ports, and I may remind the hon. gentleman—perhaps he is not aware—that originally the subsidy given to the Allan Line was at least three times as great as it is at present. I think the subsidy, when it was first started, and that was from old Canada alone, was $408,000 a year. It was afterwards reduced to $200,000 and then it has been subsequently reduced to what it is now—between $150,000 and $170,000. The real fact of the matter is that this subsidy is given substantially for the pnrpose of maintaining inter-communication. We could easily send our mails during the summer season from Montreal and Quebec, but in order to maintain communication from the Canadian winter ports, to which both sides of the House have attached a great deal of importance, we are obliged to subsidize vessels going from St. John and Halifax very heavily, or we would have no line from these points in any degree equal

to what we now have. One hon. gentleman has asked what is the average speed maintained by the steamers. The average speed of the 'Tunisian' was 13 7-10 knots, the 'Parisian' 13 3-10 knots , the 'Bavarian' 13 3-10 knots and the 'Ionian' 13-6 knots. I think the hon. leader of the opposition (Mr. Borden, Halifax) asked me a question in regard to the distances. The distance between Moville and Rimouski, via Cape Race, is 2,455 miles, and between Moville and Halifax, via Cape Race, 2,254 miles. My hon. friend beside me (Hon. Mr. Tarte) was inquiring how many of these trips had been made in less than seven days. There were eight trips made under seven days. The majority of them were above seven.

Hon. Mr. TARTE. We have fast steamers leaving almost daily from New York and other American ports, and for a good many years to come we will be obliged to use the American route on that account, but all the same it is most desirable that we should build up our Canadian route as fast as we can.

Mr. COCHRANE. No one is disputing that fact.

Hon. Mr. TARTE. I know, but there may be some hon. gentlemen who are not as kindly disposed towards the St. Lawrence route as I am.

Mr. MACLEAN. I believe that the line of the fast service between America and Europe is from a Canadian port to a British port, and that if we had the courage to establish a fast passenger express across the Atlantic we would get all the American traffic to come our way, and instead of paying tribute to them, the American people would be paying tribute to us. But it wants a government of courage who will settle the matter at once and for all. It may be a comparatively large expenditure at the outset, but it can be financed, and it will go a long way towards elevating Canada in the eyes of Europe. I have given some attention to the matter, and the idea now is that an express boat on the Atlantic is not a great big boat of 10,000 tons, but probably one of 5,000 tons, constructed for the express purpose of making the trip in the shortest possible time. We have the most contiguous ports to Britain, and we should make some effort to establish this fast service. We have been at it for years and years, and we are further away from it now than ever before. Probably the port of Sydney would be the nearest port, or there may be a port in Newfoundland from which the Atlantic could be crossed in two days by these new turbine steamers. The question must be taken up by the government in a courageous way if we are to have this fast express service. I believe the government should try to solve the question at the earliest possible moment on some such line as I have suggested.

The MINISTER OF TRADE AND COMMERCE. The weight despatched by the Allan Line steamers from the 1st of April, 1902, to 1st of March, 1903, was : letters, and post cards, 7,330 pounds ; other matter, 60,795 pounds ; in all, 68,089 pounds. I have made inquiry at the post office with reference to the weight coming the other way, and I have been informed that it is not customary to weigh mails exchanged between countries of the postal union, except when it becomes necessary to obtain the weights for statistical purposes. No record has been kept of the weight of mails despatched to Canada from the United Kingdom, and unless the British office has done so for its own information it cannot be obtained.

Mr. CLARKE. Does that mean that the total mail matter carried for 12 months from Canada to Great Britain would be only 34 tons ?

The MINISTER OF TRADE AND COMMERCE. Thirty-five tons, to be correct.

Mr. CLARKE. Probably there would be half that much coming this yay.

The MINISTER OF TRADE AND COMMERCE. Very likely.

Mr. CLARKE. And we are paying $150,000 a year for that privilege ?

The MINISTER OF TRADE AND COMMERCE. Yes. If the House likes to abolish the service, of course, it is in its power to do so, but that would probably be very inconvenient for our friends in the maritime provinces.

Mr. CLARKE. We have no desire to inconvenience our friends in the maritime provinces, but we are most anxious that this service shall be improved and accelerated.

The MINISTER OF TRADE AND COMMERCE. Well, it is a question of cost.

Mr. CLARKE. By the way, there was a very elegant model of a bottle-necked steamer out in the lobby for some years ; what has become of it ?

The MINISTER OF TRADE AND COMMERCE. I think it was returned to Mr. Petersen along with his deposit.

Mr. CLARKE. And the interest.

The MINISTER OF TRADE AND COMMERCE. Yes.

Mr. COCHRANE. Did you test the ball-bearing apparatus on it before you returned it ?

Mr. HUGHES (Victoria). I desire to ask the Minister of Agriculture if he has given any consideration to the question of freight rates on commodities between Canadian centres and British centres. The American government furnishes the rate of all classes of commodities over all lines to and

from the great American centres, and between American ports and European ports, and I am satisfied that if these were furnished to the people for Canada they would find a very great discrimination against Canada in the matter of long haul through-traffic rates, as compared with the rates in the United States. We in Canada have taxed ourselves liberally and cheerfully to build railroads from which our municipalities derive very little taxation, and I think it quite unfair that the rates from American points to the old land should be much less than the rates from Canadian points to imperial centres over those same Canadian roads. That handicaps our farmers, and I would like to ask the minister if he purposes giving the question consideration.

The MINISTER OF AGRICULTURE. The hon. member has referred to me——

Mr. HUGHES (Victoria). I meant the Minister of Trade and Commerce.

The MINISTER OF AGRICULTURE. I may say that on a former occasion this question was brought to my attention and I have discussed it a little with the officers of my department, and I hope to obtain certain statistics in regard to it, but it will take some time to get that information.

The MINISTER OF TRADE AND COMMERCE. I have paid a good deal of attention to it and I may observe to my hon. friend (Mr. Hughes) that as a rule the steamship companies complain that the service during the winter is utterly unprofitable, so unprofitable that if they did not make a little money during the summer, they would be compelled to abandon it. Of course, statements of that kind may be taken cum grano ; but, there is no doubt that during the winter season, very little money has been made on the service from Halifax and St. John, and that it is substantially true that what they carry they carry at a loss. The House will of course recognize that, from the geographical configuration of our country, the railroad haul to American ports is very considerably shorter than the railroad haul to points on our Atlantic coast ; and the old rule that ocean navigation is very much cheaper than railroad hauling prevails. Moreover, as my hon. friend very well knows, the American routes leading into New York have very great advantages, not merely in the equipment, which is a matter of expenditure, but in the grades. You can have grain carried at an extremely low rate from Buffalo to New York, because there are no grades of any magnitude to surmount. Under these circumstances, I do not know that we can hope to compete, with the superior advantages they possess, unless we subsidize.

Mr. HUGHES (Victoria). What I want is to get the facts, and then I am satisfied that public attention will be drawn to the very points the Minister of Trade and Commerce and the Minister of Agriculture have brought forward, that it is a question of hauling, and that if we had our railroads constructed with very low grades, they would be in a better position to compete.

An hon. MEMBER. And fitted with ball-bearings.

Mr. HUGHES (Victoria). Yes, and fitted with ball-bearing axles for freight cars. I am satisfied that is coming in the near future, and that the hauling capacity of locomotives will be doubled, or increased at least 50 per cent when the cars are equipped with the modern system of ball or roller bearings. I know that our rates are higher than the American rates ; but I want the facts to be brought out, and, having found out the reason, we will proceed to reduce our grades.

Mr. ROBINSON (West Elgin). I think it is time that our railways and our steamships were so equipped that whenever Canadians wish to take a trip to Europe, they can find as good accommodation at Canadian ports as they can at American ports. I notice in reading the papers that whenever any of the members of our government, or any of our public men go to Europe, they go by New York. They are generally interviewed there by newspaper men, and they tell everything that has happened in Canada. I do not say that they have a private car to go to New York ; they surely would not charge the country with that ; but the Intercolonial is always at their disposal. During the summer they can sail from Montreal. Perhaps the river is not properly equipped, and they might be in danger in going down the river. If it is not, the Minister of Public Works or the Minister of Marine and Fisheries should have their attention called to the matter, so that our ministers' lives will not be jeopardized. Then, they can sail from Halifax, which is one of the best ports in America. Why do the ministers not set the example and sail from our own ports ? It is time that their attention was called to this matter.

The MINISTER OF TRADE AND COMMERCE. If the hon. gentleman looks at the records, he will find that the Prime Minister set a good example, for he both went and came by the Canadian route.

Hon. Mr. TARTE. I wish to take issue with the statement just made by my hon. friend the hon. Minister of Trade and Commerce. He has stated that we cannot, in his opinion, compete with the American railways running between Buffalo and New York. My hon. friend is mistaken, and the facts are there to prove that he is mistaken. The distance between Buffalo and New York by rail is 445 miles, not one more, not one less. The distance between Depot Harbour and the port of Montreal is, in round numbers, 370 miles ; the distance between Midland and Montreal is 365 miles. Now, the

rates from Duluth, Chicago, Milwaukee, Buffalo and Fort William, Port Arthur and Parry Sound, are the same. They were very low last year; at one time they went as low as one cent a bushel for wheat—not for a very long time; but for two or three weeks the rates between these points and the Atlantic ports was one cent a bushel. The average rate during the whole season was one and a half cents, the rate being the same by the Canadian route and by the American route. What was the railway rate between Buffalo and New York? It was on an average three and a quarter cents, or, let us say, three and a half cents. The rate was not higher on our Canadian routes. Mr. Booth, of the Canada Atlantic Railway, and the Grand Trunk Railway, carried grain for three cents a bushel. There is no reason why we cannot compete even as we are located to-day with the American railroads. The reason why we have not been more successful in the past is not that the rates have been higher on the lakes from the grain distributing centres, but that the rates on the St. Lawrence route from Montreal to the English market have been higher; and why has it been so? Because as I have said repeatedly, and as I cannot say too often or too earnestly, we have not improved our St. Lawrence waterway as we should have done. We have not been quick enough in that respect. Fortunately things have been improving every day, and I have no hesitation in saying that the St. Lawrence to-day, between Quebec and Montreal is in good shape. During the last three or four years it has been widened, dredged, better lighted, and made a safe route. The St. Lawrence between Quebec and Montreal will, within a year or a year and a half, or two years at the outside, have a uniform depth of thirty feet at low water, that is to say, from the 15th of September to the close of navigation, and at other times from thirty-three to thirty-five feet of water; and it will have a width of four hundred and fifty feet in the straight parts and six hundred or seven hundred feet at the curves.

Mr. CLARKE. Will the same pilotage system continue in the future?

Hon. Mr. TARTE. I quite grant that our pilotage system has been bad in the past. It is improving, however. I wish it were improved more quickly. I wish the Department of Marine and Fisheries, as I have frequently suggested, would take charge of the pilotage; the country would then become responsible. However, that is a matter of detail. Let us go on with the improvement and equipment of the St. Lawrence. Let us do it now. I fully agree with my hon. friend the Minister of Trade and Commerce, of whose wide experience we are always glad to avail ourselves, that our waterways are the only practicable and feasible means of competition with our American neighbours.

Mr. SPROULE. Can the hon. gentleman give us the freight rates from Montreal to Liverpool?

Hon. Mr. TARTE. I have not got them under my hand. For the last year or two there has not been as much difference between them and the rates from American ports as during the past. In the past there has been a difference of at least 50 per cent, and at times more; but all that is simply a question of detail.

Mr. CLARKE. Is there any reduction in the insurance rate?

Hon. Mr. TARTE. The Canadian Pacific Railway have arranged with Lloyds for a much lower rate. I think that the Allan Line also insure at lower rates. When the insurance companies have no longer the pretext that we have been neglectful, they will be obliged to come down.

Mr. CLARKE. The experience of the insurance companies has not been a very happy one.

Hon. Mr. TARTE. Navigation companies have met with accidents in the Lower St. Lawrence as in other parts of the world, and the insurance companies have been very zealous in charging against the St. Lawrence route wrecks that have taken place even elsewhere. However, let us equip that St. Lawrence route as fast as money and energy can do it. It is easy to have first class lighthouses and fog signals. Money and energy can secure all that. During the last year or two the Department of Marine and Fisheries has moved ahead pretty fast. There is now no danger between Quebec and Montreal of a complete wreck, even if a steamer should meet with an accident. As the St. Lawrence is becoming lighted up more and more between Quebec and Montreal, in a year or two that part of our navigation will be perfectly safe. I came up the river a few nights ago in very dark weather, and I found the system of lighthouses between Sorel and Montreal so perfect that the biggest ship can navigate at night without any fear at all. The St. Lawrence is lighted up just as Sparks street is; and if we go on in improving our Canadian waterways, we can secure the trade.

Mr. COCHRANE. Are not the freight rates across the Atlantic from a Canadian port more expensive than from an American port?

Hon. Mr. TARTE. Why should they be? They have been in the past, but why should they be in the future? From New York to Liverpool the distance is 3,000, and from Montreal to Liverpool it is 2,600. If we make our system safe, why should the rates be higher?

Mr. COCHRANE. Is it not a fact that to-day the freight rates are higher from Halifax and St. John, or even Quebec, than from an American port?

Hon. Mr. TARTE. I am talking especially from the standpoint of the port of Montreal. The rates are about the same from the port of Quebec. At times they are a little higher, for the excellent reason that the port of Quebec has not been able to supply the same kind of freight that Montreal does, but as a rule the rates are the same. As regards Halifax and St. John, I cannot say, but I believe that I am right in stating that the Canadian Pacific Railway, now that it has acquired a fleet of its own, will be able to make through rates just as cheap as any American company. If we stand by our Canadian route, we will accomplish our object. The nations of the world, which have become great, were not discouraged at the first attempts. I have been reading lately a good deal of the history of the German empire, which to-day is second as a maritime power. How was that accomplished? Because it has not been afraid to spend money on its own waterways and in subsidizing its own navigation companies. Its trade now covers the world. There is no reason why, when we certainly have the choicest route, we would not be able to make it the best. Let us not forget that the St. Lawrence route, for perishable products, such as butter and cheese, is far superior to the American routes, as it is cooler and fresher. If the hon. Minister of Agriculture will allow me to make a suggestion, I would suggest to him that his officers, who have given a great deal of attention to the agricultural trade, could do more in Montreal. On the wharfs themselves there should be refrigerators to receive the butter and cheese from the cars. We know very well that to carry butter and cheese only a half a mile under a hot sun will damage these products very much. Therefore, I believe that it would be of the greatest advantage to the country to have on the wharfs at Montreal and elsewhere the accommodations which are found in all equipped ports of the world. It always surprises me to hear some of our friends complaining that we are spending money on our harbours. Why, we have scarcely begun to spend money. What is it to spend five or ten millions on a great national harbour, when other nations are spending thirty millions, fifty millions—any amount that may be necessary to make their harbours commodious, speedy and capable of handling goods to advantage? I apologize to the committee for having spoken so long.

The MINISTER OF TRADE AND COMMERCE. In answer to the hon. member who asked the question, I may say that the current rate from our ports to Liverpool is 5½c. per 100 pounds on wheat and other kinds of grain.

Hon. Mr. TARTE. That is during this season?

The MINISTER OF TRADE AND COMMERCE. At present. That is probably the lowest rate ever attained, and I am advised that it compares favourably with the rate by New York.

Mr. COCHRANE. Has the right hon. gentleman the freight rate from Chicago and other points on cheese and butter?

The MINISTER OF TRADE AND COMMERCE. I cannot give the rate on cheese and butter. It varies a good deal. From such a point as Midland to Liverpool, the rate is 12½c. That would give 5½c. to the steamship and 7¼c. to the railway.

Mr. KEMP. I would not take second place to my hon. friend from Montreal, St. Mary's (Hon. Mr. Tarte), in my enthusiasm about the St. Lawrence route. I did not design to bring about the discussion that has arisen as to the St. Lawrence route as a route for freight traffic. I spoke of the carriage of mails and the subsidy we are giving for the carrying of mails. I agree with a great deal of what has been said by my hon. friend (Hon. Mr. Tarte), and I should say further that this year, up to the present time, more freight has gone by the St. Lawrence route than in any other similar period in the past. This of itself must prove that the freight rates by that route must be favourable, at least so far as grain is concerned. As to butter and cheese, that is another question. The St. Lawrence route is the popular route for dairy products. Our Canadian shippers do not avail themselves of the facilities by American ports for these products. One reason is that ours is cooler and the facilities are better. As to the insurance rates, it is to be borne in mind that when the Canadian Pacific Railway bought out the Elder-Dempster Company, the insurance rates on the vessels bought were reduced. That will afford us some encouragement on this subject. We have a right to regard the St. Lawrence route more hopefully than at any time in the past. I believe that the grain of this great northern part of the continent will go by this route in increasing proportions year by year. What I wished to draw attention to is this: The Minister of Trade and Commerce has told us that the quantity of mail that went by the Canadian steamers, for which we pay $150,000, was 68,000 pounds, or about 35 tons.

The MINISTER OF TRADE AND COMMERCE. That is one way only.

Mr. KEMP. Would there be as much coming this way?

The MINISTER OF TRADE AND COMMERCE. Not quite.

Mr. KEMP. I quite admit that the Tunisian is a very fine vessel, and we are thankful that we have so very fine a vessel. There are one or two others that are creditable. But these vessels are not fast enough for a mail service. In the discussion that has taken place, it has been clearly brought out

that that 35 tons of mail matter is carried from Canada and about the same quantity from Great Britain to Canada—say 70 tons of mail altogether. The subsidy we pay would be equal to about $2,150 a ton. The ordinary rate of freight from Great Britain to Canada per ton of 2,240 pounds is from $3 to $5, and from Canada to Great Britain it is a little more. I cannot think that the maritime province people are availing themselves of the facilities provided. The hon. Minister of Trade and Commerce says it is not so much the Rimouski route that we care about as providing these facilities for the maritime province people. Let us see what this means. An ordinary freight car carries 40 tons. It must be plain, when our total mail matter one way amounts to only 35 tons, that the maritime province people are sending their mail by way of New York.

Mr. CLARKE. That 35 tons includes packages.

Mr. KEMP. Yes, this includes mail matter of all kinds. I think it is clearly demonstrated that the people in no part of the country are availing themselves of these facilities. I think the time has come when the government should look at this matter seriously and see where we are at. Are we to have a fast Atlantic line? Is it a thing we can afford? What is our policy to be? Certainly, we should not go on paying $2,150 a ton for mail matter between Canada and Great Britain. The thing, to my mind, is unreasonable.

Mr. ROBINSON (Elgin). What the hon. member for Montreal, St. Mary's (Hon. Mr. Tarte), says may be quite right. But he was for a number of years Minister of Public Works, and I think he had an excellent opportunity to improve the St. Lawrence river so that large boats could go up and down it without danger. Before the hon. gentleman became Minister of Public Works I went down the river twice and returned twice. It was safe enough for me; and I think if it is good enough for me, it is good enough for the hon. member for St. Mary's or any member of this government. We are all anxious to see the port of Montreal well equipped and made a free port if possible. But we want to see the people of Montreal take an interest in their own port. I had the pleasure of visiting Montreal a few weeks ago, and that was not my first visit. I lived there over forty-three years ago. And in my recent visit I found Montreal, with the exception of the harbour, very little improved so far as cleanliness is concerned. The farmers of Ontario will hesitate very much before they ship butter and cheese and other goods that will spoil through tainting by way of Montreal. If there were any members representing the city present I would try to lecture them on this point. There is plenty of water in the St. Lawrence river to keep the city clean, and if the people there expect the farmers of Ontario to ship their produce that way, they must keep their city clean. I will not say what further I saw in Montreal. But the next time I go, if it is not in better shape than it was two weeks ago last Saturday, I will tell you about it.

Mr. SMITH (Wentworth). This discussion has brought out the fact that this subsidy of $150,000 is not given for the purpose of carrying the mail. It is given as a subsidy to secure these vessels going and coming by way of Montreal and St. John. If we get a well-established and satisfactory service, the money is well spent. As I have suggested already, these vessels should all have thorough ventilation. The minister has said that in one or two cases it has been stipulated in the contract that this ventilation should be provided. I would like the minister to say what lines are subsidized by this $150,000.

The MINISTER OF TRADE AND COMMERCE. The Allan Line only.

Mr. SMITH (Wentworth). Is it contracted with the Allan Line that the vessels should be thoroughly ventilated?

The MINISTER OF TRADE AND COMMERCE. The 'Tunisian' and the 'Bavarian' have refrigerators. I have explained that this subsidy is not primarily granted for mail services; I have never contended, and I do not think any of my predecessors ever contended, that we were receiving good value in a mail point of view from this service. Practically speaking, we could get everything we wanted carried at very trifling cost during the summer season; but you cannot maintain a service from the Atlantic ports in winter unless you subsidize it. That is the exact position.

The MINISTER OF AGRICULTURE. The hon. gentleman is mistaken in saying that we are paying the 'Tunisian' and the 'Bavarian' subsidies for cold storage. These two ships are not getting a subsidy at the present time for cold storage.

Mr. SMITH (Wentworth). Have the government not paid anything for cold storage or for cool storage service on either of these vessels?

The MINISTER OF AGRICULTURE. Not for cool storage, and I do not think for cold storage either.

Mr. SMITH (Wentworth.) Do the government not pay anything for cool storage on either of these vessels?

The MINISTER OF AGRICULTURE. I would not say positively about cool storage, though I do not think either of these vessels are amongst those for which we are paying for cool storage. As to the cold storage, I am not positive.

Mr. SMITH (Wentworth). The point is this: We are paying $150,000 subsidies to

the Allen Line, and as we get nothing out of it in the way of a mail service, we should get something out of it in the way of a freight service. I have heard the Minister of Agriculture complain in this House that he or the members of his staff did not feel that they were in a position to compel these steamship companies to provide the proper ventilation necessary for carrying perishable products. But here is an opportunity to secure that when these contracts are made. When something is paid for which no other service is rendered, the least the minister can do is to provide in that contract that these vessels should have their compartments properly ventilated in which perishable products are carried. In one of the contracts that is provided, so there can be no excuse why it should not be called for in the other contracts.

Mr. MONK. The reproach made by the hon. member for Elgin (Mr. Robinson) to the city of Montreal, rankles in my bosom. I can say in the language of Shakespeare :

I am not prone to weeping as some folks commonly are, but I have that honourable grief lodged here which burns worse than tears drown.

I do not think the hon. gentleman is justifiable in his aspersions upon the city of Montreal. Montreal is not such a dirty city as he would have us suppose. The houses are clean, the port is not in an unclean state, and I am sure the people are clean. I am quite sure that the agricultural products which come from the province of the hon. gentleman pass through less clean places than the city of Montreal. We have had a very unfortunate period in our municipal administration. We lost a great deal of money in a way in which the money should not have been lost. Some members of this House who know something of our municipal history, know that that state of affairs which has existed in the past has now come to an end. We have a better administration, an improved administration, and a large sum of money is going to be spent next year in keeping the streets clean ; that is the principal point. So the hon. gentleman need not discourage people from sending freight through that very important port. I would like to add this at the same time, since my hon. friend from Northumberland (Mr. Cochrane) has raised the question. It is very important, when we give such large subsidies to steamship companies, that we should know what is the rate of freight for agricultural products, and how that rate compares with the rates of American shippers. The Americans are great rivals in the carrying trade, and it would be a proper thing for this government to treat primarily with the steamship companies in order to secure from them such a rate of freight as would enable us to compete with the American lines. That would not be difficult, and I do not think it has been done, or attempted by this government. Competition is becoming very close, and it seems to me that such a step as a conference with regard to the rate of freight in order if possible to secure one that is fair and just, should be a necessary precedent to the granting of a subsidy. I would apply the same remark to the question of insurance. It is no use for us to improve the St. Lawrence, to spend millions of money upon that route, unless, by a conference with the underwriters on the other side of the Atlantic, we can secure from them more favourable terms of insurance, as we spend more money to make the navigation of the St. Lawrence safer. Now, these men reside at a distance. As the hon. member for St. Mary's (Hon. Mr. Tarte) said, they charge up all losses to the St. Lawrence route. It seems to me it would be a fit and proper thing for the members of this government who travel frequently to the other side of the Atlantic, to meet these men and to find out upon what conditions they will improve their insurance rate, provided we carry out the improvements which from time to time have been suggested, and which possibly these gentlemen might suggest. I am sure that if this government made such arrangements with these underwriters, who to a large extent, naturally, ignore the improvements we are carrying out on the St. Lawrence route, we would before long have a diminution of these insurance rates. The rates upon freight, which most largely concerns the public, are far more than the rates upon the steamships themselves. These rates have not, so far as I am informed, been diminished, in spite of all the money we have spent upon this route. They remain stationary, and will remain stationary, until we bring these people on the other side to understand that every million of money that we spend upon that route tends to diminish the danger and protect the underwriters. Some years ago, I believe, it was contemplated to organize a marine insurance company upon this side of the Atlantic. I believe that would be a proper thing to do, and this government should assist such a company if it was formed. There is no doubt that if we created on this side of the Atlantic a company of underwriters amongst ourselves, who would be able to follow much more closely than European underwriters the improvements we are making in the St. Lawrence, a very salutary rivalry will be created between those who do an insurance business, to the advantage of our Canadian shippers.

Mr. KEMP. May I ask the Minister of Customs what he did last summer, during his long stay in London, with regard to interviewing the underwriters to see if it is possible to get better rates from them on the steamers which sail on the St. Lawrence route ?

The MINISTER OF CUSTOMS. Personally I did not have any such interview.

I think the Postmaster General could give information on that point.

Mr. KEMP. Did he have interviews with the underwriters on that subject ?

The MINISTER OF CUSTOMS. I think the hon. Postmaster General had.

The MINISTER OF TRADE AND COMMERCE. We have had many interviews with the underwriters, and the case is no doubt one that deserves all the attention the House can give to it because the rate of insurance is one of the great obstacles in the way of making the best use of the St. Lawrence route. They presented a statement to the effect that the number of disasters that had occurred in the St. Lawrence was so numerous that for several years their accounts showed a loss and not a gain. Of course, this was their statement, and I give it for what it was worth.

Hon. Mr. TARTE. Of course, if my right hon. friend remembers the fact, these underwriters——

The MINISTER OF TRADE AND COMMERCE. They charged us with a wreck that occurred on the Scotch coast in one case.

Hon. Mr. TARTE. And they took the last ten or twelve years without taking into account the improvements made within the last five years. I remember very well discussing it with them and showing them they were wrong, because they were simply charging against us all the accidents that had happened in the past. The St. Lawrence has been improved very much within the last four or five years, it is improving year after year and day after day. There is no ground for the extra charges that the Lloyds are exacting from us—and I cannot see for the life of me why they are allowed to do so. Of course, they are a very powerful company and I apprehend that our American friends, being a little bigger than we are, may have more influence with them in London than we have ourselves. But when we have done our duty, when we are on the right side, when all our improvements are completed, if they do not do the right thing—I may not have much to say in public affairs then, but I hope I would not hesitate to take the most energetic measures to see what we could do here to improve the conditions in regard to insurance.

Mr. WRIGHT. I would like to ask the hon. gentleman if it has not been reported to the House already that there was a reduction made in the rate on the Canadian Pacific Railway line of steamers ?

Hon. Mr. TARTE. Yes.

Mr. WRIGHT. Then, the good work has commenced.

Hon. Mr. TARTE. Yes, because we have ourselves done the good work of improvement. Things are not going badly, but it seems to me they should go better. I take every opportunity to impress upon the House the necessity of not delaying any longer the improvement of our waterways. It is obvious that they are the best means of trade that we have at our disposal. If that is so let us not lose time.

Mr. CLARKE. What has been the experience this season so far on the St. Lawrence route ? How many marine casualties have taken place ?

Hon. Mr. TARTE. There have been scarcely any accidents between Quebec and Montreal.

Mr. CLARKE. I am speaking of the river generally, not of that particular part of the river.

Hon. Mr. TARTE. There have not been any accidents of any magnitude. Lately there has been the loss of the 'Monterey' of the Canadian Pacific Railway Line and it was off the island of St. Pierre Miquelon, not in our territory at all.

Mr. BICKERDIKE. In answer to the hon. gentleman for Jacques Cartier (Mr. Monk) in regard to the insurance rates, I would say that I do not think the underwriters are charging at all an exorbitant rate from this country. You can get your cheese insured at 20 cents per $100 all the way from Toronto to the interior of England with ten days on the wharf at either end. Surely that is not an exorbitant rate. The rates have gone down during the last two years 50 per cent, and this reduction is largely due to the improvements made in the St. Lawrence route. In regard to the establishment of a company on this side, I may say that there are two or three companies which have exclusively Canadian shareholders. We have the Royal Marine Insurance Company, recently established at Montreal, the British American and the Western nearly all with exclusively Canadian shareholders. To-day the rates are down to twenty cents per $100 for the best steamers, such as those of the Allan Line, including ten days on the wharf on each side. Will any hon. member of this House undertake to say that that is the reason why the business is not going by way of the St. Lawrence route ? The Canadian Pacific Railway got a reduction of 25 per cent in the spring of 1903. Last season we had seven or eight wrecks in the St. Lawrence or in the gulf. The government instituted very searching inquiries as to the causes and in every case the accident was due to no want of improvement in the St. Lawrence route but to the inefficiency of the officers.

Mr. CLARKE. Of what officers ?

Mr. BICKERDIKE. In some cases of the captain, in some cases of the mate, and in other cases of the pilot, but I do not think there is a single case where the cause has

been brought home to any defect in the St. Lawrence channel. These facts have been brought home to the Department of Marine and Fisheries by Commander Spain who has had charge of several investigations and by Commander Salmon who also inquired into some of the cases and in every instance they brought home the fact that the accident was not due to any defect in the channel, but was due to inefficiency on the part of the officers.

Mr. BORDEN (Halifax). How do the rates of our own underwriters compare with the rates charged by Lloyds ? I suppose we have Canadian underwriters who take risks on the St. Lawrence route. Are they practically the same ?

Mr. BICKERDIKE. They are practically the same.

Hon. Mr. TARTE. How do these rates compare with the American rates ?

Mr. BICKERDIKE. The American rates are about 20 per cent less than ours.

Mr. MONK. That is what I was referring to. My hon. friend (Mr. Bickerdike) is at the head of an insurance company himself, and my experience of insurers is that they have always found the rate of insurance extremely moderate and reasonable, while the larger class of the insured have always found these rates very exorbitant and high. I will not discuss the question of rates because I am not familiar enough with the question of insurance to do so, but the point is that our rates are very much higher than the American rates. That is the question which I want to bring to the notice of the committee.

Mr. BICKERDIKE. It must naturally always be so because there are several hundred miles of river forming a part of our route which is always more dangerous.

Mr. COCHRANE. I thought the hon. gentleman said there was no trouble in the river at all, but that these accidents were due to the carelessness of the officials.

Mr. BICKERDIKE. Exactly.

Mr. MONK. That is the question and without suggesting for a moment the creation of a commission which is rather à la mode for this government, it seems to me that if we had a man specially qualified for the purpose of acting for the government, taking up that question and representing to the insurance companies the value of the improvements we are making to the St. Lawrence route every year, steps would probably be taken before long to bring the insurance rates down to such a figure as would enable us to contest successfully with American ships.

Hon. Mr. ROSS (Victoria, N.S.). The subject under discussion has extended over a very wide range. In the first place, I hope there is no hon. member on either side of this House who would discountenance the $150,000 vote, because by the grant alone can we ensure communication. If we depend upon trade vessels they can come and go just as they please to suit their own convenience. The hon. member for Montreal, St. Mary's, (Hon. Mr. Tarte), to use his own expression is always fresh when speaking about the St. Lawrence route and the improvement at the port of Montreal. The port of Montreal has an advantage this year because of the abolition of the canal tolls, and that has increased its trade. I hope that later on not only Montreal, but other ports in this Dominion will become free ports, and that I believe will result in a large volume of trade coming to them. The question of the cleanliness of the streets of the city of Montreal is somewhat outside of this discussion and I shall not refer to it. There is one thing we must not forget, and that is that the port of Halifax is 250 miles nearer Great Britain than any other port in the Dominion.

Mr. KEMP. What about Sydney ?

Hon. Mr. ROSS (Victoria, N.S.) Yes, but you cannot use Sydney all the year round. I am a Sydney man because I was born on the Island of Cape Breton and everything connected with that island is dear to my heart. I would hold up both hands for Sydney if you could use it all the year round. The port of Halifax does not require to be deepened. It has every facility at the present time except that perhaps you would want more docks for steamship accommodation. The merchants of Halifax are sometimes sneered at because it is said they are not up to the times, but the fact is that there are seven or eight wharfs in Halifax to which the largest steamers can come and these wharfs were built by the merchants of Halifax with their own money and without any outside assistance. I was pleased to find that one gentleman from Ontario takes an interest in the port of Halifax. I wish to say a word in favour of the views of the hon. member for East York (Mr. Maclean). As every one knows I am an old man, but perhaps I am a little in advance of the government in my ideas as to what a fast line should be.

Mr. CLARKE. That's easy.

Hon. Mr. ROSS (Victoria, N.S.) If we have a fast line from Canada the passengers will go by that fast line when we can prove that we can shorten the ocean voyage two days to Great Britain as compared with New York. The United States is a large country and the passengers will come to the place from which you can make the shortest ocean trip. If a gentleman with his family wants to go to Europe he wishes to avoid seasickness as much as possible, and he will go to the port from which the quickest ocean voyage is made. I am not disappointed that we have not a fast line just now for the reason that I am disap-

pointed at the rate of speed which the government have stipulated for this fast line.

Mr. ROBINSON (Elgin). I may say that a lady who is anxious to get to Europe without seasickness should take the ship at Montreal for the reason that she gets used to the swing of the boat before she gets out to sea, and then she will not get seasick. Every Canadian who wishes to avoid seasickness should take the steamer at Montreal or Quebec and not go to Halifax.

Hon. Mr. ROSS (Victoria, N.S.) You cannot go to Montreal in the winter time.

Mr. KEMP. I wish to ask the hon. member for St. Lawrence (Mr. Bickerdike) if the hulls of British steamships are insured in Canadian companies ?

Mr. BICKERDIKE. No. There are no Canadian insurance companies large enough to do that business. It is done entirely at Lloyds in England.

Mr. KEMP. That is what I thought, and of course the hull is usually worth more than the cargo. I wish to ask the Postmaster General what steps were taken when the members of the government visited London last summer in regard to the rate of insurance on British ships coming to the St. Lawrence ?

The POSTMASTER GENERAL. I attended before a committee of Lloyds, and I stated that the opinion prevailed in Canada that Lloyds was discriminating unfairly against the St. Lawrence water route. These gentlemen pointed out some reasons that seemed to warrant their action, attributing however to the St. Lawrence route disasters that were not fairly attributable to it. In fact I think that they even attributed to the St. Lawrence route disasters to vessels sailing from a Canadian port though these disasters happen on the coast of England or Scotland. However, they stated that they were anxious to remove any discrimination, and on behalf of the government I invited them to send representatives to Canada to study our route and to point out what action on our part would remove these difficulties. I stated on behalf of the government that we would pay all the expenses of that examination in order that we may know definitely if possible what their objections were, so that we might take steps to remove these objections. They have promised to send a committee here, but I am not aware that they have done so yet.

Mr. CLARKE. Was anything said at that conference about the fast Atlantic line ?

The POSTMASTER GENERAL. That was not the subject we were discussing at Lloyds.

Mr. CLARKE. I thought it was anticipated that there would be a good deal of difficulty in getting insurance for these ships.

The POSTMASTER GENERAL. That was not the subject of discussion.

Mr. KEMP. The Postmaster General can hold out no hope from any expression of opinion on the part of the underwriters that there will be a reduction in the insurance rates in the immediate future.

The POSTMASTER GENERAL. I would not be warranted in speaking for them. They expressed the utmost friendliness towards Canadian trade and a desire to be fair. They explained however that Lloyds, as we all know, is not a corporation having a fixed rate of insurance, but that the rates are fixed by the opinion of the underwriters on each occasion. When a bottom is to be insured the broker goes to the room where the different underwriters have their desks and he presents a memorandum to the underwriters showing what amount of insurance is wanted on a certain ship, and he puts down the rate offered and all who are willing to underwrite at that rate do so. The broker, from the knowledge of the requirements of the individual underwriters, practically estimates what the rate will be and the figure is reached as the result of the prevailing opinion among the underwriters. The difficulty is of course to change the opinion of the underwriters. I found a very friendly feeling on the part of the committee towards Canada and a desire on their part to be satisfied that our route was not entitled to be black-listed as it has been. Perhaps some correspondence has taken place betweeen the Minister of Marine and Fisheries at the time (Hon. Mr. Sutherland) and the underwriters. But the point I pressed upon them was, that they should themselves send representatives to learn for themselves that the reason for discrimination no longer existed or, if it did, then to have that reason made clear with a view to its removal.

Mr. KEMP. I would like now to inquire as to what the cost is of carrying the Canadian mails from here to New York, and transferring them across the Atlantic ?

The POSTMASTER GENERAL. The rates are fixed by the International Postal Convention. I cannot say from memory what they are.

Mr. KENDALL. There is a phase of this question which I would like to accentuate. The insurance companies, I think, are not entirely to blame. The steamship companies are very largely to blame for many of the wrecks that occur. To show this, I may mention two incidents that came under my own observation. By accident I happened to be in the office of a large steamship company in London when I heard the captain of one of their vessels soundly censured by one of the directors for not having made better time on two of his recent trips. The captain pleaded that he had to run through a fog, and that if he had run faster, he would have been in danger of running into

icebergs. I heard that director tell the captain that if he was not prepared to make better time, the directors would find a man who would do so. On another occasion I sailed from Halifax to London. We had fog a large part of the way. I did not hear the conversation myself, but I learned in London that the captain of the steamship was told, as the other had been, that if he was not prepared to make good time, he would be dismissed. I returned on the same boat. When we reached the banks it was at night and we were in a fog. The captain was asked to slow down. He promised to do so, but he continued to run the boat at the same rate as before. At six o'clock in the morning the fog arose, and we saw an iceberg close on our bows. I am not going to make this statement on my own authority, but on the authority of a sea captain who is very well known in the maritime provinces. Referring to the accidents that occurred in the St. Lawrence last season, this captain—who has had a large experience in the gulf, and has never, I believe, had an accident—said that neither of these accidents would have happened if the captains had not been too anxious to shorten the time between the points. He further said that no matter what appliances might be placed in the dangerous parts of the gulf, in the shape of lighthouses and fog-whistles, unless the sea captains were ordered by the steamship owners not to hug the chief dangerous points too closely, no precautions we might take would prevent disasters in the gulf of the St. Lawrence.

Hon. Mr. TARTE. All of us who have travelled by the American and Canadian routes in the fall season know very well that there is as much fog on the banks by the American route as there is by the Canadian route. I have made several trips by both routes, and I can state that there is as much fog on the routes from Boston, New York and Philadelphia as there is on the route from Quebec. So that the fog cannot be fairly given by Lloyds as a reason for the high insurance rates. I am very much afraid that the genuine reason for Lloyds action is the large volume of trade between the American ports and England; they have too much influence for us. Now, we are passing through days of government ownership. Governments are becoming more and more inclined to assume heavy responsibilities. It seems to me that when the trade of the country and its good reputation are at stake, the government might take some little risk; and if Lloyds, who have been invited by my hon. friend to come and see our improvements, and who have not responded to our invitation, and may not respond—if they do not come to terms, the government might to a certain extent become our own insurers. It is a feasible thing. Lloyds must understand that we are somewhat of a nation now. When we talk of fifty millions, and one hundred millions, we show that we have courage; and if my hon. friend and former colleague would speak loudly enough on that insurance question, it seems to me that Lloyds would come down. The St. Lawrence has been improved, and we are continuing to improve it every day; and yet the more we improve it the less it seems Lloyds recognize the improvement. When the Canadian Pacific Railway Company became the owner of their line, the reason that was given, I think, for lowering the rates was that that company were sure to secure the services of the best officers. My hon. friend the member for St. Lawrence (Mr. Bickerdike) was right when he said that the accidents that were investigated last season were all found to be due either to incapacity or bad conduct on the part of the officers. I am very much afraid that some of the companies are trying to secure cheap men. You cannot have good men in these days of prosperity without paying for them.

Mr. BROCK. I think the object we all have in view would be very much advanced if we were a little more moderate in our desires for a fast service. The service which the government seem to have been striving for is a twenty-knot or twenty-two-knot service. I think we would be much more likely to arrive at a satisfactory conclusion of this matter if the government would be satisfied with an eighteen-knot service. This is a service which could be rendered by a good many lines which would be shut out if we insisted on the faster rate. It is said that passengers will go a long distance by land in order to take a short trip by ocean. That was the case many years ago when we had a poor class of vessels on the Atlantic. At the present time, with the comforts provided on first-class steamers, there is not such a desire to cross the Atlantic in a short time. And here the subject of insurance comes in. You can get one of our first-class steamers insured to-day from Liverpool to Montreal at a great deal lower rate than you can a steamer which is forced to cross the Atlantic at the rate of twenty-two knots an hour. When crossing from the other side, as soon as we are at all near the banks of Newfoundland or the shores of Canada we run the risk, at certain seasons, of being detained by fog during two or three days. A twenty-two knot steamer cannot go faster through a fog than an eighteen-knot steamer, and it costs a great deal more to keep her going. The expense of running a twenty-two knot steamer per day is enormous compared to that of running a sixteen or eighteen knot vessel. I quite agree with the hon. member for St. Mary's division (Hon. Mr. Tarte) that in the attempt to run our steamers as cheaply as possible across the Atlantic, one of the means adopted is to get cheap men. To this no doubt is due some of the accidents. What should be rather aimed at is to get men who will bring our steamers safely across. The steamship

companies appear to value a man by the shortness of the time he takes to bring his vessel from port to port. This has a good deal to do with the losses that have occurred on approaching our shores and also in going up the St. Lawrence. But it seems to me we pay a very heavy price for the sake of saving an hour or two in speed. Having crossed the Atlantic some sixty or seventy times, I have a little of experience in the matter ; and I know that at present, when the passages are made so pleasant and comfortable, there is not the same desire as formerly on the part of the passengers to reach shore speedily. With all the comforts on board, electric lights in the cabins, exquisite music, luxurious drawing-rooms and smoking-rooms, first-class table, and everything as comfortable as possible, the passengers, as a rule, enjoy their trip too well to be in any great hurry to finish it. Some years ago, when we used to have to smoke alongside the smokestack on the hurricane deck and when our cabins were right over the screw, the case was different, and people were anxious to get across as speedily as possible. But to-day you cannot get people to risk crossing on a twenty-two knot steamer and pay the extra price, when they can cross on an eighteen knot steamer for several pounds less. I would urge on the government, in its negotiations for a fast Atlantic service, to keep safety in view rather than speed. The greater the safety the lower will be the insurance. If you insist on a twenty-two knot service, it will be impossible to get freight, because the rates will have to be so high to meet the extra insurance and expense of running these fast steamers. I do not believe that the country would care to pay a million dollars per year subsidy for a fast Atlantic service such as is talked about. Many of those who advocate such a service would be the very last to commit the country to the expenditure of a million dollars a year for it.

Mr. SMITH (Wentworth). In what particular does the contract with the Allans of this year differ from that of the 15th of March, 1901 ?

The MINISTER OF TRADE AND COMMERCE. It is the same contract.

Mr. SMITH (Wentworth). I do not find in it any reference whatever to the ventilation of the steamers.

The MINISTER OF TRADE AND COMMERCE. There is not.

Mr. SMITH (Wentworth). I wish to draw attention to this very important matter. If the whole $150,000 a year were paid for that purpose alone, it would not be money thrown away by any means. We have had up to the last year or two our vessels carrying perishable articles to the old country in a very bad shape indeed. The loss has been millions annually on the various perishable products, especially apples. The hon. Minister of Agriculture has told us at times that he does not find himself in a position to dictate to the vessel-owners or to go on board these vessels and see if the fans, which the government pay for, are being used. But when the government give a large subsidy it should put a condition in the contract that these vessels be ventilated. Some of them are ventilated at a trifling cost to the government or free of cost to the government ; but we cannot tell if the ventilation is proper unless an officer of the government has the right to go on board and make the tests in order to see whether the fans are being used or not. That cannot be done now unless by the courtesy of the steamer-owners, but it could be easily provided that we should have the right to do it.

The MINISTER OF TRADE AND COMMERCE. The suggestion of the hon. gentleman is well worth considering, and I shall take a note of it.

Mr. SPROULE. With regard to the remarks of the hon. member for Toronto (Mr. Brock), as our silence might be interpreted as an assent to his observations, I wish to say that I do not agree with him. We are living in a very fast age. As Fanny Fern says, we are all somewhat of the squirrel order, on the rush from morning to night. It is not the custom of travellers to-day to take very kindly to a slow road, whether it be a steamboat line or any other mode of conveyance. The faster we go, the better we like it. It would not be worth while for the government to provide a subsidy for a fast steamship line if it could not do better than eighteen knots an hour. I do not think we should give a subsidy to a line that would make no greater speed. If we have a fast line at all, it ought to be equal to the very best, or we will not get the travelling public.

Mr. LOGAN. I can heartily endorse what the hon. member for East Grey (Mr. Sproule) has said. To subsidize a sixteen knot service would be simply throwing away the money of Canada. Let us either have a fast service or not subsidize a service at all. We have to compete with the New York route. In my opinion, we ought to secure a fast service across the Atlantic with the least possible delay. There seem to be many difficulties in the way of our doing so, and I do not know that the government is at all to blame ; but if we are going to have a fast passenger service, let it be one of twenty-one or twenty-two knots an hour. We should endeavour to divert British travel into Canada through Canadian ports. At present if you will ask travelling Englishmen how they came to this country, nineteen out of twenty will tell you that they came via New York or Boston. But in coming by New York, travellers get a wrong impression of Canada. When a man has visited St. Peter's in Rome

he has no great desire to visit other small cathedrals in Europe. The same principle applies when a man comes from Europe to New York, and then comes from that great metropolis to a Canadian city, his impression of Canada is not as good as would have been formed if he had come across the ocean direct to Quebec, Montreal, Halifax or St. John. Therefore, it seems to me that money spent for a service of sixteen knots, as mentioned by the hon. member for Centre Toronto (Mr. Brock), is money absolutely thrown away. Let us have a fast service, or let us not give Canadian money to secure any kind of a service.

Hon. Mr. ROSS (Victoria, N.S.) I wish to say one word in reply to the hon. member for Toronto (Mr. Brock). That hon. gentleman has overlooked the fact that railway travel is far more comfortable now than it used to be. On a train you can get as good a bed, I was going to say, as in most of our hotels, and quite as good a table. People are much more ready to travel by railway now than they were twenty years ago. I had the experience myself of travelling from Portland to Ottawa in 1867, and it was a very tedious, trying journey. There were no beds of any kind, and no comfort at all. But it is far different now. If you take the Intercolonial from Halifax to Montreal you will get as good table accommodation as in any hotel in Canada, and everything else in keeping.

Mr. HEYD. It is quite evident that there is a difference of opinion as to the necessity of a fast line service. So far as I am concerned, I am very glad that the government have failed, up to the present time, to make a satisfactory arrangement. I am satisfied that an expenditure of a million or a million and a half per annum to encourage a fast line service would be lost money, so far as the people are concerned. It is a matter of absolute indifference to ninety-nine men out of a hundred whether we have a fast line service or not. Whether we add to the comfort of the few people who may avail themselves of the opportunity to travel by such a line at the expense of the great mass of the people is a matter of no moment. If we have a million or a million and a half of dollars to spend for the encouragement of anything in this way, let us spend it in making the transport of our freight to the old country cheaper and more secure, and so develop that trade in which the great mass of the people are interested. Whether we shall ever be able to induce people, as some think we can, to come from New York and take the fast steamer at Montreal, is also a matter of indifference to the great mass of the people. What we want in Canada is to be able to place in the markets of Europe the products of our Canadian farms in the best possible condition and at the least possible expense.

Mr. FOWLER. It seems to me that the most important feature in connection with the whole matter is the question of the freight rates. As I understand it from the figures given by the ex-Minister of Public Works (Hon. Mr. Tarte), the cost of carrying freight from lake points to Montreal or other Canadian ports is as low as from the lake ports to the American seaboard, but the cost of transport to Europe is greater by way of the Canadian route than by way of the American route, notwithstanding the fact that we have an advantage, and a very considerable advantage, in distance. It seems to me it is the duty of the Minister of Trade and Commerce to apply himself to ascertain what is the cause of that great difference in the freight rates to Europe as between our Canadian ports and the American ports. If it lies in the fact that the insurance rates are higher, surely some arrangement could be made to obviate that difficulty and lessen the insurance rate. These insurance rates, it seems, have not lessened, or their lessening has not kept pace with the improvements on the St. Lawrence route or the improvements from St. John and Halifax. It is a matter of very great importance to us in the maritime provinces that the products of the great west, so rapidly increasing in quantity, should be carried through a Canadian port. I think we all feel, those from the west as well as those from the east, that if we are going to be a nation, we must carry our own foreign trade through our own ports. Therefore, it seems to me most important that this matter should be looked into and some way found of at least equalizing the freight rates. In fact, the rates should be cheaper by the Canadian than by the American route. It has been complained that the Minister of Trade and Commerce has not very much to do, that the department is a useless department. I understood—I was not in the House, but learned of the matter from my reading—that the present incumbent in this office spent many hours in this House denouncing the Department of Trade and Commerce as a useless appendage to the government. I suppose the reason the right hon. gentleman has not bestirred himself in the matter now before us is that he wishes to justify the statement he made when in opposition. He declared that the position of Minister of Trade and Commerce was useless, and he proposes to justify it by not performing any duty while he himself remains the incumbent of that office. It does seem to me that this is a matter of very great importance and one that has been too long neglected. I trust the right hon. minister will bestir himself and take steps to find out where the difficulty lies, and, having found out, will take steps to remove that difficulty.

The MINISTER OF TRADE AND COMMERCE. I am inclined to think that at

the present moment the rate from Montreal is quite as cheap as it can possibly be expected to be. A rate on grain of 5¼c. per 100 pounds is just as cheap as we are likely to get for a considerable time to come.

Mr. FOWLER. I do not know the facts myself, but it has been stated here as a fact that the rate from Montreal and Quebec is higher than the rate from New York, Boston or Portland.

The MINISTER OF TRADE AND COMMERCE. Not at present.

Mr. FOWLER. Then, what becomes of the statement that it is cheaper to ship by the American route, which statement has been made here to-day, and, so far as I have heard, not contradicted?

The MINISTER OF TRADE AND COMMERCE. It is not cheaper during the summer season. Our reduction in tolls has thrown a very large volume of traffic on the port of Montreal.

Mr. FOWLER. Yes, but during the winter season that rate does not obtain, and a great deal of freight is shipped during the winter season from the Atlantic ports.

The MINISTER OF TRADE AND COMMERCE. During the winter season it is not possible.

Mr. SMITH (Wentworth). Is it not true that in the contracts with some of the lines it is provided that the rate of freight from interior points in Canada to the sea-board and Great Britain shall not be greater than the rate of freight from the same point in Canada via New York?

The MINISTER OF TRADE AND COMMERCE. In some of them it is.

Mr. SMITH (Wentworth). But, as I understand it, there is no such provision in the contract with the Allans.

The MINISTER OF TRADE AND COMMERCE. No.

Mr. SMITH (Wentworth). Could the hon. minister tell us why.

The MINISTER OF TRADE AND COMMERCE. I have already stated that the Allans represent, and I think quite truthfully, that the winter freights are carried at a dead loss from St. John and Halifax.

Mr. SMITH (Wentworth). But is it not provided in some of the contracts that the rate from Montreal shall not be in excess of the rate via the American ports?

The MINISTER OF TRADE AND COMMERCE. The contracts with several of the lines from St. John do contain that provision, but not the Allan contract; and I do not think we could obtain more favourable terms if we were to ask for them. You can abolish this if you like. In my opinion, it is not of the slightest value in the summer season. It is kept on the statute-book because it is a great convenience to the ports of St. John and Halifax.

Mr. SMITH (Wentworth). That clause in the contract is of very great importance. I have known cases in which, on account of that clause, a steamer sailing from a Canadian port reduced its freight rate because its rate was shown to be higher than that from an American port. As they were obliged to carry at the same rate, they had to make a reduction, and this was a matter of great importance to the shipper.

The MINISTER OF TRADE AND COMMERCE. I am speaking of this particular contract we now have under consideration, and I tell the hon. gentleman that all the parties concerned in it have represented to the department, and I believe truly, that their freights during winter were carried at a dead loss.

Mr. SMITH (Wentworth). How is it that some contractors agree to these terms, while the Allans do not?

The MINISTER OF TRADE AND COMMERCE. Because they make a profit on the summer season, I presume, that about equals the loss that they sustain in winter.

Mr. SMITH (Wentworth). The Allans also run their boats in the summer season. Do they not make a profit on their summer business?

The MINISTER OF TRADE AND COMMERCE. I say there is no such stipulation in their contract, and I do not think it could be put in to any advantage.

Mr. BORDEN (Halifax). It would not be feasible to have it inserted, I suppose the right hon. gentleman means?

The MINISTER OF TRADE AND COMMERCE. I doubt very much whether we could obtain it unless we were prepared to pay a larger subsidy.

Mr. BORDEN (Halifax). Of course, it would be some advantage if we could obtain it without any increase in the subsidy?

The MINISTER OF TRADE AND COMMERCE. Certainly.

Mr. BORDEN (Halifax). As it is contained in some contracts, I suppose that possibly, without a great deal of difficulty, it might be included in this. The service is of some importance no doubt to the ports of Halifax and St. John. But the difficulty about mails and passengers is just this, and I can show it by an illustration. A friend of mine two or three years ago was one of two gentlemen who were in Great Britain. Coming home, one of them left by a steamer direct to Halifax, and the other left the following day by a steamer for New York. The latter arrived in New York, and came thence by rail to Halifax, a day in advance of the gentleman who sailed direct to Halifax. That, of course, is owing

to the fact that to New York they have faster lines than the line to Halifax. I think the service is not very much better now than it was forty years ago.

The MINISTER OF TRADE AND COMMERCE. Considerably better.

Mr. BORDEN (Halifax). I have seen some comparison made in the papers as to the rate of speed which prevailed forty years ago. I have not verified the record myself, but the gentleman who was making this contribution to the press proved to his own satisfaction, at least, by the records, which he alleged to be correct, that we were not very much in advance of what we were forty years ago. It has been suggested that an 18-knot service would be a sufficient service from Halifax to the mother country. A gentleman of great experience in these matters pointed out to me once that if we gave a large subsidy for an 18-knot service between Canada and the mother country, we would be practically giving that subsidy for a service between New York and the mother country. The way in which he argued it was this: He said, suppose you give $500,000 or $750,000, and the mother country gives half as much, for an 18-knot service or a 19-knot service, the result would be that the second-class boats now running between New York and London would be put on the route between Canada and the mother country, and the money paid as a subsidy would be used for the purpose of putting on first-class boats between New York and the mother country. There may be some force in that. I do not think that any hon. gentleman in this House, at all events on this side, desires to see this service abolished; but they would very much like to see it improved, they would very much like to see that fast line service that has been in contemplation for the last ten years, a service about which I think there was no division of opinion in the House of Commons in the spring of 1896, when the resolution passed. I would like to ask the Minister of Trade and Commerce whether, in the arrangement which was made by this government with Petersen, Tate & Company, the carriage of the mails was provided for, or was there to be an additional subsidy for carrying the mails?

The MINISTER OF TRADE AND COMMERCE. It was provided for.

Mr. BORDEN (Halifax). So assuming that could be done for $500,000 a year, it really only amounted to an increase of $350,000. Now, I was in hopes that when the Minister of Trade and Commerce brought this item before the House to-day, he would have been able to give us some more definite information as to the progress of negotiations concerning this fast Atlantic service, which we think is of a good deal of importance to the country. The negotiations, as the right hon. gentleman knows, have been going on for a long time. I may illustrate that fact to him in this way, that since they first begun, eight members have disappeared from this government and have been replaced. I think only six of the gentlemen who were in this government at the time we were assured that the service had been secured for this country, still remain in the government. So this service might very well sing the song of the brook, slightly paraphrased: 'Ministers may come and ministers may go, but our negotiations go on for ever.' Now we have had a good deal of negotiation with Petersen, Tate & Company, which have occupied wearisome time; then there was a sort of interregnum, and now we have negotiations on again by public tender and advertisements for a service, called, I think, by some of the newspaper men, a long legged and a short legged service, a 21-knot and a 16-knot service. My right hon. friend, when he laid the tenders upon the Table of the House, told us that while the government were not disposed to accept either of the tenders—I think there were only two—the government were of opinion that these tenders might form the basis of further negotiations. I was not in at the beginning of the debate upon this item; but would the hon. gentleman be good enough to tell us whether these negotiations have made any real or substantial progress, and whether we are any nearer the goal than we were at the commencement of this session?

The MINISTER OF TRADE AND COMMERCE. I am sorry to say I am not in a position to give the hon. gentleman the information he desires as to what can be done. The hon. gentleman is aware that since these tenders were laid on the Table the attention of the government has been very much occupied indeed with other matters affecting transportation, and that really we have not had time to give much consideration to the question of the fast Atlantic service; though certainly we have not lost sight of it. But he can very well understand that with the work in hand it is simply impossible to find time to take up the other question.

Mr. CLARKE. Can the minister tell us what is the idea of asking for a 16 and 20-knot service?

The MINISTER OF TRADE AND COMMERCE. It was supposed we would obtain a considerable number of tenders. Several of the objections that had been raised by parties was the enormous expense of supplying four vessels of the speed that was at first asked for, or supposed to be asked for. Everybody knows that the slightest increase beyond 20 knot means an enormous proportionate, or rather disproportionate, expense in the cost of construction and in the cost of running. It was supposed, erroneously as it would seem, that we might obtain a much larger number of tenders for only

two vessels as we asked for in the first instance. I may call attention to this fact, that almost all the freight lines seemed to have practically gone on some such principle. They had only a couple, at the outside, of really Atlantic greyhounds in their service at any one time. Their other vessels have been of less speed. There is a good deal of force in what the leader of the opposition has said as to the result of taking a less rate than was named. It might result, as he says, in our having a second-class vessel and practically assisting the New York route. That has not escaped our attention.

Mr. CLARKE. In asking for tenders for a fast service what is the idea in also asking for a sixteen-knot service ?

The MINISTER OF TRADE AND COMMERCE. The idea is that we will do as the great lines have done ; we will have a couple of very fast vessels making record trips and other vessels which would be a great improvement on the present service, while not requiring the enormous outlay that is necessary to maintain the fast service.

At six o'clock, committee took recess.

After Recess.

Committee resumed at eight o'clock.

Some resolutions reported.

RAILWAY ACT, 1903.

House again in committee on Bill (No. 21) to amend and consolidate the law respecting railways.

The POSTMASTER GENERAL. We will go on at first and correct some clerical errors in the Bill.

Mr. MACLEAN. I would ask the Postmaster General (Hon. Sir William Mulock) what further stage he intends to take to-night in connection with this Bill ?

The POSTMASTER GENERAL. I understand from the Minister of Justice (Hon. Mr. Fitzpatrick), who has charge of the Bill, that he has arranged with some members not to proceed with the discussion of any controversial matters. We have simply been engaged in correcting some typographical errors in the Bill.

Mr. MACLEAN. The committee will sit again to consider the Bill further ?

The POSTMASTER GENERAL. Yes.

The MINISTER OF JUSTICE. What remains to be considered in connection with the Bill ?

Mr. MACLEAN. On the third reading, I intend to propose some amendments.

The MINISTER OF JUSTICE. But not in committee ?

Mr. MACLEAN. No. I would like the government to give notice when the third reading of the Bill is to be proposed, so that members who are interested in a clause on which they may wish to take the sense of the House may be prepared.

Mr. GUTHRIE. I desire to move to add a subsection.

The MINISTER OF JUSTICE. There are one or two members who thought of making suggestions to-night. I told them it was not intended to proceed further. Therefore, I move that the committee rise, report progress and ask leave to sit again.

Mr. CLARKE. When is it intended to proceed with the further consideration of the Bill ?

The MINISTER OF JUSTICE. We desire to consult the convenience of the House. Of course it will be well to get the Bill through the House and get it before the Senate as soon as possible. At the same time, as I say, we wish to consult the convenience of the House.

Mr. CLARKE. You will not proceed with it to-morrow ?

The MINISTER OF JUSTICE. The Grand Trunk measure, I understand, is on for to-morrow.

Mr. SCOTT. I have an amendment to propose which I hope will not prove of a controversial nature. I am willing to go on with it now if the committee is ready to consider it.

Progress reported.

SUPPLY.

House in Committee of Supply.

For the branch of the Commissioner of Agriculture and Dairying, including live stock, dairy, cold storage, extension of markets, poultry, seed and fruit divisions ; employees paid from this sum not to be subject to the Civil Service Act, $220,000.

The MINISTER OF AGRICULTURE. This is the item comprising cold storage and the general work under Prof. Robertson. It was passed some weeks ago, but the hon. gentlemen asked for an opportunity to discuss it again when I would be able to give them some more information with regard to it.

Mr. SMITH (Wentworth). How is this amount of $220,000 to be apportioned among the different branches ?

The MINISTER OF AGRICULTURE. As follows : At the head office, $26,800; live stock division, $21,460 ; dairying division, $37,840 ; cold storage division, $77,000 ; fruit division, $19,600; seed division, $14,400; extension of markets division, $15,200; poultry division, $7,700.

Mr. SMITH (Wentworth). Is this $77,000 entirely for cold storage on ocean vessels ?

The MINISTER OF AGRICULTURE. No, there is for cold storage on vessels, $53,000.

Mr. SMITH (Wentworth). How much has been spent for cold storage on vessels altogether up to the present time ?

The MINISTER OF AGRICULTURE. I think that is in a report of the department. Not long ago, I think in the early part of the session, that information was brought down to the House.

Mr. SMITH (Wentworth). In that return the amount was said to be $134,000. How much has been spent since that time, up to the 1st of June last ?

The MINISTER OF AGRICULTURE. Speaking from memory I think payments were made just before the beginning of this fiscal year, to the amount of $26,000.

Mr. SMITH (Wentworth). What cold storage is it proposed to effect with this $36,000.

The MINISTER OF AGRICULTURE. This is for refrigerator chambers. The contracts with these vessels are all expired and terminated, and this money is for the circulation of cooled air entirely.

Mr. SMITH (Wentworth). What were the agreements made with the different steamship companies when the cold storage plant was put in, with regard to temperature ? Did the government arrange that they would have control of the temperature for the cold storage proper ?

The MINISTER OF AGRICULTURE. I have not a copy of these agreements here, but speaking from memory, the temperature was to be about thirty-five, that is the temperature at which the ships were to hold the chambers, thirty-five to forty.

Mr. SMITH (Wentworth). In the annual report I see that the minister recommends that butter should be carried at about twenty.

The MINISTER OF AGRICULTURE. That is true, but the ships have of their own accord lowered the temperature for butter. Our original contract, when we gave assistance for these cold storage chambers, was made at a time when the butter shippers only required a temperature above freezing, and the contracts included not only butter but chilled meat and fruit; therefore we only required a temperature that was considered to be low enough to carry all the goods that were included. Since that time butter shippers have demanded a much lower temperature, and the shippers have voluntarily reduced the temperature. To-day our thermograph shows a temperature ranging much below thirty in the butter compartment. Of course in the other compartments where cheese, meats and fruits are put, which are not allowed to freeze, the temperature must range higher.

Mr. SMITH (Wentworth). I would remind the minister that several of these steamers have carried butter at a much higher temperature. I notice in the minister's report that he specifies one steamer as having carried it at a temperature of something like fifty-six degrees. On the 'Pretorian,' the average temperature was forty-three to forty-seven for butter.

The MINISTER OF AGRICULTURE. That was on a steamer whose contract with us had expired, and we had no longer control over her temperature. But we still put thermographs in all the steamers to record the temperature, though we are not able, after the contract has expired, to control the temperature in the holds. I may say, however, that the ships which are furnished with our thermographs and not allowed to carry at low temperature, are getting very little butter, because shippers will not send their butter except in those ships which have shown a good record by our thermograph.

Mr. SMITH (Wentworth). Then I understand that the government have no control over those vessels which have had subsidies from the government, as to temperature, after the expiry of a certain term of years.

The MINISTER OF AGRICULTURE. Our control expires when the contract expires.

Mr. SMITH (Wentworth). How long does the contract last ?

The MINISTER OF AGRICULTURE. Three years. We paid these ships in three annual instalments, and after that term has expired we have no control. The origin of this work was that at the time it was initiated by my department the ship owners said that the trade and the requirements of this cold storage were so uncertain that they were so little likely to be able to get goods to fill these compartments that they could not afford to put in the chambers. For the purpose of showing the advantages to the trade of these compartments the government assisted them to put in the compartments and the machinery necessary to maintain a cold temperature. That was done for three years. We believed at that time that after three years of test the advantages of this system would be so proven that the trade would require a continuance of it, and that the shipowners would find that the advantage of the continuance of it was so great that they would carry it on themselves. In many cases that has occurred ; in fact, the shipowners themselves have put in a great many of these cold storage plants without any assistance and without entering into any contract with the government.

Mr. ROSS (Ontario). May I ask the hon. minister whether all the butter and cheese exported from this country in vessels goes in cold storage ?

The MINISTER OF AGRICULTURE. Practically all the butter tnat is now exported in the summer time from Canada goes in cold storage. The cheese does not, except in very warm weather. Cooled chambers are preferred for cheese to absolutely cold chambers, and, as a matter of fact, experience has shown that it is only butter that requires such a low temperature as 20. Meats require a temperature a few degrees below freezing. Cheese and apples seem to be served better by cooled air driven through and amongst these products serving the purpose of keeping the temperature down to about 60.

Mr. ROSS (Ontario). Are the ships provided with cooled air chambers ?

The MINISTER OF AGRICULTURE. Yes.

Mr. ROSS (Ontario). All the ships that are engaged in this trade, or only certain ships ?

The MINISTER OF AGRICULTURE. There were certain ships which had the original cold chambers for low temperatures. We have now made arrangements with certain ships for cooled chambers, but the two systems are entirely different and worked independently.

Mr. SMITH (Wentworth). Did the contract on the 'Pomeranian' expire last season ?

The MINISTER OF AGRICULTURE. I cannot tell off-hand the names of the vessels, but I think her contract did expire last season. That was for cold storage. I do not think that there was any vessel under contract for the season of 1902 for cold storage.

Mr. SMITH (Wentworth). I would judge from that that no money has been paid by the government for cold storage for some years, if all the contracts are three years old or more.

The MINISTER OF AGRICULTURE. I cannot say exactly when the last money was paid, but the accounts for some of these cold storage subventions were not closed up. I think, during the year 1902, that some payments may have been made, but I think, I am pretty correct in saying that there was no ship under contract for the season of 1902 for cold storage. That is for the old system of cold storage.

Mr. SMITH (Wentworth). It is very unfortunate that the government in making these contracts did not provide for control of the temperature for a longer period than three years. A good deal of money has been expended for cold storage, and I am sure it has not been thrown away if we have a cold storage service, but when we find that there are a great many of these boats carrying products in a temperature of from 45 to 60 and the government have no control over the matter it seems rather an unfortunate condition of affairs. Surely, when the contract was made, it would have been a good condition to have put in the contract that the government should retain a certain control over the temperature for a longer term than three years.

The MINISTER OF AGRICULTURE. We could not get control for a longer period than the period during which we were making the payments. As long as we were making the payments we had a hold upon the companies. When payments were finished we could not control the owners of the ships. The ships in many cases have taken off the service and other ships put on and the owners of the ships hold themselves free to take these ships wherever they like.

Mr. SMITH (Wentworth). In regard to fruit the hon. gentleman says correctly that the temperature should be 35. I would like to draw his attention to the steamer 'Lakonia' September, 1900. That is surely when the contract was in existence three years ago. There was a temperature in one compartment of from 39 to 60 degrees and in another compartment, of from 28 to 50 degrees.

The MINISTER OF AGRICULTURE. I have not in my mind the details that the hon. gentleman speaks of. I suppose he is reading from a return which was made to an Order of the House ?

Mr. SMITH (Wentworth). Yes.

The MINISTER OF AGRICULTURE. I could not say anything about that particular case.

Mr. ROSS (Ontario). Complaints were made to me by an apple shipper regarding the placing of fruit upon the steamer. The fruit was shipped in the ordinary way not intended to go into cold storage, and the complaint was that it was placed in a part of the vessel not properly ventilated. The apples were in good condition when shipped and they arrived in very poor condition, and the surmise was that these apples might have been put too near the engine or in a heated part of the ship. Are there any inspectors in the department whose business it is to see that apples are properly placed in the ship ?

The MINISTER OF AGRICULTURE. The first duty of the inspectors that we have at the port of Montreal to look after that work is to see to the special chambers which are prepared for products. If they are able besides that to have a general supervision of the manner in which stowage is done in all the ships they are to do that also. I was talking only the other day with one of

the most efficient of these inspectors and one who has been for the longest time at this work upon this subject. I happened to meet him, and discussing his work quite informally with him, I asked him some questions on that very point. He told me that as a matter of fact the stevedores understood thoroughly well the demands of the different kinds of products that they had to put into the ship and that it was quite an unusual thing for apples to be put in a place where they would be unduly heated. He said that such a thing might occur occasionally, but very very seldom, and his opportunities of observing are probably as good as any one in the country. He said that whenever he had observed anything of the kind he had drawn the attention of the stevedores to it and he had always found them quite willing to see that the cargo was properly stowed in a place suitable to its carriage. Our inspectors have no absolute control over the stevedores. All they can do is to draw attention to the matter and report to the shipper so as to enable him to recover from the ship owner if his fruit was damaged by being improperly stored in the hold.

Mr. ROSS (Ontario). We have inspectors to see that proper space is given to cattle on the ocean voyage, and that is a very important matter. But if the condition of things exists as was represented to me, it is a calamity that apples especially should be shipped in a manner in which they are liable to get overheated. The greater portion of the apples that are shipped from Canada are shipped as ordinary freight; and under these circumstances I think it would be in the interests of the trade of the country if an inspector were appointed to see that these apples are properly placed in the vessel.

The MINISTER OF AGRICULTURE. The inspectors do watch it, but it is not their first duty, and it may be better that a man should be appointed for that express purpose when the apple shipping season comes. All the complaints have been with regard to apples, but from the report of the inspector I do not think there is a great deal of difficulty even with apples. However, it may be well to obviate whatever difficulty there is when the apple shipping season comes around.

Mr. MACKINNON. A year ago the government established a service between Charlottetown and Manchester by the Manchester Line. The service was a very good one and the cold storage was all right, but in one case the steamer did not arrive at the date prescribed and the shippers who had collected the cargo at Charlottetown were put to heavy loss. They had to feed the cattle, and to go to expense in preserving the other products until the steamer arrived. Is there any hope that these people will get compensation out of the subsidy. Is there any method which the department can adopt by which these gentlemen who lost so heavily can be compensated. The steamer was advertised to sail in November, but she did not turn up until December, and then she went to Georgetown, so that the cattle, and the rest of the cargo had to be shipped there at heavy expense to the shippers. A great many people in the island are interested in the matter, and they think that since the government was subsidizing the steamer, the government should reserve part of the subsidy and apply it to compensating them to some extent. Can the minister do anything in the matter?

The MINISTER OF AGRICULTURE. The subsidy is entirely in the hands of the Minister of Trade and Commerce and my department has no control over it. When the subsidy was given I was consulted as to the cold storage accommodation on these ships, but what my hon. friend says now is the first intimation I have had of the facts of this case. I will draw the attention of the Minister of Trade and Commerce to the matter and if the subsidy has not already been paid I will ask him to see whether something cannot be done in the matter. I take it, however, that it would rather be a matter of recourse against the ship-owners for non-fulfilment of their contract. However, I will draw the attention of the Minister of Trade and Commerce to the matter.

Mr. BRODER. Is any portion of this vote to be applied towards the maintenance of icing cars from internal points to points of shipment? It is very important to the cheese industry of the country that cheese should be placed in these cars from internal points to the points of export. The system was tried last summer and I believe was satisfactory.

The MINISTER OF AGRICULTURE. We have made an arrangement to extend that service very largely.

Mr. BRODER. I am very glad to hear it.

The MINISTER OF AGRICULTURE. We have arrangements now for about one hundred iced cars per week for the carriage of cheese. It was successful last year and it is to be very much extended. In addition to that there is a very large number of specially ventilated cars being built by the railway companies for the express purpose of carrying cheese and fruit, and the railway companies have done that in consequence of the representations made by us. These cars will be available for the service this year.

Mr. BRODER. When cheese arrives in the old country is there any provision to carry it in cold storage cars to points in the interior?

The MINISTER OF AGRICULTURE. We are not paying for any service there,

but in consequence of the representations made by our agents in England a considerable number of refrigerator cars have been placed on the railway lines, particularly those leading from London and from Bristol.

Mr. SMITH (Wentworth). If the minister will look at the 'Lakonia's' report for September 12th, 1901, he will see that the temperature ranged from 28 to 50. For several hours it stood at 28, four degrees below freezing point, which of course would utterly ruin tender fruit.

The MINISTER OF AGRICULTURE. I do not know what was in the chamber at the time, but there certainly should not have been such variation of temperature as appears to have been the case. An instance came to my attention not very long ago, a lot of butter which was found to be very warm was put into the second chamber, and the thermograph was put in alongside of some of the packages of this butter. The ordinary thermometer in the chamber showed a perfectly even temperature, while the thermograph showed an irregular temperture. When this extraordinary condition of affairs was tested, it was found that the irregular temperature was in one part of the chamber only, while there was an even temperature in other parts. An accident of that kind might happen in any chamber. It could not happen if the chamber was full of fruit.

Mr. SMITH (Wentworth). The minister will see that it is stated on the back of the return that it was tender fruit. Are butter and fruit allowed to go in the same compartment ?

The MINISTER OF AGRICULTURE. Oh, no. I may say that this high rise in the temperature up to seventy took place after the chamber was opened.

Mr. SMITH (Wentworth). I do not refer to that; but the temperature was at fifty for a long while after the fruit was put in.

The MINISTER OF AGRICULTURE. Probably the fruit was very hot when it was put in.

Mr. SMITH (Wentworth). If the hon. minister will look at No. 175 of the same boat, he will find that the temperature was sixty in that case. That is altogether too high.

The MINISTER OF AGRICULTURE. It is very evident from this chart that there must have been a lot of very hot fruit put in, so that it took the chamber a long time to cool. It apparently took from Thursday, when the temperature was at sixty, until Sunday evening to get it down to fifty, and it was only on Wednesday that it got down to forty, where it ought to be. It is, I might almost say, absolutely impossible, if a great mass of hot fruit or butter is put into the chamber, to get the chamber down to the proper temperature immediately. One of the greatest dangers we have to contend with lies in the fact that the goods arrive at Montreal in a very warm condition, and if they are immediately put into the chamber it is impossible to get the temperature lowered for some little time, even with the machinery working at its fullest capacity and the chamber right in every respect.

Mr. SMITH (Wentworth). I would draw the minister's attention to the fact that both the butter and the fruit always arrive in refrigerator cars.

The MINISTER OF AGRICULTURE. Not always the fruit.

Mr. SMITH (Wentworth). The tender fruit surely. I think it is all shipped at Grimsby, where it is kept in the government cold storage establishment. From there it is transferred to a cold storage car. If the hon. minister will peruse some thermograph records, he will see that the fruit, and also the butter, were brought down to the proper temperature almost immediately on being put into the boat, and they were kept at an even temperature all the way across the ocean; which goes to show that the fault is with the man in charge of the cold storage on the boat. That is evident because there are so many cases in which both fruit and butter have been carried as well as it is possible to carry them. I could cite a dozen more cases of fruit being carried in a ridiculously high temperature, or in an uneven temperature, and in some cases in a temperature below the freezing point. Some of us who have made these tests at Grimsby have wondered why we could not have these fruits carried to the old country in good condition when we could keep them in good condition in our own cold storage establishments for two months. Yet the choice fruit which we sent to the old country in cold chambers was said to have arrived there in a decayed condition. We were told that the fault must be with the packing and the management of the fruit before it arrived at the boat. But when I see these returns and the report of the thermograph, which is an absolute test, and which shows what occurred on the way across the ocean, I cannot wonder at the results. The fact is that the cold storage shipment of tender fruits from Ontario is practically killed. To-day we are not shipping anything except hard late pears. We dare not ship even Bartlets, the staple pear of commerce much less peaches and plums. We spent considerable money in making experiments, and we strongly hoped that a large trade would be built up. England wants the fruit of which we have a superabundance and we can keep this fruit in perfect condition in our own cold storage plants for a much longer time than it takes to go to England; and why cannot it be taken across

the Atlantic ? It seems to me that the minister has not kept his promise to us in this matter, but that he has been very negligent of the interests of the fruit growers of Ontario, who hoped that he would develop this trade.

The MINISTER OF AGRICULTURE. I think the hon. gentleman is jumping to a rather hasty conclusion. He says that there are a number of instances in which the fruit was carried in an even temperature and in good condition. I have no doubt that where that was the case, the fruit was put into cold storage in proper condition. There are other cases in which the temperature of the chamber was too high at the beginning of the voyage and continued to be too high for some little time. My information is that it depends very largely on the condition of the fruit. If the fruit is in a heated condition when it is put into the chamber, it is impossible to reduce the temperature immediately. Very frequently the fruit itself, in a certain condition of ripeness, generates heat, and heats the chamber in which it is. The cooling apparatus cannot immediately overcome that. It is very much easier to put fruit into a cold chamber at the orchard, close to where it is picked, and to keep that at an even temperature, than it is to put it into a car and bring it to Montreal, and put it into a cold storage chamber there to be carried over to England. A comparison between the two is unfair. It is much easier to maintain it at the same temperature when put into cold storage and kept in the place where it is packed, than when it is carted from one place to another. I do not profess that this work is perfect, but I think great improvements have been made. These thermographic charts were only begun in 1900 and have contributed to greater regularity and efficiency in the working of their machinery. I find that the temperatures have been published regularly and are improving steadily. Probably in certain instances the temperature has not been what it ought to be, but we immediately report such instances to the ship owners, and the men who are irregular are immediately dismissed, because the ship owners are extremely anxious to make a good showing in their cold storage chambers, as that is the only way they can secure the trade which they are very desirous to get. I think my hon. friend is too pessimistic. I know that a good deal of fruit sent forward last year and the year before, especially the year before, arrived in good order. Last year the fruit was of an inferior quality, so that not so much was exported and the returns were not so satisfactory. But the unsatisfactory returns were not due in any way to the lack of cold storage.

Mr. SMITH (Wentworth). This return shows 31,000 packages, how much of that was Canadian and how much Californian fruit that went forward last year?

The MINISTER OF AGRICULTURE. I have not the details with regard to that.

Mr. SMITH (Wentworth). So far as the shipments from Grimsby district are concerned, they were not many last year. According to this return there were none the year before. The hon. gentleman says that improvements are being made. These are, no doubt, due to urgent representations to his department. Looking at the returns of the 'Maria,' I find that in 1901 the temperature was 32·38 throughout the voyage, which is what it should be, but in 1902 it was 40·52. No. 89, so that instead of being improved it got to be worse. The hon. minister admits that he has no control over these temperatures. Here was a period when the contract had not expired, yet the temperatures were outrageously high, and in some cases far too low.

The MINISTER OF AGRICULTURE. I do not know whether the contract with regard to that particular vessel had expired. It may not have expired on the first occasion and may have expired on the second occasion.

Mr. SMITH (Wentworth). With regard to the arrival of the fruit in vessels at different temperatures, they all go through the same process and should arrive in the same condition. Take the government plant at Grimsby——

The MINISTER OF AGRICULTURE. That is not managed by the government. The building belongs to the department, but we have had nothing to do with the management. We gave it to the people there some time ago.

Mr. SMITH (Wentworth). At any rate it goes through the same process. It is put into a cold storage chamber and goes in cold storage to Montreal, where it is transferred to the vessels, so that I cannot see why one lot should come in all right and another in bad condition.

The MINISTER OF AGRICULTURE. That depends a good deal on the ripeness of the fruit. One lot may come out all right and the other may be all wrong just because the condition of the fruit in each lot was different.

Mr. SMITH (Wentworth). The growers must have learnt by this time the right stage of ripeness in which their fruit should be when put in cold storage, instead of putting their fruit up in worse condition year after year they have beeen putting it up in better condition each year. Certainly they are not so stupid as not to learn how their fruit should be put up after six years' experience in this line. It therefore should go on the boat in better condition each year and come off in better condition. I would like to ask how many vessels have been fitted up with cool air appparatus. I understand that a large part of this vote is for the

establishment of refrigerator vessels for the production of cool air. What is the extra charge for the carrying of products on these vessels ?

The MINISTER OF AGRICULTURE. I find that the Allan Line has three steamers, the Thompson Line five steamers, the Donaldson Line one, and the Elder Dempster two steamers, making altogether eleven steamers fitted up with cool air circulation. Others have been fitted up since, without any contract, by the ship-owners themselves. The rate they charge is ten shillings per ton on cheese and the equivalent to that on apples.

Mr. SMITH (Wentworth). What is the difference between these two plants, cold storage and cool air ?

The MINISTER OF AGRICULTURE. It is practically a difference in temperature. In the cold storage plant, the chambers are shut up entirely. In the cool air plant there is a circulation of air and the temperature is only required to be down to sixty. In the cold storage it is much lower.

Mr. SMITH (Wentworth). It will cost much less to keep the temperature at 60 than 30 or 32.

The MINISTER OF AGRICULTURE. The arrangement for circulation and ventilation costs more. The air has to be cooled and forced through, and there is constant change of air, whereas, in the cold storage chambers, which are tight, they get the temperature down to a certain point and it takes but little to keep it there.

Mr. SMITH (Wentworth). That might account for the bad carrying of freight in cold storage chambers. There is no circulation of air. In our private cold storage establishments, we do have a circulation of air. What steps have been taken to ascertain with certainty whether in the forced air plants the circulation of air is kept up during the voyage ?

The MINISTER OF AGRICULTURE. We have thermographs in these as in the cold storage chambers. Consequently, we know the temperatures.

Mr. SMITH (Wentworth). I have some figures summarizing certain reports of the thermograph records where there was ventilated storage. The average minimum temperature was 4:54, and maximum, 67½. And in eleven records, where the cold air plant had been provided, and for the benefit of which the shippers paid ten shillings per ton extra, the average minimum was 55½, and maximum 66 4-11. So, there was practically no difference. It is true that the eleven instances I have averaged were those in which the temperature was highest out of twenty-three. Yet the cooled air system costs very large sums to the government for the installation of the plant, and the shippers paid ten shillings a ton extra, yet the practical result is that there is no lower temperature than is secured by the system of ventilation.

The MINISTER OF AGRICULTURE. I have not the data before me which the hon. gentleman (Mr. Smith, Wentworth) has. I think he will find that the figures depend upon the period of the year and the weather. If in one case the figures were for the summer, and in the other for the autumn, that would explain the matter.

Mr. SMITH (Wentworth). The cases of ventilated storage I referred to were : August 19th and September 23rd, the 'Sarmatian'; August 21st, the 'Importer'; August 1st, the 'Numidian'; August 8th, the 'Pomeranian,' and October 10th, the 'Commerce.' The cases of cold storage were September 26th, September 17th, July 18th, August 24th, August 28th, August 1st, July 18th, July 4th, July 11th, June 27th, and June 19th. So, the figures cover practically the same season.

The MINISTER OF AGRICULTURE. I may say that last season was a particularly cool season, and did not show the full effects of this system of the circulation of cool air. That was remarked by shippers last year, and, as a matter of fact, many of the cheese shippers did not send goods in cool air chambers because of that fact.

Mr. SMITH (Wentworth). Has the minister taken definite steps to ascertain whether this forcing of air through the holds has been properly carried out ? My opinion has always been that although steamers put in this plant, which costs very little, in many cases the plant is not operated. Of course, in many cases it is, and excellent results are secured. I know of many cases where the results have been observed and most favourably commented upon on the other side. I have known cases of apples, the same variety picked at the same time and packed at the same time by the same parties, taken from the same storage at the same time, but shipped in different compartments of the steamer, yet some coming out in good condition and others in very bad condition. It must be that there is a difference in the storage on the vessel. I cannot explain it except on the idea that in some compartments the ventilation system is carried out, thus securing low temperature where the apples are, besides having pure air, while in other cases the hatches are battened down and the fans not used. I have suggested to the minister that it is easy to ascertain whether the fans were operated or not. All that is necessary is to put a thermograph where the apples are and another on deck. If the two correspond, that is proof that the fans are operated.

The MINISTER OF AGRICULTURE. I ordered a large number of extra thermographs and have given most positive and reiterated instructions to the officers in charge that no chamber shall be allowed to go without a thermograph in it. If it is there it will show the temperature, and we shall be able to know whether the fans are used or not. My instructions are plain and positive and I believe they will be carried out.

Mr. SMITH (Wentworth). I am glad to hear the minister say that. It has taken a long time, but at least we seem to be getting to the point where we may hope to get a good service and be able to carry our perishable goods across in good condition. If the people are allowed to know which vessels do carry cargoes perfectly, it will be a great advantage to the country.

The MINISTER OF AGRICULTURE. These thermograph records are posted on the board of trade of Montreal, and there the people in the trade who are interested can examine them and see for themselves.

Mr. SMITH (Wentworth). Do the steamship people, or those in charge in this country make every effort to resist the government——

The MINISTER OF AGRICULTURE. Oh, yes.

Mr. SMITH (Wentworth). It appeared to me that the fault lay with the officers in charge of the vessels.

The MINISTER OF AGRICULTURE. I cannot say positively as to that. I would not like, without greater knowledge than I have, to accuse anybody. But the hon. gentleman can understand that a new system—for, though it has been working for a number of years here, it is still new to a great many people concerned—will not be worked perfectly for some time. But I am satisfied that the ship owners, and, as a general rule, their officers are desirous of carrying it out properly and are doing all they can to that end.

Mr. CLANCY. I am sure the committee has listened to the Minister of Agriculture with no small degree of disappointment. The hon. gentleman has been very profuse in his advertising, especially on the occasion of election contests, advertising the success of his department, and particularly of the cold storage. And now we have the deplorable spectacle of the hon. gentleman admitting that cold storage under his administration has been a dismal failure and that to-day it is worse than it was the day he took hold of it. Immense sums of money were voted by this parliament for cold storage. The hon. gentleman has abandoned the undertakings one after the other, and those systems that have been put in have turned out most unsatisfactory. My hon. friend from Wentworth (Mr. Smith) has pointed out what seems to be a severe lesson to the hon. gentleman; I hope he will take it to heart, and I am quite sure the people of this country will take it to heart. He has pointed out that the cold storage system is a mere mockery, and there is no hope that it will be brought to a proper condition. It is used to-day for butter almost alone. The hon. gentleman stated on a former occasion that outside of poultry, meat and butter, the shippers would not pay the extra sum they were being charged for cold storage. The country has learned long ago that there was no such thing as cold storage in the sense the hon. gentleman speaks of; and after he has been nearly seven years in office, and after declaring that he had made it a perfect system, he is to-day compelled to come before the House and admit that his system is in a most deplorable condition. He has not said so in so many words, but he has disclosed the fact by his admissions to my hon. friend from Wentworth, who has gone somewhat thoroughly into this matter. I think this House would be prepared to vote any reasonable sum of money for a service of that kind. But the hon. gentleman has squandered thousands and thousands of dollars to no purpose. There seems to be but little hope that the hon. gentleman will be able to offer to the fruit growers and shippers of this country any relief from the present unsatisfactory condition of things. I do not know whether this committee would be justified in giving the hon. gentleman the additional sums of money that he is asking for. We had a cold storage service which was said to be very expensive, steamships were assisted by the government, but at the end of a three years' contract it has been abandoned. I want to repeat what my hon. friend from Wentworth has said, that there has not only been carelessness in taking a contract for so short a period as three years for so large a sum, but that during the period that contract was in existence there was either gross negligence on the part of the steamship companies or their officers, or on the part of the Minister of Agriculture in failing to enforce the conditions of the contract. I repeat that it is a dismal condition of things, and that we stand precisely where we were, if not infinitely worse off than we were in 1896.

The MINISTER OF AGRICULTURE. I suppose the hon. gentleman is disposed to be a little facetious on this matter. I will not go into details, but I will only say that if he should to-day propose to the shippers of Canadian produce to return to the condition of affairs that existed in 1896-97 he would be met with a storm of indignant protests. I have before me a statement which was made by the chairman of the Home and Foreign Produce Exchange, Limited, of London, England, in which they state that two steamers which sailed from Montreal to London fitted with cooled air

arrangements, have proved a great success, and they say that it would serve the best interests of Canadian shippers if all steamers were so fitted up. That experiment was made the year before last, and it was continued last year, because we found it so successful. The success of the cold storage arrangements cannot be contradicted, even though here and there an apparent failure may occur in the great number of vessels going out every year from our ports fitted up in this way. But I have the constant support of the people who send their produce in these vessels, especially the shippers of butter and cheese. The cases of failure instanced by the hon. member for Wentworth are cases in which the fruit perhaps did not go forward in as perfect a condition as it should. There may have been some slackness on the ships, but I do not think the fact that these shipments arrived in poor condition proves any defect in the system. I acknowledge that there may be an occasional shipment going forward in cold storage which would not be perfectly successful—possibly including cheese, though no case has been called to my attention where difficulty has occurred with cheese. Occasionally products are put into refrigerator cars in such a condition that it is impossible for the ice to overcome the heat in these packages when they are put in. We are trying to induce the people who ship butter and other things to see that when the stuff is put into the car it is in proper condition. Our refrigerator cars are not for the purpose of cooling things, our refrigerators on ships are not for the purpose of cooling things, they are for the purpose of preserving things which are already cool. We do not profess to supply ice to cool butter and fruit, but we do profess to see that cars are so iced that things which are put into them in a reasonable cool condition will be maintained in that condition. The same on the ships. But if heated stuff is put into the chambers it will require some time before any cooling apparatus that we can provide can bring them down to the right temperature. The men who do business with these refrigerators would be the last men to allow that they should go back to the condition of things when this work was commenced by the department.

Mr. CLANCY. The hon. gentleman has been told that shippers of fruit are not novices at that sort of thing. He assumes that in every case where the shipment has gone forward in bad condition, it has been received in bad condition. The hon. gentleman has no evidence in support of that assumption. His assumption that the shipments were sent aboard the refrigerator cars in bad condition is not fair to the shippers.

The MINISTER OF AGRICULTURE. Speaking of proof, I have had an inspector out during last fall, last summer, and this summer, who is testing the temperature of the butter that is put into the car, and watching these shipments, and he has found dozens of cases where it has had a temperature as high as sixty when put into the refrigerator car. So that my evidence is quite complete upon that point and my hon. friend is mistaken in believing that I am assuming.

Mr. CLANCY. The hon. gentleman says that the butter has all been landed in good condition. The hon. gentleman is not making out his case because he declares that if there has been any butter not arriving in good condition he is not aware of it. Now, the hon. gentleman wishes to shift his position and to say that even butter received in bad condition has been landed in good condition in the old country, so that the hon. gentleman is in rather an unfortunate position. Is it possible that it may have gone in fairly good condition if it had not gone in cold storage ? I am going to assume that it would not have gone in good condition under those circumstances. I think it is fair to say that the cold storage system properly carried out is a good thing. The only regret I have is that so far it has not been a success. It was believed at one time that our perishable fruits could go forward in good condition, but, the hon. minister must admit that up to this time that part of it has been a decided failure. Whether the hon. gentleman will be able to overcome that or not seems doubtful at this moment, but I again ask the hon. gentleman if he has had any evidence of fruit going aboard the cars in bad condition, because it is no doubt a fact, that fruit has arrived on the other side of the Atlantic in a decidedly bad condition.

The MINISTER OF AGRICULTURE. We have not been taking the temperatures in regard to fruit in the same way as we have in regard to butter. We have found that fruit arriving in Montreal to go on board the ships was so ripe that it was in a heated condition, not from the cars in any way, but from the overripeness, and I think there is no doubt that that fruit must have gone into the cars in a condition unfit for transhipment.

Mr. BLAIN. Is all of the fruit that is put into these cars inspected by a government inspector ?

The MINISTER OF AGRICULTURE. No.

Mr. BLAIN. Would that not be worthy of the attention of the hon. minister? It seems to me that if fruit arrives in bad condition in the old country there should be an explanation given to the public why it has arrived in that condition, and if the responsibility does not rest upon the government it should rest upon the proper party who would be the shipper.

The MINISTER OF AGRICULTURE. We have inspected as much as we can at

Montreal, but, not by any means all of the fruit. It would be almost impossible, physically to attempt an inspection of the fruit going forward in these cars, although we might make a special effort to inspect the fruit going in cold storage more than we do in other respects. We have done that to a considerable extent, but still not by any means completely.

Mr. BLAIN. How has the fruit arrived that has been inspected by the government inspector ?

The MINISTER OF AGRICULTURE. We have never undertaken to stop fruit if it is in bad condition. We have no authority to do so. We have to allow it to go forward and the result has been that fruit in bad condition in Montreal arrived on the other side in bad condition. Fruit in good condition when put into the ships at Montreal arrived forward as a rule in good condition.

Mr. BLAIN. I would like to draw the hon. minister's attention to an article in the Montreal 'Herald':

New Butter Bill Unfair to Canada.

London, July 22.—The butter Bill which is now passing through the House of Commons, shows a preference to Ireland over the colonies. According to the provisions of the Bill, all butters, including colonial butters, which contain over sixteen per cent water, will be penalized. Irish butter will, however, be allowed to contain twenty per cent water, which gives the Irish dairy industry a decided advantage over that of Canada.

Could the hon. gentleman tell us if he has received a copy of the Bill and is informed as to its contents ?

The MINISTER OF AGRICULTURE. I have not seen a copy of the Bill but I know that there was a Bill which did make some exceptions in connection with certain classes of Irish butter and allowed them privileges that other butters in the markets of the United Kingdom are not allowed. That is, of course, a regulation of the home authorities over which we have no control. I am trying to get information in regard to it, but I have not yet obtained any. I saw the item in question and that was the first intimation I had that Irish butters generally were exempted from the operation of the law requiring only 16 per cent of water in butter. I have not yet had any further details about it, but, I hope to get them very soon.

Mr. BLAIN. Has Irish butter, when it goes upon the market in the old country, any special stamp upon it to distinguish it from Canadian butter?

The MINISTER OF AGRICULTURE. Only the private stamp. Of course, nearly all butter is marked in some way or other when it goes upon the market. Our Canadian butter has to be marked with the word 'Canadian' and Irish butter has special stamps or brands put upon it which are known in the markets of England. I am not aware that Irish butter is given any particular stamp as Irish butter.

Mr. BLAIN. How is butter usually put up upon the London, Glasgow and Liverpool markets with which our butter comes into competition ?

The MINISTER OF AGRICULTURE. Of course butter is put up in all sorts of shapes just as our butter is put up in different shapes. There is some Irish butter put up in boxes, something like our own. Most of our butter is sent to England in square boxes but a good deal still goes forward in the old fashioned tubs. Irish butter is put up in different packages, some of it similar to our own, but according to our own law all butter going forward from Canada is marked 'Canadian' on the package. Of course, when it is turned out in retail stores it would not have that mark upon it. There is an English law which requires that all provisions coming from outside the united kingdom shall be marked with the name of the country from which they come whether foreign or colonial. For instance butter from Canada is marked 'Canadian,' New Zealand, is marked New Zealand, Australian is marked 'Australian,' Dutch is marked 'Dutch,' French is marked 'French' and so on. I do not think that law would require Irish butter to be marked 'Irish' because Ireland is part of the united kingdom.

Mr. BLAIN. Could the hon. minister tell us how the Canadian trade in butter is prospering ? We see general statements and read the reports in the newspapers. Can the minister tell us the quantity of butter exported from each province last year, and whether it was put up in pound rolls or in what kind of packages ?

The MINISTER OF AGRICULTURE. The production of butter in Canada is less this year than usual, due to a large extent to the high price of cheese, so that factories which were equipped both for butter and cheese making, turned their attention to cheese, and also due to the fact that in the earlier part of the season we had a great drought and the production of milk was smaller than usual. Nineteen hundred was a large year ; 1901 was a trifle smaller than 1900, but I think it is the largest except 1900 we ever had up to that date ; 1902 was abnormally large and this year has fallen back very much. This year we have exported only about two-thirds the amount exported last year, but of course that does not show the quantity of butter in storage throughout the country. The reports say that the butter is arriving in England this year in most excellent condition. The reports issued by Mr. Weddell, a well-known firm in London, speak highly of our butter. We are exporting chiefly in fifty-six pound

boxes and there is a considerable quantity being shipped in tubs. Until a few years ago the round tinnet was practically the Canadian package, but the square box has taken its place, and about 75 per cent of our butter now goes in the square boxes. The rolls or blocks are only for the local trade, and very little if any of them go to Great Britain.

Mr. BLAIN. About two years ago I noticed a statement that a large portion of the butter used in the Yukon was supplied from the United States. Is that still the case ?

The MINISTER OF AGRICULTURE. I am happy to say that the Canadians are supplying the Yukon market with butter now, and the government creameries in the North-west are shipping largely into that territory.

Mr. WRIGHT. I may say that I have been over in England with butter and I have seen the Irish butter coming into the Liverpool and London markets in all manner of shapes the same as butter comes to the Montreal market. There is no danger of our coming into competition with the Irish butter, because there is no doubt that we make butter better and can beat them every time. If reports in the newspapers are correct the percentage of water in butter applies only to the Irish butter, and if we do not send any butter over there with more than 16 per cent of water in it there is no danger of our trade being injured. We have tried to ship butter to the old country in prints, but it does not keep nearly as well as when sent in fifty-six pound boxes. Occasionally a few of the seventy pound tubs are sent, but nearly everything goes in the fifty-six pound boxes now.

Mr. CLANCY. Was there any conference at any time between the Ontario government and the Department of Agriculture here having regard to the partial system of cold storage that was instituted by the Ontario government ?

The MINISTER OF AGRICULTURE. I do not remember any conference within the last two years with the Ontario government in regard to any matter of that kind. Some years ago there was a proposition made by the Ontario government for certain co-operation in regard to cold storage work and there were some shipments made by the Ontario government, but I had no official connection with them. That was over two years ago I think, and I have no information that I can give to the hon. gentleman with regard to it.

Mr. CLANCY. The minister is about right when he says that it was two years ago, because the Prime Minister of Ontario was preparing for the elections and he was telling the farmers of Ontario that they would have cold storage at their doors. For what length of time does the contract run for what is known as the cooled system of cold storage ?

The MINISTER OF AGRICULTURE. I think the contract for the cooling chambers covers two payments and is for two years.

Mr. CLANCY. What is being paid for the cooling chambers as compared with what was called cold storage ?

The MINISTER OF AGRICULTURE. We are paying half the cost of the plant, not to exceed $7,000 per ship, and that payment is extended over one quarter of one year and one quarter of another.

Mr. CLANCY. What was paid for the cold storage ?

The MINISTER OF AGRICULTURE. Half the cost, running up to $12,000 per ship, in some instances more than that, according to the size of the compartments and the strength of the machinery.

Mr. CLANCY. Two years seems to me to be a very short period, when the hon. gentleman pays half the cost of installing the plant, which at the end of the two years becomes the property of the steamship company. It seems to me that we have no adequate return for so large an expenditure of money, especially in view of the fact that the shipper must pay as much as he did under the cold storage system. Did the hon. gentleman find it impossible to make contracts extending over a longer period, or had he some reason for making such exceedingly short contracts ?

The MINISTER OF AGRICULTURE. I did find it impossible to bind the companies for any longer period. Experience has shown that if the efficacy of the work is once proved, the demands of the trade require it to be carried on. We found that in the case of the old cold storage system, and I am satisfied that we shall find it to be the case with the cooling chamber.

Mr. CLANCY. I suppose these contracts have been made with the steamship companies with whom the contracts for cold storage were made ?

The MINISTER OF AGRICULTURE. The contracts for the old cold storage practically covered all the ship lines which came to Canada, and these contracts are with the same people. There were no others to make them with.

Mr. CLANCY. If the system is to have such a future as the hon. gentleman seems to hope for, is it not fair to assume that we have gone beyond the experimental stage ? If the cold storage system has been a sufficient success to induce the steamship companies to put in the plants themselves, or with the assistance of the government in

the past, it is no longer an experiment; and if the steamship companies are not disposed to install this plant on getting the large sum of ten shillings per ton extra for the goods shipped in cold storage, one is at a loss to understand why the government of Canada should contribute a dollar towards it. If the cold storage system has been even a measurable success, even in a few articles, it seems to me that the steamship companies should not refuse to install even the cheaper system for which they charge higher rates than they did for the other system. It seems that the experiment has not been such a success as to induce the steamship companies to install the plants at their own expense, and that they are expecting more from the government of Canada than they are entitled to receive.

The MINISTER OF AGRICULTURE. It was with the greatest difficulty that we were able to induce the steamship companies to put in these chambers, because they did not know whether or not the experiment would be a success. We tried the experiment on two ships first, and the reports were satisfactory; but even with that result we had the greatest difficulty in inducing the steamship companies to agree to it. I confidently believe, however, that it will be a sufficient success on these eleven ships to induce other companies to adopt it, or the same companies to put the apparatus into other ships. But until we had started it on a sufficient scale to show the benefits of it to the trade, we were not able to get them to take it up.

Mr. CLANCY. Do I understand the minister to say that all the steamships which were fitted up with the plants for cold storage are now being fitted up with what are known as cooling chambers?

The MINISTER OF AGRICULTURE. Speaking from memory, I think there are over forty ships fitted with the old cold storage; but we have only succeeded in getting eleven ships fitted with the cooling chambers. I do not know whether all these ships have the old cold storage or not. Most of them have.

Mr. CLANCY. Are the ships that were originally fitted up with cold storage continuing to keep up an efficient plant?

The MINISTER OF AGRICULTURE. Every ship we know of is.

Mr. CLANCY. I am afraid the hon. gentleman is answering hastily. He has no control over them, and the contracts have ceased.

The MINISTER OF AGRICULTURE. My hon. friend forgets that we have the records of them. We put thermographs into their cold storage chambers, and we watch their operations, although we do not force them to do what they originally did.

Mr. CLANCY. How many creameries are now in operation in the North-west, and what is the condition of the undertaking there?

The MINISTER OF AGRICULTURE. In 1902 there were sixteen; in 1903 there will be nineteen. The increase is due to one, which was closed during 1902, being reopened at Wetaskiwin. We are running two others, one at Black Falls and one at Lacombe. These have been built and equipped by the settlers without any advance or loan from the department; but we are running these for the settlers this year.

Mr. CLANCY. Have the loans all been repaid?

The MINISTER OF AGRICULTURE. Not all. There is still $16,000 unpaid. There has been $36,436 repaid.

Mr. CLANCY. Is the rest likely to be repaid?

The MINISTER OF AGRICULTURE. I think most of it will be, I would not like to say positively that all will be. Some factories have not at all done well. The country in those particular districts has not filled up with dairymen sufficiently to hold out great hopes of final repayment; but I think that most of this money will be repaid.

Mr. CLANCY. Has there been some new arrangement made there?

The MINISTER OF AGRICULTURE. No, I am not aware of any change.

Mr. CLANCY. I find that generally throughout the North-west such payments as these occur. Take the creamery of:

Tindastoll B. & C. Association: school taxes, 1901, $7.56; premiums of insurance on creamery, $24; rent of creamery, 1899 to 1901, three years at $172.50; extra allowance for rent, 1900 and part of 1901, one and a half years at $50; less advance, $100.

What is the meaning of that?

The MINISTER OF AGRICULTURE. These items were all charged against the manufacturing account. There was a surplus in the creamery, and consequently these items were not really paid by the government at all, although the money went through the hands of the department.

Mr. CLANCY. What is meant by the rent of the factory? Who rents the factory?

The MINISTER OF AGRICULTURE. There is rent paid in all the factories to the original owner. That is charged in the manufacturing account.

Mr. CLANCY. Are not the government advancing considerable sums and becoming owners of some of the factories which have failed?

The MINISTER OF AGRICULTURE. We do not become owners of the factories.

Mr. CLANCY. There was a large sum expended in fitting up and rebuilding certain factories. After spending large sums of money on the factories, does the government pay rent for them ?

The MINISTER OF AGRICULTURE. We do not take over the factories. We rent them from the owners and advance certain sums which we spend in improvements, so as to put them in proper running order. Any one who takes a factory and runs it has to pay rent.

Mr. CLANCY. Is the department keeping up the system of making these advances ?

The MINISTER OF AGRICULTURE. No, we have not made any for several years. I do not think we have made any since 1900.

Mr. BLAIN. Who has charge of the sale of butter for those creameries ?

The MINISTER OF AGRICULTURE. Primarily the head office here. Mr. Marker is inspector in charge of the creameries in the North-west Territories, at Calgary, under direction from here and he manages the sales.

Mr. BLAIN. What was the output last year as compared with the year before ?

The MINISTER OF AGRICULTURE. In 1902 the output was 532,000 pounds and in 1901, it was 672,000 pounds.

Mr. BLAIN. How do you explain the decrease ?

The MINISTER OF AGRICULTURE. I am informed that it is due largely to the floods and bad roads in the spring which prevented the farmers bringing in their milk. Also in the district of Assiniboia, the large wheat crop kept the farmers too busy to attend to the creamery.

Mr. BLAIN. Where is the butter sold ?

The MINISTER OF AGRICULTURE. In British Columbia and the Yukon and a portion in China and Japan.

Mr. SMITH (Wentworth). What do you charge the farmers for making butter ?

The MINISTER OF AGRICULTURE. Four cents a pound.

Mr. SMITH (Wentworth). That might account for the falling off. In the Ontario creameries it does not cost more than two cents per pound.

Mr. WRIGHT. We always charge three and a half.

Mr. SMITH (Wentworth). Yes, but it does not cost more than two. I happen to be a director of one of them.

Mr. WRIGHT. I am a director also, and I know the cost is more than that.

The MINISTER OF AGRICULTURE. The expenses are very much higher than in the North-west and the output is very small, so that you have to charge higher prices than if you were running on a very large scale.

Mr. SMITH (Wentworth). You must make a good profit because butter can be made in quite a small factory at not over two cents a pound in the east. The government is supposed only to charge the actual cost.

Mr. WRIGHT. Four cents per pound is charged in the United States and in some places three and a half cents. But three and a half to four cents is the price.

The MINISTER OF AGRICULTURE. We charge four cents, and if the actual disbursements do not come up to four cents, the difference is credited to the dairy on the advance paid by the government.

Mr. SMITH (Wentworth). Then it costs four cents ?

The MINISTER OF AGRICULTURE. In some cases it costs about two and a half. We charge four cents, and when there is a surplus we credit it.

Mr. BLAIN. How many factories have been assisted by the government, and how many are now operated ?

The MINISTER OF AGRICULTURE. The creameries at Indian Head, Wolseley and Maple Creek have ceased to operate because these places are in the wheat belt and the farmers had all their time taken up with their wheat.

Mr. BLAIN. Has the government any control over those which have repaid the money advanced ?

The MINISTER OF AGRICULTURE. We are still operating them, but the time is near when we will cease to do so.

Mr. CLANCY. The understanding on which the hon. gentleman got his first vote was that at the end of three years the experiment would cease.

The MINISTER OF AGRICULTURE. Yes, but the people have been urging us to go on, and as they owe the government we thought it best to do so. Now that some have paid off their indebtedness, it is about time we should cease to operate those factories.

Mr. SMITH (Wentworth). How many had paid off their indebtedness ?

The MINISTER OF AGRICULTURE. Ten.

Mr. CLANCY. Are there any which have given up operations entirely ? Some twenty were assisted in the first instance with skimming stations outside, which were as a sort of subsidiary stations for the collecting of cream. There were originally, I believe,

about twenty. Are there any of that number that have ceased to operate ?

The MINISTER OF AGRICULTURE. Yes, those at Indian Head, Wolseley and Maple Creek.

Mr. CLANCY. How much did they owe ?

The MINISTER OF AGRICULTURE. Indian Head owed nothing. Wolseley owed $2,000, but they have paid something through the sale of part of the machinery. We hold the rest of the machinery. Maple Creek owes about $1,000.

Mr. CLANCY. In both these cases, there would be a loss ?

The MINISTER OF AGRICULTURE. We still have some of the plant that will be available against the debt.

Mr. CLANCY. Is it the intention of the department to operate these creameries until the debt is paid off ?

The MINISTER OF AGRICULTURE. I would not say positively as to that. Some, as I have said, may not be able to pay off the advance.

Mr. CLANCY. Why ?

The MINISTER OF AGRICULTURE. Because the conditions do not seem favourable for dairying in those places. The conditions may change. A few have been successful, and in the others it is hoped that the debt will be paid off.

Mr. GILMOUR. There was only about 570,000 pounds of butter made, and I almost think that two of the factories alone made half that quantity. Has the minister any account of the butter made in the factories ?

The MINISTER OF AGRICULTURE. I have here a statement of the butter made in these factories for the year 1902. I will give the total in round numbers : Calgary, 19,000 pounds ; Churchbridge, 116,000 ; Edmonton, 14,000 pounds ; Glenfel, 38,000 pounds ; Innisfail, 99,000 pounds ; Moosejaw, 16,000 pounds ; Moosomin, 11,000 pounds ; Olds, 42,000 pounds ; Prince Albert, 14,000 pounds ; Regina, 25,000 pounds ; Red Deer, 55,000 pounds ; Saltcoats, 6,000 pounds ; Qu'Appelle, 20,000 ; Tindastoll, 28,000 pounds ; Whitewood, 6,000 pounds.

Mr. GILMOUR. The factory at Tindastoll is a new one. Has the government advanced anything toward that ?

The MINISTER OF AGRICULTURE. We have not made any loans to the Tindastoll factory. We did pay for some small items of machinery. And the money is being repaid out of the season's work.

Mr. BLAIN. As to the operation of these factories after they have repaid the money advanced, did I understand the hon. minister to say that his department was considering the advisability of closing them up ?

Mr. CLANCY.

The MINISTER OF AGRICULTURE. Not closing them up, but ceasing to operate them—putting them into the hands of the people.

Mr. BLAIN. Have they been successful since they repaid the debt?

The MINISTER OF AGRICULTURE. We are still operating them as before. No change has been made in that respect. But I have warned them that, as they have paid off the debt, I thought it time for them to take up the work themselves. They have asked us not to insist upon that, because they find that the general management of our inspector is an advantage. No doubt, with the whole group of factories managed by one head and the marketing and shipping arranged for, the management is more economical. But, now that they have got beyond the experimental stage, it is doubtful whether we ought to continue the management of them. But, so long as we operate any of them, it would perhaps be as well to manage all, even those that are able to stand upon their own feet.

Mr. BLAIN. Are they run at a loss to the government ?

The MINISTER OF AGRICULTURE. Not those that have paid off their loans. Any money made is paid over to them.

Mr. GILMOUR. The government operation of the factories is considered a great boon by the people. It takes the marketing of the produce and the collecting and distribution of the money off their hands. In some cases it would be very inconvenient for them to do this for themselves. It cannot be managed for each factory so well as it can be managed for all by one head.

The MINISTER OF AGRICULTURE. Quite true.

Mr. SPROULE. Am I correct in believing that the government charges 4 cents per pound for making butter and does not collect the cream ?

The MINISTER OF AGRICULTURE. Yes, for making butter and furnishing supplies, such as tubs, salt, &c., and marketing the butter ?

Mr. SPROULE. With us the ordinary charge is 3 cents per pound and the highest charge is 3½ cents, and they collect the cream.

The MINISTER OF AGRICULTURE. The cost is very much higher in the Northwest than in Ontario. Any surplus that there is goes to the patrons.

Mr. SPROULE. But, if the factories were more economically run and the charge for making and supplies reduced below 4 cents, there would be more for the patron. I know of small factories in my section that have been run for years, and the highest charge

they ever made was 3½ cents and they collected the cream. I know that for a fact, for I have been sending to two of these factories for some time.

Mr. GILMOUR. As I understand it, if there is a profit the government pays it back to the patrons.

The MINISTER OF AGRICULTURE. Yes.

Mr. SPROULE. But if the charge of 4 cents per pound is made, there is less to be divided among the patrons than if they were charging 3½ cents, which ought to be sufficient, considering that the government does not collect the cream.

Mr. GILMOUR. If the government takes it, it gives it back to the patrons in some way, for the government does not take any profit. These factories were indebted to the government, as I understand it.

Mr. SPROULE. But my complaint is that the charge for making butter is too high. I assume that it would cost a little more in the North-west than in Ontario, but the government must be relieved of a good deal of expense in not collecting the cream. I take it that if they did collect the cream they would charge 4½ per cent.

The MINISTER OF AGRICULTURE. In my part of the country the average charge is three cents a pound. In the North-west it costs about $180 a car to ship boxes to these factories. Fuel, labour and everything of that kind is very much higher there than it is in the east.

Mr. SPROULE. Was I correct in understanding that the shipment of fruit in cold storage was a success ?

The MINISTER OF AGRICULTURE. It has been a great success.

Mr. SPROULE. What kind of fruit are you shipping ?

The MINISTER OF AGRICULTURE. The government has not shipped anything themselves. But private shippers, I believe, have shipped several varieties of apples, pears, and a few peaches.

Mr. SPROULE. I understood that the government did carry on an experiment for some years in shipping fruit in cold storage.

The MINISTER OF AGRICULTURE. We stopped that two years ago.

Mr. SPROULE. Then I presume it was a failure ?

The MINISTER OF AGRICULTURE. I do not think it was a failure. Those shipments were entirely experimental. We shipped peaches and pears chiefly, and some grapes. The pears went forward as a rule successfully, and so did the grapes, as far as the carriage was concerned. Apples went forward successfully.

Mr. SPROULE. What is supposed to be the proper temperature for sending apples forward ?

The MINISTER OF AGRICULTURE. The best temperature for sending fruit would be 35 to 40 degrees Fahrenheit, for the tender varieties.

Mr. SPROULE. I have seen an account from Washington of shipments of the harder variety of apples, which sold in London for $5 a barrel. These were shipped from Illinois. They shipped in carload lots, and realized $5 a barrel. They were sent forward at a temperature of 31. These shipments included pears, lemons and other fruit, and they went forward successfully. They think there is no difficulty at all, provided the cold storage is right. I remember looking up the experiments made by the experimental farm here, and I do not think they were very successful. When the shipments reached London they were sold at a less price than they cost here. Could the minister tell us what is the additional cost of sending butter and fruit in cold storage over the cost of sending it in the ordinary way ?

The MINISTER OF AGRICULTURE. The difference is ten shillings a ton, that applies to all lines of goods. In regard to apples, the harder varieties that are intended to be kept after arrival in the old country, should be shipped at a temperature of 31 ; but the tender varieties which are to be put on the market immediately after coming out of cold storage, need to be shipped in a higher temperature, as otherwise they would spoil in getting into warmer air. The shipments that were made last year by the horticulturist of the experimental farm, realized more than $5 a barrel on the London market, in competition with apples from Illinois.

Mr. SPROULE. What percentage of all the shipments of butter and cheese is made in cold storage or cold chambers ?

The MINISTER OF AGRICULTURE. I stated earlier in the evening that practically all the butter goes forward in cold storage, in the lowest temperature that the chambers will give. Of cheese, hardly any goes in these cold chambers, but a considerable quantity is carried in the cooled or ventilated chambers.

Mr. SPROULE. Have you some arrangement made this year for cold storage cars on the different railways for shipping butter and cheese ?

The MINISTER OF AGRICULTURE. We have cold storage cars for shipping butter and in addition to that we have a very large number of iced cars for cheese, for the first time this season. There were a few last year as an experiment, and we found it so satisfactory that we induced the railway companies to put on about one hundred im-

proved cars, iced cars, for the carriage of cheese.

Mr. SPROULE. What do they charge extra over the ordinary freight rates for the carriage of cheese in these cars ?

The MINISTER OF AGRICULTURE. They do not charge anything over the ordinary rates. They run once a week.

Mr. POPE. Where do they run from ?

The MINISTER OF AGRICULTURE. They run from practically everywhere all over the country.

Mr. SPROULE. What does it cost the government ?

The MINISTER OF AGRICULTURE. We pay for icing the cheese cars $5 per car, and for the butter cars we guarantee the railway companies two-thirds of the capacity of the car. If they earn more than two thirds of the capacity of the car we are credited with the surplus, and if they earn less we are charged with the difference, and the balance is made up at the end of the season.

Mr. SPROULE. You pay $5 per car irrespective of the length of the run ?

The MINISTER OF AGRICULTURE. Yes, that is the cost of icing.

Mr. SMITH (Wentworth). What was the total expense last year ?

The MINISTER OF AGRICULTURE. $5,436.11 for butter and $1,940.77 for cheese.

Mr. SMITH (Wentworth). A year ago it was claimed that a great deal of the damage to fruit that was shipped arose from the fact that it was too hot in the cars, that the cars were not properly ventilated and that the cars were chargeable with a good deal of the damage rather than the ships. I think the hon. minister proposed to take some steps to endeavour to get a large number of cars ventilated. I would like to know what steps have been taken.

The MINISTER OF AGRICULTURE. Last year we got ten ventilated cars on the Grand Trunk Railway for which we paid $626.50.

Mr. SMITH (Wentworth). What system of ventilation ?

The MINISTER OF AGRICULTURE. I cannot very easily describe it. I am told that there is a syphon arrangement by which by the motion of a car the air is drawn into the car.

Mr. SPROULE. Do you have any on the Canadian Pacific Railway ?

The MINISTER OF AGRICULTURE. They are building some this year, I believe.

Mr. SMITH (Wentworth). It cost $62 per car to put this ventilating arrangement on ?

The MINISTER OF AGRICULTURE. Yes, that was for ten cars for the season.

Mr. SMITH (Wentworth). Would it be necessary for the government to pay in order to get that accommodation ?

The MINISTER OF AGRICULTURE. We are not paying anything at all this season.

Mr. SMITH (Wentworth). Will the railway companies not put this ventilating apparatus on their cars without charge ?

The MINISTER OF AGRICULTURE. I believe they are doing that this year. We made that arrangement last year to try the experiment and they found the experiment so successful that they are putting them on themselves this year.

Mr. SMITH (Wentworth). They propose to put on a large number of cars ?

The MINISTER OF AGRICULTURE. I believe so.

Mr. TAYLOR. I hold in my hand a pamphlet which is headed :

Dominion of Canada.
Department of Agriculture.
Branch of the Commissioner of Agriculture and Dairying.
Poultry Division.
Profitable Poultry Farming.
(Revised Edition).

I presume there was a former edition that did not perhaps show a profit as great as this edition does.

Bulletin No. 6.
Published by direction of the Hon. Sydney A. Fisher, Minister of Agriculture.

It contains a lot of valuable information and a lot of splendid wood-cuts, and on page 38 there is a gentleman dressed in full dress with a chicken in his hand as it is held preparatory to killing, and on page 39 there is a chicken with a brick on its back, showing the position of the chicken in the shaper, with a brick on top to shape it. The whole thing is to induce the farmer to go into profitable poultry farming. I take up the Auditor General's Report and turn to D—76, 77 and 78, and I find how the government give an illustration of profitable poultry farming. I find that at Holmesville, which I presume, the hon. member for West Huron (Mr. Holmes) will know, a gentleman named Mr. F. C. Elford purchased chickens and feed, and the bill amounted $613.36. He sold them for $196.65, making a loss of $417.31. A gentleman from Bowmanville named Mr. A. W. Foley expended $225.29 on chicken farming and returned 66 cents, making a loss of $224.63. on the speculation. A gentleman at Renfrew named Mr. John Frood expended $183.70 and returned $6.88, making a loss of $176.82. There is a gentleman at Eldon, Prince Edward Island, who expended

$267.77 and returned $88.57, making a loss of $179.20. A gentleman at Alberton, Prince Edward Island spent $225.37, returned $116.87, and made a loss of $108.50. At Andover, New Brunswick, a person spent $347.04 and returned $179.03, making a loss of $168.01. At Bondville, Quebec, Mr. Hillhouse, spent $719.87 and returned $407.71, making a loss of $312.16. I want the hon. Minister of Agriculture to explain how he can put a document like this into circulation advising the farmers to go into poultry farming for profit while making the losses the government have made. They expended $7,621.58 in this way and all they returned was $2,753.12, making a loss of $4,868.46.

Mr. COCHRANE. At how many stations ?

Mr. TAYLOR. I did not count the number of stations, but this is the total result. How can the hon. minister tell the farmers there is profit in poultry farming while showing such a loss as this ?

The MINISTER OF AGRICULTURE. The hon. gentleman knows perfectly well that this is experimental work. You do not expect to make a profit on the work itself. You never can do so and you might as well expect the farm at Ottawa which deals with an immense amount of experimental work to sell enough out of its fields and out of its herds to pay for that experimental work. The same principle applies to the poultry experimental stations where the work is done for the purpose of obtaining information and not for the purpose of obtaining results at the stations themselves.

Mr. COCHRANE. Would the minister let me ask him a question ?

The MINISTER OF AGRICULTURE. Would the hon. gentleman wait till I sit down ?

Mr. COCHRANE. I thought that perhaps the minister would never be able to get through in time to sit down. I can tell the minister that if the experimental farm outside of the experimental plots will not pay, then it is no good. What can the farmers of Canada learn from the Minister of Agriculture in reference to farming, when he tells us to-night that he cannot make his own farm pay. He has the most beautiful site there is in this country for a farm, and I venture to say that neither the minister himself nor any man on the farm has brains enough to make it pay. The minister tells us that he has men trotting around the country teaching the farmers how to raise chickens. What is the use of that when the farmers cannot get help enough to do the ordinary farm work. He issues this pamphlet with all these cuts in it at a great expense, and then he tells us that chicken raising does not pay him, and that it is only an experiment. It is the most absurd thing I have ever heard tell of, to think that he has men in our section of the country running around to tell the farmers how to fatten chickens.

Mr. CLARKE. How to suck eggs.

Mr. COCHRANE. Well, there is a good deal of sucking going around in that department, and the minister has more suckers than chickens. Mr. Chairman, you yourself, as a doctor, will see the absurdity of sending people to farmers telling them how to raise chickens. We are paying $50 a month to these men to do that, and then the Minister of Agriculture turns around and tells us that he cannot himself make this chicken fattening a paying business. It is better that he would drop the chicken fattening and bring his great ability to bear on running the experimental farm properly. I would like to ask you, Mr. Chairman, how long you could live on a farm that you could not make pay ? It is worse than absurd to take the money of the hard working farmers of the country and spend it on an experimental farm which the minister says he cannot make pay. What is the use of it as an example to the farmers of Canada if it is a concern that cannot pay its own way ?

The MINISTER OF AGRICULTURE. I admit that I cannot make the experimental farm pay, and I never knew it to pay since its inception, and I do not expect it ever will pay.

Mr. COCHRANE. You had better wind it up.

The MINISTER OF AGRICULTURE. But it does pay, and the farmers of this country acknowledge it pays, in the information they get from these experiments and from the reports and bulletins that are sent out. I can say that since that bulletin has been out we have had hundreds and thousands of applications for it from farmers who want to know how to carry on the business, and I am having more applications for experimental stations every day.

Mr. COCHRANE. From some Grit heelers.

The MINISTER OF AGRICULTURE. No, but frequently from Conservative voters who appreciate the benefits that are being conferred upon them in this respect by a Liberal government. These are progressive farmers and are not like my hon. friend (Mr. Cochrane) who thinks he can learn nothing—not from the Minister of Agriculture, who does not pretend to teach him—but from the officials in the Department of Agriculture, who are the best experimenters and the best experts in this country, and I may say on this continent, and who are working to-day for the benefit of the farmers of Canada and doing work that the farmers of Canada appreciate.

Mr. COCHRANE. The minister says that he has received thousands of applica-

tions for his pamphlet, but the reason is that he has deceived the public by it, and they will soon wake up to the fact that they have been deceived by the Minister of Agriculture, who pretends to know more than he does. The Minister of Agriculture says that I can learn nothing from him. I would be very sorry if I could learn anything from the minister about farming, and I can tell him that the farmers of this country can learn nothing from his farming. I am willing to pay any reasonable amount for experiments in these experimental plots, and I believe they are very useful, but I also believe I should not be asked to pay my hard earned money to keep up a farm that the minister admits he cannot make pay. I can tell the minister that there are hundreds and thousands of farmers in this country who have better and more artistic buildings on their farms than he has got on his experimental farm. The experiments made by these scientific men are of value, and the people are willing to pay a liberal sum for the benefits we derive from them, but otherwise the thing is of very little value. We know as much about cheese making and butter making as any gentleman there, unless it is Professor Robertson. We know that the minister spent $40,000 in experimenting in curing cheese in cold storage, when he could have made his experiments for a couple of thousand dollars in any well equipped cheese factory. I repeat what I said, that the minister is deceiving the public because he led the farmers to believe that he could make chicken farming pay, when the Auditor General's Report shows that his experiment was worse than a failure.

Mr. TAYLOR. I am not surprised at the statement made by the minister that he has had a great many applications for these stations. I suppose every government supporter throughout the country would like to have a station on his farm. There is one of those stations at a place called Holmesville, which, I presume, is in the constituency of the hon. gentleman from West Huron (Mr. Holmes) and there a gentleman got an expenditure of $613.36 and he returned $196, showing a deficit of over $400. Another at Bowmanville expended $225.29 and returned 66 cents. If the hon. minister's statement is correct, that these are experimental stations, how does it come that this gentleman purchased a lot of eggs and supplies, and only got 66 cents out of the lot? Would not every voter in the country want one of these stations at his door when he sees the results that follow. The gentleman at Bowmanville was paid $150 for his services, from the 24th April to the 24th July—$50 a month. Every farmer would like to get that for feeding a few chickens. He bought 1,722 eggs, at $20.78. He must have sucked them all, because he only returned 66 cents out of the lot. So I am not surprised at the statement of the minister that he has application after application for these stations. I have only read a few items, but there are dozens of others all over the country. I am sure that several of these stations could be planted in the constituency of Leeds, among the hon. gentleman's friends there. They would like to have them, and have the care of the chickens. Is the minister satisfied with these results of his experimenting?

Mr. HOLMES. I am sorry I did not happen to be in the House when the matter of the Holmesville chicken station was first referred to, because I would like to have heard all that was said in relation to it. But I can say that although it shows a deficiency on the expenditure, the people in the neighbourhood, irrespective of their political proclivities, are glad to have the station, and admit that it has been a success. I can say further that the egg-suckers referred to by the hon. member for Leeds (Mr. Taylor) are not confined to the Liberal party; for I had an application this week from a Conservative in Goderich who realized the success of the Holmesville station and wanted one established at Goderich also. I am sorry that the minister was not able to grant the request, because I am satisfied that the people of West Huron, altogether regardless of political predilections, regard the station at Holmesville as a success and as doing a good work.

Mr. POPE. Are these chickens fed with the feeding machine?

The MINISTER OF AGRICULTURE. Sometimes they are, and sometimes they are not.

Mr. POPE. Why are they not all fed alike?

The MINISTER OF AGRICULTURE. They are not using the machine much now.

Mr. POPE. It was only a year or two ago that we were advised by the Minister of Agriculture that the squirt was the only proper thing with which to feed chickens. Surely, after having made the careful investigation which the hon. minister must have made before recommending this priming machine, which was adopted at his suggestion or at the suggestion of his department, he must have known whether that machine was a success or not.

The MINISTER OF AGRICULTURE. It was an experiment.

Mr. POPE. It had been experimented with in very many parts of the world. It was not the invention of the hon. gentleman—this squirt which he used to pump food into the chickens. Why, as I look at the picture of this well-dressed gentleman in this pamphlet, I could almost fancy that it represented the first experiment of the Minister of Agriculture himself on that chicken.

The MINISTER OF AGRICULTURE. A good likness.

Mr. POPE. A very good likeness indeed—a little too much hair perhaps. It may have been taken in the younger days, before the parting was quite so definite. But I observe here a long description of wringing the chickens' necks. Great heavens, Sir, I have wrung the necks of chickens and some other things ever since I was ten years old. This is what the article says :

Kill chickens by dislocating the neck.

That is simply wringing the neck.

With the left hand——

Don't take the right hand ; if you do, the job will not be properly done.

With the left hand hold the chicken's legs and wings in one firm grasp.

If you are left-handed, you cannot do the business. No left-handed man need apply.

Place the first finger of the right hand——

Mind, not the second finger. If you have lost the first finger, you are not in it.

Place the first finger of the right hand on the right side of the neck, and the remaining fingers on the left side. Grasp the head in the hollow of the hand, with the fork of the fingers behind the head where it joins the neck. The back of the chicken being upwards, hold the legs against the left hip.

If you should put them against the right hip, the whole thing is 'bust ;' the killing of this chicken would be a failure ; the meat would not be worth sending to market; it would be completely spoiled.

Hold the legs against the left hip and the head near the thigh or knee.

It does not give you a choice. Mr. Chairman, this is interesting to you as a physician, to know the proper way to kill a chicken.

Bend the head backward as far as possible, and at the same time stretch the neck, and when it is dislocated, immediately pull the head.

If you don't the chicken will wake up ; you must not give it a second. It says immediately ; the instructions are specific ; the word should be underlined.

Immediately pull the head to you one and a-half inches from the neck.

If you pull it more than 1½ inches, the whole job is incomplete.

Hold the wings firmly——

This is an important matter, that you must hold the wings of chickens at all times with a firm grasp.

Hold the wings firmly after killing——

Even after the chicken is dead, you must not let go ; it is dangerous to let go of the wings——

—and allow the chicken's head to hang down so that the blood can collect in the neck. The head is attached to the body simply by the skin of the neck.

That is, you stretch it 1½ inches, hang on to the wings after the chicken is dead, and let its head drop down. What a cruel act, Mr. Chairman, towards this beautiful bird who but a few moments before was crowing around the barnyard, so proud of himself that you might almost think he was the Minister of Agriculture. There he is, with his head hanging down after you have twisted it off. I think, Mr. Chairman, that there are farmers in this country who might possibly be able to wring a chicken's neck without these elaborate instructions contained in this pamphlet which is issued by the Department of Agriculture.

The MINISTER OF AGRICULTURE. Well, Mr. Chairman, we will issue a new edition of the pamphlet with the annotations of the hon. gentleman. It might be more acceptable to his friends.

Mr. POPE. It is very kind of the Minister of Agriculture, who I know is very kindly disposed towards me. If you issue a new addition, just say wring the chicken's neck in the old-fashioned way, and let it go at that. The farmers will catch on, for it is very simple.

Mr. CLANCY. On what principles are those experiments carried on which result in a loss ? The first thing to convince the farmers would be that the work could be carried on privately afterwards without loss.

The MINISTER OF AGRICULTURE. Whenever experiments have been carried on, there are expenditures which have nothing whatever to do with the profit or loss in the raising or fattening of chickens. Records have to be kept and a certain amount of experiments are bound to result in failure, but our failures serve as a lesson to others. Last year we tried the experiment of raising a certain number of chickens ourselves and feeding them in competition with chickens we bought. We have also been trying incubators for eggs raised from our own hens and eggs that are bought. That kind of work costs more and shows more failure than ordinary work done on purely commercial lines.

Mr. CLANCY. The hon. gentleman does not throw much light on the subject. The committee must be surprised at the hon. minister stating that they tried bad methods in order to find out good ones. In other words they sow failures in order that they may reap success and spend a lot of money in that way. If the hon. gentleman has men capable of carrying on experiments, it seems to me that the best methods should be thought and none others. There is not a farmer who does not know how to raise chickens, and it is a very poor compliment to their intelligence to have men going about teaching them that work. Farmers have incubators just as well as the Experimental Farm. How many experiment stations have paid expenses, and how many are in operation ?

The MINISTER OF AGRICULTURE. None of them have paid expenses. There were twelve stations last year in operation.

Mr. CLANCY. Who are the men employed in carrying on these experiments at these different stations ?

The MINISTER OF AGRICULTURE. There is one at Calgary under charge of Mr. Barker. One at Renfrew, Ontario, under the charge of Mr. John Broone, and there are several others.

Mr. CLANCY. Where did those gentlemen receive instructions as experts to equip them for the work ?

The MINISTER OF AGRICULTURE. They are farmers who have been engaged in poultry raising, and they get their instructions from the department.

Mr. CLANCY. They come down here to undergo a training.

The MINISTER OF AGRICULTURE. No.

Mr. BLAIN. Does the hon. minister intend establishing any more of these experimental stations ?

The MINISTER OF AGRICULTURE. There are some passing out of our control, and perhaps some others will be established in place of the old ones. There is a demand from almost every quarter for this work to be carried on.

Mr. FOWLER. I should think they would want it carried on in Renfrew.

The MINISTER OF AGRICULTURE. It is not a question of the expenditure of the money and the making of a direct profit, but it is the advantage to the farmers of seeing the work done and learning the results of the experiments.

Mr. FOWLER. But the results they find out from the station at Renfrew would tend to prevent the farmers from going into the business. These requests must come from Grit heelers who want jobs.

The MINISTER OF AGRICULTURE. No, but from farmers of the district.

Mr. BLAIN. I believe the committee would be satisfied to have a certain amount of money expended in teaching the farmers how to fatten chickens. But I am strongly of opinion that all that work ought to be done at the Experimental Farm at Ottawa. What advantage, for instance, do the farmers of West Huron get from the expenditure of $400 or $500 on this experimental station more than they would get from work properly done on the experimental farm here? It would be better to expend the money in equipping the experimental farm here and sending out bulletins to farmers around the country prepared by the experts in charge of this main station. If it is necessary to extend further in the province of Ontario, the hon. minister must remember that at Guelph there is an Ontario Experimental Farm, which naturally becomes a centre of information for the farmers of West Huron and many other constituencies. What advantage is it to teach the farmers of West Huron by experiments how to kill a chicken ? There is only one way to do it, and no doubt the bulletin set it forth. The minister is reaching out too much, and that is one reason why the experimental farm here is not better equipped. It would be better to equip this farm properly, and from here send out bulletins.

Mr. FOWLER. In my town there are several persons who are engaged in the poultry business. But when the government came to select a person for the work in this experimental station, instead of selecting one of the men who understood the business, they selected a man, a very worthy gentleman in his own line, who was engaged in the sale of agricultural implements. He had not an acre of land, was not a farmer in any sense, and did not even keep a hen or chicken about his premises, until he was appointed to this work. But he had this qualification, that he was very active in working for the Liberal party. I agree with the hon. member for Peel (Mr. Blain) that expenditure of this sort is quite absurd. The minister, in the course of his occupation of this department, has done some very absurd things, but of all the things he has been guilty of, this chicken fattening business is to my mind, the most absurd. I am sorry he does not carry out what he intimated to the committee last session, when this subject was up for discussion, when he intimated that he was about through with his experiments along this line. It is impossible for people generally in a large agricultural community to go and see how the chicken fattening business is done. You must instruct by means of bulletins, and these can be issued from the Experimental Farm at Ottawa. When you take this Renfrew case, it is most glaring. The expenditure is $180. It is a small sum, but, on the other hand, you find that the receipts amounted to only $6.86. Did the chickens die off ? Or were they sent in the defective cold storage that the hon. minister has given us, and perish on the way ? It does seem to me that, after the lamentable exhibition he has given us tonight, he can no longer pose as the capable head of this department. When we find that this cold storage of which he boasted so long is so thoroughly inefficient, when we find, that the fruit growers of Niagara district can no longer take advantage of it because their fruit is practically destroyed, and when we find these chicken experiments resulting so deplorably, surely these things should constrain the hon. gentleman to plead guilty to the charge that he is thoroughly incompetent and unfit for his position, and should make way for some better man.

Mr. CLARKE. When this pamphlet was published, I took advantage of the opportunity to write to the officials of the hon. gentleman's department and get a number of copies, which I had the pleasure of sending out to people engaged in chicken raising. I had not then seen this account in the Auditor General's Report. If the gentlemen to whom I sent the pamphlets learn of the financial results of these experiments, it is hardly likely they will follow the advice given. I would like to ask the hon. minister what was the object of establishing this experimental station at Bowmanville? I see that the expenditure was $225.29; and there was a return of just 66 cents. The main item of expenditure was $150 salary to the person operating this branch. On eggs and other things $75.25 was spent. The number of eggs purchased was 143½ dozen. There was also bought 75 gallons of coal oil, two gross of screw nails and other suppiles. Is it the intention to carry on that station at Bowmanville? Was the object in establishing it to incubate the eggs artificially? In any case it seems to have been a lamentable failure, when we get back only 66 cents after an expenditure of $225.29. I notice that at the Holmesville station, to which my hon. friend from Huron referred, there was one purchase of ten yards of flannel. Was that to prevent the chickens from getting the croup?

Mr. HOLMES. It shows that they were pretty honest in putting everything into the account.

Mr. CLARKE. I agree with the hon. member for Peel (Mr. Blain) that the country is ready to spend any reasonable sum in well considered experiments. What is to be done with this Bowmanville station? I am sure the results have not been very satisfactory to the minister. Does he intend to keep that station going on? It has cost this country $225.29 less 66 cents to produce an experiment upon 142½ dozens of eggs. Has there been any practical benefit to the farming community of Bowmanville or of the county of Durham from this experiment?

The MINISTER OF AGRICULTURE. I have not got the details of the results of the work there. But I would point out to the hon. gentleman what I said earlier in the evening, that I do not expect for a moment that these illustrations at the experimental stations are going to have any profitable results as far as revenue is concerned. But they are beneficial to the country at large, just as other experimental and illustration work in the various parts of the country, in so far as they supply information which is distributed to the farmers throughout the country. In this particular case, if I find that the station has not been productive of anything of value to the country, I should not continue it. The country at large is asking for illustration work of this kind. Not a week passes that I do not receive requests from different parts of the country to establish experimental farm stations. Complaints are constantly coming in that the farmers cannot afford to come to the experimental farm at Ottawa, or to those in other parts of the country, they are asking for something more within their reach. That request has been so constant that wherever it has seemed feasible, I have been glad to try and distribute this kind of work over the country as much as possible. That is the policy I have adopted in these illustration stations and some other branches. So far as I have seen, that has been on the whole acceptable to the farmers, and I believe it is a useful concession to the demands which have been made in the interest of agriculture. The poultry stations are doing work that is partly experimental and partly illustrative. The expenditure and the sales from them have no relation at all to the nature of the work. The balance between sales and expenditure at a station is no criterion at all of the value of the work that is done at that station.

Mr. CLARKE. But what is the particular kind of information which the hon. gentleman wishes to furnish to the farmers by these stations? The principal item in the outlay at this station at Bowmanville is for three months' salary, $150, for the gentleman who had the good fortune to be selected to conduct these experiments. Has he issued any memorandum showing the results obtained by this station?

The MINISTER OF AGRICULTURE. That was one of several stations in which the work of fattening chickens was illustrated for that section of the country. The same work is illustrated in other stations which I have read over.

Mr. CLARKE. Here it is about eggs.

The MINISTER OF AGRICULTURE. That shows the hon. gentleman that what he finds in the Auditor General's Report does not show the work that is being done there.

Mr. CLARKE. Then what is the use of publishing it?

The MINISTER OF AGRICULTURE. What he finds in the Auditor General's Report is merely a statement of the disbursements and receipts, but as I have explained, these are no criterion at all of the value of the work done.

Mr. CLARKE. Has this gentleman made a report of the result of his operations at Bowmanville?

The MINISTER OF AGRICULTURE. Certainly.

Mr. CLARKE. Can the minister say what better knowledge we have of the raising, feeding and fattening of chickens as a result of the establishment of that station at Bowmanville?

The MINISTER OF AGRICULTURE. I have pointed out that this kind of work has been conducted in a dozen different stations all over the country for the purpose of illustrating what can be done. One of these stations was in the far west of Ontario, another is at Renfrew, and other is in central Ontario, at Bowmanville.

Mr. CLARKE. The information which the farmers of Ontario will obtain from the Bowmanville station ought to be accompanied by some further information, because those of them who only see or hear of the Auditor General's Report, will only know that this station cost $225.29 and yielded receipts of 66 cents. Will they be edified by getting that information ?

The MINISTER OF AGRICULTURE. I think they will appreciate what has been done.

Mr. CLARKE. Would it not be better for the minister to give further particulars as to the results which he has attained in this station at Bowmanville ? We all appreciate the efforts which are made to give our farmers increased knowledge as to the profitable raising of poultry, but the way these accounts are presented will not leave a favourable impression upon the mind of the ordinary reader. If the hon. gentleman is going to issue any more pamphlets, let him give us some memoranda that will show to the people any benefit there may be from the expenditure of this money at Bowmanville.

Mr. FOWLER. So far as we can see, the result of this experiment at Bowmanville will be to deter the farmer from going into the chicken business. But we have a similar result at Renfrew, where the receipts are very much larger., it is true, but still there is a great disparity between the receipts and the expenditure. I know the experiments at the Sussex station, which the minister has partly discontinued, were very disastrous. I think the receipts were only about 25 per cent of the expenditure. The only way in which the hon. minister could possibly get any advantage is by issuing bulletins from these different stations, because all the information that the country has is what is contained in the Auditor General's Report. As the hon. member for West Toronto (Mr. Clarke) has pointed out, I do not know how the farmers are going to read between the lines or how they will regard it as a very valuable work unless it be from the standpoint that it is a good business to keep clear of as far as the farmer is concerned. Unless the hon. minister has bulletins issued to the farmers or has farmers' excursions arranged to bring them in, and let them see how the chicken is properly fattened and the egg properly hatched, I do not see where any beneficial results can possibly be attained, and I throw out that suggestion to the hon. minister in order that he may try and improve matters in the future if he proposes to continue his chicken fattening experiments.

Mr. TAYLOR. The hon. gentleman made the statement a few moments ago in order to try and lead the House and the country to believe that he was doing what was fair for the province of Ontario. He said he had established one station at Holmesville in western Ontario, one at Renfrew in eastern Ontario, and one at Bowmanville in central Ontario. If he will look at the Auditor General's Report he will find that on the next farm, at Whitby, he has established another. Whitby is in South Ontario and Bowmanville is in West Durham, two adjoining Grit constituencies, and the gentlemen running these stations are known to be the worst Grit heelers in that section of the country. Mr. Foley, at Bowmanville, every one knows, is one of the faithful, while Mr. Brant, who lives a few miles out of Whitby, everybody knows, is one of the leading politicians in that section of the country and knows nothing more about fattening chickens than the hon. minister himself does. He got $638.41 and returned $266.63, making a loss of about $400. He drew out of that for services from April 1 to December 24, 1901, $382, and the balance went for supplies ; 3,800 pounds oat chop, 12 bushels corn, skim milk, 9,210 pounds, &c., and there is a deficiency of $400 in this case. Central Ontario had to have two stations adjoining each other. The hon. minister tried to lead the House and the country to believe there was only one.

The MINISTER OF AGRICULTURE. Was that not in the year before ?

Mr TAYLOR. This is all in the last Auditor General's Report.

Mr. HOLMES. Just for the benefit of the hon. member for King's, N.B. (Mr. Fowler), who suggests the holding of farmers' excursions, of course, jocularly, I may say that hundreds of people from all over that section of the country have visited the poultry station at Holmesville. I hope hon. gentlemen opposite do not think that Holmesville has any special connection with myself because it happens to have my name. I am sorry to say that nearly all of the residents there vote against me. At the same time I venture to make the statement that if the hon. Minister of Agriculture could see his way clear to establishing a poultry station in every county in Ontario the people of Ontario would endorse his action in doing so. The people of the locality who have had an opportunity of seeing the work that is being done at the station are perfectly satisfied with what has been done during the first year of its existence, because it has only been in existence one year, even though the work is being done at a loss. Of course, as the hon. minister very properly suggests, you cannot expect that experiments of that

kind will show their results in dollars and cents. Whether these stations are expected to become self-sustaining or not I do not know, but I venture to make the assertion that I believe the people are perfectly well satisfied with the work that is being done there, and they realize that it has enhanced the value of poultry in that section to a very considerable degree.

Mr. HENDERSON. I think we might turn our attention now to some other subject.

Some hon. MEMBERS. No, no.

Hon. Mr. ROSS (Victoria, N.S.) I would like to say a few words on the subject first.

Mr. HENDERSON. As an interlude and to allow our friends to have a breathing spell in dealing with poultry, I desire to introduce another subject. I am interested, I may say, in poultry raising. I have for years taken a great deal of interest in it and I think that a great deal can be accomplished by supplying the farmers with eggs of the most approved breeds of poultry. I am sure there is as much accomplished in that way as in any other part of the business undertaken at the experimental farm or by the government. The subject that I desire to introduce at present is a matter that came before the Agricultural Committee in the month of April last, and which I am not sure whether it has been dealt with by the hon. minister or not. I refer to a pamphlet that was written illustrating a portion of the fruit districts in western Ontario. A copy of this pamphlet was shown to members of the Agricultural Committee and the suggestion was made that the author should write another book of about the same size along the same lines but dealing with all the provinces of the Dominion as well as the province of Ontario, which was dealt with in this book. That suggestion met with the approval of the Agricultural Committee. It was thought to be a good thing to have some illustrated book that could be sent to the old country to show the people there the character of the fruit farms of Canada, with a view of directing the attention of the people there to the matter and inducing them to invest money in that business. It is unnecessary for me to attempt to enlarge upon the value of the fruit industry of this country. We have heard a great deal about it. We all know something of it. The other day the right hon. Prime Minister was somewhat at a loss to find where the garden of Canada was. Well, if he will come to the county of Halton I will show him a portion of it and perhaps one of the finest portions as far as fruit-growing is concerned. I would like to see this illustrated book that the Agricultural Committee examined given a circulation in the old country because I believe it would be a very useful kind of literature and something that the hon. Minister of Agriculture would find profitable and useful in soliciting a certain class of people to come to this country. The report of the Agricultural Committee was presented on the 5th of May last, and as the minister was then out of the country it is possible that his attention may not have been called to it. I read the report from the Votes and Proceedings, page 277 :

Mr. Douglas, from the Select Standing Committee on Agriculture and Colonization, presented the third report of the said committee, which is as follows :—

The committee submit, for the information of the House, the following report of a sub-committee, and said report adopted by the committee on the 1st April, 1903.

The sub-committee of the Select Standing Committee on Agriculture and Colonization, appointed to examine into and report upon the advisability of procuring a second and extended edition of the pamphlet written by Miss Martha Craig, illustrating the fruit industry of a portion of Western Ontario, beg leave to report as follows :—

We are of opinion that a booklet prepared on the plan indicated by the sample above named is admirably calculated to attract the attention of people in the old land interested in fruit-growing.

Miss Craig's proposal to us is to issue a second edition of the said work, eliminating from the sample shown to the sub-committee all that does not relate exclusively to fruit-culture and the results accruing therefrom, and to extend the scope of the work to all provinces of the Dominion.

Subject to these conditions, the sub-committee advise that your committee recommend to the honourable the Minister of the Interior and the honourable the Minister of Agriculture, that departmental support be granted to the extent of the acceptance of a sufficient number of copies of the said enlarged booklet as will warrant the authoress to proceed with the work to completion and publication at once.

This report received the endorsation and commendation of the Committee on Agriculture, but for some reason or other the chairman did not move its adoption. I hope that the minister, if he has not already done so, will give his attention to it and will carry out the views expressed by the committee.

The MINISTER OF AGRICULTURE. I have not had the matter brought formally to my attention although several members of the Agricultural Committee have spoken to me with regard to it. The report was not adopted by the House.

Mr. HUGHES (Victoria). It was never presented.

Mr. HENDERSON. The report was presented but for some reason or other the chairman refused to move its adoption and in this way he thwarted the intention of the Agricultural Committee. I am satisfied that had the report been moved it would have received the unanimous approval of the House.

The MINSTER OF AGRICULTURE. My impression is that a report of that kind recommending the expenditure of public

money would not be in order, and probably that is why the chairman did not move its adoption. My attention is being constantly drawn to various publications by private individuals and I have been averse to purchasing publications of that kind. Without in any way going into the merits of this publication, I think it is better for the Department of Agriculture to issue the publications of its own officers rather than to buy from private individuals publications for which they wish to get patronage. Those publications are frequently pressed upon us in all sorts of ways, and if we once began to purchase them it will be very difficult to refuse some and to accept others. I have not dealt with this particular matter, but on general principles my first disposition would be against the Department of Agriculture purchasing such a book.

Mr. HENDERSON. I am rather surprised at the strong position the minister takes upon this matter. The Committee on Agriculture having recommended to the minister this small appropriation, surely he would consider it his duty to listen to the voice of that committee. What is the committee for if it is not to examine into matters of this kind, and to give the result of their investigation? The minister has not examined this book, but the Committee on Agriculture has examined it and approved of it, believing it was an excellent work for the purpose for which it is intended. Surely the minister will accept the recommendation of such a large committee as that? As to the excuse that the chairman could not move the report because it involved the expenditure of public money, we know that the chairman of the Agricultural Committee day after day moved reports recommending the printing of certain bulletins which involves expenditure. If it is wrong in one case it is wrong in the other. To my mind the minister takes a very strong position indeed when he tells the Committee on Agriculture that he is not going to accept any advice from them, and that he prefers to act on his own judgment and utilize the works that are prepared by the officials of his department. He may have in his deparment officials just as competent to write a work of this kind, but I do not think that any of them has succeeded in doing so. The book is got up in an attractive form calculated to attract the attention of people in the old land, and it was the opinion of the committee that it would be an excellent work for that purpose. I hope that the minister on reflection will not so lightly treat the recommendation of such a large committee, who after a full examination of the work sent this report to the House.

Mr. SMITH (Wentworth). I rise to support the contention of the hon. member for Halton (Mr. Henderson). Our immigration department costs over $600,000 a year, and large sums are expended for literature of one kind or another chiefly in advertising our western grain fields. We are losing from Ontario each year many thousands of our young men, who are going to the Northwest; and it is very fortunate that it is so, because they make the best settlers and form the backbone of that country. But their places in Ontario must be taken by some other persons, and fruit-growing is one of the best industries in which immigrants from the old country could engage, whether in Ontario or any of the older provinces. This pamphlet will show the merits of fruit-growing in different parts of the Dominion, not confining its attention to any one locality. I have seen a work by the same author, and it was very well got up and a very handsome work; and I am sure that the work proposed will be a very attractive pamphlet to place in the hands of intending immigrants in the old country. I do not think the minister could spend what it would cost to better advantage. If he has a man in his own department who could do the work better and has the time to do it, well and good; but I suppose that his officers have no time to write books, and if that is the case, I do not think the hon. minister could do better than act on the recommendation of the Committee of Agriculture, who have examined this work and recommended it to the government.

Hon. Mr. ROSS (Victoria, N.S.) I happen to be a member of the Committee on Agriculture where this subject was fully discussed. The gentleman having that publication in charge took a great deal of trouble to seek information from every part of this Dominion, so that the book, when published, will not be confined to particular localities, but will include every part of the Dominion, on a subject that will be very interesting and full of information to parties in the old country if they get the opportunity of reading it. I think a limited expenditure—because the expenditure would not be large—in getting this book published would be of great service to the Department of Agriculture in inducing a better class of immigrants to come to this country.

Mr. SMITH (Wentworth. I find in a late issue of the Montreal 'Star' that at a meeting of butter and cheese merchants in the city of Montreal, it was stated by Mr. Ayer that he did not know of a single creamery in Canada which was putting up butter in proper shape. Another gentleman, Mr. Hodgson, stated that thousands of cheese are arriving on the other side without the vestige of a box. A year ago the minister was going to take some steps to induce the factories to put their cheese and butter into strong and sufficient boxes. It seems to me that that has not been done, and that the business is in a worse condition now than ever before, if these statements are correct.

The MINISTER OF AGRICULTURE. I think there has been a great improvement this year. Just yesterday, a gentleman from Montreal, in conversation with one of my officers, stated that he noticed a great improvement in the boxing of cheese this year. The experiment of shipping cheese from the cool curing rooms in good boxes has been very successful, and the other cheese makers have taken example and warning from that.

Mr. SMITH (Wentworth). Does the government continue to guarantee to pay 5 per cent on the cold storage plant established in the city of Quebec, and has the government been obliged to pay it ?

The MINISTER OF AGRICULTURE. That has all been settled three or four years ago, and I think nothing has been paid since.

Mr. SMITH (Wentworth). What space is reserved for the merchants of Montreal in the ships with cool air ? I think I have seen in some of the agreements that a certain amount of space is reserved.

The MINISTER OF AGRICULTURE. There was some agreement of that kind in connection with the old cold storage system. It was not that a certain amount of space should be available for the shippers of Montreal, but that a certain amount should be reserved for shippers from the west as against the Montreal shippers for a certain time before the ship sailed. That is not in this agreement with reference to the cooled air chamber.

Mr. GILMOUR. What use has been made of the cool chamber last year and this year ?

The MINISTER OF AGRICULTURE. This year we have had to refuse cheese all the time. We have not been able to accommodate all that was offered. The results last year were so satisfactory that the factory men have been crowding their cheese in.

Mr. GILMOUR. How long has the cheese been continued in that curing room ?

The MINISTER OF AGRICULTURE. Two or three weeks, and sometimes four weeks. The absolute limit as advertised is eight weeks, but the cheese has never been kept nearly so long as that.

Mr. CLANCY. Are the government bearing any share of the cost of the cold storage concern at Charlottetown now ?

The MINISTER OF AGRICULTURE. There is no payment this year.

Mr. CLANCY. Has the government ceased to have any connection with that ?

The MINISTER OF AGRICULTURE. I think so.

Some resolutions reported.

On motion of the Minister of Finance, House adjourned at 12.35 a.m., Thursday.

HOUSE OF COMMONS.

THURSDAY, July 30, 1903.

The SPEAKER took the Chair at Three o'clock.

OFFICIAL REPORT OF THE DEBATES.

Mr. L. N. CHAMPAGNE (Wright) presented the sixth report of the Select Standing Committee appointed to supervise the Official Report of the Debates of the House during the present session, as follows :

Your committee recommend :

1st. That an additional English reporter be appointed on the staff of the official reporters of the debates at the same salary as that paid to each member of the staff, and that the appointment and remuneration of the said reporter date from the day on which he enters upon his official duties.

2nd. That the salary of C. W. Boyce, assistant to the chief reporter be increased from $1,000 to $1,200 per annum, such increase to date from the 1st August prox.

3rd. That the amanuenses to the official reporters who at present are receiving $3 per diem for their services be, as regards salary, placed on the same footing as the extra sessional clerks, i.e., that they be paid $4 per diem and that the said increase date from the beginning of the present session.

All of which is respectfully submitted.

(Sgd.) L. N. CHAMPAGNE,
Chairman.

NATIONAL TRANSCONTINENTAL RAILWAY.

The PRIME MINISTER (Rt. Hon. Sir Wilfrid Laurier). Mr. Speaker, I move for leave to introduce a Bill to provide for the construction of a National Transcontinental Railway. The Bill which I have the honour to place in your hands is divided into two parts. The first provides for the creation of a commission to be composed of three members, and to be empowered to build a certain portion of the railway which is mentioned in the Bill, the title of which I have just given. I do not know that at this moment it would serve any good purpose to go minutely into the dispositions of this part of the Bill. They are such as are to be found in Bills of this character, to empower the commissioners to do a certain work, and they define their powers and their obligations.

The second part of the Bill provides for the ratification of a contract which has been entered into between the government and certain gentlemen now seeking incorporation under the name of the Grand Trunk Pacific Railway Company. This Bill will have to be supplemented by resolutions, which I will place on the Order Paper to conform with our rules of procedure in such cases. The House has been impatient, and not unnaturally, to be informed of the leading features of the policy which we have to present with regard to the building of another transcontinental railway. It will be my duty now to inform the House

and to give it all the knowledge it is in my power to give at this moment, in order to satisfy a very legitimate curiosity.

First, Sir, perhaps it would not be amiss if I were to address myself at once to a question which has come to us from different quarters, and which may find an echo within these walls. Why this new enterprise? Why this expenditure? Why should parliament be called upon to assent to such a policy as is here indicated? We ask parliament to assent to this policy because we believe—nay, we feel certain, and certain beyond a doubt—that in so doing we give voice and expression to a sentiment, a latent but deep sentiment, which is to-day in the mind, and still more in the heart, of every Canadian, that a railway to extend from the shores of the Atlantic ocean to the shores of the Pacific ocean, and to be, every inch of it, on Canadian soil, is a national as well as a commercial necessity. That such a road must be built, that it is, in the language which I have used, a national and a commercial necessity, that it is a corollary of our status as a nation, that it is a requisite of our commercial development, is a proposition to which, up to this moment, I have heard no dissent.

Exception has been taken to the immediate necessity of building such a road, exception has been taken to the policy which we have to suggest for the immediate construction of such a road; but as to the idea itself I have never heard a word of opposition, nor do I believe that such a word will be heard in the debate. The first of these objections, that is to the immediate construction of such a road, can be disposed of, I believe, with a single observation. To those who urge upon us the policy of to-morrow, and to-morrow, and to-morrow; to those who tell us, Wait, wait, wait; to those who advise us to pause, to consider, to reflect, to calculate and to inquire, our answer is: No, this is not a time for deliberation, this is a time for action. The flood of tide is upon us that leads on to fortune; if we let it pass it may never recur again. If we let it pass, the voyage of our national life, bright as it is to-day, will be bound in shallows. We cannot wait, because time does not wait; we cannot wait because, in these days of wonderful development, time lost is doubly lost; we cannot wait, because at this moment there is a transformation going on in the conditions of our national life which it would be folly to ignore and a crime to overlook; we cannot wait, because the prairies of the North-west, which for countless ages have been roamed over by the wild herds of the bison, or by the scarcely less wild tribes of red man, are now invaded from all sides by the white race. They came last year 100,000, and still they come in still greater numbers. Already they are at work opening the long dormant soil; already they are at work sowing, harvesting and reaping. We say that to-day it is the duty of the Canadian government, it is the duty of the Canadian parliament, it is the duty of all those who have a mandate from the people to attend to the needs and requirements of this fast growing country, to give heed to that condition of things. We consider that it is the duty of all those who sit within these walls by the will of the people, to provide immediate means whereby the products of those new settlers may find an exit to the ocean at the least possible cost, and whereby, likewise, a market may be found in this new region for those who toil in the forests, in the fields, in the mines, in the shops of the older provinces. Such is our duty; it is immediate and imperative. It is not of to-morrow, but of this day, of this hour and of this minute. Heaven grant that it be not already too late; heaven grant that whilst we tarry and dispute, the trade of Canada is not deviated to other channels, and that an ever vigilant competitor does not take to himself the trade that properly belongs to those who acknowledge Canada as their native or their adopted land. Upon this question we feel that our position is absolutely safe and secure; we feel that it corresponds to the beating of every Canadian heart.

With regard to the plan which we have adopted for the construction of the road, there may be honest and honourable differences of opinion. The House knows there have been already such differences of opinion, honourable and honest, because it has been our misfortune to lose one of our colleagues upon this question. We make bold to say, however, that we stand upon very firm ground, and it will be my duty to present to the House the reasons which have led up to the policy which we have adopted and the reasons which we can invoke in favour of its support.

Our conception that this road, in order to give to the people the full benefit which they have a right to expect from it, should extend westward from the heart of the maritime provinces, from the town of Moncton, at the juncture of the two lines which proceed from Halifax and from St. John. I know very well that amongst those who oppose our policy there are a good many who maintain that it is sufficient that such a road should be constructed from Quebec westward to the Pacific ocean; that there is no need whatever of extending that railway from Quebec to Moncton because, between Quebec and Moncton, there is already the Intercolonial Railway. Sir, the answer which we have to make to this objection is plain, obvious, categorical, peremptory and paramount; the answer is that the Intercolonial never was intended, and never was conceived, and never was built for transcontinental traffic. The Intercolonial was first conceived as a military road. It was built and located for politi-

cal reasons, not from any commercial considerations. Far be it from me to cast any aspersions upon the memory of those who conceived and carried out this very useful enterprise. But if the truth must be told, it must be said that those who conceived and carried out the Intercolonial added to its length, to its normal length, several hundred miles. I will not quarrel with them at this stage. The reasons were political, and they were reasons we can all understand. If that railway was located where it is to-day it was simply because it was desired to give railway facilities to the groups of population which inhabit the northern section of New Brunswick and the south shore of the St. Lawrence. Far be it from me to blame the judgment of those who carried out that enterprise ; but the action which they took affords us a lesson which we should not forget at the present time. The action which they took is a lesson to us who are to-day entrusted with the destinies of this nation, as the trustees of the people, that in building a transcontinental railway we have to build not only for the time being, but for the morrow as well, and not for one locality, but for the whole of Canada. Sir, the men of 1867 built for the condition of things which they found in 1867 ; but we the men of 1903, have to build for the condition of things which exists in 1903, and not only for that condition of things, but also for a condition of things that we see looming up in the near future.

The line which we propose will extend from the Quebec bridge down on the southern slope of the mountains which extend through the counties of Lévis, Bellechasse, Montmagny, L'Islet, Kamouraska and Temiscouata up to the town of Edmundston. At the town of Edmundston that line will connect with the system of railways which now gives direct connection with St. John. From the town of Edmundston the railway will proceed eastward to the town of Moncton ; it is impossible to say at this moment by what route, perhaps by Chipman, or in the vicinity of Chipman. At all events, from this point it is impossible exactly to locate any precise line, or to say where it will be ultimately. Suffice it to say that we desire to have the best and the shortest line between Lévis and Moncton. This is the line which would have been adopted in 1867, but in 1867 the settlements within the territory which will be covered by this line were few and far between. If there were any at all they were certainly very few in number. But, that condition of things has been changed since. The surplus of population north of the chain of mountains has overstepped the mountains, and is to be found upon the other side. They have occupied the fertile valley which is now rapidly settling up. New farms are being established, new parishes are springing up and, therefore, this is our justification, for this road will serve a local as well as a national purpose. But, we will be told —we have been told already—that by building such a line we are paralleling the line of the Intercolonial Railway. I have already taken issue with my late colleague the ex-Minister of Railways and Canals (Hon. Mr. Blair), and once more I beg to take issue with him upon this point. If you will look at the map you will perceive that the Intercolonial Railway, when it leaves the station at Halifax, proceeds almost directly in a straight line to the head waters of the Bay of Fundy, which it reaches at Truro. From Truro the line proceeds in an almost due west course to Moncton. From Moncton it strikes northward to the waters of the Baie des Chaleurs. Upon reaching the waters of the Baie des Chaleurs, it hugs the shore very closely until it comes to the confluence of the Restigouche river. At the Restigouche river the line strikes northwards again and follows the waters of the St. Lawrence river to Chaudière Junction, a little west of Lévis. Thus, the line makes a long loop towards the north, it describes almost a complete semicircle, and the distance covered by it is no less than 488 miles. If it were possible to have a line of railway in a direct course from Lévis to Moncton it would be possible, I believe, without any exaggeration, to abridge the distance almost one-half, but, unfortunately, and I say it frankly to the House, it is not possible to have an absolutely direct line, or the shortest line possible between Moncton and Lévis, and if you will know the reason, you will find it at a glance at the map, and you will find it in the blunder which was made by British diplomacy in settling our boundary line by the Ashburton-Webster treaty. No one can look at that map without feeling a sentiment of anger, almost akin to indignation. But, it is no use to go back to what has been done. We have to take facts as they are, we have to submit to the inevitable and to the fact that the boundary line of the state of Maine has been projected through our territory within a distance of about 45 miles of the St. Lawrence. We have to follow the line of the state of Maine, and following that line we believe we can abridge the distance between Moncton and Lévis by from 120 miles to 140 miles. Between these two lines of railway, the one extending northward along the shore of the St. Lawrence, and the line which is now laid down on the map, there will be a distance at every point of at least 30 miles, and at some points of at least 75 miles. It is impossible, under these circumstances, therefore, to say that the second line will parallel the Intercolonial Railway. First of all, how can we say that the line is parallel at all ? What is the definition of a parallel line ? I could not conceive that one line is paralleling another because they start at the same point and end at the same point, but they only become parallel lines when it is possible for the people living between

these two lines to use either the one or the other of them. This is a condition which does not apply to the present line which we are contemplating. There will be a distance of 30 miles, which alone would prevent communication from one to the other, but, in addition to that, between these 30 miles, there is a chain of mountains which it is very difficult for people to overcome. Therefore, I say it cannot be fairly stated that this line is going to parallel the line that we already have in existence. I stated a moment ago that the line of the Intercolonial Railway was placed where it is for political reasons. Certainly, those who built that line, those who conceived it, those who planned it, never contemplated at the time that the day would ever come when it would be used for transcontinental transportation, yet, scarcely had the last rail been put down, scarcely had a train commenced to run upon it when it was discovered that the long, tortuous meanders of the line were a serious impediment to trade, even to the comparatively small trade of the Canada of that day. An agitation immediately commenced in the maritime provinces, in the province of Quebec and even westward in the province of Ontario, to have a shorter line built between the centre of confederation and the eastern ports of Canada. Those who were in the House of Commons in the years 1880, 1881, 1882, 1883 and 1884 will remember that almost every session allusion was made to the fact that the Intercolonial Railway could not serve the purposes of the growing traffic of Canada, and that we had to find a shorter line of railway than we then had. The feeling became so acute, the agitation became so strong, that the government of Sir John Macdonald had to give heed to it, and in 1884 the following resolution was introduced by Sir Charles Tupper, then Minister of Railways and Canals:

> For the construction of a line of railway connecting Montreal with the harbours of St. John and Halifax, by the shortest and best practicable route, a subsidy not exceeding $170,000 per annum for fifteen years, or a guarantee of a like sum for a like period, as interest on bonds of the company undertaking the work.

Mark the language of this resolution.

> For the construction of a line of railway connecting Montreal with the harbours of St. John and Halifax, by the shortest and best practicable route.

There was an admission that the line of the Intercolonial Railway was not the shortest and best practicable route, that it could not serve the purposes of the growing trade of that time, but, strong as is the admission contained in the resolution, it is perhaps still better that I should give the commentaries made on that occasion by Sir Charles Tupper himself to illustrate and develop the thought that is there contained. He said:

> Then a very strong feeling has grown up in the maritime provinces, and not only in the maritime provinces, but throughout Canada, because I believe that from British Columbia down through the North-west Territories, through the province of Ontario, and in the province of Quebec, there has been a strong and general sentiment that this great interoceanic line of the Canadian Pacific Railway would be incomplete if we were obliged to have our Atlantic terminus in a foreign country. I believe the sentiment is not at all confined to the provinces of Nova Scotia or Prince Edward Island, or the province of New Brunswick, but I believe it has taken just as deep a hold of the minds of our friends of the other provinces almost as it has in the maritime provinces. Although every effort has been made to render the operation of the Intercolonial Railway as successful as possible, although more has been accomplished in the development of the country, in the development of the trade and business of the country, through the agency of the Intercolonial Railway than any person on either side of this House a few years ago supposed to be possible, still we have found we were too heavily handicapped by the distance, and that we could not, reluctantly as we are driven to the conclusion, we have been driven to the conclusion by the force of circumstances and by the practical results, that it is impossible for the ports of St. John and Halifax to compete with the nearer ports of Portland and Boston, in the United States.
>
> Under these circumstances, the attention of the government has been drawn, as I have said on one or two occasions before in this House, to the best means by which we might secure a realization of that which we all desire, the Atlantic terminus being in Canadian territory as well as the Pacific terminus, and thus be placed in a position to fairly compete for the transcontinental trade and traffic that we all know must flow over that line. * * * *
>
> I have stated the position in which this question stands from its national or larger point of view, and I believe I may confidently rely not only upon the kind support of our friends on this side of the House for carrying out a measure which has been considered by the government in all its aspects and in all its bearings with a view to the promotion of the best interests of the country, but I believe I can rely with equal confidence upon the support of gentlemen opposite in carrying out what we all recognize as most important, making a complete line of communication through Canada, and enabling us to have the great ocean termini on the Atlantic as well as on the Pacific within our own borders. * * * * From Montreal, Halifax will be brought within 672 miles, and it is found practicable to obtain a line which will bring the port of Sydney under the effect of this subvention, within 774 miles. There will thus be saved in the present distance from Montreal to Sydney 219 miles, in the distance from Montreal to Halifax 173 miles, and the distance to St. John will be reduced 159 miles. I have only to read these figures to the House, in order to show that the government, in asking for this aid in extending practically the terminus of the Canadian Pacific Railway, involving as it will the transport of the traffic of both the Grand Trunk Railway and the Canadian Pacific Railway down to our own coasts, and our own ports in the maritime provinces, are asking aid which will, without any question, assure the completion of that work. I have already stated that it is proposed that this shall not only be the shortest line to Montreal, but the shortest line to Quebec. * * * *
> In fact I believe that, within a very brief

period—I have stated four years as the term of these resolutions—this line of communication will be perfected and we will have the satisfaction of finding that we have the complete realization of our hopes and expectations in reference to the transcontinental traffic of the Canadian Pacific Railway being brought down to our own ports. The questions with which I have been dealing up to this point, of course, are based upon broad and national considerations. They are founded upon a policy that is recognized and has been recognized from the first as the first duty that we owed to the country, and that is to be obtained by the construction of a national line of railway the closest possible intercommunication between one section of our country and another. The great disadvantage under which Canada has laboured, if it may be regarded as a disadvantage, was the remoteness of important sections of our common country from one another, and we have all regarded it as a first duty we owed to the country to endeavour to remove and obviate that as far as possible by diminishing the distance between all the important points of communication in the several sections of our country, thus bringing them as closely as we could together. Not only commercially but socially, the greatest possible advantage may be fairly expected from shortening the distance of intercommunication between the great commercial centres of the country and the outlying portions of it.

Now, Sir, in this long extract which I have read from that important speech of Sir Charles Tupper, the central idea is that the mode of communicating with the maritime ports over the Intercolonial Railway was inadequate on account of its abnormal length, and that it was the duty of the Canadian parliament and the Canadian people to at once provide for a shorter route of communication between the west and the east. This policy was never dissented from ; it was accepted immediately. But, I would call the attention of the House to one thing which is noticeable, which perhaps has escaped the attention of gentlemen on the other side, but which did not escape our attention when we were sitting on that side —it is noticeable that whilst Sir Charles Tupper lays great stress upon the fact that our national harbours must be upon Canadian territory and that we should have a shorter line of railway between St. John and Halifax he specially avoided any reference to the equally great necessity that that line of railway should be on Canadian territory.

Some hon. MEMBERS. Hear, hear.

The PRIME MINISTER. Sitting as we were on the opposition side of the House we were not slow to point to this omission. We called the attention of the government to it, and as we received no satisfaction, then I, sitting in the seat now occupied by my hon. friend from Jacques Cartier (Mr. Monk), moved the following amendment because we had reason to believe as it actually turned out to be true afterwards, that it was the intention of the government of that day not to build the short line of railway upon Canadian territory but upon American territory. I moved :

That the said resolution be not now read a second time, but that it be referred back to a Committee of the Whole with power to amend the same by providing that the route for the line of railway connecting Montreal with the harbours of St. John and Halifax, for which a subsidy of $170,000 a year for 15 years is provided, should be subject to the approval of parliament.

I am sorry to say that this motion was defeated. If it had not been defeated, if the policy which was there enunciated had been implemented, probably it would not be my duty to-day to ask this House to vote money for the building of another line between Quebec and Moncton, for the line would have been built on the very ground where we now propose to locate it. However, the motion was defeated. And in order to obtain the majority of parliament to vote against this motion, the government had to promise and it made the promise on the floor of this House, that during the recess between that session and the following session, surveys and explorations would be made by competent engineers to discover if we could not have a better route than the one which was indicated as we understood, across the state of Maine. During the recess in the summer of 1884 several exploring parties went out and their reports can be found in a return which was brought down in the session of 1885 being a :

Return to an Address (Senate) presented to His Excellency the Governor General, dated the 17th March last; praying His Excellency to cause to be laid before this House copies of the reports of the various surveys made by engineers under the direction of the government for a line of railway connecting Montreal with the harbours of St. John and Halifax by the shortest and best practicable route including the reports of Messrs. A. L. Light and Vernon Smith on the lines surveyed by them, respectively, running up the valley of the Etchemin river and from Canterbury, N.B., to the northern end of Chesuncook Lake, in the state of Maine.

In the session of 1885, the government came down with the policy which had been foreshadowed the previous year, that is the policy to build a short line of railway, not upon Canadian territory but across American territory, in the state of Maine. The resolution was introduced by Sir Charles Tupper and it was in these terms :

Also for a line of railway connecting Montreal with the harbours of St. John and Halifax via Sherbrooke, Moose Head Lake, Mattawamkeag, Harvey, Fredericton and Salisbury, a subsidy not exceeding $80,000 per annum for 20 years, forming in the whole, together with the subsidy authorized by the Act 47 Vic., cap. 8, a subsidy not exceeding $250,000 per annum, the whole of which shall be paid in aid of the construction of such line for a period of 20 years, or a guarantee of a like sum for a like period as interest on the bonds of the company undertaking the work.

Well, Sir, we took strong exception to this policy and that exception was formulated in an amendment which I myself moved from the opposition benches and which was in these words :

In the opinion of this House, additional surveys are requisite in order to a sound decision for the short line railway, and it would be premature to adopt any line before further surveys have been made.

The surveys which had been made had not been complete. The line was simply surveyed in a portion of the province of Quebec and very little in the province of New Brunswick. We therefore demanded before the policy was adopted to run that line of railway across the state of Maine, that new surveys should be made so that we might come to a better understanding of the question and arrive at a more proper decision. Again, I am sorry to say, this motion was voted down and the policy was adopted of building the short line of railway across the state of Maine. Now, Sir, it has been more or less in the air for the last twenty years that the government of Sir John Macdonald assented very reluctantly to the policy of building the short line of railway across the state of Maine. There has been a tradition in the air for a great many years that that policy was imposed upon the government by a gentleman who was then a very powerful member of the administration. As to that, however, I have nothing to say. Whatever may have been the reason, the policy was adopted of building the short line of railway across the state of Maine. Now, Sir, in the resolution which I have just read to the House, I want at this moment to call attention to a particular phase of it.

The resolution called for a line of railway connecting Montreal with the harbours of St. John and Halifax, via Sherbrooke, Moosehead, Lake Mattawamkeag, Harvey Fredericton and Salisbury. It was supposed that these words, Harvey, Fredericton and Salisbury has been inserted in order to give a shorter route to Halifax. I ventured at the time, in the speech which I delivered in support of my motion, to point out that these words seemed to be an after-thought. I did not believe that they were genuine. I supposed that they were a blind, and I expressed my opinion accordingly. The suspicion to which I gave expression called for an answer from the government which was given by Sir Hector Langevin, and it was in these words :

Well, I am sure the hon. gentleman will be pleased to hear the declaration which the government makes through me, that in the arrangements to be made with the company to build the railway, to take advantage of this vote of money, of $250,000 during twenty years, the government will take care to secure the completion of the railway, not only to Mattawamkeag, but also to Salisbury, and if that is not secured, there will be no subsidy given. We must act in good faith ; the faith of parliament is pledged, and we must take care that that money is employed as parliament wishes.

These were very strong words; but it turned out afterwards that my suspicions were correct, and that these words were introduced simply as a blind, because this promise, which was made solemnly on the floor of parliament, and to which the faith of parliament was pledged, never was implemented; and the line through Harvey, Salisbury and Fredericton has not been built to this day. Whatever may have been the reasons which militated against the government implementing that promise so solemnly made—made with all the sacredness which ought to attach not only to the word of the government, but to the word of parliament—whatever may have been those reasons, I do not know; but some years later (it took four or five years to complete the line by way of Sherbrooke and Mattawamkeag), about the time that road was completed, in the session of 1889, Sir John Macdonald, under the strong pressure which was brought to bear upon him by the parties whose interest it was to have this railway built from Harvey to Fredericton and Salisbury, introduced into this House a resolution to the following effect :

That it is expedient that a railway should be constructed as a government work, between a point of junction on the New Brunswick Railway, at or near Harvey, in the province of New Brunswick and a point of junction with the Intercolonial Railway at or near Salisbury, in the said province, or somewhere between Salisbury and Moncton, and that the sum of $500,000 be granted towards the construction of the said railway.

This was another effort to implement the solemn promise which had been made on the floor of parliament. That Bill passed this House. The resolution was introduced, adopted, and put in the shape of a Bill, which was sent to the Senate. But that happened in the Senate which rarely happened in those days ; the Senate rejected the Bill thus solemnly introduced by the government. Whatever may have been the reasons, whatever may have been the whispers in the ears of senators, whatever may have been the influences which caused the Senate thus to rebel against the policy of the government, it is not for me to say; I have no particulars on this point to offer. But certain it is that in the following year a company was formed, known as the St. Lawrence and Maritime Provinces Railway Company, which tradition says was acting under a tacit understanding between the Grand Trunk Railway Company and the government of Sir John Macdonald for the construction of a line of railway from the town of Edmundston to Moncton. If that railway had been built, it would have provided a shorter line of communication by way of Halifax, Moncton, Edmundston, and Rivière du Loup. The line was surveyed, and I have the report of the engineer in charge,

Mr. Davy, who said that a good line could be found between Edmundston and Moncton. Here is his language :

The total length of the line surveyed from Grand Falls to Berry's Mills was 166 miles, and adding thirty-six miles from Edmundston to Grand Falls, and seven miles from Berry's Mills to Moncton, the total distance from Edmundston to Moncton would be 209 miles, which would make the distance from Montreal to Halifax, by the Grand Trunk, to Chaudière Junction, the Intercolonial to Rivière du Loup, the Temiscouata Railway to Edmundston, and the proposed line to Moncton, and thence by the Intercolonial to Halifax, 759 miles in all.

If, however, the line from the Grand River north of the Sisson Range, which, as I have already stated, I explored myself and with an assistant engineer, be adopted, a saving of distance of at least ten miles would be obtained, and the improvement of the line at the de Chute River, recommended by Mr. Cranston, would also affect a saving of distance, so that, in my opinion the total length from Edmundston to Moncton may be reduced to 199 miles, or 749 miles from Montreal to Halifax. Time did not allow for our making a complete survey of the line by these alternative routes at the two points I have referred to, but I believe that when made it will result in the saving of distance already stated.

However, Sir John Macdonald died shortly afterwards, and the scheme fell through.

Now, Sir, the policy which we propose, apart from all other considerations, may be taken as a step, tardy though it be, to implement the solemn pledge which was made in 1885. I confess, Sir, that perhaps this of itself would not be a sufficient reason, though in one respect it ought to be a sufficient reason; because, if there is one thing as to which the parliament of Canada ought to be firm, it ought to be that the solemn word of parliament is sacred, and that every promise made by parliament should be implemented.

But, Sir, there is another consideration of a far more important character than this, to which it is now my duty to call the special attention of parliament. When Sir Charles Tupper in 1885, speaking from the place from which I now speak, stated that the Intercolonial Railway, located as it was, could not perform the service we expected from it, that it could not give thorough satisfaction in the way of providing transportation for the growing trade of Canada, he stated a proposition to which, no exception was taken to it then, no exception can be successfully taken now. But, Sir, there is something more than that. When Sir Charles Tuppper stated also at that time that it was essential to the welfare of the people of Canada that the terminus of any transcontinental railway that we might have should be in Canadian territory, in Canadian waters, he simply voiced what is the conscience of the Canadian people. I am sorry that Sir Charles Tupper did not with equal firmness insist that not only should the terminus be in Canadian territory, in Canadian waters, but that the route itself should be in Canadian territory. When he agreed that the line should be in American territory, Sir Charles Tupper went back on the heart and conscience of the Canadian people.

Now, Sir, we lay it down as a principle, upon which we are to be judged by friend and foe, that we are to have a transcontinental railway, that its terminus must be in Canadian waters, and that the whole line, every inch of it, must be in Canadian territory. We say further that such a line is a necessity of our commercial independence. Sir, I am surprised at the levity displayed by some hon. gentlemen on so grave a question. What have you to say to-day to this ? What are your minds running to when you have facts staring you in the face which show you that at this moment Canada is not commercially independent of the United States ? What is our position to-day ? From the early days of railway development of this country, we have been dependent on American good-will for the transportation of our goods across American territory. From the early days of Canadian railway development, we have been forced to make use of American territory and harbours. The American government granted us the bonding privilege. They granted us the privilege of using their harbours for our imports and exports without paying them tolls and customs dues. But my hon. friends opposite are aware that this privilege has always been held over our heads by the American authorities as a sword of Damocles. My hon. friends on the other side are aware that the abrogation of this privilege has been used again and again as a threat to obtain from us concessions. Why, Sir, it is only last week that an American citizen of great influence wrote a letter to the London 'Times,' in which he reviewed the policy we have offered to the British government. When in England last year, the Canadian ministers at the intercolonial conference made this proposition to the British authorities :

The Canadian ministers stated that if they could be assured that the imperial government would accept the principle of preferential trade generally and particularly grant to the food products of Canada in the United Kingdom exemption from duties now levied or hereinafter imposed, they would be prepared to go further into the subject and endeavour to give to the British manufacturer some increased advantage over his foreign competitors in the markets of Canada.

This policy is to-day attracting the attention of the civilized world. It is being submitted to the British electorate, and it is this policy which is reviewed by an American citizen, Mr. Andrew Carnegie, in the great exponent of public opinion in England, the London 'Times. ' Mr. Carnegie states the reason why the British public and the Canadian electors cannot give heed to this policy which I have just outlined, cannot go forward with it, cannot under-

take to give the British people a preference in return for a preference from them, because the American citizen has a weapon in his hands which he can bring down upon the head of the Canadian people, and that weapon is the bonding privilege. Mr. Carnegie, in a letter, which I find summarized in some newspapers, uses this very striking and significant language :

A word from the president cancels the privileges now generously extended to Canada of reaching open American ports through American territory with all her exports and imports free of duty for five months in the year when her own ports are ice bound. She uses the privilege all the year. President Roosevelt is the last man I could think of who would hesitate a moment to say the word, but even he and all his cabinet would be powerless to resist the imperious demand that at least we should not furnish the weapon that enabled another power to wound us. The withdrawal of the privilege given to Canada would probably be sufficient to satisfy Great Britain that the American people were in earnest. Negotiations would soon begin, and the privilege so rashly distributed would be restored. Simultaneously peace would reign, but the bitterness created would remain for years to retard the return to the present unusually cordial relations so wantonly impaired.

Let me observe that if we have used American ports, it is not because for five months in the year our own ports are ice-bound. Everybody knows that our ports in winter are just as open as the American harbours. Everybody knows, except Mr. Andrew Carnegie and the bulk of American public opinion, that if we have used American ports and the bonding privilege, it was not because our harbours were ice-bound in winter, but simply because we had no railways to reach them. In the face of this, are the Canadian parliament and people going to stand on their manhood and place us in such a position that at all times of the year, not only by one railway, but by two or more, we shall have access from January to December to our own harbours, and be able to say to our American neighbours : 'Take off your bonding privilege whenever it suits you, we are commercially independent.'

Hon. gentlemen opposite may ask : Who is Mr. Andrew Carnegie, he is simply an American citizen, he is not speaking for the nation ? Sir, when men speak, who are in the position of Mr. Carnegie, we must take it for granted that they know something of the public opinion of their country. We know that Mr. Carnegie, unfortunately, is not voicing his own opinions alone, but the opinions of a large section of the American people, because the ideas to which he has given expression have been again and again expressed in the American press. We cannot take a step to better our position, to improve our trade, but we are told from the American side that we had better look out, because, forsooth, the bonding privilege will be taken from us. When, in 1896, Sir Charles Tupper thought of asking for tenders for the fast Atlantic service—a thing with which, after all, the American public have nothing whatever to do, a thing which is purely a measure of domestic concern—we were told by the American press that if we dared to go on with that project, the bonding privilege would be removed. The New York 'Sun,' which is an American of Americans, and a good exponent of American public opinion, which voices the sentiments and even the prejudices of the American people—and I do not use the word 'prejudice' in an offensive sense, because prejudices are sometimes only the exaggeration of a noble feeling, and I do not blame any one for having prejudices in his heart, they being frequently the result of education and other circumstances—but the New York 'Sun,' speaking of the project of a fast Atlantic service between England and Canada, made use of the following language :

The route by the new steamship line from Liverpool to Halifax and thence by Canadian Pacific Railway to Chicago would be shorter than the route to and through New York, and hence its advantages are obvious. Goods and merchandise would be carried from Halifax to Quebec through American territory under protection of the bonding privilege, and accordingly the Canadian Pacific Railway would be able to profit largely by their transportation westward.

Here is a condemnation of the policy which had been adopted a few years before, of having the Canadian Pacific Railway built across the state of Maine :

The privilege thus conferred by us is already essential to the prosperity of that company. This road could not run without it. The Canadian Pacific Railway therefore lives and prospers by our sufferance and direct assistance. We furnish it with feeders and traffic essential to its existence ; yet it was built and is maintained as a military road along the northern border, and as a tie binding together in political combination, the widely separated Canadian provinces with a view to the strengthening of the Dominion against us in the event of a war with England. This military and political road, sustained by American bounty in the form of bonding privilege, is consequently a permanent menace to us. Its very existence is a distinctly hostile demonstration.

Will our government furnish the new steamship line with what amounts to another subsidy, and insure the prosperity of the military and political road by continuing to grant the bonding privilege, which Canada is already using to the disadvantage of our own railroads?

Sir, I am told, and perhaps I may be told again : This is simply the opinion of a journalist. Why, Sir, if the expression of this opinion only came from private citizens, as Mr. Carnegie, if it were confined to newspapers, as the New York 'Sun,' perhaps we might pass lightly over it and not feel much apprehension upon the subject. But what will you say when I bring to your attention the expressions of the highest in the land, of those in authority, of those who are in a position to speak for the

American government and the American people? What will you say when I bring you messages of presidents of the United States and reports from the American Senate? In the month of August, 1888, President Cleveland sent the following message to Congress:

> The value to the Dominion of Canada of the privilege of transit for their exports and imports across our territory, and to and from our ports, though great in every aspect, will be better appreciated when it is remembered that, for a considerable portion of each year, the St. Lawrence river, which constitutes the direct avenue of foreign commerce leading to Canada, is closed by ice.
>
> During the last six years the imports and exports of British Canadian provinces carried across our territory under the privileges granted by our laws, amounted in value to about two hundred and seventy millions of dollars, nearly all of which were goods dutiable under our tariff laws, by far the larger part of this traffic consisting of exchanges of goods between Great Britain and her American provinces brought to and carried from our ports in their own vessels.
>
> The treaty stipulation entered into by our government was in harmony with laws which were then on our statute-book, and are still in force.
>
> I recommend immediate legislative action conferring upon the executive the power to suspend by proclamation the operation of all laws and regulations permitting the transit of goods, wares and merchandise in bond across or over the railways of the United States to or from Canada.

This was the language, the peremptory language of the president of the United States. Now, it is, perhaps, not out of place, nay, it is extremely important, to make clear what was the cause which brought President Cleveland to hold such a threat over our heads? The cause was the fact that we would not agree—the Canadian government, the Canadian people, would not agree—to the abrogation of the Fisheries Convention of 1818. Under the convention of 1818, American fishermen are granted certain privileges in Canadian waters. They are allowed to make use of the shore of Nova Scotia and New Brunswick for certain purposes—for wood, water, repairs and shelter. They are not allowed to make use of that coast to buy bait or to land their fish. The Americans have applied to us again and again for these two privileges, the privileges of buying bait in Canadian territory and the privilege of landing their cargoes of fish. We have refused, unless we were given some compensation. We have always been ready to negotiate with them. We have told the American fishermen again and again: We will share with you our advantages, if you will share with us your advantages. On the coast of Nova Scotia, we have a basis for the operations of fishermen, and Canadian fishermen have the advantage that they can use the coast to supply themselves with bait and to land their cargoes of fish. The American fishermen have the advantage of having a market in their own territory. We have told them again and again: Yes, we are ready to agree with you; give us the opportunity of sharing with you your market, and we will give you the privilege of sharing with us the advantages of our base of operations. That was a fair proposal. But it never was acceded to, it never was accepted. But, because we would not agree to give away our birthright, we were threatened by President Cleveland with the withdrawal of the bonding privilege. Nor is that all. A few years afterwards, in the session of Congress of 1892, a report was brought down to the Senate from the Committee on Interstate Commerce again dealing with the bonding privilege. This time, the reason why this threat was held over our heads was, not on account of the fishery question, but on account of the railway question. The American railways wanted to have certain privileges upon our territory that we were not prepared to give them; and, because we would not give them these advantages, because we were not ready to make the soil of Canada, for railway purposes, part of the territory of the United States, again we were threatened with the removal of the bonding privilege. This was the conclusion of the report I have referred to:

> The committee therefore recommend that either such a license system shall be established as will be applicable to the Canadian railroads doing business in the United States, or that some other plan, not injurious to the general trade and commerce of the country, be adopted which will secure to American railroads an equal chance in competition with Canadian railroads. Such action, in the judgment of the committee, is in the interest not only of American railroads, and especially American transcontinental lines, but in the interest of American commerce and of the general prosperity of the American people.

Even that was not all. In the following year, President Harrison again approached the subject, and again approached it in the same hostile spirit, and approached it, as the committee of the Senate had done, from the point of view of American railways. He made the following recommendation to Congress in a message dated November, 1893:

> The statutes relating to the transportation of merchandise between the United States and the British possessions should be the subject of revision. The treasury regulations have given to these laws a construction and a scope that I do not think was contemplated by Congress. A policy adapted to the new conditions growing in part out of the construction of the Canadian Pacific Railroad, should be declared, and the business placed upon a basis more just to our people and to our transportation companies. If we continue the policy of supervising rates and requiring that they shall be equal and reasonable upon the railroads of the United States we cannot in fairness at the same time give these unusual facilities for competition to Canadian roads that are free to pursue the practices as to cut rates and favoured rates that we con-

demn and punish if practised by our own railroads.

I regret that circumstances prevented an earlier examination by me of these questions, but submit now these views in the hope that they may lead to a revision of the laws upon a safer and juster basis.

Fortunately, Sir, up to this moment, we have escaped the danger with which, on repeated occasions, we have been threatened. But, Sir, what would happen if at any moment there should come one of those frenzies, one of those periods of excitement which we have seen sometimes amongst nations, the American nation included ? At any moment we may be deprived of the bonding privilege which we have had up to the present. The only way whereby we can contemplate such a contingency with equanimity is to provide against it, and to have upon our own territory all the facilities by which we can get access to our own harbours. Sir, our relations to-day with our American neighbours are friendly ; they were never more so, and I hope they will so continue. For my part—I never made any secret of it—I have the greatest possible admiration for the American people. I have always admired their many strong qualities. But I have found in the short experience during which it has been my privilege and my fortune to be placed at the head of affairs, by the will of the Canadian people, that the best and most effective way to maintain friendship with our American neighbours is to be absolutely independent of them. These are the reasons why we apply to parliament to give its countenance to the policy which I have outlined, a policy which will give to this new Transcontinental Railway its terminals in our own harbours, and an all-Canadian route to reach them.

Now, Sir, let me call your attention to some of the objections taken against this proposition, which we have seen and heard in the press ? They tell us : If you build this railway right through you will injure the Intercolonial. Sir, I do not admit that we would injure the Intercolonial, because I have no doubt and I submit it to the judgment, the intelligence and experience of every man in this House, that there will be trade and business enough coming from the west, not only for one road but for two roads, if not more. But, after all, I say to our friends on the north shore who may perhaps feel that the Intercolonial might be prejudiced by this new line, that there is nothing to be feared in this respect, because the new road will not prejudice the constituency which is served by the Intercolonial : the business of the new road will be created by the road itself, it will be a business which is not in existence to-day. Again, let me say this to the members of the House, and I submit it to the Canadian people as well, that even if the Intercolonial were injured to some extent, were to lose some traffic, let me ask this question : Does the Intercolonial exist for the Canadian people or the Canadian people for the Intercolonial? Are we to be told that if we made an error we cannot correct it, if we injure somebody we cannot repair the injury ? Sir, are we to be told that if we are to have traffic from the east to the west, the people of the west must not have the benefit of the shortest route, or that the people of the east must not have the benefit of this western line ? No, Sir, if it comes to be a question between the management of the Intercolonial and the interest of the Canadian people, we leave the issue in perfect confidence to the judgment of the Canadian people.

Now, Sir, I have to pass to another point of this scheme. The public has been made aware already, by the correspondence which has been exchanged between myself and my hon. friend the late Minister of Railways and Canals, that it is proposed to divide this line of railway which is to extend from Moncton to the Pacific ocean, into two sections. One section, that from Moncton to Winnipeg, is to be built by the government ; the other section, that from Winnipeg to the Pacific ocean, is to be built, owned and operated by a company. I know that this policy has already been the subject of much criticism. We are told that we are keeping to ourselves the unproductive portion of the road, while we are leaving to a company the productive portion of it. This criticism might have a good deal of force in it if we were ourselves to operate the line which is to be built by the government. But we have made a contract whereby this line is to be operated, not by ourselves, but by that company, which agrees to pay us a rental at the rate of three per cent per annum upon cost of construction. Therefore, let our friends on the other side of the House, and let our friends on this side of the House also, take note of this fact, that with the exception of a few years of interest, to which I shall allude later on, we shall have this portion of the railway built by the government from Moncton to Winnipeg without the cost of one dollar to the Canadian people. We shall have to advance the money, and we shall have to pay interest upon it, but we shall receive interest upon it at the same rate ; so that whatever we give with one hand we shall receive back with the other. To this extent there is no risk whatever assumed by the Canadian government or the Canadian people.

But, why did we keep this section of the road in our hands ? Why did we not give it to the company to build as the other section? We did it because we want to keep that section of the line which is to be the exit of the productive portion of the west, in our own hands so as to be able to regulate the traffic over it. The prairie section will be teeming with business, as we know ;

it will be teeming with activity, as we know. Already there are three lines of railway, the Canadian Pacific Railway, the Great Northern and the Canadian Northern ; and this one will be still another. Other roads are also going to be built there to meet the increasing wants of the people. The Canadian Pacific Railway has its exit on the north shore of Lake Superior ; those other railways have no exit. It is our intention that this road shall be kept and maintained under our supervision, so that all railways may get the benefit of it, so that the Canadian people may not be compelled to build another road across that section of country. This is the reason why we have adopted a policy which I shall supplement later on by other explanations.

Now, I will be asked : Why do you not retain also the western section ? Why do you not continue building by the government the railway from Winnipeg to the Pacific ocean ? We came to the conclusion to have that railway built and operated by a company for the reason that we do not believe, under existing circumstances, and for many years, perhaps for many generations to come, it will be possible, with such activity as may be developed in that section of the country, successfully to operate it as a government road. I may be biassed and prejudiced on this question. I formed my opinions some years ago, and perhaps I may be permitted to relate a personal experience which went far to form my own conviction in this regard. In the fall of 1896, Mr. J. R. Booth, of this city, invited me to visit his railway, the Canada Atlantic Railway, which was then in process of construction. I accepted the invitation. The road had been built almost to the shores of the Georgian bay, perhaps within half a mile of it. When we left the train we walked to the shore of the lake, a bleak shore with not a building upon it. Mr. Booth said : this is the terminus of my railway. I asked Mr. Booth : Where is the trade to come from ? His answer was : 'I have to create it, I have to collect it from Port Arthur, from Duluth, from Chicago and from both sides of the lakes. I will have to build elevators, I will perhaps have to buy wheat in order to furnish trade to my railway.' Then, I say, it dawned upon me that no government under such a condition of things, with everything to create, could successfully operate a railway in a new country like that. When this railway is taken to Port Simpson, there will be the same thing which I found on the Georgian bay in 1896—a bleak shore with nothing upon it. Everything will have to be created. Wharfs, warehouses and sheds will have to be built, elevators will have to be provided, branch lines will have to be constructed, possibly hotels may have to be built and managed, steamships will have to be built or chartered and trade will have to be brought from all points of Asia. Would any one tell me that government management, under such circumstances, could do justice to the undertaking in such a big question as that ? Would any one tell me that the management, even were we to put it in the hands of a commission responsible to parliament, having to come here for appropriations for this and for that, would have that elasticity which would be a condition essential to the successful management of such a road ? Would parliament be willing to give power to the Minister of Railways and Canals, or to the commission, to build or acquire steamships, or would parliament give power to send agents across to the coast of Asia, to Japan, to China and elsewhere to collect trade ? Would parliament, in its disposition, as I have known it for many years, be willing to give the government power to go into the business of hotel keeping and hotel building? I doubt it, and for all these reasons we have come to the conclusion that it is better and preferable in every possible way that such a railway should be built and operated by a private company. Now, I shall come to this subject again, at a later period in my remarks.

It is about time that I should touch upon another branch of the subject. An accusation has been made against us, which, perhaps, may have caused some uneasiness and trepidation among those who do us the honour to give us their support in this House and out of it, and which would have been serious enough if there had been in it any basis of truth. But, I am happy to say that for that charge as for many others, there is not even a shadow of foundation. It has been stated and restated in all possible tones from the plaintive wail to the indignant protest that we are launching into railway construction of gigantic magnitude through a country of which we know absolutely nothing, and without taking the usual elementary precaution of having a previous exploration. I say again there is not a shadow of truth in this charge as I shall show later on. But, before I proceed any further, let me say that the conception which we have of this work which we are now contemplating is very different from the conception entertained of it by some of our critics. Most of our critics look upon this scheme simply as a commercial venture to be judged by the only rule of profit and loss. We look upon it as a work of a national character necessitated by the status of Canada in the year 1903, just as the Intercolonial Railway was necessitated by the status of Canada at the opening of confederation, and just as the Canadian Pacific Railway was necessitated by the status of Canada a few years after confederation. Sir, when the conference met in 1864 which laid down the basis of confederation, it passed a resolution affirming the necessity of the immediate construction of the Intercolonial Railway. It passed this resolution without waiting to have surveys

and explorations of the ground to ascertain whether or not all parts of this railway would be equally productive. It passed this resolution as it conceived it to be a work of political necessity, and if it was a work of political necessity it had to be built, cost what it might. When, a few years later, upon the accession of British Columbia to the confederation, the government of the day pledged themselves, and wisely pledged themselves, in favour of the building of a highway across the Rocky mountains, in order to bind the new province by the Pacific to the rest of the Dominion, they did it although they supposed that all sections of the country would not be equally productive, but they did it in the faith that the weaker sections would be carried by the stronger sections. If our conception of this railway is the correct and true one, as we contend it is, that it is a work of a national character, then, it follows that this railway has to be built from ocean to ocean to connect the tidal waters of the Atlantic with the tidal waters of the Pacific though we know in advance, though we are sure that all sections of it will not be equal in fertility, in resources and in productiveness. In that consideration alone there would have been cause sufficient for us to go on with this work without any previous explorations, but I have to say this more that we have a wealth of information on this subject. We have more information upon this scheme than ever was possessed by former governments when they decided upon the Intercolonial Railway or the Canadian Pacific Railway. I do not expect even the most fastidious of our critics will ask us that we should have had an exploration across the prairies. They are satisfied that we have enough information now to deal with this question so far as the prairies are concerned. But, I shall be asked : What about the Rocky mountains? My answer in regard to the Rocky mountains is that we have mountains of information. We have mountains of books, pamphlets and reports—books, pamphlets and reports from traders, from explorers, from engineers. From the early days, when the French settled upon the shores of the St. Lawrence, the constant aim of those hardy pioneers was to reach that western sea now familiar to us, at that time unknown, and which inspired the awe of everything unknown. Samuel de Champlain devoted years to the task in the hope of finding a passage to the sea. Robert Cavelier de La Salle lost his life in the attempt. Another man, LaVerendrye, took an overland journey to reach it by exploring the prairies, and his two sons, on the 1st January, 1743, were the first Europeans to cast eyes upon the Rocky mountains. LaVerendrye himself lost his life like Robert Cavelier de La Salle in the attempt to get to the Pacific ocean. After the country had passed under the sovereignty of the British Crown the task was resumed by Scotch traders established in Montreal, and in 1793, Alexander Mackenzie was the first white man to reach the Pacific ocean across the mountains by the overland journey. Many private individuals subsequently attempted and performed the same feat. The last of them was Captain Butler, of the British army, who in the winter of 1872 crossed the continent from Fort à-la-Corne at the forks of the Saskatchewan by way of the Peace river to the Pacific ocean.

In that year, 1872, the Canadian government undertook a systematic and scientific exploration of the whole northern region from Lake Abitibi westward to the Pacific ocean. From the year 1872 to the year 1880 no less than twenty-eight expeditions were organized to visit, explore, and report upon that country. Their reports are all available to us now and during that time the sum of no less than $5,000,000 was expended for that purpose. Now, one district was specially examined at that time and that was the northern section of the Rock mountains. Several passes, aye, all the passes north of the Kicking Horse Pass were examined and especially the Pine River Pass and the Peace River Pass. Mr. Marcus Smith, Mr. Cambie, Mr. Hunter, Mr. Gordon, Mr. Horetzky and several other, all engineers of eminence, crossed and recrossed that territory and became as familiar with it as they were with the streets of Ottawa. Any one who to-day would care to look into the reports now accumulated in the archives of the Railway Department will know that country just as he may know his own home. These explorations show conclusively that the best of all these passes may be found either in the Pine River Pass or in the Peace River Pass. It is not only a fact that there is a very successful way of crossing the Rocky mountains either by the Pine river or by the Peace river, but on both these rivers are to be found lands as fertile as the lands of the Red river or the Saskatchewan.

It is of some interest to follow the area of wheat produced on this continent from the early days of the 19th century. Wheat-growing first began on the shores of the St. Lawrence; from the shores of the St. Lawrence it passed to the Genesee Valley in the state of New York; from the Genesee Valley it passed to the Ohio river; from the Ohio river to Illinois; from Illinois to Minnesota; from Minnesota to Dakota and from Dakota to Manitoba and the North-west Territories, where it now is. The wheat area is fast advancing towards the Saskatchewan river and in a few years it will pass over to the Peace river and to the Pine river valleys. And when the Red river and the Saskatchewan river territory have been exhausted for wheat production and have been given to mixed farming, then the Peace river and the Pine river territory will become the wheat producing centre of the world. Instead of giving my own opinion

on this, it is perhaps better that I should give the language used by the explorers employed by the government of that day. But before I go into that, let me quote the language of Captain Butler who was the last of the individual explorers to whom I have alluded. In the appendix to his work 'The Wild North Land,' Captain Butler writes in the following pregnant language :

But should this Indian Pass at the head of the Pine river prove to be, on examination, unfit to carry a railroad across, I am still of opinion that in that case the Peace river affords a passage to the western ocean vastly superior to any of the known passes lying south of it. What are the advantages which I claim for it ? They can be briefly stated.

It is level throughout its entire course ; it has a wide, deep, and navigable river flowing through it ; in its highest elevation in the main range of the Rocky Mountains is about 1,800 feet ; the average depth of its winter fall of snow is about three feet ; by the first week of May this year the snow, unusually deep during the winter, had entirely disappeared from the north shore of the river, and vegetation was already forward in the woods along the mountain base.

But though these are important advantages for this mountain pass, the most important of all remains to be stated. From the western end of the pass to the coast range of mountains, a distance of 300 miles across British Columbia, there does not exist one single formidable impediment to a railroad. By following the valley of the Parsnip river from 'the Forks' to Lake Macleod, the Ominica range is left to the north, and the rolling plateau land of Stuart's lake is reached without a single mountain intervening ; from thence the valley of the Nacharcole can be attained, as we have seen in my story, without the slightest difficulty, and a line of country followed to within twenty miles of the ocean, at the head of Dean's Inlet.

I claim, moreover, for this route that it is shorter than any projected line at present under consideration ; that it would develop a land as rich, if not richer, than any portion of the Saskatchewan territory ; that it altogether avoids the tremendous mountain ranges of Southern British Columbia, and the great gorge of the Fraser river ; and finally, that along the Nacharcole river there will be found a country admirably suited to settlement, and possessing prairie land of a kind nowhere else to be found in British Columbia.

That, Sir, is the opinion of a traveller of eminence, but let me give now the opinion of a professional engineer. Mr. Gordon, whose report is to be found in Mr. Fleming's report for 1880, says :

Were it necessary or expedient to find a course for the Pacific Railway, as far north as the Peace River Pass, a comparatively easy route is offered in this direction. Even at the wildest and most rugged parts of the pass, the mountains are almost invariably fringed by flats or by gentle slopes of varying width. One or two avalanche courses, a few ravines, and occasional projections of rock would form the chief difficulties, which are apparently much less serious than many obstacles that have been overcome on other Canadian railways. At its higher or western extremity the pass is not more than 1,650 feet above the sea level, and the current of the river, which is very equable, is not more than from four or five miles an hour, where it cuts through the mountain range. East of the pass, for fifty miles, till the canyon is reached, the engineering difficulties would probably be not much greater than those presented by an open prairie. But the chief difficulty on this route would be found at the canyon where the river sweeps round the base of a solitary massive hill, known as the Mountain of Rocks, or the Portage Mountains, just above the Hudson's Hope ; yet even here, although the work would be heavy, the difficulties would be by no means insuperable.

Mr. Cambie, in the same report, says :

The Peace river, which is the lowest known pass through the Rocky Mountains, offers a wonderfully favourable line for a railway through that range, and for sixty miles east of its main summits.

Mr. Marcus Smith, in the same report for 1878-9, says :

This can undoubtedly become the great wheat-producing province of the Dominion. In aid of its development, it possesses a noble and navigable river, which runs through its centre, affording easy means of collecting its produce, and bringing it cheaply to some convenient point, where it could be received by the railway.

Mr. Marcus Smith, referring to the Pine River Pass route in another report, says :

There is further the important consideration that, in the place of a bleak sterile country the line by the Pine river route would traverse an area of remarkable fertility—the fertile belt, or wheat-producing country, extends nearly 300 miles further to the west, before the Rocky Mountains are reached, than by the route over the Yellowhead Pass ; a corresponding reduction being made in the breadth of sterile country to be crossed in the Rocky Mountain district.

Now, Sir as to Port Simpson, which is to be the terminus of this railway, it is also important to know what is the opinion of the engineers who surveyed the country at the time of which I have spoken. Mr. Fleming, in his report for 1878-9, says :

Port Simpson is possibly the best harbour on the mainland. . . . of all the terminal points projecting on the mainland and on Vancouver Island, Port Simpson is most conveniently situated for Asiatic trade.

Mr. Marcus Smith, says :

There is really no harbour in the coast of the mainland of British Columbia, with the exception of Port Simpson, eligibly situated for purposes of foreign commerce. . . . It is easily approached from the ocean, and is the nearest to the coast of Asia of any harbour in British Columbia.

Again in another report written in 1878-9, Mr. Marcus Smith says :

Port Simpson may possibly be considered at present, too far north for the terminus of the Canadian Pacific Railway, but it is important that the fact should be borne in mind, that by virtue of low altitudes and consequent easy gradients, together with the moderate character of the works required to reach it, this terminal point offers advantages which would enable a Canadian line to defy competition for the trade with China and Japan.

This is not all. The section of country east of the city of Winnipeg and extending to Lake Abitibi was also explored by the engineers of the government at that period. In order to save time I will not refer to the opinion then expressed; but I will come to the information which has been collected by the government of the province of Ontario, which in 1900 organized a special expedition entrusted to carefully selected commissioners for the express purpose of visiting and reporting upon that section of country between Lake Abitibi and the western boundary of the province of Ontario. In their report the commissioners speak as follows :

Agricultural Land.

The great clay belt running from the Quebec boundary west through Nipissing and Algoma districts and into the district of Thunder bay comprises an area of at least 24,500 square miles, or 15,680,000 acres, nearly all of which is well adapted for cultivation. This almost unbroken stretch of good farming land is nearly three-quarters as great in extent as the whole settled portion of the province south of Lake Nipissing and the French and Mattawa rivers. It is larger than the states of Massachusetts, Connecticut, Rhode Island, New Jersey and Delaware combined, and one-half besides of the state of New York. The region is watered by the Moose river, flowing into James bay, and its tributaries, the Abitibi, Mattagami and Missinabie, and the Albany and its tributaries, the Kenogami and Ogoke. Each of these rivers is over 300 miles in length, and they range in width from 300 or 400 yards to a mile. They are fed by numerous smaller streams, and these in turn drain numberless lakes of larger or smaller size, so that the whole country is one net-work of waterways, affording easy means of communications with long stretches fit for navigation. The great area of water surface also assures the country against the protracted droughts so often experienced in other countries. The southern boundary of this great tract of fertile land is less than forty miles from Missinabie station on the Canadian Pacific Railway; and the country north of the height of land being one immense level plateau sloping off towards James bay, the construction of railways and wagon roads through every part of it would be a comparatively easy matter.

In the small part of the district of Rainy river which was explored, the proportion of good land is not so great, but the clay land in the townships around Dryden was found to extend north in the valley of the Wabigoon river, with an area of about 600 square miles, or 384,000 acres. There are also smaller cultivable areas at various other points.

The Climate.

Another important fact established by the explorations is that the climate in this northern district presents no obstacle to successful agricultural settlement. The information obtained completely dispels the erroneous impression that its winters are of Arctic severity and its summers too short to enable crops to mature. The absence of summer frosts noted by the explorers and the growth of all the common vegetables at the Hudson Bay posts must disabuse the public mind of this erroneous impression. The 50th parallel of latitude passes through the centre of the agricultural belt, and the climate is not much different from that of the province of Manitoba, lying along the same parallel, with this exception, of course, that the winter is tempered by the great spruce forests and the presence of so large a proportion of water surface. The country, too, has an abundance of wood for fuel, building and commercial purposes, and plenty of pure water every where.

The Timber.

Another point equalled only in importance by the existence of a vast area of agricultural land in this country and its moderate climate is the fact that it is largely covered with extensive forests of spruce, jackpine and poplar. The value of this class of timber, as everybody knows, is increasing every day and the market for it is widening; and rich, indeed, is the country which has boundless resources in these varieties of woods. In the district of Nipissing, north of the Canadian Pacific Railway line, there is estimated to be at least 20,000,000 cords of pulp-wood; in the district of Algoma, 100,000,000 cords; in the district of Thunder Bay, 150,000,000 cords; and in the district of Rainy River, 18,000,000 cords; a grand total of 288,000,000 cords. The pine region does not seem to extend much beyond the height of land, but on this side, in the country around lakes Temagaming and Lady Evelyn, and to the north, an area of red and white pine of fine quality was explored and estimated to contain about three billions of feet, b.m.

Water Powers.

A feature of this region, which it is well to note from an industrial point of view, is the existence of many falls on the rivers and streams. These will no doubt be utilized with advantage in the creation of economical power when the country comes to be opened up.

Conclusion.

It was not expected, of course, that the parties would be able to make a thorough and exhaustive exploration of all the territory assigned to them, and the estimates here given of what has been reported are very conservative. Totalling up the figures here quoted, however, we have over 25,000 square miles of good fertile land, or over 16,000,000 acres, and 288,000,000 cords of spruce or other pulpwood. There are also numerous smaller areas, both of timber and land, which are not included in these figures, but which will all be available when the development of the country takes place.

The country east of Lake Abitibi, in the province of Quebec, has also been explored, and explored several times. It was in the possession of the early French settlers, as far back as two hundred years ago. The French, I believe, had a port on Lake Abitibi in the seventeenth century. But it is difficult to summarize all the information with regard to that country, collectable in books of exploration. The Quebec government has had it explored in the last few years by an engineer of eminence, Mr. O'Sullivan, and his opinion has been summarized by another engineer, Mr. Doucet, in the following language :

From Roberval (which is a station on the Quebec and Lake St. John Railway) to the western limit of the province of Quebec, a distance of some 375 miles the line runs through a good farming country, the soil being chiefly clay.

I need not continue the quotation, because what follows is simply an amplification of this sentence.

To recapitulate what I have stated on this subject:

It is established that the railway can be easily built across the Rocky mountains by way of the Pine river or the Peace river.

It is established that along these rivers will be found rich prairies equal in fertility to the best land along the Saskatchewan river and the Red river.

It is established that the railway built by way of either the Pine river or the Peace river would place us in communication with the famous Omineca district, famous for its gold mines, which to-day are idle because it is impossible for the miner to get access to them with his tools and provisions, but which probably, the moment we secure access to them, will become valuable and develop into another Klondike.

It is established that the region between Winnipeg and Quebec is a fertile clay belt, rich in good land, rich in timber, rich in water-powers, rich in all those resources which go to make a fine agricultural and industrial country. In fact, it is only within the last four weeks that an important authority on the lumber trade, the 'Lumberman' of Chicago, stated that this section of country would become the source of supply for the future wood-pulp and paper industry of the world.

Such being the facts, what is the conclusion to be drawn from them? The conclusion seems to be obvious and imperative: That is, that we must at once provide for a railway to tap these rich and fertile territories. I will not dwell upon facts which are well known and patent to everybody. Our fertile prairies are becoming settled, and are going forward by leaps and bounds. Thousands and hundreds of thousands of immigrants are coming in every year. For one, two, three generations, at least, and perhaps more, these new settlers will grow cereals, and probably nothing else. They will have need of everything that is required by civilized men. They will have need of clothing, furniture and every other kind of manufacture. Then, Sir, what shall we do? Shall we allow them to be supplied by our American neighbours, or shall we provide a railway which will enable our manufacturers in Ontario and Quebec to supply them with what they shall require? There is one thing above all which will be their chief need, and that is lumber. They must have lumber for their houses, their barns, their stables, and all their buildings. Where are they to get it? Not from the section of country where they live and work, for the lumber is not there.

But luckily for us, the other sections of the road, the section between Moncton and Quebec and the section across the Rocky mountains, are rich in lumber of every kind; and the moment the road is open there will be established at once an important trade between all the sections covered by the railway. Nor is that all. There is another branch of trade which seems to be forgotten or passed over at present, but which is also of the greatest importance. I refer to the cattle trade. I need hardly tell you, Sir, that the foothills of the Rockies are perhaps to-day the best grazing lands under the sun, and the herds of domestic cattle in those grazing districts are becoming as numerous as were the buffaloes of old. The breeders must find an exit to the ocean. This new line, by its shortness, directness and climatic conditions is an ideal line for the cattle trade. The shipper, when he lands his cattle at Quebec, St. John or Halifax, will have them in the ideal condition of being able to set at once to sea without any loss of weight.

There is another consideration, in some respects even more important, and that is the trade of the Orient. All nations at this moment are competing for the trade of Japan and China, and there is no nation so well situated as Canada to capture that trade. Take a look at the map, and you will find that the route from Europe to the Canadian harbours is the shortest of any of the routes available to European merchants. Take the route which will be opened by this new railway, and you will find that it is the shortest of all the lines across the American continent. Again look at the map and you will find that the route from Port Simpson to the coast of Japan is the shortest of all the routes to that country from the American continent. All these considerations led us to the conclusion that it is our imperative duty not to wait until to-morrow, but to provide at once for the building of such a railway as I have indicated, if it is possible for us to obtain it on reasonable conditions.

It now becomes my duty to lay before the House the conditions on which we are to have this railway built; and, unless I am greatly mistaken, they will astonish friend and foe by their superior excellence. I shall have the honour, before resuming my seat, to lay on the Table a contract entered into between

His Majesty the King, acting in respect of the Dominion of Canada, and herein represented and acting by the Honourable William S. Fielding, acting Minister of Railways and Canals, of the first part; and Sir Charles Rivers-Wilson, C.B., G.C.M.G.; the Rt. Hon. Lord Welby, G.C.B.; John A. Clutton-Brock, Joseph Price, Alfred W. Smithers, all of the city of London, England; Charles M. Hays, Frank W. Morse and William Wainwright, all of the city of Montreal, in the Dominion of Canada; and John Bell, of the city of Belleville, in the said Dominion, representing herein and acting on behalf of the Grand Trunk Pacific Railway Company, a company to be incorporated by Act of the parliament of Canada at the present session thereof.

I may say at once that one of the first sections of this contract is to provide that the capital stock of the Grand Trunk Pacific

Railway, which in the Bill before the House to-day is $75,000,000, is to be reduced to the sum of $45,000,000. Of this sum $45,000,000 —$20,000,000 shall be preferred stock and $25,000,000 common stock ; and I would ask special attention to this feature of this common stock ; It is provided that the whole of the $25,000,000 shall be acquired and retained at all times by the Grand Trunk Railway itself. When we were approached by the gentlemen associated with the intended Grand Trunk Pacific Railway with the view of coming to an arrangement for the building of this line, strong and responsible as were the gentlemen connected with the enterprise, we told them that we would not act with them separately or individually. We told them that we would not act with them unless they brought into this enterprise the old Grand Trunk Railway, well tried, with a foothold in every city, town, village and hamlet in the provinces of Ontario and Quebec, and there is the consequence of this first covenant between the corporators and ourselves. Then the preamble of the contract recites :

Whereas, having regard to the growth of population and the rapid development of the production and trade of Manitoba and the Northwest Territories, and to the great area of fertile and productive land in all the provinces and territories as yet without railway facilities, and to the rapidly expanding trade and commerce of the Dominion, it is in the interest of Canada that a line of railway, designed to secure the most direct and economical interchange of traffic between eastern Canada and the provinces and territories west of the great lakes, to open up and develop the northern zone of the Dominion, to promote the internal and foreign trade of Canada and to develop commerce through Canadian ports, should be constructed and operated as a common railway highway across the Dominion, from ocean to ocean, and wholly within Canadian territory.

Section 2 provides that the line is to be divided into two sections—the eastern section, from Moncton to Winnipeg ; and the western from Winnipeg to the Pacific ocean. Another clause provides also that the western section shall be divided into two sections—the prairie section and the mountain section.

As I indicated a moment ago, it is our intention that the government shall build the eastern section from Moncton to Winnipeg, but it shall be leased to and operated by the Grand Trunk Pacific Railway. It is also provided that the western section, from Winnipeg to the Pacific ocean, shall be built, owned and operated by the Grand Trunk Pacific Railway.

Before proceeding further, perhaps it would be advisable to give to the House the respective covenants of the government and the company with respect to the building, owning and operating of the western section. If I do that, the other covenants with regard to the eastern section shall be better understood. It is provided in the contract that the government will undertake to guarantee the bonds of the Grand Trunk Pacific Railway for the construction of the western section to the extent of 75 per cent of the cost of construction, the liability in no case to exceed $13,000 for the prairie section and $30,000 for the mountain section per mile. It may be asked if the aid of the government is to be given only to secure the construction of 75 per cent of the road, where is the company going to get the other 25 per cent ? The answer to that is this : That it is provided in the contract that the company shall be authorized to issue a second series of bonds which are to be guaranteed, not by the government, but by the old Grand Trunk Railway Company of Canada. Let me read here to the House this section, as it is an important one :

Sir WILFRID LAURIER.

Inasmuch as the bonds to be guaranteed by the government only make provision for a part of the cost of construction of the western division, the company hereby agrees that the Grand Trunk Railway Company of Canada shall guarantee bonds of the company for the balance required for the construction of the said western division, exclusive of the said twenty million dollars required for first equipment, which the company is required to provide under paragraph 22 of this agreement, and the company may issue a second series of bonds, to be guaranteed as aforesaid by the Grand Trunk Railway Company of Canada, to be a second charge upon the property described in paragraph 25 (b) hereof, and to be subject to, and to rank upon, the said property next after the said bonds so to be issued and guaranteed by the government.

I need not dwell upon the importance of this covenant on the part of the company. It practically takes away from the guarantee of the government all risk. There is not a dollar to be advanced by the government. We do give our credit and nothing else. And our guarantee of seventy-five per cent of the construction of the road is to be supplemented by the credit and all the backing of the Grand Trunk Railway Company itself.

The company is to provide, upon the completion of the road, equipment to the amount of $20,000,000. Let me quote the contract on this also—section 22 :

The company shall equip both divisions of the said line of railway with modern and complete rolling stock suitable and amply sufficient for efficient operation and handling of all classes of traffic to the satisfaction of the government, and the first equipment for the completed road shall be of the value of at least twenty million dollars, of which not less than five million dollars worth shall be supplied for the operation of the eastern division of the said railway, and the said five million dollars worth of rolling stock, together with all renewals thereof and additions thereto, shall be marked as assigned to the said eastern division and shall be held to be and form part of the equipment of the eastern division of the railway during the said period of fifty years and shall be used as the equipment appertaining thereto, according to the ordinary practice of railways during the said period of fifty years.

Now, Sir, I have to call the attention of the House to another important provision.

We undertake to guarantee the bonds. But it is an important question, what is to be the character of the road ? The answer is this : The character of the road to be constructed by the Grand Trunk Pacific Company, between Winnipeg and the Rocky mountains is to be the same as that of the road between Montreal and Toronto.

Mr. MACLEAN. Double track ?

The PRIME MINISTER. The hon. gentleman (Mr. Maclean) speaks too soon.

The company shall lay out, construct and equip the said western division of the said railway to a standard not inferior to the main line of the Grand Trunk Railway Company of Canada between Montreal and Toronto, so far as may be practicable in the case of a newly constructed line of railway, but this section shall not be held to oblige the company to construct a double track railway.

And I would add 'before the time has come for it.' Now, it will be asked : What is to be the liability of the government, what are they to contribute to the building of this railway, for they must contribute something ? What they contribute is simply this—the payment of the interest for a certain number of years. It is provided that the bonds shall run for fifty years. During the first seven years, the company are not to be called upon to meet the interest, which is at three per cent ; that interest will be met by the government. After seven years the company shall pay the interest, if the proceeds of the road are sufficient to earn three per cent. But, if the proceeds are not sufficient to earn three per cent, the payment shall be made by the government. But, at the end of three years, the government shall be recouped every cent by the company. It is important that, from this point, I should give the very section of the contract :

The government shall pay the interest upon an amount of bonds equal to the principal of the bonds guaranteed by the government on account of the construction of the mountain section, accruing due during the first seven years from the date of the issue of said bonds, and shall not have recourse against the company for any interest so paid. After the expiration of the said period of seven years, the company shall be primarily liable to pay the said interest, and should default be made by the company in payment thereof, or of any part thereof, the government shall pay the same and take up the coupons representing such interest, and any moneys so paid by the government under its guarantee, whether for principal or interest of the said bonds, shall be held to be paid in discharge of the liability of the government, but not in discharge of the liability of the company with respect to the said bonds, and any moneys so paid by the government shall continue to be a charge under the said mortgage, to be given to secure the said guaranteed bonds hereinafter mentioned, and the government shall be subrogated to all the rights of the holders of the said bonds, the interest upon or the principal of which shall have been paid by the government, and the government shall in respect of all moneys which it may so pay, be in all respects, in the position of holders of bonds in respect of whose bonds default has been made to the extent of the moneys so paid by the government, subject to the following proviso and exception, namely : That the government shall not, during the next succeeding period of three years following the period of seven years above mentioned, be entitled to exercise any rights of foreclosure or sale against the company or to take possession of the said railway, if the default of the company consists in failure to pay during the said period of three years the interest upon an amount of bonds equal to the principal amount guaranteed by the government on account of the construction of the said mountain section, but any moneys so paid by the government shall be repaid by the company to the government in the following manner : At the end of the said period of three years the whole amount so paid by the government shall be capitalized and shall be repaid by the company to the government with interest at the rate of 3 per centum per annum, or the company may, at its option, repay the same in forty equal annual instalments, with interest at the rate aforesaid, or may give to the government bonds for the said interest so capitalized, payable in forty years from the date thereof, with interest at the rate aforesaid ; in any event, the interest so capitalized and the bonds so to be given therefor, if any, shall continue to be secured by the said mortgage to secure the bonds guaranteed by the government, hereinafter mentioned, and the said mortgage shall contain proper provisions in that behalf.

Mr. SPROULE. That only applies to the prairie and the mountain sections ?

The PRIME MINISTER. To the mountain section only. Now, what is the disposition for the prairie section ? The disposition with regard to the prairie section is that the company shall pay interest from the issue of the bonds ; the government will pay no interest at all upon the prairie section. Now, Sir, what is the liability incurred by the government for the construction of this road from Winnipeg to the Pacific ocean ? Assuming that the road across the mountains is 600 miles long, the cost of construction will be $18,000,000, and the total interest for three years will be $3,780,000. This is the whole of the liability which is incurred by the government for the construction of the railway from Winnipeg to the Pacific ocean.

I pass now to the eastern section. It is provided that it shall be operated by the company under a lease. As we are to build a railway that they are to lease it from us at the rate of three per cent per annum, we have thought it advisable that they should have a joint voice with us in the construction of it. Therefore, section 7 provides :

In order to insure, for the protection of the company as lessees of the eastern division of the said railway, the economical construction thereof in such a manner that it can be operated to the best advantage, it is hereby agreed that the specifications for the construction of the eastern division shall be submitted to, and approved of by, the company before the commencement of the work, and that the said work shall be done according to the said speci-

fications and shall be subject to the joint supervision, inspection and acceptance of the chief engineer appointed by the government and the chief engineer of the company, and, in the event of differences as to the specifications, or in the case the said engineers shall differ as to the work, the question in dispute shall be determined by the said engineers and a third arbitrator, to be chosen in the manner provided in paragraph four of this agreement.

When completed, the company will lease the road and will pay to us a rental at the rate of three per cent per annum upon the cost of construction, whatever that may be. The same abatement of rent is provided also as in the case of interest on the western section. During seven years the company will be exempt from the payment of rent. For three years the company will be bound to pay the revenues and tolls of the road if they amount to three per cent; and if they fail to amount to three per cent, then the difference between the revenues gathered and the three per cent will be capitalized and added to the cost of construction, and the company will pay interest upon it. So that here again the whole of the liability which is incurred by the government for the building of that section from Moncton to Winnipeg is simply seven years of interest. The sum total of the money to be paid by the government for the construction of that line of railway from Moncton to the Pacific ocean will be in the neighbourhood of $12,000,000 or $13,000,000, and not a cent more. Now, Sir, what is $13,000,000 in the year 1903? It is about the surplus of our revenue over the expenditure. The surplus for this year will pay for the construction of this road. I will come presently to the objections which I see in the faces of hon. gentlemen opposite. They will ask me: What guarantee have you that the company will be able to pay that rate of interest? I will come to that presently. But let me first give to the House the provision we have made for the use of the railway for traffic by other roads. It is our intention that this line of railway shall be a common highway for all the railways who want to use it, and for this purpose we have made a provision in the contract in the following language:—

24. The said lease shall also contain proper and usual provisions.

(a.) Reserving to the government in respect of its ownership, present and future, of the Intercolonial and any other line or lines of railway, running powers and haulage rights over the said eastern division upon equal terms with the lessees, subject to such reasonable restrictions as may be necessary to secure safety and convenience in the operation of all the traffic over the said division and subject to the payment by the government to the company of such reasonable compensation as may be agreed upon between the government and the company:

(b.) Reserving power to the government to grant running powers and haulage rights sufficient to enable any railway company desiring to use the said eastern division or any part thereof, to do so upon such terms as may be agreed upon between the companies, or, in case of their failure to agree, then upon such terms as may be deemed reasonable and just by the government, having regard to the rights and obligations of the lessees:

(c.) Securing to the government, in respect of its ownership as aforesaid, running powers and haulage rights over the western division, or any portion thereof, upon such terms as may be agreed upon between the government and the company;

(d.) Securing to any railway company desiring to make use of the same, running powers and haulage rights over the said western division, or any portion thereof, upon such terms as may be agreed upon between the companies, or, in case of their failure to agree, then upon such terms as may be deemed reasonable and just by the government.

(e.) Securing to the company running powers and haulage rights over the Intercolonial Railway, or any portion thereof, upon such terms as may be agreed upon between the government and the company.

So that under this agreement an Intercolonial train can leave St. John or Halifax and proceed all the way to Port Simpson. Under this agreement, a train of the Great Northern or of the Canadian Northern can enter upon this road at any point and go as far as the maritime provinces. So we have guarded this point in every way, and I believe that in this respect the provisions we have made will command the full satisfaction of the Canadian people. But coming back to the rental, I may be told, you have taken provision, you say, that the rental shall be paid by the company for all the time the bonds run, with the exception of seven years. What guarantee have you that this will be implemented? We have taken precautions upon this point, which I will now recite to the House.

35. For the purposes hereinafter in this paragraph respectively defined, the company may and shall create mortgages to trustees as follows:

(a.) A mortgage which shall be a first charge upon the railway, undertaking, equipment and property, tolls, rights and franchises of the company, including all equipment and property to be thereafter acquired by the company (but not including branch lines exceeding six miles in length or the revenues therefrom or the franchises in connection therewith, or such additional rolling stock as may, with the assent of the government, be designated and marked by the company as constituting the equipment thereof, and not including ships or any municipal or provincial grants of land, by way of bonus or subsidy, to the said company other than for railway purposes) to secure the payment of the said issue of first mortgage bonds guaranteed by the government.

(b.) A mortgage which shall be a second charge upon the property covered by the mortgage provided for by paragraph 35 (a), save and except the rolling stock constituting the equipment of the eastern division, to secure the bonds to be guaranteed by the Grand Trunk Company of Canada as aforesaid.

(c.) A mortgage which shall be a charge upon the rolling stock constituting the equipment of the eastern division next after the charge mentioned in paragraph 35 (a.) to secure to the government the rental payable in respect of the eastern division, the efficient maintenance and

continuous operation of the said eastern division, and the observance and performance by the company of the terms of this agreement.

Now, you see we have provided a special mortgage to force the company to implement the conditions imposed upon it, and especially the operating of the railway. But, I may be asked: Will this be sufficient? There is a mortgage of $5,000,000 upon the rolling stock; will this be sufficient to force the company to implement its promise to operate this road? We have far more in this undertaking than the simple mortgage to which I have alluded. We have the interest of the company itself to operate this road. No one doubts that the interest of the company would be to keep the traffic of the Grand Trunk for that railway. The company will take it over its present line to North Bay, from North Bay over the road which is now being built by the Ontario government, and then, transferring it at the junction of this road with the proposed road, it will send it westward to the Pacific ocean. I wish to make myself understood. The Grand Trunk Railway Company has an immense interest in getting to the fields of the prairies. Its trade to-day is in the province of Quebec and in the province of Ontario. It will take this trade from Toronto, from Montreal and from points eastward to North Bay, from North Bay, it will take it over the new line being built by the Ontario government to the point of junction with the present road, and then westward to the prairie section. Its interest there is manifest. It must operate that portion of the road. Otherwise it would never have gone into this contract. This contract is to give it the privilege of taking its traffic in the prairie section from Ontario and Quebec, but the condition is this, that it shall operate not only that section of the road, but the whole of the road from Winnipeg to Moncton. It cannot default upon the eastern part, because, if it defaults upon the eastern part, it defaults upon the western part. It cannot default upon one part without defaulting upon the whole and therefore, we hold them tight to their bargain, and they cannot deviate from it.

There is another important provision as to rates and tolls. We have provided in section 39 that the rates and tolls are to be under the direct control of the government, or, when the commission has been organized, of the commission. We thought it advisable at one time to follow the suggestion which had been made by my hon. friend the hon. ex-Minister of Railways and Canals (Hon. Mr. Blair), to which he referred in the correspondence exchanged between him and me, to force the company to give us part of its profits upon the western section, but, upon consideration, it is our intention, instead of forcing the company to give us a portion of its profits when the profits reach a certain reasonable point, to use them in such a way as to compel a decrease in the rates which are chargeable to the people who use the railway.

Now, there is another feature of this contract to which I shall call the attention of the House. If we have gone into this contract, our intention has been, as stated in the preamble, to force traffic in Canadian channels and through Canadian waters. We have made it a special condition of the contract and this condition is expressed in section 42 as follows:

It is hereby declared and agreed between the parties to this agreement that the aid herein provided for is granted by the government of Canada for the express purpose of encouraging the development of Canadian trade and the transportation of goods through Canadian channels. The company accepts the aid on these conditions, and agrees that all freight originating on the line of the railway, or its branches, not specifically routed otherwise by the shipper, shall, when destined for points in Canada, be carried entirely on Canadian territory, or between Canadian inland ports, and that the through rate on export traffic from the point of origin to the point of destination shall at no time be greater via Canadian ports than via United States ports, and that all such traffic, not specifically routed otherwise by the shipper, shall be carried to Canadian ocean ports.

Section 43. The company further agrees that it shall not, in any matter within its power, directly or indirectly advise or encourage transportation of such freight by routes other than those above provided, but shall, in all respects, in good faith, use its utmost endeavours to fulfil the conditions upon which public aid is granted, namely, the development of trade through Canadian channels and Canadian ocean ports.

Now, to show that this is not simply an idle covenant, but that we mean what we say, and intend to implement it, I have to call the attention of the House to another disposition of this contract whereby we force the company to procure all the ships necessary at both ends of the line on the Pacific and on the Atlantic as well as on the St. Lawrence, to accommodate all the trade that is offered.

Section 45. The company shall arrange for and provide, either by purchase, charter or otherwise, shipping connections upon both the Atlantic and Pacific oceans, sufficient in tonnage and in number of sailings to take care of and transport all its traffic, both inward and outward, at such ocean ports within Canada, upon the said line of railway, or upon the line of the Intercolonial Railway, as may be agreed upon from time to time, and the company shall not divert or, so far as it can lawfully prevent, permit to be diverted, to ports outside of Canada any traffic which it can lawfully influence or control, upon the ground that there is not a sufficient amount of shipping to transport such traffic from or to such Canadian ocean ports.

There is another provision which I am sure will be welcomed by the hon. member for Cornwall and Stormont (Mr. Pringle), and it is that the company shall buy all its supplies in Canada. There is another covenant, and it is the last of those which I

shall call to the attention of the House at this moment, to this effect :

The company shall within thirty days after the passing of the Act confirming this agreement and of the Act incorporating the company hereinafter referred to, deposit with the government $5,000,000 in cash or approved government securities, or partly in cash and partly in such approved securities, at the company's option, as security for the construction of the western division and for the first equipment of the whole line of railway, as provided for in this agreement.

Now, Sir, these are the salient features of the contract which we have made with the Grand Trunk Pacific Company. Compare its terms with the terms which were granted to the Canadian Pacific Railway Company in the session of 1880-1881. Twenty-five million acres of land were granted to the Canadian Pacific Railway—not an acre of land is granted to the Grand Trunk Pacific Railway Company.

Twenty-five million dollars was paid in cash to the Canadian Pacific Railway Company and works were handed over to that company which had been built by the Canadian government at the expense of the Canadian people, the cost of which was at least, if my memory serves me, $35,000,000.

Therefore the cash aid which was given to the Canadian Pacific Railway Company was in the neighbourhood of $60,000,000—the cash subsidy which is promised and which is to be given under this contract to the Grand Trunk Pacific Company will not exceed $13,000,000 or thereabouts.

Under the contract with the Canadian Pacific Railway Company for 20 years there was an exemption of competition—in this contract there is no exemption whatever. Everybody is free to compete with the Grand Trunk Pacific Railway Company and the Grand Trunk Pacific Railway Company has to face competition from whatever quarter it may come.

Exemption from taxation was given to the Canadian Pacific Railway Company in a manner that is felt even to this day in the North-west Territories and Manitoba—not one dollar of exemption from taxation is given to the Grand Trunk Pacific Railway Company.

Now, Sir, I think under such circumstances that I can appeal with some confidence to the judgment of the House to ratify, and to ratify with earnestness and with joy the contract which I have the honour to lay upon the Table. Canada has made greater sacrifices, I imagine, that any other nation in the world for the benefit of her people, in building railways. These sacrifices were rendered necessary on account of our geographical position. We border on a powerful country which had a long start on us in the march of progress and which was in such a condition that it could well afford to leave railway construction to the unaided effort of private enterprise. These greater sacrifices on our part were rendered necessary likewise by the immensity of our territory, by the sparseness of our population, and the imperative duty which was cast upon us of binding together all the groups into which our country is divided. Sometimes, indeed more often than otherwise, the terms granted for railway construction in the past were excessive and perhaps extravagant. But, looking back upon the history of the past we can all see that even in the face of these excessive terms the result has been beneficial.

We offer to the House to-day a contract which is free from all clauses which were the blemish of former railway contracts, and which is far superior to them in every other respect. Sir, it can well be said that of all the inventions for which the last century has been famous, perhaps the one invention which has had the greatest potentiality for civilization has been the discovery of the locomotive and the railway. Justin McCarthy in his 'History of our own times' writes, that when Sir Robert Peel was summoned from Rome to London to assume office as Prime Minister, he travelled in the same manner exactly as 1,500 years before Constantine had travelled from York to Rome to become Emperor. The writer remarks that each traveller had only the power that horses and sails could lend to speed him on his way, but, had Sir Robert Peel made the journey a few years afterwards he would have covered the distance in the space of about forty-eight hours. The railway has been the great agency of civilization in the last century. It has done more to bind nations and nations together than any other human agency. It has removed old prejudices by enabling peoples and nations to know more of each other, and it has made union possible where but for its aid ignorance would have continued to sow its seeds of discord and strife.

The Canadian confederation would have been a union on paper and a union on paper only, but for the fact that the Grand Trunk Railway, and the Canadian Pacific Railway and the Intercolonial Railway brought all parts of our country together to act in unison and to beat with the same heart. This new railway will be another link in that chain of union. It will not only open territory hitherto idle and unprofitable ; it will not only force Canadian trade into Canadian channels ; it will not only promote citizenship between old Canada and new Canada but it will secure us our commercial independence, and it will for ever make us free from the bondage of the bonding privilege. For that reason alone, in my estimation, it would be worth all the sacrifices and far more than we are called upon to make.

Some hon. MEMBERS. Hear, hear.

The PRIME MINISTER. Sir, it is therefore with a firm heart that I offer this

scheme to friend and foe ; it is with a firm heart that I present it to the Canadian people.

Some hon. MEMBERS. Hear, hear.

The PRIME MINISTER. I am well aware that it shall not be received everywhere with the same feelings. I am well aware that it may scare the timid and frighten the irresolute ; but, Sir, I claim that every one who has in his bosom a stout Canadian heart will welcome it as a scheme worthy of this young nation for whom a heavy task has no terrors which has the strength to face grave duties and grave responsibilities.

Mr. R. L. BORDEN (Halifax). Mr. Speaker, the right hon. gentleman has pursued a somewhat unusual course in the introduction of this measure. Every one acquainted with parliamentary procedure knows that in the case of great projects of this kind the usual practice is to put a resolution upon the Order Paper, to acquaint the House with its terms and to thus enable the measure to be discussed intelligently when it is introduced, if discussion at that time is thought necessary. That was the course pursued with regard to the Canadian Pacific Railway in 1873 and again in 1881. That was the course pursued with regard to the Drummond County Railway contract. That was the course pursued with regard to the Grand Trunk Railway contract in 1889. That was the course pursued in every case with which I am familiar, except with regard to the Yukon Railway and this ; and this possesses many of the characteristics which were noticeable when the Yukon Railway project was introduced. I would have thought it not out of place, I would have thought it somewhat more consistent with the courtesy which the right hon. gentleman usually displays to this side of the House, that a copy of the measure might have been placed in my hands at least a few hours before the right hon. gentleman presented it to the House. But at the conclusion of a very discursive statement in which he has rambled over the history of this country for the past twenty-five years, in which he has dealt with the question of bonding privileges and fishery rights, in which he has traced the history of explorations and pointed out that a gentleman named Alexander Mackenzie was the first man to reach the shores of the Pacific——

Some hon. MEMBERS. Hear, hear.

Mr. BORDEN (Halifax). I think some of the hon. gentlemen opposite cheered that under the impression that my right hon. friend referred to a late honoured member of this House and Premier of this country.

Some hon. MEMBERS. Hear, hear.

Some hon. MEMBERS. Oh.

Mr. BORDEN (Halifax). After making his very discursive speech, the right hon. gentleman at his conclusion was good enough to send to me across the floor of the House a copy of the Bill which I suppose he might have sent me this morning or even yesterday. Well, that may be in perfect consonance with the right hon. gentleman's idea of fair dealing with the opposition in this House ; but all I have to say is that it is not in consonance with the treatment which up to this time I have had the good fortune to receive from that right hon. gentleman.

The right hon. gentleman tells us that he has heard no dissenting voice with regard to a transcontinental railway. Well, I did think, Mr. Speaker, that that was a most extraordinary proposition to come from the right hon. gentleman. Has the right hon. gentleman's memory failed him ? Can he not recall the days of twenty years ago when his eloquent voice, with those of his leader and his colleagues and associates, were raised against the project of a transcontinental railway ?—when we were told in effect that it would be better to break to pieces this Dominion of ours than to go to the expense of building a railway across this continent ; when we were told that the western country was so worthless and useless that a railway across it would not pay the cost of the grease of its axles; when we were told that the great province of British Columbia was a mere sea of mountains. Yet, the right hon. gentleman stands up in his place and tells us that he has never heard a dissenting voice with regard to the project of a transcontinental railway. Well, Mr. Speaker, we are glad to hear the eloquent words of the right hon. gentleman to-day. We are glad that he has at last awakened to a sense of the importance of a transcontinental railway across this country ; and we are glad that he admits to-day that the Canadian Pacific Railway, upon which project the Conservative party staked its political life, has been the means of binding together the people of Canada and making it the nation that it is to-day.

It is of course impossible for me to deal in detail with the project of the right hon. gentleman to-day, for the reason that I have already mentioned. But there are one or two general matters respecting which I would like to make a few remarks before this Bill is read for the first time. In the first place, my right hon. friend says there is no time for deliberation ; we cannot wait ; we must do this thing at once ; the time is for action, and not for deliberation. I would like to point out to my right hon. friend that his government has been in power for a period of seven years, that this transportation question has been before them during all that time, that during at least three or four years of that time a large immigration has been flowing into the Northwest ; and yet the right hon. gentleman says that there is no time for deliberation. Well, I think the scheme on its face bears

the imprint of the truth of the right hon. gentleman's remark. There has been no time for deliberation. What the reason for that is I do not know ; but this I do know, that with regard to that the right hon. gentleman has changed his mind very much since the first day of this session. What were the words that were put into the mouth of His Excellency the Governor General when this session opened ?

> The great influx of population into our North-west Territories and the very large additional areas of fertile land which are being brought under cultivation combine to further press upon us the need for increased transportation facilities for the forwarding of our grain and other products to the markets of the world, through Canadian channels.

Now, I invite the right hon. gentleman's attention to the following words, as to which I wish to address a few queries to him :

> The whole question of transportation and terminal facilities continues to occupy much attention, and my government will immediately appoint a commission of experienced men to report on the subject.

I think we might well ask, what is the position of that transportation commission at the present time ? Nearly five months of this session have passed away since those words were placed in the mouth of His Excellency, and I would like to know from the right hon. gentleman now, if he is able to answer me, what progress has been made with the transportation commission ? Has it even been constituted ? If so, is he prepared to lay its report on the Table of the House ? Is it on the report of that commission, or if not on what substitute therefor is it, that the right hon. gentleman has brought this project before the House ? Does he propose to proceed with this transportation commission, and, if so, upon what shall it report after this project has been brought down and passed through parliament ? Upon what shall it report, and of what use shall it be ? Were these words put idly into the mouth of His Excellency ? Were they put into his mouth with the intention of deceiving the country ? If not, has the right hon. gentleman changed his policy since the commencement of this session, and if he has, what were the overmastering reasons which led him to present this measure to the House, as he says himself in effect, without that deliberation which such a measure as this should demand at the hands of any government? No time for deliberation, when he himself had placed in the mouth of His Excellency the best and most cogent reason possible why there should be deliberation with regard to this matter. And that deliberation was not only promised then, but it was promised to us many times since the session opened ; and yet apparently we are to deal with this measure without reference to any report which that commission could make.

My right hon. friend waxed eloquent in one portion of his remarks upon the importance of the parliament of this country and the government of this country remaining true to pledges which were given in the past ; I must confess that I thought his eloquence was most touching when he was dealing with that subject. He is so firm a believer in the sanctity of promises that he is even willing to carry out pledges made by Conservative administrations. Well, Mr. Speaker, there is a good old proverb that charity well understood begins at home, and would it not be well for the right hon. gentleman to deal with a few of the pledges which he has made to this country in the past before he undertakes to deal with pledges made by Conservative administrations ? Would it not be well, before he undertakes a task of that kind, that he should give us that free trade as it is in England which he promised in Winnipeg and in every other city in the west ? I have repeated his words in this House, and he has not denied them. Would it not be well for him to wait until he reduces the expenditure of this country by three or four millions ? Would it not be well for him to wait until he carries out the verdict of the people pronounced in the plebiscite vote ? Would it not be well for him to attend to a few of these matters before he stands up and folds his arms and announces that he is about to implement a promise made by the late Conservative administration ?

The right hon. gentleman is very much impressed with the importance of a railroad through all-Canadian territory. I may say to him in passing that his government has brought down and voted during the present session, a subsidy for a system of railway which passes to the extent of nearly forty miles through American territory ; and my right hon. friend did not seem to have that consideration so much in mind at that time as he does to-day.

Passing to another portion of the right hon. gentleman's remarks, I was astonished to hear the Prime Minister of this country stand up in his place in this House and say that this country is at the mercy of the United States of America on account of the bonding privilege. I do not believe in language of that kind from any man in this parliament and least of all the right hon. gentleman. We thought we had got beyond language of that kind. We heard it a good deal in days gone by, and in our ears it has a certain reminiscence which we would be very glad indeed to shut out. I do not believe that Canada is at the mercy of the United States. And if Canada is at the mercy of the United States on account of the bonding privilege, how does it happen that the government of the right hon. gentleman has stayed in its place seven years without taking any steps to remedy the situation ? They have been seven years in power and they wake up to-day to the fact that Canada

is forsooth at the mercy of the United States because of the danger of having the bonding privilege abrogated. I believe that that bonding privilege is as valuable to the United States as it is to us. And for my part, I desire to disclaim, in language as emphatic as the usages of parliament will permit, the statement of the right hon. gentleman, the Prime Minister, that Canada now or at any time is or has been at the mercy of the United States, for that reason or any other.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. BORDEN (Halifax). I had expressed my disappointment, Mr. Speaker, that the right hon. gentleman, in introducing this measure, had seen fit to depart from parliamentary usage in springing his measure upon the House this afternoon without any previous notice of its terms, and in seeing fit, during two and a half hours, to make a controversial speech, instead of contenting himself, as is the practice, with intimating to the House the purport of the Bill. The intention was perfectly obvious. The opposition were to be taken unawares. No reply was to be made to the right hon. gentleman, and his speech was to go forth to the country without any answer whatever. Well, Sir, it will not go forth without some answer, although of course, one is taken very much at a disadvantage, with regard to a measure of this magnitude, in having the printed copy sent across, at the conclusion of the right hon. gentleman's speech, when it might have been placed in the hands of the leader of the opposition hours before. Nevertheless, I think there are some salient points in this measure which ought to be answered on the spot, and which I propose to answer on the spot.

The right hon. gentleman has covered a very wide range of ground. When we took recess at six o'clock, I was dealing with his remarks regarding the bonding privilege between this country and the United States. Before proceeding further, let me say that I do not know, to use the phraseology of my hon. friend the Minister of Trade and Commerce (Sir Richard Cartwright), who dry-nursed the right hon. gentleman for this speech which he has delivered to-day. There might be some question as to whether or not the gentleman who wrote that article in the New York 'Sun,' which was quoted by the Prime Minister to-day, had anything to do with the preparation of that speech. The right hon. gentleman declared at considerable length that Canada was at the mercy of the United States on account of this bonding privilege, and it may not be out of place, in passing, to point out the view which another Canadian statesman, who is not now in the House, took of this situation some six years ago. Speaking in this House on the 24th of August, 1896, Sir Charles Tupper said :—

> Occasionally some people in the United States, who are very anxious to create trouble with Canada, who do not hesitate to do everything in their power to hand us over to the United States, have been kind enough to suggest to the United States government to stop the bonding privilege as a means of bringing Canada to her knees, just as they have been kind enough to suggest that the United States have it in their power to adopt a course that would render the great railway lines of this country, the Grand Trunk Railway and the Canadian Pacific Railway, bankrupt in a very short time. That is the policy which I can understand emanating from the Farrars from the Wymanns and from the Glens ; but I cannot understand the first minister committing himself to a declaration tantamount to saying that the bonding privilege is one we have yet to settle. Sir, it is a privilege that has been conceded after the most solemn declarations by the plenipotentiaries of both countries, and has been ratified by a treaty under which we now enjoy it.

That is in marked contrast to the position taken by the Prime Minister to-day. He tells the people of Canada that we are utterly at the mercy of the United States government, when, as a matter of fact, it has been demonstrated that the bonding privilege is of more value to the shippers of the United States to-day than it is to us, and that, if it were abolished to-morrow, the shippers and the people of the United States would have more to suffer than we. But whether that be so or not, it seems to me a remarkable position for a Prime Minister of this country on the eve of the resumption, as we are told, of negotiations with the United States concerning trade matters, to stand up and say that for a period of five or six years to come, until this road is completed, we shall be absolutely at the mercy of the United States, bound to go down on our knees and submit to anything they may dictate to us. The right hon. gentleman has indulged in efforts of this kind before. The first thing he did after coming into power in 1896 was to give an interview to a reporter in Chicago, in which he very kindly promised to give away almost everything Canada had to offer, provided we could have some better relations with the United States than we then enjoyed; and when the right hon. gentleman expresses his fear of commercial bondage to the United States, I am reminded that eleven or twelve years ago, in 1891, he went through this country advocating a policy which his leader, the hon. Mr. Blake, admitted afterwards, was bound to subject the people of this country, not only to commercial, but political bondage as well, to the United States.

The right hon. gentleman apparently forgets those days, he forgets his attitude of that time, and he is oppressed with the danger of the commercial bondage of Canada to the United States of America. Thanks to the policy of the Conservative

party inaugurated in 1878, this country has found its own market; it has found a market in Great Britain and on the continent of Europe; it stands to-day in its own strength; it does not feel itself at the mercy of the United States, notwithstanding the declaration of my right hon. friend; and it will continue to stand in its own strength and increase in its own strength in the future. And if the government of the day is actuated by the feeling and principles which inspired the establishment of the national policy of this country in 1878, it need not fear from the United States or any other country commercial bondage, political bondage or bondage of any kind. And the right hon. gentleman was somewhat plaintive with regard to the attitude of the United States of America toward this country. That is in marked contrast with the good old days, when, I think, delegates were sent to Washington for the purpose of inspiring American statesmen with the idea that they could much better negotiate with Canada if the Liberal party came into power, and when we were told from one end of the country to the other that the difficulty in the way of making an arrangement with the United States was the unreasonable attitude taken by the leaders of the Conservative party. The right hon. gentleman has changed his views with regard to all this. He does not sing those old songs of long ago, but frankly admits to us that in dealing with the United States of America we are dealing with a people who want—as is very natural—to get the best of the bargain, and who, on all occasions when they negotiate with Canada or any other nation will see to it that their rights and privileges are not neglected. Now, so much for the somewhat discursive observations of the right hon. gentleman this afternoon.

As to the scheme itself, I can only deal with it in its main, general aspects, because it was only handed to me at the conclusion of the Prime Minister's speech. But there are one or two salient points with regard to it which stand out in bold relief and to which I will bring the attention of the House and the country.

In the first place, Mr. Speaker, it seems to me that it has put back for fifty years, at least, the prospect of government ownership of railways in this country. Now, I do not declare myself to-day as absolutely in favour of government ownership of railways, although I know that there is a strong sentiment in this country in favour of that idea. But I say that it is not a wise policy, it is not a prudent policy for the government, looking to the developments of the future, to embark upon a scheme which absolutely puts that policy out of sight for the next fifty years, and this the government has certainly done, for it proposes to build a railway from the city of Moncton to the city of Winnipeg and to hand that railway over to the Grand Trunk Pacific for fifty years at least. That line from Moncton to Winnipeg is described by the right hon. gentleman as the key to the whole western situation. If it be true that it is the key to the whole western situation, the handing of it over in this way places beyond the power of the government for the next fifty years any policy of government ownership of railways.

In the second place, Mr. Speaker, it enables the Grand Trunk Railway Company to practically control the Intercolonial Railway. There is no doubt about that. It looks as if it were intended to result in the eventual ownership by the Grand Trunk Railway of the Intercolonial Railway. How is it to be done? Lines of steamships are to be established on the Atlantic and the Pacific to be operated by the Grand Trunk Railway Company. I suppose that on the Atlantic they will sail from the ports of Montreal, Quebec, Halifax and St. John. How are these steamships to be operated unless the Grand Trunk shall secure running powers over the Intercolonial Railway from Moncton to Halifax? And when it secures these running powers, or even without them, what becomes of the Intercolonial Railway? It is virtually placed within the power of the Grand Trunk Railway, and that railway will be in a position to dictate the policy of the Intercolonial Railway and regulate its mode of dealing with traffic. Further than that, it practically converts the Intercolonial Railway, a road upon which we have expended nearly $70,000,000, if I recollect correctly into a local road. Certainly it converts it into a local road so far as that portion of its line from Quebec to Moncton is concerned. And, while my right hon. friend, in speaking here to-day, was inclined to minimize that aspect of the question, nevertheless, he, in effect, admitted that, so far as those portions of the provinces of New Brunswick and Quebec traversed by the Intercolonial Railway are concerned, the building of this new line must be detrimental to these localities.

But there is a more important matter in connection with the Intercolonial Railway, and that is that the policy brought down to-day is an absolute and complete reversal of the policy upon which this government embarked four or five years ago. And I will show you why. In 1898—I think it was—the ex-Minister of Railways and Canals (Hon. Mr. Blair) brought down a proposal to this House to acquire a line of railway from Lévis to the city of Montreal. That proposal eventually passed this House and became law. Under it the government of this country paid for the Drummond County Railway the sum of $1,600,000, that being the capital representing the annual payment of $64,000 for ninety-nine years. In addition, the government has spent upon that line no less a sum than $500,000. So,

the line from Lévis to Montreal represents to-day a capital expenditure of $2,100,000 of the peoples' money. In addition to that, the government, for the purpose of dealing with the western traffic, which, it was said at that time, the Intercolonial Railway would control under this agreement with the Grand Trunk Railway, entered into an agreement with the Grand Trunk Railway Company by which it pays to that company, for the period of ninety-nine years, if I remember correctly, the sum of $140,000 a year as rental for its terminals. So you have a capital expenditure of $2,100,000 and a yearly rental of $140,000 payable to the Grand Trunk Railway in respect of the terminals at Montreal. That policy of the government meant certainly this—that, under the agreement, the Grand Trunk Railway was to hand over to the Intercolonial Railway at Montreal its proportion of through-traffic to be carried by the Intercolonial Railway to St. John or Halifax for transport to the markets of Europe. Further than that, if that policy meant anything, its logical and necessary conclusion would be the extension of the Intercolonial Railway to the great lakes, so as to provide the traffic of the west with another outlet, and also to provide a line of railway from the great lakes to the Atlantic seaboard which could be used, if necessity arose, as a means of regulating railway rates in this country. Well, the project submitted by the government to-day does away with all that. It side-tracks the city of Montreal, it renders vain the expenditure of $2,100,000, it renders excessive and absurd the payment of $140,000 per year to the Grand Trunk Railway for the terminals at Montreal. Therefore, the government, by the proposal which it has brought down to the House to-day, as is its custom in many cases, absolutely reverses the very policy which it brought down to the country only four or five years ago.

Then, Mr. Speaker, there is another criticism upon this proposal, namely, that like the fast Atlantic service, which the government have lately asked tenders for, it is of a hybrid character. The government now owns and operates in Canada about 1,300 miles of railway. It now proposes to build and own, but not to operate, 1,800 miles of railway. For what reason or on what ground will a distinction be made? When the government acquired the Drummond County Railway from the city of Lévis to the city of Montreal, it did not propose to hand that over to the Grand Trunk or to any other railway; it stood then upon the policy of the operation by the government of any railway which it owns. Now, we have the spectacle of the government coming down and building some 1,800 miles more of railway, not having the courage to undertake its operation itself, but handing it over at a more or less nominal rental to the Grand Trunk Company, in order that they may run this line in connection with their own. Now, I say that the government should adopt either one policy or the other. Either the policy of the operation by the government of the lines which it owns is a good one or it is not a good one. I do not see that you can make any distinction in that regard between the line from Moncton to Winnipeg and the line from Montreal to Halifax and to St. John. The right hon. gentleman, in the speech which he delivered to-day, did not point out any such distinction; and if it be a good thing to have government operation of roads owned by the state, then I say the government has not acted wisely in handing over to the Grand Trunk Railway Company 1,700 or 1,800 miles of line from Moncton to Winnipeg. If, on the other hand, the government has arrived at the conclusion that it is impossible successfully to operate railways owned by the state, then the government certainly should not bring down the policy it has brought down to-day, but it should propose some comprehensive scheme by which all the railways, including the Winnipeg-Moncton line should be operated on some other basis and under some other management than those under which they are operated to-day.

My right hon. friend told us of an interview which he had with Mr. Booth in connection with the terminal of the Canada Atlantic Railway. It seems that the right hon. gentleman experienced almost a vision, a sudden thought flashed upon his mind, and he saw at once that it would be of no use for the government to attempt ownership of railways in the west. And what were the reasons the right hon. gentleman assigned? Why, he said, if you built a railway owned by the state in the western part of Canada, you would have to build elevators and wharfs, and you would have to send out agents looking for freight. Well, does not the right hon. gentleman send agents all over the country, all over the United States and all over Europe, looking for immigrants, and would there be any great distinction between that and sending agents to look after freight? The right hon. gentleman does not seem to realize that only three years ago his government spent hundreds of thousands of dollars in building elevators and wharfs at St. John. Yet the inexpediency of building elevators and wharfs is about the only reason that I have heard in the right hon. gentleman's speech for refraining from government ownership of railways in the west.

Now, my right hon. friend attached great importance to the idea that this project of his ensures the transportation of Canadian goods through Canadian routes. In the first place, the proposed contract which has been placed before the House gives the Grand Trunk Railway Company absolute control of the line from Moncton to Winnipeg. That company is to own the whole of

the common stock of the Grand Trunk Pacific Railway. I venture to think that sections 42 and 43, to which the right hon. gentleman referred in his address this afternoon, are sections which, so far as they are intended to ensure the transportation of Canadian goods through Canadian routes, will prove to be of the most illusory character. It is absolutely impossible, it seems to me, under conditions of this kind to expect that result. Where has the Grand Trunk Railway its terminus at the present time? It has its Atlantic terminus at Portland, in the United States, upon which it has expended millions of dollars. Now, if you can, by any agreement, or by any Act of parliament, prevent the Grand Trunk from routing its freight over this line to its own terminus at Portland, I will be very glad indeed to have that accomplished. I for one venture to doubt whether, under the sections of this Bill which have been referred to by the right hon. gentleman, that matter can be accomplished. What are the sections? Section 42 reads:

> It is hereby declared and agreed between the parties to this agreement that the aid herein provided for is granted by the government of Canada for the express purpose of encouraging the development of Canadian trade and the transportation of goods through Canadian channels.

Well, that sentence does not amount to anything at all, it has no legal force or effect, and a different policy would not, it seems to me, be attended with any better results.

> The company accepts the aid on these conditions, and agrees that all freight originating on the line of the railway, or its branches, not specifically routed otherwise by the shipper, shall, when destined for points in Canada, be carried entirely on Canadian territory, or between Canadian inland ports, and that the through-rate on export traffic from the point of origin to the point of destination shall at no time be greater via Canadian ports than via United States ports, and that all such traffic, not specifically routed otherwise by the shipper, shall be carried to Canadian ocean ports.

Now, as a matter of practice, as a matter of every day business, I say I believe there would be no difficulty whatever in the Grand Trunk Railway departing from the spirit of that section. Further than that, Mr. Speaker, I want to point out to the House and to the country that the violation by the Grand Trunk Railway Company of that section is not attended by any punishment under the terms of the contract. Suppose the Grand Trunk systematically violates that provision in the agreement, how are you to recover damages? Is any one to bring an action against the Grand Trunk Railway because some shipper has been induced to route his traffic via Portland instead of via Montreal or Quebec? What is the remedy under this? Section 43 is in the same line, it carries the matter no further:

> The company further agrees that it shall not, in any matter within its power, directly or indirectly advise or encourage the transportation of such freight by routes other than those above provided, but shall in all respects, in good faith, use its utmost endeavours to fulfil the conditions upon which public aid is granted, namely, the development of trade through Canadian channels and Canadian ocean ports.

Very nice, high-sounding phrases, Mr. Speaker, but when you come to practical results, where shall we be under a clause of that kind? If we find our traffic, or nine-tenths of it, going to Portland instead of Montreal or Quebec, what is to be our remedy, and what shall we say to the Grand Trunk, and more especially what shall we do to the Grand Trunk? Why, Portland is in a state of delight already over the fact that it is to be the terminus of a great Canadian transcontinental railway. Here is an extract from a Portland newspaper of not long ago. The right hon. leader of the government indulged in some extracts from the New York 'Sun' and other United States newspapers. I wonder what he will think of this aspect of his transcontinental railway, as viewed by the eyes of the people of Portland:

> Portland people will be gratified to learn that it is practically settled that this city is to be the great terminus of the new Grand Trunk Pacific line across the continent. St. John and Montreal are in a great stew about it, and the Grand Trunk people are doing the best they can do to retain the good-will of their Canadian constituents and at the same time carry out their ideas without any special change. Such is the programme, as admitted by those in the best position to know.
>
> To-day an 'Advertiser' reporter had an interview with a prominent Grand Trunk official, who stipulated that his name should not be used for obvious reasons, as it may get him into trouble with his superior officers. This gentleman freed his mind something like this:
>
> 'All this talk about Montreal and St. John being able to handle the Grand Trunk terminal business all the year round is wearisome. St. John has not the harbour facilities to do it, and the expenditure of $5,000,000 would not make that harbour equal to Portland's. Montreal is nothing but a summer port anyway. Portland has no need to worry, for the Grand Trunk people are going to stay where they can get adequate accommodation.
>
> 'Just notice that President Charles Rivers-Wilson and General Manager Hays, in their replies to the queries of the legislators in Ottawa, did not for a moment admit that they had any intention of leaving Portland. Sir Charles put it point blank when he said that the port of Montreal had proven inadequate to handle the business, and Mr. Hays did the square thing when he said that the Grand Trunk had not expended all the money at Portland, but that the people of Portland had provided the most of it.
>
> 'The fact is that Portland is really going to be the great terminus of the new transcontinental railway line, that will equal in importance any in the world. Portland has the natural facilities to do the business and St. John has not. St. John may get a small share of the traffic, but, mark me, Portland is destined

to be the place where the great bulk of the business will be transacted.'

That is from the Portland, Main 'Advertiser.'

Mr. WADE. Of what date ?

Mr. BORDEN (Halifax). Published in June.

Mr. WADE. They have changed their tune since then.

Mr. BORDEN (Halifax). Have they ? If they have changed their tune perhaps they have done so advisedly and with good reason. Now, I say, Mr. Speaker, it seems to me that this provision in its actual working out will be found illusory and there will be no practical safeguard to the Canadian people, but it will be found in the end that the traffic over this line will go pretty much as it has in the past as far as the Grand Trunk Railway is concerned. The same thing is true of the running powers to be granted to other railways over this railway from Winnipeg to Moncton. It is well known not only amongst railway men but to those who are not railway experts, that the company which has the management and control of the line can regulate the running powers granted to other railways in such a way that there are of no practical advantage to the railway having those running rights. I do not think there is any doubt in the mind of any railway man in regard to that, and therefore I think that the running powers which are proposed to be granted over the line from Moncton to Winnipeg are of really no value. I doubt very much if they will be used by any railway company other than the Grand Trunk Pacific Railway Company, and I believe the Canadian Northern, the only railway which would be likely to use them, will come to the conclusion that no advantage could possibly result to its enterprise from obtaining the running powers which have been referred to by the right hon. gentleman.

The great, the important point which was dealt on by the right hon. gentleman was that the proposal which is brought down to parliament is a proposal that will give to the people of the west an all rail route to the Atlantic, which will be used for the transportation of their products and thus remove all the difficulties of the transportation problem in Canada. The right hon. gentleman did not give to the House one bit of information, one single figure or any data whatever upon which he could base any such conclusion as that. On what can he base it ? What is the position of affairs in the western part of Canada to-day ? There is no congestion north of Lake Superior. The Canadian Pacific Railway operates a line running north to Lake Superior and we are told on the very best authority that it could handle from five to ten times the traffic which passes over that line to-day. The congestion in the west is west of Lake Superior, and it is to that congestion that the efforts of the government should be directed. It is impossible to believe upon what data which have been furnished to the House by the right hon. gentleman that any relief would be given to the west by this line. Look at the position of matters as they are at present. The Canadian Pacific Railway handled something like forty million bushels of grain, I believe, last year. I understand that two and a half million bushels, or about six per cent, went by this line north of Lake Superior. The rest of it was put in elevators at Fort William and was transported partly by rail and partly by water to the Atlantic ports from which it was forwarded to Liverpool. If the Canadian Pacific Railway, having that line north of Lake Superior were able to earn a profit on carrying that wheat by rail and had an opportunity to take forty million bushels of it north of Lake Superior, certainly it would have done so. There can be no doubt about that. It would be to the advantage of the Canadian Pacific Railway to handle the whole of the forty million bushels by the all rail route from Montreal to St. John if it could do so at a profit. Instead of that we find that it handled only two and a half million bushels, or six per cent, by the all rail route and it handled it at a rate which is said to be not a very paying rate. Where will this new line get its traffic ? Is it expected that it will take any portion of the traffic which at present goes to the elevators at Fort William or Port Arthur ? Apparently not, because it will not be in any better position as far as we know to handle the traffic than the Canadian Pacific Railway are able to handle it at the present time ; and as that railway handled only six per cent of this grain by means of the all rail route, what warrant has the right hon. gentleman for supposing that any considerable portion of that traffic will be handled by this new line ? And then, what about the rates ? It is said on very good authority that a railway line 360 miles in length can be constructed from a Georgian bay port to the city of Montreal and that grain can be hauled over that line at a cost of four and one-half cents a bushel including elevator charges. It is also said that the grain can be transported from Fort William or Port Arthur to the Georgian bay port at the paying cost of one and a half cents per bushel, making a total cost from Fort William or Port Arthur of six cents per bushel to the city of Montreal. If you add two cents for carriage to the city of Quebec you have a rate of eight cents to Quebec. Now, the lowest rate that the Canadian Pacific Railway, owning a line north of Lake Superior, has ever fixed upon traffic to the city of Montreal from Fort William or Port Arthur is ten and one-quarter cents, and the average rate, I understand, has been something like twelve cents

a bushel. Under these circumstances how is the new railway going to compete with that six cent rate which can be established, and no doubt will be, between Fort William and Montreal ? On what ground does the right hon. gentleman expect to control this traffic and why did he not deal with this aspect of the question instead of talking about bonding privileges and reading us long, wearisome extracts, containing accounts of the adventures of hunters and trappers two or three hundred years ago ?

Then the hon. gentleman seems to have rather a curious idea as to the cost this enterprise will impose upon the country. He has admitted that we are to give to the Grand Trunk Pacific Railway a bonus of $3,780,000 in respect to the mountain section. I understood him to say that the seven years rental estimated on the basis of three per cent on the cost of construction on the eastern section would amount to about $13,000,000—the Postmaster General shakes his head; what are the figures ?

The POSTMASTER GENERAL. I think that when the premier used the figures $13,000,000 he intended these figures to embrace not only the eastern division but the whole line.

Some hon. MEMBERS. Hear, hear.

Mr. BORDEN (Halifax). Well, the Prime Minister was not very definite in his remarks and the Postmaster General may be right, but I gathered exactly the opposite of what the Postmaster General says. I understood the Prime Minister to say distinctly that the cost to the country in respect to the eastern section would be $13,000,000.

Some hon. MEMBERS. No.

Mr. BORDEN (Halifax). Will my hon. friend the Postmaster General tell me what the cost will be, because we have no information as to the cost of that section.

The POSTMASTER GENERAL. I am not in a position——

Some hon. MEMBERS. Oh, oh.

The POSTMASTER GENERAL. The hon. gentlemen did not hear the rest of my sentence. I am not in a position to discuss the subject to-night.

Some hon. MEMBERS. Oh.

Mr. BORDEN (Halifax). Well it is a rather remarkable thing that we have this project brought down to the House and no man on the treasury benches is able to give us the slightest estimate of the cost of the road. It certainly fully sustains the declaration of the Prime Minister this afternoon when he said, that this project had been entered into without deliberation. Can any hon. gentleman on the treasury benches give us within ten million dollars of the cost of the eastern section ?

Mr. BENNETT. Give them time to think.

Mr. BORDEN (Halifax). Surely some hon. gentleman on the treasury benches can give an estimate within $10,000,000 of it.

Some hon. MEMBERS. Hear, hear.

Mr. BORDEN (Halifax). I must say that this is a rather unusual spectacle—a project brought down ; heralded by the right hon. gentleman in a two and a half hour's speech; tremendous applause from his supporters, and not a minister of the Crown can give us within $10,000,000 of the cost of the eastern section.

Some hon. MEMBERS. Hear, hear.

Mr. BORDEN (Halifax). Well, certainly my right hon. friend put it very mildly when he said that this project had been gone into without deliberation. I should suppose that taking the estimate of the right hon. gentleman this afternoon, that he must conclude that that road would cost at least $65,000,000, if I am right in my supposition that the seven years rental at three per cent amounts to $13,000,000. As three per cent for seven years would amount to 21 per cent, you would simply have to multiply the 13 by 5 and you get $65,000,000 as the estimated cost. If, however, the estimated amount of the rentals is only $10,000,000, then you would have to reduce the cost to about $5,000,000. And yet my right hon. friend alleged this afternoon that the whole cost to this country would be $13,000,000. He winks out of sight the fact that this eastern section is to cost from $50,000,000 to $65,000,000, and I venture to say that in the end it will cost nearer $75,000,000.

Some hon. MEMBERS. Hear hear.

Mr. BORDEN (Halifax). And the right hon. gentleman presented the most delightful and pleasing spectacle to the country of a road built from the Atlantic to the Pacific costing this country only $13,000,000. As a matter of fact, add $50,000,000 or $65,000,000 or perhaps $75,000,000 to that and you get some idea of what this project—brought down without deliberation, brought at the end of the session, brought down in a hurry—means to this country.

Some hon. MEMBERS. Hear, hear.

Mr. BORDEN (Halifax). It is no wonder that the ex-Minister of Railways and Canals (Hon. Mr. Blair) shrunk from it. Some small wonder there may be perhaps that the right hon. gentleman saw fit to ask the ex-Minister (Hon. Mr. Blair) to keep his seat in the government and proclaim himself an adherent to that policy when in his heart he did not believe it to be in the interest of the country.

Some hon. MEMBERS. Hear, hear.

Mr. BORDEN (Halifax). I hope, Mr. Speaker that there is not on the treasury benches any minister who had the same belief as the ex-Minister of Railways and Canals

(Hon. Mr. Blair) but had not the same courage.

Some hon. MEMBERS. Hear, hear.

Mr. BORDEN (Halifax). The right hon. gentleman was good enough to make a comparison between the terms upon which the Canadian Pacific Railway was built and the terms upon which this railway is to be built; but in making that comparison he very ingeniously put out of sight the $50,000,000, or the $65,000,000, or the $75,000,000 which will be expended in constructing this road from Winnipeg to Moncton. As a matter of fact if you assume that this road from Winnipeg to Moncton will cost $65,000,000—and I believe that is a very moderate estimate—you will have nearly $80,000,000 to the cost to this country of this so-called national transcontinental road.

Some hon. MEMBERS. Hear, hear.

Mr. BORDEN (Halifax). And as far as the prairie section of that country is concerned, I will venture to say in the presence of this House and before this country; that it is a fairer proposition, a better business proposition to build a road across the western prairies to-day without any government assistance or guarantee at all, than it was twenty years ago to build it on the terms upon which the Canadian Pacific Railway built it.

The right hon. gentleman retracted some of his own views with regard to the Canadian Pacific Railway and the building of it, and the linking together of Canada by that band of iron; but he could not quite recant, and in the latter part of his speech he was bound to say, that the policy of building the Canadian Pacific Railway was an unwise policy. And yet, Mr. Speaker, if the Canadian Pacific Railway had not been built when it was built, and if the western country of Canada had not been acquired, it is probable that another flag, not the British flag, would float over it to-day.

Some hon. MEMBERS. Hear, hear.

Mr. BORDEN (Halifax). The right hon. gentleman laid great stress amid the plaudits of his supporters upon clause 37 of this agreement. He told us that clause 37 made it absolutely necessary that every dollar that the company spent in materials and supplies should be expended within the limits of Canada. Let us take section 37 and see what it means. It says:

> The company shall purchase all material and supplies required for the construction of the western division and the equipment of the whole of the said line of railway from Canadian producers, when the same are produced in Canada and when such material and supplies can be purchased in desired quantities and of equal quality suitable for the purpose required, and for prices and upon terms equally advantageous with those procurable elsewhere.

Mr. Speaker, you as a lawyer, will appreciate the delightful latitude which is afforded to the Grand Trunk Pacific Company under the provisions of the Bill.

Then, my right hon. friend went into ecstacies over clause 12 of the agreement. There is to be a guarantee of $5,000,000 by the Grand Trunk Railway Company, and that was a most important part of this agreement. Let us read section 12, and we will observe what this guarantee amounts to, and for what purpose it is to be used:

> The company shall, within thirty days after the passing of the Act confirming this agreement and of the Act incorporating the company hereinafter referred to, deposit with the government five million dollars in cash or approved government securities, or partly in cash and partly in such approved securities, at the company's option as security for the construction of the western division and for the first equipment of the whole line of railway, as provided for in this agreement.

Therefore, the company guarantees, by the deposit of $5,000,000, to do something without which its enterprise would be of absolutely no moment at all. In other words, the company guarantees to build a railway as to which it receives a guarantee of $13,000 per mile for one portion of it and $30,000 per mile for the rest; and it deposits with the government $5,000,000 as security that it will use for the construction of the railway the moneys derived from the bonds guaranteed by this government. That is certainly a most remarkable piece of statesmanship, and I am not surprised at the plaudits with which the announcement of this clause was greeted by the right. hon. gentleman's supporters. It is quite evident they were kept as much in ignorance of the real nature of this clause as were the hon. gentlemen on this side of the House.

Now, Mr. Speaker, there are some matters as to which I think the House should have information before very much further progress is made with this measure, which has had the result of driving from the cabinet the Minister of Railways and Canals, the man who among them all had experience in matters of this kind, the man whose policy they have been endorsing during the past seven years, the man whom they have pointed out to the country as an able and efficient administrator ever since he took office, in 1896. When this policy is announced to the House and is before us for discussion, there are certain documents and certain information which ought to be placed on the Table before it is further discussed at any great length. In the first place, I submit to my hon. friends on the treasury benches that all correspondence with regard to it should be brought down, and that we should have placed on the Table all surveys and documents relating to location, cost, and earning power of this proposed railway. My right hon. friend said this afternoon that there were mountains of information about this line. Well, let us have deposited on the Table just a small

portion of that information, and let us understand what the reasons are which have induced the government to adopt this policy. Then, I think we should have all estimates of engineers, and the details and data upon which those estimates are based. We should have all documents showing the character of the construction which is to be adopted—what the gradients will be, and what opportunity there will be of operating the line economically, particularly from Moncton to Winnipeg. We should have an estimate of the cost per mile of the mountain section, the prairie section, and the eastern section. We should have a statement as to each of these sections, showing the population, exclusive, of course, of cities, residing, we will say, within twenty miles of the proposed location of the line. We should have an estimate of the earnings per mile and the operating expenses per mile of each section. We should know what portion of the traffic, if any, now controlled by the Canadian Pacific Railway and the Canadian Northern Railway, is expected to be carried by this railway. We want to know upon what data the government rely in assuming that this railway will give relief to the congested districts west of Lake Superior. I would like to know what the government's views are as to what proportion of the traffic which will originate in the district through which this railway will pass in the west is expected to be carried by an all-rail route, and what proportion is expected to be deposited in elevators at Fort William and Port Arthur, for the purpose of being carried to the seaboard in the way in which the greater part of the traffic is carried at the present time. I assume that the government have investigated and considered all these matters, and are prepared to bring down some information upon them. I would like also to have an estimate of the rates at which this railway is expected to carry traffic from points as far west as Port Arthur and Fort William to St. John and Halifax, because if this road is to relieve the congestion in the west it can only do so by competing with lines already in existence; and the government have surely not embarked in the enterprise without considering what rates can be established and carried out. I would like the government also to place on the Table of the House all information of experts with regard to this line, if such information has been laid before them. I presume that they have acted on such information, because at the beginning of the session they proposed to appoint a transportation commission and to act on its views. They have evidently not acted on the views of that commission, and whatever expert opinions they have acted on should be laid before parliament. I would also like to have, if there be such, all demands and resolutions for the establishment of this line or any portion of it, laid on the Table of the House, in order that we may know whether there has been any popular demand placed before the government for the construction of this line, in whole or in part.

Now, I have had to deal with this question along very general lines. That is not my own fault; it is the fault of the attitude of the government, in not allowing me any means of preparation for this debate tonight. I, therefore, apologize to the House for the very partial and ineffective manner in which I have dealt with this question. This seems to be a project into which, as the right hon. gentleman says himself, he has entered without deliberation, and against the advice of that member of his cabinet who had the greatest experience in these matters. It is an enterprise into which he has entered, if the ex-Minister of Railways (Hon. Mr. Blair) is to be believed, without any surveys or definite information which might place the government in a position to judge of the advisability of building a line which will cost an enormous sum to this country. Let me add that while the right hon. gentleman tells us that no lands whatever are to be granted to this company, nevertheless I find in clause 46 of this agreement the following provision:

> The government shall procure to be granted to the company, in so far as the same are vested in His Majesty in right of the Dominion of Canada, such lands as may be required for the right of way of the western division, and for all stations, station grounds, workshops, buildings, yards and appurtenances required for the construction and working thereof, and shall also procure to be granted to the company, upon such terms as may be agreed upon, in so far as the same are so vested in His Majesty, such lands fronting upon and covered by navigable waters touched by the line of the railway as, in the judgment of the government, may reasonably be required for the use of the company in connection with its operations. The right of the company to obtain such lands without compensation shall cease when the said division is constructed and equipped as required by paragraph 29 hereof.

The language of that section is pretty comprehensive. While it does not give to the company any lands for the purpose of sales, nevertheless it will have the effect of vesting in the company without charge very considerable portions of the government domain in the North-west.

The proposal which the right hon. gentleman has submitted to this House seems to me ill-advised. It seems to me a project which indicates, on the very face of it, that it has been entered into without due deliberation, and having regard to the fact that we are asked to take it up at the conclusion of this session, without any details or information laid on the Table up to the present, and having regard to the further fact that there can be no assurance, except the right hon. gentleman's own suggestion, that it will have the effect of either relieving the con-

gestion in the west or of securing transportation of Canadian traffic through Canadian routes and Canadian ports. I am not inclined to view it with favour and am not surprised that the ex-Minister of Railways and Canals found it necessary to part company with his colleagues on this very policy.

Hon. JOHN HAGGART (South Lanark). I listened, Mr. Speaker, with a good deal of interest to the introduction by the right hon. gentleman who leads the government, of that important measure he has submitted to us. I was with the right hon. gentleman when he pictured the prosperity of our country and the aspirations of the youth of our country, and when he told us that we ought to be independent of any foreign country. But when he unfolded to us the details of this measure, I was astonished at its magnitude and at some of the statements of the right hon. gentleman. The road contemplated in this measure is divided into two sections. One is the section which is built by the government, from Moncton to Winnipeg ; the other is the section from Winnipeg to the Pacific ocean to be built by the Grand Trunk Pacific Railway. In his plea on behalf of the section from Quebec to Moncton, the right hon. gentleman described how the people were anxious to get in the quickest possible time to their destination, and how the Intercolonial Railway, which follows a roundabout route to Moncton, was built for military and not for commercial and practical purposes. But, what he omitted to mention, and what is very important, is the distance to be saved by the new line which he proposes to build from Quebec or Lévis to Moncton. The distance from Lévis to Moncton by the Intercolonial Railway is 489 miles. The shortest distance across through those parishes in Quebec, along by the St. Francis river, by High Falls and by Chipman, over to Moncton, would not be more than fifty or sixty miles less than the present route ?

Mr. HUGHES (Victoria). Fifty miles.

Hon. Mr. HAGGART. Less than fifty miles is the extent to which the distance will be shortened between these two points ; and to achieve that gain, this country is expected to expend—how much ? No road, Mr. Speaker, can be constructed up to the standard of the Grand Trunk Railway through that section of country for less than $30,000 per mile ; or the cost of building this road will amount at least $13,000,000. From the description of the route to be taken by the new line to Moncton, I notice that it goes down north to a point on the road called Chipman. Well, from Chipman to within 33 miles of St. John, there is a railway already constructed. Does the governmen intend to acquire that road ? Is that road to be built for the purpose of giving to the port of St. John a far shorter connection with Lévis than is enjoyed by Halifax ? That road from Chipman to within 33 miles of St. John must be part of the bargain, and the right hon. gentleman should have given us the full details of his scheme ? He should have informed us whether he intends to acquire that piece of road. If the road from Chipman to Norton, a station on the Intercolonial within 33 miles of St. John, is to be utilized as a government road, that will be virtually an abandonment of the Intercolonial Railway, so far as the trade of St. John is concerned, on the whole length of the railway from Lévis to St. John, and it will be an abandonment of the Intercolonial Railway, so far as the Halifax traffic is concerned, of the whole length of railway from Lévis to Moncton. With the experience we have had in connection with the Intercolonial Railway—an expenditure on capital account of nearly $43,000,000, and a loss to the people for the last six years, putting it at a moderate amount, of $2,500,000 per year—we are asked to build a road which will destroy the traffic on the Intercolonial Railway from Quebec to Moncton. And for what purpose ? For the purpose of saving a distance of fifty or sixty miles in the carrying of traffic from the North-west Territories and Manitoba to St. John and Halifax. Did a more insane idea ever take possession of any one ? The ports of the North-west and the ports of Manitoba are at the head of lake Superior, and I believe will in the future be a Hudson bay. Facilities ought to be afforded for the carrying of that produce from the head of Lake Superior to our ports—Montreal, Quebec and Halifax. But the idea of making a condition in the contract with the Grand Trunk Railway that they will carry freight to Halifax or St. John at the same rate as they carry it to Portland ! Does the right hon. gentleman, or does the government, imagine that a bushel of wheat or anything else exported from Manitoba or the North-west will ever go over this line to Portland, Halifax or St. John ? I am with the right hon. gentleman to this extent, that the one thing that the people, and especially the young men, are interested in is the development of this country, and that the necessary steps for that development should be taken immediately. But they should be upon proper lines. The people are anxious, in these growing times, and when there is prosperity, that something should be done by the government for our national development. And nothing can be more important than providing proper transportation facilities. Proper transportation facilities are at the very foundation of our country's commercial success. But is it by building a road from Winnipeg to Quebec that our means of transportation will receive the improvement they need ? The Grand Trunk Railway want a road from Winnipeg to the Pacific ocean ; they want also a road from Winnipeg to Lake Superior, and they may arrange for connection with their North Bay or Montreal system of roads. But it is no

interest to them, it is a drag and a load upon them, to compel them to accept a road from Winnipeg to Quebec and Quebec to Moncton. I am with the right hon. gentleman in any proposal that will help to develop any part or portion of the country. But we are proceeding upon the wrong lines. As the hon. leader of the opposition has said, what knowledge have we as to the country through which this new road is to run between Winnipeg and Quebec? The government say they have possession of the knowledge. They have mountains of information. Why did not the right hon. gentleman give us some of that information? I can tell him something with reference to that country through which he proposes to build this road. As we all know, the granite ridges to the north of the height of land extend, in the province of Quebec, as far as the shore of James bay. It is a country with small spruce trees growing in muskegs, the muskegs separated from one another by granite ridges running at right angles to the proposed road. For fifty miles south of James bay you have a comparatively fertile country. As you go westward the width of this fertile tract increases, and it reaches in some places two hundred and fifty miles from Hudson's bay. I have been assured in that section it is possible to grow grain nearly as well as in Manitoba and the North-west. But does this railway go near that fertile section? No. It will be built—it must be built—in that section north of the height of land reaching to the plateau which borders Hudson's bay and which, at the verge of the plateau, drops to the extent of three or four hundred feet. Between that drop and the height of land, the land is totally unfit for any purpose known to civilization, a land of low scrubs and unfathomable muskegs crossed by granite ridges. The reports are there in the Department of Railways and Canals. There was a survey made before I was minister, from the Ottawa river north of Lake Temiskamingue north of Lake Nipigon, along the English river to Selkirk. It was supposed that an easier line for the construction of the road around Lake Superior could be found than that which was afterwards adopted, and it was surveyed to a certain extent by the government. I remember reading the reports in the Department of Railways and Canals. I think that one party of surveyors went to the east nearly one hundred miles, and one under Mr. Bailey, if I remember well, went westward towards Winnipeg. And the reports were identical with the statements I have made, and showed that the cost of that railway would be greater than it would be to build through the Rocky Mountains. We all know that the road which passes along the shore of Lake Superior and from Lake Superior to the city of Winnipeg cost more per mile than did that portion of road running through the Rocky Mountains. That section of the road, 1,400 miles in length from Quebec to Winnipeg cannot be graded and constructed for less than $30,000 per mile, or $42,000,000. Then add $13,000,000 for the road from Quebec to Moncton; add between $5,000,000 and $6,000,000 for the bridge crossing the St. Lawrence at Quebec. And yet the right hon. gentleman in making the speech introducing the Bill says that all this and also the prairie section of 1,000 miles west of Winnipeg, and the 600 miles through the mountains to Port Simpson will all be built at a cost to the people of this country of the small sum of $12,000,000. Such an absurd statement! It reminds me of the right hon. gentleman (Right Hon. Sir Wilfrid Laurier) long, long ago, when he was Minister of Inland Revenue and introducing a Bill in this House to amend the Inland Revenue Act. I remember the mess he made of the Bill, and I remember well the remarks of his leader the late Alexander Mackenzie whom I knew very intimately at the time. He said: 'why, the fellow nearly defeated the government; he does not know how many ounces there are in a pound.' When the right hon. gentleman appeals to the heart, I am with him. But when he gets into any mathematical question or anything involving mechanics or anything of the nature of a calculation, he is always astray. Why, look at it. In order to build that road from Winnipeg to Quebec at least a year and a half must be occupied in preliminary surveys. It is impossible that it can be constructed under government superintendence, or under the commissioners proposed in the Bill, in less than seven years. The Grand Trunk proposed to build a road from Winnipeg to the coast in five years from 1904. It is a much easier task to build that section of the road than the other. They cannot build it and have it completed in less than eight years and a half from this date. Look at the interest we will have to pay, the interest on half the cost of the road for eight years and a half. Then there are the seven years in which we give them the use of the road free. Then there are the three years during which they are not obliged to pay any interest, if the earnings of the road do not meet the expenses. Then we have to build the Quebec bridge, or pay for it any way after it is built. You cannot buy that for less than $5,500,000. With the money we spend on the Moncton road, it will cost the people of this country $12,000,000.

Now, Sir, if the right hon. gentleman and the House want to know my views on the transportation question, they are quite plain. It is an absurdity to build any such road as that from Quebec to Winnipeg. It will virtually ruin the Intercolonial Railway by duplicating it from Quebec to Moncton. There is no necessity for it at all. Surely the people of this country have carried out in good faith their bargain with the maritime provinces in the expenditures which we have made on the Prince Edward

Island Railway, and the amounts which we require to spend every year on capital account to make up the losses on the Intercolonial Railway. I notice in one of the clauses of the Bill that all the terminals of the Grand Trunk Railway, even after it is constructed, are to be built at the expense of the government. If the permanent improvements go on to the extent that they have lately on the Intercolonial Railway, you can perhaps imagine what the cost of that road will be. I stated some time ago that the management of the Intercolonial Railway for the last six years had killed entirely the idea of government ownership of railways in this country. There is no probability of this parliament acceding to any such thing as a government railway, although in my heart I believe, judging from the experience of other countries, that a government railway can be managed and run as economically as any other railway. My experience upon the Intercolonial Railway was that you could get a service as cheaply and buy supplies cheaper than upon any other railroad in Canada. The people have confidence in the government, and like to sell to the government, and you can get service from your employees cheaper than you can on any company road. It can be managed as efficiently as any company can manage a road. But the money which the people have been called upon to expend on the Intercolonial Railway has, as my hon. friend has said, put the government ownership of railways back for forty years in this country. The people would rather see their money become a total loss than to put it into railways run by the government as the Intercolonial Railway has been done.

Then, what are we to do in Ontario? This scheme completely ignores us. It ignores the city of Montreal, it ignores the city of Toronto. What is the proposition before the government?—because they must have had a proposition, and why do they not state it here? What was the proposition of the Grand Trunk Railway with reference to building a line from Winnipeg to Lake Superior? Any man of sense knows that the western connection would be useless without that. There are 403 miles to be built. There is a connection to North Bay to be built to satisfy the Toronto people and the people of Ontario, and there must be a connection with Montreal in some way or another. Those things must have been considered in council, and what is the policy of the government in reference thereto? Surely they do not intend to build a transcontinental railway that completely ignores that portion of the Dominion that contributes most to the revenues of the country. Are they going to ignore my province altogether? Is there to be no connection with Montreal? Is it to be a road simply for the convenience of the maritime provinces and Quebec, cutting out the province of Ontario altogether? No, they may be insane, but they are not insane enough for that. They have some sort of an understanding, and the people are entitled to know what it is. Then this road goes from Winnipeg to Edmonton, 900 miles.

An hon. MEMBER. It does not say so.

Hon. Mr. HAGGART. The general impression is that the terminus of the road, although it is not mentioned in the Bill, is Port Simpson. The scheme that we have heard talked about is to build from Winnipeg to Edmonton and to Port Simpson. What about paralleling the road which we have at present subsidized to Edmonton, 900 miles? Are we to have two parallel lines running within 30 miles of each other, two main lines from Winnipeg up to Edmonton, and from Edmonton I suppose to the Rocky mountains or to Port Simpson? Is it the policy of the government to tax the people of this country for the purpose of building two parallel lines from Winnipeg to Edmonton? If that is not their purpose, we have a right to know from the government what their purpose is, and where their terminus is to be on the Pacific coast.

Then, what guarantee have we that the parties who build the road from Winnipeg to Port Simpson, and who own the road from Winnipeg to Lake Superior, will ever work that section from Winnipeg to Quebec? There is a deposit of $5,000,000. Does that apply to the whole undertaking? I should judge it did, that is the two divisions, the government section and the other. But, as my hon. friend the leader of the opposition says, although he forgot one feature of it, that $5,000,000 deposited with the government can be paid out on progress estimates, and for the purchase of rolling stock as the undertaking goes along. Now, look at the importance that the government themselves place upon that section of the road from Winnipeg to Moncton. They require as a first equipment of the road that the Grand Trunk Railway should purchase $20,000,000 worth of rolling stock. How is that to be apportioned? $15,000,000 on the section from Winnipeg to Port Simpson, on the longest and hardest part of it to work, and $5,000,000 from Winnipeg to Moncton. The port, as I have said, for the surplus products of Manitoba and the North-west is the head of Lake Superior, or perhaps in the future, Hudson bay. I am glad to see that the government are sending an expedition into Hudson bay, presumably to get more accurate information in reference to the ports, and to the navigation of the Hudson straits. From the information I have, Hudson bay is navigable as long as the St. Lawrence is, and with as little danger to navigation. If that is the case, the surplus products of the North-west and Manitoba, and down as far as St. Paul, and even lower, taking in Kansas and that section of the country,

would go to Liverpool cheaper via Hudson bay than by any other route.

What the government ought to do in reference to the transportation problem is to provide facilities to reach the port. Then they should do what my hon. friend says is easy; they should see that the navigation on the upper lakes is sufficient for the purpose of carrying the products of the west to ports in our country for transhipment. I have no hesitation in saying that so far as the North-west Territories, Manitoba, Ontario, and the greater portion of Quebec are concerned we look to the port of Montreal as the port from which we must ship the produce of this country. Build then, if necessary, as my hon. friend says, lines of railway from Midland or other Georgian bay ports to the port of Montreal. I believe that the Canada Atlantic Railway, the Grand Trunk Railway and the Canadian Pacific Railway, in this section of the country, are bringing the grades down to four-tenth grades, or a little over twenty feet to the mile, which is the standard low grade of the country. When this is accomplished, with plenty of tracks from Midland, or from some other place on on the Georgian bay, to Montreal, with a proper system of port dues, abolishing them altogether if necessary in Montreal, with that the harbour of Montreal improved, and with the St. Lawrence deepened and properly lighted, you will have provided a proper system of transportation, and the system of transportation that the people need. With the expenditure that you are making for this entirely useless line of railway from Winnipeg to Quebec you could furnish these facilities five times over that are necessary for the trade of the country. If this country to the north of us is developed, if minerals are found and if waterpowers are utilized, or if any of its other resources are turned to account, let the country be opened up by colonization lines of railway, but on no account build this road for that purpose. The right hon. gentleman says that the road would be constructed with the lowest possible kind of grades. What does he know of the contour of the country between Winnipeg and Quebec ? It may be impossible from the contour of the country to get the best grades which are necessary for a freight carrying road and which are grades of twenty feet to the mile. This is taking a leap in the dark. I expect, and I think that the Grand Trunk people believe that in the end, when the government come to examine this railway, when they come to know the expenditure that will be entailed, they will give up the project and there will be no such road built as the one proposed from Winnipeg to Quebec. The Grand Trunk Railway Company do not want it, nor do the people of Canada outside of Quebec. I grant that there is a feeling in the maritime provinces that probably the trade of Manitoba and the North-west Territories will go by way of Quebec over the bridge and then by this new line to Halifax and St. John. There is no probability of that. The eastern traffic may go in that way and the goods imported from the old country for distribution in that section of the country may pass over the road. The traffic will be only one way, but as to the heavy produce of the west, I think it is entirely improbable that it will go down over that road. The right hon. gentleman spoke about the ambition of the people of this country to have a road through their own territory. I am with him in that. We have one line through our own territory at present—the Intercolonial Railway. We have a shortening of that line to St. John by way of the Temiscouata branch. It is true that the grades on that road render it almost useless for transportation purposes. Then, there is a line from the terminus of the Temiscouata Railway to St. John. I am with the people of the maritime provinces in the desire to have a road through our own territory, because, when a foreign country commands the exit or entrance of freight to another country the transportation of that country is virtually under the control of the foreign country. I am with the right hon. gentleman in the desire to have our produce shipped through our own country. But, we can do that without going to the expense that he proposes, without making a port the exit from this country which nature never designed it should be. I would like to emphasize the fact that the ocean port of the North-west Territories and Manitoba is the head of Lake Superior and that I believe that in future the port of shipment for the products of that part of the country will be on the Hudson bay. The transportation policy of this country ought to be to improve the navigation on the lakes and through the canals, to increase the transportation facilities by improving the waterways from the head of Lake Superior to the port of Montreal, and then improve the St. Lawrence river so as to render its navigation as safe by night as by day. We could have a string of electric lights from Montreal to Quebec at very little expense. There will be no need of pilots after this has been done. Any man on board a vessel could take it down night or day and the St. Lawrence river could be made as safe and navigation from the port of Quebec as easy as from a port right on the Atlantic where all a vessel has to do is to draw outside the bar to the broad Atlantic ocean. Our country has been blessed with advantages superior to any on the continent of America. After the old French explorers discovered the St. Lawrence they made use of two great highways on the American continent as a means of transportation from the North-west. These great highways were the St. Lawrence and the Mississippi rivers. The St. Lawrence river offers unrivalled facilities for the movement of our commerce. We are blessed by Providence with a coun-

try which depends entirely upon our own exertions and upon the adoption of a wise system of expenditure of public money in providing the means for taking advantage of the facilities which are offered to us. I was glad to see that the right hon. gentleman placed in the speech from the Throne the statement that the government intended to invite experts to look into this transportation question and to recommend to the people a system of transportation upon which large sums of money would be expended if necessary. Instead of that the right hon. gentleman and the government have taken the duty upon themselves. They have solved the whole transportation question for this country and they are going to impose a burden upon the people, because the day will come when there will not be that excess of revenue that there is at the present time, which will cramp the enterprise of this country and which will have the effect of imposing a useless expenditure of public money upon the people, thus retarding the development of the country, and preventing us from doing the best we can to make of this country a nation and the first nation on the North American continent. Our position, our resources and our facilities give us that advantage, and the people of the country are equal to it if properly directed.

The MINISTER OF FINANCE (Hon. W. S. Fielding). I do not rise for the purpose of discussing the merits of the measure even for a single moment. From our point of view the time has not arrived when the members of this House on either side are in a position to satisfactorily and intelligently discuss the matter. The disadvantage of discussing it before there has been time to read and understand the Bill is already apparent. However, Sir, my only point in rising was to say a word with regard to the complaint of my hon. friend the leader of the opposition as to what he regarded as a discourtesy on the part of the Prime Minister. I think in that respect my hon. friend (Mr. Borden) is mistaken. I can assure him in all sincerity, that among the ministry generally, there is not one, and least of all the Prime Minister, who would desire to extend to the hon. gentleman anything but that courtesy to which he is entitled, both because of himself and the position he occupies. On a moment's reflection the hon. gentleman will see that it was not reasonable to suppose that the Prime Minister could take my hon. friend into his confidence and give him an advance copy of a measure which had not only not been submitted to the House generally, but which had not been submitted to a single member of this House outside of the minstry. I think my hon. friend (Mr. Borden) will realize that while there are occasions where a joint and common action is expected between the leaders on both sides to agree upon some action, yet it was too much to expect, that my hon. friend, in a matter which was notoriously going to be one of controversy, could be taken into the confidence of the Prime Minister and shown an advance copy of the Bill.

As to the procedure, the Prime Minister on making his statement on the first reading of the Bill, I venture to submit was not only within his parliamentary rights, but he was taking a course which will commend itself to the judgment of the House and of the country. The Prime Minister might have given notice of some bald resolution which after all would not have presented the matter fully to the House. I am satisfied that the House and country will feel, that after the delay that has occurred, after the repeated questions that have been put to the Prime Minister as to the desirability of affording the House early information on this subject, the Prime Minister did what was right and proper when he availed himself of the very first opportunity, not merely to move some formal resolution, but from his place in the House to make a full and frank and thorough statement covering the whole question. At all events, I desire to give to my hon. friend the leader of the opposition, on the part of the Prime Minister and his colleagues, the assurance that nothing was further from our thoughts than that there should be any discourtesy to him.

Mr. BORDEN (Halifax). I may be permitted to say that so far as I am concerned, I have usually received from the gentlemen who sit on the treasury benches, and particularly from the Prime Minister, every possible courtesy in connection with the business of the House. I do not think, however, that a controversial speech of the character that was made this afternoon, a speech which obviously required an answer on the spot, should be made without having acquainted me, as I might have been acquainted with the details of the measure at least an hour or two before hand. It is the practice as my hon. friend well knows, to furnish to the leader of the opposition a copy in advance of the speech from the Throne. I thought that under the present circumstances, the same course might have been adopted to-day, and therefore I made the remarks which I did make. But I accept with the utmost frankness the assurance of my hon. friend (Hon. Mr. Fielding) that no discourtesy was intended, and I may say that judging from the intercourse which I have had with the Prime Minister, anything of this kind was, so far as he is concerned, unintentional, even if I have a right to complain.

Mr. T. S. SPROULE (East Grey.) I rise to a point of order, Mr. Speaker. I wish to ascertain your ruling as to whether this Bill is in order, introduced as it has been. So far as I have yet heard we have had no intimation given to the House that it has received the assent of the Crown, nor has it been introduced in the usual way, by a resolu-

tion. That very excellent authority on parliamentary procedure, Bourinot, says :

Bills relating to trade or involving expenditure and taxation must be initiated in Committee of the Whole before the House will give leave for their introduction.

This Bill is not introduced by resolution. Bourinot again says at page 596 :

Bills involving public aid or charge—It is the invariable rule that all measures involving a charge upon the people, or any class thereof, should be first considered in a Committee of the Whole.

Rule 88 says :

If any motions be made in the House for any public aid or charge upon the people, the consideration and debate thereof may not be presently entered upon, but shall be adjourned until such future day as the House may think fit to appoint ; and then it shall be referred to a Committee of the Whole House before any resolution or vote of the House do pass thereon.

Bourinot at page 539 says :

Governor General's recommendation—The recommendation of the Crown to any resolution involving a payment out of the Dominion treasury must be formally given by a privy councillor in his place at the very initiation of a proceeding.

All these rules have been either overlooked or neglected. I draw attention to the fact that this Bill is not introduced by a resolution. I draw attention to the fact that Bills which provide for the expenditure of public money or taxation must have the assent of the Crown, and we have not had any intimation that the assent of the Crown has been obtained. I ask your ruling, Mr. Speaker on these points.

The MINISTER OF FINANCE. The right hon. the Prime Minister might have accomplished the same purpose in another way rather than by formerly introducing his Bill. I may say to my hon. friend (Mr. Sproule) that while the rule is undoubtedly as he has read it, the practice of the House is to permit a Bill to be introduced, and again and again the resolution has been afterwards placed on the notice paper. Of course that resolution must be considered before the Bill is proceeded with.

Mr. SPEAKER. I am not ready to decide off-hand the question which has been raised by the hon. member. It is a very important question, and I think the hon. gentleman will agree with me that before I give a decision it would be necessary for me to read over the Bill. At the same time if the hon. gentleman looks at rule 88 he will find:

If any motion be made in the House for any public aid or charge upon the people, the consideration and debate thereof may not be presently entered thereon, but shall be adjourned until such further day as the House may think fit to appoint.

If there is any doubt, perhaps the question could be adjourned with the assurance that the resolution is going on the Order Paper to-day, and then there will be no violation of the rule. However, I shall be glad to look into the question carefully.

Mr. SPROULE. They have not had the assent of the Crown.

The MINISTER OF FINANCE. The resolution is on the Order Paper.

Motion agreed to, and Bill read the first time.

The MINISTER OF FINANCE moved the adjournment of the House.

Mr. BORDEN (Halifax). What will be the order of business to-morrow ?

The MINISTER OF FINANCE. We will take up in supply the estimates of the Minister of Trade and Commerce, who cannot very conveniently attend in the evening, and if we go out of the Committee of Supply, we will take up the resolutions on the iron and steel bounties.

Motion agreed to, and House adjourned at 10.10 p.m.

HOUSE OF COMMONS.

FRIDAY, July 31, 1903.

The SPEAKER took the Chair at Three o'clock.

THIRD READING.

Bill (No. 233) respecting the manufacture of binder twine in Canada.—The Minister of Finance.

SUPPLY.

Ocean and mail service between Great Britain and Canada, $150,000.

Mr. BLAIN. At the last meeting the Minister of Trade and Commerce gave us the quantity of mail matter that went by the Canadian route. Would he be good enough to give us the quantity that goes by the New York route ?

The MINISTER OF TRADE AND COMMERCE (Rt. Hon. Sir Richard Cartwright). Probably about six or seven times as much. That would rather come under the Postmaster General's department.

The POSTMASTER GENERAL (Hon. Sir William Mulock). I could not carry those figures in my memory. Some time ago the question was asked from the other side by, I think, the senior member for West Toronto (Mr. Clarke), and I gave the figures of the quantity of mail that went via New York and via Halifax.

Mr. BLAIN. Is the quantity of mail matter going by the Canadian route increasing or decreasing ?

The MINISTER OF TRADE AND COMMERCE. I think it is about stationary, that is to say, relatively.

Mr. TAYLOR. I think the minister was to bring down a statement showing the amounts we paid to the American boats and to the Canadian boats.

The MINISTER OF TRADE AND COMMERCE. What we pay to the Canadian boats does not come in my department. What is paid to the American boats, I understand, is so much per pound. It is fixed by the Postal Convention.

Mr. TAYLOR. Some one ought to know how much we pay per year for carrying the mails via New York.

The MINISTER OF TRADE AND COMMERCE. If my hon. friend wants that information, I will ask the Postmaster General to make a note of it and bring it down. For what year does the hon. gentleman want the information ?

Mr. TAYLOR. For this year or any year.

The MINISTER OF TRADE AND COMMERCE. The weight of letters despatched via New York was 92,530 pounds. The weight of other matter was 663,000 pounds. About one-seventh part goes by the Canadian route and about seven times as much goes by way of New York.

Mr. BLAIN. Has the mail matter going by way of New York increased or decreased in volume ?

The MINISTER OF TRADE AND COMMERCE. Speaking from recollection, I think they maintain about the same ratio from time to time.

Mr. TAYLOR. The right hon. gentleman has not got the cost ?

The MINISTER OF TRADE AND COMMERCE. No, that is wholly a matter concerning the Post Office Department.

Mr. BLAIN. I think the right hon. minister should give the committee a statement of the different negotiations that were entered into by this government in respect to the fast Atlantic steamship service.

The MINISTER OF TRADE AND COMMERCE. I have already stated what was done.

Mr. BLAIN. The right hon. gentleman has stated what was done with the last contract. I am asking the right hon. gentleman to give the committee a statement of the different negotiations, correspondence, &c., that were engaged in by this government since they came into office in 1896 up to the present time—just briefly ; I do not ask for a detailed statement. I would like the right hon. minister to give us a statement as to the amount of money that has been expended for negotiating the different services that have not matured since they came into office.

The MINISTER OF TRADE AND COMMERCE. I may answer the last question first by saying that I do not think any amount of money has been expended in negotiating for the fast service. The only amount of money that has been brought into question in regard to the matter has been the $50,000 which was deposited by Messrs. Petersen, Tate & Company and afterwards returned, or to be returned by vote of this House. As to the progress of these negotiations it has been briefly this : A couple of propositions were made in 1896 to the late government, but neither of them came within the form of a regular tender. After that Mr. Petersen, as the committee is aware, proposed to give the service required for $750,000, $500,000 to be paid by us and $250,000 by the imperial government. The negotiations were spread over a period of three years, and as hon. gentlemen are aware the Boer war took place and the cost of the construction of shipping went up to such a figure as to render it practically impossible to make any bargain at all. Since that there have been no negotiations except those with which the House is acquainted and which are contained in the papers that were laid on the Table the other day, and having reference to the two tenders submitted by the Messrs. Allan and by another company.

Steam service between Halifax, St. John's, Newfoundland and Liverpool, from July 1, 1903 to June 30, 1904, $20,000.

The MINISTER OF TRADE AND COMMERCE. This is the usual vote which we have been giving for several years for this service. The vessels sail once every 17 days. The present contract is with Furness, Withy & Company.

Steam service between St. John and Glasgow during winter of 1903-4, $7,500.

Mr. CLARKE. What is that for ?

The MINISTER OF TRADE AND COMMERCE. This is for ten round trips during the winter between St. John and Glasgow. This is performed by the Messrs. Donaldson, of Glasgow, represented by the Robert Reford Company, of Montreal. We pay them only $750 a trip and they give a fortnightly service. Representations have been made from the merchants and the people using this service to the effect that this is a growing trade and they are very anxious to obtain a weekly service in place of a fortnightly service during the winter. Probably we will have to submit a further sum in the supplementary estimates for doubling the service, but I am at present only asking the regular vote which has been

given every year, amounting to $7,500 for ten round trips.

Steam service between St. John, Dublin and Belfast during the winter of 1903-4, $7,500.

The MINISTER OF TRADE AND COMMERCE. This is a similar service to the last, and is performed by what is known as the Head line. Of course, they are only paid per trip. If they fail in making the number of trips the price is proportionately reduced.

Mr. TAYLOR. They always earn their money, do they not ?

The MINISTER OF TRADE AND COMMERCE. No, they do not. One year they failed in giving a complete service and the sum was reduced. They are paid simply for the work actually done. The object, of course, is to put ourselves in communication with the important centres of population in England and Ireland.

Mr. SPROULE. Has this any relation to the amount of trade they do ?

The MINISTER OF TRADE AND COMMERCE. Yes.

Mr. WILSON. Why is it necessary to have two or three different companies doing practically the same work ? Why cannot the line that calls at Glasgow, call at Dublin as well ?

The MINISTER OF TRADE AND COMMERCE. I am afraid that would lengthen the service very much. Vessels that go to these places would probably require to remain there two or three days additional on each trip, if they had any considerable amount of cargo to discharge. I do not think it would be possible without very considerably increasing the subsidy to induce them to make calls at all these ports. The hon. gentleman will notice that the sum granted is a very small sum, barely £150 sterling per round trip.

Mr. WILSON. But it is reasonable to suppose that we could get the service performed by one company for less than we now pay to have it performed by two or three.

The MINISTER OF TRADE AND COMMERCE. I am afraid not.

Mr. WILSON. It looks to me as if that would be a reasonable thing.

The MINISTER OF TRADE AND COMMERCE. If it were a large subsidy there might be a good deal of force in the hon. gentleman's remark, but, where the sum granted is so small, I do not think we could hope to increase the service without increasing the vote proportionately, and it would certainly lengthen the voyage very considerably.

Sir RICHARD CARTWRIGHT.

Mr. WILSON. It might, but then you would have double the subsidy to give one company.

The MINISTER OF TRADE AND COMMERCE. I do not think it would suit the merchants as well. These vessels, not being vessels of any great size, cannot maintain a very rapid rate of speed. If you were to add to the length of the present voyage, say a couple of days for Belfast and a couple of days for Dublin each way, it is quite clear they could not perform the number of trips they are now giving, or take anything like the length of time they assert to be necessary in calling at St. John.

Mr. WILSON. How long do they spend in these ports now ?

The MINISTER OF TRADE AND COMMERCE. I understand that as a rule they have to spend in St. John and at the point they reach on the other end, between three and four days. Of course, it would depend a great deal on the amount of cargo they might happen to have. I won't say it has been the case all the time, but I think of late most of those vessels have had pretty full cargoes. Of course, if we were to employ larger and swifter vessels something of the kind may be done, but that would mean very considerable expenditure.

Mr. WILSON. If there are large cargoes why need you give them subsidies ?

The MINISTER OF TRADE AND COMMERCE. I admit that that applies to all these concerns. The truth is that we have been trying to create a trade from these winter ports and the plan we have adopted has been to engage them to go to various ports on the other side of the Atlantic where there were considerable populations likely to consume our products. I think that this money is probably as well spent as any of these subsidy moneys usually are, and we have certainly increased our export trade from St. John during the winter very considerably within the last three or four years.

Mr. SPROULE. Do each of these vessels carry the mail ?

The MINISTER OF TRADE AND COMMERCE. They nominally carry the mail, but you are quite right that you cannot call these mail subsidies in any sense of the term. They are freight subsidies in reality. They are called here 'mail subsidies and steamship subventions,' but I do not pretend that these are of any value at all for mail purposes ; they could not be.

Mr. WILSON. Do you expect them to continue ?

The MINISTER OF TRADE AND COMMERCE. That is for the House to say.

Mr. WILSON. What is your opinion ?

The MINISTER OF TRADE AND COMMERCE. My opinion is that we must be governed by the state of trade and the success in developing our winter port service. That service is very properly regarded by both sides of the House as a matter of very considerable national importance, and all these subsidies are for the purpose of aiding and sustaining it. The hon. gentleman knows very well that ports like Glasgow, Dublin and Belfast are not merely considerable cities, but they are centres of a very large population, and everything that contributes to bring Canadian products into active consumption there is worth a considerable deal to the people of Canada. That is the chief reason which induced us to do this, and the chief reason which, I suppose, will induce the House to continue it.

Mr. SPROULE. Is the amount of trade rapidly increasing at St. John ?

The MINISTER OF TRADE AND COMMERCE. It has increased very considerably. Of course it will greatly depend on the amount of grain that comes forward. Last year they did not send as much as the year before, but that was very largely due to the shortage of the American corn crop which affected all the various lines of transport very materially. As a rule it has been a very rapid increase during the last four years at any rate.

Mr. SPROULE. Has the minister any figures that would give an approximate estimate of the quantity of grain handled at St. John ?

The MINISTER OF TRADE AND COMMERCE. I can obtain that for my hon. friend if he wishes—does he mean by these particular lines or in a general way ?

Mr. SPROULE. I mean from all lines that sail from that port.

The MINISTER OF TRADE AND COMMERCE. Perhaps my hon. friend (Hon. Mr. Blair) would know that.

Hon. Mr. BLAIR. I cannot say what the exact amount of the trade is. I have the figures at home, but I am sorry I have not them here at this moment. The statement made by the Minister of Trade and Commerce is correct that last year it fell off, but the year before it was the largest we have had, and the year before that was larger than the preceding year.

Mr. SPROULE. Of course that information is of no use whatever because it does not indicate whether there was 1,000,000 bushels or 50,0000,00. It is desirable that we should know what advantage is taken of these winter ports especially in the case of grain, for that must have an important bearing on the future as to whether this grain can profitably be shipped by rail to St. John during the winter season.

Mr. WILSON. We should also know what proportion went over the Intercolonial Railway and what proportion went over the Canadian Pacific Railway to St. John. I have been told by people who ought to know that the Canadian Pacific Railway has not been able to carry grain to the seaboard except at a loss and that then it was used for ballasting ships that they had to furnish cargo for. The government ought to be able to tell us whether that is true or not.

The MINISTER OF TRADE AND COMMERCE. The hon. gentleman is correct thus far ; that the Canadian Pacific Railway has probably carried the grain without profit, but I do not think it has carried it at a downright loss.

Mr. WILSON. I have my information from pretty good authority.

The MINISTER OF TRADE AND COMMERCE. They are not very fond of that St. John line and their views may be a little pessimistic. I do not think they carried it at a loss, but they certainly did not make a profit on it.

Mr. WILSON. The reason they carried it was to furnish cargoes for the ships.

The MINISTER OF TRADE AND COMMERCE. They have to run cars to St. John and I suppose they want ballast for their cars as well as for their ships.

Mr. WILSON. There may have been some profit in the shipping part of it, but the information I have is that they made a loss on the railway haul.

The MINISTER OF TRADE AND COMMERCE. I think it is perfectly true they made no profit.

Mr. WILSON. Can we get the quantities carried by each of these railways ?

The MINISTER OF TRADE AND COMMERCE. I have a record of the quantity going forward in the various steamship lines, but I would have to get the other information from the Intercolonial Railway, and also from the Canadian Pacific Railway, which, of course, is not under our control.

Mr. WILSON. Will you get the figures for us ?

The MINISTER OF TRADE AND COMMERCE. Certainly, if you want them. There will be an opportunity on the supplementary estimates.

A line or lines of steamers to run during the summer months between St. John, Halifax and London, and during the winter months between St. John and London direct and Halifax and London direct, $40,000.

Mr. WADE. With regard to this item, I may say that in the past the contract has been given to the Furness-Withy Company, and there have been very serious complaints as to the manner in which

they have performed said contract. During the year 1901, complaints were very loud amongst the apple shippers in the province of Nova Scotia. The contract for the year 1901 was made much more stringent, and it stipulated that the company should run certain steamers of a very high class, but unfortunately during the year they took off two or three of their best ships, and in their place put on others of a much inferior character and a much lower rate of speed, with the consequence of a direct loss to the shippers of many thousands of dollars. These claims are now standing against the company. There have been negotiations, I understand, between the shippers and the company, and there have been constant promises by the company to adjust and pay these claims, but nothing has been concluded. The contract drawn last year was much more stringent in its terms, and the shippers felt confident that they would receive every satisfaction. I am informed, however, that the company did not live up to the terms of that contract—they did not put in the forced ventilation as soon as it was stipulated for, and that the rate of speed was not as great as was contracted for. There was not as much complaint last year, because the apple crop of Nova Scotia was comparatively light. But this year, I am informed, the crop will be the heaviest that has been gathered for many years; the fruit is of most excellent quality; and it will tax the capacity of these steamers to carry it in proper condition. It is important that the fruit should be carried in proper condition, and I am satisfied that it will be if such a contract as was entered into last year is carried out by the company. But the shippers have small confidence in the promises of the company. I am informed by many of them that they would sooner there were no subsidy granted at all than that the service should be performed as in the past. Their argument is that the contract with the Furness-Withy Company prevents other companies competing, and therefore they do not have the open competition they would have if no subsidy were granted. I understand that it has been impossible for the department to obtain tenders from any other concern. This I assume is owing to the smallness of the subsidy, and I would urge that this subsidy be increased in the supplementary estimates to a sufficient extent to induce different steamship companies to compete. I would also urge, in the interest of the shippers, that if the minister is not in a position through his officers to compel the Furness-Withy Company to live up to their contract, no direct contract be given to them. This is a matter of the very greatest importance. Hon. gentlemen can understand that where there is a shipment of 500 or 600 thousand barrels of apples, if there is a loss of even 25 cents per barrel, in consequence of the manner in which the fruit is carried, that means a very serious loss to the country. I would urge on the minister with the utmost earnestness that if the Furness-Withy Company is to be given this contract, it should only be given it on condition that the department shall be in a position to see that the company carry it out. There has been a demand on the part of the shippers, and it does seem to me that it is a reasonable demand, that these people should not be contracted with until they have satisfied these claims for damages, or demonstrated that they are not just claims. It may be said that the parties have the courts open to them, where they can go and assert their claims. But it is difficult for a man who ships one or two thousand barrels of apples, and who meets with the loss of twenty-five or fifty cents a barrel, to go into the courts and fight a powerful steamship company. There are hundreds of these shippers, and I think it would be only fair that this company, before they are given another contract, should make a fair adjustment of these claims. It is unfortunate that the country does not seem to have confidence in the Furness-Withy Company; and, from the information that I have received, I am sure that the Furness-Withy Company merit the estimation in which they are held by the country.

Mr. GOURLEY. I desire to concur in what the hon. member for Annapolis (Mr. Wade) has said. I have received memorials from the Fruit Growers' Association of Annapolis, in which they make a very strong case against this company. It is idle to say that these individual farmers have a remedy against this company. It is irony to tell these people to go into court and fight for $200 or $500 damages, which may be the profit of the whole year's growth, with a company which might lead them from court to court, and compel them to spend their whole profit in a lawsuit, leaving the question at the end in great doubt. I would follow the suggestion of the hon. member for Annapolis so far as to say that I would be perfectly willing to support, as far as I am concerned, a greater subsidy, if that were the remedy to secure proper and safe exportation of the fruit products of the Annapolis valley. Those products are becoming a source of great wealth to the province of Nova Scotia; and all the people of Canada, especially all the people of the maritime provinces, should be most anxious to see that the fruit reaches the market in such a condition as to command the highest prices and give the largest profits to the people engaged in that business. There may be several ways of effecting this. One way would be to establish a large forfeit in the contract, which the company would be compelled to make, in case there was any substantial complaint of non-compliance with the contract; and that money should be held back from the company until every claim in connection with the shipments of

each year was settled, and the matter should be adjusted by some officer of the department. The shipper should not be compelled to go into court and perhaps waste three or four years and the whole value of his shipment in contesting the right with this company. The company could, by appealing from court to court, secure an absolute denial of justice. Consequently, I urge on the minister that every means be taken to secure the fruit-growers of Nova Scotia in the matter of the shipment of these fine fruit products. I have received document after document, and paper after paper, asserting that the greatest injustice has been done to that community. I do not wish to charge this injustice to the Department of Trade and Commerce. I have no doubt that it is due to the greed of the company to make money at the expense of the shippers of Nova Scotia without regard to the consequences. I think that can be cured by the officials of the department in some way making it so costly to this company to do wrong that they will be compelled to do right.

The MINISTER OF TRADE AND COMMERCE. I have taken careful note of what the hon. gentlemen state. The present contract was made with two or three very stringent clauses in it to secure proper ventilation and proper accommodation for the conveyance of apples. If the company fail to carry out these, I will most assurdly cut their subsidy.

Mr. COCHRANE. Has the minister any way by which he can ascertain whether the ventilating fans are kept in motion or not during the crossing of the Atlantic ?

The MINISTER OF TRADE AND COMMERCE. I have on one or two occasions sent down to examine and inspect; but whether the fans are kept in motion on the voyage or not, I cannot say. Except through the intervention of the shippers, I do not see how I can obtain that information. I cannot despatch men on each of these vessels to see that that is attended to.

Mr. COCHRANE. Is that not where the difficulty comes in, that from the compartments not being ventilated, the injury to the fruit takes place ?

Mr. WADE. The difficulty last year was that the company did not put the forced ventilation in as soon as they should have done. The ground of complaint was first the uncertainty of the sailings. They advertised their sailings for certain days. The shippers sent fruit down by train to the point of shipment, and there it had to wait sometimes for several days. Then that the speed of the vessels was not up to the contract. Instead of making the trip from Halifax to London within contract time, they would be two or three days longer, which was most serious for the shippers, especially of apples, it being most desirable that the fruit should only be on board during the shortest possible period.

Mr. BLAIN. I would regard that as a very serious complaint against the hon. minister's department. The hon. member for Annapolis makes a charge against the government——

Mr. WADE. No, I did not make any charge. I said that the contract was not carried out.

Mr. BLAIN. The hon. gentleman should wait until I had finished. He has made the charge against the government that the government entered into a contract with the steamship company to ply between these two points. He has further stated that after that contract was entered into, the company changed the vessels and put on others which were not up to the contract at all.

Mr. WADE. In 1901?

Mr. BLAIN. I would regard that as a most serious charge, and the hon. minister should give us some explanation.

The MINISTER OF TRADE AND COMMERCE. The contract provides penalties for infraction of the contract. In several of these cases, particularly in the case to which reference has been made, a considerable deduction was made from the subsidy that would otherwise be paid, on the score that they had not fully performed their contract. Beyond that or beyond the drastic remedy of dropping this contract altogether, I do not see what we can very well do. These complaints have been investigated. I do not think there was any change in the vessels during the last year. The changes to which the hon. gentleman referred were made a couple of years ago. We have been at pains to insure the introduction of proper apparatus, ventilating and other, for the purpose of carrying these fruits in the best possible condition. That was not put in until somewhat late in the season, and I fined these people for their neglect. If they do not do better this year, I shall either cancel the subsidy altogether or fine them in proportion.

Mr. COCHRANE. Was the money paid over to the farmers who lost?

The MINISTER OF TRADE AND COMMERCE. No, I cannot undertake to act as arbiter between these parties. If the company damage goods by negligence, that is a matter for the courts to investigate. It is quite impossible for any department of the government to sit in judgment on disputes between the shippers and the steamboat owners. We cannot undertake to do that, but we can undertake, if these people fail to perform their contract, either to reduce or stop their subsidy altogether.

Mr. BLAIN. How much was this company fined?

The MINISTER OF TRADE AND COMMERCE. The service, of course, is not complained of during the greater part of the year. During the part of the year in which there was complaint, a fine of $2,500 was inflicted on them.

Mr. GOURLEY. I find on looking at the results that the uncertainty in the time of sailing is one of the chief complaints made by the shipper, and I can understand that to be a very trying difficulty. Surely it is within the power of the hon. minister to notify these people that if the sailings are not punctual—and they ought to be punctual to the hour, much less to the day—a portion of their subsidy shall be deducted. If such a clause does not already exist, it ought to be inserted in the contract.

The MINISTER OF TRADE AND COMMERCE. There is such a clause, and the penalty has been inflicted on several occasions.

Mr. GOURLEY. What is the penalty for not sailing at the appointed time ?

The MINISTER OF TRADE AND COMMERCE. There shall be deducted from the subsidy payable for such a voyage a sum equal to one-tenth of the amount for delays or failure to sail at the dates specified.

Mr. WADE. There can be no fault found with the contract. I do not see how it can be drawn any stronger. What I am concerned about is difficulties between the company and the shippers. We have a company admittedly in fault every year since it has had the service, and it should not be re-contracted with unless it will absolutely carry out its agreement. I would urge on the government the desirability of increasing this amount sufficiently so that other companies will compete, in which the people have confidence.

Mr. CLARKE. What is the value of the fruit shipped by this line?

Mr. WADE. The value will be something like $1,500,000 this coming year. Last year it was very small because the crop was almost a failure and the fruit inferior. It was probably not more than one-third of that amount. This service is not for the fruit trade alone. It runs between St. John, Halifax and London all the year around, and incidentally serves the fruit shippers. It is virtually the only line by which shippers can send their fruit.

Steam communication between St. John, Digby, from July 1, 1903, to June 30, 1904, $12,500.

Mr. CLARKE. Does this carry the mails?

The MINISTER OF TRADE AND COMMERCE. Yes.

Mr. CLARKE. Is it for that the subsidy is granted ?

The MINISTER OF TRADE AND COMMERCE. Largely for the encouragement of communication along this coast between St. John and Digby.

Mr. CLARKE. Do the vessels stop at any place between St. John and Digby ?

The MINISTER OF TRADE AND COMMERCE. It is between Digby and St. John. They have given us rather more trips than the contract called for during the past year. As a matter of course, they carry the mails, but the mail service is a small affair.

Mr. CLARKE. How many trips do they undertake to give for this subsidy ?

The MINISTER OF TRADE AND COMMERCE. During June, July, August and September, a daily round trip ; during October, November, December, March and April, four times a week; during January and February, three times a week. As a matter of fact, they have made the trip much oftener than the contract calls for. The distance from St. John to Digby is forty-five miles.

A line or lines of steamers to run between St. John and Halifax, or either, and the West Indies and South America, $80,700.

Mr. CLARKE. Do these vessels carry mails too ?

The MINISTER OF TRADE AND COMMERCE. This is a service which we subsidize in conjunction with the imperial government, we paying about half.

Mr. CLARKE. What imperial purpose does it serve ?

The MINISTER OF TRADE AND COMMERCE. They subsidize it to encourage West India trade to St. John and Halifax. In point of fact these vessels call at pretty nearly all the West India islands. They start from Halifax or St. John and call first at Bermuda, then down along the line of West India islands, bringing up at Trinidad. I think they call at eleven or twelve places.

Mr. CLARKE. What does the imperial government contribute to this service ?

The MINISTER OF TRADE AND COMMERCE. They contribute £5,000 sterling. We had this service before, but it was only about half the service which we now obtain. When the British government made their contribution, they arranged practically to govern the service.

Mr. BORDEN (Halifax). If I remember rightly, the British government made the contribution at a time when new and improved steamers were put on the route. I think one of the members of the firm who are owners of the steamships, went to England for the purpose, and had an interview with the imperial government. That was some two years ago.

The MINISTER OF TRADE AND COMMERCE. Yes.

Mr. BORDEN (Halifax). It does answer the purpose of promoting trade between the West Indies and the maritime provinces, and the whole of Canada. I understand that the view the imperial government took was that it was desirable to encourage this trade, inasmuch as several of the West India islands have very excellent steamship communication with the United States, particularly with New York, and the trade of these islands was being very largely diverted to the United States. The trade of the maritime provinces with the West India islands has been very great in the past, and is still very considerable. This trade was formerly done by means of small schooners between the ports of Nova Scotia and New Brunswick and those of the West Indies. But the trade cannot be done in this way at present, but must be done by steamships; and the trade is not sufficient to maintain a line of steamers without assistance. The maintenance of this steamship communication has been so highly regarded by the imperial government that, as the hon. minister has said, they have made a contribution towards it.

Steam service between Victoria and San Francisco, $5,000.

The MINISTER OF TRADE AND COMMERCE. This we are bound to carry out under the terms of confederation with British Columbia. It has been largely reduced from time to time.

Mr. BORDEN (Halifax). Is it a small service as well ?

The MINISTER OF TRADE AND COMMERCE. I presume that some mails do go by this route, but since the recent development of railway communication along that coast, I fancy these steamers carry very little mail matter.

Steam communication during the season of 1903, i.e., from the opening to the closing of navigation between the mainland and the Magdalen Islands, $9,000.

The MINISTER OF TRADE AND COMMERCE. This is carried out by the Leslies.

Mr. BORDEN (Halifax). What ports are touched on the mainland ?

The MINISTER OF TRADE AND COMMERCE. The steamers go from Pictou, call at Georgetown and Souris, in Prince Edward Island, Amherst Island, Grand Entry, and Grindstone Island, in the Magdalen Islands. This is a weekly service.

Mr. BORDEN (Halifax). A mail service ?

The MINISTER OF TRADE AND COMMERCE. Yes; it is performed by the steamer 'Amelia.'

Steam communication during the season 1903, i.e., from the opening to the closing of navigation between Prince Edward Island and the mainland, $12,500.

The MINISTER OF TRADE AND COMMERCE. This is a daily service. Georgetown to Pictou, Summerside to Pointe du Chene.

Mr. BORDEN (Halifax). By what steamers ?

The MINISTER OF TRADE AND COMMERCE. The 'Northumberland' and the 'Princess.' This is a five years' contract. Tenders were called for, and this was the only one received.

Steam communication from July 1, 1903, to June 30, 1904, between Grand Manan and the mainland, $5,000.

Mr. BORDEN (Halifax). What is the population of Grand Manan ? Is this a mail service ?

The MINISTER OF TRADE AND COMMERCE. The population is between 2,000 and 3,000. As the hon. gentleman (Mr. Borden, Halifax) knows they are a rather isolated community.

Steam communication during the year 1903, i.e., for not less than fifty-two full round weekly trips between St. John and Halifax, via Yarmouth and other way ports, $10,000.

Mr. BORDEN (Halifax). There is an increase in this vote of $3,000.

The MINISTER OF TRADE AND COMMERCE. Yes; it is proposed to make this a weekly service. It used to be thirty-two trips a year.

Mr. BLAIN. I suppose these vessels carry passengers and freight, as well as the mails ?

The MINISTER OF TRADE AND COMMERCE. Yes.

Mr. BLAIN. Can the minister tell us whether there is an increase of trade and passenger traffic, and whether it looks as if this service would become self-sustaining?

The MINISTER OF TRADE AND COMMERCE. I am rather afraid, judging from past experience, that it will be a good while before it will be self-sustaining. The trade is considerable, but, as reported to me, there does not appear to be any very considerable increase, except, perhaps, in the passenger traffic. The passenger traffic of late has increased a good deal, but not the amount of freight. On the other hand, these vessels have, as a rule, carried pretty good cargoes. They call at a considerable number of ports along that coast.

Mr. COCHRANE. Why is it more necessary to subsidize a vessel running from one point to another on the Atlantic coast than it is from Kingston to Toronto on Lake Ontario ?

The MINISTER OF TRADE AND COMMERCE. I have asked that question myself once or twice. It is to a considerable extent use and wont. I am inclined to think these services were inherited by us at confederation. Prior to confederation, I believe, the Nova Scotia government used

to subsidize most, but not all, the services for which we are now taking votes. Of course, the hon. gentleman is aware that a great many of these sections are very poorly supplied with railway accommodation as compared with other parts of the country. That no doubt is the case why subsidies were originally given, and also why the subsidies are now continued. But I do not know that there is any special reason why one should be subsidized more than the other.

Mr. COCHRANE. I do not think that is a very good reason. If my memory serves me right, the hon. gentleman used to condemn this expenditure in opposition.

The MINISTER OF TRADE AND COMMEFCE. No, I do not think I did.

Mr. COCHRANE. In the position the right hon. gentleman occupies now, if he finds there is an evil he should check it.

The MINISTER OF TRADE AND COMMERCE. I do not think the hon. gentleman will find that I voted to strike it out. Of course, if he thinks it is an improper expenditure, it is quite open to him to move to strike it out.

Mr. COCHRANE. I do not say that. But as the hon. gentleman feels conscientious scruples about continuing it he ought to have backbone enough to strike it out himself.

The MINISTER OF TRADE AND COMMERCE. But I did not vote against the subsidies.

Mr. GOURLEY. I think if the Minister of Trade and Commerce opposed this in opposition, that is the best argument why it should be maintained at the present time. I want to tell the hon. gentleman and the people of Ontario especially, that we have no proper railway accommodation in Nova Scotia. In Nova Scotia we have only 900 miles of railway all told, and our province is two or three hundred years of age ; while in Manitoba, which is only of twenty-five or thirty years' growth, they have nearly 3,000 miles of railway. But the Minister of Trade and Commerce was so dominant in Ontario with a certain section of the people—I am bound to say it was a narrow section, such as the Postmaster General leads to-day——

Mr. CLARKE. The leadership has passed from the Minister of Trade and Commerce.

Mr. GOURLEY. It was at any rate a narrow section of Ontario. But I find that to-day the belief is thoroughly grounded in the people of Ontario that Sir Charles Tupper and the men we sent up here filled that province with railways and spent the money of Canada for the benefit of the maritime provinces, whereas in Ontario they got no public expenditure at all. The fact is we have suffered in the maritime provinces to build up the province of Ontario. But we did it uncomplainingly. We said to ourselves that surely the time would come when the people of Ontario would get generous and offer to give back to the people of Nova Scotia something to repay them for the great self-sacrifice they have made to build up the province of Ontario. But the time seems never to come ; and I want the people of Ontario on both sides of the House to understand that so far as railways are concerned, we are simply at the porch of the temple, we have not entered the temple of railway building in the province of Nova Scotia, and we blame that on the people of Ontario. Sir Charles Tupper, when he was here, endeavoured to give railroads, not only to Ontario and to the west, but to the maritime provinces ; but he found his own party first on his back, then he found the Liberals on his back, and he could not struggle up with both parties on his back. He could not liberalize both parties in the province of Ontario. The result was that in Nova Scotia and the maritime provinces we are without railways to-day. Therefore, we had to resort to these tu'penny ha'penny grants to run steamers around the shores of the province in order to give us communication. But these tu'penny ha'penny grants should be doubled or quadrupled in order to give some practical benefit to the commerce of the maritime provinces.

Steam comunication between a port or ports in Prince Edward Island and a port or ports in Great Britain, $10,000.

Mr. BORDEN (Halifax). What is the position of that communication at the present time ?

The MINISTER OF TRADE AND COMMERCE. At present we are getting two trips, and we had a good deal of difficulty in getting vessels to call there. My hon. friends from Prince Edward Island have represented to me that it would be much more profitable for them if this vote was reduced and they obtained better communication with Nova Scotia. I am disposed to do that, and I only require for the service which is now under contract the sum of $5,000. Therefore, I move to reduce that vote to $5,000. But I may state that the sum so saved I propose to give, in the supplementary estimates, to another service for the benefit of the island.

Mr. LEFURGEY. Is this $10,000 to be appropriated for two trips only ?

The MINISTER OF TRADE AND COMMERCE. I propose to appropriate $5,000 to the two trips that I have contracted for.

Mr. LEFURGEY. Is it the intention of the minister to endeavour to obtain more service if possible ?

The MINISTER OF TRADE AND COMMERCE. If I could have obtained it I

would have retained the vote in its present shape.

Mr. LEFURGEY. The right hon. gentleman has not entirely given up the idea of trying to obtain a better service ?

The MINISTER OF TRADE AND COMMERCE. No ; but for the present year I do not propose to deprive the island of the $5,000 ; I propose to apply it for its benefit in another service, which will be brought down in the supplementary estimates.

Mr. LEFURGEY. Would the right hon. gentleman state what service that will be ?

The MINISTER OF TRADE AND COMMERCE. The service for which the balance will be appropriated will be between Prince Edward Island, Sydney and Newfoundland.

Mr. LEFURGEY. Has the right hon. minister any steamer to undertake that service ?

The MINISTER OF TRADE AND COMMERCE. We are endeavouring to arrange for that at the present moment.

Mr. LEFURGEY. Does the right hon. minister know when the first trip will be made to the old country ?

The MINISTER OF TRADE AND COMMERCE. We expect in October and that trips will also be made in November and December as may be found most convenient for the trade of the island.

Mr. BORDEN (Halifax). In what way is the $5,000 that is to be appropriated for some other service to be expended ?

The MINISTER OF TRADE AND COMMERCE. In providing a service between Prince Edward Island, Sydney and Newfoundland.

Mr. BORDEN (Halifax). Is there any steamer on that route at present or is one to be provided ?

The MINISTER OF TRADE AND COMMERCE. One is to be provided.

Mr. LEFURGEY. What steamer do you propose to get for the service between Prince Edward Island, Sydney and Newfoundland?

The MINISTER OF TRADE AND COMMERCE. We are negotiating for that, but we have not settled the matter yet.

Direct fortnightly steam service between Montreal, Quebec and Manchester, England, during the summer season, and between St. John, Halifax and Manchester during the winter season, $35,000.

Mr. BORDEN (Halifax). What line receives this subsidy ?

The MINISTER OF TRADE AND COMMERCE. The Manchester Line. The ships are known as the Manchester Line with various addenda, such as 'Manchester Liner,' 'Manchester Trader,' 'Manchester Commerce' and names of that kind. The hon. gentleman, I suppose, is aware, that the reason why we have been induced to take this up is that the corporation of Manchester has constructed a ship canal leading directly to the city of Manchester which is the centre, perhaps, of the very largest consuming population in England and we have deemed it expedient to endeavour to promote trade with Manchester. A very considerable trade has been developed, it is increasing and is likely to increase. The subsidy was formerly $38,000 and it has been reduced to $35,000.

Mr. BORDEN (Halifax). Are these boats supplied with cold storage or cooled chambers ?

The MINISTER OF TRADE AND COMMERCE. Most of them are supplied with cold storage, but not all. I may also mention that these people have considerably exceeded their contract. They have given us more voyages than the contract called for. I think the chances are that the trade will not merely develop in a way that will make it a valuable trade for us, but if I am correctly advised the population around Manchester is so densed that within a circuit of between three and four miles there is now stated to be a population of nearly 8,000,000 people, almost all of whom are consumers and not producers of food stuffs; so that, if we can establish a trade proportionate to the consumption we will do very well.

Mr. BORDEN (Halifax). Is there any stipulation in the contract requiring the vessels or any number of them to be supplied with cold storage ?

The MINISTER OF TRADE AND COMMERCE. Most of them are. The corporation of Manchester, who, I understand, are largely concerned in these vessels have, as perhaps the hon. gentleman knows, warehouses especially adapted to the reception of food products in which everything can be placed immediately on arrival. My deputy tells me that he believes that all but two are supplied with the requisite cold storage accommodation.

Direct monthly steam communication between Canada and South Africa, $146,000.

The MINISTER OF TRADE AND COMMERCE. This we had under discussion some few weeks ago, as perhaps hon. gentlemen will remember, and I laid upon the Table the contract with the three firms who proposed to carry this on. Of course, nothing has been paid to them as yet. It depends entirely on the vote of the House.

Mr. HUGHES (Victoria). What ports will be called at ?

The MINISTER OF TRADE AND COMMERCE. Cape Town, Durban and Port Elizabeth.

Mr. HUGHES (Victoria). And East London ?

The MINISTER OF TRADE AND COMMERCE. We have the liberty of requiring them to call at three ports besides Cape Town.

Mr. CLARKE. How many trips have been made already?

The MINISTER OF TRADE AND COMMERCE. They commenced in October and they have made eight or nine trips, I think.

Mr. CLARKE. Have the ships had any difficulty in getting cargoes both ways ?

The MINISTER OF TRADE AND COMMERCE. The chief complaint that has reached me as yet has been not so much on this side as on the other side. I have been in communication with parties in Natal in the endeavour to obtain better accommodation for our ships when they go there. They have complained that they were held over and found a good deal of difficulty and delay in discharging their cargoes. On the whole the cargoes have been pretty good.

Mr. CLARKE. From where ?

The MINISTER OF TRADE AND COMMERCE. From here.

Mr. CLARKE. Do they get a return cargo ?

The MINISTER OF TRADE AND COMMERCE. Not much. There is comparatively little at present to return to us from South Africa. It may improve.

Mr. CLARKE. They come back in ballast ?

The MINISTER OF TRADE AND COMMERCE. We do not interfere with their return voyage. It is their voyage to South Africa that we are concerned in. When they get to South Africa they have to find their way back, but they may go to England, Australia or elsewhere provided a vessel is forthcoming at the requisite time on our side of the ocean.

Mr. CLARKE. What do their cargoes from here consist of ?

The MINISTER OF TRADE AND COMMERCE. We have sent lumber, agricultural implements, and we sent out what the Americans would call a cargo of notions on two or three occasions—furniture and miscellaneous articles of all sorts and descriptions. We have also been sending a good deal of flour and oats.

Mr. CLARKE. How much flour has been sent ?

The MINISTER OF TRADE AND COMMERCE. I am told that on several of their voyages the amount of flour sent was a couple of thousand tons, which is very good if it lasts.

Mr. HUGHES (Victoria). Are the Canadian agents in Africa under the control of the department presided over by the right hon. gentleman?

The MINISTER OF TRADE AND COMMERCE. Yes, if Mr. Jardine is the gentleman referred to.

Mr. HUGHES (Victoria). What does he do ?

The MINISTER OF TRADE AND COMMERCE. His present office is to examine the general condition of the country and to report from time to time, and he has made ten or eleven reports to us——

Mr. HUGHES (Victoria). Reports are easily made.

The MINISTER OF TRADE AND COMMERCE. Yes. He has made these reports pointing out the articles that in his judgment can be most advantageously dealt with from Canada to South Africa. I might add that he has called attention to one feature of the trade which I hope will not need to be called attention to again, and that is the fact that goods forwarded to South Africa on two or three occasions have not been equal to the samples sent.

Mr. CLARKE. What kind of goods?

The MINISTER OF TRADE AND COMMERCE. Articles like lumber. They did not equal the articles that had been ordered, and a good deal of trouble ensued in consequence. I need not say to the House that it is of the first importance, particularly when you are opening up a new trade, that the articles sent should at the very least equal the description. Nothing can do us more harm, in opening up new trade, than to let it be supposed that Canadian merchants will not live up to the samples they send, or will not attend to the orders that are given to them.

Mr. HUGHES (Victoria). It would be advisable that the commercial agents for Canada, both in South Africa and Australia, should not only act as agents for the sale of Canadian goods, but should encourage the people of these countries to trade with us. I found in Australia and New Zealand very little interest in Canadian trade, because there was no market in Canada for any of their produce, which largely consists of hides and wool. If there was some interest on the part of the merchants there who have goods to sell in Canadian trade, it would be a great help to Canada.

The MINISTER OF TRADE AND COMMERCE. Quite true. I have instructed them on that head.

Mr. HUGHES (Victoria). I might point out that in Canada there are two firms that have taken first and second prizes in England for the manufacture of wind pumps.

Mr. CLARKE. What's that?

Mr. HUGHES (Victoria). Wind pumps.

Some hon. MEMBERS. Hear, hear.

Mr. HUGHES (Victoria). I have no doubt that Canada is well able to turn out wind pumps, as wind is at a premium. However, I have no reference to the Department of Agriculture.

The MINISTER OF AGRICULTURE. I am not under fire to-day.

Mr. HUGHES (Victoria). If our agent drew attention to this fact in South Africa, he would find a ready sale for these articles.

Mr. BLAIN. When was this South African subsidy first granted?

The MINISTER OF TRADE AND COMMERCE. The first vote was $5,000 a couple of years ago, but that was only for the purpose of getting a ship to make an experimental voyage, and I think lumber was chiefly carried.

Mr. BLAIN. The vote is now $146,000, and no doubt the Canadian people are anxious to get this trade if possible, but would the minister tell us why he recommended such a large expenditure and what is his anticipation of the future as to trade with South Africa.

The MINISTER OF TRADE AND COMMERCE. This is to be regarded as an experiment, of course, but it was only found possible to obtain a regular monthly steamship service by offering pretty liberal treatment. From Montreal to Cape Town the distance is 6,500 miles, and to Durban it would be 1,000 miles further. We found it almost impossible to get any single company to undertake this service, and the contract is made in a somewhat unusual fashion, the Allans, the Elder-Dempster and the Furness-Withy lines each taking one-third. I placed the contract on the Table of the House a few weeks ago giving full details. How far it will succeed I cannot say as yet, but there is a very considerable industrial development going on in South Africa, particularly in the Transvaal, and the parts adjacent, and it is hoped that we will be able to supply them not merely with a very considerable amount of coarse goods, such as lumber, but food products of various kinds, and possibly furniture and agricultural implements.

Mr. BLAIN. Who is our chief competitor there ?

The MINISTER OF TRADE AND COMMERCE. The United States have a pretty large trade there, and one chief reason for our establishing the service was the complaint made to us by Canadian merchants that their consignments were tossed to one side in New York, and that they had very little satisfaction in trading from that port. The various representatives of commerce throughout the country pressed on us rather strongly to give them a Canadian line, in which case they stated a very considerable trade would be developed. It is too early yet to judge, but I think there is a fair chance that a reasonable trade will be developed; I hope a large trade ultimately. The difficulty is that there is no large return cargo, and we are obliged to allow the various ships, if they cannot obtain cargo for Canada, to go around by England or elsewhere.

Mr. BLAIN. I am informed that so far the expectation of the government has not been realized, and that the trade during the eight months has not been up to expectations.

The MINISTER OF TRADE AND COMMERCE. I cannot exactly say that. I did not expect myself that it could attain full grown proportions in the course of six months. You will have to nourish these infants a little before you can expect very much out of them.

Mr. BLAIN. Is there any complaint from the shippers in respect to the freight rates?

The MINISTER OF TRADE AND COMMERCE. There was some complaints six or seven months ago, but lately I am told that the service has been more satisfactory.

Mr. BLAIN. What was the complaint ?

The MINISTER OF TRADE AND COMMERCE. The complaint was, in part, that the service was irregular, that they did not start on the day appointed, and that they attempted to obtain American trade in preference to Canadian.

Mr. BLAIN. Is not that the complaint at the present moment?

The MINISTER OF TRADE AND COMMERCE. I am told that the present complaint has been made as to the matter of cold storage provided for in the contract; that an undue proportion of that has been assigned to American shippers. I called the attention of the various parties concerned to that, and I think if that has been the case heretofore it will be remedied now.

Mr. BLAIN. I suppose that the anticipation of the government was that there would be some fruit trade developed between South Africa and Canada ?

The MINISTER OF TRADE AND COMMERCE. No, I did not expect that there would be much of that.

Mr. BLAIN. What is the cold storage for to which the hon. minister refers ?

The MINISTER OF TRADE AND COMMERCE. This is for the benefit of Canadian products.

Mr. BLAIN. I understand that there is a very serious complaint from the fruit-growers of Canada that the vessels are not

fitted up in such a way that we might expect a trade between Canada and South Africa to develop.

The MINISTER OF TRADE AND COMMERCE. The storage accommodation provided was, I think, intended, not so much for fruit, although that is, of course, an item that may be included, as for such articles as cheese, meat products and perhaps butter. If the hon. gentleman will look at the contract which has been laid on the Table, he will find the details there set out pretty fully.

Mr. CLARKE. Do we send butter to South Africa ?

The MINISTER OF TRADE AND COMMERCE. We tried to do so, and were fairly successful. We send considerable cheese. Of course, these vessels have to cross the equator, where there is risk of injury to the products. I depend more upon cheese, meat products and canned products than upon such an article as butter. There is a pretty large demand in Johannesburg and all the adjacent regions of the Rand. The American trade with them amounts to a very considerable sum. That we hope to cut into.

Mr. BLAIN. I understand that these vessels carry American products as well as Canadian. Can the hon. gentleman tell us which are carried at the cheaper rate ?

The MINISTER OF TRADE AND COMMERCE. The freight rate from New York is somewhat lower, I think, than ours, but not very much. That is scarcely to be avoided under the circumstances.

Mr. CLARKE. Do these vessels call at New York ?

The MINISTER OF TRADE AND COMMERCE. No, they go straight to Cape Town, and then along the coast.

Mr. CLARKE. Do they come to our ports from New York ?

The MINISTER OF TRADE AND COMMERCE. They are at liberty to go where they please on the return voyage. They may come from New York, but they do not take any freight from New York. They carry Canadian freight from the various ports between Montreal and Halifax.

Mr. KAULBACH. How many trips are made under this contract each year ?

The MINISTER OF TRADE AND COMMERCE. There is one trip per month. We have the right to vary the ports from time to time, as we see fit.

Mr. KAULBACH. On the return voyage, the vessels could go to Buenos Ayres and get wool or tallow and to Rio for coffee.

The MINISTER OF TRADE AND COMMERCE. Yes, they may go where they please. There is at present scarcely any return freight from South Africa.

Mr. BORDEN (Halifax). I observe that there is provision in the contract by which the government can establish a maximum of freight rates. Can the hon. gentleman tell whether or not any such schedule of rates has been established ?

The MINISTER OF TRADE AND COMMERCE. Not as yet. We have been waiting to see how this trade developed before we attempted that.

Mr. BLAIN. Does the hon. minister know whether the United States government pay any subsidy to vessels ?

The MINISTER OF TRADE AND COMMERCE. I think they pay nothing.

Mr. BORDEN (Halifax). I understood the hon. minister to say that there had been some complaint with regard to the allotment to American shippers of too much cold storage accommodation. As a matter of fact, is there any considerable quantity of produce shipped to the United States by means of these lines ?

The MINISTER OF TRADE AND COMMERCE. The hon. gentleman knows that the Canadian Pacific usually picks up a certain amount of American freight and takes it through to St. John. It has been from that quarter chiefly that any American produce has come.

Mr. ROBINSON (West Elgin). Where does the Canadian agent make his headquarters ?

The MINISTER OF TRADE AND COMMERCE. He has been travelling all over South Africa, from Cape Town to Pretoria and Johannesburg, with an excursion into Rhodesia. It is a pretty large country, and his instructions were in the first instance to make himself acquainted with the whole of the South African territory under British rule. He reports regularly to my department, and his reports are communicated to the various boards of trade and commerce.

Mr. ROBINSON (West Elgin). What wages does he get ?

The MINISTER OF TRADE AND COMMERCE. Two thousand dollars a year and his travelling expenses.

Mr. BORDEN (Halifax). The minister speaks of the American traffic over this line as being largely by way of St. John ; that is to say, the shipments from Montreal and Quebec ?

The MINISTER OF TRADE AND COMMERCE. I refer to what is carried in cold storage. I do not think there has been any large amount of the other kinds.

Mr. BORDEN (Halifax). Could the minister give us any idea of what proportion of the carryings consist of United States produce and manufactures, and what proportion of Canadian produce and manufactures ?

The MINISTER OF TRADE AND COMMERCE. With the exception of what is carried in cold storage, the percentage of American goods carried is very small. The great bulk has been Canadian goods, and our instructions, of course, were that Canadian goods should have the preference.

Mr. BORDEN (Halifax). Of course, it might alter our ideas as to the advisability of a very large subsidy to this line if eventually we found that the cargo consisted largely of products or manufactures of the United States. Therefore we should have as definite information on that point as the hon. minister can give us.

The MINISTER OF TRADE AND COMMERCE. My information is that but a small percentage of American goods is carried, except of the goods carried in cold storage, of which there was a good deal carried at one time ; but I understand that now the Canadians are getting the bulk of that.

Mr. CLARKE. If these vessels are paid this subsidy for the purpose of carrying Canadian products, surely they should not be allowed to carry American goods.

The MINISTER OF TRADE AND COMMERCE. I suppose the hon. gentleman would not refuse to carry American goods if there is room, and the shippers pay for carrying them ?

Mr. CLARKE. Then it appears that we are subsidizing this line to enable American manufacturers to compete with ours.

The MINISTER OF TRADE AND COMMERCE. No, on the contrary, supposing that these vessels carried 3,000 or 4,000 tons Canadian goods and were able also to carry 1,000 or 2,000 tons of American goods to fill up with, for which they would be paid, that would enable them to carry Canadian goods relatively cheaper.

Mr. CLARKE. But the American government do not have to pay for that privilege.

The MINISTER OF TRADE AND COMMERCE. If we have enough Canadian goods to fill the vessels, the Americans will send none. If there is a deficiency of Canadian goods, the vessels will take American goods. I do not think it would be very good policy to refuse the American goods when we have not enough of our own.

Mr. CLARKE. That may be a matter of opinion. It is news to me that these vessels were permitted to carry American freight.

The MINISTER OF TRADE AND COMMERCE. I never knew of a case in which a clause was put in a contract forbidding the carrying of freight from any port, though preference might be given to Canadian freight.

Mr. CLARKE. We are paying $146,000 for this service to South Africa and it is carrying American freight as well as our own.

The MINISTER OF TRADE AND COMMERCE. It may carry some, but the great bulk is Canadian.

Mr. CLARKE. I do not know whether our boards of trade are aware of that fact.

The MINISTER OF TRADE AND COMMERCE. I should say that if we desire to make the best of our routes, particularly the St. Lawrence route, so far from discouraging American goods going by them, I should be glad to see millions of tons of American produce coming down the St. Lawrence and going in our steamships to other parts of the world. These goods will find their way across anyhow, and we may as well have the benefit of the trade.

Mr. HENDERSON. Have Canadians got any better rates by reason of the space being filled up with American products than if American products were not taken ?

The MINISTER OF TRADE AND COMMERCE. I think they would. If a vessel has accommodation for 5,000 tons and can only got 3,000 tons of Canadian freight, the chances are that the Canadian producer would get better rates if the other 2,000 tons were made up from any other quarter. You will have to pay this service what it costs to take the vessels from one side to the other.

Mr. HENDERSON. The only point is that we are subsidizing vessels to carry the products of a foreign competitor as well as our own.

The MINISTER OF TRADE AND COMMERCE. The great bulk of the freight which we do send is our own, and I do not see that we will gain anything by prohibiting other goods.

Mr. CLARKE. Can the hon. gentleman inform us what proportion of the freight is Canadian and what American ?

The MINISTER OF TRADE AND COMMERCE. I doubt very much if ten per cent is American.

Mr. CLARKE. What is the average tonnage of these ships ?

The MINISTER OF TRADE AND COMMERCE. About 5,000 or 6,000.

Mr. CLARKE. I understood that the American part of the cargo consists of goods that have gone in cold storage ?

The MINISTER OF TRADE AND COMMERCE. Some portion of it.

Mr. CLARKE. That would be food products ?

The MINISTER OF TRADE AND COMMERCE. Yes, of course we ourselves are sending some by New York.

Mr. CLARKE. Where does this fruit come from ?

The MINISTER OF TRADE AND COMMERCE. It is supplied us by the railway systems chiefly. Some come by the Grand Trunk Railway and some by the Canadian Pacific Railway.

Mr. CLARKE. Where do we get our supply of American freight ?

The MINISTER OF TRADE AND COMMERCE. The only trade we get is what comes across our lines of railway, the Grand Trunk Railway and the Canadian Pacific Railway.

Mr. BLAIN. I understand that there are three companies, each getting a portion of this $146,000. Did any of the vessels call at Canadian ports before the government entered into this contract ?

The MINISTER OF TRADE AND COMMERCE. Of course, the Allan Line did.

Mr. BLAIN. Did the others ?

The MINISTER OF TRADE AND COMMERCE. Also the Elder-Dempster called at Canadian ports, but they did not go to South Africa.

Mr. BLAIN. Were any vessels put on after this contract was entered into ?

The MINISTER OF TRADE AND COMMERCE. New vessels were put on certainly by the Elder-Dempster Line. The Furness-Withy I am not sure of. The Allan's have a large steamship fleet, and they relegated some of their vessels to this South African service. Several vessels formerly employed on other routes were put into the South African service.

Mr. BLAIN. Has the hon. gentleman any means of ascertaining what proportion of the cargo comes from the United States ?

The MINISTER OF TRADE AND COMMERCE. That is somewhat difficult, because we receive the goods from the railway companies and they do not discriminate between the two very carefully. We are obliged to approximate, but I think I am right in stating that the percentage is but small.

Mr. CLARKE. I should like if possible to have definite information on that point.

The MINISTER OF TRADE AND COMMERCE. I will try. It is somewhat difficult to get minute information. I can tell the hon. gentleman generally that the great bulk of the cargoes has been supplied by Canada.

Mr. CLARKE. Where did the hon. gentleman get that information ?

The MINISTER OF TRADE AND COMMERCE. From the steamship companies and customs.

Mr. CLARKE. Would it be unreasonable to inquire from the steamship companies what are the exact quantities that come from the United States ?

The MINISTER OF TRADE AND COMMERCE. Certainly.

Steam communication during the season of 1903, i.e., from the opening to the closing of navigation, between Gaspé basin and Dalhousie or Campbellton, $12,500.

Mr. BORDEN (Halifax). Is any change being made in the service ?

The MINISTER OF TRADE AND COMMERCE. This used to be performed by the steamer 'Admiral'. It is now being performed by a screw steamer of greater draught. But there has been some difficulty about getting into various harbours.

Mr. MARCIL (Bonaventure). Has the contract been signed ?

The MINISTER OF TRADE AND COMMERCE. No.

Mr. MARCIL (Bonaventure). I cannot allow this item to pass, Mr. Chairman, without thanking the Minister of Trade and Commerce for the trouble he has gone to during the last two or three years in trying to improve this service. I might also mention the right hon. the Prime Minister in this connection. The hon. member for Gaspé (Mr. Lemieux) and myself have been to see the right hon. gentlemen often in the last three years to try to get a more satisfactory service than has been given in the past. This service is from Dalhousie to Gaspé Basin, a distance of 160 miles, along the whole county of Bonaventure and Gaspé. The county of Gaspé being entirely without railways, and Bonaventure the same for nearly one-third of the distance, great importance is attached to this steamship service. The old steamer 'Admiral' performed this service for twenty-five or thirty years. But, though a good boat in her time, the 'Admiral' is somewhat out of date. She was formerly the property of General Grant as far back as 1864. She is a paddle-wheel steamer, and, for that reason, not fitted for the route. For the last five or six years the people have insisted on a change and on a more modern steamer being provided. The Prime Minister and the Minister of Trade and Commerce saw the reasonableness of the request and invited Mr. Connolly, who has the contract under the name of the North Atlantic Transportation Company, to secure a better and a more modern boat, and one propelled with a screw, so that she could start earlier in the spring and keep the service up later in the fall, for the service in the Baie des Chaleur can easily be kept up for at least ten months in the year and a specially constructed vessel could ply along that coast for almost twelve months in the year. Paspebiac and other ports are open for the whole twelve months. Mr. Connolly

consented last year, at the request of the government, to remove the 'Admiral' and replace her with a better boat. He went to England and secured a freight boat which he named the 'Restigouche.' This boat has been performing the service since the spring without a contract with the government. And I must say, the letters that I receive from my constituents are strongly to the effect that the 'Restigouche' is altogether unsuitable for the service. She is a good freight boat, but not suitable for passenger service. And, in a country where there are no railways, the question of passenger accommodation on the steamboat is a very important one. There were very few cabins on the 'Restigouche,' though a certain number have been added since she was put on this route. She is now performing the service in a more or less satisfactory manner without a contract; but, I presume that at the end of the season Mr. Connolly will come and ask the government to pay him for the number of trips he has made. There is published at Campbellton, New Brunswick, from which it is proposed to run this service, a newspaper called 'Events', which is a non-political paper, and I believe, fair in these matters. It speaks of this steamer service, which, it should be remembered, is not only for the people of that locality, but for the large number of tourists who visit this section in summer. The editor of this paper went on one of the trips of the 'Restigouche,' and he has given his impression in an article of two columns and a half in that newspaper. Of course, I have no intention of reading that article, but I may be allowed to read extracts in order to convince the right hon. Minister of Trade and Commerce of the necessity that exists for a change in this service. In a portion of his article the editor points out the requirements of a boat for that particular service:

> What are the requirements for a boat for the Bay Chaleur?
> Not too commodious, but staunch.
> Quick in getting under speed.
> Very responsive to her wheel.
> Not drawing a great deal of water.
> Good speed out of port and prepared for a little ice in a late season.
> The 'Restigouche' is too long, while proportionately narrow, practically doesn't make a wharf at all, naturally slow in getting under speed, draws too much water, being a single screw boat is helpless to back water, and except under speed her helm is not of service.
> In short as to her present requirements she is out of her element
> If she were here to make a through trip, Dalhousie to Gaspé for handling freight and accommodating passengers, with a little further care for those on board she would give good service, but that is not her work and far from it.

When the boat leaves Dalhousie at two o'clock in the morning, she has twenty-two or twenty-three stops to make before reaching Gaspé at ten or eleven o'clock at night. Being a coasting steamer, she is expected to go as near as possible to the shore. But a boat drawing sixteen feet of water cannot go near the shore and people have to go out in small boats and wait, it may be for two or three hours, for the boat to come along One of the stops is New Carlisle; but the first trip made by the 'Restigouche' she passed by the shiretown of Bonaventure without stopping at all, to the great disappointment of the people. She had through freight for Gaspé Basin, and did not stop. The editor of 'Events' describes her efforts to stop at Carleton, which is a well known summer resort. Where there is a splendid wharf with fourteen feet of water at high water:

> Our first stop was Carleton, where in an effort to come to the wharf, it was sadly missed and the 'Restigouche' found herself getting into the beach sand in her strugglings to keep to her element. Reversing her screw (and those who purported to know said that except when dead still it is not permissible at all) the whole boat shook from brow to stern, but she finally got back and a second effort brought her up angling broadside on the narrow end of the wharf. We need not here enumerate the sailors' efforts but suffice to say almost two hours were required to secure her to the posts.

It will easily be seen that a boat of that kind is not suitable for this service. What is required is a boat drawing not more than ten feet of water, or twelve feet at the outside; a screw steamer that will break through the thin ice in Dalhousie and Gaspé Basin, in the month of April and keep up the service to the 1st of January. She should have proper passenger accommodation, and also be able to handle freight, because considerable freight is carried on that line. I have said these words in justice to my constituents, and I know that if the hon. member for Gaspé were in the House at the present time—he had to leave for Montreal this afternoon—he would have endorsed every word I say. I hope the right hon. minister will take steps which will result in an improved service next year. If calling for tenders publicly is the only protection we can have, I hope they will be called for early during the present season. It should be stipulated that this navigation should be kept up as long as possible, not merely at Dalhousie, because that is a landlocked basin where ice forms early in November, but be kept up for ten months in the year, where it can be easily kept up, in the Baie des Chaleurs. That is all I have to say. I once more thank the Minister of Trade and Commerce for the trouble he has gone to to secure us a good service, and I would ask him to excuse me for the trouble I have felt it my duty to put him to. The peculiar situation of these counties requires special attention to this steamship service.

The MINISTER OF TRADE AND COMMERCE. The 'Restigouche' has not given

as good results as we hoped to see. I have made careful note of the remarks of the hon. gentleman (Mr. Marcil, Bonaventure), and will try to do all possible to accommodate the people of the Gaspé peninsula.

Steam service during the year 1903, between St. Stephen, New Brunswick, St. Croix, river points, Deer Island, Campobello and the inner islands, Passamaquoddy bay and L'Etete or Back bay, $2,000.

The MINISTER OF TRADE AND COMMERCE. This is done by a steamboat company to Campobello.

Mr. GANONG. The only objection is that this vote is at least $1,000 less than what is needed to give the service we should have.

The MINISTER OF TRADE AND COMMERCE. My hon. friend will find in the supplementary estimates something more for the purpose of carrying out that service.

Administration of the Chinese Administration Act, including remuneration to trade and commerce and customs officers, $5,000.

Mr. TAYLOR. There is an increase.

The MINISTER OF TRADE AND COMMERCE. We have had a good many more immigrants and a good deal more is received from them. The number of Chinese immigrants during the year has increased from 2,544 to 3,587; and the revenue has increased from $178,000 to $364,000. We are getting now about $500,000 out of the Chinese. I suppose when the present statute comes into force that will be stopped.

Mr. BORDEN (Halifax). By what means is the Immigration Act administered?

The MINISTER OF TRADE AND COMMERCE. Under the supervision of the controller of Chinese immigration, but we chiefly employ customs officials and give them a certain allowance to look after these immigrants and to collect the poll-tax. The tax is chiefly collected at Vancouver or Victoria.

Mr. BORDEN (Halifax). The amount received for the past year was how much?

The MINISTER OF TRADE AND COMMERCE. $364,000. For the present year the amount is estimated to be $526,000. One-half goes to us and one-half to the British Columbia government.

Mr. BLAIN. What is the increased tax?

The MINISTER OF TRADE AND COMMERCE. That does not come into force till the 1st of January next. Of course the increased number is probably due to anticipation on the part of these people.

Mr. BLAIN. How many are in Canada at the present time, giving the number by provinces if it is convenient?

The MINISTER OF TRADE AND COMMERCE. I am afraid I will have to refer the hon. gentleman to the census for the exact numbers. But about 20,000 are supposed to be in Canada now, the great bulk in British Columbia.

Mr. BLAIN. How many have come in since notice of the increased tax has been given?

The MINISTER OF TRADE AND COMMERCE. The number reported to have come in is 3,587.

Canada's proportion of expenditure in connection with International Customs Tariff Bureau, $600.

The MINISTER OF TRADE AND COMMERCE. This is a small charge that we pay to the customs bureau in Bruxelles.

Mr. BORDEN (Halifax). What does it do?

The MINISTER OF TRADE AND COMMERCE. It is supposed to furnish us with information as to the changes occurring from time to time in the tariffs of the various countries in Europe and elsewhere. It is a bureau of information. We subscribe for the purpose of receiving early notice of the changes.

Mr. BLAIN. Do we get an annual report?

The MINISTER OF TRADE AND COMMERCE. Yes, we get reports much more frequently than annually. We get the changes in the tariffs whenever any are made by the respective governments connected with this.

Mr. BLAIN. Are they published in the blue-books?

The MINISTER OF TRADE AND COMMERCE. Yes.

Commercial agencies, improving expenses in connection with negotiation of treaties or in extension of commercial relations, $40,000.

The MINISTER OF TRADE AND COMMERCE. This is the same as heretofore. There have been four officers appointed since last year—one, Mr. Poindron, in Paris; another, Mr. Jardine, in South Africa; another, Mr. Ross, in Melbourne, Australia, and another, Mr. Ball, in Birmingham.

Mr. BORDEN (Halifax). How many commercial agencies have we altogether?

The MINISTER OF TRADE AND COMMERCE. Eleven.

Mr. BORDEN (Halifax). In what places are they established?

The MINISTER OF TRADE AND COMMERCE. There is Mr. Larke at Sydney, Mr. Ross at Melbourne, Mr. Jardine in South Africa, Mr. Ball at Birmingham, Mr. Poindron in Paris, Mr. Burke at Kingston, Jamaica, Mr. Bryson at Antigua, Mr. Horsford at St. Kitts, Mr. Tripp at Trinidad and Tobago, and Mr. Sontum at Christiana, Norway.

Mr. BORDEN (Halifax). Would the right hon. gentleman give us some idea as to the service to the country which these commercial agents render ?

The MINISTER OF TRADE AND COMMERCE. The minor ones, as the hon. gentleman will see from the salaries fixed which are very small, report from time to time whenever they see any chance of trade and they keep us informed as to what trade is going on with Canada in their particular districts. The ones who receive larger salaries, such as Messrs. Larke, Ross, Jardine, Ball and Poindron, are expected to traverse the country more or less in which they reside, to report to us as a rule monthly, or oftener when required, and generally to advise us in what possible direction the trade of Canada can be developed. Of course, most of these gentlemen have been appointed very recently. Mr. Larke is the only old appointment. He has been in New South Wales for a considerable number of years.

Mr. BLAIN. Have there been any new appointments during the present year ?

The MINISTER OF TRADE AND COMMERCE. Yes, I gave them. Mr. Ross was appointed at Melbourne, Mr. Jardine at Cape Town, Mr. Ball at Birmingham and Mr. Poindron at Paris.

Mr. BORDEN (Halifax). Would the right hon. gentleman give us his opinion as to the practical results which they get from this expenditure ? Does he regard this expenditure as well justified ?

The MINISTER OF TRADE AND COMMERCE. Well, most of these gentlemen have just been appointed. Mr. Ross has only been appointed for six months, Mr. Jardine for about a year, Mr. Ball for two or three months, and Mr. Poindron for six or eight months. How far these gentlemen will succeed in developing trade and commerce I can hardly say as yet. They all appear to be very zealous in calling the attention of the communities in which they reside to the articles that Canada can produce and in making suggestions as far as they can to Canadian manufacturers and merchants as to what classes of articles are best adapted for the markets, in what way they should be prepared and generally how trade can be increased. I am in hopes that they will justify the expenditure of the sum which we are now asking for them, but in most cases the appointments are too recent to say how much or how little they may accomplish. Mr. Larke's reports which have been received for a period of six or seven years are very carefully prepared and I think he has done his utmost to promote trade with Australasia. This trade has shown a very considerable development within the last few years and I have no doubt Mr. Larke has contributed considerably to it. The other gentlemen, I think, will assist more or less in diffusing information, but it will rest, of course, very largely with the manufacturers and merchants themselves who may choose to take advantage of it. These officers discharge to a very great extent the functions which are discharged by the consular agents appointed by European countries under somewhat similar circumstances. You may regard them as Canadian consular agents.

Bounties on iron and steel and on the refining of lead. To cover expenditure in connection with the administration of the Acts, $5,000.

The MINISTER OF TRADE AND COMMERCE. Most of this will be refunded by the parties to whom these bounties are granted. We are obliged, of course, to check the products and will be obliged to increase considerably our vigilance particularly in the case of lead bounties.

Mr. BORDEN (Halifax). There is an increase of $2,500.

The MINISTER OF TRADE AND COMMERCE. Yes, the hon. gentleman is aware that we are increasing the bounties on iron and steel and lead and probably there will be a considerable additional output in both of these cases.

Mr. BORDEN (Halifax). I do not quite see, although the hon. gentleman seems to imagine I should, why an increase in the bounties would increase the expenditure.

The MINISTER OF TRADE AND COMMERCE. It will increase the output and consequently will increase the amount of work that will have to be done, and moreover I suspect that the justification for giving the bounty is that a number of lead mines will come into operation which are practically idle now.

Mr. BORDEN (Halifax). If it covers lead also, I admit there is force in the right hon. gentleman's observation.

The MINISTER OF TRADE AND COMMERCE. It covers lead. We propose to make these parties pay the expense of inspecting them and seeing that they earn the bounty in conformity with the regulations.

Inspection of staples—chief inspectors, inspectors, deputy inspectors and other employees under the general inspection of the Manitoba Grain Acts, $48,000.

The MINISTER OF TRADE AND COMMERCE. These officers were in former times paid out of the Manitoba grain fund and they were paid by fees. We have deemed it better that these officers should receive a fixed salary, and that the fees should go into the consolidated revenue fund. We received from the fees collected up to June 30 of the present year $76,900, and the total expenses have been $65,000.

Inspection of binder twine, $2,500.

Mr. TAYLOR. Will the minister explain why he appointed an inspector of binder twine ?

The MINISTER OF TRADE AND COMMERCE. Various complaints have been made to us by farmers and others that the binder twine was not up to the requirements, and we thought it expedient to make sure that the farmers' interests were duly protected, and we appointed an inspector at a salary of $1,200.

Mr. TAYLOR. How can an inspector inspect a lot of binder twine ?

The MINISTER OF TRADE AND COMMERCE. Probably in the same way as you would inspect barrels of apples, by taking samples and seeing that they correspond with the requirements of the law.

Mr. TAYLOR. How will he do it—by taking samples ?

The MINISTER OF TRADE AND COMMERCE. Each parcel of binder twine is supposed to contain a certain number of yards and, I think, a certain weight, and he can inspect a number of these parcels in the factories, and if he finds that on the average they are correct, he would be justified in assuming that the remainder are good. If he found there was a deficiency in any considerable number of these he would be justified in so reporting, and have the parties fined. There is a statute providing penalties in the event of binder twine being deficient in quantity or quality.

Mr. HENDERSON. I do not think it applies to the quality, but only to the quantity. The statute provides that there must be a tag on each ball showing the number of feet per pound, and I apprehend that this inspector's duties would be to see that it contained the proper length.

The MINISTER OF TRADE AND COMMERCE. He will see that the statute is complied with.

Mr. HENDERSON. Will that apply to American twine as well as Canadian?

The MINISTER OF TRADE AND COMMERCE. My instructions to him were to see that the American twine came up to the standard represented.

Mr. HENDERSON. The importer is liable if the statute is not complied with.

Mr. ROBINSON (Elgin). Has the inspector been inspecting binder twine this season ?

The MINISTER OF TRADE AND COMMERCE. Yes.

Mr. ROBINSON (Elgin). Has he reported to you ?

The MINISTER OF TRADE AND COMMERCE. Yes.

Mr. ROBINSON (Elgin). Did he find any delinquents ?

The MINISTER OF TRADE AND COMMERCE. He reported to me that as a rule the results have been satisfactory. I think they are allowed a deficiency of five per cent, but if it is more than five per cent, they are liable to be fined. His report is that the majority of the manufacturers have complied with the law.

Mr. TAYLOR. The minister might just as well admit that this was done for the purpose of giving a job to Mr. Joseph Haycock, who was the leading Patron element in helping the Liberals in the elections of 1896, and who deserved something at their hands. Mr. Haycock had to be provided for, and so they appointed him inspector of binder twine, something that there is no more use for than there is for appointing an inspector of mosquitoes. If he wants to inspect a ball of twine he has to unravel it, and that spoils the ball and the government will have to pay for it. That is about all Mr. Haycock has to do. The farmers of this country are shrewd and sharp enough to inspect their own twine when they are buying it.

Mr. COCHRANE. It is just a job.

The POSTMASTER GENERAL. We would not do such a thing.

Mr. BLAIN. How did you manage to get along for several years without this inspector ?

The MINISTER OF TRADE AND COMMERCE. Complaints were made to the department that the farmers' interests were neglected.

Mr. BLAIN. I suppose there is some correspondence with respect to this appointment ?

The MINISTER OF TRADE AND COMMERCE. I don't think there is any correspondence.

Mr. BLAIN. When was the statute passed providing for inspection of binder twine?

The MINISTER OF TRADE AND COMMERCE. I am not quite certain, but it was prior to the inspection being assigned to the Department of Trade and Commerce.

Mr. BLAIN. And since it was passed the binder twine had been manufactured in the penitentinary without any inspection at all. Has there been any general complaint with respect to the quality of the twine manufactured ?

The MINISTER OF TRADE AND COMMERCE. As to the penitentiary, I cannot say, but there have been complaints that the balls of twine were not up to the standard prescribed by the statute.

Mr. BLAIN. What are the inspector's duties ?

The MINISTER OF TRADE AND COMMERCE. To go to the several factories at which twine is manufactured, and also to inspect from time to time the larger wholesale and retail establishments in which twine is sold. If he discovers any defalcation, he has to report and endeavour to have the party fined.

Mr. BLAIN. Seventy-five per cent of the twine now consumed in Canada is manufactured in the United States. Has the inspector anything to do with that twine?

The MINISTER OF TRADE AND COMMERCE. His instructions are to ascertain whether the twine sold conforms with the provisions of the statute.

Mr. BLAIN. There was a time in the history of Canada when a large proportion of the twine consumed in Canada was manufactured in this country, but at the present time, since the free trade policy adopted by my hon. friend, 75 per cent of the twine used in Canada has been manufactured in the United States.

The MINISTER OF TRADE AND COMMERCE. I am not prepared to say what the proportion is.

Mr. BLAIN. That statement was made in the House, and I think it is within the mark. What I do not understand is that when there was a very large quantity of twine manufactured in Canada the government did not see fit to appoint an inspector, but now, when a much smaller quantity is manufactured, they think it necessary to have an inspector.

Mr. HENDERSON. I do not think it makes much difference whether we have an inspector or not. The idea of appointing one man to inspect all the binder twine used in Canada is utterly ridiculous; he cannot examine the thousandth part of it. I am inclined to think, with my hon. friend from Leeds, that the object has been a good deal more to find a position for Mr. Haycock than for any good he is likely to accomplish. I am sure that all the balls of binder twine he will examine will not return very much profit to the farmers of this country. You would require to have fifty men, if you are going properly to inspect the binder twine used by the people of this country. Then, what is going to become of the twine that Mr. Haycock inspects? A man cannot inspect a ball of twine without destroying it. Is the government going to pay the manufacturers or the agents whose twine is examined, for the loss they have sustained by reason of the inspection? Because, when a ball of twine is once unwound, I rather think it will not accomplish the purpose for which it was made. I have heard it said that Mr. Haycock has some instrument by which he can rewind the twine, but I think he will not be able to do it in that scientific way required to make it run freely off the binder. There will be a considerable sum required to compensate the binder twine men for the twine lost in this way, and the minister had better put it in supplementary estimates.

Mr. WILSON. What particular qualifications has Mr. Haycock for this position? I did not think that a market gardener was specially qualified to inspect binder twine. I presume that the reason Mr. Haycock got the appointment was because of the good he did the government in stumping the various counties for them. He stumped mine, but I do not think he did any harm, because he is too well known in that part of the country. I remember the Minister of Trade and Commerce once writing a letter in which he claimed that the Patron platform was the policy of the Liberal party, and economy was then a prominent plank in that Patron platform. I do not know what economy there is in appointing a man as inspector of binder twine because he posed at a Patron, and at the same time stumped for the Liberals.

Mr. BLAIN. We would like the hon. minister to make a statement of the qualifications of Mr. Haycock for this appointment.

The MINISTER OF TRADE AND COMMERCE. If the hon. gentleman has met Mr. Haycock, on the stump or anywhere, I think he will substantiate my statement that Mr. Haycock is a man of very decided intelligence.

Mr. CLARKE. He has made a very bad use of it.

The MINISTER OF TRADE AND COMMERCE. I have known men of intelligence in very high positions who have put their intelligence to a very bad use—not meaning anything personal to my hon. friend.

Mr. BLAIN. I did not understand that it was one of the necessary qualifications of a binder twine inspector that he should be a good stump speaker. I might remind the hon. minister that there is a very large number yet to be provided for. For myself, I wish to enter a protest against this expenditure, and I think I shall move to strike out the vote. As I understand the law respecting the manufacture of binder twine, it provides that each binder twine manufacturer must put a tag upon each ball, stating the number of feet per pound in the ball. If that is true, what is the necessity of having an inspector?

The MINISTER OF TRADE AND COMMERCE. Sometimes they make mistakes, and do not give the requisite number.

Mr. BLAIN. This gentleman was appointed last June. There has been a very large amount of twine manufactured since then, and I suppose the officer has made some report to the department as to the duties he has performed—whether he has found that any of the twine manufacturers

in Canada have not been living up to the law, and whether the large quantity of binder twine imported into this country has been found to be up to the standard manufactured by the Canadian people.

The MINISTER OF TRADE AND COMMERCE. He has made a report, and, so far as he can discover up to the present date, the twine manufactured corresponds with the regulations imposed by the law.

Mr. TAYLOR. Will the hon. minister bring down his report ?

The MINISTER OF TRADE AND COMMERCE. Certainly.

Mr. TAYLOR. If the hon. minister had appointed an inspector to see that the manufacturers did not make over 100 per cent profit, he might be of some value to the Canadian farmers. If the hon. gentleman will turn up 'Hansard' of July 29, he will find that the Minister of Justice gave the prices that were paid for pure manilla each year since 1893, and if he will look at the report made by the late Minister of Justice, he will find that twine can be manufactured for ¾ cents per pound. To that add the cost of the manilla, and a reasonable profit, and you will have the price at which the inspector should see that the twine is sold to the farmers. Double it, if you like, and you will see that the farmers have paid a good deal more. Mr. Clarke, of Toronto, asked :

What was the average price per pound paid each year since 1893 by the government of Canada for manilla used in the manufacture of binder twine at the Kingston penitentiary ?

The Minister of Justice stated in reply that in 1893 there was none purchased : in 1894 the price was $4.38 per cwt. Add 75 cents for manufacturing, and you have 5 cents per pound. In 1894 twine was sold to the farmers for about 6½ cents. In 1895 the cost of manilla was $4.13; in 1896, $4.46; in 1897, $4.26. In 1897 the farmers of Canada paid about 13 cents a pound for binder twine. This thing has been going on under the eyes of the government for several years, and why did they not appoint an inspector before to see that the farmers were not being overcharged ? In 1898 it cost $3.71 for pure manilla according to the Minister of Justice. Adding 75 cents for the cost of manufacturing, that would give $4.50 per hundred pounds, yet the farmers paid 13 cents in 1898. In 1899 pure manilla cost $3.39. In 1900 none was produced. We purchased enough in 1899 at $5.39 to do for another year, yet in 1900 it was sold away up from 12 cents to 15 cents. And this government put the blame on the war for the heavy prices they were charging. In 1901 it cost $7.54, and in 1902, $6 per hundred pounds. Adding 75 cents for the manufacturing, that would make $6.75, and giving a cent per pound profit, you have $7.15. Yet, it was sold from 12 to 13 cents. In the face of these facts, why do the government not see that the farmers are not obliged to pay two or three times the cost of the production of twine. There was something for an inspector to investigate. The government have appointed Mr. Haycock, market gardener, at a salary of $100 per month and travelling expenses, which will amount to another $100 per month, going around the country to see that the manufacturers put a tag on each ball, showing the correct measure. Surely the hon. minister will allow this item to drop and pension off Mr. Haycock, or give him some other work to do.

Mr. COCHRANE. The right hon. the leader of the House pleaded yesterday that he was carrying out a moral obligation. Let me draw his attention to this fact. We are told by the Minister of Trade and Commerce that Mr. Haycock has superior qualities and was very eloquent on the stump. We also know the right hon. gentleman once sent a letter to this institution, of which Mr. Haycock was one of the prominent members, endorsing its policy. What policy had the Patrons at that time ? Criticising the extravagance of the government. I remember very well the hon. gentleman, when he was on this side, raising his hand to heaven and denouncing the extravagance of the Tory party in spending $35,000,000 to govern 5,000,000 people. I call upon the right hon. gentleman to carry out now the pledge he made while in opposition to reduce the expenditure of the government $3,000,000 or $4,000,000. Does he think he will reduce it by employing this man at $1,200 per year ? The right hon. gentleman must feel very sad when he thinks that this government are not carrying out the principles they advocated in opposition.

The PRIME MINISTER. I do not think that at all.

Mr. COCHRANE. Circumstances alter cases. The hon. gentleman has a very satisfactory berth and is willing to throw to the winds all the promises he ever made. All his anxiety is to retain office. I challenge him and the Minister of Trade and Commerce to point to one principle which they advocated on this side that they have not thrown to the winds. They excuse their extravagance in every instance by the plea : 'Oh, we have inherited this from previous governments.' Well, they did not inherit this particular item. What has become of the $60,000,000 which they have frittered away ? They have not inaugurated one scheme which they ever intended to carry out. They have now before the country a scheme which I do not believe they intend to carry out. The only ambition they have is to keep in office as long as they can.

Mr. HEYD. One of the highest tributes paid to the present government is every allusion to the fact that the patron in-

dustry—an organization that grew into great strength and influence because of the extravagance and iniquity of our hon. friends opposite—has disappeared since the present government came into power.

Mr. BLAIN. We should have some explanation as to the qualifications of the gentleman appointed to this position. When you appoint an inspector at a salary of $1,200 and expenses, or equal to $2,500 per year, we naturally expect him to have some qualifications for the position. I would like to ask the hon. minister whether there has been any complaints made to the department that the twine manufactured and imported into this country in years past was not up to the standard, and if the Patrons of Industry or the farmers have made any general demand for the appointment of such an officer.

The MINISTER OF TRADE AND COMMERCE. There have been complaints that the quantities provided by the statute were not furnished to the farmer. As regards the inspector, I think that a gentleman of his intelligence and general ability is quite able to discharge the important and onerous duties assigned to him.

Mr. BLAIN. Does the hon. gentleman say that this officer is really required in the interests of the farmers ?

The MINISTER OF TRADE AND COMMERCE. I think it desirable that the farmer should be protected. We should see that he is supplied with the quantity of twine which the law provides should be contained in each separate spool. It will be found that the farmers of Canada, who are not over and above well regarded in the distribution of patronage, approve as a rule of the appointment of one of their number to see that the provisions of the statutes are carried out for their benefit. Moreover, I have heard from several parties that they were glad to find the government had taken action.

Mr. BLAIN. Can the hon. gentleman present those letters to the House ?

The MINISTER OF TRADE AND COMMERCE. I am afraid that many of them are marked confidential.

Mr. HENDERSON. It is rather a reflection on the Minister of Justice that the hon. Minister of Trade and Commerce should employ a man to watch over the government output, and see whether the twine turned out has a tag giving its length. I wonder if the hon. minister has got a report from the manufacturer at Kingston. For it is quite possible, if others put up twine at short length, that it may be done there. But it seems that the government have to appoint farmers to watch their own operations.

The MINISTER OF TRADE AND COMMERCE. My hon. friend (Mr. Henderson) thinks we need a good deal of watching, and has said so a good many times.

Mr. ROBINSON (Elgin). I hope that no reflection is being cast upon the patrons or the farmers, because I was a patron myself. I was elected by the patrons to keep down the expenditure of the government, if I possibly could. They elected me to see that justice was done to every man, if I knew what justice was, and they thought I did. There is just one point I wish to emphasize, and that is this, the manufacturers and the importers of binder twine, knowing that there is an inspector of binder twine will be very careful to make the ball full length. There is that point in favour of the appointment of an inspector of binder twine. The question is whether the right man has been appointed, and whether the appointee should be a gardener, a farmer or something else. I am in favour of farmers for every thing. I think a farmer could be found to be the First Minister for that matter, and more particularly Minister of Trade and Commerce. However, I do not want to make this a matter of guess, but, I want to say that the money paid to the inspector will be well earned if all the manufacturers and importers of binder twine are compelled to see to it that there are 650 feet of binder twine to every pound. I met the inspector of binder twine a few days ago, and he told me he had visited a large number of manufacturers, and watched their operations, and he found some of them were 'sailing very close to the wind' whatever that means. That was his language, and I infer that he meant that they were hardly giving the farmers justice. I said—and put emphasis on what I said—'Now, Sir, your reputation is at stake ; and if you find any man not doing his duty and not giving us fair measure, bring him to justice.' He said he would. I am not one of those who cavil and think the office of binder twine inspector is a useless one. If the inspector does his duty fairly, his salary will be well earned, and I hope the minister will see to it that the inspector does his duty.

At six o'clock, House took recess.

After Recess.

The House resumed at eight o'clock.

PRIVATE BILLS.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill (No. 152) to incorporate the Southern Central Pacific Railway Company.—Mr. Riley.

Bill (No. 231) to confer on the Commissioner of Patents certain powers for the

relief of the Keller Heater Company of Canada, Limited.—Mr. McIsaac.

PRINCE EDWARD ISLAND FERRY COMPANY

House in committee on Bill (180) to incorporate the Prince Edward Island Ferry Company.—Mr. Emmerson.

On section 14,

Mr. HACKETT. This is an entirely different Bill from the one that was before the committee yesterday, and I would like to ask that the matter stand over to allow us an opportunity to consider it. Several clauses have been introduced that were not before the committee.

Mr. MACKINNON. The clauses referred to were before the committee yesterday. The only distinction between the Bill now and the Bill as it was introduced at the beginning of the session, is that the bond issue is now made to apply to steamship companies, and it was agreed to by the committee yesterday. The hon. gentleman may not have observed it, but that is the case. The bond issue was to apply to the railway company for the purchase or construction of the railroad, and there were separate clauses added for any steamship companies that were bought. These are the general clauses that are in all the statutes relating to steamship company Bills.

Mr. HENDERSON. I think the request of the hon. member for West Prince (Mr. Hackett) is a very reasonable one. The affair occurred in this way. Considerable change had to be made in the Bill inasmuch as it was practically made a charter for the steamship company. It was arranged that the chairman, I think, and the clerk of the committee were to introduce certain clauses in order to get the Bill into proper shape. I think it is quite reasonable that the hon. member who is interested in this Bill should have an opportunity of looking over it before it receives its final reading. It will certainly do no harm, and it will satisfy the hon. gentleman that he has done his duty.

Mr. MACKINNON. I have no objection to it standing over, but I wish to correct the hon. gentleman; the Bill passed the Railway Committee yesterday. However, I move that the committee rise, report progress and ask leave to sit again.

Motion agreed to, and progress reported.

ST. CHRYSOSTOME RAILWAY COMPANY.

House in committee on Bill (No. 158) respecting the St. Chrysostôme Railway Company.—Mr. Brown.

Mr. BORDEN (Halifax). How did we get back to this Bill?

Mr. DEPUTY SPEAKER. The promotor was not present when it was called, and it was called again.

Mr. ROBINSON (West Elgin).

Mr. BORDEN (Halifax). This has been done twice to-night, and it should not be done as a matter of course. I have not the slightest objection to it being done, but it should be done in the regular way, and the permission of the House asked.

Mr. DEPUTY SPEAKER. You are perfectly right.

The POSTMASTER GENERAL. I have never heard of it being objected to, and it often has occurred. If objection is taken the order can be discharged.

Mr. BORDEN (Halifax). I have not the slightest objection, but I say it should not be done as a matter of course, and without calling the attention of the House to it.

Mr. DEPUTY SPEAKER. We will do it in future.

Bill reported, read the third time, and passed.

SUPPLY.

House again in Committee of Supply.

Inspection of binder twine, $2,500.

Mr. BLAIN. When the committee rose at six o'clock the hon. minister was to give us a report of the inspector.

The MINISTER OF FINANCE. The deputy informs me that he is not in a position to produce the information to-night. There is no formal report, though there are some letters from the inspector.

Mr. BLAIN. I understand that the binder twine factories are scattered all over Canada. For instance, there is one in Brandon, Man. Does the minister think it is possible for one man to inspect all the binder twine in this country, if it is necessary to have it inspected at all? If it is necessary, would it not be better to have an inspector paid a small salary and located in each town or city where there is a manufacturing establishment, so that the inspection would be an inspection in fact as well as in appointment? The inspector should be there when the factory is in operation, which is only a short period in the whole twelve months.

The POSTMASTER GENERAL. No, the manufacture of binder twine goes on for a very considerable time throughout the whole year.

Mr. BLAIN. There are a great many months in the year when the binder twine factories are not in operation at all. I think my hon. friend from Brantford (Mr. Heyd) will bear me out in that statement. The factory in Brandon is not in operation more than six months out of the twelve. I repeat, if the department has decided that it is necessary to have an inspection, would it not be better to appoint a man where the factory is and have the twine properly inspected?

The MINISTER OF FINANCE. The Minister of Trade and Commerce thought that as a beginning one officer might do a large amount of inspection. I fancy that the value of an appointment of this character is not so much for the cure of the evil as for the prevention of the evil. The hon. member for West Elgin (Mr. Robinson) stated this afternoon that the knowledge that there was such an officer, who might come in and inspect at any moment, would have an excellent effect on any manufacturer or dealer. If we adopted the policy suggested by the hon. member for Peel, it would not only involve the appointment of an inspector for each factory, but one in each town where there is a dealer. It may be that the method of inspection is not as broad as it should be. We shall have to learn by experience how far it may be necessary to extend it.

Mr. BLAIN. Has the binder twine imported into this country to have the same number of feet to the pound as that manufactured in Canada ?

The MINISTER OF FINANCE. Yes, the regulation applies to the imported article as well as the manufactured article.

Mr. TAYLOR. Where is the great bulk of the twine imported into Canada manufactured ?

The MINISTER OF FINANCE. I cannot tell the hon. gentleman. Probably he is aware himself.

Mr. TAYLOR. I am. The hon. Minister of Justice knows that we have on the statute-books a law prohibiting the importation into Canada of any article made in the prisons of the United States, and I believe that from one-half to two-thirds of the binder twine imported into Canada is manufactured at the Stillwater prison, and is sold to agents at the big binder twine establishments in Minneapolis and St. Paul, and by them exported to Canada.

Mr. HEYD. Have you any evidence to that effect ?

Mr. TAYLOR. I have information to that effect which I believe to be true.

Mr. HEYD. Convince us by giving us the information.

The MINISTER OF FINANCE. If my hon. friend has that information in a form that permits it to be used, he as a friend and protector of the manufacturers of Canada has been doing them a great injustice in keeping it to himself, because he is well aware that if he placed that information at the disposal of the Minister of Justice every pound of that binder twine would be prohibited from coming into Canada at all. I am afraid my hon. friend is not as good a protectionist as he professes to be.

Mr. TAYLOR. I came into possession of the information within the last six hours, and as soon as I received it I addressed the Minister of Finance and the Minister of Justice, whose duty it is to see that the law is enforced. If the hon. gentleman inquires, he will find that there is a large quantity of binder twine made in the Stillwater prison, and if he traces that product, he will find that a great proportion of it is landed in Canada.

The MINISTER OF FINANCE. But my hon. friend, in justice to himself, should not be content with a mere statement in parliament. That statement is of course entitled to respect, but after all it is not a basis for action. If he has that information, I think he should place it in possession of the Minister of Customs in such a way as to enable him to follow it up.

Mr. HUGHES (Victoria). What is this army of inspectors for ? What is the army of customs officials for if not to attend to cases of this kind ? Why play the bluff game of asking my hon. friend from Leeds to inform the Minister of Customs. What is this army of heelers appointed for except to trace the binder twine that is imported and find out where it was made ?

The MINISTER OF FINANCE. I am sorry that the hon. member for Victoria characterizes the customs officials as an army of heelers.

Mr. HUGHES (Victoria). Now it is time to drop a tear.

The MINISTER OF FINANCE. It is time to drop a tear ; but the hon. gentleman cannot refer to an army of inspectors of binder twine, because there is only one, though of course sometimes one is a host in himself.

Mr. HUGHES (Victoria). Is that all ? I thought there were several. I apologize ; I thought there was an army, and that this last one was the chief of the outfit. I trust that the minister will see that this new officer attends to his duty and traces this prison-made binder twine, wherever it comes from, and sees that it does not come into Canada.

Mr. HEYD. It seems a curious thing that the binder twine makers have sent deputations down here and told the government the difficulties under which they laboured, and yet not a single representative of the binder twine makers ever made that statement to the government : and to assert that the International Harvester Company and the Plymouth Company, who sell 90 per cent of the twine sold in the United States, would be guilty of palming off on their customers either on this side or on the other side prison-made twine, is something that the hon. gentleman himself does not believe. If the statement which the hon. gentleman now makes is true, the men who make the binder twine would be aware of it and would have brought it to the attention of the government long ago.

Mr. TAYLOR. Is not the twine made in the prison as good as that made in the factory outside? Do they not turn out as good binder twine in the prison at Kingston as in the city of Brantford? In the United States the prison manufacture is probably the best twine turned out in that country. Where is it sold? It must compete with the other twine manufactured in the United States, and I am informed that the whole outfit of the American prison goes into the hands of gentlemen who supply the trade in Canada.

Mr. HEYD. The trade in Canada is supplied by the International and Plymouth people.

Mr. TAYLOR. They do not make it all.

Mr. HEYD. They make 90 per cent of all that is used in the United States and send 16,000,000 pounds to Canada. It is not likely that a concern of that importance would sully its reputation by palming off prison-made twine, even if it were as good as that made in the factory, which it is not. No factory in Canada would palm off prison-made twine for its own.

Mr. TAYLOR. All I ask the hon. Minister of Customs to do is to put a detective to work and investigate and he will find my statement correct.

Mr. THOMSON (Grey). I would not like to say that all the officials in the Customs Department are heelers, but there is one thing I am sure about, and that is that the gentleman who is receiving this appointment is a political heeler. He has been active from place to place in every by-election held in recent years.

Mr. HEYD. What do you mean by heeler?

Mr. THOMSON (Grey). A man who seems to make his living by stumping in constituencies and doing such work as his party requires. This gentleman spent nearly a month in North Grey during my by-election, and now he is apparently receiving his reward. I must say that I do not think he was any particular advantage to the Liberal party, but rather a source of strength to the Conservative party, and I would like our hon. friends opposite to send out that class of heelers at every election. Why should he receive a government appointment worth $2,500?

The POSTMASTER GENERAL. $1,200.

Mr. THOMSON (Grey). The vote is for the inspection of binder twine, $2,500. If he does not receive it in salary, he will receive it in some other way. Here is a man who is nothing but a political heeler and has been so for years, then he is placed in charge of certain government work, while officials who have been in the service for years are pressing the government to pay them $600 or $700, and are unable to do so. What are this man's duties?

Mr. TAYLOR. To draw his salary?

The MINISTER OF FINANCE. My hon. colleague, the Minister of Trade and Commerce, fully explained that this afternoon. Was my hon. friend present?

Mr. HUGHES (Victoria). Perhaps both could not tell the same story.

The MINISTER OF FINANCE. That is a good reason why I should not tell any. I understood my hon. colleague to have explained that the object was to guarantee to the farmers that each of these parcels of binder twine contains the quantity it should contain.

Mr. THOMSON (Grey). How is he to make this inspection? There is a tag on each ball giving the contents, so many feet to the pound. Do you mean to tell me that this inspector is going to measure each of these balls of twine?

The MINISTER OF JUSTICE. Not all of them.

Mr. THOMSON (Grey). He will, I presume, go into a factory and measure one ball and certify that it is 650 feet long. If he does not measure it, how will he inspect it?

The MINISTER OF JUSTICE. He will weigh it.

Mr. THOMSON (Grey). These packages may weigh two or three pounds each and may be measured and stamped. It seems to me that this is another case of providing for friends of the government for whom they can find no other place.

Mr. RICHARDSON. What are the special qualifications of this official? He may be a politician and not have qualifications for the office to which he has been appointed.

The MINISTER OF FINANCE. I was fortunate enough to be present ten minutes before recess and heard my hon. colleague, the Minister of Trade and Commerce, say that this man was very intelligent and capable of doing the work assigned him, and he thought the farmers would be pleased to have one of their own appointed to this position.

Mr. RICHARDSON. One would suppose that the gentleman appointed to an office of this kind would be an expert, should know how to discern what is sisal and what manilla, of what is the substance the binder twine is composed of. It may be a simple thing to take a ball of seven yards of twine and ascertain by weighing how much is in the ball. Anybody could qualify to do that in half an hour's experience. But to understand what the substances are that the binder twine is made of would require a man of considerable experience. The committee would like to know the qualifications of this man?

The MINISTER OF FINANCE. He is not a manufacturer of twine.

Mr. THOMSON (Grey). I see the hon. Minister of Justice there. It appears to me that the manufacture of binder twine, as carried on in the Kingston penitentiary, has not been satisfactory to the people. The price of twine during recent years has been very high, and the farmers have complained very much. I notice by the Auditor General's Report that twine which the Minister of Justice said cost 6 cents per pound, was sold to the farmers at 10½ cents. That would appear an unreasonable profit. Twine imported into the country, made of pure manilla, is sold at from 10 to 15 cents a pound, but this is a mixed manilla. If it only costs 6 cents per pound, why is the farmer charged 10½ cents ? When the farmers refused to pay that price, it remained on his hands, and later in the season he could sell it at 5½ cents to some of the government jobbers.

The MINISTER OF JUSTICE. It is very good of the hon. gentleman to give me an opportunity of explaining the discrepancy. It would be convenient for me, indeed, if the hon. gentleman would attend when the estimates are under consideration. If he will kindly refer to 'Hansard,' I have not the number of the page under my hand, but I will be able to find it and give it to him—he will learn all the details. I gave all the details of cost of twine and the reason why we were not able to dispose of the twine during the season required and had to keep it over. He will get the information and more if he will kindly refer to the 'Hansard' report of the debate which took place when he did not happen to be in the House.

Mr. THOMSON (Grey). I have the Auditor General's Report for 1902, and I find that at page M—47 it is noted that the government sold 6,783 pounds of mixed manilla, at 10½ cents per pound. And the hon. minister stated early in the session that it cost 6 cents per pound.

The MINISTER OF JUSTICE. I do not accept the statement of the hon. gentleman.

Mr. THOMSON (Grey). I will look it up in 'Hansard.'

The MINISTER OF JUSTICE. If the hon. gentleman will do so, he will then be in a position to give some information to the House.

Mr. THOMSON (Grey). Then, the department sold 10,000 pounds at 10½ cents, and 220,000 pounds at 5 1-10 cents, or less than half the money. It would seem to me that the farmer is being imposed upon. This institution was established in the Central Prison to regulate the price, so that the farmer might not be imposed upon by any combination in this country or any other. The local government established a similar institution in the Central prison, for the same purpose. And, as my hon. friend from South Brant (Mr. Heyd) is here, I may say that the Farmers' Binder Twine Company was established for the same purpose, yet, that hon. gentleman has stated in his place that that concern made no less than 240 per cent in three years, besides being able to make great improvements in their plant. The Kingston penitentiary was making twine for 6 cents per pound and charging the farmer 10½ cents per pound, the same prices that were being charged by American firms selling the goods here. There seems to have been some understanding among the manufacturers to charge the farmer more than is fair, for——

Mr. DEPUTY SPEAKER. I am afraid the committee is wandering away from the point under discussion. We are not discussing the general question of the manufacture of binder twine, but the propriety of appointing an inspector to see to the proper measurement of the twine. I hope the members of the committee will not enter upon irrelevant discussion.

Mr. THOMSON (Grey). The only reason I adverted to this question was that the Minister of Justice was not present when this was brought up.

Mr. HOLMES. The hon. member for North Grey (Mr. Thomson) was not present.

Mr. COCHRANE. How do you know ?

Mr. HOLMES. I was here.

Mr. THOMSON (Grey). Well, I was not lecturing in the Young Men's Christian Association anyway.

The MINISTER OF FINANCE. I am afraid there is no danger of the hon. gentleman (Mr. Thomson, Grey) having any opportunity to do that.

Mr. THOMSON (Grey). The Minister of Justice was not in his place, and the Minister of Finance took note of that and apologized for his colleague's absence. But, if we are not allowed to discuss the question of manufacture, there is still a good deal to say as regards the appointment of this inspector, and I must say that I will support a resolution to strike out this amount. It is simply making an office for a party heeler. The service can be performed for much less money than the allowance given to Mr. Haycock. If other appointments under the government are made in the same way as this, it is no wonder that the expenditure of this country rises to such an enormous sum.

Mr. RICHARDSON. I could understand if such an appointment could be useful at all, that it might be made useful by the appointment of some man who had had experience in handling or manufacturing binder twine. But Mr. Haycock's qualifications are of an altogether different char-

acter. This is simply the creation of an office for the benefit of Mr. Haycock. He has qualifications, but they are rather of a kind that are useful in a by-election. But nothing I have ever heard or read about him would lead me to believe that he has any qualification for this office. The name might suggest a knowledge of grasses, and so, of cordage of some kinds, but there is nothing in a name in this case. This office is useless to anybody but Mr. Haycock himself, and the money paid to him could be devoted to some useful purpose.

Mr. BLAIN. When was the Act passed making it necessary for the manufacturer to put a tag upon each ball giving the number of yards per pound? Can the hon. minister read us that clause?

The MINISTER OF FINANCE. I cannot point to the particular Act, it was passed some years ago.

Mr. THOMSON (Grey). If that is all the law provides, what is the use of this inspector? If the law only requires that the tag shall be put upon the binder twine, why should this inspector be saddled upon the people? What are his duties?

The MINISTER OF FINANCE. I do not think the farmer is so desperately anxious to know that the tag is on, but what he wants to know is that the quantity corresponds with the tag.

Mr. THOMSON (Grey). Then, all that this inspector will do is to test one ball. And for this you employ him for the whole year at $2,500 of public money.

The MINISTER OF FINANCE. In any case where inspection takes place, I imagine every package is not inspected. When a number of parcels are sent through the customs house the officers do not inspect every one, but they sample them. I suppose the same will be done by this inspector.

Mr. TAYLOR. As I understand the Act, it makes no provision for an inspector. It simply provides that every manufacturer shall put a tag upon his products stating the number of feet in each ball. In that case, every farmer can be his own inspector; and if he finds that the twine does not meet the requirements of the law he can set the law in motion to have the penalty enforced. When he buys a ball of twine that weighs what the Act calls for and has the number of feet in it required by the law, the farmer can be his own inspector, and there is no need of paying $2,500 in salary and expenses to Mr. Haycock to make the inspection, because he has no more effect on the production of binder twine than if he remained at home attending to his market gardening. The last time I met Mr. Haycock was at a provincial election where he was speaking in the interest of the Reform candidate against my friend Mr. Gallagher, who was the candidate for Frontenac in the local election. I was speaking on behalf of my friend Mr. Gallagher, and I drew attention to the fact that the last time I met Mr. Haycock was at a Dominion by-election, when he had the Auditor General's Report in one hand and a can of Australian mutton in the other, pointing out to the farmers the iniquities of the late Conservative government, and showing by the Auditor General's Report that they had bought so many jack knives, so many envelopes, so many sponges, and a lot of little things like that, reading them out of the Auditor General's Report and then holding up the can of mutton.

Mr. GOURLEY. That shows he can read.

Mr. TAYLOR Oh, yes. He served his time in the provincial legislature, and was appointed leader of the Patron party that the Minister of Trade and Commerce and the Postmaster General created. They created this Patron party for the purpose of helping their elections and splitting up the Conservative party. Mr. Currie was another leader. Mr. Currie is appointed immigration agent now over in the United States, drawing another $2,500 a year. I would suggest to the minister that Mr. Currie be authorized to go over and see if the binder twine that is being imported into Canada is not made in prisons. They wanted to give him a job. There is a third one, Mr. Lockie Wilson, that they have not provided for yet. He is the third gentleman who was a leader of the great Patron party. Two of them are provided for at a large salary and they have nothing to do. My hon. friend can turn up the Auditor General's Report and find that Mr. Currie, who was a leader of the Patron party in the west, is now in the employ of the government over in the United States, riding around in Pullman cars at great expense to the country, and drawing a big salary besides. Mr. Haycock is provided for at a salary of $1,200, and $1,300 for travelling expenses and hotel bills, for the balance of the year. My hon. friend from Brantford (Mr. Heyd) who is interested in the binder twine establishment up there, knows that every word that I am saying is correct, and that there is no more necessity for an inspector of binder twine than there is for a dozen inspectors, one for each factory.

Mr. HEYD. I am afraid our friends are not so hostile to the position of an inspector as they are to the gentleman who happens to fill it. I just wondered to myself whether if Mr. Haycock had been busying himself in the interest of the hon. gentleman (Mr. Taylor) and his friend Mr. Gallagher, we would have heard one word of objection to the creation of this office.

An hon. MEMBER. We have heard it from you.

Mr. HEYD. I do not think so. The mere fact that the office happens to be filled by Mr. Haycock is the reason why all this objection has been urged. Had it been filled by a good, active Conservative organizer we would not have heard a whimper from the other side.

Mr. RICHARDSON. It really does appear from this discussion that this is an entirely unnecessary office. Any farmer going into a store to buy twine and looking at the tag and seeing how many feet to the pound are stated to be in the ball, can demonstrate that to his own satisfaction and can prove it to the dealer at once. It will not take him more than a minute to do it. He can take a few yards and then weigh it and find out at once whether it comes up to the standard which is stated by the tag upon the ball. Anybody is qualified to do that. The only other object of the inspection of binder twine is to find out whether it contains the right proportion of manilla and sisal. If it makes no provision for that, then the office is entirely useless. If Mr. Haycock must have a position, I would suggest, after hearing the discussion the other night in regard to the killing of chickens, that probably Mr. Haycock understands this business, and the government could give him a job of going around and teaching the farmers how to kill chickens.

Mr. BLAIN. I think the minister should give the committee the Act under which this gentleman is appointed. There was a special Inspection Act for binder twine, passed either in the session of 1901 or 1902. I would have thought that if the government intended to appoint an inspector, some provision would have been made for it in the Act. I do not think the acting minister would say that there has been any demand from any section of the farmers or of the merchants selling binder twine, for an inspector to be appointed. I am quite sure the office is an unnecessary one. I think, under the law, there is a penalty for the infringement of its provisions. This looks to me like an after-thought on the part of the government. The gentleman no doubt was pressing for some appointment, and this position seems to have been created for him. I am not opposed to the inspection of binder twine, but I think if it is to be inspected some better system should be adopted. I am sure it is impossible for one gentleman to inspect all the binder twine that is produced and imported into this country. The minister must be aware that a large quantity of binder twine is imported into western Canada and the province of Manitoba. There is some manufactured in Manitoba, but a very large quantity is imported.

Mr. HOLMES. The argument of some hon. gentlemen opposite is to the effect that because there is a certain law passed that does not require an inspector to be appointed, therefore no inspector is required. We have on the statute-book at the present time a law requiring that weights and measures should be of a certain standard size. According to their argument now no inspector is required to see that that law is enforced. I suggest that they turn their guns for the time being on the gentleman who happens to occupy the position of inspector of weights and measures for western Ontario, who happens to be a good Conservative, retained in his office by the present administration. Now, if their argument is of any force that because there is a law on the statute-book requiring weights and measures to be of a certain standard size, they do not require to be inspected, and therefore they would do away with the services of that inspector, as they are proposing to do away with the services of Mr. Haycock ; by the same process of reasoning, all the license inspectors should be dismissed—I know in their opinion they should be anyhow. But it is illegal to sell liquor after certain hours, it is illegal to-day to do certain things in connection with the hotel business.

It is necessary that an inspector shall be appointed to see that the Act is enforced and I think the same thing holds good in reference to the appointment of an inspector of binder twine. I do not think it comes with very good grace particularly from our hon. friends opposite to make use of the arguments which they do against the appointment of Mr. Haycock. What is Mr. Haycock's offence in their eyes ?—simply that he has taken an active part in political campaigning. He has gone out and done stumping—to use a common phrase—in different parts of the country. If that is a serious offence, then, our Conservative friends themselves have a great many heelers among their numbers, because I know there were some of them in the riding of the hon. member for North Grey (Mr. Thomson). I think their argument is a very weak one and that it comes with bad grace from a party who, while in power, were continually appointing persons who had been political heelers to various offices within the gift of the government. I think the fact that a man has a certain amount of ability qualifying him to take part in a political campaign should not stand in the way of his getting political preferment. Besides that, Mr. Haycock, whatever his offences may have been, is a practical farmer. He may have been the representative of the Patron party, as he was no doubt, but he is a practical farmer, he knows a great deal about the binder twine question, and I think the people generally would approve of his appointment and endorse the government for having placed him in that position.

Mr. BARKER. Was Mr. Haycock appointed chief inspector or an inspector as mentioned here ?

The MINISTER OF FINANCE. The deputy minister will be here in a moment and I will be able to give the hon. gentleman an answer. As far as I know there is only one inspector, but whether he is designated chief or otherwise at the moment I cannot answer.

Hon. Mr. ROSS (Victoria). Generally when the term 'chief inspector' is used there are deputies under him, but in this case it would appear that there is only the inspector himself.

Mr. BARKER. I have no doubt that is so. As the hon. gentleman (Hon. Mr. Ross, Victoria) says he is an inspector and I would therefore ask the hon. Minister of Finance for what division he has been appointed ?

The MINISTER OF FINANCE. I am sorry I cannot give the hon. gentleman the information.

Mr. BARKER. I suppose we must ask that of the deputy ?

The MINISTER OF FINANCE. There was a pretty full discussion of this item before recess and I thought the right hon. Minister of Trade and Commerce had satisfied the laudable desire of every hon. gentleman opposite for information, and that all I would have to do would be to call the item and it would be carried at once. I am amazed that it should not pass.

Mr. BARKER. I am amazed that the hon. gentleman does not know more about it.

The MINISTER OF FINANCE. I do not pretend to know very much about it.

Mr. BARKER. In looking at the statute I find that the government, when appointing an inspector, are required to designate the district for which he acts. When a chief inspector is appointed he is appointed for the whole province, it is true, but when a division superintendent, who is called ordinarily an inspector, is appointed, he is appointed, apparently under the statute as follows :

> The Governor in Council may from time to time, designate the several cities, counties, towns and other places or inspection divisions in Canada, at and for which respectively it is expedient to appoint inspectors.

I presume that the hon. Minister of Financ, looking over this matter, has considered whether Mr. Haycock should be an inspector of a particular division or not and if he is appointed simply as an ordinary inspector for a division, a particular county or a number of counties, or for a particular city, or district, the fact should be designated by the Order in Council. I think we are entitled to the information, because, as far as I see there is about as much foundation for the appointment of this particular inspector as an inspector of binder twine as if he were appointed as an inspector of haycocks.

Mr. CLARKE. It is surely reasonable to ask what division he is going to act in ?

The POSTMASTER GENERAL. The whole includes different parts.

Mr. BARKER. No, the statute clearly says that there shall be an inspector for a particular district and a chief inspector over the inspectors. I would like to know whether Mr. Haycock is an inspector of inspectors or an inspector of binder twine.

The POSTMASTER GENERAL. The statute may enable us to appoint a great many inspectors, and an inspector of inspectors, but as an economical and business-like government we do not deem it necessary to make any more appointments than the public interest demands. If it is found that Mr. Haycock can cover all the ground then it will not be necessary to put the country to the expense of a second appointment.

Mr. BARKER. Is he the only one ?

The POSTMASTER GENERAL. He is the only one up to date. He has only been appointed within two months.

Mr. BARKER. You do not know but that you will want more.

The POSTMASTER GENERAL. It is coming on towards harvest time. Mr. Haycock is a man highly respected by the class who use binder twine. For many years he enjoyed the confidence of the farming community as representing their views upon public matters. I have no doubt he still enjoys that confidence and he is particularly qualified in so far as a knowledge of the farming community goes to guard their interests in a matter of this kind. However, as hon. gentlemen opposite are complaining we have not appointed enough we will bear that in mind, and if, after the harvest season has gone by, experience shows that the appointment has been productive of good and if we are satisfied that the public interest calls for an additional appointment we will have to do our duty, but do not blame us because we have not rushed in and appointed a whole army of officers at once. I believe an hon. gentleman earlier in the discussion called one an army. We have not gone that far yet.

Mr. CLARKE. The hon. Minister of Finance explained that he is a whole host in himself.

The POSTMASTER GENERAL. No doubt he is a very capable man.

Mr. BARKER. The explanation of the hon. Postmaster General shows that he has not read the Act.

The POSTMASTER GENERAL. Yes, I have.

Mr. BARKER. The Act empowers the Governor General in Council to appoint inspectors for certain divisions and presumably the Governor General in Council will authorize the appointment of inspectors where they may be necessary. To-day there may be an inspector required in Brantford. Possibly such an inspector was very much required when the manufactory there was making 240 per cent profit on its business. It would have been a very proper thing for the Governor General in Council to appoint an inspector for that district and for different places where it might have been found necessary to appoint inspectors. But, the government when they had appointed half a dozen or more Haycocks, or inspectors throughout the country might have found it necessary to appoint a general inspector to overlook the whole of these, and that is provided for, but the hon. gentlemen have begun with a general inspector and if he should be the only one that begins the work then he should be placed where his inspection is required to be done. If the hon. Postmaster General had read the Act he would have seen that the whole spirit of the Act was that the government should begin at the districts where the inspection is required and after they had provided for a number of districts they ought to have appointed a general inspector. The very term implies that he is an inspector of inspectors. They have begun with a general inspector who has one general district of inspection.

Mr. BLAIN. Would the hon. minister tell us what are the duties of this inspector and whether his instructions are in writing ? It is not unfair to ask that we should have a copy of that.

The MINISTER OF FINANCE. I am informed that when he was appointed he received instructions, but I did not imagine the question would be asked. I shall be glad at a later stage to produce this valuable information.

Mr. CLARKE. It is very important, because I understood from the Postmaster General that this is only the first of a series of similar appointments.

The POSTMASTER GENERAL. There is no such inference to be drawn from my remarks. We propose to appoint one inspector, and if it is found that one is not sufficient for the work, we intend to appoint more, but gentlemen opposite are endeavouring to drive us into making a large number of appointments. We are a government of economy ; that is one of our strong cards ; we enjoy the confidence of the country because of that, and we intend to stand by that principle. The only thing that will drive us from it will be a due regard to the public interest, and if the public interest demands two inspectors, we will appoint them. The hon. gentleman from Hamilton desires us to put on frills before we have the fabric and to appoint an inspector of inspectors. What we are doing now is the appointing of an inspector of binder twine.

Mr. BARKER. The Act says you must designate a district.

The POSTMASTER GENERAL. The Act says :

> The Governor in Council may from time to time designate the several cities, counties, towns and other——

Mr. CLARKE. Hear, hear, that is the whole contention.

The POSTMASTER GENERAL. The hon. gentleman has a habit of interrupting when something is being said or read. If he will have the kindness not to interrupt me until I read two lines he can interrupt at the end of the third line :

> The Governor in Council may from time to time designate the several cities, counties, towns and other places or inspection divisions in Canada.

The statute does not say we 'must' do it. This Act was passed by our opponents, and does the hon. gentleman say that it was intended to force the government to divide the country into districts and appoint inspectors That has not been done in a single case.

Mr. GOURLEY. Then it is all wrong.

The POSTMASTER GENERAL. Does the hon. gentleman from Hamilton say that all Canada is to be divided into inspection districts for every article mentioned in the statute ?

Mr. BARKER. The only authority to appoint an inspector is under this Act, and the Act says that until you designate districts you cannot appoint inspectors. Let me ask the minister whether a board of examiners has certified that this gentleman is a fit and proper person to conduct this inspection. The Act requires that he should obtain a certificate from a board of examiners of certain boards of trade. Has that been obtained ?

The POSTMASTER GENERAL. Let us stick to one point at a time. This Act has been in force since 1896, and I am informed by the deputy minister that in no instance has such an interpretation been placed upon the Act as the hon. gentleman now puts on it. There is only one case in which there is a district set apart for inspection and that is in the case of grain. This Act deals with the inspection of flour, meal, wheat, beef, pork, leather, fish oil, hides, &c., and by the Act of 1901, binder twine is added to the list. Does the hon. gentleman (Mr. Barker) say that all the appointments since this Act became law are illegal ?

Mr. BARKER. I did not say that.

The POSTMASTER GENERAL. Then he argues that they are illegal when made by the Liberals but not illegal when made by the Conservatives.

Mr. BARKER. The Act requires that your inspector should get a certificate from a certain board of examiners.

The POSTMASTER GENERAL Have you abandoned your other argument ?

Mr. BARKER. No.

The POSTMASTER GENERAL. Either that or you are defeated.

Mr. BARKER. Not at all. Under this statute the first step of the government is to name a district in which the inspector is required, and the next step is to obtain a certificate from a proper authority that the person to be appointed is competent to fulfil his duties. Even this very government required a board of trade of which I was president to send certificates that certain persons were competent when they were to be appointed as inspectors.

Mr. GOURLEY. This matter is one of great seriousness. I listened to the scientific part of the debate with great pleasure, but now there is a nice legal question lying at the bottom of the appointments that are to be made. I undertake to say that it is a local jurisdiction that has been created by this statute, and it is elementary law that a local jurisdiction must be definite and distinct before an officer can exercise any authority under that jurisdiction. My hon. friend is a lawyer. Let him take the case of a justice of the peace who is appointed for a city or county. He cannot act for one moment until the territory for which he is appointed is defined. If he did, every act he performed would be without authority, and he would be liable for an action. The point my learned friend has made is quite clear. The Act says that 'such inspector shall hold office during pleasure, and shall act within such local limits as the Governor in Council assigns to him.' How does my hon. friend, who, I understand, is a lawyer, in name at any rate, get over such plain and distinct language ? My learned friend takes a very illogical position in arguing that as the government were only going to appoint one inspector, there was no necessity of assigning local limits. If you only wanted to appoint one inspector for the province of Ontario, the proper course would have been to pass your Order in Council declaring the province of Ontario to be one district. If you want to appoint a man for a county or a city, you must first plot out your county or city, and declare that that is the territory and these are the local limits in which you desise the inspector to act; and then he would have jurisdiction to act within those limits. This inspector can be kicked out of every store in Ontario ; and you do not want the government to send unauthorized men to act as inspectors and to run the risk of being put out. If such a man were put out, the Minister of Labour would be put out at the same time, because his agent is the minister himself in law; and how sorry I would feel if any indignity were put upon the Minister of Labour. A gentleman of his commanding stature ought not disrespectfully to be put out of any place in this country. But if he persists in acting in the face of the law so plainly pointed out by my hon. friend from Hamilton, who is no doubt a very careful lawyer, he has only himself to blame. But the next difficulty my hon. friend pointed out was that you have two classes of men to appoint. You have the familiar illustration of the stipendiary magistrate and the justice of the peace. You must define in your commission whether you want to appoint a stipendiary magistrate or a justice of the peace. They are officers with different jurisdictions, and you must first define your territory and then appoint your officer. So in this case you must state the jurisdiction you expect your officer to exercise, whether that of local inspector or inspector in chief. These are such elementary principles in law that I thought the hon. gentleman would have caught on at once, and would have said : 'My duties as Minister of Labour have so occupied my attention that I have completely overlooked this particular matter.' I should have thought he would have thanked the astute counsel from Hamilton for having suggested so plain a matter to him. The next point raised by the hon. member for Hamilton was that you cannot appoint a sub-officer unless you have a chief. However, I will not debate that. There may be such a thing as appointing an inferior officer without appointing a superior. It would seem an extraordinary thing to appoint a chief without a sub, and equally extraordinary to appoint a sub without a chief. Ex necessitate the hon. gentleman appears to be wrong. But even if he got past all these difficulties, there is the certificate. I can understand that this law was very wisely framed. It anticipated the hon. gentlemen opposite coming into office at some time, and therefore it should be provided that this man should be examined as to his competency before he should be appointed. On these three points, I have no doubt that the hon. minister as a lawyer will say at once, 'peccavi.'

Mr. BARKER. I do not think you can pass this item, because it is contrary to law.

Mr. FRASER. We will take chances.

Mr. GOURLEY. We will not allow you. We do not want you to get into a law suit.

The MINISTER OF FINANCE. It is a serious matter if it was our duty to appoint an army of inspectors, and we have neglected to do so; but for the present our

sense of economy would not permit us to appoint more than one. There is a great deal to be said for the hon. gentleman's argument that we are obliged to appoint a large number of inspectors; but do not ask us to commit ourselves to such a policy too early.

Mr. GOURLEY. That is not the point of my argument. You could not appoint anybody under the present state of the law.

The MINISTER OF FINANCE. That shows how the opposition are not consistent with one another. The hon. member for Hamilton says we cannot only appoint an inspector, but an inspector of inspectors, and keep on appointing them.

Mr. BARKER. Will the hon. gentleman allow me? I said you can appoint an inspector and a chief inspector, provided you follow the provisions of the Act, and I say that you have not followed the provisions of the Act.

The MINISTER OF FINANCE. The hon. member for Colchester says we cannot appoint anybody.

Mr. GOURLEY. Not until you plot the territory.

The MINISTER OF FINANCE. Well, suppose we do plot the territory and appoint a large army ?

Mr. GOURLEY. But you cannot appoint anybody until you plot the territory.

The MINISTER OF FINANCE. We will take that into consideration. We may make further appointments, but we do not think it is necessary at present. I do not like to throw down a valuable suggestion like that.

Mr. BARKER. Does the hon. gentleman seriously tell us that there has been any certificate from the body required to give a certificate under this statute? Does he tell us that this gentleman who is to be appointed is a proper person to be appointed under the statute ? Under the statute the government have no right to make such an appointment at all, and we object to it on that ground.

Mr. CLARKE. Surely there must be some satisfactory answer given to the statement of the hon. member for Hamilton, if he has stated the law correctly. We assume a certain amount of responsibility for this appointment, and we want to know the fact.

The POSTMASTER GENERAL. I think we may regard the matter in a broader view than has been suggested here. I have not seen the appointment, nor do I know what principles have been observed in regard to it. The requirements of the statute may have been complied with or they may not, but the appointment itself could be made if there were no statute, the only question would be what powers the inspector would have. He cannot discharge any duty unless authorized to do so. But if in a general and informal way the government appoints this man to discharge certain duties and the twine manufacturer permits him to exercise those duties, and if that meets the requirements of the case, why put the country to the expense of the appointment of a large number.

Mr. GOURLEY. That would not follow.

The POSTMASTER GENERAL. Yes it would. You could not have a large number of inspectors without putting the country to a great expense. Suppose there were no statute at all and the government appointed a man to do certain work and parliament voted the money to pay him, and the manufacturers permitted him to inspect, the same end is obtained as by going to the expensive process urged upon us. If the law is that no inspector can be appointed for more than a limited territory and this whole Dominion is to be divided up into inspectorates, involving very large expenditure, it seems to me that the Act ought to be amended and made more in harmony with economy.

Mr. BARKER. The way to amend an Act of parliament is not by a resolution in the estimates. The Act of parliament requires a certain procedure before such an inspector as the one now proposed, may be appointed. The hon. gentleman says that the government may appoint certain officers; but when an Act of parliament intervenes, declaring how an officer is to be appointed, it does not rest with the government to appoint him in some other way. I do not think any hon. gentleman on the government benches would controvert that position. This is not a question of giving Mr. Haycock or any other gentleman a government allowance. This is a question of inspecting a certain matter of trade in this country. There are a number of articles that have to be inspected. There is the article of hides. It is very important that the inspector of hides should be competent, and it is impossible to get a man appointed inspector unless he undergoes a certain examination and obtains a certificate from a particular body that he is competent. Hon. gentlemen know that upon the certificates of such officers trade goes on throughout the Dominion. The certificate of an inspector such as the one to be appointed, is accepted in all the markets of the country. The inspector of hides at Hamilton gives certificates, which are accepted at Montreal, Quebec and Boston, as those of a person qualified for the work. People all over the United States and Canada deal to the extent of thousands of dollars upon that certificate. If the government can appoint Mr. Haycock without a certificate of competency, they might also appoint in the same way an inspector of hides and wheat and other articles, and thus disturb the trade of the whole country. The

statute provides that the inspector must have a certificate and we object to any resolution authorizing payment to any person who is not appointed according to the statute.

Mr. GOURLEY. There will be great difficulty in connection with this man. He will have important duties to perform, and if properly appointed his authority would be effective and valid, but if not, he will be simply a trespasser and be liable to be sued for trespass, and every body who sent him would be responsible. If not properly appointed, he could not act as an officer of Canada, he would be a pseudo officer, and have no authority at all. If it be the case that the stamp of our inspector of hides is received in Boston or in Montreal as official, is it not most important that the appointments of other inspectors should be perfectly regular ? What a scandal would it not be to allow a man to give an official character and market value to a hide and then have his appointment declared null and void. If the department has not observed the statute strictly, it is time it should do so. When an officer is properly appointed his district is prescribed and just as in the case of a judge. Imagine a judge being appointed and the territory of his jurisdiction not defined. The limits of this man's jurisdiction must be as strictly defined as those in which a judge exercises jurisdiction. If this man's territory be not defined, he can exercise no jurisdiction, and if his territory be defined he can only act within that territory, and any act outside it would be void and the department be responsible. We want to know whether this man's commission defines the territory in which he must act. The second point which my hon. friend from Hamilton made is that a deputy inspector shall be appointed only from among duly qualified persons. There may be, therefore, but very few people who may be appointed. The appointment is subject to extraordinary limitations. It is limited to very few political heelers, if men of that class are not wholly excluded. I think a man who could get an appointment under this statute would not be likely to be much of a political heeler. Perhaps he might be a divinity student, or a Ph. D., or an LL. D. This Act confines the appointment to 'qualified' persons. What that qualification is, I am at a loss to understand. And perhaps this should be submitted to the Supreme Court to get a judicial interpretation of the statute. The minister must understand it. I can only regard it with the eye of the student of language, and so regarding it I say that mountains of difficulty, difficulties alpine in their character surround the minister or the legal adviser of the department in connection with this question. Talk about standing on thin ice. Why, there is no ice here at all. A man would be in the water up to his neck when he attempts to make an appointment under this statute. It provides that 'they and their deputy inspectors shall be appointed only from among duly qualified persons.' I cannot understand what qualifications they must have. I would like to ask what qualifications the minister found in this man ? Were they scientific ? Were they religious ? Or literary ?

The POSTMASTER GENERAL. Some say they were political.

Mr. GOURLEY. That would not do under the Act. I can see that my hon. friend, being much interested in politics, might think that this statute referred to political qualifications. But if he considers it as a student of literature, I think he will see that that is an error. I am sure, from the speeches the hon. gentleman has made in this House that his mind is illuminated with the classics, English, Greek and Latin. If a man's mind is so illuminated, he acquires the quality of realizing the importance of words. Why, a word appears as big as the side of a house to him. He notices differences that to others would be imperceptible. He is struck at once with an accusative, or a dative, or an ablative absolute. The student of words taking up this statute would be struck at once with this peculiar phrase, 'and they and their deputy inspector shall be appointed only from among duly qualified persons.' If I were in office and it were my duty to make an appointment under this statute, I would naturally touch one of these numerous bells that seem to ring all over the department and bring numerous officials to the minister's side. I would call one of these men, perhaps a literary man or a doctor of laws, and I would say to him, 'tell me what 'qualified' means in this statute. If he were a student of statutes and accustomed to construing them, he would at once see that these words do not relate necessarily to scientific qualifications, in short they are not words of nomenclature, therefore, they must be defined in the Act. Then I would look through the Act for a definition of 'duly qualified persons.' But looking through the Act I do not see any such interpretation. I am driven then to the conclusion that the words must receive the ordinary interpretation of these words in the English language. What, then, does duly qualified mean ? It may refer to a person who has been immersed—in that case he would be duly qualified to enter the Baptist Church, or if it meant duly qualified to enter the Church of England, it would require that he should be able to pass an examination in the thirty-nine articles. Of course, if he belonged to the church of the hon. member for Guysborough (Mr. Fraser), he would have to be able to recite the shorter catechism word for word and letter for letter.

Mr. FRASER. Yes, and he would know that he must give an account of time; therefore, he would not kill time.

Mr. GOURLEY. And he must also be familiar with that stately confession of faith called the Westminster confession. But since that hon. gentleman (Mr. Fraser) has entered parliament, they are doing away with the confession of faith. I suppose that as the hon. gentleman has been so long supporting the government they find it necessary to modify it in order to retain him; for one could hardly support this government for such a length of time and be ready to accept the old confession. But I am making a strictly legal and technical argument, and the hon. gentleman ought to understand that I am approaching the question scientifically and as a lawyer. Can the hon. learned gentleman help me to find out what is a duly qualified person under this Act ? For, he will observe, if any other person is appointed, that appointment is illegal, and I am satisfied that the government would not wish to appoint a person illegally. I never saw a case beset with so many difficulties, and yet the minister seems never to have had one of them called to his attention. I venture to say that every one of the appointments made under the Act is irregular and void under this statute; and if the writs were sent to the Minister of Justice, that hon. gentleman would advise : You have not a shadow of a defence ; read the statute; and reconstruct your department. I would like the Minister of Justice to tell me what these words mean. He may say that this Act was passed under a Tory administration. If that is his answer, I can only say that the Tory administration had a poor draftsman. And, as to that, I think the draftsmen employed by this parliament are not good. You find singular provisions of the law clothed in different language. We ought to have an English draftsman, no matter what we pay him, so that when we wish to make a certain provision, it shall be clothed in the same language, every comma in its place. Then, when a section is judicially construed, it helps in the construction of every other. But in our country different language is used to express the same idea, or, if the words are not varied, they are used in varied connections. I am amazed at the difficulties one finds in turning over these papers. The Minister of Labour (Hon. Sir William Mulock) could never have read this Act, could never have considered these difficulties. I can understand why all these provisions were necessary.

You were appointing an officer with extraordinary power. For instance, you could put up the Minister of Labour. As for the Minister of Finance, I think he did it more as an ad captandum reply to our friends on this side, because he is a shrewd Nova Scotian, and he catches on quickly to a way of avoiding difficulties. But the Minister of Labour has seen fit not to reply, even by way of warding off attack. I have no doubt he intended to appoint more than one chief inspector, and perhaps one deputy. But I would not urge the second point. If he appoints one chief inspector in the province of Ontario, he must name the province. He can name the whole territory of Ontario if he likes. He can say that for the purpose of chapter 99 the whole province of Ontario shall be one inspectorial district. Then he could proceed to find out what a properly qualified person was, and having found that out, he could, from among these people, select one of them. You cannot say that 'qualified person' has no meaning, you have got to find a meaning for this phrase, and every word of that section must be read in connection with every other word. The human mind is supposed to be capable of interpreting fully even a statute of the legislature. Some statutes, I admit, are very difficult to construe, because they are often not drawn with much care. But the judge who interprets these will say, I do not know whether these men in the House of Commons knew what they were doing or not, but for myself I am bound to give this language the most reasonable interpretation I can. I am bound to assume that they did know what they were doing. A judge is bound to find a meaning for these words 'qualified person,' otherwise he will hold this officer to be improperly appointed. It is no excuse for my hon. friend to say that he appointed Mr. Haycock. He might as well have appointed a cock of hay, and attempt to justify it under this section. I think my hon. friend was illogical in another respect. He said that Mr. Haycock covered the whole field. Why, in Nova Scotia we have dozens of haycocks and they do not cover a field. So my hon. friend has not a nice sense of language. I think a minister of the Crown should select every word he uses with the nicest care, with the same care that the Roman senators used when speaking. Once a barbarian came from a distant province that had been conquered by Rome, and hearing one of the senators pronounce a speech, he returned to his barbarian home and told the people to submit at once to the power of Rome, because, he said, the senators were gods and spoke as gods. Now how could any uncouth, unlettered person come into this House of Commons, and, looking down upon the grave and reverend seigneur, the Minister of Labour, and hearing him, in his most inartistic manner, discuss this statute, how could he return and make to the people of his distant province such a remark as that which was made concerning the Roman senators ? Surely the people of Canada should require of their ministers language as precise as that of the Roman senator. I am bound to tell you, Mr. Chairman, that Rome never ruled over as much territory

as the parliament of Canada rules over to-day. At the proudest moment of Rome's power she never ruled over 3,000,000 square miles; whereas the hon. gentleman, by the extraordinary conduct of fate, is permitted to rule over 3,750,000 square miles of territory. Now I desire in the interest of Canada that the Minister of Labour, for whom I have the kindliest feelings, and whose fine ability I am bound to say—that is, I assume that he has a fine ability, because I assume that any gentleman who becomes a minister of the Crown has fine ability, although he may successfully conceal it from the public for a long time. But to-night I am going to assume on behalf of the cabinet of Canada—for I am bound to respect that body—I am going to assume, no matter how violent the assumption—we are commanded by law often to make violent assumptions—I am bound to assume that the Minister of Labour possesses that luminous mind that would enable him at once, when his attention is called to this statute, to give us all the benefit of a clear and distinct explanation. If he has it not at hand, he will send and get us the original records of his department in which these appointments were all pointed out, and show us, before he asks us to pass that estimate, that every condition precedent to a legal appointment has been made.

To cover law costs and other expenses connected with deferred payments of bounties on iron and steel, $3,879.39.

The MINISTER OF FINANCE. This item arises out of the fact that there was a difference of opinion between the department and the Auditor General with respect to the claim of the steel companies for the payment of bounties. The question at issue was whether pig-iron, in the molten state, should be considered to be pig-iron, whether it must first be allowed to pass into the form of solid pig, or whether it was technically pig-iron as it came out in a molten condition. The department took the view, under the best information it could obtain, that the parties producing this iron had a right to claim the bounty upon it in the condition in which the claim was presented. There had been changes in the method of producing pig-iron. Formerly pig-iron was cast into solid pigs and passed in that stage into the next process for the manufacture of steel, but with the advancing methods of manufacture, that process was abandoned. The Auditor General took the ground that inasmuch as this pig-iron, in passing into the next stage of steel, was not cast into solid pigs, therefore it was not pig-iron. The matter was discussed for some considerable time, legal opinions were taken upon it and finally it was decided to have the case determined by the Exchequer Court. The decision was in favour of the company and against the view taken by the Auditor General. Thereupon the bounties that were claimed were paid but in the course of this transaction legal expenses were incurred in trying the case and it is to pay these legal expenses that this vote is asked.

Hon. Mr. HAGGART. I remember when the bounty on iron came up discussing this particular phase of the question. There was a bounty on pig-iron and a bounty on steel. I asked the government at that time if the company did not convert it into pig-iron and then into steel they would get the bounty for pig-iron and also for steel. The answer, if I remember correctly, at that time was that they would get the bounty for pig-iron and also for steel. I also drew the attention of the government to the fact that in the modern method of manufacturing steel it did not go into the form of pig-iron at all, but that it was converted at once into steel, and I asked the question at the time whether they got the bounty for pig-iron as well as for steel. I do not recall the exact terms of the answer given, but it seems to me that it was that they would get bounties on both iron and steel.

The MINISTER OF FINANCE. That is possibly correct.

Mr. GOURLEY. Why did the government not appeal? I do not wish to reflect in any way upon the judgment of Mr. Justice Burbidge, but in a matter involving so much money I would have thought that the government would have appealed, because I know there has been a great deal of speculation at the bar in regard to whether the judgment was scientifically or legally sound. I am bound to assume, in deference to the judge who pronounced the judgment, that it was, but I was surprised that the government did not think it wise to appeal, so that the question would be settled by a full bench. As a matter of fact, the judgment of a single judge does not settle anything. Any lawyer has a right to differ from him, but we are bound to bow to the judgment of the full court.

The MINISTER OF FINANCE. Apart from the question of law, there was a question of equity in it. Suppose that it should be assumed for the moment that the judgment of the court was wrong, the company might have proceeded to convert this pig-iron into solid form for 24 hours, and then to have passed it on to the next stage. It would simply have imposed a little more labour and a little more expense upon them, and I do not know that we have any object in forcing them to go to unnecessary trouble of that kind.

Mr. GOURLEY. Would it not have lessened the bounty that the government had to pay?

The MINISTER OF FINANCE. No. It would not have lessened the bounty, but it might have made it a little more expen-

sive for the company in the method of production, by obliging the company to go through the process in the old way rather than in the new. It would have made no difference in the amount of the bounty.

Hon. Mr. HAGGART. Does the hon. minister remember what we are paying in iron bounties now?

The MINISTER OF FINANCE. About $1,300,000.

Mr. GOURLEY. I understood that it made a considerable difference in the bounty. If it did not, I do not see why the company were so anxious to contest that suit.

The MINISTER OF FINANCE. They found the modern method cheaper, and of course we might have forced them to adopt the old cooling process that had hitherto been followed, but it would have made it cost a little more in the production.

Mr. GOURLEY. If that is the only point, I agree with the view of the hon. gentleman.

Hon. Mr. HAGGART. In the manufacture of steel by the modern method it is just as cheap to manufacture steel as pig-iron. You can bring out pig-iron in the same process as you can bring out steel, and the cost of manufacturing one is very little more, if any more, than the cost of manufacturing the other.

Mr. TAYLOR. Why these law costs when we have a Solicitor General's department to look after these matters? Why should we have paid these outside lawyers when we have the hon. Minister of Justice and the hon. Solicitor General? When hon. gentlemen opposite were on this side of the House they took that ground.

The MINISTER OF JUSTICE. We in the Department of Justice advised the Auditor General to the best of our ability. He refused to accept the opinion we gave and took outside advice. After he took the advice, we thought it better to allow the case to go to the court, as the advice he obtained differed from the advice we had given. The matter having been referred to the court, the result was that the opinion of the Department of Justice was sustained in its entirety.

Mr. GOURLEY. What were the costs?

The MINISTER OF FINANCE. $3,879.

The MINISTER OF JUSTICE. There were experts brought from all over the United States to testify.

Mr. GOURLEY. That includes witness fees?

The MINISTER OF JUSTICE. Yes, some of these experts were paid as high as $150 a day.

Mr. GOURLEY. Does that include solicitors' and experts' fees.

The MINISTER OF JUSTICE. Yes, the whole business.

Inspection of Staples—Expenditure in connection with inspection of grain and flour under the General Inspection and Manitoba Grain Acts—Governor General's warrant, $16,000.

Hon. Mr. HAGGART. How was it that you required a Governor General's warrant?

The MINISTER OF FINANCE. That was a case where the appropriation was found to be insufficient, and it was necessary to have an additional sum. As we had no provision to meet this expenditure, we had to obtain a Governor General's warrant. This service is self-sustaining. We have to vote the cost in the ordinary way, but the fees fully pay the expense.

Hon. Mr. HAGGART. What is the total amount required for inspection?

The MINISTER OF FINANCE. $50,000 with the present vote.

Hon. Mr. HAGGART. What were the fees?

The MINISTER OF FINANCE. About $75,000.

Mr. GOURLEY. Will the hon. minister excuse me for asking one more question about the bounty on steel? What was the Auditor General's objection if there was practically no difference in the amount of the bounty?

The MINISTER OF FINANCE. I suppose the Auditor General felt that it was his duty to give the treasury the benefit of all doubts, and having a doubt in his mind he took legal advice.

Mr. GOURLEY. If there was no difference in the payments that were to be made whether it was molten or solid, what doubt or difficulty could exist in the Auditor General's mind?

The MINISTER OF FINANCE. If the court had sustained the contention of the Auditor General, the company could not have collected the bounty on iron at all.

The MINISTER OF JUSTICE. He said that being in liquid form, notwithstanding that the ingredients were absolutely the same, it was not pig-iron. In order to be pig-iron, he held that it was necessary that it should go through the cooling process.

Mr. GOURLEY. With such astute officers, I think the revenue is safe.

Culling timber, $17,500.

Mr. INGRAM. What is this for?

The MINISTER OF FINANCE. This is the usual vote, with some very slight change.

Mr. TAYLOR. What is the revenue from this?

The MINISTER OF FINANCE. About half of the cost is refunded by the revenue.

Hon. Mr. HAGGART. This expenditure, I think, is one that the timber trade ought to bear itself. This is for the purpose of paying cullers of timber down in Quebec and probably other places. The fees received for the culling used to pay the expenses and leave a surplus, but now there is a deficit.

The MINISTER OF FINANCE. We used to have twenty-eight cullers on the list, and twenty-two of these have been superannuated, which accounts for the increase in the superannuation allowance.

Hon. Mr. HAGGART. There is no necessity at all for six cullers in Quebec; no timber goes there.

The MINISTER OF JUSTICE. Oh, yes.

Hon. Mr. HAGGART. Very little.

Mr. INGRAM. Who are these gentlemen?

The MINISTER OF JUSTICE. All good old Tories. They have been in the service for a very long time.

Hon. Mr. HAGGART. Notwithstanding that the trade is decreasing, the cost of the clerical staff has increased from $5,950 to $6,100.

Mr. COCHRANE. Are they Tories?

The MINISTER OF JUSTICE. Every one of them. I do not think we need trouble very much about the salaries there, because the larger part of the amount is for the salary of the supervisor, Mr. Paton, who has been there a very great number of years, and for whose salary we may be providing for the last time. He is a very old man, and I am sorry to say that he is not likely to have another salary voted to him.

Hon. Mr. HAGGART. I suppose you find it almost impossible to dismiss civil servants or reduce their number in Quebec.

The MINISTER OF JUSTICE. We are very partial to the old men we have there.

Mr. EARLE. In connection with the items for the Trade and Commerce Department, I would like to call the attention of the acting minister to a question which was brought to the attention of the department last year. It has reference to the list of articles which are mentioned as entitled to preferential entry into the markets of France. Salmon is not mentioned on that list, but there was a shipment from our province accepted last year, while there was another shipment which they refused to accept. I would like to know if the deputy minister can inform the minister as to the condition in which that matter stands at present.

Mr. TAYLOR.

The MINISTER OF FINANCE. The deputy minister informs me that the French government have not consented to take our view of the matter. They still adhere to their interpretation of the tariff as respects that item.

Mr. EARLE. There must be some misunderstanding about it, because one shipment that had been refused entry was afterwards accepted under the preferential tariff. The shipper himself informed me of that, and through me there was some correspondence on his behalf with the department.

The MINISTER OF FINANCE. Was it by direct shipment?

Mr. EARLE. It was by a shipment which was accepted as direct. As you are aware, we cannot ship direct in a ship sailing to France from our province, because there are none, and the shipment would have to go by rail to some of the eastern ports. There have been several shipments made, some of which have been entered under the preferential tariff. My object in bringing the matter to the attention of the department is to point out that while fish is mentioned on the list, canned salmon is not mentioned, and the French authorities claim it is not entitled to preferential entry. I wish to know if the department has taken any steps to have salmon placed on the list; lobsters and other fish are on it.

The MINISTER OF FINANCE. My recollection of the treaty is that it reads: 'Fish in its natural form,' or something like that. I do not think it specifically mentions the kind of fish, but I would not be sure about that. The main difficulty we have is the question of direct or indirect importation. If goods are sent by way of an English port and thence to France they do not treat that as a direct importation. If goods are sent by New York, strange to say, in the case of one line which seems to be recognized to some extent by the French government, the French Atlantic line, the French government have been willing to recognize goods carried by that line as a direct shipment. I am informed that the department has presented the matter to the French authorities, but so far without success.

Mr. EARLE. The shipment I refer to was made in the same way as lobsters and other fish are sent.

The MINISTER OF FINANCE. Was it made from a Canadian port?

Mr. EARLE. It was made from New York, by a French vessel.

The MINISTER OF FINANCE. They do admit lobsters sent by the French line under the treaty.

Mr. EARLE. If you look at the schedule you will see that it specifies the fish by name.

The MINISTER OF FINANCE. Perhaps it does.

Mr. EARLE. At the time the schedule was arranged there was no shipment of salmon in view, and it is likely an oversight on that account.

The MINISTER OF FINANCE. I will call the attention of the Minister of Trade and Commerce to it, and, of course, we are all anxious that the salmon of British Columbia should receive the benefit of the minimum tariff if we can get it.

Mr. EARLE. Very well.

The MINISTER OF FINANCE. I wish to call the attention of the committee to the supplementary estimates of the Department of Railways and Canals for the past year. In part I have been able to bring down the information which the hon. gentleman (Hon. Mr. Haggart) asked for, and the rest I will bring down at a later stage. I would be very glad that as far as possible hon. gentlemen opposite would facilitate the passage of these estimates, reserving to themselves the right to discuss similar items in the main estimates, which are yet to come, for the reason that the year has passed and gone and the accounts have to be closed up. It is of the utmost importance that these accounts should be promptly closed or otherwise the Auditor General cannot do his work, and the consequence would mean delay at the beginning of next year, I trust that hon. gentlemen opposite may be able to let the present estimates pass with as little discussion as possible, but, of course, I would not expect them to waive their right of inquiry or criticism.

Murray Harbour branch and Hillsborough bridge, Prince Edward Island Railway, $450,000.

Hon. Mr. HAGGART. The hon. minister was to bring down some information with respect to the Prince Edward Island Railway.

The MINISTER OF FINANCE. The hon. gentleman asked me to divide the item of $300,000 and show how much of it was for each branch of the service. It is as follows : For the bridge, $155,156.43 ; for the branch, $87,567.98 ; for rails, $45,000 ; for ties, $7,300 ; for rolling stock, $1,375.60 ; for land, $5,600. These items aggregate in round numbers $300,000.

Hon. Mr. HAGGART. What is the amount expended during the year under each head ?

The MINISTER OF FINANCE. For the year 1902-3 the expenditure was : On the bridge, $464,257.62 ; on the branch, $329,226.86 ; on the rolling stock, $9,515.52.

Hon. Mr. HAGGART. The hon. minister promised to bring down information as to what the rolling stock was.

The MINISTER OF FINANCE. Under the contract dated July 2, 1900, the contractor is to have the free use of two locomotives and twenty-five cars for ballasting, track laying, surfacing and trimming. He has had these since last summer. They are not new locomotives or new cars, but the smaller ones which have been in use for some years. He applied for additional locomotives and cars in May, 1903. Two locomotives and fifteen cars have been hired to him at $5 a day for each locomotive and 30 cents a day for each car. He has therefore a total of four locomotives and forty cars.

Hon. Mr. HAGGART. These supplementary locomotives and cars are not those to which he is entitled under the contract ?

The MINISTER OF FINANCE. No. He is hiring those at a price.

Hon. Mr. HAGGART. What possible object has the government in furnishing capital to this contractor, for which it receives an interest which is totally inadequate ?

The MINISTER OF FINANCE. Of course, under the contract he was to be allowed the use of these. The consequence was that his tender was lower than it would have been if he had to furnish them for himself.

Hon. Mr. HAGGART. The minister does not understand me. I am not referring to those to which he was entitled under the contract, but to those which were furnished to him subsequently at so much a day. Why do you furnish him with something that he is not entitled to under the contract ?

The MINISTER OF FINANCE. The road is approaching completion, and we shall require this rolling stock for the road. We could not afford to wait for it until the last moment.

Hon. Mr. HAGGART. It will be entirely useless when the road is finished. Is it sufficient justification to say that the rolling stock may be valuable after the road is completed, for purchasing rolling stock long before it is required for the road, and leasing it or giving it to the contractor ?

The MINISTER OF FINANCE. The road can be finished probably this autumn down to Murray river, and we would not have the rolling stock on hand for any great length of time.

Hon. Mr. HAGGART. No matter whether the road is finished or not, the minister must see that a wrong principle underlies this action.

Prince Edward Island Railway—to provide and lay steel rails, $13,400.

Hon. Mr. HAGGART. Is this the total amount that has been expended for steel rails during the past year ?

The MINISTER OF FINANCE. Yes.

Hon. Mr. HAGGART. What are these rails used for—for the purposes of the contractor solely ?

The MINISTER OF FINANCE. These are not for the Murray Harbour road. They are for the main line of the Prince Edward Island Railway.

Mr. INGRAM. What weight of rails are these ?

The MINISTER OF FINANCE. Fifty-pound steel rails. It is a narrow gauge road.

North channel—forming channel and dam, $80,000.

Hon. Mr. HAGGART. The last time the estimate was up, there was some negotiation with the United States regarding the erection of this dam. What is the total amount expended ?

The MINISTER OF FINANCE. The matter is making very satisfactory progress with the United States but is not yet settled.

Hon. Mr. HAGGART. Are you making the dam without their consent ?

The MINISTER OF FINANCE. This is not for the dam, and the dam should not be included.

Hon. Mr. HAGGART. What amount has been expended and what was the original estimate for that channel ?

The MINISTER OF FINANCE. The estimated total of that work when completed is $1,354,410.42, including the dam.

Hon. Mr. HAGGART. What was the amount estimated before the work began ?

The MINISTER OF FINANCE. The original estimate for 200 feet was $750,000. The width was afterwards increased to 300 feet. My deputy cannot remember the estimate made under the amended plan.

Hon. Mr. HAGGART. Will this $80,000 complete it ?

The MINISTER OF FINANCE. There is a further appropriation of $18,000 asked in the main estimates. These two items will complete it.

Hon. Mr. HAGGART. $1,302,000 for a work entirely useless and not required at all for the navigation of the river.

Galops canal—enlargement, $25,000.

Hon. Mr. HAGGART. As this item will create a long discussion and the hon. member from that district is not here, I would ask to have it stand over. I would ask also that the next item, $25,000 for depening and widening Galops rapids be allowed to stand over as there will be a vote for the purpose of striking it out and a full discussion.

Hon. Mr. HAGGART.

Mr. TAYLOR. The hon. member for Grenville informed me that he wanted this to stand as the money asked for has not been spent.

The MINISTER OF FINANCE. My information is that the work was done some time ago.

Hon. Mr. HAGGART. There never was work done for the payments made there.

Items allowed to stand.

Welland canal—to lower mitre sills of lock two and guard gates, $9,000.

The MINISTER OF FINANCE. I move to strike out that item.

Hon. Mr. HAGGART. I would like to know if the mitre sill is a foot higher than the navigation ?

The MINISTER OF FINANCE. Yes, there was a mistake made some years ago in the engineering.

Hon. Mr. HAGGART. Exactly the statement I made a couple of years ago when the item was under discussion, and I was informed that there was no mistake whatever.

Motion agreed to.

Welland canal—to remove obstructions and make other improvements, $30,000.

The MINISTER OF FINANCE. This is for deepening portions of the long level. The contractors have made better progress than anticipated, and a further sum of $30,000 is required to close the work to the 1st July.

Hon. Mr. HAGGART. What, for filling in the long level ?

The MINISTER OF FINANCE. For removing obstructions and taking out centre piers.

Hon. Mr. HAGGART. That is an enormous sum for taking out piers, there must be something else.

The MINISTER OF FINANCE. There are $95,000 in the main estimates. This is not only for the removal of piers but also for the putting in of new spans. The channel was found too narrow and those piers had to be removed.

Mr. LANCASTER. At what part of the canal are these ?

The MINISTER OF FINANCE. It is known as the Long Level. I do not know whether my hon. friend (Mr. Lancaster) can identify it by that.

Hon. Mr. HAGGART. That stretches over many miles. At what part of the Long Level is it ? If the hon. member for Welland (Mr. German) were here, he could tell us.

The MINISTER OF FINANCE. I remember the hon. member for Welland urged

it as of great importance to the navigation of the district.

Hon. Mr. HAGGART. I suppose it is in the town in which the hon. member (Mr. German) resides.

The MINISTER OF FINANCE. I cannot give the name of the precise spot.

Hon. Mr. HAGGART. There is only one spot where it can be.

The MINISTER OF FINANCE. It is between Port Colborne and Welland, but the deputy cannot tell me the precise spot.

Hon. Mr. HAGGART. It is between one extremity of the canal and the other. The hon. gentleman's (Hon. Mr. Fielding) information is precise and to the point.

The MINISTER OF FINANCE. If my hon. friend is acquainted with the——

Hon. Mr. HAGGART. I know where it is exactly. Better pass on to the next.

Welland canal—land damages, Grand river, $625.

Hon. Mr. HAGGART. Surely the land damages are done on the Grand river. This is of no use to the navigation of the Welland canal, and the sooner it is abandoned the better.

The MINISTER OF FINANCE. This is because of damages to land by flooding caused by the construction of the Dunnville dam.

Hon. Mr. HAGGART. Why, this dam was erected forty years ago, and there are land damages every year. Who are the parties ?

The MINISTER OF FINANCE. One of the claimants is W. T. Anthony, $500 ; Phillip Dufford, $97.27.

Hon. Mr. HAGGART. He must have been kicking a good deal ?

The MINISTER OF FINANCE. Was that the way in the old days ?

Hon. Mr. HAGGART. That is the way now.

The MINISTER OF FINANCE. The Department of Indian Affairs had two claims of $14.63 and $13. I do not suppose that department has been kicking very much.

Hon. Mr. HAGGART. The sooner the government is relieved of responsibility in reference to this branch of the canal, the better. It is of no use to navigation, and has been abandoned since the Lake Erie level was adopted. The Grand river in connection with the Welland canal is a totally useless work.

Mr. INGRAM. And, so long as it is there, there will be land damages to pay, if the government is willing to pay them. Every one knows that this is a district of low level, and is bound to flood in some part every year.

Lachine canal—electrical appliances for operating lock gates, bridges and weirs, $20,000.

Hon. Mr. HAGGART. What is the total amount of this improvement ?

The MINISTER OF FINANCE. This is to provide power house, flume, necessary machinery, power for work shops, &c. The expenditure up to 30th June, 1903, was $67,895 ; and the amount required to complete the work is $30,000, making a total estimated cost of over $97,000. I cannot explain why the appropriation asked is only for $20,000, making $87,000. However, that is an error on the right side.

Hon. Mr. HAGGART. Were these works only commenced last year ?

The MINISTER OF FINANCE. Yes.

Mr. TAYLOR. Is the work being done under contract ?

The MINISTER OF FINANCE. Yes. There is one contract of $12,925, with Mr. Pringle, for electrical apparatus, and there are other items making up the total to over $19,000 out of the $20,000 we asked for.

Mr. FOWLER. Was the rest of the work done by contract ?

The MINISTER OF FINANCE. Yes, the principle part of it.

Hon. Mr. HAGGART. What part was not done by contract ? One would think that all these electrical appliances would be supplied under contract.

The MINISTER OF FINANCE. All the electrical appliances, I am advised, were procured under contract. But there were a number of services and other supplies that could not be contracted for.

Hon. Mr. HAGGART. The total expenditure, including this vote have been $87,000. But what amount of that is done by contract ?

The MINISTER OF FINANCE. I was confining myself to an explanation with regard to this vote of $20,000, I cannot give the facts with regard to the previous expenditure, but I will get that information and bring it down.

Mr. GOURLEY. I think I ought to move to strike out this vote entirely. We often hear complaints made of tu'penny ha'penny expenditures on the harbours of Nova Scotia, and it grieves me to see millions of money thrown into these canals in Ontario.

Mr. LANCASTER. This is for Quebec.

Mr. GOURLEY. But it is necessary to and tributary to Ontario. I find that these canals have been squandering money for half a century to develop the trade of To-

ronto. Now, I am not sectional. I never uttered a sectional word in my life, and I hope I will be spared the necessity of doing so. But when I hear hon. gentlemen from Ontario begrudging, apparently, little trifles that we need for harbours and steamers in Nova Scotia, I am shocked when I see these extraordinary sums voted with such carelessness for Ontario. I think there must be an end of these enormous expenditures on these canals, unless there is some compensation given in some way to the maritime provinces. We are tired of these eternal expenditures upon Ontario. We in the maritime provinces are tired of being the milch cow of this Dominion. As some compensation last year I readily agreed to the knocking off of the tolls on this canal, because anything that would benefit the trade of Ontario benefits me. I represent Ontario as much as any of these gentlemen here. Yes, under the law of this country the Minister of Justice would tell you that I represent every foot of Ontario as well as my own county. Now I want the freight rates on the Intercolonial lowered as a compensation for doing away with the tolls on the canals. I cannot see why this Lachine canal should be free, why we should vote this enormous sum of money, $20,000, to make bright and beautiful this canal for these gentlemen from Ontario who sail through it in their pleasure yachts. The item reads 'Electrical appliances for operating the lock gates, bridges and weirs.' These gentlemen travelling down from the wealthy cities of Ontario cannot wait, apparently, to have these locks opened in the ordinary way; this country must furnish them with the most modern electrical appliances for that purpose. I suppose when the Minister of Customs desires to go on one of these pleasure trips down the St. Lawrence he cannot be bothered with having these opened in the ordinary way. That is all right, he wants to lead the strenuous life, I suppose. But at the same time I want to make the point that we must have some compensation for this extraordinary expenditure of money on these canals. We are getting tired of it in Nova Scotia, and we are not going to put up with it any longer. Therefore I think these gentlemen from Ontario should agree to cut the rates on the Intercolonial 50 per cent.

An hon. MEMBER. Make them free.

Mr. GOURLEY. The people of Ontario are not generous enough for that. We would be satisfied with a cut of 50 per cent. Or else I will move to strike out this item for lighting luxuriously the locks on the Lachine canal. It is the most extraordinary thing I ever heard of—electrical appliances for operating lock gates! I am told this is the latest and most modern thing in the history of canals. The people of Ontario are never satisfied with anything. They expect us in the maritime provinces to be satisfied with any old thing that happens to come along. We have been satisfied long enough, and now we want more railways. The province of Nova Scotia is practically without railways. If it had not been for the kindness of Providence in throwing the ocean around us, we would have been barbarians for the want of communication. But the sea has given us means of communication by which we have been enabled to keep in touch with each other, and keep our language and civilization in a measure intact.

Mr. DEPUTY SPEAKER. I must ask the hon. gentleman to confine himself to the question.

Mr. GOURLEY. I move to strike that item out. I ask the Minister of Finance whether he is prepared, in compensation for these enormous votes that we are called upon to pay in the maritime provinces, to make us some compensation in the way of reducing rates on the Intercolonial.

The MINISTER OF FINANCE. I want my hon. friend to prove his generosity by being content to take less than he thinks he deserves; I want him to be generous enough to withdraw the motion. When you want to do a generous and gracious thing, do it handsomely.

Mr. GOURLEY. I will withdraw it, assuming, however, that the acting Minister of Railways and Canals will take into consideration the proposition, and endeavour to do justice to the maritime provinces.

The MINISTER OF FINANCE. Hear, hear.

Rideau canal—to complete Brasses' Point bridge, $2,750.

Hon. Mr. HAGGART. Where is that?

Mr. TAYLOR. That is at Brewer's Mills.

The MINISTER OF FINANCE. The appropriation to complete this bridge was found insufficient. It is a steel superstructure. The contract price was $8,950 and the contract was awarded to the Dominion Bridge Company, who were the lowest tenderers.

Mr. TAYLOR. They had trouble with the piers.

Hon. Mr. HAGGART. I do not see any item in the estimates for Poonamalee crossing which was recommended to the department a couple of years ago. I had expected to see an item in the estimates for the purpose of doing this work and I hope that before the session is over there will be a grant made to the township of Elmsley and to the other township in Leeds county which are practically interested in this undertaking. It is money that they are in

justice entitled to. On account of the construction of the Rideau canal part of the highway has been overflowed. It has been reported by the superintendent of the canal and it should be attended to without further delay. It really does not require an item in the estimates because the general vote for the Rideau canal will cover it. A petition has been sent to the department in regard to another matter in connection with the township of Montague and a deputation has been here to see the Minister of Railways and Canals. The representations of that deputation were promised favourable consideration, and the deputation went home believing from the courteous manner in which they had been received they had virtually received a grant for the undertaking. I hope the hon. minister will see his way clear to taking favourable action in regard to these two matters. Damages have been caused, something in the line of those caused by the overflowing of the Grand river in consequence of which money has been voted. As a result of the construction of the Poonamalee dam the parties living above it allege that the dam has been raised every year, that the overflow of water upon the land is greater every year and they claim that they are entitled to damages. It is a small amount that they require and their request is a legitimate one.

The MINISTER OF FINANCE. I will inquire into the matter.

Hon. Mr. HAGGART. Oh, yes, but inquiries have been made for a long time.

The MINISTER OF FINANCE. We will consider it. We must not make promises.

Hon. Mr. HAGGART. I should judge from that that there are to be further supplementary estimates.

The MINISTER OF FINANCE. We have some supplementary estimates to come down.

Welland canal—to complete dam and bridge at Dunnville, $12,000.

Hon. Mr. HAGGART. That is the most monstrous expenditure that I ever heard of the government making for a work that is not at all necessary. This dam is for the benefit of a lot of mill owners on the Grand river. I do not believe you collect the amount that they promised each year for the use of the water for running their mills and to make an expenditure of $12,000 for a purely private undertaking for the benefit of these parties without a particle of benefit in it for the country at large is most unjustifiable. You might as well give me a present of $12,000 as make such an expenditure as that.

The MINISTER OF FINANCE. I want to reduce that item to $3,001. At the same time I would not be acting fairly by my hon. friend if I conveyed the impression that that was all, because there was an appropriation in the main estimates for this work. This is only the balance.

Hon. Mr. HAGGART. What is the total amount you are expending ?

The MINISTER OF FINANCE. There has been voted $30,000 and when we reduce this amount to $3,001 it will make $33,001.

Hon. Mr. HAGGART. And that is only for the purpose of repair ?

The MINISTER OF FINANCE. This finishes it.

Hon. Mr. HAGGART. This is being done by day labour ?

The MINISTER OF FINANCE. No, it is under contract. The contractors being Messrs. Hutchison, Lattimore & Lalor.

Hon. Mr. HAGGART. A great portion of it was done by day work.

The MINISTER OF FINANCE. I am advised that the hon. gentleman is mistaken.

Hon. Mr. HAGGART. Was there none done by day labour ?

The MINISTER OF FINANCE. The amount of the contract is stated to be $39,069.96, let to the lowest tenderers, the gentlemen whose names I have mentioned. It is a schedule contract and it is estimated to figure out to that amount.

Hon. Mr. HAGGART. That is all the expenditure under contract ?.

The MINISTER OF FINANCE. Yes.

Hon. Mr. HAGGART. Well, that is supplementary to the work done by the day there. There has been a lot of work done by day labour. There have been parties employed from 1896 down by the day for the purpose of renewing the dam.

The MINISTER OF FINANCE. In this case we are rebuilding the dam. The hon. gentleman is referring to some previous work of repair.

Hon. Mr. HAGGART. Rebuilding, is repairs.

The MINISTER OF FINANCE. This was commenced last year out of the appropriation of last year.

Mr. INGRAM. Is the object of this dam to furnish water to the feeder of the Welland canal which is not used at all now ?

The MINISTER OF CUSTOMS. What did Cayuga bridge cost ?

Mr. INGRAM. The hon. gentleman (Hon. Mr. Paterson) ought to know because he criticised it very severely when it was up in the House several years ago.

The MINISTER OF CUSTOMS. How much did that cost ?

Mr. TAYLOR. About $4,700.

The MINISTER OF CUSTOMS. A little more than that.

Mr. TAYLOR. Look at the Auditor General's Report.

The MINISTER OF CUSTOMS. This is on the same ground. The river flooded the land.

Hon. Mr. HAGGART. What is the use of this dam to the public ?

The MINISTER OF FINANCE. The information furnished me does not enable me to answer the hon. gentleman's question.

Hon. Mr. HAGGART. It is possible it may have some public utility but it is not apparent to any one who has visited the place. It may be apparent to the department.

Mr. COCHRANE. I must confess that we are passing these large items very flippantly. It was necessary at one time to have this as a feeder to the Welland Canal, but it is not required since the canal was deepened, and why should the ratepayers of my riding be called upon to pay $33,000 to keep up a dam which is absolutely only for the use of private individuals who have mills along there ? If these private parties want a dam let them keep it up themselves.

The MINISTER OF PUBLIC WORKS. The water must be maintained there and these parties have leases and pay us a revenue.

Mr. COCHRANE. Let them have it free and keep the dam themselves.

The MINISTER OF PUBLIC WORKS. It might be cheaper for the manufacturers to do that than to pay the considerable rental which they pay. We must remember that indirectly we are helping these manufacturers who have their works along the canal and who give employment to a large number of people. That is for the benefit of the public as a whole.

Hon. Mr. HAGGART. What is the amount of revenue the government receives? There were two flour mills there, one of which was burned down, and the one remaining turns out about 20 barrels a day. There is also a company manufacturing light for the town of Dunnville, and that is all. What revenue is paid by these people to the government ?

The MINISTER OF FINANCE. I will have it looked up, and give the hon. gentleman the information later.

Intercolonial Railway, operating expenses, $800,000.

The MINISTER OF FINANCE. This simply refers to the increased volume of business.

Hon. Mr. PATERSON.

Hon. Mr. HAGGART. You want it to balance your books.

The MINISTER OF FINANCE. Yes. I will bring down a statement of the receipts and expenditures later on, and we will pass the item with that understanding.

Hon. Mr. HAGGART. Very well.

Some resolutions reported.

The MINISTER OF FINANCE moved the adjournment of the House.

Hon. Mr. HAGGART. Will the Minister of Finance be kind enough to state what business he intends to take up on Monday?

The MINISTER OF FINANCE. Monday being a private Bills day, and the Grand Trunk Pacific private Bill being on the Order paper, my expectation is that the hon. gentleman in charge of that will take it up. That with other private Bills may occupy some time. If we reach government Orders, we may proceed with some resolutions and Bills, and if we reach Supply, we will take up the main estimates of the Department of Railways and Canals.

Hon. Mr. HAGGART. If you proceed with Bills, will you take up the Redistribution Bill ?

The MINISTER OF FINANCE. I have no instructions from the Prime Minister about that.

Hon. Mr. HAGGART. We would like to have a special arrangement with reference to that Bill and a day fixed.

The MINISTER OF FINANCE. I will convey the hon. gentleman's wish to the Prime Minister.

Hon. Mr. HAGGART. Has the hon. gentleman received a decision from the Speaker as to whether the National Transcontinental Railway Bill is to be introduced by resolution or not ?

The MINISTER OF FINANCE. The resolution stands on the Notice paper, and its formal stage will be taken on Monday.

Motion agreed to, and House adjourned at 11.35 p.m.

HOUSE OF COMMONS.

MONDAY, August 3, 1903.

The SPEAKER took the Chair at Three o'clock.

TORONTO AND HAMILTON RAILWAY COMPANY.

On the Order for :

Resuming adjourned debate on the proposed motion of Mr. Campbell that Mr. Speaker do

now leave the Chair for the House to go into Committee of the Whole on Bill (No. 147) to incorporate the Toronto and Hamilton Railway Company.

The MINISTER OF PUBLIC WORKS (Hon. James Sutherland). Mr. Speaker, it has been represented that some points that have been raised in connection with this Bill were not fully considered by the Committee on Railways, Canals and Telegraph Lines, and with the permission of the House, if it is agreeable to all parties, I beg to move :

That the order be discharged and that the Bill be referred back to the Committee on Railways, Canals and Telegraph Lines for further consideration.

Mr. CLARKE. May I ask the hon. minister (Hon. Mr. Sutherland) if the proposition to refer the Bill back has been agreed to by both parties ?

The MINISTER OF PUBLIC WORKS. No.

Mr. CLARKE. I may say, for the information of the House, that there was considerable difference of opinion as to the merits of this measure. The right hon. leader of the government (Rt. Hon. Sir Wilfrid Laurier) and some of his colleagues received a deputation representing both parties, and the conclusion was reached that the counsel having charge of this measure should present to the government the case in support of the measure and that five days should be given to those who oppose it to make answer to the case presented on behalf of the promoters. Since that meeting was held, in so far as I am aware, those representing the municipalities opposed to the Bill in its present form have not been heard from, and I want to know if the action that is being taken meets with their concurrence ?

The PRIME MINISTER (Rt. Hon. Sir Wilfrid Laurier). As the hon. gentleman (Mr. Clarke) is aware, the invariable practice on both sides of the House, I think, is to support the report of a standing committee of the House when they have examined a matter that is referred to them by the House. Naturally, we come to the conclusion that they have given the best consideration to the question that is possible to give to it, and we are prepared to give to their report all due consideration. That rule of the House has been invariably observed, except where it has been shown that there has been misrepresentation, or that an important feature of the measure has not been examined. This Bill has been reported by the Railway Committee, but since the Bill has been so reported it has been represented to us that this was a matter which invaded provincial rights. Strong representations, as my hon. friend knows, have been made to us in that respect. It is difficult to come to a conclusion and to form a judgment upon the point so raised except by a thorough examination and discussion of the Bill itself and the effect of it. We have, therefore, without prejudging the question at all, thought it preferable to have the matter referred back to the Committee on Railways, so as to give an opportunity to all parties to have the matter thoroughly threshed out, and that is the reason we have come to the conclusion that it is better that this motion should be made and the matter again brought to the attention of the Railway Committee. I have received a long memorandum from the city of Toronto upon this subject.

Mr. CLARKE. Before the matter is taken up by the Railway Committee, will those who are opposing the Bill in its present shape be communicated with and be given an opportunity of being present so that they may be heard ?

The PRIME MINISTER. Oh, certainly.

The MINISTER OF PUBLIC WORKS. I do not know the views of either party, but I thought the best way to do was to give the parties an opportunity of being heard by the members of this House in the Railway Committee.

Motion agreed to.

GRAND TRUNK PACIFIC RAILWAY COMPANY.

House again in committee on Bill (No. 64) to incorporate the Grand Trunk Pacific Railway Company.—Mr. McCarthy.

Mr. McCARTHY. Mr. Chairman, I would suggest to the committee the advisability of disposing first of the clauses of the Bill that stood for consideration, and then taking up the proposed amendments of which notice has been given by hon. members.

On section 11,

Mr. MACLEAN. I intend to take the opportunity of this motion which is now before the House to discuss the general proposition of the Grand Trunk Pacific Railway, both in the way of this Bill and in the way of the proposition made by the government the other day. I am quite within my rights, I think, in discussing it upon this question, and I propose to avail myself of the opportunity.

Mr. DEPUTY SPEAKER. Order, is it the will of the committee that this discussion should take place ?

Mr. MACLEAN. It is not out of order.

Mr. DEPUTY SPEAKER. Yes. You cannot discuss the principle of a Bill on one of the sections in committee.

Mr. MACLEAN. This is on the motion to go into committee.

Mr. DEPUTY SPEAKER. But we are in committee.

Mr. MACLEAN. Well, I can hang on a discussion on this clause. I hold that at any stage of the Bill it is quite in order to discuss the general proposition.

Mr. DEPUTY SPEAKER. It is not in order, but if the committee is willing I will bow to the committee.

Some hon. MEMBERS. Dropped.

Mr. MACLEAN. No time will be lost because the discussion has to come up and it suits by book to discuss it now.

Some hon. MEMBERS. Order.

The MINISTER OF PUBLIC WORKS. I appeal to the committee that there ought be some decorum and some effort to proceed in accordance to the rules of the House. There have been a number of opportunities for discussing the Bill and there will be plenty of other opportunities. If a transgression of the rules like this is to be allowed in one Bill why not in all Bills. Surely my hon. friend (Mr. Maclean) will see the necessity of proceeding in accordance of the rules of the House.

Mr. DEPUTY SPEAKER. A discussion on the principle of any Bill cannot take place upon the discussion of any one of its clauses. My ruling is that the discussion on the principle of the Bill is now out of order.

Mr. MACLEAN. To put myself in order, I shall have to move that the committee rise and report progress.

The PRIME MINISTER. That would not help you.

Mr. DEPUTY SPEAKER. The hon. member will have to confine himself to show why the committee should rise.

Mr. MACLEAN. With all due respect to the Chair, I can go into the whole question on that motion.

The MINISTER OF PUBLIC WORKS. You will have plenty of other opportunities.

Mr. MACLEAN. What is the difference?

Mr. FRASER. One is right and the other is wrong.

Mr. DEPUTY SPEAKER. It matters not to me, but the rule is that if the hon. gentleman moves that the committee rise and report progress, he will have to speak to that motion. The hon. member knows that just as well as I do.

Mr. MACLEAN. I will appeal to the leader of the House to say if there is anything wrong in allowing a discussion on the general principle of the Bill now. I have not a great deal to say, yet I wish to say it, and I would like to say it to-day.

Some hon. MEMBERS. Order.

The PRIME MINISTER. As my hon. friend (Mr. Maclean) has appealed to me, I must say that I deeply sympathize with him. I understand he has a speech on his stomach which he wants to be delivered of to-day, but unfortunately the rules of the House do not permit of it. I would advise him to wait until the proper opportunity arises which is not very far off. The best way after all is to abide by the rules of the House.

Mr. MACLEAN. I am well able to take care of myself, but while I do not appeal from the ruling of the Chairman, I believe that I am quite in order in discussing the Bill now. As the Prime Minister has recommended a certain form or emetic, I would suggest to him that he tender it to some of his own supporters instead of to members on this side.

On section 11,

Mr. McCARTHY. The leader of the opposition suggested that the word 'common' should be inserted after the words 'amount of such' so as to make it read 'amount of such common stock.' I have consulted the parties interested, and I am prepared to accept the suggested amendment. This amendment would make the clause apply to common stock and not to preferred stock.

Hon. Mr. HAGGART. In the government Bill there is a class of stock which comes after the government guarantee and which is to be guaranteed by the Grand Trunk Pacific Railway Company. Can they issue this stock in payment of the guarantee for that other stock?

Mr. McCARTHY. I should think not.

Hon. Mr. HAGGART. You are quite sure that they cannot.

Mr. HUGHES (Victoria). Get it defined if there is any doubt about it.

Mr. McCARTHY. Is there any doubt about it?

Mr. BORDEN (Halifax). This clause has to be considered in connection with other proposed amendments, one of which has reference to the power of the company to enter into an agreement with the government for the construction and operation of the line. Then there is a provision in the Bill submitted by the Prime Minister under which the Grand Trunk Railway Company is to acquire the whole of the common stock of this company. Taking this clause in connection with that provision, what is the effect upon the question of the construction of the railway from Moncton to Winnipeg? Is it the intention of these three provisions to which I have called at-

tention that this stock shall be issued under some arrangement between this company and the Grand Trunk Pacific and that the Grand Trunk Railway Company shall construct that portion of the railway ? Is that not possible ?

Mr. McCARTHY. I think not, because this section only applies to any payment for 'plant, rolling stock, docks, elevators, wharfs, warehouses, vessels or materials.' All the common stock is to be held by the Grand Trunk Railway Company, so that during the term of the lease for fifty years it is still in the hands of that company.

Mr. BORDEN (Halifax). Let us see if it can be worked out. We will suppose that the Grand Trunk Pacific Railway Company makes a contract with the government of Canada to construct a line of railway from Moncton to Winnipeg, and sublets that contract to the Grand Trunk Railway Company. I do not know whether that can be done or not. I do not know what the powers of the Grand Trunk Railway Company are in that regard. Under the provisions of this clause this company might allot the whole of the common stock to the Grand Trunk Railway Company as part of the compensation for the construction of that line. I think that is possible.

Mr. McCARTHY. I submit that it is not possible, because under the contract with the government the Grand Trunk Pacific Railway stock of $25,000,000 is to be acquired and held by the Grand Trunk Railway Company ; so that for fifty years the Grand Trunk Pacific Railway will not be at liberty to allot its stock at all.

Mr. BORDEN (Halifax). That does not quite answer what I have said. I have said that the Grand Trunk Pacific Railway make a contract with the government to build this line. There is a provision in the Bill for a transcontinental railway that the Grand Trunk Railway Company shall acquire all the stock of the Grand Trunk Pacific Railway Company. Assuming that the Grand Trunk Railway Company has the power under its charter, it could acquire under the provisions of this Bill the $25,000,000 of stock of the Grand Trunk Pacific Railway in the way I have mentioned. I would like to know whether the Grand Trunk Railway Company has power to enter into a contract of that kind ?

The MINISTER OF JUSTICE. The only difficulty I see as to that is that according to my general knowledge of the Grand Trunk Railway Act, that company has no authority to build a railroad at all. I may say that this section is similar in terms to section 39 of the General Railway Act.

Hon. Mr. HAGGART. This is far wider. This provides that 'as consideration for rights, powers, and privileges acquired' the company may issue paid up stock. Under the Bill introduced by the government, it is provided that the Grand Trunk Railway Company shall take stock in the new undertaking to the extent of $25,000,000. I could not understand where the company could get the money to take that stock. This section enables the new company to allot its stock to the Grand Trunk Railway Company as a payment for the guarantee of the transcontinental railway's bonds, or for the purchase of rolling stock for the new line.

The MINISTER OF JUSTICE. Will the hon. gentleman be good enough to point out the word ? Is it in consideration for rights acquired, for powers acquired, for privileges acquired, that they can get that stock ?

Hon. Mr. HAGGART. Yes.

The MINISTER OF JUSTICE. Under which of the words could it be done ?

Hon. Mr. HAGGART. In consideration for rights, powers and privileges acquired.

The MINISTER OF JUSTICE. Which of the words would cover it ?

Hon. Mr. HAGGART. Any of them. A privilege is the endorsing of the bonds by the Grand Trunk Railway.

The MINISTER OF JUSTICE. That would not surely be a privilege acquired. How could you call a guarantee given upon the second mortgage bonds a privilege acquired by the Grand Trunk Railway ? It would be a liability incurred by the Grand Trunk Railway.

Hon. Mr. HAGGART. Surely it is a privilege to the company that gets it.

The MINISTER OF JUSTICE. I am sure that if my hon. friend will consider these words further, he will change his opinion.

Hon. Mr. HAGGART. Would it not be under services rendered ? Under this Act of incorporation the Grand Trunk Pacific Railway may issue paid up stock for the guarantee received from the Grand Trunk Railway on their second-class securities for the purpose of purchasing rolling stock for the two lines.

The MINISTER OF JUSTICE. There must be somewhere in the Act of incorporation authority for the Grand Trunk Pacific to transfer these over to the Grand Trunk Railway or otherwise the Grand Trunk Railway could not take the stock. I do not think they could do it under this clause.

On section 26,

Mr. McCARTHY moved that section 26 be struck out and the following substituted therefor :

The company may construct, acquire and operate ropeways for the transportation of ores and other freight, and also tramways, not exceeding ten miles in length in any one case, to or from any point on its railway or any branch thereof, in the province of British Col-

umbia, and shall have all such powers for the expropriation of land requisite for the convenient construction and operation of such works as are given by the Railway Act to railway companies for railway purposes, but the powers conferred upon the company by this section shall not be exercised until a plan showing the route of the ropeways or tramways proposed to be constructed have been duly filed with the Department of Railways and Canals, and approved by the Railway Committee of the Privy Council, or such authority, tribunal or commission as is designated or constituted under any Act of the parliament of Canada, for the regulation or control of railways, and no such tramway or other way shall be constructed upon or along any street, highway or other public place within the limits of any municipality until the company shall have first obtained the consent of such municipality, within which such street, highway or other public place is situate.

2. Before such approval is given, notice of the application therefor shall be given in writing to every other railway company operating a railway in the said locality, and such notice shall be published in the 'Canada Gazette' for at least one month previous to the time named in the notice for the making of such application, and such notice shall state that all persons interested may appear and be heard on such application.

Mr. CLARKE. As this amendment covers mine, I beg to withdraw the amendment of which I gave notice.

Mr. INGRAM. Does this amendment affect a tramway which runs outside a municipality ?

Mr. McCARTHY. It applies to any municipality affected.

Mr. INGRAM. The consent of every muncipality must be obtained. But suppose a road runs between two municipalities, and one of them refuses to give consent, to whom is there an appeal for a redress ?

Mr. McCARTHY. We have no redress.

Mr. INGRAM. It is a remarkable piece of legislation to put a railway company in such a position that if a municipality objects to giving permission, the railway company has no alternative.

The MINISTER OF JUSTICE. This only applies to the branches.

Mr. INGRAM. Will the general law in Canada be affected ?

Mr. McCARTHY. The hon. gentleman will remember that we had quite a long discussion when the Bill was in committee before, and it was explained that these ropeways and tramways only applied to the province of British Columbia. That is the intention of the promoters of the Bill, and I stated to the committee that that provision was thus confined. The hon. member for Victoria and the hon. member for West Toronto gave notice of amendments, and these amendments were considered, and the power which is sought to be embodied in this clause was understood by them. I see the point made by the hon. member for Elgin (Mr. Ingram). In the more thickly or densely populated section of the country it would be proper not to accept the amendment which I moved, but inasmuch as it applies to British Columbia, and the intention being only to run tramways or ropeways to or from a mine, for instance, I do not see that there would be any difficulty on our part. I quite see it might be a precedent that may do harm in the future.

Mr. INGRAM. I am not objecting so far as the present Bill is concerned, but in view of the future ; I am speaking of this parliament laying down a principle covering the General Railway Act of Canada.

Mr. CLARKE. This matter has been discussed again and again in committee. The municipalities must have protection against these insidious attempts to promote legislation in this parliament to override provincial and municipal rights. The hon. gentleman who has charge of this Bill understands the situation exactly. He has consented to an amendment to meet the views I have presented. We must guard against any action, under the guise of general legislation, that will give power to run tramways through the streets of a municipality without its consent. What this company desired was power to construct tramways on the streets and highways of a municipality without its consent. Will it be contended that the company should have power to run tramways through the streets of any municipality in Canada, if the municipality does not consent ? It strikes me that the power to authorize the operation of tramways belongs to the provincial legislatures, and not to this parliament.

Hon. Mr. HAGGART. It does not interfere with the main line at all, or their branches. The principle which my hon. friend from West Toronto is advocating so firmly only applies to rope lines to and from the main line of the road.

Mr. CLARKE. To all kinds of tramroads.

Hon. Mr. HAGGART. It only applies to lines of road in British Columbia. As amended it only applies now to those in British Columbia for the purpose of reaching mines of ore.

Mr. HENDERSON. Before the amendment to section 26 is carried, I desire to move an amendment to that amendment, of which I gave notice. The object of my amendment is to prevent this company from exercising a power which I do not think has been granted to any other railway company, that is a power to build branch lines from branch lines, and thus extend their operations all over the country. As I read section 11 of the Act, I understand that the Grand Trunk Pacific Rail-

way includes the main line and the branches named therein. Now when we read section 26 we find that the company takes power 'to construct, acquire and operate tramways or other ways for the transportation of ore and other freight to or from any point on its railway or any branch thereof.'

Mr. McCARTHY. The hon. gentleman is not reading from my amendment, but he is reading from the original Bill. His point is well taken as to the original Bill, but not as to my amendment.

Mr. HENDERSON. I will now read the amendment:

The company may construct, acquire and operate ropeways for the transportation of ores and other freight, and also tramways, not exceeding ten miles in length in any one case, to or from any point on its railway or any branch thereof.

Now it is quite clear to my mind that power is here taken to construct a branch line ten miles in length and then throw out another branch line ten miles from the first one, and so continuously; so that practically it is a charter that covers the whole country. Now I think there should be some limitation to bring it within the general scope of what parliament has allowed, simply branch lines ten miles in length from its main line.

Mr. McCARTHY. The proposed amendment to this section only applies to ropeways or tramways, and they are to be limited to ten miles in length. Such ropeway or tramway may start from the main line or from a branch line. Nothing more is asked for, it goes no further. The objection the hon. gentleman now makes is well founded as concerns the original clause, but not as concerns the suggested amendment.

Mr. MONK. It seems to me this section simply consecrates a principle which has been accepted in the Railway Committee, that tramways should not circulate through streets without permission of the municipality. The objection raised is that this does not give sufficient power to the municipality in case of conflict arising between the municipality and the railway company. I do not think that objection ought to be sustained, because if the municipality has a decided objection to the circulation of tramways upon its streets, I do not see that we have any power to interfere with the power of the municipality which, as I understand, we want to establish. Moreover if it only applies to British Columbia for the conveyance of ore, I do not see what objection there can be.

Mr. MACLEAN. The municipalities are not trying to block the great railway companies; what they are trying to do is to prevent tramways being forced upon them through a general Railway Act, without their consent. No municipality ever yet tried to block a railway in the manner suggested here to-day. They have not done it, and until such a case arises, I think we might just as well accept the clause as it is to-day.

Mr. HENDERSON. I move in amendment to the amendment to strike out the words 'or any branch thereof' in the third line of the amendment.

Amendment to the amendment negatived.

Amendment agreed to, and section as amended agreed to.

Mr. McCARTHY moved to amend section 1 by inserting therein the following names:

Sir Charles Rivers-Wilson, C.B., G.C.M.G.; Lord Welby, G.C.B.; John A. Clutten-Brock, Joseph Price and Alfred W. Smithers, all of the city of London, England.

Hon. Mr. HAGGART. Is that in addition, or in substitution?

Mr. McCARTHY. Yes, in addition.

Mr. MACLEAN. Now, Mr. Chairman, I am quite in order in passing any remarks I choose to pass in regard to this Bill.

Mr. McCARTHY. Will not the hon. gentleman wait and speak on the motion to report?

Mr. MACLEAN. No, I would like to say now what I have to say. The whole principle was brought up by the names that are here proposed. We know now the men we are dealing with and we have the proposal the government made the other day. So, I am quite in order in going into the whole question, and I am going to do it. The cry of the west to-day is in regard to transportation. The cry of the west is: Help us to move our crops; we have abundant crops, more than can be handled by existing routes, and we ask the people of Canada to afford us relief from the present condition of things.

Mr. DEPUTY SPEAKER. Will the hon. member (Mr. Maclean) allow me to put the motion?

Mr. MACLEAN. Yes.

Amendment was read.

Mr. MACLEAN. As I was saying, Mr. Chairman, the cry of the west is for help to solve the transportation problem. They say: We cannot move our freight; there are not sufficient elevators; there is not sufficient rolling stock; in every way things are not as they ought to be, and we appeal to the parliament of Canada for relief. In answer to that appeal a proposition has been made by the government, and this Bill has been introduced in the House. I do not think this Bill should be allowed to pass, for the reason that neither this Bill nor the proposed measure of the government deals with this difficulty in the right way. What the people want is relief in regard to transportation, and most

of all they want relief by means of a government-owned railway. The people of Canada say: If we pay for a railway, if we supply all the money to build it, let that railway be our own. In no way let that railway pass from us into the hands of private parties. And this is in accord with the cry of the west for relief from their transportation difficulties, and relief by a road owned and managed by the government. But the proposal involved in this Bill, the proposal brought down by the government gives no immediate relief to the people of the North-west. The proposal is to build a road through the wilds of New Brunswick, a road through the wilds of the Laurentian country in Quebec, a road through the wilds of Ontario, through the so-called clay belt, and so across the prairies and through the mountains to the Pacific coast. Outside of that part of the road in Manitoba and the North-west, there is not a single proposition in the whole scheme that aids in the solution of the transportation problem, or gives relief to the people of the North-west.

Now, in what way can relief be given to the people of the North-west under present circumstances? In one way and one way only, and that is by adopting the principle of government ownership. If the government were alive to the situation, the first thing they would do would be to build a railway to be owned and operated by the government from Port Arthur on Lake Superior to Winnipeg and so into the west. Some years ago when a proposition was made in this House to subsidize very heavily a railway called the Rainy River Railway and now a portion of the Canadian Northern, and owned by Mackenzie and Mann, I appealed to the government to nationalize that road. I pointed out that not only was a large grant being made by the Dominion, but large grants had been made by the province of Manitoba and the province of Ontario, the public moneys thus granted being, as I believed and contended, sufficient to build the road. And, as the public were paying for the road, I appealed to the government to nationalize the work. But they ridiculed the idea. And now we are told we are having government ownership. Within six years of the time when they ridiculed the idea of government ownership, they boast of adopting it. And I must say that the late Minister of Railways (Hon. Mr. Blair) ridiculed the idea that I then brought forward, but he has since seen the light, and I hope he will support me in——

Hon. Mr. BLAIR. If the hon. gentleman (Mr. Maclean) will permit me a word, I think that what he was then proposing was to nationalize all the railways in Canada. I raised no objection to the building of a railway through that country by the government—never in my life.

Mr. MACLEAN. What I say is that, when the Rainy river proposition went through, and the late Minister of Railways and Canals endorsed it, I appealed to him and to the government to nationalize that road in the interest of the country. At that time I entered into correspondence with Mr. Hays, who had recently come to Canada, and told him that, so far as I could see, the great aim of the Grand Trunk should be to get an entrance into the Canadian North-west, and the way to get in was to make such representations at Ottawa as that the government would throw out these subsidy proposals and would nationalize that road from Port Arthur to Winnipeg, and to permit the Grand Trunk to get into that country. Mr. Hays at that time said he was seized of the idea, but he had other propositions before him and that he must defer dealing with the matter for some time.

The MINISTER OF JUSTICE (Hon. Mr. Fitzpatrick). How did the hon. member (Mr. Maclean) intend that the Grand Trunk should get into the North-west?

Mr. MACLEAN. The Grand Trunk today is at Midland. The Grand Trunk could, to-morrow, by a fleet of steamers, be at Port Arthur. Nationalize the Canadian Northern, as I say, or if necessary, nationalize the Canadian Pacific from Port Arthur to Winnipeg. Do this, and you have solved the problem. You can then extend a government-owned railway out into the prairies, or you can nationalize the Canadian Northern, and so reach through to Manitoba and the North-west Territories, and, shortly, clear across the continent. That is the way to give immediate relief to the North-west. That is the way to give the people cheap transportation. It is simply a matter of nationalizing the 'spout.' Sir William Van Horne very aptly called that portion of the country between Winnipeg and Port Arthur the 'spout,' and my idea is that that portion at least ought to be nationalized, all other roads should be allowed equal right of way over it, and the tolls should be reasonable. Is there any other way to solve the transportation question except on the principle of 'the King's highway'? A great mistake was made in England when the railways were first built there by allowing those railways to become private roads. Like any other roads, they should have been retained as 'the King's highway.' The step that was then taken has been deeply regretted, and an effort is now being made in England to retrieve that mistake. We also could have saved ourselves by recognizing the principle of 'the King's highway.' If we had this road from Winnipeg to Port Arthur as a public highway, we could run the Grand Trunk over it, we could run the Canadian Northern over it, we could run the Canadian Pacific over it, and, best of

all, we could run the Intercolonial over it. We could have the four great systems working for the Canadian North-west, handling the traffic of that country, and, with the competition that would be assured, we should have a lowering of rates.

The MINISTER OF JUSTICE. By way of information, would the hon. gentleman (Mr. Maclean) permit me to ask how he would get from Port Arthur to Midland over the Grand Trunk?

Mr. MACLEAN. For the present, I would get there by a line of boats.

The MINISTER OF JUSTICE. Not otherwise ?

Mr. MACLEAN. I might go this far—nationalize the Grand Trunk to North Bay, and, if the Canadian Pacific would not make terms, I would nationalize their line from North Bay to Port Arthur.

The MINISTER OF JUSTICE. Then the nationalization of the line would be from Winnipeg to North Bay?

Mr. MACLEAN. It might be. But the way to give speedy relief is to invite these great railways to a conference, and tell them plainly what we propose.

Mr. DEPUTY SPEAKER. I must call my hon. friend's attention to the fact that he is out of order in discussing the whole transportation question upon any individual section of the Bill. It is wholly out of order, and I rule so.

Mr. MACLEAN. If you will allow me, Mr. Chairman, the amendment is that the name of Sir Charles Rivers-Wilson, the head of the Grand Trunk Railway Company, and who is to be the head of the Grand Trunk Pacific Railway Company, be added to the list of incorporators. I think I am quite in order in discussing the whole question because the real crux of the Bill is in the men who are named here and I do not think we should deal with these men on these lines.

Mr. DEPUTY SPEAKER. The rule is quite clear that in Committee of the Whole each section of the Bill has to be taken up separately, and that the particular section under consideration is the only subject that can be discussed. That rule is well known to every hon. member of the House; otherwise, we would hardly know where we are at. We would have every section of the Bill being discussed at the same time, and I therefore call the hon. gentleman's attention to the rule which provides that a general discussion of the question cannot take place on any particular section.

Mr. MACLEAN. Surely, Mr. Chairman, you will not contend that I am out of order when we are dealing with the clause that names the men who are to form this company——

Mr. DEPUTY SPEAKER. That is my decision.

Mr. MACLEAN—and in view of what we have heard as to the relations of these men to the government. I do not think I am out of order with all due deference to you.

Mr. DEPUTY SPEAKER. Then, you will have to appeal from my decision.

Mr. MACLEAN. I do not wish to be put in that position. There is a clause coming up in a few minutes saying that they may enter into negotiations with the government. That opens the whole question and if you wish me to repeat what I have taken ten minutes to say, I shall be obliged to do so.

Mr. DEPUTY SPEAKER. It is one of the most painful things I am called upon to do when I am obliged to call an hon. member to order, but I am here for the purpose of seeing that the rules should be carried out as nearly as possible so as to facilitate the despatch of business. The rule I am pointing out is well known to old parliamentarians and to my hon. friend as well, and I hope he will not insist on violating it.

Mr. MACLEAN. We are discussing a clause which names Sir Charles Rivers-Wilson as one of the incorporators of this company. I object to the man's name being in the Bill for the reasons I am about to give, I think I am quite in order and on that line I intend to proceed until I am called to order again and told to sit down.

Mr. DEPUTY SPEAKER. I would lose my command of the committee altogether if I allowed any hon. member to deviate from the rule, and if I did not insist upon my rule being respected. It is far better if an hon. gentleman does not agree with the chairman to appeal to the Speaker and settle it at once.

Mr. HUGHES (Victoria). Surely, the Chairman does not object to the hon. member (Mr. Maclean)——

Some hon. MEMBERS. Order, order.

Mr. HUGHES (Victoria). I am perfectly in order. Surely the Chairman does not object to the hon. member giving reasons why he objects to these names being added to this Bill ?

Mr. COCHRANE. What is the use of going into committee at all on the Bill if we have not the right to discuss it ?

Mr. DEPUTY SPEAKER. I would suggest to the hon. member (Mr. Maclean) that he appeal to the Speaker so that we may have it settled and so that we may have a precedent established for future discussions. My ruling is that the general principle of the Bill cannot be discussed on any one particular section.

Mr. MACLEAN. May I point out to the hon. mover of this Bill (Mr. McCarthy) has

said that certain names ought to be introduced into this clause, the names of men of great prominence in connection with this Bill and in connection with another great proposition and this brings the whole clause up. My contention is that the name of Sir Charles Rivers-Wilson should not go in for the reasons I intended to give and particularly because this man is not sound on great public questions. He is one of the contracting parties in connection with a further proposition. I am going to give my reasons and I will let the right hon. leader of the House express his opinion upon them, but, I think I am perfectly in order, and I think the right hon. leader of the House would be inclined to let me have the floor under the circumstances, especially as I think, I am right in this case.

Hon. Mr. HAGGART. It is not only the names that are included in the Bill itself, but, it is the addition of other names that is involved. The whole clause as amended will be put from the Chair for the consideration of the committee and the greater powers which are being granted are up for discussion under this clause.

Mr. DEPUTY SPEAKER. That is my ruling and probably it would be better for the committee to refer the matter to the Speaker and it would thus establish a precedent which would guide me in future.

Mr. MACLEAN. I will make a motion to that effect if you will allow me, Mr. Chairman, but I do not intend it in any way to be a reflection upon your judgment. Would you have any objection to referring the question to the Speaker without putting it to the committee ?

Mr. DEPUTY SPEAKER. I am willing to get the Speaker as rapidly as possible.

Mr. HUGHES, (Victoria). On what ?

Mr. DEPUTY SPEAKER. On my ruling that the principle of a Bill cannot be discussed in Committee of the Whole upon any particular section.

Hon. Mr. HAGGART. I would suggest that you refer to the Speaker the proposition that the whole of the Bill is up for discussion when the greater powers are being considered.

Mr. DEPUTY SPEAKER. The Speaker will understand that matter probably better than I will. Let us submit to the Speaker the ruling that the principle of any Bill in Committee of the Whole cannot be discussed on any particular section.

Mr. LANCASTER. Mr. Chairman, I do not understand that that is the issue between the hon. gentleman and yourself. I do not think the hon. member disputes that it is a sound principle that you have just enunciated, but I understand the hon. gentleman to say that by adding new incorporators to those already named you involved the whole principle of the Bill. The question is whether the adding of these names does not open up the whole principle of the Bill.

The PRIME MINISTER. I think the position taken by the hon. member for Lincoln (Mr. Lancaster) is the right one. An amendment is moved to add certain names to the incorporators and the contention is made by the hon. member for East York (Mr. Maclean) that under the circumstances he has the right to discuss the whole principle of the Bill.

Hon. Mr. HAGGART. You are proposing to add to the incorporators named in the clause that is now before the committee. Then, can you not discuss everything that you could discuss without these names being added ?

The PRIME MINISTER. The point is whether the amendment moved by the hon. member for North Simcoe (Mr. McCarthy) to add certain names to the incorporators so enlarges the question as to give the hon. member for East York the privilege of discussing the whole Bill.

Mr. BORDEN (Halifax). It is exactly in the same position as if we were taking up the clause for the first time. The question is whether if we were taking up the question for the first time it would be competent for my hon. friend from East York to make the remarks which he proposes to make.

The PRIME MINISTER. I would suppose that to be a matter to be decided by the Speaker. There is no discussion after the clause has been passed, but, it is now moved to reconsider it so as to add one or two names to the list of incorporators and under such circumstances the hon. member for East York claims that he has the right to discuss the whole Bill as if it were moved for the first time.

Hon. Mr. HAGGART. To discuss the whole of it as if it were reconsidered.

Mr. HUGHES, (Victoria). I understand the position to be that the hon. member for East York takes the ground that there are new names being added to this Bill, that he wants to discuss the effect that these names have on the general principle of the Bill. He also wants to discuss the effect that these names may have upon a Bill before the House and the country, and he wants latitude to do that.

The PRIME MINISTER. I think he wants more latitude than that.

Mr. BELL. I think it must be admitted that the whole clause is before the committee because I understand the present proceedings were introduced by a motion to reconsider this whole clause.

The PRIME MINISTER. That is for a purpose—for the purpose of putting in new names and nothing else.

Mr. BELL. Then, the clause, being amended by the addition of these names, must be before the committee.

The PRIME MINISTER. That is a question I have no opinion upon.

Mr. FRASER. Is there anything particularly sacred about the first clause that we can discuss the whole Bill under it? If there is not, we can discuss the whole Bill on the second clause and so on up to the thirty-third clause. Under this clause you can only properly discuss whether these men are suitable men to be incorporated—whether they have the necessary capital, and so on. You cannot discuss whether they are Pagans or Christians; that has nothing to do with the question. On the preamble we can discuss the whole Bill; but each clause deals with a specific subject, and the discussion should be confined to that specific subject.

Mr. CLARKE. This clause is of special importance and should be given special attention, for the reason that one of the names proposed to be added is that of a gentleman who is at the head of another railway corporation. The hon. member from East York proposed to discuss from a financial point of view the propriety of allowing him to be connected with this company.

Mr. FRASER. That is a legitimate subject of discussion.

Mr. BELL. Surely if it is proper to discuss whether a number of persons should be incorporated, it is equally proper to discuss what powers may be conferred upon them. One must follow the other.

Mr. FRASER. Certainly, but these powers are all in the Bill.

Mr. MACLEAN. Suppose the Bill proposed that the name of Mr. Vanderbilt or Mr. Chauncey Depew should be included, would not the whole thing be changed? The whole thing is changed now. What I propose to do is to give a reason why Sir Charles Rivers-Wilson's name should not be included in the Bill and that involves the whole question.

The PRIME MINISTER. If it were proposed to add the name of Mr. Vanderbilt that might perhaps be a good opportunity for my hon. friend to show reasons why from a national or any other point of view it would not be wise to allow Mr. Vanderbilt to become a member of this company. But I do not think that would give my hon. friend the right to discuss anything that was not relevant.

Mr. BORDEN (Halifax). The hon. member for East York could discuss the question on the motion that the chairman do now leave the Chair. Such a motion has the same effect when the House is in committee as a motion for the adjournment of the House when the Speaker is in the Chair. If there were no other way for my hon. friend to deliver himself of his opinions, he could certainly do it in that way. However, it might perhaps be well to have the opinion of the Speaker as a precedent, and if my hon. friend desires to obtain the opinion of the Speaker, the proper way is stated by Sir John Bourinot in his book at page 483:

> If it be found expedient to refer a point of order to the Speaker, a member will move that the chairman report progress and ask leave to sit again that day. When the Speaker has resumed, the chairman will report that the committee wishes to be instructed as to the point in question.

Hon. Mr. HAGGART. We discussed that question the other day, and the Finance Minister took the position that we would have to get the leave of the House by a vote on the question.

Some hon. MEMBERS. No, no.

Hon. Mr. HAGGART. I beg pardon; that is what he stated. I took issue with him. I said that would give the majority of the House the power of refusing to allow us to get the opinion of the Speaker at all. I said the motion should be that the committee rise for the purpose of asking the Speaker his opinion on the subject. Then, if we differed from the Speaker, we could appeal to the House. But the Finance Minister took a different ground.

The PRIME MINISTER. I think my hon. friend confuses two things which are different. I understand that a point of order was raised, which was decided by the chairman. Then an appeal was made from the ruling of the chairman, and the committee had to rise without any motion, and the question had to be submitted to the House and not to the Speaker.

Hon. Mr. HAGGART. The right hon. gentleman was not in the House at the time, or he would not make that statement. What did occur was this: A question was put to the chairman for his ruling, and he ruled in a certain way. The chairman then referred the matter to the Speaker. The Speaker said, 'I cannot overrule the chairman, but I will put the question to the House.' The motion was put to the House, but we were discussing an entirely different proposition, that was, how we could get the opinion of the Speaker on the question. I took the ground that the proper course was to move that the committee rise. Then, when the Speaker came in, the chairman, without leaving his place, would ask the Speaker for his ruling. The Finance Minister said that could not be done without a vote of the House, giving its consent to the committee rising. I said that that would leave the minority in a hopeless position. The Prime Minister and the chairman both now agree with me, that the minority have some rights, and that we can get the opinion of the Speaker without the consent of the House.

The PRIME MINISTER. If my hon. friend was right the other day he is wrong now.

Mr. DEPUTY SPEAKER. The proper procedure is this : If it is deemed expedient to get the opinion of the Speaker on this question, a motion is made in writing for the committee to rise, report progress and ask leave to sit again to-day. The question has to be voted by the committee, because this is a reference, and not an appeal from my ruling. Then, when the Speaker hears the question discussed, he gives his decision, and the committee resumes. If the hon. member will kindly put his motion in writing, we shall have the question decided.

Mr. McCARTHY. Would not the hon. member for East York let us get on with the Bill, and make his motion at another stage ?

Mr. MACLEAN. No, I am quite in order.

Mr. McCARTHY. We are taking up a good deal of time with an academic discussion.

Mr. MACLEAN. It is not an academic discussion. I beg to move :

That the committee rise and report and ask leave to sit again this day for the purpose of getting the Speaker's opinion on the point contended for by Mr. Maclean. That he is in order in discussing the general principle of the Bill on the motion to add certain names to the list of incorporators.

Hon. Mr. HAGGART. You will get a decision against you on that.

Mr. MACLEAN. Well, how will I put it ?

The PRIME MINISTER. Come on with your motion.

Mr. MACLEAN. I will put it in this way:

For the purpose of getting Mr. Speaker's opinion on the point contended for by Mr. Maclean that he is in order in discussing the Bill on clause one, on the amendment to add certain names to the list of incorporators.

Mr. FRASER. That is an absurdity.

Mr. DEPUTY SPEAKER. That is not at all the question raised.

Mr. BORDEN (Halifax). Surely the hon. gentleman has a right to state his own point of order.

The MINISTER OF JUSTICE. The trouble is that it is not his own.

Mr. INGRAM. How would something like this do :

That the committee rise, report progress and ask leave to sit again this day and that a reference be made to the Speaker of the House for his decision as to whether the Committee of the Whole is in order in discussing the principle of Bill (No. 64) by reason of an amendment to section one of the Bill having been offered.

Mr. MACLEAN. That is all right.

The MINISTER OF JUSTICE. Do you adopt that motion ?

Mr. MACLEAN. Yes.

Mr. DEPUTY SPEAKER. Mr. Ingram moves——

The MINISTER OF JUSTICE. Mr. Ingram cannot move.

Mr. MACLEAN. Then I will move it.

And the motion having been put to the committee, it was agreed to.

The committee rose.

And, Mr. Speaker having taken the Chair, the Deputy Speaker reported the motion.

Mr. SPEAKER. Mr. Macdonald, of the committee of the Whole, reports that the committee has decided to refer to the Speaker for his decision : Whether the Committee of the Whole can discuss the principle of the Bill (No. 64) by reason of an amendment to section 1 of the Bill having been offered.

At the outset I may say that, generally speaking, the principle of a Bill should be discussed on the second reading thereof, but that rule is somewhat different in the case of private Bills and public Bills. In the case of public Bills, it is not in order to discuss in committee the general merits of a Bill on a particular clause ; but, in the case of private Bills, the rule, as stated by May, is as follows :

The second reading corresponds with the same stage in other Bills, and in agreeing to it, the House affirms the general principle, or expediency of the measure. There is, however, a distinction between the second reading of a public, and of a private Bill, which should not be overlooked. A public Bill being founded on reasons of state policy, the House, in agreeing to its second reading, accepts and affirms those reasons; but the expediency of a private Bill, being mainly founded upon allegations of fact, which have not yet been proved, the House, in agreeing to its second reading, affirms the principle of the Bill, conditionally, and subject to the proof of such allegations before the committee.

With regard to this Bill, its principle was considered when the motion was made in committee of the whole for the adoption of the preamble of the Bill. In the case of private Bills, the principle is supposed to be contained in the preamble, and when the preamble has been declared carried, then, according to my view, the principle of the Bill cannot be further discussed in committee. The Committee of the Whole is now considering clause 1 of the Bill, which contains the names of the incorporators, and on that clause it is not in order to discuss the principle of the Bill.

Mr. Speaker then left the Chair, and the House resumed in Committee of the Whole.

Mr. MACLEAN. Mr. Chairman, in order to get myself before the committee—and I

accept the ruling that has been given—I beg to move that you do now leave the Chair, and, on that motion, I propose to discuss the general question. So, we have only lost forty minutes. I wish to discuss the whole question involved in this Bill, particularly in view of the fact that Sir Charles Rivers-Wilson, the head of the Grand Trunk Railway, is now identified with this proposition for the first time, and it is proposed to make a deal between this new company and the government to settle the transportation problem in the North-west. I told the House some time ago that I did not think this was the right way to settle the transportation problem. I believe that the only way it can be solved is by the government ownership of the line that connects the main roads in Ontario with the main roads in the North-west, and my idea is to have a government-built and government-owned road from Port Arthur, or, if necessary from North Bay to Winnipeg. In that way the Grand Trunk Railway and the Canadian Northern Railway would be at once put into the North-west. Imagine what would happen in the North-west to-morrow if this were carried out. What the Canadian Pacific Railway fear to-day most of all, and what I thought the government were trying to accomplish, was to put the Grand Trunk Railway into the North-west to-morrow. Under the proposition we have now before us, the Grand Trunk Railway will not be in the North-west for six years, even if they are there in ten years ; but by nationalizing one of the roads between the main systems of the east and the systems of the west, you can have the Grand Trunk Railway in the west to-morrow. That is what the people of Canada want to see—they want to see the Grand Trunk Railway go into the North-west over a government-owned line, and over the same line they desire to see the people's railway, the Intercolonial Railway go. But we are told that the Canadian Pacific Railway have a special clause in their contract by which their rates are not to be interfered with until certain profits have been proved to have been made. The time came long ago when the cost of that road should have been investigated, and its rates brought under revision. But that has never been done, and I suppose it never will be done. But the way to regulate the Canadian Pacific Railway in regard to its rates and to give relief to the people of the North-west is to put the Grand Trunk Railway, the Canadian Northern Railway, and, above all, the Intercolonial Railway, in competition with it. That is a way that has been found satisfactory in regulating rates—to have one road owned and controlled by the government fixing the rates. Real competition will bring down rates regardless of special agreements. As I pointed out not long ago, in dealing with another question, the railway passenger fares in the state of New York were settled by dealing with one railway. An Act was passed regulating rates on that one road, and while the other roads claimed that they had special privileges, yet, competition has compelled them to reduce their rates. So, the government could at once affect a reduction of the rates by proceeding in the right way. Negotiate with one of the big roads, or, if they will not negotiate, let the government build a new road and in that way give relief to the country. But I believe the building of a new road would not be a necessity. I believe the Canadian Pacific Railway or the Canadian Northern Railway would discuss this matter with the government and that the outcome of that discussion would be a determination to nationalize this railway through the country which Sir William Van Horne has called 'the spout.'

Now, what is a practical railway for the business that is to be done ? Clearly it is a high class road. The day has gone by for cheap railways. You must have a high class railway ; you must have a double track railway ; you must have a road without curves and without grades. With that, you will be able to carry wheat at the lowest possible rates, and so give the people relief. You can build as many one-horse railways as you like, and they will do very little good in these days. We have built many of them, and built them with the people's money. But they do not solve the problem, for they are not in a position to carry freights at the lowest rates. My idea of a road to do that work is a road of the standard of the New York Central Railway, or better still, the Pennsylvania Railway. Such a road as that might cost $60,000 a mile or even more, but once built, it would carry immense trains at a very low cost, particularly in connection with our navigation system. I will go further, and say that the moment that line had been nationalized between Winnipeg and Lake Superior, I would go to the Grand Trunk Railway and the Canadian Pacific Railway and would say : Gentlemen, we want the wheat of the North-west carried at the lowest possible rates not only over this government road from Winnipeg to Port Arthur, but over the roads in the east ; therefore, we will assist you to straighten out your roads from Midland or Owen Sound to Montreal or any other St. Lawrence port. Government assistance given in that way would bind the provinces together as nothing else will. But you will never solve the transportation problem by a one-horse railway through the wilds of New Brunswick, through the wilds of Quebec and through the wilds of Ontario. But you can solve it to-morrow by nationalizing the road between Winnipeg and Port Arthur, building it to the proper standard and then straightening out the roads in the east from the great lakes to the sea-board. It may be that these roads would be willing to be

nationalized between Midland and Montreal, or between Owen Sound and Montreal and Quebec. Probably the best line for a high class road would be from Midland connecting with the Canadian Pacific Railway system to Quebec, or it may be over the Canada Atlantic Railway, which could be taken over by the government and made a portion of the national system. These lines would be all run as complementary of our navigation system. We have spent immense sums in this country building up our ports and harbours and making our canals. The men who own and control the railways to-day are to a large extent the men opposed to transportation by water. A system of railways owned and controlled by the government, and not handed over immediately to a private corporation, should be the complement of our navigation system. That is a thing which has been left out of view in connection with transportation in this country. The only way in which our railways can be made the complement of our system of navigation is by the government controlling and owning them. The proposition before the House does not begin to solve the question. All it is doing in the North-west is to give another one-horse railway to reach our prairie sections. It does not touch the vital issue at a single point. It is not going to reduce the transportation of grain a dollar in years to come. It is possible that negotiations may be going on to bring the Canadian Northern into this deal. I would like to see the Canadian Northern brought in this proposition to-day, and it may be brought in later on, but I would wish to see it brought in under the control of parliament and not of the Grand Trunk Railway. I am only indulging in guess work, but I am inclined to believe that the Canadian Northern Railway would be ready to make a deal of that kind. If we did that, it would grant immediate relief to the North-west. Is not that something worth striving for?

I am told that government ownership is not a desirable thing. The right hon. gentleman made the confession here the other day—and I very much regretted to hear him make it—that because he stood once on the bleak shores of Georgian bay and saw all the work which Mr. Booth had to perform to make traffic for his road, from that moment he lost faith in government ownership. Was there ever a more humiliating confession? He did not give any study to the question; he did not inquire where government ownership had been tried; he did not go into any details; but just because a fit of despondency came over him as he stood gazing around the bleak shores of Georgian bay, he made up his mind that government ownership was not a success. But had he inquired, he would have found that wherever tried it has been a success. It has solved the transportation problem in many countries. The people of England to-day are of opinion that government ownership must come there, because the transportation charges there are higher than anywhere else. The people of the United States are coming to the conviction that there must be a grand trunk railway between the east and the west owned and controlled by the federal authorities. With a road of that kind, all the other roads would be regulated by it. In Germany, Italy, Russia, Australia, Africa, government ownership has been tried and has succeeded. It is found to be the only system which gives the people satisfactory service at the lowest rates. Take the experience in Austro-Hungary. They have government railways in that country, administered by the government, and the constant aim of the government commissioners is to run the railways so as to give the lowest transportation rates, and you will find the lowest transportation rates for passengers there of any country of the world. If by government ownership you mean the kind of ownership we have in this country, I do not believe in it. The Intercolonial Railway, as it is administered, is not my ideal of government ownership. But if the Intercolonial Railway were taken out of politics, it would, if it were administered by commissioners independent of politics and members of parliament, do you mean to say that it would not make a better showing? I would like to see a man like Sir Thos. Shaughnessey or Mr. Hays given control of our Intercolonial with instructions to run it in the interests of the people and keep it free from politics altogether. If that were done, it would give the best solution of the transportation problem. Instead of building rivals to the Intercolonial Railway, keep it as it is, take it absolutely out of politics, put it under the administration of a man like Mr. Hays, and tell him to go ahead and extend it into the North-west and run it on such lines as to force every other company, the Canada Atlantic Railway, the Canadian Northern, the Grand Trunk Railway and the Canadian Pacific Railway, to give the lowest possible rates. In that way relief would soon be accomplished.

You could nationalize a sufficient portion of our railways for my present purpose for a comparatively small sum. $20,000,000 will do it. But I do not believe that $100,000,000 will build the road proposed by the government.

The POSTMASTER GENERAL. How could you nationalize the three roads you have named for $20,000,000?

Mr. MACLEAN. You could nationalize the road from Winnipeg to Port Arthur for $20,000,000 or less.

The POSTMASTER GENERAL. The hon. gentleman proposes to nationalize the Grand

Trunk Railway from Midland to Montreal, the Canadian Pacific Railway from Owen Sound to Montreal, the Canada Atlantic Railway and the Canadian Northern Railway from Port Arthur to Winnipeg—could all that be done for $20,000,000 ?

Mr. MACLEAN. Very largely.

The POSTMASTER GENERAL. Those four roads?

Mr. MACLEAN. If it is more than $20,000,000, what are we to think of the hon. gentleman's proposition, which he says would only cost $13,000,000, running from ocean to ocean? But the proposition submitted to the House, I submit, involves an expenditure of over a hundred millions. We are committing this country to a proposition involving an outlay of a hundred million dollars, and we are not to get anything for our money, but are immediately to give the road away to the Grand Trunk Railway. Thus we are not solving the problem but only buildidng a one-horse railway.

The POSTMASTER GENERAL. Is the Grand Trunk Railway a one-horse railway?

Mr. MACLEAN. It will be from Moncton through the wilds of Quebec. No reason was given for it other than it would be a colonization road. The place to test government ownership and the building of a road by the government is the fat part and not the lean. Government ownership has been tried in this country always where it must fail. Politics have been mixed up with it, and it has been tried besides in an unproductive, bleak part of the country. But try it in the province of Ontario. What would the people of Ontario say to-day if the government came down with a proposition to parallel the Grand Trunk Railway and the Canadian Pacific Railway from Montreal to Toronto and to Niagara and the Detroit river and Georgian bay. That is a road which would furnish the key to the lock. The people of Ontario would like to see a hundred millions of their money spent in paralleling these roads in the province of Ontario, because such a road would run through the heart of the traffic and bring the other railways to time. That is what I would like. But I am now asking for a very modified form of government ownership, which would put the Grand Trunk Railway into the North-west to-morrow, which would give the Canadian Northern Railway an opportunity it has not now of developing and expanding in the North-west, and above all, would bring the Intercolonial Railway into the North-west. The principle of government ownership is one which will find approval among the people. That is the kind of ownership which the people want and the kind of relief which the people of the North-west want. It would not cost a great deal and would solve the problem right away. The proposal now brought down does not involve government ownership, although we are asked to support it because it does. As soon as the road is constructed, the government will give it away. Why should we give these railways away? If we build them, why should we not own and control them and give every railway that desires it running powers over them by our leave, and not by the leave of the Grand Trunk Railway ? I want to see these railroads run over this new road, and have running privileges, but I wish the control of the road to be in the hands of the government, and not in the hands of the Grand Trunk Railway with power to discriminate against any outside road that may desire to use it.

There is another thing in respect of which I think the proposal involved in this Bill is an extraordinary one. I believe that in some way there are men associated with this scheme who hope to make money out of it in some way, who are seeking to take advantage of a large grant of public money in order to make fortunes for themselves. Whether that is so or not, I cannot tell at the present time, we must wait and see. But my idea is that whatever money is spent on that road should be spent by the government in the interest of the people, and without any regard to the interest of private individuals who are seeking to make fortunes out of it. The history of railroad building in the past in connection with subsidies from parliament, irrespective of party, I make the broad statement, has been to build up the private fortunes of individuals. We don't want any more of that in this country; and yet I am afraid that in this bogus proposal which is said to involve the principle of government ownership, there may be a great deal of that. I want to see this road built by the people and owned by the people, in such a way that no private fortunes are made out of it, that no great grafts are to be worked, as we see they have been worked in the past. The suspicion is that they are being worked to-day, and that the project is brought forward in the interest of men who have had large experience in exploitations of various kinds. I do not know how much truth there is in that, and I am not going into it to-day. But in the light of the history of the past, all that should be avoided, and the people, for their money, should get a people's railway. They should get for their money a road that will bring relief to the people of the North-west to-morrow. The proposal of the government will only bring relief after ten years. The government should bring down a scheme that would put the Grand Trunk into the North-west to-morrow. I believe the Grand Trunk desire to get into the North-west to-morrow. I do not believe they desire to build this line through Quebec, or through New Brunswick ; and I believe there is a clause in the Bill which says the Governor in Council may suspend

operations in connection with that if they see fit.

Now, what the Grand Trunk desire, I believe, is to get into the North-west at the earliest possible moment; but certain parties, for reasons of one kind or another, are forcing the Grand Trunk to go through the bleak portions of Quebec and the Laurentian country, and through the wilds of New Brunswick. I do not believe the Grand Trunk themselves desire this proposal for one moment, but they do wish to devote all their energy to getting from North Bay, and as best they can, into the North-west and from there to the Pacific. I want to see the Grand Trunk get into the North-west, and the people of the North-west wish to see it there. But they wish to see it get there in the most desirable form. They do not wish to see it get there in this form, they do not wish to see that great railroad tied up to the obligation of building a road, as is proposed, a road in Ontario, of building a road in Quebec, of building a road in New Brunswick. That won't solve the problem in the least, and it will take ten years to accomplish it. But the project suggested here today will solve it at once. What I suggest is that the whole energy of the Grand Trunk be devoted to getting to the Pacific. I believe in getting to the Orient by a new railway. I believe there is lots of traffic west of Winnipeg, lots of traffic through the Peace river country, lots of traffic in that district for a Canadian railway taking Canadian products to China and Japan. But the way to do that is to allow the Grand Trunk to devote its whole energy to getting to the west, not in building these roads at the present time to the north of us. They are not going to settle the transportation problem one bit; but building the road on the lines I have suggested will do it immediately, and will put the Grand Trunk where I believe it wishes to be put—in the North-west to-morrow. As I said before, the Grand Trunk put in the North-west to-morrow, it may be over the Canadian Northern for the present, will be an immediate competitor of the Canadian Pacific Railway, and you will have the Canadian Pacific Railway changing its attitude and trying to serve the people of the North-west and cutting down rates. But as it is to-day, the whole energy of this parliament, and of the Grand Trunk, judging by the Bill as it now stands, are to be frittered away in building these roads through the wilderness of the eastern provinces.

Now, Mr. Chairman, later on I intend to discuss the question again, and to go perhaps more fully into it. But at present I only take the opportunity of entering a solemn protest on behalf of the people of Canada, and of the people of the North-west in particular, against this proposal. I do so because it does not give immediate relief to the North-west, it does not solve the problem, and it entails great expense upon the country, and in every way is not in the public interest. I say now, in order that the Prime Minister may hear me, that what he should have done was to bring the great railroads into consultation, and say to them: We will nationalize our spout, we will allow you to run over it, we will let the Intercolonial run over it, we will make the Intercolonial a competitor of your road, we will fix the pace, and you must dance to that tune, if it is in the public interest. All that could have been done, all that could be done now. It could have been started five years ago. But all we are told is that the proposition to avail ourselves of this opportunity of government ownership is a mistake. I think it is no mistake. I think the one solution of the problem is government ownership, or at least government competition; and on that line I enter this protest against the proposal. I think it is a wrong policy, I think it is a bad policy, I think it is against public interest, and it is not in the line of the progress that characterizes all other countries to-day in dealing with these great questions. Russia is building an immense railroad; it may be primarily for national reasons, but it is also for transportation reasons. Australia is building up railroads all the time; all the nations that have gone into public ownership are extending their systems, they are satisfied that they are right. We alone are going back on that principle. The right hon. gentleman, in this proposal, is going back on the principle of government ownership, because he proposes to denude in some way the Intercolonial. He is giving it a rival at its most important point, a Grand Trunk string to the Intrcolonial bow at very large cost and will effect but a small shortening of the distance. An hon. gentleman said the other day that he does not think it will save more than sixty miles. We have the Intercolonial to-day which is available; it ought to be extended, it ought to be strengthened and improved; it ought not to be run down by a competitor put alongside of it. It should be extended to the west through the province of Ontario. That would make it a great railroad, that would make it a people's railroad, then you would help the people of the North-west to solve the great transportation problem and give them immediate relief. By controlling the terminals you would control the whole situation. These terminals make the strength of a railroad's position. We are gradually spending immense sums on them. In that way you will bind the provinces together.

The right hon. gentleman, when he brought down his proposition the other day, said there was danger of the withdrawal of the bonding privilege. Is it not a fact to-day that we have an all-Canadian road from Halifax to Vancouver? Suppose the Americans deprived us of the bonding privilege to-morrow, we still have a Canadian railway in our own territory, controlled by this

parliament; and we will be no better able, when we have this new line of the government, than we are to-day to withstand any pressure that our neighbours may put upon us in connection with the bonding privilege.

So, that argument falls to the ground. We have an all-Canadian route to-day and we are spending $100,000,000—it may be $150,000,000—to get a road that will do nothing more as far as the bonding privileges are concerned than the roads we have to-day. As far as the sentimental reasons given are concerned, we will not have any better means of transportation than those existing by means of the roads we have now. They will bind the country together and the way to bind the country together is to reduce rates over these railways so as to give an opportunity to the community of exchanging their views and becoming acquainted with each other by means of travel. The people of the North-west Territories have to pay four cents a mile to travel on the railway and they cannot under those circumstances come east. The policy of the Canadian Pacific Railway is to take people into the North-west at one cent a mile and to charge them four cents a mile to bring them out again. That is not good public policy. In the province of Manitoba they have a three-cent a mile rate and railway competition made it. Probably the agreement that the Manitoba government made with the Canadian Northern may have had something to do with it. Governments are in a position to do different things to alleviate the grievances of the people in connection with transportation, but they must go the right way about it. In this case, the right way to go about it is not to devote ten years to the building of a new railway through the wilderness but to do something immediately right in the places where traffic is congested and right in the populous centres. There is one way to regulate traffic on railways and that is to regulate one road or to have a government-owned road in operation in competition with private-owned roads in the populous parts of the country because the effect of that competition will be to regulate traffic charges. The people of the North-west Territories not only want a reduction in the traffic charges, but they want increased accommodation for moving their freight. They say they have a congested state of affairs up there. They never can get rid of that congestion of traffic by the adoption of the proposal of the government which is now before us because there can be no solving of the problem by the building of a road through the wilderness. If the government study the question they will see that their proposition is not feasible, they will withdraw from their present position and they will begin to negotiate with the Canadian Pacific Railway and with the Canadian Northern Railway, and if they do negotiate and do get possession of a road do not let them give it away the moment they get it, but get it for the people and keep it because it will have a regulative influence upon all the roads. If these negotiations are going on, as I believe they are going on with Sir Charles Rivers-Wilson, they ought to be absolutely based upon the principle of government ownership of the Canadian Northern Railway, and if we have that we will have the Grand Trunk Pacific in the west to-morrow, we will have 1,700 miles of railway competing with the Canadian Pacific Railway and we will have the resources of that great road extending its line across the plains and getting to the Pacific ocean, and in securing that we will be doing something for the people of this country. That is the issue between my idea and the idea submitted by the government. I believe my idea is one that will meet with the sanction of the people. It is an idea that I have been following very closely. I have been studying the question, I have been listening to men from all portions of the country, I have been reading the press, and if there is one thing to-day in the public mind more conspicuous than another, it is that the solution of the transportation problem whether by railways or waterways, is from the adoption of the principle of government owership, the building up of one system of railways and making the rates on this system as they ought to be so that other roads operating in competition with this government road will have to come down to these rates and give equal treatment and facilities to the people. Mr. Chairman, I beg to withdraw the motion.

Motion (Mr. Maclean) withdrawn, and section as amended agreed to.

On section 4,

Mr. McCARTHY moved:

That section four be reconsidered for the purpose of amending it by substituting the word 'forty' for the word 'seventy' in the first line.

Mr. BORDEN (Halifax). This is, I suppose, in view of the proposition that the company shall build only from Winnipeg to the Pacific ocean. What will the length of the line be?

Mr. McCARTHY. Between 1,600 and 1,800 miles.

Mr. BORDEN (Halifax). This will give a capitalization of how much per mile?

Mr. McCARTHY. A little less than $30,000 per mile—$27,000 or $28,000 per mile.

Mr. BORDEN (Halifax). What is the estimate of the cost of these 1,600 or 1,800 miles?

Mr. McCARTHY. My information is that the cost will be $20,000 per mile on the

prairie section, and $50,000 per mile on the mountain section.

Mr. BORDEN (Halifax). This will include rolling stock ?

Mr. McCARTHY. My information is that in addition to that there will be about $7,000 per mile for rolling stock, so that the cost will be $27,000 per mile on the prairie section, and $57,000 per mile on the mountain section.

Mr. INGRAM. What does that include in the shape of rolling stock ?

Mr. McCARTHY. My information does not go as far as that.

Mr. BORDEN (Halifax). We were informed that the cost for the prairie section would be very much less than the hon. gentleman states when we were discussing another matter this session. Is that estimate based upon any reports of engineers ?

Mr. McCARTHY. I cannot say as to that, but I can say this that the railway to which the hon. gentleman referred has only built a 56 pound rail, and the intention of this railway is to build an 80 pound rail which will make a very great difference. The cost of a standard railway will be much higher. The requirements of the contract are that as far as practicable the railway is to be built to equal the line of the Grand Trunk Railway between Montreal and Toronto.

Mr. MACLEAN. What is the weight of that rail ?

Mr. McCARTHY. Eighty pounds, I understand.

Mr. BORDEN (Halifax). What will be the location of the railway between Winnipeg and Edmonton ?

Mr. McCARTHY. It is set out in section 12, of the Bill.

> To a point at or near the city of Winnipeg ; thence westerly and north-westerly, passing through or near Battleford, Edmonton and Dunvegan, or by such other more feasible route as is hereafter located, but following in a general direction that herein indicated, and by way of either the Peace River Pass or the Pine River Pass.

There is another clause which requires the line to be located in a specific way, and, of course, it is subject to the approval of the Governor in Council.

Mr. BORDEN (Halifax). Will the proposed line run north or south of the proposed Canadian Northern Railway line ?

Mr. McCARTHY. North, I understand ; but, of course, that is not settled. The committee spent several days considering the question as between the three railways, and finally a clause was added that at no point they are to be closer than 30 miles.

Mr. McCARTHY.

Mr. ROCHE (Marquette). Does the hon. gentleman (Mr. McCarthy) mean to say that this road is going to run north of the Canadian Northern Railway to any extent after it passes Winnipeg ?

Mr. McCARTHY. I cannot say.

Mr. ROCHE (Marquette). As outlined on the map, if that is any guide, it runs between the Manitoba and the north-west branch of the Canadian Pacific Railway, and the main line of the Canadian Pacific Railway, and the Canadian Northern Railway runs far north of the Manitoba and north-western branch. After it passes Portage la Prairie at any rate it surely must run south, and very far south of the Canadian Northern Railway.

Mr. McCARTHY. The hon. gentleman (Mr. Roche) knows the country very much better than I do, and, it would be idle for me to state where the railroad is going to run. The ordinary observances have been followed in this charter, stating that it shall start from a point at or near a certain place, and then run to a certain other point. This charter is subject to more restrictions than other charters in respect to this 30-mile limit ; it is subject to the general provisions of the Railway Act, and it is also subject to the Governor in Council deeming its location reasonable. Until it is absolutely located, one cannot speak definitely as to whether it will be north or south of either one or the other line.

Mr. ROCHE (Marquette). If it runs south of the Canadian Northern Railway it ought to be a much cheaper road to construct than the Canadian Northern Railway. When I took exception to the estimate of $19,000 per mile for the Canadian Northern Railway, the reason given for the high estimate was that it included several expensive bridges. If $19,000 was sufficient for the Canadian Northern Railway, including bridges, this road going considerably south would be an easier road to construct, and yet we have an estimate of $27,000 per mile, including $7,000 for equipment. I think that estimate was exaggerated.

Mr. McCARTHY. The hon. gentleman knows that I am not going to construct the road, and that I am merely giving the information which I have. Let me call attention to the fact that parliament is only guaranteeing on the prairie section a maximum of $13,000 per mile. If seventy-five per cent of the cost is less than that, then the guarantee is only up to seventy-five per cent. Whatever it costs will be ascertained and be subject to the control of the Governor in Council.

Mr. FOWLER. Does the hon. gentleman mean to intimate that it is no concern of this House what this road shall be capitalized at ? Surely it is important to the

people of the country whom we are supposed to represent to know whether it shall be capitalized at a larger amount than is necessary to build the road, because they would be entitled to charge rates according to the amount of their capitalization. It is, therefore, important to know this. The hon. member (Mr. Roche) has said that this road which is going to go south of the Canadian Northern Railway would be a much easier road to build, and it seems to me that $20,000 per mile is a larger capitalization than should be allowed. That with $7,000 a mile for rolling stock is simply absurd.

The MINISTER OF JUSTICE. With respect to the amount stated for rolling stock, I may say that when the contract was about to be entered into with the railway company, it was thought advisable to have the opinion of Mr. Schreiber, chief engineer of government railways, and he told us that a proper equipment for such a railway would amount to $6,000 or $7,000 a mile. We, therefore, give my hon. friend the expert opinion of a man who is qualified to speak on the subject.

Mr. BORDEN (Halifax). Is it in writing?

The MINISTER OF JUSTICE. I have no doubt that we can get it in writing. It was given to the acting Minister of Railways (Hon. Mr. Fielding) in my presence. I am not sure whether he asked it in writing, but I will ask for a certificate from Mr. Schreiber.

Hon. Mr. HAGGART. The estimated length from Edmonton to the coast is about 1,000 miles, and the length from Winnipeg to Edmonton 600 or 700 miles, making 1,700 miles in all. Why does the Minister of Justice require that the first equipment of rolling stock shall the $15,000,000, apportioned to the western section ?

The MINISTER OF JUSTICE. We estimated the length of the road and multiplying it by seven, it came to $18,300,000 and we put it down at $20,000,000, and the company agreed. Of course, if my hon. friend (Hon. Mr. Haggart) wishes to set up his opinion against that of Mr. Schreiber he is perfectly free to do so, but we took the opinion of a man, who in our judgment, is competent to advise.

Hon. Mr. HAGGART. I am not talking about my opinion at all, but I say that 700 miles at $7,000 per mile would not be $15,000,000.

The MINISTER OF JUSTICE. It would be $11,900,000 on those figures.

Hon. Mr. HAGGART. The government saw that the estimate would be more than sufficient, but they only apportioned $5,000,000 of it for the whole line from Winnipeg to Quebec.

The MINISTER OF JUSTICE. No.

Hon. Mr. HAGGART. That is in the Bill.

The MINISTER OF JUSTICE. The hon. gentleman has not read the contract. The $5,000,000 with respect to the eastern end is especially apportioned for the purpose of being security to us for the operation of the road. That is to say, of the $20,000,000 for rolling stock, we ear-mark $5,000,000, apportion that to the eastern end and hold that as a special guarantee. That does not mean that the $5,000,000 is the extent of the equipment ; it is the extent of the guarantee.

Hon. Mr. HAGGART. But the whole stock of the road is security for the running of the road.

The MINISTER OF JUSTICE. For the first issue of bonds the whole stock is security on the western end, but with respect to the eastern end, we have to take a special security, because in that case they are only our tenants, and we ear-mark $5,000,000 of that stock which is to be apportioned to the eastern end, and will be security to us for the due performance of all the work.

Mr. CLARKE. Do you get a first or second mortgage on that ?

The MINISTER OF JUSTICE. We get a first mortgage. We first take security on the whole $20,000,000 on our guarantee, and with respect to the $5,000,000 in addition to the fact that it is a security to us for the guarantee of the bonds at the western end, we take it as a special security in connection with the eastern end.

Mr. CLARKE. There seems to be a considerable lack of information as to the location of the line west of Winnipeg. Is that indefiniteness due to the fact that negotiations are going on for the acquirement of the Canadian Northern system by the new company ?

The MINISTER OF JUSTICE. Not at all. It is simply due to the fact that we are observing with reference to this railway enterprise all the rules that we observe with reference to other companies which come before us for charters. When a charter is granted to a railway company, it comes under the operation of the general Railway Act, which provides that all maps, plans, and profiles of the road shall be submitted for the approval of the Railway Committee of the Privy Council; and here special provision is made for the location of the western end, which is to be subject to the approval of the government.

Mr. CLARKE. I am informed that it is impossible for this company to comply with the condition that the line running westerly and northerly from Winnipeg to Edmonton shall keep 30 or 40 miles from any other line. I want to ask if negotiations are going on between this company and the

Canadian Northern ? If so, we can understand why there is such indefiniteness in the Bill. If this company acquired the Canadian Northern, it would not be paralleling its lines.

The MINISTER OF JUSTICE. My hon. friend must not be too inquisitive, and ask us to tell him what negotiations are going on between two railway companies. As to what may be going on between the Grand Trunk Company and the Canadian Northern, we know nothing. It is not to our knowledge that any such negotiations are going on. We assume that such an important corporation would not undertake to build a railway through a country where they could not locate it.

Mr. CLARKE. I am given to understand by those acquainted with the country that it is physically impossible to build this railway 40 miles north of the Canadian Northern Railway.

The MINISTER OF JUSTICE. I am sure that the railway company will be impressed with this discussion. The Grand Trunk Railway Company have a knowledge of the country because they have surveyors there now locating the line.

Mr. CLARKE. We have the assurance from one high authority that no survey has yet been made.

The PRIME MINISTER. Surveys have been going on for the past six months.

Hon. Mr. HAGGART. Has the right hon. gentleman any information with reference to the passes ? The company has power under the Bill to take the Peace river or the Pine river pass, and to go to any port on the Pacific.

The PRIME MINISTER. They have to go to Port Simpson.

Hon. Mr. HAGGART. If that is so, that virtually locates the line. The Bill says at or near Port Simpson or Bute Inlet or any other port on the Pacific.

The PRIME MINISTER. The intention certainly is to go to Port Simpson unless very cogent reasons are brought to the contrary. There is no doubt whatever, from the explorations we have had, that Port Simpson is decidedly the best harbour we have in British Columbia.

Hon. Mr. HAGGART. I think so myself.

Mr. INGRAM. When this Grand Trunk Pacific Bill was before the Railway Committee, several hon. gentlemen refrained from discussing the merits of this railway on the promise of the Minister of Finance, acting Minister of Railways and Canals, that when the government scheme for assisting the Grand Trunk Pacific should be submitted to parliament, the government would be in a position to state definitely what the route would be. That was the pledge given to the Railway Committee by the hon. gentleman.

The MINISTER OF JUSTICE. Not at all.

Mr. INGRAM. I pledge my word of honour that that pledge was given, and if it is not carried out now, it only shows that we cannot rely on a pledge when it is given.

Mr. BORDEN (Halifax). It seems to me, taking this clause in connection with clause 13, that the capitalization of the company is pretty large—in fact, very excessive. Under section 13 you have $20,000 per mile of bonds authorized on the prairie section and $50,000 on the mountain section ; and you have, under section 4, $45,000,000 of capital authorized for a road between 1,600 and 1,800 miles in length. Has my hon. friend who is moving the Bill made any estimate of what the total capitalization would amount to ?

Mr. McCARTHY. My hon. friend will remember that we discussed this fully before the committee before. I am unable to apply the term capital in the way he does. I cannot understand the bonding privilege as capital. A bonding privilege is something that may be executed to its fullest extent, or it may not be. I have therefore made no calculation, and am unable to answer the hon. gentleman's question.

Mr. BORDEN (Halifax). I would suppose that capital, in the sense in which I am using it, would include the expenditure of money raised by bonds as well as the expenditure of money raised by the issue of capital stock. This railway might be built altogether, as many other railways are, with the money raised from the sale of the bonds. Suppose the common stock of this company were $50,000, and it were given bonding power sufficient to build the whole road ; would not the question of capital in that case be involved in the amount of the bond issue ? It is none the less involved because you fix a substantial sum as the capital stock of the company. The result will be that you will have this company capitalized, including the bond issue, to the extent of some $57,000 per mile, and my hon. friend does not pretend that the road on the prairie, including equipment, will cost more than $27,000 per mile. I am still of opinion, notwithstanding what has been said to the contrary, that a capitalization of that kind may interfere to a great extent with the control of the rates hereafter. It is impossible, looking at the conditions as they are, to say that the amount of outstanding bonds and capital stock in the hands of bona fide holders will not affect the question of the control of rates in the future. These mat-

ters will be looked at by the tribunal, whatever it may be, which has to deal with the question of control of rates in the future.

I may say further that it is remarkable we have not a more definite statement as to where the location will be. The hon. member for Marquette (Mr. Roche) has said that it will be very much cheaper if built south of the proposed line of the Canadian Northern Railway than if built thirty miles north. But the promoter of the Bill is unable to say whether or not this company proposes to build north or south of the Canadian Northern Railway. I should think that some member of the government should be prepared to make an announcement on that point, in view of the fact that the government has introduced a measure which contemplates assistance to this company of a very substantial amount, not only on the mountain, but the prairie section as well. Surely the government takes some interest in this question of capitalization. It is a question of practical interest to everybody throughout the country. The people believe that a high capitalization will materially interfere with that control of the rates which is desirable we should have. The information of my hon. friend is extremely indefinite and based on such insufficient data that we are not very much inclined to accept his estimate of the cost of the road across the prairie section. We have no information before the House in the shape of engineers' estimates that I am aware of, and we know that railways have been built on the prairie section for very much less than the hon. gentleman suggests. It is quite true that the standard of this road may be somewhat higher, but we are merely guessing unless we have some information of the kind to which I have referred. Why should this road have a capitalization of $57,000 per mile ?

The MINISTER OF JUSTICE. That is on the mountain section.

Mr. BORDEN (Halifax). No, I am speaking of the whole road. On the mountain section, you have not only the capitalization included in the stock issue, but a possible capitalization of $50,000 per mile of a bond issue as well. We have no exact information as to the length of the mountain and the prairie section. We may presume that the prairie section will be 1,100 long and the mountain section 600. That is the nearest approach we can make to it, from the somewhat indefinite statement made by my hon. friend in charge of the Bill.

Mr. FOWLER. It seems to me that the promoter of the Bill should give some reasons why he is making this reduction. What is the basis upon which he is working ? The original Bill required a capital of $75,000,000. He has struck off $30,000,000 and made the capital $45,000,000. According to the position presented by the First Minister, the company are to be rid of the building of the road from Winnipeg to Moncton. This would be the more expensive part of the line. Under the first arrangement, they were to build from Moncton to the coast. They are getting rid of the more expensive portion and yet their capital is allowed to remain at considerable more than half the original amount. This committee should have the basis on which the hon. gentleman makes his deduction. The hon. gentleman declines to answer. That is just what I expected. There is evidently no basis. They have simply lumped the matter just as they did the whole transaction. They have gone into it without any information. The very gentleman who promoted this Bill before the Railway Committee and who has been lauded as such a railway builder, did not actually know anything about the country. He did not know where Lake Nepigon was ; he did not know the length of the line and the nature of the country, and was simply taking a leap in the dark. We need not ask for definite information, for we are not given even indefinite information. But it seems to me that when the government is going to give such substantial assistance to the enterprise, these men who are promoting the Bill should have the information we are asking for.

The PRIME MINISTER. The committee has already had a good deal of information. It is provided in the contract that the mining section is to be assisted by the guarantee of the government to the extent of 75 per cent on its cost, and the liability of the government is in no case to exceed $30,000 per mile in that section. It is assumed that the mountain section is between 600 and 700 miles in length. It is not possible to say exactly, but it will not be less than 600 or more than 700. Suppose it is 600. The bonds to be guaranteed by the government to the extent of 75 per cent will cover an amount of $18,000,000. The other twenty-five per cent will bring the amount to $24,000,000. This is a very low estimate, but that would be the lowest cost of the mountain section. It is estimated that the prairie section will be between 1,000 and 1,100 miles long. On that section we guarantee that bonds of the company to the extent of 75 per cent of the cost, our liability not to exceed $13,000 per mile. As to that we have some data, because some time ago we had a Bill passed in this House under somewhat similar circumstances over the same prairie section, in which it was agreed that we shoull guarantee the bonds of that body. It seemed a fair arrangement, and therefore, taking the cost of that part of the road at $13,000,000, as regards the government guarantee, you will have the whole cost of the prairie section between $16,000,000 and $17,000,000. Add $25,000,000 for the mountain section and you will have a total

cost of $42,000,000. Then you must add $20,000,000 of rolling stock, which brings the amount to $62,000,000. My hon. friend knows well that the stock to be issued by the company is an unknown quantity, as regards the amount which it will realize. As my hon. friend knows, it would not realize one hundred cents on the dollar, but only what the confidence of the people and the state of the market may fix. Under these circumstances, the company must have some leeway. In all cases in building a railway like this, you must give power to issue bonds and stock to a certain extent above the par value. If you knew that you were going to get exactly the face value of these securities you could calculate in that way what you would require. But you are not able to do so, consequently you must fix a wider limit.

Mr. FOWLER. The bonds are not counted in the capital stock. You must have capital to cover the margin between the seventy-five per cent guaranteed by the government and the cost of the road. On the mountain section there will be $6,000,000 and on the prairie section about the same—at any rate a total of $11,000,000 or $12,000,000 as I remember it. But, if you require $12,000,000 to make up the difference between what will be realized from the sale of the bonds guaranteed by the government and the actual cost of the road, what is the need of this capitalization of $45,000,000 ? It seems to me, that the public would have more confidence in this enterprise and also would give a higher price for the stock if the authorized issue was not so large. For, if $45,000,000 of stock is issued, as this will not increase the earnings, you have that much less security for a good return to the persons who invest. Then we must consider the people who are to be served by the line. There can be no possible question that that is a matter that will be taken into consideration when the tariff of tolls is to be fixed for this road by the Railway Commission under the Act now before parliament. The question will be asked : What is the capital of the road ; what interest must be paid to those who have invested their money in the enterprise ? For that reason it is very important that we should know somewhat accurately the basis on which this calculation has been made up. If it is reasonable that a capital of $45,000,000 should be allowed, this committee will cheerfully grant it. But, until the information is before it, the committee ought not to be asked to authorize such a capitalization as is here proposed.

Mr. BORDEN (Halifax). Further than that, the right hon. gentleman has dealt only with the bonds guaranteed by the government. But that does not touch the question I was dealing with, the amount of bonds and capital stock the company is allowed to issue—$50,000 of bonds per mile on the mountain section and $20,000 of bonds per mile on the prairie section. Let us see, taking the estimates given by the hon. member for North Simcoe (Mr. McCarthy), what the road is to cost. He says it will cost $20,000 a mile for the prairie section. That, I believe is excessive. Then, he asks $7,000 a mile for rolling stock which is also pretty liberal. That makes $27,000 a mile for the prairie section of say 1,100 miles, or a total of $29,700,000. Then take the mountain section. It is said that this would cost $50,000 a mile, add $7,000 for the rolling stock and you have $57,000 a mile, for say 600 miles, or a total of $34,200,000. So, the cost of the whole road, even on these pretty liberal estimates would be $63,900,000. How do you propose to capitalize the company in view of that ? In the first place you give $45,000,000 of stock, and bonding powers amounting to $52,000,000, or a total capitalization of $97,000,000, which is $33,000,000 more than the whole cost of the road, even according to the very liberal estimates of the hon. member for North Simcoe. It may be true, as the right hon. Prime Minister (Right Hon. Sir Wilfrid Laurier) has said, that you must give some leeway. But what excuse is there for a leeway of $33,000,000 on a total estimated cost of $63,900,000 ? What excuse is there for that ? Does the right hon. gentleman pretend to say that that very extravagant capitalization, when the securities have been sold and have passed into the hands of bona fide purchasers, will not exercise an influence upon the control of rates upon that ? I believe it is bound to exercise a very considerable influence, and I protest for my part, against this excess of $33,000,000 over the very liberal estimates submitted to the House by the hon. gentleman who is promoting the Bill.

Mr. BARKER. I would like to ask the right hon. First Minister whether, as a matter of fact, it is not the intention of the parties to these negotiations that the Grand Trunk Railway Company—not the Grand Trunk Pacific, but the Grand Trunk—shall receive a present of $25,000,000 of this stock? Under the 27th section of the agreement between the government and the Grand Trunk Pacific, it is provided that the Grand Trunk Railway Company shall acquire and take $25,000,000 of the stock, and shall also hold it during fifty years. It strikes me that the Grand Trunk Railway Company would find it rather difficult to raise $25,000,000 to pay for that stock, unless they could afterwards sell the stock, and under the contract this is just what they cannot do, for they must hold it. I doubt whether there is any intention as between the two companies, the Grand Trunk and the Grand Trunk Pacific, that the Grand Trunk shall pay a dollar on that stock. I think it will turn out that this stock is to be given as a recompense to the Grand Trunk for guaranteeing 25 per cent

of the cost of the road. They will get that for their guarantee, while the country will get nothing.

The MINISTER OF JUSTICE. Will the hon. gentleman (Mr. Barker) point out in this Bill where there would be any authority for the Grand Trunk Pacific to do what he suggests ?

Mr. BARKER. I only read from the section of the contract which says :

The company undertakes——

That is, the Grand Trunk Pacific Company undertakes, for the Grand Trunk undertakes nothing——

—that the Grand Trunk Railway Company of Canada shall acquire and take the said common stock to the amount of twenty-five million dollars, except shares held by directors not exceeding one thousand shares, and shall hold the shares during the term of the said lease, and so long as any of the bonds guaranteed by the government under the terms of this agreement shall remain outstanding and unpaid.

Looking at that from a common sense standpoint and in view of the fact that it is much to be doubted whether the Grand Trunk Company could afford to pay $25,000,000 for that stock—I do not suppose the Grand Trunk Pacific expect the Grand Trunk Railway Company shareholders to acquire so much stock and remain liable to be called upon to pay one hundred cents on the dollar—I infer that there will be what is commonly known as a dicker, and the money advanced on the bonds will be apparently advanced on the stock. By some of the ways unknown to dealers in stock the Grand Trunk Railway Company will get the stock without any liability ; there will be, as I said, simply a present made to the Grand Trunk of $25,000,000 out of this $45,000,000 of stock.

The MINISTER OF JUSTICE. There is no limit to assumptions, except the imagination of the gentleman who makes them. But I would repeat my question and ask the hon. gentleman (Mr. Barker) to point out where the Grand Trunk Pacific would have the authority to make such a 'dicker' as he speaks of.

Mr. MACLEAN. I would like to ask a question that I was about to ask when the hon. member for Hamilton (Mr. Barker) rose, and that is, what the government proposes that the Grand Trunk shall pay for the $25,000,000 of stock that they are supposed to acquire. If the Grand Trunk is coming into this thing, it should show its good faith. We ought to have some assurance that, if that company acquires $25,000,000 of stock, it will pay for it. If it pays for it, this country will be relieved to that extent of the actual cost of the road.

The MINISTER OF JUSTICE. Irishman-like, my hon. friend answers one question by asking another. I would like the hon. member for Hamilton (Mr. Barker) to answer the question I put.

Mr. BARKER. The minister has heard of the various methods that have been adopted in the past in ordinary commercial companies, and in what are called industrial companies, by which an immense amount of stock is placed upon the market as paid-up stock when not a dollar is paid upon it. There are various ways of doing it. We know that there have been large manufacturing concerns in which a million or two millions of stock have been issued as paid-up stock and never a dollar has been paid upon it, and yet it has gone out to the public, and the public have bought it as paid-up stock, and to all intents and purposes, it is so far as legal obligation goes, paid-up stock.

The MINISTER OF JUSTICE. The Joint Stock Companies Act is known to us, the Railway Act is known to us all, and I would like the hon. gentleman to point out in the Joint Stock Companies Act or in the Railway Act anything that will justify the statement he has made.

Mr. BARKER. Does the hon. gentleman mean seriously to assure this House that under this contract if the Grand Trunk Railway take twenty-five millions of that stock, they are going to pay for it ?

The MINISTER OF JUSTICE. I am not here to say what I think, I am here for the purpose of applying the law. The hon. gentleman has made a statement, and I want him to point out by what law he justifies that statement.

Mr. BORDEN (Halifax). Why can it not be done under section 11 ? The question has already been asked.

Mr. MACLEAN. I press for an answer to my question.

The MINISTER OF JUSTICE. I would like my hon. friend from Hamilton (Mr. Barker) to point out any section of any law that justifies his statement.

Mr. BARKER. I know this, that bonds can be sold for what they are worth, and the Grand Trunk Railway Company can take stock at one hundred cents on the dollar and take bonds at five cents on the dollar, and buy both. The hon. gentleman has heard of such a transaction.

The MINISTER OF JUSTICE. As to bonds, yes ; as to stock, no.

Mr. BARKER. Very well, if some people in the same transaction want to buy both bonds and stock, they can buy very little in bonds and a great deal in stock. Very much like the old well-known practice under the Duncan Act, where a man paid five cents for a bit of ginger bread and got whiskey free.

The MINISTER OF JUSTICE. I do not think we have any law in this country which says that those who subscribe for stock must pay for it.

Mr. MACLEAN. What are the Grand Trunk Railway to pay for this $25,000,000 of stock?

The MINISTER OF JUSTICE. So far as I am concerned, under the law, they have got to pay full value for it.

Mr. MACLEAN. As a member of the administration, has he made a contract with this road, or does he know that they intend to pay the cash ?

The MINISTER OF JUSTICE. I know what the law requires of them, and I expect them to comply with the law.

Mr. MACLEAN. Here is a contract involving $25,000,000, and we have no assurance from the government whether this $25,000,000 is to be in money, or whether it is to be practically a gift to the Grand Trunk Railway.

At six o'clock, committee took recess.

After Recess.

Committee resumed at eight o'clock.

On section 4,

Mr. DEPUTY SPEAKER. Shall the amendment be adopted?

Mr. MACLEAN. We were to have had some explanation about that. We would like the promoter of the Bill or some one representing the government to tell us what is to be done with this twenty-five million dollars worth of stock that the Grand Trunk Railway Company are to take up, when they are acquiring it what they are to give for it, and if the money that they give for it is to be devoted to the purpose of constructing the road. If that is the case it alters very largely the financial aspect of the proposition. Before the committee rose at six o'clock, when that question was up, we were expecting some information on that point either from the government or the promoter of the Bill. I ask again for that information.

Mr. McCARTHY. I cannot understand the difficulty that my hon. friend (Mr. Maclean) sees in the matter. There is no difference in this Bill from any other Bill respecting capital stock, and I am at a loss to understand how you can mix the privilege of issuing bonds and debentures with capital stock. The issue of bond or debenture requires the placing of the assets of the company of a mortgage, and that mortgage must be paid off in this case within fifty years. If that mortgage is paid off, the company are relieved of their obligation, but if it is not paid off, then the mortgagees have the right to foreclose the mortgage on the road. How you can mix up with capital the placing of a mortgage on the assets is more than I can understand. This is capital stock to be issued for ordinary purposes. It is not an exorbitant sum. It is greatly reduced as compared with the Canadian Pacific Railway or any other railway company that ever asked for corporate powers from this parliament, and upon this clause I cannot see how you can mix up the capital stock with the bonding privilege. This is a fair capitalization. I have not heard any criticism of the amount of the capitalization except by joining it with the bonding privilege. I cannot understand the view which hon. gentlemen take, because every bond issued is secured by a mortgage. On one side of the ledger you have the assets, on the other side you have the mortgage, and you cannot make the capital any better or any worse because one balances the other.

Mr. HENDERSON. I do not think that any one desires to mix up the capital stock of this company and the bonds except the promoter himself, and it appears to me from what he has said now and said before, that he is rather desirous of confusing our minds upon this question. The stock of the company, we are told, is to be $45,000,000, and of that $25,000,000 is to be acquired by the Grand Trunk Railway Company. What we want to know is what becomes of this $25,000,000 after it is acquired by the Grand Trunk Railway Company?

An hon. MEMBER. They have to hold it.

Mr. HENDERSON. Is it intended that they receive that as a gift for promoting this gigantic scheme? Is it intended that that $25,000,000 is to be divided amongst the provisional directors as their compensation for promoting this gigantic undertaking ? Is it intended that they shall purchase it, and if so, at what price shall they receive it—25 cents on the dollar or 50 cents on the dollar, or will they get par for it ? I am very suspicious that this $25,000,000 is to go to the Grand Trunk Railway Company to be divided amongst the directors as compensation for promoting this scheme. There is certainly something mysterious about it from the peculiar wording of the resolution and from the peculiar manner in which the promoter has endeavoured to answer the questions that have been propounded from this side of the House. I think we must have some specific declaration as to what will ultimately become of that $25,000,000, whether the par value of the stock is to be realized from the Grand Trunk Railway Company and whether the $25,000,000 goes into the construction of this road.

The MINISTER OF PUBLIC WORKS. I am rather surprised that my hon. friend (Mr. Henderson), if he has read the contract,

should make that statement. I think we have a right to assume that if the Grand Trunk Railway Company subscribe for this stock they will carry out their agreement according to law. It will be fraudulent to subscribe for this stock in some roundabout way, and to obtain it in a manner not in accordance with the laws of the country. My hon. friend suggested that they might dispose of this stock to some other parties. It is clearly agreed that they are to hold this stock as the Grand Trunk Railway Company, and they cannot dispose of it. Having entered into an agreement with the parliament of Canada to hold the stock, it would be a violation of the whole agreement should they attempt to dispose of it. I suppose they would be liable to all the penalties that would be incurred for a breach of contract. There might even be a foreclosure of the mortgage. I do not think there is anything but what appears to be a straight business contract according to the laws of the country, and we have every reason to assume that a large and responsible company such as the Grand Trunk Railway Company would carry out any agreement that they entered into. I would be very sorry to think that there was anything in the Bill or the contract that would appear to be otherwise.

Mr. HENDERSON. Is it the intention that the Grand Trunk Railway Company in taking up this $25,000,000 of stock shall practically furnish $25,000,000 towards this undertaking? If that is the intention it would appear to be a bona fide transaction, but I confess from the manner in which the promoter answered the questions on this point it led to a great deal of doubt in my mind as to whether this was the intention or not.

Mr. McCARTHY. Has the hon. member for Halton (Mr. Henderson) any idea that if the Grand Trunk Pacific Railway Company were to be wound up, the shareholders of that company would not have to pay 100 cents on the dollar, and if he has not any doubt upon that point he cannot have any doubt upon the question he is asking. When he endeavours to charge me with mixing up the bonding privileges and the capital stock, I absolutely repudiate his statement. I did not mix them up. The hon. leader of the opposition (Mr. Borden, Halifax) and other hon. gentlemen on the other side of the House, when the discussion was up here the other day, sought to add the capital stock and bonding privileges together, to divide the mileage of the road into that and to show that this road was capitalized by the result per mile. That is absolutely foundationless. The premises are not correct. A bond that is issued cannot be said to be part of the capital stock of any kind of a company, because every bond is secured by mortgage. You have the assets upon one side and the bonds upon the other, and if the bonds are not paid the right of foreclosure can be exercised in this case at the end of fifty years. This is the ordinary case of a company asking for incorporation. When a railway company comes here asking for incorporation, it has its capital stock and it has its bonding privileges. We have never heard of this discussion before. We have never heard of the process of adding bonding privileges and capital stock together and saying that the capitalization of the company is the result of that addition. I do not think, in business parlance, that that is a correct way of stating the case. I think it is absolutely incorrect, and the question is whether $45,000,000 is a fair capitalization for the company or whether it is not. The Canadian Pacific Railway, which will possibly have twice as much mileage as this road, have a capitalization of $85,000,000. In addition to that they received $25,000,000 in cash, $35,000,000 of railway constructed, and 25,000,000 acres in land. I am not charging that the aid which was given to the Canadian Pacific Railway was improperly given, but when you put the two cases in parallel columns, it cannot be argued that the capitalization of this company is unfair or that it is inadequate to the requirements of the company. The bonds must be met in fifty years and it is not fair to mix capital stock with bonding privileges.

Mr. MONK. I do not think this Bill is to be considered as an ordinary Bill going through the House under the same circumstances as most Bills, and I think my hon. friend (Mr. McCarthy) does not quite seize the sense of the argument on this side of the House as regards capitalization. The object of this great enterprise is to reduce rates, and that consideration was given to the bonded indebtedness of the company, and the argument founded upon that was that the capital should not be made too large, because, if the bonded indebtedness represented a very large sum requiring payment of interest and it was necessary to pay interest upon an exorbitant amount of capital stock, the real object of all our efforts would not be attained ; that is to say, the payment of interest upon the bonded indebtedness and the payment of dividends upon the stock would prevent our attaining a great reduction of the rates. That is the way I understood the argument. As to an enterprise of this kind having a great effect on the reduction of rates, experience has proved the contrary ; experience has proved that when there are rival companies rates are not reduced. There is increased accommodation, greater conveniences and more comfort, but an arrangement is generally arrived at between rival lines so as not to reduce the rates, at all events to such a degree as that provision will not be made for the payment of interest on the bonds

and also for doing justice to the shareholders of the stock of the company. It is therefore very natural to say that the bonded indebtedness being so much per mile and there being a second mortgage authorized, you will find that if you have a capital of $45,000,000 you will not be able to give to the western people that reduction of rates which they have a right to expect. I have an open mind on the question whether it will not be necessary for the company to have a capital of $45,000,000. I take it that the company will have to expend, over and above the bonds which it is authorized to issue, a sum approximating $10,000 per mile for the mountain section, because the report of the engineers made in 1877 for the route which the company has chosen to Bute Inlet represents an expenditure of $60,000 per mile, covering 523 miles. The authorized bonding in that region is only $50,000 per mile, so that the company will have to spend $10,000 per mile at least, if we are to have the standard railway that is stipulated in the contract, without taking into consideration the terminal facilities which the company is obliged to provide at Fort Simpson. In addition to that, the amendments which have been adopted to-day authorize the company to build branch lines to North Bay, to Montreal, to Port Arthur, and also tramways each not exceeding ten miles in length in British Columbia. I doubt very much if the company will be able to give us a line of railway in the prairie section of the standard required by the agreement for $20,000 per mile. It may be so, but there are a great many rivers there and one or two watersheds, and the land is not absolutely flat. For my own part, I have an open mind on the question of the $45,000,000 capitalization. My hon. friend from Hamilton (Mr. Barker) has raised a question of very great importance, and one which was probably suggested by the latitude found in section 11 of the Bill. He asked for distinct information as to whether the Grand Trunk Railway is going to put into this company cash or its absolute equivalent to the amount of $25,000,000. That is a very important question, because the agreement made with the company, and which was emphasized by the Prime Minister, requires the company to put $25,000,000 into the enterprise. If the company is to get $25,000,000 in any other way; if it is to get it in the way of a gratuity for promoting the Bill, or if it is in any way permitted to not carry out what seems to be the letter and spirit of the agreement, then it is a very important matter upon which we should be fully enlightened.

Mr. WADE. There is a feature of this discussion which is somewhat novel. Gentlemen on the other side contend that freight rates are fixed in consideration of the amount of capital in the way of stock or bonds that is put on the market. I would ask these gentlemen opposite, if any one of them has ever had anything to to do with the fixing of rates upon railways, and if so can he tell of one solitary case where the capital stock or the bonds that were issued entered into that consideration in the slightest degree. I submit that the fixing of rates on railways is determined upon a different basis altogether. It seems to me that we would be mere children to suppose that the tribunal which has the fixing of the rates would take into consideration, not the dollars and cents that the road costs actually in money, but the amount of stock and bonds that have been put upon the market. I make bold to say that no such consideration has ever prevailed yet in the fixing of rates upon a railway.

Mr. MONK. I think a great many examples might be given.

Mr. WADE. Can the hon. gentleman give me one case in which it has been done?

Mr. MONK. It is certainly an important element in determining the rates on a railway like this.

Mr. WADE. Can you give me a single case?

Mr. MONK. There are many cases which might be mentioned in the United States, but without going further than Montreal, I might say that in the case of the Montreal Street Railway that was an element in determining its rates. It was alleged by the Montreal Street Railway Company—that their rates could not be made lower and a reasonable dividend paid to the holders of stock, and so the amount of the stock was taken into consideration. Also, in the case of the Montreal Light, Heat and Power Company, it was urged that the rates could not be made lower on account of the large capitalization of the company, which, I think, is $17,000,000. It is a question frequently raised on behalf of the company when a company is called upon to reduce its rates.

Mr. WADE. I do not see wherein the statement of the hon. gentleman has the slightest bearing on the case we are discussing. I repeat my statement, that I do not believe a solitary case can be cited in which the railway authorities in fixing rates on a railway, have taken into consideration the amount of stock or bonds that had been issued. I am speaking in the presence of the late hon. Minister of Railways (Hon. Mr. Haggart), and he can correct me if I am wrong. We have nothing to do with railways in the United States, and I am not speaking of street railways; I am speaking of railways which are under the control of this government. I would refer the hon. gentleman (Mr. Monk) to the 29th paragraph of this agreement, which says:

The rates and tolls to be levied and taken by the company on any part of the said rail-

way shall be under the control of the Governor in Council or of such authority or tribunal as is designated under any Act of the parliament of Canada for the control of the business of the railway.

Surely, any person who takes any of the bonds or the stock of this railway, takes it with a full knowledge that the government, or the tribunal that is constituted by this parliament for that purpose, has the absolute control over fixing rates. Does he mean to tell me that the government or the tribunal which is constituted are foolish enough to have their decision warped in the slightest degree by the amount of stock or bonds put on the market ?

Mr. MONK. Most decidedly.

Mr. WADE. Then I must say that he has small confidence in the government, at which I am not surprised, and small confidence in the tribunal that will be organized; but surely the hon. gentleman who sits beside him will not agree with him in that assumption. The hon. gentleman knows that if the company place the stock at anything less than par, under the law, the holders of the stock will be liable to pay the balance in case it shall be necessary. In this case, in order that the government or the tribunal may not be deceived, the 19th section of the agreement gives the government the most absolute power to investigate in any way they see fit, by the employment of engineers, accountants and inspectors, to ascertain just how much money has been put into the construction of the road. In addition, they have a director sitting at the board of the company, and having access to all its books. If $25,000,000 of this stock were allotted to the Grand Trunk Railway Company on payment of 10 per cent, they would be liable, in case of necessity, to pay the other 90 per cent, and there can be no injury to anyone.

Mr. MACLEAN. Let me point out an instance which will meet the hon. gentleman's argument. If the government undertook to regulate the rates of this road, it would be in the way of the company being cited to show cause why the rates should not be reduced. The company would say, ' we have issued $45,000,000 of stock.' This may have been purchased by investors for little or nothing ; but in the meantime it may have changed hands, and the old argument of the widow and the orphan would come up again. The Toronto Street Railway pays dividends on $6,000,000 of watered stock, and that fact is the great stumbling block in the way of a reduction of fares. We have asked what consideration the Grand Trunk Railway Company are to pay for this stock. If it is the intention that they shall pay cash for it, and that the money shall go into the treasury of this company, it will go a long way towards building the road. If the money goes in, value will come from it ; but if it is to be watered stock on which dividends are expected to be paid, there will be very little hope of a reduction of rates subsequently.

Mr. BORDEN (Halifax). My hon. friend from Annapolis (Mr. Wade) has apparently examined the proceedings before the Railway Commission of the United States, or he would not have made such a sweeping statement as he has made.

Mr. WADE. On the contrary, I said I was not referring to any proceedings in the United States, but I was confining myself to the proceedings in Canada. I am not familiar with the laws or practice in the United States.

Mr. BORDEN (Halifax.) While the hon. gentleman asserts that it would be childish to take that argument into consideration, American publications say that it is an argument that has been made there again and again before tribunals having power to fix rates, and an argument to which effect has been given. Therefore, when he makes the broad assertion that no one but a child would rely on that argument, he is casting an imputation on gentlemen who have as much familiarity with railways and as much capacity to make an argument as any hon. gentleman in this House.

Mr. McCARTHY. If a man gets any of this stock for nothing, he has notice that there will be control over the rates, and the fact that he holds a par value of $100 for which he gave nothing cannot be given as a reason for keeping up the rates.

Mr. BORDEN (Halifax). I should not think the question of notice would arise in such a case at all. Every one holds stock subject to the general law of the land.

Mr. McCARTHY. And surely subject to a specific contract under which the stock was purchased.

Mr. BORDEN (Halifax). I cannot grasp my hon. friend's point. All I am suggesting is that when this matter comes before the tribunal having power to deal with rates, this argument, which has been made over and over again in the past, will be repeated, namely, that the company whose rates are sought to be controlled is capitalized at such an amount, and that it is fairly entitled to have its rates fixed, so that it can pay a legitimate profit to the persons who hold the stock. That is an argument which is not affected by any question of notice, so far as I understand it. With regard to the other point, that the Grand Trunk Railway Company are bound to pay $25,000,000 in cash in any possible event, I do not see how that can be made good, in view of the fact that section 11 provides exactly the contrary—that there may be some cases in which stock can be given for considerations which are not cash.

The MINISTER OF JUSTICE. There is no statute requiring the rates to be fixed according to the amount of the capital stock. Therefore, the only reason why the tribunal would take the amount of the capital stock into account would be that the tolls or rates should be put at such a level as to enable the capital put into the undertaking to be remunerative. If that be the reason, is it not open to the tribunal, which we appoint to fix the rates, to ascertain the true amount of capital and not take the nominal value, especially when those who take the stock take it knowing that a contract exists between the company and the government, providing that the tolls shall be regulated by the tribunal and that the government shall have power to investigate in order to ascertain what the true amount of the investment is. With respect to the contribution, I do not think it is argued that the contribution should be in cash for the stock. It may be in the equivalent to cash. The company will have to give something equivalent to cash in return for the stock.

Mr. MACLEAN. What is that ?

The MINISTER OF JUSTICE. Plant, rolling stock, elevators, wharfs, warehouses, vessels or materials of any kind. That is what the statute says. If they do not give an equivalent in cash they would have to pay the cash.

Mr. BORDEN (Halifax). My hon. friend has made it very plain now. The intention is exactly what we suspected all along. They are to give the capital stock in return for rolling stock, vessels and services and so on, due regard being had to the market value of the stock. And if the stock would not have any particular market value they could give $25,000,000 of stock for almost nothing and no one could find any fault. My hon. friend the Minister of Justice has made the matter extremely plain.

The MINISTER OF JUSTICE. If I have satisfied the leader of the opposition, I am quite happy.

Mr. BARKER. I desire to call attention to a provision which was in the General Act respecting railways as first introduced, but which was subsequently struck out by the committee, and which is now in the Grand Trunk Pacific Railway Bill with a very significant addition. In the General Railway Act, as originally introduced, there was this clause, which was struck out after discussion in this committee.

59. The directors of the company, elected by the shareholders, may make and issue, as paid up stock, shares in the company, whether subscribed for or not, and may allot and hand over such stock in payment for right of way, plant, rolling stock or materials of any kind, and also for the services of contractors and engineers ; and such issue and allotment of stock shall be binding on the company, and such stock shall not be assessable for calls.

After discussion, that clause was struck out. But now we find in this special charter that same clause, which was considered improper to be inserted in the General Railway Act, and in addition certain very significant words :

11. The directors of the company, elected by the shareholders, may make and issue as paid up stock, shares in the company, whether subscribed for or not, and may allot and hand over such stock in payment for plant rolling stock, docks, elevators, wharfs, warehouses, vessels or materials of any kind——

Now comes a very important addition :

Or as consideration for rights, powers and privileges acquired and also for bona fide claims, &c.

I need not go on with the clause, but here are the significant words : As consideration for rights, powers and privileges acquired. Why, Sir, does this House overlook the fact that the board of the Grand Trunk Pacific Railway and the board of the Grand Trunk Railway are one; that when the president of the Grand Trunk Railway sits in his office and shakes hands with the president of the Grand Trunk Pacific Railway, he shakes his own hand ; that when these two companies sit down together, under another clause of the General Railway Act, and make arrangements for the interchange of traffic and all those other things so common among railway companies, the one company can give to the other rights, powers and privileges, the value of which no one can estimate or weigh ; that if they agree that these rights and privileges are worth $25,000,000 or $25 no man could say it was right or wrong, and that the Grand Trunk Railway may stipulate, in any traffic arrangements which it shall make with the Grand Trunk Pacific Railway, that $25,000,000 of common stock of the latter road shall be transferred as a consideration for entering into the agreement. How is any railway commission to say that such a bargain is fraudulent or that they paid more or less than the value of the bargain ; and yet, under this clause, with these words in it, which was rejected from the General Railway Act, these two companies may agree that $25,000,000 of common stock shall be considered the equivalent of the contract entered into between them and be considered paid up stock not assessable for calls.

Mr. McCARTHY. My hon. friend has discovered a mare's nest. He knows that this same clause was standing in the old Railway Act.

Hon. Mr. HAGGART. No.

Mr. McCARTHY. Yes. The ex-Minister of Railways and Canals (Hon. Mr. Haggart) stood up in his place, when this clause in the General Railway Bill was objected to, and said that it was similar to the one in the Railway Act.

Hon. Mr. HAGGART. You have added words which make it entirely different.

Mr. BARKER. The words I have quoted are not in the old Railway Act, namely, 'in consideration for rights, powers and privileges acquired.' These have been inserted for the purposes of this Bill.

Mr. McCARTHY. My friend knows that when this clause was before the committee, the point now taken by him was not urged. The clause was in the General Railway Bill and also in this Bill, so that the point sought to be made by the hon. member for Hamilton that it was specially introduced in this Bill to make up for something that has been struck out of the General Railway Bill is incorrect. Although there have been some words added, they are simply words which require to be added because this company, as the hon. member for Jacques Cartier has pointed out, is going to erect docks, warehouses and vessels. Therefore the clause is not a departure from the law as it has been since 1888, in section 39 of the Railway Act, which was passed in that year. This company is to provide terminal facilities both upon the Atlantic and upon the Pacific. Therefore, the bonding privilege and the stock they ask to be allowed to issue is not exorbitant. But the hon. gentleman (Mr. Barker) seeks to draw a red herring across the scent by speaking of the president of one company making a bargain with the other company simply by shaking hands with himself. Why, what has been the clamour in the country up to the present time until this contract was announced to the public? It has been that irresponsible people were behind this scheme. We had it day after day in the press that the Grand Trunk Railway Compapny of Canada was not prepared to back this scheme financially. And now this is answered conclusively when it is shown beyond the shadow of a doubt that the Grand Trunk Railway Company of Canada is behind this scheme financially and every other way. Why, then, should we have the hon. gentleman saying that a bargain between these two companies will be made by the simple process of the chairman of both shaking hands with himself? This is entirely opposed to the criticism to which the Bill was subjected in the committee. And it is unfair criticism. The desire of the whole country was that the Grand Trunk Railway Company of Canada should take part in this scheme and give it stability. What we have before us is not section 11 or section 13; the question is whether $45,000,000 capitalization—having regard to the general legislation which has passed this parliament—is fair or unfair in the case of a company such as this. And hon. gentlemen are discussing extraneous matters in trying to lead us to the consideration of other sections of the Bill, which have already been discussed and passed.

Mr. BARKER. I thought I was discussing the question of the capital stock of the company, and I am very much mistaken if I have said a word outside of that subject. The hon. gentleman (Mr. McCarthy) says correctly that in the General Railway Act, as introduced, there was the clause that I more than once called attention to in this House as a very objectionable one, as enabling a company to issue capital stock without getting any money for it. After lengthy discussion the Minister of Railways voluntarily withdrew that clause as one that he did not think it proper to allow to remain in the General Railway Act. But the hon. member for North Simcoe (Mr. McCarthy) rather gets outside the line of the argument. He says that that clause was in the General Railway Act during the discussion of the clause in this Bill in the Railway Committee, and therefore there was nothing extraordinary in that clause. But the hon. gentleman has overlooked that I pointed out to him that there were very important words incorporated in this clause in this special Bill that was never in the General Railway Act at all; and it happens that the very words that are introduced into this Bill that are peculiarly fitted as between two railway companies allied as these two are, to enable one to issue a large amount of capital stock to the other without getting a dollar out for it. The particular words I referred to were not in the General Railway Act at all; they are 'or as consideration for rights, powers and privileges acquired.' That is, one railway company may issue stock as fully paid up when it acquires from the other powers and privileges. Why, that is the very point we are raising, that the Grand Trunk Pacific, by entering into an arrangement with the Grand Trunk may acquire privileges of unknown value, and as consideration for them may hand over its common stock. You cannot measure in dollars, or in any way, the value of privileges accorded by one great company to another for the interchange of traffic, the use of terminals and all the other things that a company fifty years of age can offer to a youngster just coming into existence. And, I ask, when these hon. gentlemen were drawing a clause in the terms of the General Railway Act and for this very purpose, why did they not adopt the clause in the General Railway Act as it stood at the time. They inserted all the provisions there, and they added these particular words that never appeared in the General Railway Act. If they have any object at all, it is to enable the Grand Trunk Pacific to give this enormous amount of common stock as compensation for the privileges they propose to gain from the Grand Trunk. Now, I would like the hon. gentleman (Mr. McCarthy), as

he is so ready to answer me and so ready to charge me with using unfair arguments, to explain how these words came to be inserted and who inserted them. Was it the hon. gentleman himself? He introduced the Bill and has been in charge of it; perhaps he will tell us with what motive these particular words were inserted. Surely the clause that had been in the General Railway Act since 1888 was sufficient for all purposes. Why did they want to insert these words in this particular Act except for the purpose that I have suggested? And if they wanted the power to deal with the rights and powers and privileges that one company can accord to the other, I think it is a reasonable argument for hon. gentlemen on this side of the House—particularly when you take this provision in connection with the fact that $25,000,000 of common stock is to be acquired from one company to the other company—that this stock is to be given, and, on the other hand, this clause 11 provides for the consideration.

Hon. Mr. HAGGART. I desire to say just a few words in reply to the hon. gentleman for Annapolis (Mr. Wade). I am glad to see that that hon. gentleman has arrived at the same conclusion that I have often expressed in this House, that the Railway Commission which we are creating will be empowered to inquire into the actual cash expenditure on the road, and fix the charges on that basis. But the hon. member differs entirely in his conclusion from the ex-Minister of Railways and Canals (Hon. Mr. Blair) and the Postmaster General (Sir William Mulock). How often, before the Railway Committee have these hon. gentlemen urged the reduction of the powers to issue stock and the bonding powers of the several railroads under consideration on the very principle that my hon. friend the leader of the opposition (Mr. Borden, Halifax) has urged—that the amount of capitalization, including bonds, would be a consideration with the commission in fixing the rates of the road. I have again and again contended for what the hon. member for Annapolis now says, that the issue of bonds and the issue of stock is an internal affair that concerns the company itself and is independent of any legislation that we may enact in reference to fixing of rates; that the true criterion is the amount of cash expended on the road, and that on the basis of this cash expenditure the commission should fix the rates. I do not say that the capitalization of this road is too large when we consider that all the rolling stock of the road is to be arranged on the western section, and that the powers of bonding are confined to that section. They have to build the section of the road from Winnipeg to Lake Superior, they have to build the connection between the main line and North Bay, and—whether they ever intend to build it or not—to make the connection with a railway that centres in Montreal. If they intend to do all these things the capitalization is not too large. But, unfortunately for the consideration of this subject, the hon. member who has charge of the Bill did not explain that feature of it. He confined his explanations to the government section of the road, and the road which the company intend to build from Winnipeg to the ocean. He did not seem to know that capital was required for the purpose of building these sections of the road. I am not opposed to the Bill at all. Give the Grand Trunk Railway Company the fullest power to enable them to fulfil the bargain they have entered into with the government. When you give them that power, then we will discuss the bargain they have made with the government. But, we cannot shut our eyes to the statement of my hon. friend from Hamilton (Mr. Barker), where he draws attention to the extraordinary powers given in section 11. I have stated before that it empowered the Grand Trunk Railway Company to make an arrangement with this new corporation which enabled them, in exchange for the guarantees which they give for the rolling stock that is put upon the road—or, as my hon. friend says, in pursuance of any other family or private arrangement made between the two companies—to give this stock over to the Grand Trunk Railway Company. Now, the question must occur, how is the Grand Trunk Railway Company to raise the $25,000,000? The Grand Trunk Railway are in this position, that the common stock is the only thing they have, with the bonds of the company. What is the value of that stock? What is the value of our claim that we have against the Grand Trunk Railway Company for nearly $30,000,000? That precedes the common stock of the company, it comes after the other securities to which we have given a preference, and if that security which we have at present is not worth a cent, what is the value of the promise of the company to fulfil these conditions? Nothing whatever. That is the position of the guarantee of the Grand Trunk Railway. They have to raise money outside this scheme to build that portion of the road from Winnipeg to Lake Superior. On the road that proceeds from Winnipeg to Quebec it is a necessity for them to have a branch to Lake Superior. They have to raise that money. They are unable to give a security upon that portion of the road to the parties who invest money in it, as it is a purpose independent entirely of all the other undertakings. All the branch lines, not exceeding six miles in length, are liable to be hypothecated by this new company as security for the advances made for the purpose of building these particular sections of road. As I said before, the capitalization, to my mind, is not too great. But let the House remember that we know exactly what is the

value of the powers of clause 11 in the agreement, that it enables this company to give the Grand Trunk Railway Company the whole of this stock for any reasons which come within clause 11, and these reasons may not be binding upon a commission if the views of the government are taken, if the views of the ex-Minister of Railways and Canals are taken, if the views of the Postmaster General are taken, that in consideration of the fixing of rates on the railway the capital and bonding powers of the road are to be taken into consideration. As I said before, I am with the hon. member for Annapolis (Mr. Wade) in thinking that the commission's duty, if it is not clearly defined in the Bill, is to look into the expenditure of cash put into the road for the purpose of construction, and on that they should act, not on any watered stock, not on any stock given away for promotion, or for any of these other purposes. As the leader of the opposition says, these matters are considered by railway commissions in the United States at the present day—the amount of capital stock, no matter how much it is, and the amount of bonds issued upon the road, because the innocent holders of bonds do not know whether they have been watered or not. It is a fair consideration for the commission to see that not more of a bond issue or stock issue is made upon the road than what the road requires for actual construction.

Mr. RUSSELL. I do not think the leader of the opposition said exactly what the hon. member for Lanark (Hon. Mr. Haggart) attributes to him. I listened carefully to his statement, and I did not understand him to say that the commissioners are guided by the amount of capitalization. I think it would have been a mistake if he had said that the commission, in settling freight rates, were very materially influenced by the question of the capitalization of the company, because so far as I understand these questions, these fixed charges do not very materially enter into the question of what the freight rates shall be. The freight rates may be made to depend upon cost of service into which the question of capital of course enters, but I think they are based more frequently upon causes other than the amount of capital invested in the road. They may in some cases be based upon cost, but more frequently they are based upon the traffic that is carried over it. They do not enter into the question of how much capital is put into the road, but whether it charges more for freight that is to be carried than the traffic will bear. It may be that the question of over capitalization would enter into the fixing of freight rates, and the question of stock watering might also enter into the fixing of a rate. But I am satisfied that those questions enter only to a small extent into consideration. If I may quote the language of one of the best authorities on that subject on this continent, the extent to which stock watering ever does enter into the fixing of rates has been much exaggerated by the popular imagination. I am quoting substantially the words of Professor Hadley, who has given this whole subject of railway transportation a more scientific consideration than perhaps any other writer on this side of the Atlantic. Speaking of the matter of stock watering in the fixing of rates, and of over capitalization which is the same thing in another form, he says :

> Its influence in this matter is very much exaggerated in the popular belief. A railroad, as we shall see when we come to consider the attempt to base rates on cost of service, does not take its fixed charges into account in making its rates. It tries to arrange matters so that on each class of business it shall make as much money as it can above operating expenses. If it makes a mistake in one place it is so much loss to the stockholders. It is not a thing which it can try to make up at some other place ; because, by supposition it would in any event try to make all it could at that other place, and to raise rates there would do more harm than good. To make the most at all points put together, it tries to make the most at each point.

In a foot note to this passage he says this, which I think is very relevant to the point made by my hon. friend from Annapolis (Mr. Wade).

> The railroads which have high capitalization on the whole do business at lower rates than the cheaply built ones. During the last twenty years while rates have been falling so rapidly, the average capital account of railroads per mile has been increasing. The railroad men often try to make their capital correspond to their profits ; but they do not try to make their rates correspond to their capital.

And they could not make their rates correspond to their capital if they did try, because these are determined by other considerations. Therefore, I am doubtful whether any commissioners in any of the states ever have undertaken to settle the freight rates by a consideration of what it has cost to build the road, and I do not think they could successfully do so if they tried.

Mr. BORDEN (Halifax). With all due deference to the authority that my hon. friend (Mr. Russell) has cited I think it hardly bears out his conclusion.

Mr. RUSSELL. I intended to allude to the very striking difference of opinion between my hon. friend (Mr. Borden, Halifax) and the very much higher authority on railway questions of the hon. member for Lanark (Hon. Mr. Haggart).

Mr. BORDEN (Halifax). I am sorry that my hon. friend forgot that because it was a great oversight on his part. He cites an authority which says that while railway companies take the view that their profits bear some relation to their capital, their rates do not bear any relation to their capital. Inasmuch as their profits must de-

pend upon their rates one would naturally suppose that the latter must equally have some relation to the capital stock. Therefore, the authority which my hon. friend has cited has not been of very much assistance to him. Notwithstanding what has been said, I think it would be a very difficult matter fifteen or twenty years from the present time for a commission to embark upon an inquiry to ascertain what has been the cost of this road, and the amount of capital that has been put into the road. Particularly when you have a clause like this under which $25,000,000 of stock can be handed over in consideration of certain rights, powers and privileges. It would be a most difficult thing for a commission to inquire, twenty-five years from now, whether these rights, powers and privileges were worth $25,000,000 of stock. It has been suggested by my hon. friend (Mr. Russell) that my hon. friend from Lanark (Hon. Mr. Haggart) is a high authority upon these questions, and I recognize as much as the hon. member for Hants the authority which his opinion bears upon matters of this kind. It has been suggested that the difficulty which I brought to the attention of the committee could always be got over by an inquiry as to the actual cost. I say with all deference to my hon. friend from Lanark (Hon. Mr. Haggart), that such an inquiry would be attended in the ordinary course with very great difficulty after the expiration of a period of years. It would be an inquiry which would envolve an enormous amount of work and it would be an inquiry which in the end would probably be futile. It would be almost impossible to make such an inquiry in a case of this kind where we should have to deal with transactions under section 11. However much my hon. friend (Hon. Mr. Haggart) may think you can work this matter out, on a strictly logical basis, or that you will not have to consider the amount of bonds and the stock outstanding, I say that taking things as they are in this world, and dealing with matters of this kind before the members of a Railway Commission you will find that such questions as these will have more or less influence. Therefore, I say that the question of capitalization must, in my own opinion, have some effect upon the control which parliament may be able to exercise in regard to rates in the future. I think my hon. friend (Hon. Mr. Haggart) has made a better answer than the hon. member for North Simcoe (Mr. McCarthy) in regard to capitalization. I have not examined the particulars of this section providing for these additional lines, and I am not aware whether it is compulsory upon this company to undertake the construction of these lines but it is only optional upon the company to undertake the construction of the lines that have been referred to, you may still have the same difficulty that the company may not see the advantage in future of constructing these lines, and nevertheless you raise this capital to $45,000,000. These lines must be of considerable extent if they cover the whole of the excess of the capital to which I have referred, because we find the company with a capitalization of $97,000,000, and we find there an excess of $33,000,000 approximately over the cost as estimated by the hon. member for North Simcoe, which estimate was based upon $20,000 a mile for the prairie section, $50,000 a mile for the mountain section and $7,000 per mile for the cost of equipment, which I am sure every hon. member who has considered this matter at all would regard as an exceedingly liberal estimate particularly for the prairie section. But, taking that estimate as approximately correct you have the sum of $33,000,000 by which this company is capitalized over and above the estimate of cost put forward by the hon. member for North Simcoe (Mr. McCarthy). I therefore still think that the capitalization of this company is not upon a proper basis and I am still of the opinion that the excessive capitalization may in future exercise an influence upon the rates which shall be charged by this company.

Section as amended agreed to.

On section 5,

Mr. McCARTHY moved :

That section five be reconsidered by the committee for the purpose of amending it by adding after the words 'capital stock' in the seventh line thereof the following ; 'not exceeding twenty million dollars or the equivalent thereof in sterling money.'

The MINISTER OF JUSTICE. They may issue the whole of the stock as preference stock or any portion the company may determine. This is to limit to $20,000,000 the amount of preference stock they may issue.

Section as amended agreed to.

On section 9,

Mr. McCARTHY moved :

That section nine be struck out.

He said : This is covered by the terms of the General Railway Act and there is no necessity for it.

Hon. Mr. HAGGART. Before this is struck out let me draw the attention of the committee to the fact that two of the members of this incorporated company are members of the Senate—George A. Cox, and Wm. Gibson, of Beamsville. How is it possible that that company can contract with the government when the new Bill introduced into the House the other day provided that no member of the House of Commons or of the Senate shall be interested in any way in this undertaking or Bill ?

The MINISTER OF JUSTICE. After the Bill has passed and the company becomes organized, then I presume, it will become

necessary that these two gentlemen shall both disappear from the company.

Hon. Mr. HAGGART. Would it not be a great deal better to strike them out at the present time ? Here is a contract being entered into between the company and the government of the country.

The MINISTER OF JUSTICE. The agreement has not yet been sanctioned by parliament.

The POSTMASTER GENERAL. They have no financial interest in it.

Hon. Mr. HAGGART. Well, if you are determined to leave them in, let them be left in.

The MINISTER OF JUSTICE. I move that in lieu of the section which it is sought to eliminate the following clause be inserted for the protection of the government :

The government of Canada may from time to time appoint a director for such period as it deems proper as provided for in the agreement referred to in the schedule of the National Transcontinental Railway Act, 1903 ; who shall not be required to hold any shares in the said company to qualify him to act as such director, but shall be entitled to exercise all the rights, powers, and privileges of a director elected by the shareholders.

Hon. Mr. HAGGART. Has the hon. gentleman given notice of that amendment ?

The MINISTER OF JUSTICE. I have not. I am presuming on the indulgence of the committee to allow that amendment to go through. It is for the protection of the government.

Mr. BARKER. Is there any reason why that director should not be appointed by the Governor in Council ?

The MINISTER OF JUSTICE. The government of Canada means the Governor in Council.

Mr. FOWLER. What is the idea of appointing this director ?

The MINISTER OF JUSTICE. The proposed agreement provides for the appointment of a director in order that the government of Canada, which will have large interests in this concern, should have some one on the board in a position to inform the government of what is going on. That really is the object. We have authority under the agreement to appoint engineers and expert accountants and auditors to examine the books, but by having a director who shall not be the holder of any stock and who shall be exclusively under the control of the government, we think we would be in a better position to control the operations of the company and to understand all they are doing.

Mr. FOWLER. Why should not the amendment provide that this director shall not be a holder of stock in the company ?

The MINISTER OF JUSTICE. It does.

Mr. FOWLER. No. It says he shall not be required to hold any shares, but he may hold shares.

The MINISTER OF JUSTICE. We will make it to read ' who shall not hold any shares in said company.'

Mr. FOWLER. That is what I want.

The MINISTER OF JUSTICE moved that the section be amended by striking out the words ' be required to.'

Amendment agreed to.

On section 12,

Mr. McCARTHY moved to amend section 12 by adding :

Provided also that should the government of Canada undertake the construction of a line of railway from the city of Winnipeg to the city of Moncton, and the company not exercise the powers hereby conferred upon it in respect to the construction of the eastern section, the Quebec section and the Woodland section, the company shall nevertheless have power to build branch lines from points on the line of railway so to be constructed by the government to a point at or near North Bay, Nipissing Junction or Gravenhurst, and to Port Arthur and Fort William respectively, and also to a point on the Montreal and Western Railway or to the city of Montreal, and all the powers by this Act conferred upon the company with respect to branch lines authorized to be constructed from its main line of railway to the said points respectively shall fully and in all respects apply to branch lines constructed to such points from the said line of railway to be constructed by the government.

Mr. BORDEN (Halifax). What will be the length of these lines ?

Mr. McCARTHY. Some of them would be pretty long. The one from the main line to Montreal would be pretty long ; the one to join the Témiscamingue road would be about 90 miles, and the one from the main line into Port Arthur and Fort William would be in the neighbourhood of 150 miles.

Mr. CLARKE. How far north of the main line of the Canadian Pacific Railway at North Bay will this line run ?

Mr. McCARTHY. Two hundred miles approximately. I think the Témiscamingue road is about 100 miles north, and this line may be 90 miles above that.

Mr. CLARKE. How far north of Ottawa will this line be ?

Mr. McCARTHY. It would be in the neighbourhood of Lake Abittibbi ; it would be about 200 miles.

Mr. CLARKE. And how far north of Montreal ?

Mr. McCARTHY. From 130 to 150 miles north of Montreal.

Mr. BORDEN (Halifax). The branch line to Port Arthur and Fort William is to be about what length ?

Mr. McCARTHY. I think from 100 to 150 miles from the main line.

Hon. Mr. HAGGART. That will be about 430 miles from Winnipeg ?

Mr. McCARTHY. About that.

Mr. MONK. It is a peculiar feature of this Bill that we do not know exactly where the Quebec section is going to be, and that is an element of some importance, in considering the length of these branch lines which we are authorizing the company to build. Will the Quebec section follow about the line of the proposed Trans-Canada Railway ?

Mr. McCARTHY. No, away south of that.

Mr. MONK. Will it go in a direct line from Quebec to the eastern limit of the province of Ontario ?

Mr. McCARTHY. Yes, as far as possible.

Mr. MONK. Even if it goes in a straight line, that portion north of Montreal from which a branch line can conveniently be built into the city of Montreal, will be away north of Lake Nominingue. Even if it goes in a direct line from Quebec to Lake Abittibbi, it will deviate considerably from the Trans-Canada line, and it will be at least 80 miles north of Lake Nominingue, or over 200 miles north of Montreal. But owing to the many lakes in that district, at least 20 per cent would have to be added for curvatures, so that I think we may assume that it will be at least 200 if not 250 miles from Montreal.

The POSTMASTER GENERAL. No such distance.

Mr. ROCHE (Marquette). Does the promoter of the Bill say that this road is to be run north of Lake Nipegon ?

Mr. McCARTHY. Yes.

Mr. ROCHE (Marquette). About how many miles north of Fort William will it be ?

Mr. McCARTHY. I said that the branch to Fort William would be between 100 and 150 miles long.

Mr. ROCHE (Marquette). How would the mileage from Fort William to Winnipeg compare with that of the Canadian Pacific Railway ?

Mr. McCARTHY. I cannot say.

Mr. MONK. If the main line passes south of Lake Abittibbi, it will be very important to know where the branch to Montreal starts from.

The MINISTER OF JUSTICE. I presume that it would start from the most convenient point on the main line to reach Montreal, because of course it would be impossible to ignore so important a centre as Montreal in connection with such a line as this.

Mr. CLARKE. According to the statement of the hon. member for North Simcoe, this line will run 400 miles north of Toronto. The city of Toronto is as large a distributing centre as the city of Montreal, and how does the hon. gentleman say that it will reach that city ?

Mr. McCARTHY. We come down by the Temiscaming road, now being built by the Ontario government to North Bay, and thence over the Grand Trunk Railway from North Bay to Toronto, which is the shortest possible route, and which is now being used by the Grand Trunk Railway and the Canadian Pacific Railway.

Mr. CLARKE. The point of junction is four hundred miles north of Toronto, or only one hundred miles less than the distance from Toronto to Quebec, and people in Ontario who want to use this new road had better go to Quebec from Toronto.

The MINISTER OF JUSTICE. Of course, Toronto has been entirely overlooked in connection with this enterprise.

Mr. CLARKE. I would not have the hardihood to say that Toronto and the whole population of that part of Ontario has not been neglected by this Bill.

The MINISTER OF JUSTICE. This Bill provides for Ontario what it has not had in the past, an opportunity to go into the North-west.

Mr. CLARKE. I hope that the hon. gentleman's knowledge of Quebec is better than it appears to be of Ontario. This railway will run 400 miles north——

Mr. HUGHES (Victoria). North-east.

Mr. CLARKE. North of Toronto, and will be of no value to that section of Ontario.

The MINISTER OF JUSTICE. What about North Bay ?

Mr. McCARTHY. How much shorter can you get to North Bay than by the present Grand Trunk Railway road ?

Mr. CLARKE. I will tell you. One of the absurdities of your proposition is that the Grand Trunk Railway itself intended to run from Gravenhurst west. The promoters have been compelled to shift their eastern terminus from Gravenhurst, the present northern terminus of the Grand Trunk Railway proper—they have been compelled to shift it first of all from Gravenhurst to Montreal, then to Quebec, and then to Moncton. The original proposition was to run north-west from Gravenhurst to get into Manitoba.

Mr. McCARTHY. No.

Mr. CLARKE. It is being compelled now to go 300 miles further north from Toronto than Gravenhurst.

Mr. McCARTHY. How can you get from Gravenhurst to the west unless you go around lake Nipissing ?

Mr. CLARKE. The Grand Trunk Railway is at North Bay now.

Mr. McCARTHY. Yes, 250 miles north from Toronto. We have to go that distance now any way.

Mr. CLARKE. You are at North Bay.

Mr. McCARTHY. And you are bringing the terminus about 100 miles south of that to Gravenhurst. If you make Gravenhurst the terminus, how much shorter would it be than going by North Bay, if you have to go around by Lake Nipissing to get west ?

Mr. BARKER. Surely the hon. gentleman does not mean to say that you have to go around Lake Nipissing to get west ?

Mr. HUGHES (Victoria). If he does not know better, somebody should send him a map. Why is this amendment proposed to run from Gravenhurst ? Take the line from Gravenhurst to Sudbury, it will be a saving of upwards of 75 miles when the new Canadian Pacific Railway is constructed, as it will be in a short time.

The POSTMASTER GENERAL. This is intended as a great trunk line.

Mr. HUGHES (Victoria). Which line, you have two or three ?

The POSTMASTER GENERAL. The main line from the Pacific ocean to the east is a trunk line.

Mr. HUGHES (Victoria). But the hon. minister must look at the amendment. He is proposing by it to abandon the eastern section :

> Provided also that should the government of Canada undertake the construction of a line of railway from the city of Winnipeg to the city of Moncton, and the company not exercise the powers hereby conferred upon it in respect to the construction of the eastern section, the Quebec section and the Woodland section, the company shall nevertheless have power to build branch lines from points on the line of railway so to be constructed by the government to a point at or near North Bay, Nipissing Junction or Gravenhurst, and to Port Arthur and Fort William respectively, and also to a point on the Montreal and Western Railway or to the city of Montreal, and all the powers by this Act conferred upon the company with respect to branch lines authorized to be constructed from its main line of railway to the said points respectively shall fully and in all respects apply to branch lines constructed to such points from the said line of railway to be constructed by the government.

So that, after all we are going to Gravenhurst. As between running to Lake Abitibbi through North Bay over this road on the one hand, and the line from Gravenhurst north-westerly to a point on the main line on the other, there will be a saving of at least 250 miles from Toronto. Yet we are told by the promoter of the Bill that this is the shortest way to get into the North-west from Toronto.

The POSTMASTER GENERAL. We could not build a trunk line and make through connection at many different points. That would destroy its character as a trunk line. The various provinces must make connections. If my hon. friend is right in saying that it is 250 miles from Toronto to North Bay, and this line will pass 400 miles north of Toronto, then it means that it will pass, 50 miles north of North Bay.

Mr. CLARKE. Does the hon. gentleman dispute that ?

The POSTMASTER GENERAL. No, but you cannot have the main road running down from Toronto and at the same time have a transcontinental trunk line. You have to choose whether we shall have a main trunk line, which will be a benefit to all the provinces, or confine its benefits to one particular province. If I were looking at the matter entirely from an Ontario standpoint, I might be anxious to see the road terminating at a point in Ontario, but it is a national trunk line, and the provinces will have an opportunity of making connections with it, and I trust there will be many such connections, among them a connection at North Bay. It is not unlikely there will be a cut-off on the trunk line westerly of the Temiscamingue road, going down to Sudbury, and in that way connecting with the existing Ontario system. In a like manner the city of Ottawa will make its connection with this line. It will no doubt extend one of its lines now running northerly from the city of Ottawa and make connection with the trunk line. No doubt, also, it will be the object of Montreal to extend the line now running to Labelle so as to connect with this trunk line. Similar connections will take place in Ontario. And before it reaches Moncton, no doubt, there will be connections with the city of St. John. Thus each province will connect with the trunk line. If it is to be regarded from a sectional standpoint, and should have to go down to the different provinces, it would entirely lose its character as a trunk line. We cannot have it both a local line and a trunk line as well. It is not intended to side track any province or give any one province any undue advantage, but should be considered in a broad, fair spirit with due regard to the interest of the whole Dominion.

Hon. Mr. HAGGART. This Bill is simply an empowering Bill giving the Grand Trunk Railway the power to build these branch lines. Unfortunately, it is not provided in

the agreement that lines are to be built to Lake Superior, North Bay and Montreal. All the other provinces in the confederation are provided for. The Dominion government builds a line from Winnipeg to Quebec and from Quebec to Moncton, but this present Bill is only an empowering one. It is not one of the conditions with the Grand Trunk Pacific Railway that they shall build one mile of branch line in the province of Ontario, or towards North Bay, or Lake Superior or the city of Montreal. They are simply empowered to do it, if they choose. If this is to be a trunk line, why should it not be a part of the agreement that the company should make connection with Toronto and Lake Superior? Why should it not be part of the agreement that they shall connect with Montreal? Every other province of the Dominion is provided for but the province of Ontario. But equally neglected is that part of the province of Quebec between the main line and the city of Montreal.

Mr. WADE. Will the hon. gentleman (Hon. Mr. Haggart) allow me to interrupt him to point out that no provision is made for connection with the city of Halifax or with the city of St. John.

Hon. Mr. HAGGART. It is already made.

Mr. WADE. It is only an enabling power, the same as it is in the case of Montreal and Toronto.

Hon. Mr. HAGGART. Does the hon. member (Mr. Wade) pretend that there can be any route from Moncton to Halifax shorter than the Intercolonial?

Mr. WADE. Yes.

Hon. Mr. HAGGART. Does he pretend that there is any shorter route from Moncton to the city of St. John than the Intercolonial?

Mr. WADE. Yes.

The POSTMASTER GENERAL. Certainly.

Hon. Mr. HAGGART. There is the point of Chipman on the road between Quebec and Moncton from which a shorter route could be had to the city of St. John. But once you go to Moncton, there is no possible route to St. John shorter than by the Intercolonial Railway. The whole of the provinces of New Brunswick and Nova Scotia are provided for by the Grand Trunk Railway, but there is only an enabling Act to allow the Grand Trunk, if they choose, to build a line to Lake Superior from North Bay, or to build to the city of Montreal, or to reach Toronto by connecting with the Northern or North-western Railway running south. Instead of merely empowering the company to do this, it should be part of the agreement. Every other part of the Dominion is provided for except the province of Ontario and the great commercial centre of the whole Dominion—the city of Montreal. For the eastern provinces the road is to be built by the government, and for the rest, from Winnipeg to the Pacific ocean, it is provided that the road is to be built by the company.

The POSTMASTER GENERAL. The hon. gentleman (Hon. Mr. Haggart) is not doing himself justice. He says that when the road reaches Moncton there is no shorter route than by the Intercolonial. The same observation could be made with regard to Montreal. The main line will run some miles north of Labelle. Supposing we say that if it goes to Quebec there will be no shorter way to Montreal than by Quebec. Why go to Labelle or to Moncton, if by branching off at an earlier point you can reach other points, as the city of Montreal and St. John? But in any event, the hon. gentleman will admit this—that however the road may be located under our Bill it will be far better for Ontario and Quebec than the line he would locate, for he would take it to Hudson's bay. My hon. friend from West Toronto (Mr. Clarke) wants it brought down to Toronto——

Mr. CLARKE. I dispute that. The hon. gentleman has no authority for making that statement as coming from me.

The POSTMASTER GENERAL. The hon. gentleman (Mr. Clarke) has argued that this road ought to go to Gravenhurst to connect with Toronto. The hon. member for South Lanark (Hon. Mr. Haggart) has argued that it should go to Hudson's bay. How can we please both of these gentlemen?

Mr. HUGHES (Victoria). I notice another point in connection with this wonderful resolution. They are going to give the Grand Trunk power to build branch lines 800 miles from the nearest point of the Grand Trunk Railway system. They are going to allow them to build a branch line from this government road to Port Arthur and Fort William. I have never seen such legislation in this House, allowing a company to build 'branch' lines hundreds of miles away from where it has a dollar's worth of property. Does this mean that the government intend handing over this whole property to the Grand Trunk at the end of fifty years, or even before that? If not, what do they mean by authorizing the Grand Trunk to build branch lines from a government road?

Mr. HACKETT. I heard the hon. Postmaster General (Hon. Sir William Mulock) say that all the provinces were to be served by this railway. I would ask him what provision is to be made to connect Prince Edward Island with the road? I asked a few days ago if it was the intention of the

government to build a steamship which would cost only $250,000 to keep up communication between Prince Edward Island and the mainland, and the reply was that there was no such intention. And yet the government ask us to contribute to the building of this railway, while they will not give us any of the privileges of connecting with it.

Mr. MONK. I submit that in reference to to the branch to Montreal, we ought to know, within a couple of hundred miles, where that branch is to be. I do not know of any other case in which parliament has authorized the building of branch lines without determining, to a certain extent, through what part of the country they are to pass. There is already a great deal of the element of vagueness in this scheme. I think it will be possible to tell every man in the country, wherever he may be, that this line of railway is going to pass right through where he lives. But with respect to Montreal, my hon. friend, by his amendment, asks that we give the company authority to build a branch to connect with the Montreal and Western Railway, or to build to Montreal. These are two very different authorizations. A branch that would connect with the Montreal and Western would be a branch of extreme length. It would put Montreal 250 miles from this main line of railway, bring it as far south as you can. If it passes 50 miles south of Lake Abittibbi, and even if you give it a curvature towards the inhabited portion of the province of Quebec, if you connect with the Montreal and Western, you put Montreal 250 miles from that main line. If you ask authorization to connect with Montreal direct, you can do it over a distance of 100 or 125 miles, by going through the first inhabited place, St. Michel des Saints, in the county of Berthier, and so direct from Montreal. Which of these lines are we authorizing the Grand Trunk to build ? I do not refer to the main line ; that is not in question this evening. I refer to this branch line, which has not been discussed in committee, and of which my hon. friend gave notice only when the Bill came back to the House. I think that we in the city of Montreal have a right to know by what means you are going to connect, and from what direction. Are you going to reach Montreal by the Montreal and Western, or are you going to go by the most direct route ? It makes a difference of 150 miles.

The POSTMASTER GENERAL. No.

Mr. MONK. It does.

The POSTMASTER GENERAL. What map has the hon. gentleman (Mr. Monk) ?

Mr. MONK. This is a map upon which I have drawn a line from 50 miles south of Lake Abittibbi, the point indicated by the Prime Minister when he introduced this Bill, straight to the city of Quebec.

The POSTMASTER GENERAL. If that is the map that the hon. gentleman sent me a moment ago, I scaled it from the line the hon. gentleman has placed, and it only makes 50 miles north of the terminus of the railway that runs into Montreal.

Mr. MONK. It may be only 50 miles, if the hon. gentleman (Hon. Sir William Mulock) scaled it correctly, but that only brings him to the end of the Montreal and Western.

The POSTMASTER GENERAL. It brings you to the line that the hon. gentleman (Mr. Monk) has fixed as the line of the proposed Grand Trunk.

Mr. MONK. I think the hon. gentleman is not correct. But whether he is right or not, have we not a right to know whether a branch road is to be built to connect with the Montreal and Western and so reach Montreal, or whether a branch is to be built to Montreal direct. In other words, have we not a right to know where that branch is going to be located ? The same remark applies to every other branch, but I am particularly interested in knowing how Montreal is going to have communication with that main line.

The POSTMASTER GENERAL. By running that branch of 50 miles.

Mr. MONK. Then why do you not authorize the building of a branch from the main line down to the terminus of the Montreal and Western Railway ? We ought to compel the building of that branch. Are we goind to depend entirely upon the good will of this new company as to whether we are going to have any connection between Montreal and the main line ?

The POSTMASTER GENERAL. Does the hon. gentleman suppose that a great trunk line such as this would pass within a few miles of the city of Montreal and not make connection with that great commercial centre ?

Mr. MONK. Then if the hon. gentleman's argument is correct, we should impose the obligation and not merely give them the choice.

The POSTMASTER GENERAL. Self-interest will be the best compulsion.

Mr. MONK. Let us make no mistake. There is not a distance of fifty miles, nor of one hundred miles from this main line. The distance exceeds that by far. When we come to examine the agreement—which is not now submitted for consideration—my hon. friend will find that that main line runs at least 250 miles north of Montreal, if we are to give any credence to the vague description of that line as it was given by the Premier.

The POSTMASTER GENERAL. The hon. gentleman is entirely wrong.

Mr. HUGHES (Victoria). The Postmaster General takes a map and he draws a line on it, and looks at the scale and figures up the distance. He has never traversed that country up north. We have heard the statement made by the hon. member for Bellechasse (Mr. Talbot) who, though speaking in favour of another road, said it was impossible to cross the line of country south of the height of land on account of the mountains, that it was impossible to get a line to run east and west, and that the only possible route from Quebec to the great west was away north of the height of land, 100 miles north of the line drawn by my hon. friend from Jacques Cartier (Mr. Monk). The Postmaster General, I suppose, takes a line from the end of this Montreal and Western Railway to the point drawn on the map by the member for Jacques Cartier, which is 75 miles by the scale, and you can easily add 20 per cent to that for the devious windings of the hills. There is another point. Why should the government employ a roving commission to build a line from Gravenhurst to some imaginary point on the Grand Trunk Railway through a country over which they already have a road to North Bay, a country in which construction is now going on in connection with the James Bay Railway, and in which the Canadian Pacific Railway is at present, it may be, preparing to construct a railway ? In other words, they are going to endeavour to cripple both the Canadian Pacific Railway and the James Bay Railway ; and even if this branch from Gravenhurst is never built, it will be held as a whip over the heads of these other two companies in order to depreciate their bonds in the markets of the world. Why should the government insert that word 'Gravenhurst' in this agreement ?

Mr. FOWLER. In looking over this agreement I fail to see any provision made for a connection with the city of St. John, except the connection by way of the Intercolonial by Moncton. I understood, when the matter was discussed before, that there was to be a connection in another way, by Chipman. I would like to ask from the promoter of the Bill what is the intention, why that was left out, or whether it was an oversight.

Mr. McCARTHY. I have no information.

Mr. FOWLER. It seems to me that is rather an important matter. The city of St. John is one of the most important of our Atlantic seaports, and if this railway is to be any good at all it should give the shortest possible connection with the sea, and that certainly cannot be made by going away round by Moncton. I understood both the member for Annapolis (Mr. Wade) and the Minister of Justice to say that the shortest way to get to St. John from Moncton was not by way of the Intercolonial, but by way of Chipman. I would not think so much of that, coming from the Minister of Justice, because living so far away from New Brunswick, he would not be well posted in the geography of that province. But the member for Annapolis surely would be expected to know something about it, and according to him it is easier to go to St. John by way of Chipman than by way of Moncton, direct by the Intercolonial.

Mr. WADE. What I said was that there was a shorter way over this line of railway to St. John than by way of Moncton to St. John. I mean that you go off the main line at a point near Chipman, and go to the nearest point on the Intercolonial on its way to St. John, which is a point about 33 miles to the east of St. John. Norton is the name of the place.

Mr. FOWLER. There is no such provision in this agreement.

Mr. WADE. Is there any provision that it shall go to Halifax ?

Mr. FOWLER. I think I was right in understanding that the intention was not to take any shorter course from the main line of this road to St. John than by going to Moncton and from there down by the Intercolonial.

Mr. WADE. You would save 50 miles.

Mr. FOWLER. It is possible to save fifty miles.

The MINISTER OF JUSTICE. Assuming that we have power to build from Lévis to Edmundston, then starting from Edmundston, would it not be almost a direct line to go by Chipman, which would be a common point to Moncton and St. John ?

Mr. FOWLER. No, you could make it much shorter by not going to Chipman at all.

Mr. McCARTHY. If the committee would allow me, I would add a clause to build from a point on the government line so as to approach Chipman, or if necessary, go to St. John.

Mr. FOWLER. Why not provide to go to St. John by the shortest possible route from Edmundston, if you want to strike St. John by the shortest line ? Why not cut across, because it would be much shorter than to go around the triangle ? If you take your route from Edmundston and go down the St. John valley you will get a much shorter line.

Hon. Mr. ROSS (Victoria, N.S.) The hon. member for Lanark (Hon. Mr. Haggart) and the hon. member for King's, N.B. (Mr. Fowler) have stated emphatically that the Intercolonial Railway from Moncton to Halifax is the shortest possible route. There are eminent engineers whose names I might mention who would state emphatically that the road could be shortened at least fifty miles. The road was run up to the Springhill Mines, where it hugs the side of the mountain for the purpose of being near the

mines. Then, it went down to suit the interests of Peter Mitchell to Chatham and Newcastle.

Mr. KAULBACH. The Grecian Bend.

Hon. Mr. ROSS (Victoria, N.S.) Yes, the Grecian Bend. If you follow that route on the Grecian Bend you can stand on the platform of one of the front cars, and you will see the cars behind, because the road is so crooked; whereas, if the line had followed the valley below, it would have found a natural level country to traverse. I know something about the history of that road. If Sir Leonard Tilley had had his own way the road would not have been built by that route, and it would have been shortened considerably, but Peter Mitchell was one of those Scotchmen who was bound to have his own way, he had a following from northern New Brunswick, and the road was diverted away from the proper route. Those who will assert that the road from Moncton to Halifax is the shortest possible route are speaking of something they know nothing at all about.

Mr. FOWLER. The Mitchell influence which the hon. member for Victoria (Hon. Mr. Ross) refers to certainly would not affect the route from Moncton to Halifax. That influence would only secure the adoption of the route along the north shore instead of down the valley of St. John, where Sir Leonard Tilley wished it to go. But, as far as the route from Moncton to Halifax is concerned, if you take the map and draw the straightest line that you can from Moncton to Halifax, you cannot affect a saving of fifty miles or anything like that, and of course, there are engineering difficulties which would prevent you from making a straight line if you wanted to.

Mr. WADE. On the contrary, you will escape the engineering difficulties.

Mr. FOWLER. Not at all. It is about 180 miles, or under 200 miles, from Moncton to Halifax, and you cannot affect a saving of anything like fifty miles even by following a straight line. As far as the southern district is concerned, if the promoter of the Bill wishes to add an amendment, the only amendment that would be practicable would be one providing for a route starting from Edmundston and going in the most direct course to the city of St. John.

Hon. Mr. ROSS (Victoria, N.S.) I have the authority of the most eminent engineers for what I have said.

Mr. ROCHE (Marquette). Do I understand from the promoter that the contract entered into between the company and the government does not compel the building of a branch line to the head of Lake Superior?

Mr. McCARTHY. I do not think the contract refers to it at all. The hon. gentleman (Mr. Roche) has the contract before him.

Mr. ROCHE (Marquette). If the contract does not provide for connection with Lake Superior as far as this road is concerned, it will not fill the bill as affecting the movement of wheat from the west, because an all-rail route cannot hope to compete with a rail and water route, and there will be mighty little grain to come down over this all-rail route to an Atlantic seaport. Unless there is a connection with Lake Superior, it will not afford the relief to the western people that it is supposed that this road will afford. Even with connection with Lake Superior, it will be at a disadvantage, because the route as mapped out north of Lake Nepigon is 100 miles or 150 miles north of Lake Superior. If there is not going to be compulsory connection with Lake Superior, in so far as the commercial aspect of the line is concerned this route will not relieve the congestion of the grain traffic that we have been feeling for the last two years in the west, and the people of the west will not approve of this large expenditure of money when it will not afford them the relief which they so much desire.

Mr. McCARTHY. The hon. gentleman (Mr. Roche, Marquette) seems to be labouring under a misapprehension. There is no doubt that it is the intention to build to Lake Superior. That was provided for in the original clause, but since the main line is to be built by the government it is necessary to amend it so as to give this company power to build a branch line to reach Lake Superior. It is clearly the intention of the company to build a branch line to Lake Superior.

Mr. FOWLER. Do I understand the promoter does not propose to make this amendment in respect to St. John? The hon. gentleman has changed his mind.

Mr. McCARTHY. I did not say that I could ask for any amendment other than I have asked for now unless it was prepared by the solicitor for the company, who knows what the railway company wants and the amendment which the company wants is the amendment which is now before the committee.

Mr. FOWLER. But the amendment which is before the committee does not speak of St. John at all.

Mr. McCARTHY. No.

Mr. FOWLER. What amendment did you propose to offer? You say that I am asking too much because I want you to go by way of the shortest line. Do you propose to amend the section by making the route shorter, but not the shortest? I cannot understand the position which the hon. gentleman takes. Have I wounded his feelings in any way by standing up

for the best interests of the province which I represent, or does he refuse to grant that measure of relief to the people of St. John which a moment ago he himself admitted that they deserved? Surely my hon. friend does not consider the matter in any personal way. I was trying to promote the interests of a portion of the people of the province of New Brunswick and of St. John, and it does seem to me that the hon. gentleman, who was going to grant this measure of relief, should not withdraw it simply because I asked more than he is willing to grant.

Mr. McCARTHY. The hon. gentleman overpowers me with the greatness that he seeks to thrust upon me. I am only in charge of this Bill in the House. The amendment which the company thought would afford them the relief they desired is before the House. I have nothing to do with it. All I have are the instructions which I have received as to this. Personally I would be glad to grant relief to the whole Dominion, and particularly to the part which the hon. gentleman represents, but I have nothing to do with it. The amendments are making necessary corrections in the original line which was approved by the committee, of the Grand Trunk Pacific, but by reason of the government undertaking the building of the road from Winnipeg to Moncton, I have to get this proviso inserted allowing branch lines to be built. That is all that is asked for by the company.

Mr. FOWLER. I was not thrusting any greatness upon the hon. gentleman. There are said to be three classes, some who are born great, others who achieve greatness and others who have greatness thrust upon them, but the hon. gentleman belongs to a fourth class. He assumes greatness. The hon. gentleman said that he would amend his amendment by providing that there should be a branch line from some point on the main line leading from Moncton to St. John. But, now he goes back upon that, and the reason he gives for going back upon it is because I suggested to him that instead of branching off at Chipman, he should branch off at the main line before he came to Chipman, because in so doing he would get a shorter route to the city of St. John. The hon. gentleman has given a puerile reason for now refusing to grant the small measure of relief which he was willing to give some time ago. It seems to me that the hon. gentleman may have been inspired by an authority higher than himself to change his mind. I hope it is not because of a whisper from the Minister of Justice nor the Minister of Finance or the Minister of Labour by whom he is surrounded.

The MINISTER OF JUSTICE. We must start with the idea that it cannot be left to my hon. friend (Mr. McCarthy) or to any other member to determine what we shall have or what we shall not have in the Bill; the committee must take upon itself to decide that. The situation is this: It is the intention of the government to construct the line from Winnipeg to Moncton and in connection with that line it was thought desirable to give to the company the right to construct branch lines for the purpose of reaching commercial centres. The first of these centres after leaving Winnipeg, is Fort William, then Port Arthur and North Bay, and finally Montreal. When we leave Quebec after crossing the river, the line goes to Edmundston and from Edmundston to Moncton, and between these two points there will be a branch to the city of St. John just as there is a branch to other cities on the western end of this section. I understand that has been in the mind of the Minister of Finance for some time. It has been considered and discussed, and I cannot see any reason why, if the committee wishes it, we should not authorize that company to build that line to St. John.

Mr. FOWLER. I am very glad to have the support of the Minister of Justice for my contention.

Mr. LENNOX. This is a very serious proposition. The government proposes to build the line from Winnipeg to Moncton, but the Bill now before this committee is not the scheme that we considered in the Railway Committee. To-night we have before us a railway to be constructed by the government and to be owned by the government from Winnipeg to Moncton, but the scheme before the Railway Committee was a proposition of the Grand Trunk Railway Company to build a national transcontinental railway. It is now proposed that we should give our sanction to the building of a number of branches, and that is altogether outside of the line of the project which was reported to this House by the Railway Committee and which I submit is the only subject which this House has now a right to consider. We are not in a position to-night, and we will not be in a position to decide on any such scheme as is now proposed until this Bill goes back to the Railway Committee and is there considered in its new aspect. The branches were not included in the Bill which we considered in the Railway Committee and their consideration is not properly before this House to-night. All that is left of what went before the Railway Committee is the building of the line by the Grand Trunk Pacific Railway from Winnipeg west to the Pacific ocean. Ill-defined as the whole scheme is, more ill-defined still is that scheme to build branch lines, and yet we are asked to sanction this indefinite scheme although it never came before the Railway Committee of this House. I do not want to throw any barriers in the way, but I want to have the question treated in a logical sense and in the light of the responsibility which we owe to the people. If

the government is going to build the line from Winnipeg to Moncton why on earth can not they build the branches as well? It was said the other day that we had a hybrid scheme before us, but what kind of a scheme is this which comes up for consideration to-night? We have the trunk line from Winnipeg to Moncton built by the government; we have the western end built by the Grand Trunk Railway, and we have proposed to-night a lot of little feeders to be built by the Grand Trunk Pacific Railway to the national line constructed by the government. I venture to say that the feeders in the end will be the people of Canada and not the Grand Trunk Pacific Railway Company. Therefore, I protest with all the force I can against this uncertain and indeterminate kind of partnership and mixup which is proposed between the government and the Grand Trunk Railway Company.

Mr. HUGHES (Victoria). I desire to ask that the word 'Gravenhurst' be dropped out of the proposed amendment, inasmuch as there is one line of the Grand Trunk Railway already constructed to North Bay, and the Canadian Pacific Railway Company are about to complete their own line from Toronto to connect with their main line at or near Sudbury. Then, there is still another road under construction, the James Bay Railway, from Toronto to Parry Sound, and connecting with the Northern road a little west of Wahnapitae. The insertion of this word 'Gravenhurst,' giving this company a roving commission to construct a line from that point to some point on their main line, will materially affect these other companies when they go to the markets of the world to raise money. I presume that the hon. member in charge of the Bill has no objection to drop the word 'Gravenhurst.'

Mr. McCARTHY. I cannot consent to the hon. gentleman's suggestion, in view of the suggestion of the hon. member for West Toronto (Mr. Clarke) that this road is not the shortest route from the west to Toronto, and for other reasons.

Mr. HUGHES (Victoria). The cut-off from North Bay to this Arctic road would answer as well as a cut-off from Gravenhurst. I am satisfied that if this Bill went before the Railway Committee, that committee, with the non-partisan spirit it has always displayed, would not allow it to parallel all these other roads; and if the hon. member in charge of the Bill will not consent to withdraw the word 'Gravenhurst,' I will ask the sense of the committee upon the question, and will move that this Bill be referred back to the Railway Committee, which I am satisfied would not tolerate any such iniquity.

Mr. McCARTHY. Looking at the map, I cannot see that the proposed road will parallel either the Canadian Pacific Railway or what the hon. gentleman calls the James Bay Railway, which I presume is a part of the Mackenzie & Mann proposed transcontinental line, which I understand is neither under construction or located to Winnipeg. It will not parallel these lines, but will cut across them.

Mr. HUGHES (Victoria). The hon. gentleman, I suppose never took a prize in geography. Certainly the knowledge he has displayed in geography would not entitle him to rank as first-class.

Mr. McCARTHY. Not if you were the examiner.

Mr. HUGHES (Victoria). I have myself seen the survey parties of the Canadian Pacific Railway within the past six weeks, and I learned from them that their work of locating their line was nearly completed. I dare say that the Canadian Pacific Railway Company, with a little more foresight than this government, make surveys before they undertake to construct a line. The hon. gentleman speaks of the James Bay Railway as not being surveyed. It is surveyed to upwards of a hundred miles north of Wahnapitae. I move that the word 'Gravenhurst' be omitted.

Mr. LENNOX. What the hon. member who has just sat down has said has emphasized the necessity of pressing on the committee the point I take. I understood that the proposal to charter the Grand Trunk Pacific Railway from Moncton to Winnipeg was struck out of the Bill. I am told by a member of the committee who has followed the discussion this afternoon, that this is not the case, and that it is proposed to charter this company to run a line from Moncton to Winnipeg. I ask the promoter of the Bill if that is correct?

Mr. McCARTHY. I presume the hon. gentleman has read the amendment?

Mr. LENNOX. I understand, then, that that is not the case. But it does not alter the position I took. Hon. members of the committee should keep this fact clearly in mind, that what was first proposed to the House and discussed in the Railway Committee was not the construction of feeders or branches, but of a national highway from ocean to ocean. If there had been a question, in the Railway Committee, of constructing these feeders, we would then have considered the question of paralleling or interfering with existing charters. We would have considered the whole question on a broader basis than was necessary under the Bill as presented to the Railway Committee. The committee have referred to this House the Bill to build a trunk line from ocean to ocean, and we have not now the right to initiate what is, to all intents and purposes, a new Bill, but must confine ourselves to the proposition debated

in the Railway Committee. All that we have the right to deal with is that portion of the road which the government have not decided to build, namely, from Winnipeg to Port Simpson. These branch lines are, therefore, out of the question. The government does not propose to build from Winnipeg to the Pacific, so that that portion of the charter is properly before this committee. This is the crucial point, namely, that the question of building these branches was never brought before the Railway Committee and never considered by them.

Mr. McCARTHY. Look at the main clause.

Mr. LENNOX. If it was considered by the committee, why bring in an amendment now? If it was considered by the committee and rejected——

Mr. McCARTHY. Never.

Mr. LENNOX. Then there is no ground for bringing it in.

Mr. McCARTHY. If the hon. gentleman will look at the main part of section 12 he will find that the idea was that the Grand Trunk Pacific Railway should construct from Winnipeg to Moncton and build branches. But now that the government are going to construct from Winnipeg to Moncton, it is deemed necessary to provide that these branch lines should be built.

Mr. LENNOX. I cannot see it in that light, because if it were considered by the Railway Committee and not rejected by that committee, it would be in the Bill as reported by that committee to the House, and there would be no necessity for that amendment. But what the promoter of the Bill is proposing is some scheme that was never considered by the Railway Committee, I therefore must protest against any such attempt in the strongest possible manner.

Mr. EMMERSON. A suggestion has been made to the effect that a line should be provided from Edmundston to St. John. That, in my judgment, would be very impracticable, and would not serve the interest of the city of St. John as they would be served by the amendment I am about to propose. Chipman is a common point, and from that point it would be in the interests of the country to reach St. John by the nearest possible route. From Chipman there is today a line connecting at Norton on the Intercolonial Railway with the city of St. John. I would move that these words be added to the section:

> Also build a branch line from the main line at a point at or near Chipman to St. John, or to acquire any existing branch lines which may serve the same purpose.

That amendment would be in the interests of the whole Dominion as it would give the shortest possible route to an Atlantic port.

Mr. LENNOX.

Mr. KAULBACH. I must take exception to the remarks of the hon. member for Westmoreland. His amendment would be most unfair to the province of Nova Scotia inasmuch as Chipman is very far south of a direct line drawn from Edmundston to Moncton, and that point (Moncton) could be reached very much more conveniently by a shorter line which would cost the government less than the route which the hon. member proposes.

Mr. EMMERSON. This is the company, not the government.

Mr. KAULBACH. The government have to pay for it all the same. I know very little of New Brunswick as respects the route which the proposed company intend to take, but I gather my knowledge from a geographical sketch taken from the map of New Brunswick and Quebec. There are very many engineering difficulties almost insurmountable on the route between Quebec and Moncton. First of all, I would say, I am utterly opposed to the Intercolonial Railway being paralleled. Again I am opposed to that proposed line of road between Quebec and Moncton running to Edmundston, because it brings us too close to the American border. I object to it for the same reason that I object to the Canadian Northern going through the state of Minnesota to the city of Winnipeg. But, if the proposed road is to be taken from Quebec to Edmundston, I do not see why the Intercolonial should not be utilized as far as River Du Loup, and then take the Témiscouata road to Edmundston and in a straight line from Edmundston to Newcastle and then utilize the straight line from Newcastle to Moncton. If you look at the map, you will see that this is almost a straight line. But if you take the road to Chipman, you make an angle, and a divergence which would be saved in taking the line from Edmundston to Moncton via Newcastle. Going from Edmundston you will reach Newcastle almost as quickly as you reach Chipman, and the distance from Newcastle to Moncton, I think, is no more than 70 miles.

An hon. MEMBER. Order.

Mr. KAULBACH. If I am not keeping within the rules, Mr. Chairman, I am wiling to take my seat, but I think I am not digressing more than some hon. gentlemen who have preceded me.

Mr. DEPUTY SPEAKER. I did not call the hon. member (Mr. Kaulbach) to order.

Mr. KAULBACH. I thought the voice was yours, sir. I think that my hon. friend from Westmoreland (Mr. Emmerson) is quite wrong when he asks that the road should go to Chipman, because it would make the road from Chipman to Moncton considerably longer than if it ran direct

from Edmundston to Newcastle and thence by the Intercolonial to Moncton.

Mr. FOWLER. I do not understand why the hon. gentleman (Mr. Emmerson), if he is sincere, if his solicitude for the best interest of the city of St. John is as great as it appears, should object to this branch road going from Edmundston to St. John. Take your main line from Moncton by the most direct route, but let the branch line from Edmundston go down the valley of St. John along the old line of the Intercolonial, the line approved by Sir Leonard Tilley, but in which he was overruled by Mr. Mitchell, according to traditions of those days. Let your branch line run from there, and you need not deflect your main line from Chipman at all, but go by more direct route, as the hon. member from Lunenburg (Mr. Kaulbach) has pointed out, than if you deflected your main line in order to strike Chipman. That would serve the interest of St. John better, and that large and important section of the province which has now no railway, the valley of St. John, it would serve efficiently, and would be found perfectly practicable and would give a shorter route to St. John than if you go across the province to Chipman and thence to St. John. You have to go by Norton and down to St. John by way of the Intercolonial, which is a long way, making two sides of a triangle, whereas if you go direct from Moncton you make only one side of the triangle.

Mr. EMMERSON. I took the trouble, on a former occasion, to demonstrate to the committee discussing this matter that if you were to attempt to go to St. John by way of Chipman, you would have to travel only 37 miles more than you would if you were to follow the valley of St. John and go into St. John, landing on the west side of the harbour along the line of the Canadian Pacific Railway. I also endeavoured to show that when you reach the western side of the harbour you are in a place where the harbour rights and terminal facilities are almost exclusively held by the Canadian Pacific Railway, and that for such a road as this it is absolutely necessary to get access to the harbour of St. John on the east side, in what is known as St. John East. In order to get harbour facilities and terminal facilities in St. John, it would be necessary to utilize the property on the east side of the harbour. Hon. members know that there is a bridge company which controls the bridge over the falls. That has been a great barrier to the traffic of the city of St. John. The tolls have been very large, as they have a monopoly, and have a branch line running from their bridge into St. John. This has been considered a very serious obstacle to the trade between St. John and the western section of the country. To go by way of Chipman would be only 37 miles farther, and it would bring you into St. John on the east side of the harbour, where there is every opportunity for terminal and harbour facilities. I would say to my hon. friend from King's (Mr. Fowler) that it was only within a very few years that a survey was made by, I think, the Temiscouata Railway, and under the direction of or in connection with the Grand Trunk, as I understand. That survey, the latest made of that country, shows the selected route from Edmundston down to a point at or near Chipman and running across from Chipman to the Intercolonial somewhere between Moncton and Salisbury. That route is considered the shortest, though it is not the best route that is to be found. My hon. friend from Lunenburg speaks of going down to Newcastle. But he must realize that the topographical conditions would make that utterly impracticable. He would find obstacles like the Nipisiquit lakes, and the Bald mountains, and others between the waters of Tobique and the Nipisiquit rivers. If you could go as the crow flies, it would be all right. But you must recognize the topographical conditions in the way and, recognizing these conditions, I think that all hon. members of the committeet will realize that the only route possible would be from Edmundston down more through the centre of the province. You could not deviate to the north to any great extent. My hon. friend from King's knows that, and he knows also that any line down through the centre of the province would bring him near Chipman——

Mr. FOWLER. No.

Mr. EMMERSON. It might be a few miles away. But when they were seeking the shortest line they located it a few miles back of Chipman.

Mr. FOWLER. A long way.

Mr. EMMERSON. I have seen the survey, and I have discussed the matter with the gentlemen on the survey, so that my information is direct. So it would be at a point at or near Chipman. There is a wilderness between Chipman and the head of the waters known as the Salmon river, on the main highway between Chipman and Harcourt, on the road leading to Richibucto in the county of Kent. I have travelled over that line and am familiar with the topography of the country; I know the conditions which would make it necessary to pass in the vicinity of Chipman. Now after reaching Chipman, it would be in the interest of the company operating that line to take a cut of 70 miles to the city of St. John rather than go a like distance to Moncton and then travel back over their tracks 89 miles to St. John. If you went from Chipman to Moncton and turned back to St. John you would go a distance of 150 miles. By means of this branch which the company is seeking power to build, or acquire, they can go into St. John from Chipman, a distance of about 70 miles, saving 90

miles in reaching St. John. To go by the line indicated by the hon. member from King's (Mr. Fowler), you would travel down the valley of St. John to Fredericton, then there would be two ways open for you if you wished to keep on the western bank of the river St. John. You might follow down the western bank by Gagetown as far as Hampstead, and there you would meet barriers all the way which would lengthen your route. It is an impracticable route, as my hon. friends know; there are hills and mountains to overcome, and there are low lands submerged a month or more every spring, and even during the autumn freshets. Then there is another route by following the Canadian Pacific Railway from Fredericton down to St. John. There again you are met with another difficulty at St. John. You do not shorten your distance, and you are met with the bridge barrier at the harbour; you are met with a condition of things which make it impossible for this company to secure terminal facilities. The Canadian Pacific Railway have control of what is known as the Carleton branch, they have control of the terminals there, and you would have to go away out into the open, down towards Duck Cove, if you wanted to get larger facilities on that side of the harbour. Now, by this proposed route, if you were to go to Chipman and go down by way of this branch to St. John, you would bring St. John 204 miles nearer to the bridge at Quebec than it is to-day by means of the Intercolonial Railway. You annihilate a distance of 204 miles, and you bring St. John and Quebec that much closer together.

Mr. HUGHES (Victoria). The hon. gentleman is altogether astray in his mileage.

Mr. EMMERSON. I can prove my figures to a mathematical demonstration, because I know whereof I am speaking. I am calculating from Chaudière, from a point where the bridge will cross the river at Quebec, and I am showing that from that point to Moncton is 498 miles. From Moncton—and my hon. friend can add the figures together—to St. John is 89 miles. The sum total of that exceeds the distance from Chaudière—

Mr. KAULBACH. What is the entire distance to Chipman?

Mr. EMMERSON. To St. John 383 miles by way of Chipman?

Mr. HUGHES (Victoria). The hon. gentleman cannot make it within 425 miles by way of Chipman.

Mr. EMMERSON. The distance by way of the Intercolonial Railway from the point where this bridge crosses the river at Quebec, to St. John, is 587 miles. The distance by the surveys which have been made from that point down to Chipman, and from Chipman down to St. John, is 383 miles. The difference between 383 and 587 is 204; that is the saving in distance between those two points. This only goes to show, however, that even if there were a variation of a few miles, there is an annihilation of 200 miles as between these two cities, by the proposed route by way of Chipman, and then down to Norton, thence down to St. John. This amendment proposed by me makes it possible for the company to secure these rights, it makes it possible for St. John to have the advantage of being that much nearer the trunk line, and it makes it not only possible for her to be that much nearer, but it ensures to that city a large proportion of the freight traffic that would come down over that route. Certainly the interests of St. John would be in that direction, the interests of no other section would be injured, and the interests of the company itself and the interest of the transportation facilities of this Dominion are best served by the operation of this branch line.

Mr. FOWLER. I wish to point out to the hon. gentleman that from Edmundston it is necessary to parallel the Canadian Pacific Railway all the way down to Grand Falls. You have got to go to Grand Falls before you can get away from the Canadian Pacific Railway.

Mr. EMMERSON. The topography of the country between Edmundston and Grand Falls is such that it would not permit the construction of a line northward or eastward.

Mr. FOWLER. Exactly. I quite understand the reason why. Topographically the country is such that you could not get away from it and you must parallel the Canadian Pacific Railway down almost to Grand Falls. You would need to parallel the Canadian Pacific Railway, also for a short distance going down the western side of the river. As far as terminal facilities are concerned what my hon. friend says respecting the Canadian Pacific Railway having absolute control of the terminal facilities on the western side of the harbour of St. John is scarcely correct. I do not think the Canadian Pacific Railway have any such rights as the hon. gentleman has just stated. The control of the terminal facilities which belong to the city of St. John is in the hands of the city of St. John and these facilities are not under the absolute control of the Canadian Pacific Railway.

Mr. EMMERSON. The city handed over the Carleton branch irrevocably.

Mr. FOWLER. That is very true, but the wharfs and docks which are terminal facilities after all, are still under the control of the city of St. John. There are two elevators belonging to the Canadian Pacific Railway, but there is ample room on the western side of the harbour for facilities for both, and it is only a question of money. As I understand this agreement, the Grand Trunk Pacific Railway are obliged to provide the necessary terminal facilities at all

ports on the Atlantic and Pacific to which their lines run. Therefore, the argument which my hon. friend has made does not affect the case at all and the interest of the port of St. John, which is the commercial centre of a very large portion of the province of New Brunswick, and in the welfare of that city a very large portion of the province is intimately concerned—the interest of the port of St. John will not be served by this road unless it branches off at Edmundston instead of Chipman, as suggested by my hon. friend. I see the hon. member for the county of St. John (Mr. Tucker) in his seat—unfortunately the hon. member representing the city of St. John is not present, but I think the hon. member for the county of St. John will bear me out in the statement I have made. I do not think that hon. gentleman will be so recreant to his duty as to agree with the hon. member for Westmoreland that the route which he had proposed by the way of Chipman would be so advantageous to the city of St. John or so advantageous to those represented by himself as the route from Edmundston direct to the city. I quite understand why the hon. member for Westmoreland is so desirous to have this deflection made at Chipman. My hon. friend represented the county of Westmoreland. Moncton is the chief town of that constituency and it is only natural that he should wish that this road should not be lessened in its importance as far as Moncton is concerned by having a shorter route to St. John. By the route which he proposes the line will be ten or fifteen miles nearer to Moncton than to St. John, and that, perhaps, may to some extent account for the desire on the part of the hon. member for Westmoreland to have the branch line start from Chipman rather than from Edmundston. The hon. gentleman must realize himself, if he is honest, that he is influenced by that motive, because such motives do affect us imperceptibly notwithstanding the fact that we may believe we are taking a fair and impartial view of the question. As far as I am concerned, I have no such interest affecting me because my interests would be the other way. If the deflection is made at Chipman a portion of the road would run through my county from Chipman to Norton, and I am looking at what is going to be for the best interests for the country at large, uninfluenced by sectional interests. We want to get the western produce forwarded by the shortest possible route to the Atlantic ocean, and that object can only be achieved by adopting the route which I have suggested, and I suggest to the hon. gentleman that he amend his amendment by striking out the word 'Chipman' and inserting 'Edmundston,' and by striking out all after the word 'St. John' in his resolution. That will cover the whole case. The Grand Trunk Railway line will go to Moncton in order to suit hon. members from Nova Scotia, and the hon. member for Westmoreland, but let it branch off at Edmundston and both purposes will be served, besides which the best interests of the province will be served.

Mr. EMMERSON. It may not be known to the members of this committee that there is already a line from Edmundston to St. John.

Mr. FOWLER. There is a line from Quebec to St. John.

Mr. EMMERSON. There is a line direct down the river St. John from Edmundston to St. John.

Mr. HUGHES (Victoria). Is there not a line from Lévis to Edmundston.

Mr. EMMERSON. There is a line from Rivière du Loup.

Mr. HUGHES (Victoria). There is a line from Lévis to Edmundston.

Mr. EMMERSON. I think there is one thing that the hon. member for King's, New Brunswick (Mr. Fowler) has entirely overlooked and it is a matter which is very material in the discussion of this question. It is of the greatest importance to have a railway that will open up and develop the coal areas in the vicinity of Chipman and it is of vast importance to the city of St. John that there should be a direct communication such as would be afforded by this line I have suggested in the amendment I have proposed. The hon. member for King's, of course, is very heroic. He does not think of the interest of his constituents. I confess to a desire to contribute in every possible way to the advancement of the section of country from which I come. I do not want it to be done at the sacrifice of any other portion of the Dominion. I want it to be done in the general interest, and the general interest in connection with the transportation facilities of this Dominion demands that there shall be the shortest possible route from Quebec to Moncton affording facilities for the transportation of freight and passenger traffic. The natural outlet for that traffic, or a large portion of it at least, would be by means of a deviation at or near Chipman. Whether it is at Chipman or five miles farther, it makes no difference. The nearest point to the city of St. John is secured by the branch which I have suggested in the amendment now before the committee. It is hardly necessary to take up any more time in the discussion of this matter. The interest of St. John requires it. It would be folly to think of building a line from Edmundston following the route of the present Canadian Pacific Railway. You can go to-day by two different ways to St. John. You can either go down by the Gibson line, on the eastern side of the St. John river, or you can go out from Wood-

stock by way of McAdam Junction. These lines connect with Edmundston ; they connect direct with the city of St. John ; and we will simply be building a long line of railway following the tracks of the other line, and we will be affording facilities which are now accorded for transportation between Edmundston and the city of St. John.

Mr. FOWLER. It is a strange thing that you should call a railway a transcontinental line which ends at Moncton, which is not a seaport at all. My hon. friend (Mr. Emmerson) has said that you must not build this branch from Edmundston, because there is already a line of railway from Edmundston. Well, there is already a line of railway from Chipman to the Intercolonial Railway at Norton ; there is a line of railway already projected and chartered this session to connect Chipman with Moncton ; there are lines of railway connecting Quebec with St. John ; there are lines of railway connecting the west with the east ; but is that any argument why there should not be another line of railway ? I am surprised at the very fallacious argument which my hon. friend (Mr. Emmerson) has advanced. He says he is prompted to work on behalf of his constituents. So am I. But when the good of the greater number is concerned, then the good of the smaller number has to give way. It is the duty of a representative of the people in parliament to advocate the best interests of the whole country rather than of any particular section, even though that particular section happens to be the section which he represents, so long as no great injury is done to it.

Mr. EMMERSON. You would even shut out King's county ?

Mr. FOWLER. It is impossible to do that. King's county occupies such a central position in the province of New Brunswick that it has got to be heard from, whether in this House or outside the House.

Mr. KAULBACH. My hon. friend from Westmoreland (Mr. Emmerson) is a little astray in his arithmetic with regard to distances.

Mr. FOWLER. In his geography, too.

Mr. EMMERSON. You are a poor schoolmaster.

Mr. KAULBACH. I confess that I have not that knowledge of the province of New Brunswick that my hon. friend possesses, but at the same time when I look at the map which I have before me, I cannot for the life of me understand how he can say that the shortest line from Quebec to Moncton is via Chipman.

Mr. EMMERSON. Will my hon. friend pardon me ? The shortest practical route, according to the surveys, is a line through Chipman. As the crow flies possibly you could get shorter, if you built an air line.

Mr. KAULBACH. What surveys are you referring to ?

Mr. EMMERSON. I am referring to the last survey made by the Grand Trunk Railway and the Témiscouata road, which I think is the very latest survey, and which was made some eight or ten years ago.

Mr. KAULBACH. I am safe in saying that if you take the distance from Edmundston down to Chipman and then back to Moncton, that the present Intercolonial Railway is equally as short. I cannot understand why the hon. gentleman would want to go down to Chipman. There is no reason why we should make that diversion and lengthen the distance to Moncton from Edmundston. According to the Intercolonial Railway time-table, the distance saved on the entire proposed new line from Quebec to Moncton is only about 44 miles.

Mr. WADE. Where did you get that on the Intercolonial Railway time-table ?

Mr. KAULBACH. By going by way of Rivière du Loup and the Témiscouata road, which you would have to take, because you cannot get through the Alleghany range of mountains——

Mr. WADE. The Alleghanies do not reach there.

Mr. KAULBACH. There is a line of mountains between the St. Lawrence river and the St. John river of that name.

Mr. MORIN. And these are the Alleghanies.

Mr. KAULBACH. I am therefore correct. If you want to overcome that range of mountains you must come by Rivière du Loup, take the Témiscouata to Edmundston and straight over as well as you can to Newcastle on the Intercolonial Railway. Then you could utilize the Intercolonial Railway from Newcastle to Moncton. If that course is taken, and I am informed by those who know the country, that it is practicable, it would be the better course to pursue. If my hon. friend will look at the map he will see the distance from Edmundston to Newcastle is shorter than by going to Chipman. The distance from Chipman to Moncton is greater than if you go from Newcastle to Moncton. Under those circumstances, my view is correct as to this route being the shorter of the two.

Mr. HUGHES (Victoria). I take the liberty of submitting some figures which I have obtained from the most accurate reports available. First I take the figures given by the Prime Minister the other day from Moncton to Edmundston, which he said was on the authority of some survey which I have been unable to find a trace of, but I presume the hon. member for Westmoreland

(Mr. Emmerson) furnished these figures. The Prime Minister stated that the distance from Moncton to Edmundston is 209 miles. The shortest distance to Lévis is 196 miles, and adding 10 miles to reach the bridge that would give you at least 415 miles from Moncton to the Chaudière bridge. I venture to say that you would have to add at least 10 per cent to that for the 209 miles from Moncton to Edmundston, which would give you 20 miles more, making the total distance 435 miles. Every one who has been in the central part of New Brunswick knows that it is a sea of hills which are worse to get over than mountains.

Mr. WADE. How do you get your figures from Moncton to Edmundston ?

Mr. HUGHES (Victoria). The Prime Minister stated in his speech that it was 209 miles. It is much more as a matter of fact, but I take his figures. The present Intercolonial Railway is 577 miles from Lévis to St. John. Via Chipman the route will be 196 miles to Edmundston from Lévis, or 206 miles from the Chaudière bridge to Edmundston and 209 from Edmundston to a junction above Chipman. Then you will find that it is 15 miles farther from Chipman to St. John than it is from Chipman to Moncton, and the road will cross 20 miles north of Chipman. No one pretends that the main line will run into Chipman. Therefore, the saving from Quebec to St. John by the new route compared with the old route will be, at the outside, only 127 miles, and to the city of Moncton a saving of only about 48 or 50 miles.

Mr. FOWLER. I wish to move an amendment, that all the words in the amendment of the hon. member for Westmoreland (Mr. Emmerson) after the word 'Chipman' be struck out, and the word 'Edmundston' be inserted, and that all the words after the word 'St. John' be struck out.

The MINISTER OF FINANCE. I think that the hon. member who has charge of the Bill gave notice of his amendment, which is amendment No. 1, and that of the hon. member for Westmoreland is amendment No. 2. My hon. friend puts in a third. I think we shall have to get rid of one of these amendments before we can take up another. I do not wish to press the point, but I think that is the rule.

Mr. FOWLER. If the Chair is to stand to the strict rules of order, I think the hon. member for Westmoreland (Mr. Emmerson), did not give notice of his amendment, and therefore it is as much out of order as mine.

Mr. HUGHES (Victoria). My interpretation of the rule is that notice has to be given of an amendment, but that amendments to that can be moved without notice.

Hon. Mr. HAGGART. I understood that the motion made by the hon. Minister of Justice was a substantive motion.

The MINISTER OF FINANCE. That is an amendment to the clause as it stands. Even an addition is an amendment. I have no desire, however, to see the rule pressed.

The CHAIRMAN (Mr. Logan). If I am compelled to rule, I must rule that the amendment of the hon. member for King's, N.B., (Mr. Fowler) is out of order.

Mr. FOWLER. The point I take is that you will have to rule on both amendments.

The MINISTER OF FINANCE. In any case, I think, we can all agree that we do not want three amendments before us at one time, and I do not think any good purpose can be served by my hon. friend pressing that point. When the amendment of the hon. member for Westmoreland is disposed of, my hon. friend can move his.

Mr. FOWLER. But suppose it is adopted ?

Mr. WILMOT. I must say that in listening to the discussion to-night concerning this very important measure, I am impressed with the profound ignorance that prevails regarding the location of the line from the Atlantic to the Pacific. I presume that the principal object in view is to find the shortest route. So far as New Brunswick is concerned, I know that the line which keeps to the western part of the province is the most direct line to the seaport of St. John. I have collected figures concerning the different routes through the province of New Brunswick. My hon. friend who represents Victoria, N.B. (Hon. Mr. Costigan) had a Bill before parliament relating to the Quebec and New Brunswick Railway. That railway was to run from Quebec to Connors, where the New Brunswick system of railways terminates, at the extreme north of the state of Maine. The distance from Quebec to Connors I find is 134 miles ; from Connors to Edmundston, 32 miles ; from Edmundston to Grand Falls, 38 miles ; from Grand Falls to Andover, 22 miles; from Andover to Woodstock, 54 miles; from Woodstock to Fredericton, 65 miles ; from Fredericton to St. John, 65 miles; making a total distance from Quebec to St. John of 410 miles. From Quebec to St. John via Chipman is 461 miles. Taking Fredericton as the common point, it is 460 miles via Chipman to St. John, as compared with 410 miles by the valley. From Fredericton to Chipman, there is a line of road surveyed, subsidized and partly built. I suppose that, in the interest of our Nova Scotia friends, use should be made of that line from Fredericton to Chipman and thence direct to Moncton. That part of the country is well adapted for building a railway. I have been over every foot of the ground myself and therefore can

speak from personal knowledge. A considerable portion of that road will go through the county I represent. There is another fact I would point out. This route, the St. John River Valley, is covered by a road owned by the Canadian Pacific Railway. I do not think it is beyond possibility that the government could acquire that road. It is already being built down the valley of the St. John by the shortest route to the sea, and I think it is a very reasonable proposition that the government should acquire that road, which, I believe, it could do at one-half what it would cost to build through the centre of the province. As regards the line spoken of by the right hon. the First Minister, from Edmundston to Moncton, in a direct line through the centre of New Brunswick, no man can tell what difficulties would be met in its construction. I have no personal knowledge of the northern part of New Brunswick, but a great many young men who live in my county are employed lumbering in that district, and they all inform me that it is a very rough country indeed. The right hon. gentleman stated to the House that the distance would be 209 miles. That may be correct; but, in view of the difficulties that would have to be encountered, it would be much more expensive to build and operate a road there than the one I have mentioned. The distance to St. John via the Intercolonial Railway is 577 miles. By the St. John valley route it is 410 miles, and by Chipman 461 miles. I think therefore that the suggestion I have made is one that should be adopted and which would satisfy our Nova Scotia friends. Considerable money could be saved by acquiring that portion of the Canadian Pacific Railway which runs through the valley of St. John and the upper St. John and the government could acquire at the same time the road from Fredericton to Chipman and Moncton. That would affect a saving of money as compared with taking the centre route. My hon. friend from Westmoreland spoke of the difficulty of going down the St. John's valley from Fredericton. There is no such difficulty as he imagines. I know every foot of the route. If we followed the bank of the river all the way down, then difficulties would be met such as he suggests. But I would make a straight line and go down to Gagetown and through the Nerepis country to Westfield country. My hon. friend knows we could get a shorter line by Fredericton going that way than by following the bank of the river.

Mr. MORIN. I think we are wasting our time in this House by this discussion. In the first place, to whom are we talking? We are talking to a government which does not know what it wants. Have they got an engineer or a map or any one that can tell them what they want? The other day the right hon. the First Minister read what he had to read. Previous to that he had written to the ex-Minister of Railways and Canals (Hon. Mr. Blair) and all that he wrote was not based on any reliable information. He gave the distances from place to place, and I can prove that his figures were not correct. We are thus all discussing this matter in the dark. Why does not the government postpone this Bill for another six months or a year and in the meantime send out engineers with instructions to run a line from place to place and find out the best route. Until this is done, we are not in a position to intelligently discuss this matter. Each hon. member talks in favour of his own county or town, and what is the government to do amidst so many contradictory and confusing suggestions and opinions? Take the hon. gentleman who is promoting this Bill. He has frankly told us that he does not know what to do or what to say. He is simply the promoter of the measure and does not care how it goes. Not long ago I was talking with a gentleman and he said to me plainly: 'We are in the hands of the Vanderbilts, the Morgans and the Hays.' He told me as plainly as possible—this was six months ago in the city of New York—that the road would be built whatever way Morgan and Hay and Vanderbilt wanted it, and there was no use of our thinking that we had any say in the matter. Is the government going to throw itself into the hands of the Morgans, Hays and Vanderbilts? If the government allows itself to be dropped into such a mud hole, you will see American engineers over here bringing their own men and running that road wherever they choose; and if anybody else interferes or writes to the government protesting against this as not being right, the government will be as dumb as an oyster, and the first thing we know the road will be built just where Morgan wants it. It is time for us to have a little light thrown on this matter; and while I have no intention of taking up the time of the House any longer to-night, I shall have something to say later on.

Mr. EMMERSON. I made a statement not long ago with respect to the distances. I wish to verify that by giving the details. The distance from Chaudière to Connors Station is 130 miles.

Mr. HUGHES (Victoria). Where does the hon. gentleman gets his figures?

Mr. EMMERSON. From the Railway Department.

Mr. HUGHES (Victoria). There is no survey in the department of any such road.

Mr. EMMERSON. I secured the figures there.

Mr. HUGHES (Victoria). They guessed at them. There are no such figures in the Railway Department.

Mr. EMMERSON. They are in connection with a railway which was projected,

and incorporated under the laws of the Dominion.

Mr. HUGHES (Victoria). I know all about it.

Mr. EMMERSON. I am giving the hon. gentleman some information. The distance from Chaudière to Connors Station is 130 miles; I won't take off a mile; I won't add a mile.

Mr. MORIN. The hon. gentleman (Mr. Emmerson) is right——

Mr. CHAIRMAN (Mr. Logan). Order.

Mr. MORIN. I was only agreeing with what the hon. gentleman said.

Mr. CHAIRMAN. (Mr. Logan). I must call the hon. gentleman to order.

Mr. EMMERSON. I thank my hon. friend (Mr. Morin). I want somebody to help me out. The distance from Connors to Edmundston is 32 miles; from Edmundston to Nashwaak Bridge is 123 miles; from Nashwaak Bridge to Chipman, 32 miles; from Chipman to St. John, 66 miles; total, 383 miles from Chaudière to the city of St. John. Now, to St. John from the same point by way of the Intercolonial is 587 miles. That makes a difference of 204 miles. My hon. friend from King's (Mr. Fowler) says that, instead of departing from the main line at Chipman, you should leave the main line at Edmundston and build down the valley of the St. John, although there is a large system of railways over that route now. I am going to show that the distance would be greater from Chaudière to St. John by the route the hon. member for King's proposes than by the other. From Chaudière to Edmundston is 162 miles. I am now giving you actual distances. From Edmundston to Aroostook Junction is 57 miles; Aroostook Junction to Woodstock, 53 miles; Woodstock to Fredericton, 60 miles. That makes a total of 332 miles from Chaudière Junction to Fredericton over a located railway.

Mr. WILMOT. No, 345 miles.

Mr. EMMERSON. If it makes 345 miles, I am willing to take that. From Fredericton to St. John is 66 miles, making a total of 398 miles from Chaudière to St. John by the proposed route of my hon. friend from King's. By way of Chipman it is only 383 miles, or 15 miles in favour of the Chipman route. Surely the amendment of my hon. friend will not hold water in the light of these facts.

Hon. Mr. HAGGART. What is the distance by the Intercolonial from Lévis, or from Chaudière Junction, to St. John?

Mr. EMMERSON. From Chaudière it is 587 miles, and from Lévis some miles less.

Hon. Mr. HAGGART. From Lévis it is 578 miles.

Mr. EMMERSON. The bridge will cross the river at Quebec, and I think that is the correct point from where to start. The traffic comes across this bridge and the route would start from that point and go through the parishes back of Lévis.

Mr. MONK. Has the hon. gentleman the distance from Fredericton to Moncton?

Mr. EMMERSON. I have it from Nashwaak Bridge to Chipman, 32 miles, and from Chipman to Moncton, 51 miles.

Mr. FOWLER. I do not know where the hon. member for Westmoreland (Mr. Emmerson, got his figures, and I do not care. If his figures are correct, then the maps that have been furnished officially and have heretofore been regarded as correct, are entirely wrong. Moreover, if the hon. gentleman's figures are correct, the rule of mathematics which declares one side of a triangle to be shorter than the other two sides is all nonsense. It is all very well for the hon. gentleman to talk glibly about the distance from this point to that when there are no engineer's reports on the subject. Of course, we are bound to accept in a parliamentary sense the hon. gentleman's statement. And we do accept it in that sense.

Mr. EMMERSON. I am glad for even that small measure of credit.

Mr. FOWLER. It is quite as much as the hon. gentleman deserves. But if the hon. gentleman will look at the map he will see whether it can be possible that his statements are borne out by the facts. This is an official map issued by the department over which, we all hope, the hon. gentleman will soon be called to rule. So, we must accept it as being absolutely correct. Also the rule of mathematics to which I have referred and which was taught us in childhood we can hardly deny now. But the acceptance of the hon. gentleman's figures is a denial of both. I do not say that he is making up these figures, but I say that the source from which they are compiled is wrong. It must be wrong, because it is absolutely impossible that a line from Edmundston to St. John—or from St. Leonards, because you have to follow up the line that distance, as I understand, before you branch off—it is impossible that such line to St. John can be longer than if you go across the province of New Brunswick to Chipman, then strike across to Norton on the Intercolonial and back by the Intercolonial. In such a route you are going west, then south-west, and then east.

Mr. EMMERSON. The distance from Chaudière to Connor's Station, 130 miles, is the only section in which there has not been a survey, except the survey made in connection with a railway that was incorporated by this parliament. From Connor's to Edmundston, according to the mil-

eage given by the Canadian Pacific Railway booklet——

Mr. FOWLER. Your trunk line follows that.

Mr. EMMERSON. I am giving the figures showing the actual mileage from Edmundston to Nashwaak bridge. From Edmundston down to Grand Falls or near there, you have the actual mileage of the Canadian Pacific Railway and the located line. Beyond that you have an actual survey that was made a few years ago, and the mileage was secured by me from data furnished as a result of that survey.

Mr. FOWLER. By your proposition you do not go to Fredericton.

Mr. EMMERSON. I go to Nashwaak bridge, which I think is nine miles from Fredericton. All these distances are absolutely correct from surveys which have been made, or from located lines. So there cannot be any error with respect to the distance of 383 miles. Now as to the 398 miles, I have given a less distance than is given by the hon. member for Sunbury (Mr. Wilmot). He makes the distance over 398 miles. Therefore, it is longer by that route than it is by Chipman, that is, the route that was surveyed a few years ago in connection with the proposed line of railway through the heart of the province.

Mr. FOWLER. How far is it from Fredericton to Chipman by the hon. gentleman's figures ?

Mr. EMMERSON. From Nashwaak it is 32 miles, and 66 miles from that point into St. John.

Mr. FOWLER. Sixty-six miles from Chipman to St. John and 32 miles from Nashwaak to Chipman makes 98 miles. Now this Nashwaak bridge is nine miles from Fredericton, and Fredericton is 66 miles from St. John, and 66 miles and nine make 75 miles, and 75 from 98 leaves 23, which is the advantage of the route I speak of. Out of the mouth of the hon. gentleman have I proved that his statement with respect to distance is absolutely incorrect.

Mr. FRASER. You cannot prove the whole by showing that a part is less or more.

Mr. FOWLER. The hon. member for Guysborough (Mr. Fraser) has made just the statement that a man makes when he jumps in, knowing nothing at all about the case. Now my statement is absolutely correct. The hon. gentleman says that from Nashwaak bridge it is 69 miles to the city of Fredericton. By his own admissions he shows that the route I have been favouring is some 23 miles shorter than the route he wishes to take to go to St. John by way of Chipman. I cannot understand why the hon. gentleman should be opposing this. It is surely in the interests of Moncton, and it should be the object of the hon. gentleman as a representative from New Brunswick, and it is in the interest of the whole country, to reach an Atlantic port by the shortest possible route. It has been pointed out to the people of St. John that they are going to have all the freight while the passengers will go to Halifax. Well, if you save 23 miles by going to St. John rather than by going to Chipman, why not choose that route ? It is not going to affect our friends from Nova Scotia, it is not going to injure anybody, and it will materially benefit the port of St. John. Therefore, I think the hon. gentleman should withdraw his amendment and allow mine to pass.

Mr. EMMERSON. The hon. gentleman has referred to the River Valley route, and I pointed out that that route, going down from Woodstock to Fredericton and thence on to St. John, would be a distance of 398 miles. I pointed out that the other route by way of Nashwaak bridge would be——

Mr. WILMOT. At what point is that bridge—directly opposite Fredericton ?

Mr. EMMERSON. My hon. friend does not know every foot of that country. There is the covered bridge and the Nashwaak bridge.

Mr. FOWLER. They are both on the Nashwaak river.

Mr. EMMERSON. They are both on the river. What is known as the Nashwaak bridge is up the Nashwaak river. By this route which is an entirely different route from the river route the difference is fifteen miles. It is a question as to whether the river route or this one is the better. As far as the Nashwaak bridge is concerned it is nine miles from Fredericton. It may be more. It is more than twenty miles, my hon. friend from York, N.B. (Mr. Gibson) states. That does not alter the point raised by myself in respect to these different routes. The Nashwaak bridge route is one and the river route is another. The Nashwaak bridge route is the one that is the shortest.

Mr. HUGHES (Victoria). My hon. friend from Westmoreland (Mr. Emmerson), I will not say endeavoured to mislead the committee, but he certainly placed his figures before the committee in a very equivocal manner, saying that he had obtained figures from the Department of Railwayss and Canals showing the distance from Lévis to Connors to be 136 miles.

Mr. EMMERSON. One hundred and thirty.

Mr. HUGHES (Victoria). My hon. friend is a little astray. He should have put the six on. These are the figures given by the promoters.

Mr. EMMERSON. My information is 130.

Mr. HUGHES (Victoria). Even these, as the hon. gentleman must know, are short of the true figures. There has never been a survey of that route. Yet, to stand up and give imaginary figures is asking us to accept something that should be taken only with a grain of salt. More than that, no survey for a railway can be run there. It is possible to have a survey for a wagon road, but you cannot have a route 136 miles long or anything like it.

Mr. EMMERSON. The hon. gentleman is mistaken.

Mr. TALBOT. Probably the hon. gentleman who has just taken his seat (Mr. Hughes, Victoria) would be surprised if I could read to him reports of three surveys that have been made all the way from Chaudière to Edmundston, which is thirty miles beyond Connors.

Mr. HUGHES (Victoria). They have certainly been made, but not to Connors—and not for this route as proposed.

Mr. TALBOT. Beyond Connors.

Mr. HUGHES (Victoria). There have been no surveys made for the routes spoken of. I care not what the hon. gentleman says.

Mr. EMMERSON. The hon. gentleman does not know all that there is in the Railway Department.

Mr. HACKETT. A short time ago I asked the government what they contemplated doing for Prince Edward Island in connection with this matter. I received no reply. Whether they desire to treat us with silent contempt or not I do not know, but I am here to raise my voice in favour of the people of Prince Edward Island, and I take the position that the government should do something in connection with this Bill which is now before parliament. We know very well that the company is a mere shadow, that the substance stands behind in the shape of the government, and I would like to ask the government what they contemplated doing for Prince Edward Island in connection with the matter ?

The MINISTER OF FINANCE. I do not know that there is anything in this Bill showing what the government are going to do for anybody. This Bill is to incorporate a company. There is absolutely not a word in it stating what the government are going to do.

Mr. HACKETT. I have an amendment to move in connection with this matter.

Mr. McCARTHY. There are three amendments before the Chair now.

Mr. HACKETT. Dispose of one or two of them and then I will bring my amendment forward.

Amendment to amendment (Mr. Emmerson) agreed to.

Mr. HACKETT moved in amendment to the amendment :

The company may acquire and operate the railway from Sackville on the line of the Intercolonial Railway to Cape Tormentine in New Brunswick, and in the event of so acquiring the said railway shall construct a pier at Carleton Point in Prince Edward Island, place suitable steamships on that route and maintain efficient communication summer and winter between Prince Edward Island and the mainland.

Mr. DEPUTY SPEAKER. An amendment must be relevant to the clause under consideration. This amendment is not relevant.

Mr. HACKETT. I must submit to your ruling, but is it the desire of the government that my amendment be overruled ? I invite the Minister of Finance to come to my rescue. He knows very well how matters are in Prince Edward Island, because he has been there, and he has made very strong promises to the people. This company is only the shadow, the government is the substance. In the Bill the company is empowered to acquire railways and build steamships, and it is most unfair to me that I should be ruled out of order, when my amendment is perfectly germane to the whole Bill, and also, I believe, to the clause under discussion.

Mr. HUGHES (Victoria) moved :

That the amendment be amended by striking out the words ' or Gravenhurst.'

If you pass this clause without striking out ' Gravenhurst,' it will give power to the Grand Trunk Railway Company to interfere with the construction of the Canadian Pacific Railway from Toronto to Sudbury and the James Bay Railway from Toronto to Wahnapitae.

Amendment (Mr. Hughes) negatived.

Mr. HUGHES (Victoria). Inasmuch as there are some radical changes in this Bill, it should comply with the rules of the House and be referred back to the Railway Committee.

Amendment to the amendment agreed to.

Mr. WILMOT moved :

That after the word ' Moncton ' on page three, line eleven, the words ' or the city of St. John ' be added in section twelve.

Mr. McCARTHY. When the hon. gentleman gave notice of this amendment it was understood that the Grand Trunk Pacific Railway were going to build the Quebec and Moncton division. In view of the fact that the government is going to build the section this amendment will come more properly as an amendment to the government measure.

Mr. WILMOT. Is it to be unchangeable, like the laws of the Medes and Persians ?

The MINISTER OF FINANCE. This matter was fully threshed out before the committee and voted down, and I do not

suppose we will want to discuss it again at this late hour.

Mr. WILMOT. The Minister of Finance is incorrect in stating that I moved this amendment in the Railway Committee. My amendment in the Railway Committee was that it should be built to St. John, and this amendment makes it Moncton or St. John.

The MINISTER OF FINANCE. I accept the correction, but the substance is the same.

Hon. Mr. HAGGART. Now that the government is to build that division of the railway, this amendment would come more properly as an amendment to the government measure.

Mr. HUGHES (Victoria). It would do no harm to move it now.

Amendment (Mr. Wilmot) negatived.

Mr. MONK. One of the reasons given by the Prime Minister for the building of the eastern section of the main line by the government was that it should be thrown open for the use of other railways as well as the Grand Trunk Railway. Does that apply to these branches which are to be built in Ontario, Quebec and New Bruns-wick by the Grand Trunk Pacific Railway? Will other companies have running powers over these branches ?

The MINISTER OF FINANCE. The contract has no reference to branch lines ; it only refers to the main line. The branches will come under the General Railway Act.

Mr. CLANCY. These lines are in no sense branches of this railway as a government road. They are really main lines constructed by the Grand Trunk Pacific Railway.

The MINISTER OF FINANCE. I rather object to discussing the government scheme on this Bill ; but I may anticipate the discussion to the extent of saying that they will be branches of a leased line. The Grand Trunk Railway Company have a lease of that line, and as lessees they desire to construct branches.

Mr. CLANCY. It seems to me that you might as well say that any road that crosses the Grand Trunk to-day and that is leased by it is a branch. It is not a branch at all, but another road.

Mr. HUGHES (Victoria). I presume that the interpretation is that the government may also build these and make a present of them to the Grand Trunk Railway Company.

The MINISTER OF FINANCE. We will think of that by and by.

Mr. McCARTHY. The next amendment of which I have given notice is as follows, which I move as an additional clause :

The directors of the company shall have power to enter into an agreement or agreements with the government of Canada or with commissioners authorized to enter into such agreements on behalf of the government of Canada, respecting the construction and operation of a line of railway, or any portion thereof, to be the property of the government, between the city of Moncton, in the province of New Brunswick, and the city of Winnipeg, in the province of Manitoba, provided, however, that such agreement shall not take effect until it has first been approved of by a majority of the votes of the shareholders of the company, present or represented by proxy at any annual meeting or at a special meeting of the shareholders duly called for the purpose of considering the same.

That is simply conferring upon this company the power to make the lease provided for in the government scheme.

Hon. Mr. HAGGART. I think the usual course is to require a two thirds vote of the stockholders.

Amendment agreed to.

The MINISTER OF JUSTICE. I wish to add an amendment giving the company all the powers necessary to carry into effect the agreement entered into between them and the government.

Amendment agreed to.

Mr. FOWLER. I wish to add a clause of which I have given notice. I beg to move in amendment that the following clause be added :

That all freight originating in Canada and received along the line of the Grand Trunk Pacific Railway, intended for export across the Atlantic, shall be shipped through Canadian ports, when the route is not otherwise specially engaged by the shipper, and the Grand Trunk Pacific Railway shall carry all freight to an eastern Canadian sea port as cheaply as to any American port on the Atlantic sea board.

There is in the agreement, I understand, a clause to that effect, but not in this particular Bill. As the government has seen fit to recognize this proposition as a good one by adopting it in the agreement, no doubt it will be accepted in this Bill.

The MINISTER OF FINANCE. This is one of several matters which were mentioned before the Railway Committee, and the view that I took and others was that they were probably matters to be considered in connection with the government contract, but not to insert in a private Bill. The matter has been fully dealt with in the government contract, quite as fully as my hon. friend desires, and I do not see that any good purpose could be served by putting in to this charter the clause he suggests.

Mr. FOWLER. I cannot agree with the hon. gentleman. He claims that the government have provided in the agreement a similar clause, but, we have the absolute right to attach this condition to the charter. The company are asking for a charter, and this

committee has the right to impose any obligation we may consider in the best interest of the country. The hon. gentleman has not given any reason why this amendment should not be accepted.

The MINISTER OF FINANCE. There are two points in opposition to the hon. gentleman's view. If it were necessary and proper to put this condition into the company's charter, I should prefer other words. The words in the agreement serve the purpose much better than those of my hon. friend, and if we had to put this in the company's charter, I would like to see the words more carefuly chosen. My other objection is that they are out of place in the charter. We cannot reasonably impose this obligation on the company except in connection with government aid. I do not say that we have not the power, but it would be unreasonable to use it. It is only in connection with the government aid that it would be reasonable to impose a condition of this character. And in the Act giving government aid the matter is dealt with.

Mr. HUGHES (Victoria). But supposing the company runs branches from all along the leased line or from the line west of Winnipeg, according to the logic of the minister, this clause would not apply.

The MINISTER OF FINANCE. As a matter of fact, this does apply to branches too.

Mr. HUGHES (Victoria). Branches constructed without government assistance ?

The MINISTER OF FINANCE. Without having anything to say as to whether government assistance is given or not.

Mr. HACKETT. Before the Bill is reported, may I ask, Mr. Chairman, what became of my amendment ?

Mr. DEPUTY SPEAKER. There were two objections to it—one that no notice had been given of it, the other that it was not relevant, in my opinion, to the question under discussion.

Mr. HACKETT. Will you allow it to stand as an order for consideration ?

The MINISTER OF FINANCE. The hon. gentleman (Mr. Hackett) could give notice of it for the third reading.

Mr. HACKETT. I will leave it in your hands as a notice, Mr. Chairman.

Mr. FOWLER. I think there were some other amendments of which hon. members gave notice.

Mr. DEPUTY SPEAKER. The mere giving of a notice does not bring these amendments before the committee.

Mr. FOWLER. But, Mr. Chairman, you read some that were not moved.

Mr. DEPUTY SPEAKER. I presented Mr. McCarthy's, because he is the promoter of the Bill. But if hon. members absent themselves from the committee, and expect that I will place their amendments before the committee, they are likely to be disappointed.

Bill, as amended, reported.

PRINCE EDWARD ISLAND FERRY COMPANY.

House in committee on Bill (No. 180) to incorporate the Prince Edward Island Ferry Company.—Mr. Emmerson.

On section 14,

Mr. FOWLER. There is a phrase in that relating to these mortgages—'not inconsistent with law.' That seems to suggest that otherwise these people might make a mortgage inconsistent with law. It seems to me this phrase should be eliminated.

Mr. EMMERSON. These are the usual clauses put in steamship incorporation Bills, and they were put in by the committee.

Mr. FOWLER. That does not seem to be a justification for putting in words such as these.

Bill reported, and read the third time.

Mr. EMMERSON moved that the Bill pass, and the title be 'An Act to incorporate the Maritime Railway and Transportation Company.'

Motion agreed to.

QUESTIONS.

CAPTAIN DIXON, CANADIAN CONTINGENT.

Mr. HUGHES (Victoria) asked :

1. Was Captain Dixon, sent to South Africa with the First Canadian Contingent, commissioned to write for the government a record of the Canadians in the war ?
2. If not, what were his duties ?
3. Has that officer yet furnished the government with an historical record ?
4. If so, will the government have it laid on the Table of the House, with a view to its being perused, and if deemed advisable, printed for distribution ?
5. Is Captain Dixon still in the Canadian service ? If not, when did he leave it, and where is he now serving ?

The MINISTER OF MILITIA AND DEFENCE (Hon. Sir F. W. Borden):

1 and 2. He was sent to South Africa as historical recorder.

3. No.

4. When received, if deemed of sufficient importance, it will be laid on the Table of the House.

5. He is on the reserve of officers. He has not been in the pay of the Dominion government since his arrival in South Africa.

DOKIS INDIAN RESERVE.

Mr. BENNETT—by Mr. Hughes (Victoria) —asked :

Have any trespasses been made and complained of on the Dokis Indian reserve, French river, during the past five years ? If so, by whom ; and have damages, and to what extent, been paid therefor ? If any amount paid, what disposition was made of same ?

The MINISTER OF THE INTERIOR (Hon. Clifford Sifton):

The only trespass of which the department have received notice is a trespass made by the Hardy Lumber Company on the Dokis Indian reserve, French River, during the winter of 1899. The quantity of timber cut was 1,129 saw logs, containing 172,336 feet board measure, for which the department charged and collected $1,034.02 for timber and damages, which sum has been placed to the credit of the capital funds of the Dokis band.

PARDON OF RUDOLPH HETU.

Mr. NORTHRUP—by Mr. Hughes (Victoria).—asked :

1. Has one Rudolph Hétu been lately pardoned ? If so, on whose recommendation ?
2. For what offences was he sentenced ? For what term was he sentenced ; and how long has he served thereunder ?

The MINISTER OF JUSTICE (Hon. C. Charles Fitzpatrick) :

1. Yes. Upon the recommendation of the Minister of Justice founded upon medical certificates to the effect that confinement was rapidly developing tubercular consumption for which unless the patient were released, little could be done in the way of treatment.

2. Hétu was sentenced for forgery and electoral frauds ; for the first mentioned offence he was awarded twelve months imprisonment ; for the second a fine of $500, or in default of payment, six months imprisonment.

He had served seven months and one day.

NATIONAL TRANSCONTINENTAL RAILWAY.

The MINISTER OF FINANCE (Hon. W. S. Fielding). In the absence of the Prime Minister, I move that the House go into committee on the following resolution, to-morrow :

Resolved, that it is expedient, in connection with the Bill now before this House, respecting the construction of a National Transcontinental Railway, to ratify the agreement set forth in the schedule to the said Bill, entered into on the 28th of July, 1903, between the government and certain persons on behalf of the Grand Trunk Pacific Railway Company, a company to be incorporated by parliament at the present session thereof, and to authorize the government to do whatever is necessary to give full effect to the said Bill and agreement.

I may say that His Excellency the Governor General has been made acquainted with the subject matter of this resolution, and recommends it to the House.

Motion agreed to.

Mr. BENNETT.

The MINISTER OF FINANCE moved the adjournment of the House.

Hon. Mr. HAGGART. What will be the business to-morrow ?

The MINISTER OF FINANCE. The Minister of Justice will take up the resolutions respecting judges, and we may proceed with the iron and steel bounties. It was the intention of the Prime Minister to proceed with the Grand Trunk measure.

Motion agreed to, and House adjourned at 1 o'clock a.m. Tuesday.

HOUSE OF COMMONS.

TUESDAY, August 4, 1903.

The SPEAKER took the Chair at Three o'clock.

INDEPENDENCE OF PARLIAMENT—MR. LOY, M.P.

Mr. F. B. WADE (Annapolis) presented the second report of the Select Standing Committee on Privileges and Elections, as follows :

Tuesday, August 4, 1903.

The Select Standing Committee on Privileges and Elections beg leave to present the following as their second report :

In obedience to the order of reference dated 22nd July, 1903, your committee have inquired fully into the allegations therein in reference to George M. Loy, Esquire, member for the electoral district of Beauharnois ; they have investigated all the circumstances connected with the acquisition by the government of Canada, of the property therein referred to, and all matters mentioned in the statement therein contained ; they have also heard the statement made under oath, by the said Geo. M. Loy, Esquire, as well as the evidence of all the witnesses who appeared before your committee, and have examined all papers, documents and exhibits produced, and beg to submit the following as the result of their inquiry, viz.:—

1. The statements contained in the first seven paragraphs of the said reference have been substantially established, but your committee cannot discover that the said statements have any bearing upon the charge made against the hon. member for Beauharnois of a violation of chapter 11 of the Revised Statutes of Canada.

2. As to the allegation in paragraph eight that 'from the time that the said Geo. M. Loy handed his property to Archambault up to the day of the sale of the said property to the Crown or government of Canada, he never ceased to be the proprietor of the said property,' your committee find that under the law of the province of Quebec, as applied to the circumstances proven before your committee, Mr. Loy had ceased to be the owner when possession was taken of the property by Mr. Archambault, under the said agreement with Mr. Foy, dated January 4th, 1898, and that the property reverted to Mr. Loy on or about the 15th of June next following.

3. As to the further statement in the said paragraph eight that 'at the time of the sale of the said property on the 20th January, 1903, the said Robert Bruce Johnston was merely

acting for and on behalf of the said Loy, who in said manner did indirectly sell the said property to the Crown in violation of said chapter 11 of the Revised Statutes,' your committee find that the said Robert Bruce Johnston was not at any time, nor in any sense, acting for, or on behalf of, the said Loy; but the said Johnston represented to Mr. Loy that he was purchasing the said property on his own account for commercial purposes, and Mr. Loy when he agreed to sell the said property to the said Johnston believed the said statement to be true, and he parted with the title to the said property in favour of the said Johnston without any knowledge or notice that the same was not required by the said Johnston for the purpose for which he had so represented; and the said Johnston according to the evidence adduced, was not an officer of the government and was not aware when he made the purchase for Mr. Dandurand that the property was required for purposes of the Crown, and your committee find that there has been no violation by Mr. Loy of the said chapter 11 of the Revised Statutes of Canada 'An Act respecting the Senate and the House of Commons.'

4. As to the statement in paragraph nine, your committee find that while the assessed value was as therein stated, the same furnished no criterion of the actual value of the property, inasmuch as it was shown that the assessments in Valleyfield are based on ratios varying from a half to two-thirds of the actual values, and your committee find that the price paid for the property did not exceed its real value.

5. As to the statement contained in paragraph ten, your committee find that at the time of the said sale there was no property owned by the Crown in Valleyfield available and suitable for the purpose for which the said property was acquired.

6. The evidence given by Mr. Loy, under examination, was not contradicted in any particular by that of any of the other witnesses, but was supported and corroborated by the other parties who had knowledge of the transaction.

In accordance with the instructions received, your committee herewith submit the evidence taken before them, together with the exhibits and all their proceedings on the reference.

All of which is respectfully submitted.

(Sgd.) F. B. WADE,
Chairman.

Mr. F. D. MONK (Jacques Cartier). If I am in order, I beg to move that all the evidence and all the proceedings of the committee, as well as the reports, be printed for the use of the members of this House. The evidence is considerable, covering about 250 pages of closely typewritten matter, and I presume that the House will not be able to pass judgment upon the two reports, namely, the report presented by the majority and the report of the minority, without examining the evidence. As a matter of fact, I believe that the evidence has not been read by any member of this House or by any member of the committee. Those who followed the proceedings of the committee very closely were not enabled to take communication of the evidence, and, a fortiori, those who have not attended the meetings of the committee will require to look at that evidence before deciding on the reports. The matter is a very important one; it concerns the privileges of this House, and I think I am voicing the sentiment of every member of the House who will be called upon to pronounce upon that question of privilege in making this motion, seconded by the hon. member for Lanark (Hon. Mr. Haggart).

Mr. SPEAKER. I would wish to have the opinion of the House with reference to rule 94 before I put the motion. Rule 94 says:

On motion for printing any paper being offered, the first shall be first submitted to the Joint Committee on Printing for report, before the question is put thereon.

According to the rule, I would be inclined to believe that the matter should be referred to the Joint Committee on Printing before a decision is made by the House.

Mr. MONK. If it is necessary, Mr. Speaker, I move that the rule which you have just quoted be suspended in this case. It is a pressing matter, both for the member concerned and for the House itself, and I believe that I am conforming to the usual practice in moving in the sense in which I have moved.

The PRIME MINISTER. Mr. Speaker, I take objection to the motion unless I am informed beforehand what is the necessity for printing.

Mr. WADE. The matter of printing the evidence was considered by the committee at two or three of its meetings, and it was almost unanimously resolved that it was not necessary. The story of this transaction, as it was told by Mr. Loy, was confirmed in every particular by every witness called who had any knowledge of the transaction, and there was no dispute whatever as to the facts. It is a very simple matter. The committee were of opinion that the real question to be determined was whether the statute was violated or not upon the admitted testimony of Mr. Loy, and the opinion of the committee was that it was not. I think that any hon. gentleman discussing this question would say that the evidence agreed with the statement made by Mr. Loy on the floor of the House.

Mr. BENNETT. I am surprised to hear the hon. gentleman who has just taken his seat make the statement that there was a unanimity of opinion in the committee as to the non-printing of the evidence. Surely the hon. gentleman must have been awake during the proceedings of the committee, and if so, he must have noticed manifestations of opposition to the suggestion that the evidence should not be printed. Moreover, there was this striking fact, that it was before the committee got fairly launched on its work and before two-thirds of the evidence was taken, that the majority in

the committee took the ground that the evidence should not be printed.

Mr. WADE. I did not say that the committee were unanimous. I said that they were nearly unanimous. I believe three were of the other way of thinking. But the question of printing the evidence was put to the committee on three separate occasion, and the strongest possible expression of opinion was given by the committee on the line I have stated.

Mr. CHARLTON. I can see no reason why the House should not conform to the regular usage and to the rule laid down for cases of this kind. I see no reason why we should not refer the question to the Committee on Printing in the regular way, and let that committee decide whether this evidence shall be printed or not. That is my opinion as to the proper course to pursue.

Mr. LEMIEUX: I have followed the sittings of the committee from the beginning, and I may say that this morning a vote was taken on the minority report presented by the hon. member for Jacques Cartier (Mr. Monk), and there were only two to vote for that report—my hon. friend (Mr. Monk) and the hon. member for Hamilton (Mr. Barker). Therefore, it seems that the committee are practically unanimous in favour of the hon. member for Beauharnois.

Mr. LaRIVIERE. I was in the committee this morning, and there was no vote at all taken in the committee.

Mr. BARKER. I would like to call attention to the fact that the first person to move that the proceedings of this committee be printed was the hon. member for Hants (Mr. Russell). He moved at the very beginning of the proceedings that all the evidence and proceedings should be printed for the use of the House. He was induced by some hon. gentlemen behind him to let the motion stand for further consideration; but the fact that he thought at the time that the evidence should be printed is some indication of the proper course to pursue. I presume that the minority report, as well as the report which has been presented by the committee, will be laid before the House in some form, and I do not see how this House is to decide between the two reports, or as to the facts set forth in the minority report, without seeing the evidence.

Mr. BORDEN (Halifax). Mr. Speaker, the course of the government in declining to have this evidence printed is one of the most unusual occurrences that I have ever witnessed in this House. I have had some experience in the committees of this House, and I have never heard any such question raised before. I do not know anything about the evidence myself. Unfortunately, I was not able to attend the meetings of the committee, although I believe I am a member of it; but I can say to my right hon. friend that in the inquiry with regard to the Drummond Counties Railway there was not the slightest question raised about printing the evidence from day to day; in the inquiry about the alleged election frauds in West Huron and Brockville, the evidence was printed as a matter of course almost from day to day; in the inquiry with regard to the emergency rations, the same course was pursued; and indeed in all the cases with which I have been familiar since I have had the honour of a seat in this House, there has never been any such question raised. What is the objection to printing the evidence? Surely there cannot be any well-founded objection. The members of the House are supposed to have some knowledge of what they are voting about, and if they are to have a knowledge of the facts and to be in a position to vote intelligently one way or the other, there cannot be any objection to having the evidence in such a shape that they can read it, understand it, and come to some conclusion about it. I have not the slightest idea of the nature of the report or of the conclusion at which the committee have arrived; I know nothing about the nature of the evidence; but I do submit to my right hon. friend that this is a most unusual departure from the ordinary mode of procedure. It is not a matter that requires to be sent to the Committee on Printing; it is a matter that will have to be discussed and considered by the House; and we know as well as the Committee on Printing can tell us, that we cannot properly understand or weigh the evidence unless we have it in printed form.

Mr. RUSSELL. Reference has been made to the motion I made at an early stage in the sittings of the committee that the evidence should be printed from day to day. I moved that purely as a routine motion, so that there would be no question about it. Then it was suggested that as there was nothing very serious in this case, as it was similar to the case we had before with reference to the hon. member for Glengarry (Mr. Schell), it might be waste of time and trouble to print the evidence. Therefore, I did not press the motion, thinking that if it should be thought necessary later on, the committee would decide the matter. I do not understand that anybody is objecting to the printing of the evidence. The question is whether it would be well to suspend the rule. My opinion is that it would be well to suspend the rule and come down to the plain question whether we ought or ought not print the evidence. The reason I suggest that is that an hon. member whom we all respect is out of his seat while we are considering whether we should print the evidence or not instead of determining the main question. My opinion is that we might as well dispense with the rule requir-

ing the Printing Committee to consider the matter, because that committee has no better light for considering it than the House has this afternoon. The Printing Committee will not examine the evidence to ascertain whether it is important that it should be printed. The hon. member for Annapolis can inform the House better than the Printing Committee. As to the main question, that comes up later on, and is another question.

The PRIME MINISTER. My reason for the attitude I have taken in this case is simply this, that I desire to act in conformity with the rules of the House. The position has invariably met the approval of the House that the report of a special committee ought to be confirmed by the House, as we presume the committee have considered the matter. In this case the question of having this evidence printed was considered by the committee more than once and the committee decided that it should not be printed. In the cases referred to by my hon. friend, the leader of the opposition —the emergency rations, the Brockville and West Huron elections and some other matters—the committee itself passed resolutions to have the evidence printed and its report was adopted by the House. In this case, however, the committee did not think it advisable to have the evidence printed, after fully considering the matter, and I think we ought to adopt its report. But the matter may be referred to the committee on printing whose decision will guide the House.

Mr. SPEAKER. With regard to the motion, I think it contrary to rule 94, which I quoted a moment ago, and which provides that no motion can be made for printing documents unless on the report of the Joint Committee on Printing. The suggestion had been made that the rule be suspended. This can only be done with the unanimous consent of the House. Is there any objection to the motion that rule 94 be suspended.

The PRIME MINISTER. I take objection.

Mr. SPEAKER. Then I declare the motion out of order.

Mr. MONK. May I not amend my motion and ask that reference may be made to the Joint Committee on Printing ? I understand that the Senate has adjourned for a considerable time, and it was in order to hasten the matter that I asked to have the printing ordered directly.

Mr. SPEAKER. It is moved by Mr. Monk that the report of the evidence and proceedings of the committee be referred to the Joint Committee on Printing of parliament.

Mr. WADE. Would it not be more in order to reserve that motion until there has been a motion for concurrence in the report.

Motion agreed to.

Mr. MONK. I now give notice that I intend to move that the said report be not adopted, but that the draft reports marked 'B,' drawn in the following terms, be adopted and laid on the Table of the House.

OFFICIAL REPORT OF DEBATES.

Mr. L. N. CHAMPAGNE (Wright) moved that the House do now concur in the sixth report of the select committee appointed to supervise the official reports of the debates of the House.

The PRIME MINISTER. I would ask my hon. friend to allow this motion to stand as the Minister of Finance is not present.

Mr. CHAMPAGNE. There is an amendment to be proposed to a clause in the report which we might dispose of.

Motion withdrawn.

FIRST READINGS.

Bill (No. 228) for the relief of Stephen Wilson.—Mr. Wade.

Bill (No. 229) for the relief of Ellen McDermid.—Mr. Wade.

INDEPENDENCE OF PARLIAMENT MR. LOY, M.P.

Mr. WADE. I beg to move that the second report of the select standing Committee on Privileges and Elections be concurred in.

Mr. MONK. I take the point of order that this motion cannot be made the day the report is received.

Mr. SPEAKER. Under ordinary circumstances the point of order would be well taken, but we must not forget that we are dealing with a question of privilege, and in such questions no notice is required.

Mr. MONK. This is not a question of privilege but a question of concurring in the report of the committee which has just been laid on the Table. I submit that a motion to adopt that report, made five minutes after the report was laid on the Table, is out of order.

Mr. BORDEN (Halifax). The rule you have laid down, Mr. Speaker, would enable the committee to proceed without giving notice to its members. A question of privilege may be brought to the attention of the House without previous notice for the very good reason that it must be placed before the House at the earliest opportunity, but when once brought before the House then the subsequent proceeding must follow the ordinary rule. Otherwise it would be absolutely impossible to deal with the matter in the committee or in the House upon any intelligible or reasonable basis.

The PRIME MINISTER. In matters of privilege the rules of the House are suspended, and they may be sprung on the House

without notice, but I would suggest that this motion be held over and the discussion adjourned.

On motion of Mr. Champagne, the debate was adjourned.

FISHERY RIGHTS OF DOMINION AND PROVINCES.

The MINISTER OF MARINE AND FISHERIES (Hon. R. Préfontaine) moved :

That an order of the House do issue for a memorandum on the status of the question of fishery rights between the federal and the provincial governments.

Motion agreed to.

INTERCOLONIAL CONFERENCE.

Mr. R. L. BORDEN (Halifax). Before the Orders of the Day are called, I would ask the Prime Minister whether or not there is any truth in the report that has been made public in the press here in Canada that the imperial government have asked the various colonial governments, including that of Canada, for permission to make public certain proceedings before the colonial conference which have hitherto been regarded as of a private nature ? Has such a communication been received by this government, and have the government come to any conclusion as to the reply they will give to the communication ?

The PRIME MINISTER (Rt. Hon. Sir Wilfrid Laurier). These are questions as to which I can give no answer until I have had communication with His Excellency the Governor General. I shall communicate with His Excellency at the earliest possible moment, and shall give my hon. friend (Mr. Borden, Halifax) the answers to his questions to-morrow or the day after.

IRON AND STEEL BOUNTIES.

House in committee on the following resolution :

That it is expedient to enact as follows :

1. The Governor in Council may authorize payment of the following bounties on the undermentioned articles manufactured in Canada from steel produced in Canada from ingredients of which not less than fifty per cent of the weight thereof consists of pig-iron made in Canada, viz. :

(a.) On rolled, round wire rods not over three-eighths of an inch in diameter, when sold to wire manufacturers for use in making wire in their own factories in Canada, a bounty of six dollars per ton ;

(b.) On rolled angles, tees, channels, beams, joists, girders, or bridge, building or structural rolled sections, and on other rolled shapes not round, oval, square or flat, weighing not less than thirty-five pounds per lineal yard, and also on flat eye bar blanks, when sold for consumption in Canada, a bounty of three dollars per ton ;

(c.) On rolled plates not less than thirty inches in width and not less than one-quarter of an inch in thickness, when sold for consumption in Canada for manufacturing purposes for which such plates are usually required and not to include plates sheared into plates of less width, a bounty of three dollars per ton.

2. The Governor in Council may make regulations to carry out the intentions of the foregoing section.

3. That chapter 8 of the statutes of 1899 be so amended as to provide that the bounties on steel and iron authorized by chapter 6 of the statutes of 1897 shall be continued until the thirtieth day of June, one thousand nine hundred and seven, and that the rates of such bounties shall be as follows :

(a.) From the first day of July, one thousand nine hundred and three, to the thirtieth day of June, one thousand nine hundred and four, both inclusive, the bounties shall be ninety per centum of the amount fixed by the said chapter 6 of the statutes of 1897 ;

(b.) From the first day of July, one thousand nine hundred and four, to the thirtieth day of June, one thousand nine hundred and five, both inclusive, the bounties shall be seventy-five per centum of the amount fixed by the said chapter;

(c.) From the first day of July, one thousand nine hundred and five, to the thirtieth day of June, one thousand nine hundred and six, both inclusive, the bounties shall be fifty-five per centum of the amount fixed by the said chapter ;

(d.) From the first day of July, one thousand nine hundred and six, to the thirtieth day of June, one thousand nine hundred and seven, both inclusive, the bounties shall be thirty-five per centum of the amount fixed by the said chapter.—The Minister of Finance.

The MINISTER OF FINANCE (Hon. W. S. Fielding). The House has had before it from time to time during the present session the question of granting some aid to the iron and steel industry. The government have come to the conclusion to propose certain legislation as set forth in the resolution now before the committee. The reasons which have led the government to prefer to grant aid in this shape rather than by making material changes in the customs tariff have been explained in previous discussions on the question of bounties. The resolutions now before the committee deal with the bounty question in two forms. First, we have certain resolutions dealing with the bounties which are already on the statute-book, and then we have a further resolution by which we propose to grant bounties for new forms of the steel industry which are not at present in operation in Canada. Dealing first with the question of the bounty as provided by existing legislation, I may remind the House that in the year 1897, the bounties were fixed at $3 per ton on steel, $3 per ton on pig-iron made from native ore, and $2 per ton on pig-iron made from imported ore. By subsequent legislation, a sliding scale of bounties was provided whereby the bounties fixed in 1897 should begin to diminish. That sliding scale took effect last year, and last year the bounties were payable on the basis of 90 per cent of the bounties as established by the Act of 1897. Provision was made that these bounties should be further decreased in the follow-

ing year to 75 per cent, then to 55 per cent, then to 35 per cent and then to 25 per cent. What is proposed in the present legislation touching bounties on pig-iron and steel is that we shall suspend for a year the operation of the sliding scale, so that, for the present year, instead of paying on the basis of 75 per cent of the bounties as at first established, we shall continue to pay for this year 90 per cent of the bounties fixed in 1897, the same as last year. The manufacturers will thus receive for two years 90 per cent, instead of one year 90 per cent and the other 75 per cent. As a means of forming some estimate of the probable difference this will make to the steel industry in the current year——

Mr. BENNETT. May I ask the hon. Finance Minister if it makes any difference whether it is manufactured entirely from Canadian ore?

The MINISTER OF FINANCE. The bounties on iron established in 1897, as I have said, were at certain fixed rates, one on native and one on imported ore; but the reduction was on the basis of a percentage which applied to all. From a statement made a short time ago as to the amount paid in bounties in the past year, it appears that that amount was $1,098,359. This was on the basis of 90 per cent of the bounty fixed in 1897. Some accounts will probably come in later which will increase that sum, but we are speaking now entirely of the approximate estimate which I had the privilege of presenting to the House some days ago.

Mr. WILSON. That is not the statement that appears in 'Hansard' in answer to the question asked.

The MINISTER OF FINANCE. Yes, but my hon. friend (Mr. Wilson) will find that the figures given in 'Hansard' included some balance from the previous year. Am I not correct?

Mr. WILSON. Yes.

The MINISTER OF FINANCE. I am dealing with the operations of last year with a view to getting an approximate estimate of what the difference is to be. As shown in 'Hansard' the payments are somewhat larger than I have given, and they include some bounties earned in the previous year. And it is only fair to say that there will be some later payments to add to the figures I have given for the past year. All I can give now is an approximate statement. On the assumption that the sliding scale would remain without change, and that the output would be the same, we should pay to the companies for the coming year, on the basis of 75 per cent, $915,299. But, instead of paying them on the basis of 75 per cent, we pay on the basis of 90 per cent; and, assuming that the output is substantially the same, they will receive for the present year the same as they received for last year. If the output should increase, the amount they will receive will increase proportionately. On the basis of the figures I have given, the difference would amount to $183,059, that being the difference between paying on the basis of 90 per cent, as paid last year, and 75 per cent, as would have been paid this year had we made no change in the regulation. We do not by this resolution increase the period of bounties, but we change the percentage in the way I have described. So much then with reference to the difference it will make for the present year.

Mr. CLANCY. Does the hon. gentleman not increase it one year by reason of repeating the 90 per cent, and then continuing the balance of the year on the sliding scale, as was formerly provided under the statute? Is there not an increase of one year by that?

The MINISTER OF FINANCE. No, not of time, there is an increase in the amount payable, because in the original arrangement the five years would end with a payment on the basis of 25 per cent; as it stands now, by the suspension of the operation of the sliding scale for one year, in the final year they will receive a payment on 35 per cent. For the present year and for each of the succeeding years, payments will be made at a higher percentage than was contemplated by existing legislation. I have given the whole difference it will make for the current year, it will make for each of the succeeding years a difference to the extent of the variation of the percentage in each case. By moving the sliding scale forward you pay them at a higher percentage than you would pay them by adhering to the present sliding scale.

Hon. Mr. HAGGART. For the subsequent years then there will be an increase of the bounty to what was proposed under the statute.

The MINISTER OF FINANCE. There will be in the percentage. But while the starting period remains the same, we will this year pay them 90 per cent of the total instead of 75 per cent, as now provided; we will next year pay them 75 per cent of the total instead of 55 per cent; in the following year we will pay 55 per cent instead of 35 per cent; and in the final year we will pay them 35 per cent instead of 25 per cent. The effect therefore is that you move forward the sliding scale one year. You give them, during each year, a higher rate of percentage than you would otherwise, terminating with 35 per cent instead of with 25 per cent as provided in the existing legislation.

Then, Sir, beyond that we have made some proposals with respect to articles which are not now manufactured in Canada. It was thought desirable that, if we were to grant further aid to the iron and steel industry, we should not only have

regard to the manufactures which are now in progress, but we should endeavour to secure some advance in the manufacturing industry by the production of lines of goods not at present produced in Canada. We have therefore proposed to grant additional bounties to the extent set forth in these resolutions on three classes of goods, one upon wire rods, an article which is used largely in making wire, and ultimately in making wire nails and manufactures of that character; and also on certain structural steel and steel plates. These things are not now made in Canada. They are consumed to a large extent, and the manufacturers have been very desirous that we should so frame our legislation as to encourage the development of these lines of industry. Therefore, instead of dealing with the tariff as already mentioned, we propose to make grants of bounties on the articles which I have named: On rolled round wire rods not over three-eights of an inch in diameter, when sold to wire manufacturers for use in making wire in their own factories in Canada, a bounty of $6 per ton. Then we proceed: On rolled angles and other forms of structural steel and large steel plates a bounty of $3 per ton. In the adjustment of these bounties regard is had to the existing conditions of the tariff. Whatever differences of opinion we may have as to the effect of duties, I suppose it will be generally acknowledged that the duty is an advantage to the manufacturer, and if he does not get it in the form of a duty but in the form of a bounty, he certainly receives considerable advantage. If he is already receiving a large advantage in the shape of the tariff, then there would be less reason for giving him a large advantage in the shape of bounties. In dealing with these articles we are dealing with items which are either on the free-list, as in the case of wire rods for the manufacture of wire and wire nails, or as in the case of structural steel and plates where the duty is a low one of ten per cent. We have reason to believe these grants in aid of the iron and steel industry, while they may fall short of what some manufacturers desire—for it is too much I suppose to hope that we should be able entirely to satisfy applicants who come to us in matters of this sort—we have some reason to believe that these grants will be regarded by the manufacturers as a moderately satisfactory encouragement. At all events they will serve the purpose of enabling industries whose position was somewhat in question a short time ago, to continue their operations, and not only to produce pig-iron and steel as they have been producing in the past, but also to make some progress in the more advanced operations by turning out these wire rods and the other items mentioned in the resolution.

I have already indicated what the charge upon the treasury will probably be by reason of the change which we are making in the bounties as respects pig-iron and steel. What the charge will be for these new bounties which we are providing, is not easy of determination. The best we can do is to call attention to the imports of these articles, and perhaps we can form some estimate of the quantity of the goods which are likely to be manufactured in Canada.

Mr. BLAIN. Might I ask the Minister of Finance if that includes every thickness of wire and steel?

The MINISTER OF FINANCE. No, if my hon. friend will read the resolution he will see it is very carefully drawn in that respect; it is drawn, as I have already said, with regard to existing tariff legislation. There are some forms of steel which have a considerable duty upon them, and we do not in that case propose to allow any bounties. There are others which are either on the free list or subject to quite a low duty, and it is in such cases that we are allowing these bounties. There is a difference in the matter of plates as to the size. Now, as to what the probable charge will be, the only method that we can have of forming an opinion is by taking the imports of the articles in question, and forming, if we can, some estimate as to what proportion of these articles will be made in Canada instead of being imported. I have prepared a statement of the imports of these articles which will show approximately the probable amount we might make in Canada. The imports last year of wire rods amounted to 55,182 tons; the imports of structural iron and plates amounted to 47,512 tons. What proportion of this we might be able to manufacture in Canada is of course a matter of conjecture, it is difficult to form any understanding.

Hon. Mr. HAGGART. Do steel rods include steel nails?

The MINISTER OF FINANCE. No, the wire rod is the first form towards the production of nails. We pay no bounty except upon the wire rod itself.

Mr. KEMP. May I ask the hon. Minister of Finance to give us the values as well as the tonnage of these articles imported?

The MINISTER OF FINANCE. The value of heavy angles, structural steel as it is generally described, imported during the year 1902 was $789,644; of plates imported, $571,291; and of wire rods imported, $1,523,792.

Mr. BORDEN (Halifax). Before the hon. gentleman leaves that I would like to ask a question. He gave us a statement of 55,182 tons which I understand applies to paragraph (a) of the resolution, and he gave us 47,512 tons, but I did not quite understand whether that applies to paragraphs (b) and (c) together or only one of them.

The MINISTER OF FINANCE. Yes, it includes everything except rods amounting to 55,182 tons. The other item covers the remainder of the resolution.

Mr. BORDEN (Halifax). You have separated (b) and (c) as to values ?

The MINISTER OF FINANCE. Yes, I have a statement showing the values, the figures of which I have just given. If we manufacture in Canada one-third of the quantity of these articles which were imported in the year 1902 then we shall pay bounties to the extent of $150,000 a year. If we manufactured two-thirds of the amount we imported we would pay bounties to the extent of $300,000 a year. Some little time will elapse probably before the manufacturers will have their mills equipped for the manufacture of these articles and I think we are probably within the mark when we say that the current year's output will not exceed one-third of the import. That is only a matter of judgment and perhaps a matter of guess. Hon. gentlemen who have the information before them may form an opinion as to whether it is correct or not.

Mr. BORDEN (Halifax). There is no period of time during which the bounties shall continue fixed by the resolution ?

The MINISTER OF FINANCE. No, we have thought it better for the present that we should not name the period and for this reason, that where you name the period of the bounty you, in a sense, create a contract with the parties entering into these operations under which you would feel that you were bound to continue these bounties for the full term of the contract so called. We have thought it better to leave the matter indefinite so that the House will be entirely free to deal with the question at any future date in connection with any revision of the tariff that may be made. On the whole we think it is better that this bounty should not be offered for a specified time because it might create something like a specific contract. Our impression is that considering that it will take the companies several months before they can get into operation to earn these new bounties we probably would not be very far astray if we were to say that they will not during the current year produce more than one-third of the quantity imported during the year, the figures for which I gave, and if that is so we will pay about $150,000 in the form of bounties on the new articles, and there would be the increase already spoken of in the bounties on pig-iron and steel. These are the leading facts of the matter and with this statement we beg to submit the resolution to the consideration of the House.

Mr. WILSON. Would the hon. gentleman be kind enough to give us a statement of the changes made since the present government came into office in the bounty on iron and steel and the change in the duty if any ?

The MINISTER OF FINANCE. In 1897 there was an increase of the bounties on pig-iron and steel at which time there was a reduction of the duty—I cannot give the exact figures in regard to all the details—but there was a reduction from $4 to $2.50 a ton on pig-iron and of course a further reduction under the preferential tariff. The bounties at that date were increased to compensate the industry for the disturbance which otherwise would have been created by a reduction in the duties.

Mr. WILSON. Would the hon. gentleman bring down a statement of those changes ?

The MINISTER OF FINANCE. I shall be glad to bring down a statement in detail showing the change made in each of these items.

Mr. KEMP. I should like to ask the hon. Minister of Finance why it was that he came to the conclusion that the items of plates, steel ingots, puddled iron bars, and pig-iron should be dealt with on the bounty basis instead of by imposing a sufficient duty.

The MINISTER OF FINANCE. Because, as I stated earlier in the session, a change in the duty on articles of this kind which are the very basis of a great many manufacturing industries, would probably involve material tariff changes and we did not deem it in the interest of the country to make such changes at present.

Mr. KEMP. Shall we draw the conclusion from that that later on these articles may be protected by a duty and the bounties taken off ?

The MINISTER OF FINANCE. The matter will be purposely left entirely open to the House so that it may deal with it in that way. It is quite possible, but of course, we can make no undertaking in regard to the future.

Mr. BORDEN (Halifax). I am sure that we can all congratulate the hon. Minister of Finance (Hon. Mr. Fielding) on having awakened to a realization of the condition of the iron industry in this country. He did not seem to be very fully alive to it at the commencement of the session when we were told that the only difficulty in regard to all our Canadian industries was that there were not sufficient men for the purpose of carrying on the work and that the warehouses were not large enough to contain the manufactured product.

The MINISTER OF FINANCE. Not as to all.

Mr. BORDEN (Halifax). I have a pretty vivid recollection of what the hon. gentleman stated and I do not remember any ex-

ception. If he made any exception I am sure he will be glad to correct me as he will have an opportunity of doing so. I think we may also congratulate ourselves that the right hon. leader of the government as well as the right hon. Minister of Trade and Commerce, those redoubtable free-traders, took occasion to leave the House while the hon. Minister of Finance was making his statement, realizing no doubt that a bounty is the most extreme form of protection and that the measure which is now being brought down by the hon. Minister of Finance is absolutely out of touch with the principles which these right hon. gentlemen up to a very late date, in fact up to the present session, have announced to the House and to the country as their political creed. Under the tariff which was established by the late government when Sir Charles Tupper was Minister of Finance, some progress was made in the iron industry and I have no doubt a very much greater development would have taken place except for the fact that the price of pig-iron fell all over the world and the development of this industry which might reasonably have been expected in Canada at that time did not take place. This government introduced its tariff in 1887 and I have already given the House the particulars of the decreases made in the iron duties at that time so that it will not be necessary to go over them again. It is sufficient to say that the decrease was very considerable in regard to many of these items. For example, on pig-iron there was a reduction of $1.50 per ton ; on scrap (cast) a reduction of $1.50 per ton ; on billets and blooms a reduction of $3 ; on scrap (wrought), a reduction of $3 ; on steel bars a reduction of $3 ; on steel bands a reduction of $3 ; on steel fish and ties plates a reduction of $2 ; on plates a reduction of $3 ; on shaftings and forgings, a very considerable reduction, and so on through all the list which I then read to the House.

Very shortly afterwards this government came to the conclusion that so serious a reduction in the duties on iron and steel was a mistake, and that that mistake might be remedied by a continuation of the bounties ; and the measure with regard to the bounties was brought down, although in proposing it the government went back on all previous professions of policy which it had preached to the country for eighteen years in regard to bounties. I need only, in that connection, refer to the language of the present Minister of Trade and Commerce (Rt. Hon. Sir Richard Cartwright), both with regard to duties on iron and steel and with regard to bounties. In 1890 the Rt. Hon. Sir Richard Cartwright said to this House :

> I doubt exceedingly whether among the many injurious duties which the policy of the present government has heaped on the producers of this country, there is one which is calculated to do more harm on a larger and wider scale than the enormous duties which have been placed upon iron.

Then this government, having reduced the duty on iron, proposed immediately afterwards to neutralize to some extent the advance which they made in that direction by bringing down their bounty scheme a few years ago. But the Minister of Trade and Commerce, on the occasion to which I refer, continued as follows :

> There is just this advantage in the proposition that to a certain extent it enables the people to see more clearly than in other cases how much the exchequer has been plundered because plunder it is, and how much the people are being inpoverished by this policy.

It is pleasing to know that the Minister of Trade and Commerce, at the present time—I regret he is not here to-day—joins most heartily and cordially in this measure for the impoverishment of the people in placing bounties on iron and steel. The Rt. Hon. Sir Richard Cartwright continued as follows :

> This is merely a concession to certain favoured individuals, or certain favoured corporations to be paid for in all human probability by contributions to election funds, just as we know that other combines are in the habit of earning the gratitude of hon. gentlemen opposite.

Well, I do not know whether any comment is required on this or not. It would be, I suppose, out of place to ask my hon. friend the Minister of Finance whether there is any connection between the bringing down of this measure now and the reported approach of the general elections, having special regard in that behalf to the language which I have quoted from the Minister of Trade and Commerce. When it came to a question of bounties four years later, in 1894, the present Minister of Trade and Commerce (Rt. Hon. Sir Richard Cartwright) thought the proposition was so absolutely absurd that he refused to discuss it at all. He said :

> I am not going to raise a discussion now as to bounties on pig-iron. I disapprove of the whole business altogether.

And he brushed it aside with a wave of his hand, and now his colleague, the Minister of Finance, brings down this resolution with the approval of the Minister of Trade and Commerce, but happily in that right hon. gentleman's absence at the moment.

Some hon. MEMBERS. Hear, hear.

Mr. BORDEN (Halifax). The late Conservative government, and particularly Sir Charles Tupper, when he was in that government, were extremely anxious that this industry should be developed in Canada ; and I have more than once referred, not in this House, but out of this House, to an incident which took place when Sir Charles Tupper was made aware that the government proposed to give bounties to this industry. I remember very well the occasion,

and I remember very well what Sir Charles Tupper said. He said he was glad that the government had done it, and he added with some emphasis: He was glad indeed that the government had done it, even though it should have the effect of giving them another five years in power. That is the aspect in which Sir Charles Tupper looked at this industry in this country, and it is not out of place at the present time to say that Sir Charles Tupper, by the stand which he took with regard to this industry at that time, both openly in this House and by means of negotiations outside of the House, contributed very largely to the establishment of these bounties, and in that way to the development of the iron and steel industry in the maritime provinces. And, as some time ago, I think at the very time these bounties were introduced, there was certain correspondence read in this House, by means of which it was sought to discredit Sir Charles Tupper's statement as to the part which he had taken in this matter, it is not out of place now for me to read a communication addressed to Mr. Henry M. Whitney, whose name was brought into that discussion; and addressed to him, not at the instigation of Sir Charles Tupper, but quite independently of him, by a gentleman who had very excellent means of knowing what share Sir Charles Tupper had in these negotiations—I refer to Mr. Graham Fraser, whose experience in the iron industry, and whose efforts in developing that industry in the maritime provinces are well known throughout Canada. This is the letter to which I refer:

New Glasgow, N.S.,
September 5th, 1900.

H. M. Whitney, Esq.,
95 Milk Street,
Boston, Mass.

Dear Sir,—In the Halifax 'Morning Chronicle' of Saturday, September 1st (cutting from which I mail herewith), I notice an article referring to a discussion carried on in the Canadian parliament, Ottawa, during last session by the Hon. W. S. Fielding and Sir Charles Tupper relative to the extension of the iron bounties, &c.

Owing to my absence in Great Britain when the discussion took place, I knew nothing of it until reading the article in last Saturday's 'Chronicle.' As my name comes up somewhat prominently in the matter, and as I think your letter is hardly fair to Sir Charles, I consider it my duty to state the facts as I know them.

By referring to my notebook, I find that on November 24th, 1897, I met you at your office in Boston, when we had some conversation relative to a supply of coal for a furnace plant which the Nova Scotia Steel Company proposed to establish at Sydney or Louisburg. On November 25th I went to Philadelphia and returned on Saturday the 27th, and again met you in your office and then gave you some figures as to the cost of making iron in Cape Breton. You then suggested a larger plan than outlined in our proposal. On Monday, November 29th, I saw you again, when you spoke in a very enthusiastic way of the proposed blast furnace project, and we then arranged for 10,000 tons of Cape Breton coal for coking test at the Ferrona works. At that interview you stated that if the test proved satisfactory and we could get the Dominion iron bounty extended for five years from the time the furnaces went into blast, you would join us in the enterprise and help us get the necessary capital. This was said in the presence of Mr. Windsor, then vice-president of the Dominion Coal Company.

The 10,000 tons of coal was shipped to Ferrona, the test proved satisfactory, and on January 25th, 1898, I again met you in Boston, when the results of the coking tests were submitted to you. You then suggested that legislation be at once got from the government of Nova Scotia incorporating a company and that in the meantime the Nova Scotia Steel Company should, through their solicitor and agents, do all they could to induce the Dominion government to extend the bounties.

We did secure from the Nova Scotia legislature an Act incorporating the company (The Nova Scotia Steel and Iron Company, Limited), but entirely failed to get during that session of the Dominion parliament any legislation extending the bounties. And on June 4, 1898, I wrote you as follows: 'I regret to inform you that we did not succeed in getting the Bill through parliament extending the bounties on pig-iron; so the matter of erecting furnaces at Sydney or Louisburg is, I suppose, off for the present.'

I heard nothing more from you until I received a telegram asking me to meet you at Syduney on the 17th of August, which I did. You then stated that you thought we had better go on with our new works as you did not believe the Dominion government would extend the bounties, and as Sir Charles Tupper was going over to England you would get him to introduce us to parties who would find the capital. In reply, I said: 'If you begin to build the large plant you are talking of, I do not believe the bounties will ever be extended. Sir Charles came in later, when you repeated to him our conversation. Sir Charles then said: 'Mr. Fraser is quite right about the bounties. You should get the Finance Minister to get an Order in Council passed extending the bounties before starting your works—it will be a great help in getting the capital. I will see that there will be no opposition to it from the Conservative party, and I will see Mr. Fielding and take up the matter personally.' When I saw Sir Charles about a month later, namely, September 16th, at the Windsor Hotel, Montreal, in the presence of yourself and Senator Mackeen, he told us that he did see Mr. Fielding at the Royal Hotel, St. John, and had a discussion with him in regard to the matter of extending the bounties.

Now, in view of the above facts you can hardly say that you were not interested in the iron and steel business at the time Sir Charles Tupper referred to, namely, August 17th, 1898. While we personally did not visit Ottawa to interview Mr. Fielding on the bounty matter, he was approached at your suggestion by the agents of the Nova Scotia Steel Company and also, I understand, by Messrs. W. B. Ross and B. F. Pearson, of the Dominion Coal Company, but without result at that session.

I well know that you are a busy man and unlikely to recall conversations such as referred to with the dates on which they took place, but when I repeat them to you as above you will, I think, recall them and agree with me as to their accuracy, and I know that you are fair enough to give Sir Charles credit for the part he took in securing such bounty legislation as

was finally passed, although it is not as favourable as you asked for, namely, 'five years from the date at which the furnace went into blast.' as provided by the Bounty Act introduced by the late Finance Minister, Hon. George E. Foster, during the session of 1894.

The difference it would make to your company you can no doubt appreciate, as it would have been unnecessary to rush construction at excessive cost.

Don't you think that some acknowledgment should now be made to Sir Charles ?

The favour of your early reply will oblige,

Your respectfully,

(Sgd) GRAHAM FRASER.

To that letter Mr. Whitney sent the following reply :

Boston, September 7, 1900.

Graham Fraser, Esq.,
New Glasgow, N.S.

Dear Sir,—Replying to your letter of the 6th instant, I have to say that I am well aware that Sir Charles Tupper was always friendly to the extension of the iron and steel bounties and gave to the proposed bounty legislation his hearty support.

The statement which I felt obliged to correct in my letter to Sir Charles was that Mr. Fielding was unfriendly to the matter and that I visited Ottawa with you and implored Mr. Fielding 'to extend that measure of assistance necessary to the organization of this great enterprise and that we went home utterly discouraged.'

As you yourself say this was not true of either of us ; and, so far as my expression goes, Mr. Fielding was, as I stated in my letter, 'friendly to the matter of the extension of the bounty period from the time of my first mention of the subject to him.'

Yours truly,

H. M. WHITNEY.

I thought it was only fair to Sir Charles Tupper that this letter, written not at his instigation, written entirely without his knowledge, should be brought to the attention of the House, as other correspondence from Mr. Whitney was at the time introduced into this House for the purpose of somewhat contradicting Sir Charles Tupper as to the share he had taken in the legislation at that time.

Now, coming to the proposal of the government, I regard it as a mere makeshift, a mere temporary expedient. I believe the iron industry of Canada can never be put upon a permanent basis until the duties are so revised as to give the home market, to a large extent at least, to our own people. That the government's present proposal will not do. The effect of a bounty and the effect of customs duties are very distinct. If by means of customs duties you can give the home market to our own people and in that way build up the production of iron and steel in Canada, the result will be that the competition thus stimulated in our own country will reduce the prices of the products to a fair and reasonable basis, and eventually there will be no burden on the people at all, because they will get their iron and steel manufactures and goods in Canada as cheaply as they can get them in any other country. But the effect of bounties is precisely the opposite. The more you develop the industry by means of a bounty, the greater burden you impose on the people. If you increase the production four-fold by means of a bounty, you increase the burden of the people four-fold. Now, there is good reason, it seems to me, for endeavouring to give our people the home market in respect to this great industry. I do not disguise from myself, nor does the hon. Minister of Finance disguise from the House, the necessity, in case the duties on iron and steel are revised, of revising the duties on other articles which are intimately associated with the use or the production of iron and steel. But is our home market worth anything ? It is estimated that we used during the past year more than 800,000 tons of iron and steel, of which we imported 544,547 tons direct products of blast furnaces and rolling mills of other countries. Surely there should be some opportunity for our own manufacturers to acquire the control of a market like that. We imported last year $33,681,625 worth of iron and steel and manufactures thereof. A considerable portion of those goods could be and ought to be manufactured in Canada. But I submit to the House, and particularly to the Minister of Finance, that it is impossible to give to our manufacturers the home market by a simple system of bounties such as that which he is proposing at the present time. My hon. friend has referred to a possible revision of the tariff in the future. Indeed, he has put these resolutions in such a form as, coupled with his remarks, to suggest that possibly he may be looking forward to a revision of the tariff at an early date. I would have thought, as I suggested at an early part of the session, that it would have been better to make a revision of the tariff at once, and not resort to this mere makeshift and temporary expedient, which will have to be abandoned if the iron and steel industry of Canada is to be put on a permanent basis. If that result is achieved, it can only be done by a very thorough revision of the tariff on these articles. I do not know whether the hon. Minister of Finance has any understanding with the manufacturers of iron and steel with regard to that. The way in which he has dealt with the matter in the House would seem to give colour to that supposition. While I am glad that these resolutions have been brought down and that this small measure of protection has been given for the purpose of aiding and developing this great industry, nevertheless I regret that my hon. friend has not seen fit to adopt the only means by which in my opinion this industry can be put upon a permanent basis in this country, that is, a revision of the customs tariff in such a way and to such an extent that the Canadian producers will enjoy the Can-

adian market. I still trust that the government will take the very earliest opportunity —I am afraid they will not have any opportunity if they do not begin very soon— to give adequate assistance to the iron and steel industry in the way I have mentioned.

Hon. Mr. TARTE. Mr. Chairman, once more we are not doing the right thing. The Minister of Finance is asking this side of the House to place at his disposal a large amount of money, so that he may pay that money into the hands of manufacturers of iron and steel. The hon. gentleman has come to the conclusion, not because, I suppose, he is convinced that protection is good policy, but because some of our industries had very nearly gone to the wall. In other words, he gives relief once more to some industries when he cannot help himself. Public opinion has forced my hon. friends on the treasury benches to do what they had made up their minds not to do at the beginning of the session. I am very glad that public opinion has forced my hon. friend to do something, but he has not done the right thing. His policy is a policy by piece-meal. It is a retail policy, and I suppose that should some other industries, before the end of the session, be threatened with destruction, my hon. friends on the treasury benches will come again to the House and ask for bounties. I share the views of the hon. the leader of the opposition.

Hon. Mr. ROSS (Victoria, N.S.). Of course.

Hon. Mr. TARTE. My hon. friend from Victoria says, of course. I do not know what views my hon. friend holds on this subject. He interrupts us very often when we address the House on questions which we believe we know as well as he does and to which we have given as much study, if not more, and his interruptions he is unable to substantiate by any arguments. I am glad to share the views which the hon. leadof the opposition has just expressed when he congratulated the hon. the Minister of Finance on doing something. I happened in September last year to have read an article published in the 'Weekly Sun,' which claims to be one of the organs of the farmers of Ontario. In this article comparisons were made between the prices of wire in this country and the United States. I addressed myself to one of the largest manufacturers of iron and wire in this country, and I shall take the liberty of reading the statement which he then sent me. I think it will convince even my venerable and hon. friend from Victoria, because the figures are there and the statement is as clear as the sun on a bright day :

The determination of the Canadians' price of wire is to Canadians a mystery. If a Canadian should want information with regard to the constitution of the wire market, he must address himself to the American Steel and Wire Trust, who, by reason of the discrepancy in the Canadian tariff which allows barb wire and Nos. 9, 12, 13 galvanized wire to come into this country free, has complete control of the Canadian market.

The American trust has complete control because we have no tariff on those articles.

Last year Canada imported 31,324 tons of wire. Of this 27,908 tons came from the United States, of the remainder about 3,500 tons was made in Canada by the Canadian firm under privilege of the American Steel and Wire Trust. Every year the emissaries of the trust come to Canada and determine the prices which will rule the season in the Canadian market, and even at which wholesale dealers will sell. All wire sold in Canada is sold f.o.b. at Cleveland whether it comes from a Canadian factory or wholesale house.

This is a fine state of affairs. No doubt the free traders in this House are pleased with it. The American trust not only controls the prices of wire, but insists that Canadian wire is sold as Cleveland. Is not that a fine policy ?

Under the free trade tariff the Canadian wire trade is under the complete control and manipulation of the American trust, and the money of the Canadian farmer goes to swell the dividends of the American millionaires. Before the duty was removed, Canadian trade was being supplied by thirteen Canadian factories. The Canadian wire manufacturers have engaged themselves if given due protection to sell their products not above the ruling United States price plus the freight.

This would give the Canadian farmer his wire at as low if not a lower rate than he is getting it now. It would be made by Canadian workmen and it would develop a Canadian market for wire rods which our steel companies should soon be able to manufacture, filling up the gap that now prevents the Canadian farmer from getting his wire from Canadian ore.

After having read this statement, let me compare the prices here and in the United States of some articles which are protected to a reasonable degree by our tariff. Bar iron is protected by our tariff of 1897 to the extent of $7 per ton. The current prices in the United States are given at $2.25. A Canadian paper gives it at $1.95 to $2 in Montreal and in Toronto. These were the quotations in September 1st. On iron pipe we have a duty of 35 per cent to pay, is it possible that free traders will stand by a government which imposes a duty of 35 per cent ? Is it logical on their part ? They are free traders, yet they support a government—and I was part of it when this good bit of business was done—which imposes a duty on certain articles a duty of 35 per cent. Our free trade friends are mighty glad when there is no duty and when the Americans slaughter our Canadian market they cheer, but when there is a duty of 35 per cent they cheer again. How do the prices compare in the case of iron pipe, on which there is a duty of 35 per cent ?

	Canadian price. Per 100 feet.	American price. Per 100 feet.
½-inch..	$ 2 85	$ 3 57
¾-inch..	3 65	4 02
1 inch..	5 20	5 77
1¼-inch	7 35	7 87
1½-inch	8 95	9 45
2 inch..	12 55	12 60

In all that list of prices, the Canadian manufacturer is the lowest, and that is due to the protective duty of 35 per cent. The result has been, as the leader of the opposition has just pointed out, that competition has been keen between Canadian producers, and so we have the reduction of prices to the Canadian consumer. Now, let us look at another article. Take the item horse-shoes, on which we have a duty of 30 per cent. As a consequence, all the horse-shoes used in this country are made within our own territory. They are sold from the factory at $3.35 per hundred pounds, while, if we had free trade or a lower tariff, the American firms would first slaughter our Canadian market and then we should have to pay the American price, which, at the date when this memorandum was placed in my hands, was $3.85. The same is true of horse nails. The cheapest No. 7 in Canada cost $6.90, against $8 to $9 in the United States ; or $11.98 for the best No. 7, against $14 in the United States. What is true of these articles is true of everything else. In other words, if we had a tariff which would protect the industries that could be worked out successfully here, we should have competition and lower prices. Now, the Minister of Finance has told us that last year we paid over $1,000,000 to the manufacturers of iron. If, instead of that system of bounties, we had adopted a protectionist tariff, let us say of 35 per cent, we should not have been obliged to pay that amount of money. And, instead of importing over $30,000,000 worth of iron manufactures, we should have imported not more than half that quantity. We should have circulated from $15,000,000 to $20,000,000 in this country to the benefit of our farmers, our working men, our merchants, our railways—everybody. In the face of the facts that I have given, in face of the prices I have quoted—and which are not the only ones I could quote—how is it possible to explain the refusal of the government of this country to come to a reasonable and Canadian policy ? Yes, a Canadian policy ; for a policy that allows American manufacturers to cross the line and dictate to our manufacturers, and even our merchants, the prices at which they shall sell, is not a Canadian policy,—it is a Yankee policy and nothing else. If there is another name for it, I am quite ready to accept it ; but I cannot find any other name for a policy—I say it again—which allows American manufacturers and American combines to tell our people : You shall not sell for less prices than those we fix for you. I say it is a policy I cannot understand, a policy I cannot explain—and a policy I cannot support, of course. The Minister of Finance is coming to the rescue of an industry which deserves every consideration at our hands. The nations that possess iron ores are happy nations indeed. We have the advantage of possessing ores and everything else that would lead to a large production of this important staple ; and we have only to adopt the right policy to see this great industry developed as it should have developed long ago. I repeat what I said the other day,—that, being unable to secure the duties, we are obliged to accept the bounties. At the same time, we know that these bounties will not serve the purpose as the duties would have done. From some of the people interested in the iron industries I have learned that, since the Minister of Finance has submitted the bounty policy, that they are in the same position that I am in to-day ; being unable to obtain what they know to be right, they have to accept what is given to them. But, of course, they will not invest a great deal of money. They know that the bounty system cannot be a permanent policy. They know that my hon. friends on the treasury benches give relief to industries only when they cannot help themselves. Consequently those industries that are helped to-day by the system of bounties will simply live from hand to mouth ; they will not develop ; they will not do what they would do if they were certain of the home market. Not being able to do better, I content myself with offering my protest against the policy which is being adopted now, because it is not the policy that ought to be adopted.

The MINISTER OF FINANCE. My hon. friend's (Hon. Mr. Tarte's) figures respecting prices are very interesting, and assuming—as I have no doubt I have the right to assume—they are accurate, very valuable. I understand my hon. friend to quote a number of leading articles in which the prices, notwithstanding the changes made in the tariff, are higher in the United States than here.

Hon. Mr. TARTE. Articles protected by 35 per cent.

The MINISTER OF FINANCE. Yes, articles on which we levy a duty of 35 per cent, and which we are getting cheaper than the consumer in the United States can buy them. And my hon. friend has told us repeatedly that the American tariff is higher than ours. What, then, becomes of the argument that if you have a sufficiently high tariff, you will have a measure of home competition which will bring down the price of the goods ? My hon. friend has simply proved that high tariff means high prices. Prices of the goods he has referred to are higher in the United States than in Canada, and the reason is not that there is a lack of industrial development, or a lack of competition in the United States, but simply and solely

that their tariff is higher than ours. Their tariff is high and their prices are high. Our tariff is somewhat lower and our prices are somewhat lower accordingly.

Now, just a word, if the hon. leader of the opposition (Mr. Borden, Halifax) will permit me, in relation to the four-year-old letter he has read in relation to the part played by Sir Charles Tupper in connection with the iron and steel industry. Sir Charles Tupper is out of politics now, and nothing was further from my thought than that I should endeavour to discredit any part he has had in public affairs. As he has retired I would rather—as would all Canadians—seek the good things he has done than seek opportunity to find fault with him. Let us attack those who are in the battle, not those who have passed out of it. I regret that the hon. gentleman has conveyed the impression that I have, in some way, tried to discredit the part played by Sir Charles Tupper in the matter of the iron industry. There is no foundation for that idea. I have sent for 'Hansard' but have not yet received it that I may refer to the passage. But with the help of the quotation the hon. gentleman has given, I can recollect the facts. Sir Charles Tupper, in a discussion which took place, I think in 1890, was not content to claim whatever credit he might fairly claim in connection with the policy of developing the iron and steel industry, but he went further and was ungenerous enough to state that I had been opposed to granting these bounties, that Mr. Whitney had come to me at Ottawa, and that I had sent him away telling him that I would do nothing. I asked Sir Charles for his authority at that time, and he stated that Mr. Henry M. Whitney was his authority. I said nothing on the subject, but I wrote to Mr. Whitney calling his attention to Sir Charles' statement. Mr. Whitney wrote a letter in reply in which he said that Sir Charles Tupper was mistaken, and he used the words which my hon. friend has used, the words in the letter to Mr. Graham Fraser, that in all negotiations in the matter with me he received every courtesy and consideration, and found every manifestation of a desire to assist him. These were the facts connected with the discussion which took place in the year 1900. However, I only allude to it now to show that neither then nor now was it my desire to make any reflection upon the part played by Sir Charles Tupper. He has passed off the stage of active political life, and I am the last man who would say anything which would deny him any fair share of credit which he may deserve in relation to this or any other matter in the history of Canada, during the long period that he was connected with public affairs.

Mr. BORDEN (Halifax). I read the letter because it indicated that the view which had been expressed in the letter of Mr. Whitney read in this House by my hon. friend, was a view which did not commend itself, in some respects at least, to the recollection of Mr. Fraser, who was as intimately connected with these negotiations as was Mr. Whitney. The letter itself shows that on the first occasion when application was made to the government during 1898, I think, the efforts of Mr. Ross and some other gentleman to prevail upon the government to adopt the system of bounties, were absolutely unsuccessful.

The MINISTER OF FINANCE. I do not think the letter showed that, and it could not show it for such was not the fact.

Hon. Mr. ROSS (Victoria, N.S.) When the hon. member for the division of St. Mary's (Hon. Mr. Tarte) was speaking, he mentioned that he was going to support the views of the leader of the opposition, and I, in my innocence, just remarked in a kindly spirit, 'of course you do.' Well, the hon. member turned on me rather unkindly for that expression. I may say to the House and to him that it would be well for him if his political life had been as consistent as mine, if it had, he would not be in the position he is in to-day. Now let us review his position. When he was a member of the government there was nothing that could be said about him by the opposition which was not said. They did not say that he had committed murder, or seduction, or anything of that kind; but there was scarcely a sin you could think of that he was not charged with by the opposition. He turned against his own government, and then the opposition with open arms were willing to receive him. Well, they are welcome to him, so far as the Liberal party is concerned. His position, Mr. Chairman, puts me in mind of a certain species of snake. When they find that the animal is rather too large for them to swallow, they slime him all over and then they can swallow him. That is what the opposition have done with the hon. member for St. Mary's, and they are now welcome to have him to assist them in every way they wish. But coming to the question under consideration, I am not so sure but it would have been well if the iron industry in this country had been allowed to go into liquidation, and that other people had built on its ruins. But we are told by very good political economists that these are infant industries, and since they are, I am willing to sacrifice some of my own principles to support them—not so much on behalf of the men who have invested their capital in them, as on behalf of other industries that are at stake all over the Dominion of Canada, in Prince Edward Island, in Nova Scotia, in New Brunswick, in Montreal, in Quebec, in Toronto, and I may say in every other place in Canada. But there is one thing about this industry that I must mention. I am speaking now of other interests in Cape Breton. They are without a manager, and I fear they will never succeed

until they have a proper manager. We had some experience with the sugar refinery that was started in Halifax. A large amount of capital was paid into that enterprise, and they got a manager from Brooklyn, and he landed them $70,000 in debt the first year of his engagement. Now, I have a rather kind regard for Scotchmen generally, and I think if these iron and steel people had sense enough to correct their errors the same as was done in Halifax, by sending to Scotland and getting a manager, they would probably have succeeded. There was any amount of extravagance committed in connection with this enterprise in the Island of Cape Breton. Columns and columns, and pages and pages, were written about the profits that were going to be made; you would think that half the iron industries of the United States were to be closed up by this one industry alone, and they induced, or seduced, innocent people to take stock in the company, who are to-day to a large extent ruined. It puts me in mind of a story of the Duke of Breadalbane. I do not know that a good story has been told in this House for a long time. The Duke of Breadalbane, like all noblemen of Scotland at that time, had a highland piper. One day the clergyman, in going around, regretted to find that the piper did not have much knowledge of Scripture, and he asked him if there was any part of Scripture that impressed him. Yes, says the piper, that golden image on the plain of Dura. When the order was given that at the sound of the harp, the sackbut, the cornet, the flute, the psaltery, the dulcimer and all sorts of musical instruments, they should all fall down and worship the image, if they had had a highland piper there none of that nonsense would have happened, because, instead of being down on their knees, they would all have been dancing. So in this instance, if the people down in Cape Breton had a prudent Scotchman to manage their affairs they would be successful to-day, as was the case with the sugar refineries in Halifax under the management of a Scotchman; they succeeded and are succeeding to this day. One of the greatest difficulties that I see in connection with assisting these iron and steel industries is that they are without a proper manager to look after their affairs. Now let me read from the St. John 'Telegraph' of an interview with Mr. Buell.

Mr. Buell said the facts were that three months ago he made a proposition to James Ross, president of the company, who was then in Europe. The proposition, if accepted, would have brought the business to a better condition than it is to-day. He decided that he would not remain there subject to the conditions then existing, and he proposed that he administer the business, and he felt sure he could bring about better results. As an alternative, he said that if his proposition were not accepted, he would resign his position, to take effect in three months. It was not accepted, and so he did resign and gave up his position this week. Mr. Buell says the natural basis for a big successful business is still there as good as when Mr. Whitney started the works ; there is the location, the materials necessary in the manufacture, all good, but it is the human factor of management of the enterprise which did not bring success for, said he, the people of Canada don't have to be told that the business is not a success. Were his proposition entertained, he felt sure there would have been different results.

There was one observation that my hon. friend from St. Mary's made, that nations that could produce iron and ore were all happy. I think that Spain is the largest exporter of iron ore of any country that we know of and I do not know that the condition of Spain is much happier than that of any other country in Europe.

Mr. GOURLEY. I feel great sympathy for the clergyman mentioned by the hon. member for Victoria, N.S. (Hon. Mr. Ross). He regretted that the piper of the Earl of Bredalbane was not more familiar with the scriptures. I have a similar regret that the government of this country are not better acquainted with the Holy Scriptures. I feel that if the government were, and especially if the hon. Minister of Finance (Hon. Mr. Fielding) were, considering his conduct towards the iron industry of this country, instead of making the speech that he did this afternoon, he should have arisen and humbly followed the splendid example of the psalmist who declared, 'I acknowledge my transgressions and my sin is ever before me.' I feel assured, Mr. Chairman, that if the hon. Minister of Finance had done that, the Liberal-Conservative party would have been prepared to give him that generous forgiveness that Ezekiel promised to the whole world when he said, 'When the wicked man turneth away from his wickedness that he hath committed and doeth that which is lawful and right he shall save his soul alive.' If the hon. Minister of Finance wants to save his political soul alive, he must turn away from the sins he has committed and which he has committed especially in regard to the iron industry. I am deeply concerned in the iron industry of this country. I am more concerned in those industries which prosper and give character to Canada than in any political success that may arise out of the matter. I am deeply concerned that Canada shall be a great manufacturing country, and that this country shall acquire the wealth which springs especially from the iron industry. It is well known that the success and wealth of any country are based upon the manufacture of iron, for iron calls into its production the mining of coal and the mining of other minerals all of which industries give character to the country. In my own county we had an iron industry at Londonderry called the Steel Company of Canada. That industry flourished under great difficulties for twenty-five years and it gave to the county of Col-

chester great prosperity. Farmers within a radius of twenty or thirty miles found a splendid market in consequence of it, and farms that had been uncultivated, farmhouses, and barns that were mean and unsightly gave way to the beautiful homes and fine outbuildings that grace the countryside. Any person who drove through that country could not but see that some magic was at work, and that magic was the successful working of the iron industry there. The Conservative party, opposed as they were by these gentlemen opposite, were cowardly to have listened to their arguments at that time, they should have felt themselves to be more assured of the ground upon which they stood and they should not have hesitated before the carping criticism of these hon. gentlemen. They never gave the iron industry that powerful support which they should have given it. However, they came forward and by the aid of bounties and by encouragement in the shape of tariff legislation, they gave it the lease of life which it previously enjoyed. In reference to the price of goods in a protected country, I must say that I thought the doctrine that duties increased the price had been exploded long ago. I really felt sorry for Nova Scotia that the hon. Minister of Finance, with whom I have no quarrel and of whom I have always spoken kindly, should seek to lower the intelligence of the distinguished province of Nova Scotia by the adoption of that argument which I thought had been given up by intelligent men twenty or thirty years ago. If the hon. gentleman had been addressing some audience in Timbuctoo or some audience in Algiers, or in some undiscovered territory in Africa, if there is any undiscovered territory in Africa, I could understand him repeating the argument that a high tariff makes dear goods. The hon. gentleman should be familiar with the history of Canada when cotton and sugar were protected in this country. Hon. gentlemen opposite wasted days and weeks of the valuable time of this parliament in asserting that cotton and sugar would be dear just in proportion to the duties imposed upon these articles. Yet, in four or five years you could buy cotton and sugar cheaper than it had ever been known to be in the history of Canada. What happened in the United States ? They protected steel rails by imposing a duty of $22 a ton. There is one thing about the people of the United States which we cannot help but admire, while not admiring many things characteristic of their system of government, diplomacy, or public life, and it is the splendid courage that they display when they attempt to deal with a question such as this. They make up their minds, and after having made up their minds, they fear the opposition, neither of their own citizens nor of any nation abroad. They wanted to manufacture steel rails. They were building railways all over the United States, until a few years ago they were sending millions and hundreds of millions of dollars to the old country and draining their own country. They imposed a small duty for a little while, but they found it did not avail. At last they put on a duty of $22 a ton on steel rails while steel rails were selling at $27 or $28 a ton in England. They put on by way of duty almost the entire value of the rails and in five or six years rails were selling in the United States at $18 per ton, or $4 less than the duty imposed. How could the duty be added to the price in this case ? This question was threshed out all through the United States by the most competent and logical minds in the United States, men like Henry Clay and Daniel Webster, men possessing the most astute and cultivated minds, men with syllogistic minds, whose reason could not be satisfied with a non-sequiter. These men, having threshed it out from the beginning to end settled the question for ever that there was no connection between duties and prices, but the question was regulated by competition. I thought the hon. Minister of Finance would not have introduced into the House of Commons an ad captandum argument which would only be fit for a public meeting and a public meeting of very ill-informed men at that. I always listen to the hon. member from Montreal, St. Mary's (Hon. Mr. Tarte) with great pleasure, because he has convictions. What we want in Canada are men of convictions, men, who having convictions, will stand by them at whatever hazard and not only stand by them, but seek to impress them upon their fellow-Canadians, feeling that if their convictions are honest and right, they should dominate the whole public opinion of the country and determine the policy of the whole of Canada. I have come to the conclusion, after watching the hon. gentleman's course in this House, that he is sincere and thorough Canadian, although I told the House a few days ago that I had a different opinon a year and a half or two years ago when the hon. gentleman made those unpatriotic speeches in the great city of Paris. I want to tell the hon. member from Victoria (Hon. Mr. Ross) that it is not wrong for a man to change his mind. Only very little and very narrow men pretend that they never change their minds. If I am wrong in the morning I will change my mind fifty times to get right by noon, and if I am wrong at noon, I will change my mind fifty times to be right at night. I would change my mind every hour of the day to be right, until I could lie down at night feeling in my heart that I was at last right. Instead of it being a criticism against a public man that he has changed his mind if his motives are right, it should be a credit to him. Hon. gentlemen opposite boast that they will not change their minds, although they have changed their policy.

The trouble with you gentlemen is that you are in a continuous state of mental hypocrisy. When you gentlemen were in opposition, you permitted your leaders to force you into a false position. You should have stood up like men and said to your leaders: In this new country these old fogey notions of the Minister of Trade and Commerce (Rt. Hon. Sir Richard Cartwright) can have no place, and you must adopt a policy consonant with the building up of Canada. If the younger men and the stronger men of the Liberal party had not permitted Mr. Blake and Mr. Cartwright and Mr. Fielding and men of that kind to dictate a policy that they must have known was unsuitable to the conditions of Canada, you gentlemen opposite would not be in the pitiable position to-day of constantly trimming your sails to meet every adventitious wind, but instead you would present yourselves to the country as a strong government with a strong policy. I am opposed utterly to this bonusing, except as a temporary measure. I suppose that when you have your head in the bear's mouth you have to take any kind of treatment the bear gives you, but if I had my head out of the bear's mouth in connection with the iron industry I would say that this bounty system is a most unscientific and ungracious way of treating the iron industry of this country. We have before us the splendid example of the United States in dealing with the iron industry. In 30 years the United States have sprung into competition with the greatest manufacturing countries in the world, until to-day they are challenging the mother of manufacturing in the products of steel. Yet, in face of this splendid example, this government is foreswearing the whole experience of this continent, and running amuck against the experience of every able and accomplished man, in attempting to assert this bounty doctrine of theirs. Gentlemen, when your Finance Minister proposed this bounty in your caucus, there should have been some of you strong enough to have said: We are wearing false colours, we are driven to the wall by the arguments of the iron manufaucturers of this country, let us be honest and say that the course we have pursued for 20 years in denouncing protection, is a wrong course, and instead of adopting this makeshift policy of bounties, which is only an attempt to square ourselves with the policy of protection, let us give that industry the ample protection it needs. Gentlemen on the other side know very well that a policy of protection would really benefit the steel industry, and would not take the taxes out of the people as this bounty system does. By imposing this bounty system you are not giving the iron industry of Canada one-tithe the assistance that a scientific policy of protection would lend it. You have in the United States a tariff on iron and steel scientifically arranged; it was made by experts from France and Germany, and other countries who assembled at Washington and framed it on scientific principles. With that American tariff scaled down and adapted to the wants and needs of Canada, you would place Canada in a very short time in a proud position, and enable her to cope not only with the United States, but with England and Germany as well. Look at what a mean and miserable policy this government has pursued. When they made up their minds to encourage the iron industry in this country, why did they not grapple with it in a straight forward and honest way, and not in the niggardly fashion which has given a staggering blow to the investment of foreign capital in Canada? Enormous quantities of capital have been lost in Nova Scotia and in Canada by this makeshift policy. If we had been bold and strong a few years ago, to-day we would have had an iron industry in Canada that would have given character and wealth and power to this country, and would have made us known the world over. In 1894 we commenced by giving a bonus of $2 upon puddled iron and steel ingots made in Canada. That went on till 1897, when the bounty was increased to $3, and then in 1899 this sliding scale was introduced. Just as our iron industry was getting on its feet and gaining strength, the Minister of Finance, as if he were angry that the iron industry was progressing, introduced a sliding scale by which 10 cents were cut off the bounty the first year, 15 cents the next year, 25 cents the next year, and in five years the bounty was to disappear altogether. Whether the Minister of Finance understood it or not, it was the most malicious attack upon the iron industry of Canada that could be conceived by mortal man. I am in a position to say that so soon as this policy was introduced the Canada Steel Company, of Nova Scotia, gave up the struggle. They struggled on for 20 years, hoping that the government and the people of this country would grow up to a strong scientific policy for the protection of the iron industry, but so soon as this policy was proposed, the Canada Steel Company went into liquidation, and that great industry which had spent some $2,000,000 or $3,000,000 of English money in Colchester county became inoperative, and last fall the Drummonds of Montreal came down and bought for $300,000 that property which had cost the Englishmen some $2,000,000 or $3,000,000. How can we hope to encourage capital to come to this country when all that the shareholders get out of an investment of $2,000,000 or $3,000,000 is scarcely enough to pay the costs of winding up the concern? Is it any wonder that they leave Canada damning the country, and protesting that they will not invest another dollar in it or permit any friend to invest a dollar in a country that pursues such a vacillating policy. That was the condition of affairs

when the Drummonds came down to Nova Scotia and bought that property, and now they are endeavouring to work it up. I know that these gentlemen were here since they have acquired the property, endeavouring to induce the government to enter upon a policy of protection. I have no warrant to speak for them, but I know that they do not want bounties, because I feel that the bounties are little good to the iron company of Londonderry. It may be some good to the Sydney people, although judging from the quotation of their stock and their financial difficulties, it is not much good to them either. It was thought that the announcement of these iron bounties would strengthen the financial position of the Dominion Iron and Steel Company, but instead of that it seemed to injure the company, and now the coal company has been divorced from the steel company, I fancy preparatory to some further ill-luck happening to the steel company. Now, Sir, I do not wish anything to happen to that steel company, because it would be of untold misfortune to the iron industry of Canada. It would publish to the world that there is something unsuitable in the conditions of Canada for the manufacture of iron and steel, and besides it would give to that imfamous cad, Carnegie, an opportunity of boasting that he had sized up the iron conditions in Canada better than any other. I call him a cad advisedly, because I do not fancy the fellow can either read or write or has the slightest training, for if he had, he would not be guilty of the low and offensive remarks he made with reference to Canada.

When these bounties were announced some days ago, I thought they were adopted to improve the condition of the iron industry of Sydney. I understood that they would not assist the iron industry of Londonderry to any considerable extent which is not engaged in the manufacture of the particular class of iron protected by theses bounties. But these indstries do not want bounties. Why do we indulge in that unscientific way of helping industries ? I find that last year we imported from the United States $25,000,000 worth of the manufactured products of iron. What the iron industries of Londonderry and Sydney want is to be making and selling those products in Canada and getting that $25,000,000 which we now send to the United States. After depriving the manufacturers of this country of the home market, with which no other market is comparable, these hon. gentlemen tell them to go and compete with the foreign manufacturer in the markets of the United States or England or Germany. That is a poor compensation for the loss of their market at home. It must be an aggravating thing for a man who manufactures in this country to go to Montreal or Toronto to sell his goods, and find there some Yankee stealing away the markets of his country, which he has helped to make. It is one of the basest betrayals a government was ever guilty of to force the manufacturers of this country to see their own markets stolen from them, and then to tell them to go and see what chance they have in foreign markets. Well, we have to take this dribble, and I take it without thanks ; I take it as not worthy of thanks. But I suppose that until a great wholesome sentiment is created in this country, strong enough to sweep away these gentlemen, we will not do better. But if I judge the signs aright, I warn these gentlemen that the deluge is at hand, and that the whole manufacturing interests of Canada are not going to be imperilled to give these fourteen or fifteen gentlemen high offices. I would rather let them get out, and give my share to maintain them all their lives with splendid pensions and put in a government that will advance the interests of Canada. I fancied that the day was gone when a minister could call on his supporters to sustain him, no matter what his principles were, and no matter how much he was injuring the great interests of the country. The Finance Minister should have said : 'I have been wrong in my political teaching ; in my early days I was a pupil of Alfred Jones, of Halifax, one of the narrowest men who has ever lived in the Dominion, or in any other part of the world ; my young mind was moulded by this man before it was able to stand alone, and I should not be judged for my errors, because they are an inheritance.' If the hon. gentleman would say that, I would say to him : 'If you intend in future to do right, accept absolution, not only from myself, but from the Liberal-Conservative party, which has always been generous in forgiving its bitterest foes.' I saw in a Montreal paper the other day the statement by some gentleman that he had the assurance from the government of Canada—he did not say from whom—that in the near future a tariff would be submitted that would amply and sufficiently protect the iron industries of this country. I do not know whether that statement was made with authority or not ; but I saw it, and was glad to see it, because I thought in some way it was inspired. But if the Minister of Finance will get up and say : 'We have sinned, but we intend to do better—because it is human to err, and it is God-like to reform and get on a higher platform—and we will give you the bounties to-day as a temporary measure, but before next session we will seek the assistance of experts and will give ample protection to the great iron industry of Canada, which will give this country character and wealth in the coming years.

Hon. Mr. TARTE. The hon. Minister of Finance has answered the statement I made in a very peculiar way. I quoted the prices of articles which are protected in this country to the extent of 30 or 35 per cent. I have

shown by those prices that the theory which we hear so often that when there is a high tariff prices are high, is false. My hon. friend answers me by calling my attention to the fact that in the United States these articles, which are protected there to about the same extent, sell at a little higher price. My hon. friend knows the condition of things in the United States ; he knows that wages are higher, the prices of farm products are higher, so much so that during the last five years they have increased in value 49 per cent, and everything else is higher. But that does not prove the contrary of my statement. When an article is sufficiently protected, there is enough competition to ensure reasonable prices. I expected somewhat the answer my hon. friend has given me, and I was prepared for it ; I know his trend of thought. My hon. friend would perhaps like to know what happens when there is no duty at all. I have proved that when we have sufficiently protected our manufacturers they are able to sell cheaper than their American competitors. Now, let me quote the prices during the past year of No. 9, No. 12 and No. 13 wire, which are free of duty. They are not manufactured here ; we do not manufacture a pound of them. What was the result ? It was very clear, because all the wire consumed in Canada is manufactured and sold by the Americans. They have two prices, one for their own citizens and another for Canadians. The price of No. 9 was $2.60 in the United States and $2.85 in Canada ; No. 12 was $2.75 in the United States and $3 in Canada ; and No. 13 was $2.85 in the United States and $3.10 in Canada. In other words, when they have slaughtered one of our industries, they charge our people more than they do their own citizens. And we are pleased with that state of affairs ; and because I happen to share the views of those who do not believe in a policy which has that result, venerable men like my hon. friend from Victoria (Hon. Mr. Ross) lecture me. He invites me to remember that some of my hon. friends on the other side of the House were some time ago saying a lot of hard things about me. A lot of things have been said about me during the last thirty years that I have been a newspaper man. I was not killed by those weapons, I am still alive, and I do not care much what is said about me, when I am sure I do not deserve any censure. My hon. friend from Colchester (Mr. Gourley) has alluded once more to what he calls my Paris speeches. He read them in the English language. I am sorry he is not a French scholar.

Mr. GOURLEY. I will read them in French.

Hon. Mr. TARTE. I invite him to read them in French and not in distorted reports in English, and I say without hesitation that they might have been made by any English citizen sitting in parliament. This little incident being closed, let me say only one word more. When there is a sufficient Canadian tariff, we are able to compete with our American friends and neighbours. We are able to sell to our own customers as cheap as, if not cheaper than they sell to their citizens. The reasons are obvious. They have a condition of affairs which does not exist here. There, wages are higher and the cost of living higher. We have everything here necessary to build up large industries, to develop our cities, to furnish home markets to our farmers, and we are doing none of these things. When my hon. friend the Minister of Finance was asking me to believe that a high tariff increases prices, I was very nearly getting up and begging the hon. Minister of Customs to come to my rescue without any delay, because he has allowed—and I am equally responsible with him—an increase in the duties on several things. Let us take cement, he has increased the duty on cement. What has been the result ? Several new factories have sprung up and we are manufacturing first-class cement. We are manufacturing it more and more. What is true of cement is true of everything else.

The MINISTER OF FINANCE. My hon. friend gave us some interesting figures a few moments ago, which seemed to bring out very clearly some important facts showing the effect of a high tariff. He has now added to that information something equally important. He has quoted facts in connection with the wire industry, and has shown that the manufacturers of wire in the United States are charging excessively high prices for that article. He has thus proved that in an industry probably protected to the extent of fifty per cent or sixty per cent or seventy per cent, in the United States, the manufacturers are able, through the operation of a high tariff, to create monopolies, trusts and combines, which enable them to dictate prices to their customers.

Hon. Mr. TARTE. My hon. friend knows political history better than that. He cannot ignore that there are more monopolies in free trade England than in the United States. When a free trader is put to the wall by a sound argument, he is able to do anything.

Mr. ROCHE (Halifax). What is desired is to give immediate relief to the iron industry, and the question for us to consider is whether this bounty is more likely to be of immediate benefit to that industry than would be an increased duty. The point to decide is whether an equal amount of bounty in money will assist the manufacturers as well as an equal amount derived from a protective duty. Let us suppose that the manufacturer makes his iron or steel as cheaply as he can, he will have in addition a bounty which will enable him to compete with any other producer. On the other hand, if I

understood my hon. friend, the leader of the opposition, he said that a duty would create greater competition and consequently reduce prices. But our object is to give the manufacturers a higher price or more money; and if you reduce the price at which he sells his article, he is losing money. What then must he do ? He cannot reduce the prices of the raw material or the machinery, and he will have to fall back on his unfortunate labourers and reduce the wages paid them. That is one of the effects of the custom system. The bounty gives immediate relief to the manufacturer, and behind that is the question which will benefit the customer the most. But as the question before us now is the giving of immediate aid to the manufacturers, that aid will be most readily given through the bounty system.

Mr. MONK. As there are iron industries of importance right in my county, I am not disposed to warmly congratulate the government on the assistance given this particular industry, although I am glad for the parties concerned that their important industry has been saved from distress. I do not think however that the system adopted by the present government will have any effect in the way of protecting, as should be done, the great iron industry, which is the basic industry of this country. If we wish to preserve that very important industry in our midst, we will have to follow the example of the countries which have created it among themselves. We will have to follow the example of Germany, Belgium and the United States, whose tariff has been prepared with the greatest care—with such care in fact that it enables that country to dominate us completely in the production of iron. My hon. friend from St. Mary's division (Hon. Mr. Tarte) has referred to the wire industry. We in the county of Jacques Cartier, before the elections of 1896, had an excellent manufactory which produced numbers nine, twelve and thirteen wire. These three were drawn and were excellent wire, and moreover, that important manufactory produced nearly the whole barb wire required in this country. What happened ? My hon. friends, in conformity with what they preached on every hustings before 1896, when they declared that we were paying exorbitant prices for barb wire and that the duties should be abolished, carried out their policy in the tariff of 1897.

The consequence was that we became dependent on American producers for products of iron and steel. The barbed wire factory at Lachine had to give up the manufacture of barbed wire, and for No. 9, No. 12 and No. 13 wire, we became dependent upon the Americans. As a result, we have dearer barbed wire since, and wire of inferior quality, as everybody knows and we are entirely under the control of the American industrials for that wire. It is humiliating to hear it mentioned in this House that 26,000 tons of wire were imported into this country last year. It is humiliating to think that over $30,000,000 of iron products were brought into this country last year. As a matter of fact it is well known the Americans import from here steel and iron ingots upon which they pay $6 a ton duty, and, after they have manufactured them into all sorts of articles, they sell them back to us. The manufacture of these ingots is carried on in bond, and the manufacturers get a rebate of $5.99 per ton when the material is sent back to this country in a manufactured state. That is the condition of affairs in my own county ; and, without having had occasion to consult these very important manufacturers who have invested millions in this industry, that they have developed in the county of Jacques Cartier, I question very much whether in the case of the great factory that used to manufacture wire and barbed wire and has been obliged to confine its operation to the manufacture of steel nails, depending entirely upon the American manufacturers for wire, this resolution will benefit them in any way. The fact is that it is generally claimed by those well acquainted with this industry that what we require is a remodelling of our duties in such a way as to protect every line of production, because new lines have arisen in the past ten years. If we wish to make that industry our own and not be dependent on the Americans—who would never for a single instant be dependent upon us for such a production—we must remodel the duties from end to end. Only then shall we become, in respect to this industry, a really independent people. My hon. friend the Minister of Finance has spoken of the higher prices in the United States. It is well known that the reason of that is the existence in the United States of these immense trusts, combinations that, not content to control the prices in the United States, tyrannize over us in Canada in regard to these prices. We are the slaves, in respect to certain articles, of these gigantic trusts of the United States. As an example—and many others might be given—it is sufficient to point out what condition our tobacco growers and our tobacco merchants are reduced to at the present time through the dominating influence of the American trust. In the province of Quebec that trust is doing incalculable harm to the manufacturers, who cannot resist its influence, and even to the tobacco growers. Anybody who wishes to convince himself of the truth of what I have said has only to read the report of Judge MacTavish, who was charged by the government with the duty of investigating this subject. It has become necessary for the government, in order to protect the tobacco growers of our province and of the province of Ontario, actual-

ly to introduce an amendment to the Criminal law, to free us to a certain extent, from the domination of these American invaders of our country. What has been never explained to me, and what I can never understand, is why, in the matter of bounty—to my mind, though a convinced protectionist, a most disastrous system of protection—a difference is made between the producers of iron and those engaged in other lines of industry. Why is it, for instance that the cotton manufacturers, who are afflicted with the British preference, are not aided at the present juncture in the same way as the iron producers are aided? Why is it that the woollen manufacturers, who have suffered great injury by the present state of the tariff, and particularly by the British preference, they who have been, in many instances known to hon. members in this House, forced to close their manufactories, are not assisted? Why is it, for instance, I would ask the Minister of Finance, that the producers of paper in this country are not assisted in this way? If it is impossible to come to their relief by changes in the paper duty, by which we could not only give to these producers the markets of this country, but give them great influence in the markets of the world, why is it that they are not assisted by bounties, since we are obliged to resort to the pis-aller in the way of assistance to certain producers? Throughout the province of Quebec—I do not speak of Ontario, though I believe that there analogous conditions exist—we have untold wealth of pulp wood. But through the treacherous policy of our provincial government our pulp wood lands are depleted, and our pulp wood is sent to the United States to be manufactured into paper and sold back to us, the whole profit going to American workmen and to American capitalists. Yet my hon. friend the Minister of Finance, if I mistake not, less than a year ago reduced the duty on certain classes of paper, thereby giving still greater advantage to the American industrials. We are the laughing stock of the great American industrials in this respect. Has my hon. friend the Minister of Finance read the very able exposition of his case by Mr. McGibbon, manager, I believe, of the great pulp mills of Shawinigan? The conclusion at which he arrives, and which is absolutely irrefutable, is that if we had a proper policy with regard to that line of industry, before ten years the Americans would construct over $100,000,000 worth of factories throughout Canada, and would be paying more than $4,000,000 a year in wages to our Canadian workmen, instead of the whole profit of that industry being taken by American capitalists and American workmen. And so convinced are our American neighbours that eventually we will realize our position and carry out a more patriotic policy in this respect that, as Mr. McGibbon points out, they are purchasing our best water-powers. They are preparing for the time, which they feel will come before long, when, if they want to manufacture, deprived as they are of pulp wood in their own country, they can come into Canada and establish the factories which Mr. McGibbon tells us they would already establish if a wise policy were carried out by our government.

Mr. KEMP. The hon. Minister of Finance referred to the trusts of the United States, and the hon. member for Jacques Cartier (Mr. Monk) has also spoken of these great combinations. The bounty system of the European continental nations, such as Germany, Belgium, and France applied to the item of sugar has wiped out the sugar refineries of Great Britain. The manufacturers of this country, a great proportion of them at least, are just as thoroughly under the influence of the great American trusts—and will be more so as time goes on—as the British sugar refiners were under the influence of the bounty fed sugar of continental Europe. My hon. friend from Jacques Cartier referred to a certain industry in his constituency which got its raw material in the shape of wire for the manufacture of wire nails from the American trust. I should not be surprised, nor, I suppose, would the proprietor of that institution—though I am not more familiar with the circumstances of the case than I have learned from my hon. friend—if that proprietor were to find on his desk some morning a letter from the trust in the United States, who are supplying him with wire, to say that the trust had made up their mind to advance the price of wire, or, even, in the future, themselves to supply the Canadian trade with wire nails.

I have myself seen letters of that kind from these American trusts, and I wish to say in this House that there is no body of men, not including the government of the United States, that are so tyrannical in their methods of operation and so selfish as the United States trusts. It will be necessary for the government of this country, whether Liberal or Conservative, so to arrange our tariff that they will be able to defeat the objects of these wealthy and enormous United States trusts. I fancy that a good deal of pressure must have been brought to bear on the Finance Minister in regard to these iron and steel bounties. I cannot understand what different pressure could have been brought to bear upon him than that which was brought to bear upon him from other industries in this country, some of which have been mentioned. From the remarks of the hon. gentleman the junior member for Halifax (Mr. Roche) I should take it for granted that so far as he was concerned he expected that the government in future would deal with the tariff on the bounty basis. If that is the case, I do not see how they are going to carry out any

such policy. I believe, as others have said, that it is a piecemeal policy; more than that, it is uncertain and indefinite. We want an adequate protective tariff in this country, a stable tariff, so that people will know what they have to calculate against so far as European and United States competition are concerned.

What I have to complain about more especially is the indefinite position of the government in regard to this bounty question. In 1897, the Minister of Finance, in introducing his budget, and in changing the tariff to some extent, gave his views in regard to fiscal questions, and he laid down certain principles upon which we expected that he intended to be guided in the future. It seems to me, as it must appear to every member of this House, that he does not entertain the same views in the year 1903 that he did in 1897, and I hope for the good of the country that he will continue to entertain different views from those of 1897. He was very severe upon the manufacturers of this country. Who are the manufacturers of this country? Where does the money come from that the manufacturing industries are carried on with? I have heard it stated on good authority, on the authority of a supporter of the hon. gentleman opposite, who is a manufacturer and well posted, that three-quarters of the capital invested in manufacturing industries in this country is borrowed capital. The manufacturer is there to defend his calling, to pay 100 cents on the dollar, and to pay his banker, or whoever he borrows the money from, a proper rate of interest. Now, upon this bounty question the Minister of Finance appears to have had, the session before last, entirely different ideas from those he has to-day. In 1901 he did not appear to be under the impression that this government would in future adopt an extension of the bounty system. Let us call the attention of the committee to a debate which took place in 1901, introduced by the hon. member for New Westminster (Mr. Morrison). That hon. gentleman, in the course of his remarks, said this:

> What I wish to draw the attention of the government to is this, that the Dominion of Canada stands to pay out a very large amount of money in the way of bounties, and I would like to know whether it is too late for the government to take such steps as may, while not invading any vested rights, at the same time prevent further vested interests growing up under the Act.

The Finance Minister in the course of his answer, said:

> There is that comfort to us in the first place. There is the further comfort that even if this system should result in the payment of large sums of money, that payment will speedily come to an end, because at the very time we provided the scale of bounties, we stated that it was regarded by us as of vital importance that the bounties should be gradually reduced by the terms of the Act itself; so that after a term of five years, beginning on the 1st of July next, the bounties will cease to exist. If, therefore, for a short time we should be called upon to pay even a large sum for the development of these industries, we would have the comfort of knowing in the meantime that as a result of that experiment there must grow up a vast amount of business in the Dominion which would not probably have grown up except for that development; and that if the bounty should be large, it can only continue for five years, when it will be wiped off the statute-book.

Now, it appears to me, Mr. Chairman, that this government are not only uncertain in regard to the tariff, but they are uncertain in regard to the bounties, and in regard to the whole fiscal question. The government this session have dealt with specific items in the tariff, with binder twine, lead and steel, and in regard to all these they have dealt with them upon a bounty basis. I have watched with some interest the remarks of the Finance Minister when dealing with these questions; and I do not know whether other hon. gentlemen have noticed it or not, but I have noticed that he is very careful how he uses the word 'protection.' In fact he scarcely ever uses that word. I noticed that in referring to the steel rail question, or the protection on steel rails which the Governor in Council was empowered to make, he referred to that, not as protecting the steel rail industry, but he called it tariff encouragement. Just think of having to use two words to express one word. Protection is an old, well known word, but he would not use the word 'protection.' He uses the phrase tariff encouragement enjoyed by other industries. The hon. gentleman also, in apologizing for protection, used the words: 'Approach the subject with moderation;' 'approach the subject with caution;' 'the government desire to avoid extremes;' 'they wish stability in the tariff.' Now all this is intended no doubt to appeal to the electorate. But that does not meet the situation which exists to-day, and which is bound to exist in the future. Have we not arrived at the time when we must have an adequate protective policy in this country? The Minister of Finance, in introducing his budget this year, said that we must watch how our opponents played the game. It did seem to me that he was just then balancing himself, uncertain whether he ought to become a protectionist or remain as he was in the past, a sort of free-trade-protectionist—I do not know what not. Now I would like to draw his attention to this fact, that our opponents are practically playing the game to-day the same as they have played it for many years past. They are playing it to-day the same as they were playing it in 1897, and it is the false theories of hon. gentlemen opposite that have been knocked out. Our opponents are playing the same game in regard to the tariff that they have played for many years past. Now, Mr. Chairman, I would like to say that I do not think this

bonus or bounty system is the proper one, I do not think any one can defend it. Here we are trying to give a bonus to all these different articles :

Angles, tees, channels, beams, joists, girders or bridge, building or structural rolled sections, and on other rolled shapes not round, oval, square or flat, weighing not less than thirty-five pounds per lineal yard and also on flat eye bar blanks, when sold for consumption in Canada a bounty of $3 per ton.

It seems to me that we cannot follow up this thing, that the government are going to become a sort of partners, or agents to investigate the business of these people, and it is a wrong principle. What I plead for is a decided policy on the part of the government. It is necessary at present in order that every one may know what it is, and that any one may safely go into an industry knowing that it is adequately protected. Before I resume my seat I wish to say that in the absence of adequate protection on these iron and steel products I approve of these bounties which have been granted to the steel industry. They will be of use to them, and will assist to some extent in maintaining their operations and building up the iron industry which we must maintain at all hazards.

The MINISTER OF CUSTOMS. By granting these bounties a certain specified object is accomplished, and I therefore cannot agree with hon. gentlemen opposite in the view that it is an unwise proceeding. They say that they would have proceeded by way of a revision of the tariff. By granting these bounties we will give encouragement, if I may use that word, to this industry, we will secure the manufacture of those goods in this country which heretofore we have not produced. I think that we have the proof that it will bring about that end, and therefore, instead of viewing these propositions as ineffective, I think they will prove amply effective and more effective than if it had been done by way of a tariff revision. The works, as I understand it, that are to produce these articles are about to expend $1,500,000 for machinery and plant for that purpose. That expenditure made, the articles will without doubt be produced in this country and they will be for sale in this country and afford as they will the raw material of numbers of manufacturers employing in the aggregate, I venture to say, many times over the number of men that will be employed in this concern, and these manufacturers will not be burdened in the production of goods that they are now producing and confer a benefit upon the workingmen, and confer a benefit upon the whole country. This we are accomplishing in this wire rod business, for instance. When the tariff was revised it was considered wise as these rods were not produced in this country and as they were the raw material of other manufacturers employing a great number of men, to place them on the free list, with the result that the farmer who formerly paid $1 a keg duty upon his wire nails, now gets them at 60 cents a keg duty, or a 40 per cent reduction upon nails. Wire rods will be made in this country by the aid of the bounty, which will not increase the price of the wire rod by one cent to the wire drawer or to the manufacturer of nails. Whatever may be said in reference to whether it would be better to aid this industry by way of a bonus or tariff the question under consideration now is : Is this a wise step that we are taking? Are we going to get results from it ? I think hon. gentlemen opposite know from what they can gather from the newspapers that we shall have an established manufacture of these lines of goods of which there were large importations, that we will effect the manufacture of them in this country and that we will not burden the scores if not hundreds of other manufacturers employing not only thousands, but tens of thousands of men who use these products as their raw material and without burdening by one iota the consumer, who will get his goods just as cheaply as before. That is the proposition that is before us. I do not intend to enter into an argument as to the relative merits of protection or free trade.

Mr. COCHRANE. Who pays the bounty ?

The MINISTER OF CUSTOMS. The community in general pay the bounty. There is no doubt about that. I shall not enter into that argument. I only want to ask hon. gentlemen opposite who are adopting a pessimistic tone that is calculated to affect the stability and spirit that is in our people : What industries are there in the country that are not thriving at the present time ? What industries are languishing ?

Mr. MONK. Woollens.

The MINISTER OF CUSTOMS. Woollens are not languishing. The hon. gentleman must not hold the government policy responsible for keeping every manufacturing industry on its feet. Because some industries in certain lines do not pay you cannot hold us responsible. If there are other industries and other men employed in producing the same line of goods making money and paying large dividends, the failure of one industry is not due to the tariff, but must be due to some other cause. I challenge hon. gentlemen opposite to point me out a single manufacturing line in Canada in which some men are not making goods and making them at a profit to themselves ?

Hon. Mr. TARTE. Would the hon. gentleman permit me to ask him a question before six o'clock.

At six o'clock, committee took recess.

After Recess.

The committee resumed at eight o'clock.

Mr. OLIVER. I do not wish to oppose these resolutions, but in view of a great deal that has been said to-day, I do not think it would be fair to the interests which I represent if I allowed the discussion to end without giving expression to the opinions which I hold, and which I believe are held by a very large proportion of the people of this country in rgard to the subject under discussion. In presenting these views, it is desirable to place certain facts which do not seem to be generally known before the House and before the country. The discussion that has taken place in regard to the iron industry to-day and on previous occasions in the House, has proceeded under the assumption that the industry of producing iron and the separate industry of manufacturing iron are practically without the protection of import duties in Canada at the present time. It will surprise some people to know that to-day scrap iron pays a duty of one dollar a ton, pig-iron $2.50 a ton and steel ingots $2 a ton. That is the duty, truly it is only a revenue duty, but it gives the industry of producing iron that measure of protection. Then, after the iron has been produced; in the first stage of its manufacture, which merely consists of plain casting or the production of malleable iron in some form, I find that rolled iron not less than 35 pounds weight per yard has a protective duty—we can only call it a protective duty—of $7 a ton; bar iron or steel less than 8 inches wide and less than one-half inch thick has a duty of $7 per ton; iron or steel plates less than 30 inches wide, $7 a ton; railway fish plates, $8 a ton; steel rails other than the rails of steam railways, 30 per cent; cast iron pipes, $8 per ton; switches, frogs, &c., for railways, 30 per cent; steel castings in the rough, 25 per cent; stove plates, surely not an article that requires any great amount of labour in their production—25 per cent; cart or wagon skeins—a plain casting—30 per cent. I would like to know what that part of the industry which relates to the production of iron, and much more that part of the industry which relates to the manufacture of iron in its cruder form—I would like to know what these industries want. If they are not satisfied with the duty that is levied on the production of iron and the bounty that is given in addition to that duty, then certainly there must be something wrong with the iron industry in this country. It must then be the wrong country in which to enter into this industry, and it is better for the country at large, better for the manufacturing industry which depends on cheap iron, better for the agricultural industry, which depends very largely on cheap iron, better for the transportation industry, both on land and water, which essentially depends on cheap iron; it is better for these industries and for the country at large that the iron required for these industries should be imported rather than be manufactured in Canada. This is the wrong place for an iron industry, if that iron industry cannot thrive under the conditions which prevail at the present time. I have said before in this House, and I take the liberty of repeating it, that in Canada cheap iron is as essential to the welfare and the prosperity of the country as is cheap food to the manufacturing industries of England. We must have cheap iron or we cannot do business. On that point—just referring for a moment to the fancy picture drawn by the member for St. Mary's (Hon. Mr. Tarte) as to what would be the result if we increased the cost of raw iron to our agricultural, manufacturing and transportation interests; and the tide of prosperity that would flow over this country—let me refer the House to the condition of affairs in this country when there was so-called adequate protection to this very iron industry. Where was the flood of prosperity at that time? What was the actual and absolute and necessary and unquestioned result of these high duties on iron at that time? It was the paralization practically of the greater part of our manufacturing industry, even though it also had high protective duties. If this were merely a matter of theory, if it were something that was in prospect, we might admit the arguments that have been put forward to-day; but when we have had a sad experience of these high iron duties, I cannot understand the propriety of the arguments that are put forward in favour of repeating the mistake that was made in those past years.

As to the question of bounties, and as to the difference between bounties and duties, some of our friends object to bounties because they are merely an expedient. My objection to the resolution now before the House is not because it is a bounty, or because as a bounty it is an expedient, but because it is not an expedient but a policy if carried to its legitimate and logical conclusion, according to the statements that have been made here to-day by the Minister of Finance, by the member for St. Mary's and by other speakers. Let me point out the difference between bounties as applied to the production of iron, and bounties as applied to the manufacture of iron. A bounty given for the production of iron is in itself an expedient; it is supported because it is an expedient and only because it is an expedient. Our condition in this country is that we have vast quantities of iron ore and vast quantities of coal. It must be evident then that if we can bring the iron and the coal together under such conditions as will permit us to produce raw iron profitably, a vast industry will be created in this country to the benefit of every one in the country. The con-

ditions are not, however, absolutely favourable. The coal is in one place and the iron is in another, and the experiment of bringing them together can only be undertaken at very considerable expense, and with a chance of very considerable loss. It is an experiment which capitalists may be slow to undertake. The government then comes forward and says: We will take an interest in this experiment, we will provide a system of bounties which will help to enable you to undertake this experiment; we will stand part of the loss. If the experiment proves that in Canada we can bring together profitably the iron and the coal in order to produce raw iron on the merits of the enterprise itself, then our money has been well expended and your industry may go on and thrive on its own merits. That is the principle as I understand it underlying the granting of bounties on the production of raw iron, and those bounties are scaled down from year to year so that after the experiment has had reasonable opportunities, if it turns out to be a success the bounties cease, and also if it turns out a failure the bounties cease. The capitalists who desired to invest in that industry are having their opportunity, and are having their assistance, and if success is attained, so much the better. There is nothing wrong in this principle. It is a common sense principle. It has nothing whatever to do with the principle of protection in connection with the tariff, and it will be observed that essentially and above everything it is an experiment; it is an expedient.

But the system of bounties which we have at present, and which the present resolutions propose to extend for a short time, and very properly so possibly under the circumstances, is different altogether in principle and ultimate conclusion from the other feature which it is proposed to introduce, that is to say, a bounty for the manufacture of iron in the country after it has been produced. None of the reasons which apply to the bringing together of the coal and the ore to produce the iron apply to the manufacture of iron into its coarser and rawer forms after it has been once produced. Either we have skill and enterprise and capital which will enable us to install machinery and to run that machinery to work up this iron after we produce it, or we have not that skill, enterprise and capital. If we have not got it, then we cannot afford to buy it at the price of paying more for that iron than it is actually worth. We need too much iron in this country, we need it for too many essential purposes, to afford the price which it is apparently supposed that this iron is going to cost us. For my part, I claim that there is nothing in the conditions or the facts, as we know them, to warrant the conclusion that we cannot manufacture the iron in this country once it has been produced, at any rate, under a reasonable and moderate revenue tariff such as we have to-day. If we can produce manufactured articles of the highest grade and quality, into which skill and industry and capital very largely enter, under the moderate protection of a revenue tariff, we certainly ought to be able to manufacture the coarser forms into which skill and energy do not enter nearly so largely as mere capital.

My view of this feature of the resolutions is this. We propose to give a bounty for the manufacture of steel wire, of heavy plates and of heavy structural iron. We import these articles very largely; we need them very largely; we must have them, or we cannot progress; and I think the government are doing very wisely in not putting a duty upon these articles higher than the present duty. The one is free and the others are under the very moderate duty of 10 per cent. But the government's proposition, as it is placed before the House, is to give a bounty on the manufacture of these articles. There is no proposition to reduce that bounty from year to year, as in the case of the bounty on the production of iron, so that it will pass out of existence by process of time. As the proposition stands, to my mind it is this. The offer is held out to manufacturers of iron to undertake the manufacture of these lines under the promise of the payment of a certain bounty. There is no indication that the bounty will at any future time be withdrawn. If those people purchase machinery and invest the capital necessary to enter upon these enterprises on the basis of the bounty that is given, I for one do not see very well how it would be fair or right to withdraw the bounty. Once we begin to pay it we must continue to pay it, or we are accused of unfairness to this investment of capital. So long as our manufacture of iron is small in proportion to our imports, it certainly pays better to give the bounty than to pay a higher duty. But so soon as our manufacture of iron increases till we are manufacturing more than we import, then it will be better for us to have a duty than to pay the bounty. It seems to me that is the natural and logical conclusion of the proposition now placed before the House. If it is right and proper to pay bounties and ultimately to pay duties on the manufacture of these classes of iron, of which I think it was stated that Canada now imports over $2,000,000 a year, there is no ground that I can see for not taking the same position in regard to other productions of iron; and I feel the duty and responsibility resting upon me, as a representative in parliament, to say to the government and the House that I do not believe that that policy can be pursued to its legitimate conclusion without the greatest possible damage to the best interests of this country.

It appears to me, from the figures which I have taken from the blue-books, that this proposition involves a sort of double bounty in addition to the duty which we also pay

on the iron. We pay now, I believe, a bounty of $2.70 a ton on pig-iron, and there is besides a duty upon it of $2.50 a ton ; so that our producers of iron have an advantage over their competitors, exclusive of freight rates, of some $5.20 per ton on pig-iron and $4.70 on steel. Then, when this steel is turned into wire rods, and they acquire the additional bounty of $6 per ton, they are winners to the extent of $10.70 per ton on steel wire rods as against their competitors from other countries. That is to say, we are paying something like $10 a ton more for these steel rods than we can buy them for elsewhere. On the heavy plates and structural steel the duty and the bounty are the same as on the production of the iron, and the additional proposed bounty is $3 per ton.

That is $7.70 per ton of an advantage on heavy structural iron and heavy steel plates, that is to say, on steel bridges and the plates which go to the building of vessels and locomotives. It is a tax then on the transportation of the country in the matter of steel bridges and in the building of steamboats and locomotives. I consider that the necessities of this country with regard to transportation are such as do not warrant our imposing any such tax on those industries. The same remark applies to the manufacturing industry at large, into which iron and steel enter so largely.

I just want to say a word with regard to the subject of bounties for the production of iron. I consider that these bounties are based on sound principles. They are not excessive. It does not matter to us whether they are extended a year or two or shortened a year or two, if we can bring about the result we desire, namely, make Canada an iron producing country. But I find, on looking over the returns, that so far from the bounties we are paying having the effect of building up an iron producing industry in Canada and developing our own iron and coal mines, for every dollar of bounty we paid during the past year for the production of iron from Canadian ore, we paid $2 for the production of iron from foreign ore. Out of every $3 that we pay in bounties for the production of iron supposedly for the building up of an iron producing industry from our own ore in our own country, we pay $2 for the production of iron from ore which comes from a foreign country. We are, therefore, paying this money out to no purpose, so far as the building up of an iron producing industry in our own country is concerned. Here are the figures for the past year of the bounties paid respectively on Canadian ore and on foreign ore to the various smelters :

	Canadian Ore.	Foreign Ore.
Midland..	$ 56,036	$ 24,109
Radnor..	15,580	2,722
Deseronto..	611	21,920
Sidney..	464	347,436
Hamilton..	119,879	39,795
New Glasgow	19,290	42,065
	$211,860	$478,047

That was for the year ending 30th June, 1902. For the year just closed, the total bounties paid amounted to $1,245,382. I submit that while we should do our share in the attempt to produce iron in Canada from Canadian ore with Canadian coal, it is not a business proposition on our part to bonus to such a degree the production of the iron mines of foreign countries. If this is the sort of home industry which the hon. member for St. Mary's division (Hon. Mr. Tarte) and hon. gentlemen opposite are so anxious to promote, I cannot see eye to eye with them. I do not think it is good policy to spend our money in such a way. I am out for the development of the legitimate industries and natural resources of this country, and I do not care what you call the means you take to produce that development. You can call it protection or free trade, high tariff or bounty, but I want to see that when we spend our money we get the desired result. I want to see that when we pay out one and a quarter million dollars to build up a Canadian iron industry, the money goes to build up that industry and not to the production of iron from foreign ores.

I do not know that it is necessary to say anything with regard to the fervid patriotism indulged in by the hon. member for St. Mary's division and other hon. members when endorsing a prospective policy of high duties. Canada for the Canadians is their motto. It is also mine. But I believe in Canada for all Canadians and not for only a section of them. That is the difference between their policy and mine. I believe in a policy that will build up legitimate, natural industres in this country, but not in a policy designed to make possible artificially, industries whch are not naturally possible. Such a policy is not a national policy, but a system of unjust taxation, unfair to the majority of the people and bound to result in any thing but the well-being of the country.

Mr. LENNOX. I want to say a word or two on this matter. Some hon. gentlemen on this side have expressed the hope that this is a measure which in the end will lead up to a legitimate measure of protection. If I entertained that view, I would probably take a somewhat different position from that which I propose to do. Had I any doubt about the matter, an incident of this afternoon would dispel it. I had the pleasure of hearing the hon. member for Victoria (Hon. Mr. Ross) read the hon. member the ex-Minister of Pubic Works (Hon. Mr. Tarte) out of the ranks of the Liberal party. That, to my mind, is a very significant point at this time in the course of the warfare between the Conservative and Liberal parties as to the tariff that we shall have in Canada. For we must bear in mind that the only point of difference between the government today and the hon. member for Montreal, St. Mary's, so far as we know, at all events,

is the question of protection or no adequate protection to our industries. I do not think we can assume that so venerable, so experienced a gentleman as the hon. member for Victoria, Nova Scotia, and a gentleman in such close touch with the cabinet could take such a step without having instructions from the ministers of the crown as to the attitude he should take. It, therefore, seems perfectly plain to me, and I think the country will not be slow to take the intimation that although the government would like, perhaps, to have it go to the country for the time being, at least to certain sections, that they are going to stand by a policy of free trade, and to other sections, which interviewed them from time to time by deputations and otherwise, that they propose to introduce such amendments to the tariff as will afford adequate and reasonable protection to the industries of Canada, yet those who have been promised a fair and adequate measure of protection have no reason to hope that such promise will be implemented by the action of the government. I therefore think that those who have indulged the hope have given the government credit for too great a degree of sincerity; and, so far as their action in connection with the tariff and the policy they have enunciated from time to time has enabled us to judge, I think we are not wise in coming to the conclusion that the country can expect any adequate relief so long as hon. gentlemen who at present administer the affairs of Canada are left in control. Now, the iron and steel industry is a most important industry to Canada, and I believe that the conditions of this country with regard to the quantity of raw material, the means of obtaining it, and the quality of that material when obtained, are such as to promise that we can develop a large and prosperous industry in this line of manufacture. Whatever will make for the success of that industry along legitimate lines, I am perfectly prepared to support. But, as regard bounties, I do not feel that this is the means by which we can give encouragement to the iron industry along legitimate lines. The iron industry should be developed side by side with the other industries of the country. One should not profit at the expense of the other. And, when I venture to oppose, as I intend to oppose in toto, the resolution introduced this afternoon, I shall do so with the full knowledge that, more than any other single cause, Great Britain owes the proud position she occupies to-day to the development of her iron industry. I recognize too, that, for the time being, it looks as if supremacy in the iron trade had passed across the Atlantic and remained for the present with the United States. But I look to the time when the centre of gravity will change again, and when in this Dominion, with its vast resources, with its energetic people and enormous territory, we shall develop an industry in iron and steel second to none in the world. But, whilst I recognize this, I am opposed to bounties on principle. In saying this, I have the sanction and approval of many prominent gentlemen on the government side of the House. I remember very well how eloquent they were in denunciation of protection, but not so eloquent as they were in denuciation of bounties, describing bounties—or subventions as some called them—as the most odious form of protection. I do not think that we can, by means of bounties, develop the country upon the lines of protection as understood by the Conservative party. I believe bounties are necessarily unequal in their operation. If, for instance all our industries were bounty fed, none would be bounty fed. It is seen at a glance, if you commence to analyze the question, the only conclusion that can be reached is that to give a bounty to every industry would be to tax every industry to raise that bounty, and so all would be on the same basis as before. But, to give bounties to some and not to others, must be detrimental to those that are not bounty fed. In other words, it is a means of robbing certain parties to give encouragement to the others. I submit, it is not a policy that we can safely or properly pursue in this country. It is more than this—it is a development of one section of the country at the expense of the others. The hon. member for Alberta (Mr. Oliver) referred to the question of bounties on raw material. I cannot at the moment recall the case of any industry which I would recommend the government to bonus. We had a question not long ago before this parliament of giving a bounty for the raising of the sugar beet. Perhaps, if there is any instance in which a bounty is justifiable, it could be better contended for in the case of a bounty which will lead to the production of raw material, because that is an enrichment to the country. If you delve into the bowels of the earth and bring up useful minerals of which the people previously knew nothing, you add so much to the wealth of the country. And, if that raw material cannot possibly be obtained except by the expenditure of some of the public money, perhaps there can be a reasonable argument advanced in support of the expenditure. And that argument applies with great force when the farmers of the country are approaching an experiment which it is hoped will lead to an industry for the benefit of the people as a whole. In such a case, there might be good excuse for considering and responding to their petition. But we find that the government refused to give them any relief at all, giving a miserable fraction of a cent, not to the farmers, not to the producers, not to those who made the raw material, but those who were in the case secondary parties in the transaction, the manufacturers.

I have heard it said this afternoon

that the bounty was a form of protection. I know that, speaking in a general way, without regard to exactness, perhaps even a Conservative might speak of bounty as a form of protection. I know that supporters of the government have been in the habit of speaking of it in that way. But I claim that a bounty is not in any reasonable sense protection of any kind. A bounty is merely the means of making a present to the manufacturer at the expense of the people at large. It creates no wealth in the country. It is a means of transferring money from the pocket of one man to the pocket of another; it is a means of compelling the people generally to enhance the profits of the manufacturer, to put into his pocket money that he never earned. A bounty therefore is a means of impoverishing the country as a whole. Protection, on the other hand, is but a legitimate form of self defence, a means by which we may secure the home market for the people of Canada, a means by which we may build up industries and make ourselves self-sustaining, a means by which we may increase the tangible wealth of the country and build up varied industries from one end of it to the other. If you want to ascertain whether a subvention or bonus does anything to add to the wealth of the country, take this illustration. Let there be a bounty of $1,000,000 distributed among the various manufacturers, a bounty of $1,000,000 a year distributed for 100 years, and what is the result? The result is that you have paid out $100,000,000 of the money of the people of Canada, and I ask you, although you have made millionaires of some manufacturers, have you added one dollar to the wealth of the country? Is the country at the end of a period of 50 or 100 years in any better position of self defence, in any better position to maintain its industries against the aggression of outside nations, than it was at the beginning of that period? Take away the bonus at the end of 50 years, take away the bonus at the end of 100 years and you are just where you were at the time that you began, with this difference, that the people are just so many millions worse off than they were at the beginning of that period.

I am not going to enter into the large question of protection at this time, but I want to make it perfectly clear the aim of this bounty, treating it in the abstract; and having regard too to the actual facts of the case. I would be very sorry to have it understood by the great agricultural classes of this country, I was in favour of bounties in any shape or form. I am not in favour of them, because I recognize that the system is unfair to the great agricultural class of this country. I recognize, as I say, the importance of the great iron and steel industry. But I recognize as of still more importance that the manufacturers should understand from whom their bread and butter is to come. I want these manufacturers to understand that they cannot play fast and loose with the Conservative party. I want them to recollect that it is the Conservative party to whom they are indebted for the measure of prosperity they are enjoying in this country to-day. I do not think that in the past they have shown that gratitude they should have shown. Be that as it may, I believe that the way to bring about a remedy for the state of things we have at the present time, the way to bring about an adequate system of protection in this country, which I believe is all important to our continued prosperity, is to let the manufacturers and merchants, and agriculturists all understand that there will be no special preference given to any one; that we are going to mete out equal justice to all; that we are going to recognize that no one industry stands by itself, and that whenever one industry has to be kept up at the permanent expense of another, there is something wrong. The great principle enunciated by the Conservative party in the past and by the Conservative party of the present, is that all industries shall work together, each one assisting the other; and that in this way, the only safe position we can take, the only safe position any man can take who believes that a protective system, reasonably high, is necessary in this country, is to say: You gentlemen want special favours, and although we would be glad to assist you, we cannot assist you unless you join with us in developing one great system upon general lines that will be fair to all the industries of the country.

Mr. BENNETT. I would like to ask the Minister of Finance a question. This resolution which says, 'from steel produced in Canada from ingredients of which not less than fifty per cent of the weight thereof consists of pig-iron made in Canada'—what kind of ore must that be, Canadian ore or American ore?

The MINISTER OF FINANCE. That is in the manufacture of steel?

Mr. BENNETT. Yes.

The MINISTER OF FINANCE. While the question of ore enters into the manufacture of pig-iron, after the pig-iron is made in Canada there is no question of the ore as respects the bounty on steel. The question of native or foreign ore arises entirely as respects the manufacture of pig-iron.

Mr. BENNETT. But as the bounty is paid in respect of productions made from the steel, I think you should prefer the pig-iron that is made entirely from Canadian ore. That opens up this question: You may have smelters in Canada using Canadian ore and you may have them using American ore. Now if they use Canadian ore, that gives work for Canadian vessels in carrying that

ore from Michipicoten—which is practically the only point in Canada where we have iron at present on the great lakes; but, if you use American ore, that gives work to American vessels. In a concern where they produce both steel and iron as well, they would decidedly prefer to use Canadian ore if the preference was given to steel manufactured from Canadian ore by way of bounty.

The MINISTER OF FINANCE. If they use foreign ore they suffer for it, if I may so speak, by reason of the lesser bounty they would get on pig-iron. It is at that stage of the process that the distinction is made. They will not get the same bounty on that pig-iron as they would if it were made from native ore.

Mr. BENNETT. But if this bounty was paid only on pig-iron that was made exclusively of Canadian ore, that would give a great impetus I contend to Canadian ore. It would result in the employment in Canada of a great many men in mining ore and as I before pointed out it would result in giving employment to Canadian vessels. The fact of the matter is that at the present time the Canadian shipping trade is greatly hampered owing to the fact that it cannot engage in the American ore trade which is one of the biggest interests that the American vessels have. The grain trade being at an end the American vessels can go into the ore carrying trade, carrying the ore from different points on the American side to points on Lake Erie. Canadian vessels, by reason of the coasting laws, are estopped from participating in that trade and they can only have recourse in a limited way to the ore trade in carrying ore from Michipicoten to Midland or from Michipicoten to Hamilton. I think this clause should be limited to pig-iron manufactured entirely from Canadian ore.

The MINISTER OF FINANCE. That would be an entire departure from the principle which has governed these steel bounties from the beginning. The only distinction we have made between imported and native ore is in regard to the manufacture of pig-iron and not in regard to the manufacture of steel, and that has been done from the beginning.

Mr. BENNETT. Whether it was right or wrong at the beginning I submit that this measure should be framed in such a way as to foster Canadian trade. If the bounties were made payable only on steel manufactured from Canadian pig-iron it will be to the interest of the manufacturer to use Canadian ores exclusively, but if a free market is given to American ore the result is very different. I grant that this may appeal strongly to the interests of the Sydney concern because the ore used there is known as foreign ore.

The MINISTER OF FINANCE. It is from Newfoundland.

Mr. BENNETT. That is classed, I assume, as foreign ore. In that case we are discriminating practically against the balance of the Dominion or against the iron industries that are operating in other parts of the Dominion and against the ores of the upper lakes.

Mr. GOURLEY. I find in the Act of 1894 that the bounty is confined entirely to pig-iron manufactured from Canadian ore. Then in 1897 I find that the bounty is given to pig-iron manufactured from 50 per cent of Canadian ore. What led the government to make this discrimination?

The MINISTER OF FINANCE. My impression is that the distinction between native and foreign ore was made earlier than that. Possibly my hon. friend (Mr. Gourley) may be correct.

Mr. GOURLEY. I have looked at the Acts this evening.

The MINISTER OF FINANCE. If my hon. friend has looked at the Acts I am quite content to accept his statement. I remember at the time the bounties were dealt with that the only point of difference was that some hon. gentlemen thought that we should class Newfoundland ore as Canadian and treat it as our own ore.

Mr. KENDALL. Has the hon. member for East Simcoe (Mr. Bennett) a case in his mind to illustrate the point?

Mr. BENNETT. Yes, in Midland and also in Hamilton where they have smelters they use large quantities of the now celebrated Michipicoten ore which is brought from Lake Superior. Under this resolution it is immaterial whether the ore comes from Michipicoten or from Two Harbours or from any point on the American side.

The MINISTER OF FINANCE. No, there is no distinction as regards pig-iron.

Mr. BENNETT. Certainly, but once done with pig-iron we come to the question of steel and the point is this: The bounty is payable in respect of steel produced from pig-iron. If that pig-iron is altogether made of Canadian ores you will give Canadian ores the advantage, but, on the other hand, if the pig-iron is made from American ore you are giving the American ore to that extent an advantage, because, I think I am correct in saying that the American ore is brought in free of duty. I say, in the first place, that if you were to state in your resolution that all pig-iron that enters into the constitution or make-up of steel must be made of Canadian ore, you are giving a premium on Canadian pig-iron, and you are going to encourage the mining of ore at Michipicoten and the development of other Canadian mines on the shore of Lake Superior which can be developed. By this resolution you are giving the Americans the benefit of our bounty system, and we are

now in this position on the upper lakes that Canadian bottoms can get very little to do. The grain season being at an end they are not allowed to participate in the American coasting trade by carrying ore, and the result is that Canadian vessels are to-day practically carrying for nothing to meet expenses. It is a well known fact that to-day Canadian bottoms are carrying grain from Fort William to Montreal at four cents a bushel, a rate which at one time was looked upon as being simply ridiculous. There are one or two courses open to them—either to tie these vessels up at the dock or to carry at these ruinous rates as they regard them. If we had these bounties on pig-iron produced from the ore found on the shores of Lake Superior we should develop the production of ore there as much as possible. Canadian vessels are not alone in carrying of this ore from Michipicoten to United States ports, for the reason that it is not a contravention of the coasting laws, but American vessels may indulge in that trade. In the first place you hamper Canadian bottoms by leaving this wide open to American as well as Canadian ore, and in the next place you prevent a larger user of Canadian ore by not providing that the pig-iron going into the steel to which the bounty applies shall be exclusively Canadian. I think that is a question that the minister might fairly consider and see if this cannot be done.

The MINISTER OF FINANCE. I think my hon. friend (Mr. Bennett), if he wants to present that view, ought to deal with the manufacture of pig iron and not with steel; whatever force there is in his argument is against the use of imported ore for making pig-iron.

Mr. BENNETT. I admit that we get the benefit of the manufacture of pig-iron, but I say we should go a step further and provide that the steel that is to earn this bounty shall be the product exclusively of Canadian ore and in that way you would increase the user of Canadian ore and give employment to Canadian vessels.

The MINISTER OF FINANCE. In so far as the use of Canadian products are required at all this requirement applies to Canadian pig-iron. The iron is made in Canada with Canadian labour at Canadian furnaces, and no matter what the source of the ore is it then becomes Canadian product. When you come to the next process, to the manufacture of steel, the pig-iron made in Canada, in Canadian furnaces and with Canadian labour, becomes to all intents and purposes a Canadian product, and must be so treated in the next stage. The argument of my hon. friend seems to be that in the manufacture of pig-iron we should either forbid the use of imported ore or make a larger discrimination than we are making.

Mr. BENNETT. Let me illustrate the point. At Collingwood I think at a very early date a steel concern is to be under way. Assuming that they wish to earn this bounty and assuming that the law should say that they should only use pig-iron which was composed exclusively of Canadian ores to entitle them to the bounty on steel and that if they use in the manufacture of that steel product any American ore, they would be estopped from earning any portion of the bounty, that ore would go either to the smelter at Midland or to the smelter at Hamilton, and they would say: We cannot earn the bounty on steel unless we use exclusively Canadian produced pig-iron; in other words pig-iron made from Canadian ores, the result would be that they would only buy pig-iron made from Canadian ore, but if it is left open as it is, it is immaterial to these producers of steel whether they buy pig-iron made of American ore or Canadian ore.

The MINISTER OF CUSTOMS. If it were necessary to mix it in order to make steel.

Mr. BENNETT. That opens up another field, and if there is to be a blending of ores then the bounty should be paid in respect to the Canadian ore only and not the American ore. But it might be possible to produce the steel from iron that was made exclusively from Canadian ore.

The MINISTER OF CUSTOMS. They are not doing it.

Mr. BENNETT. That is on account of the uses they put it to.

Mr. HENDERSON. I wish to ask the minister a question with reference to the amount of duty all told that would be paid on wire rods three-eighths of an inch in diameter. I understand that we did pay $3 bounty for the production of the iron, and $3 more for the production of the steel. Will these rods be made from this steel which has already received a bounty of practically $6 a ton? If so, the entire bounty on these wire rods would be $12.

The MINISTER OF FINANCE. My hon. friend's calculation is quite correct except with regard to the first process. He has taken the bounty on the pig-iron at $3, but of course if it were made from imported ore it would be only $2. Subject to that correction, my hon. friend is substantially correct. Of course, the persons who produce these things are not the same in all cases.

Mr. BENNETT. If this is intended to give a preference to the Canadian ore entering into the production of pig-iron, why should it not be equally so in regard to the steel?

The MINISTER OF FINANCE. There is some point in the argument of my hon. friend (Mr. Bennett), but it is so radical a departure from the conditions in the past,

that if we adopted such a policy it might have a very serious effect on some of the furnaces. I am inclined to think that the Ontario furnaces would not use entirely Canadian ore, and we know that two of the large concerns in Nova Scotia depend wholly upon Newfoundland ore, and to say that they should be shut out entirely from the bounty on steel because they imported Newfoundland ore would be a serious proposition. Although my hon. friend may think there is some reason for it, yet the effect of it would be to close them up.

Mr. BENNETT. Conceding for the sake of argument that there must of necessity be a blending of American ore with Canadian ore to produce pig-iron, that would make steel, then there should be a higher bounty paid on the Canadian ore than on the American ore. The proportion of the bounty should be higher on the Canadian ore going into the manufacture than upon the American or foreign ore.

Mr. HEYD. What would be the effect of the application of that principle if we were to apply it to the coal that is used in the production of this iron? It is found in Cape Breton that they must import some portion of their raw material from Newfoundland, and they have gone as far as Spain and Norway for it. In the western part of Canada they get the iron ore from the Lake Superior region, but they get their coal from the United States. If you apply the principle that because a portion of the ore in eastern Canada is imported it should not be entitled to this concession, then it might be said that the iron masters in western Canada are not entitled to the concession because they import American coal for the purpose of manufacturing. I fancy that the object we have in view is to develop the manufacture of iron ore in Canada, and the place whence the ore comes is a matter of comparative unimportance, because the cost of the ore is a very small factor in the cost of production. Besides, we are not in possession of the expert evidence that was presented when this particular kind of legislation was first introduced into this House. The policy was adopted after most mature consideration, and after consultation with men who thoroughly understood the fluxing and manufacture of ores. I would look with considerable doubt upon any attempt to change a plan that was adopted after most mature consideration.

Mr. BELL. I think that possibly the discussion to-night has taken a much wider range than was expected by the Minister of Finance when he moved this resolution. No doubt, that is an indication of the general interest felt to-day in the wider question of protection. It would appear to me that the manner in which on every occasion when the opportunity arises, the discussion, beginning no matter where it may, always enters into the general question of protection, would seem to indicate very clearly that in the minds of the people of Canada the question of protection is to-day perhaps the most important, as to my mind it has been the most important for a great many years past. The action of the government in proposing this resolution seems to confirm that view and to show that not only the House and the country, but the government of Canada as well, is really impressed with the view that the country demands such adequate protection for our home industries as will enable them successfully to gain a footing, and enable Canada to become a protectionist country in all the leading lines of manufacture, so that eventually Canada shall take her place as one of the great manufacturing nations of the world. My only fear with regard to this resolution is that it may not be sufficiently far-reaching, because in reality while there can be no doubt—I suppose the matter is too well known to admit of it being treated as a secret—while there can be no doubt that the immediate cause of the submission of this resolution is the condition of business which affects a great company in Nova Scotia, I am inclined to fear that although the government has finally made up its mind to come to the assistance of that industry, the government may scarcely have done enough to make its interference on behalf of that industry as effective as it ought to be. After all, the concession that is here made by the government is not a very great one. They are extending for one year the payment of the bounties upon the production of iron and steel at the rate of 90 per cent of the original bounty, which was $3 per ton. Now, they do not absolutely give to these companies a gift of 90 per cent of the bounties, because although they have for the second year given them 90 per cent they have also cut off the operation of these bounties for the last year of the term. The amount of bounty to be granted in that year was 15 per cent of the total bounty, so that really what is given to the iron industries in Nova Scotia and elsewhere is 90 per cent less 15 per cent, or actually 75 per cent of the bounties. It is to my mind a comparatively small concession and if it should prove to be sufficient to relieve the company that is most seriously affected from the difficulty in which it finds itself, I will be surprised indeed. It is merely adding for this current year to the receipts of that company 15 per cent, or 15 per cent of $6. If we suppose that the whole product of the company shall be converted eventually into steel, this assistance will amount simply to 90 cents a ton on this year's product. That is an extremely small measure of assistance, but I hope it will be sufficient. I shall be exceedingly surprised if it will be sufficient to relieve the company of its difficulties. I am not forgetting that there is

in addition a bounty on certain classes of structural iron of $3 per ton, on certain classes of plates of $3 per ton, and on bar steel, suitable to be rolled or drawn into wire, of $6 per ton. There are no companies in Canada to-day, so far as I know, in a position to avail themselves of this concession. In order that they may do so, time must elapse, and the companies must expend large sums of money in the construction of buildings and the purchase and construction of plant. So that in reality the amount of assistance granted in this case by the government is not very material. I hope sincerely that it may prove to be sufficient; but I do not share altogether the confidence expressed by the hon. Minister of Customs, who spoke of this action on the part of the government as being effective. I am only too anxious to believe that he is right in his expectation; but when he recollects that practically all that has been done has been to add 90 cents per ton to the steel product of this year, and that the sum estimated by the Minister of Finance as likely to be paid of the other bounties for the current year is only $125,000, it will be seen that to a business of the extent of the Dominion Steel Company this addition is comparatively trifling. For the current year it amounts at the outside to only $300,000. That is, to be sure, a pretty large sum, but it is a comparatively small sum when you take into consideration the enormous capitalization of those works, their large plant, their enormous expenditure, and the fact that they have not yet succeeded in establishing a firm market for all their products, but are compelled from day to day to change their product from one form to another in order to secure a market for them. It is not a great concession, and I am sorry that the government have not seen their way to go further and grant such a form of aid as would, beyond any reasonable doubt, extricate this business from the unfortunate position in which it apparently is. At the same time, I congratulate the government on the fact that they have decided to come to the assistance of that industry, and in general to the assistance of the business of producing iron in Canada. Nothing could be more gratifying to a protectionist than to find that the government of Canada, as voiced by the Minister of Customs, is to-day prepared to grant assistance which it considers to be amply sufficent to extricate that industry from the difficulty in which it is placed. I am gratified that the government have gone so far; but when they are prepared to give a bounty which is equivalent to a protective duty of $3 per ton on certain products and $6 on certain other products, I cannot understand why they cannot make up their mind to do it in the form which I am sure the managers of that industry would prefer, of a change in the tariff. I am utterly at a loss to understand what the purpose of the government is in adopting a system of bounty or bonus instead of making a change in the tariff, which would have precisely the same result. I think the company would simply add to their receipts the amount of the bounty in the one case, as they might hope to add the same amount from a rise in the tariff in the other case. I am unable to understand why the government, having gone so far, have stopped short of taking the step which would fairly commit them to the position of a protectionist government so far as this iron industry is concerned. We know that when they came into power in 1896 it was under the assumption that they would not adopt a protectionist system; in fact, they were pledged to avoid a protectionist system; but they have not succeeded in doing so. In fact, they have been impressed with the view of the protectionists so far that they have in their tariff duties as high as 35 per cent, and since they have come into power they have added to that tariff certain bounties, for the purpose of giving that advantage to the manufacturers of this country which a protective tariff would give them. Why do the government hesitate to take such a position as would settle for all time to come their attitude towards this question? Would it not be far better for Canada and equally well for the government if they proposed from time to time to come to the assistance of industries which require assistance, and to do it in that fashion which has proved to be the most successful, by frankly modifying their tariff and placing it on a more protectionist basis? I do not see why they do not adopt that system, or why the Minister of Customs stated that in the matter with which they are dealing here they had a specific object in view. I cannot doubt that he was referring to the object of aiding an industry which was in difficulties. He said they had adopted the form of a bounty because it was a specific remedy for a specific complaint, and it would be an effective one. If they are going to resort to specifics, I would advise them that in medical practice the specific is generally looked upon with distrust.

Mr. KENDALL. Except for some diseases.

Mr. BELL. Medical men as a rule hold that specifics should be avoided as much as possible, and that general treatment is preferable.

The MINISTER OF FINANCE. Some very good citizens sell them.

The MINISTER OF CUSTOMS. And recommend them.

Mr. BELL. It is better to avoid their use, however, and therefore I believe that in this case the action of the government would be more satisfactory to the company

and to the country generally if they avoided what they describe themselves as specific treatment and resorted to good general practice. To my mind the hon. Minister of Customs has made a most complete and sudden volte-face. He turned a summersault of a most extraordinary character when, in justifying the course of the government in coming to the rescue of this particular industry and resorting to a specific treatment for the cure of a specific ailment, he declared, without a shadow of evidence, that so far as a great many other industries are concerned, which are complaining, their position was due to no fault on the part of the government or tariff, but entirely to their own lack of good management. Why did he not apply that rule to the specific case with which we are dealing? In this case he did not attribute any fault to the management, so that we may conclude that if other industries could make out an equally strong case, the government would not press against them this charge of mismanagement or lack of ability, but would provide a specific remedy to meet each specific case. The result would be that this government would stand prepared, in every case in which this tariff is proved ineffective, to come to the rescue of the particular industry in distress. If so, I would like to know how much further this government has to go in order to establish itself fully in the position of being in favour of protection to Canadian industry and the development to the utmost possible extent of such industries—in fact of going to the utmost length to which the ex-Minister of Public Works (Hon. Mr. Tarte) is prepared to go in doing everything possible in order that Canadians may supply exclusively the manufactured products we require.

The MINISTER OF CUSTOMS. But this is a new industry in the country. These articles are not yet introduced in the country.

Mr. BELL. These particular articles that are now being introduced—but how does that help the hon. gentleman? If he is prepared, in order to introduce into a manufacturing industry of this country, some new articles, to come to the assistance of that industry, is he not a protectionist up to the hilt?

The MINISTER OF CUSTOMS. I only mention that because the hon. gentleman was saying that other industries in existence, which were suffering, might as well come forward and be similarly dealt with. I point out that this is not a manufactory of certain goods, which has been in existence for years and is suffering, but it is an industry which is bringing into existence a new line of manufactured product.

Mr. BELL. This industry is simply producing a particular form of article which has not hitherto been made in this country, but it is not a new industry. If the hon. gentleman were to make in his establishment a new kind of biscuit or confectionary, he might just as well claim that he was establishing a new industry. This steel company is turning out steel billets, but these particular billets, to which this exceptional protection is to be given, are simply to be rolled to a rather smaller size, or, in the case of plates, they are rolled to a greater width and are a little more weighty. It is not a new industry we are assisting, but only varied products of an industry already established. Therefore, I think the hon. gentleman has been rather unfortunate in his interruption.

The MINISTER OF CUSTOMS. Does it not bring into this country an entirely new class of machinery, which is not in existence at present?

Mr. BELL. No, it does not.

The MINISTER OF CUSTOMS. Yes, it does.

Mr. BELL. It simply means that whereas the company have been rolling their steel to a size of four inches square, they are about to take that four inch square billet and reduce it to a size of three-quarter inch round. That is all it means. And, instead of the billets being four inches square, they are to be passed through smaller rollers until they are reduced to a diameter of three-quarters of an inch. They have been producing iron of that size at New Glasgow. They have not been producing wire rods, and the only difference between the rod and the steel billet is that the rod is rolled a little longer to a smaller diameter. To pretend that it is a new product, one might as well say that a new pattern of calico produced in a cotton mill is a new product. It is merely a slight change from what the manufacturer has been making all the time. But the great point is this. Why does the government hesitate? Is it possible that the government hopes to deceive that great class of voters, the consumers, to whom they played during eighteen years of opposition? Is it possible that by refusing to change their tariff but effecting exactly the same purpose by means of a bounty they hope to delude the people into the belief that this government, so ready to go to the assistance of a suffering industry, is really a free trade government. To my mind it is impossible to find any other reason for their action in this matter. And while I am glad indeed, for the sake of an industry in my own province, which is of the very highest importance, and which both sides of this House will admit is one of the fundamental industries of any country that is going to develop manufacturing ascendency, that the government has adopted this course, but I would be much better pleased if it would do it in such a frank fashion as would rank it in the safe,

strong, defensible position of being openly and avowedly prepared to assist the industries of Canada, and enable Canada to develop from a mere producer of raw materials into a centre of varied manufacturing industries embracing every achievement in that direction possible to our natural resources and people. The criticism of the hon. member for Alberta (Mr. Oliver) condemning the government because it is treating this iron and steel industry in a friendly manner, and describing it as an industry which is not legitimate to Canada, is most amazing. In what country could the iron industry be more legitimate than Canada? We have every one of the raw materials which enter into the production of iron. We have a suitable climate, a people unexcelled in their adaptability to all industrial processes, and a climate that is favourable to severe labour. In fact we have an ideal country in which to produce iron. We are alongside a country which is leading in iron trade in the world, and has yet no greater facilities for that trade than we have. There is this one difference between the United States and Canada, and that is that in the one case, undiscouraged by the failures that attend its earliest years, the government of the United States went from one stage of protection to another, and by showing itself in favour of protection and pressing that remedy home to the last requirements of the industry, succeeded in establishing it in the unrivalled position in which it is to-day. There is no other difference between the two countries.

And there can be no question that if we stand as loyally, firmly and believingly at the back of the iron industry of this country as they did in the United States, we may hope at an early day to see Canada become what, so far as natural resources are concerned, she is calculated to become, one of the great iron producing countries in the world. No doubt, at the back of that, progress, will follow exactly what is being hoped for by the government in this matter. Here the government is helping not only the production of raw material, but also—a distinction properly drawn by the hon. member for Alberta (Mr. Oliver)—the second industry of producing wire and nails from that iron. The government is not only offering assistance to the great company producing foundation article, the iron, but is also seeking to add another industry to the working outfit of this country, employing labour, adding new centres of population, increasing the home market for the farmers, adding to the imports, swelling the trade of this country. By this action unquestionably, if they stand loyally at the back of this industry and do it frankly as protectionists, they will add one industry to another until they will have added enormously to the productive powers and population of Canada, and we will have wiped out what, to my mind, is a reproach to Canada that, in an article which she could produce, she is dependent upon the United States. The government has entered upon a good work; let them go forward in that work. And I would suggest that it would be better, in the interest of the manufacturers, in the interest of the country, and better in order to establish that confidence which will attract foreign capital to come freely into this country and bring the necessary population with it, that the government should enter upon this course in such a fashion as shall convince all that their action is not merely temporary, not a mere specific for a special case of illness, but a carefully thought out policy which it is not only prepared to apply for the moment, but to guarantee interested parties in this country or out of it that it is ready and determined to continue as long it remains in power as a government.

Mr. CLANCY. Mr. Chairman, this is not the first time that you have had the painful experience of seeing the Finance Minister standing face to face with the consequence of his own blunders. Nor is it the first time we have seen the Finance Minister asking the authority of parliament to pass the hat to recoup by bounties industries that have been injured by his policy. The Minister of Customs (Hon. Mr. Paterson), whom I see smiling as he always does, challenged this side of the House to point out an industry in Canada that was not prosperous. Any hon. gentleman might make that challenge. But let me remind him that, if our industries generally are prosperous, it is because he and his friends had not the courage to take away the protection that has been given to those industries by a previous government. But there are some exceptions to our prosperity, and those exceptions can be traced in every instance to the removal of protection by this government. I challenge the hon. gentleman to controvert that statement. I say that there is not an industry in which they have taken away substantial protection which is not suffering materially, or which is not coming here and asking for protection. But instead of giving the protection which his policy has taken away, he is asking the people to put their hands in their pockets and recoup those industries by bounties. The hon. gentleman said we must have protection or bounties. I would ask him how he would like to have protection taken away from the business that he has made a great success, partly by his ability as a business man and partly by the protection given to that industry, and an allowance of bounties made that would assist him temporarily and for the renewal of which he would be obliged to come and ask from time to time. If he would not consent to that, how can he approve of the proposition made by the Finance Minister to-day? The hon. gentleman tried to

draw a fine distinction based upon the idea that this is a new industry. But the government are giving bounties not merely to the new industries that are mentioned, but also to production of iron, which is an old industry in this country. There is absolutely no difference for practical purposes whether it is an industry which is being expanded and extended or a new industry that is to be built up. The hon. gentleman recognizes that, for he proposes to treat them alike. I do not know anything more at variance with the hon. gentleman's own experience as a business man than the policy of bounties. I do not know anything more at variance with the experience of every practical man. Of course, we make some allowance for hon. gentlemen brought up in what I may, without offence, call the narrow school. None doubt the sincerity of the Finance Minister. But many doubt his theories. The industries of the country have good reason to doubt his theories. He was brought up in a school whose chief idea was to worry and harass every industry in the country, to look with distorted eye, almost with a bloodshot eye, on every industry that received a particle of protection. Now, however, he finds himself face to face with the great responsibilities of the high position of Minister of Finance. He must deal with great practical questions. But he never moves from conviction, nor will he unbend any of the things he has learned. He moves under pressure. He still thinks that every particle of protection is an evil. The only thing that causes him to recede from his position is the strong pressure of the business interests of the country, whose dissatisfaction, he fears, will cost him some votes. Now, what would be an ideal man for Minister of Finance? If I were selecting a Minister of Finance, I should not select one different physically or intellectually from the one we have. But I would select one who would unlearn everything the hon. gentleman has learned. I would select one who would act from conviction, and who would be moved by the broad spirit of protection that pervades this country. That it does pervade the country we can see by the attitude of the hon. gentleman's own followers. We had, for instance, the example of wabbling of the hon. gentleman from Alberta (Mr. Oliver). He found fault with everything and condemned everything, yet he was able to support the government. He told us that we must have cheap iron. The government some time ago took the duties off iron, one of the great errors they are trying to repair. And I would ask the hon. member for Alberta to point out a single instance where we have had cheaper goods as a result of the lowering of duty. I challenge the hon. gentleman to say that there has been a single article purchased cheaper by reason of the government having lowered the duties on iron. But the government have considerably crippled this industry. And what does the Finance Minister think will happen at the end of four years when these bounties shall cease? The hon. gentleman will have to mend his ways between now and then, if he is still Finance Minister. But if he does not mend his ways and the people will still be deceived, what will be the position of these industries? They must come back, every one of them, and ask for additional bounties. They cannot maintain themselves. They have lost their own market, and as a compensation we have to give them bounties instead of giving them protection, which would result, in a large measure, in supporting them at the expense of the foreigner. Now, what is the position of the workingman in this country? Under a proper system of protection he has a day's work, whereas under the present system it means that he is deprived of that day's work because he has lost the field, and he must put his hand into his pocket and contribute something to help his neighbour.

Now, I do not propose to offer any opposition to this measure, because I think it is necessary under the circumstances. At the same time, I do not think it is a wise policy, I think it an extremely unwise policy. It is merely a policy of shifting, merely a policy of expediency; an hon. friend near me says it is wabbling. It is not even respectable wabbling. However, I welcome anything that will for the time being give relief to this industry that the hon. gentlemen have in a sense destroyed. They have come down and have to some extent repaired the harm they had done, but at the expense of the taxpayers of this country. They did the same thing with respect to the binder twine industry. The duty was taken off the binder twine altogether, and after the hon. gentlemen had ruined that industry practically, they passed the hat around to help the manufacturers of binder twine. They are now passing the hat around again to help the iron industry. But this bounty system will not give them the home market. The American producer will still come in and sell alongside of them, as he does in respect to the binder twine industry. It is simply taxing our own people for the support of these industries instead of taxing the foreign manufacturer. It is about time, it seems to me, that we should shift the burden. I have only to repeat what I said at the outset, that I do not know of any more unwelcome spectacle than to see ministers sitting on that side of the House who came in seven years ago with a great flourish of trumpets, promising to reform the tariff, and they have not made a single reform. I challenge them now to point to a single substantial reform, a single change they have made in the tariff to compensate those from whom they took away protection. I am going to support the boun-

ty, not because I believe it is a wise principle, but because I think it is necessary to do something to keep this iron and steel industry on its feet.

Mr. ROBINSON (Elgin). I understand that these bounties are given in order to stimulate the industry of iron and steel, I do not understand that they are given for protection. I understand that the people who started this industry are not able to purchase the machinery and to carry it on successfully without some assistance from the country. In other words, this bounty is given as an encouragement to them in their work. Now, it seems to me that unless we have the raw material in our country, unless we have sufficient iron and coal in proximity, it is only a waste of money to give bounties to stimulate that industry. After you have encouraged this steel and iron industry by a bounty, after you have got it to work and it is then still unable to stand up on its own merits permanently, what is the use of giving the bounty ? As I say, in order that the industry may be permanently successful it must have the raw material, the coal and iron in proximity to each other. If you have to import the raw material you cannot be successful. I heard the hon. member for Simcoe (Mr. Bennett) complaining that they are paying duties on iron made from ore brought from the United States. Now, if you are going to bring ore from the United States and coal from the United States, you had better let the United States manufacture the iron, because you are only throwing away your money by giving it bounties.

An hon. MEMBER. What about the cotton industry in England ?

Mr. ROBINSON (Elgin). They can get the raw material cheaper than any other country because they have got the shipping to bring it in cheaper than any other country ; that is why the cotton industry succeeds in England. The iron industry succeeds there because they have both the coal and the iron. But it is no use for us under any circumstances to try to bolster up manufacturers of raw material of which we do not possess within our own borders. I heard the hon. member for Pictou (Mr. Bell) say a few minutes ago that they had the grandest country under heaven for the manufacture of iron. If they have, then they must lack men of enterprise and intelligence to carry on the industry. If you have got the raw material and if you have got the right kind of men, you do not need any protection. I do not like the bonusing system, either in this or in any other industry. If you have got the right kind of men with any snap about them, they ought to make the industry a success without the assistance of bounties. Still, in this case, if these men are suffering, if they feel obliged to give up the enterprise and to take their money out of the country unless we help to set them on their feet, I am willing to help them, but all the same I say it is a wrong principle.

Mr. WILSON. I want to ask the Finance Minister a few questions. I would like to know how much of the ore that is manufactured or smelted in Deseronto is imported into this country. They make a different kind of iron to what is made in Nova Scotia, it is called charcoal iron. I would like to know how much ore they imported. I would like to know whether the increased amount of bounties you are proposing to give will be sufficient to tide the companies that are supposed to be in financial difficulty over the trouble they have got into. I think the Finance Minister ought to give us some information with respect to the reasons why he brought this up at so late a date. I have no doubt he has had interviews with the company, discussion and correspondence, and I think the House is entitled to that information. I presume it is not necessary to say anything with reference to the position of the Dominion Iron and Steel Company, the Finance Minister is perfectly familiar with it. It is said they are in the best place in the world to manufacture iron. The town of Sydney gave the company 500 acres of land fronting on the harbour. The bounties they expected to receive would be sufficient to pay for the plant and to set them going in a successful manner. Now, if these things are true, if Cape Breton is the best place in the world to manufacture iron, there must have been great mismanagement in this matter. If there has been mismanagement in it why should the people be taxed to make right the mistakes that have been made by a particular company ? I differ entirely from my hon. friend from Bothwell (Mr. Clancy), I am not in favour of bounties.

Mr. CLANCY. Neither am I.

Mr. WILSON. You may not be in favour of them, but you are going to support them, and it looks as if you were in favour of them.

Mr. CLANCY. I did not say whether I was in favour of bounties or not. I say that on general principles I am opposed to bounties, but if hon. gentlemen opposite have destroyed industries by taking away their protection, I am willing to give bounties or anything else to help them out.

Mr. WILSON. The hon. gentleman only does it as the best thing possible, and not because he likes it. He is in favour of a fair measure of protection which I think is by far the better policy. I see that the president of the Consolidated Lake Superior Company has issued a circular letter which appeared in the Toronto 'Mail and Empire' of the 28th July, in which he says that unless the stockholders of the company take up the bonds amounting to $12,500,000 the

property will fall into the hands of the creditors. That seems to me to be a very strange condition of affairs. I would like the hon. Minister of Finance to tell us whether these bounties are going to be sufficient to tide these people over their difficulties. The Dominion Iron and Steel Company last year, according to the answer given by the hon. Minister of Finance, to a question asked in this House, received bounties to the amount of $885,963, and the total bounties paid last year on iron and steel were $1,245,382. It does seem to me that if we cannot manufacture iron and steel under such bounties as these it is folly for us to increase them, and if it is because of the bad management of these companies that they have had such poor success then I think they ought to be allowed to go to the wall and let other men take hold of the business who would be able to conduct it in a more successful way.

The MINISTER OF FINANCE. I think the first question my hon. friend (Mr. Wilson) asked was in reference to the operation of a charcoal iron furnace at Deseronto. I understand the ore is imported almost wholly from the United States.

Mr. WILSON. What bounty do they get per ton ?

The MINISTER OF FINANCE. Two dollars per ton on the imported ore and on any portion they make from native ore they, of course, get a higher bounty. In regard to the Dominion Iron and Steel Company, I have had frequent communications with representatives of that company. I am not authorized to say that they will regard this as entirely satisfactory. I think it will enable them to continue their operations at present, and that they will regard this as meeting their difficulties for the time being.

Mr. WILSON. What proportion of the enterprise is in operation now ?

The MINISTER OF FINANCE. I have not had any very recent communication with them, but I have seen what appeared in the press. I understand that the other day they stopped a portion of the work, and I saw by a subsequent telegram that it was stated that they had resumed it, but I have no information upon that point other than what I saw in the public press. In regard to the operations at Sault Ste. Marie, there have been no representations made to us lately on this subject. The condition of the industry was presented to us at the beginning of the session, and a proposal was made in regard to steel rails, and the arrangement then announced respecting duty on rails was based on representations so made, although, of course, it applies as well to any other mill in Canada which may make steel rails. As far as I am aware, the mill at Sault Ste. Marie is the only mill which intends to make steel rails. I have had no communication from them lately, and I am not in a position to give any further information upon that point.

Mr. WILSON. Have they carried out their contract for the supply of steel rails ?

The MINISTER OF FINANCE. No, they failed to carry out their contract for the supply of steel rails during the time specified. They did supply a quantity later on, but they did not supply the quantity that the contract mentioned. They, however, supplied a smaller quantity. I am not able to say anything as to their future operations.

Resolution reported, read the first and second times, and agreed to.

The MINISTER OF FINANCE moved for leave to introduce Bill (No. 238) respecting bounties on iron and steel.

Motion agreed to, and Bill read the first time.

MANITOBA GRAIN ACT AMENDMENT.

The MINISTER OF THE INTERIOR (Hon. Clifford Sifton) moved the second reading of Bill (No. 232) to amend the Manitoba Grain Act, 1900.

Mr. BORDEN (Halifax). Would the hon. Minister of the Interior (Hon. Clifford Sifton) make some statement as to the Bill before it is read a second time ?

The MINISTER OF THE INTERIOR. When introducing this Bill I made a general statement in regard to its purport, and I think perhaps a detailed explanation would be more intelligible in taking the clauses up in committee. I may say in a general way that the Bill is a result of the experience of the last year or two in connection with the difficulties of handling grain in Manitoba and the North-west Territories. There has been a great deal of difficulty in connection with the transportation question for some years, and a condition under which practically the men who were in the elevator and warehouse business were enabled to compel the producers of grain to sell their grain to them directly, because of the fact that they were unable to procure cars for shipment themselves. An amendment was introduced a year ago, chapter 19 of the statutes of 1902, which was designed to meet that condition of affairs by permitting farmers to ship directly, giving them power to order their cars directly, and compelling railway companies to furnish cars directly to them. In addition to that a number of other changes were made concerning the regulation of the shipping business as originally provided in the Manitoba Grain Act, 1900. The Act of 1902 was largely experimental and it was known to be experimental at the time, because it was known that it would bring

about considerable changes in the shipping of grain, and it was not known until actual experience had demonstrated how the provisions of the law would work.

I may say that the provisions of the law of 1902 have given great satisfaction to the farmers of Manitoba and the North-west Territories. I do not mean that the Act has been regarded by the farmers as being perfect by any means, but it has been regarded as being a vast improvement upon the legislation as it stood upon the statute-book before. The privilege which this Act gave to the farmers of ordering their cars directly and shipping directly is considered by them to be an extremely valuable privilege. The grain-growers of Manitoba and the North-west have formed an association and they have discussed this question of the shipment of grain at great length, and at the different meetings which they have held the representatives of the railway companies have been invited to meet them and the subject has been discussed very fully. During the present session of parliament the grain-growers sent a deputation to Ottawa and the grain-dealers of Manitoba and the North-west Territories also sent a deputation and they met here and fully discussed the proposed changes in the law. A short time ago they submitted to me a Bill which was practically the result of their deliberations and was in the nature of an arrangement which was agreed to by all parties. The railway companies have also been consulted in regard to the provisions of the Bill, and while the Bill does not absolutely meet the views of any of the conflicting interests, yet I am satisfied from the information at our disposal that it may be regarded as a satisfactory measure. The principal provisions of the Bill are: In section 3 to provide for the appointment of deputy warehouse commissioners. The original Act provided for the appointment of a warehouse commissioner and it has been found that owing to the duties that have devolved upon him and the enormous increase of the business of shipping grain due to the increased production, he has been unable to find sufficient time for the discharge of all his duties. It is certain that we shall require to appoint one or more deputy commissioners under this clause. The effect of the 4th section is to bring track buyers of grain under the provisions of the law which require licenses to be taken out by persons dealing in grain. The 5th section provides by an amendment to section 10 that the weighmasters and their assistants, in addition to the other information which they are required to report, shall report as to whether or not the cars which they examine are in bad order. Section 6 deals with the making of returns by the warehouse men owning or operating terminal elevators as required by section 24 of the Act. Section 7 gives the commissioner power to deal with disputes in regard to applications for sites for elevators and warehouses. The effect of section 8 is to require persons operating country elevators or country warehouses to receive as a matter of duty under the law the first six standard grades of wheat established and described in the general Inspection Act. Section 9 makes provision to exempt the elevator owner from receiving grain when he has not sufficient accommodation for that purpose. Section 10 makes provision which deals with the duty of the elevator man in regard to the shipments of grain when the owner desires it shall be shipped. The provision in the existing law was found to create a difficulty by reason of the fact that when a person who owned an elevator was unable to secure shipping facilities he was still compelled to keep the grain without making any charge for it. Section 11 provides for the amendment to section 34 of the original Act by adding a subsection the effect of which I will explain when we reach the committee stage. The effect of section 12 is to make an amendment to section 35 which provides for the giving of notice in case that grain goes out of condition in the elevator. Section 13 makes a change in section 39, the effect of which can only be shown by comparison and there are some verbal changes which I shall explain in the committee. Section 14 makes provision for the erection of flat warehouses which is substantially the same as in the Act of 1902, but the section is required because the repeal of the Act of 1902 does not bring into effect legislation which was repealed by that Act itself, so that we have to re-enact. Section 15 is new and it is simply to prevent a person getting a warehouse site from the railway company and allowing it to stand without proceeding with the work. Section 16 provides in detail for the construction of loading platforms. Section 17 deals with the duties of grain commission merchants. When they sell on commission, they are required to in a certain specified time report the quantity sold and render a statement to the consignor. One section deals with the necessity of their taking out a license. Section 18 is the same as the section dealing with the same subject in the Act of 1902. Section 19 amends section 50 of the original Act, and requires the chief inspector, in addition to making a report to the railway officials, to make a return to the commissioner. Section 20 deals with penalties. Section 21 makes provision with reference to the distribution of cars. This is the most important feature of the Act. Section 61 is new. It provides that the provisions of the Act shall not apply to grain which is shipped westward of the British Columbia boundary. It was found in actual practice that the result of the Act making provision respecting the distribution of cars was to prevent the railway companies, on shipping on British Columbia orders or on orders for the

orient, to supply the cars, because the law would not permit them to do so except in a certain way; and it has been agreed by all concerned that the Act shall be amended so that it shall not apply to the shipment of grain when it is consigned to any point west of the boundary line between British Columbia and the North-west Territories. The Bill as drawn says the Pacific coast, but I propose to have that amended by changing it to the boundary line of British Columbia. Section 62 deals with the licensing of track buyers. Sections 22 and 23 amend the forms of storage receipts in the schedule in compliance with the amendments to the Act in other places.

Motion agreed to, Bill read the second time, and House went into committee thereon.

On section 1,

Mr. MACLEAN. Will the minister make a short statement as to the actual condition of affairs in the North-west to-day—whether the car famine has been largely overcome, whether there has been an increase of elevators, and whether generally the grievances which formerly existed in connection with this matter have been ameliorated to any extent.

The MINISTER OF THE INTERIOR. My information is that at the present time there is no difficulty in regard to the shipment of grain, because practically the whole of last year's crop is shipped out. The difficulty as to car shortage will of course not arise again until the new wheat comes in, and what we are trying to do in this legislation is to provide a satisfactory method for the distribution of cars. This legislation will not provide any more cars or increase the quantity of rolling stock, but I think it will result in a far more satisfactory distribution of cars.

Mr. MACLEAN. Do the railway companies show a disposition to provide an increased number of cars for the trade? Has the situation been improved in that respect?

The MINISTER OF THE INTERIOR. Yes. My information is that the railway companies have shown a disposition to put on all the rolling stock they could get. That question was gone into very fully during the early part of last winter, at the time the car shortage was very acute, and I think everybody who had anything to do with the railway companies was satisfied that they were doing their best, although they were seriously to blame for not forseeing what was to come, and making adequate provision for it. Since that time they have been making every effort to provide adequate rolling stock and prevent a shortage in the future. Whether they will have sufficient cars to move the next crop it is difficult to say at present. That depends to some extent on the deliveries to the cars and to some extent on Providence as to the amount of wheat there will be to be shipped out. No one can form any very definite idea as to that until practically the last week of the harvest. My observation in Manitoba and the North-west Territories is that people have very little idea of how much wheat they are going to have until a few days before the wheat is ready to be cut. The climatic condition of the last two weeks practically decides whether the crop will be a phenomenal one or an average one. The present indications are that in the North-west Territories it will be very good, in some parts of Manitoba it will be very good, and in other parts somewhat light. On the whole it is not to be expected that it well be as large as the crops of the last three years.

Mr. MACLEAN. Has there been any improvement in regard to elevators and storehouses?

The MINISTER OF THE INTERIOR. There has been an enormous increase in the amount of elevator accommodation. Elevators are being constructed rapidly all over the country, and the accommodation will be vastly greater than it was last year.

Mr. HUGHES (Victoria). I might point out also that a good deal of the trouble during the last two years was due to the increased acreage sown. Many of the farmers had no granaries, and as soon as they threshed their wheat they were anxious to put it in cars or in an elevator. In other words, they wished the Canadian Pacific Railway Company to furnish them with granary and warehouse accommodation at a moment's notice. That will of course largely improve itself as time goes on. Not only have a great many elevators been built by the grain companies at the railway stations, and the railway companies have increased their elevator accommodation, but many farmers have built granaries. At the present time the Canadian Pacific Railway Company and the Montreal Transportation Company report that they are carrying cargoes westward, and are coming east light, because all the grain is out.

On section 3,

Mr. BOYD. Is it the intention to have those commissioners located at Winnipeg or to place them at other points throughout the province?

The MINISTER OF THE INTERIOR. They will have to be located at outlying points. The difficulty which arises with the commissioner at Winnipeg is that he is liable to get demands from different parts of the country at the same time, which necessitate a very large amount of travel and delay. They will have to be located at points whence they can get readily to places where complaints arise. The commissioner at Winnipeg will have general supervision over their duties.

On section 9,

Mr. BOYD. Would the hon. minister please explain this section ?

The MINISTER OF THE INTERIOR. The law as it stood made some provision requiring the elevator men to take in wheat whenever it was offered. They claimed that they were liable—they were advised that they were liable—if they did not take the grain when it was offered, even if their elevators were full and they could not get cars to ship. This provides that they shall not be required to take the grain in when they have not room for it.

On section 10,

Mr. DAVIS. As I read this clause, only the farmer who has a full car load of grain can take advantage of this provision of the Act. Now, there are a great many people living at a distance from the railway who are entirely left out of the benefits of this clause. A man living within ten or twelve miles of a railway station can call for a car and load it. But the man living at a distance must use the elevator. Now, there are many new settlers coming into this country who have not 1,000 or 1,500 bushels of wheat to ship the first year. But if two or three farmers together have enough wheat of a certain grade in the elevator to make up a carload, why should they not be allowed to combine and order a car ? If this is not allowed, the elevator people, knowing that these small growers cannot get cars, will have them completely at their mercy, and will buy their wheat at what they choose to give for it.

The MINISTER OF THE INTERIOR. I suppose that what my hon. friend (Mr. Davis) means is that if say three farmers, none of whom have enough grain to make a carload, could, by combining their warehouse receipts, make up a carload, they should be allowed to order a car to take the grain out.

Mr. DAVIS. That is exactly what I mean.

The MINISTER OF THE INTERIOR. I may explain that, as the matter stood under the Act of 1902, we had given the farmer the privilege of ordering a car to a loading platform or into the yard. But we did not give him the privilege of ordering a car to the elevator, even though he had his grain there. This is to cover that defect, and to enable a farmer who has his grain stored to order a car to the elevator and ship it himself and sell it direct. I do not know that there would be any objection to the amendment suggested by my hon. friend from Saskatchewan (Mr. Davis), but I would like to hear what the other members from Manitoba and the North-west Territories have to say about it before it is agreed to.

Mr. DOUGLAS. I would remind the hon. member for Saskatchewan (Mr. Davis) that the parties to whom he refers are still able to combine, as many did during last season, and fill their car at a loading platform. But, as the hon. minister has stated, the defect of the Bill last year was that no farmer could compel the railway company to place a car for him at the elevator. The railway companies refused to place cars at the elevators, consequently elevators were not used in that way. This section has been introduced into the Bill to overcome that difficulty.

Mr. DAVIS. I would point out to the hon. member for East Assiniboia (Mr. Douglas) that a man living twenty-five miles from the railway station is not in a position to load a car from a platform, as is a man living near the railway station. When he brings his grain he has to put it in an elevator. If he is given the privilege of combining with others to ship it, I cannot see that anybody would be injured. And these are the people that require to be provided for. Very often, the first year, they have not large crops or large means. If the law can be so amended so as to secure for them three cents or four cents per bushel that they would not otherwise receive, it ought to be given them.

Mr. SCOTT. This matter was given very serious consideration by the delegates both from the Grain Dealers' Association and the Grain Growers' Association who have visited Ottawa since the commencement of this session, and who spent not only hours, but days considering the various points coming up under these amendments, and who are largely responsible for the shape in which these amendments now appear. The point raised by the hon. member for Saskatchewan was given the utmost consideration. As has been explained by the minister, an additional privilege is being given by this section. Under the amendments adopted last year the farmers did not have the privilege of ordering a car to be spotted at the elevator to be loaded direct there, but were limited, so far as direct loading is concerned, to the platforms and flat warehouses. The difficulty found in making the provision my hon. friend (Mr. Davis) suggests is this : It was recognized that this extra privilege that is being given to the farmers of loading through the elevators will open a pretty wide door for—I suppose we will have to use the word 'fraud,' through perhaps that is an extreme term—a pretty wide door for fraud on the part of managers of elevators. These men may easily make arrangements with certain farmers or other people to order cars to elevators—perhaps people who do not own grain at all—simply to get for these managers more cars to load than they are entitled to. In later provisions of this Bill, it will be seen that very strict regulation is made with regard to the

distribution of cars. The principle of first come first served is endeavoured to be followed in this amendment, as in the case of the amendments adopted last year. My hon. friend was at some of the meetings, with myself and other North-west members, that were held in this city by the delegates I speak of. Personally I quite appreciate the disadvantage accruing to these farmers who do not grow as much grain as a carload, and I would be pleased if some reasonable suggestion could be made to their advantage. But up to the present time I have been unable, and the delegates were unable to agree upon any suggestion to give to the farmers the additional advantage, those of them who do not grow as much as a carload of wheat, without leaving the door open for an abuse of the privilege which is being granted to other farmers who do grow more than a carload of wheat, and who will be able to take advantage of the amendment.

Mr. DAVIS. I do not understand the arguments of the hon. gentleman. He says the door has been opened to a certain extent by allowing farmers the right to ship from the elevator. If you are opening the door by allowing a man who has a carload of wheat to come in and ship out of the elevator, what difference is it going to make if you let three men put their wheat together, and to ship it as a carload? Where will you draw the line? If the object is to shut off fraud by not allowing elevator men to get more cars than they are entitled to, you give them as much opportunity for fraud when you give the right to get a car for one man who has a carload of wheat as for three men combined who have a carload. The only difference is that you are protecting the poor man as against the elevator man.

Mr. SCOTT. The elevator men do not put any farmer in that position, because he still has the safeguard of the flat warehouse and the loading platform.

Mr. DAVIS. As a matter of fact, the principle was introduced of allowing grain to be shipped through elevators in order to protect people a long distance from the railway. As the Act stood before, the only people that could take advantage of it were those living within 10 or 12 miles of the railway There are many people in the North-west who live 15, 20 or 30 miles away from a railway, and as the Act stood, these people could not take advantage of it. It is impossible for a man who has to get a car and hold it for 24 hours, to bring in his wheat 30 miles and hold that car. This was done to allow men at a distance to take advantage of this Act. The North-west Grain Growers' Association themselves proposed to give the elevators 25 per cent of the cars, or something to that effect, on account of their having to handle grain from a distance. This was introduced to meet that difficulty, but I want it to go so far as that the poor man can take advantage of it just as well as the wholesale man who has a carload of wheat.

Mr. BOYD. I had not the advantage of meeting the grain growers and the grain dealers in agreeing upon the amendments that have been proposed to this Act, but I do know that last grain season attempts were made, and in some cases succeeded, whereby the grain dealers were able to get men to have cars placed at the elevators for them, in cases where they merely held the grain a day or two. As I understand it, this clause is put in to prevent that sort of thing. I see later on there is a provision made for prosecuting any person that attempts to take advantage of the Act in that way. I understand that the dealers, or rather the farmers who have elevators of their own, or who were interested in farmers' elevators, wished that cars should be placed at the elevator. While I appreciate what the hon. member for Saskatchewan (Mr. Davis) says in regard to the poor man, it is not very often that a man having three or four hundred bushels of wheat asks to have it stored, he usually sells it. It is the man that has a carload of grain that seeks to ship it himself, and if he has not enough for a carload, it is customary for him to get enough of his neighbours to combine with him to make up a carload. Now in order to do what the hon. member for Saskatchewan suggests, you will need to be very careful so that a man owning an elevator will not do as some did last year, and as many would like to do, that is, to get men who possibly have sold him 200 or 300 bushels of wheat to say, I have wheat at that elevator, and for that reason I want a car. The elevator man believes that, and he is enabled to get cars that he would possibly not be entitled to under the provisions of the Act.

Mr. DAVIS. If he was going to do anything like that it would be easier for him to get one man to do it than to get three. What is the difference? Supposing three men owned 500 bushels of wheat each, a car holds 1,500 bushels, and what is the difference whether one man has 1,500 bushels or three men, if it is all shipped out of the same car, if they are willing to put their wheat into the same car and ship it together? One man orders the car and I do not see any objection to that. If three men who have so much grain in the elevator—and they put it together and ship it, they are open to prosecution if they want to go together and produce their receipts, why should they not be allowed to do so? If you do not do that you are simply putting these men, who have a small quantity of wheat at the mercy of the grain dealer or the speculator. They know he cannot take advantage of the Grain Act to get the car. The man who has a

carload can get two or three cents more for it, and the poor man who has not got so much will get a lower price.

The MINISTER OF THE INTERIOR. I understand that my hon. friend from East Assiniboia (Mr Douglas) agrees with the views expressed by my hon. friend from West Assiniboia (Mr. Scott), and the hon. member for Macdonald (Mr. Boyd), while for myself, of course, I only desire that the clause shall be satisfactory to the producers more especially. I can see that a difficulty might arise in the way suggested by the member for Macdonald. My hon. friend from Saskatchewan (Mr. Davis) says that no difficulty can arise about three farmers who own wheat combining to make up a carload. No difficulty can arise when it is honestly done. If there are three bona fide farmers who have wheat in an elevator and they combine and order a car in good faith, no harm arises. That would happen in my judgment very seldom. I think, as the member for Macdonald has said that the case of a farmer who has less than a carload of wheat and puts it in an elevator is a very rare case, and it would not be likely to occur so often as to make a practical measure of relief necessary. Under any possible legislation we might provide there would be some cases which will not be adequately met. What we have to aim at in making these amendments is how best to enable the farmer to have complete freedom in shipping his grain. I confess that either way some difficulty may arise. But the cases in which the farmer would have so small a quantity of grain as less than a carload, and would have it stored in an elevator, would seem to be so few that it would be hardly necessary to make provision to meet such a case.

Mr. DAVIS. I am willing to admit that if a farmer knows he cannot take advantage of the Act he is not going to store his grain in an elevator, and he will sell his grain for whatever he can get for it.

Mr. SCOTT. If there is a flat warehouse he is not at the mercy of the elevator.

Mr. DAVIS. I do not know how a farmer is going to be able to ship his grain from a flat warehouse.

Mr. SCOTT. We are talking about communities of farmers.

Mr. DAVIS. If a farmer knows he cannot ship it in that way he will sell it, but it does not follow that if he can use the privilege in such a way that he can take advantage of it, although if two or three were able to store their grain together they might take advantage of the Act and get a higher price for their wheat.

Hon. Mr. TARTE. I would like to know whether the storage capacity has been increased since last year ?

Mr. DAVIS. Yes, I think it has been to a considerable extent.

Hon. Mr. TARTE. I am sure the committee would like to know in what proportion, if some of our hon. friends from the west were in a position to tell us.

Mr. SCOTT. I have a very casual knowledge, but I should think possibly 20 per cent would represent the increase that has been made in the elevator capacity.

Hon. Mr. TARTE. There has been a very large increase at Port Arthur during the last year.

Mr. SCOTT. I understand that the Canadian Pacific terminal elevator capacity will be almost doubled this fall as compared with last fall.

Hon. Mr. TARTE. If I am not mistaken the Canadian Pacific Railway and the Canadian Northern will have a capacity of 15,000,000 bushels this year.

Mr. McEWEN. I do not see any reason why, if three farmers have a carload of grain and they have three different certificates for that amount, two of them cannot assign their certificates to one of them and he cannot ship the grain.

Mr. DAVIS. Is there any legislation that prevents that ?

Mr. SCOTT. The trouble is that it would create a greater difficulty in preventing the irregular dealings that have been described by the hon. member for Macdonald (Mr. Boyd). That difficulty is going to be serious enough as the section stands, and in the event of the adoption of the amendment suggested by the hon. member for Saskatchewan (Mr. Davis) it would be simply impossible to procure conviction and punishment of this sort of violation of the law. I say that even as the section stands the difficulty will perhaps be great, and the delegates fully recognized the fact, but they deemed the provision necessary for the reason that without it the farmers' elevators are put out of business altogether. What are known as farmers' elevators are elevators put up by communities of farmers to enable them to ship their own grain from these elevators, and under the law as it stood last year they were not able to do business. The grain-growers while deeming this a proper provision, recognized that they were opening a door to irregular dealing, to the putting up of jobs whereby an elevator manager might enter into collusion with farmers outside to get more cars than he was entitled to in the car distribution. The case of the farmers' elevators was deemed by the delegates to be so important that they considered it necessary to put in such a provision, but although they gave the fullest possible consideration to the claims of the farmers for whom the hon. member for Saskatchewan speaks, and although these

farmers had the entire sympathy of the delegates, they were not able, nor were any of the members of parliament or senators who attended the meetings of the delegates, able to suggest such a provision as would not leave the door too wide open and make it absolutely impossible to prevent irregular dealing on the part of elevator owners.

Mr. DAVIS. It appears that there is a good deal in what the hon. member for Huron (Mr. McEwen) has said that if three farmers had a certain amount of wheat in an elevator and two of them sold it to the third one, he should have a right to ship it. But, where would he come in under this Bill as you have it now? If three men have a carload of wheat and two sell it to the third man, would the third man have the right to ship it?

Mr. SCOTT. I think so.

The MINISTER OF THE INTERIOR. I beg to move an amendment to section 11, as follows:

Provided that this subsection shall not be held to limit or curtail the rights of any applicant where such applicant has any grain stored or binned as above stated.

When this Bill was drawn it was suggested that the reading of section 11 along with section 58, which provides for the distribution of cars, might be held to imply an interpretation of the rights of applicants which is not intended. I am asking for this amendment simply to make it absolutely clear that section 58 is not intended to control the interpretation of section 11, which deals with the rights of applicants.

Section, as amended, agreed to.

On section 12,

The MINISTER OF THE INTERIOR moved:

That after the words 'in the' in the second line the words 'where the same first occurs' be inserted.

Amendment agreed to.

The MINISTER OF THE INTERIOR. I move to strike out the words 'one month' in the 28th line and substitute therefor 'ten days.' When notice is given by the warehouse man that the grain is out of condition the law requires that it shall be removed by the owner within one month, but that is considered an unreasonably long time to keep the grain, and so ten days has been substituted.

Section, as amended, agreed to.

On section 14,

Mr. DAVIS. Can two or more parties use that warehouse and still order cars to it?

The MINISTER OF THE INTERIOR. Yes. I move that the words 'of not less than 3,000 bushels capacity' be inserted after the word 'warehouse.' That was in the old Act, and after full consideration it seems to me that it is not good policy to permit warehouses of less than 3,000 bushels capacity. Every member of the House whom I have spoken to on the subject agrees to that view.

Mr. SCOTT. I am bound to say that I do not approve of this suggestion. I do not think that we ought to commence travelling backwards in the way of restrictions, and last year it was the opinion of the North-west members and a very large majority of the people who advised them, that the old restriction with regard to the size of the flat warehouses should be removed. It was removed, and for my part I certainly do not approve of re-enacting it. So far as I know, there is no person in a position to make a complaint of the operation of last year's Act with that restriction removed. The question of granaries was raised by my hon. friend from Victoria (Mr. Hughes) to-night, and it is a question that is very generally mentioned when we are dealing with grain blockades or any matter connected with the grain trade. I have before pointed out in this House that a farmer in the prairie country who is going to do his business to the best advantage cannot afford to have his granary on his farm, if his farm is far removed from the railway. He is bound to have his storage space right beside the railway in order that he may be at the best advantage. The provision for the flat warehouses as the Act was amended last year enabled any farmer, no matter what his output, to store his grain on the railway track, and those farmers, who were championed by my hon. friend from Saskatchewan (Mr. Davis) to-night, are those who are chiefly affected by this amendment. A farmer who grows 1,500 or 2,000 bushels of grain was permitted by the Act of last year to build his granary beside the railway, and that privilege enabled him to do his business most advantageously.

The MINISTER OF THE INTERIOR. Do you know of any flat warehouses that have been erected of less than 3,000 bushels capacity?

Mr. SCOTT. Not that I am aware of.

The MINISTER OF THE INTERIOR. I am quite certain that I never saw one and I am quite sure that my hon. friend (Mr. Scott) will never see one whether this law is changed or not. It seems to me that to give authority by an Act of parliament to require a railway company to give a site for a warehouse to hold grain of less than 3,000 bushels capacity, is an absurdity Suppose they started to erect small granaries of 1,000 bushels capacity, these would string out along the railway and fill up the sidings, and while it might be convenient for the farmers who happened to get in

first, it would be a great inconvenience to the general public, and would impede the shipment of grain and generally congest the business. The best proof that this is a sound view is that although under last year's Act there was no restriction, these small warehouses were not put up, because it would not pay, under the circumstances, to erect them. It may not be absolutely essential that there should be a limit, but it seems to me that the limit suggested is a reasonable one, and that it would be wise to insert such a provision.

Mr. SCOTT. When I come to think of it, I believe I can give the hon. minister instances of warehouses that have been erected of less than 3,000 bushels capacity. In Balgonie, McLean, Qu'Appelle, Indian Head, Sintaluta, and other points, there were last year and the year before scores of granaries put up by farmers for the purpose of getting their grain stored beside the railway track while the roads were passable. While I am not positive about the size of these granaries, I am pretty certain that scores of them put up at these towns were of a capacity of less than 3,000 bushels. My impression is that the average was 1,200 or 1,500 bushels capacity, and some of them were put right on the railway company's premises alongside of the track to save the necessity of more frequent handling than would otherwise be required.

Mr. DAVIS. I noticed myself in the riding of my hon. friend from East Assiniboia some of these so-called warehouses stretched out along the track and built something like a box car with a little round roof. If you are going to allow every man in the country to build one of these things on the railway premises around the station, I do not know how people are going to do business. The law requires them to cover them with metal, and that I suppose prevented them from building on the railway premises before. If a man wants to build a flat warehouse, if it is not going to hold 3,000 bushels of grain, he should not be allowed to build it on the railroad.

Mr. DOUGLAS. I think the hon. member for West Assiniboia forgets that most of these temporary warehouses in my constituency are on sidings. This section requires them to be on a siding or on some switch in connection with the railway. Most of these temporary granaries may be on the railway property, but they are not on the track or on a switch. I should not oppose the utmost freedom. In the Bill of last year everything in the shape of a restriction was removed, and very largely at my suggestion; but I dislike very much to compel a railway company to provide such a number of sites on a common switch as might be in requisition. A building holding 3,000 bushels is a small building. I know that from personal experience, having built temporary granaries, and having shifted them from one part of the farm to another. Did I contemplate building a flat warehouse and asking that a site on a switch should be furnished by the railway company, I would not for a moment think of putting up a building that would hold less than 3,000 bushels. Some phraseology might be adopted leaving it largely to the discretion of the grain commissioner to determine the size of the building.

Mr. SCOTT. My own impression is that the railway company has very little to fear so long as we leave the restriction, which was the only one left last year, providing that the flat warehouse must be covered with metal. So far as I know, no complaint has been made on the part of the railway company that any person has built a flat warehouse and covered it with metal, of less than 3,000 bushels capacity. It is well known that a majority of these warehouses were not on the railway, simply because of that restriction. It would be a great advantage to those farmers who are compelled to haul their grain or leave it on the farm until the road breaks up in the spring, to have the granaries on the sidings. It would save them an extra haul.

Amendment of Minister of the Interior withdrawn, and section agreed to.

On section 17,

The MINISTER OF THE INTERIOR. I wish to move to amend this clause so as to provide that the platform shall be eight feet wide and 54 feet long. The object of the change is to specify the size of the platform in the Act, which was requested by the railway companies, and I think it is reasonable. The height is left to be decided by the commissioner, because that is important with respect to loading. I also wish to amend the latter part of the section so as to provide that no loading platform shall be erected at sidings for crossings only.

Mr. DAVIS. Would that cover sidings outside of where there is a station yard? It is well known that on some portions of the lines running through new portions of the country there is a station every twenty-five miles, with a siding between from which the farmers ship their wheat. Would this cover that case?

Mr. SCOTT. I should think that if shipments of any class of merchandise are made at such a crossing, it could not be called a crossing siding, and the company would be compelled to erect a platform.

Mr. DAVIS. But it is only for the purpose of shipping grain at that season of the year. In my own district there are four or five of those sidings, and I would like to have it understood that these can be used.

The MINISTER OF THE INTERIOR. The point of my hon. friend is this: That

where stations are distant some twenty miles from each other and the companies have a siding between the two stations, we should provide that the sidings may be used. I have no objection to that, and I would move that the clause be amended by inserting the words 'Or upon a siding where there is no station' between the words 'yards' and 'at.'

Section, as amended, agreed to.

On section 58, subsection 13,

Mr. DAVIS. Before that is passed, I would ask the minister if that would take in the sidings I mentioned a while ago? The agent in my town has a couple of sidings outside the town under his control. Does this section provide for orders for cars being left at these sidings? As the section reads, I do not think it does.

The MINISTER OF THE INTERIOR. I will look up that point and speak about it later on.

On section 58, subsection 4,

Mr. DAVIS. This section provides that a person failing to notify the agent has to pay car rental at the rate of 25 cents per hour for each hour the car is held for him. I think that is rather a heavy fine. A poor man may happen to be four hours late and there is a fine of a dollar, and a dollar is a good deal to a settler who is not well off.

The MINISTER OF THE INTERIOR. A man cannot expect to have a car put on the siding for him and allow it to stand.

Mr. DAVIS. No, but the fine might be so much a day.

The MINISTER OF THE INTERIOR. This is to impose a penalty for delay which may be injurious to other people. I move that in subsection 13, after the word 'loading platform' the words 'or at any siding' be inserted. That will cover the point raised by the hon. member for Saskatchewan.

Motion agreed to.

Mr. BOYD. What is the meaning of this subsection 2 :—

Applicants may make order according to their requirements, and where an applicant requires two or more cars, he shall make two or more applications as the case may be.

When may he order two cars or how?

The MINISTER OF THE INTERIOR. He can order as many as he likes, but under a subsequent provision, he can only get one until all others are given at least one. My hon. friend will see that section 59 covers the point he has raised.

On section 61,

The MINISTER OF THE INTERIOR. I move to strike out the words 'on the Pacific coast,' and insert the words 'west of the boundary between British Columbia and the North-west Territories.' This is to enable a railway company to fill orders for grain west of British Columbia boundary line which they cannot do under the Act as it stands at present. It has happened during the last season that railway companies have received large orders for shipments from persons in Manitoba and the North-west Territories to some parts of British Columbia or the Pacific coast. Under the law as it was they were unable to fill those orders because they had to be shipped in large specified quantities, and they could not get cars all at the same time to any elevator or warehouse, and the result was that they could not take the orders at all. The railway companies were under a penalty if they furnished cars which they brought to the station in any other way than as provided by this Act.

Amendment agreed to.

On section 62,

Mr. BOYD. I want to move another clause, and I think this is the proper place to propose it. I will read it:

These commissioners shall semi-daily, as soon as possible after nine o'clock in the morning and twelve o'clock noon, on every day between the 31st day of August in each year and the first day of April the following year communicate by telegraph to the railway station agent at places in Manitoba and the North-west Territories where grain elevators are situated, the price of No. 1 Manitoba hard wheat and of No. 1 Northern wheat at Fort William, at the said respective hours, and each such agent shall immediately after the receipt of such telegram publish the same by writing it legibly on a blacboard in a convenient place accessible to the public at such station.

I may say, Mr. Chairman, that if this was done, I think, it would to a great extent do away with much of this trouble that we have had as regards the loading of cars and the loading platforms. I understand that such a provision prevails in certain states of the union, and it has worked very acceptably. It is true there will be some difficulty in carrying it out, but there should be none, for the reason that in several of the towns in Manitoba and the North-west Territories the price of grain in Minneapolis and Chicago is telegraphed every half hour. Now if the farmer could go to the station and ascertain the price of these grades of wheat at Fort William, at nine o'clock in the morning and at one o'clock in the afternoon, he would know exactly what price he is receiving for his wheat, and what rate the elevator man or the track buyer is allowing him for it and what profit he is receiving. Then if he is satisfied with the profit that the grain dealer is allowing him he can sell him his wheat, if he is not satisfied with it he can ask for a car and ship it. I think if this system was adopted it would to a great extent do away with a great deal of trouble

we have had in the past with regard to this phase of the question. I brought this matter up before the minister last year and he requested me not to press it. I was not aware this matter was being brought up to-night, and in order to give him notice of it, I handed this motion to the clerk.

The MINISTER OF THE INTERIOR. I think there is something to be said in favour of the suggestion that the hon. gentleman has made. The difficulty is in carrying it out. If I remember aright, the objection which obtained in my mind to this proposition when it was made before, was in regard to the commissioner taking the responsibility of deciding what the prices were and sending them out, because the probability is that the community at large would regard the commissioner as being responsible for these prices, and in cases of dispute as to accuracy, no doubt the department would be held responsible. There may be some way to work out the plan which my hon. friend has suggested. I have not given the subject any special consideration since the matter was before the House on a former occasion. But there is this to be said against it, that while the matter has been discussed and while every conceivable phase of the Grain Act has been discussed during the last year very fully by the grain growers who certainly do not lack full knowledge of the situation and the difficulties that they have encountered up to the present time, I believe none of them have suggested that this particular provision should be inserted in the Act. However, I am quite willing that it should receive proper consideration and I will allow the matter to stand over, if my hon. friend agrees to that view. I will leave the Bill in committee, think it over in the course of the next three or four days and get such information as I can upon the subject. I will ask the opinion of the commissioner as to whether he thinks it practicable or not and bring it before the committee again at a later day.

Mr. BORDEN (Halifax). I was endeavouring to assist my hon. friend from Macdonald in regard to drafting something that would cover the case, but I do not know whether it is in proper form, as it has been done very hastily. There may be some difficulty in this matter if the commissioner is not at some particular point all the time. Is the commissioner stationed in any particular point, or does he move around the country ?

The MINISTER OF THE INTERIOR. No, he is not at any particular point, but that difficulty could be got over in this way: He has an office in Winnipeg, and he has an assistant there, and, of course, the prices are quoted there every hour of the day. There would be no difficulty from that standpoint, because his assistant could send out the prices as well as he could himself.

Mr. BORDEN (Halifax). The difficulty that the hon. minister speaks of as regards the question of liability would be a very serious one, and if the proposition of my hon. friend from Macdonald were adopted it would be very desirable to add, to the clause which has been drafted, some provision to the effect that neither the commissioner nor the government should be in any way responsible for mistakes, because mistakes sometimes occur in the transmission of messages. There will be no possibility of any wilful mistake, but it might occur, as the hon. minister says, in the transmission of the message or from wrong information received by the commissioner.

The MINISTER OF THE INTERIOR. I do not think there is a very serious practical difficulty, with all due deference to my hon. friend from Macdonald. Some years ago, undoubtedly, farmers did suffer from lack of knowledge as to what was the price of grain, but I do not think it can be said at the present time that they have any difficulty in finding out what grain is selling for. When they come into town or come to a station, they have no difficulty in finding out what grain is selling for. The railway station agent is there and he gets the information, and there is nearly always more than one buyer. Still, I will go into it and see what can be done, if anything, to meet the wishes of the hon. gentleman.

Mr. BOYD. I think the hon. minister is mistaken in regard to that, because I know that there are times when as much as 10 cents a bushel was made by grain men in handling wheat. If the farmers knew what the price of wheat was, knowing the freight to Fort William, they would get cars under circumstances of that kind, ship themselves, and the dealers could not treat them in that way. The hon. minister says that farmers have no difficulty in ascertaining the price. The dealers themselves know the price. They get it from their houses every morning and every day at noon, and if the dealers can get that information there is no reason why the farmers should not have it from the commissioner. I have thought a great deal upon the subject, and I believe it would be a great benefit to the people of the North-west Territories, and I think if the hon. minister gives it as much attention as I have he will see that it is possible to provide for it.

Mr. DAVIS. If it is such a benefit as the hon. member for Macdonald says, how is it that the delegates of the Grain Growers' Association sent down here by the farmers did not advocate it ? They never made any suggestion in that direction, and I think they can be pretty well trusted to look after the interests of the farmers in a matter of that kind.

Mr. BOYD. I do no think that all the wisdom in the North-west Territories was

confined to the three or four grain growers who were sent down here. I have had opportunities of discussing this question with a great many farmers in the west, and they have expressed a desire to have such a provision as I have suggested.

Mr. DAVIS. The Grain Growers' Association represents the farmers of all parts of the North-west Territories. All the amendments to the Act that they desired were discussed, and when the delegates came down here representing the farmers, if they had required this amendment they would have asked for it.

Mr. BOYD. Probably if I had had an opportunity of discussing the question with them, that no doubt, the hon. member for Saskatchewan had, this amendment might have been engrafted on the Bill.

Mr. DAVIS. They were here for a week.

Mr. BOYD. I was not invited to take part in their meetings.

Mr. DAVIS. Neither was I.

Mr. HENDERSON. I was going to suggest that the hon. member for Macdonald probably had not an opportunity of bringing this before the representatives of the association, and that the hon. member for Saskatchewan, knowing that the hon. member for Macdonald had brought the matter up last year, in all probability overlooked or intentionally neglected to bring it to the attention of the delegates. I remember that this question was discussed here last year, and I thought the idea put forward by the hon. member for Macdonald an excellent one. It seems to me to be a grand thing that the farmers in the North-west should be able to get information not only once a day, but at all hours of the day as to the price at which grain is selling at Fort William or Winnipeg, or at leading points, so that he will know that he is not being taken advantage of. I am quite sure that the hon. minister can make provision for this, and I think the people of the North-west will be very much indebted to the hon. member for Macdonald for bringing this matter up.

Mr. SCOTT If my recollection is right this is not the suggestion that was made by the hon. member for Macdonald last year. I think he suggested last year that the railway companies should be compelled to furnish this information at every shipping point. This is a point that was not overlooked by the delegates from the Grain Growers' Association. It was discussed by them at various meetings, but was not pressed. They appeared to take the view that it was an unnecessary provision to add to the Act. I do not know what the custom, or practice, or system, may be which is prevailing in Manitoba, but in my own section of the North-west Territories the farmers themselves have taken steps to possess themselves daily of the information from Winnipeg or Fort William. As a matter of fact, the information comes from Winnipeg. They have certain arrangements made by which they are advised from time to time, sometimes more than once a day, when changes take place in the price. These delegates did not appear to wish that such a provision should be added to the Bill.

Section allowed to stand.

Progress reported.

The MINISTER OF FINANCE moved the adjournment of the House.

Mr. BORDEN (Halifax). What business shall be taken to-morrow?

The MINISTER OF FINANCE. I understand that the report of the Committee on Privileges and Elections is set down for to-morrow. For the government business, we shall have the resolutions and Bills which stand in the name of the Minister of Justice, and it may be that we shall be able to take the lead resolution.

Motion agreed to, and House adjourned at 12.05 a.m., Wednesday.

HOUSE OF COMMONS.

WEDNESDAY, August 5, 1903.

The SPEAKER took the Chair at Three o'clock.

INDEPENDENCE OF PARLIAMENT—MR. LOY, M.P.

Mr. F. B. WADE (Annapolis) moved :

That the second report of the Select Standing Committee on Privileges and Elections be now concurred in.

Mr. MONK moved in amendment :

That the said report be not adopted ; but that the appended draft report marked 'B,' be adopted by this House in lieu and stead of the report laid upon the Table of this House :—

The Select Standing Committee on Privileges and Elections beg to report as follows upon the question of the purchase of a post office site at Valleyfield :—

In the opinion of the committee, the following facts have been established by the evidence adduced before the committee, which is annexed to the report of the committee :

1. As far back as the year 1898, when Mr. George Loy was mayor of the town of Valleyfield, a petition of the citizens of Valleyfield to the government (exhibit No. 20), praying that a post office be built at the town of Valleyfield and on the property known as the Loy property, was circulated for signatures, and was forwarded to Ottawa and acknowledged by letter from the Department of Public Works to the mayor, Mr. George Loy, himself one of the signatories of the petition.

During the same year, the municipal council authorized two deputations to Ottawa to press upon the attention of the government the two

questions of sewers and post office building, and Mr. Loy, as mayor, formed part of both deputations.

(Evidence of Mr. Lavimodière, secretary-treasurer.)

2. After the election of Mr. George Loy, as member for Beauharnois, in the autumn of 1900, and at the first session which followed his election, a sum of $10,000 was appropriated by parliament for a post office at Valleyfield, Mr. Loy being, at the time of such appropriation, the sitting member for Beauharnois, wherein Valleyfield is situated.

3. Mr. Loy's election was protested and declared void, but he was re-elected at the by-election of 1902, and the sum of $10,000 was re-voted at the session of 1902 for the same purpose, the previous vote having lapsed, Mr. Loy being again the sitting member for Beauharnois.

4. On the 10th July, 1902, the Department of Public Works directed Mr. U. H. Dandurand, real state agent, of Montreal, to purchase the Loy property at Valleyfield, the instructions to that effect being conveyed in the following terms :—

(Translation.)

On Board SS. 'Stanley,'
July 10, 1902.

Mr. U. H. Dandurand,
Real estate agent,
Montreal.

My dear Mr. Dandurand,—My department requires a site upon which to construct a public building at Valleyfield. The locality most suitable for us is a property which belongs to Mr. Loy, on the principal street, fronting on the canal on one side and on a street at the rear part. The fact that this property belongs to the sitting member makes the purchase embarrassing for us. I request you, therefore, to purchase the property on the best possible terms. You have an extensive experience ; you will not say for whom you want to buy. I believe it was sold two years ago for $8,000. I fear you will not be able to have it for less than $10,000. You will, if you please, lose no time and obtain an option on this property without delay. I myself will pay you the usual commission. I have reasons for purchasing quickly.

Yours truly,
(Sgd.) J. ISRAEL TARTE.

5. Pursuant to these instructions, Mr. Dandurand sent out to Valleyfield a sub-agent usually employed by him in similar cases, named R. B. Johnston, who arrived in Valleyfield in the afternoon of the 14th July, and on the same evening secured from Mr. Loy an option in the following terms :—

Valleyfield, July 14, 1902.

R. B. Johnston, Esq.

Dear Sir,—Confirming our conversation of this evening, I beg to say that I will give you an option until three o'clock, Wednesday afternoon, on the 16th instant, for the purchase of my property in the town of Valleyfield, consisting of a lot land situated on Victoria street and extending to the street in the rear, on which are two dwelling houses, i.e., one of stone and the other of wood, the price to be $10,000, payable in cash on day of sale, the buildings at present on the lot, one used as a storehouse and the other as a tin-shop, to be removed within sixty days from date of purchase. It is agreed that the present tenants shall remove within the sixty days before mentioned.

Notice of acceptance or refusal of option to be given to me in Montreal on above date, or left at the office of McIntosh & Hyde, there.

Yours respectfully,
GEORGE M. LOY.

While Johnston did not disclose to Mr. Loy that he was acting, in the purchase, for the government, Mr. Loy said to him :

'Well,' he said, 'now it is not for the government, is it ?'

I said: 'That, Mr. Loy, is a matter that interests me, whether I wish to deal with the outsiders or the government.'

He said : 'I would like to know.'

Question : Yes ?

Answer : I said : 'I have several.'—(Johnston's evidence, p. 129.)

6. Johnston returned the following morning and reported to Mr. Dandurand, and an acceptation of the option was prepared by Mr. R. A. Dunton, notary, of Montreal, acting under Mr. Dandurand's instructions, and signed by Johnston. It is in the following terms :—

Montreal, July 16, 1902.

George M. Loy, Esq.,
Care of McIntosh & Hyde,
Montreal.

Dear Sir,—I beg to accept your offer to sell me your property on Victoria street for $10,000, as contained in your letter addressed to me, dated July 14, 1902, upon the terms therein mentioned, deeds to be executed before R. A. Dunton, N.P., with due diligence and within fifteen days. Price will be paid in cash on title being found satisfactory and deeds executed by you. Please send all papers and titles to Mr. Dunton to prepare deed of conveyance if desired.

7. On the day of the acceptance of the option (the 16th July) Mr. Loy came to Montreal, went to the office of Mr. Hyde, inquired about Johnston, and Mr. Hyde, at Mr. Loy's request telephoned to Mr. R. A. Dunton, notary, as to Johnston ; later in the day the acceptance was brought to Mr. Hyde, with $100 to bind the bargain, by Mr. Dunton, said $100 being furnished by Mr. U. H. Dandurand, and Mr. Hyde forwarded the $100 to Mr. Loy.

8. The delay of fifteen days mentioned in the option expired, but nothing occurred according to the evidence adduced, until on the 8th September following when the secretary of the Department of Public Works wired Mr. Loy as follows :—

'Kindly see the city clerk and ask him to forward us by next mail, if possible, a copy of the plan of the city of Valleyfield, which is needed to complete the purchase of site for public building.

(Sgd.) FRED. GELINAS,
Secretary.

Mr. Loy sent up the plan called for with the accompanying letter :—

Fred. Gélinas, Esq.,
Secretary, Department of Public Works,
Ottawa.

Dear Sir,—Your telegram received last night. I send you herewith, inclosed, the only plan of the town which I could get. I am informed that Mr. Sullivan, the former engineer of the town has a new plan, but he is away from home to-day. I will see him on his return and if he will lend it I will send it or take it up to you. I would call your attention to the fact that at present there are two post offices in the town, one in the central part and another near

the Canada Atlantic Railway station, in Bellerive ward.

I am, sir,
Yours very truly,
(Sgd.) GEORGE M. LOY.

And this letter from Mr. Loy was acknowledged by the Secretary of the Department of Public Works, as follows :—

Department of Public Works of Canada,
Secretary's Office,
Ottawa, September, 16, 1902.

Geo. M. Loy, Esq.,
Valleyfield, P.Q.

Sir,—I have to acknowledge the receipt of your letter of the 9th September instant, inclosing a copy of the plan of the city of Valleyfield, said plan being required by the department in connection with the purchase of Mr. R. B. Johnston's property.

I have the honour to be, sir,
Your obedient servant,
FRED. GELINAS,
Secretary.

9. On the 17th September, 1902, a memorandum for reference to council was prepared in the Department of Public Works.

It alleges as follows :

'That it is necessary to acquire a site for the public building which is to be erected at Valleyfield, P.Q., and for which parliament, at its last session, voted a sum of $20,000. (Should be $10,000.)

'That an officer of the department had examined the different sites available for this building, and has reported that the lot shown in pink on the sketch hereto annexed is the most suitable for the purpose. This lot is centrally situated, it runs from Victoria to Ste. Cécile streets and has a frontage on these streets of 77½ feet, and 163 feet deep.

'That the lot in question is owned by Mr. R. B. Johnston, who is willing to sell for $10,000 which price is considered reasonable by the officer who examined the site.

'The undersigned, in view of the foregoing, has the honour to recommend that the authority be given to purchase from Mr. R. B. Johnston the lot described above, and which is shown in pink on the plan hereto annexed, the said land being required for the purpose of a site for the public building which is to be erected at Valleyfield, P.Q., the price to be paid being $10,000.

This recommendation was adopted by council on the 22nd November, 1902.

10. On the 1st of December following (1902), the deed of sale from Mr. Loy to Johnston was ready for signature by the parties concerned, and then, for the first time since Johnston's visit to Valleyfield, they met, at the office of Mr. R. A. Dunton, notary, but the government cheque had not been issued, and it became necessary to procure money.

A note for $10,000 at one month was made by Johnston, and it was discounted by the Sovereign Bank, on representations made to the bank by Mr. Dandurand, the government agent, and the proceeds of the note in question were handed over to Mr. Loy on account.

Mr. R. A. Dunton gave the committee a statement showing how he subsequently disposed of the balance.

Here is the statement :

1902.

Dec.	1.	Net cheque amt	$9,600 00

Contra.

Dec.	1.	Paid Mr. Loy.....	$1,000 00
"	6.	N. Papineau	4,500 00
"	18.	Interest	731 90
		Paid R. A. Dunton, discharge.	7 30
		Paid balance, Loy	3,360 80

11. It will be seen that Mr. Loy only received, in reality, $9,700, Johnston having been allowed by Loy to keep (and Johnston having kept) $300 on account, as he represented, of trouble, &c., in negotiating to procure the amount.

12. The note of $10,000 matured in due course, but the government cheque not having yet arrived, it was renewed at fifteen days from 31st December, 1902.

Pressure seems to have been brought to bear to cause the official cheque to issue. The papers were in the hands of the Department of Justice for examination as to title.

The Deputy Minister of Justice, on the 17th January, 1903, wrote as follows :

Sir,—I have the honour to request that you will send me a cheque for the compensation money in this case in favour of Robert Bruce Johnston and Robert A. Dunton, agent of the Minister of Justice. I would be glad to have this cheque immediately, as the Minister of Marine and Fisheries has telegraphed, asking that the purchase may be completed to-day.

Finally, on the 19th January, 1903, a cheque for $10,000 issued from the Finance Department, payable to the order of R. B. Johnston and of Notary Dunton, who was to act as agent of the Department of Justice, specially appointed, and it was forwarded to Mr. Dunton, who caused it to be endorsed by Johnston and went with the latter to the Sovereign Bank to take up the $10,000 note previously discounted, and at the same time Johnston signed a deed of sale in favour of the government, the Public Works Department being represented by Mr. Charles Archer, advocate, of Montreal.

(Deed dated 20th January, 1903, similar in terms from Mr. Loy to Johnston, 1st December, 1902.)

13. 'Johnston's Interest.'—The only interest Johnston, the sub-agent employed by Mr. Dandurand, had in the transaction, was the remuneration given him by Mr. Dandurand himself, when Johnston returned from Valleyfield and made his report, as well as handed in the option to Mr. Dandurand (page 126). Mr. Dandurand is quite clear in his evidence on this point.

Johnston was paid a sum, between $50 and $100, for his services.—(Deposition of Mr. Dandurand, page 134.)

The reduction of $300 on the $10,000, obtained from Mr. Loy, whereby the price was reduced to $9,700, was without Mr. Dandurand's knowledge, and was a matter between Mr. Loy and Johnston only. In all other respects, in signing the deeds, in obtaining the discount of the $10,000 not, in signing cheques, &c., Johnston merely executed the instructions given him by Mr. Dandurand and Mr. R. A. Dunton.

Mr. Dandurand paid the notary $22, amount of his account, but his commission of $500, due by the government, is not yet paid.

14. 'Mr. Loy's Knowledge.'—It is difficult to understand, even outside of the documentary evidence, how Mr. Loy could be completely ignorant of what was going on in respect to his property from the time he received Johnston's first and only visit at Valleyfield, 14th July, 1902, until the day when he made the sale to Johnston, on the 1st December, 1902.

He never, as he admits, saw or endeavoured to see Johnston during that long period, until

he finally met him to sign the deed and draw money on the 1st of December, although in the interval correspondence passed between Mr. Loy and the government relating to the purchase of the Loy property.

He merely went to see a friend, Mr. Hyde, and had him inquire from Mr. Dunton if Johnston was all right.

The delay fixed in the option expired on the 30th July ; the Department of Public Works prepared its memorandum for Council, corresponded with Mr. Loy, the Order in Council was passed, there was a change of ministers, money had to be borrowed because the government cheque had not issued, the Loy contract had been delayed ; and of all this Mr. Loy states that he had no knowledge whatever, and never thought that the government was in reality the sole purchaser of his property.

The government part in the transaction must have been brought home to Mr. Loy when he received a formal demand from the Department of Public Works, on the 8th September, 1902, for a plan of the city of Valleyfield, which is needed to complete the purchase of site for public building.

Indeed, in his answer, accompanying the plan sent by him, Mr. Loy refers to the fact of their being two post offices in Valleyfield. Furthermore, information of a precise and definite nature was certainly conveyed to Mr. Loy, when the department, on the 16th September, wrote him officially that the said plan was required by the department in connection with the purchase of Mr. R. B. Johnston's property.

Under these circumstances, Mr. Loy could not have remained ignorant of the fact that Johnston, in the transaction with Mr. Loy, was an agent of the government.

In the opinion of the committee, the sitting member for Beauharnois was thus officially notified of the real state of affairs, and it became his duty not to carry out the sale of the 1st of December following, which he clearly was prohibited from doing under section 10 of chapter 11 of the Revised Statutes, which reads as follows :

'10. No person, directly or indirectly, alone or with any other, by himself or by the interposition of any trustee or third party, holding or enjoying, undertaking or executing any contract or any agreement, expressed or implied, with or for the government of Canada on behalf of the Crown, or with or for any of the officers of the government of Canada, for which any money of Canada is to be paid, shall be eligible as a member of the House of Commons, or shall sit or vote in the said House.'

In view of the fact, admitted by all witnesses, that the question of a post office site had been a burning question in Valleyfield since 1898, both while the property was held during four months by a Mr. Archambault, and since he retroceded it to Mr. Loy, after the four months, Mr. Loy cannot, in the opinion of the committee, plead ignorance of the real nature of the deed which he executed in December, 1902, and it appears to the committee that the law quoted above has been violated.

Evidence was adduced in regard to the value of the property, and also in regard to the availability of two government properties at Valleyfield ; but the committee confines its report to the facts which establish the violation by Mr. Loy of the law quoted above.

Mr. SPROULE. Before the House proceeds with the discussion, might I ask why we are expected to consider this report without having the evidence printed ? I have inquired for a copy of the evidence, and I am informed that it is not printed. While the report has been presented to the House, members cannot do justice to it if they have not an opportunity to examine the evidence.

The PRIME MINISTER. Question.

Mr. SPEAKER. The question is on the amendment.

Mr. F. D. MONK (Jacques Cartier). Mr. Speaker, before touching, as I will as briefly as possible, upon the evidence adduced before the Committee on Privileges and Elections, I would like to say a word of explanation in regard to the bringing before the House of the question of privilege which the House is about to consider. I have found it stated in the press and heard it stated elsewhere, and it was insinuated while the committee were proceeding with this investigation, that in provoking the investigation in question I had been moved by motives which I would be very sorry to see attributed to me. It was suggested in the public press and elsewhere that I had some personal rancour against the sitting member for Beauharnois ; and some went so far as to say that even further motives than that had animated me when I brought this very important matter to the notice of the House. I think it due to myself, and a duty on my part, to disclaim any such motive or intention. As a matter of fact, I state to the House now, and I trust that my statement will be accepted by the members of this House, that almost immediately after the purchase of this property by the government in January last, the circumstances of that purchase were brought to my notice, and, to a certain extent, were a matter of public notoriety in the county of Beauharnois and the surrounding counties and in the district of Montreal. Long before the session opened these circumstances were disclosed to me by parties who were familiar with them ; and, whether I displayed a want of sufficient zeal or failed to take that interest in the matter which it seems to me a matter of this gravity should command, the certificate of search of the registrar and the other documents bearing on this question were placed in the hands of my hon. friend the member for Montmorency (Mr. Casgrain). Subsequently, when the session opened, and from time to time during the session, this matter, which seems to me to be one of real importance for the members of this House, was again brought to my attention. When my hon. friend the member for Montmorency was called to England on professional business, the documents remained in the possession of members who sit on this side of the House ; and, as the close of the session approached, a distinct impression was made upon me that if we failed to bring this matter, which had been laid before us with all its surrounding cir-

cumstances, to the knowledge of this House, that failure to perform a public duty would be attributed principally to carelessness on my part or to some other unavowable motive. It was upon that impression, which was conveyed to me by unmistakable signs, that I deemed it my duty to bring the matter to the notice of this House ; and I trust, Sir, that in spite of the treatment which I received during the investigation before the committee, the members of this House will be persuaded by the explanation which I have given that, in calling the attention of the House to this grave violation of that salutary rule which guards the independence of parliament, I have been moved by no other motive than a sense of a public duty, which every member of this House, under similar circumstances, would have discharged in the manner in which I have discharged it.

It was said before the committee, time and again, that there was procrastination, and that the result was the exclusion from this House of the sitting member for Beauharnois (Mr. Loy). I need hardly tell the House that I did all in my power to have the investigation concluded in the shortest possible delay. I handed in the names of my witnesses, and the House will see by the proceedings of the committee that there is no justification whatever for the strictures of the chairman of the committee regarding delay. Indeed I have no hesitation in saying that I never before had to deal with a chairman who placed upon his duties as such the interpretation which the hon. gentleman who presided over this committee did place upon his.

The circumstances of the case are not very complicated. A very faithful recital of them is to be found in the Votes and Proceedings of this House of yesterday, which contain at length the minority report of that committee. With regard to the question of exclusion, when a question of privilege has been referred to a select standing committee, I do not think that the hon. member implicated is obliged to absent himself from the deliberations of this House. If he were, the House will realize what power there would be in the hands of hon. members to obtain the exclusion, during a long time, from the House of one of its members with regard to whom a question of privilege is raised. I have not had time to fully look up the authorities, but I would submit the following authority, taken from May's 'Parliamentary Practice,' page 393 :—

> On the 17th May, 1849, petitions were presented complaining of the conduct of three members, as railway directors. The members were permitted to explain and defend their conduct, but did not afterwards withdraw. It being contrary to the standing orders of the House to make a motion, or to enter upon a debate on the presentation of a petition, unless it complains of some present personal grievance, or relates to a matter of privilege, the conduct of the members could scarcely be regarded as under the consideration of the House at that time, and as soon as the members were heard, the petitions were ordered to lie upon the Table, without further debate. One of the members withdrew, but returned almost immediately to his seat.
>
> On the 28th of April, 1846, the House had resolved that Mr. W. S. O'Brien, a member, had been guilty of a contempt : but the debate upon the consequent motion for his commitment was adjourned until a future day : Upon which Mr. O'Brien immediately entered the House, and proceeded to his place. Mr. Speaker, however, acquainted him that it would be advisable for him to withdraw, until after the debate concerning him had been concluded. The reason for this intimation was, that the member had been already declared to be in contempt, although his punishment was not yet determined upon. On the 30th, a request was made through a member, that he should be heard in his place: but this was regarded as clearly irregular, and he was not permitted to be heard. But a member not yet adjudged guilty of contempt may return to his place, when the debate is concluded.

I would infer from that authority that after the question of privilege has been debated and been referred to a committee for investigation, the hon. member concerned is at liberty to return to his place and may take part in the proceedings of the House until the committee has brought in its report and found him guilty. Any other interpretation would be contrary to justice and reason and would proceed upon an assumption contrary to all the principles of our parliamentary laws, that a man is presumed guilty until he is proved innocent.

Let me refer briefly to the facts of the case. The fact is stated in the report that the question of the purchase of a property at Valleyfield for a public building had been discussed in the county of Beauharnois up to the year 1900, and after that up to the time when the government decided to purchase the property in question. Petitions had been sent to Ottawa, deputations had come to Ottawa, and the hon. member for Beauharnois (Mr. Loy), who was then chief magistrate of the town, formed part of these deputations. A vote of $10,000 had been appropriated in 1901 for the purpose of a public building in Valleyfield. No effect was given to that appropriation, and during 1902, after the by-election rendered necessary by the unseating of the sitting member and after an election contest of a very violent character, in which this question was the topic of discussion, the hon. member was re-elected, and parliament again voted $10,000 for a public building in the town of Valleyfield. On the 14th of July a letter was sent by the Department of Public Works—and I invite attention to this because it is the basis of the subsequent negotiations—to a well known real estate agent in Montreal requesting him to acquire the very property subsequently purchased. That real estate

agent deputed a man usually employed by him for the purchase of property where it is important not to disclose the name of the principal, to obtain an option on this property. This sub-agent came out to the town of Valleyfield and offered the hon. member for that county the price mentioned in the letter of instructions to Mr. Dandurand, namely, $10,000. Mr. Johnston, whose evidence was by no means favourable to those who wished to establish the truth of the charge made in this case, gave it as his opinion before the committee that it was impossible that the member for Beauharnois should have consented to a sale to the government had he known that in reality the government intended purchasing this property. But when Mr. Johnston, the sub-agent, is asked what grounds he had for that belief, he never having met the member for Beauharnois before that date, he relates the conversation which took place between himself and the hon. member on the 11th of July, and that conversation is referred to in the report. The very first question which the hon. member asked this emissary of Mr. Dandurand, and a very natural question under the circumstances, was this. Mr. Johnston says :

'Well,' he said, 'now it is not for the government, is it ?

I said : 'That, Mr. Loy, is a matter that interests me, whether I wish to deal with the outsiders or the government.'

He said : 'I would like to know.'

I said : 'I have several.'

From which I think, Sir, it is fair to infer that at that moment the member for Beauharnois had a suspicion at least that this much talked of purchase of this very property of his by the government was in the mind and in the intention of this agent. Well, during the space of a very short interview, the sitting member for Beauharnois gave an option to Mr. Johnston ; that option is to be found in the minority report printed in the proceedings of yesterday. I wish to call the attention of the House particularly to the fact that in that option, which is delivered to Mr. Johnston, who had acted on behalf of Mr. Dandurand, who was, for the purpose of this transaction, an agent of the government, conditions were imposed to that sale, and one of the conditions was that the sum of $10,000 should be paid in cash and the transaction completed within fifteen days, the deeds to be made out and the transaction completed within fifteen days, and the acceptance of the option to be made within two days, or on the 16th of July then ensuing. Mr. Johnston—this is established in the evidence—returned to Montreal, made his report to Mr. Dandurand, handed him in this option, and received the remuneration which he was entitled to, after having taken these steps towards the purchase of this property. The next day, if I mistake not, or on the 16th rather, the last day fixed for the acceptance, Mr. Johnston, or somebody on his behalf, had an acceptance prepared, that acceptance was prepared by Mr. R. A. Dunton, and I wish to call particular attention to this point, that he had been chosen both by Mr. Loy and by Mr. Dandurand, as the notary who was to act in the matter. He had been chosen by Mr. Dandurand, as results from Mr. Dandurand's own evidence, and he was the notary chosen by Mr. Loy, as results from the statement made by Mr. Loy in his deposition ; that is, the notary in the matter was Mr. Dunton, of Montreal. This acceptance was taken over to the office of Mr. Hyde, one of Mr. Loy's friends, not his business agent, but one of his friends in the city of Montreal, with a sum of $100 on account, which sum was sent out to Mr. Loy at Valleyfield. Now, Sir, I wish to submit to this House that from that moment there were fifteen days granted to the parties to complete the transaction, fifteen days within which the deed which was to constitute the real purchase was to be made out and the money, payable in cash, paid over to the vendor. This is an important point, because it may be claimed here that the property, from the moment of the acceptance, vested in Mr. Johnston, that the member for Beauharnois parted at that moment with his ownership of the property, and that everything which occurred afterwards occurred between the purchaser of the property, Mr. Johnston, and the government. The proposition which I submit to the consideration of this House is this, that upon the expiry of the fifteen days within which the transaction was to be completed and the money paid over, there was no more 'vinculum juris,' no lien de droit, as we say under our law in the province of Quebec, between the two parties in the event of failure to carry out the essential conditions mentioned in the option. That is the law of our province, and, although I am ignorant of the law of the other provinces, I venture to believe that is also the law of the other provinces, that where an option is given upon a property, and the conditions mentioned in that option as to be performed within a certain delay, are not performed, then the binding force of the option lapses, and that after the month of July there was no title in that property in Mr. Johnston, and in reality that property remained vested in the sitting member for Beauharnois. That, Mr. Speaker, is the law in our province, and the constant jurisprudence for many years. I think it is proper for me to give some proof of that proposition. Ever since 1876, and I believe long before—but I take that year as a starting point—the law in our province, such as I have laid down, has been so interpreted in our courts, both in the Superior Court and in the court of final jurisdiction in the province of Quebec. I quote from Stephen's Digest, of 1882, volume 2, at page 684, where a decision of the Queen's Bench rendered in 1876 is reported :

On the 28th July, 1874, the appellant gave to the respondent a writing, intitled 'sale from Daniel Munro to Mr. M. Dufresne.' It was in effect a promise of sale, by which Munro bound himself to sell to Dufresne certain immovable property, therein designated, for the price of $50,000, of which $8,000 was to be paid on passing the deed. The offer was to remain open until the 10th August. The parties met on that day at the office of Simard, notary, who was to have joined Dufresne in the purchase, but he declined to come in; Dufresne had not the funds ready, and they separated to give Dufresne time to make other arrangements. Later in the day Dufresne sent a letter to Munro stating that he accepted the offer made on the 28th July. The first point was whether this was a sufficient acceptance of the promise of sale to be binding on Munro. Was it sufficient that on the 10th August Dufresne should say, merely, I accept your offer? There was no difficulty that when there was a delay fixed, the expiration of the delay was fatal if there was no acceptance on the day. There was no necessity for a mise en demeure if the party does not accept on the day fixed.

The only question, then, was as to the meaning of the promise of sale. On the day named, the money was not forthcoming, and after some pourparlers Dufresne did nothing more than write to Munro, stating that he accepted the offer. It was in evidence that Munro subsequently sold the property to one B. For the same amount Dufresne then brought his action asking that Munro should have the deed to B. set aside and convey the property to him, or that the judgment be held to be a title for him to the property; and if the property could not be conveyed, that Munro be condemned to pay him $30,000 damages. The court below held Munro bound by the acceptance, and condemned him to pay $23,635 damages for the failure to convey the property. The question was this, was Dandurand bound to put the vendor en demeure on the 10th August to give him a deed on that day, and failing that, was he entirely debarred from any claim on the property?—Held that the word acceptance did not mean merely sending the vendor word that he would accept, but a complete acceptance, and that it was for Dandurand to put him en demeure. The judgment would therefore be reversed and the action dismissed.

That is the decision rendered in 1876 by the court of Queen's Bench. A similar holding was that of the Superior Court, presided over by Chief Justice Tait, on the 30th November, 1888. It was reported in the Montreal Law Reports, vol. 4, page 436. In that case it was held:

That, in order to put the vendor legally in default the plaintiff should have tendered the $6,000 within ten days from the date of the writing, and that the tender subsequently was too late. Further, that the plaintiff should have renewed the tender by his action, and brought the money into court.

A decision in the same sense was rendered by the court of Queen's Bench on the 21st May, 1890, as reported in the Montreal Law Reports, Queen's Bench, vol. 6, page 405. In that case, Foster vs. Fraser, it was held:

Where by a contract for the sale of real estate the buyer is to pay part of the price in cash within a fixed delay, in order to put the vendor legally in default to execute a deed the buyer must tender the cash payment within the delay; and in a suit to enforce the sale, and asking that the judgment be equivalent to title, he must renew the tender and pay the money into court.

A decision in the same sense was rendered still later, in 1897, in the court of Queen's Bench, Montreal. It is reported in the Quebec official reports, vol. 6, page 367. In the case of Deschamps vs. Goold, it was held:

Where the owner of real estate offered to sell the same, for a price named, to the plaintiff or to any one whom he might designate, and in the event of the plaintiff effecting a sale, he was to receive a commission of $500—the offer to hold good until a day fixed,—that the plaintiff was not entitled to claim the commission unless the vendor was put en demeure before the day fixed, to complete his part of the obligation, by the tender of a deed with the purchase price; or unless there is proof that the plaintiff, before the expiry of the term, had obtained a purchaser able and willing to fulfil his obligation, and that the inexecution of the sale was due to the unwillingness or inability of the vendor to complete it.

I think that point is of some importance, because I have contended, and I submit to this House, that when the month of August, 1902, arrived, the sitting member for Beauharnois had absolute ownership of the property, that Mr. Johnston could in no way consider himself the owner and would have no right to enforce a deed from the sitting member. Now, another point of some importance, is that, strange to say, even from the time when the sitting member for Beauharnois had given this option to the purchaser at a price which, if the evidence is scrutinized, will undoubtedly be considered a very good price for the property, if not too large a price, a price greater by $2,000 than the value estimated by the vendor himself two years before, at a time when he was not a sitting member, and when he promised to sell the property for some $8,000—I say that an extraordinary circumstance is that, from that day the personality of Mr. Johnston seems to have effaced itself completely from the mind of the hon. gentleman. He came to Montreal. He unquestionably must have had some desire to see the transaction completed. That is proved by the correspondence produced. And yet, never once until 1st of December following, months afterwards, does he seem to have taken the slightest interest in this proposed purchase of his property. But during the month of September, long after the option had expired, a correspondence took place between the sitting member for Beauharnois and the government itself. And I submit to the House, that it is impossible to read that correspondence, which is set out at length in the report that is proposed to be made in this matter, and not arrive at the conclusion that, by that correspondence, the sitting member for Beauharnois was made aware in an unmistakable manner, officially made

aware, made aware as much as if that knowledge had been brought home to him solemnly by notarial notification, that it was the government that was seeking to acquire this property. On the 8th of September, I believe it was, the sitting member for Beauharnois received from the Department of Public Works a request for a map of the town of Valleyfield, and the reason for the request given in that communication was that the map was required by the department in order to complete—not to initiate, but to complete—the purchase of a post office site in the town of Valleyfield. Members in this House will naturally say! This may have been an intimation to the member for Beauharnois that the government was completing the purchase of a site in the town of Valleyfield for this long desired post office, but where do you find in that communication any proof that it was Mr. Loy's property the purchase of which was intended by the government? Sir, a doubt may exist upon that point in regard to the communication of the 8th of September. We may assume in favour of the hon. member that he was not obliged to conclude from that communication any more than this—that at that time the purchase of a property in his own town and in his own constituency was being completed by the government. And we can understand that, under certain circumstances, as member for that constituency and as being informed on the 8th of September that this, to these people, most momentous question was being finally concluded, he should not have pushed his investigation any further. Certain it is that the plan was immediately forwarded by the sitting member to the department and his letter is on record in the proceedings of this committee. That letter refers to the question of the purchase of a site for the post office for the town of Valleyfield. Members of this House may take communication of that letter of the sitting member for Beauharnois and of his reference to the question of a post office in his constituency, and from it draw their own conclusion. But, Sir, another communication was sent to the hon. member. The receipt of this plan and of his letter and of his suggestions was acknowledged by the government in a letter dated a few days later, and also to be found in the printed report. In that letter, the secretary of the department thanked the hon. member for the plan which he had sent and states clearly that that plan was required from him by the government in order to complete the purchase of the property of Mr. R. B. Johnston, in the town of Valleyfield. This is what is stated in the communication:

> Sir, I have to acknowledge the receipt of your letter of 9th September inst., inclosing a copy of the plan of the city of Valleyfield, said plan being required by the department in connection with the purchase of Mr. R. B. Johnston's property.

That is dated the 16th September. Now, was it possible after the receipt of this communication for the sitting member for Beauharnois to be in doubt for a single instant as to what was the part that Mr. Johnston was playing in this transaction? He knew at that time, and if he did not know as a man learned in the law, he could have found out, that this property designated to him as R. B. Johnston's was his own property, and that the Mr. Johnston mentioned in this communication had no more right to the property than I have, that the option had lapsed and that consequently what was being prepared in the department was the report of the department, no doubt the Order in Council, required for the purchase of the property which on that date, the 16th September, was the property of the sitting member for Beauharnois and his property alone. On the 17th, or about that date, the report of the department was prepared. That report was forwarded to Council on the 22nd November following only and the Order in Council was passed authorizing the acquisition of this property from Mr. R. B. Johnston. I say again, because it is a circumstance of much importance and we have the proof in the proceedings of this committee, that during this time the sitting member for Beauharnois was in want of money and that he desired very naturally to see this sale terminated. There is no doubt of that. At that time there was a desire on the part of the sitting member to close this transaction and receive a part of the purchase price. There was a mortgage on this property and if the House will refer to the statement which was produced before the committee which was contained in this report the House will find that there were very considerable arrears of interest due on this mortgage. Nevertheless, during all this time, during the month of October, during the month of November and up to the very moment that the deed of sale was signed on the 1st December, the sitting member for Beauharnois, having all this knowledge officially conveyed to him, seems to have taken no steps whatever—in fact he says he took no steps—to find out what was the truth in regard to Mr. Johnston's role—his singular role, as it must have appeared to him—in this transaction. I say it is impossible to read the evidence in this case without arriving at the conclusion that steps were taken by the sitting member for Beauharnois, or by some person on his behalf, to hurry this transaction through. There is correspondence, there is a letter from the deputy Minister of Justice; and from this correspondence and this letter, anybody must arrive at the conclusion that steps were taken to hurry this transaction through. But, on the 1st December, a couple of days after these steps had been taken, there was no money to fulfil the essential condition of the contract; there was no money to pay the

vendor. The sitting member for Beauharnois was in the office of the notary, Mr. Johnston, who had not been seen by anybody, very naturally from the moment on the 14th July preceding after he had fulfilled his part of the transaction was there, the notary was there and there was no money. What happened? Through the interposition of Mr. Dandurand, the real estate agent chosen by the department to carry this transaction through, a note was discounted in the Sovereign Bank under the signature of Mr. Johnston without any credit that we could see attached to Mr. Johnston but on the representations made by Mr. Dandurand himself the personal note of Mr. Johnston with a bank with which he had never had any transaction whatever, was discounted for $10,000. The deed was then signed and the proceeds of the note were placed in the hands of the notary who was, as I have said, the agent both of the sitting member for Beauharnois as notary and as well the notary of the government. The notary handed over immediately the sum of $1,000 to the vendor and kept the balance to extinguish the mortgage of $4,500 and also to pay the amount of the accumulated interest which figured up I think to some $731. On the 18th, after having attended on behalf of the sitting member and on behalf also of the government to the discharge of this mortgage, Mr. Dunton, the notary, paid over the balance to the sitting member for Beauharnois, some $3,360. Now, the sale made by the sitting member to Mr. Johnston was for the sum of $10,000, but on the day when the sale, long suspended, was carried out, on the 1st December, Mr. Johnston seems to have reported to the sitting member that he was entitled to some $300. The evidence given by the sitting member is that the representation made to him by Mr. Johnston was that Mr. Johnston had trouble in negotiating to find the money. I assume, Sir, that we must give the sitting member credit for ordinary intelligence and he knew and knew positively, at that time that this Mr. Johnston had not in reality deeded this property over to the government that that part of the transaction had been decided weeks before; yet, if we are to accept his statement upon the representation made by this man that he required $300, he abandoned to him this sum of $300, and the deed of sale instead of being for the sum of $10,000, the exact sum voted by parliament, the exact sum available and the only sum available for that purpose that year; the exact sum which is mentioned in the subsequent deed of sale by Johnston to the government, was for the sum of $9,700. How the sitting member could have accepted this statement that Mr. Johnston notified to him in the official letter of the secretary of the Department of Public Works weeks previously as the man who was selling this property to the government; how I say the sitting member could have accepted this plea for the payment of $300 and accepted it upon the reasons alleged by Mr. Johnston, it is for the House to decide.

Now, Sir, this note for $10,000 was renewed. It was kept in the bank until further pressure from some parties—whether acting on behalf of the sitting member or otherwise—until further pressure was brought to bear upon the government to issue an official cheque. That cheque was issued from the Auditor General, from the Department of Finance, and it was made payable to whom? It was made payable to Mr. R. B. Johnston and also to the order of the notary, Mr. Dunton, who was, I claim, the agent, the appointee, the chosen notary of the sitting member for Beauharnois as well as the notary also chosen by Mr. Dandurand, and finally designated specially by the Department of Justice to act for that department in this affair. That cheque came to Montreal and on the day it arrived in Montreal, with the proceeds of that cheque, this note lying in the Sovereign Bank for over a month was taken up and Mr. Johnston signed his deed of sale to the govfernment. Now, Sir, it is apparent, I think, to the members of this House that Johnston never acted in this matter in any other capacity but as the agent of the government. It is clear from the documents produced and the evidence of Mr. Dandurand, that Mr. Dandurand was the agent directly named by the government, and that Mr. Johnston never for a single moment occupied any other position than that of sub-agent named by Mr. Dandurand to secure an option upon this property. Therefore he had no interest in the transaction but that of a paid employee, and from the moment he returned to Montreal and handed over his option and made report to Mr. Dandurand that he had fulfilled the duty required of him, he was paid off and disappeared from this transaction and never reappeared until the day when it became necessary—not to secure his intervention for any purpose relating to the completion of this transaction, not to treat with the government whose agent in reality he was as to the price, but merely to intervene in the notary's office to sign the authentic deed containing word for word all the stipulations contained in the previously signed deed between the sitting member for Beauharnois and this sub-agent himself. Sir, I do not wish to take up unduly the time of the House but it seems to me that the circumstances of this case disclose as clear an infraction of section 10 of chapter 11 of the Act relating to the independence of parliament as it would be possible to place before this House. Few cases I submit could be clearer. In matters of this kind as in many other matters with which members of the legal profession are familiar, where it is designed to evade the law, titles never pass directly; it passes through the agency of interposed persons, and who

bears that characteristic more in the present instance than the man Johnston who acted throughout this transaction? As to the knowledge of the sitting member I say that it is impossible after the communications which passed between the member for Beauharnois (Mr. Loy) and the government itself, weeks before this sale was completed; it is impossible for members of this House to arrive at any other conclusion, than that, at the time the sale was made on the 1st of December, the sitting member for Beauharnois knew perfectly well what was the role filled and to be filled by Mr. Johnston in this matter. Mr. Speaker, I submit to you that the amendment which I have proposed is well founded, and I would repeat that it seems to me that in bringing this matter to the notice of the House I have fulfilled a duty of which not only the public but the members of this House themselves ought to be grateful in a certain sense and in a certain degree. There was a time Sir, speaking more particularly for my own province, when there was no law in reference to the independence of members who sat in the representative assembly. I venture to assert without fear of contradiction that since that time there has been a tendency to violate to a certain degree that cardinal principle of the absolute independence of the members of this House, without which this House would be reduced to a state of absolute inutility. Under these circumstances it seems to me that every effort made for the absolute restoration of that independence so essential to the proper working of our representative institutions, is a step taken in the right direction.

Hon. J. I. TARTE (St. Mary's, Montreal). Mr. Speaker, I feel that it is incumbent on me to answer the observations that have just been made by my hon. friend from Jacques Cartier (Mr. Monk). I gladly acquit him of any improper motives on this occasion. He has stated, and I for one accept his statement in toto, that he has been animated by the desire of fulfilling his duty. He has invited his colleagues to take his word and I take his word. I would have been very pleased however if he had extended to myself and to Mr. Loy the same treatment, and had accepted our word. Mr. Loy and I have both stated on our word of honour the transaction as it took place. Mr. Loy stated on his honour that he had no knowledge of the purpose for which that property was acquired by Mr. Johnston. I stated on my word of honour that Mr. Loy never approached me and that I have never approached him when he was a member of parliament in reference to this matter. This personal question settled, permit me to call attention to the wording of my hon. friend's indictment. The hon. gentleman (Mr. Monk) states first.

That in 1898 Mr. Loy had sold his property when he was not a member of parliament, to Mr. Archambault.

With that the House has no concern. We have nothing to do with transactions carried on by gentlemen before they are elected to this House. The indictment as far as the sitting member is concerned is as follows:—

That from the time the said George Loy handed his said property to Archambault up to the day of the sale of said property to the Crown or government of Canada, he never ceased to be the proprietor of said property, and that at the time of the sale of said property on the 20th January, 1903, said Robert Brice Johnston was merely acting for and on behalf of said Loy, who in said manner did indirectly sell his said property to the Crown or government of Canada.

This is a very serious charge. My hon. friend, on information that he had received, has made to the House a statement that when Mr. Johnston bought Mr. Loy's property, he, Johnston, was acting on behalf of Mr. Loy himself—that in point of fact Johnston had been appointed as the agent of Mr. Loy to sell his property to that department. This is the gist of the charge. I ask my hon. friend from Jacques Cartier whether he has substantiated that charge in any way whatever? Has it been established by a tittle of evidence that Mr. Johnston was the agent of Mr. Loy? Why, Mr. Loy and Mr. Johnston have stated under oath that they did not know each other. Johnston had never met Mr. Loy, and Mr. Loy did not know Johnston even by sight. The Department of Public Works did not know Johnston. As my hon. friend has just said, before taking his seat, Johnston acted as an agent for Mr. Dandurand. He was paid for his services, not by Mr. Loy, but by Dandurand himself. It is true, Mr. Loy consented to give him $300 of the price of sale; but at that time Mr. Loy did not know that Johnston had been acting for the government. Now, my hon. friend will be obliged to recognize that he has utterly failed to establish the real point of his statement, that is to say, that Johnston was acting on behalf of Mr. Loy. That is the only point with which the House is concerned. I will not discuss the law in the matter. I will not follow my hon. friend in the statement he has made that the law might involve Mr. Loy in trouble because the deed of sale was not passed immediately. The main fact is that Mr. Loy did not know Johnston. Johnston, then, did not act for Mr. Loy. It is in evidence that Johnston was employed by Mr. Dandurand. In what capacity did Dandurand act? The letters that are in evidence show. When on a tour of inspection of the different works of the department I called at Valleyfield. Parliament had placed at the disposal of the department the sum of $10,000 to erect a public building there. It was then my duty to choose a site. I proceeded to the town, I found that a government site on which perhaps I might have cast my eyes was no longer available, as it had been rented by the Department of Railways and

Canals some time previous. There was no other government property which was fit for a public edifice. I made up my mind that the Loy site was the only one that was really fit, and I immediately instructed Mr. Dandurand, whom I knew very well, who is a trusted real estate agent in Montreal, to acquire immediately the Loy site. I was aware that I could not purchase Mr. Loy's property with his knowledge that the government was purchasing from him. I instructed Mr. Dandurand accordingly. Not to awaken a suspicion, he appointed a sub-agent. That sub-agent went to Mr. Loy, represented to him that he wanted the property for commercial purposes, and took an option on the 14th of July. On the 16th of July the option was completed in Montreal, $100 being paid down as a guarantee of good faith, the deed to be passed later on. From that date Mr. Loy was no longer the owner of his former property. He had nothing more to do with it. He had pledged himself to sell, and practically had sold. Every man of business will agree that when a man has given an option on a property, he is no longer the owner of that property, but has sold it. The deed had to be executed; that was all that had to be done. My hon. friend from Jacques Cartier lays a good deal of stress on the fact that in the month of September, before the final deed of sale was executed, Mr. Loy was communicated with by the secretary of the Department of Public Works. I was away then. Mr. Dandurand, the government agent, had communicated to the department officially the fact that he had secured the property that was indicated to him. Let the House not lose sight of this fact, that in the month of August, before these communications took place between the department and Mr. Loy, Mr. Dandurand had officially notified the department that he had secured the property he had been instructed to secure. There is written evidence in the record of that fact. Then the department was officially acquainted with the fact that the property was ours. There was only the ordinary procedure to be followed, and that is just what was followed. When the department is notified that a site has been secured, before passing the deed, the department sends an official to ascertain whether the site has been rightly chosen, and whether the price agreed upon is not too high. That is just what was done in this case. Mr. Routhier, an architect of the Department of Public Works, proceeded to the town of Valleyfield, and carried out the procedure which I have just indicated, and it was to give effect to the sale of which we had been notified that Mr. Gélinas, the secretary of the department, asked Mr. Loy, in the ordinary way of business, for a map of the town. Mr. Gélinas was not then aware of the different phases through which the sale had passed, I was not obliged to tell my officers what I had done. Mr. Gélinas acted in the ordinary way of business. He communicated with the sitting member for information which he might have got elsewhere. Surely if there had been any desire to conceal that transaction from the public, the Deparment of Public Works would have acted differently. The whole thing was carried out in perfect good faith. My hon. friend was surprised at the delay that took place in completing the purchase. Well, in the month of August the ministers were away, I was away, and it was only on the 17th of September that I ordered a report to be prepared. There was no sitting of the Council, and some time afterwards I resigned. Therefore, the delay on which my hon. friend has laid so much stress is very easily explained. The correspondence between Mr. Gélinas and Mr. Loy is also very easily explained. I do not desire to say much more on that question; I am a layman, and am judging things of that kind in the ordinary way in which laymen judge them. Mr. Loy gave an option on the 14th of July. On the 16th of July that option was executed and a sum of money paid in cash as a guarantee of good faith. From that day Mr Loy considered himself no longer the owner of the property. Mr. Dandurand had appointed Mr. Johnston as his agent without the knowledge of Mr. Loy or the Department of Public Works. Mr. Johnston carried out his mission in concealing from Mr. Loy the object of his errand. He went to the town of Valleyfield and explained to Mr. Loy that he wanted the property for commercial purposes. Mr. Loy inquired whether the purchase was for the government, and Mr. Johnston said no it was for other purposes. Mr. Loy did not know a word about the object of Mr. Johnston's mission, he did not know Johnston. On information that he received, my hon. friend took upon himself to assert that he was in a position to prove that Johnston was acting on behalf of the sitting member and that the sitting member was trying fraudulently to evade the law. That is the charge made. It is that Mr. Loy, knowing that he could not sell directly, appointed Mr. Johnston as his agent and that the two men were acting fraudulently. That charge my hon. friend has tried to prove. He has admitted himself that Mr. Johnston acted all through as the paid agent of Mr. Dandurand, and consequently of the government. It is evident that Johnston never acted as the agent of Mr. Loy. Then I ask: How can the sitting member be said to have been guilty of any fraudulent act? The House and the country will say no. Any man of good faith will say no. And without casting any reproach on my hon. friend, accepting his statement that he has acted in good faith, I verily believe he would have acted more creditably to himself and have shown greater regard for

the honour and dignity of the House, if he had agreed to the suggestion made to him by the right hon. gentleman who leads the House, and accepted the statement which Mr. Loy and myself made on our honour that the transaction had been carried out in the way it has been. But my hon. friend, proceeding on information he had received from the outside, saw fit not to accept our statement. The question was referred to the Committee on Privileges and Elections. Mr. Loy was examined under oath. He repeated under oath what he had said in the House, that he did not know for whom Mr. Johnston was buying his property. I was examined under oath, and I swore that Mr. Loy never approached me nor did I approach him since his election to parliament. It is true that in 1898, before Mr. Loy was a member, and when he was the first magistrate of the town of Valleyfield, a petition was signed suggesting as a suitable site for a public building, Mr. Loy's property. Parliament had not then voted any money for a public building. But the citizens of the town of Valleyfield were anxious to have a public building, and they recommended the Loy property as the best site. When Mr. Loy signed that petition, he had sold his property to a Mr. Archambault, and was no longer the owner. Later on, however, Archambeault did not pay, and Mr. Loy took it back. When he signed the petition in 1898 he was not the owner, but even if he had been, he was not a member of parliament, and but only the mayor of the town; and though it might be said to be a little risky, he had right, as well as anybody else, to sign the petition. The hon. member for Jacques Cartier has reminded the House that in 1898 Mr. Loy had sold to Mr. Archambault for the sum of $8,000, and that the government paid $10,000 for the same property; but my hon. friend knows that it is clearly established in the evidence that from 1898 to 1902 property in Valleyfield has increased by leaps and bounds. One of the statements which my hon. friend has made in his indictment is that the property sold to the government was sold at a price exceeding its value, and that the assessors had valued it at $5,000. In point of fact, the indictment of my hon. friend, from beginnng to end, is a charge of fraudulent conduct between Mr. Loy and myself, because if the property had been paid far too high, if Mr. Loy acted fraudulently in bonding it to Mr. Johnston, both Mr. Loy and myself are guilty. I am guilty for having closed my eyes to a transaction in which a member of parliament was involved and also to the fact that the property was purchased at too high a price. Sir, I took every possible precaution, and the evidence justifies my course from beginning to end. The evidence has established that property in Valleyfield is assessed at two-thirds and sometimes one-half of its value. One of the assessors, himself a political friend of the hon. member for Jacques Cartier, swore that in his official capacity he was accustomed to value property at two-thirds and sometimes at one-half its real value.

That point is clear, and on that score, as to the others, my hon. friend (Mr. Monk) has failed, I know he has acted in good faith. He had his information from parties who have told him stories that he should not have believed. The transaction was carried on in an honest way; and, indeed, I can only repeat what I said on a former occasion, that I am so sorry that my hon. friend the sitting member for Beauharnois has been subjected to such an annoyance. Let me tell the House that no more honest man has ever lived in any country than my hon. friend from Beauharnois. He is an honest man in the very best sense of the word. And that is the main reason, perhaps why the French Roman Catholic riding of Beauharnois elected him, an elder in the Presbyterian church, as their representative in this House. He was an honest man then, he is an honest man to-day. He has not violated the law willingly or knowingly, and I hope he has not violated even the letter of the law. The proverb says that the letter of the law kills. I hope it will not kill on the present occasion, for the spirit of the law has not been violated. The hon. member for Beauharnois did not know what I was doing in this matter. I concealed my actions from him; the department concealed their actions from him. He has acted in perfect good faith; he has sold at its real value a property that could be sold to-day at a profit. It is in evidence that a property smaller than his could not be bought then for less than $13,000 cash. The value of property in the town of Valleyfield has been going up by leaps and bounds within recent years.

Well, Sir, I think I have covered all the points that deserve to be covered: The property was not bought too dear; Mr. Loy had no knowledge of the object for which it was purchased; Mr. Johnston did not act as his agent. There remains nothing except the fact that my hon. friend from Jacques Cartier has been wrongly informed by parties who had other purposes to serve than promoting the public interest. I quite understand that political warfare must be carried on. It is a case of political warfare on the part of the informants of my hon. friend from Jacques Cartier. He has given his word to us and to the country, and I take his word. But our word must be taken also. While taking my hon. friend's word, as I am glad to do, and as I am bound to do, yet I say without hesitation that those who informed him have been acting from purely party motives. Such sentiments should not be—and I hope will not often have occasion to be—ventilated in this House. When the case is as clear as

it has been made, it seems to me we should not have held the long investigation we have held, the result of which is now known to the country at large.

Mr. S. BARKER (Hamilton). As I was a member of the committee to which this question was referred, and as I concurred in the minority report now under discussion, I desire to say, in as few words as possible, why I formed the opinion I did, that the minority report should be sent to this House, and why I think this House should receive and adopt it. The question was not one as put by the hon. member for St. Mary's (Hon. Mr. Tarte) of the moral wrong or moral guilt upon the part of the member for Beauharnois, but whether that gentleman committed an act, which, under the statute relating to the independence of parliament voided his seat. The question arose under section 10, which is in these words :

No person, directly or indirectly, alone or with any other, by himself or by the interposition of any trustee or third party, holding or enjoying, undertaking or executing any contract or agreement expressed or implied, with or for the government of Canada, on behalf of the Crown, or with or for any officer of the government of Canada, for which any public money of Canada is to be paid, shall be eligible as a member of the House of Commons, or shall sit or vote in the said House.

Now, the sole question was whether Mr. Loy, while member for Beauharnois, had brought himself within the terms of that section. Of one thing there is no question whatever, Mr. Speaker, that the Department of Public Works intended to buy this property from Mr. Loy. There is no question whatever that the department resolved to make that purchase through the interposition of an agent. The minister employed a Mr. Dandurand to make the purchase, and that agent of the government simply sent an employee of his to do the work. Now, what occurred ? Mr. Johnston, who was the sub-agent or employee of Mr. Dandurand, went down to Valleyfield and there saw Mr. Loy. After an hour's discussion, or less than an hour's discussion, Mr. Johnston obtained a written option from Mr. Loy for the purchase of this property for $10,000. Now, just here it is necessary to recall the fact that for three or four years prior to the closing of this transaction, the construction of a public building in Valleyfield and the purchase of property for that purpose was a burning question there. Before Mr. Loy became a member of the House, while he was mayor of Valleyfield, he had taken part in deputations that had come to Ottawa to urge that a public building should be constructed in Valleyfield, which was within what afterwards became his constituency. It was known to him that many of the people of Valleyfield were urging that Mr. Loy's own property should be purchased by the government for the purpose of this public building. Mr. Loy first became a member of this House in 1900, and at the following session there was a sum of $10,000 placed in the estimates for the purpose of this public building in Valleyfield. Under circumstances that we need not go into here, Mr. Loy lost his seat in this House, and was subsequently re-elected at a by-election. He became a member of this House again in 1902, and again the vote of $10,000 was placed in the estimates and granted by this House for the purpose of this public building. So it stood until July, 1902, when this Mr. Johnston being sent out by the agent of the government, saw Mr. Loy and negotiated with him for the purchase of the Loy property. And, shortly, they agreed that there should be an option given for two days to sell this property to Mr. Johnston in his name for the same sum of $10,000, the amount that was in the estimates for the building at Valleyfield. Mr. Johnston, in the course of the conversation, was asked by Mr. Loy this question :

Well, Mr. Loy said, now it is not for the government is it ?

Now, Mr. Speaker, what induced Mr. Loy to ask that question ? Was it not his consciousness that what had been going on for three or four years was now culminating in the purchase of the property ? Was it not his suspicion, at least, that the person who was there offering to him, or willing to contract with him for $10,000 to buy this property, was really an undisclosed agent of the government ? He asked him a question, and what is the answer ? Mr. Johnston says :

That, Mr. Loy, is a matter that interests me, whether I wish to deal with outsiders or the government.

Now, surely that answer alone was sufficient to put Mr. Loy upon inquiry, he knowing at the time that he could not sell that property to the government without forfeiting his seat in parliament. But the matter does not rest there. There are further circumstances that bring the knowledge more clearly to Mr. Loy. The acceptance declared that Mr. Johnston was to complete the purchase, and obtain his deed, and pay the purchase money within fifteen days. He did not do so, and apparently nothing was done. The matter was allowed to lie in suspense until December, but some correspondence passed in the meantime. On the 8th of September a clerk in the Public Works Department telegraphs to Mr. Loy :

Kindly see the city clerk and ask him to forward us by next mail, if possible, a copy of the plan of the city of Valleyfield, which is needed to complete the purchase of site for public building.

Now, I would call attention to the fact that at this time the contract with Johnston was in suspense, no action was taken upon it. Mr. Loy knew that the question of the

public building related to his property; he knew he had given an option to this man and had not yet received his purchase money, yet without a word with the department without a word of inquiry he sends the plan. 'Are you buying some property; whose property are you buying?—would have been natural questions for the member for the constituency to ask, especially in the interests of the citizens of Valleyfield. He gets that plan, and he sends it to the Public Works Department with this letter:

Your telegram received last night. I send you herewith, inclosed, the only plan of the town which I could get. I am informed that Mr. Sullivan, the former engineer of the town, has a new plan, but he is away from home today. I will see him on his return, and if he will lend it I will send it or take it up to you. I would call your attention to the fact that at present there are two post offices in the town, one in the central part and another near the Canada Atlantic Railway station, in Bellerive ward.

These latter words are significant, as written by a gentleman who had no knowledge that his own property was being bought by the government. There Mr. Loy clearly shows that he knows what is the object of this purchase, it was in connection with a further post office that the town was claiming, and which the government was about to construct, and for which a vote was in the estimates of the year. The plan being sent, the clerk in the Public Works Department writes a further letter, which even more clearly brings home to Mr. Loy the knowledge that it was his own property that was being dealt with:

I have to acknowledge receipt of your letter of the 9th September instant, inclosing a copy of the plan of the city of Valleyfield, said plan being required by the department in connection with the purchase of Mr. R. B. Johnston's property.

Mr. R. B. Johnston was the man who held an option for the purchase of that property from Mr. Loy, the man who was in default, who had not carried out his undertaking to pay for the property within fifteen days. Johnston is apparently selling this property to the government, and Mr. Loy is to be assumed as supposing that he was acting as a man who had acquired and then owned the property, and was selling it again for an advance, perhaps, upon the price. Now, is it conceivable that that could be so? Is it possible to conceive for one moment that a man of the intelligence that we all know Mr. Loy possesses, would not see at once that Mr. Johnston was simply an intermediary of the government, and that he had been sent there to get round the provision of the statute; Mr. Loy knew he could not sell to the government directly, that the government ought not to buy from him directly, and so a Mr. Johnston was interposed? Mr. Johnston gets an option to purchase, he does not carry it out, but the transaction is going on in the Public Works Department, and Mr. Loy is asked to furnish a plan. He knows it is to be for a public building, and he knows it has relation to this Mr. Johnston who held an option from him, and he would have us believe that he had no suspicion that the purchase by Johnston was for the government.

Now, I do not wish to occupy any longer the time of the House. The hon. member for Jacques Cartier has gone into the whole of the circumstances very fully. I can only say, Mr. Speaker, that if, under such circumstances as are here stated, it is possible for a member of this House to sell property to the government through an intermediary, the Independence of Parliament Act is absolutely waste paper. Any member can buy from or can sell to the government, and the government can buy from any member by merely sending down a person to carry out the transaction, a third person, who is merely a nominal party in the bargain. I do not wish to comment further upon the case except to say this, that although Mr. Low was kept until the 1st of December—the option having been given in July, to be carried out within fifteen days—although he was kept until the 1st of December before he got his money, he allowed Mr. Johnston to keep $300 out of the prchase money; instead of allowing him to keep $300 out of the purchase money, if there was anything that one side should be paid by the other, it was that Mr. Loy should have received interest from Mr. Johnston.

Mr. F. B. WADE (Annapolis). I do not propose to detain the House very long; I think it will be sufficient for me to make but a few remarks in regard to this matter. The facts as they are now before us were disclosed at the beginning of the session, all the circumstances were communicated to the hon. member for Montmorency (Mr. Casgrain), but he did not think them of sufficient importance to warrant him in taking any action upon them. We are told by the hon. member for Jacques Cartier (Mr. Monk) that he knew of these facts previously to the beginning of the session. He has told us that he is very anxious to preserve the rules and privileges of the House; and yet he sat in his seat and allowed Mr. Loy to sit here for four months and a half in violation, as he believed, of the statute, without saying one word. He did not move in the matter until he was urged to do so by some influence or other, and that influence cannot have been from the hon. gentlemen who sit upon the other side of the House, because they did not take enough interest in the matter to appear before the committee, only two or three of them. I do not know where the influence came from, but I have a very shrewd suspicion. Now, the facts that were disclosed to us are these: First, that Mr. Loy, in January, 1898, gave a promise of sale of this piece of property to Mr. Archambault, and that

that promise of sale was afterwards discharged, along in June. So far, there is no dispute. But there was the further statement in the charge that, although this promise was absolute, there was a secret agreement between Mr. Loy and Mr. Archambault which raised a suspicion that the promise was given for the purpose of enabling Mr. Archambault to make a sale of the property to the government in the interest of Mr. Loy. Mr. Archambault came upon the stand and testified himself, strongly, that such was not the case, that there was no agreement whatever between himself and Mr. Loy to that effect, and Mr. Loy said the same thing. It further transpired that Mr. Archambault took possession of the property. During the months that he had it he moved the buildings and did other things and made a loss of $800, and he only failed to carry out the arrangement because he could not get the money for that purpose. The committee very properly concluded that this transaction in 1898 had nothing whatever to do with what has been charged against Mr. Loy. Another matter that has been charged against Mr. Loy is that the purchase by the government of this property was a purchase by the government from Mr. Loy through the agency of Mr. Johnston. The words of the charge are as follows :

That from the time the said George Loy handed his said property to Archambault up to the day of the sale of said property to the Crown or government of Canada, he never ceased to be the proprietor of said property, and that at the time of the sale of said property on the 20th January, 1903, said Robert Bruce Johnston was merely acting for and on behalf of said Loy, who in said manner did indirectly sell his said property to the Crown or government of Canada, in violation of chapter II. of the Revised Statutes of Canada, 'An Act respecting the Senate and House of Commons.'

I will admit that if the statement had been correct, then Mr. Loy would have violated the statute, but it is not correct even according to the statement of the hon. member (Mr. Monk) himself, because, to-day, upon the floor of this House, he does not pretend to say that Mr. Johnston was the agent of Mr. Loy, but he turns it now and says that Mr. Johnston was the agent of the government. There is the crux of the whole situation. If he had been the agent of Mr. Loy, or if he had to the knowledge of Mr. Loy been the agent of the government, then, there would have been a violation of the statute, but surely no hon. member would pretend to say that if Mr. Johnston was not the agent of Mr. Loy, and if Mr. Loy had no knowledge of the agency of Mr. Johnston on behalf of the government, Mr. Loy has committed any breach of the statute. If I am not correct in that, then, I will warn hon. gentlemen on the other side to be very careful before they sell property, because the government could send out an agent to purchase a piece of property no matter how small from one of their number and then some hon. member might get up in the House make a charge against the party selling the property and we would have to turn him out. That is a proposition that the hon. member for Hamilton (Mr. Barker), a lawyer stands up in the House and makes. It seems a surprising thing that he should pretend to support such a proposition as that. Let us refer to the statute and see what it says. Section 10, I believe, is the section that hon. gentlemen opposite claim has been violated :

No person, directly or indirectly, alone or with any other, by himself or by the interposition of any trustee or third party, holding or enjoying, undertaking or executing, any contract or agreement, expressed or implied, with or for the government of Canada on behalf of the Crown, or with or for any of the officers of the government of Canada, for which any public money of Canada is to be paid, shall be eligible as a member of the House of Commons, or shall sit or vote in the said House.

I would like hon. gentlemen to note well the construction of this section :

No person, directly or indirectly, alone or with any other, by himself or by the interposition of any trustee or third party, &c.

That is if he sells the property to the government himself he commits an offence. If he sells the property by means of an agent or trustee then he violates the statute. That is the reasonable construction of the statute, and that is the evil that the statute was intended to remedy. The object of the statute was to put it beyond the power of the government to in any indirect way bribe the representatives who sit in the House, but I cannot conceive of any lawyer pretending to argue in favour of the other interpretation.

Mr. BORDEN (Halifax). If an agent of the government goes to a member of parliament and buys a property from him and the member of parliament does not know at that time that the agent is the agent of the government but he discovers it before the bargain is completed that this man is really buying for the government does the hon. gentleman think that is not covered by the statute ?

Mr. WADE. I did not say that at all.

Mr. BORDEN (Halifax). I want to know.

Mr. WADE. The hon. gentleman shall know. I thought I made the hon. gentleman understand me as I went along, but, if I have failed, that is my misfortune. If he finds out before the sale is completed of course he does know. My proposition is simply this, and it is so plain to my mind that it does not need any demonstration, that if the party does not know at all surely he cannot be liable under this section, but if he does know that the agent is acting for the government, then, of course, he is liable.

Some hon. MEMBERS. Hear, hear.

Mr. WADE. My hon. friends say 'hear, hear.' I am glad that I have been able to make them see this thing as I see it. The question is: Did Mr. Loy know that Mr. Johnston was acting as agent for the government? I make bold to say that there is not one word of testimony to support that position. But, there is the emphatic evidence of Mr. Loy, the emphatic evidence of Mr. Tarte, and the emphatic evidence of Mr. Johnston, all the other way showing that Mr. Loy did not know that Mr. Johnston was acting as the agent of the government. What did Mr. Loy know, and what did Mr. Johnston say? Mr. Loy, in the first instance, asked Mr. Johnston if this property was for the government. It was a very ordinary question to ask. What answer did he receive? It is a question for me whether I deal with the government or with outsiders. That was Mr. Johnston's reply. Is that not a proper answer for a man who is buying property to make? If I go to Mr. A to buy his property from him, if he states his price and I am willing to give the price, has Mr. A any right to limit the parties to whom I shall sell that property? If Mr. Johnston had bona fide purchased the property had he not a perfect right to go out and sell it to the government the next day or at any time that he saw fit? Mr. Johnston gave Mr. Loy to understand that he needed the property for a departmental store, and Mr. Loy has told us in his testimony that he believed that he was selling the property to him, but I submit here as a reasonable proposition that if Mr. Loy, at the time he sold his property, believed honestly in his mind that he was selling it to Mr. Johnston it does not make the slightest difference what was in the mind of Mr. Johnston. When did Mr. Loy have the first knowledge that the government was going to get this property? According to his evidence it was long afterwards, nearly two months afterwards on the receipt from the secretary of the Department of Public Works of the letter acknowledging the receipt of a plan he had sent and which letter stated that the plan was required for the purpose of concluding the purchase of the property from Mr. Johnston.

Some hon. MEMBERS. Hear, hear.

Mr. WADE. I hope my hon. friends will be quiet until I am done. At that time had Mr. Loy knowledge that Mr. Johnston had negotiated a sale of the property to the government? Certainly, and he does not deny that for a moment, but he had no knowledge at the time Mr. Johnston was acting as agent of the government in the purchase of the property.

Mr. LANCASTER. I was not able to be at the committee all the time and the evidence not having been printed, I am obliged to ask questions to know what the evidence was, because I have no means of knowing. Did Mr. Loy say where he supposed the government were going to build the post office?

Mr. WADE. I do not know that there was ever anything said about it. There was an attempt on the part of Mr. Monk to prove that the government had a site there which they could have built on, but he has abandoned that as he has abandoned the statement made by him that the price paid for this property was too large. The statement made by Mr. Loy was that he had no knowledge of the government getting this property until long after he had concluded the terms of sale, and had received $100 on account.

Mr. BENNETT. And did not get the consideration.

Mr. WADE. Certainly he did not get the consideration; that has been stated half a dozen times over. He only received $100 on account, and he was under promise to convey the property to Mr. Johnston, and the evidence shows that he did not know that Johnston was the agent of the government until long after the deed had been passed and until after the whole money had been paid to him. I am not quite as suspicious as some hon. gentlemen opposite and that is the reason why I am not ready to condemn any man upon the mere statement of so flimsy a suspicion as has been put forward here. The last speaker also tried to make the point, that the option of sale was given in July for fifteen days, and that the sale was not concluded until December. Why, to my mind, that and the explanations that were given, afford the strongest argument in favour of the honesty of Mr. Loy and of his innocence and want of knowledge in this whole matter. The negotiations were going on and this Mr. Johnston was trying to get the money. It was a continuous contract, it had never been ended by Mr. Loy, he was anxious to sell his property, he needed the money to clear off the mortgage upon it, and finally at the suggestion of Johnston who said he had trouble in raising the money and that Loy would have to drop $300 from the price in order to enable him to expedite the obtaining of the money, Loy did so, and then Johnston went and negotiated his note with the Sovereign Bank in Montreal, obtained the money and paid it into the hands of the notary who, with the proceeds discharged the mortgage that was on the property and handed over the balance to Mr. Loy. Now it does seem to me that the only question we had to consider, and the only question we have to consider to-day is: Whether the statement of Mr. Loy in that connection is true or false. He has undertaken to swear, and he is supported in it by three other witnesses. that he never knew that Johnston was an agent of the government until after the deed had been passed. That is exactly the evidence and it is just as it appears.

He did know on September 16th that the government was buying property from Johnston and that is the statement contained in the letter——

Hon. JOHN HAGGART (South Lanark). The hon. gentleman has made a very important statement, and might I ask him when was the deed passed ?

Mr. WADE. The deed was signed in December if my memory serves me.

Hon. Mr. HAGGART. Then surely he had the knowledge on the 8th September according to your own admission.

Mr. WADE. Not at all. The hon. gentleman (Hon. Mr. Haggart) does not seem to follow my remarks for the purpose of getting information, or otherwise he would have heard what I stated, and I stated it as emphatically as I could : that on the 16th day of September by the letter which Mr. Loy received from the secretary of the department, it was conveyed to his mind that the government was buying this property from Mr. Johnston. That is what I stated.

Hon. Mr. HAGGART. Yes.

Mr. WADE. Now, I say that if Mr. Johnston purchased the property bona fide from Mr. Loy, had he not a perfect right to turn around and sell it to the government ?

Mr. BORDEN (Halifax). We have not the evidence before us owing to the action that the government has taken, and so we do not understand this matter thoroughly, and consequently I have to ask a question. When was the sale from Loy to Johnston completed ?

Mr. WADE. The sale from Loy to Johnston was completed, if my memory serves me right on the first or second day of December.

Mr. BORDEN (Halifax). I thought that was the date of the sale from Johnston to the Crown.

Mr. WADE. No. The date of the sale from Johnston to the government was away along in January.

Mr. BORDEN (Halifax). Is it a fact that this letter came to Mr. Loy's possession some six weeks before he completed the sale to Mr. Johnston ?

Mr. WADE. That is perfectly right. It came to his possession on or about the 16th or 17th of September.

Hon. Mr. HAGGART. The 8th of September.

Mr. WADE. The 8th of September, perhaps; it does not matter for a few days. That letter conveyed to his mind exactly what I have stated, that Johnston and the government were negotiating the purchase of that property.

Mr. BORDEN (Halifax). I shall have to ask the hon. gentleman another question. We have to get at the facts in this fragmentary way, not having the evidence printed. I do not quite understand the explanation of the rebate of $300 on the price. It has been alleged that the payment of $300 was really a commission paid by Mr. Loy to Mr. Johnston for his services as agent. My hon. friend (Mr. Wade) conveys a different view which must of course be considered because I was impressed by the statement made from this side of the House. My hon. friend (Mr. Wade) says that was an abatement and not a commission paid to Mr. Johnston; it was an abatement of the price which Mr. Johnston had agreed in the first instance to pay to Mr. Loy. Will my hon. friend give us the evidence as fully as possible with regard to that, because I think it bears pretty strongly upon the point we have to decide.

Mr. WADE. The evidence upon this point is : That the purchase price agreed upon between Loy and Johnston was $10,000, and there was to be no commission paid by Mr. Loy to Mr. Johnston and there was never any talk about commission at all.

Mr. BORDEN (Halifax). Naturally there would not be—if it was a mere purchase.

Mr. WADE. It was a mere purchase. That was at the beginning of the transaction. Time went on until about the first of December or the last of November, when Mr. Johnston comes to Mr. Loy and tells him that he has great difficulty in securing the money and that Mr. Loy will have to make a reduction in the price—that is the evidence—and Mr. Loy who was in need of the money at the time finally agreed to make a reduction of $300 in the price.

Mr. BORDEN (Halifax). May I ask my hon. friend another question ? I have to apologize to him for interrupting him, but it is because of the evidence not being printed.

Mr. WADE. I am glad to have the hon. gentleman do so.

Mr. BORDEN (Halifax). Did Mr. Loy, at that time, inquire of Mr. Johnston what he was getting from the government ?

Mr. WADE. No. There is no evidence as to whether he did or not, but I would suggest this to the hon. gentleman, that if Mr. Loy had known that Mr. Johnston was getting $10,000 for the property, he would not have been very likely to have taken off the $300. There is another thing. Mr. Johnston was paid by the real estate agent, Mr. Dandurand, some $50 or $60 for his services in going out there and buying the property. That is where Mr. Johnston is supposed to have got his remuneration, but as a matter of fact Mr. Johnston manipulated the whole matter in such a way that he was able to get $300 in advance of the price he paid for the property.

Mr. LENNOX. When on the first or second of December an agreement was made to change the price, would the hon. gentleman (Mr. Wade) who is a prominent lawyer, inform the House whether he would regard that as a new contract entered into at that time, Mr. Johnston being in default on the first agreement ?

Mr. WADE. Certainly not. I would simply regard it as a modification of one of the terms of the contract that existed between them. There is no question about that. I do not know that I have anything more to say about this matter, Mr. Speaker. I should, I suppose, express my regret that my conduct as chairman of the committee was not pleasing to the hon. member for Jacques Cartier, but then you know there is a certain class of lawyers who are very much given to abusing the judge who decides against them in a suit they should never have brought, and I do not see why I should not allow that privilege to my hon. friend (Mr. Monk).

Hon. Mr. HAGGART. Let me give my view of this transaction in just a few words. I will deal with the minority report and from that report it seems to me that there was an option got by a man named Johnston, who was agent for Mr. Dandurand in Montreal, who was employed by the Minister of Public Works for the purpose of purchasing this property. That option was obtained in July. The termination of the option was on the 31st of July. For that option he paid $100, Mr. Loy covenanting that he would have the right to purchase the property for $10,000. On the 8th of September, long after the option had expired, there is a letter or a telegram from an officer of the Department of Public Works, asking Mr. Loy to send up plans of this particular property.

Some hon. MEMEBRS. No, no.

Hon. Mr. HAGGART. I will read the telegram :

> I have to acknowledge the receipt of your letter of the 9th September, inst., inclosing a copy of the plan of the city of Valleyfield, said plan being required by the department in connection with the purchase of Mr. R. B. Johnston's property.

For what purpose was the plan required ? For the purpose of the purchase of the property. The hon. chairman of the committee admits that Mr. Loy must have had knowledge that the government were purchasing this property when he received this letter. Then Mr. Loy had knowledge on the 8th of September that his property was being purchased by the government for the purpose of a public building. He was then under no obligation whatever to convey that property to Mr. Johnston.

Mr. COWAN. Why not ?

Hon. Mr. HAGGART. The option had expired on the 31st of July.

Mr. RUSSELL. That is not the fact.

Hon. Mr. HAGGART. Then I am misinformed from the documents. The option was on the 16th of July, and was for fifteen days.

Some hon. MEMBERS. No, no.

Hon. Mr. HAGGART. Read the option and its acceptance. Is it an option for ever? When does it expire ? The option expires within the fifteen days mentioned, and Mr. Loy was not obliged at any time afterwards to convey the property. At any rate, on the 8th of September following, he had notice from the government that the purchase was made on behalf of the government, and he makes a conveyance of the property on the 1st of December following, receiving the money and giving the deed. Is not that a knowledge by the party who is selling the property that he is virtually conveying it to the government which had purchased it for the purpose of erecting a post office ?

Mr. N. A. BELCOURT (Ottawa). I will not go over the ground convered by the hon. member for Annapolis (Mr. Wade), but I want to state how this matter strikes me. What are the facts in this case ? On the 14th of July, Mr. Johnston, who was acting as the agent of Mr. Dandurand in acquiring this property—and I am prepared to admit at once that the latter was the agent of the Department of Public Works—obtained an option from Mr. Loy which was to be exercised on the 16th of the same month. On the 16th of July the option was exercised, and $100 were paid by Mr. Johnston to Mr. Loy. There is absolutely nothing in the evidence which shows that Mr. Johnston himself knew that he was acting for the Crown. He was told by Mr. Dandurand to go and acquire this property, without being told for whom it was wanted. Mr. Dandurand himself knew that the property was required by the Crown.

Mr. MONK. Mr. Dandurand, in his evidence, makes it clear that he told Johnston that the property was required by the government.

Mr. BELCOURT. That is not my recollection. My recollection is that Johnston himself did not know at all that the property was required by the Crown.

Hon. Mr. TARTE. He did not.

Mr. BELCOURT. And he assumed that it was required for the purpose of putting up a theatre or a departmental store.

Mr. MONK. Mr. Dandurand corrects that.

Hon. Mr. TARTE. Both Dandurand and Johnston swore that Johnston did not know for whom he was purchasing.

Mr. LENNOX. Does not the hon. gentleman remember that when Johnston was

giving his evidence, he said that he did know that the property was required for a post office, and that he knew that when he went down to Valleyfield ?

Hon. Mr. TARTE. No.

Mr. LENNOX. And thought he had the right to exercise his own judgment in the selection of a site ?

Mr. BELCOURT. I have already stated my recollection of the evidence, and there is no use my repeating it. There is at any rate no dispute about the option having been exercised on the 16th of July, when $100 were paid by Mr. Johnston to Mr. Loy. That made the position the same as if on that day, instead of an agreement to sell being made, a conveyance had been actually executed.

Mr. BORDEN (Halifax). Is my hon. friend aware that where property, to which a trust is attached, is sold to some one who is ignorant of the trust, but who, before the consideration money is paid, has knowledge of the trust, he is bound by the trust?

Mr. BELCOURT. I do not see what this has to do with the question.

Mr. BORDEN (Halifax). Will my hon. friend permit me to tell him ? If a member of parliament was approached for the purchase of a piece of property and entered into a bargain to sell it, not knowing that it was wanted for the Crown and if, before the consideration money is paid, he becomes aware of that fact, he would be within the terms of the statute.

Mr. BELCOURT. I take issue with my hon. friend on that point.

Mr. BORDEN (Halifax). The hon. member for Annapolis (Mr. Wade) was not bold enough for that.

Mr. BELCOURT. As a lawyer, with some knowledge of the law of Quebec, where the transaction took place, such would not be the case. Let me quote an authority. My hon. friend the leader of the opposition is perhaps not as familiar as we are with the Quebec Civil Code, but if he will turn up articles 1472 and 1476 he will find that I am right. 1472 says :

> Sale is a contract by which one party gives a thing to the other for a price in money which the latter obliges himself to pay for it.
>
> It is perfected by the consent alone of the parties although the thing sold is not then delivered.

Consent makes the sale perfect, and my contention is that on the 16th of July the title of the property passed from Loy to Johnston, and that anything that happened subsequently did not change the legal position of the parties. Article 1476 says :

> A simple promise of a sale is not equivalent to a sale, but the creditor may demand that the debtor shall execute a deed of sale in his favour according to the terms of the promise, and, in default of so doing, that the judgment shall be equivalent to such deed and have all its legal effects ; or he may recover damages according to the rules contained in the title of obligations.

On the 17th of July, and from that day until the 20th of January, 1903, when this conveyance was made, Mr. Johnston had the right to say to Mr. Loy : 'You must convey that property to me.' And if Mr. Loy had refused Mr. Johnston could have enforced his claim in the courts.

Mr. MONK. Does the hon. gentleman say that the decisions I have quoted, and which have been uniformly followed in the province of Quebec, namely, that if a man does not conform to the conditions stated in the option, he cannot claim the property ?

Mr. LEMIEUX. That is jurisprudence, not law.

Mr. BELCOURT. In my opinion, a promise of sale, under the circumstances disclosed, accompanied by a payment on account, is as good a title as a conveyance. Does my hon. friend dispute that as a sound proposition ?

Mr. MONK. Of course I will deny that. I have quoted authority to show that you must conform to the conditions of the option.

Mr. BELCOURT. That is not a denial of my proposition. I am sure the hon. gentleman would be very careful about denying the proposition of law I have put. If that be so, the knowledge which Mr. Loy acquired some time in September—and I admit for the sake of argument that he received notice that the Department of Public Works wanted his property for this public building——

Hon. Mr. TARTE. He received notice that they had bought it.

Mr. BELCOURT. Assuming that Mr. Loy knew beyond doubt that that property was required for public purposes, he could not avoid the transaction which he had concluded with Mr. Johnston on the 16th July without laying himself open to an action at law to compel him to execute that conveyance. In order to determine whether this transaction was a violation of the Independence of Parliament Act, we must go back to the 16th of July ; and if on that day the transaction was perfectly legitimate, then Mr. Loy did not commit any violation of the Act. There is absolutely nothing in the evidence which would warrant any one believing that Mr. Loy on the 16th of July had been notified or knew that the property was required by Johnston for other purposes than a departmental store or theatre. But hon. gentlemen opposite argue that the option had lapsed and that, as a matter of law, Mr. Loy could have

avoided the agreement he made on the 16th of July and should have avoided it because of the knowledge he had since acquired. I submit that that is also wrong in law. Under the law of the province of Quebec, he was bound to carry out his agreement. The delay in executing a deed of conveyance only gave him the right to claim interest. Article 1077 says :

The damages resulting from the delay in the payment of money, to which the debtor is liable, consist only of the interest at the rate legally agreed upon by the parties, or, in the absence of such agreement, at the rate fixed by law.

So far as the law is concerned, Mr. Loy was bound to carry it out notwithstanding the knowledge he had acquired two months later on. I want to point out a very glaring contradiction on the part of my hon. friend from Jacques Cartier, which shows most conclusively that—in his own mind, although perhaps he did not realize it for the moment—he was satisfied that the charge against Mr. Loy is disproved. Look at paragraph 8:

That from the time the said George Loy handed his said property to Archambault up to the day of the sale of the said property to the Crown or government of Canada, he never ceased to be the proprietor of said property—and that at the time of the sale of said property on the 20th January, 1903——

—and I call the attention of hon. members of the House to the following words :

—said Robert Bruce Johnston was merely acting for and on behalf of the said Loy.

So, my hon. friend charges that Mr. Johnston was the agent of Mr. Loy. And that was the charge, I submit that my hon. friend must prove in order to establish the fact that there had been a violation of the statutes.

Mr. WARD. Will the hon. gentleman (Mr. Belcourt) permit me to ask him a question ? What would be the effect of the fifteen days mentioned in the acceptance of that option according to the laws of the province of Quebec ? How, long, for instance, after that fifteen days had expired would Johnston have the right to enforce that contract ? Will it go on for ever ?

Mr. BELCOURT. No, it does not go on for ever. The delay of fifteen days, as I understand it, was required by Johnston himself within which——

Mr. WARD. For looking into titles——

Mr. BELCOURT. Yes—within which Loy should convey the property to him. But there were difficulties in the way. Johnston was quite satisfied to take his deed later on, and I say that is all that we must look to, because Loy was bound to do that which Johnston required of him, notwithstanding the lapse of fifteen days.

Mr. WARD. Then, he could enforce it five years hence ?

Mr. BELCOURT. I cannot make my point if I am interrupted in this way. I was going to say that my hon. friend from Jacques Cartier made the charge that Johnston was the agent of Loy ; and I say, and I think he will agree with me, that, in order to claim that Loy has committed a violation of the section, it was necessary to establish that point. For the section—section 10—says :

No person, directly or indirectly, alone or with any other, by himself or by the interposition of any trustee or any third party, holding or enjoying, undertaking or executing any contract or agreement expressed or implied, with or for the government of Canada on behalf of the Crown, or with or for any officers of the government of Canada for which any public money of Canada is to be paid, shall be eligible as a member of the House of Commons or shall sit or vote in the said House.

What the Act contemplates is an agent on the part of the member against whom the charge is made, and not an agent on the part of the Crown. Otherwise, as was pointed out by the hon. member for Annapolis (Mr. Wade) the seat of every member of this House would be in jeopardy continually. The statute provides that a member of the House shall not directly by himself or through an agent endeavour to sell his property to the Crown. And now, what has the hon. member for Jacques Cartier asked this House to declare ? Not only in his argument has he stated that it is not proven that Johnston was the agent of Loy, but by reference to the report which his motion asks this House to adopt, we find these words :

Under these circumstances, Mr. Loy could not have remained ignorant of the fact that Johnston, in the transaction with Mr. Loy, was an agent of the government.

Remember, Mr. Speaker, that the charge was that Johnston was the agent of Loy. Yet, my hon. friend is asking us to-day to declare that Johnston was the agent of the government. There is a flat contradiction which, to my mind, shows conclusively that the hon. member for Jacques Cartier, in dealing with this evidence, himself concluded that the charge he had brought that Johnston was the agent of Loy had been disproved. Nobody disputes that Johnston was the agent of the government—he was employed by Mr. Dandurand, who, was the agent of the Crown. But Mr. Loy did not know this. And surely we are not going to declare that a member of this House has violated the independence of parliament by the sale of property if, on that day, he did not know that the purchaser was the agent of the Crown. The hon. member for Hamilton (Mr. Barker) would not follow the hon. member for Jacques Cartier (Mr. Monk). He does not ask this House to say that there was any actual moral—I think he called it—violation of the statute, as the hon. member for Jacques Cartier tells us.

Mr. BARKER. The hon. member (Mr. Belcourt) must allow me to explain that I did not say that. I stated that it was not a question of moral wrong, but simply a question of whether there had been a violation of the words of the statute.

Mr. BELCOURT. I understood my hon. friend (Mr. Barker) to say that the most he would contend for was that there was a technical violation of the statute.

Mr. BARKER. No.

Mr. BELCOURT. Then, I do not press that. But it is clear that the hon. member for Jacques Cartier has been compelled to say in this minority report that the other two charges that he made, namely, that the price was excessive, and that there was other property in Valleyfield suitable and available for the purpose of a public building, were disproved.

Mr. MONK. My hon. friend (Mr. Belcourt) must not misrepresent the report. It is said in the minority report, that we have confined the report to the direct question submitted to the committee. My hon. friend remembers perfectly well the nature of the evidence as to the value of the property as well as its availability as a site.

Mr. BELCOURT. I take it that if the hon. member (Mr. Monk) had been able to show to his own satisfaction that the price was excessive, he would not have been content to let that go without calling attention to it. Had it been shown by the evidence that the price paid by the ex-Minister of Public Works was excessive, it would have been the hon. member's duty to say so. Why did he include this in his charge if it was not relevant and necessary ? I think that the hon. member failed, on his own admission to show that too much was paid for the site or that there were other sites in the town available. And as to the other charge, the hon. member disposes of that himself by this motion declaring that Johnston was the agent for the government. The very essence of his charge was that Johnston was the agent of Mr. Loy. To establish that charge it must be shown that Loy must have known, at the time when the property was being acquired, that it was being acquired for the government. It seems to me that after the statement made by the hon. member for Beauharnois and the statement made by the hon. member for St. Mary's (Hon. Mr. Tarte) the hon. gentleman (Mr. Monk) might well have withdrawn his charge, because the evidence he had before him in the documents—and there is a great deal of documentary evidence—goes to show that, until two months after this option was given. Mr. Loy could never have known that this property was being acquired for government purposes. The hon. member for Jacques Cartier tells us, and we are bound to take his word for it, that he has no ulterior motives in making the charge. But, while we here are bound to accept his word, I think people outside will have a very shrewd idea that this was an attempt, perhaps on the part of a gentleman who used to sit in this House, if not on the part of the hon. member for Jacques Cartier, to avenge himself upon a political opponent. I submit that the charges that were brought have been disproved by the evidence. And, in order to justify the vote I intend to give, I want nothing better than my hon. friend's own statement contained in his motion, that Johnston was the agent of the government, and not the agent of Mr. Loy.

Mr. R. L. BORDEN (Halifax). I did not intend to make any remarks on this matter, but the very astounding propositions laid down by my hon. friend from Ottawa (Mr. Belcourt) compel me to say a word or two. In the first place, I think it most unfortunate that the right hon. leader of the House, who, next to the Speaker, is responsible for the dignity and decorum of this House, saw fit, in his wisdom, to insist that we should discuss this matter without having the evidence printed and before us. The motion which the right hon. gentleman saw fit to have passed yesterday was that this question of the printing should be referred, if you please, to a joint committee of the Senate and House of Commons. That is the position the matter stands in to-day. This question of printing the evidence touching the honour, and privileges, and prerogatives of this House is to be referred to a joint committee of the Senate and House of Commons to determine whether it shall be printed. I do not regard that as a proper way of dealing with the question, and I venture to think that it was most unfortunate that the right hon. gentleman did not see fit to assent to the motion of my hon. friend from Jacques Cartier to have this evidence printed. We have had to-day disputes across the floor of this House about many questions of fact contained in this evidence, although we were assured yesterday that there was no possible question about any matter of fact involved in this case. The members of this House at the present time are in doubt, I am in doubt myself, as to the evidence with regard to many matters that have been mentioned.

But I wish to refer to some remarks of my hon. friend from Ottawa (Mr. Belcourt) with regard to the effect of this statute. I wish to speak so far as the law of my own province is concerned. I do not profess to speak with any authority with regard to that of Quebec. But so far as the law of my own province is concerned, I beg to dissent most emphatically from the views which that hon. gentleman has laid down. The law of Nova Scotia, following in that regard the law of England, is very much the same as that which the hon. gentleman has propounded as the law of Quebec. If a con-

tract is made for the sale of land, although no deed passes at the time, although no money is paid at the time, the land in equity though not at law, becomes the property of the purchaser; the right to compensation is the right of the man who sells the land. That is the rule in equity, and that is very much like the law propounded by the hon. gentleman as that of the province of Quebec. But I would point out to him that according to the English law—I am speaking only with regard to the English law and the law of my own province——

Mr. RUSSELL. In regard to the point at issue, as to whether delay in the payment of the purchase money would split up the whole contract and leave both parties free, what would my hon. friend say to that ?

Mr. BORDEN (Halifax). I shall come to that very fully before I sit down.

Mr. RUSSELL. I was afraid my hon. friend would neglect that view.

Mr. BORDEN (Halifax). I say that so far as that matter is concerned, distinctions are drawn in the English law between the position of a man who has made a formal conveyance and received the compensation money, and the position of a man who has made a contract for the land, but has not yet received a legal title and has not yet received compensation. One distinction was that to which I adverted a moment ago. Another distinction I think would be made in a case of this kind, which involves a matter of public policy, because what would follow the hon. gentleman's proposition ? Has he thought of it ? His proposition is this, that if any member of this House were approached by some person and gave that person an option of purchase which was after accepted ; then if the member discovers before the contract is completed that the other party was really the agent of and was purchasing for the government, the member can complete the contract.

Mr. BELCOURT. I do not dispute that, but that is not the case here.

Mr. BORDEN (Halifax). But he did dispute it a moment ago. He told us that he most solemnly affirmed upon his standing as a lawyer in this House that that man could go on and carry out that contract. My hon. friend has changed his opinion, I am glad he has changed his opinion, because I say such a doctrine as that would be a monstrous one. What would follow from it ? According to the law of Nova Scotia, according to the law of England, and I suppose according to the law of Quebec, an undisclosed principal can be sued by the man with whom he has made a contract, and that being the case, as soon as a member of parliament found out that he was dealing with the government, if the government did not see fit to carry out the contract under the new conditions, you would have the spectacle of a member of parliament bringing suit in the Exchequer Court against the government for the unpaid price of property which he had sold to the government.

Mr. BELCOURT. I was not dealing with such a case at all, I was dealing with a different case. The case the hon. gentleman supposes is not the case here.

Mr. BORDEN (Halifax). I am glad to see that I misunderstood my hon. friend. I would not have got up except to make an observation on what I thought he distinctly stated to this House, in answer to a question I put to him, namely that such was his view of the law of the province of Quebec.

Mr. WADE. Would the hon. gentleman allow me to put a question to him ? When did Mr. Loy ascertain that he was selling the property to the government ? I submit for his consideration that Mr. Loy never found that out until after the deed had passed, he never found that this man was acting as agent for the government.

Mr. BORDEN (Halifax). My hon. friend's view of the case is of course entitled to all possible respect, I am not finding any fault with that. But there are circumstances in connection with this case which, in my opinion, might point to an opposite conclusion. It appears so far as I can gather from the evidence, which I have not had an opportunity of reading, that there was considerable discussion as to the probability of the property being required as a site for a post office. It appears that Mr. Johnston came to Mr. Loy and Mr. Loy was suspicious at the time that the property might be required by the government. An option was given, which I will not refer to again, as it has been read two or three times to the House. The terms of that option were not carried out. And six weeks before Mr. Loy gave any formal conveyance of the property at all, he receives a letter from the Public Works Department, a letter of the 18th of September, in which he is distinctly told that certain information which is required from him with regard to a plan of the city of Valleyfield, is required by the department in connection with the purchase of R. B. Johnston's property. Now, my hon. friend from Annapolis, or some hon. gentleman on the other side, has very ingeniously put forward this view of the situation : They say that that merely means that Mr. Loy, had agreed to sell to Mr. Johnston, and Mr. Johnston buying in his own right, had afterwards agreed to sell to the government. Well, that may be so, but it is rather unusual that Mr. Johnston should immediately sell to the government long before he got a title from Mr. Loy.

Mr. WADE. Not immediately, two months afterwards.

Mr. BORDEN (Halifax). Let us say two months afterwards; and I think it is most

unfortunate for Mr. Loy that he was not called before the committee to give evidence as to his understanding of that letter. Was he asked with regard to his understanding of that letter ?

Mr. BELCOURT. He was before the committee.

Mr. BORDEN (Halifax). I know he was, but I understand he was not before the committee after this letter was produced. Am I right or wrong ? Again my hon. friend will see that I am embarrassed by the fact that, owing to the action of the government yesterday, we have not this evidence before us. Am I right or wrong in supposing that Mr. Loy did not give evidence before the committee after this letter was produced ?

Mr. BARKER. He did not.

Mr. BORDEN (Halifax). Then I consider it is a very unfortunate thing that he was not called before the committee to give evidence, and to make plain to the committee what his understanding was of the purport of that letter.

Mr. WADE. He was there, why did not the hon. gentleman opposite cross question him ?

Mr. BORDEN (Halifax). I am speaking of this matter on behalf of Mr. Loy himself, because here is a letter of the 8th of September written to Mr. Loy and received by him some six weeks before this transaction was completed, and in which it is made perfectly apparent to him that the man who has come to him to get an option on his property is really proposing to convey that property to the government. Now, under these circumstances, it does seem to me very unfortunate that Mr. Loy did not again come before the committee and throw what light he could as to the condition of his mind after he had received that letter.

Mr. BELCOURT. Assuming that Mr. Loy could have had no doubt on that day, the 8th of September, that the property acquired by Mr. Johnston was being made over to the crown, will the hon. gentleman contend that because of that knowledge on the part of Mr. Loy he would have been relieved in law from performing his contract made with Mr. Johnston on the 16th of July ?

Mr. BORDEN (Halifax). I do not know what the hon. gentleman means.

Mr. BELCOURT. Could he have successfully resisted an action for the specific performance of the agreement of the 16th July ?

Mr. BORDEN (Halifax). If Mr. Loy had notice, and if Mr. Loy knew that Mr. Johnston was really acting for the government——

Mr. BELCOURT. I assume that.

Mr. BORDEN (Halifax). I asked the hon. gentleman that once and he gave me one answer, and I ask him again and he gives me another answer.

Mr. BELCOURT. Surely my hon. friend wants to be fair. Assuming that on the 8th September Mr. Loy acquired knowledge that the property was being acquired by the department, could then Mr. Loy have successfully resisted an action at law on the part of Mr. Johnston for a specific performance of the agreement of the 16th July? I say no, and I would like to have my hon. friend's opinion.

Mr. BORDEN (Halifax). If, as a matter of fact, there was, in the first instance a distinct bargain between Mr. Johnston and Mr. Loy, according to Mr. Loy's belief and that bargain had been carried out between Mr. Loy and Mr. Johnston so as to vest the title in the property to him, it would be perfectly plain that any transaction between Mr. Johnston and the government afterwards would be of no effect.

Mr. BELCOURT. That is the whole point.

Mr. BORDEN (Halifax). That is the whole point ?

Mr. BELCOURT. Yes.

Mr. BORDEN (Halifax). Well, I have very great difficulty in making myself plain to my hon. friend. If, on the other hand, Mr. Johnston came to Mr. Loy as the agent of the government—and there is no doubt he did come as agent of the government in reality whether he knew it or not—to purchase this property, and before that transaction was carried out, although a contract had been entered into, Loy received notice that this was really a sale between himself and the government, then, I maintain that the contract could not be carried out between them, because you would then have the ridiculous position that I pointed out a moment ago to my hon. friend of the government declining to pay compensation money, being sued by a member of parliament who would go into court and say : I made a bargain with your agent although I did not know he was your agent, to sell this property. I have now discovered that he was only your agent, you are now declining to carry out your bargain, and I come into the Exchequer Court with my petition of right, and claim from you $10,000 which was agreed to be paid for my property. Surely the hon. member for Ottawa (Mr. Belcourt) or any other hon. member on the other side of the House will not pretend for a moment that any such action as that would be entertained by the Exchequer Court.

Hon. Mr. TARTE. Would the hon. gentleman allow me to ask him a question ? A layman may perhaps be able to make things clear. On the 16th September the

secretary of the Department of Public Works writes to Mr. Loy and he tells him that the department wants a map in connection with the purchase of Mr. Johnston's property. Mr. Loy considered then that he had sold his property to Mr. Johnston. Was he not simply informed that Mr. Johnston had sold to the department ? That is the point I would like to make clear.

Mr. BORDEN (Halifax). Here is one of the difficulties in connection with which I stated a moment ago that I regarded it as most unfortunate that Mr. Loy was not called before the committee to give evidence after this letter had been produced. Do I make myself clear to my hon. friend ?

Hon. Mr. TARTE. I see.

Mr. BORDEN (Halifax). I say that the letter might possibly have the construction which the hon. gentleman puts upon it, namely that Mr. Loy might merely infer from it that Mr. Johnston had bought this property in good faith from Mr. Loy, had afterwards entered into an agreement with the Crown to convey it to the Crown, and that the Crown were therefore investigating the title and wanted a plan for that purpose. That would make Mr. Loy perfectly innocent, but if, on the other hand, this letter gave to Mr. Loy the notice that I have described a moment ago, that Mr. Johnston was not really buying the property in his own right, but buying it for the Crown, and that the Crown was taking steps for the fulfilment of the contract, an entirely different condition of affairs would exist.

Hon. Mr. TARTE. It is in evidence that when Mr. Johnston went to Mr. Loy, Mr. Loy did not know that Mr. Johnston was acting for the department. He made that clear in his evidence.

Mr. WADE. Assuming that Mr. Johnston was the agent of the government, and the government the undisclosed principal, the hon. gentleman (Mr. Borden, Halifax) will admit, will he not, that Mr. Johnston could not commence action for specific performance against Mr. Loy if Mr. Loy had refused to convey to him, and if Mr. Johnston could commence action against Mr. Loy for specific performance and if Mr. Loy was innocent at the time that he made the promise to sell to Mr. Johnston, could this statute be any defence in an action for specific performance ?

Mr. BORDEN (Halifax). It would be exactly the same defence that would arise in the action I have suggested. Does the hon. gentleman think that Mr. Loy could maintain an action against the government in the Exchequer Court ? I would hardly suppose that he would go as far as that, but if he did go as far as that, with every possible deference to the hon. gentleman's opinion, I would hardly feel justified in agreeing with him upon that point.

Mr. HEYD. If the most brilliant lawyers in this House do not understand this question, what could you expect from poor Loy ?

Mr. BORDEN (Halifax). I think that is a question which might properly be addressed to the right hon. leader of the House (Rt. Hon. Sir Wilfrid Laurier) particularly in view of the fact that he has not even permitted these lawyers to whom my hon. friend (Mr. Heyd) refers in such complimentary terms, to have an opportunity of perusing the evidence.

The PRIME MINISTER. I am afraid it would be worse and worse if the evidence were printed.

Mr. BORDEN (Halifax). I do not know about that.

Mr. BELCOURT. My hon. friend can console himself with the knowledge that there was no argument before the committee at all.

Mr. BORDEN (Halifax). I almost feel inclined to address the House now in the language of Samuel Weller before leaving the witness stand : Is there any other hon. gentleman who desires to ask me a question ? In conclusion, I have simply to say that my view of the statute is entirely different from that which has been presented by some hon. gentlemen on the other side of the House. If we are to conclude from this evidence, which is not actually before us, because we have not had it printed, and from this correspondence, that Mr. Loy at all times up to the time he gave the title and received the compensation money believed that he was making a real sale of the property to Mr. Johnston, then that is one aspect of the case, and, adopting that view, we would have to acquit him ; but if, on the other hand, the evidence, the correspondence and the circumstances of the case would lead us to the conclusion that at any time up to the conveyance by him of this property and the receipt of the compensation money he became aware of the fact that Mr. Johnston was really the agent of the Crown, then it seems to me that this is not a case in which he can be justified in the way in which the majority report of the committee does seek to justify him.

Mr. E. B. OSLER (West Toronto). Mr. Speaker, it seems almost a pity to interrupt the flow of legal eloquence, but it is also a pity that the whole of the afternoon should be taken up without a layman expressing an opinion. I can only form an opinion from the speeches I have heard ; and, taking the defence of Mr. Loy, I can only conclude that Mr. Loy is one of the most innocent men I ever have heard of. He is too innocent to sit in this House. I dare say you all remember reading of that charming old humbug Samuel Pepys, who used to humbug himself and others, and who,

on one occasion, was controller of the King's navy, and had reason to suppose that a certain gentleman was going to offer him something for an appointment. This gentleman asked him to dinner, and on leaving, Mr. Pepys, in his quaint language, says: This man did hand me an envelope which, by its feel, I felt contained money; when I got home I did open the envelope behind my back, so that if asked in future I could truly say that when I opened the envelope I saw no money there. Now, Sir, it strikes me that this simple and ordinary transaction of the purchase of a piece of property in Valleyfield for a post office, the negotiations for which had been going on for some years, has been so complicated and so surrounded with agents and with extraordinary conditions, that I would say it would be impossible that Mr. Loy should not have known that the government were purchasing this property. With regard to the abatement of $300 of the price, that abatement was paid, if I understood the hon. gentleman (Mr. Wade) aright, after Mr. Loy had knowledge or suspicion that the government were purchasing. That seems to me of itself a most extraordinary transaction. As the case has been presented, from a layman's point of view it would be concluded that Mr. Loy had knowledge that that property was purchased for a post office. If he had not, he is too innocent a man to represent any constituency in this House.

Mr. C. B. HEYD (South Brant). It is not yet six o'clock, and as we have just had the opinion of one layman, permit me to give the opinion of another layman. We have listened to lawyers all the afternoon, and the whole question simmers down to this: If Mr. Loy is a liar and a perjurer, then the gentlemen opposite are right; but if he is an honest man, as I believe he is, then they are wrong. I believe Loy is honest, and I am going to support the report of the majority.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

GRAND TRUNK PACIFIC RAILWAY COMPANY.

Mr. LEIGHTON G. McCARTHY (North Simcoe) moved third reading of Bill (No. 64) to incorporate the Grand Trunk Pacific Railway Company.

Mr. G. W. FOWLER (King's, N.B.) Mr. Speaker, before this motion passes I wish, pursuant to the notice which I have given, to move:

That the said Bill be referred back to the Committee of the Whole, with instructions that they have power to amend the same by providing that a branch line be built from the proposed main trunk line of the Grand Trunk Pacific Railway, beginning at a point at or near where said trunk line crosses the Naskwaak river, and thence extending, by way of Fredericton and the valley of the St. John river, to St. John city.

It is not necessary for me at this time to go into this matter at any length, as it was discussed to a considerable extent when the Bill was in Committee of the Whole. I think this is a very important provision. As was pointed out at that time, it would be impossible for the Grand Trunk Railway Company and the Grand Trunk Pacific Company to enter into an arrangement by which a portion, and even the whole of the common stock of the new company might be handed over en bloc to the Grand Trunk Railway Company in exchange for certain privileges granted by that company to the Grand Trunk Pacific Company. It was also pointed out that this might have a very important bearing upon the freight rates that would be charged by the Grand Trunk Pacific in the territory over which it is to run; that, if the adjustment of the freight rates of the new company were to come before the railway commission which is to be appointed, the amount of the capital stock of the company would be a very important consideration with the commission in estimating what those freight rates should properly be. Therefore, it seems to me important that due provision should be made that no such arrangement as that which I have pointed out should be allowed to take place, but that whatever capital is placed upon the market or is passed from the control of the Grand Trunk Pacific Company to other holders, whether they be private persons or the Grand Trunk Railway Company, should be passed for a money consideration; so that the actual money cost of the Grand Trunk Pacific would be the only thing to be taken into consideration by the commissioners should they be called upon to adjust the freight rates over that road. It may be said that they would still have power to inquire into this matter and to ascertain whether money had been paid for the stock or not; but then, supposing that this stock or a portion of it were to get into the hands of third parties, innocent persons who had paid par for the stock, although the original owners of it had got it for ten or twenty or thirty per cent, or any other figure under par, it would not be fair to these innocent holders of the stock not to take into consideration the amount they had paid for it. I do not intend to make any extended remarks on this matter. The thing seems to me to be so plain that I cannot understand how any member of this House can oppose my amendment.

Mr. W. F. MACLEAN (East York). Mr. Speaker, when the government's proposal in relation to the Grand Trunk Pacific was introduced into the House, the Prime Minister stated that he would insist that the

Grand Trunk should acquire $25,000,000 of this stock; and I think he ought to tell the House and the country how he intended that the Grand Trunk Company should acquire that stock—whether by purchase or by what means ?

Mr. T. S. SPROULE (East Grey). While we are waiting for the answer of the right hon. First Minister, I may point out that it is provided in the contract that the Grand Trunk Company shall acquire this stock. What we want to know is in what way it is proposed that they shall acquire it ?

Mr. McCARTHY. Of course, the amendment of the hon. member for King's, N.B. (Mr. Fowler), is something which is absolutely unprecedented. Not one precedent has been cited where a clause was ever inserted in a charter requiring a company to sell its stock for any given sum of money. The question which has been asked the Prime Minister, of course, I cannot answer more than to say that I do not see how such a question can reasonably be asked, namely, how a company which acquires stock shall acquire it. I suppose they will acquire it in the course of business, according to the law of the contract, which must be construed in accordance with the law of the land. In that contract the government require the Grand Trunk Railway Company to acquire $25,000,000 of this stock. Personally speaking, I think that was a wise precaution. It was, at all events, an answer to the criticism that the Grand Trunk Railway Company of Canada was not behind or aiding or assisting in the scheme of the Grand Trunk Pacific Company. The Grand Trunk Railway Company, when they do acquire this stock, are bound to hold it for fifty years and possibly longer—at all events, until the bonds which the government have guaranteed are paid off. The company cannot dispose of that stock, but must hold it as a guarantee that they are interested in and are behind this scheme. But that we should insert in a charter a clause that a certain stock shall be sold for cash at par value, is something which I never yet knew to be asked to be inserted in any other charter which has ever passed this House.

Mr. SPROULE. I made that inquiry because I regard it as a matter of importance. That provision is put in the contract for some specific purpose. I assume that it is for the purpose of establishing confidence in the public mind, that this transaction is a bona fide one, and that the provision made for security is all that could be desired. For what purpose is it made compulsory on this company to secure it, if it is not some guarantee that the Grand Trunk Railway will have an interest in this undertaking which will compel them to carry it out. The hon. member for North Simcoe says that this is an unprecedented thing. It is, but he must remember——

Mr. McCARTHY. I do not say that the question of contract is unprecedented because two parties to a contract may agree on anything ; but speaking of the charter, I say it is unprecedented to insert in a charter a provision requiring the stock of the company to be sold at a particular price.

Mr. SPROULE. While that may be unprecedented, the intention of parliament is to provide that this stock shall be taken up in order to furnish a guarantee. We have never had to deal with such a Bill before. Here are two corporations, and the same men are on the directorate of each. We are giving the directors of the one company the power to sell to themselves, as directors of the other company, a certain amount of stock and at whatever price they like. The directorate may sell it to the other at five cents in the dollar. Will any one say that such a transfer as that would be any guarantee for the carrying out of the undertaking ? This provision looks very like a blind to the public, an attempt to make the public believe that there is some kind of guarantee because we compel the Grand Trunk Railway to take $25,000,000 worth of stock in the Grand Trunk Pacific Railway, whereas the fact is that since the same men are on the directorate of both companies, the one board may sell the stock to the other at five cents on the dollar. That being the case, is it unreasonable that we should provide that if the Grand Trunk Railway purchase the stock of the Grand Trunk Pacific Railway, they must give some substantial consideration for it. Speaking on this point, the right hon. First Minister said : 'I may say at once that one of the first sections of the contract'——

Mr. McCARTHY. I do not want to take an unreasonable objection, but a reference to a prior debate on a government measure cannot be made on a private Bill.

Mr. SPROULE. But these two Bills must be read together. They are practically the same contract. The one is the complement of the other, and a reference to the government measure is, I respectfully submit, quite in order.

Mr. SPEAKER. I do not think that the hon. gentleman is in order in referring to a debate which has taken place on a Bill that is not now before the House.

Mr. SPROULE. May I remind you, Sir, that the Bill we are discussing refers to the stock of the Grand Trunk Pacific Railway.

Mr. SPEAKER. The hon. gentleman has no right to quote from previous debate on any other measure.

Mr. SPROULE. I respectfully submit that I am quite in order. This Bill speaks of $25,000,000 worth of stock being purchased by the Grand Trunk Railway, and I am within my rights in referring to the

fact that the right hon. First Minister explained why the stock was taken.

The MINISTER OF JUSTICE. There is nothing of the sort in the Bill.

Mr. SPEAKER. The hon. gentleman has a perfect right to discuss the merits of the Bill now before the House, but not to quote from a previous debate on another Bill.

Mr. SPROULE. That debate has reference to the same subject. For instance I take up this Bill——

The POSTMASTER GENERAL. Question.

Mr. SPROULE. I am dealing with the question. The hon. gentleman need not be so uneasy.

Mr. WADE. Chair.

Mr. SPROULE. I am quite within my rights, and am speaking to the Chair. I want the hon. member for Annapolis to understand that no senseless interruptions will stop me. I am dealing with an amendment providing that this $25,000,000 of stock to be purchased by the Grand Trunk Railway shall be paid for at par, and I am quite within my rights in stating that we are given to understand by the right hon. Prime Minister that the clause in its unamended form is a substantial guarantee.

Mr. SPEAKER. The hon. gentleman must comply with the ruling of the Chair.

Mr. SPROULE. It is contended by supporters of the government, by the government press, that this provision furnishes a substantial guarantee to the country that the Grand Trunk Railway are behind the scheme and will carry it out. I say it does not. I say, let us have a substantial guarantee, and such a guarantee would be the payment for these bonds in cash at par. Let the Grand Trunk Railway make a bona fide purchase of the stock and let it not be shuffled from one hand to the other. Let the Grand Trunk Railway buy the stock in the open market, and then they will be putting up $25,000,000 as a guarantee for the faithful carrying out of the contract. Until that is done, the country will not be satisfied that this is a bona fide scheme. I say that the transaction, in its present shape, is one that will not bear the light of day. It is one that the people will not regard as a proper contract to be passed by this House.

Mr. R. L. BORDEN (Halifax). Before the question is put, we should have a declaration from the government with regard to this matter. Does the government attach any special importance to the fact that the Grand Trunk Railway is required to acquire $25,000,000 of the common stock of this company? I think that that is a perfectly fair question to submit to the government at this time, and for these reasons. It is said that the Grand Trunk Railway is behind this company, and that the fact that it will control the common stock is a source of strength to the Grand Trunk Pacific Railway. In what way is that a source of strength? Does the government take the position that it is a source of strength to this company that the Grand Trunk Railway should acquire this stock for a nominal consideration? If that is the attitude of the government, I am not supposed to agree with it. For it would only result in an excessive capitalization of the company; and, in the end, might prove an obstacle in the way of controlling the rates as we should control them in the interest of shippers. Then, there is another matter in this connection as to which, I think, we ought to have some answer. The clause which is dealt with by the motion proposed by my hon. friend from King's, N.B. (Mr. Fowler) is a clause which has been eliminated from the Railway Act of Canada as passed through this House, and as it now stands practically ready for its third reading. If this clause is not a proper one to retain in the General Railway Act, what are the special reasons which justify its insertion and retention in this Bill? It will not do for the government to tell us that this is a mere private Bill in which the country is not interested to a greater extent than in any other private Bill. This is a Bill incorporating a company with which the government proposes to make a contract and to which it proposes to give substantial assistance to the extent of many millions of dollars and a guarantee. It is a company for which the government proposes to build a road some 1,600 miles in length. For these reasons, the country is interested in this Bill to a very much greater extent than it would be in an ordinary railway Bill. This is a clause which, beyond doubt, permits the whole of the common stock of this company to be handed over to the Grand Trunk Railway Company of Canada for a consideration which it might be difficult to estimate. Under these circumstances, I think it becomes the duty of not only my hon. friend from North Simcoe (Mr. McCarthy), but of the government itself to state the reasons for the insertion in this Bill of a clause which has been deemed not worthy to be placed in the general railway legislation of this country.

The PRIME MINISTER (Rt. Hon. Sir Wilfrid Laurier). The amendment which is now before the House has been given notice of by my hon. friend from King's, N.B. (Mr. Fowler) in the following language:

That the said Bill be referred back to the Committee of the Whole, with instructions that they have power to amend the same by striking out section eleven; or in the alternative, to amend the said section by providing that in case the Grand Trunk Railway Company shall

acquire the whole, or any part of the common stock of the Grand Trunk Pacific Railway Company, such stock shall be paid for in cash to the full par value thereof by the said Grand Trunk Railway Company.

I presume that there is a clerical error in the notice and that the clause referred to is section 12, not section 11. Section 11 is in these words :

The directors may annually appoint from among themselves an executive composed of at least three directors for such purposes and——

Mr. BORDEN (Halifax). May I point out that the right hon. gentleman is reading the Bill as originally introduced, whereas the amendment relates to the Bill as it is printed.

Mr. McCARTHY. There is only one change in clause 11, and that consists in the insertion of the word 'common.'

Mr. BORDEN (Halifax). But the numbering has been changed.

The PRIME MINISTER. That section in the Bill as reprinted reads :

The directors of the company elected by the shareholders may make and issue as paid-up stock, shares in the company, whether subscribed for or not, and may allot and hand over in payment for plant, rolling stock, docks, elevators, wharfs, warehouses, vessels, or materials of any kind, or as consideration for rights, powers and privileges acquired and also for the bona fide claims of contractors and engineers, such an amount of such stock as shall be a fair and bona fide value for the property purchased, or for the rights, powers and privileges acquired, or services rendered, as aforesaid, other than promotion services, due regard being had to the then market value of the stock, and such issue and allotment of stock shall be binding on the company, and such stock shall not be assessable for calls.

In this section there is nothing new or unusual ; it is the provision which has been inserted in all railway charters from time immemorial. My hon. friend says that such a provision has been eliminated from the General Railway Bill which is now before the House. That may be. But we have to deal with the law as it is to-day, and with the custom of parliament as it is to-day. The reasons which have induced the company to ask for these powers are the same, no doubt, as have induced all similar companies to ask for them. It may be that, in the future, it will be desirable to provide otherwise. But we are dealing with the provisions of the law as they are to-day, and as they have been for many years past. Now, I come to the main point made by my hon. friend. If the Grand Trunk Railway Company of Canada acquire this stock, why should they be treated differently from any other purchaser of the stock ? For, practically, that is what this amendment means. My hon. friend has said, and has said rightly, that the government attaches great importance to the Grand Trunk Railway Company coming into this scheme and standing behind it. The government in that, I think, interprets rightly the feeling of the Canadian people generally. They would be more confident of the ability of the Grand Trunk Pacific Railway to cope with the enterprise if that company have the backing of the Grand Trunk Railway Company of Canada. And I hold, that instead of being deterred from taking part in this scheme, the Grand Trunk Railway Company should be encouraged to stand behind it, because by so doing they will be of great assistance in the successful carrying out of the enterprise. But, if the Grand Trunk Railway Company are to come into the scheme, is there any reason why they should be subjected to more severe obligations than any other purchaser of the common stock of the company ? Why, Sir, the amendment, if I may say so without offence, is simply absurd. How can we bind the Grand Trunk Railway Company or anybody else to pay for stock more than the market price ? But the Grand Trunk Railway Company is to be asked to pay $25,000,000 in cash for $25,000,000 of stock. If any one believes that the Grand Trunk Railway would be willing to pay par value for this stock as it is issued, he has more faith than I, for my part, have in human nature. The stock will be sold at market value, and not otherwise. Let us read the amendment :

In case the Grand Trunk Railway Company shall acquire the whole or any part of the common stock of the Grand Trunk Pacific Railway Company, such stock shall be paid for in cash to the full par value thereof by the said Grand Trunk Railway Company.

The Grand Trunk Pacific Railway put their stock on the market. Anybody can bid for it. I may buy stock at fifty cents on the dollar. But if the Grand Trunk Railway Company of Canada undertake to purchase stock, they will have to pay one hundred cents on the dollar. I do not think that anybody has so much faith in the enterprise—though I have great faith in it—as to believe that the stock will bring one hundred cents on the dollar as it is issued. The thing is preposterous, and that is the reason why it cannot be accepted.

Mr. BARKER. I have listened with some surprise to the remarks of the right hon. the first minister (Rt. Hon. Sir Wilfrid Laurier). He seems to be under the impression that the company will issue its stock at the market price. I never heard of that before. He speaks as if, the market price of the stock being fifty cents on the dollar, there is no reason why the Grand Trunk Railway Company of Canada should not buy it at fifty cents on the dollar. And there is no reason in the world why it should not do so, provided it buys the stock from the public. But this clause is not dealing with the market price of this stock after it is issued, but it is dealing with the issue of the stock by the company itself ; and I

venture to say that the right hon. gentleman has never heard of a case where a company has been authorized to issue its stock without the subscribers of the stock being under obligation to pay one hundred cents on the dollar.

The POSTMASTER GENERAL. The Canadian Pacific Railway stock was not so issued.

Mr. BARKER. The right hon. gentleman was speaking of the ordinary conditions on which stock is issued or stock is sold. I say that the ordinary conditions upon which stock is subscribed is that the man who subscribes for $100 worth of stock undertakes to pay $100 to the company on that stock, that is the ordinary condition; and the moment you depart from that you are making an exception. If the right hon. gentleman proposes that this should be an exception, let it be so stated that we will know what is meant. But let us not pretend here that that is the ordinary course of business in this country, because it is not. Now, the right hon. gentleman has read clause 12 in the original Bill, and I wish to point out that there has been a very material and a very significant change in this clause as it has been reprinted as amended in committee. I have pointed this out, and I beg leave to point it out again, as the right hon. gentleman does not seem to have noticed what I said before. Clause 12 is in the language read by the right hon. gentleman, and very much in the same words as were formerly used and as now exist in the general Railway Act of 1888. That clause has been struck out in the new General Railway Bill now before the House. But two or three very significant words have been incorporated in this clause since it was introduced into this House by the hon. member for Simcoe, and which read:

> The directors of the company elected by the shareholders may make and issue as paid up stock shares in the company, whether subscribed for or not, and may allot and hand over in payment for plant, rolling stock, docks, elevators, wharfs, warehouses, vesels or materials of any kind.

So far the words as they were in the Act of 1888, and as they were in clause 12 of the Bill as introduced into this House. What follows then?

> Or as consideration for rights, powers and privileges acquired.

Now, those are very important words. We must not forget that the Grand Trunk Pacific and the Grand Trunk Railway Company of Canada have practically one set of directors. They are different in name, I know, the former has some senators, for example, that are not in the Grand Trunk Railway Company, but we understand they are going to disappear. Nobody doubts that the directorial power in the two companies will be practically and in effect the same. Now, these two companies with one board of directors, one power, one government, will meet to do—what? To enter into agreements for traffic arrangements between the companies under the powers of the general Railway Act. They can agree there in consideration of the terminal facilities which the Grand Trunk Railway Company may give to this new company, to give any consideration whatever, however large; and under these little innocent looking words the whole $25,000,000 of stock may be given as a consideration for the interchange of traffic between these two companies, when, according to the right hon. gentleman, it is a part of the undertaking, without compensation, that the Grand Trunk Railway is going to help this road and be behind it. Out of the forty-five millions of capital, the Grand Trunk evidently intends—or there is no object in putting that clause in the Bill—evidently intends to get twenty-five millions of paid-up stock, and everybody knows that the Grand Trunk Railway Company of Canada cannot pay that amount of money for it.

Mr. McCARTHY. Does the hon. gentleman appreciate the fact that the Grand Trunk Railway Company of Canada has got to hold this stock in its entirety for fifty years?

Mr. BARKER. Yes, but the company are to rank as stockholders, and it will be paid-up stock, and when you come by and by to settle tariffs, you will hear of this to the cost of this country. That is the objection. Let the Grand Trunk pay in hard cash as holders of the twenty-five millions, and we will know where we are. But the country does not want to pay tolls in respect of this stock given to the Grand Trunk for the interchange of traffic. That is the contention here, and it is for that reason that the hon. gentleman from King's (Mr. Fowler) wishes to make it quite clear that the stock subscribed for by the Grand Trunk Railway Company shall be paid for in cash, so that hereafter it will be known what they did pay for it and what the company got for it.

The PRIME MINISTER. Although I have spoken once before, perhaps I may be allowed to reply to an observation of the hon. member for Hamilton (Mr. Barker). He knows this better than I do, because he is an authority on railways, and he does not pretend, surely, that because we print in the Bill a limit of the capital stock at forty-five million dollars, that we are bound to take that amount into consideration when we consider the rates. It seems to be in the mind of the hon. gentlemen opposite that we shall have to take into computation of the freight rates the forty-five million of dollars, whatever has been paid for it. If the Grand Trunk Railway Company do issue forty-five millions of stock and if they pay twenty-five millions, all that will be taken into consideration in fixing the rates will be the twenty millions, and not the

forty-five millions. Therefore, it does not matter what they are authorized to pay; what matters it that they shall pay the fair value of the stock, and whatever they pay shall be the basis of the rate to be levied upon shippers.

Mr. BARKER. I am very well aware of what the right hon. gentleman has said. But the right hon. gentleman knows that he is enabling these two companies to agree between themselves what the value may be of the privileges and rights accorded under this agreement; and ten years hence no commissioners, parliament, or anybody else, can go back upon that and say whether the value they put upon that agreement is or is not correct. But if you require the cash, you will know where you are. That is the distinction. Suppose, for example, that to-morrow these two companies were to sit down together—the same body of gentlemen perhaps, though really acting as two distinct corporations—and they agree that the Grand Trunk shall give terminal facilities to the Grand Trunk Pacific in Montreal or at other points, and they estimate between themselves that such facilities are worth an enormous sum of money, and in consideration of those facilities they issue paid-up stock, who hereafter is going to say that that was not the true value ? How are you going to get at it ? If you make it a cash basis, you will know what cash went into the company, and then it will be quite correct, as the hon. gentleman says, that if only twenty millions were paid in, that is all they could reckon in the settlement of the tariff or the tolls. But when you enter into such arrangements as are referred to here, compensation for rights, powers and privileges, who hereafter is going to measure the value of those rights and powers ? The right hon. gentleman leaves the whole thing at large, and it is impossible hereafter to say whether the stock issued, whether this twenty-five millions or forty-five millions, ought or ought not to stand for its full value in the settlement of tolls.

Amendment (Mr. Fowler) negatived on division.

Mr. S. HUGHES (Victoria). I desire to move :

That the Bill be not now read the third time but that it be referred back to the Committee of the Whole, with instructions to amend section twelve by omitting the word 'Gravenhurst' therefrom.

I desire to amend section 12 by the omission of the word 'Gravenhurst' or, at all events in such a way as not to give the company a roaming commission to establish branch lines from both North Bay and Gravenhurst. If we were to say from North Bay instead of Gravenhurst I would be satisfied, or from Gravenhurst instead of North Bay I would also be satisfied, but I do not think in the interest of other companies that have undertaken the construction of roads in that locality it would be proper to give a roving commission to the Grand Trunk Pacific Railway Company. I trust the promoter of the Bill will accept the amendment and confine it either to Gravenhurst or North Bay.

Amendment (Mr. Hughes, Victoria) negatived.

Mr. A. E. KEMP (East Toronto). I desire to move an amendment of which I gave notice some time ago and which is as follows :—

That Bill (No. 64) be not now read the third time but that it be referred back to the Committee of the Whole House for the purpose of amending section eight by adding thereto the following words 'The majority of the directors of whom the president shall be one shall be British subjects.'

This clause was inserted in the agreement with the Canadian Pacific Railway Company and it seems to me that it was a wise precaution. I hope that the hon. gentleman who has charge of this Bill (Mr. McCarthy) will see his way clear to accepting this amendment. About a year ago we had a good deal of talk in this country in reference to the stock of the Canadian Pacific Railway becoming so absorbed by those interested in American railway systems that the Canadian Pacific Railway might practically become an American institution. However, that was guarded against by the fact that the majority of the directors of the Canadian Pacific Railway are British subjects. It will be a very serious thing, it seems to me, if any of our transcontinental railways were to be placed under the control of the powerful syndicates which are operating and which are at the head of American railway systems. It would have a tendency to build up United States cities and ports at the expense of Canadian cities and ports. Under these circumstances they could operate, if they saw fit, Canadian roads in favour of the United States and against domestic enterprises and it seems to me that this would be a restriction against the adoption of such a policy. I would ask the promoter of this Bill to accept this amendment.

The PRIME MINISTER. If my hon. friend (Mr. Kemp) will accept a suggestion I would say that while I think his amendment is a good one and I do not see any objection to it, I think we had better introduce it into the Bill confirming the contract which will come later. I am prepared to accept this amendment, but I think it would be better to put it into the Bill confirming the contract with the Grand Trunk Pacific Railway Company.

Mr. KEMP. I understand the right hon. gentleman (Sir Wilfrid Laurier) to say that this provision will be made a part of the contract ?

The PRIME MINISTER. Yes.

Amendment (Mr. Kemp) withdrawn.

Mr. WILMOT moved :

That the Bill be not now read the third time but that it be referred back to the Committee of the Whole, with instructions that they have power to amend the same by providing that a branch line be put from the proposed main trunk line of the Grand Trunk Pacific Railway, beginning at a point at or near where said trunk line crosses the Nashwaak river, and thence extending, by way of Fredericton and the valley of the St. John river, to St. John city.

Mr. McCARTHY. I would like the ruling of the Speaker as to whether an hon. gentleman can move a motion of which another hon. gentleman has given notice.

Mr. WILMOT. I gave my reasons in opposition to the proposed line laid down in the Bill——

The PRIME MINISTER. Order, order. The hon. gentleman has not given notice.

Mr. SPEAKER. I cannot lay my hand just now on the authority, but I am sure to have seen somewhere in May that a motion making an important amendment to a private Bill must be moved by the hon. member giving notice of it. I cannot just now lay my hand upon the authority but I am pretty sure that the amendment can be moved only by the hon. gentleman who has given notice of it.

Mr. HUGHES (Victoria). Mr. Speaker, the ground I take——

Mr. McCARTHY. The hon. gentleman (Mr. Hughes, Victoria) has spoken once.

Mr. HUGHES (Victoria). The hon. gentleman (Mr. McCarthy) has spoken forty times and I am satisfied that if he will only have the goodness to keep quiet the business of the House will proceed much better. I am asking a question in reference to a point of order and if I am not within my rights I will be delighted to obey the rules of the House. In case this Bill passes nine o'clock, notice can again be given and the member giving notice can move the motion.

The PRIME MINISTER. That is not a notice; it is a suggestion.

Mr. FOWLER. I understood that having already spoken on the motion of which I gave notice it was against the rules of the House for me to move the second motion of which I gave notice. I would like to ask the Speaker's ruling on the point as to whether it is in order to move this motion. If it is I am sure I will be delighted to do so and to discuss the question too.

Mr. SPEAKER. It will have to be done with the unanimous consent of the House. I understand the House agrees to that.

Mr. FOWLER. Well then, I beg to move, pursuant to notice that I have already given :

That this Bill be not now read a third time but that it be referred back to the Committee of the Whole, with instructions that they have power to amend the same by providing that a branch line be built from the proposed main trunk line of the Grand Trunk Pacific Railway, beginning at a point at or near where said trunk line crosses the Nashwaak river, and thence extending, by way of Fredericton and the valley of the St. John river, to St. John city.

There was some discussion the other evening when this Bill was before the Committee of the Whole in respect to this branch line. The charter as first introduced does not provide for any branch extending from the main line to the city of St. John. I brought the matter up and requested the promoter of the Bill to make such an amendment to the Bill as would provide for a direct connection with the city of St. John. Without such direct connection, in order to reach the largest Atlantic seaport of Canada it would be necessary to go round by way of Moncton which was the proposed terminus of this so-called—this so-called—I say it advisedly—transcontinental road. Transcontinental as applied to a road which it is proposed shall stretch from one ocean to the other but which stops at an inland town seems rather a misnomer. It was not, by the charter as originally introduced, proposed to make any connection at all with the city of St. John which is the largest city in the province of New Brunswick, and which is the nearest Atlantic port on the Canadian coast. I consider that this was a very serious blunder on the part of those who are promoting the Bill. I ask that the Bill be amended to the extent that the city of St. John will have direct connection by the shortest possible route with the main trunk line. There was a counter proposition by the hon. member for Westmoreland (Mr. Emmerson), who proposed that instead of going by the shortest and most direct route from the main trunk line of the proposed road, we should go by a more roundabout way, around by the small country town of Chipman and thence to Norton, a point on the line of the Intercolonial Railway between Moncton and St. John, and about 33 miles from St. John. Now, even by the contention of the hon. member (Mr. Emmerson) this proposed course would be considerably longer than the proposition which I make in this motion now before the House. It was very easy matter to take the map of any country and sit down with a pencil and draw lines which shall be short routes. The hon. member for Westmoreland is either oblivious of the fact, or he has forgotten it if he ever knew it, that the route which he proposes for this main trunk line is through the most mountainous part of the province of New Brunswick. It is through a part of the province which is not only very rugged and mountainous, but which abounds in lakes of considerable size, and

in order to avoid these lakes—because even this Grand Trunk Pacific Railway road will scarcely be able to run on the water—in order to avoid these lakes and to get a feasible pass through these mountains, it will be necessary to make wide detours. And when that is taken into consideration and the necessary allowance made for these wide detours, the route which is proposed by the hon. gentleman will be more than 50 miles longer than the route followed, say from Edmundston, where it should come really, down the valley of the St. John river to the city of St. John. I do not know why this town of Moncton was made the terminus of the road. If it were intended to get the shortest possible route to the Atlantic seaboard it certainly was a very great mistake to make the town of Moncton that terminus.

Some hon. MEMBERS. Nine o'clock.

Mr. SPEAKER. The hour for private Bills having expired, the House will resume the consideration of the motion of Mr. Wade, and the amendment thereto.

INDEPENDENCE OF PARLIAMENT—MR. LOY, M.P.

The House resumed the debate on the motion of Mr. Wade and the amendment of Mr. Monk thereto.

Mr. H. LENNOX (South Simcoe). When the debate began this afternoon I did not intend to speak upon the question, as in common with many other members of the House, owing to the fact that the evidence of the committee had not been printed, I had not been able to acquaint myself so fully with the facts as I would desire. But in the course of the discussion certain matters have transpired and certain statements have been made which I think should not go unchallenged. It has been stated this afternoon that the majority of those who have spoken on both sides of the House are lawyers, and this one would anticipate in a question of this kind. One of the laymen who spoke (Mr. Heyd) on behalf of the hon. member for Beauharnois, said that if lawyers could not agree upon a statement of the law how then would Mr. Loy be expected to know the law? Well, I do not wish to press this point, but their are certain recognized rules of law which have to be adopted in order that justice shall prevail, and one of them is that ignorance of the law is no excuse. In other words, the hon. member whose seat is attacked, whether he did or did not know the law relating to his case, is bound in common with all the subjects of the King by the law as it exists. Otherwise it would be impossible in many instances to carry out the just provisions of the law. But I am not going to address the House to-night so much upon the question of whether the seat of the hon. member should or should not be vacated, as to reply to certain very broad statements made by at least two members of the legal profession who spoke on the government side. It has been recognized since courts of justice have been known in Britain and in this country, that that which you cannot do directly as being a violation of the law, you cannot do by any underhand method; you cannot by a trick evade the law and so evade the responsibility which attaches to violation of the express provisions of the law. It is also well recognized that if certain circumstances exist which would put a man of ordinary prudence and discretion upon inquiry, and if the courts find that inquiry was avoided, much more so if it is found that the party deliberately closed his eyes so as to avoid a knowledge of that which would be prejudicial to him or inconvenient for him to know; then the same consequences must attach as if he had actually known all the circumstances. It is, therefore, exceedingly pertinent and important in dealing with this question that we should come to a conclusion not only as to whether the member for Beauharnois had actual knowledge by words or by letter of the circumstances which were transpiring in reference to his property; but it is pertinent and important to inquire whether the surrounding circumstances were such as would carry conviction and would suggest inquiry to any reasonable man situated as he was at that time. I merely refer to this. But I am induced to speak for a few minutes upon this question more particularly because of certain broad propositions, of law particularly, and some statements of fact made, this afternoon by the hon. member for Annapolis (Mr. Wade) and the hon. member for Ottawa (Mr. Belcourt). The former gentleman, concluded his argument in these words: 'A certain class of lawyers'—and he did not finish them. I was rather puzzled why he did not explain what this term meant. I cannot explain it unless he had in mind a certain class of lawyers who when they have a poor case, usually abuse the opposite counsel. If he had, I do not know that that reference is borne out by the fact. If he refers to the hon. gentleman on this side of the House who brought up this matter, I do not find that the hon. gentleman abused anybody. On the contrary, I think the consensus of opinion in this House must be that he presented the matter in a calm and temperate way, with that proper measure of judicial discretion and that observance of judicial rules which we would expect in a matter of this importance, involving very grave issues to the hon. member for Beauharnois. But on the other hand, although it is true that there are certain circumstances in which a lawyer displays the fact that he has a weak case by abusing the opposite counsel, there is another way of determining whether a

counsel has the conviction that he has not a strong case, or whether or not he has a strong case. When we find the Chairman of the Committee on Privileges and Elections, the hon. member for Annapolis (Mr. Wade) and the hon. junior member for Ottawa (Mr. Belcourt), men of such a very high legal standing in this country, men of such conspicuous ability, men of such great fame in the profession—when we find these gentlemen struggling with this case for so long a time, with the result that as they proceed with their argument it becomes darker for the member for Beauharnois, what do we think then of the case? Is there not a suggestion that the case as presented by these hon. gentlemen is not strong? Can we come to any other conclusion than that if these hon. gentlemen, with their well known forensic skill, had a good strong case, they would make a very powerful argument? Now, I will not say on behalf of the hon. gentleman whose seat is attacked, 'save me from my friends,' because that might imply something not very complimentary to the hon. gentlemen who are assisting him; but I will for the moment address myself to a statement made by the hon. member for Annapolis. He said, if I understood him aright, that Mr. Johnston sold to the government, and that if he did, having made a valid contract with the sitting member for Beauharnois, then the sale was valid. I dispute the proposition that Mr. Johnston sold to the government. What are the facts? The facts as stated by the hon. ex-Minister of Public Works (Hon. Mr. Tarte), and not questioned by any member of this House, are that he instructed a gentleman in Montreal, Mr. Dandurand, to purchase this property for the purpose of a post office site; that this gentleman went to Mr. Johnston and instructed him to act in the matter; that Mr. Johnston says that, acting upon that instruction, he went to Valleyfield and made an arrangement with the sitting member to secure an option for the purchase of this property. He was in league with the government. He had no money with which to purchase the property. He never changed his position. He began as an agent of the government—a sub-agent, it is true, but his position is not modified by that circumstance—and continued to negotiate as an agent of the government. He was supplied through the agency of a gentleman whom the ex-Minister of Public Works had instructed to act on behalf of the government. So it is impossible to argue that this gentleman was in any sense purchasing on his own behalf. From first to last he was purchasing as the professed agent of the government, under instructions directly given through the Department of Public Works, with money which was procured through the agency of the government; and he was paid as an agent by receiving afterwards the sum of $300 through the abatement made by the vendor of the property and $100, which I think was contributed by the government. The letter which was sent, stating that the government required certain land, is important as showing whether or not the hon. member for Beauharnois had a knowledge of the fact before the transaction was consummated that the property was to be the property of the government. Now, it was admitted by the hon. member for Annapolis that if, as a matter of fact, the hon. member for Beauharnois knew that the government was to be the purchaser, and that Johnston was virtually only an agent before the transaction was consummated by a deed of the property, then the law must apply and the seat must be vacated, as the hon. member had violated the law. What is the evidence on this point? It is suggested by the hon. leader of the opposition, with that fairness which characterizes that hon. gentleman that probably that letter in itself was not altogether conclusive; that it might be subject to the interpretation that Mr. Loy understood that he was carrying out the transaction with Johnston, and that Johnston was entering into an independent transaction with the government. But having regard to the facts and to the question which was put by Mr. Loy at the time the negotiation for the purchase was entered into, 'Is this for the government?' having regard to the fact that it was notorious that this property above all others was a suitable site for the post office; having regard to the fact that the hon. member for Beauharnois had been the mayor of that town, and that he was prominently connected with the municipal affairs as well as a parliamentary light: having regard to the additional fact that he was a prominent man, to whom such a question would naturally be communicated, and who would be in touch with the prevailing sentiment of the locality, which is said to have been that his property was the most suitable site for the post office, it is almost inconceivable that he should not have known from that letter that the government intended acquiring his property. At any rate, as he knew all the circumstances, he was put upon inquiry; and if he deliberately closed his eyes, he was just as much responsible as if he had allowed the full light to flow in upon him. Then is it consistent with the contention that Mr. Johnston was regarded by the hon. member from Beauharnois (Mr. Loy) as a man of means acting for himself, when just about the time the transaction was being completed by the deed, there was an arrangement made by which an abatement of $300 was taken off the original price upon the ground that he could not otherwise carry out the purchase. Mr. Johnston insisted upon a reduction in the price. Did not that reduction annul the option and make a new contract? If so, then

the hon. member for Beauharnois was no longer bound by the option he had given. My hon. friend from Annapolis (Mr. Wade) says he does not regard that abatement as constituting a new contract. I shall not question the sincerity of my hon. friend. I take it that he gives us his opinions as an hon. member of this House belonging to the legal profession, candidly and fairly, but I do venture, with all due deference to my hon. friend, to question the soundness of his conclusion. In dealing with this matter, we are not discussing abstract, cast iron rules of law. I understand that we are to apply to it reasonable interpretation upon broad and common sense principles, and I submit that when Mr. Johnston said he could not carry out the option unless he were given an abatement of $300, a new contract was then proposed, and my hon. friend from Beauharnois, who then knew that the property was to be transferred to the government, should have declined to conclude the sale. My hon. friend from Annapolis (Mr. Wade) has laid down the proposition that if Mr. Loy knew, before the completion of the contract, that the property was going to the government, then the independence of parliament Act applied. Well, having regard to what has transpired, can there be any doubt in the minds of hon. members that the hon. member for Beauharnois must have had at least a very strong suspicion that it was the government which was acquiring the site. Seeing this the hon. the junior member for Ottawa, Mr. Belcourt, took the position that Mr. Johnston did not know that he was purchasing the property for the site of a post office. I had not the opportunity of attending all the meetings of the committee, but I was at some of the meetings, and consequently it would be easier for me to carry in my mind the evidence that transpired while I was present than if I had been present at all the meetings. I have a distinct recollection of the examination of Mr. Johnston, and I clearly recollect that he explained that he had been instructed to obtain a site for a post office. And what did seem extraordinary to many members of the committee was that he did not stop there, but went on to say that the selection of the site was left to his discretion. Hon. members who were present at that meeting were no doubt as much startled by that evidence as I was. I repeated it immediately afterwards to some members outside, and expressed my astonishment that the choice of a site should have been left to him, Mr. Johnston, the agent of the government. He went to Valleyfield for the purpose of obtaining an option on a site for the post office, and the government, through Mr. Dandurand, provided him with the money to carry out the sale. The hon. member for Ottawa (Mr. Belcourt) cited to us article 1472 of the Quebec Civil Code. I recognize no substantial difference between that article and the law in the province of Ontario. That article reads:

> Sale is a contract by which one party gives a thing to the other for a price in money which the latter obliges himself to pay for it.

Let me draw attention to these words: 'Which the latter obliges himself to pay for it. They are not at all unimportant in the consideration of this matter, because an option differs very substantially from an ordinary contract of sale, in which both parties are mutually obligated, the option of sale being more in the nature of a mere offer. Now the portion of this article of the code to which my hon. friend wished to direct attention is this:

> It is perfected by the consent alone of the parties, although the thing sold be not then delivered.

I quite agree with my hon. friend that this is a good proposition in law, not only in the province of Quebec, but probably throughout the Dominion generally. But if a sale is perfected by consent, it is only perfected within the terms of the written document or within the terms of consent. It is contended by my hon. friend from Ottawa (Mr. Belcourt) that the whole matter is to be determined by the condition of things as we find them on the 16th of July. I need not remind hon. members who are of the legal profession only, for it is well known to all the members of this House, that fraud in the initiation of a contract vitiates it, that no contract founded in fraud or misrepresentation can be enforced at the suit of the person who is a party to the fraudulent misrepresentation. Specific performance, indeed! At whose suit? Could there be specific performance at the suit of Johnston? Why, he went there with a deliberate falsehood in his mouth. He went there instructed to make statements that were untrue. The sitting member for Beauharnois was a public man, interested in the welfare of his town. It was a matter of interest to him whether that property should be used for some great public purpose, such as suplying a need of the town of Valleyfield, or should be diverted to some other purpose. The representation made that the property was being purchased for a purpose other than that which was actually stated would have met Johnston immediately if he came into court for specific performance. Could specific performance have been enforced at the suit of the Crown? What position was the Crown in? I call attention of the members of the government to that. The Minister of Public Works, who has charge of this matter, holding that the property was desirable in the interest of the government and in the interest of the country, formed a plan by which to acquire it. He goes to an agent and the agent employs a sub-agent, who is instructed to misrepresent to the vendor what the

property is to be used for. So, the Crown, which we are supposing to have instituted proceedings, is shown to have been aware that this property could not have been bought directly by fair and open dealing from the sitting member for Beauharnois, and yet it comes into court and asks for specific performance of the contract. What will the answer of the court be? The answer will be: This matter did not begin on a fair and open basis; and, in addition, the government of Canada, who, above all parties, should not initiate a suit directly contrary to public policy and to the words of the statute, cannot say that specific performance should be enforced for the sale of the property of a member of parliament to the Crown. At the suit of Mr. Loy, can specific performance be obtained? I submit to you, Sir, and I feel I am submitting a matter that you will concur in, that no such suit could be successful. I admit that if the contention of the hon. member for Ottawa were correct and the transaction were closed on the 16th July, that the option of sale concludes the whole matter, then there would be good ground. Or, if the suit arose before there was any disclosure made to the sitting member for Beauharnois, then there would be good ground for the suit. But when the facts are that he does know before the time the deed is demanded that the proposal is substantially to vest his property in the Crown, by sale, he being a member of parliament, and in the face of the Act which declares that no sale can be made and no contract entered into between a member of parliament and the Crown, it goes without argument that he too will be denied the remedy of specific performance. What is the remedy, if any? The remedy is to go after Johnston. The remedy is in damages and for damages alone ; and so, section 1077 of the Code, which my hon. friend has cited, comes in very properly. Go after Johnston, the party with whom you dealt, and who deceived you. That is the remedy. It may be said that this is rather hard ; it may be said that Johnston is a man of no substance. I have nothing to controvert that. It is probable he is a man of no substance, for it is generally a man of no substance who is put forward to carry out a scheme of this kind. The answer is : Have a care before you enter into contracts with men unknown to you; have a care when a stranger invades your town, and, with some unusual story, asks you to bind yourself to sell your property to him, trusting that you will conform to his wishes with all the innocence of youth. But, if with the unsuspicious nature that characterizes the ordinary member of parliament, you sell property of this character, which is known to be prized by the Dominion government, known to be the only site for an intended post office in your town, it is incumbent upon you to know the man you are dealing with, and you have no complaint if you are compelled to seek damages against a worthless man. But, aside from these general propositions which, I say with all fearlessness will be acknowledged by every member of this House as applied to the parties to the contract, there are certain well known rules of courts of equity which must be recognized. A court of equity does not decree specific performance as a matter of course; it decrees it or withholds it at its discretion. I cannot grant the exceptional and peculiar remedy of specific performance except where the righteousness of it is established. He who comes into equity must do equity. The party who claims specific performance must show that his hands are clean, must show that he is guilty of no connivance, no fraud, no questionable conduct. Could any of the parties show this ? But the party who seeks a decree in equity must do more than that. He must show that it is not contrary to public policy. Can this be done in this case? There could be no more flagrant violation of the requirements of public policy than for a court of this land to decree specific performance once they knew that this transaction, on the fact of it honest, was in fact an evasion of the statute, by which evasion the property of a member of parliament would become vested in the Crown represented by gentlemen in political affinity with him who was the vendor of the property.

Now, I want to appeal, not to my friends on this side of the House, but to you, Mr. Speaker, to all members of the cabinet and supporters of the government, on behalf of Mr. Loy. I do not think the hon. member for Beauharnois—I say it in all sincerity—has been treated fairly in this matter. I do not think the government have given the hon. gentleman a fair chance for his life, because, after all, a man's blameless and unblemished reputation is of more value to him than life itself. What is the position in which the government has placed the hon. member for Beauharnois ? It has forced him into this position, than at best he has to stand with a cloud of suspicion attaching to him. If that evidence had been printed, as it was the duty of the government to print it, we could have gone into the discussion of the matter fully and fairly, recognizing that whatever our political differences may be, it is our duty in all honour and in all fairness to stand by each other in that which is right. We would have been able, perhaps, not only to exonerate Mr. Loy from the charges made against him, to the extent of enabling him to hold his seat, but we would have been able, perhaps, so to vindicate his honour as that the whole House would unanimously agree that he was not to blame at all. That might have been the case if the government had allowed the evidence to be printed. But what position are we in ? We are in this

deplorable position, and I hope it is not a precedent that will be honoured in the future, that members on this side of the House and on that side of the House cannot agree because they do not know the evidence. It is impossible for hon. gentlemen upon either side of the House, except those who continuously attended the committee—and very few of them did so—to be able to judge of the merits of this case as fully as they ought to be, because they are not possessed of the evidence.

Now, in view of all these circumstances, I am not going to say that I would not like unduly to press the case against the hon. member for Beauharnois, who has been so badly treated by his own friends. They have left him—and don't you forget it—they have left him covered by suspicion, by reason of the notoriety of the fact that the government wanted this property, suspicion by reason of the fact that an appropriation had been made, the suspicious movements of Mr. Johnston in acquiring the property, suspicion by reason of the fact that Loy was a supporter of the government, and that he was specially interested and charged with a knowledge of the whole matter as representative of the city, and by reason of the fact that after the option had expired, and at a time when you would have expected him to be on the alert in regard to a man unknown to him like Mr. Johnston, he appeared indifferent to the result. I say all these circumstances are calculated to cast suspicion upon the conduct of the member for Beauharnois, even though they do not amount to actual proof. Now, under these cricumstances, feeling that the hon. member may well exclaim, 'Save me from my friends,' speaking for myself alone, having no instructions from anybody, having no knowledge of the general opinion on this side of the House, I would be glad, speaking from my feeling of good nature, if the hon. member who has had charge of this matter could see his way clear not to press his motion to a division. I feel that where honour is at stake, it is better that several hon. members who may be guilty of some infraction of the law should go unpunished, than that one member should have a stigma cast upon him which by possibility is not deserved.

Mr. E. G. PORTER (West Hastings). After the lengthy discussion that has taken place on this motion, I would not venture to address the House now but for the fact that I have the honour of being a member of that committee to whom was confided the investigation of the charge which has been the subject of discussion this afternoon. I do not wish to be understood by the House or by the country as acquiescing in the majority report which has been brought into the House in regard to this matter, nor do I wish to be understood as assenting to some of the propositions that have been laid down by hon. members opposite in regard to the construction that is to be placed on the contract between Mr. Loy and Mr. Johnston. The junior member for Ottawa (Mr. Belcourt) endeavoured to convince this House that the contract of sale between the member for Beauharnois and Mr. Johnston was consummated on the 16th day of July, and that after that date, no matter what information the hon. member may have received, it was impossible for him to recede from the contract into which he had entered. Now, Sir, I take issue with the hon. member for Ottawa in that position. It is, I think, a proposition in law that will not be disputed by any lawyer, in fact, it is a proposition of individual right which will be recognized, I think, by every member of this House, that a person having property to sell, a vendor, so to speak, has a perfect and absolute right to dictate and to state upon what terms his property shall be sold. No matter how ridiculous, or how absurd, or how onerous these conditions may be, he has a perfect right to impose these conditions and a perfect right to insist upon these conditions being performed before he is obliged to part with his property. To apply that principle to the case in hand, the hon. member for Beauharnois in signing the option for the purchase of his property had a perfect right to impose upon the intending purchaser whatever terms he saw fit, and unless these terms were acquiesced in by the intending purchaser he was in no way bound. When an option is given for the sale or purchase of property, unless the identical terms under which that option is given are accepted, there is no binding contract. The option may be conditional as to the time in which the option shall be exercised, it may be conditional as to the manner in which the purchase money shall be paid, or it may be optional as to the state of the title, or it may be optional in many other ways. Whatever the conditions imposed by the vendor are, they must be accepted by the intending purchaser; otherwise, there is no contract. If the terms of the option are varied in any way by the intending purchaser, then something further is required in order to complete the contract; in other words, the vendor having received a qualified or conditional acceptance it is for himself to go a step farther and acknowledge or confirm the conditional offer that he has received. It is perfectly apparent in this case that no such third step as that was taken. Only two steps were taken in the formation of this contract, and I desire to call the attention of the House to the exact wording of the option and acceptance. I submit with every confidence to the House that upon a fair and reasonable construction of the option and of the letter of acceptance there never was a contract between these two parties before the money was actually paid over. The terms of the option are that he will sell the property,

the right to buy to be exercised by three o'clock on Wednesday afternoon on the 16th, with this further condition 'the price to be $10,000, payable in cash on day of sale.' If the argument of the hon. member for Ottawa (Mr. Belcourt) is correct, the sale, according to that hon. gentleman, was completed on the 16th July, when the letter, which he termed 'the letter of acceptance.' was written. I defy any one to find in that so-called letter of acceptance an acceptance of the exact terms contained in this option. There were three things to be done—first, the exercise of the option of the 16th July ; second, the payment of $10,000 ; and, thirdly, the payment at the time of sale. Now, these are the three conditions that the vendor imposed and had a right to impose. Let us see if these conditions have been accepted by the intending purchaser. Mr. Johnston says : 'I beg to accept your offer.' That part of it is all right, and he did that on the 16th July. But then he goes on to say that he does not accept the second part as to the payment of the $10,000 on the day of sale, but he puts it in this way :

> The price will be paid in cash on title being found satisfactory and deeds executed by you.

An entirely different thing from what the vendor had stated in his option. By the terms stated in the option the intending purchaser was bound to exercise that option in its exact terms, but when we read the acceptance of the 16th July we see that the intending purchaser entirely varies the option given to him by the vendor. For that reason, I say that there was no contract, that there was no confirmation of that intended acceptance by the vendor ; and for that reason, I submit there never was a binding contract by the option and by the intended letter of acceptance between these two parties. If I am right in that contention, then it leads me one step further. The hon. member for Ottawa argued that because there was a contract, therefore, the hon. member for Beauharnois could not withdraw. If I am right in my contention, there was no contract ; and if that be so, the second part of his argument falls to the ground. If there was no contract between those two parties, as I submit there was not, then it was perfectly open to the hon. member for Beauharnois at any time after he received that letter of the 16th July to have withdrawn from what had taken place, as the negotiations might eventually end in a contract. I submit that the evidence given before the committee amply justifies me in saying that the hon. member for Beauharnois had become possessed of the knowledge that the government were really purchasing this property, and the moment he acquired that knowledge, there being no binding contract between himself and the intending purchaser, it was not only his privilege, but his duty as a member of this House, to have repudiated the whole thing and to have refused to enter into any further negotiations in regard to it. But that was not the only means of escape, to my mind, that the hon. member for Beauharnois had in regard to this matter, and I quite agree with some of the remarks that were made by the last speaker (Mr. Lennox) in regard to this question. If the hon. member for Beauharnois did not know that this property was being sold to the government, the government certainly knew that this property was being bought from the hon. member for Beauharnois, the government knew that the hon. member for Beauharnois was a member of this House at the time, and it was just as incumbent upon the government to inform the hon. member for Beauharnois of the position in which he was placing himself by going on and completing his contract as it was the duty of the hon. member for Beauharnois to have withdrawn from it when he understood what the character of the contract was. There is a principle of law which is as well recognized as any other principle of law that I know of, and it is that it is just as much a fraud to withhold information that should be imparted as to impart false information to a party with whom you are contracting, and I hold that, while the term 'fraud' may be too harsh, it was withholding on the part of the government information that it was their bounden duty to impart to the hon. member for Beauharnois to enable him to form a proper judgment upon the matter, and to escape the penalties or the obligations of this statute, which is made to protect the parliament of this country. For these two reasons, then, I differ entirely from hon. gentlemen opposite, because I have come to the conclusion from the evidence, as in fact it has been admitted by hon. members on the other side of the House during this discussion, that at a certain time before the money was actually paid over, the hon. member for Beauharnois did become aware that the government were purchasing this property, and having obtained that knowledge before he was bound to carry out the contract, or the government being under an obligation to impart that knowledge to him, I submit there was no justification for the hon. member for Beauharnois carrying out the contract, nor is it honest or just for the government to ask their supporters to whitewash him in this matter.

House divided on amendment (Mr. Monk).

Amendment negatived, main motion (Mr. Wade) agreed to on division.

NATIONAL TRANSCONTINENTAL RAILWAY—PLANS PRESENTED.

The PRIME MINISTER. I beg to move :

That an order of the House do issue for certain plans prepared by Mr. E. A. Hoare, engineer for a short line of railway between Quebec and the maritime provinces.

Motion agreed to.

The PRIME MINISTER laid the plans on the Table of the House. He said : I have also laid upon the Table of the House certain reports from the different engineers employed by the provincial governments of Ontario and Quebec, and the government of Canada. These, however, do not require any motion because they are public property.

Mr. BORDEN (Halifax). I would like to ask whether this comprises the mountains of information to which the right hon. gentleman referred in his speech.

The PRIME MINISTER. No ; that does not comprise the mountains ; only some of the hills.

Some hon. MEMBERS. Hear, hear.

Mr. BORDEN (Halifax). May I ask when we shall expect the mountains ?

Mr. MACLEAN. The mountain is not delivered yet.

QUESTIONS.

POSTMASTER AT MACLEOD, ALBERTA.

Mr. OSLER asked :

1. Has Mr. D. J. Campbell been dismissed from the position of postmaster at Macleod, Alberta ? And if so, when was he dismissed ?
2. Upon whose recommendation was he dismissed ?
3. For what offence was he dismissed ?
4. How long had he occupied the position of postmaster at Macleod ?
5. What was the appointment worth annually?
6. Has any person been appointed to the vacancy ? And if so, who has been appointed, and what was the date of the appointment ?

The POSTMASTER GENERAL (Hon. Sir William Mulock). Mr. Campbell was appointed postmaster at Macleod on the 1st of January, 1885; his salary was $800 a year. He has been also acting as sheriff and his duties as sheriff interfered with the proper discharge of his duties of his office as postmaster and for that reason a change was made. On the 6th instant Mr. Samuel Heap was appointed in his place.

COMMISSION ON CAPITAL AND LABOUR; 1886.

Mr. KENDALL asked:

1. What are the names of the commissioners appointed in 1886 for the purpose of inquiring into the relation of capital to labour, and other matters?

2. What was the cost of such commission, to what was this amount paid, and how much was paid to each person?

The POSTMASTER GENERAL (Hon. Sir William Mulock):

1. Hon. James Armstrong, Ottawa; John Armstrong, Toronto; G. Boivin, Montreal; U. Carson, Ottawa; J. A. Clark, St. John, N.B.; A. T. Freed, Hamilton; W. A. Gibson, Ottawa; Wm. Haggarty, Sydney, N.S.; S. B. Heakes, Toronto; Jules Helbronner, Montreal; John Kelly, St. John, N.B.; Patrick Kerwin, Quebec, Que.; H. A. McLean, Halifax, N.S.; Michael Walsh, Halifax, N.S.

2. The total cost of the commission was $81,718.98. This amount was paid as follows. To the commissioners:

Hon. James Armstrong, Ottawa	$ 7,142 17
John Armstrong, Toronto	2,400 00
G. Boivin, Montreal	1,737 90
U. Carson, Ottawa	2,040 98
J. A. Clark, St. John, N.B.	3,440 40
A. T. Freed, Hamilton	3,152 19
W. A. Gibson, Ottawa	2,831 38
Wm. Haggarty, Sydney, N.S.	1,862 17
S. B. Heakes, Toronto	3,122 84
Jules Helbronner, Montreal	6,507 80
John Kelly, St. John, N.B.	1,637 11
Patrick Kerwin, Quebec, Que.	3,072 98
H. A. McLean, Halifax	3,119 65
Michael Walsh, Halifax	3,586 91
	$45,654 48

The sum of $81,718.98 was paid out as follows:

To the secretary and stenographers of the commission	$10,019 79
To W. C. Blumchart	758 50
" J. Bouchard	425 25
" J. H. Browning	814 32
" D. Delisle	417 75
" A. deHaerne	384 00
" D. S. Hennessey	420 25
" Holland Bros.	372 12
" A. Monpetitie	1,892 55
" A. Prieur	934 00
" A. Raby	526 50
" E. Roger	615 00
" J. P. Sexton	941 25
" Wm. Smith	540 00
" M. Vidal	456 00
Total	$7,194 49
To various other persons	$ 3,543 19
To printing and stationery	10,981 01
Government stationery office	39 02
King's Printer	1,287 00
Making a total of	$81,718 98

MONTREAL HARBOUR COMMISSIONERS.

Mr. MONK asked:

1. What are the names of the present harbour commissioners of Montreal?

2. What amounts have been paid to each of the said commissioners during the last fiscal year of said board, as salary, fees for attendance at meetings or other purposes?

The MINISTER OF MARINE AND FISHERIES (Hon. R. Préfontaine):

1. Hon. Robert Mackay, Jonathan Hodgson, Robert Bickerdike, Alphonse Racine, E. H. Lemay, Wm. E. Doran (from May 2nd), James Cochrane (Mayor), James Crathern, John Torrence, L. E. Geoffrion, Robert Reford.

2. Hon. Robert Mackay, salary as president (Act 57-58, Vic. Chap. 48), $2,000.

Fees $5 for attendance at a meeting:

Hon. Robt. Mackay	$680
Jonathan Hodgson	505
Robt. Bickerdike	570
Alphonse Racine	595
E. H. Lemay	385
Wm. E. Doran (from 2nd May)	410
James Cochrane	425
James Crathern	455
John Torrance	525
L. E. Geoffrion	490
Robt. Reford	375
	$5,415

RAILWAY BETWEEN NAPANEE AND DESERONTO.

Mr. PORTER asked:

1. Was a charter ever granted to the Rathbun Company, or any other company or persons, to build a line of railway from Napanee to Deseronto, and locating the line of such railway along the bank of the Napanee river? If so, when?

2. Has any Act been passed or charter granted to the Rathbun Company, or any other person or company, to construct a line of railway from Napanee to Deseronto, changing the original location referred to in paragraph one of this question, or authorizing any other location? If so, when, and what location was so authorized?

The MINISTER OF FINANCE (Hon. W. S. Fielding):

1. Charter to Napanee, Tamworth and Quebec, Can. 1879, chap. 67, covered this route by authorizing a line from Napanee to the Ottawa river, 'and to extend the said railway in a southerly direction to such points on the Bay of Quinté as may be deemed expedient.' This company subsequently, 1890, chapter 62, changed its name to the Kingston, Napanee and Western, and was amalgamated under Can. 1896, chap. 15, with the Bay of Quinté Railway Company, the latter company being incorporated in 1881,

Can. 1881 (chapter 46), with Messrs. Hugo B. Rathbun and Edward B. Rathbun as two of the provisional directors.

2. While the original location does not appear to have been changed by subsequent charter, other locations were authorized by Can. 1884, chapter 62, 1886, chapter 68, 1890, chapter 62, 1896 (1) chapter 15, section 6.

KINGSTON PENITENTIARY—COST OF SISAL.

Mr. CLARKE asked :

What was the average price per pound paid each year since 1893 by the government of Canada for sisal used in the manufacture of binder twine at the Kingston penitentiary ?

The MINISTER OF JUSTICE (Hon. Charles Fitzpatrick) :

1893..	None purchased.
1894..	$3 50 per cwt.
1895..	2 91 "
1896..	3 35 "
1897..	3 06 "
1898..	None purchased.
1899..	None purchased.
1900..	$8 50 per cwt.
1901..	5 13 "
1902..	6 26 "
1903..	8 75 "

RAILWAY ACT, 1903—RAILWAY COMMISSION SALARIES.

The MINISTER OF JUSTICE moved that the House go to-morrow into committee to consider the following proposed resolution :

Resolved, that it is expedient to provide as follows with respect to the salaries of the board, and other expenses incidental to the carrying out of the provisions of the Bill, now before the House, to amend and consolidate the law respecting railways :—

1. The chief comissioner to be paid a salary of $10,000 per annum.

2. The other two commissioners to be paid salaries of $8,000 each per annum.

3. The secretary to be paid a salary to be fixed by the Governor in Council, not more than $4,000.

4. Such salaries and remuneration to be paid to the other officers, staff and appointees of the board, and such other expenses to be paid incidental to the carrying out of the provisions of the Bill as are approved by the Governor in Council.

5. The salaries of the commissioners and secretary to be paid monthly out of the unappropriated funds in the hands of the Receiver General. All other salaries, remunerations and expenses, including travelling expenses, to be paid out of the moneys to be provided by parliament.

He said : I may say that the assent of His Excellency has been received to this resolution.

Motion was agreed to.

TREADGOLD COMMISSION.

Mr. R. L. BORDEN (Halifax). Before the Orders of the Day are called I bring to the attention of the government a telegram which was received from Dawson, directed to Mr. T. Chase Casgrain, M.P., and which by direction of the sender was handed to me in his absence :

Dawson, Y.T., August 4, 1903.

T. Chase Casgrain, M.P.,
Ottawa.

Board Trade asked Laurier, Ross full text scope commission twice without avail, inquire.

I presume it refers to the Treadgold commission and I would gather from it that the board of trade have asked to be furnished with a copy of the scope of the commission and have not received a reply. That inquiry would seem to have been addressed to the Prime Minister and to the member for the Yukon. However, such as it is I bring it to the attention of the government in order that such action may be taken in regard to it as may be deemed necessary.

The PRIME MINISTER. I have received such a telegram as that from, I think, Mr. McCormick, who, I believe, signs as president of the board of trade, asking for full particulars. The information if sent by mail could not reach Dawson any sooner than the commissioners themselves, who are now on their way to Dawson City. I propose sending a summary by telegram.

Mr. BORDEN (Halifax). I suppose there will be no difficulty for the members of the board of trade and the people who are interested in the matter, to ascertain precisely what the scope of the commission is from the commissioners themselves.

The PRIME MINISTER. Certainly not.

Mr. BORDEN (Halifax). Perhaps the right hon. gentleman might see that the commission are so instructed.

The PRIME MINISTER. The commission will sit as a public court.

NATIONAL TRANSCONTINENTAL RAILWAY.

The PRIME MINISTER. Before we proceed with the Orders of the Day, I would like to ask my hon. friend the leader of the opposition, if to-morrow will be convenient for him to take up the transcontinental railway Bill ? If not to-morrow, what day will be convenient ?

Mr. BORDEN (Halifax). To-morrow would have been quite convenient except for the fact that the documents which were asked for on Thursday last have not been laid on the Table of the House until to-day. In view of that, I think possibly Tuesday next will be more convenient, because it is desirable that the members of the House should make themselves acquainted with the information to which the right hon. gentleman referred in his remarks, and which up to the present time has not been accessible to members on either side of the House.

The PRIME MINISTER. Then we will take up the subject on Tuesday.

PUBLIC AND REFORMATORY PRISONS.

Bill (No. 221) further to amend the Act respecting public and reformatory prisons, read the second time, and House went into committee thereon.

On section 1,

Mr. BORDEN (Halifax). What is the meaning of certified industrial schools ?

The MINISTER OF JUSTICE. This amendment is made at the request of the Attorney General of Ontario. The certificate referred to is issued by the provincial secretary of Ontario, and has the effect of placing these industrial schools on the same plane as the Ontario Reformatory for Boys.

Mr. BORDEN (Halifax). The words 'certified industrial school,' I suppose, has reference to some Act of the province of Ontario ?

The MINISTER OF JUSTICE. Yes.

Bill reported, read the third time, and passed.

JUDGES' RETIRING ALLOWANCES.

House in committee on the following resolution :

Resolved, that it is expedient to amend the Supreme and Exchequer Courts Acts, the Exchequer Court Act, and the Act respecting judges of provincial courts, and to provide as follows :—

1. If any judge of the Supreme Court of Canada, or of the Exchequer Court of Canada, or of any Superior Court of Canada, resigns his office, His Majesty may, by letters patent under the great seal, reciting such judge's age and period of service, grant unto him an annuity equal to the salary of the office held by him at the time of his resignation ; to commence immediately after his resignation, and to continue thenceforth during his natural life ; provided such judge has (a) attained the age of seventy-five years, and continued in office as judge of one or more of the said courts, or as such judge and as stipendiary magistrate of the North-west Territories, for twenty years or upwards ; (b) attained the age of seventy years, and continued in office as judge of one or more of the said courts for twenty-five years or upwards ; or (c) continued in office as judge of one or more of the said courts for thirty years or upwards.

2. If any judge of the Supreme Court of Canada, or of the Exchequer Court of Canada, or of a superior court of any of the provinces of Canada, resigns or has heretofore resigned his office as such judge, to accept the office of lieutenant governor of a province, and if he serves, or has served as such lieutenant governor, and is not otherwise eligible for any retiring annuity, as such judge, His Majesty may, at any time after the expiration of the term of service of such judge as lieutenant governor, grant unto such judge an annuity equal to two-thirds of the salary annexed to the judicial office which he held at the time of his resignation ; to commence immediately upon the issue of such letters patent, and to continue thenceforth during his natural life.

3. Every county court judge who has attained the age of eighty years shall be compulsorily retired: and to any judge who is so retired, or who, having attained the age of seventy-five years, resigns his office, and who in either case has continued in office for a period of twenty-five years or upwards, His Majesty may grant an annuity equal to the salary of the office held by him at the time of his retirement ; or if he has continued in office as such judge for a less period than twenty-five years, equal to two-thirds of such salary ; provided that to any such judge who is so compulsorily retired, or who so resigns within years after the passing of the Act based upon these resolutions, there may be granted an annuity equal to the full salary of the office held by him at the time of his retirement or resignation, irrespective of the number of years he has continued in office

4. If any judge of a county court, after having continued in office for a period of thirty-five years, and become afflicted with some permanent infirmity, disabling him from the due execution of his office, resigns his office, His Majesty may, by letters patent under the great seal of Canada, grant to him a pension equal to the salary of his office at the time of his retirement ; the said annuity to commence immeditaely after his retirement, and to continue thenceforth during his natural life.—The Minister of Justice.

On resolution 1,

Mr. WILSON. I would like to have some better reasons from the hon. Minister of Justice for these resolutions. If my memory does not deceive me, the Liberal party was more strongly opposed to superannuation, when in opposition, than to anything else. And throughout the country, the people, irrespective of party, are opposed to that sort of thing. They consider that a man ought to pay for his own superannuation, and that the tax-payers should not be taxed in order to pay a superannuation allowance to a man who has lived in luxury while in the public service, and neglected to lay up a competency for his old age. I represent a rural constituency, and my people are not at all in favour of this policy. There are in that constituency labouring men and mechanics who earn from $300 to $400 per year. Is it fair that these men should be taxed on their small earnings to help pension a judge who has been superannuated on full pay, and who has enjoyed a salary of from $4,000 to $7,000 a year during the years he was on the bench ? I consider this most unfair. It is not even as if these judges had ever paid anything towards their own superannuation. I give this government the credit of having made some changes in our superannuation system since they came to power. Every civil servant now has to pay into the superannuation fund so much a year, and that money is returned to him with interest at 5 per cent when he is superannuated, or is paid to his family should he die before superannuation. There can be no objection to that, because they are simply getting back what they have con-

tributed. But there is no reason why the government should tax people to keep men living in luxury with their families, who have never contributed anything to the superannuation fund. I am speaking the sentiments of the people I represent.

The MINISTER OF JUSTICE. I represent myself a farming constituency, where there is probably a greater number of farmers than in my hon. friend's riding, and I have no hesitation whatever in saying that any man who has served his country thirty years as a judge on the bench is entitled to all the consideration he can get. Many of our judges are giving their services to the country on the bench for a pittance compared to what they would earn at the bar.

Mr. BENNETT. And just the opposite too.

Mr. WILSON. In my riding there is a vacancy on the county court bench at present. And there is not a lawyer in the county town who would not take the position at the pay, and it is only a county court judgeship. There are also other gentlemen in other towns who are very anxious to get the position, and the pay is more than the most of them earn at the bar.

The MINISTER OF JUSTICE. There may be something in what the hon. gentleman has said, but there is also a great deal in what I have said. The bench has ceased to attract the best men at the bar. My hon. friend will admit that some of the men he knows in Ontario, and whom I know in Quebec, have been on the bench twenty-five and thirty years, and are seventy-five years of age and over, and they are obliged to work on when they have really passed their years of labour, because they cannot afford to retire. In view of the very small salary paid distinguished men on the bench, the least we can do is to give them this retiring allowance.

Mr. ROBINSON (Elgin). I notice that judges eighty years of age can be compulsorily retired ?

The MINISTER OF JUSTICE. That only applies to county court judges. The high court judges may retire if they choose, but we cannot compel them.

Mr. ROBINSON (Elgin). Why is a county court judge to be compelled to retire at eighty years of age ?

The MINISTER OF JUSTICE. Because experience has shown that when a man has reached the age of eighty, it is time for him to leave the bench.

Mr. ROBINSON (Elgin). Does the hon. Minister of Justice know that some men at eighty are as full of vigour and as active in intellect as some men of sixty, I do not think it is necessary to compel a man to retire unless he is unable to do his work. In the county where I live, the judge, who has been on the bench fifty years, is full of vigour to-day, and the members of the bar there are not anxious to have him retire, nor is he himself anxious to retire. He is full of experience and probably a far better judge than any one we could select in his place.

Mr. BENNETT. What was the age of Mr. Justice Britton when he was appointed to the Superior Court in Ontario ?

The MINISTER OF JUSTICE. I cannot remember.

Mr. BENNETT. About seventy, was it not ?

The MINISTER OF JUSTICE. I have no idea at all.

The PRIME MINISTER. I would like to observe to my hon. friend from Lennox (Mr. Wilson), who seems to take a different view from that presented in these resolutions, and to object that judges be given pensions, because pensions of some kind are not given other classes of the community, that in all civilized countries, particularly England, the services of judges have been deemed of such a character as to make it advisable for the community at large that they should be provided a pension in their old age. The object is to put judges above temptation, to ensure their dignity and independence, and to make them what they should be, the impartial arbiters of all differences in the community. The idea of giving pensions to judges has never been called into question in this House. Ever since confederation, our judges have been granted pensions.

Mr. WILSON. Are you not increasing the amount ?

The PRIME MINISTER. No, but we provide that, under special circumstances, a pension will be given. At present when a judge has served fifteen years, he can, on the mere asking, retire and receive a pension of two-thirds of his salary. This resolution provides that when a judge has served thirty years or has reached the age of seventy and served twenty-five years, or the age of seventy-five and served twenty years, he shall be allowed to retire on full pay. Now, my hon. friend objects to this, as do some other hon. members, that men should not be compulsorily retired. Judges of the county court can be compulsorily retired; judges of the superior court cannot be so retired, but they are given the option after having served thirty years, or after having served twenty years and having attained the age of seventy-five years, or after having served the twenty-five years and attained the age of seventy-five years, of withdrawing with full salary. For my part, I am sorry we have not the power to retire even judges of the superior courts compulsorily at a certain age. Such power

of compulsory retirement should not be taken as a reflection upon anybody. Unfortunately, we have to admit that as time goes on our forces diminish. And judges, being human like the rest of us, when they reach a certain age, say seventy-five or eighty years, ordinarily are not as fit as younger men to discharge the important services which the community look to them to render. Take a parallel case, say of generals in the army. In the United States a general is compulsorily retired at sixty-four years. In England also, I think, there is a limit of age for the general officers. If I am not mistaken, and speaking under correction, officers in high command are forced, after they have reached a certain limit of age, to take their pensions. The same thing should apply to judges. My hon. friend from West Elgin (Mr. Robinson) speaks of a certain judge who at eighty years of age is as well able to discharge the duties of his position as a man of sixty would be, perhaps better. But exceptions of this kind only prove the general rule, that a man at eighty is not as well fitted to do good work as a judge as a younger man would be. So, the fact that there is a judge in the county of Elgin who, at eighty years of age is able to discharge his duties proves nothing. Mr. Gladstone at eighty gave perhaps his best services to the state. Those exceptions are very rare. Though my hon. friend (Mr. Robinson) is very vigorous at his age —perhaps sixty, like myself—yet perhaps he will agree with me that his vigour was greater than it is at the present time. I am sorry to be obliged to admit that, as time goes on, our forces, instead of increasing, diminish. This rule of human life is the thing that we have to recognize and provide for in this Bill. It is a painful spectacle which some of those who have to attend in court are compelled to witness —men forced by reason of the fact that they are not in affluent circumstances, to continue the discharge of duties upon the bench when it is painfully evident that it would be better that they should take their pensions. Then, I repeat, nobody will dispute the fact that the services rendered by the judges are the most important that can be rendered to the country. I think that when a man has discharged his duties as a judge for twenty-five years and has reached the age of seventy-five, or has discharged his duties for thirty years, and, in his own judgment, knows that his forces are diminishing, and it is to the advantage of the public that he should withdraw and make way for younger men, the country should not turn him out on the street, but should maintain him in dignity and affluence and comfort to the end of his days.

Mr. ROBINSON (Elgin). I feel as though I would like to die in harness. I do not think it is right, when a servant has been faithful to you all his lifetime and has discharged his duty well, to kick him out because he hapens to have his age against him. We all grow old, but we all hate to be kicked out. We would hate to be kicked out even from this House. And if the Prime Minister is able to discharge his duties at eighty years of age, the country would not like to see him kicked out and he would not like it. Here is a judge who has served the country for fifty years and wishes to continue in his place, and members of the bar who plead before him are nearly all anxious that he should hold the position. It is cruel to turn him out. It is like turning out an old horse in the pasture to die. I hope the minister will make exceptions to this Bill, and, whereever there is a man capable of discharging his duty to the public, for pity's sake do not turn him out.

Mr. BROCK. I desire to express my own opinion, and the opinion of the class to which I belong—those engaged in mercantile and manufacturing pursuits, who have a great deal of litigation—that it is very desirable that our judges should be amongst the most vigorous of the professional men in the country. I think it is more desirable that a judge should be well paid and should be able to look forward to a pension in old age than that almost any other class that I know of should be in that position. I think that we could do with a different class of politicians, we could even do without a great many of those we have, but we cannot do without the best services that our judges can possibly render in a country like this where there is so much litigation. I think, therefore, that the motion before us is absolutely in the right direction. It is impossible for us all to pay attention to the worthy but sentimental reasons advanced by the hon. member for West Elgin (Mr. Robinson), because if we do we shall find ourselves in very serious difficulties, such as have been spoken of by the Prime Minister. Judges who are past their best days—and sometimes people, even judges, when they grow old grow obstinate—will not retire when they should. I think it is well that the power afforded by this resolution should be in the hands of the government, so that they may use it in the case of a judge who is not able to perform his duties. It would be invidious, of course, to take a case here and there. It should be made a general rule, and it should be applied, as the Minister of Justice has provided in this resolution. Therefore, I wish to say that I favour the resolution, and I think that, so far as the class to which I belong are concerned, they will be unanimous in support of the government's proposal.

Mr. PORTER. The clause of the resolution under discussion does not make it compulsory for judges of the Supreme or Superior Courts to retire from their posi-

tions, as the hon. member for West Elgin (Mr. Robinson) seems to think. This clause of the resolution only applies to voluntary resignation. And it seems to me that no one can be a better judge of the time when he should retire, and the advantages or disadvantages of retiring than the very men who would be entitled to take advantage of this resolution. A gentleman who has served upon the bench for thirty years and has reached the age limit provided in this resolution, ought to be the very best possible judge as to whether it would be advisable for him to continue in the occupation of his exalted position, or whether it would be to his advantage and to the advantage of litigants and the public generally for him to retire. But, while I think that would be the case, I think it would be unfair, after he had given so many years of service to the country, that a judge should be compelled to retire; or, should he believe that he had become incompetent to discharge the duties of his high office and feel it incumbent upon him to give way to some one else more capable to perform his duties, it is not fair, to my mind, that he should be allowed to retire after spending so many years in the public service without some provision being made by the country he has served faithfully and for so long. For my part, I am in entire accord with the resolution under discussion.

Mr. BORDEN (Halifax). Has the scope of the resolution been taken from any other source, or is it entirely original with ourselves ?

The MINISTER OF JUSTICE. Absolutely original. The only precedent I know of exists in the United States where, with respect to judges of the Supreme Court and judges of the district court of the United States who have served ten years, it is optional with them to retire on full pay, 70 years of age and ten years of service.

Mr. BORDEN (Halifax) It seems to me, looking at the scope of the resolution and having regard particularly to the reason suggested by the Prime Minister, that there are possibly some cases not provided for by this resolution and which might deserve consideration. For example, take the case of a judge who is appointed at the age of forty-five years and has served twenty years, and at the age of sixty-five he finds himself subject to some infirmity which greatly interferes with or absolutely prevents the discharge of his duties as a judge. It seems to me that the reasoning of the Prime Minister would include a case of this kind. But the right hon. gentleman will observe that that is a case which is not covered by the terms of this resolution.

The MINISTER OF JUSTICE. Perhaps to meet a case of that kind we might require some medical certificate.

Mr. BORDEN (Halifax). I am assuming that everything of that kind would be safeguarded by such means as would be found desirable in the public interest. I do not know whether cases of that kind have been considered by the government, but in listening to the observations of the right hon. gentleman it struck me that there might be cases of that kind which would be just as deserving of consideration as those which are dealt with in the resolution.

Mr. OSLER. With these resolutions I entirely agree. I cannot see why they should not be extended to all the judges. If the age limit is to be applied to the lower court judges I do not see why it should not be applied to judges of the higher courts. As the hon. gentleman knows, there are cases where a man reaches his greatest vigour and is more useful at eighty years of age than at sixty. But these cases are very rare. I do not know why exception is made of the Supreme Court and Superior Court judges. It strikes me this provision should be applied to them quite as much if not more than to the lower court judges. I think in that particular the Bill does not go far enough. The Prime Minister truly said that when a man is appointed judge he should be rendered independent of all cares and anxieties as to money, and he should have full provision made for his old age after he has served the country for a long period. After all, I think these provisions do not go to the root of the matter, because the salaries we are paying our judges now were fixed at the time of confederation when living was very much cheaper than it is now. The result is, as the Minister of Justice knows, that to-day it is difficult to get the men we would like to take positions in the higher court. Another result is that we find our judges are more and more endeavouring by other means to implement their salaries. We find the judges in our higher courts, many of our best judges that we all look up to with great confidence, taking positions as directors of various companies, looking out for various outside sources of supplementing their incomes. I think that is a serious detriment to the administration of justice in Canada, and some way ought to be found of stopping this practice, as I consider it a very serious evil. These judges are sought for by companies whose object it is to get men who will inspire the public with confidence in their concerns. My experience of judges is that as a rule they are not good business men, and I think that statement may be made of judges generally. I would be afraid to say what proportion of them, at all events in Ontario, take positions in companies about the business of which they can really know nothing. They are forced to do so because their incomes are not sufficient for their position. Any lawyer of great ability in large centres like Toronto, or Hamilton, or London, or Mont-

real, or Quebec, or Ottawa, will make a larger income in the practice of his profession than the salaries received by any one of our judges. I think we cannot attain what ought to be our object, that is to have judges who are absolutely independent, until we increase their salaries very materially.

The MINISTER OF JUSTICE. In answer to what has fallen from the hon. genleman, I may say that it is not within our power to affect the tenure of office of judges of the high court. Under the British North America Act, section 96, the Governor General has exclusive power of appointing judges of the superior, district and county courts in each province. Section 99 provides that the judges of the superior courts shall hold office during good behaviour. So we have absolutely no power to interfere. I must admit that I am one of those who would not like to have power to interfere with the judges of the high courts. I think the more they are kept beyond our control, directly or indirectly, the better it is for the bench and for the public at large. I would like to take advantage of this occasion, when I am endeavouring to do as much as I can for the judges of the high courts, to say that I agree entirely with what has just fallen from the hon. member for Toronto (Mr. Osler) when he says that it is not desirable that our judges should be mixed up in commercial corporations. I hold strong views on that subject myself, and I have no doubt about the impropriety of it. I am of the opinion that if a judge is paid a salary to give his whole time to the service of the country in that position, he has no right to divert any portion of that time to any other purpose. I think that remark applies with great force to those judges who take upon themselves to sit as directors in financial institutions, and to be connected with corporations which take a portion of their time, to the detriment of the interest of the public.

Mr. WRIGHT. Representing as I do a rural constituency, I would like to say a word with reference to these resolutions, and for this reason. We have in our constituency a very intelligent, broad-minded and liberal judge, who has passed the age of eighty years. Now we think it is only right that a judge such as this one should be allowed to retire with full allowance and full pay. We are exceedingly anxious that the very best men the country can afford should be placed upon the bench. If there is anything that we are prouder of than another, it is the status which our judges have throughout the length and breadth of the Dominion of Canada. We are exceedingly anxious that conditions may be made such that our best men can take these positions and this resolution enables them when in the natural course of events they are no longer able to perform their duties to retire on a sufficient allowance. In my own constituency and in other rural constituencies there are men in the ordinary walks of life who are not able to engage counsel in a case which comes before a judge and it is an advantage to have a fair-minded judge who will take the case up for them and see that justice is given to them. This matter has come to the notice of the people in my constituency for the reason that our judge is very advanced in years and he will be able to retire with an allowance if the resolution that is now before the committee is carried out.

Mr. GALLIHER. I heartily concur in this resolution just as it is. I am not sure that the suggestion of the hon. leader of the opposition (Mr. Borden, Halifax) is not one that would probably involve us in difficulty afterwards. If I undertsand aright the provisions of this resolution they are to reward those who have spent a certain number of years in the public service. It might happen in the case suggested by the hon. leader of the opposition that a judge might be incapacitated by illness or by some accident from performing his ordinary judicial duties. Then we would have to be guided by the question of the degree of fitness or unfitness. While we might say of one judge that he was unfitted we might say of another judge that he was unfitted in a lesser degree, and that while we would give a certain benefit to one we would not give the same benefit to another because he was not unfitted to the same degree. I can see that difficulties might arise in regard to that. A judge may have served five or ten years and he may meet with an accident which renders him unfit to perform his duties as a judge. He would then be placed in the same position as a judge who had probably served twenty or twenty-five years, that is if I understand the suggestion aright which has been made by the hon. gentleman. I do not think that is really the intention of this resolution as brought down and if the government were to adopt such a suggestion I take it that they would meet with that difficulty. I wish to say a word further, not in connection with this resolution, but in connection with judges. In my opinion judges and especially judges of the Supreme Court are underpaid. We certainly want the very best men that we can possibly get at the bar to act as our judges. There is no more important position in the land to fill than that of judge. Judges have in their hands questions as to rights of property between subject, and subject sometimes involving very large sums of money. Therefore, we should have the most honest, the most upright and the most capable men that we possibly can have, men most learned in the law, men possessing judicial minds, and I would like to see some measure brought in by which the salaries of these judges will be increased or a readjustment of the salaries of judges from one end of

Canada to the other made. If they are worthy of the office of judge, then, they are worthy of being paid proper salaries, salaries that will place them beyond any question of suspicion of being tampered with in performing their duties and place them beyond any question of want when their term of office expires or they are obliged to retire by reason of age. I would also say a word in reference to county court judges and particularly the county court judges in the west. For instance, in that part of the west where I live and practice my profession our county court judge is paid $2,400 per annum. He has not the advantage, as in many places in the east, of being able to receive fees from surrogate work, so that practically all that the judge in Kootenay county, British Columbia, and I take it in other counties in British Columbia has, is the sum of $2,400. That was not a sufficient sum to induce any man who practices at the bar, who has any practice in any town or district in British Columbia to accept a seat on the bench. There should be some provision by which the salary of these judges should be increased, there should be some fees derived from surrogate work, or they should be allowed a certain amount for living expenses, because living expenses are much higher there than in the east. The salary of our county court judge unaided as it is by fees from outside sources is much less than the salary of county court judges in the east.

Mr. HUGHES (Victoria). Everything is higher out there.

Mr. GALLIHER. Everything is higher, even most of the men.

Mr. GILMOUR. Do I understand that this resolution in regard to Supreme Court and Superior Court judges requires that they shall reach a certain age before they are entitled to their retiring allowance ?

The MINISTER OF JUSTICE. Under the law as we have it, a judge immediately after his appointment, if he becomes incapacitated from illness, may retire upon two-thirds of his salary. If he has served fifteen years at the expiration of the fifteenth year he can go off with his pension notwithstanding the fact that he may be in full possession of all his faculties. In the amendment which I now propose if a judge has reached seventy-five years of age and spent over twenty years on the bench he may retire, or if he has reached the age of seventy years and spent twenty-five years on the bench he may retire, or if he has served thirty years on the bench he may retire, whatever his age may be.

Mr. GILMOUR. I think if anything should happen to a judge after five or ten years service he should have some portion of his salary as a retiring allowance.

Mr. BORDEN (Halifax). I was desirous of seeing what safeguard has been provided by the statute in the case which has been referred to by the hon. Minister of Justice, namely, the case of a judge who, having served less than fifteen years, becomes incapable of properly performing his duties, and therefore has to retire.

The MINISTER OF JUSTICE. There is no way of compelling a judge to retire. He must act of his own motion.

Mr. BORDEN (Halifax). I understand that thoroughly.

The MINISTER OF JUSTICE. I will send the statute over to my hon. friend.

Mr. BORDEN (Halifax). In reply to what has been suggested by my hon. friend from Yale and Cariboo (Mr. Galliher), of course, I understand that there must be some safeguard, and that you must not adopt any policy that would place any judge under the control of the executive. I would be as much afraid of that as my hon. friend is, but I would like to point out to him that under the law as we have it at present, you have the matter dealt with already in the case of a judge who not having served for 15 years, nevertheless becomes incapable of performing his duties as judge. I will read the section, omitting the immaterial portions :

> If any judge of any superior court who becomes afflicted with some permanent infirmity disabling him from the due execution of his office, resigns his office ; Her Majesty may by letters patent under the great seal, reciting such permanent disability, grant unto such judge an annuity equal to two thirds of the salary annexed to the office he held at the time of his resignation ; to commence immediately after his resignation and to continue henceforth during his natural life.

I am not at present aware, whether there is any provision in the statute as to ascertaining what the permanent disability is.

The MINISTER OF JUSTICE. A medical certificate.

Mr. BORDEN (Halifax.) This is the practice of the Department of Justice, and not a provision of the statute. Of course, that does not provide for the case where the judge becomes incapable of resignation. Then, applying the principle of the law as it is at present to the case I suggested, you would have this condition of affairs perhaps : A judge appointed at the age of 45 years, having served for 20 years, and becoming afflicted with a permanent disability such as is mentioned in this section, would if such a policy commended itself to parliament, retire under the provisions of the statute on a salary equal to that which he enjoyed at the time of his resignation.

Mr. GALLIHER. That is what I thought the hon. gentleman was referring to, and that is what struck me as to the 15-year

limit provided for by the statute, and not up to the 25 or 30-year limit; that it seemed clear that if the judge retired from disability such as you mention, you would be practically applying to him the principle of long service, whereas in reality he had not served the full term designated as long service, for instance, the 30 years or 25 years, after attaining a certain age. I can understand his being paid a proportionate part, according to the years of service, but not the full amount of the salary such as a long service judge would receive.

Mr. BORDEN (Halifax). I thought my hon. friend (Mr. Galliher) was raising some objection on the ground of the difficulty of ascertaining the permanent disability. I was dealing only with that portion of his remarks, and I was pointing out there would be no more difficulty in that case than there is under the provisions of section 14 and 15 of chapter 108 of the Revised Statutes. Assuming that there is no difficulty of that kind, and there is no more difficulty in the one case than the other, then the other question comes up as to whether or not you have got as strong a case under the circumstances I have suggested for giving to the judge on retirement his full salary, as you have in the cases which are set forth in the resolutions introduced by the Minister of Justice. In the one case you have a man of 70 years of age not afflicted with permanent disability, but retiring on full salary because he has served 25 years. The case I have mentioned seems equally meritorious, namely the case of a judge having attained the age not of 70 years, but 65 years, having served not 25 years, but 20 years, but at the age of 65 becoming afflicted with some permanent disability which would prevent him from performing his judicial duties. It seemed to me, speaking off-hand, that a case of that kind possessed as much merit as the case of a judge who has attained the age of 70 years, and has served 25 years, but who is not afflicted with any permanent disability which should necessitate his retirement.

Mr. GALLIHER. It would be only a question of whether you have the two principles; one the case you have mentioned, and the other the principle of granting a man full pay who would serve the full term. You would have to have a double principle.

Mr. BORDEN (Halifax). That observation of my hon. friend (Mr. Galliher) is perfectly fair and logical. You are, in the case I am suggesting, combining the principle which has been acted on in the statute I have referred to with the principle which is embodied in the resolution of the Minister of Justice. Whether this is a wise and logical thing to do is a question, and I am inclined to think it is wise.

Mr. GALLIHER.

Mr. WADE. It does seem to me that we should not fix the period of 20 years' service.

Mr. BORDEN (Halifax). I was only using that by way of illustration.

Mr. WADE. It does seem to me that a man who goes on the bench and leaves his practice, after he has been on the bench for 10 years and is afflicted by some permanent infirmity, such as blindness or deafness, or anything of that sort, so that he is permanently unable to discharge his duties as judge; it does seem to me that in such a case as that he should be permitted to retire with his full salary. If the principle is good in one case it would seem to me that it is good in the other case. Indeed there might be far stronger reasons why in the case I speak of he should be retired with his full salary than in the other case. If a man goes on the bench at 45 and leaves his practice, and then at 50 years of age, after his practice has gone from him, he is unfit by infirmity to sit upon the bench, he has either to do one thing or the other, he has to retire on two-thirds of his income—and that is impossible in our province, where the judges have only $4,000 a year—or else he has to remain on the bench and not discharge his duties. It would be better in the public interest to allow a judge who has been in service five or ten years and becomes permanently afflicted, to retire on full salary.

Mr. GOURLEY. One strong argument to support the ground that in case of infirmity a judge should retire and retain his full salary, is that a judge should at once, when he finds himself unable to discharge his duties, be in a position to retire. I know one instance where a judge would retire now, but because of the fact that he cannot retire with his full salary he does not feel in a position to retire, and, therefore, the administration of justice is retarded by the presence of a judge who ought not to discharge judicial duties on account of his infirmity, and who would not discharge them if he had an opportunity of retiring on full pay. When there is a physical infirmity rendering a judge incapable of fulfilling his duties, I think he should be allowed to retire on full salary, in order that whenever he feels that he is not capable of exercising his duties, properly, he can step down and out without financial regret.

I want to say one word in support of the views of the hon. member for Yale (Mr. Galliher). I think the salary of $2,400 a year for the county court judges of Nova Scotia is entirely inadequate at the present time. When the salaries were fixed twenty years ago, there might have been something to be said in favour of such a small figure; but to-day that salary is utterly inadequate to enable a judge to maintain that social position which is necessary to the proper dignity

of a judge. It is so small that it rather renders him an object of sympathy and pity than of dignity. That should not be the case. Our judges should be in a position to live well and to be independent of any thought of dependence on the public or otherwise.

Then, I have often been anxious, even before I entered this parliament, to bring another matter to the notice of the Minister of Justice and the other lawyers in this House. At confederation there was a principle established of making a distinction in the salaries of the judges in the different provinces according to the population or the area of those provinces. I think that distinction is absolutely vicious. If a judge in British Columbia, where the population may be only 300,000, exercises the highest judicial functions in that province, on what ground of justice is he paid a smaller salary than the judge who exercises the same high functions in another province, simply because the territory or the population happens to be smaller ? I regard this as a most invidious and unjust distinction. In fact, it makes a judge of the Supreme Court of Nova Scotia inferior to a judge of the High Court or to a judge who exercises similar jurisdiction in some other province. If a judge exercises supreme jurisdiction in his province, whether it is over twenty people or over one million, his salary should be equal to that of any judge in Ontario or Quebec. After all, it makes no difference in principle that the population is larger in one province than it is in another, because the judge can only do so much work in the province. As a matter of fact, the judicial territory in the larger provinces is divided up, so that a judge in a judicial district in Ontario or Quebec has no more population or territory to exercise jurisdiction over than a judge in Prince Edward Island. Although the province is larger, the particular district to which the labours of the judge are confined is not in many instances as large as the circuit in the smaller provinces. Therefore I ask the hon. Minister of Justice to wipe out this unjust and invidious distinction, introduced at the time of confederation. I think all the legal gentlemen in this House will support me in the contention that there is no reason why the salary of a superior court judge in Ontario should be one cent more than the salary of a superior court judge in British Columbia, Prince Edward Island or Nova Scotia. Judges exercising similar jurisdiction in every part of Canada should be paid the same salaries. I say that in defence of the judges of Nova Scotia, and I am sure that every legal gentleman from every other province will assert the same principle.

The MINISTER OF JUSTICE. The difference in the salaries of the judges in the different provinces has been a standing grievance for a long time, and I trust that at no very distant day something may be done in the direction of levelling up judicial salaries. However, one must not try to do too much at one time, and if I accomplish now what I have undertaken, I think I shall accomplish something, and I would prefer to leave another part of the work to some future time.

Mr. KENDALL. I would like to ask the Minister of Justice a question or two in regard to the demeanour of judges towards gentlemen at the bar and court-houses full of ratepayers. I have not much to say of a derogatory nature of the judges of the province of Nova Scotia. I have always understood that most of these gentlemen have been men of great learning, of high character and generally of gentlemanly demeanour. But I wish to bring before the notice of the Minister of Justice the fact that on two or three occasions during the last year or two the bar has been subjected to indignities by members of the bench and court-houses crowded with respectable ratepayers have been attacked in the most malignant way by one or more judges of the province of Nova Scotia. I ask, is a judge within his rights when he reflects on the character of a committee appointed by a county council to contruct a court-house ? Is he within his right when he makes a malignant attack on the tastes of a court-house filled with well-behaved ratepayers ? I will not say more than this, but I hope this reference will secure in the future more respectful treatment of lawyers and of people whose business of inclination takes them to a court-house. I would intimate to these judges, if my remarks should reach their ears, that if they wish to command the dignity due them, they must treat barristers and the people who frequent their courts with that consideration to which they are entitled.

Mr. KAULBACH. Being a layman, I had no intention of taking part in this discussion, but I certainly consider that I would be derelict in my duty to my county were I to remain silent. The resolutions with regard to the pensions of judges are, to my mind, contrary to what I consider a just principle. Our judges in our different courts are supposed to live within their salaries, but if they are improvident and lay nothing by for a rainy day, that is their own faults and they should suffer the consequences. I would very much rather increase the salaries of our judges than give them pensions. We have more judges now than we have work for, if I can judge by the work of my own county. There the judges sit twice a year and despatch the business in two or three days. I therefore do not see why the number should not be reduced by one-half, and then give double pay to the others and abolish this system of pensions. The public who have to pay the judges' salaries and pensions are deserving of some consideration. In my opin-

ion, the principle of pensions to any one, I care not who he may be, is wrong, and I take this opportunity of expressing my disapproval of so uncalled for, extravagant and unprecedented a drain as calls, on the exchequer of this country.

On resolution 2,

Mr. SPROULE. That seems to be very exceptional treatment.

The MINISTER OF JUSTICE. We will let that stand and consider it another time.

On resolution 3,

Mr. STEPHENS. I was somewhat surprised to find that the hon. Minister of Justice had made some changes in the ages at which county court judges may be compulsorily retired. When this resolution was first put on the Order paper, it read, 'seventy-five years,' but now it is 'eighty.' I am of the opinion that not one man in eighty is as capable as younger men. I have made some inquiries, and have failed to find a mercantile or financial institution in this country with a man as manager at the age of eighty. Let a man seventy years old seek employment in any institution where brainwork is required, and he will not in many cases succeed, but even should his application be entertained, the undertaking would not prosper under his management as it would under the management of a younger man. I consider the position of county court judge a very responsible one—one that requires a man to be in possession of all his faculties. This is certainly required of a man who has to look into and decide intricate cases, and that generally without delay. Besides that the position is a responsible one, for the reason that from the decisions of a county court judge, in many cases, there is no appeal. Look at the case from a merchant's standpoint. A merchant may sue a man for $100 or $200; and if the judge is incapable of giving a proper decision, he not only injures that merchant from a monetary point of view, but his character as well. I propose therefore to move in amendment to clause 3 that the word 'eighty' be struck out in the first line, and 'seventy-five' be substituted, and that 'seventy-five' be struck out in the third line and 'seventy' be substituted.

The MINISTER OF JUSTICE. The reason for the change from seventy-five to eighty is this. When the resolutions were first introduced they attracted some attention, and I discovered that in Ontario there were three county court judges who would be compulsorily retired at seventy-five, notwithstanding the fact that they had not served twenty-five years. Consequently, they would have been obliged to retire on two-thirds their salary. Under the circumstances, I thought it better to extend the period of time into eighty. The law now provides for action by the executive where you have a county court judge not competent to perform his duties. An application may be made to the Minister of Justice, and he can appoint a commissioner who will hold an investigation, and the judge may be retired by Order in Council. So that we have that provision at the present time, and I think it is only fair to go as far as we can towards giving such relief to the county court judges as we can give; and I do not think we are giving too much by adopting the resolution in its present form.

Mr. CLANCY. The rule of forcing retirement on the county court judges is, no doubt a very harsh rule. I do not know whether the Minister of Justice has gone so far as to say that he would have that made compulsory with the Superior Court judges, if he had the authority to do so. I think that when an hon. gentleman brings a resolution in this House, he ought to have the courage to make a charge rather than shelter himself behind the privileges of parliament. The hon. member for Kent (Mr. Stephens) insinuates, without having the courage to state and take the responsibility of his statement, that one of the county court judges, presumably in the county he represents, is unfit for his position. Will the hon. gentleman declare from his place in this House that there is a county court judge in the county of Kent who is unfit to discharge his duties? If he is prepared to do that he will assume some responsibility and will show some courage. This is not the first time the hon. gentleman has played a second part in these matters. The hon. gentleman some time ago proposed a resolution in this House which he had never framed, a word of which he had never written, but which had been placed in his hands, with regard to one of the Superior Court judges. He is now playing an equally false part with regard to his own county. He has had a resolution placed in his hands to move here, prompted by somebody from his riding who wants to secure an appointment there. If he wishes to make a charge against the county of Kent judges let him be man enough to make that charge rather than insinuate what he dare not state.

Mr. STEPHENS. I may tell the hon. gentleman (Mr. Clancy) that he is mistaken in saying that this resolution was written out and given to me. It is wholly my own suggestion. And I was not making any insinuation as to the judge of the county court in Kent county. I simply say that there are several judges that I know of in Canada who are not capable of discharging their duties.

Mr. CLANCY. How does the hon. gentleman (Mr. Stephens) know that?

Mr. STEPHENS. I know it from statements made to me by solicitors in the different counties.

Mr. LENNOX. What counties ?

Mr. STEPHENS. There is no need to say what counties. The hon. gentleman from Bothwell (Mr. Clancy) is wrong when he insinuates that this amendment was placed in my hands to be read to the House. He evidently thinks that there is no one capable of doing anything in this House except himself. In that he makes a sad mistake. Beyond the age limit I have proposed, very few men are able to discharge the duties of any bench, to say nothing of the county court bench. A judge of the county court has great responsibility. He is only one man, and in many cases, there is no appeal from his decision. His position is more important than that of a judge of a higher court.

Mr. CLANCY. Will the hon. gentleman state what hardships have come under his notice to induce him to take the course he does ?

Mr. STEPHENS. It is not necessary that I should state them. I say that a man of eighty years of age is not capable of discharging properly the duties of a judge. I think that is a good stand, and that is the stand I am going to take.

Mr. CLANCY. The hon. gentleman, I think, stated that I thought nobody to be capable of doing certain things except myself. I wish to say that I do not think there is any gentleman in this House capable of doing what he has done except himself.

Mr. LEMIEUX. Oh, oh.

Mr. CLANCY. I wish to say to the hon. gentleman (Mr. Lemieux) who gives vent to that utterance that he is not playing a part consistent with the high position he holds as a member of the legal profession.

Mr. LEMIEUX. I am not a judge.

Mr. CLANCY. Surely the hon. gentleman ought to stand by the eminent members of his own profession who are guilty of no greater crime than that of growing old, I hope he will be spared to be as guilty as the oldest of them, and that nobody will say 'oh !' when that time comes should his case be discussed. I do not expect to see that time myself. As to the hon. member for Kent, he is not a legal gentleman. Depending upon hearsay and that, no doubt, from some person who wishes to get an appointment at his hands, he comes to this House and partly insinuates that certain judges are unfit to occupy their position at eighty years of age, yet refuses to state that he knows of a single case where hardship has arisen from cases of that kind. I think I can leave him in the position he occupies, a position which does not display great courage.

Mr. STEPHENS. Does the hon. gentleman (Mr. Clancy) know of any judge who is not capable of discharging his duties ?

Mr. CLANCY. I have never said that there was one.

Mr. STEPHENS. But does the hon. gentleman know of any such case ?

Mr. CLANCY. I know of none.

Mr. BENNETT. May I ask the Minister of Justice how many judges in Ontario will be retired under this Bill if it passes as he proposes ?

The MINISTER OF JUSTICE. The committee will be surprised to learn how few judges will be given relief under these resolutions, should they pass in their entirety. In the High Court there are only two men in the whole province of Quebec, one man in Nova Scotia, and one in the North-west Territories.

Mr. GOURLEY. Who is in Nova Scotia ?

The MINISTER OF JUSTICE. The chief justice, who is seventy-five years of age and has been twenty-two years on the bench. There is one man, Judge Richardson in the North-west Territories. In New Brunswick there is one, the chief justice. With respect to the county court judges in the county courts of Ontario, there are :—Judge Elliot, who is eighty years of age and has been thirty-four years on the bench; Judge Hughes eighty-one years of age and forty-eight years on the bench; Judge Deacon, seventy-nine years of age and thirty-five years and six months on the bench; Judge Lazier, seventy six years of age and twenty-one and one-half years on the bench; Judge O'Brien, eighty-three years of age and thirteen and one-half years on the bench; Judge Ketchum, seventy-five years and six months of age, and fourteen and one-half years on the bench; Judge Woods, eighty-four years of age, and seventeen and one-half years on the bench. In the county court of New Brunswick there is Judge Stevens, who is eighty-one years of age and who has been thirty-six years on the bench—and who, I may say, has been for a long time asking for such legislation as is now brought in.

Mr. BENNETT. Has the hon. minister any account or memorandum as to the number who would be retired in the course of two or three years.

The MINISTER OF JUSTICE. No. It took considerable time and labour to get together the information for this memorandum. Unfortunately we have not in the department the ages of the judges at the term of their appointment and have some difficulty in ascertaining them. I do not apprehend that there are very many who would be affected by this legislation within the next two or three years.

Mr. CLANCY. The hon. minister will not be able to find out their ages now.

The MINISTER OF JUSTICE. I may say that I have not had any complaint with respect to the legislation now proposed. I

do not think its operation will produce hardship. After all, judges who have got beyond seventy-five years of age retire with full pension. So, there is no hardship so far as they are concerned.

Mr. POPE. They ought to have full pension.

The MINISTER OF JUSTICE. Some of them ought.

Mr. MACKIE. In regard to Judge Deacon's age, he is in his 81st year, instead of 79.

The MINISTER OF JUSTICE. I have taken Judge Deacon's word for it.

Mr. MACKIE. I have taken Judge Deacon's word for it myself, within the last three months.

Mr. BENNETT. In view of the prospect of three more appointments of county court judges in the province of Ontario, I think the Minister of Justice might give a thought as to how these appointments shall be made. A principle was inaugurated in the province of Ontario that worked out well, namely that it was thought better not to bring active politicians from the scenes of their fights and place them on the bench. That principle was observed by Sir John Thompson, and was supposed to be an admirable one, but owing to party exigencies the Minister of Justice, since he has been in office, has been forced to break in upon it, and the result is that we see in the province of Ontario, installed in judicial places, men who have been the keenest politicians and are now brought face to face with the people with whom they have been fighting for many years. While that has been going on, I must congratulate the Minister of Justice that in the county of York, and in the county of Grey, he did not promote the junior judges. I think that was an admirable conclusion arrived at by the minister. I think that both those gentlemen who are junior judges deserve richly to be reprimanded as they were by not being promoted. I hope the active part taken by them in politics will be a lesson to all junior judges in future, and that they will prefer to take chances of preferment by reason of their merits rather than by reason of their political affiliations. Coming down to the question before us, I say that in my opinion the salaries of Superior Court judges, particularly in Ontario, are not high enough. I wish to say also that I think there are too many judges in our province. What have we seen lately? At the last session of the Ontario legislature, in deference to political leverage, for it cannot be anything else, the provincial government has arranged for the appointment practically of three more judges. As I understand the law, once the province has determined upon the appointments, then it is the duty of the federal power to supply the salaries. It is a notorious fact that in Ontario the superior court judges are not pressed with work. I think perhaps there has been some congestion so far as appeal judges go.

Mr. McCARTHY. Is it not a fact that there are only two judges to be appointed, and one is to be taken from the chancery division?

Mr. BENNETT. That will be two too many, in the opinion of the general public, I think. It comes to this, that in the province of Ontario we all believe that we should have better men on the bench than some of the gentlemen who have been getting on. In order to get the best men, you have got to pay higher salaries. I have understood that there are Superior Court judges to-day in the province of Ontario who are quite willing to do more work, but they expect more pay for it, and I think they are right. It is a notorious fact that in past years Superior Court judges in Ontario have crippled the courts, owing to the fact that they were absent from their duties. In regard to county court judges, it has got to be a screaming farce, appointments are made in counties where there is no more need for a junior judge than there is for five wheels to a wagon. I am not going to say that the government who are now in power are entirely to blame for that, because I think the former government erred in that respect also. But now that there is to be an appointment in the county of Prescott, let me draw the attention of the Minister of Justice to the fact that in that county last year there was not a single case tried in the so-called county court. There might have been a division court case, but the return shows that in the county of Prescott not a single case was tried before the county court. In view of that fact, and seeing there is a junior judge in that county, it would be well to promote him, and in that way do away with one. Take the county of Ontario, which has two judges, in that county last year there were three cases tried. Political exigencies have played such a part in the appointment of judges that we find in the county of Ontario that Judge McCrimmon, the senior judge, is a man in the prime of life, and yet he is assisted by a junior judge, and owing to political exigencies it was found necessary to appoint a third gentleman as surrogate court judge. So there are three gentlemen practically standing around to do work that might be done by one. The time has arrived when there should be a thorough revolution in relation to county court judges. Let there be fewer of them. So far as salaries go, I think, with the addition of the surrogate fees that are paid to them, their salaries are fairly good; but in regard to the superior court judges, I think it is the opinion of the lawyers and of the general public that they should be paid higher salaries and that there should be fewer of them.

The MINISTER OF JUSTICE. My hon. friend is somewhat mistaken when he says that Sir John Thompson laid down the principle that county court judges should be taken from the bar outside the district to which they were appointed. That principle was laid down by him, it is true, but when the question came up for discussion some time ago in the House, I had an analysis made of the appointments that were made by Sir John Thompson, and when this resolution comes up again for consideration I intend to bring that down, and the hon. gentlemen will learn that we have all sinned very much with respect to these appointments. While the rule has been laid down by Sir John Thompson, I am not disposed to say that I think that rule ought to be abrogated.

Mr. PORTER. I would like to ask the Minister of Justice whether this clause is intended to affect junior court judges as well as county court judges.

The MINISTER OF JUSTICE. All county court judges.

Mr. PORTER. It says every county court judge. In some legislation that took place a few years ago with regard to the salaries of county court judges, that expression was used, and it was afterwards construed to have application only to senior judges, but not to junior judges. I would suggest to the hon. minister that that be made perfectly clear by adding junior judges. While I am on my feet, I desire to say a word with reference to the salaries that are paid to county court judges. I quite agree with the remarks that have been made by some hon. members that the county court judges are not sufficiently paid. As I understand the matter, the salaries now paid to county court judges were fixed at the time of confederation and there has been no increase since then. But there has been a decrease of some $200 to $400. At the time the salaries were fixed, it is an actual fact that the cost of living to a county court judge was very much less than it is at the present time. The salary was then fixed, not only having regard to the cheapness of living, but having regard to the duties that were then expected to be performed by a county court judge. Now while there has been no increase in the salary there has been a very significant increase in the cost living of the county court judges and there has been a very significant increase in the amount of work they are expected to perform. Instead of only performing the duties belonging to county courts and division courts, as they were intended to perform at the time of confederation, there has been passed since that time not less than 52 Ontario and Dominion statutes, imposing additional duties upon county court judges. Now, is it reasonable to expect that they should perform the duties imposed upon them by these 52 additional Acts of parliament without additional salary, while at the same time they are obliged to pay a higher cost for living than at the time their salaries were fixed. In fact they are paid a smaller sum.

It does appear to me that it is entirely unfair to the county court judges. This matter was recognized by parliament in regard to the superior court judges, when in 1873 an Act was passed increasing the salaries of the high court judges it was put in the preamble, that owing to the increased cost of living, the government of the day felt it incumbent upon themselves to increase the salaries of the superior court judges. If there was an increase in the cost of living for the superior court judges, there was a similar increase in the cost of living for the county court judges and while parliament increased the salaries of the supperior court judges it decreased the salaries of the county court judges. There is another very cogent reason why the salaries of the county court judges should be increased. A part of the means of adding to their salaries has been taken away from them. In former times it was quite the usual practice for a county court judge to fill the dual position of county court judge and local master of the high court. Now, in any county of this province where that position becomes vacant it is no longer given to the county court judge, but an appointment from the bar is made to fill that position and that source of revenue is cut off from the county court judge. In former days fees that were derivable from the business transacted in the surrogate court were given to the county court judges, but now the practice is that if that position becomes vacant a special appointment is made from the bar to fill the position and these fees go into the pocket of the appointee and are not received by the county court judge. One other strong reason why county court judges should be paid more is this: County court judges, in addition to being county court judges, are to all intents and purposes superior court judges with the one single exception that they do not try high court cases, but all chamber motions and applications of all sorts in connection with cases in their respective counties are heard by the county court judges as local judges of the high court and instead of this business being performed by the judges of the high court in Toronto as formerly, it is now performed by the judges of the county court and in that way their duties have been very materially increased, while there has been no proper adjustment of their salaries. If I understood correctly we have received an intimation from the Minister of Justice that something would be done in the future for these county court judges and I hope he will see his way clear to do something for them in the very near future.

Mr. FOWLER. I entirely agree with the remarks of the hon. member for Hastings

(Mr. Porter) as to the necessity of increasing the salaries paid to county court judges on account of the additional cost of living at the present time as compared with that at the time their salaries were fixed and the additional duties that they have to perform. In my own province we are not so fortunate as to have one or two judges for a single county. We have only one judge to attend to the judicial duties in several counties and that statute respecting speedy trials has caused a very large increase in the expenses of the judges. The judge of the county that I represent is also the judge of the county of Albert. If a man is charged with a criminal offence the judge is obliged to go to the county of Albert when this person applies for trial, and he is put to considerable expense for railway fare and also his living expenses during the time he is absent. For this he receives no remuneration whatever. I think the salaries of the county court judges should be increased for the reasons which have been so ably enumerated by the hon. member for Hastings.

The MINISTER OF JUSTICE. I have a great deal of sympathy with what has been said by the hon. member for West Hastings (Mr. Porter) in regard to an increase in the salaries of the county court judges and I would like to repeat what I said before, that I concur in the statement that our county court judges should be better paid, but I am afraid I am placed in the same position that much more eminent men than myself have found themselves in when they attempted to increase the salaries of the county court judges. They withdrew the resolutions after they had got them into committee. This question has been under consideration since 1883. I have a letter written by Sir John Thompson to one of the judges, in which he says that he hopes during that session to bring down a resolution for the purpose of increasing the salaries of the judges of the high court and the county courts. Unfortunately, he never got beyond the resolution. I think the judges are not paid sufficiently well. I think they ought to receive further consideration, but, however, that is only my own personal view and I cannot do more than express it.

Mr. HENDERSON. I desire to say a word in reference to the controversy that took place between the hon. Minister of Justice and the hon. member for East Simcoe (Mr. Bennett) in reference to the policy laid down by the late Sir John Thompson. I remember quite well, when Sir John Thompson was Minister of Justice, pressing him to make an appointment in my own county and he informed me that he had determined upon the line of policy intimated by the hon. member for East Simcoe and that he could not make the appointment of the gentleman we then thought it desirable to appoint, and he did not make it. Might I suggest that the hon. member for East Simcoe is quite correct and at the same time the hon. Minister of Justice may be correct? Posibly at the commencement of his term of office Sir John Thompson had not adopted that policy, but after having been Minister of Justice for one or two years he came to the conclusion that it was a proper policy to adopt and that from that time forward he did adhere to that policy. The hon. Minister of Justice may be quite correct in saying that he made appointments in a way different from that intimated by the hon. member for East Simcoe, but these appointments may have been made in the earlier part of the regime of Sir John Thompson.

The MINISTER OF JUSTICE. I will produce here a list of the names of the gentlemen appointed, the districts to which they were appointed and the dates at which they were appointed. I have a memo. all prepared and I will have it here when these resolutions are taken up again.

Mr. HENDERSON. It occurred to me that both the hon. gentlemen were right.

Mr. FOWLER. Could the hon. Minister of Justice give us some data as to the judges who will be affected by this eighty year provision. I understand that the amendment proposes that the word 'eighty' shall be struck out and that 'seventy-five' shall be substituted.

Mr. LANCASTER. I think it is a pity that the hon. Minister of Justice did not have sufficient courage, as his predecessor had, to bring down a resolution to increase the salaries of the county court judges and let us see who are the members of this committee who will stand up and say that they are sufficiently paid. I can only speak of the province of Ontario, and I am bound to say that I do not think there is any man in the public service that is as poorly paid as the ordinary county court judge in that province. It is no criterion of the work of a county court judge, when you speak of the number of cases that are returned as having been tried in the county court. In that return there are only included certain cases over which the judge has civil jurisdiction. To begin with, the county court judge saves the country an enormous amount of expense in the trying of criminals. More and more every day men charged with criminal offences are advised by their counsel that they are just as safe in trusting their liberties to the county court judges as to a jury. I am safe in saying that two-thirds of those charged with criminal offences in nearly every county of Ontario now elect to be tried by the county court judges, and the county court judges have power to try all offences except murder or treason. It must be recognized by parliament that judges who have such full jurisdiction in regard to the liberties of the

subject, must be competent men or else the parliament of Canada would not allow them to do that work. Considering the cost of living to-day, and considering that a public servant who is underpaid is not fairly treated, we have, I think, to admit that our county court judges are not treated by the country as they should be. I wonder sometimes that we can get competent men to take the position, and I often think that it must be public spirit rather than the salary that induces them to do so. Probably they desire to serve their country rather than to look to the compensation that attaches to the office. I know that many county court judges could not live on the salaries they get had they not private means. That ought not be so. If a man has not got a shilling and yet is fit to be a county court judge, the salary ought to be sufficient to enable him to take the office. Without unduly delaying the House at this late hour, I wish to emphasize particularly on the Minister of Justice that had he brought down a resolution to increase the salaries of the county court judges—I speak of those in the province of Ontario about whom I am most competent to speak—such a resolution would have received the support of a large majority of the members of this House. I regret that the Minister of Justice did not bring down such a resolution, because I believe that the county court judges in Ontario at least are at present very much underpaid.

Mr. GUTHRIE. The amendment proposes to reduce the age of compulsory retirement from 80 years to 75 years, it being 75 years in the original resolution. I believe for the reasons given by the Minister of Justice, that the age should be maintained at 80. It would work a great hardship on several of the county court judges if the age is not so maintained. In my county the judge who on his appointment had every reason to believe that he would be continued during life and good behaviour in his office, will be about 23 years on the bench when he is 75 years old. That would only entitle him to two-thirds of his allowance, and I believe that would be unfair. Several such cases occur in Ontario, and I believe that 80 years should be maintained as the age of compulsory retirement.

Mr. LANCASTER. What period of years does the Minister of Justice intend to insert in the blank?

The MINISTER OF JUSTICE. I do not intend putting the resolution through to-night, and I thought I would like to hear what the committee had to say on the subject. I shall take it into further consideration.

Mr. BORDEN (Halifax). What is the reason for confining it to a certain number of years ?

The MINISTER OF JUSTICE. That was inserted when we had the limit fixed at 75, but now in view of the change I do not think there is any need for it now.

Amendment allowed to stand.

On section 4,

Mr. STEPHENS. I wish to amend section 4 by striking out the figures 'thirty-five' in the second line and substituting the word 'thirty' therefor.

Mr. LANCASTER. Why have you fixed any number of years here? I do not see why, if a county court judge becomes afflicted with some permanent disability 25 years or 20 years or even 10 years after he has been appointed to office, he should not be taken care of by the state just as well as after 35 years. I cannot see any merit in a man having the good luck to be in office a few years longer before he was afflicted with some permanent infirmity. If it is a sudden affliction that comes to a man it is a matter he cannot control. If a man having given up his profession and not intending to retire, but being rendered by the act of God afflicted so that he cannot perform his duties, it seems to me he ought to have the right to be looked after no matter at what period of his service it happens.

The MINISTER OF JUSTICE. My hon. friend will remember that up to last year or the year before if a county court judge became permanently disabled at any time before he had been on the bench for ten years, he simply went off and got nothing at all. Last year the law was amended so that if he had served five years he became entitled to half his pay, and if he had served ten years to two-thirds of his pay. If we did make this change with respect to the county court judges, we would put them in a more favourable position than the high court judges ?

Mr. LANCASTER. That might not be undesirable, considering the small salaries they get.

Mr. LENNOX. Suppose a judge is not willing to resign his office, what does the hon. Minister of Justice propose to do ?

The MINISTER OF JUSTICE. That is a serious question. We had two cases of that kind in Canada, and in neither case was anything done except to let the judge continue on. That has been the course followed in England. I would ask my hon. friend to let the amendment stand as well as the resolution, and I would ask that the committee rise, report progress, and ask leave to sit again.

Progress reported.

The MINISTER OF FINANCE moved the adjournment of the House.

Mr. BORDEN (Halifax). What will be the order of business to-morrow ?

The MINISTER OF FINANCE. The Railway Commission Bill will be taken up, and we will endeavour to clear off other matters on the Order Paper as much as possible, probably the lead resolutions, and later in the day other Bills may possibly be dealt with.

Motion agreed to, and House adjourned at 12.30 a.m., Thursday.

HOUSE OF COMMONS.

THURSDAY, August 6, 1903.

The SPEAKER took the Chair at Three o'clock.

FIRST READING.

Bill (No. 236) for the relief of Harford Ashley.—Mr. Porter.

EXCHEQUER COURT AND RAILWAY DEBTS.

The PRIME MINISTER moved that item 47 on the Order Paper, to wit, second reading of Bill (No. 155) respecting the jurisdiction of the Exchequer Court as to railway debts (Mr. Demers) be placed among government Orders.

Motion agreed to.

QUESTIONS.

CUSTOMS DEPARTMENT SALARIES.

Mr. CLANCY asked :

What increase of salaries have been granted to officers and employees of the Customs Department in Montreal during the last three months ? What are the names of these employees ?

The MINISTER OF CUSTOMS (Hon. William Paterson). The following is a list of the increases in question :

	Increase.
M. Charland	$100
E. H. Mercier	100
E. T. Wilkes	50
T. S. Slattery	50
J. Davis	50
J. S. Sorley	50
T. Butler	50
A. Bourret	50
J. S. Loyer	50
B. Heroux	150
J. Hough	50
F. L. Chevrier	100
A. E. Giroux	100
J. M. Bessette	150
J. A. Chicoine	50
R. Fontaine	50
P. Martin	50
P. J. O'Neil	50
J. C. O. Brière	50
T. J. Dawson	100
E. O'Shea	100
J. Z. Corbeil	$ 100
J. McCluskey	50
J. Murray	50
B. T. Holdbrook	100
N. Provost	50
J. A. Robert	50
E. Bernard	50
H. McCamley	50
J. Cannon	50
J. A. A. Larin	50
D. Manson	50
M. Neher	50
J. Drysdale	50
S. B. Lytle	50
S. St. Jean	50
P. McGovern	50
M. McGurn	50
H. Gauthier	140
P. Keane	50
W. Murphy	150
T. Logan	100
C. Killoran	90
F. Brabant	100
J. B. Desbois	100
P. J. Martin	80
H. Hearne	80
P. Sansfaçon	50
E. Beauvais	50
J. Dwane	30
E. Elliott	30
P. Locke	30

Mr. BORDEN (Halifax).

MR. A. W. WRIGHT.

Mr. SCOTT asked :

What different sums of money have been paid, and at what dates, and on what account, to A. W. Wright, Conservative organizer, of Toronto ?

The POSTMASTER GENERAL (Hon. Sir William Mulock). On the 29th October, 1895, Mr. Wright was appointed a commissioner to inquire into the sweating system in Canada. He made his report on the 6th of March, 1896.

The total expenditure on account of this commission was $904.90, the details being as follows :

Services, eighty-eight days at $5 per day	$440 00
Board and lodging	269 50
Travelling expenses	174 20
Miscellaneous	21 20
	$904 90

BRITISH COLUMBIA LABOUR COMMISSION.

Mr. EARLE asked :

Has the commission appointed by the government to investigate the labour troubles in British Columbia reported ? If so, will the report be laid on the Table of the House, and when ?

The POSTMASTER GENERAL (Hon. Sir William Mulock). The commission has reported, and its report is now in the hands of the printer. As soon as the report is printed, a copy will be laid on the Table.

INTERNATIONAL CONGRESS OF GEOLOGY—MEETING IN CANADA, 1906.

Mr. CARSCALLEN—by Mr. Lancaster—asked :

1. Is it the intention of the government to invite the International Congress of Geology to hold its next meeting in Canada in 1906 ?

2. If so, what steps have been taken to that end ?

3. Have delegates been appointed by the government to attend this year's congress in Vienna ?

4. If so, who are they ?

The MINISTER OF THE INTERIOR (Hon. Clifford Sifton) :

1. and 2. The government has informed the Royal Society of Canada that if the society's invitation to the International Congress of Geology is to hold its meetings in Canada in 1906 is accepted, the government will furnish certain funds for receiving and entertaining the congress.

3. and 4. Dr. Bell, the acting director of the Geological Survey, has been given authority to proceed to Vienna as a representative of Canadian geologists and as delegate of the Royal Society, for the purpose of delivering the invitation.

GRAND TRUNK PACIFIC—PARISHES CROSSED—LEVIS TO TEMISCOUATA.

Mr. MORIN asked :

What parishes will the line of the Grand Trunk Pacific cross between the Quebec bridge, at Lévis, and the county of Temiscouata ?

The MINISTER OF FINANCE (Hon. W. S. Fielding). It is not possible to name the parishes through which the road will pass until the location of the road is made, but it may pass through the counties of Lévis, Dorchester, Bellechasse, Montmagny, L'Islet, Kamouraska and Temiscouata.

GRAND TRUNK PACIFIC—CROSSING OF MOUNTAINS.

Mr. MORIN asked :

In what county and at what point will the line of the Grank Trunk Pacific cross the chain of mountains that separate it from the line of the Intercolonial ?

The MINISTER OF FINANCE (Hon. W. S. Fielding). I can only say that the line has not yet been located, and we cannot answer the question definitely.

TRENT CANAL—EMPLOYMENT OF MEDICAL OFFICER.

Mr. HUGHES (Victoria)—by Mr. Lancaster—asked :

1. Who is medical officer to the government contracts and contractors on the Balsalm lake to Lake Simcoe section of the Trent canal ?

2. How far from the works does he reside ?

3. Has the government received any complaints anent his neglect of the workingmen on the works ?

4. What is his remuneration ?

The MINISTER OF FINANCE (Hon. W. S. Fielding) :

1. The Department of Railways and Canals have no doctor employed on the Balsam Lake to Lake Simcoe section of the Trent canal, and are not aware as to whether or not the contractors employ one.

2. The above answer, answers this question.

3. The Department of Railways and Canals have received no complaints.

4. Answer to No. 1 answers this question.

TRENT CANAL—PAYMENT OF WAGES—CASE OF MR. THOMAS DODDS.

Mr. HUGHES (Victoria)—by Mr. Lancaster—asked :

1. Has the case of Mr. Thomas Dodds, of Woodville, now a patient in Lindsay hospital, been brought before the Department of Railways and Canals, he having been working on the Balsam lake to Lake Simcoe section of the Trent canal ?

2. Is the government aware that he has not received his pay for some time, the excuse being given that the government has not paid the contractors ?

The MINISTER OF FINANCE (Hon. W. S. Fielding) :

1. No record can be found in the department of any such complaint.

2. The department is not aware that he has not received his pay for some time.

NATIONAL TRANSCONTINENTAL RAILWAY—PRINTING OF THE BILL IN FRENCH.

Mr. J. EMILE LEONARD (Laval). (Translation.) Mr. Speaker, before the Order of the Day is called, I wish to draw the attention of the government to the fact that Bill (No. 235) concerning the National Transcontinental Railway has not yet been distributed to the House in French. I wish the government would hasten the printing of the French copy of the Bill.

BRITISH CABLE NEWS SERVICE.

The MINISTER OF FINANCE (Hon. Mr. Fielding) moved that the House go into committee to-morrow to consider the following proposed resolutions :

That it is expedient to enact as follows :—

1. The Governor in Council may authorize the payment of the following sums, in the respective fiscal years mentioned, for the purpose of assisting in establishing and maintaining an independent and efficient service of telegraphic news from Great Britain, for publication in the Canadian press :—

(a.) For the fiscal year 1903-4, a sum not exceeding fifteen thousand dollars, or at the rate of fifteen thousand dollars per annum for any period less than a year.

(b.) For the fiscal year 1904-5, a sum not exceeding fifteen thousand dollars.

(c.) For the fiscal year 1905-6, a sum not exceeding fifteen thousand dollars.

(d.) For the fiscal year 1906-7, a sum not exceeding ten thousand dollars.

(e.) For the fiscal year 1907-8, a sum not exceeding five thousand dollars.

2. The said sums may be paid at such times and in such manner as the Minister of Finance

may determine, to any association or committee representing the proprietors of such newspapers as may associate themselves for the purpose of establishing and maintaining such service.

Provided, however, that no payment shall be made under authority of this Act until the Minister of Finance shall have satisfied himself that the benefits of the service are open, on fair and reasonable terms, to all newspapers published in Canada; and that not less than one-half the cost of establishing and maintaining such service is paid by the proprietors of the newspapers participating in the benefits thereof.

3. The Governor in Council may make regulations for carrying out the purposes of this Act.

Motion agreed to.

RAILAY ACT, 1903.

House went into committee to consider the following proposed resolutions:

That it is expedient to provide as follows with respect to the salaries of the board, and other expenses incidental to the carrying out of the provisions of the Bill, now before the House, to amend and consolidate the law respecting railways :—

1. The chief commisisoner to be paid a salary of $10,000 per annum.

2. The two other commissioners to be paid salaries of $8,000 each per annum.

3. The secretary to be paid a salary to be fixed by the Governor in Council, not more than $4,000.

4. Such salaries and remunerations to be paid to the other officers, staff and appointees of the board, and such other expenses to be paid incidental to the carrying out of the provisions of the Bill as are approved by the Governor in Council.

5. The salaries of the commissioners and secretary to be paid monthly out of the unappropriated funds in the hands of the Receiver General. All other salaries, remunerations and expenses, including travelling expenses, to be paid out of the moneys to be provided by parliament.

The PRIME MINISTER (Rt. Hon. Sir Wilfrid Laurier). I am sorry that the Minister of Justice (Hon. Mr. Fitzpatrick) is not in his seat at the moment. He will be here soon. In the meantime, I may expose to the House the reasons which have induced the government to suggest the salaries mentioned in these resolutions. These salaries are the highest that will be paid by the government for any officers that we have at the present time; they are even higher than the salaries of the justices of the Supreme Court and superior courts of the land, higher also than the salaries of the ministers. It has been observed, and, I think, with a great deal of truth, that the salaries that are now paid to the highest judicial officers are becoming—indeed, have actually become—insufficient. No revision of such salaries has taken place for thirty-five years, since the opening of confederation; and the opinion has been expressed more than once on the floor of this House in past sessions, and during the present session also, that the time has practically arrived when it would be advisable to have a revision of salaries paid to the judges. The commission which we are organizing will have to discharge duties of no less importance than the duties now discharged by the judges. Some of the officers, especially the chief commissioner will have to be versed in the law generally and in the law of railways, and versed also in all matters which appertain the practical working of railways. That being so, it seems to us that the salaries proposed are not at all too high. In comparison with the salaries to be paid other officers, it may perhaps sound high, but, looking at it from the point of view of the importance of the duties which are to be discharged by these officers, and judging it also by what is done for the judges and other officers of the government, I think the House will be disposed to agree with us that what we ask them to vote is not at all unreasonable. If we compare the salaries we propose for these commissioners with the salaries that are paid to railway managers, for instance, whose duties are no higher or no more important than those assigned to the chairman of the Railway Commission, it will perhaps be agreed, that these salaries are reasonable. It must be borne in mind also that the gentlemen who serve on this commission will be denied many of the advantages which to-day appertain to the judicial office. For instance, the judges of the land are not removable, holding office during good behaviour. The members of the commission are appointed for ten years, and even during those ten years they are removable.

Hon. Mr. HAGGART. Ten years? I thought it was reduced.

The PRIME MINISTER. I feel assured that I am right in saying the term is ten years. But during those ten years the tenure of the office is not so secure as the tenure of the office of judges, because they may be removed in the same manner as lieutenant-governors are removed. The judges are not removable except after very exhaustive proceedings, they can only be removed upon an address voted by both Houses of parliament. From this consideration it seems to us that the sum of $10,000 which we propose to be paid to the chairman of the commission, is an adequate salary. If this sum is agreed upon as a reasonable compensation to the person who is to act as chairman of the commission, then we submit also that the sum of $8,000 pari passu ought to be the salary to be paid to the other two commissioners.

Hon. Mr. HAGGART. What constitutes the qualifications of the other two gentlemen?

The PRIME MINISTER. There is no special qualification provided in the Act.

Mr. MACLEAN. There is no qualification for any of them, none for the chief commissioner ?

The PRIME MINISTER. There is no special qualification provided in the Bill.

Hon. Mr. HAGGART. The only thing I would add is, has the government come to any conclusion as to who will be appointed on the commission ?

The PRIME MINISTER. No, the question has not been considered. I would suggest a brief amendment to the resolution, that instead of saying the 'chief commissioner' we should use the words in the Bill, and say 'chairman of the commission.'

Mr. MACLEAN. It is chief commissioner in clause nine of the Act.

The PRIME MINISTER. If it is, then do not change it.

Hon. Mr. TARTE. In my opinion, my hon. friends on the treasury benches make a mistake in not paying suitable salaries. A minister of the Crown is not paid enough, though it is true he has the honour of leading a great party, and he has the privilege of being a Privy Councillor. But if you want, in this age, to get good men, honest men, you must pay them well. In my humble opinion the president of such a commission as this should be as well paid as the manager of a great railway corporation. I take the liberty of throwing out the suggestion, which perhaps may come more fittingly from me as I am an independent member of the House. The government might perhaps on this occasion, at any rate, pay some consideration to the advice which I am tendering, and which I believe will be echoed by those who have given this subject some attention. The salary of $10,000 is altogether inadequate. The government will not be able to get a strong man as president of this commission for any such salary.

Mr. MACLEAN. I would like to see the chief commissioner mentioned in this resolution paid at least $15,000 a year, and the two other commissioners paid $10,000. I would also like to see the manager of the government railways in this country paid at least a salary of $15,000. You cannot get men of the calibre required to take these offices, I believe, for a less sum than $15,000. Men who discharge similar duties in other positions are in receipt of $25,000 a year, and some of larger sums. Some bank managers are getting $15,000 to $20,000 a year, men who are not required to perform duties so important as those which men in this position will have to perform. I am not afraid to say in this House that I think the time has come when parliament ought to revise the salary list, and pay men of high executive capacity, and they are very rare, substantial salaries, something like what they would get in the open market when other great corporations required to choose executive officers.

The PRIME MINISTER. My own inclination would run in the direction indicated by the hon. member for St. Mary's division (Hon. Mr. Tarte) and my hon. friend from East York (Mr. Maclean). There was a time when my ideas of economy were perhaps different from what they are today. At one time I thought it possible to diminish our public expenditure by millions of dollars. But I notice lately that every time we have attempted to do that our friends on the other side have prevented us from doing it. Therefore, I do not know exactly what to do in this matter, so I have taken the safe course of suggesting that we should adopt a salary of $10,000 a year. But if I live I shall not forget this expression of opinion, in which I largely share myself. The time may come perhaps when we shall have to attempt a revision of all the salaries paid under the government, especially the judicial salaries, and when we do so certainly the salaries allowed to these commissioners ought to be revised also.

Mr. INGRAM. In view of what the right hon. gentleman has just stated, that he does not know what to do in this case, I am bound to say that that is the position every hon. member of this House is in at the present moment. He has not stated whether he intends to appoint as chairman of this board an expert railway man. If he does intend to have a first-class expert railway man, he certainly cannot secure such a man for $10,000 a year. If the hon. gentleman says that it is such a man that he wants to secure, then I, as a member of the opposition, say that the proposed salary is insufficient to secure a man of that character. I think it is very important that the government should secure an expert railway man, because such a man is needed to fill the position that has been created. But in deciding on the salaries to be paid to these officials, I think we are putting somewhat the cart before the horse. The government should have appointed these men in the first place, and then we would be in a better position to say what salaries ought to be paid to them.

Mr. SPROULE. I would like to say for the comfort of the Prime Minister, who seems to have no one to come to his support, that in my judgment the great majority of the people of this country will think that the salaries he proposes to pay the railway commissioners are large enough, and unless he gets an extra superior man for chairman, the people will think the salary is perhaps a little high. So the right hon. gentleman need not worry very much about the danger of people grumbling, because he has not put the salary high enough. I am rather inclined to think he will re-

ceive the support of the great majority of people in his desire to keep it down.

Hon. Mr. ROSS (Victoria, N.S.). I am glad to find that the ideas of the first minister are getting expanded, that he has larger ideas now than he had in former times. I hope, if he lives to be as old as I am, his ideas will keep getting larger and larger. We must remember the condition of things existing now in comparison to what they were in former times. While my hon. friend from St. Mary's (Hon. Mr. Tarte) has not the honour of being a minister, he has the honour of being what I was once myself, an ex-minister of the Crown. So we must wear these honours with our usual modesty. The late Lieutenant Governor Tilley told me that when he went home to London on a delegation with my great friend, Joe Howe, as they used to call him, Howe used to say to him, 'Tilley, you must enlarge your ideas, you must have a wider breadth of beam, and if you live to my age, you will get clear of these narrow ideas.' I would say another thing to the right hon. leader of the government, and it is that if you are to have first-class men, you must give them first-class salaries; otherwise you cannot get first-class men.

Mr. MACLEAN. Perhaps the right hon. leader of the government would tell us whether there is any prospect of the farming portion of the community being represented on this commission.

The PRIME MINISTER. I think such is the intention.

Mr. MONK. I would like to ask the hon. gentleman if any estimate has been made of the total cost of this commission? There is an amount of $10,000, two amounts of $8,000 each and then $4,000 for the secretary. Of course, this is only a part of the cost of the commission. Can the government give us any idea what the annual cost will be?

Hon. Mr. BLAIR. Perhaps I may be able to throw a little light upon the question that the hon. gentleman (Mr. Monk) has asked while of course I cannot undertake to say that in what I may observe, I am expressing the present views of the government. The subject has received more or less consideration from myself, and I endeavoured to form a judgment as to what sum it would be desirable to ask parliament to grant the first year at all events for the purpose of the maintenance of this board. Looking at the amount of work which would naturally devolve upon it in the earlier part of its existence, considering that it would be called upon to enter upon inquiries and investigations in different portions of the country, and considering that in connection with these inquiries and investigations there will be more or less expense in summoning witnesses, procuring expert aid and assistance of various kinds in different localities, I thought that it would be unwise and unsafe to ask parliament to vote anything less than $100,000 for the first year. It may prove that the estimate is somewhat excessive. If it proved to be excessive no harm would be done if there was proper provision to enable the commission to work out the purposes for which it was created. If, on the other hand the sum that was voted proved inadequate, it would practically disable the commission from performing its work.

The MINISTER OF FINANCE. We shall ask in the supplementary estimates for an appropriation for the purpose of meeting the expenses of the commission, but, as to the precise amount of it, I could not say anything at the present moment.

Mr. MACLEAN. Section 21 of the Bill says:

> The Governor in Council may from time to time, or as the occasion requires, appoint one or more experts, or persons having technical or special knowledge of the matters in question, to assist in an advisory capacity in respect of any matter before the board.
>
> 2. There shall be attached to the board such officers, clerks, stenographers and messengers, as the board, with the approval of the Governor in Council, from time to time appoints, at such salaries or remunerations as are recommended by the board and approved by Governor in Council. The board may, at will, dismiss any such employee.

I take that to mean that the Governor in Council can appoint all these officers.

Hon. Mr. BLAIR. He will do so.

Mr. MACLEAN. On the recommendation of the board.

The PRIME MINISTER. Yes.

Mr. MONK. The estimate made by the hon. ex-Minister of Railways and Canals (Hon. Mr. Blair) seems to be a very fair and just one, considering the work that is going to be confided to this commission. At the same time, I, for my part, agree very much with what has been said by the hon. member for East Grey (Mr. Sproule) and it seems to me, that, as regards the assistance, which no doubt the commissioners will require, we ought to be able to find a man and two assistants to do the work required at the salaries which have been proposed by the government. These salaries are reasonably high. But, it occurs to me that it would have been wiser for us in view of the very large expenditure for which we are exposed in the creation of another commission, as I understand it, for the purpose of building the eastern section of the proposed transcontinental railway to defer for the present the creation of this commission.

Resolution reported, read the first and second time, agreed to and referred to the Committee of the Whole on Bill (No. 21.)

RAILWAY ACT, 1903.

House again in committee on Bill (No. 21) to amend and consolidate the law respecting railways.

On section 255,

The MINISTER OF JUSTICE (Hon. Charles Fitzpatrick). I propose an amendment, the object of which is that there shall be no change in the classification until notice of the application to have the change made has been published in the 'Canada Gazette' so that all parties interested may have proper notice and be represented if they desire. The change will be by way of an addition to the clause:

No goods shall be removed from any lower to any higher class until two weeks notice shall have been given in the 'Canada Gazette.'

Mr. KEMP. Two weeks would not be sufficient notice for British Columbia, for instance. I think it should be at least six weeks.

The MINISTER OF JUSTICE. Very well, we will make it read:

Until six weeks notice shall have been given in the 'Canada Gazette' or such further notice as the board may determine.

Mr. KEMP. I think that will be satisfactory.

Amendment agreed to.

The MINISTER OF JUSTICE. I wish to add as section 309 (a) the following:

In every case in which the parliament of Canada votes financial aid by way of subsidy or guarantee towards the cost of railway construction, all mechanics, labourers or other persons who perform labour on such construction shall be paid such wages as are generally accepted as current for competent workmen in the district in which the work is being performed; and if there be no current rate in such district then a fair and reasonable rate. In the event of dispute arising as to what a current or fair and reasonable rate is, the same shall be determined by the Minister of Railways whose decision shall be final.

Hon. Mr. HAGGART. Have you copied that from the imperial contracts?

The MINISTER OF JUSTICE. Practically.

Hon. Mr. HAGGART. I do not think you should impose on the Minister of Railways the duty of fixing the wages.

The POSTMASTER GENERAL. He will have to submit the question to some expert, and though it will be his decision, it will not be his task.

Hon. Mr. HAGGART. I think it is sufficient to copy the clause in the imperial contracts without making reference to the Minister of Railways.

The POSTMASTER GENERAL. You would need some tribunal to appeal to.

Mr. CLARKE. What is the meaning of that clause?

The MINISTER OF JUSTICE. The meaning of it is that the contractor should be obliged to pay in the particular district in which the work is done the rate of wages which is current for similar work performed by other people in the neighbourhood. That is to say, the contractor shall not have the right to bring in a lot of men and pay them wages far below that rate.

Mr. MACLEAN. Does that apply to companies which have already received government assistance?

The MINISTER OF JUSTICE. A somewhat similar provision is already in the Subsidy Act.

Mr. CLARKE. Has the hon. minister made any provision for a case in which the contractor contracts himself out of this obligation? The hon. gentleman will remember the case which arose a few days ago in which a firm of contractors who had a contract for a public building at Nelson in the province of British Columbia, made an agreement with some men in the province of Quebec to go out at less wages than the current rate in the locality. They went out and did the work, not knowing what the rate of wages in the locality was until they arrived there, and on their return they sued the contractor. The Public Works Department ignored the fair wage contract, and declined to asisst the men in any way. Has the hon. minister made provision against a recurrence of a case of that kind?

The MINISTER OF JUSTICE. I think it would be exceedingly difficult for us to provide against a contract being made between a contractor and his employees as to the payment of any particular rate of wages. But the government have a right to make provision that a contractor who receives aid from the government shall pay a particular rate.

Mr. CLARKE. As I understand, there was a clause in the agreement between the contractor and the Crown that the contractor should pay the current rate of wages, and he ignored that provision. Can there be a repetition of such a case? I think the hon. member for Yale and Cariboo (Mr. Galliher) knows the circumstances of that case better than I do.

Mr. GALLIHER. In that case I think it was pointed out that in the contract made between the contractor and the men who were brought from the province of Quebec to British Columbia there was a consideration that their employment should be for a fixed term, that is, during the continuance of the erection of the building. That in itself, as I pointed out at the time, was to my mind a good consideration. They also received their transportation to the place of work and back home again if they chose

to come, and their keep in the meantime. I think that was the distinction that was pointed out. Further, in the contract which those men signed there was a statement in express words that they knew perfectly well that they were not receiving the wage that was being paid in the locality. Consequently they knew what they were contracting about. I am not justifying the transaction at all; I am simply stating the circumstances.

Mr. CLARKE. I would like to ask the hon. Minister of Justice if there is anything to prevent men who know what the prevailing rate of wages is in the district where the work is going on, doing what these men did in the case of the Nelson post office—contracting to work for less than the current rate of wages, provided the contractor pays their fare? Does that do away with the obligation of the contractor?

The MINISTER OF JUSTICE. I have not given the matter very much consideration; but it appears to me at first sight that no legislation that we could pass here could affect a contract of that sort. That is a contract relating to civil rights which has to be regulated by the laws of the province in which the contract is made. But, on the other hand, when we enter into a contract with a contractor or a company, and we undertake to give a subsidy towards the work that is to be done, we have a right to stipulate that the contractor or the company shall do certain things, and we can enforce that stipulation by means of the subsidy which we have in our hands when we come to make a settlement with them. But that is an entirely different thing from the point suggested by my hon. friend from West Toronto, which refers to contracting out by the labourer.

Mr. CLARKE. I think it was brought out pretty clearly that there was money for the work in the hands of the government when these men made their claim; but the ex-Minister of Public Works seemed to ride rough-shod over the Department of Labour, for he decided off-hand that the balance under the contract was due to the contractor, and paid it over. The men found, after they deducted their fare to Nelson and return, that they were $100 or $200 each short of the amount they would have received if the wage contract between the government and the contractor had been observed. There does not appear to be any machinery to enforce this wage clause, and it ought to be provided for here.

The MINISTER OF JUSTICE. I am now getting some information on the subject which my hon. friend has brought up, and I do not think all the facts in that case have been before the House. I was not here when the matter was discussed, but I have some recollection that a case of that kind came to the Department of Justice from the Department of Public Works. It was the case of a foreman who entered into a contract at Hull to work in British Columbia for a firm of contractors, one of whom was named Lemoine. He went out there, and asked to be paid the rate of wages that was paid in that particular locality to men occupying a different position. The papers came over to me and I think we reported to the Public Works Department that they were not entitled to retain any part of the subsidy. I speak from memory, however. If the matter is to be discussed thoroughly, I would like to have a proper memorandum prepared, so as to state to the House what the real facts of the case were.

Mr. GALLIHER. I think the case spoken of by the hon. member for West Toronto is not the same case. That case, I think, was never referred, the point being that there was no schedule rate of wages for a foreman in the labour regulations. The other case is, I think, a case of a blacksmith from Montreal.

Mr. FRASER. I remember, when the case was up, that reference was made to the fact that he knew what the terms of the contract with the government were. Knowing that they were entitled by law to receive a certain wage, if they choose to contract for another wage, they have a right to do so.

Mr. CLARKE. Can they do that under this clause?

Mr. FRASER. I would think that any special contract for a valid consideration would be effective. Any man may enter into any valid contract he pleases with his eyes open.

Mr. MACLEAN. That is the point. It is quite clear that if a workman can contract himself out his rights, then the law becomes inoperative. If he signs away his rights he has no recourse.

Mr. LANCASTER. If this clause is intended to have any effect, it is to compel contractors to pay the wages usually paid in the locality where the work is done. To allow the labourers to contract themselves out of that right would be to nullify this provision. If we have the right to stipulate that the contractor shall pay certain wages, that carries with it the right to stipulate that any agreement made between a contractor and a labourer contrary to this provision would be null and void.

Mr. MACLEAN. The same question has come up in the matter of the Grand Trunk Railway benefit fund. The Grand Trunk Railway employees have been signing their rights away, and it is proposed to insert a clause that will protect them even if they do so.

Mr. CLARKE. If a contractor can make an agreement that will relieve him from the

obligation imposed by this law, the law is a dead letter.

Mr. FRASER. No, because in ninety-nine cases out of a hundred the men would not enter into such a contract. They hardly ever do except they are going away a long distance and have some special reason. If a man thought it would be better for him to go to a new country and that was part of the consideration, he should be bound by the contract he made with his eyes open. If the Act of parliament said that by no contract could he put himself outside the statute, that would be different, but that would be going rather far.

Mr. LANCASTER. Can there be any objection to doing that once we undertake to interfere with the freedom of contract? The object, I presume, is to prevent a contractor beating down wages by bringing men from a distance. If he should bring men from a distance, he ought to pay them the wages current in the locality where the work is being done.

The POSTMASTER GENERAL. As the hon. Minister of Justice has pointed out a provision in the statute against contracting would be ultra vires. But if we make it part of the law whenever railways are receiving financial aid from the government, the workingmen employed in construction are entitled to a fair wage, then the government, in a contract with the railway company, may insert the condition that the company shall satisfy the government that it has complied with all the provisions of the statute. In this way you will have secured an effective remedy for the workingman.

Mr. LANCASTER. Would there be any objection to putting in a clause providing that the workingmen shall not be allowed to contract themselves out of their rights?

The POSTMASTER GENERAL. The hon. Minister of Justice fully treated that point. He has given the opinion that any declaration in this Act that a workingman could not contract himself out would be null and void. It could not affect the legal rights one way or the other.

Mr. CLARKE. Do I understand that a contractor may present a document binding the workman to receive less than a fair wage, and if the workman signs it, he is not bound by it? I did not understand the Minister of Justice to make that statement. I would like to know if that is his opinion of the law—that it is impossible for a man to contract himself out ?

The POSTMASTER GENERAL. Of course it is not. I did not say it was impossible. I said that this amendment, being part of the general Act, if a company becomes entitled to financial aid, the practice is for an agreement to be made between the Crown and the company setting forth the terms under which the company is to be entitled to payment. The mere voting of a subsidy by this House does not complete the contract between the Crown and a railway company. The contract has to be entered into, and that contract contains necessary provisions. It seems to me that it would be proper, in framing a contract between the Crown and the railway company, under which the company was to be entitled to financial aid voted by parliament, to insert in that contract provisions requiring the company to comply with the law whatever it is. If the law is that the company shall pay to the men certain wages, it would be proper to provide for a compliance with that condition in the contract. And it does not appear to me that the contractor would be entitled to say that he has complied with the provision of the fair wage by showing that he had not paid a fair wage because the workmen had chosen to surrender the right to be paid a fair wage.

Mr. CLARKE. But the hon. gentleman (Hon. Sir William Mulock) is making everything depend on the contract and not on the statute.

The POSTMASTER GENERAL. Does the hon. gentleman (Mr. Clarke) in any way object to this parliament declaring that such an agreement is null and void ?

Mr. CLARKE. What is the use of the clause ?

The POSTMASTER GENERAL. Perhaps the hon. gentleman will move to strike it out ?

Mr. CLARKE. Oh, no.

The POSTMASTER GENERAL. The hon. gentleman objects to it, but will not have it struck out.

Mr. CLARKE. I do not object. But I simply want to point out to the minister that he is giving these workmen a gold brick instead of something that will be of real benefit to them. If the contractors can contract themselves out of the obligation to pay the current wages, what is the use of the clause? The contractor is fully aware of every condition of the contract he enters into with the government, and the men he is employing may not be. And it may be, as in the case of the men sent to Nelson, that it will be alleged that the privilege of seeing the romantic and beautiful scenery between the place where they made the agreement and the place where they went to work is compensation for the loss of the fair wage—that that is one of the conditions. Or it may be said that their fares were paid there and back. If these conditions may be interposed between the contractors and the government, what use is this law ?

Mr. COCHRANE. Not being a lawyer, I have often wondered, when there was a certain principle agreed to by the commit-

tee, why it could not be worded in such a fashion as to convey to everybody what is intended to be conveyed. We see that difficulty again right here. And I would suggest to the Postmaster General and Minister of Labour (Hon. Sir William Mulock) that when the Minister of Justice (Hon. Mr. Fitzpatrick) is introducing a Bill he should allow that hon. gentleman himself to tell us what he means by it. The Minister of Justice is supposed to deal with legal questions, and I think he is prepared to explain anything he proposes to the House. As I understand, there is a consensus of opinion that any contractor who receives aid from the government should be required to pay his men the current rate of wages in the place where the work is being carried out. If that is the principle we are going to affirm, why cannot the Minister of Justice word a clause in the statute so that it will carry out the idea of the committee? I understand that as the clause is now worded it is possible—as in the case of the men employed in this part of the country to work in British Columbia—for a contractor to make such an arrangement with his men that they may be cheated out of the wages that they would be entitled to under what was supposed to be the law. It seems to me that the Minister of Justice could prepare a clause that would prevent the contractor from doing this. Suppose, for instance, that a contractor in British Columbia having a contract to which this section applied arranged with Chinese labourers to do the work at such wages as those labourers were willing to accept, but which would make it impossible for white labourers to obtain employment on the work at the rate of wages current in the district. This would clearly be contrary to what the committee intended, and I do not see why the Minister of Justice could not prepare a clause which would legally carry out what we wish, and one that would not provoke a controversy among legal men as to what it means.

Mr. BORDEN (Halifax). The proposition of my hon. friend the Postmaster General with regard to this matter seems peculiar. If there were no contract as to wages, or, to express it more accurately, if the rate of wages were not expressed in the contract between master and servant, you would have exactly the rate of wages provided for in the clause, namely, the current rate of wages in the district. But, according to the Postmaster General, you cannot interfere with a contract. Therefore, this clause has no operation at all. It has no operation in the case which has been suggested, because you get that rate of wages anyway in the absence of any other rate being fixed in the contract; and, in the other case, according to the Postmaster General, the clause which we are proposing to pass is ultra vires of this House, and so, of course, has no operation. I have not given careful consideration as, no doubt, the Minister of Justice has done, to the question as to how far you can go in the direction of interfering with contracts. It all depends upon that, of course. But I should not think you were going any further by saying that this should prevail notwithstanding any provision in the contract between master and servant. If you intend to touch the case where the rate of wages has been agreed upon between master and servant, I should think, with all deference to the Minister of Justice, that you are not going further if you say 'notwithstanding anything in the contract between master and servant.'

The MINISTER OF JUSTICE. If this section is good, that would go as a matter of course.

Mr. BORDEN (Halifax.) Perhaps so. Well, are you only going one step further—I do not think you are—when you say in addition to that that the servant shall not be allowed by any contract to put himself outside the provisions of this Act? Does my hon. friend the Minister of Justice think you are going further there?

The MINISTER OF JUSTICE. I am afraid so. That is a matter I have considered rather carefully.

Mr. BORDEN (Halifax). I have an absolutely open mind on the subject, and the Minister of Justice may be able to convince me. In one case you say that this statute shall take effect notwithstanding any provisions to the contrary in the contract between master and servant. You are certainly dealing with the question of contract there, and you are getting the power to do so because that is supposed to be incident to the subject you are dealing with. If you go a step further, and say that any agreement not to observe the provisions of this section shall, as between master and servant, be void, are you really overstepping the line?

The MINISTER OF JUSTICE. Let me state the position, as I understand it. Of course, as to the question of contract, that must be regulated according to the law of the province within the limits of which the contract is made. I do not say that it is impossible for us to interfere with the contract, such as is here made, any more than with any other contract. But I do think that if we grant aid, for instance, toward the construction of a railway, we have a right to make it a condition of the grant that the company that receives the aid shall apply that money, in connection with the contract with its labourers, according to a fixed rate of wages. Now, we can only enforce that contract, so far as we are concerned, against the contractor or the railway company, or the individual, and in this case I speak of the railway company. We can only enforce it against the railway company; but we could not step in for the purpose of en-

forcing a contract against or in the interest of the employee of the railway company, because that is a contract absolutely independent of us.

Mr. CLARKE. Where does the employee come in ?

The MINISTER OF JUSTICE. In so far as we may be able by this indirect method to force the company, or the contractor, to pay the labourer a particular rate of wage, the company or contractor would feel that there was a penalty attaching to the non-fulfilment of the conditions. I have considered this matter as far as I could, and I do not see what more we can do.

Mr. BORDEN (Halifax). My hon. friend may be right, because he has considered the question and I have not. But, I want to ask him this : If you can deal in that indirect way to the extent the hon. gentleman has stated, why can you not deal in that indirect way to the extent of preventing the employee from contracting himself out ?

The MINISTER OF JUSTICE. We might perhaps go so far as to prevent the employer from making a contract of that sort, but I do not think we could control the employee. There is no contract between us and the employee, but there is a contract beween us and the contractor.

Mr. BORDEN (Halifax). But would not that observation have the same application to what I said a moment ago ?

Hon. Mr. HAGGART. The Minister of Justice says it is only a sort of penalty which attaches to the party who contracts with the government. Supposing the government were to say : You have not been paying fair wages to your men, and we will retain the difference between what you have paid and what you ought to have paid. Can you do that ? To whose benefit is the money to accrue ? Does it go into the exchequer of the country, or has the Minister of Railways and Canals power to return it to the labourer ? I think the first position the Minister of Justice took was the correct one. Is this an incident to something which we have power to do, that is, the building of a railway ? We can exercise our jurisdiction to the fullest extent possible in building a railway. We can pass an Act of parliament which prevents an employee from contracting himself out, because that is an incident to the power we have of building a railway, we have full jurisdiction over that subject. I should say it is an incident to this power for us to see that fair wages should be paid to the employees upon the construction of any road which is being built under government supervision. If it is an incident to it, you have a right to say that the contractor shall pay to the employee a fair wage ; if not, you must said that it interferes with the jurisdiction of the local government over a contract between the employer and employee. You must take one of the horns of the dilemma.

Mr. CLARKE. Might I ask the Minister of Justice if there is not a form of affidavit current in some of the departments, I think in the Post Office Department, which has to be made by persons who supply goods to the Post Office Department ? I think the contractor has to say in that affidavit that he has paid the current wage, and that he has complied with certain sanitary conditions.

The MINISTER OF JUSTICE. I am not aware of that.

Mr. CLARKE. Would it not be possible to provide a form of affidavit to which the contractor must subscribe, certifying that he has made no contract in violation of this section ?

Hon. Mr. HAGGART. What does the minister do with the penalties that he is going to enforce under this Act ?

The MINISTER OF JUSTICE. Ask the Minister of Railways and Canals that.

Mr. MONK. The case of the public building at Nelson occupied the time of this House some days ago, but I do not think the Minister of Justice was present when that case was discussed. It was a case of three brothers who had engaged with the contractors of a building in British Columbia, and had contracted themselves out of the rate of wages mentioned in the schedule to the contract. It was evident by their agreement that there was an intention to escape the rate of fair wages mentioned in the schedule. I remember that these terms were used, that the amount paid to them was so much, but that in view of the advantages the contractor offered them by paying their passage money out, and giving them board, which would be deducted later from their wages, these advantages should be considered an equivalent to the $5 a day which was the rate mentioned in the schedule attached to the contract. It was urged here very strongly that we had no power, as the Minister of Justice observed a moment ago, to interfere with a contract made between the employee and the employer, and the fact, when representations were made to the Department of Labour and to the Department of Public Works, which was the department interested in that construction, they seemed to have come to the conclusion that as that agreement had been made between the parties, it was impossible to give these three men the relief they claimed, because they claimed that relief ; and in consequence of that contract having been made, they lost the sum they were claiming, which amounted in the aggregate to nearly $1,200.

The POSTMASTER GENERAL. They have not lost it.

Mr. MONK. They have lost it unless they take the recourse suggested by the Minister of Labour of going into the courts.

The POSTMASTER GENERAL. But the hon. gentleman said they were sure to win, and the defendants are responsible.

Mr. MONK. If the schedule had been observed they would have had the money at once.

The POSTMASTER GENERAL. Why did they lose it ?

Mr. MONK. It is a matter of determining the rate of wages. But when we voted a sum of $40,000 for the Department of Labour we imagined the labourers would be saved the misfortune of falling into the clutches of lawyers. Now, this amendment of the Minister of Justice appears to me to be on the face of it a very wise one, but I would suggest to him the advisability of adding a proviso that any contract made by the employer in avoidance of this clause, would be null and void. The labourers would find it out quickly enough, as my hon. friend knows, and the employer would be warned by the law that he must make no stipulation which would deprive any man of his fair and equitable wage. I think that would be an admissible law, it is not contrary to public order, and it is perfectly fair. It would simply state that the workman, who is very often the victim of the necessities and blandishments of the employer, would have that protection that the law declares in the contract he should have, and that if he makes any contract with the contractor in avoidance of the terms of this clause it will be null and void. My hon. friend from Grey suggested that it might be an interference with the right of contract. There are cases in which parliament can interfere with the right of contract. We had one under discussion yesterday, and this very clause now I think is an interference with the right to contract, and a justifiable one and the only suggestion I make to the hon. Minister of Justice is to add that proviso.

The MINISTER OF JUSTICE. I have considered the wisdom of making the provision that my hon. friend refers to, that the labourer shall not have power to contract out, and I am of opinion that this cannot be done, that it is not in our power here to regulate contracts between employer and employee. I do not think we can interfere with that ; at the same time, the matter is one that is worthy of consideration and I am quite willing to consider the matter further if it is so desired, but I must confess that up to the present time I have not seen how it is at all possible to interfere with a contract between employer and employee.

Mr. CLARKE. Could you not make the employer sign a statement to the effect that he had not evaded the payment of the current rate of wages ?

The MINISTER OF JUSTICE. Yes, we could make him do anything that we choose in respect to his employees, but that is a matter of contract between himself and the department.

Mr. CLARKE. Could you not provide that he shall make an affidavit that he has not contracted himself out of his obligation to pay the current rate of wages? The hon. Postmaster General (Hon. Sir. Wm. Mulock) has some such affidavit that he requires all persons doing business with his department to subscribe to.

The MINISTER OF JUSTICE. That would be a matter of contract between the employer or the contractor and the department, but I do not think that it ought to be made a matter of statute.

Mr. CLARKE. Of course, my hon. friend from Jacques Cartier pointed out how these men could be imposed upon, and if the desire of parliament is to protect them and to see that they are paid the current rate of wages, we ought to be able to provide machinery to carry out our intention.

The MINISTER OF JUSTICE. I think a contract such as was referred to by the hon. member for Jacques Cartier by which the labourer would contract out of the provisions of the law would be perfectly valid in our province. Under our law a labourer has the right to contract out. It would not be enforceable in Ontario as I understand because I am informed that the contractor cannot contract out under the Employers' Liability Act. An amendment might be made to the Civil Code in our province to prevent a labourer from contracting out, but I do not see how we could make that amendment here.

Mr. PUTTEE. I should like to point out to the hon. Minister of Justice that if it is acknowledged that power to contract out lies in the clause it is practically acknowledging that it is of very little use to the worker who needs this protection most, because, if there is power to contract out, the worker is going to be practically forced to contract out.

The MINISTER OF JUSTICE. My hon. friend (Mr. Puttee) seems not to have read the provisions. While a man has a perfect right to contract out it relieves the contractor as to the labourer, but not as to the department. The department can still enforce this agreement against the contractor.

Mr. PUTTEE. While the department can go on and enforce its contract with the contractor I am surprised to hear the opinion that contracting out would still be allowed. It must be remembered that the proposal to contract out would always be made on the part of the employer himself. There

is another matter that I would like to mention. This amendment is carrying out in almost the exact terms the resolution of 1900, that went through this House and, of course, it is only right and proper that we should apply it to all railway grants, bonuses and subventions, as I believe it has been applied to some in the past. We have had three years' experience of trying to enforce the current wage resolution and a good deal of information has been acquired upon the subject. The British House of Commons after having this resolution in force for six years, appointed a commission to inquire into its working and found out a great many of the drawbacks which are similar to those which we have experienced in this country in the last few years. The very fact that the resolution was of some use has been proved by the number of expedients that have been resorted to on behalf of contractors to overcome it. In the amendment which has been proposed the hon. Minister of Justice will see it is proposed that in case a dispute arises as to the current rate or fair rates the matter shall rest for decision with the Minister of Railways and Canals. Is the hon. minister aware that we have fair-wage officers whose whole duty lies in ascertaining what fair or current rates of wages are in different parts of the country? I should imagine that with the experience they have had these officers are becoming supplied with very valuable information as to what fair and current rates are throughout the country and it seems to me that the Minister of Railways and Canals would have no officer in his department to whom he could delegate this work in case of a question arising as to what was a fair rate of wages.

The MINISTER OF JUSTICE. These fair-wage officers who are in existence may be used for the purpose of giving advice to the Minister of Railways and Canals when he is called upon to decide as to whether or not a contractor is complying with the terms of his contract, but I think it would be going rather too far to say that we should substitute a fair-wage officer for the minister in connection with an important matter of this sort.

Mr. MONK. I think with some other hon. gentlemen that it is very important if it is possible that we should protect the workingmen, because there is no doubt—I say this with no desire to appear as the protector of the workingman especially—that they will be the sufferers unless some relief can be afforded to them by the amendment suggested by my hon. friend. When this session opened, the hon. Minister of Justice will remember that I had a Bill before the House by which I endeavoured to place the responsibility for fires caused by railway companies upon the railway companies, but I admitted that the matter of torts or damages was a provincial matter and that we could not directly legislate in this House that railways under the control of this Dominion should be responsible for fires caused by their locomotives. I thought that was impossible because it was an invasion of the provincial field by the Dominion legislature. Therefore, my Bill consisted of an endeavour to make clearer some provisions of the Interpretation Act so as to arrive indirectly at the result which it was desired to obtain. But that did not meet with the views of the hon. Minister of Justice; whereas, a direct law decreeing in very words that the railway companies shall be responsible for fires caused by the locomotives, is now incorporated, as I understand, in this Bill. In other words if my view is correct we have legislated on a matter of damage and tort which is in the provincial field exclusively in a manner designed to meet the point. According to the view entertained by my hon. friend, I suppose that we were legislating in regard to Dominion railways and that therefore we could impose any conditions that we chose upon the railways under our control even if those conditions constituted an invasion of the provincial field of legislation. I believe that has been held by the Privy Council in the case of the taxation of the banks which came up before the provincial court and went to the Privy Council. If we can do that why cannot we legislate in the sense that no contract by which a labourer will have contracted out of the conditions mentioned in the law will be available before the department, or some such legislative disposition without decreeing especially that any contract made by the labourer with the employer shall be null and void, which might, as the hon. Minister of Justice says, be beyond the powers of this legislature, or say, as least, that any such contract cannot be invoked between the contractor and the labourer in so far as the subsidy granted by this parliament is concerned? I would not undertake to word the clause; I have no doubt my hon. friend the Minister of Justice can do it much better than I can. But if we have legislated that the damages occasioned by fires caused by locomotives under the control of railways that are under our control, shall be paid by the railway company, surely we have the right to legislate in regard to the contracts existing between contractors and labourers on railways which are under our immediate control. That is the point I wish to make.

The MINISTER OF JUSTICE. I do not think the two things can be compared. In the case of damage by fires the position is that where an individual who suffers damage applies to the railway company for redress, he can only apply on the principle that there has been fault on the part of the railway company, which fault has resulted in damage to the individual who seeks redress. What the Privy Council decided in the case of Roy vs. the Canadian Pacific Railway was, that if a company does that

which the legislature authorized it to do, there can be no fault, and it seems to me that notwithstanding all that has been said about that judgment, it is a most elementary principle that there can be no fault where there is legislative sanction for doing the thing complained of. With respect to the amendment to which my hon. friend referred, what we decided here was purely and simply that while we authorized the company to operate its road in a particular way—if we limited ourselves to that we would relieve them from responsibility for anything that might happen so long as they remained within the law—we specifically extended that feature in the doing of the thing we authorized, by saying that for damage occasioned by way of fire caused by them, they would be responsible. That is to say, we limit the extent to which they would have the right to go in connection with the operation of their road. That is completely within our control. But what I cannot up to the present time see is, where we can get authority to interfere with a contract entered into between two individuals within the limits of any particular province with respect to the lease and hire of service. A contract is made between two individuals, and if the law of a particular province allows absolute freedom of contract with respect to that, then how could we do anything here which could in any way influence that particular contract or modify it? How can we restrict the right of the parties to that contract? How can we determine any limit to the area within which they can contract? Where do we get authority to do it? I contend that we have a perfect right to say to a man who asks us for assistance, that in consideration of the assistance we are giving him he shall do so and so, and if he doesn't do it we have recourse against him for failure on his part to comply with the terms of his contract. But that we can govern the relations between himself and some one else for the benefit of that other person, I cannot see where we can get authority to do it.

Mr. MONK. If the Minister of Justice is right the only question is this: Can we push our right to legislate in regard to these railways that are under our control to the point that we will regulate the relations existing on those railways between employer and employee. My hon. friend, I suppose, admits that principle?

Hon. Mr. BLAIR. Railways do not come under the control of this government simply because they receive subsidies from it.

Mr. MONK. As far as the subsidy is concerned, they do come under the control of this government.

Hon. Mr. BLAIR. Yes.

Mr. MONK. Then, going beyond that point which was mentioned by my hon. friend, since we have the right to legislate as to federal railways, it seems to me that we have the absolute right to legislate as to the relations that will exist between the employers and employees on these railways. That is going very far, but it seems to me it is not going too far. As my hon. friend admits, the moment we grant a subsidy to a railway we can attach such conditions as we like to the granting of that subsidy. The Minister of Justice, by his amendment, goes this far: He decrees what shall be the relations between the railway company to whom the subsidy is granted and its employees, but he says that we cannot go so far as to declare void any contract in relation to that employment between those employers and those employees. I submit that we can interfere with such a contract, since we have the right on the granting of the subsidy to legislate as to the relations between employers and employees. We can go so far as it may be necessary for us to attain the object which the hon. gentleman has in view in this amendment, and we can declare that a contract made between a subsidized railway and its employees in avoidance of this amendment shall not be a contract which can be invoked between the parties. We can go that far.

Mr. LANCASTER. When I spoke on this matter about an hour ago, I am afraid I did not impress upon the Minister of Justice what my meaning was. I intended to convey to the Minister of Justice that instead of being afraid of interfering with other people's rights in that contract, we might be permitting them to interfere with our right of contract if we stopped short of what I suggested. That is to say, that any contract sought to be made—I would not say any contract made, because I do not admit they would have the right to break a contract entered into with us—but that any contract sought to be made in violation of this stipulation should be null and void for the purpose of this section. What I mean by saying that they might be interfering with our own right of contract is this: We certainly have the right to contract in regard to these subsidies; we have the right to say what conditions shall exist in the granting of these subsidies. When we make a contract with a contractor we say that one of the conditions shall be for the benefit of some other individuals who are citizens of Canada, and not for the benefit of the Dominion of Canada itself as a government. The government of Canada seeks to say to the contractor that these individuals who are workmen shall have certain rights which the contractor shall not take away from them. The minute we say that the power of a provincial legislature can make our contract ultra vires, then we are saying: Although we made this contract with this contractor intending him to carry it out for the benefit

of the workmen, we at the same time recognize that he shall have the right to violate it if he sees fit.

The MINISTER OF JUSTICE. Oh, no; you can enforce it against him.

Mr. LANCASTER. The fact is that we have been arguing in a circle. We must be intending by that contract that this contractor shall pay a certain scale of wages and if we recognize that some one else can evade the effect of that contract then we are saying that our contract is no good.

The MINISTER OF JUSTICE. Why some one else ?

Mr. LANCASTER. We are making a contract for the benefit of these workmen, and if we let it be understood that without the consent of the government, that the contractor can make another contract with these very people we have undertaken to protect, then we are doing away with the whole benefit of our contract.

The MINISTER OF JUSTICE. And if he does that he pays the penalty.

Mr. LANCASTER. But what good does the penalty do the men we are trying to protect ? What is the object of the contract ? It is to benefit these workmen, and how are they going to get their fair wages by that penalty being paid ?

The MINISTER OF JUSTICE. Because the man who is subject to the penalty is more likely to do what is required of him.

Mr. LANCASTER. Is there any better way by which we can prevent a contractor making these unfair contracts than by expressly enacting that if he does make such a contract it will not be of any use to him after he has made it ?

Mr. CLARKE. If the contractor and the workmen have a right to agree together to that effect, why should we penalize the contractor or the company for making an agreement which they have a perfect right to make ? What is the use of this clause ? If we cannot by legislation in this House prevent that being done, I think we should oblige the contractor to make an affidavit before the subsidy is paid that he has not done so.

The MINISTER OF JUSTICE. We could do that as a matter of regulation.

Mr. MONK. I do not know that the remedy suggested by my hon. friend would be as complete as the one mentioned a moment ago ; but perhaps the two might go together. The affidavit would be a very good thing, although my feeling to-day is that I have a great distrust in human nature ; but I would add to it the other proviso. My hon. friend the ex-Minister of Railways (Hon. Mr. Haggart) says that what we are contending for is already provided for in the amendment of the hon. Minister of Justice ; and so it is to a certain extent, because by this amendment we do legislate as to the contract of lease and hire of work. My hon. friend says by his amendment that the labourers shall be paid at such a rate, irrespective of any contract. It seems to me that we should take very great precautions in this case. An affidavit to be furnished by the railway company before the subsidy is paid will certainly produce an excellent result ; but railway contractors and companies are not always very scrupulous, and the man who makes the affidavit may consider that he has conformed to this clause, though he may not have done so. The three brothers who were despoiled of their just wage through the absence of the Minister of Labour, were paid, so the contractor represented, the equivalent of $5 per day. If we legislate between the lessors and lessees of work, I think we can go a little further, and provide that every agreement made in violation of this provision shall be null and void. If that had no other effect, it would have the effect, whether constitutional or not, of scaring the railway company, and I am not, like my hon. friend the Minister of Labour, against the workingman, but in his favour.

The MINISTER OF JUSTICE. The suggestion which my hon. friend from West Toronto has made respecting the evidence which the contractor must give that he has complied with the conditions of his contract, is a regulation which would be effective, and if I were the Minister of Railways, I would be disposed to provide that such a regulation should be made part of the contract.

Mr. CLARKE. If it is a matter of regulation, it will rest with the government to provide such a regulation. I think it the sense of the House that it should be provided.

Amendment agreed to.

Mr. CLARKE. I would take the liberty of asking the hon. Minister of Justice a question with respect to section 193. That section, as originally in the Bill, was amended at the request of the hon. member for East York (Mr. Maclean). The ex-Minister of Railways and Canals (Hon. Mr. Blair) was good enough to insert an amendment providing connections with railway stations by local telephones. The matter is one in which the municipalities of Port Arthur and Fort William are very much interested, and the mayor of Fort William has written that he is in doubt as to the meaning of this clause, and he has taken some advice upon it. The opinion given him is that it does not affect municipal telephones already in existence. I took the liberty of consulting the hon. member for St. John (Hon. Mr. Blair) and he gave me the opinion that the rights of municipalities

now owning a telephone service were fully protected.

The MINISTER OF JUSTICE. I would be prepared to accept any opinion expressed by the ex-Minister of Railways and Canals on a subject to which he has given so much consideration. I know of no one more competent to give an opinion in relation to the Bill. My own view is that the words 'whenever any municipality is carrying on operating and maintaining a telephone system' would apply to any municipal system now in operation.

Mr. KENDALL. By clause 211, provision is made to compel all trains to be equipped with certain safety appliances, but by section 212 power is given to the board to exempt railway companies from this obligation. The board is therefore given a power which, in my opinion, should be vested in parliament alone, namely, the power of deciding whether in any particular case any railway company shall be exempted from providing safety appliances. The board, however, might be allowed the power of extending from time to time the period within which these appliances must be applied, on good reason being shown for the delay.

Mr. DEPUTY SPEAKER. Section 212 has been adopted, and if the hon. member proposes to move an amendment to it, he must first move that it be reconsidered by the committee.

Mr. KENDALL. I move that the committee reconsider section 212.

The MINISTER OF JUSTICE. Before this motion is adopted, I should like to thoroughly understand what my hon. friend has in view. I do not feel disposed to allow any amendment at present to this Bill which has had so much consideration.

Mr. KENDALL. The object of my amendment is to retain in the exclusive power of parliament the right to decide whether or not certain railways shall be exempted from using certain safety appliances.

Hon. Mr. HAGGART. What does parliament know about the apparatus to be employed ? How can parliament tell anything about it ?

Mr. KENDALL. If parliament does not know, in all probability the board will not know anything about it. I would not be content to delegate to any board the power to decide in such a matter. We can all understand what influence might be brought to bear on the board.

Hon. Mr. HAGGART. The hon. gentleman means that the board might be influenced into making an order permitting a company to postpone making these improvements ?

Mr. KENDALL. I ask by my amendment that after the word 'section' in clause 212, all the words be struck out, and the following substituted. 'But may from time to time extend the period within which such appliances shall be used, on being furnished reasonable evidence by the railway company of its inability to comply with the law.' Instead therefore of giving this discretion to the board to exempt a company from providing safety apparatus, I would only give it discretion to extend the time within which the company must equip its road with such appliances.

Hon. Mr. HAGGART. Parliament has declared that certain improvements shall be placed upon railways. Some of the railways have not got these improvements but are getting them made and having them put on as fast as possible. Parliament then gives the commissioners the power of deciding whether these railways are proceeding with the requisite despatch in equipping themselves with these improvements, and the hon. gentleman wants to take that power from the commissioners and vest it in parliament.

Mr. KENDALL. If the hon. gentleman will read clause 212, he will see that the railway board is given the power to decide whether these safety improvements shall be applied at all.

Mr. LANCASTER. I am personally in favour of the amendment proposed by the hon. member for Cape Breton (Mr. Kendall), because it strikes me—as this discussion goes on I may be further enlightened—that section 212 is in exact conflict with section 211, and almost renders nugatory its provisions. We have spent a great deal of time in providing that certain things shall be done for the protection of the men working on the cars and for the protection of travellers also. Section 211 declares what shall be done and what appliances shall be provided. As I understand the amendment of the hon. member for Cape Breton, it is not what the hon. member for South Lanark (Hon. Mr. Haggart) supposed, but it is of a character that that hon. gentleman would favour. The amendment simply proposes that the board may have the power to extend the time for providing these appliances, if it thinks right to do so. But the section as it stands will give the board power practically to repeal section 211. I am opposed to that. Parliament, in section 211, declares that certain things are necessary for the safety of the public, of the railway employees and of passengers. That is for parliament to say. But, under section 212, the board may say that their opinion is better than ours, and so they may 'exempt the company from using upon its railway or any portion thereof, any of the appliances in the last preceding section mentioned, and may from time to time extend the period with which such appliances shall be used.' I do not think

that it should be for this board, with the manifold duties that they have to perform, to undertake the duties of parliament also, as they would be authorized to do under this section 212. I think the amendment should carry, because if it does not, we endow the board with power to enact the very opposite of what parliament has enacted.

Mr. MACLEAN. I might point out that the brotherhoods among the railway employees who are interested in this legislation desire this amendment. We fought all this out before, and got these protective clauses inserted in the law in their interest. But now, after we have the principle admitted, there is this section to make nugatory all that has passed in the law. Certainly, railway men are dissatisfied with the Bill and wish amendments to be made on the line proposed by the hon. member for Cape Breton.

Hon. Mr. HAGGART. Surely the hon. member (Mr. Kendall) leaves power in the board to make modifications of the provisions of section 211 ?

Mr. KENDALL. To extend the time only.

Mr. CLARKE. Does the hon. gentleman (Mr. Kendall) think that this amendment will make the clause more as desired by the railway employees than it is at present ?

Mr. KENDALL. I certainly would think so.

Mr. GUTHRIE. Under the present clause the railway company may be wholly exempt by the commission from the obligation to use these appliances.

Mr. MACLEAN. Under the amendment, the railway company must give a good reason why it cannot provide the appliances. That is what the men want. They say : We want these protective appliances, but we are willing, if the company show that they cannot provide them in a reasonable time, that the time should be extended; but we want them to comply with the law. I think it is only fair that this protection should be afforded to the railway men. Similar protection is afforded under the railway law of the United States. It was fought out there, the companies were given a certain number of years to put in these safety appliances, and they have put them in. Congress gave an extension from year to year for a sufficient number of years to enable them to make the changes. I can tell the committee that the men who are mainly interested and for the safety of whose lives these provisions have been put in this Act think that the Act is worthless as it is, and ask for this reasonable amendment.

Mr. CLARKE. It does seem to me that what the hon. member for Lincoln has stated is quite true, that this clause 212 gives too broad a power to the commission. It authorizes them to 'exempt the company from using upon its railway, or any portion thereof, any appliances of the last preceding section mentioned.' The only condition being that 'the same can be allowed without danger to the public or to passengers or to employees of the company.'

Mr. GALLIHER. I support the amendment of the hon. member for Cape Breton. I think it must strike anybody who will read section 211 and 212 that the amendment is necessary. In the first place, section 211 explicitly provides that there shall be these appliances. That is a parliamentary Act. But section 211 provides that, notwithstanding that we have legislated that these appliances shall be used, this board may allow exceptions and modifications, if they are satisfied that life is not endangered. In other words, it puts the power of legislation in their hands. I have been asked by the railway men interested, to look into this matter ; and I have looked into it, and am satisfied that what they are asking is reasonable and right. For my part I am prepared to support the amendment. All they ask is that the words after 'section' be struck out and the following substituted : 'but may from time to time extend the period within which such appliances shall be used'—that is, they do not want to be unreasonable in the matter. If it is a difficult task for the railway company to put in these appliances at once, or within a month, or within six months, let the time be extended, so long as the railway company can satisfy the commission that the delay is necessary. This is no hardship upon the railway companies, while it provides that section 211 shall be carried out, and the best possible appliances provided on our railways.

The MINISTER OF JUSTICE. I am afraid that if we adopt the suggestion of my hon. friend (Mr. Kendall) the result will be that improved appliances may be made by 1906 that cannot be used on these cars unless parliament is again applied to, and special provision is made. You have to leave some latitude with the board, but if the desire is to take away the right to exempt the company from the legal obligation to use these appliances, I would suggest an amendment that would meet that case.

The board may, upon application order that any apparatus or appliance specified in such order shall, when used upon the train in the manner and under circumstances in such order specified, be deemed a sufficient compliance with the provisions of the last preceding section——

The board must determine the extent to which the law has been complied with.

—but the board shall not, by such order, allow any exception to, or modification of, the requirements of such section unless fully satis-

fied that the same can be allowed without danger to the public, or to passengers, or to the employees of the company.

Mr. BORDEN (Halifax). That throws a very heavy responsibility upon the board.

The MINISTER OF JUSTICE. It does, it throws upon the board the responsibility of determining what ought to be done to protect the public against accidents in the way of providing cars and engines with proper equipments. Then we might amend the other part of the section. The section now reads :

And the board may, by general regulation, or in any particular case, on good cause shown, exempt the company from using upon its railway, or any portion thereof, any of the appliances in the last preceding section mentioned, and may from time to time extend the period within which such appliances shall be used.

The hon. gentleman is afraid that the board may have it in its power to exempt a company from using any appliances at all. I would suggest that we modify that section so as to leave out all the words between 'exempt' and 'mentioned.' So the section will read in this way :

The board may, by general regulation, or in any particular case, on good cause shown, from time to time extend the period within which such appliances shall be used.

Taking from the board the right to exempt the company from using the appliances, and giving them merely time to extend the period within which the appliances should be used.

Hon. Mr. HAGGART. That is intended to apply to construction trains.

The MINISTER OF JUSTICE. And small railways.

Hon. Mr. HAGGART. But the clause as framed at present gives power where it is not necessary to use them on these particular trains.

The MINISTER OF JUSTICE. That is the object of the clause.

Mr. INGRAM. These are the very trains they should be used on. Only the other day, on the Lake Erie and Detroit Railway, a gravel train ran into another one and killed some persons because they had not the proper attachments. I noticed in the evidence taken in the inquiry that it was stated that it was necessary to have these attachments on that class of trains. They are the very class of trains they should be on. I regret to say that on most railways they are not on.

The MINISTER OF JUSTICE. Under the amendment I suggest, there would be no power to exempt any company from the use of these appliances, but the board would have the right to extend the delay within which the appliances may be used.

Hon. Mr. FITZPATRICK.

Mr. LANCASTER. I am afraid the words he is leaving in and which the hon. member for Cape Breton wants left out, would accomplish what we wish to avoid.

The section now says :

The board shall not by such order allow any exception to or modification of the requirements of such section——

The member for Cape Breton wants it to stop there, but the minister says go on and add :

—unless fully satisfied that the same may be allowed without danger to the public.

Does it not mean that the board may allow any exception or modification if fully satisfied that the same may be allowed without danger to the public ?

The MINISTER OF JUSTICE. Supposing there are improvements which will enable us to do away with some of the appliances mentioned in the preceding section, and that the board of commissioners come to the conclusion that the use of these new appliances may exempt the company from the necessity of using all other appliances that are provided for, surely they must not be compelled to come to parliament every time they want to use new appliances on a railway.

Mr. LANCASTER. They must use better appliances than are mentioned here, for instance, outside ladders on the sides of each car. Would you say that the board ought not to have power to say that any other ladder will do instead of the one specified here ? This section would allow them to say that any other ladder could be used.

The MINISTER OF JUSTICE. I suggest that the clause be made to read this way :

The board may, upon application from time to time, order that any apparatus or appliance specified in such order shall, when used upon the train in the manner and under circumstances in such order specified, be deemed sufficient compliance with the provisions of the last preceding section, but the board shall not, by such order, allow any exception to or modification of the requirements of such section.

Strike out all these words :

Uuless fully satisfied that the same can be allowed without danger to the public, or to passengers or employees of the company.

And then substitute :

But the board may by general regulation, or in any particular case on good cause shown from time to time extend the period within which such appliance shall be used.

Section as amended, agreed to.

On section 211,

Mr. INGRAM moved :

That subsection two of section 211 be reconsidered.

He said : I understand that it has been proposed that the words 'in Canada' in

the first line of subsection 2 of section 211 be struck out.

Mr. CLARKE. There is surely no objection to that.

Mr. INGRAM. Subsection 2 reads as follows :

All box freight cars built in Canada, for use on Canadian railways, after the passing of this Act, shall be provided with the following attachments, &c.

Mr. INGRAM. They might bring in cars from the United States and evade the Act.

Mr. CLARKE. We oblige our people to manufacture cars in Canada which will comply with the conditions of this section, but we do not oblige people who manufacture cars on the other side to comply with them. Cars may come from the other side without these attachments and be used in Canada.

Mr. INGRAM. The object of this amendment is to make sure that the section shall apply to cars built in the United States for use on Canadian railways. We know that the railway companies have not been able at times to get a sufficient number of cars in Canadian shops and that they are obliged to give orders to American manufacturers. If they are to be compelled to place these attachments on cars built in American shops and intended for use on Canadian railways then it will be necessary to strike out the words 'in Canada' in the first line of this subsection.

The MINISTER OF JUSTICE. As far as I am concerned I think this Bill has been so thoroughly discussed when it was formerly before the House that I cannot see my way to agreeing to any amendment such as that which has been proposed.

Mr. INGRAM. All I have to say to the hon. Minister of Justice is that he will have to fight the people who do want it.

Mr. CLARKE. What is the objection, may I ask ? There has been a great dearth of cars of all kinds and the railway companies in Canada have been obliged to procure cars from the other side. As I understand, the object of the amendment is that these cars must be equipped as is contemplated under section 211. Is there anything unreasonable in that ?

The MINISTER OF JUSTICE. There is nothing unreasonable in it except that the company would be required to procure a lot of cars that could not be used in Canada. If they could not get sufficient cars in Canada they would buy these cars elsewhere and they could not use them because they might not be equipped according to this section.

Mr. INGRAM. Why should they not comply with the laws of Canada ? Why should not the company be compelled to specify in the contract which they make for cars to be built on the other side that they shall have these attachments ?

The MINISTER OF JUSTICE. There is a great diversity of opinion about the value of these attachments. I understand that the Master Car Builders' Association have passed a resolution absolutely opposed to their adoption.

Mr. INGRAM. There is no Master Car Builders' Association that has passed any such resolution, and any person who says that there is does not know what he is talking about. They simply have not approved of them, that is all, but they have not passed any resolution against them. Why should not the companies procuring these cars comply with the conditions laid down in this Act ? Many of the companies are building cars to comply with the conditions laid down in the Act. Who will pretend to say that the master mechanics are violating the rules of the Master Car Builders' Association ? It is simply idle rot to make such a statement and any man who has any knowledge of this question knows perfectly well that this is the proper course to adopt.

Mr. MACLEAN. I will point out to the hon. Minister of Justice that we have put this provision into the Bill in order to protect the men working on the cars. By allowing these two words to remain in the subsection an evasion is permitted in the case of a large number of cars and all we want to do is to carry out the law to its fullest extent and make it apply to cars built in the United States as well as to cars built in Canada. We have adopted the principle which is now in the Bill and we say that this principle should apply to all cars, and I think that when the object is pointed out to the hon. minister he will consent to striking these words out.

Mr. CLARKE. Subsection 2 provides that :

All box freight cars built in Canada, for use on Canadian railways, after the passing of this Act, shall be provided with the following attachments.

These attachments are specified in the subsection which follows. Then, the paragraph at the bottom of the page provides that :

All cars built prior to the passing of this Act shall be fitted with such attachments on or before the 31st day of December, 1905.

There is an obligation imposed upon the companies to fit all cars which are built and in existence at the present time with these attachments. There is an obligation on the Canadian manufacturer as well as upon the

railway company to attach the appliances to cars that are now being built in Canada. If the words 'in Canada' are not struck out the company may bring in as many cars as they please that may be built six months or a year from now in the United States, and these cars need not be equipped as the Canadian cars are. If the minister will give the objection raised by the men careful consideration he will see that it is reasonable.

Mr. BARKER. As the section stands now, it simply means that a Canadian railway company ordering cars from the United States can order cars differently equipped from those which they could order in Canada. I do not see what objection there can be in striking out these two words.

The MINISTER OF JUSTICE. Read the section with these words left out.

Mr. BARKER. The words 'built for use' would not be carried so far as to mean cars belonging to United States companies.

The MINISTER OF JUSTICE. In legislating it is not a question of how far you would carry it, but of what the words mean.

Mr. BARKER. You must give a reasonable interpretation to them.

Mr. CLARKE. They are not built for use on Canadian railways, but on American railways.

Hon. Mr. BLAIR. They are built for use everywhere.

Mr. LANCASTER. If you strike out the words 'use on' and 'in Canada,' you will get it right.

Hon. Mr. BLAIR. The suggestion of the hon. member for Hamilton would not be of any value, because these cars are often in an emergency purchased as already manufactured, and not built expressly for any Canadian company at all. The difficulty is that you are undertaking to legislate to cover every imaginary case. You have required that the box-cars used on Canadian railways shall have these appliances, but, not satisfied with that, you want to have a provision that all cars that are built hereafter must necessarily have these appliances. I do not see any necessity for that. You are only creating embarrassment and leaving loop-holes which would not otherwise exist.

Mr. CLARKE. Does not the hon. gentleman think it would be advisable to have these cars that are operated in Canada equipped, as far as possible, with the same sort of equipment ?

The MINISTER OF JUSTICE. How can you do it ?

Hon. Mr. BLAIR. Half the cars used on Canadian railways come from the United States and are used there in conformity with their laws, which do not require some of these appliances you are insisting upon.

Why should you want to add to the difficulty of exchange of traffic and the carrying on of business, because there are a certain number of people who insist upon certain protection, while an equally large body of railway people say it is not at all necessary ? These things seem to be carried rather too far, and you are liable to embarrass the business of the country to an extent which you do not now appreciate.

Mr. CLARKE. How would it do to say 'all box freight cars built for Canadian railways ?' Will not that meet the objection ?

Mr. MACLEAN. If a railway company wants 100 box-cars and orders them in Canada, they must have these attachments, but if it orders them in the United States, they need not have these attachments, and so would cost less. If you do not change this section, you are going to put the Canadian car builders at a disadvantage.

The MINISTER OF JUSTICE. It seems to me that there is a real difficulty in connection with this section which it is worth considering. The section now is applicable to cars built in Canada, and the railway company might acquire cars in the United States which may not be so equipped. Why not say 'all box freight cars purchased by the company after the passing of this Act shall be provided,' &c.?

Mr. CLARKE. I think that would do.

Mr. INGRAM. You must not forget that railway companies lease a lot of box-cars.

Hon. Mr. BLAIR. A railway company in a sort of way leases all the box-cars on its road belonging to other railways, because they pay so much a day for them while they are in their possession, and consequently there might be trouble if you use the expression 'lease.'

Mr. INGRAM. The ex-Minister of Railways (Hon. Mr. Blair) used the argument that we are endeavouring to pass a law here which conflicts with the laws of the United States. Let me point out that the Michigan Central Railway operating in Canada interchange more American cars than any other railway in Canada in proportion to its mileage, and they are building their cars as required by this Act. Why do they go to that extra expense if the Master Car Builders' Association is correct ?

Hon. Mr. BLAIR. There are probably various reasons.

Mr. INGRAM. That company is not eager to spend money unnecessarily, but they find that it is to their interest to have these attachments, and they are interchanging with American railroads all the time handling from forty to seventy cars on a train largely of American freight passing through this country, and yet they find no hardship in providing these appliances. Let me ask any hon. gentleman of this House

to apply his own reasoning to the matter. When he is passing along on a passenger train and sees long freight trains on the sidings, let me ask him whether he would pass between the cars in order to get up on top or whether he would not get up on a ladder if there was a ladder there for him to use? Would not common sense tell any man that that is the safest way? The men, knowing this, are asking for this protection. The reason I feel so strongly on this question is that I speak from experience. I have climbed on the cars myself hundreds of times, in all hours of the day and night, and in all kinds of weather; and knowing what I say to be the case, I cannot see why the provision should be refused when we apply a little common sense to the matter.

The MINISTER OF JUSTICE. I have drafted an amendment which I think will meet the real difficulty; but it is now six o'clock, and I will endeavour to have that amendment ready by eight o'clock.

At six o'clock, committee took recess.

After Recess.

Committee resumed at eight o'clock.

The MINISTER OF JUSTICE moved to amend subsection 2 of section 211 by inserting the words 'all box freight cars of the company built after the passing of this Act shall be equipped with.'

Section, as amended, agreed to.

Mr. GUTHRIE. I move that the committee reconsider section 242. My object is to move an amendment to section 242. The amendment I intend moving is to add the following as subsection four:—

Notwithstanding anything in any public or special Act heretofore passed, or in the rules or by-laws of any railway company, or in the rules or by-laws of any insurance or provident society or association of railway employees formed under the authority of any Act heretofore passed, no contract or agreement made or entered into by a workman, employee or servant of any railway company, and no rule or by-law of any society or association as aforesaid, shall be a bar or constitute any defence to an action against such railway company by such workman, employee or servant, for the recovery of compensation or damages for personal injury to him, or, in case the injury results in death, to an action by the personal representatives of such workman, employee or servant—

(a.) unless for such workman, employee or servant entering into such contract or agreement, or becoming a member of such insurance or provident society, there was other consideration than that of his being taken into, or continued in the employment of the railway company;

(b.) unless such other consideration is, in the opinion of the court or judge before whom such action is tried, ample and adequate; nor

(c.) unless, in the opinion of the court or judge, such contract or agreement, in view of such other consideration, was not on the part of the workman, employee or servant, improvident, but was just and reasonable;

and the burden of proof with respect to such other consideration, and of its being ample and adequate, and that the contract was just and reasonable, and was not improvident, shall in all cases rest upon the railway company.

That clause is taken from the Ontario Act known as the Workmen's Compensation Act. A similar Act is in force in several of the other provinces. The difficulty I seek to remedy is this: Some railway companies, by means of special legislation or special clauses incorporated in their charter, have been able to form insurance or provident society, and by means of a summary contribution to the funds of these societies, they are able to have a great deal to say in their management and the formation of rules to govern them. In the case of one of these companies, the Grand Trunk Railway, which employs about 25,000 men, it has formed such a society, under the authority of an Act passed by this parliament in 1874, and amended in 1878, giving it power to form a provident society and conduct the business of accident and life insurance. No one objects to their doing so, but the difficulty is that provision is made in the rules of the society for the immunity of the railway company, on the payment of a small fee per head according to the number of members, from every liability in the case of accident. In the Grand Trunk Railway provident society, there is a rule to this effect, rule number 15, which reads as follows:

In consideration of the subscription of the Grand Trunk Railway to the society, no member thereof or his representative shall have any claim upon the company for compensation on account of injury or deaths from accident.

The men are charged fairly high rates for the small insurance they get. They are charged 50, 60, 75 and 80 cents per month for an insurance, which in many cases is only $250. The premium is much higher than is charged for a much larger amount of insurance in other benevolent and friendly institutions. It has been proved in a court of law that benefit associations doing business in Ontario to-day, give, for a lower rate, insurance of a thousand dollars, instead of $250, and the same weekly benefits in the case of sickness or injury. For many years this rule lay dormant. The Grand Trunk Railway never set it up in an action for damages, but in later years it has been set up in such actions almost invariably. In Ontario the only decision we have by a judge of the Superior Court is the decision of the trial judge in the case of Holden against the Grand Trunk Railway, which was tried at Hamilton. In that case the Grand Trunk Railway set up rule fifteen as a defence for the action, and the trial judge upheld the defence. That case went to the court of appeals, but unfortunately it was not there decided on the point I have men-

tioned, but the decision of the court was based on the question of contributory negligence. It has been decided, however, in the Superior Court in the case of Grenier against the Queen—a case arising out of an accident on the Intercolonial Railway where a similar rule is in force—that that rule is binding on the workman and his representatives.

Now, this is in direct antagonism to all modern legislation on the subject of master and servant. Other corporations, large employers of labour, are bound by the Workmen's Compensation Act in Ontario and similar Acts in other provinces. They cannot escape their common law liability, unless they do so on the giving of some consideration other than the fact of the employment. If they wish to secure themselves, it is open to them to take out accident policies in the various insurance companies doing that line of business. So, I submit, it should be with the Grand Trunk Railway Company or other companies having such a rule as this. Now, it has been stated that this amendment in a manner deals with the question of civil rights, which is ultra vires of this parliament. But, I think that proposition may well be doubted. The only decision we have upon the subject has upheld it. The Ontario law was pleaded in the case of Holden vs. The Grand Trunk, but the trial judge said: No, the rule is binding; it is passed under the authority of Dominion legislation in 1874 and 1878; the Grand Trunk Railway Company is a Dominion corporation. And so the rule was upheld, notwithstanding the Workmen's Compensation Act in the province of Ontario. Now, I submit that no harm can be done to any one by engrafting that legislation upon the Dominion statutes. It will be a long time before a railroad workman who has lost an arm or a leg, or before the widow of a railroad workman who has been killed in an accident on the road, can go to the court of Appeal or the Privy Council to find out whether that statute in Ontario is binding upon the railroad companies or not. You can remove all doubts by placing that legislation in the Dominion Railway Act. I bring it up here because the Bill that I introduced early in the session, though it was read a first and a second time and passed the Railway Committee almost unanimously, is very little likely to be reached this session. But, as it was a Bill to amend the Railway Act, I think this is the proper place, if it becomes law, to introduce it in the Railway Act as an amendment to section 242. These are briefly the facts, and I would ask leave to reconsider that section with a view to introducing that amendment to subsection 4.

Mr. LANCASTER. Speaking for myself, I quite agree with the amendment of the hon. member for South Wellington (Mr. Guthrie). In the Railway Committee I supported him in the Bill he introduced, because I think, we shall be allowing an inconsistent and wrong state of law to exist if we do not, for the reasons the hon. gentleman has so well explained, pass this legislation as a part of the Dominion law respecting railways. If the law is not amended as contended for by the hon. gentleman, we may have a case like this arising in Ontario, or in any other province where a law similar to the Workmen's Compensation Act of Ontario is in force: A man may have two sons, one working for a railway company chartered by the Dominion, and another for a manufacturer, and both injured by the same sort of negligence on the part of their fellow employees; one son will be able to get damage from his employer and the other not able to do so because his employer is the Grand Trunk Railway Company. It does not seem that there can be anything harsh against the Grand Trunk Railway Company or any other railway company—for this applies to all—to provide fair and reasonable protection to the employee. They can still escape liability if they make a compact with the workman based upon a consideration other than the fact of their employing him; and, in passing, I may say, that I think that is no consideration at all, for no railway company will pay a man more than the services he renders are worth, so that all he gets is paid for wages and there is nothing left to be regarded as a consideration for anything else. But, if they employ him and give any other consideration than the employment and if in the opinion of the court or judge before whom such action is tried, ample and adequate; or if, in the opinion of the court or judge, such contract or agreement, in view of such other consideration, was not on the part of the workman, employee or servant, improvident, but was just and reasonable, the railway company can still escape liability for the injuries even under the amendment my hon. friend proposes. So, there is no hardship to the railway company in enacting this amendment. And, as the railway committee, by a very large majority, declared that it approved this legislation and practically there is a report to the House to that effect. I suppose we need not take much time in arguing that it ought to pass the House in this form.

Hon. Mr. BLAIR. The question fairly arises whether or not, supposing the committee to agree entirely that it would be desirable that some legislation of this kind should pass—if we have the authority to pass it in this parliament—it is necessary to pass this amendment, or whether all that the hon. gentleman (Mr. Guthrie) is contending for is not already provided for in the Bill as it stands to-day. I refer to section 242, subsection 3. If hon. gentlemen will read this carefully, they will see that it recognizes that legislation touching relief

from liability for misfeasance or for a tort of any kind which may be sought to be enforced by an employee of the company is governed entirely by the provision of the legislation of the province in which the cause of action is alleged to have arisen. This subsection reads :

No inspection had under this Act, and nothing in this Act contained——

Let me call attention to this—' nothing in this Act contained :'

—and nothing done or ordered or omitted to be done or ordered, under or by virtue of the provisions of this Act, shall relieve, or be construed to relieve, any company of or from any liability or responsibility resting upon it by law, either towards His Majesty or towards any person, or the wife or husband, parent or child, executor or administrator, tutor or curator, heir or personal representative of any person for anything done or omitted to be done by such company, or for any wrongful act, neglect or default, misfeasance, malfeasance or nonfeasance, of such company, or in any manner or way to lessen such liability or responsibility, or in any way to weaken or diminish the liability or responsibility of any such company, under the laws in force in the province in which such liability or responsibility arises.

Now, if I correctly interpret this clause—and it appears to be very clear—it provides that if the law of the province in which the cause of accident is alleged to have arisen, provides that the employee is not bound by any contract under which he contracts the company out of liability, that condition of things is recognized and the parties are placed in exactly the same position as respects their rights as if we were, five or six times over, to re-enact what the hon. gentleman (Mr.Guthrie) is asking us to sanction. If he will take the trouble to read this clause he will agree with me that it is not only susceptible of, but it must necessarily bear, that meaning.

Mr. GUTHRIE. I cannot read that section as the ex-Minister of Railways reads it. It says :

No inspection had under this Act, and nothing in this Act contained——

Well, there is nothing in this Act at all bearing on the subject. The difficulty does not arise under this Act, but under a special Act obtained by the Grand Trunk Railway Company from this parliament in 1874, and the subsequent Act of a private company obtained in 1878. There is nothing in this Act touching upon the subject at all.

Hon. Mr. BLAIR. The hon. gentleman has not read the whole :

—and nothing done, or ordered, or omitted to be done or ordered.

Now it must be under this Act that the railways are operated, it is under the authority of this Act that the company does its business, they cannot do business otherwise. It is not a corporate organization except by virtue of the provisions which are contained in this Act. And when the language is as particular as this :

And nothing in this Act contained, and nothing done or ordered or omitted to be done or ordered, under or by virtue of the provisions of this Act.

You cannot have broader language than that.

Mr. LANCASTER. This same legislation existed at the time Holden's case was tried, the case the hon. member for South Wellington (Mr. Guthrie) referred to, and where the decision of the trial judge went to the court of appeal, but was not there decided because the court passed off on to another question. This Railway Act as it existed then had exactly the same words which he ex-Minister of Railways and Canals relies on, but that did not save Holden, that did not cause the trial judge to decide in his favour.

Mr. GUTHRIE. As I read it, the whole section is confined to anything done under the provisions of that Act, or ordered to be done under that Act, or omitted which should be under this Act. Now the defence submitted by the Grand Trunk Railway made this plea :

These defendants further submit that the said Grand Trunk Railway Insurance and Provident Society being a society authorized by the statutes of the Dominion of Canada and such rules and by-laws being passed pursuant to such statutes, there was no power in the legislature of the province of Ontario to authorize any court or judge to take away the defence which said statutes, by-laws and rules give to these defendants, and any legislation to the contrary would be beyond the powers of the province as affecting these defendants.

Now that has been upheld.

Hon. Mr. BLAIR. We are not overriding that or attempting to do so.

Mr. GUTHRIE. If we put that amendment in this Bill that defence will not be permissible, because the effect of the amendment is that they shall not be permitted to defend on that ground.

Mr. INGRAM. What is the difference between the General Railway Act and this section 242 ? There is none. If there be no difference between the old Act and the present one, and if these cases occurred under the same section, what power would they have now beyond what they had at the time the trial took place ?

Hon. Mr. BLAIR. I am not familiar with the case already referred to, but my hon. friend is apparently relying upon a special Act of the company whose employee had brought the action and who is raising this defence, and it was by virtue of the provisions of that special Act. Am I right?

Mr. GUTHRIE. Not exactly. The special Act authorizes the railway company to form

a provident society, and to formulate rules for the government of the society. Now my own opinion is, if I may venture an opinion in face of the decision of the trial judge, that that rule on appeal would not be upheld. But the difficulty is that you cannot get any one to fight a railway company and go to appeal. Therefore, to settle all these doubts and to make the matter perfectly plain, I do not know a shorter cut than by passing this amendment. It will clear the atmosphere, and people will know where they are. I do not believe an appellate court would uphold that decision. It was upheld under somewhat different circumstances in the Intercolonial Railway case.

The MINISTER OF JUSTICE. The circumstances were not the same.

Mr. GUTHRIE. The object of the amendment is to set these doubts at rest, and to have a clear statement of what the law is.

Hon. Mr. BLAIR. As the hon. gentleman is now stating the matter—I do not profess to be familiar with the Act or the circumstances arising out of the case, or with the decision of the judge. But he is asking us now to incorporate a provision in this Bill which will change to some extent the provisions of the special Act with which this Bill has nothing whatever to do. Parliament has chosen to grant a special Act to a company, as it did to the Grand Trunk Railway Company. We have not taken away from any of these companies any special privileges or powers that were granted in those Acts. If we did that an appeal would be a proper thing. My hon. friend proposes by a general provision in respect to a particular Act what we have not done in respect of any Act in any clause of this Bill.

Mr. INGRAM. I understood the hon. member for Wellington to say that the last Act affecting this case was passed in 1878. I know something of the history of this Grand Trunk Provident Insurance Society. I know that under the law of the province of Ontario, an Act was passed excluding the Grand Trunk Railway Company from the operation of the Workmen's Compensation for Injuries Act, by reason of the Grand Trunk Railway Company having an insurance and provident society for their railway employees. A strong fight occurred in the legislature in 1887. The Grand Trunk Railway took the ground that its employees preferred the benefits of the insurance society rather than the benefits of the Compensation for Injuries Act. As a result of the fight between the employees and the company, the Ontario government issued a lot of questions which they circulated privately to the railway employees of the Grand Trunk Railway asking them whether they would prefer being excluded from the benefits of the Compensation for Injuries Act and to retain their position in the society; and I believe over 70 per cent of them answered that while they had no objections to the Provident Insurance Society, at the same time they wanted the benefit of the Compensation for Injuries Act. They said they paid for their insurance, and they felt that they had no right to be deprived of the benefits of the Compensation for Injuries Act. As a result of these answers, the government wiped out the section which excluded the Grand Trunk Railway from the provisions of the Compensation for Injuries Act, and that company came under the provisions of that Act in the province of Ontario. Now I am surprised to find that the courts are holding that because employees are members of the Provident and Insurance Society they cut themselves out of any benefits that might come to them by reason of the Ontario Compensation for Injuries Act, in case of accident. I think something ought to be done to make it perfectly clear that, though they belong to the insurance society and pay for that privilege, they are not thereby deprived of the right to damages in case of accident.

Mr. LENNOX. I hope the committee will adopt this provision moved by the member for South Wellington. The ex-Minister of Railways says that this is a proposal to alter a special Act. Well, in some respects, probably it is, but I do not understand that the hon. gentleman who proposes the amendment exactly shares in that view, and I do not think it is the fairest way to look at the matter. The case presented by the hon. gentleman who proposes the amendment is, that it may be quite possible that the special Act granted to a railway company does not justify the position that the railway company takes, but, on the other hand, the railway company does see fit to place upon the Act a certain interpretation, and that interpretation having been placed on it by the railway company and the decision of the court, standing as it is in the province of Ontario, it is impossible for any person to get at what may be the true interpretation of the statute until he carries it to the ultimate court of appeal. The hon. gentleman points out that it is important that the class of people who invoke the provision of the law for their benefit in a matter of this kind shall not be handicapped by the difficulty of having to carry their case to the court of appeal; in other words, that the widow and children of deceased employees of the railway companies are not in a position to fight the railway companies. The hon. member asks not for the repeal of the special Act under which the railway company is operating, but for such an amendment as will, in effect, be a declaration of the rights of the parties. That is what it amounts to. He brings in an amendment declaring that the railway companies shall

not have power to contract themselves out of liability unless the contract is founded upon some new construction, independently of the mere fact of admitting a person to the service of the railway company, because it has been well remarked from my hon. friend from Lincoln (Mr. Lancaster) that no just consideration arises out of the mere circumstance of employment; because it is supposed that the employee gives value for every dollar that he gets from the company. We declare the presumed intention of parliament, when it gave the right to the company to grant insurance and to make insurance regulations, namely: that it should not have the power to contract itself out of liability unless it could show that there is some consideration for the contract beyond the mere matter of admitting the employee into the service of the company. In addition to that the hon. gentleman who introduces the amendment, very properly provides that the contract shall be in force only in so far as it is declared by a judge who tries the case to be just and reasonable. This is no new system of legislation. It is one that is well recognized in various statutes in the province of Ontario, and I apprehend in the statutes of other provinces as well. The hon. ex-Minister of Railways and Canals (Hon. Mr. Blair) referred to subsection 3 of section 242, and argues, with his usual force and clearness, that there is probably a sufficient safeguard in this section. I venture, with all deference, to submit that the subsection in no way affects the question. It is not an enabling provision at all. It is a mere negative provision. It provides no remedy. It merely provides that:

> No inspection had under this Act, and nothing in this Act contained, and nothing done or ordered or omitted to be done or ordered, under or by virtue of the provisions of this Act, shall relieve, or be construed to relieve, any company of or from any liability or responsibility resting upon it by law.

In other words, it leaves the law as it was before. But, if any additional argument is required, I wish to refer the hon. gentleman who has charge of this Bill, at the present time, (Hon. Mr. Fitzpatrick) to this fact, to be borne in mind, that although we are dealing with a new statute, we are dealing with an old provision. The same provision appeared word for word in the statute of 1888, the General Railway Act; therefore, this provision was in force at the time these difficulties arose, and at the time these matters were brought before the court. I may say, though this is not a matter of great importance, only as illustrating the position that I take, that I have also had personal experience of the matter. I have not been so unwise, I admit, as to bring an action, under such circumstances, because I realized that unless one has a pot of money it is impossible to follow these railway companies from court to court, but I held a brief in a case which came up for trial at Brampton after the decision in the case of Holden vs. the Grand Trunk Railway Company, and the learned judge who was sitting there declined to hear the case. He, of course, gave us a suggestion that it was not wise to press the matter, and in effect told me that he would not try the case until he had heard the ultimate result in the case of Holden vs. the Grand Trunk Railway Company. The hon. member who proposes this amendment has explained that that case was not decided in appeal upon this question, but on another point—showing that the judges regarded it as a question of difficulty, and, therefore, they will not decide this question finally by way of appeal until they are driven to it. The fact that it is a matter of difficulty and that it is a questionable point, ought to be sufficient, I submit, to induce this committee, having regard to the necessity, the vital importance it is to the widows and children of a deserving class of our people who are not able to protect themselves in all cases, to accept this amendment. I do not often have the pleasure of supporting an hon. gentleman on the other side of the House, but I have great pleasure in doing so upon this occasion.

The MINISTER OF JUSTICE. I happened to know something about the case of Grenier vs. the Queen, as I was engaged on that case myself, and I may say that that case did not turn in any way upon the point that is now before the committee. The case was one that arose in the province of Quebec as the result of an accident on the Intercolonial Railway at Fraserville, and the point to be determined there was as to whether or not the action that the widow brought for damages as the result of the death of her husband was what is called a representative action or an independent action; that is as to whether this action came to her in her character of a widow independent of her husband or whether the action was one which came to her because she was the widow of the deceased. The judge held that the action of the widow was an independent action, and on appeal to the Supreme Court it was unanimously held that it was a representative action, that the widow was bound by the act of her husband, but in no way was the question involved here dealt with in that case.

Mr. GUTHRIE. I read that case only last week and it is distinctly held that the rule is binding.

The MINISTER OF JUSTICE. It was held that Lord Campbell's Act applied and that the husband could legally contract out of his liability, but the question at issue in that case was a question as to the nature or character of the action. My hon. friend says that that point was involved in the

case of Holden vs. the Grand Trunk Railway. I have had occasion to look into the law in the province of Ontario, and into the cases, and I find that half a dozen cases have been tried. In the case of Farmer vs. the Grand Trunk Railway Company in the common pleas division before Galt, McMahon and Rose the point was formally decided there.

Mr. GUTHRIE. That was before the Workmens' Compensation for Injuries Act was passed.

The MINISTER OF JUSTICE. My hon. friend has got me at a disadvantage in this respect when he talks about these things; I have only to rely on the law and I find it referred to in this judgment.

Mr. GUTHRIE. What year ?

The MINISTER OF JUSTICE. In 1891 the case of Lydia Farmer vs. the Grand Trunk Railway Company. Here is the holding of the court :

Held, that the action was not maintainable. The plaintiff was paid $250 by a benefit insurance society in connection with the railway—though a distinct organization, of which deceased was a member. The plaintiff gave a receipt stating that the railway company was relieved of all liability. The deceased's certificate did not profess to be an insurance against acidents, and the railway company were no party to the receipt :

Held, that the receipt formed no bar to the action against the defendants ; nor was there any right to deduct the amount received from the benefit society from the sum the plaintiff was entitled to as damages.

Mr. GUTHRIE. It was a question of release.

Mr. LENNOX. In 1891 the Ontario Act against contracting out of liabilities had not been passed.

The MINISTER OF JUSTICE. The Workmen's Compensation Act was referred to. However, my point is made out by hon. gentlemen who are arguing the other way. The Workmen's Compensation Act regulates the matter, and it is only in so far as that Act prevents contracting out that it is not possible to do it. This is a mere matter affecting the right to claim damages arising out of an accident within the limits of a province; it is a mere matter of civil rights in the province.

Mr. INGRAM. Would not the special Act of the Grand Trunk Railway have something to do with it ?

The MINISTER OF JUSTICE. No. I think it is absolutely unnecessary. In so far as legislation of that sort is of any use, this Act provides that nothing contained therein shall operate against any claim that may arise under the civil law of a province.

Mr. INGRAM. Perhaps in the case quoted, the employee was guilty of contributory negligence.

The MINISTER OF JUSTICE. And that very point of contributory negligence shows the absurdity of the position we are led into. In our province contributory negligence is no defence at all to an action for damages.

Mr. INGRAM. It is in Ontario.

The MINISTER OF JUSTICE. It is in Ontario, and that very thing shows that these cases must be guided according to the laws of each province. In the province of Quebec you cannot set up the doctrine of contributory negligence. In the case of Grenier vs. the Queen it was a clear case of contributory negligence, but we happened to get the law of our province applied to it under civil rights, and as a result the Crown escaped.

Mr. LENNOX. I quite understand what the Minister of Justice says in reference to this matter being to a certain extent controlled by Ontario legislation, but the difficulty is that this parliament has granted a certain statute to the Grand Trunk Railway Company, and the Grand Trunk Railway Company are setting that up as a reason why they should not be liable. What is asked by this amendment is that you shall so control and declare the meaning of that statute, that it shall not hereafter prevail as a defence. I feel that if the amendment were incorporated in this Bill it would be very beneficial and it would work no injury, even if it is not necessary in every aspect of the case as the hon. gentleman (Hon. Mr. Blair) alleges.

Mr. GUTHRIE. The case referred to by the Minister of Justice does not decide the point at all. I recollect that case very well, and it turned on the question as to whether or not there was a release given by the receipt for the insurance. The rule in that case was not pleaded by the Grand Trunk Railway. It is only within the last few years that the rule has been pleaded at all. The decision is simply this : That as this privilege is extended to the Grand Trunk Railway Company under an Act of this parliament to a corporation incorporated under the law of this parliament; the Workmen's Compensation Act of Ontario does not apply to it. That has been held in Holden vs. the Grand Trunk Railway, and that is the only decision we have.

The MINISTER OF JUSTICE. Where is the decision in Holden reported ?

Mr. GUTHRIE. It is not reported, but it is a well known case among the members of the Ontario bar; so well known that it has been followed on several occasions by trial judges. That being the case, if the contention of the Minister of Justice is cor-

rect that the Ontario law does govern, his contention is in direct antagonism to that decision and no harm can come to any railway company by putting that clause in this Bill and making sure of it. If we have it wrong in the province, we will have it right in the Dominion, and vice versa. I submit that no injury can be done to any railway company exercising these rights. I believe the only other company having such a privilege is the Algoma Central; the Intercolonial Railway makes use of it, but that comes in under another Act and will not be affected by this clause.

Mr. KENDALL. What we have heard to-night simply corroborates the experience of a great number of us. That ample legal provision is not made for a splendid body of men in this country engaged in a very hazardous occupation, many of whom are killed and the families of whom have to bear the brunt of the loss. I have had some little experience in connection with these cases. I have seen under the common law of Nova Scotia probably some twenty actions brought for damages for loss of life, and I think in only one or two of these cases has compensation been recovered by the plaintiffs. If they won in the lower courts the case was taken to a higher court, and then appealed again, with the result that the families of the persons killed had, if I may be allowed to use the classic expression of Dante, about as much chance in the courts of the land as a cat in hell without claws. Now, Sir, this condition prevailed in Great Britain for a great many years. Society was at last aroused to the fact that hazardous occupations in the country were killing off hundreds and hundreds of people and that their families had to bear the entire loss. Public opinion was so aroused that the British Workmen's Compensation Act was put on the statutes in 1897 and came into force in the year 1898. Though I am not a lawyer, I will venture if legal gentlemen have patience with me, to mention the provisions of the British Workmen's Compensation Act. This Act is based on the assumption that hazardous occupations ought to carry their own risks. Of course that ground has been assailed by croakers and pessimistic prophets, but the practical working out of this Act has been so satisfactory that during the last five years its provisions have extended, and this year amendments of the most drastic nature are before the British parliament. Under this Act the compensation varies between £150 and a maximum of £300. Under this Act the employees in any specified hazardous occupation cannot contract out of this agreement unless it can be shown to the satisfaction of the registrar of friendly societies in England that he is already enjoying the benefits of an Act not less friendly to him than the Workmen's Compensation Act. Another feature of the law is that the burden of proof as to the liability for injury does not rest upon the descendants of the man killed. But the burden of proof lies upon the employer to show that the workman caused his death or was injured by his own act of negligence. The practical working out of that has been that where, under the old law, only a very small proportion of the actions resulted favourably to the workingman, under the Act to which I refer the great majority of the decisions have been in favour of the employee; and in the amendment which is before the British House of Commons to-day contributory negligence is proposed to be done away with entirely. It is assumed that no man will of his own will and accord put himself in a position to cause his death. Whether that will pass or not, we have to wait and see. Furthermore, what I understand is known among lawyers as the doctrine of fellow-servant is done away with by this Act. If a man is killed or injured, and his death or injury is due to the act of an overman or foreman, the overman or foreman is not liable to him or his representatives, but the employer is the responsible party. The employer has a right of action against his contractor if he sees fit to take that action. I simply say that, in my humble opinion at least, an Act which was considered not too good for the British parliament to pass away back in 1897 is not too good for us in Canada to enact at this time. I would ask the Minister of Justice if he holds that parliament has power to place on its statute-book the provisions of the British Compensation to Workmen Act for all railway employees of Canada?

The MINISTER OF JUSTICE. I entertain no doubt that we have no power to do anything of the sort. If we have the power to regulate this question of contract, and we decide that an employee cannot contract out with his employer, we have also power to enact that the doctrine of common employment or contributory negligence shall be applicable to the whole Dominion of Canada, notwithstanding the law of the province of Quebec. We have as much right to do the one thing as the other. If you want to take responsibility, that is for the committee to decide; but it must be done against my formally expressed opinion on the subject. What is the result? Where is this going to lead to? In whose interest is this being done? I speak from my knowledge of insurance companies, when I say that both the Intercolonial and the Grand Trunk systems contribute large amounts each year to what they call their insurance funds. We are called on to vote each year $6,000 to a fund for the insurance of the employees of the Intercolonial Railway.

Mr. CLARKE. How many men are affected by it?

The MINISTER OF JUSTICE. I cannot tell how many, but all the employees. Pro-

bably 1,200 or 1,500 men belong to the association. In addition, each member contributes a small sum. The result is that when an accident happens the injured man gets the benefit, not only of the contributions of his fellow workmen but of the contribution by parliament. The same thing is done by the Grand Trunk Railway Company. They also contribute each year a large sum to the insurance fund of their employees, and each employee also contributes. The reason why the company and the government contribute to this fund is that it enables them to relieve themselves of liability for accidents if accidents occur. That is the determining cause. But if we are going to interfere and say by legislation that they shall not derive any benefit from that contribution or obtain any relief from liability as a result of it, we might as well ask what is the use of that contribution ?

Mr. INGRAM. Does any part of this $6,000 go to pay doctors' fees ?

The MINISTER OF JUSTICE. Yes.

Mr. INGRAM. Then it is evident that instead of contributing $5,000 or $6,000 for the benefit of the employees, the management of the Intercolonial are contributing for the payment of doctors in case of accidents, because they want to relieve themselves of liability and want to have medical witnesses.

The MINISTER OF JUSTICE. Is not the medical assistance for the benefit of the employees ?

Hon. Mr. BLAIR. My hon. friend is quite in error in saying that medical men are employed in order that there may be medical witnesses in the interest of the railway. The doctors are chosen, named and employed by the employees themselves. The Intercolonial Railway authorities do not, under any circumstances, select any of the physicians who are employed.

Mr. INGRAM. I do not disupute that, but I think the hon. member will bear me out in saying that a portion of this fund goes to the payment of these doctors.

Hon. Mr. BLAIR. Certainly, because they employ the doctors.

Mr. INGRAM. And part of their duties is, in case of accidents along the line of railway, to be present on the spot to assist in relieving the injured, and in case of actions for damages, to be present to give evidence.

Hon. Mr. BLAIR. Not at all.

Mr. INGRAM. I fancy that is the object of the Grand Trunk Company. They manipulate the officials who manage the provident insurance societies, and doctors are employed on the different divisions ; and, in case of accident, these are the doctors who are sent to look after the people who are injured, and also to be in a position to give evidence as to whether the company was responsible for the accident or not. When accidents occur on the railways, I am sorry to say, that you can get expert medical evidence, either for the plaintiff or the defendant, for which the doctors are sometimes paid large sums. You can almost prove anything you want to prove nowadays by medical testimony. You can prove that the accident was a serious one and that the company should pay large damages ; or you can prove the contrary. So I say it is to the interest of the company to have this fund, and if they can induce the employees to contribute towards it, so much the better for the company ; but I repudiate the idea that these large sums are contributed by the company for the benefit of the employees. I myself was compelled to sign a contract on the Grand Trunk Railway against my wishes, because I thought I was sufficiently insured and to the limit of what I could afford to pay, as hundreds of other employees are. Because they are employed by the Grand Trunk Railway they are compelled to insure whether they are amply insured or not. My young friend who has charge of the railway Bill may have a very good idea of the theoretical working of this legislation, but when it comes down to its practical working out, he knows no more about it than hon. members. There are two sides to the question.

Mr. HEYD. I can quite understand why the Minister of Justice attaches so much importance to the symmetry of the Bill, and his desire to have it uniform and regular. That sort of thing appeals to the legal mind, but to the ordinary layman, who wants to get on the spot in the shortest possible time and who is not held back by any niceties of construction or interpretation, it has no force. In the employ of the Grand Trunk Railway there are some 25,000 men who, in Ontario at any rate, are deprived of certain rights that are enjoyed by other workmen. In return for a subscription by the company of fifty cents per year for each employee to the provident fund, these men have to sign an agreement that, if killed or injured while in the employ of the company, the company will be not liable to them or their representatives for any compensation, no matter whether it be in fault or not. If a man in the employ of a painter goes up a ladder with a defective round and falls and injures himself, he has an action against the master painter for having been the cause of the accident. But if a man is employed by a railway company, which has become part owner of a transcontinental system, he can be set to work around defective machinery, and if injured he has no recourse, because he has signed away his rights under a rule of a provident institution to which the company contributes fifty cents per year per head for every individual that belongs to it. If we have the power to put a clause in this

Bill providing that an employee of the Grand Trunk Railway shall have in Ontario the same rights as any other employee in that province, we certainly ought to do it. If the Workmen's Compensation Act was passed for the benefit of the workmen, the employees on the Grand Trunk Railway should not be precluded from its benefits. I do not care whether the law is symmetrical or not, whether there are exclusions this way or the other way, if we have the power to settle this matter in this Bill, we ought to do it. The Minister of Railways and Canals has accepted many suggestions made with the idea of improving the Bill, and I hope the hon. Minister of Justice will accept similarly the suggestion we are now making. It is in the interest of the wage-earners of Ontario, and the Grand Trunk Railway can afford to pay.

The MINISTER OF JUSTICE. According to my hon. friend, it is absolutely immaterial whether the thing be right or wrong. Provided it be a short-cut to what he has in view, it must be adopted. But my experience is that in legislation short-cuts lead to the cemetery.

Mr. INGRAM. It is unfair that an employee should be compelled to sign a contract which takes away his rights and privileges and which at the same time may compel him to drop a large amount of insurance that he has kept up in some other society. A company which is getting rights and privileges from parliament should not be allowed to force its employees into such a position.

Hon. Mr. BLAIR. The question is whether or not it is within the legislative competency of this parliament to make such a provision as is here proposed. I have no doubt that the hon. Minister of Justice is entirely right. You might as well say that because this parliament incorporates a company to carry on a wholesale dry goods business in the city of Toronto, all the relations between the employees and employers come within the legislative control of this parliament, and we have the right to say what the conditions of employment shall be. My hon. friend says that some judges have passed an opinion to that effect. I would like to see the case, because I can hardly realize that any judge of eminence in Ontario could come to such judicial determination. I agree with the Minister of Justice that is too clear for argument that we have no such power as the hon. member asks us to attempt to exercise. If that be the case, what is it the committee are proposing to do ? Does it propose to destroy this Bill ? Does it propose to compel the Minister of Justice to advise the Governor General that we have passed a Bill, a portion of which is entirely beyond our competency ? Or does it propose that this Bill shall stop right here ? I do not pretend to indicate what course the Minister of Justice will take in the premises, but if I were he and had advised the committee as strongly as he has, there is only one course which I would adopt.

Mr. CLARKE. I do not think there is any desire on the part of the House not to pay deference to the views expressed by the hon. Minister of Justice. But what we do ask is what damage would be done the company, if it were made responsible?

The MINISTER OF JUSTICE. I say that it is responsible, under the law of Ontario. Holden and the Grand Trunk Railway to the contrary notwithstanding.

Mr. CLARKE. The opinion of the hon. minister is entitled to a great deal of respect, and I would not presume to contradict him. If he says that notwithstanding the existence of this Grand Trunk Railway Provident Company, the widow or representatives may enter an action against the company for damage sustained by the injury or death of an employee, the agreement in question will not be a bar to that action, I have nothing more to say, and am prepared to accept his opinion.

Mr. MACLEAN. Is there not some way of attaining the end other than the one proposed, something in the way of disciplining the company—providing that it shall not do certain things ?

Mr. FRASER. You would have to repeal the Act that gave them the power to establish this provident insurance company.

Mr. MONK. I take it that the law is as the hon. member who suggested the amendment has explained it to us. The objection that occurs to me is that it is difficult to legislate in a general Act and not interfere with the rights which the Grand Trunk Insurance Association has exercised under the authority of this parliament, or without considering the position to which that insurance association has advanced under the express authority of our own legislation. For, if the suggestions made in this amendment are well founded, by what legislature can we have that amendment enacted? Not by the provincial legislatures. Who has passed these by-laws ? It is a company incorporated under the authority of the Dominion parliament. It is a company which owes its existence to our legislation, It seems to me that if we have absolute control over the Grand Trunk Railway Company and this insurance association exists by virtue of our own enactment, we surely have the power to limit or expand the regulation-making power of the insurance association we have the power to declare they shall not pass by-laws such as this referred to by my hon. friend ; and it seems to me very desirable that some such provision as this amendment should be made in the interests of the workmen.

Mr. LENNOX. I do not propose to controvert the opinion of the ex-Minister of Railways and Canals (Hon. Mr. Blair), or the Minister of Justice (Hon. Mr. Fitzpatrick). They both give us illustrations of what the position and the relative rights of the two parliaments are. But I think there is a distinction which should be called to their attention at this stage. The ex-Minister of Railways says, if we incorporate an insurance company in the city of Toronto, we cannot regulate all its transactions from first to last, for these are largely matters—I understand both these gentlemen to agree as to this—relating to property and civil rights. To this extent, I think, the position is quite clear. But it leads up to the point we wish to discuss in this matter; and I think that if we can make these hon. gentlemen thoroughly apprehend the point we are endeavouring to present, probably they will concur with us that what the mover of the amendment seeks can possibly be accomplished. We have incorporated the Grand Trunk Insurance Association, and have given them certain powers. But whether they have the powers, under that Act, to make certain regulations particularly rule 15—Mr. Chairman, if you and the assistant clerk will drop your conversation for the present, and if the hon. members of the House will suspend conversation for a time, it will be easier for me to make myself heard. What I was endeavouring to call the attention of the Minister of Justice to, is, that this parliament, having passed an Act incorporating the Grand Trunk Railway Company, or a branch of it, as an insurance association, had power, at that time, to limit the powers of the company as to what they should do in reference to their employees. So, it comes down to this, that the only difficulty arises from the fact that we are not dealing directly with the original Act, but are indirectly dealing with it in a general Act. There may, therefore, be some possible question as to the advisability of amending their powers at the present time, none as to our power. It is a mere matter of procedure. But when we keep in mind that the hon. gentleman (Mr. Guthrie) who moves this amendemnt, introduced it as a Bill, of which all the companies concerned had full notice, that this Bill was discussed at length in the Railway Committee, and as recommended, practically unanimously, by that committee—at all events, there was an unanimous report—and that thus there is practically a Bill before the House for an amendment of the charter granted to the insurance branch of the railway company—when we consider this, we see that it is a mere matter of expediency or procedure. I do urge upon the minister to consider whether, having the power, and I quite concur in what he says as to the law in reference to the province of Ontario—Mr. Chairman, will you call hon. members to order. I do not propose at any time to have hon. members of this House think they can make as much noise as they like. If hon. gentlemen will continue conversation, and so prevent a member who is speaking from being heard without shouting at the top of his voice, I shall move that the committee rise. There is business to be transacted here. Every member of the House has equal rights, and I propose to exercise my rights. I am speaking in the interest of a large and deserving class of people; I am speaking in the interest of thousands of the labouring class of this country. Perhaps I may be unable to accomplish my purpose, but I do not propose to consent to hon. members, while I am speaking, carrying on conversation, in some instances, I am forced to believe, not with the best possible design.—— Now, addressing myself again through the Chair to the Minister of Justice, and endeavouring—with some difficulty, under the circumstances—to make myself clear without repetition, I wish to say that I recognize the position the hon. minister takes and am quite prepared to concur in his view with regard to the rights of the provinces is their full control over their legislation, and over certain classes of subjects. But I submit to the hon. gentleman who is in charge of the Bill that, having regard to the fact that we have incorporated this insurance company, we can limit their power in such a way as we think fit, and may say: You shall not pass regulations which contract you out of liability; we find that they are unfair and we hereby define your powers. I defer to the minister's opinion in the matter, but it seems to me it is all a question of what is judicious, it is a question of procedure. And, if we have this power, I submit that it will be no hardship upon the company if we exercise it—seeing that this Bill was introduced, has obtained publicity, and has been sanctioned by the Railway Committee, a fact which is always referred to, by hon. gentlemen who support the government, as almost conclusive as to the rights of the parties.

The MINISTER OF JUSTICE. Would the hon. gentleman (Mr. Lennox) say that you can amend a special Act by a general Act, unless you mention the special Act?

Mr. LENNOX. No, I do not think so.

Mr. FRASER. Then there is no use talking.

Mr. LENNOX. I think there is use in talking. I shall address myself through the Chair to the Minister of Justice, not to my hon. friend (Mr. Fraser). I have the greatest respect for my hon. friend when he rises, as he often does, at the close of a debate to enlighten both sides, wending his careful way through the mazes of what has been said, and judicially awarding praise and blame, but, I prefer to address myself to the Minister of Justice. What I wish to submit

to the Minister of Justice is this, that although we cannot affect a special Act without a special mention of the Act, I do not think that this should bar our way. I am entirely in accord with the hon. member for Brant (Mr. Heyd) who says: Let us get there by a short cut. We cannot adopt that view in one sense, though in another sense we can; I mean that so long as we do no wrong let us not be too technical about the method by which we accomplish our object.

Mr. DEPUTY SPEAKER. The motion before the Chair is to reconsider section 242.

Amendment (Mr. Guthrie) negatived. Yeas 25, nays 41.

Mr. DAVIS. I move to reconsider section 24.

The MINISTER OF JUSTICE. The hon. gentleman had better explain what he wants to accomplish.

Mr. DAVIS. In this section, subsection (e) deals with fire-guards, and in this Bill power is given to the commission to deal with that question. But out in the North-west Territories that power would be of no use whatever to the people for the reason that the commission would only have control over the right of way which belongs to the railway. Now, a fire is often started by sparks on windy days blowing from a locomotive outside the right of way, and we would like some provision whereby the railway company should be compelled to plough fire-guards and burn a tract of land in order to stop fires from running. This question has been up several times before this House, and I would like to read an extract from a report of the Commissioner of Public Works of the North-west Territories of 1901, which will give the minister an idea of how the territorial government feel on this question:

> The department is doing everything possible to provide a thorough system of fire-guards throughout the territories, and in pursuance of that policy we ploughed or backset 950 miles of fire-guard last year, and in addition the small local improvement districts provided some 900 miles of guard. Our efforts, however, have been practically nullified in some districts by the failure of the railway companies to provide a proper system of fire-guards along their lines to prevent the spread of the many fires which are started by their locomotives. The question has been dealt with in both the last two annual reports, but it has now become so important and pressing as to require immediate action of some kind. . . . The companies naturally deny the claim that a large number of fires are started by their locomotives, but that such is the case is well known to residents in the vicinity of the railway lines, and to everybody who has given the matter any consideration. That fires are started in this way is only reasonable when it is noted that the guards, if any, which are put on by the company, are only a short distance from the track, and that in an open country subjected, like the greater portion of the teritories, to high winds, sparks from locomotives are sure to be carried outside such guards and start fires which spread until they get entirely beyond control. Unfortunately there is at present no legal provision compelling the companies to provide and maintain a proper system of guards, and unless such a law is passed or public opinion becomes strong enough, the companies are not likely to move in this important matter. In last year's report attention was directed to the correspondence which has passed between the Canadian Pacific Railway Company and the department regarding a proper system of guards, and to the failure in the effort to make any satisfactory arrangement.

I may say, Mr. Chairman, that this is a very important matter to stock raisers in the North-west Territories, because if fires are allowed to run in the fall of the year as well as in the spring of the year, they sweep over whole tracts of country and practically leave the ranches without any food for their cattle, because the grass has not time to grow up, and there is nothing to feed the stock the following spring. It is very important that they should have some provision whereby the railway company would be compelled to afford relief. I understand that in discussing this matter before, the ex-Minister of Railways and Canals thought it would be trenching on provincial rights to put such a clause in this Bill, that it would be forcing the company to go outside their regular right of way to plough fire-guards. The clause I would like to have inserted in the Bill is this:

> Provided that in respect of fire-guards the board may, if empowered so to do by the legislature of the North-west Territories or of the province of Manitoba respectively, order the company to enter upon land not owned by it to construct and maintain such fire-guards and no claim for damages shall be maintained against the company for any act done in compliance with the order of the board; and provided further that neglect or failure of the company to comply with any such order of the board be an offence under this Act punishable, on summary conviction, by a fine not exceeding $1,000.

I understood the other day when this question was brought up by the member for West Assiniboia (Mr. Scott) that one of the members for Toronto, Mr. Osler, who is connected with the Canadian Pacific Railway Company, stated that some arrangement had been entered into by the railway companies and the government of the North-west Territories in reference to this matter. I want to say that such is not the case. An arrangement was entered into which the government of the North-west Territories found very unsatisfactory. I will read you a telegram that was sent to the hon. member for West Assiniboia (Mr. Scott) when he had a Bill up in connection with this matter:

> Regina, N.W.T., April 20.
>
> Walter Scott, M.P.,
> House of Commons,
> Ottawa.
>
> Territorial government have cancelled fire-guard contract with Canadian Pacific Railway

to take effect at end of this year. Use your best efforts to get fire-guard Bill through compelling railway companies to do this work.

G. H. V. BULYEA.

At the last meeting of the North-west Assembly that passed an ordinance with reference to this matter, to amend chapter 87 of the Consolidated Ordinances of 1898, entitled an Ordinance for the Prevention of Prairie and Forset Fires. It says :

Section 21 of the Prairie Fires Ordinance is hereby amended by adding thereto the following subsection :—

(2) If a fire shall be caused by the escape of sparks or any other matter from any engine or other thing it shall be deemed to have been kindled by the person in charge or who should be in charge of such engine or other thing, but such person or his employer shall not be liable to the penalties imposed by this section if in the case of stationary engines the precautions required by section 12 have been complied with and there has been no negligence in any other respect or in the case of railway or other locomotive engines such engine is equipped with a suitable smoke stack netting and ash pan netting in good repair and kept closed and in proper place and in the case of railway engines where the line of railway passes through prairie country there is maintained for a distance of at least three miles continuously in each direction from the point at which the fire starts on each side of such line of railway and not less than two hundred nor more than four hundred feet therefrom a good and sufficient fire-guard of ploughed land not less than sixteen feet in width kept free from weeds and other inflammable matter and the space between such fire-guard and such line of railway is kept burned or otherwise freed from the danger of spreading fire and there has been no negligence in any other respect.

That is the ordinance, but I think the hon. Minister of Justice will perhaps agree that this will be considered ultra vires, and that it would be disallowed by the government on account of it interfering with matters over which the territorial government had no control. An arrangement was eventually obtained, as mentioned by the hon. member for West Toronto (Mr. Osler), but not until he companies became afraid that legislation would be passed here compelling them to do something themselves. The government of the North-west Territories has been offering to assist them in doing this work for years, but up to the present time they have not shown any disposition to do their part. My statement is borne out by an extract from a letter which the acting Commissioner of Public Works of the North-west Territories sent to the hon. member for West Assiniboia (Mr. Scott) :

I note your remarks regarding the possibility that the second reading of your Bill to amend the Railway Act regarding fire-guards may not be reached this session. We had, as you know, opened negotiations with the railway company with the object of getting them to be put in proper system of fire-guards before the Bill was introduced, but had failed to get any satisfaction. Almost immediately after the introduction of your Bill they telegraphed here for further information, and it now looks, from correspondence which the deputy commissioner has had with Superintendent Leonard, as if the company were going to come to time and agree to put in a proper system of fire-guards. I am quite satisfied that the introduction of the Bill caused this matter to move, and even if it has not reached its second reading, the fact that such legislation has been introduced and will probably be pressed next session will, without doubt, have the effect of making the Canadian Pacific Railway and Canadian Northern Railway deal with this very important question.

Let me say, Mr. Chairman, that the fact that the Bill was introduced by the hon. member for West Assiniboia had the effect of waking them up, and a correspondence was started on this subject between the superintendent of the Canadian Pacific Railway, Mr. Leonard, in Winnipeg, and the territorial government, but up to the present time nothing satisfactory has come of it. I have already read a telegram from the territorial government saying that the arrangement that they had with the railway companies was being cancelled, and in connection with that I have read from the acting Commissioner of Public Works of the North-west Territories, giving the reasons why the territorial government have terminated this contract between the railway companies and themselves. He says :

As you are aware, in the spring of 1902 this government took up the question of fire-guard construction with the Canadian Pacific Railway, owing to the very unsatisfactory manner in which the work had been done—or, in other words, had not been done—in years past, thus rendering a larger area of the Territories liable to destruction by fire, for want of a proper fire-guard along the line. This work is done in the interests of the settlers and not for the benefit of the railway company. A contract was signed in which the company agreed to contribute one-half the cost of construction of fire-guards along their line, up to a maximum of $10 per mile, that is, the railway company would not pay more than $10 per track mile for a guard on the two sides of the track, or, in other words, a maximum of $5 per mile of guard. For re-ploughing this guard, the company would only pay one-half the cost of the work, but in no case would they pay a sum exceeding $2.50 per mile of guard or $5 per mile of track. All the cost of inspection and everything incidental thereto was to be borne by the government, and in addition, in event of the guard having to make a detour around sloughs and other obstructions, the government pays the additional mileage caused thereby. Considerable difficulty was experienced last year in getting persons to tender for the work, and in fact a great many contracts entered into were never completed, or were only done in a most unsatisfactory manner, leaving no guard in some places on either side of the track, in several places only a few furrows, some here and some there, so you can easily imagine how inefficient a guard has been made. In many instances we were called upon to pay a higher price than $10 per mile of guard, but the Canadian Pacific Railway, of course only paid $5, the department paying the balance, and as I have already stated, bearing the cost and trouble of advertising for tenders, staking out and inspecting the guards.

This year a very small number of unfinished portions of these guards have been completed in the vicinity of Dunmore and Cowley. From your intimate knowledge of the question, you will know full well that guards constructed last year will require backsetting or other work done on them this year to render them efficient, and safe should we have an abundance of rain, followed by a dry season in August or September.

At the present time, we are using our best endeavours to complete the work begun last year, and re-ploughing or disk-harrowing the portions of the guard finished, so as to render efficient protection to the country along the railway lines from Morley to Broadview, and along the Crow's Nest and other branches, but owing to the demand for contract work of all classes, we are having difficulty in securing competent men to proceed with the work. We are endeavouring to deal with the guard along the line from Gull lake to Broadview and the Soo branch from the office. Mr. Stocks, assistant chief engineer, is travelling over the western portion of the line and the Crow's Nest line to see what he can do there, and we will probably know in the course of two weeks' time just how the matter stands. I may add here, that the work is of that class that should be done by the railway company themselves, they having, or being able to obtain, everything required in connection therewith and having the means of transporting contracting outfits along the line and getting them any supplies, so that it is hoped that your best efforts will be used toward getting a Bill through parliament to compel the railway company to do this work and not leave the matter as it is now, for the government or the people to do to protect themselves against the company. I may add in conclusion that a contract was submitted to the department last year by Messrs. Osler, Hammond & Nanton, on behalf of the Qu'Appelle, Long Lake and Saskatchewan Railway and the C. and E. Railway, upon somewhat the same basis as that entered into with the Canadian Pacific Railway Company, and was returned to them some time in July, if I remember rightly, for amendment, as they had included the whole line from Prince Albert to Regina, along the Q. L. L. and S. Railway, and from Macleod to Strathcona, on the C. and E., whereas it was only intended to make a guard along the Prince Albert branch from Regina to Saskatoon and along the C. and E., from Macleod to Olds. Thinking that the contract would be returned with this amendment, the department proceeded with the work of constructing the guard along the two lines and practically completed a fire-guard along both sides of the C. and E. Railway, from Macleod to Olds, and had a small amount of the work done on the Q. L. L. and S. Railway. The contract was never returned, and as a result the government paid for all the work done.

You were informed by the commissioner by telegraph some months ago, that notice had been given to the Canadian Pacific Railway Company that the contract had been cancelled. This will take effect on December 31st next. Since that time the Q. L. L. and S. Railway and the C. and E. Railway people have been notified that it is not the intention of the department to undertake any further work of constructiong fire-guards along these two lines.

I have also a further letter, dated July 17th, containing additional information, with special reference to the C. and E. and Q. L. L. and Sask. Companies, as follows :

Since the question of the construction and re-ploughing of these guards has been taken in hand this year some correspondence has taken place between the department and Messrs. Osler, Hammond & Nanton, who represent these two railway companies, they being now able to produce the contract which was returned to them for execution in July, 1902. They have returned copies of the contract covering the Q. L. L. and S. Railway from Regina to Saskatoon, and the C. and E. Railway from Macleod to Olds, duly executed. Unfortunately the late commissioner had executed these contracts on behalf of the department before forwarding them to Messrs. Osler, Hammond & Nanton ; doubtless had it been left for the railway companies to perform their part and sign the contract first, these copies would have been returned long since, so you will understand that as far as the records of this office are concerned, the only inference we could draw was, that the C. and E. and the Q. L. L. and S. people had not and did not desire to execute the contracts at the time they were returned to them, last year, owing to the proposed amendments. I may add that these contracts were received by the department only yesterday, July 16th. It perhaps would be saying too much to state that Messrs. Osler, Hammond & Nanton showed bad faith in not returning these contracts at the time they were returned to them for execution, but they are cerainly guilty of neglecting performing their part of the contract.

In other words these contracts were signed and sent back after the discussion about fire-guards took place in this House. They kept them until they found there was to be legislation here, and then they signed these contracts and sent them back. I do not see why the government of the North-west Territories should be compelled to expend a large sum of money to do work that the railway companies themselves should properly do. It is their engines that set fire to the prairie and do the damage, and they should be compelled to protect the people. I hope that now that this matter is before the House, the Minister of Justice, who has charge of the Bill, will take steps to insert a clause in this Bill that will cover the ground and give power to the commission to see that proper guards are made. I quite understand that difficulty may arise from the fact of railways having to plough outside of their right of way on land that does not belong to them, but any one who is acquainted with the North-west Territories knows that there are miles and miles of government land where they could not be interfering with the rights of any person, and any way no one would object if they ploughed up fire-guards and carried out the idea suggested in the amendment. In the amendment which I have submitted, the commission before enforcing this, would have to get authority from the government of Manitoba or the government of the territories.

Mr. GOURLEY. I think I have never had an opportunity of agreeing with the mem-

ber for Saskatchewan (Mr. Davis) since I have been in the House, until this evening, and I feel a pleasure in getting in touch with him at last. I know that the Minister of Justice cannot understand the fire-guard question in the slightest degree. No man who has lived in the east, no matter how intelligent he is—and the Minister of Justice I presume has the ordinary intelligence of the men of the east—no man in the east understands the question of fire-guards. A man has to live in the west, and to have experience in the west, before he understands the extraordinary difficulties connected with the fire-guard question. Before I had lived in the North-west long enough to become familiar with this matter, the question of fire-guards would have been utterly meaningless to me, but now, I know that it is a paramount question there. A rancher with 20,000 acres of grazing land, and a large stock of either cattle or sheep, is absolutely dependent upon the preservation of his pasture land for the preservation of his stock. A prairie fire may ruin him in a night. I have seen prairie fires do immense destruction within 24 hours, and within 48 hours in a grazing country that was smiling with green grass, I have seen the verdure disappear, and thousands and thousands of acres burned and browned, and the rancher compelled to take up his location and go hundreds of miles away, at a cost which was enough to ruin him. I recollect one evening, the ranch people having been at work all day gathering hay, suddenly some one saw a few miles away the appearance of a prairie fire. The whole country was alarmed and well it might. I could not realize what the alarm was about, but in a few hours I saw this tremendous sheet of flame apparently as far as the human eye would carry, racing upon the people's stock, and the whole country side and the Mounted Police turning out and fighting that fire as if it were an invading army. It is a matter of the most vital importance to the rancher, whether he is going to be exposed day after day, and night after night, during the dry season in that country, to this alarming danger. The railway runs through the ranching country for hundreds of miles. A man's property may abut against the railway for ten or fifteen miles, and that whole country is exposed to a single spark setting the prairie fire going, and the man's ranch may be burned down, and thousands of square miles swept clean of a bit of verdure within 24 hours. No man can afford to have a band of sheep, or a bunch of cattle, in that country, without putting up a large quantity of hay for the winter. The winter may be soft and he may not need the hay, but on the other hand he may be compelled to feed his cattle for a considerable time, and then the salvation of the stock depends upon having a quantity of hay safely housed. The danger of a prairie fire is therefore double. It not only clears away the growing grass, but it destroys the hay which the rancher has preserved for the protection of his stock in the winter time. Consequently, the Minister of Justice should reflect upon this problem, as one of vital interest to the people of the North-west. I want it to be understood, that I have no quarrel with the Canadian Pacific Railway. I am friendly to the Canadian Pacific Railway. I believe it to be one of the greatest institutions in Canada, and I have never been able to sympathize with the people of the North-west, who have indulged as I think, in the most unjust and ungenerous criticism of the Canadian Pacific Railway, which has done so much to develop their country. When I was in the west, I could not help but notice that the whole development of that west depended largely upon the Canadian Pacific Railway. Of course, when it was a young enterprise, it had to charge rates that were considered in the east high, but that was unavoidable. That was never a sufficient basis for any man to object to, or to abuse the Canadian Pacific Railway. It was a very proper basis, on which to negotiate with the Canadian Pacific Railway, and to appeal, for a reduction of their charges, but there was an attempt in certain quarters of the North-west, to arouse popular prejudices against the Canadian Pacific Railway, simply in order to play to the gallery. I always felt that unjust. There were, it is true, rightful criticisms to be levelled against the Canadian Pacific Railway, but these were magnified and distorted beyond reasonable bounds. I am not speaking to-night as an opponent of the Canadian Pacific Railway. I believe, that the Canadian Pacific Railway has been one of the greatest national institutions ever created in Canada, and that, it has done more to give us a national status, than even the distinguished nation maker opposite. At the same time while I do not wish to press anything against the Canadian Pacific Railway, I think that the Canadian Pacific Railway should be called upon, to do justice in the matter of fire-guards. I have some small interest in the North-west now, and I am compelled every year to undergo serious pecuniary loss for protecting property against fire. Gentlemen in the east do not know what the ploughing of fire-guards is. You may have a grazing territory there of considerable extent, and twenty or thirty miles away you have what is called a home ranch, where your home and your buildings are. you may drive your flocks or herds thirty miles away to pasture, but there is a home ranch consisting of probably 640 acres, and to protect that home ranch by fire guards, you have to send your men once, or perhaps twice a year to plough around that home ranch, a breadth of 30 or 40 feet, in order to protect your buildings from prairie fires.

If a man's ranching territory happens to lie near the railway, he has to plough for miles along it in order to protect his ranch

from the danger of fire. That burden in my time was thrown entirely on the ranchers, and it is an enormous burden. I have known men to be ploughing day by day and week by week. The furrow is so long that a man who starts in the morning hardly gets it completed by night. I have no doubt that the Minister of Justice, from the narrow limits of his experience in the province of Quebec—I mean the mere knowledge of space and distance which no man in the east can have—is unable to realize the idea of magnificent distance which one gets on those magnificent prairies. Unless a man has that idea, he cannot comprehend what enormous burdens are thrown on the man who has great flocks and herds in the west and the immense pastures on which they subsist. A man may to-night be as rich in flocks and herds as Job, and to-morrow he may be as poor as Lazarus. In this case the hon. member for Saskatchewan is absolutely right. He has presented a real grievance, unlike many of the North-west grievances, which are entirely a play to the gallery. It is a grievance thoroughly well based, and we must not go headlong and place the blame at the wrong door or the expense of rectifying the grievance where it does not belong. With regard to the constitutional difficulty, many men in this House are oppressed with constitutional difficulties. It is time we were done with this provincial rights business. A great deal of that difficulty arose from political questions. Whenever a man, who had not much mind to think or anything to say, wanted to say something, he would get up and talk about provincial rights. No matter how shallow he was, he could talk learnedly about provincial rights. There is no question of provincial rights involved in this case. When this parliament is properly seized of a subject matter which the constitution has vested in it, we can pursue that subject to the end, and no question of civil rights can intervene until parliament has exhausted its power of legislation on the subject matter in question. On this matter, which is a pure matter of railway legislation, we can legislate until we exhaust the subject, even if in doing that we enter the domain of what may be regarded as merely provincial rights; and if after we are done, nothing is left, no person can raise that question. It is of no use for the railway company to have guards inside their fences. The difficulty from fires is always twenty or thirty or forty yards outside the railway fences. The ranchman who ploughs his fire-guards ploughs them thirty or forty yards, or it may be one hundred yards, outside of the railway fence; and if you give him protection you must give it to him there. The land outside the railway fence, as a rule, belongs either to the government or to the Canadian Pacific Railway Company. If it belongs to the company, there is no harm in forcing the company to plough fire-guards on their own land outside of the fence. If it belongs to the government, and we give the Canadian Pacific Railway Company power to plough these fire-guards, there can be no harm in that. If it belongs to a ranchman, he will be happy to give the railway company power to go on the land and plough the fire-guards, because if the railway company does not do it, the ranchman will have to do it at his own cost. Whether the railway company should be charged with the whole cost or not is a matter of equity for the Railway Commission to decide. But in any case there should be some provision in this Bill. Whether the provision proposed by the hon. member for Saskatchewan is the right one or not, I do not know, but the mere wording of the Act would be a very simple matter once the principle to govern this thing were settled. It is a matter of vital importance that this matter should be settled, or some day the whole North-west, along that railway, will be burned up, and a serious injury will be done to the whole stock interest of that country. They have been avoided on many an occasion with the greatest difficulty, and only by the whole country side turning out, and especially because of the good work done by that splendid body, the North-west Mounted Police. I have seen these policemen save the North-west many times from enormous disaster. They have a perfect system for fighting prairie fires. It is wonderful to see that magnificent body attack a prairie fire with military precision and overcome it just as they would an enemy that would venture to assail Canada. I cannot say too much in praise of that fine organization. It is one of the greatest organizations that could exist in any civilized country for the beneficent purposes of civilization. What it accomplishes in favour of good government and the protection of the North-west from lawlessness and destruction of property is beyond the comprehension of the ordinary man in the east. Therefore on all grounds, I would urge the Minister of Justice to take up this question and deal with it. It is the most important I have heard raised in the whole debate, on the Railway Bill. The only trouble is that our friends from the North-west raise many questions and throw such an amount of dust around every question they raise, that it is difficult to say which is the important and strong question to which parliament should turn its attention. This is one of the serious questions which ought to be dealt with in the interests of the ranches of the North-west, and I speak as an eastern man with some knowledge of the subject.

Hon. Mr. BLAIR. The committee does not need to be convinced that conditions exist in the North-west which call for immediate legislation of some kind. The question now under discussion is not a new one at all. Some two or three months ago the hon. member from Assiniboia (Mr. Scott) called my attention to a Bill he was

about to introduce or had introduced dealing with this subject. I gave it my very best attention, and the conclusion I was compelled to arrive at was that we would have to depend on provincial or territorial legislation in order that proper and due effect should be given to the power we were conferring on the board.

Mr. GOURLEY. What induced the hon. gentleman to come to that conclusion ? Was it the constitutional question ?

Hon. Mr. BLAIR. Undoubtedly the constitutional question. We were asked to enact that the board should have power to authorize or compel a railway company to go upon private lands and take them without compensation for the use and purposes of a fire-guard.

Mr. GOURLEY. Could the hon. gentleman not have given the railway commissioners power to direct the company to do this, and throw upon the company the necessity of making such agreements with the property owners that might be made or else give the company the power of expropriation ad hoc.

Hon. Mr. BLAIR. No, the better way appeared to be to authorize the board to require the company to make proper fireguards, but that would not become operative until the local authority had passed the necessary and proper legislation. I understand that there is no doubt at all but that they will pass that legislation, and when they do pass it, then the power conferred on the board, under the 24th section of this Bill, subsection e, will enable it to require the company to provide fireguards. The subsection is as follows :

With respect to the use of any engine, of nettings, screens, grates and other devices, and the use of any engine or car of any appliances and precautions, and, generally in connection with the railway respecting the construction, use and maintenance of any fire-guard or works which may be deemed by the board necessary and most suitable to prevent as far as possible fires from being started, or occurring, upon, along, or near the right of way of the railway.

You have there ample power conferred on the board to order the construction of fire-guards. My hon. friend shakes his head. You have all the power parliament can give the railway board to require that these precautions should be taken. It is proposed by the present amendment that this clause shall be inserted :

Provided that in respect of fire-guards the board may, if empowered to do so, by the legislature of the North-west Territories or the legislature of Manitoba, order the company to enter upon lands not owned by it, to construct and maintain such fire-guards, and no claim for damages shall be maintained against the company for any act done in compliance with the order of the board.

The trouble is this : The first portion of that clause is wholly unnecessary. The board has power now, to the full extent of the legislative authority of this parliament, to order a fire-guard to be erected. Therefore, we do not want to repeat that. Why is it necessary to assert that when Manitoba or the territories shall give the board power, they may do it ? You do not require such a provision, because the board have under this Bill that power the moment this legislation is passed. It is the latter part of the amendment to which I take more particular objection, 'no claim for damages shall be maintained against the company for any act done in compliance with the order of the board.'

Mr. GOURLEY. I am not concerned with the mere wording of the amendment, but only wish to arrive at the idea.

Hon. Mr. BLAIR. We have nothing to do with arriving at ideas. Let the provincial legislature pass the necessary legislation and the board can act.

Mr. GOURLEY. Why the provincial legislature ? We are fully competent. If the hon. gentleman would suggest a legal argument which precludes that competency, I am not so prejudiced as not at once to give in. But I can see nothing in the constitution of Canada to prevent our fully exhausting the subject in every way. We are seized with the power to make an Act on this subject matter. Once seized with the subject matter, we cannot be ousted from that jurisdiction by any claim of the provincial legislature. I think there may have been, at one time, in the early days of the study of the constitution, a narrower idea prevailing; but I am persuaded that this is the correct construction of the constitution, and the one approved by our constitutional lawyers, by the Privy Council, and by every authority. For instance, it was once the idea, among provincial judges, that this parliament, though it was clothed with power to legislate, fully, upon bankruptcy, it could not invade, or overcome, a provincial Act, that gave a preference. That is exploded to-day. It is now held, that if we undertake to legislate upon bankruptcy, we can exhaust every civil right known to the law, and oust every provincial statute, if necessary, and if we deem it wise policy. We can deal with the subject of promissory notes ; we can deal with the subject of execution. Provincial laws may give priority in execution. We can come in, and destroy in a moment; no control by the provincial legislatures, over matters of property and civil rights can stand in our way. In these matters the provincial control over questions of property and civil rights means control of what is left after we have done legislating on the subject. That is to say, if we undertake to legislate, with regard to property and civil rights, on a subject over which we have jurisdiction, there is nothing

for the provincial legislatures except what is left outside of our legislation. This parliament has vested in it the right to legislate on the subject of railways. We can regulate them, control them, confer powers upon them, and require them to exercise those powers in a certain way. When we enter upon that subject, we can exhaust every civil right, and we have no right to make our legislation depend upon anything done or left undone by a provincial legislature. That is why, in the Railway Committee, I urged that every mile of railway should be declared to be a work for the general advantage of Canada, in order that we might have one law, one set of rules governing all the railways in the country. Therefore, I would like to hear the Minister of Railways and Canals state specifically, if there is any reason why we should not provide that every railway shall, within two hundred or five hundred yards of its own fences, and of its own right of way, make a fire-guard, and then, having made that general order, provide wise regulations for carrying it out. Take the case of Dominion property. We could provide that the company shall have the right to go upon that land without compensation. Our Act would be a license to any railway company. This would provide for fire-guards on the property that belongs to the Dominion. Then, with reference to the property that belongs to the Canadian Pacific Railway—and every other lot along the railway, that has not been sold belongs to them—no question would arise, because they would have the right to make fire-guards across their own property. There might be another class of lands, those belonging to private individuals. The owners would be only too happy to agree to the employees of the company going upon their land to plough a fire-guard. In my own case I would be only too happy to welcome them. In the case of these lands we can make some provisions that, if the Canadian Pacific Railway offered to make the fire-guard over private lands and the right to do so was refused, that should be a perfect defence in any suit for damages that might arise. I think that would be perfectly fair. So, for these three classes of land—government land, Canadian Pacific Railway land and land of private individuals—we could make regulations here that would be perfectly constitutional, and against which there could be no objections. I do not think it is right for us to be constantly deferring to the supposed rights of provincial legislatures, making our legislation depend upon those supposed rights when really there are no such rights in existence.

Hon. Mr. BLAIR. In the course of a conversation I had with the hon. member for West Assiniboia (Mr. Scott) I stated the conclusion I felt justified in arriving at on this matter. I did not come to that conclusion without having given the matter the very best consideration in my power; and I assured him—and I am still of that opinion—that the Bill as it stands now will give all the power that he desires, except that it does not, by enactment, declare that these people shall have the lands taken away from them without compensation. My hon. friend who is now in charge of the Bill may conclude otherwise. I do not think he will, but it is for him to say whether he will adhere to the position I took when I had charge of the Bill. I pointed out that I could not consent to make any change or adopt any different principle in the case, taking the land of private owners for the purpose of fire-guards from that which applies in the case of lands of private owners taken for other purposes. We have provisions in the Bill which control and regulate that matter in its entirety. And, if you do not wish to go to the provincial legislature for this power, or, if, going to the provincial legislature, you fail to get the power, it is still open to the board to provide that fire-guards shall be made upon the property of individuals, and if that is provided, the company will have to take advantage of the powers of expropriation, paying to the owners the compensation provided in the Act. We cannot go outside of that. The hon. gentleman must see that it would be impossible for us to incorporate in the Bill any different principle in dealing with private property under these circumstances from those which we recognize in dealing with private property under other provisions of the Bill. That question, I take it, is settled, unless my hon. friend feels that he would be compelled to vary or depart from it. This Bill as it stands covers all the ground. I assure my hon. friend that, in my opinion—and he can take also the opinion of the Minister of Justice—it covers the ground as fully and completely as we can cover it, and as fully as is asked for, except that we do not say, and we ought not to say, that we are going to take the property of people away from them without compensation. For we have no power to do so. Of course, we can confiscate by an Act of this parliament, for parliament is supreme. But when I say we have no power to do this, I use the word in the general sense. We should not take away the property of any man, except we give him compensation. It is said that very little private property would be taken for this purpose. I am not sure that that is a correct statement. The information given me by the hon. member for West Assiniboia is that a great deal of private property would have to be taken for the purpose of this protection; and when I asked the question, the hon. member said that the people who owned the land along the railway were not interested in the fire-guards, did not care about having them, and would not go out of their way to afford facilities for laying them down but would be likely to exact the last dollar for property taken from them for this purpose. So, the question stands to-day

as it stood then. I trust the committee will not feel that there is any good reason why there should be a departure from the rule that governs all legislatures, at all events, under British institutions, and that has always governed them.

Mr. GOURLEY. Would the ex-minister say whether he thinks this language would justify the board in ordering the erection of a fire-guard outside the actual limits of the railway ?

Hon. Mr. BLAIR. The board has power, or if any supplementary authority was needed it could be obtained, to authorize the taking of the property under the Expropriation Act. You do not want any legislation for that purpose, because you have it now.

Mr. DAVIS. Do I understand the ex-Minister of Railways to mean that the Railway Commission would have power to order the railway company to provide a proper system of fire-guards ? If so, it would be the duty of the company, under the expropriation clause of this Act, to go outside and buy that land if they found it necessary. Will the board, under this subsection (e), have power to force the company to erect these fire-guards outside of their right of way ? I would like to know also what right the local legislature has to pass legislation dealing with lands ?

Hon. Mr. BLAIR. They are the only legislature that can do so, dealing with the question of compensation.

Mr. DAVIS. Do I understand that under this Act the commission will have power to force the company to put up these guards ?

Hon. Mr. BLAIR. That is my opinion.

Mr. GOURLEY. Do I understand the ex-minister to say that we could not here amend this clause by inserting a few words giving to this commission power to expropriate land, or authorize the company to go upon it and exercise rights ?

Hon. Mr. BLAIR. No ; not without paying something for it.

Mr. OLIVER. I am willing to take the word of the ex-minister as to the power of this commission.

Hon. Mr. BLAIR. That is my opinion, and the opinion of the Minister of Justice.

Mr. OLIVER. That this clause as it stands fully empowers the Railway Commission to order the erection of fire-guards outside of the railway right of way ?

Mr. GOURLEY. The minister did not say so.

Mr. OLIVER. Do I understand that it is within the power of the local legislature to provide that this authority may be exercised without compensation to the owners of property ? I understood the minister to say that this parliament would not have the right to give that authority to the Railway Commission.

Hon. Mr. BLAIR. Yes.

Mr. OLIVER. Well, now, would the local legislature have the right, leaving outside the question of whether it would be equitably right or not, to authorize the making of fire-guards, under the authority of the commission, on property outside the right of way ?

Hon. Mr. BLAIR. That is our opinion.

Mr. OLIVER. They would have the right to legislate to do what the ex-minister intimated would be practically an act of spoliation ?

Hon. Mr. BLAIR. Yes.

Mr. OLIVER. That satisfies me on the subject. I am perfectly satisfied to take the ruling of the ex-minister. Let me point out, however, that taking the right to construct a fire-guard on private property is not an act of spoliation, and should not be considered, in my opinion, as requiring expropriation. The necessity of fire-guards exists because of the land not being cultivated, or owing to the fact that the owner of the land does not reside in the immediate vicinity and is not able, except at great loss, to make the fire-guard. Just as soon as the land comes into cultivation, or just as soon as settlement becomes close along the line of railroad, then the necessity of entering upon outside land and making these guards ceases. It is merely a temporary necessity caused by the peculiar existing conditions, which, in process of time, will change, at least in a great part of the country, so that where fire-guards are necessary now they will not be necessary later on. There would have been a danger in passing legislation here covering the whole case that the law would be made applicable to parts of the country where it is not necessary.

Hon. Mr. BLAIR. We have restricted that.

Mr. OLIVER. Then I consider that the provision as it stands, and as interpreted by the minister, is much better than a hard and fast piece of legislation which would put unlimited compulsion on the railway company. It must be largely within the judgment of somebody as to whether a fire-guard is actually necessary. Where it is not actually necessary expense should not be incurred, nor should trespass be committed upon private property ; but where it is necessary it is not a trespass upon, but a protection of private property.

Motion (Mr. Davis) to reconsider section 24 negatived.

Mr. ROBINSON (Elgin). I rose this afternoon to ask the minister to allow the committee to return to section 242, which deals with actions for damages. I think the present clause does not cover the point

which should be covered for the protection of farmers who have to take their cattle to market. I may perhaps in a few words relate a circumstance that happened two or three weeks ago on the Canadian Pacific Railway, near the town of Galt. Three farmers, two of them neighbours of mine, and the other a resident of the constituency of my hon. friend from East Elgin (Mr. Ingram), were killed, and three others were seriously injured owing to a rear end collision that occurred between a freight train and another train. The freight train was loaded with cattle, and the men were asleep in the caboose. At midnight another freight train came along, ran into the cattle train, and these three men were killed. Of course, an inquiry was made into the cause of the accident. An inquest was held on one of the men who was killed, but the coroner did not take much pains to probe the facts. It seems that he was very anxious to get through with the inquest, and a full inquiry was not made. He refused to allow the solicitors for the friends of the men who were killed to examine witnesses. A verdict was given and all parties seem to have been exonerated from blame. My reason for bringing this matter up is that I think something should be placed in this Bill to protect men who entrust their lives and their property to the hands of the railway companies. Of course, accidents may occur, but whenever the railway employees or the company are to blame for the accident, these men should have redress, and I hope that the hon. Minister of Justice will see his way clear, now that this has been explained, to place a clause in this Bill covering the case. The cattle men are obliged to sign an agreement with the railway company whereby they renounce any claim to redress in case of accident. If the cattle were killed, they could get redress, but if they lost their lives their relatives have no recourse. Human lives amount to very little apparently to railway companies. These men left widows and children and there should be a court to which these widows and children could appeal for redress. If there is no court established for such a purpose there ought to be, and I do think that the government should see that our farmers are protected in taking their cattle to market. Therefore, I beg to move :

That section 242 be reconsidered and that the following subsection, to be known as subsection 4, be added to section 242 : 'Whenever any cattle or other live stock are shipped on any railway and the person in charge of such cattle or other live stock is killed or injured through the carelessness or neglect of the railway company or its employees, the case may be tried in any court of competent jurisdiction and the company shall be liable for all damages.

The MINISTER OF JUSTICE. I would suppose that this amendment would not be very necessary, because the law provides now not only for the protection of gentlemen in charge of stock, but also for the protection of the general travelling public. Any person who travels by railway has redress if an accident happens through the carelessness of the employees of the railway company or of the company. There are courts of competent jurisdiction to deal with such matters.

Hon. Mr. BLAIR. I presume what the hon. gentleman (Mr. Robinson, Elgin) has in his mind is this : The ordinary rules of railway companies will not permit the owner of cattle to send along people free of charge with the cattle. The railway companies engage to take care of the cattle themselves, and they are bound to deliver the cattle at their destination and to look after them while in transit. But, if the owner of the cattle thinks he would like to send one or two or more men along and if the owner is willing and if the people who go are willing to ride with the cattle, not in an ordinary conveyance, not in a first, second or third class passenger coach, but to travel with the cattle, receiving their transportation free, then it is a perfectly reasonable and proper thing for a railway company to say : Well, if you wish to take the risk we will permit you to accompany the cattle, but you must take the risk. Unless you are prepared to travel in proper cars which we provide for passengers you will have no claim for damages. It is under those circumstances that the hon. gentleman says these people are not able to recover. I do not think we ought to change the law at all. I agree with the hon. Minister of Justice that it would be very unwise legislation to adopt a provision of that kind; therefore, I think the committee ought not to reconsider the section.

Mr. INGRAM. As I undersand it, the railway company insists upon a caretaker to accompany the stock, provided the stock is to be transported a distance exceeding 100 miles. Then, I understand they have a certain provision that if the caretaker accepts a pass the company shall not be responsible for damages in case of accident. I think it can be shown that in certain cases which have been tried in court, our judges have differed on that question. I do not profess to be a lawyer, but it occurs to me that if one judge is correct in what he holds then the companies are responsible according to the law as he interprets it. Take the case of Bicknell vs. the Grand Trunk Railway Company :

A contract was made by a railway company for the carriage of cattle to a point on the line of a connecting railway company at a fixed rate for the whole journey. The contract provided that the shipper (or his drover) should accompany the cattle ; and that the person in charge should be entitled to a 'free pass,' but only 'on the express condition that the railway company are not responsible for any negligence,

default, or misconduct of any kind on the part of the company or their servants :

Held, that the condition was valid and could be taken advantage of by the connecting railway company, who therefore were not liable to the shipper for injuries suffered by him in a collision caused by their servants' negligence.

The judge says :

By the contract between the plaintiff and the Bay of Quinté Company, it was provided, by the terms of the 17th clause of the agreement endorsed upon the receipt note, that 'When free passes are given to persons in charge of animals, it is only on the express condition that the railway company are not responsible for any negligence, default, or misconduct of any kind, on the part of the company or their servants, or of any other person or persons whomsoever, causing or tending to cause the death, injury or detention of any person or persons travelling upon any such free passes, and whether such free passes are used in travelling on any regular passenger train, or on any other train whatsoever ; the person using any such pass takes all risks of every kind, no matter how caused.

It will be observed that this clause merely exempts the contracting company from liability and does not refer at all to the defendant company.

The judge comments on that clause in this way :

The fact that he was being carried free, if it was a fact, would make no difference, as appears from the Jennings case. But I do not think there is any evidence that he was being carried free. I should find, as a fact, that the consideration that he paid for the carriage of the cattle included his own carriage or the carriage of some person in charge of the cattle. For, by clause seventeen, above referred to, it was necessary for the plaintiff himself, or some one under his direction, to travel with the cattle to take charge of them, as will appear from the directions therein contained (the learned judge read clause 17 and continued) :

It is perfectly manifest, I think, and I should find as a fact that the cattle would not have been delivered for the purpose of carriage had not the company agreed to some one going along with them for the purpose of looking after them. It was as much a part of the contract that the plaintiff, or some one in his behalf, should go with the cattle, as it was that the cattle should be carried by the company.

I do not see anything to exonerate the defendant from liability.

That was the decision in the case. The jury found $5,000 damages against the company for causing the injury to this man, but on appeal, judges Osler, MacLennan, Lister and Moss, all disagreed with Judge Rose, the trial judge in the case. The judgment in appeal was unanimous, but it shows that the law is not by any means very clear.

Mr. COWAN. The court of appeal reversed the trial judge, and that is the established law of the province now. It was settled in the court of appeal in the Bicknell case that wherever a man is travelling on a free pass there is no contract, and, therefore, he takes his chances.

Mr. INGRAM.

Mr. INGRAM. This parliament now enacts that when stock gets injured on a railway by reason of the negligence of the railway company, the company shall be responsible, and it strikes me as the most remarkable thing that a man can contract himself out of any compensation because of accident, when in nine cases out of ten he never reads the contract, and only accepts the pass and signs the contract under the impression that he cannot ship his cattle unless he accompanies them or has a caretaker to do so. Why should the caretaker of cattle on a train be able to contract himself, and his family in case of his death, out of the possibility of securing damages because of the negligence of the railway company ? It does not seem fair to me as a layman. They compel the caretaker to go with the cattle, and if he accepts a pass then he contracts himself out of any liability on the part of the railway company. There are suits arising from this accident that occurred at Galt, and there is no question at all but that it was due to the gross carelessness on the part of a railway employee. The company have a semaphore there, and they have provided everything necessary, if the employees carry out the instructions of the company to prevent accidents, but this accident occurred because of negligence on the part of an employee, and these three men lost their lives and others were injured. It is a hardship to the families of these three men that they have to suffer on account of the loss of their bread winners, and I hope something will be done by the Minister of Justice to remedy this defect in the law.

Mr. COWAN. I draw the attention of the Minister of Justice to the fact, that while under the law a railway company is supposed not to be able to contract itself out of negligence, at the same time the railway company compels a shipper in certain cases to sign a contract in consideration of a reduced rate to limit the liability of the company. I have a case in mind which no doubt the legal gentlemen in the House are quite familiar with. It is the case of Robinson vs. the Grand Trunk Railway. The race horse 'Henry R.' was injured in a collision, being shipped from the city of St. Catharines. At the time of shipment Robinson was compelled by the railway company to sign a contract, that in consideration of the reduced rate charged by the railway company their liability was limited to $100 in the event of damage through the negligence of the railway. The horse was killed in a collision. An action was brought and the value of the horse was fixed by a St. Catharines jury at $5,000. It turned out upon the trial that although it was stipulated in the contract signed by the shipper, that it was in consideration of a reduced rate, as a matter of fact it was the usual rate charged by that railway, as well as others, and was not a reduced rate.

In appeal, the Supreme Court held, following the Vogel case, that while the railway could not contract itself out of negligence, at the same time a man could enter into a contract with a railway company, and in that contract the railway could limit its liability to a specific amount notwithstanding its negligence, and that the contract was good although it was not a reduced rate that was charged as the contract stated. It does seem to me that there ought to be some provision in this Bill to meet an emergency of that kind. I do not think that a railway company should be able to contract against its own negligence in any case wherever a fare is charged.

Mr. GOURLEY. The Minister of Justice, not being familiar with the shipping of cattle, did not grasp the full significance of the objection that was raised by Mr. Robinson, and included in his amendment. It may not have been expressed scientifically, but he was really endeavouring to cure a wrong. In the west, every shipper has to send a caretaker with the cattle, and while the caretaker may technically get a pass, as a matter of fact, he travels in consideration of the charge that is made for the cattle, and Judge Rose was perfectly right in holding that was the true construction of the contract. A part of the money that is paid by the shipper, is paid as much for the transportation of the caretaker, as the transportation of the cattle, but, of course, there can be no opinion among legal men, but, that the court of appeal were perfectly right in holding as they did.

The MINISTER OF JUSTICE. My hon. friend will observe that both courts could not be right.

Mr. GOURLEY. I hold that Judge Rose was right and the court of appeal was right, because their decisions were on different points. Now, the question arises, will this parliament sanction any railway company contracting with people to carry their freight, and at the same time contracting that in case the company kill an individual who accompanies the freight, they shall not be responsible to any one for damages ? That is the question before us. The court of appeal has decided that that contract is valid ; but I think that Judge Rose stated the equity of the thing, which should control our action. We are here not to construe hard and fast statutes, but we are here to settle a principle ; and I agree with the hon. member opposite that we should affirm the principle that no railway company should compel anybody to contract that if the company negligently kill an individual there should be no remedy. Up to this time it may have been legal ; but the question is, shall we in future allow the Grand Trunk or any other company to compel a man to sign a contract like that, so that there will be no damages to be paid by the company in case he is killed ? I say that it is not right, and that some remedy should be provided. In the case cited with regard to the horse, the simple point on which that case was decided was that both parties had agreed what the damage should be in the case of loss ; and the principle is clear that when a man agrees what his damage shall be, no court can interfere. In that case the shipper need not have shipped the goods until he had made a satisfactory contract ; but having done it, there was no remedy, and I do not see very well how that can be changed. But in the case brought up by the hon. member for Elgin, all we have to do is to provide that no company shall compel any man to forego his right to damage if the damage is caused by negligence of the company, notwithstanding his having used a free pass. I would go that far, because the court would be met by this free pass, and the courts might not all be like Judge Rose, who held that the free pass was not a free pass, but was the holder's right and was part of the contract to carry the cattle. Therefore, I would provide that no such contract would be valid, and that the conditions on that pass were unreasonable and void. That would cure the whole difficulty. The company would not be allowed to plead those conditions, and the relatives of the party killed would be thrown back upon their remedy at common law without this technical defence of the company. I think the House should say that the man who goes with the cattle should have the protection of the common law. Is it not an awful thing for this parliament to say that the relatives of a man who has been killed have no remedy? I think we should not be put in that position. I think the time has come when we should make a law which would suit another state of affairs, and when those decisions should not longer continue to be made, and they must be made unless we alter the law.

Mr. SPROULE. I want to ask the minister one question. Shippers who must sign a shipping bill, sign that is practically a contract. There are many conditions in that shipping bill in which the shipper contracts away his rights ; but he is obliged to do it or he cannot ship. Is it not a fact that the courts hold generally that if the conditions in that shipping bill are unreasonable, the shipper is not compelled to forego the rights which he has signed away by signing that shipping bill ?

The MINISTER OF JUSTICE. My hon. friend has overlooked the provisions of section 275, which provides that the conditions shall not be binding unless they have first been approved by the board.

Mr. SPROULE. Hitherto, so far as I know, they have not been approved by anybody. I thought the court would decide

what was reasonable or unreasonable, and, if the conditions were unreasonable, the shipper would not be bound by them.

Mr. INGRAM. I cannot understand how it comes according to the Minister of Justice, that a Grand Trunk Railway employee cannot contract himself out of any benefit in case of accident, by reason of the company contributing a certain sum to the provident insurance society, while the cattle drover who goes to take care of stock does do so by reason of accepting a pass.

Bill reported with amendments.

LEAD BOUNTIES.

House went into committee to consider the following resolutions :—

That it is expedient to repeal chapter eight of the statutes of 1901, intituled : 'An Act to provide for the payment of bounties on lead refined in Canada,' and to enact as follows :—

1. The Governor in Council may authorize the payment of a bounty of seventy-five cents per one hundred pounds on lead contained in lead-bearing ores mined in Canada ; such bounty to be paid to the producer or vendor of such ores, upon evidence that such ores have been smelted in Canada. Provided, that the sum to be paid as such bounty shall not exceed five hundred thousand dollars in any fiscal year. Provided, also, that when it appears to the satisfaction of the minister charged with the administration of this Act that the standard price of pig-lead in London, England, exceeds twelve pounds ten shillings sterling per ton of two thousand two hundred and forty pounds, such bounty shall be reduced proportionately by the amount of such excess.

2. Payment of the said bounty may be made from time to time to the extent of sixty per centum of the full bounty authorized, subject to adjustment at the close of each fiscal year. If at the close of any year it shall appear that during the year the quantity of lead produced, on which the bounty is authorized, exceeds thirty-three thousand three hundred and thirty-three tons of two thousand pounds, the rate of bounty shall be reduced to such sum as will bring the payments for the year within the limit mentioned in section one.

3. If at any time it shall appear to the satisfaction of the Governor in Council that the charges for transportation and treatment of lead ores in Canada are excessive, or that there is any discrimination which prevents the smelting of such ores in Canada on fair and reasonable terms, the Governor in Council may authorize the payment of bounty at such reduced rate as may be deemed just, on the lead contained in such ores mined in Canada and exported for treatment abroad.

4. The said bounties shall cease and determine on the thirtieth day of June, one thousand nine hundred and eight

5. The Governor in Council may make regulations for carrying out the intention of this Act.—The Minister of Finance.

The MINISTER OF FINANCE (Hon. W. S. Fielding). This resolution provides for the repeal of the existing Act passed in 1901 respecting bounties on lead and provides another system of bounties in lieu thereof. The bounties provided by the existing Act are for the refining of lead. A refinery has been established under that Act but it has done very little. At all events we have had occasion to pay but a very small amount so far. I am advised however that the proprietors of the refinery are consenting parties to this legislation, so that although in the form of resolution we are now proposing, no reference is made to refining, the refining process is by no means given up but will still be continued. We propose to provide a bounty equivalent to $15 a ton on the lead contents of lead bearing ores, when sent to smelters in Canada. I propose to make a slight change in the wording of the resolution but not in its essence. The resolution says this bounty shall be paid on evidence that the lead has been smelted in Canada. It has been pointed out, however, that the lead ores are delivered to the smelter and may not be smeltered for a considerable time. We propose that samples shall be taken and assayed and payments made to the miners on these assays. We propose to adapt ourselves to the practice of the mines, and by a slight amendment it is intended that sixty per cent of the bounty may be paid to the producer who has delivered his lead to a smelter for the purpose of being smelted in Canada. Forty per cent of the bounty will be retained until it is proved that the actual smelting has taken place. That forty per cent shall not in any case be paid before the end of the fiscal year for this reason. We provide that the total sum shall not exceed $500,000 in any one year. If the output proved larger than the $500,000 would pay for, then the rate per ton shall be reduced accordingly, so that the amount paid shall not exceed $500,000 in any one year. It has been suggested by those interested in the lead industry that it is possible—and this is not necessarily a reflection on the owners of smelters—that circumstances might arise in which the owners of smelters and transportation lines might take such action as would prevent the smelting in Canada at fair and reasonable rates. While that is not likely, it is a possibility which might as well be guarded against, and provision is made that if any such circumstance should arise and the Governor General in Council be satisfied that there is unfair interference with smelting conditions in Canada, then the lead ore may be exported and the government may make a reduced rate of bounty adapted to that condition. Another condition of some importance is that with regard to the value of lead. Lead has ranged in price from as high as £17 in the last few years to as low as £12 and sometimes lower still. There is a standard price of lead in the London market. Whenever it goes above £12 10s. it would be proper for us to. reduce the bounty. If it does not rise above that price, this bounty shall stand. If it should advance, as

in former years, the lead miners would be receiving such a good price for their lead that this bounty would not be required. We have taken £12 10s. as the standard price of a ton of lead, according to the English method of weight 2,240 pounds. I think the latest quotations are about £12 5s. If the lead advances in price, as it has done in former years, above £12 10s. there shall be a corresponding reduction in the amount of bounty.

Mr. BORDEN (Halifax). The hon. gentleman speaks of the bounty entirely ceasing when lead has attained a certain price. What price would that be ?

The MINISTER OF FINANCE. At about £16—the bounty would cease entirely. I am advised that lead has been quite as high as that in the past four years and indeed higher. The bounty shall be given for a period ending in 1908. Another clause I propose to insert, which is not in the resolution, is intended to meet a new process which has been brought to our notice. We propose to pay this bounty on lead which is smelted in Canada—a part of it on delivery of the lead ore at the mill and the balance on evidence that the smelting process is completed. It has been represented, however, that there are new processes for the manufacturing of lead which do away with the smelting processes and that certain products of lead may be made direct from the ore without passing through what is commonly known as the smelting process. It is not likely that that system will be extensively developed, but it is scientifically established that it is feasible, and I propose to insert a clause providing that if at any time it shall appear to the satisfaction of the Governor General in Council that products of lead are manufactured in Canada direct from ores mined in Canada, without the intervention of the smelting process, the Governor General in Council may make such provisions as may be deemed necessary to extend the benefits of this Act to the producers of such ores.

I think, Sir, that covers all the points mentioned in the resolution. The lead industry, a few years ago, was a very extensive one in British Columbia, the output having been as high, in 1900, as 30,000 tons. I believe the present output is about 5,000 tons. However, since these resolutions were placed upon the Notice paper, there has been quite a revival of the lead industry, and we have every reason to believe that, under the influence of the aid to be given, there will be a large development of this industry in British Columbia.

Mr. CLARKE. When will the payment of this bonus be commenced?

The MINISTER OF FINANCE. It will take some time, I suppose, for the mines to get into operation, but if they were in operation at once after the passing of this Act, payments would be begun.

Mr. CLARKE. The bounty will not be paid on any ore that has already been mined?

The MINISTER OF FINANCE. My attention has been drawn to that point. From the best information I could gather, the quantity of ore already mined is very small. It would be difficult to distinguish between the ore on the dump and that which is to come out. Still, if it were likely to be a matter involving a considerable sum, we should take steps to make the distinction. But we are advised and believe that it will hardly be worth while to do so.

Mr. CLARKE. The bounty will be paid on the lead ore already mined?

The MINISTER OF FINANCE. Yes, that now on the dump.

Mr. ROBINSON (Elgin). What guarantee will the minister have in paying the bonus ? How will he know what quantity has been mined ?

The MINISTER OF FINANCE. In all bounty legislation we must give, as we do in this case, power to the Governor in Council to make regulations. The Department of Trade and Commerce, under whose direction this matter will come, will have to provide regulations so as to take the greatest precautions against fraud.

On section 1,

The MINISTER OF FINANCE. I propose to strike out the words 'upon the evidence that such ores have been smelted in Canada,' because we are dealing with this point by an amendment later on.

Mr. POPE. What interpretation do we place upon the word 'vendor' ?

The MINISTER OF FINANCE. It has been represented that, in the case of a small miner, he may produce lead, but not be able to hold it long enough to take it to the smelter. And if he raises money on it or sells it, the buyer should not be deprived of the right to the bounty.

Mr. BORDEN (Halifax). It is assumed that the producer will get the benefit of it in the price he obtains?

The MINISTER OF FINANCE. Yes.

Mr. CLANCY. What provision is the hon. minister making with regard to making a reduction upon a favourable condition of the market? It seems to me that this is surrounded with great difficulties, except in the case of a long-continued rise in the price. There might be a sharp increase in the London market, yet none of our lead might get the benefit of that increase.

The MINISTER OF FINANCE. I understand that what is called the 'smelter return' fixes on every transaction the standard price of lead by the latest cable quotation. This smelter return is a document

which the proprietor of the smelter gives to the producer of the lead when the lead reaches the smelter. That would bear on the face the London price of the day, and that transaction throughout would be governed by that price.

Mr. BORDEN (Halifax). This is undoubtedly a very important industry in the province of British Columbia, and the hon. gentleman (Mr. Fielding) is not giving the House very much information as to the causes in relation to that industry which have induced the government to adopt this measure of encouragement. I understand that the amount of capital invested in silver lead mines in British Columbia is supposed to be about $20,000,000. No doubt, the hon. member for Yale and Cariboo (Mr. Galliher) would be able to inform the House as to that. The amount invested in railway and steamship lines which depend largely upon this industry, I understand, is in the vicinity of $12,000,000 or $15,000,000. The amount invested in smelters is $800,000. The lead production in 1900 was 31,670 tons, worth $4,487,000 ; in 1901, the prduction was 25,700 tons, worth $3,336,000; in 1902, the production was 12,000 tons, valued at $1,154,000, but the production has fallen at the present time, as the hon. Finance Minister has stated, to about 5,000 tons. I would like to know from the Minister of Finance what effect he expects this bounty will have on the maintenance and development of the lead-ore production. Is it expected that this will give the Canadian market to the Canadian producer of lead to any greater extent than at the present time ? I understand that our consumption of lead in Canada is somewhere in the vicinity of 14,000 tons annually. I do not know whether that is correct, or whether the Minister of Finance has different information.

The MINISTER OF FINANCE. That is about correct, as I am advised.

Mr. BORDEN (Halifax). And all that we consume is imported, I understand, with the exception of about 3,000 or 4,000 tons. Is that in accordance with the information of my hon. friend?

The MINISTER OF FINANCE. Yes.

Mr. BORDEN (Halifax). Then, is the bounty expected to have the result of giving the Canadian market to the Canadian producers to any greater extent than at present? In the next place, will the bounty have the effect, that we all desire, of establishing in this country any of the industries allied to the production of lead—for example, works for the corrosion—I think that is the expression—of lead, and other industries, which, I believe, might be expected to result from the encouragement of this industry by a protective duty ? I do not know whether the Minister of Finance has any information for the House on these subjects; but it seems to me that it would be extremely desirable that some policy of encouragement to the lead-mining industry should be adopted which would bring about results of this kind. If this bounty will not give to the lead producers of British Columbia the control of the home market to any greater extent than they have control at the present time, it will amount, in a great measure, to a bounty on export. If the lead producers have to send to a foreign market for sale all the lead they produce in excess of the 3,000 or 4,000 tons sold in Canada, practically we are paying a bounty to encourage production first, but, in the second place, to encourage the export of what we produce.

Now, I am desirous of supporting the government in any measure which will have the effect of developing this industry in British Columbia and of increasing the production of our own lead mines in Canada, but I would rather see that accomplished in a way which would give the lead producers of this country control of their own market. I dare say, that if it were attempted by means of a revision of the customs duties, it would be necessary to make changes in the customs duties for the purpose of increasing the protection to other industries, but would it not be desirable to do that if by doing so you could not only give the Canadian producers of lead control of the Canadian market, but at the same time give encouragement to the establishment in this country of the other industries to which I have referred ? I have no doubt that all these matters have been under the consideration of the hon. Minister of Finance, but I think it would be well that he should give some information to the committee on this point, because I think he will agree with the rest of us, that if it is possible to accomplish the results which I have indicated, it is desirable to do so. I have a good deal of doubt, myself, as to whether the system of bounties which is proposed by these resolutions would accomplish the result in anything like the way it could be accomplished by increased protection in the shape of customs duties. At the same time, I realize to so very great an extent the importance of this industry, not only to British Columbia, but to the country as a whole, that I am willing to support the government even in this measure which the hon. Minister of Finance has introduced, although I am of the opinion, which I think is very well founded, that a better result might have been accomplished in the way I have indicated. I would like if the hon. Minister of Finance would give us an idea as to the causes of the depression in the lead industry.

The MINISTER OF FINANCE. It is very largely due to the attitude of the American trusts and combinations, which have practically shut our lead out of the market. As to the general question as to the effect of this bounty upon the home market, I think

my hon. friend will agree with me that the home market is entirely a question of price. If the producer of lead in British Columbia can sell his lead low enough, he will have control of the home market. This bounty will enable him to sell his lead at a lower rate than he otherwise could sell it for, and in that way he can get access to the market. I do not think the lead producers contemplate dealing in this way with the export trade. They will have to export some, because the total consumption is only 14,000 or 15,000 tons, and they contemplate an output of at least double that, and some portion will have to be exported ; but I anticipate they will supply a much larger amount to the home market than has been done in former years. However, I imagine that with the bounty and with lead being produced under more favourable conditions, it will enable other manufacturers to take this lead and to develop their industries, although it is only a conjecture as to that. I understand, however, that there are parties who propose proceeding in the production of white lead, which is a product of the corroding process, and it is very likely that that product will be made in Canada under the assistance given in this way.

Mr. SPROULE. It seems to me that the hon. Minister of Finance (Hon. Mr. Fielding) would have done better, if he had followed the advice given by the legislative assembly of British Columbia. They say :

That it is desirable in the interest of silver-lead mining and smelting industries of British Columbia, that the duties on pig-lead and the products thereof imposed by the Dominion of Canada should be so increased as to protect the capital invested in these industries.

That is to say, that these duties should be so increased as to shut out American lead which is being used in Canada, and provide at least a home market for the Canadian producer. Their judgment was that customs duties would have accomplished that better than bounties would, and I think they would have done so. The hon. minister says that if we pay them a bounty and that bounty enables them to sell their lead cheaper so as to compete with the Americans, they will have control of the home market, but would it not be better to put on a customs duty so as to shut out the American lead, and if necessary, in addition to that to grant a small bounty and encourage the manufacture of lead at home. If the government have ignored the recommendation of the legislative assembly, I would have thought that they would have had some regard for the recommendation of the Rossland Liberal Association, which passed a very strong resolution on January 10, 1903, on the same lines. The following resolution was adopted :—

That we, the members of the Liberal Association of Rossland, do heartily endorse the action of the silver-lead miners and do especially urge upon the Dominion government the establishment of such duties as will secure for Canadian mines the benefits of the entire home market and will enable resumption of work in the many mining districts of British Columbia which are now suffering from great depression.

The government had the recommendation of the legislative assembly, and to make it stronger, the Liberal Association of Rossland backed it up with their recommendation. I would have expected that the government would have paid a good deal more attention to that, coming, as it does, from their own friends, and their own friends only, than if it had come from another source. But I regret that they have seen fit to ignore the recommendation, and that, instead of increasing the duty, as has been advised by both of these bodies, they propose to give a bounty that will allow the Americans to control our market still which ought to be supplied by our own people at home. In my judgment, the government are not adopting the best way to do for the lead miners what they desire. They are not securing the home market to the lead miners of Canada, and while I think they will improve it a little, they would have helped the lead miners much more if they had adopted the advice of their own friends of the Liberal association and had increased the duty so as to secure the home market for our own people.

Mr. POPE. While I do not like to disagree with the government in this matter, I am inclined to think as the hon. Minister of Finance might perhaps anticipate, that in the matter of these bounties he is not going to do the good that possibly he desires. Being a protectionist, perhaps I am prejudiced in the matter somewhat and do not see clearly how the bounty upon this product is going to give a permanent stimulus to the situation. When we consider that ore going from Canada to the United States has to pay a duty of $30 a ton, when we find that the duties of the United States, as they apply to the lead in its various forms of pig, pipe, bars, sheets, white and red, and all the rest of it, range from $50 to $65 a ton, because these are the duties that are applied to lead in the United States, as against our duties of $16, $17, $12 and down as low as $3.87 per ton, which constitute the protection which we have in this country, and if we add this $15 a ton to any of these figures that I have mentioned, it will be seen that our encouragement falls far short of the encouragement which the United States are giving to the lead industry in that country. I do not expect that we shall realize in British Columbia that benefit that we would all like to see, under any policy of bounties or under any other policy than carries with it the absolute control of this market, and without such encouragement as to make possible the export of these products to foreign countries. I believe that on top of that $15 a ton we should have a duty equivalent to that of the United States. With a less duty

than that we are not going to develop this industry. Of course, the Minister of Finance understands that we, on this side of the House, are going to accept any encouragement, whether it be by bounty or otherwise; but we would be failing in our duty, if we did not emphasize the fact that, with $15 a ton on our side, when $30 a ton are charged for exporting lead into the United States, the producer of lead in Canada has to pay $15 a ton more to get his lead into the United States, even after this encouragement.

Mr. GALLIHER. They will not take our lead in the United States at all, even if you give $60 a ton.

Mr. POPE. Then if that be true, it is impossible for us to export our lead into the United States. I think that only emphasizes the statement I made a few moments ago that the government should not hesitate a moment in placing the duty dollar for dollar with that of the United States.

Mr. MACPHERSON. Most of the lead that comes into Canada does not come from the United States, it comes as a rule from Spain.

Mr. POPE. Does the hon. gentleman mean to say that we buy scrap and pipe lead from Mexico?

Mr. GALLIHER. That is principally made from Canadian ore, the pig-lead. It is our own lead, our own bullion, that is sent into the United States in bond and refined there, then brought back and put on the market here.

Mr. POPE. I am obliged to the hon. member for Yale (Mr. Galliher) for the information he has given. I am more convinced than ever that it is our imperative duty to run this industry ourselves rather than let the United States run it for us. Let our people get the whole advantage of the development of that industry instead of the United States.

Mr. GALLIHER. I may point out that this government did give a bonus some two or three years ago to a refinery to refine this very lead I am now speaking of that is being refined in the United States in bond. That refinery is turning out a certain quantity. It was an experimental plant in the first instance, operating under a new process that had never been tried before. Therefore their plant is small at present, but it will be increased. The government granted them aid to help develop the lead refining industry and they experimented with the electrolytic system. They claim that it is a complete success, and the company are preparing, as I understand, to enlarge their plant to meet the growing requirements. But that takes time. So far they have not refined a great quantity of lead, one reason being the fact that they were experimenting for a considerable time. But gradually the have been improving the process until they are now in a position to enlarge their plant.

Mr. POPE. The government, I think, would do better to give encouragement to a system that did not need to be conducted as an experiment. There are systems in operation in treating lead ore that do not require experiment. The hon. gentleman has just told us that they have been spending their time in experimenting.

Mr. GALLIHER. Not altogether.

Mr. POPE. The hon. gentleman said they had been spending their time in experimenting with these ores. If they had had proper protection they would have developed under a system that is in use every where else.

Mr. GALLIHER. Let me correct the hon. gentleman. The new system they have been conducting is not only greatly in the interest of science, but it will be advantageous to the refining of ore throughout the world, because it is the best and cheapest system, and the cheapest plant that can be invented.

Mr. POPE. Then the hon. gentleman argues that there is no development for that system inside of Canada, and if there is no development inside of Canada, why grant a bounty?

The MINISTER OF FINANCE. The hon. gentleman is under the impression that we have granted a bounty for a particular method of refining lead, which is a mistake. We have not granted a bounty to any particular method, but we have granted a bounty on the refining of lead, and we have paid it to one refinery. There is nothing to prevent any other refinery coming in and getting the bounty, but this happens to be the only one that was established.

Mr. POPE. Evidently the system of bounties has failed, it has failed in developing that single industry. You have not accomplished anything. One man says it is an experiment, the minister says they have given it to the only refinery that exists.

Mr. GALLIHER. I may point out something that the hon. gentleman knows, as he is interested in this industry. The lead smelters of the country have not been running even to supply the refinery that was running last year. The fact that they were shut out of the American market for selling their ore is responsible for the present condition. It is not a question of the bounty failing to encourage the industry.

Mr. POPE. Does the hon. member think that the company would prefer a strong system of protection to a system of bounties?

Mr. GALLIHER. I might answer the hon. gentleman by repeating expressions

of opinion made by people interested in this matter, and who are better able to give him information than I am. I may tell the hon. gentleman that the question of protection in the readjustment of duties was not the only question considered at these meetings. There was also the question of a bonus. Some favoured one and some favoured another, but I am bound to admit that the majority came to the conclusion that a readjustment of the duty would be better. Any one who will take the trouble to read my speech on the budget will know that I am stating exactly what took place.

Mr. CLARKE. Why did they come to that conclusion ?

Mr. GALLIHER. Like all mass meetings of that kind, it was not all composed of men of the same political thought ; some came to that conclusion possibly because of their political belief and others came to a different conclusion, but at all events the majority came to that conclusion.

Mr. CLARKE. Purely political motives.

Mr. GALLIHER. No ; I do not wish to convey that idea at all.

Mr. BORDEN (Halifax). Does not the hon. gentleman (Mr. Galliher) himself think that a protective customs tariff is really the best for this industry ?

Mr. GALLIHER. Let me answer the questions one at a time. When the Minister of Finance announced in the budget speech that the government did not see its way to grant the request of the lead miners for an increased duty on pig-lead and corroded lead, it was intimated that later on something might be done to aid the industry in the way of a bounty. I set to work, and the matter was brought before the different associations in my county, and I received numerous telegrams urging me to place before the government as strongly as I knew how the desirability of assisting this industry by means of a bonus. After the announcement of the bounty, on the 8th of July, I received telegrams from the boards of trade, the owners, the associations, men of different political views ; but all interested in the welfare of the lead industry, and these telegrams show that the people most affected are well satisfied with the action that has been taken by the government. Some of these telegrams are complimentary to myself, and for that reason I will dispense with them. But I would like to read one which, after thanking myself and those from the province who supported me in obtaining this bounty, winds up by saying :

> We appreciate the result on the lead question and can say that the country is rejoicing at action of government. Please convey thanks to other members of British Columbia.
>
> Signed, Geo. Alexander, S. S. Fowler, G. L. Parker, executive committee. L. Pratt, secretary of Silver Lead Association.

I have other telegrams conveying the appreciation of the people on the action of the government in granting this bounty. I think this expression of opinion from the people interested is probably the best answer I can give to my hon. friend.

Mr. CLANCY. Does that indicate that they prefer a bounty to a protective tariff ?

Mr. GALLIHER. When the men who own the mines, and who have their capital invested, and who are most deeply interested ; when these men say that the country is rejoicing at the action of the government, it ought to convince members on both sides of the House that they are satisfied.

Mr. CLANCY. Does the hon. gentleman mean to say that if protective duties had been put on instead of bounties, he would not have received those telegrams of rejoicing ?

Mr. GALLIHER. I can only speak of what I have received.

The MINISTER OF FINANCE. I have no desire to enter into the general question of the relative advantage of duties and bounties at this late hour, but there is one view I might suggest as bearing on the question. Suppose we had put some moderate and reasonable customs duty on these articles greater than we now have, these duties would only operate as a protection to the extent of the quantity consumed in the home market, which is about 14,000 tons. The bounty will apply to the output of 33,000 tons, and therefore the benefit of the bounty covers a larger output. I can imagine that even a man who is a protectionist may perhaps see that the bounty system, for the present at all events, might help him better than customs duties. I do not want to argue the merits of the two systems, but merely to call attention to the fact that while, by the protective system, the benefit would only be on the quantity consumed in the home market, by the bounty system the benefit is received on the total output.

Mr. WILSON. How long has the lead industry been in operation ?

Mr. GALLIHER. The Hall and Slocan mines turned out lead, copper and silver as far back as 1885.

Mr. WILSON. How long have they had bounties ?

Mr. GALLIHER. This is the first bounty that has ever been granted. Prior to this time the ore was bought by the American smelters to the extent that we could supply it, but then this Lead Smelter Trust of the United States was formed, and it was formed, as we firmly believed in that country, for no other purpose than to close up the industry in Canada, and now they won't purchase our ores.

Mr. WILSON. When you made your speech in the House, did you not ask for protection instead of bounties ?

Mr. GALLIHER. If the hon. gentleman will refer to the 'Hansard' of the 29th of April, he will find my speech there, and he need not ask me to depend on my memory.

Mr. SPROULE. Do I understand the hon. member (Mr. Galliher) to say that we do not get any of our lead from the United States?

Mr. GALLIHER. We get no United States produced lead.

Mr. SPROULE. We got from the United States 5,895,174 pounds of dry and white lead.

Mr. GALLIHER. Not one pound of that is produced from ore mined in the United States.

Mr. SPROULE. That information is not given in the returns, but at any rate it comes in from a country that has a high duty against us. I would think that the instructions which the hon. member (Mr. Galliher) would have regard to would be the instructions given by his own Liberal Association, and I have before me a copy of the resolution which they passed on the 10th of January, 1903, and which says :

ROSSLAND LIBERAL ASSOCIATION.

Robert T. Grigor,
President.
Roland A. Laird,
Secretary.

Rossland, B.C., January 10, 1903.

Sir,—I have the honour to inform you that at a largely attended meeting of this association held last night the following resolution was adopted :—

Whereas since the present Canadian tariff was framed, changed conditions have placed Canada in a position to more than supply the lead necessary for home consumption and her mines are now, through the smelters marketing the bulk of their lead product in China, Japan and Europe, while German lead and Mexican lead manufactured in the United States is being marketed in Canada, supplying the most of the demand, to the detriment of the mines, smelters and refineries in Canada ;

Whereas practically all the silver-lead mines are closed, due to the decline in the world's price for silver and lead, in consequence of which the vast amount of money invested in the development of these districts is now lying idle, and workmen, whose wages were as high as any in the United States and higher than the average paid in Missouri, Mexico and Australia are unemployed, and

Whereas the Dominion government has, through some of its members, stated that tariff revision would be made when changed conditions justified it, therefore,

Be it resolved that we, the members of the Liberal Association of Rossland, do heartily endorse the action of the silver-lead miners and do especially urge upon the Dominion government the establishment of such duties as will secure for Canadian mines the benefits of the entire home market and will enable resumption of work in the many mining districts of British Columbia which are now suffering from great depression.

Be it further resolved that copies of these resolutions be immediately forwarded to the members of the Cabinet, Senate and House of Commons.

RONALD A. LAIRD.
Secretary.

I presume that at least one of these was sent to their own member, and I take it that these were the instructions given by the Liberals of that constituency to him as their representative. Now he pretends to say that he is satisfied with the bounty, and he does not say one word in the way of asking the government to put a duty on lead, which his own association asked for, but he says they are quite satisfied with the bounty. After the budget speech was made, and the statement of the Finance Minister that he did not consider it wise to change this session the duties upon this or any other article, I presume that they were compelled to be satisfied with the half measure which they got, though they did not believe, and do not believe to-day, in my judgment, that this is the best way to help the lead-mining industry in that country. The people of British Columbia, as represented by the resolution passed in the legislative assembly on the 11th June, 1902, and by the resolution of the Rossland Liberal Association—and this is only one of several resolutions in the same line passed by Liberal associations—were in favour of a customs duty and not a bounty on lead. You give them, not what they believed was the best, but only a half measure of relief.

Mr. GALLIHER. I do not think that those who sent me here, whether they were Liberals, Conservatives, labour men, or anybody else, have any cause to complain of my action in forwarding their interests on this lead question. I am quite satisfied to leave myself in their hands in that respect. I hope the hon. member does not think that I sat idle until the budget speech was delivered, and did not urge what I was sent here to urge.

Mr. SPROULE. Does the hon. gentleman think that the people who sent these representations knew what they wanted?

Mr. GALLIHER. I represented to this government exactly what I was sent to represent. The hon. member knows very well that a member from any district, on approaching the government to obtain a concession of any kind from them, comes armed with all the strength he can possibly command, if he understands his business. That will account, probably, in some measure for the resolutions which I came armed with.

Mr. CLARKE. Are the resolutions merely a bluff to strengthen the hands of the hon. gentleman ?

Mr. GALLIHER. You can form your own opinion of them. We do these things

pretty much as I think they are done in all parts of Canada, and in all parts of the world, for that matter.

Mr. LEFURGEY. Might I ask the hon. member if he has changed his opinions ?

Mr. GALLIHER. Will the hon. member be kind enough to allow me to answer the hon. member for East Grey, and then I will be only too happy to answer any question he may put. The hon. gentleman quoted the resolution of the Rossland Liberal Association, and said that they had received not what they asked for, but something they were compelled to take, and that they did it simply because they could not get anything else. I will read a telegram which I received on the 8th of July, the day these resolutions were placed on the Order paper. This telegram is addressed to myself :

Rossland, B.C., July 8.

W. A. Galliher, M.P.,
Ottawa.

We congratulate you, Senator Templeman, provincial members and the government on the splendid stand taken on lead question.

This is signed by the president of the Liberal Association. I could quote considerably more literature to my hon. friends if they wished it, to prove that the people are satisfied. In fact, they never expected to get $15 a ton for their lead, and they are very pleased indeed that it has been granted.

Mr. MACPHERSON. Just to set this matter possibly a little more clearly before the House, I may say that I had the privilege of attending, in the city of Vancouver, one of the first meetings held of the silver lead men of British Columbia. They were not themselves a unit as to the best method by which the difficulties they were labouring under could be got over. The question of a bonus was largely discussed. The general consensus of opinion of the lead men was that a bonus would not be granted. In view of that, they thought they had better later on ask for a higher protective duty. In the home market last year we consumed 12,000 tons, or 24,000,000 pounds. The first lead shipment in British Columbia was in 1887. The shipments from that date down to last year were as follows :—

	Pounds.
1887..	204,800
1888..	674,500
1889..	165,100
1890..	nil.
1891..	nil.
1892..	808,420
1893..	2,135,023
1894..	5,662,523
1895..	16,475,464
1896..	24,199,977
1897..	38,841,135
1898..	31,693,559
1899..	21,862,436
1900..	63,358,621
1901..	51,582,906
1902..	22,536,381

You can easily see from this immense lead production and our small consumption, what a small market we have for lead in Canada. In 1901 the lead combine was formed in the United States, and in 1902 our total production of lead was exactly our consumption, possibly a little less. Our total production was 22,536,381, and we consumed that year 24,000,000 pounds. We have had practically our market to ourselves.

Mr. SPROULE. How can the hon. gentleman say that when we brought in 15,000,000 pounds of foreign lead——

Mr. MACPHERSON. Yes, but the majority of that is Spanish lead. But we sold at the same time 22,536,381 and consumed 24,000,000.

Mr. SPROULE. But the hon. gentleman says we had our own market. Evidently we had not.

Mr. MACPHERSON. We sold enough to supply our own market and had to buy some besides, but the reason was we were not getting a proper price for our lead, not having an open market for it. The hon. member for East Grey has quoted the Liberal Association of Rossland. Let me quote to him the New Denver 'Ledge,' which is a strong Conservative organ and one of the most representative mining papers in British Columbia. On July the 16th the 'Ledge' published the following article :—

Outlook Much Brighter.

Prospects of good times in the silver-lead camps of the Kootenays have greatly brightened since the assurance has come from Ottawa that the Dominion government will give aid to the producers in the sum of $500,000 a year. From all sections where lead mines are being developed, words of cheer are heard, and there is no doubt that mines which have in recent years been operated only in the development stage, will in a short time be thrown open and ore turned out at their full capacity.

Senator Turner, principal owner of the Sullivan group, in East Kootenay, is credited with saying to the Cranbrook 'Herald': 'The proposed bonus will enable Sullivan Company to start mine immediately and to complete the smelter this season.'

Reports of a like nature come from other camps. J. L. Parker, of the North Star mine, says :

'As long as the bonus lasts, we may consider that we will have good times for the following reasons :

1st. The mines that are in a shipping condition, but which are not shipping, will naturally ship their ores.

2nd. Those in a developing condition, but not developing, will naturally develop.

3rd. Those properties which have a favourable surface mineral condition, will naturally either have some work done on them, or the owners will find a more favourable market for them than has been the case the past two years.

4th. Encouragement will be given to the prospector to hunt for new finds, probably resulting in the later opening up of a new district or two.

5th. The wage expenditure will return to the old standard of about $2,500,000 per annum instead of less than $500,000.

6th. The merchants, who have been reducing their stock, will replenish it, resulting in the merchants east getting fresh orders, and giving the railroads more work.

7th. The smelters will have live furnaces, instead of dead ones, and this will give employment to more men, and through this certain ores available for fluxes can be used and purchased by them which would otherwise have to remain in the ground. The latter feature is an important one, giving employment to more men.

The amount of bonus to be distributed in five years time on the basis of $15 per ton, will be about $2,500,000, and as the mine-owners will spend $10,000,000 more during the same period, than they would have done under the past conditions, it will be seen that the government aid, although tardy, will mean a direct aid to the district of two million five hundred thousand dollars, besides an indirect aid of ten million.

John A. Finch is reported as saying: 'We expect to start up the St. Eugene this summer by reason of the benefit from the lead bounty. We formerly worked about 200 men on the property and were shipping 3,000 tons of lead concentrates per month. The concentrates were running 65 per cent lead.'

Bryon N. White of the 'Slocan Star' said: 'The mine-owners are getting all they asked for from the Dominion government. The effect of the bonus will certainly be beneficial. The Slocan Star, which was shipping to the American Smelting and Refining Co., and suspended shipments some time ago has entered into a contract to ship to the Trail smelter and will start shipments soon. It is reported the bonus will be paid only on lead ore mined, smelted and refined in Canada. By shipping to the Trail smelter we will receive all the bonus coming to us.

I have no doubt the increased output stimulated by the bonus will take up all of the grant of $500,000 per annum made by the government. Indirectly the bonus will be of still greater benefit to the province as it will bring several millions of British and American money into the Slocan and Kootenay lead mines for investment.

I could go on quoting page after page from British Columbia papers all to the same effect. As a matter of fact the lead mine-owners more than once asked this government for aid, and they appreciate the aid now given which will bring the price of lead to a certain figure. They do not care whether that is the result of a bonus or a duty. Lead miners in British Columbia to-day without exception will tell you that $15 per ton of a bonus is much better to them than the duty first suggested.

Mr. LAFURGEY. It is not the best thing for the country.

Mr. MACPHERSON. I think it is. We were suffering under great difficulties, and the people believe that their difficulties are now removed and that is all they hoped for.

Mr. POPE. I am glad to see that I am sustained in the position I am taking by an authority which the hon. member for Yale and Cariboo must recognize as a good one. I have looked up the hon. gentleman's speeches, and I find that on the 29th of April last he sustained me in every position I have taken. In the first place he pointed out that the great difficulty experienced was the competition of Mexican ore, mined by men who are paid fifty cents per day, and who thus enter into competition in British Columbia with men who receive from $3 to $3.50 per day. If the hon. gentleman represents the labouring men of that section, he will be disposed to think very seriously of their situation with regard to that competition. The bounty will not lessen that competition. If it is simply a question whether the miners can get enough out of this bounty to operate a certain number of mines. I find that the hon. member for Yale and Cariboo said in that speech:

> It was unanimously decided at the Sandon meeting that the delegation should be sent to Ottawa to present the facts to the government and to ask them to give us a duty on our lead that would be sufficient to place our miners—not exactly in that position of the American miners because we felt that we could not get that—but at all events to place them in a position so that they will be able to work their mines to advantage.

The hon. gentleman was asked what he thought would be a sufficient duty on lead and he replied:

> What was asked was practically the Dingley tariff which is two and one-eight cents a pound on pig-lead, and two and seven-eights cents a pound on corroded lead. That would be adequate but I had no hesitation in using the word 'adequate.'

So you see, Mr. Chairman, that when he came fresh from his constituency and from this meeting at Sandon, which unanimously decided to ask for duties, the hon. gentleman urged this government to protect the lead industry by the imposition of duties and not by a bounty.

Mr. DEPUTY SPEAKER. I would draw the attention of the hon. gentleman (Mr. Pope) that to refer to the past debate, and certainly to read from that debate is against the rules of the House.

Mr. POPE. I am referring to an utterance of an hon. gentleman (Mr. Galliher) on the same subject, and here is a clause that will interest you, Mr. Chairman:

> An adequate bounty would tide us over our difficulty——

I said that probably that might be the result of our bounty system, and the hon. gentleman from Yale and Cariboo agrees with me. That was the speech on the budget debate, made when he came fresh from his constituents:

> —for a time until the government could see its way clear to give us at least a fair, proportionate and reasonable adjustment of duties, so that our lead products, at all events, would

be on the same basis as other products of Canada.

Now, Mr. Chairman, the hon. gentleman should be frank enough to admit that while he and I are, to a limited extent, satisfied with the half loaf we are receiving, it is quite clear that we are not receiving what the people of that country asked for and what he himself said he was instructed to ask for here. So, there will be nothing satisfactory to this industry until it receives the adequate protection the hon. gentleman referred to—equal to the Dingley tariff, or something better. It is not necessary for me to pursue this subject further. The hon. gentleman and I quite agree, and I am delighted, as a man living in the east, with some interest in that western country, but not understanding that industry as one living there would—for I have not a scientific understanding of the question—to find that when, as I say, the government is not doing the measure of justice that the people demanded unanimously at their meeting, according to the remarks of the hon. member for Yale and Cariboo, to be corroborated by the hon. gentleman who has the honour to represent those people in this House.

Mr. BELL. I understand that a very important feature in connection with this industry is the supply of fuel. I see that boards of trade and other associations in British Columbia have laid great stress on the development of the coal properties owned by the government of Canada in the Crow's Nest Pass. Of course, the intention of the bounty is to place the mining industry of British Columbia on a paying and satisfactory basis as far as possible. Might I ask the government what has been done by them to meet the views of the British Columbia Board of Trade, in which they ask that the government should select their coal lands on Morrissey Creek, and should either develop them as a government work or lease them under such conditions that it would be possible for other mining companies operating in that part of Canada to get control of the output. I made the discovery on a visit to British Columbia last fall that the fuel question there is so important that it is considered that unless it is settled, anything the government can do to foster the lead industry by a bounty might be unavailing. The industry is liable to be interrupted by difficulties in connection with mining by strikes, and would be entirely jeopardized by a serious rise in the price of coal or coke; so much so that it has been suggested that the government should take steps which would guarantee a sufficient supply of coke or coking coal at a fixed minimum price. I know that this is not related directly to the question of bounties, but, as it is essential that the fuel question be put upon a safe basis before the benefit can be expected from the bounties, may I ask what attention has been paid to the representations on this point of parties who speak on behalf of the mining industry and especially of the lead mining industry?

The MINISTER OF FINANCE. In connection with representations made to me and my colleagues as to the lead industry, I think I am correct in saying that nothing was said as to the fuel question. It may be that something was said to my colleagues on that point. The question of developing coal lands might come more directly before the Department of the Interior. But the gentlemen who composed the lead deputation did not represent that they were under any disadvantage in connection with the fuel question. As to the general question of doing something in the way of developing the government coal lands, that is worthy of attention, and will, on doubt, engage the attention of the Minister of the Interior.

Mr. BLAIN. If I understand the case correctly, when the proposal was first presented to the government by the hon. member for Yale and Cariboo (Mr. Galliher), he stated in the House that three separate meetings were held in the west in connection with the lead mining indutsry. The first was held in Sandon, and a resolution was passd asking the government to increase the tariff. After that meeting had passed this resolution unanimously, another meeting was called at the city of Nelson, and the resolution which had been passed at the meeting at Sandon was repassed by the meeting of miners assembled at Nelson. And the third and final meeting was held in Sandon, and resolved unanimously that the government should be called upon to put a tariff on lead, and not a bounty. After the Minister of Finance made his statement in the House, the hon. member for Yale and Cariboo received telegrams from the mining interests in the west calling upon him to urge the government to reopen the question, not to decide in favour of a bounty, but to call upon them to raise the duty. Surely there cannot be any doubt that the men engaged in mining in the west are not in favour of a bounty.

Mr. GALLIHER. Did I state that?

Mr. BLAIN. Did the hon. member state it? I will read that part of his speech.

Mr. DEPUTY SPEAKER. I will have to take objection to this reading. The hon. gentleman (Mr. Galliher) does not deny that he said what was attributed to him, and, if he does not deny it, that is just as effective as if the report of his statement were read. The speech referred to was made on the budget. It is part of a past debate, and I do not think it should be opened.

Mr. CLARKE. If you would declare, by your ruling, whether the hon. gentleman

(Mr. Galilher) said it or not, we should be satisfied.

Mr. DEPUTY SPEAKER. I have ruled. The hon. gentleman can't refer to a former debate.

Mr. BLAIN. I understood that in a discussion of this kind we could make reference to statements made in a debate on the same question.

Mr. DEPUTY SPEAKER. Let me say how that is. The hon. gentleman (Mr. Blain) can go on and use an argument used during the debate on the budget, but it should be used independently, without reference to that debate, and without reading from the report of the debate. To read from past debates is distinctly out of order.

Mr. BLAIN. I do not wish to violate any rules, Mr. Chairman, and will not attempt it, but what I do say is that, as the House understood, the request from British Columbia made by miners and those interested in the lead industry was unanimous, and it was that the government should place a tariff on this article; and in no case did the hon. gentleman (Mr. Galliher) or any representative from the west call upon the government—and in no case, I think I may say, did the representatives of the west call upon the Finance Minister—to place a bounty on lead, until they had received the statement of the government that it would be impossible to put a tariff on lead, but that they might reach the case with a bounty. After the statement made in the House by the Finance Minister, telegrams were sent from the lead mining industries in the west to their representatives here asking them to use their influence not to have a bounty, but a duty.

Mr. GALLIHER. I deny that in the form in which the hon. gentleman (Mr. Blain) states it.

Mr. BLAIN. With that denial I think I shall be permitted to read what the hon. gentleman (Mr. Galliher) said :—

> I have received numerous telegrams, and resolutions from boards of trade both in the territories and throughout the entire province of British Columbia, urging upon me that I should ask the government to reconsider the question of the adjustment of duties, so far as lead is concerned.

Mr. GALLIHER. But the hon. gentleman added that I had said not to put a bounty on it. That is what I denied, and that is not in my speech.

Mr. BLAIN. As I understood the Finance Minister's statement, and I am sure the hon. member understood it in the same way, it was that there would be some resolution in the House this session that would meet, or make an effort to meet, the demand from the west in respect to the mining industry. The hon. gentleman (Mr. Galliher) will not deny that.

Mr. GALLIHER. I will not deny anything that I said.

Mr. BLAIN. When the statement was made——

Mr. DEPUTY SPEAKER. Allow me another word. When an hon. member is charged with having made a statement, and that hon. gentleman says he did not make it, the question must there and then cease; the statement of the hon. gentleman must be accepted. And here is what the rule says with regard to a previous debate :—

> No member in speaking can refer to anything said or done in a previous debate during the same session.

Mr. BORDEN (Halifax). That rule is qualified in many ways, Mr. Chairman, and the rule that you have laid down on the other point, perhaps, is not expressed as accurately as it ought to be. If two hon. gentlemen have the same personal knowledge of the same question, one is not required to accept the statement of the other, for the rule would apply to both, and each would have to accept the other's statement. Thus, the rule applies only to cases within the personal knowledge of one and not of the other, according to my understanding. As to the rule respecting a previous debate, as it is laid down in May—I am not familiar with it in Sir John Bourinot—it is not quite so broad, it seems to me, with all deference to your opinion.

Mr. DEPUTY SPEAKER. I quoted the very language.

Mr. BORDEN (Halifax). I am speaking of the rule in May, which I had occasion to examine recently. For example, if the Minister of Finance, on motion to go into Committee of Ways and Means should make his budget speech, and the committee should rise; and if, later in the session, he goes into Committee of Ways and Means for the purpose of amending the tariff, it is competent, on any resolution then discussed, to refer to the budget speech, because you are dealing with the same subject and by the same procedure. That is very much the case here. The Minister of Finance dealt with this question of the lead duty, which was dealt with by hon. members in that debate. Now, the hon. minister, though not going into Committee of Ways and Means, is practically doing the same thing in bringing down resolutions with regard to bounties. I should think it would involve us in some difficulties in conducting the debates of the House if, on resolutions of this kind, we were not allowed to refer to the budget debate.

Mr. DEPUTY SPEAKER. I cannot agree with the hon. gentleman (Mr. Borden, Halifax). If there is a proposition placed before the House, and that proposition is discussed and finished either by defeating it or by adopting it, that discussion becomes a past

debate to all intents and purposes. A single resolution in Committee of Supply becomes a past debate when that resolution is decided by the House; otherwise we would have all the resolutions and questions so mixed up that we could not tell what was a past debate and what was a present one. I do not think that May puts the construction upon it that my hon. friend has said.

Mr. BORDEN (Halifax). I have a different opinion.

Mr. SPROULE. Supposing we are dealing with a Bill and a motion is made for the second reading, which practically affirms the principle, and that motion is carried. According to your interpretation that would be a past debate. If that Bill comes back to this House and we go into committee, and you rise several times and report progress, every time we go into committee again we are at perfect liberty to refer to any discussion that took place on that Bill, because we are dealing with the same subject.

Mr. DEPUTY SPEAKER. If the hon. gentleman will examine the rules he will find that that rule does not apply to Bills. A Bill is considered a subject from the preamble to the last section of it, and consequently can be referred to from time to time. But a proposition in the form of a resolution or anything of that kind comes under the rule that I have expressed. The rule in reference to a previous debate is found on page 426 of May, in a foot note :

> The rule, however, does not apply to the different stages of a Bill, but it does apply to all other cases.

Mr. BLAIN. I submit at once to the ruling of the Chair. But I would like to have an understanding with the hon. member for Yale and Cariboo (Mr. Galliher) on this question. Might I ask the hon. gentleman if, when he came to the House with a request from the lead-mining interests of the west, their request was not a unanimous one asking that the government place duties upon the lead-mining interests ?

The MINISTER OF CUSTOMS. Mr. Chairman,——

Mr. BLAIN. I beg the minister's pardon, I did not ask him a question.

The MINISTER OF CUSTOMS. I did not want to interpose, but my hon. friend did not seem to think it was necessary to answer it.

Mr. BLAIN. Whether the minister thinks it is necessary or not, I think it is necessary. This is a question that the committee should thoroughly understand. It is not enough for some members of the committee to say that the lead-mining interests of the west are satisfied with this bounty, when the fact is that the lead-mining interests of the west did not ask for any such bounty. The lead-mining interests of the west called upon the government, through their representatives, for a duty to be placed upon lead. What I ask now from the hon. gentleman is whether I misunderstood the representations made by himself in this House. Am I correct in understanding from him that the lead-mining interests of the west, meeting at three separate places and at three separate times, passed unanimous resolutions calling upon the government to place a duty upon lead?

Mr. GALLIHER. I do not think the hon. gentleman will accuse me of making any statements in my speech that were not true. My statements are there, and the hon. gentleman can read them for himself.

Mr. BLAIN. The hon. gentleman from Burrard (Mr. Macpherson) says they are satisfied. Will the hon. gentleman be good enough to answer my question, whether the mining interests in the west called upon him as a representative to ask this government for a bounty, or whether they called for a duty upon lead?

Mr. MACPHERSON. I said that at a meeting held in Vancouver, after the meeting held in Nelson, they adopted a resolution unanimously asking for a duty. But I can tell the hon. gentleman that they were not by any means unanimous in their branches, whether it should be a duty or a bounty. I say further, that had the lead men any suspicion that they would receive a bounty of $15 a ton there would never have been a question of duty at all.

Mr. WILSON. So great a bounty.

Mr. MACPHERSON. Yes, because it is a bounty that is quite sufficient. Now, I can tell the hon. gentleman that he could not go into the Kootenay country and make them feel bad by telling them they ought to have a duty and not a bounty, because they are all very well satisfied.

Mr. POPE. We will try you later on that.

Mr. MACPHERSON. You will always find us doing business at the old stand.

Mr. BLAIN. The hon. gentleman says that if the lead-mining interests of the west had understood that a bounty of $15 a ton could be secured from the government they would not have asked for a duty. I would like to ask the hon. gentleman this : After the Finance Minister had made his statement in the House that a bounty would be placed upon the lead-mining interest, how does it happen that telegrams were sent from the lead interests in the west to the members here calling upon them to ask the government to put a duty on lead? How did that happen if they were so well satisfied? The hon. member for Yale made that statement in the House.

Mr. MACPHERSON. I received a telegram at the same time from the Mining Association at Victoria asking me to urge for a bounty of $8 a ton. Now, what does the hon. gentleman make of that ?

Mr. BLAIN. I venture the statement now that the hon. gentleman cannot produce a telegram from the lead-mining interests in all the western country calling upon this government for a bounty in preference to a duty upon the lead-mining interest.

Mr. MACPHERSON. Do I understand the hon. gentleman to mean that what I say is not true ?

Mr. BLAIN. I am not responsible for the construction that the hon. gentleman puts upon it. I did not say that. I make the statement, and I make it without fear of contradiction, because I had the privilege of interviewing some of the lead-mining men, when in British Columbia, and, while I do not assume to be as familiar with the question as hon. gentlemen representing that district, the demand there was for a duty, and that the mining men called upon the governemnt for a duty, so that they would have possession of the home market. Nothing that is in the correspondence, nothing that is in the public press of the west, nor in any resolution can warrant the hon. gentleman in the statement that the lead mining interest wanted the government to put a bounty on lead. The one request from the west is, and always has been, that the government should place a duty upon lead.

Mr. OLIVER. I represent a section of the west, and I may say that I received a number of letters in regard to the position of the lead industry, and in no case was a question of duty mentioned. They asked for assistance to the lead industry, but they did not mention the kind of assistance that they wanted.

Mr. BLAIN. May I be permitted to ask the hon. gentleman if in the correspondence there was any demand for a bounty ?

Mr. OLIVER. No.

Mr. BLAIN. Will the hon. gentleman make the statement now, that the lead mining interests would be as well satisfied with a bounty as with a duty ?

Mr. OLIVER. Unless the lead mining interest is perfectly crazy, I would say, certainly. Considering that we import some 20,000,000 pounds of lead, and that we produce two or three times that much, I do not see, myself, how the lead mining industry is going to be substantially or permanently benefited by the imposition of a duty. If the output has to be exported in order to be marketed, certainly a duty cannot affect the price of that part which has to be exported. If the larger part has to be exported, the price of the larger part is not going to be affected by the duty. I may say, further, if it is a matter of information, that I discussed this lead question with a gentleman who represented himself as the representative of the mining industry in British Columbia, and his proposal, as given to me, was, that they wanted an increase of duty, and that they wanted a bounty also.

Mr. POPE. That is right. That is business.

Mr. OLIVER. But neither he nor any other person else that I ever spoke to in regard to this question, or whoever spoke to me in regard to it, pinned his faith on any particular method. Anything that would produce the result was what they wanted, and as I understand it, the amount of the bounty that is being given is considered sufficient to produce the result. These gentlemen, now knowing the amount of the bounty that is being given, have, through their representatives here, declared themselves satisfied. It does not make any difference whether at not, at some time in the past, the lead mining interest of British Columbia expressed a preference for one form of assistance or another. Now that they know the amount of the assistance that they are getting, and now that they have expressed themselves as satisfied through their representatives, surely the House ought to be satisfied.

Mr. BLAIN. That cannot be a correct statement of the case. The lead mining interest had three meetings in the west prior to this session of parliament, first at Sandon, then at Nelson, and then again at Sandon. At no one of these three meetings was a resolution passed calling on the government to place a bounty upon lead, but at each and all of these meetings a unanimous resolution was passed calling upon the government to place a duty upon lead. If that be the case, I assume that the lead mining interests meeting in convention knew what they wanted. I do not think it is fair for the hon. member for Alberta to get up now and say that they are satisfied with a bounty. When the representation was made to the governmen, during this session, calling upon them to place a duty upon lead, and when a statement was made by the hon. Minister of Finance that a bounty would be placed upon lead, how did it come that the representatives of the mining interests of the west, having read the hon. minister's statement, sent telegrams down to their representatives, calling upon them to ask the government to put a duty on lead ?

Mr. OLIVER. The reason is, that they did not know the amount of the bounty that was going to be given.

Mr. BLAIN. That is the answer, is it ? However, I will not pursue it further.

The MINISTER OF CUSTOMS. I was just going to call attention to the fact that

this proposition is one to aid the lead industry. The whole House is well acquainted with the circumstances connected with it and with the conditions of the market. I think all parties are agreed that this is an industry to which some relief in some way should be given by parliament. Well, now, as to whether the men engaged in the production of lead themselves wished this relief to be given by way of a duty or by way of a bounty, it seems to me, need not concern us very much. I understand that what has been said is correct. I understand that they would like to have a bounty, and that they would also like to have a duty, that they would like to have both, as I understood in some interviews I had with some of them. I have not the slightest doubt that the earliest representations made were for duties, but the government are not bound to accede to all the demands that are made upon it. The government are bound to give them a candid hearing, and most courteous treatment, and to weigh the suggestions that are put before them, and having done that in this case, the government have decided to assume the responsibility of the course which they now propose. Therefore, this is aside from the question as to what suggestions were made to the government. The government recognized that the whole country was interested in this industry, and might fairly be called upon to do something to bear part of the burden of encouraging that industry. They have decided that the best way to do that, in their opinion, is in the form of the proposition now before the House. If I were to express an opinion myself in reference to the bonus, I would view it, that probably, when they urged us strongly for duties, they had not anticipated that the government might see its way clear to propose to the House such a large bonus. From the information I can get, strengthened by the telegrams read by the hon. member (Mr. Galliher), it would seem that all parties interested are satisfied. I would hesitate to give my opinion as to which form is the better, because the men interested ought to be the best judges, but, looking at it from my standpoint, I would say that they must be better satisfied with a bounty than they would be with a duty, for the reason that if a duty were put on, it would have to go by a roundabout process before it could reach these men and benefit them.

Mr. POPE. It would be permanent.

The MINISTER OF CUSTOMS. I do not know about its permanency either, but the hon. gentleman will agree with me that the benefit would be by a roundabout process, because it means the raising of duties on many articles of commerce that are a second or third remove from where we are applying the relief directly. You would need to have adjusted the duties in these two or three different points, before these men would get the benefit, but the result of the bounty is, that now these mines are opening up, development has commenced, and you have an immediate relief which you could not have had the other way. Whether they would prefer to have a duty or not I cannot say. But it strikes me that if the committee see fit to approve of this resolution, it would be a direct relief to the industry. No one in the House seems to object to the resolution itself ; the only discussion is as to which is the better way and this being the proposition of the government, it seems to me that it would be well for us to adopt it.

Mr. BORDEN (Halifax). I think so, Mr. Chairman, and as the Minister of Customs says, there is no one here objecting to it. It is fortunate indeed in that respect, that we have not present these earnest and consistent free traders the Prime Minister and the Minister of Trade and Commerce, because there would be strong objection, I have no doubt, if they knew that the Finance Minister was introducing this resolution, particularly as the Minister of Customs has pointed out, that this is a direct way and not an indirect way of putting money into the hands of these heartless corporation against whom we used to indulge in such tirades in days gone by.

The MINISTER OF CUSTOMS. I never did that.

Mr. BORDEN (Halifax). The Minister of Customs has pointed out that this bounty puts the money into the pockets of the lead miners in a direct way, but the Minister of Trade and Commerce used rage throughout the country because as he alleged money was put into their pockets in an indirect way. The merit of this proposition, according to the Minister of Customs is, that it puts money into their pockets in a direct way, and therefore, every one ought to be satisfied, even the earnest free traders on the other side of the House who apparently do not recognize that bounties are the most extreme forms of protection.

The MINISTER OF CUSTOMS. Did I say anything about putting money in any one's pocket.

Mr. BORDEN (Halifax). Oh, yes.

The MINISTER OF CUSTOMS. I think not.

Mr. BORDEN (Halifax). Immediate relief —direct relief—surely the minister has not forgotten what he said a few minutes ago.

The MINISTER OF CUSTOMS. I certainly did not say that.

Mr. BORDEN (Halifax). The whole question has been summed up by one British Columbia authority in these words :

> No bonus without duty will relieve the competition in our domestic markets from the product of cheap foreign labour, and the anomaly would be presented of a highly bonussed Canadian miner selling his products in the markets of the world while the greater part of his home market is reserved for the products of foreign countries.

That is the way in which it is viewed in some quarters. However, as the Minister of Customs has said, in the absence of the distinguished cabinet ministers I have named, there is no one in the House who seems to be specially opposed to this resolution, and probably under the circumstances it might be passed.

The MINISTER OF FINANCE. My hon. friend must remember that in matter of parliamentary procedure, and in the enactment of statutes, it is the latest statute that always governs and by it all the others are wiped out; in like manner the latest resolutions and telegrams from the miners of British Columbia wiped out all the others.

Mr. LEFURGEY. I was surprised to hear the Minister of Customs express himself as he did. He treated this whole question as a matter of expediency; and as if we should satisfy the people of British Columbia for political reasons only. It would seem from his argument, that the whole object of the policy of the government is to pursue a trimming course in this matter. There is no decided policy on their part as regards free trade or protection, but each one of them seems to be trimming his sails to meet the political exigencies that may arise at the next election. There is a deplorable want of sincerity in the manner in which these gentlemen opposite treat the fiscal policy of this country. The hon. member from Vancouver read a long article from a western paper setting forth how the trade of the country was going to boom on account of the establishment of this bonus, but notwithstanding that, in my opinion the bonus system is entirely wrong. The government is working from the wrong end in this matter, and they are simply trying to postpone the inevitable. We shall have in the end to protect our industries by a legitimate form of protection that will give stability to the industries of the country. You cannot accomplish that, by this hand to mouth proposition of bonusing certain industries. In this country we need a staple fiscal policy that will encourage foreign capital or home capital to invest in legitimate lines. When the government found that we had in the western country a mining industry which needed some protection, the proper thing for the government to do was to give that industry protection in a legitimate form. Instead of that, they give a bonus of $15 a ton which apparently pleases some people, and because it pleases some people the Minister of Customs is perfectly satisfied, and he does not care whether it is taking the money out of the pockets of the people and giving us permanent benefit to the country so long as he thinks it is going to help his political party.

Mr. GALLIHER. You are not objecting to the bounty.

Mr. LEFURGEY. I am not objecting to any assistance being given to any industry which will help it to advance. I object to this form of assisting an industry, because I believe it will not give permanency and stability to that industry. It is the same with every other industry. We want to establish permanency. We want to put up our tariff wall so that all these industries will be perfected and carried out to their utmost in this country. Why, take the nickel industry. Nickel ore is turned out in Ontario for something like $400 per ton; it is sent to the United States and treated and brought back here worth $2,500 per ton. Would it not be much better if we had so fostered that industry that that treatment would take place in Canada, and we would be building up our own country and inducing capital to come in, and using our wheat products of the west in feeding our own people? That is what we want to do, not only with the lead industry and the nickel industry, but with the steel and iron industry, and almost every other industry that needs protection. And the form of protection should be such as to give permanency and induce capital to come into the country. Now, I want to read an article which I have taken from a paper.

Mr. COWAN. Is it a long article?

Mr. LEFURGEY. It is pretty long, but it is good and will do the hon. gentleman good. This article is by the Secretary of the Treasury of the United States. He says, speaking against the lowering of the tariff, which was contemplated about that time:

> I am only attempting to show the folly of a free trade remedy for an alleged evil.
>
> We are frequently threatened with overproduction, and against this we must always protect by increasing our markets as far as possible. But other countries also have overproduction, and from this source our industries are sure to be crushed unless protected. Does any one suppose any iron industry in the United States could have survived an inundation from Europe occasioned by recent business stagnation in some localities on the continent but for the tariff.
>
> The Republican party watches primarily that the American labourer shall have employment. It is probable that during the last year or two free trade in iron would have cheapened the product to the American consumer, but a million and a half people, fed and clothed directly by wages paid by the various iron and steel manufactories, would have been again begging bread.
>
> Unreasonable prices are always objectionable, but prices unreasonably low are more objectionable and fraught with greater hardships, primarily to the wage-earner, and, secondly, to all those who supply the wage-earner's necessities, than prices unreasonably high. Do you remember that President Harrison said again and again (for the issue in 1892 was high prices). 'There is such a thing, gentlemen, as having prices too low.' But the public did not heed the warning and we had four years of low prices.
>
> Do you want to try this experiment again so soon? We will have prices low enough as soon as the supply equals the demand, and the naked threat of a change of economic

policy always has had the effect to check demand more rapidly than anything else. To-day consumers actually bid against each other.

It has often been pointed out that a protective policy will be a burden on the consumer; and possibly to some extent during the building-up stages this may necessarily to some degree happen. But we have to pass through that stage, and the sooner we get past it and have the competition and the industries built up in our country, the better. Further on, using the United States Steel Corporation as an example, he says:

The corporation owns its own ore, and it therefore pays out for labour directly or indirectly, every dollar except what it pays in interest and dividends. It follows then that this one concern paid during the year ending June 30, 1902, directly or indirectly, over $400,000,000 for labour. And what became of this money? Most of it was spent primarily for food and raiment and material to build homes. This food came from the wheat fields of Minnesota and the Dakotas, and from the grazing fields of the south and from the sheep ranches of the far west, but it all came thence by way of the factories of New England and the Atlantic states. Nor is this all.

The farmers who received this money for food products, for cotton and for wool, spent it in turn for labour or for building material, for carpets, for clothing, or barbed wire, or nails, or other articles of consumption. The mills which ground the wheat, the packers who killed the beeves and the hogs, and the factory men who produced the cloth, paid at least 95 per cent of their gross receipts for labour.

And so these millions went on and on and on and are going still. They have cheered many homes. They have brought food to those who were starving six years ago, and they have helped, in a measure, to make us all rich. But what has the corporation done with its net profits?

The stock of the corporation is held by more than 48,000 people. So this profit is thus divided and subdivided. And what do these stockholders do with it? They, too, have been fed and clothed.

I speak of these things only to show that the entire profit has not been lost. There are compensations, even with high prices. We have at least kept the money with us. It has not gone hence, and labour has received, perhaps not its due proportion, but more than if the money had gone abroad.

But I believe competition is in sight. Last year the entire rolled iron and steel product of the United States was 12,000,000 tons, of which the United States Steel Corporation produced less than 51 per cent. The Lackawanna Iron and Steel Company is building a plant near Buffalo, costing $26,000,000, and they propose to be able to produce a million and a quarter tons per annum. The independent concern, with which Mr. Frick in connected, is being increased to a $20,000,000 plant. I have a letter from Mr. James Swank, secretary of the American Iron and Steel Association, in which he says that when the plants now in process of construction are completed the capacity of this country will be fully 24,000,000 tons per annum; you can draw your own conclusions.

In my judgment we are to have competition, and it will be the kind the American people have learned to appreciate. It will be American competition, and our own artisans will not be forced upon the street again to beg while foreign workmen supply the limited needs of a paralyzed country.

I read this article with the object of showing you that the high protective system in the United States has proved a boon to that country. While there are necessarily some hardships in the working, it has fed and clothed their millions of workmen; and while their prices are higher, they are able to pay their workmen higher wages. The people of the United States find that the protective system, when properly carried out, produces competition at home, which results in lower prices. That is what we want in this country. We want to establish a permanent and stable fiscal policy, which the people can have some dependence upon, instead of dribbling in bounties on one product or another, and having no definite line of action. The country would be in a very much better condition if we established some such policy and applied it to the steel industry, the lead industry and numerous other industries, which would come forward to reap the results which the hon. Minister of Customs expects them to reap from this measure, and they would have the added benefit of permanency.

Mr. POPE. Might I ask the hon. Minister of Finance upon what basis he arrived at this bounty of $15 a ton?

Mr. WILSON. They only asked for $8.

The MINISTER OF FINANCE. They asked for $20. The lead is worth about $60 to $62, and $15 is not an extravagant allowance. If they were getting it in the form of a duty, it would not be considered as a high one.

Mr. THOMSON (Grey). The government are granting a bounty to the manufacturers of binder twine and also to the manufacturers of steel, and they are now giving a bounty of $15 per ton for the production of lead. What are they going to do for the farmers? The hon. Minister of Customs told us distinctly that the bounty was paid directly by the people. I assume that the farmers will have to pay the whole of it. If instead a protective duty had been imposed, that would be paid by the outsider. I purpose saying a word on behalf of the farmer, and I would like to ask the government what assistance they propose to give to help the beet sugar industry. A large deputation this year asked for some assistance for this industry. Does the hon. Minister of Finance intend giving it any?

The MINISTER OF FINANCE. The hon. gentleman is not aware apparently that that industry is already largely encouraged, or, if he prefers to put it that way, protected.

Mr. THOMSON (Grey). There are two lines in which the farmers are particularly interested. One is the beet sugar industry, the manufacturers of which are not satisfied with the amount of protection they are receiving, and the other industry is market gardening. When hon. gentlemen opposite were in opposition they expressed great solicitude for the farmer, but now they seem to think that every other industry requires assistance except those which would benefit the farmer.

The MINISTER OF CUSTOMS. Are you against the bonus ?

The MINISTER OF FINANCE. We think that we have done a great deal for the farmer when we protect him against the adoption of a policy which would add enormously to his taxation.

Mr. THOMSON (Grey). The hon. Minister of Customs said that, in the case of a bounty, the consumer had to pay the whole of it, but that, in the case of a duty, it was the foreigner who paid it. I am in favour of protecting the farmer and making the foreigner pay their duty.

The MINISTER OF CUSTOMS. I certainly never said that. Is the hon. gentleman in favour of this resolution to pay this bounty to the producers of lead and to which the farmer will have to contribute ?

Mr. THOMSON (Grey). I would much prefer a duty.

Mr. CARSCALLEN. I may mention another industry which has pleaded for protection, but without avail. A large deputation interested in the arsenic industry waited on the government last session. They had been led to believe before the election that they would be given a bounty, but they have not received it yet. That industry used to employ some 300 or 400 hands, who are now out of work.

The MINISTER OF FINANCE. I must take exception to the statement that these people were ever led to believe that they would get a bounty. There was no foundation for it.

Mr. CARSCALLEN. I have read a letter of the hon. minister in which he stated, if his words had any meaning at all, that not only this government, but the local government would give a bounty.

The MINISTER OF FINANCE. The hon. gentleman will not find any letter of mine dealing with the local government or promising any bounty. I would invite him to produce the letter, but there is none such in existence, and he has been misinformed.

Mr. CARSCALLEN. I saw the letter myself. The hon. minister will remember that he referred directly to assistance being granted by the local government.

Mr. COWAN. Produce the letter.

Hon. Mr. FIELDING.

Mr. CARSCALLEN. It can be produced quite easily if you will allow this discussion to stand over.

The MINISTER OF FINANCE. If the hon. gentleman has any such letter, he will find no lack of opportunity to present it. But I gave no such letter and gave no assurance whatever of any bounty.

Mr. THOMSON (Grey). I would infer from the remarks of the hon. Minister of Finance that there is to be no assistance granted to the beet sugar industry or to market gardening. My constituency is deeply interested in these industries, and that is why I want the government policy to be made known.

The MINISTER OF FINANCE. I am precluded by the rule respecting previous debates from reviving a discussion which we have already had concerning market gardeners.

On section 2,

The MINISTER OF FINANCE. I move that the first clause of this section be struck out and the following be substituted :—

Payment of the said bounties may be made from time to time to the extent of sixty per centum on evidence of the smelter return showing that the ores have been delivered for smelting at a smelter in Canada. The remaining forty per centum may be paid at the close of the fiscal year upon evidence that all such ores have been smelted in Canada.

It goes on then, ' if at the close,' &c.

Mr. WILSON. How did you pay the bounties before ?

The MINISTER OF FINANCE. Upon the refined lead, which was a more advanced product.

Mr. WILSON. Why is it paid in portions ?

The MINISTER OF FINANCE. It is represented that the process by which the smelters carry on the business will not permit them to guarantee the smelting at the moment the ore is delivered. They take a sample which they assay, and pay the miner on that basis, but they do not smelt it for some time. We assume that they are going to smelt it, and so pay this sixty per cent, but we do not pay the full bounty until the ore is smelted.

Mr. BORDEN (Halifax). As a matter of fact, it practically amounts to this—the smelter buys the ores after having made an assay to ascertain the value.

The MINISTER OF FINANCE. Yes, and in order to have some leverage, we do not pay the bounty until the smelting takes place.

Amendment agreed to.

The MINISTER OF FINANCE. In order to carry out what I stated with respect to

the manufacture of lead by another process, I desire to insert the following :—

If at any time it shall appear to the satisfaction of the Governor in Council that products of lead are manufactured in Canada direct from lead ores mined in Canada without the intervention of the smelting process the Governor in Council may make such provisions as may be deemed equitable to extend the benefits of this Act to the producers of such ores.

Mr. BLAIN. Does the government expect that such a process will be soon adopted ?

The MINISTER OF FINANCE. I had an application since this resolution was placed upon the paper from some gentlemen in Toronto, who stated they were engaged in an industry by which they proposed to produce the products of lead without the smelting process. I asked for information, and they gave me the opinion of experts that it was reliable and would probably be put in operation. I thought it right to make the resolution wide enough to cover that operation as well as the smelting, if it should turn out satisfactory.

The MINISTER OF CUSTOMS. I would move for a reconsideration of the first clause from which the word proportionately has been struck out. I would point out to the leader of the opposition that £12 10s. is the price at which they will get this bonus. Say that the lead goes up to £14, then the bonus is reduced proportionately. Now, that word 'proportionately' has been struck out, the effect will be to reduce the bonus by £1 10s.

Mr. BORDEN (Halifax). That would be all right if you were to follow it up by the words which conclude the sentence 'by the amount of such excess.' When you say that 'such bounty should be reduced proportionately by the amount of such excess," I do not understand that.

The MINISTER OF CUSTOMS. It may run up ; if it runs up to £16 10s. it ceases altogether. It shall be reduced proportionately to that ; that is, if the price has advanced we will say £3, then whatever proportion that £3 would bear to £12 10s. whatever percentage that was, would effect a reduction.

The MINISTER OF FINANCE. There is another question. We have a ton of 2,000 pounds and the English ton is 2,200 pounds. I think for the present the word 'proportionately had better be allowed to remain in, and before the third reading we will give it further consideration.

Mr. BORDEN (Halifax). I would remind the hon. gentleman that these resolutions impose a further charge upon public revenues of the country.

The MINISTER OF FINANCE. No, because it is limited to $500,000.

Mr. BORDEN (Halifax). But it is possible to impose a charge because it might not amount to $500,000 without that.

The MINISTER OF FINANCE. I do not think my hon. friend is right there. This is an important question as to the various methods, but the limitation is the same. We are empowered to go up to the sum of $500,000, but not to increase that.

Mr. BORDEN (Halifax). But it might not amount to $500,000 without this additional charge.

The MINISTER OF FINANCE. It is not an additional charge, if it goes to ores in both cases.

Resolutions reported, read the first and second times, and agreed to.

The MINISTER OF FINANCE (Hon. W. S. Fielding) moved for leave to introduce Bill (No. 239) respecting bounties on lead.

Motion agreed to, and Bill read the first time.

On motion of the Minister of Finance, House adjourned at 1.25 a.m., Friday.

HOUSE OF COMMONS.

FRIDAY, August 7, 1903.

The SPEAKER took the Chair at Three o'clock.

INTERCOLONIAL CONFERENCE.

Mr. T. S. SPROULE (East Grey). Mr. Speaker, before the Orders of the Day are called, I desire to ask a question with regard to the correspondence which took place on the subject of the inter-imperial conference. I am informed that the question was put to the right hon. the Premier (Rt. Hon. Sir Wilfrid Laurier) a few days ago whether he would endeavour to have this correspondence laid on the Table at an early day, and he replied that he hoped to be able to lay it on the Table in a few days. Might I ask, in the absence of the leader of the opposition (Mr. Borden, Halifax), if the Prime Minister has any further information to give us on the subject ?

The PRIME MINISTER (Rt. Hon. Sir Wilfrid Laurier). I told my hon. friend the leader of the opposition that I would have to communicate with His Excellency the Governor General before making any statement. This I have done. The information I have to convey to the House is that the despatch which came from the Colonial Office was a secret despatch, which we have not the right to lay upon the Table. His Excellency has communicated with the Colonial Office asking for permission, and no answer has been received.

NATIONAL TRANSCONTINENTAL RAILWAY—OLD SURVEYS.

Hon. J. G. HAGGART (South Lanark). I would like to call the attention of the act-

ing Minister of Railways (Hon. Mr. Fielding) to the necessity of furnishing the House either to-day or on Monday with all possible information that is in the department in reference to surveys that were made for a contemplated railway at the time when the Canadian Pacific was building, from Lake Témiscamingue north of the height of land, north of Lake Nepigon towards Lake Winnipeg. One of the surveys west of Lake Nepigon and to twenty-five or thirty miles north was made by a Mr. Bailey. The one on this side was by Mr. Secretan, and Mr. Gansby made another survey. I do not want the actual surveys, but the reports of the engineers as to the nature of the country would be very interesting and helpful in the debate on Tuesday next.

The MINISTER OF FINANCE (Hon. W. S. Fielding). I have been informed that there are no reports of the character referred to in the department other than those which have been published and that may be found in the library. I made inquiry with reference to what the hon. gentleman (Hon. Mr. Haggart) said on a previous occasion, and this is the information that was given me in the department. Perhaps, with the details that the hon. gentleman has given, we may be able to find them.

Hon. Mr. HAGGART. I can give the names of the engineers who have charge of the different surveys. There can be no doubt about it. The reports must be there.

The MINISTER OF FINANCE. All these reports, I think, were published at the time, and are to be found in the library. But I understood the hon. gentleman to say that there was something later.

Hon. Mr. HAGGART. No; they are not published. They are reports made for the purpose of an alternative route for the Canadian Pacific Railway. The surveys were made under the direction of Sir Sandford Fleming (then Mr. Sanford Fleming), who was then the deputy head of the department.

The MINISTER OF FINANCE. I think that what my hon. friend (Hon. Mr. Haggart) refers to will be found in the different reports of the department that are on file in the library. I understand he has reference to some that were not published. I will make further inquiry about the matter.

BRITISH CABLE NEWS SERVICE.

House went into committee to consider the following proposed resolution:

That it is expedient to enact as follows:—

1. The Governor in Council may authorize the payment of the following sums, in the respective fiscal years mentioned, for the purpose of assisting in establishing and maintaining an independent and efficient service of telegraphic news from Great Britain, for publication in the Canadian press:—

(a.) For the fiscal year 1903-4, a sum not exceeding fifteen thousand dollars, or at the rate of fifteen thousand dollars per annum for any period less than a year.

(b.) For the fiscal year 1904-5, a sum not exceeding fifteen thousand dollars.

(c.) For the fiscal year 1905-6, a sum not exceeding fifteen thousand dollars.

(d.) For the fiscal year 1906-7, a sum not exceeding ten thousand dollars.

(e.) For the fiscal year 1907-8, a sum not exceeding five thousand dollars.

2. The said sums may be paid at such times and in such manner as the Minister of Finance may determine, to any association or committee representing the proprietors of such newspapers as may associate themselves for the purpose of establishing and maintaining such service.

Provided, however, that no payment shall be made under authority of this Act until the Minister of Finance shall have satisfied himself that the benefits of the service are open, on fair and reasonable terms to all newspapers published in Canada; and that not less than one-half the cost of establishing and maintaining such service is paid by the proprietors of the newspapers participating in the benefits thereof.

3. The Governor in Council may make regulations for carrying out the purposes of this Act.—The Minister of Finance.

The MINISTER OF FINANCE (Hon. W. S. Fielding). The resolution which is before the committee, as will be seen, has reference to the granting of a sum of public money to assist in making a better cable service for the benefit of the Canadian press and, through the Canadian press, for the benefit of the Canadian people. I am sure that members of the committee will agree with me when I say that the manner in which our Canadian press is served with cable news from Europe, except as respects a few special despatches which they are receiving, and which are unobjectionable, is eminently unsatisfactory. I am sure that every hon. member when reading in the public press the report of something of imperial concern which has been before the British House of Commons, or in some way has engaged the attention of the people, has had reason to feel aggrieved at the tone and temper of the whole report. This arises from the fact that our Canadian newspapers —though I am glad to say they are making gratifying progress, and are making an excellent place in the journalistic world—are not, many of them, endowed sufficiently with wealth to be able to establish an independent cable service. Some two or three of the more enterprising have recently obtained special cable reports of their own, but the majority are still obliged to use the reports received by way of the United States and prepared chiefly for the United States people. The consequence is that many things that are of interest to us in Canada are not reported at all, and many that are reported are coloured in a way that is far from agreeable to us. Several years ago I was so impressed with this fact that I asked the consent of my colleagues to make

a proposition to parliament for a public grant to assist a movement of this kind toward the establishing of a better service for the Canadian press. I thought then, as I think now, that the service should not be entirely supported by government, but that the newspapers themselves should bear a proper share of the expense. I had negotiations with a number of gentlemen connected with the Canadian press, in the hope that I might then be able to prepare a scheme of this character. But, as it involved a considerable outlay by the Canadian newspapers, they were not prepared at the time to respond to the suggestions we made. The proposition received their sympathy, but the financial part imposed too serious a burden upon the newspaper proprietors, and, for the time being, the movement was not successful.

Quite recently however some gentleman connected with the press who have been aware that the government entertained such an idea in time past, have approached us again and asked if we would still be disposed to carry out what was then in our minds, and I have been glad to be able to assure them on behalf of the government that if they were prepared to form an organization for giving an efficient service to the Canadian press and bear a reasonable proportion of the expense, we would be glad to make a contribution to the system. A committee composed of representatives of the press, irrespective of political parties, came here some time ago and stated that if we would agree to give a moderate degree of assistance they would themselves undertake to raise a considerable sum of money. We have come to the conclusion to ask the House to approve of the grant of the sums which we have mentioned in these resolutions $15,000 for the first, second and third years, $10,000 for the fourth year, and $5,000 for the fifth year. We are assuming that the press will develop considerably, and that while at the beginning they cannot aid as much as we would like them to do, and they would like to do for themselves, we expect that after several years they will be able to gather in the subscriptions of a larger number of newspapers and be able to carry on the service effectively after the expiration of the five years. We leave the scheme largely to the newspapers. The government do not assume to exercise any control over it. We propose to deal, as the resolution says, with an association or committee representing the press generally.

Mr. SPROULE. Have they not outlined any scheme yet ?

The MINISTER OF FINANCE. Not further than this, that we have intimated to them that for a time at least they should undertake to provide a service, to employ correspondents, to pay for cable bills and do all that is necessary to create an efficient service, and they have agreed to secure the co-operation of as many newspapers in Canada as are able to contract for the service. The newspapers in the large cities will have to pay a much larger amount than the newspapers in the smaller centres, although all will receive the service alike ; those in the large communities will have to pay more, those in the smaller communities will pay less, though they all get the same news. We leave the gentlemen of the press to work out all the details for themselves. The conditions which we impose are, first, that they raise and spend for the service at least as much money as the government does. The second condition is that they must hold the service open to every newspaper in Canada on fair and reasonable terms ; and unless they can show us that everybody in Canada who wants to contract has all the privileges which this scheme offers them they are not entitled to receive the money. We leave the working out of the details entirely to the newspaper people, and we accept the assurance which the representatives that the leading papers have given us that they will work it out on an entirely non-partisan basis, and with the co-operation of the press generally throughout the Dominion.

Mr. BORDEN (Halifax.) I heartily and cordially support the proposal of the Minister of Finance in this regard. I am satisfied that the people of this country have not had fair play in the way of getting news from England during the past, and on the other hand the people of England perhaps have not been any better supplied with Canadian news. We have had to get a great deal of our news through sources which are coloured, not certainly from a Canadian or an English standpoint. While I am not disposed to make any reflection in that direction, nevertheless I feel satisfied from what information I have obtained, and that I have had placed before me in connection with this very matter, that certain events of great public consequence in the mother country have sometimes come to us with a certain colour which is not desirable either in the interest of the empire or in the interest of Canada. If it is possible by aid of this kind to ensure that the press of Canada shall have fair and accurate reports of events of public importance in the mother country, and that the people of the mother country shall have accurate and adequate means of knowing what is being done and published in Canada, I think a great service will be rendered to the country. I do not know how it is in Great Britain at the present time, I have not had the pleasure of visiting that country for six or seven years ; but I know that during my previous visits I have often been intensely disappointed, I might even use a stronger word, at the very great dearth of news of my country that appeared in the English papers. In many of them there was not a word regarding Canada for a considerable time, and in the more import-

ant journals only a line or two and perhaps not that. If this grant will contribute to any better result, and I have every reason to believe that it will, I think there is no person in this country who would not heartily join in supporting the proposition of my hon. friend the Minister of Finance.

Hon. Mr. TARTE. Some time, either in the month of June or July, I attended a meeting of gentlemen connected with this project in the city of Montreal. At that time they did not appear to have any clearly defined scheme in their minds, I hope it has been made clearer since. At the meeting to which I allude there were, besides newspaper men, some business men. Similar meetings I understand had been held in Toronto and elsewhere. If I understood what was in their minds, their idea was to form a kind of a joint stock company together and send news. It was in my capacity of a newspaper man that I was invited to attend the meeting; there were only a few newspaper men present for the city of Montreal. I would like to know from the Minister of Finance on what conditions he proposes to pay that pretty large sum of money. So far as I understood the idea of the newspaper men, it was to act in opposition to the existing cable, or at any rate to the existing state of affairs. The object was not very clear, and that is the reason why I inquire. Let me say before taking my seat that, being no more Minister of Public Works, I am more free to fight for the rights of my former department. I think my hon. friend the Minister of Finance is invading the realm of the minister of telegraph. If it were in my days I would kick. I make that remark in a very friendly spirit, but all the same I claim that when a department has direct charge of business-like telegraphs the hon. Minister of Finance should at least agree that the minister of telegraphs should make a report jointly with him. That is only fair. I have no personal ends to serve and I make these observations in all friendship.

The MINISTER OF FINANCE. In regard to the statement of my hon. friend (Hon. Mr. Tarte) that it is an invasion of the Public Works Department, I may say that it is not an invasion of any department for the Minister of Finance to provide the money. I have never found that any department had the least objection to the Minister of Finance providing money. I am not clear that any particular department has charge of this business, but I may say that when the Minister of Public Works required money for the Harbour Commissioners of Montreal, a matter coming within the purview of his department, as far as expenditure is concerned, it was always the Minister of Finance who brought up the appropriation and gave him the money, so that we are simply following the same rule in this case as in other cases. My hon. friend the leader of the opposition (Mr. Borden, Halifax), whose commendation and co-operation I am glad to welcome, I am afraid connected this resolution with a matter which is a little beyond its scope when he suggested that we might make provision not only for news coming from Great Britain, but also for a supply of news from Canada to Great Britain. That is very desirable indeed.

Mr. CLARKE. This scheme may work out in that way.

The MINISTER OF FINANCE. Yes, this scheme may lead to it. You have to make arrangements with the English papers to publish your news and this is not a matter that can be directed from this side of the Atlantic. If we could do anything to induce English papers to give more prominence to Canadian affairs it would be well worth our pains to attempt to do something in that direction. I am glad to know that of late years there has been a vastly increased interest taken in colonial affairs, and particularly in Canadian affairs, and we find that the English newspapers are to-day disposed to publish much more matter from Canada than formerly. They have a number of special correspondents in Ottawa. I have had the pleasure of meeting three of four gentlemen representing the British press within a few days who have come out to visit Canada, not only those with the British press party, but others who have come out individually. I think if anything could be done to arouse an increased interest in London, and to bring about the publication of Canadian events in the British papers it would be very desirable.

Mr. SPROULE. Am I correct in understanding that this cable service will be quite independent of the American lines?

The MINISTER OF FINANCE. Yes.

Mr. SPROULE. What will be the cost per word for these despatches, and what number of words will be received per day during the year for that amount?

The MINISTER OF FINANCE. I am afraid I cannot give the hon. gentleman that information. When we say it will be independent of the American lines, what we mean is that there will be a Canadian correspondent in London and he will do work entirely for the Canadian service, and that will give us a purely Canadian service. We do not make any condition as to what particular cable the news must come over. As to rates, I have no reason to suppose that the rates will be any lower than they now are. Just what number of words this will give each day is a point that I could hardly undertake to speak upon.

Mr. SPROULE. What are the rates now?

The MINISTER OF FINANCE. The press rate is 12½ cents per word, or half the ordinary commercial rate. The commercial rate is 25 cents a word, and the press rate is 12½ cents a word.

Mr. CLARKE. What about utilizing the Marconi system ?

The MINISTER OF FINANCE. I have no doubt they will, and if they do they will get the benefit of the rates for which we have stipulated. On that point we have not very much information as to the recent movements of the Marconi system. A representative of the company was here recently, he came to see me and he said that while they had suffered some difficulties and delays, he felt satisfied that within a very little time they would be able to carry out all they had undertaken.

Mr. BORDEN (Halifax). As a matter of fact is there not another company that has made some better progress than the Marconi company ? I have noticed some tests between the two companies in the United States, the Deforest Company and the Marconi Company, and I observed that on two recent occasions messages transmitted by the instruments of the Marconi Company have been tapped by another company. One of these occasions was only a day or two ago.

The MINISTER OF FINANCE. There is another company which has been making very great progress. As to the relative merits of the two systems, I would not be in a position to offer any opinion. The Marconi system is admittedly successful for short distances as the Deforest system is. As to long distances, I would not say anything as to their relative merits, but they are both successful as to short distances. At present the Deforest company has not attempted ocean telegraphy, but they have it in contemplation, and they believe that they can carry it out more successfully than the Marconi Company. They have made some proposals to the departments looking to the adoption of the Deforest system in the Canadian government service.

Mr. BORDEN (Halifax). I should think it would be extremely desirable for the government to make sure as to the success of either system before spending any more money in connection with it. It seemed to me extremely inconsistent that last year we should be making a grant of money in favour of the Marconi Company, and at the same time building cable lines in localities which should be served by this company if this invention is going to amount to anything. I do not know anything of the relative merits of the two systems, but I think that possibly the hon. Minister of Finance may be able to tell us whether or not the Marconi system across the Atlantic is an assured success.

The MINISTER OF FINANCE. No, it is not a commercial success yet. I understand, however, that they are sending messages from this side to England. The representative of the company who called on me, in answer to my question as to that, said that they were prepared to transmit any message which I might give him to any of my friends or acquaintances in London, but that they could not undertake to bring the return message, because the power of their station in England is not as great as the power of their station in Cape Breton. That was the reason given.

Mr. CLARKE. It is a lop-sided system.

The MINISTER OF FINANCE. Well, it takes two parties to make a contract like that. I do not regret the step that we have taken in assisting the Marconi system. It is a great invention, and I think Canada obtained a little kudos for holding out her hands and assisting these people to come to Canada, and if the Marconi system should prove to be a great success in the future the government of Canada will always in the history of that invention be credited with having been the first government in the world to give it a friendly hand.

Mr. SPROULE. It seems to me, from the calculation that I have made, that they would not get a very big service for the amount of money that is proposed to be given.

The MINISTER OF FINANCE. They have to give an equal amount of money.

Mr. SPROULE. That would make it $30,000. If you take $30,000 and divide that by eight, which would practically give the rate per word, then divide the result by 365, the number of days in the year, you would find that the number of words that you would get would not be very many. Then you would have to deduct also from that the cost of delivery and other incidental expenses in connection with it; so that you would not get a very good service for the amount of money, unless there is some special arrangement whereby there will be a reduction in the rate that we are paying to-day.

The MINISTER OF FINANCE. I am afraid I will have to give away some of the family secrets. My hon. friend (Mr. Sproule) is too confiding when he assumes that every word he reads in these cable despatches in the newspapers has been cabled from the other side. I have no doubt that there is an impression amongst many excellent people, when they read these long columns of cable despatches that every word came from England exactly as it appears, at the rate of sixpence per word. The fact is, that many of these words are never cabled from England at all. These cablegrams are skeletonized, and a clever journalist can,

with the exercise of his intelligence and his experience, fill out that paragraph, save a good deal of money, and give the people an intelligent service.

Mr. CLARKE. That is the practice on the other side.

The MINISTER OF FINANCE. It is a world-wide practice in the field of journalism, and it is a legitimate practice in the hands of capable and responsible men. If you are giving the exact words of a man or a quotation from a document, of course that must be given exactly; but for the general purpose of giving news you can fill in your skeleton cable and you can do it quite legitimately.

Mr. SPROULE. Without destroying the sense or warping the meaning?

The MINISTER OF FINANCE. Certainly.

Mr. HOLMES. The hon. member for Grey (Mr. Sproule) is so seldom on his feet that I have no objection to being called to order by you, Mr. Chairman, in order that I should give the floor to him.

Some hon. MEMBERS. Hear, hear.

Mr. HOLMES. As one of those who happened to be present when the delegation of newspaper men waited on the Finance Minister, I wish to say a word or two on this matter. The representations then made to the Finance Minister and made to myself in private conversation afterwards, were that the representatives of the press intended by this method to get an entirely uncoloured news-service so far as English cable news is concerned. My hon. friend the leader of the oposition, as stated by the Finance Minister, is evidently under a wrong impression as to the nature of this service. I would myself be glad if it were possible to have in the English newspapers a good summary of Canadian news, which apparently we have not at the present time. However the object of the newspaper men who waited on the Finance Minister as representing the various leading papers of the country of both sides of politics, was that they might be able to obtain a much better and more complete cable service than they have at the present time. I do not know what information the late Minister of Public Works (Hon. Mr. Tarte) has over and beyond what he has stated to the House, but so far as the representations made to the Finance Minister are concerned, there was no idea or intention that there should be the establishment of an independent cable service at all. The simple idea was to procure through uncoloured channels information that would be of advantage and benefit to the people of Canada. There is also this fact to be borne in mind—as criticism is offered by the member for East Grey—that the amount that was promised by the Finance Minister is the amount that was practically asked for by the gentlemen representing the newspapers. They evidently had made some estimate as to the annual expense that would be involved, and they were perfectly satisfied with the conditional assurance of the Finance Minister that assistance of the nature now proposed should be granted. They realized that this would give to them a satisfactory news-service. Anybody who had had any experience with newspapers knows perfectly well that telegraph tolls as a rule are pretty heavy, and the newspapers do not get any more cable news than is absolutely necessary because of the great expense. Under the anticipated condition of affairs, they will have an everyday cable service that will be more satisfactory to newspaper readers and to the people of Canada generally. I understood from the remarks of the deputation that they intended taking in a number of the journals throughout the country as co-partners in this scheme. Of course, newspapers are subjected to what no other business is subject to, in that there is more or less stealing carried on by the papers that come out later than the others, and consequently no help can be obtained from some newspapers for this scheme. However, it was understood that a number of the papers joining in this organization were willing to bear their share of this expense in connection wth the proposal as announced by the Minister of Finance. It seems to me that the proposal will meet with the cordial approval of the entire House. It is one of the few questions upon which we can all agree, and I am satisfied that it will prove a decided advantage to Canadian newspapers. If the result should be to lead to the publication of fuller and better Canadian news in the British newspapers, we will have accomplished a great deal of good for Canada by voting this money.

Mr. SPROULE. I feel deeply grateful to the member for Huron (Mr. Holmes) for the gratuitous information he has given to the member for East Grey, and also for the additional information he has given us as to the proclivity of the newspaper men for stealing their news.

Mr. BENNETT. That is only some of them.

Mr. SPROULE. The small press, he says. I assume that those who acquire the habit of stealing ballots could as well steal their press despatches, and therefore it would not be much out of place for them to do so. I still believe that this scheme is not universally regarded by the press of the country as a satisfactory arrangement. I am told that the Montreal Gazette is not of the opinion that it is going to be an unqualified success, and for reasons which I need not wait to explain at the present time. I am not opposed to the proposition because I think the principle is good. I have al-

ways regarded it as an unfortunate thing that our news from England comes through a source that so warps it, that it is of little value to us, and does not do justice to the country or to those with whom the information originates. It is very desirable, if it be possible to attain it, that whatever news we do get shall not be coloured by the fruitful imagination of journalists, but that we should get in substance the same information that was given at the other end of the wire. That is a matter of great importance to the country, and as for news going to England, I assume that it is not so liable to misrepresentation as the news coming from England to Canada. If this succeeds in getting us correct information in cable despatches, the money, in my judgment, will be well spent.

Mr. HOLMES. Every one in this House knows perfectly well that when the hon. member for East Grey (Mr. Sproule) addresses the House, he only speaks on subjects that he is familiar with, and hence his reference to ballot stealing must be based on personal experience.

Some hon. MEMBERS. Hear, hear.

Mr. SPROULE. I am not on record as having any experience in that line like my hon. friend.

Mr. MARCIL (Bonaventure). As a member of the newspaper fraternity, I believe I can express the opinion prevailing in the province of Quebec, when I congratulate the government on this new departure. It is certainly a sign of the times, and I hope the benefits of the proposal will be lasting for the Canadian press and for the Canadian people. The scheme is so good a one that I am sorry it has been limited in its operation to Great Britain. We have in Canada more than a million and a half of Canadian citizens who take a very deep interest in what goes on in France. Successive governments have made praiseworthy efforts to renew our commercial relations with France; the Conservative government brought about a treaty with France and the present government is following up the efforts which were made in that direction in the past. I trust, therefore, that the government will not overlook the importance of having a branch of this cable service extended to Paris. London, of course, is the centre of the English world, as Paris is the centre for continental news, and it is in the interest of Canada that certain things which happen in France should be reported to the Canadian press from Paris itself, and not receive a colouring in London, as unfortunately has happened when some little friction has sprung up. While I commend the effort that is now being made, I hope that the government will see that this Canadian Press Association will have an agency established in Paris, not only for French news, but for continental news generally. No Canadian now goes to Europe without going to Paris, and no trip to Europe is complete without a visit to Paris. If we wish to extend our commercial and social relations with Europe, I believe that we should have a representative of the Canadian press in Paris, and that Canadian news should be sent to Paris, which is the centre of distribution for the whole continent.

The MINISTER OF FINANCE. I am glad to be able to assure my hon. friend (Mr. Marcil) that the matter which he has spoken of has not escaped our attention. When I was discussing the subject with the gentlemen of the press who called on me, I suggested to them that it might be desirable that we should take into consideration the needs of the French press, and I asked them to communicate with some of the French newspapers and ascertain to what extent they desire communication with Paris. I anticipated that it might be necessary to stipulate that there should be an agency in Paris, but I am informed, and though my information is at second-hand, I think it is correct, that the leading French papers take the view that while they were desirous of having occasional telegrams from Paris, when something of importance occurred, they did not think there was enough news of interest to Canada to require a regular correspondent to be established there in the same sense as in London. I anticipate, however, that the committee will see that a connection is made with Paris for getting French news, and supplying as much of that to the French newspapers as they are desirous of having. I can assure the hon. gentleman that the matter has been considered, the committee has been in communication with the proprietors of some of the French newspapers, and I am assured that they are in sympathy with the movement in its present shape.

Mr. BORDEN (Halifax). Have the committee or the gentlemen who are to compose the proposed association had under consideration at all the subject of supplying Canadian news to the English press? I regard it as very important that the news which is distributed throughout the United Kingdom with regard to Canada should go as much as possible direct from Canada, and I believe that is not the case at the present time to a very great extent, except with the great journals.

The MINISTER OF FINANCE. Though it is not the case to as large an extent as we could wish, it is the case to a much larger extent than ever before. There are two well known press agencies in England, the Reuter and the Exchange Telegram Company, both of which have correspondents at Ottawa; and when a despatch goes to either of these agencies, it is distributed to a large number of newspapers. In addition to that, several papers have

their special correspondents, who, though they do not send daily telegrams, do send telegrams when anything of importance occurs. While I realize that this service is much better than it was in former years, it is not yet all that we desire, and I shall be glad if this association can be the means of improving it. The newspaper men of Canada represent to me that while they can enter into an agreement for news to be printed in the Canadian press, they have no guarantee that any news they might send to England would be printed in the English newspapers if it were sent. So that I do not think that at the present time we are able to do in that respect what my hon. friend and myself both desire. I hope the effect of this arrangement will be to help the other end of the service, and that, ere long, we shall have a better service on both sides than we have at present.

Resolutions reported, read the first and the second time, and agreed to.

The MINISTER OF FINANCE moved for leave to introduce Bill (No. 240) to assist in establishing and maintaining an independent and efficient service of telegraphic news from Great Britain for publication in the Canadian press.

Motion agreed to, and Bill read the first time.

RAILWAY DEBTS.

The PRIME MINISTER (Rt. Hon. Sir Wilfrid Laurier) moved second reading of Bill (No. 155) respecting the jurisdiction of the Exchequer Court as to railway debts. He said: This is a Bill which has been placed on the government orders, but which has been introduced into the House by my hon. friend from St. John and Iberville (Mr. Demers).

Mr. L. P. DEMERS (St. John and Iberville). In 1890 an Act respecting the jurisdiction of the Exchequer Court as to railway debts was enacted as chapter 44. By this Act leave was given to the mortgagees, creditors or holders of debentures against a railway to obtain from the Exchequer Court a decree of sale of the railway. Since that time it has been discovered that there were other parties to whom no leave was given. These are the ordinary creditors and the public at large. It is proposed by this Bill to give relief to these parties. It is a well-known fact that many of our railroads are not operated during certain parts of the year, and though the public at large suffer, this government has not been able to afford a proper remedy. It is proposed by this Act to permit the Minister of Railways and Canals when a railway is insolvent to apply to the Exchequer Court for an order of sale and for the appointment of a receiver.

Motion agreed to, and Bill read the second time, and House went into committee thereon.

On section 1,

Mr. BORDEN (Halifax). Is it intended by this Bill to take away any of the jurisdiction which a provincial court might exercise so far as a railway wholly situated in a province is concerned?

Mr. DEMERS (St. John and Iberville). The purpose of the Act is not to take away the jurisdiction of provincial courts. It is in accordance with what was in the Act of 1899.

The MINISTER OF JUSTICE. It seems to me that the first paragraph of section 1 is an answer to the question of my hon. friend the leader of the opposition. It is intended to give the Exchequer Court jurisdiction merely in connection with railways under federal jurisdiction, i.e., railways that reach beyond the limits of any one province, or that connect with the great French lines running into, such as the Canadian Pacific Railway and the Grand Trunk Railway. The intention is to give jurisdiction to the Exchequer Court over such railways as are within the legislative jurisdiction of the federal parliament.

Mr. BORDEN (Halifax). We have railways in Nova Scotia, which are subject to the legislative authority of the parliament of Canada, but which are wholly in the province of Nova Scotia. Is it intended by this Bill to vest exclusive jurisdiction over such railways in the Exchequer Court? I do not know that there are any words in the Bill which necessarily would lead to that interpretation, but, some question might be raised; and if it is not intended to deprive provincial courts of any jurisdiction they have at present, it would be better to state so specifically. I might bring to the attention of my hon. friend from St. John and Iberville the use of the word 'insolvent' in subsection (a). Has he defined that word anywhere in the Bill?

Mr. DEMERS (St. John and Iberville). Yes, in section 5. As I have already stated, clause 1 of the Bill, defining the railways over which the Exchequer Court of Canada shall have jurisdiction, is taken verbatim from the statutes of 1899, chapter 44.

Mr. BORDEN (Halifax). This section simply re-enacts that?

Mr. DEMERS (St. John and Iberville). No, it goes further. While the same railways fall under the jurisdiction of the Exchequer Court, as are defined in chapter 44 of the statutes of 1899, the jurisdiction of the Exchequer Court is extended beyond that Act to ordinary creditors and to roads not operated.

The MINISTER OF JUSTICE. This legislation is rendered absolutely imperative by

the judgment of the Privy Council in Grey vs. the Manitoba and North-western. The Privy Council held that no provincial court has jurisdiction to deal with a railway as an entity, which exceeds beyond the limits of the particular province in question, so that in order to have such a railway sold, it is necessary to vest some federal court with jurisdiction over it. As regards a railway entirely within the limits of a province but which is under federal jurisdiction, owing to its having been declared a work for the general utility of Canada, I cannot see any good reason why a provincial court should not have jurisdiction to deal with it. It is an immovable and entirely within the limits of the province.

Mr. BORDEN (Halifax). I agree absolutely with my hon. friend that, as regards a railway which extends beyond the limits of a province, we must confer jurisdiction on the Exchequer Court. But there is a question as to those wholly within, although as the hon. member for St. John and Iberville points out, he has used exactly the same language in that regard as is to be found in the Act of 1899. We have had no difficulty in Nova Scotia about working out these matters in respect of a railway wholly within that province. My hon. friend from Annapolis knows that our courts have dealt with these matters without any difficulty whatever, and it seems to me that it would be more convenient to deal with them in the province where our courts are readily accessible and not have to go to Ottawa for the issue of process and the many interlocutory applications necessary in litigation of that kind. Of course, in so far as this Bill proposes to confer upon the Exchequer Court powers which are not exercisable by any provincial court, and which are in the public interest, you migh leave it as it is with respect to interprovincial railways; but in the case of a railway situated wholly within the province, it would be better to have those powers exercised by the highest court of the province. Has my hon. friend from St. John considered that point in his Bill?

Mr. WADE. I would be very sorry indeed to see any of the powers of our provincial courts taken away. I do not think that the wording of this section deprives them of any jurisdiction. It only confers jurisdiction on the Exchequer Court in cases where it is not vested in a provincial court. If there be any doubt, it would be well to add a clause providing that this Bill shall not detract from any jurisdiction now vested in our provincial courts.

Mr. BORDEN (Halifax). There is a little more in it upon which I would be very glad to know the opinions of members of the bar throughout the House. This Bill does confer powers upon the Exchequer Court which are not at present exercisable by provincial courts. But in respect of a railway situated wholly within a province, is it better to confer those powers upon the Exchequer Court or the provincial court of the highest jurisdiction? At this moment there is no good reason why those powers should not be exercised by the highest court in the province in respect of a railway wholly situated within that province.

Mr. DEMERS (St. John and Iberville). The Bill only concerns railways over which the Privy Council has decided that the provincial courts have no jurisdiction.

Mr. BORDEN (Halifax). I agree that the Exchequer Court is a proper tribunal to have jurisdiction in respect of any railway extending through more than one province. But why should not the provincial court of the highest jurisdiction exercise those powers in respect of a railway situated within a province? I take, for example, the Dominion Atlantic Railway, or the Nova Scotia Central Railway, which are entirely within the province of Nova Scotia. Suppose you want to exercise the powers here conferred upon the Minister of Railways and Canals or upon any creditor, to sue for a decree against such a railway because it has become insolvent, or has for more than ten days failed to efficiently continue the working or operating of such railway, why should you not have the decree made by the Supreme Court of Nova Scotia instead of by the Exchequer Court?

Mr. BELCOURT. It seems to me that the suggestion of the leader of the opposition is a good one.

The MINISTER OF JUSTICE. If it were decided to carry out the suggestion of the hon. leader of the opposition, all that would be required would be to strike out the words 'or as regards any railway otherwise subject to the legislative authority of the parliament of Canada.' This would restrict the jurisdiction to those railways not wholly within one province. But the question arises as to whether it is or is not wise to give the federal court which is under our control absolute jurisdiction in all matters connected with railways that are under federal authority. It seems to me that this would be desirable rather than to follow the suggestion of the leader of the opposition. There is no reason why a railway that is under federal jurisdiction, even if it is wholly within the limits of one province, should not be made subject to the jurisdiction of the Exchequer Court, the same as with a railway extending beyond the limits of one province. It seems to me it would be better to make uniform legislation. That would not exclude the concurrent jurisdiction of the courts of the province in dealing with those railways that are situated wholly within the province. My hon. friend will remember the decision in the case of Redfield vs. Corporation of Wickham, where the Privy Council held that

a provincial court had a right to sell a railway. I will read from that decision :—

> They do not suggest that, according to the policy of Canadian law a statutory railway undertaking can be disintegrated by piecemeal sales at the instance of judgment creditors or incumbrances; but they clearly show——

And this is the important part——

> —that the Dominion parliament has recognized the rule that a railway or a section of railway may, as an integer, be taken in execution, and sold, like other immeubles, in ordinary course of law. They justify the statement of Chief Justice Dorion, in the present case, that 'it is now well settled by the jurisprudence prevailing in this country, and recognized by the Act 46 Vic. c. 49, that a railway can be seized and sold for the debts of the company who owns such a railway.

That was a railway which came within the operation of our Dominion Act, but, being entirely situated within the limits of the province of Quebec, it was held that the provincial courts had jurisdiction, and the railway could be taken in execution and disposed of by the sheriff absolutely in the same way as any other property.

Mr. BORDEN (Halifax). I agree with everything that the Minister of Justice (Hon. Mr. Fitzpatrick) has said with regard to the operation of the law. The old rule, of course, was that, in respect to a railway you 'could not cut down the trees, but only take the fruit'—you could put a receiver in charge and use the revenue to pay a judgment creditor.

Mr. WADE. That, however, never prevailed on this side of the water.

Mr. BORDEN (Halifax). That prevailed in England. And they put it on the ground of public policy—that a railway was intended to be a public service, and you could not interfere with the service at the instance of the creditors, but you could give him relief by giving him the rents and tolls through a receiver. I do not know whether I clearly apprehended the reason on account of which the Minister of Justice said that these powers should be conferred on the federal court. Would he be good enough to repeat briefly the reason that he gave in that regard ? I suggested that, in the case of a railway wholly within one province, it would be more convenient to confer the jurisdiction upon a provincial court. The hon. gentleman made some answer to that.

The MINISTER OF JUSTICE. I do not think I answered that. No doubt, it would be convenient in one way to have the court of the province continue exercising its jurisdiction. But I said that we conferred jurisdiction upon the Exchequer Court in these cases to deal with railways under federal jurisdiction, whether they were under our jurisdiction because they have been declared to be works for the general advantage of Canada, or because they connected with certain railways mentioned in the Railway Act, or because they extended beyond the limits of one province; and it seemed to me better, for the uniformity of legislation, that we should give federal jurisdiction over all. This could be done without interfering with the existing jurisdiction in the provincial courts with respect to those railways which though federal in their character, are situated entirely within the limits of one province, and the suggestion as to that point I am ready to agree to.

Mr. BORDEN (Halifax). But the hon. minister will see that you do not secure uniformity even if you do adopt his suggestion, for the provincial courts will still have power to sell a railway at the instance of the creditor under the powers which are vested in it apart from any statute. Is there any reason why you should not give to that court the additional powers that are created by this statute ? In one sense it would be more uniform to give the powers to the Exchequer Court, but we do not attempt uniformity of that kind in other things. With respect to insolvency we confer jurisdiction upon the provincial courts ; even in the case of the elections to this parliament, we confer jurisdiction on provincial courts. This is a matter of some importance to provinces situated at a long distance from this capital, the place where the Exchequer Court has its headquarters.

For example, take the province of British Columbia, or of Prince Edward Island, or of Nova Scotia, it is a very difficult thing for them to transact business in the Exchequer Court on account of the long distance. In cases of this kind you would naturally have a great deal of interlocutory business, there is no local judge, and you may have to have the business transacted in Ottawa. It might be a very desirable thing that the local solicitor or counsel should be present at motions and proceedings of that kind. Unless you can give some strong reason for restricting jurisdiction to the Exchequer Court, it would seem to me to be the wiser course to let the provincial courts within the province deal with these matters so far as railways wholly situated within the province are concerned. That would be my own view, though I realize that there may be some reason for the opposite view. It is not a matter I am pressing very vigorously.

The MINISTER OF JUSTICE. I would like the hon. gentleman to say whether he can see any objection to giving concurrent jurisdiction to the provincial court and the Exchequer Court. The provincial court is now undoubtedly vested with jurisdiction to deal with these particular railways, and is there any difficulty or any objection to granting to the Exchequer Court jurisdiction also over these railways, so that it might

be optional with a creditor to select his own court ?

Mr. BORDEN (Halifax). Speaking offhand, I do not see any objection to that. My hon. friend suggests that all statutory powers which are created by this proposed Bill are to be conferred upon provincial courts concurrently with the Exchequer Court, so far as railways only situated within the province are concerned.

Mr. WADE. Is it not a fact that at the present time provincial courts have complete jurisdiction over railways, no matter whether they are railways declared to be for the general advantage of Canada or not, and no matter whether they are entirely situated within the province ?

The MINISTER OF JUSTICE. That is right.

Mr. WADE. It has no power to order the sale of a railway that extends beyond the province. Our provincial courts have not that power.

Mr. BORDEN (Halifax). I am only saying that there are certain powers which are statutory powers and are not vested at the present time in the provincial courts because they are creatures of this statute.

Mr. WADE. What power ?

Mr. BORDEN (Halifax). The power, for example, to sell a railway because the company has failed to work it for ten days. I wish to make myself clear to the hon. member for Annapolis (Mr. Wade). I mean that so far as you are creating powers here which are not at present vested in any provincial court you should vest these powers in a provincial court at least concurrently with the Exchequer Court so far as railways wholly situated within a province are concerned.

Mr. WADE. I asked whether that is not the case now. Have they not absolute power ?

Mr. BORDEN (Halifax). I am talking about powers created by this statute, which do not exist outside this statute.

Mr. WADE. That is the very thing.

The MINISTER OF JUSTICE. I understand the leader of the opposition to say that in this Bill, we are conferring certain specific powers upon the judge of the Exchequer Court, we are granting that court certain powers that are not now vested in it, and the leader of the opposition suggests that we should give to the judges in the provincial courts these same powers with respect to this particular class of railway that we are vesting in the Exchequer Court.

Mr. BORDEN (Halifax). Exactly.

The MINISTER OF JUSTICE. It is suggested to me by a layman that there might be a difficulty in giving the courts concurrent jurisdiction. You may have one creditor going to the local court for the purpose of having the railway brought to sale, and another creditor going to the Exchequer Court. There might be a conflict of jurisdiction between the two courts. There does appear to be something in that. We will have to guard against that.

Mr. BORDEN (Halifax). You can easily guard against that. A court in which a second action is taken always stays proceedings until the first action is determined. There are cases where an action is taken in two different courts each having jurisdiction. For example, an action might be brought in the province of New Brunswick and another in Nova Scotia, both going on at the same time, one brought before the other. The usual course is that the court in which the second action is brought stays proceedings until the first action has been determined. That is also the rule which has been acted upon in England within a very few years past, and acted upon in the Supreme Court of Nova Scotia. Not long ago a similar case was decided in England, I forget the name of it, perhaps the Minister of Justice is familiar with it—a case where an action had been brought in either a French or an Italian court, and the action was also brought in England during the pendency of that foreign action. The English court, if my memory serves me correctly, simply stayed proceedings until the foreign action had been determined, then they gave the judgment in accordance with the decision which had been arrived at in the foreign court. There would be no difficulty on that score.

Hon. Mr. HAGGART. I would ask the promoter of this Bill this question. Suppose there is an action brought in the province of Quebec by a creditor of a railway company before the Exchequer Court, and there is a sale ordered of the property. Is that sale adjudicated by a provincial court in the province of Quebec, that is, does the provincial court transfer the property absolutely, and are the proceeds received from the sale of the property distributed by the court among the different creditors according to their rank ? Would the judgment of the Exchequer Court have two different effects in different provinces ? In the province of Ontario it would be only a sale of the franchise, in the province of Quebec it would be an absolute disposition of the property. Now suppose a party holds bonds under a Dominion statute, or securities, or perhaps a mortgage, on a judgment obtained before the Exchequer Court against a Dominion railway which has a Dominion charter in the province of Quebec ; now if this property is disposed of as the court in the province of Quebec has a right to dispose of it, that is making an absolute

sale, that would not be the case if he held securities.

The MINISTER OF JUSTICE. I understand that the suggestion of the hon. leader of the opposition would meet that difficulty, because the suggestion of the hon. gentleman was that we should confer upon the provincial court the same powers that we confer upon the Exchequer Court so that the powers which could be exercised by the courts in each of the provinces would be the same as those which are exercised by the Exchequer Court. The difficulty of the hon. gentleman (Hon. Mr. Haggart) would be met by the suggestion of the hon. leader of the opposition.

Mr. BORDEN (Halifax). Yes.

Hon. Mr. HAGGART. The security from a company which has a Dominion charter which the holder of a mortgage has is the franchise of the company which can be sold if the debts of the company are not paid, but if you get judgment in the Exchequer Court here against a company in the province of Quebec you can sell the property absolutely although the property might only bring one-fifth of the value of these prior securities should the court order. There is no sale in Quebec that is not an absolute transfer of the property. Then, the courts act as the receiver and distributes the money received for the property according to the rank of the security.

Mr. BORDEN (Halifax). If a company were authorized, in Ontario for instance, to give a mortgage on its franchise, and covering not only its franchise, but its rolling stock, permanent way and buildings, you surely could sell these on foreclosure proceedings ?

Hon. Mr. HAGGART. Yes, but you could not by an ordinary execution. You could only sell the franchise or the right to run the road.

The MINISTER OF JUSTICE. Subject to the claim of the mortgagee.

Mr. DEMERS (St. John and Iberville). That was the law, but in 1899 this parliament decreed that the Exchequer Court could sell the railway. The Act was passed in 1899 permitting the Exchequer Court to sell the property, but I do not see anything in the Railway Act authorizing the sale of the franchise.

Mr. WADE. I think I am compelled to agree with the hon. member for Lanark (Hon. Mr. Haggart) in regard to this question. We have to be a little cautious as to how we apply certain provisions that are in this proposed Bill. As far as the general jurisdiction of a railway situated exclusively in a province, although the railway may be subject to the legislative jurisdiction of Canada, is concerned, our courts have already full and complete jurisdiction over them in the matter of the foreclosure of the mortgage, the sale of the road, and appointment of a receiver in connection with the property.

Mr. DEMERS (St. John and Iberville). Not in Quebec.

Mr. WADE. Of course I cannot speak for Quebec, because I am not familiar with the law there, but it seems to me that in the province of Quebec to that extent they must have jurisdiction. I can speak with authority in regard to our own province as the matter has been thoroughly threshed out in the case which has been referred to by the hon leader of the opposition (Mr. Borden, Halifax), the English principle to which he referred was also settled in that case, and the distinction which prevails between the situation of English railways and our own was clearly defined. By the English statute law they do not permit the company to mortgage anything more than their tolls. They do not permit them to mortgage their property or their franchise, hence, the only thing you can do under the trust which they give to secure their bonds and debentures is to apply for the appointment of a receiver, operate the road under the receiver and in that way collect the tolls for the purpose of paying their debts. But, under the charters that are granted here the company not only mortgage their property, but their franchise, and you can take foreclosure proceedings in regard to all the property and the franchise of the company, and the party purchasing them will have all the powers that the company possessed in the way of operating the road. All these powers our court possesses at the present time in regard to roads which are wholly within the province and the only restriction upon its power of sale is where the road is partly in one province and partly in another. The hon. leader of the opposition has asked that they should be clothed with that jurisdiction, which this Bill proposes to give to the Exchequer Court only, an extraordinary jurisdiction to cover two classes of cases, one is where the company have not paid their debts or met their liabilities, and the other is where they have failed to operate the road. In other words, any creditor of the company may go before the Exchequer Court and proceed against the company, and ask for an order for the sale of the road, or if the road has not been in operation for ten days, any person may do the same thing. This a very large and a very extraordinary jurisdiction which we are conferring upon the Exchequer Court, and it seems to me that it might be dangerous to give that jurisdiction to the provincial courts, because, as has been said by some one, we must look at the effect that legislation of this kind would have upon the securities which have been issued by the company and which are held abroad. Anything that has a tendency to weaken these

securities is not wise legislation, and I think that where this extraordinary jurisdiction is sought by any person it should be before a court that has general jurisdiction, and there cannot be any hardship in taking these proceedings before the Exchequer Court. It should not be given to the provincial courts to act in the matter, especially in cases where the railway is under the legislative authority of the Dominion parliament. I do not apprehend that the provincial courts would not act just as wisely or just as carefully in the matter or not give quite as good a judgment in each case as the Exchequer Court would, but what I am looking at is the effect of this legislation upon the securities of the railway company. When it is proposed that on the motion of any party the provincial court could proceed to have the road sold, I think it would be better to have the matter remain in the hands of the Exchequer Court, because it does not weaken the jurisdiction of the provincial courts in regard to any other matters.

Mr. BORDEN (Halifax). If there is any weakening of the securities it is effected not by the court to which the jurisdiction is assigned, but by the legislation itself. If it is possible that the securities may be weakened by conferring this jurisdiction upon the provincial courts, why the same result would not be effected by conferring it upon the Exchequer Court is rather too fine a point for my intellect to grasp.

Mr. WADE. I will explain why I think so.

Mr. BORDEN (Halifax). You could only explain it in this way: You think one court would exercise it wisely and that the other court would not exercise it wisely. I think the provincial courts are just as capable of exercising their judgment wisely and discreetly as the Exchequer Court. I think this power should be conferred upon the provincial courts concurrently with the Exchequer Court.

Mr. WADE. I took care to say that the provincial courts would give as wise a judgment as the Exchequer Court. I do not think there is any trouble about their judgment; and there is no doubt that they would do right; but I do say, it would have a much more serious effect on the security if it were known that any court in a province could take this extraordinary proceeding. It would have much more serious effect on the securities than it would, if this jurisdiction could only be exercised by a central court, and that court the court of the Exchequer. I think the general public would have more confidence, that it would not be exercised hastily. I think further, that there should be some striking urgency for any proceedings to carry out the provisions of this section, and such an urgency as would make it worth the parties while to make application to the Exchequer Court rather than to some local court. If we make it too general it will be dangerous legislation.

Mr. FRASER. What the hon. member (Mr. Wade) says goes to prove the contention of the leader of the opposition that there must be some difference between the two forums. If there is a confidence on account of going into one forum that would not obtain in going into another, it must be because one forum is deficient.

Mr. WADE. There would be this difference. In one case there is one court and one judge before whom these proceedings could be instituted; in the other case there might be sixty judges.

Mr. FRASER. That would make no difference unless you say that the sixty were inferior to the one.

Some hon. MEMBERS. Hear, hear.

Mr. FRASER. I can very well understand that the Exchequer Court on account of its mode of procedure, on account of having rules that are better fitted than the rules of the Supreme Court—for example under our Judicature Act in Nova Scotia—may be a better court to wind up a railway company in that its machinery might be more operative, but, I cannot understand the other proposition. I think perhaps that this section is too broad. There are three cases in which the Minister of Railways and Canals or any creditor or a company may ask for an order to decree the sale of the railway: (1.) When the company has become insolvent; (2.) If for ten days it has failed to efficiently continue the working or operating of the railway, and (3.) If it has become unable so to do. There might be a bridge down for example so that for ten days they would be absolutely unable to operate the railway. These words are too broad. Has the minister looked into that?

The MINISTER OF JUSTICE. I would suggest that this section be allowed to go through, with the understanding that before the third reading, we will consider it in the light of this discussion, the extent to which we may be able to improve the Bill.

Mr. BORDEN (Halifax). That will be quite satisfactory.

On subsection (b).

Mr. WADE. I think there is one very strong objection to the operation of that section. It says:

> Or, at the instance of a mortgagee of such railway or section, to order or decree the foreclosure of the interest of the person or company owning or entitled to such railway or such section, with the rolling stock, equipment and other accessories thereof, or the equity of redemption therein, whenever in like circumstances of default the high court of justice in England can, at the time this Act comes into force, so order or decree with respect to mortgaged premises situate in England.

As has already been pointed out, they do not order the sale of the road; they simply put the road into the hands of a receiver and take the tolls, and I submit that these lines should be striken out, or otherwise we will render the whole Act inoperative. I would make another suggestion in regard to this clause and the preceding clause, and that is, that the power of sale should include the power of selling the franchise as well as the railway equipment and accessories. The franchise would hardly be considered within the term 'accessories.' I presume that the mortgages in the past always covered the franchise, but we do not say in this section that we will sell the mortaged premises; we say we will sell the railway and the equipment and the accessories. Where you are defining, it seems to me that these are words of limitation and would exclude the franchise, unless it is expressly provided in the statute.

The MINISTER OF JUSTICE. I wish to draw the attention of the hon. gentleman to the words of the statute. Provision is made for the sale:

> Whenever in like circumstances of default the high court of justice in England can, at the time this Act comes into force, so order or decree with respect to mortgaged premises situate in England.

Not, with respect to railways, so that we give to our Exchequer Court in dealing with this railway, the same power as the High Court in England with respect, not to railways, but mortgaged premises; thus avoiding the very difficulty that my hon. friend suggests.

On section 3,

Mr. FOWLER. What do you mean by the word 'making' in this clause?

Hon. Mr. HAGGART. If I understand it aright these are alternative powers; they may make a sale of the road or they may appoint a receiver.

Mr. DEMERS (St. John and Iberville). Under the direction of the court.

Mr. BORDEN (Halifax). They are rather interlocutory powers; things to be done in the meantime pending a suit.

The MINISTER OF JUSTICE. The clause seems somewhat involved. The word 'making' seems to be out of place.

Mr. RUSSELL. It seems to me that some of the functions given here to the receiver are more than what are ordinarily given to receivers. Some of them are rather the functions of a manager, and it might be well to use that term in the statute.

The MINISTER OF JUSTICE. As used in our statutes, we know what the word 'receiver' means, and I would not like to change its meaning very much. But I do not see very well what meaning can be attached to the word 'making.' The receiver is not appointed, as a rule, for the purpose of building a railway, but for the purpose of operating a railway. I do not see the sense of the word being used here.

Mr. WADE. I think the word, as it is used here, is important, and it should be left in, because the railway might not be completed, and it would be necessary for the receiver to go on and complete it. I had some experience of that kind myself. I was the receiver of a railway for some six years. In that case the road was not completed, although it was nearly so, and it was necessary for me to obtain a special order of the court to have power to go on and complete the road, and I did so. The same thing may often be the case, and it may take months to get final order from the court to give the receiver power to complete the road, which may be necessary in the interest of all parties concerned. I think the word 'making' should remain in the Bill.

Mr. FRASER. What the hon. leader of the opposition said is, I think, correct, that this is not an Act for the building of a railway, but for the sale of a railway. If it were intended that the receiver should have power to build a railway, or a section of a railway, he might go on and wreck the property worse than it was at the time he was appointed receiver, and the consequence would be that the creditors would get nothing, and the railway might not be sold, but be kept in the hands of the receiver. This is going to be an Act which will be the foundation for the Exchequer Court dealing with railways in Canada in future; and, in view of the very extensive building of railways in Canada, we should wisely see that nothing is put in this Act other than what would be used in the interest of the creditors and the railway itself. If a railway has to go into the hands of a receiver, the stockholders are not likely to get anything; but if the stockholders lose, I do not want those who have advanced money on mortgage or the workmen to lose. But do not let this man who is appointed receiver go on and build the railway in sections. I think that is too much power to give to a receiver, who, as the hon. leader of the opposition said, is only an interim official appointed to keep the railway in operation and to see that the money, as it comes in, is deposited in a bank and kept. That is what I look on as a receiver, and not a person to build railways.

Mr. FOWLER. The word 'making' is so wide in its meaning that it would enable the receiver to extend the railway in all directions, and even to build branches. He could ruin the whole property if he were so minded.

The MINISTER OF JUSTICE. It has been suggested to me that the word 'making' was put there for the purpose of meeting a specific case which we have in the

province of Quebec. There are six miles of a railway to be completed to an important centre, and the word is put in to enable the receiver, if so ordered, to complete that road. The section provides that the receiver shall act under the direction of the court; and, that being the case, I do not see any great objection to the word.

Hon. Mr. HAGGART. The receiver is not necessarily an interim receiver. He may continue to manage the property for years.

Mr. FOWLER. The receiver would be an interim one, no matter how long his duty would last.

Hon. Mr. HAGGART. All receivers are interim in that sense.

The MINISTER OF JUSTICE. I think the words are clear enough. 'A receiver is appointed for the interim preservation of the property.

Mr. RUSSELL. It is well known that in the western states a great many railways, which went into the hands of receivers because of over capitalization or because they were built where they were not needed, were operated much more successfully than those which remained in the hands of the original companies. This power being exercised, as has been pointed out by the Minister of Justice, under the constant direction and control of the court, no such difficulty as my hon. friend apprehends will be encountered in the operation of these roads. As to giving the receiver the right to complete the road under direction of the court, that may be very necessary in order to enable the road to make any profit. As regards extending the powers of the receiver, I remember distinctly that when my hon. friend from Annapolis (Wr. Wade) was receiver of the road to which he has referred he was also made the manager, and he could not have operated it as successfully as he did if he had not been given the functions of manager as well as those of receiver. The courts have found it necessary to appoint receivers to be managers as well, in order that they might have the powers included in both offices. If you give by this Bill to a receiver all the powers of a manager, it may be immaterial whether you use the word 'manager,' but there may be powers which it is necessary for the official to have which are not expressly given by the statute but would be dependent on the general principles of law, and in that case unless the term manager was used in the statute these powers would not be possessed.

Mr. BORDEN (Halifax). Does the word 'making' used in this section serve the purpose intended by the Minister of Justice? It seems to be rather a casual way of dealing with a pretty large subject. A matter of that kind is perhaps worth the dignity of a separate section and a somewhat more elaborate provision. I would suggest that the word 'completion' would be much better than the word 'making.'

The MINISTER OF JUSTICE. Perhaps it would be better to allow the section to go through omitting the word 'making' altogether and then make special provision for the completion of the road as suggested by my hon. friend.

Section, as amended, agreed to.

On section 4,

The remuneration of the receiver shall be fixed by the said court, and shall, as also shall the expenses lawfully incurred by him as receiver, including the expenses of working, operation, maintenance, renewal and institution and defence of actions aforesaid, be a debt of the company and be the first charge upon the railway, or section, and upon the rolling stock, equipment, accessories and earnings thereof.

Mr. BORDEN (Halifax). This section provides that the remuneration of the receiver shall be fixed by the court, but it does not provide that the other expenses shall be approved likewise by the court. The receiver therefore would pass upon his own expenses.

The MINISTER OF JUSTICE. In order to save time perhaps we might as well let this clause stand, and I shall endeavour to have an amendment drafted by some of the officials of my department to meet the case.

Mr. BORDEN (Halifax). It might be as well also to have a special section drafted giving the receiver the right to complete the road.

The MINISTER OF JUSTICE. I agree with my hon. friend.

Mr. BORDEN (Halifax). If the power does not already exist in the Exchequer Court to make regulations as to practice, it might be as well to have a section conferring that power. The general powers of the Exchequer Court may be sufficient, but I doubt if they would cover these matters.

The MINISTER OF JUSTICE. It has power to make rules with respect to matters now within this jurisdiction, but I think not with regard to new matters such as these.

Section allowed to stand.

On section 5,

A railway company is insolvent within the meaning of this Act, in all cases which constitute insolvency under sections 5 and 6 of the Winding Up Act, except that paragraph (g) of section 5 of that Act shall not apply to cases where possession of any railway or section thereof has been taken by trustees for bondholders under the provisions of section 94 of the Railway Act, and except further that the delay to secure or compound allowed in the case mentioned in section six of

the Winding Up Act shall be fifteen days instead of sixty.

Mr. MARCIL (Bonaventure). I would like to draw the attention of the Minister of Justice to the case of the Atlantic and Lake Superior Railway in this connection. This road was transferred, in 1900, to trustees for the bondholders. It is, to all intents and purposes insolvent, owing a large sum of money. I would like to know whether they are exempt under this law ?

The MINISTER OF JUSTICE. It is impossible for me to say whether the law would not be applicable to a particular case, because I am not aware of the facts. But I apprehend that the Atlantic and Lake Superior is vested in trustees under terms of mortgage.

Mr. MARCIL (Bonaventure). Trustees for the bondholders ?

The MINISTER OF JUSTICE. That would be under terms of mortgage. I think the creditors under this Act would have the right to apply for the appointment of a receiver.

The MINISTER OF MARINE AND FISHERIES (Hon. R. Prefontaine). To make the point clear, I would move that the following words be added at the end of section 5 :—

But such transfers to trustees shall not exclude such railway from the provisions of the present Act.

Hon. Mr. HAGGART. Suppose the bondholders got possession of the railway under the Act of 1899, and they did not pay their debts and became insolvent, what remedy would you have against them?

The MINISTER OF JUSTICE. I would like to consider this amendment. It would be better to let this section stand.

Section allowed to stand.

Mr. BORDEN (Halifax). Before the committee reports, I would direct the attention of the Minister of Justice, and also the attention of the hon. member for St. John and Iberville (Mr. Demers), to subsection (a) of section 1. Perhaps our attention was more particularly directed to the form of that section than to the substance of it. You will observe that under the terms of subsection (b), a creditor can have the railway sold. But still, in addition to that, it is provided in subsection (a):

At the instance of the Minister of Railways and Canals, or of any creditor of any person or company owning or operating such railway or section, to order or decree in such manner as it may prescribe, the sale of such railway or section of railway, and of all the rolling stock, equipment and other accessories thereof, whenever such company has become insolvent, or has for more than ten days failed to efficiently continue the working or operating of such railway or section or any part thereof, or has become unable so to do.

Hon. Mr. FITZPATRICK.

Now it seems to me that this is a pretty wide power to confer upon a creditor. If he has a lien or charge, he can enforce it. But if he has not, is there any special reason why he should be empowered to move against the company in this way. You are giving authority to sell the entire railway in three cases, insolvency, failure to operate or inability to operate. It seems to me it would be sufficient if you conferred that power upon the Exchequer Court at the instance of the Minister of Railways and Canals. I do not think that powers of that kind ought to be invoked simply to enable a creditor to get the payment of his debt. The power might be used oppressively. I think the creditor has ample protection under subsection (b), so far as the payment is concerned.

Mr. DEMERS (St. John and Iberville). I do not think that by the old law the ordinary creditor is protected.

The MINISTER OF JUSTICE. The objection of my hon. friend (Mr. Demers) is that the ordinary creditor, who is without a lien or claim upon the property, is without recourse. It is not open to him to take any steps, and it is unfair that he should not have, in any of the three cases, the right to apply to court for a receiver, or exercise some recourse against the company.

Mr. BORDEN (Halifax). In my own province the creditor would get a lien upon the reality by registration of judgment. But I suppose that is not the case in the province of Quebec.

The MINISTER OF JUSTICE. Yes.

Mr. BORDEN (Halifax). Has not the ordinary creditor, then, a perfect remedy ?

The MINISTER OF JUSTICE. The leader of the opposition says that the creditor obtains a judgment against an individual, and, if the individual has property, the creditor becomes by registration a judgment creditor secured by mortgage. I have never entertained any doubt of that being the law in the province of Quebec. The creditor could take suit, register his judgment against the property, and then it becomes a mortgage. It is suggested to me that that is not possible in this case, but I must say I have never entertained any doubt that that was the law.

Mr. BORDEN (Halifax). Assuming that that is the case, I would suggest that the ordinary creditor has very good protection under subsection (b).

The MINISTER OF JUSTICE. If the action is against the railway company there might be some difficulty there.

Mr. BORDEN (Halifax). There would be no difficulty in my own province, as there is a registry office in every county through which the railway runs.

Progress reported.

PENITENTIARIES ACT.

Bill (No. 217) respecting penitentiaries (the Minister of Justice) was read the second time, and House went into committee thereon.

Mr. BORDEN (Halifax). Is this Bill a consolidation ?

The MINISTER OF JUSTICE (Hon. Chas. Fitzpatrick). It is really a consolidation of existing laws for the convenience of those who are consolidating the statutes. There are certain changes, but they are of no importance except the one with respect to the schedule of salaries. The only important thing in this is the schedule, and when we reach that I will point out in what respect changes are made. I am endeavouring to reduce the salaries in two or three directions.

On section 23,

The MINISTER OF JUSTICE. That is new. I have found it convenient in the course of my experience, when an inspector goes to a penitentiary for the purpose of making an inspection, to occasionally give him power to take control immediately of the penitentiary so that he may be in a position to make an examination with greater freedom than if he were subject to the warden.

Mr. FOWLER. It might be necessary to summarily suspend the warden.

The MINISTER OF JUSTICE. Yes.

On section 27,

The MINISTER OF JUSTICE. Under the present law the appointment of officials is distributed between the Governor in Council, the Minister of Justice, and the warden. I do not think that it is right that the warden should appoint clerks, keepers and guards. The minister should have the responsibility for these appointments so that he may be able to answer to parliament, and this section provides that he shall have it.

Mr. FOWLER. Would it remove these appointments from politics if they were left to the warden rather than to the minister ?

The MINISTER OF JUSTICE. The minister ought have the responsibility direct, and as a matter of fact it eventually comes back to the minister, because the warden applies for his authorization to make these appointments. At present the minister can fall behind the warden and put the responsibility on him. It is a roundabout way of getting rid of responsibility and it should not be so.

On section 28,

Mr. MORRISON. Does this section alter the present condition of affairs which allows the warden to reside outside the penitentiary inclosure ?

The MINISTER OF JUSTICE. There is no change in the law. The warden's residence is always declared to be part of the penitentiary.

Mr. FOWLER. At Dorchester it is outside the penitentiary.

The MINISTER OF JUSTICE. And at St. Vincent de Paul it is separated by a street from the penitentiary, but the grounds of the residence are maintained by the convicts and in order that we may have control over them, the residences are proclaimed to be part of the penitentiary.

Mr. FOWLER. There is a farm at Dorchester and it is under the same rule.

The MINISTER OF JUSTICE. Yes, and the roads connected with the farm are also proclaimed part of the penitentiary or otherwise it would be impossible to keep control over the convicts.

On section 33—warden, &c., not to exercise any other calling,——

The MINISTER OF JUSTICE. I move to strike out the words, 'except by consent of the Governor in Council. That is a power I do not care to exercise. I think it is safer not to do so.

Mr. FOWLER. Would that apply to the chaplains ?

The MINISTER OF JUSTICE. Even with respect to chaplains, my desire would be to give them larger remuneration, and endeavour to have their duties confined exclusively to the penitentiary. That would not imply that a minister of the gospel would not be able to render services occasionally for one of his friends, but he should not have any regular charge. It has been suggested that instead of appointing regular chaplains to the penitentiaries, we should authorize the ministers of the different denominations in the locality to attend the penitentiary in turn. I do not know how that would work. Of course, in the penitentiaries there are men belonging to different religious denominations, and the complaint is that we have ministers of the Church of England to attend constantly.

Mr. CLARKE. What does the hon. minister propose doing about that ?

The MINISTER OF JUSTICE. I throw out the suggestion, because I want to hear what others who are qualified to speak on religious subjects have to say about it.

Amendment agreed to, and section as amended agreed to.

On section 34,

The MINISTER OF JUSTICE. I move that the following be added to subsection 2 :

In the event of a penitentiary being established in and for the North-west Territories, the salaries of the several officers and em-

ployees of such penitentiary shall be the same as those prescribed in schedule 'a' for the officers and employees of the Manitoba penitentiary.

Amendment agreed to, and section as amended agreed to.

On section 35,—gratuities or retiring allowances.

Mr. MORRISON. What is meant by retiring an officer to promote efficiency? Is it supposed that if a man is found obnoxious or inefficient, he can be retired without a retiring allowance.

The MINISTER OF JUSTICE. This section is new. My experience is that men who have been in the service of a penitentiary for a number of years get very lazy and indolent, and it would be very much to our advantage to be able to remove them and put in their places men who would be able to perform their duties more satisfactorily. In some of our penitentiaries I have been able to reduce the staff by six or seven by placing young and active men in place of those who have grown fat and lazy. It is a good thing for the men to have the possibility of removal before their eyes, but if a man has been in the service for a number of years, I would not want to remove him without giving him some retiring allowance.

Mr. FOWLER. Does that apply to the warden?

The MINISTER OF JUSTICE. Yes, it would apply to the warden.

Mr. FOWLER. I think you ought perhaps to except the chief officers.

The MINISTER OF JUSTICE. I think we might let the whole section stand.

Mr. FOWLER. I think it is a very good provision if it is confined to the inferior officers.

Mr. INGRAM. Are the wardens and deputy wardens considered civil servants?

The MINISTER OF JUSTICE. No.

Mr. INGRAM. I notice that you provide for a gaurantee by private bonds as well as by the bonds of the company. Have not the departments given up the idea of private security, and do they not require bonds by guarantee companies? I notice also that in case of the absence of the head of the penitentiary and the deputy head, you give the chief keeper power to act. That does not seem to be the rule throughout the departments of the government, but it is one that I strongly approve of.

The MINISTER OF JUSTICE. I find that the best way to maintain discipline and secure the effective co-operation of your employees is to make them feel that you are standing by them. With respect to security by private bonds, I think that is rather a mistake. A man who gets a public position asks his friends to sign, and generally they do not like to refuse. If it be in the power of the minister to insist on the bond of a guarantee company, we get rid of much difficulty and hardship.

Progress reported.

At six o'clock, House took recess.

After Recess.

PRIVATE BILLS.

SECOND READINGS.

Bill (No. 229) for the relief of Ellen McDermid.—Mr. Birkett.

Bill (No. 228) for the relief of Stephen Wilson.—Mr. Wade.

SUPPLY—SOUTH AFRICAN MEDALS.

The MINISTER OF FINANCE (Hon. W. S. Fielding) moved that the House go again into Committee of Supply.

Mr. E. F. CLARKE (West Toronto). I desire, Sir, to draw attention to the conditions of the regulations which have been issued in connection with the granting of the King's medal to soldiers who served in South Africa. There were two medals given. There was the Queen's medal given to all who disembarked in South Africa before May 31st, 1902, the day when the war ended. In this connection, I may say that several contingents of the Canadian Mounted Rifles were deprived of this medal because they disembarked a few days later. There was also a second medal, the King's medal, given to those who had served for eighteen months on South African soil, or up to the 31st May, 1902, and part of whose service was after December the 1st, 1901. Complaint is made that, owing to the nature of the regulations, it is impossible for any Canadian soldier who served in a Canadian corps to get this medal. It could not have been the intention of the imperial authorities to deprive His Majesty's Canadian subjects of the honour of obtaining this medal. About two hundred non-commissioned officers and men served in more than one Canadian contingent during the war. The first service was for twelve months, and those who served in that contingent, if they had re-enlisted at the earliest practicable moment in another Canadian corps intended for service in the Boer War, and immediately returned to South Africa, could not have put in the length of service in the field necessary to entitle them to this medal. There are, as I have said, about two hundred non-commissioned officers and men who went from Canada in the first contingent and who, on their return, re-enlisted and went with the second contingent. But it was impossible, owing to the length of time it takes to

reach South Africa, for any of these men to put in the full service in the field which would entitle them to receive the medal. A petition has been prepared by these men asking the government to request the imperial government to modify the regulations in this respect. It certainly does seem an invidious distinction that Canadian soldiers of the King should be the only ones who served in the war who, owing to the regulations, cannot receive this medal. Australians, New Zealanders, South Africans, as well as the regular troops, have received the medal. But it is impossible for any Canadian who served in a Canadian corps to receive it. The medal is greatly coveted by those who have seen service and who would like to wear it as an honourable reminder of the services they have performed on behalf of the empire. I am sorry the hon. the Minister of Militia is not here, because I propose to read for the information of the House a copy of the memorial submitted to His Excellency the Governor General in Council, asking him to take action, so that the men who volunteered twice for service in South Africa in Canadian contingents may receive this medal.

The petition is as follows :

To His Excellency the Governor General of Canada in Council.

The humble petition of the undersigned late non-commissioned officers and members of Canadian contingents who have served twice in South Africa, during the Boer war, 1899-1902, humbly showeth.

1. That the present regulations for the King's medal demand eighteen months service in South Africa.

2. That the voyage from Canada is longer than from any other colony, the double trip occupying at least four months.

3. That under the present regulations, no Canadian can obtain the King's medal, from his service in Canadian contingents.

4. That your petitioners, whilst few in number, being scattered from the Atlantic to the Pacific, feel confident in addressing your Excellency that they voice the feelings of all the non-commissioned officers and men (who your petitioners believe, number some 200), who served twice in South Africa, during the Boer war.

5. That your petitioners therefore humbly pray that application may be made to His Gracious Majesty that the regulations for the King's medal be altered to provide that in all cases in which a man has gone twice from Canada to South Africa for the purpose of taking part in the war, fourteen months service in South Africa may be held to entitle him to receive the King's medal.

And your petitioners will ever pray.

Dated this 25th day of April, 1903.

I am perfectly satisfied that, if the attention of the imperial authorities were drawn to the peculiar disabilities under which our Canadian soldiers were placed in view of the conditions of the regulations, some mitigation of them will be ordered, so that these men may obtain this much-coveted medal. I should like to know from the government if this petition was received, if it was forwarded to the imperial authorities through the proper channels, and if any recommendation or any request was made by His Excellency to the imperial authorities that the regulations for the issuing of the King's medal might be altered to the extent suggested to His Excellency in connection with the service of the Canadian volunteers ? I repeat that I am sure it was not the intention of the imperial authorities to frame the regulations in such a way that our Canadian soldiers, who did such splendid service in the South African war, should be excluded from this honour. If the government have not taken action, I think they should do so, in order that this invidious distinction may not be perpetuated. I am sorry the Minister of Militia and Defence (Hon. Sir Frederick Borden) is not present. I gave him notice of my intention to bring this matter up on going into supply, and had hoped to receive from him information as to whether the petition had been received and what action had been taken, and, if it was forwarded, whether any answer has been received.

The MINISTER OF FINANCE. I regret the absence of the Minister of Militia and Defence. In his absence I would not feel at liberty to make any statement on the subject referred to by the hon. member for West Toronto (Mr. Clarke). But I will see to it that his attention is called to the matter, and, if any action has been taken, the information will be given to the hon. gentleman (Mr. Clarke) at a later stage.

Mr. FRANK OLIVER (Alberta). I would like to say a word in support of what has been said by the hon. member for West Toronto (Mr. Clarke). There can be no question, that the regulation which provides for the issue of the King's medal to those who have served eighteen months in South Africa was meant to cover the case of those who enlisted a second time. I believe that all the colonial contingents were enlisted for a year's service. It is merely the fact that Canada is more distant than the other colonies that shuts our men out from this honour, whereas the very fact of that distance entitles them all the more to the honour, if it is to be given to any. I am sure that shutting our men out was the furthest from the thought of the imperial authorities and I have every confidence that if the matter is placed before them the oversight will be rectified to the advantage and to the credit of those amongst our people who deserve it. I take the opportunity of speaking on this subject because from the constituency which I represent more men went to South Africa than from any other constituency in the Dominion of Canada, and therefore, I believe there are more of my constituents interested in this matter, possibly, than those of any other member of the House. I know personally a number of men who were out in the first Canadian Mounted Rifles, and also in the third contingent who took part in the battle of Hart's

River, the final battle of the war, the one which practically decided the war—and it is no news, I presume, to members of this House that, in the estimation of those competent to judge, it was very largely the presence of the Canadians at that battle which produced the result which was achieved by that battle and in closing the war. Before sitting down, I would like to say that there was a Canadian corps which did serve throughout the war with very considerable distinction. I refer to the Canadian Scouts, organized at first by Captain Howard, and afterwards commanded by Captain, or Major, Ross. I do not know whether the Canadian authorities have taken any cognizance of this corps or not; but it was known as the 'Canadian Scouts.' It was principally composed of Canadians, though not altogether, and it served with the greatest possible distinction for the longest possible term. And, certainly, while I do not think that anything we can do can add to their credit, I am strongly in favour of doing what we can to secure for ourselves as much credit as possible from their very gallant and distinguished actions.

Mr. R. L. BORDEN (Halifax). I would like to add a word in support of what has been brought before the House by my hon. friend from West Toronto (Mr. Clarke) and supported by my hon. friend from Alberta (Mr. Oliver). It seems to me that a very good case might be made out—has been made out—for these Canadians who served twice in South Africa. The fact that the war ended when it did, prevented them from coming within the terms of this regulation, notwithstanding that they had gone to South Africa for the purpose of giving a second term of service which would have brought them well within those terms. Under the circumstances, I hope the government will be able to make such representations as will do to these men what I believe is no more than justice by placing them in the list of those who are entitled to receive the medal.

Mr. T. S. SPROULE (East Grey). Will the minister be good enough to tell us if the South African Constabulary will participate in the receipt of these medals ?

The MINISTER OF FINANCE. I will call the Minister of Militia and Defence's attention to my hon. friend's (Mr. Sproule's) question.

Motion agreed to, and House went into Committee of Supply.

The MINISTER OF FINANCE (Hon. W. S. Fielding). There are a few items still left in the supplementary estimates of last year. One is item 114, the expenses of the commission to inquire into the tobacco trade. My hon. friend the Minister of Justice (Hon. Mr. Fitzpatrick) informed me that the hon. member for Jacques Cartier (Mr. Monk) expressed a desire to have this item discussed at another time so that he might be present. If it be agreeable I would be glad to have the item passed, with the understanding that the hon. member for Jacques Cartier should be able to speak on it on another occasion. I do not understand he wished to oppose it, but there were some facts in connection with it to which he wished to refer. With this item and another item passed, the whole Supply Bill for the last year will be ready. There are many services in it that are very urgent and I will be glad if the committee would pass these two items, particularly so that we may take concurrence. Although the Minister of Justice has to some extent consented that it should stand over, and we will let it stand if desired, that means the standing over of the whole Supply Bill. I would be glad if the committee will pass the items, with such information as the Minister of Justice can give now, reserving the right of the member for Jacques Cartier to discuss the subject in some other item.

Hon. Mr. HAGGART. On what item ?

The MINISTER OF FINANCE. On any item.

The MINISTER OF JUSTICE. My arrangement with the member for Jacques Cartier went further, and I absolutely agreed that the item should not be pressed in his absence. He mentioned that the amendment to the Criminal Code deals with the subject and might be discussed at the same time, so I think my hon. friend will have an opportunity to say all that he wishes to say when we deal with the amendment to the Criminal Code, which is passed as a result of this investigation.

Mr. SPROULE. I think that would be satisfactory, so long as we have full latitude to discuss it.

Galops rapid—deepening and widening, $25,000.

Hon. Mr. HAGGART. What item will we be able to discuss that on ?

The MINISTER OF FINANCE. Any canal item.

Mr. BLAIN. The hon. member for Grenville (Mr. Reid) requested me to ask that this item should stand.

The MINISTER OF FINANCE. It has been standing several times at the request of the hon. gentleman.

Hon. Mr. HAGGART. I suppose he will have the liberty of moving to strike it out on concurrence ?

The MINISTER OF FINANCE. When will the hon. member be here ?

Hon. Mr. HAGGART. He will be here on Monday ?

The MINISTER OF FINANCE. If we pass the item now, the hon. gentleman can make his motion on concurrence on Monday.

Mr. CLARKE. We will have an opportunity of discussing it on concurrence ?

The MINISTER OF FINANCE. Yes, but it is equally urgent that we take concurrence and get the Supply Bill. Therefore, I hope the hon. gentleman will be able to be present on Monday.

Mr. BLAIN. If he is not present then, we will not ask it to stand any longer.

Railways and canals—Intercolonial railway—to strengthen bridges, $165,100.

Hon. Mr. HAGGART. You were to give full details about that.

The MINISTER OF FINANCE. I understood the hon. gentleman wished to have a statement in detail as to the bridges to be strengthened. Of this sum $77,000 is a revote standing over from last year. I have here a list of the names of the bridges, which is of some length, but I will read it if the hon. gentleman desires. The number of spans in each case is also given.

Hon. Mr. HAGGART. What is the total amount expended up to date, and what is the probable amount required to finish this work of strengthening ?

The MINISTER OF FINANCE. The statement is made up to January last, at which date these papers were prepared. The amount expended up to that date was $451,680. I have given the hon. gentleman the names of most of the bridges for which the additional amount of $87,000 is required. There is also a list of bridges which are to be doubled up, as it is described in the department. As respects this $77,000 revote the items are given as follows : Balance due on bridges tendered for $31,000; floors ditto, $4,000; painting ditto, $1,400; false work, $4,500; doubling up, $3,500; inspection, &c., $1,811.10. These items make $77,711, which is the revote of last year's estimate and the other items which I have read represent the items which make up the additional expense to $87,000.

Hon. Mr. HAGGART. Does that complete the whole work of strengthening ?

The MINISTER OF FINANCE. The deputy informs me that he thinks this will finish the work of strengthening these bridges.

Mr. FOWLER. What expense has been put upon the bridges at Torryburn and Brockville ?

The MINISTER OF FINANCE. The list I have read only refers to the bridges which it is expected to deal with during the present season and the money has not been expended yet.

Mr. FOWLER. Is there any estimate as to the probable cost ?

The MINISTER OF FINANCE. Not in the case of each separate bridge. The estimate is general.

Hon. Mr. HAGGART. That is a total amount required for strengthening these bridges of over $600,000.

The MINISTER OF FINANCE. $451,000 up to the end of January.

Hon. Mr. HAGGART. And $165,100.

The MINISTER OF FINANCE. There has been some expenditure since that to which is added the appropriation in these estimates. The hon. gentleman's figures, I think, are about correct.

Mr. INGRAM. Will the hon. minister say how many bridges the department have on hand now that there are doubling up ?

The MINISTER OF FINANCE. The list contains seventeen bridges which are to be doubled up out of this vote.

Mr. INGRAM. Do we understand that $3,500 is for the strengthening of bridges ? The hon. gentleman gave an item of $3,500 to cover the doubling up of bridges. He surely does not intend to say that that is going to cover all the cost of strengthening these bridges.

The MINISTER OF FINANCE. $3,500 has reference to moneys expended in doubling up in the past. It will not pay for this list that I have read. The list that I have read in detail is for the bridges to be doubled up out of these estimates.

Mr. INGRAM. Then you are only estimating $3,500 to be expended that way ?

The MINISTER OF FINANCE. The amount set apart for doubling up is $33,988.

Mr. FOWLER. Are all these repairs to bridges chargeable to capital account ?

The MINISTER OF FINANCE. This is not for repairs to bridges. It is really for the betterment of the road by the strengthening of the bridges, and is therefore chargeable to capital account.

Mr. FOWLER. Is the strengthening of the bridges being done because these bridges have become weakened by the lapse of years ?

The MINISTER OF FINANCE. It is because of the heavier locomotives and rolling stock which are required to pass over these bridges. Having increased the weight of the locomotives and rolling stock the bridges which were good in the past are not strong enough now to bear the additional weight.

Mr. FOWLER. Are they new bridges ?

The MINISTER OF FINANCE. Doubling up of course, means the taking of two bridges and putting them together. These are not new bridges, but they are good bridges.

Mr. FOWLER. Do you charge the cost of doubling up two bridges to capital account ?

The MINISTER OF FINANCE. Where one bridge is transferred from one place to another it is not charged to capital.

Mr. INGRAM. We want some details of the number of bridges which you are doubling up in that way and we would like to have in connection with that the reasons for doing this. This method is not adopted by other lines of railway very extensively. I have never heard of it before.

The MINISTER OF FINANCE. In the case of old bridges doubled up the amount charged to capital account is the cost of making the change, not the cost of the bridge itself. The bridge itself, having been charged to capital account originally, remains in capital account, but the new bridges are charged to capital account.

Mr. LEFURGEY. Would it be fair to charge that to capital account ?

The MINISTER OF FINANCE. If you take a bridge from one portion of the road and put it in another portion of the road you still have it on the road and you have lost nothing.

Mr. LEFURGEY. I mean the expense of doing this work.

The MINISTER OF FINANCE. Yes, I think the expense of the work of changing the bridge from one part of the road to another is fairly chargeable to capital account.

Mr. FOWLER. I think we should have some details as to what becomes of the bridges which are replaced on the road. Do they go into scrap or are they used elsewhere ? We want to know where credit is given for them.

The MINISTER OF FINANCE. In one or two cases these bridges are being transferred to the Prince Edward Island road and of course they are charged up against that road and credited to the Intercolonial Railway. Where the bridges are being doubled up they are still utilized on the road. I have asked the deputy minister whether any cases have occurred in which they have gone into scrap and he thinks not.

Mr. CLARE. If you move a bridge and build a new one and charge the expense of that to capital account that cannot be right.

Mr. BARKER. I suppose it would be a proper thing that the value of the bridge occupying the place of the old bridge which is removed should be deducted from the capital charge. I take it that when a bridge is found on the main line insufficient to carry the weight of the heavier locomotives now in use and you have to remove it and put a stronger bridge on the main line, removing the old bridge to the branch, the charge should be credited with something for the value of the bridge which is dispensed with on the branch.

The MINISTER OF FINANCE. That would be quite correct if the bridge were sold off the road. If the bridge remains in the service of the road and is made use of elsewhere, you still have its value for the road.

Mr. BARKER. Yes, but if you do not make this substitution and have to replace the bridge on what I call the branch line for illustration, you have to do that out of revenue, and if you simply take a bridge from the main line and put it on the branch that will simply be relieving the working expenses to that extent ; so that, if you strengthen a bridge on the main line and take the old bridge to another point you save the working expenses of that line of what would be necessary to renew the bridge on the branch. There is always a charge made for that purpose against revenue, and it saves capital so much money.

The MINISTER OF FINANCE. I am advised that the bridges are used either for the doubling up process, or, in one or two cases they have been moved to Prince Edward Island. If you take two bridges and put them together they still remain on the road. It is not a question of renewing; it is simply adding to the equipment of the strength of the road, and in the new bridge you have so much additional capital on the road.

Mr. BARKER. Perhaps I did not make myself quite understood to the Minister of Finance. If you renew a bridge on the Prince Edward Island Railway you would have to do it at the expense of revenue, but instead of renewing it at expense of the revenue you bring an old bridge from the main line and put it there. You charge the whole expense of increasing the strength upon the main line to capital. Surely revenue has gained by this manipulation, and revenue should bear some portion of that charge. The result of this is that revenue has escaped the charge of renewing in the case of the Prince Edward Island Railawy. I am quite sure the deputy minister would thoroughly understand that if he were keeping his accounts for an ordinary railway company.

The MINISTER OF FINANCE. The error in my hon. friend's statement is that he asserts that this work in Prince Edward Island is renewal.

Mr. BARKER. Certainly.

The MINISTER OF FINANCE. That is a fatal error. It is not a renewal; the bridge is used on a new line and properly charged to capital account.

Mr. BARKER. All the same, if a bridge that has gone out of service but is still of value is taken off the main line, the capital

account should receive credit for the value of the bridge. A manufacturer would easily make that charge as a matter of bookkeeping. If you are building a new line in Prince Edward Island and had to buy a bridge you would have to charge that to capital account, but the Minister of Finance goes to the main line of the Intercolonial Railway and gets that bridge for nothing.

The MINISTER OF FINANCE. What the hon. gentleman says should be done is just what has been done in this case. The bridge is taken from the Intercolonial Railway to Prince Edward Island, and it is charged against the Prince Edward Island road and credited in the Intercolonial Railway accounts against capital account.

Mr. BARKER. If that is so it is all right.

Hon. Mr. HAGGART. The bridge having been taken off the Intercolonial Railway goes into the stores account, and when it is taken out of the stores account it is charged to the Prince Edward Island Railway. Is it credited then to capital account on the Intercolonial Railway ?

The MINISTER OF FINANCE. I am informed that it is.

Mr. BARKER. Can the minister point to any place in the public accounts where a credit of that kind is shown ? I have never seen it.

The MINISTER OF FINANCE. My hon. friend could not well see it in this case because the transaction has not taken place yet.

Mr. BARKER. But these things are going on for the last three years and we have been complaining that we cannot get at the truth as to whether these accounts are credited or not.

The MINISTER OF FINANCE. I am glad to assure my hon. friend that what he thinks ought be done is being done in this case.

Hon. Mr. ROSS (Victoria, N.S.) The Minister of Railways and Canals explained last year this bridge was taken from the Miramichi river and transferred to Hillsborough.

Mr. LEFURGEY. It would seem that any old bridge is good enough for Prince Edward Island. Has the minister the information he promised us as to what is being done with the approaches on the Hillsborough bridge ?

The MINISTER OF FINANCE. I will give this information on another item.

Mr. INGRAM. It seems to be that you must have an interminable number of bridges of the same span on the Intercolonial Railway, because you have been doubling them up for the last three years. Unless the spans are about the same length I cannot see how you can double them up.

The MINISTER OF FINANCE. Of the bridges proposed to be doubled up the spans of some of them are as follows : 27 feet, 44 feet, 36 feet, 23 feet, 29 feet, 56 feet, 32 feet, 28 feet, 54 feet, 54½ feet, and so on.

Mr. INGRAM. How do you double them up ?

The MINISTER OF FINANCE. By taking two of the same size.

Mr. INGRAM. Where do you get two of the same size in that list ?

The MINISTER OF FINANCE. If I do not find them I will be in trouble. There are two of 44 feet and one of 29 feet and another 28 feet, and I suppose, although I am not an engineer, that they can double them up to that extent.

Hon. Mr. HAGGART. Stretch the short one.

Mr. BARKER. This is the first time I have heard the statement made specifically that when bridges are removed in this way a charge on capital account is made to the Prince Edward Island Railway, and a credit given to the Intercolonial Railway. How much has been charged for this particular bridge to the Prince Edward Island Railway and how much credited to the Intercolonial Railway, and where does that appear in the accounts ?

The MINISTER OF FINANCE. It has not been charged yet because the transfer has not been made, but the amount to be credited to the Intercolonial Railway is $32,000.

Mr. BARKER. Is that the amount charged to the Prince Edward Island Railway ?

The MINISTER OF FINANCE. Yes.

Mr. BARKER. What was the original cost of that bridge ?

The MINISTER OF FINANCE. I will get the information later.

Mr. LEFURGEY. How old is that bridge?

The MINISTER OF FINANCE. The bridge was built in 1876, but it is not right to say that any old bridge is good enough for Prince Edward Island. My hon. friend (Mr. Barker) is pointing out that it is a very valuable bridge and that we should be careful to charge it. The bridge is not strong enough for its present purpose but it is a perfectly good bridge and is perfectly adapted for the traffic on the Prince Edward Island Railway which is a narrow gauge line and does not require such a strength of bridge as the Intercolonial Railway.

Mr. LEFURGEY. Could I get any idea of what is the difference in cost between that bridge and a new bridge ?

The MINISTER OF FINANCE. That is the same question as was asked by the hon. member (Mr. Barker).

Mr. LEFURGEY. It seems to me that it is very poor policy to take a bridge twenty-seven years old, and practically useless, and transport it to Prince Edward Island at great cost, and put it on a substructure costing half a million dollars or more. This amount is being charged up to Prince Edward Island, and when we come and ask for a few railway facilities or means of transportation across the straits, there is always the cry that Prince Edward Island is asking too much.

The MINISTER OF FINANCE. Not from this side.

Mr. LEFURGEY. Yes, from that side. I think it poor policy to send us second-hand stuff, which probably in a few years will have to be changed ; and, according to the manner of bookkeeping of the last few years, this will be charged up to capital account, and it will be detrimental to the Prince Edward Island Railway.

The MINISTER OF FINANCE. My hon. friend does not help his case by stating that the bridge is worn out and no good. That does not happen to be the fact, but it was essential to my hon. friend's case to put it that way.

Mr. HACKETT. From what part of the Intercolonial Railway was this bridge taken?

The MINISTER OF FINANCE. From the Miramichi river. It has not yet been taken, but is to be taken.

Mr. HACKETT. This was a light bridge when it was constructed, and I understand that the ordinary life of an iron bridge under good care is fifty years. The bridge, which is over half worn out, you are placing on a superstructure that is costing the country an immense amount of money, and in twenty or twenty-five years you will have to replace it by a new bridge. As the hon. member for East Prince says, it is poor economy. When you are building a new railway in Prince Edward Island, and when you are constructing a bridge across the Hillsborough river at a great expense to the country, the least you can do is to put new material into it. But it appears to be the policy of this government, and especially of the Department of Railways and Canals, to send any old bridge across to Prince Edward Island, where it will have to be renewed in a few years. That is a policy of which I disapprove, and in the name of the people I represent, I must protest against it.

The MINISTER OF FINANCE. The hon. gentleman has fallen into the same error as his friend from the other district in suggesting that this is a worn-out bridge. All I can say is that it is not an old bridge, and that the ordinary life of an iron bridge is very much longer than the term the hon. gentleman has mentioned. At any rate, I am informed on competent authority that this is a stronger and better bridge than any new bridge which would be built for the railway at that point.

Mr. HEYD. I want to ask these hon. gentlemen, do they want us to throw away this bridge and build two new bridges ?

Mr. HACKETT. I would suggest that the government use this bridge in doubling up the bridges on the Intercolonial Railway, and give us a new bridge on the Prince Edward Island Railway.

Mr. LEFURGEY. No, put it on the Grand Trunk Pacific.

Hon. Mr. HAGGART. I cannot understand how these bridges appear as a credit capital account on the Intercolonial Railway. First of all, if they are taken from the Intercolonial Railway they go into the stores' account, and they are afterwards used on the Prince Edward Island Railway. By what process of bookkeeping is credit given to the Intercolonial Railway capital account for the amount expended on the Prince Edward Island Railway ?

The MINISTER OF FINANCE. I am informed that the stores' account will show it.

Hon. Mr. HAGGART. That does not appear in the capital account of the Intercolonial Railway. The expenditure for the purpose of strengthening and renewing the bridges on the Intercolonial Railway within the last few years has been over $1,000,000, besides an expenditure for repairs on the different bridges of nearly $700,000. The department has been running heavy locomotives on the Intercolonial Railway during the last two or three years ; and how is it that the government risked the lives of the employees on the railway during that time if these bridges were not sufficient to sustain the locomotives ? I suggested that if the bridges were not strong enough to bear the locomotives, new bridges should be built in the first place. But after the purchase of these heavy locomotives, and after they have been running three or four years, here is an expenditure of over $1,000,000 for the purpose of building new bridges and strengthening old ones. We have had no explanation as yet in regard to capital account.

The MINISTER OF FINANCE. I thought that was made quite clear.

Hon. Mr. HAGGART. It is clear, I suppose, to the Finance Minister. The bridges, after they are removed, are put into the stores' account.

The MINISTER OF FINANCE. And credited there to capital account.

Hon. Mr. HAGGART. No, credited to the stores' account.

The MINISTER OF FINANCE. I am advised that this bridge, when it goes to Prince Edward Island, will be credited to the capital account of the Intercolonial Railway and charged to the capital account of the Prince Edward Island Railway.

Mr. BARKER. I understand, from the statement of the hon. Finance Minister, that it is the intention that this particular bridge or material which is sent to Prince Edward Island shall be credited to the Intercolonial Railway. The Minister cannot tell us that that is done in any other particular case, and he cannot show that it will be done in this case—because the change is yet to be made. Now, the bridges are put into the stores' account when they are removed from the railway. I quite understand that the stores, having received this bridge along with $1,000,000 or $2,000,000 of other material, may issue bridges or anything else, and charge something to expense account and something to capital account. That must have been going on for years, and what I would like to understand is this. When we find year after year a sum put into the public accounts as charged to capital account, is that a charge of everything that is put in, or is it only a balance that is charged after crediting certain things and deducting the credits ?

The MINISTER OF FINANCE. In the case of an item on capital account, where there is to be a deduction later, we would have to take the full vote on capital account to enable us to have the money to buy the material ; but when the material enters into the actual construction of the road, then the account is credited with the proceeds of the article to be sold, and only the balance is charged to capital account.

Mr. BARKER. What I understand is this: Supposing $5,500,000 has been expended on capital account in the actual operations of the year and $500,000 is credited the item for such things as these, what appears in the public accounts is only the difference between $5,500,000 and $500,000. In other words you only charge up $500,000.

The MINISTER OF FINANCE. That would be correct. But you might have to take a larger appropriation, in the first instance, to enable you to buy the goods. In the statement of the account later, it would be as the hon. gentleman has said.

Mr. BARKER. Let me suggest this. It would be of very great value to the House if the Department of Railways and Canals would show in its capital account the gross amount expended on capital and the credits on account of capital, so that we would see clearly that such items as these are credited to capital and only the net expenditure actually charged. I have over and over again in the last three years endeavoured to get at the facts, but I have never yet been able to ascertain that in any individual case a credit has been given. The hon. gentleman can only tell us now that it is intended to be given in this case. He cannot tell of any particular case where such a credit has been actually given. It is most desirable that in future the railway reports should show the gross expenditure on capital account and what credits are deducted, difference being in the amount actually charged against capital account.

The MINISTER OF FINANCE. It looks to me as if the suggestion of my hon. friend has much to commend it. I would not like to commit myself too hastily, but I shall talk it over with the officials of the department. I do not see on the surface why the hon. gentleman's suggestion should not be carried out.

Mr. BARKER. It would be of great advantage to the country.

Hon. Mr. HAGGART. But the hon. Finance Minister says it has been done already.

The MINISTER OF FINANCE. The hon. gentleman's suggestion is that it should be shown in the account as well as done.

Hon. Mr. HAGGART. $500,000 is voted for the purpose of building a bridge. The whole amount is expended upon the bridge, but there is $50,000 from the old bridge, which ought to be credited to the new structure, but which goes into the stores account. By what process is credit given back again to the construction of that bridge or does it ever appear in any of the books ?

The MINISTER OF FINANCE. The hon. member for Hamilton tells me it does not, and I must not contradict him. I am sure it does appear in the stores account. The only question is whether it could not be shown in the manner he suggests. I am sure it does appear in the stores account.

Hon. Mr. HAGGART. No doubt it does but not in the capital account.

The MINISTER OF FINANCE. But for these credits the capital account would be so much larger.

Mr. BARKER. I think the hon. minister will admit that no person can take the public accounts and say whether anything has been credited or not. There is a certain sum charged as expenditure on capital account, but there is nothing to show whether that expenditure was half as much more and was reduced to the amount charged.

Mr. HEYD. As I understand the position, assuming that $100,000 was expended on a new bridge on the Intercolonial Railway and $10,000 received for the old bridge, instead of charging $100,000 to capital account, they only charge $90,000. If that is the method pursued, the result is correct, but it does not show the amount actually expended and the amount credited, and I agree with the hon. member for Hamilton that that ought to be shown.

Hon. Mr. HAGGART. I would like to know the total amount expended for the strengthening of bridges and putting in new bridges on account of these new locomotives. The total amounts expended on the Restigouche and the Miramichi bridges are two independent items. Add the two together and the amount expended on the other. I think it must be over $1,000,000.

The MINISTER OF FINANCE. The total amount is made up to the 31st of January last. We have not the figures to the close of the fiscal year. Leaving out the bridges at Miramichi and at Restigouche, the amount is $461,680.

Hon. Mr. HAGGART. That is what the hon. gentleman said before. Then there is the vote of $165,000 to be added to that, and the hon. gentleman says that will complete the repairs on those bridges.

The MINISTER OF FINANCE. I stated that this appropriation for the year will probably finish the work, but the general manager says it will take another year. There will be something further to be done.

Hon. Mr. HAGGART. You do not know what the amount is ?

The MINISTER OF FINANCE. I have not the estimates at hand.

Mr. INGRAM. For the total repairs of bridges ?

The MINISTER OF FINANCE. For strengthening the bridges ?

Mr. INGRAM. I have always understood that the department makes an estimate of the probable cost of strengthening bridges on the Intercolonial Railway. Will the hon. gentleman tell us what is the estimate cost of strengthening these bridges ?

The MINISTER OF FINANCE. There was an estimate made by the general manager and the recollection of my deputy is that it was about a million and a quarter dollars.

Mr. INGRAM. Surely there must be some mistake. That includes the bridges at Restigouche and Miramichi ?

The MINISTER OF FINANCE. The estimate is substantially correct—over a million dollars, including the large bridges as well as the process of doubling up. It would be subject to some deduction if bridges were sold off the road, but that has not yet been done, most of them being used in doubling up.

Mr. INGRAM. Then the department in making up these estimates would estimate what it would cost to strengthen the old bridges and what it would cost to buy the new bridges. Could the hon. gentleman tell us the items of these two classes of work ?

The MINISTER OF FINANCE. I do not give the hon. gentleman (Mr. Ingram) that information at the present time.

Mr. LEFURGEY. I have not yet understood the method of bookkeeping in dividing these items between capital and revenue accounts. Suppose a bridge costs $50,000 and $1,000 to put it in place, and it is to be replaced with a bridge costing $100,000, which it will cost $2,000 to put in place. Surely it cannot be said that the $1,000 spent in placing the original bridge is not lost ? At least $1,000 of the cost of putting in the new bridge should be charged to revenue.

The MINISTER OF FINANCE. I am afraid I have not understood my hon. friend's (Mr. Lefurgey's) question.

Mr. LEFURGEY. If it costs $1,000 to put the first bridge there, and you are taking that up, you have lost $1,000.

The MINISTER OF FINANCE. A good deal depends upon what you do with it.

Mr. LEFURGEY. But the expense of putting it there is lost. Either that, or, what would amount to the same thing, the same amount in the cost of putting in the new bridge should be charged to revenue.

The MINISTER OF FINANCE. Even if that were correct, it would not be a large item.

Mr. LEFURGEY. If you were putting in a hundred bridges, it would amount to $100,000. Of course, that is not large in these times.

Mr. BARKER. The question raised by my hon. friend (Mr. Lefurgey) involves a point that we have been discussing for the last two or three years. Supposing a bridge as originally put in costs $1,000 and it is being removed and a bridge costing $5,000 is to be put in its place. The question is what is to be done with the original charge of $1,000. The revenue should be charged with whatever is necessary for the work up to its original value, and capital should stand the difference and also the $4,000 of the betterment. The objections that I have been trying to press upon the government are these. In the past the government have been practically adding the whole $1,000 to revenue account, and revenue has not been charged anything for superintendence. Suppose that this bridge costing $1,000 in the course of time becomes worth only $500, revenue should be charged with $500 and capital should be credited with $500 against the new one.

Hon. Mr. HAGGART. According to the statement of the minister it will require $1,250,000 to do this work. I should judge from the estimates for this year that he expects that the expenditure for the year will be $1,000,000, and it will require some $200,000 more to complete the work. How

was it then, that the minister made the statement last year or the year before that the total expenditure would be only about $600,000.

The MINISTER OF FINANCE. The figures are certainly in excess of those the hon. gentleman mentions. I do not recall what the minister said. In view of the figures, $600,000 would fall very short. I think there must have been some misunderstanding as to what the minister said.

Hon. Mr. HAGGART. The hon. minister spoke at that time about the contracts that had been made with the Hamilton Bridge Company and some others, and about the trouble he had to get the work done, and evidently speaking about the two bridges, the Miramichi and the Restigouche, said :—

We have only expended $225,000 out of the $600,000 which it was originally estimated it would require.

The MINISTER OF FINANCE. That would be far short of the actual——

Hon. Mr. HAGGART. Just about half.

Mr. LEFURGEY. Before we pass this item, I would like the committee to fully understand the method of bookkeeping of the Intercolonial in this matter. I think the minister has acknowledged that the illustration I gave of the bridges is practically the way they are keeping their capital accounts. The Intercolonial charges to capital many items such as a man in keeping his accounts of his own business would charge to the expenses. That being so it can easily be understood how the Minister of Railways and Canals has been able to show a surplus on the Intercolonial. If the people fully understand this, they will certainly condemn the administration for this attempt to deceive them by their method of bookkeeping.

Intercolonial Railway—air brakes to freight cars, $25,000.

Hon. Mr. HAGGART. The minister promised us, when this item was under discussion before, that he would give us a full account of how many freight cars were to be furnished with air brakes, and the cost. We would like to know also whether this is done under contract or whether there is a supply on hand.

The MINISTER OF FINANCE. The contractor is the Westinghouse Air Brake Company of Hamilton, Ontario. The total number of freight cars, June 30th, 1902, was 9,689. The number equipped with air brakes at that time was 5,568; so that there remained to be equipped 4,121. There were equipped in the year 1902-3, 449 cars, so that at the end of the year there remained to be equipped, 3,672 cars. The average cost per car is about $50.

Hon. Mr. HAGGART. When will this work be completed, and what will it cost ?

The MINISTER OF FINANCE. About one-third of the total number remain to be equipped, so it will take several years.

Mr. INGRAM. What is the contract price ?

The MINISTER OF FINANCE. I am informed that is the schedule price which the Westinghouse establishment charges to all railways.

Mr. INGRAM. What is the cost per car for the air brake, and what is the cost of the draw-bar ?

The MINISTER OF FINANCE. About $50 per car for the air brake, and $40 for the draw-bar.

Mr. INGRAM. The ex-Minister of Railways and Canals last year stated that the air brakes would cost about $40 and the draw-bars $25. There ought to be some reliable figures.

The MINISTER OF FINANCE. Perhaps the difference arises from the fact that the one item includes labour of putting on the brakes, while the other does not.

Mr. BARKER. The minister says there are 9,609 freight cars. Is that the total stock-list of freight cars ?

The MINISTER OF FINANCE. Yes.

Mr. BARKER. Well, there are several hundred freight cars out of service that will have to be purchased or rebuilt. Does the hon. gentleman include these in the number for which he is going to take a special vote? —because nowadays, the hon. gentleman knows, he can buy them equipped with all these appliances. I would like him to explain that, so that we may not be putting four or five hundred too many on one side of the account.

The MINISTER OF FINANCE. The figgures I quoted include every car on the list.

Mr. BARKER. Then the cars out of service, there are 400 or 500 of them, will be bought as new cars, and they will be bought, no doubt, with the full equipment of modern cars. The hon. gentleman will not want to buy the Westinghouse equipment to put upon them as if they were old cars.

The MINISTER OF FINANCE. I am told that when the cars get out of service they will be rebuilt in the shops and charged to renewals, with the exception of the air-brakes, which will be charged to capital in as much as the old cars did not have the air-brakes.

Mr. BARKER. This is an opportune time, as the general manager is here, to ask why they have not already been dealt with in that way instead of the government buying new cars.

The MINISTER OF FINANCE. It is because of the increasing business of the

road they need both, not only to buy new ones but to repair old ones.

Mr. BARKER. Perhaps the minister could tell us why these cars that are out of service, and have been out of service year after year, have not been restored instead of buying new cars. The hon. gentleman knows there would have been a very large addition to the working expenses of the railway. But by not doing that and by buying new cars, there has been no addition to the working expenses of the railway, and there has been a large addition to the debt of the country.

The MINISTER OF FINANCE. The manager informs me that they were doing all they could in this direction, they are constantly buying new cars as well as constantly repairing and improving old ones, to the extent of their facilities.

Mr. BARKER. The extent of their facilities seems to be getting behind, and we are paying year after year large sums to increase the equipment at Moncton to enable the department to do this work. I would like to point out that a far more profitable answer is this, that if the department had replaced these cars in their shops, the charge would have been to working expenses ; but by buying them from the United States and elsewhere, it has gone to capital account ; and the company is supposed to have been making a profit on the road when there has really been a large loss.

The MINISTER OF FINANCE. I am advised that the proportion of these cars which are out of service now is not larger than that of other railroads. They have perhaps in the past not been able to overtake them, but they have now caught up, and there is not more than the usual proportion of cars out of service.

Mr. BARKER. Two years ago I went into that question particularly, and I cited the reports of the Grand Trunk Railway and other companies as to their equipment of locomotives, and showed that the Grand Trunk Railway, two years ago, I think, it was, was actually ahead of its stock list, while the Intercolonial Railway was 700 cars behind.

The MINISTER OF FINANCE. That was correct a few years ago, but I am glad to be able to say we have done better since.

Mr. BARKER. No, you have done worse.

Mr. INGRAM. What is the capacity of the box cars they have been buying ?

The MINISTER OF FINANCE. 60,000 and 80,000 pounds, the size of modern cars.

Mr. BENNETT. What has been done under the recommendation of Mr. Muhlfeld as to the equipment of certain cars and locomotives with what was known as the Chapman ball bearing apparatus ?

The MINISTER OF FINANCE. Nothing has been done.

Mr. BENNETT. Was anything done on the report submitted by Mr. Muhlfeld ?

The MINISTER OF FINANCE. He made a report, but the officials tell me it was not acted upon.

Mr. BENNETT. Then there are none of these ball bearings in use now on any of the locomotives or rolling stock of the Intercolonial ?

The MINISTER OF FINANCE. None.

Mr. INGRAM. While dealing with that phase of the question, I would like to know what has been done with Mr. Cleveland's patent for cylinders ?

The MINISTER OF FINANCE. It is being used on several locomotives at the present time.

Mr. INGRAM. I understand Mr. Cleveland has had his patent put on some 18 locomotives on the Intercolonial, they have been on for some time, and that gentleman can get no information as to whether they were regarded as satisfactory.

The MINISTER OF FINANCE. I understand that the reason why they have not furnished information as to the success of these appliances is that the officials wish to test them for a longer time.

Mr. INGRAM. They have been on for some years, I understand.

The MINISTER OF FINANCE. The first was put on three years ago. These gentlemen have been making changes in the appliance since that time and improvements as they claim and the officials have not felt justified in giving any report up to the present time.

Mr. INGRAM. And no report as to how it acted in the first place or as to these improvements from time to time ? I understand that in the state of Michigan there is a gentleman who has got out a patent which is becoming a very serviceable one. By reason of using it the locomotive consumes less fuel and greater speed is attained and the patent is becoming very valuable. It does seem to me strange that after these gentlemen have submitted this appliance to test on the Intercolonial for three years they could get no report upon it. It is not fair to these men and there must be some cause for not giving a report.

The MINISTER OF FINANCE. I am informed that the people interested in this appliance have received some reports as to what is being done, but they would like a more general report. They have reports from time to time as to the fuel consumption, &c., which are important elements in the matter, but they have been applying to the department for a general report, no doubt,

with the desire, should it prove satisfactory, that they should supply some more of these appliances.

Mr. INGRAM. When may we expect that they will be able to get that report ?

The MINISTER OF FINANCE. One of the gentlemen concerned in the patent, I am informed, has spent most of his time at Moncton up to a comparatively recent date and is perfectly familiar with the operation of the appliance. He was there observing it himself and therefore did not need any report.

Mr. INGRAM. I am bound to say that if I read the letter that I have in my possession, it would ensure the hon. Minister of Finance that this gentleman has become very tired waiting around Moncton to get a report. I think if I read the letter it would raise the hair of the hon. gentleman' head, but I do not feel like doing so because I do not think it would be a good thing to put on record. He complains very bitterly that he cannot obtain any report from the Intercolonial in reference to this test, that he can get no satisfaction at all and that the officials of the Intercolonial Railway simply ignore him. There are three gentlemen interested in this patent, one of them is in San Francisco and another is in Toronto. One of these gentlemen was here endeavouring to get some information, but he could get no satisfaction from the department and he was forced to leave Ottawa. He is a poor man without the means to enable him to remain around and I think he has hardly been treated fairly. If his patent is no good he should be told so at once.

The MINISTER OF FINANCE. Does the hon. gentleman mean that the gentleman who was recently here was the one who has been at Moncton ?

Mr. INGRAM. Yes.

The MINISTER OF FINANCE. I understand that there are several parties connected with this patent and I am not sure that they all take the same view.

Hon. Mr. HAGGART. Who are the other gentlemen connected with it ? There are three of them, are there not ?

The MINISTER OF FINANCE. There are Peterson and Cleveland and there are several members of the concern. There are two Petersons and two Clevelands.

Mr. INGRAM. I am informed that the patent office only recognized two—Mr. Cleveland and Mr. Peterson. The trouble, Mr. Cleveland tells me, is that there are some parties associated with the concern in Moncton, some gentlemen who have become interested in it in a way, Mr. Cleveland thinks, that is causing it to be a case of freeze-out, and Mr. Cleveland objects to being frozen out. Yet, he and the other two control the patent as far as the patent office is concerned.

The MINISTER OF FINANCE. They will have to settle the patent question among themselves.

Mr. INGRAM. I think the Intercolonial Railway should give them some satisfaction.

Mr. BENNETT. Is it the intention of the department to go on and instal this Chapman double ball bearing apparatus on certain locomotives and cars on the report of Mr. Muhlfeld ?

The MINISTER OF FINANCE. The privilege has been accorded to these parties to make a trial of this apparatus, but they have not so far availed themselves of it.

Hon. Mr. HAGGART. At their own expense ?

The MINISTER OF FINANCE. Yes, there is no present understanding as to any further action.

Hon. Mr. HAGGART. Have you much of a supply of these air-brakes on hand ?

The MINISTER OF FINANCE. There are some on hand.

Hon. Mr. HAGGART. Not a large quantity ?

The MINISTER OF FINANCE. I think not.

Mr. INGRAM. Can the hon. minister say definitely whether the estimate he is making for the air-brake and draw-bar includes the labour or not ?

The MINISTER OF FINANCE. This $50 I have quoted as the cost of the air-brakes does include the labour of putting them in.

Mr. INGRAM. And the $40 for draw-bars also includes the labour ?

The MINISTER OF FINANCE. Yes.

Mr. BENNETT. I find by a circular issued by this company that the arrangement is not as the hon. minister has stated it to the committee. The hon. member for West York (Mr. Campbell) is president of this company and with the view of selling stock they have issued a prospectus purporting to give a copy of a report by Mr. Muhlfeld. It says :

> The railway to pay the cost for the expense for the application of the equipment only to such an amount as may be occasioned by the removal of the present equipment. If, after one year's continuous service, the equipment has demonstrated that it can fulfil all of the requirements, in accordance with the claims made for it by the inventor, and the company who may control the invention, the railway to pay the additional amount to defray the cost for the initial application.

The MINISTER OF FINANCE. Is my hon. friend reading from a prospectus ?

Mr. BENNETT. From the prospectus which is purporting to give a copy of the report of Mr. Muhlfeld, superintendent of machinery and rolling stock.

The MINISTER OF FINANCE. Mr. Muhlfeld has not been in the service of the Intercolonial for some time.

Mr. BENNETT. He was in the service at the time this report was written, in May, 1902. Is that still the standing of this company or is the company sailing under false colours in making this publication to the people ?

The MINISTER OF FINANCE. I am afraid I cannot add anything to what I have already stated. The officials of the department state that the privilege was accorded to this company of making a trial at their own expense, but that they have not availed themselves of it.

Mr. BENNETT. Then this report is misleading ?

The MINISTER OF FINANCE. I do not say anything about that. I do not form any opinion as to the report.

Mr. BENNETT. Do I understand that the privilege is cancelled or is it still open on the terms of the report of Mr. Muhlfeld ?

The MINISTER OF FINANCE. That will have to be considered if they should make an application. It is intended that they should have the privilege of having a full test made of this apparatus, and if they make an application to us we will consider it.

Mr. BENNETT. Is the report correct in stating that the department were to pay as set forth in the report which I have read?

The MINISTER OF FINANCE. The understanding of the department was that the trial was to be made at the expense of the company.

Mr. BENNETT. Then the report is misleading.

The MINISTER OF FINANCE. I do not say anything about the report.

Mr. BLAIN. Is not the cost of putting on air-brakes cheaper now than it was a year or two ago Two years ago the minister said that these air-brakes cost $70 each and now we are told they only cost $50.

The MINISTER OF FINANCE. I cannot explain that. Things have not become very much cheaper, the good times continue.

Mr. HENDERSON. Is it the reduction of duty on the air ?

Some hon. MEMBERS. Hear, hear.

Mr. BLAIN. Labour is higher now than it was two years ago ; perhaps the reason is that you are buying a larger quantity and are getting them cheaper.

The MINISTER OF FINANCE. The prices may vary a little, but I have no information that would enable me to explain the difference between $50 and $70.

Mr. BLAIN. Which is correct, the $50 or the $70?

The MINISTER OF FINANCE. I can only be responsible for the $50.

Mr. INGRAM. When did you first commence buying air-brakes from the Westinghouse Company at Hamilton ?

The MINISTER OF FINANCE. The Railway Department has had relations with the Westinghouse Company for a long time, and since they have established themselves at Hamilton we have been doing business with them. That may be two or three year ago or perhaps longer.

Mr. INGRAM. I suppose it is another evidence that the protective tariff brings manufacturers to Canada.

The MINISTER OF FINANCE. There is no doubt that the manufacturing industries of Canada have prospered enormously under the administration of the present government. I cannot deny it.

Mr. INGRAM. But that is due to the tariff of the old government.

The MINISTER OF FINANCE. But hon. gentlemen opposite are complaining that this is a wretched tariff we have now ; I cannot understand them at all.

Mr. BLAIN. Perhaps they are cheaper because they are manufactured in Canada.

The MINISTER OF FINANCE. I cannot say. It is since this government came into power that most of these things happen in that way.

Mr. BARKER. Is not the explanation that that since the Westinghouse Company came into Canada they have entered into a new contract with the government at a reduced price ?

The MINISTER OF FINANCE. I have no information as to that.

To exchange draw-bars on freight cars, $46,000.

The MINISTER OF FINANCE. The cost per car is $40. The total number of freight cars on June 30, 1902 was 9,689 ; the number equipped with master car builders couplers was 5,743 to June 30, 1902 ; there remained to be changed 3,946 ; there were changed last year, 1,008 and there remained to be changed 2,938. This vote is supposed to deal with 1,150 cars.

Mr. BARKER. As I have the report of the Railway Department here now, I find that the exact number of cars out of service to the end of June, 1902, is 571 ; I said 560 from memory. The minister thought they were improving, but the report shows that at the end of the previous year the number out of service was 361, so that he has gone 210 to the bad during the year.

The MINISTER OF FINANCE. I am assured that in the report for the present year the situation will be improved.

Mr. BARKER. Distance lends enchantment to the view.

Mr. SPROULE. Are you taking them off one class of cars and putting them on another ?

The MINISTER OF FINANCE. We are exchanging the old fashioned coupler for the modern appliance.

Mr. BARKER. Are you charging the whole cost to capital?

The MINISTER OF FINANCE. Yes ; the old ones are used in repairs to the old cars.

Mr. BARKER. That will not do.

The MINISTER OF FINANCE. It is a fact.

Mr. BARKER. That is too thin.

Hon. Mr. HAGGART. On what principle do you charge changing draw-bars to capital ?

The MINISTER OF FINANCE. It is a decided betterment.

Hon. Mr. HAGGART. But a thing of that kind is never charged to capital.

Mr. BARKER. Betterment is one thing and charging the whole cost is a very different thing.

Mr. INGRAM. Do you manufacture them in the shops at Moncton ?

The MINISTER OF FINANCE. Some have been bought in Walkerville, some in Montreal, and some in the United States.

Mr. INGRAM. What becomes of the old draw-bars ?

The MINISTER OF FINANCE. They are used in repairing old cars.

Mr. INGRAM. But if they are smashed they cannot be used.

The MINISTER OF FINANCE. Then they go into the scrap heap.

Mr. BARKER. And if they do go into the scrap heap does not the minister see that revenue is bound to replace them ? He has no right to charge their replacement to capital. He has 900 old draw-bars, he throws them into the scrap heap, and he has not charged anything to revenue. The revenue of the company has got to replace the old ones, and if they are not worth replacing you must charge the difference between what it would cost to replace the old ones, and the cost of the new ones to capital account. Your revenue has to bear the expense necessary to replace the old ones.

Mr. INGRAM. I would like to know what railway system in Canada or the United States follows a system similar to that followed on the Intercolonial Railway? Or is this system followed on the Intercolonial Railway because the management can get a vote of government money whenever they want it ? It is easier to buy new material than to replace the old, and charge it to capital account under these circumstances.

The MINISTER OF FINANCE. I cannot answer that.

Mr. INGRAM. Well, I think if a little common sense were applied that system would not be adopted merely because the money is voted so easily.

The MINISTER OF FINANCE. We do not find that the money is easily voted. We get it with great difficulty.

Mr. INGRAM. The managers of other railways do not get their money so easily.

Mr. BARKER. The hon. minister is not entitled to say that he cannot answer for that, because for two or three years past he has voted squarely in the House for the very things we are contending for, and he must take the responsibility for it.

The MINISTER OF FINANCE. I take the responsibility of it ; but what I cannot answer is as to the affairs of other companies.

Mr. INGRAM. Surely the superintendent can give the information. Where are all these Master Car Builders' Associations we have heard so much about? Surely the government railways are not run without the managers having an interchange of ideas with the managers of other companies. Surely they are not conducting this railway on their own ideas, and not inquiring how other railways are conducted. Will the hon. minister say that any officer of the Intercolonial Railway associates with the officers of other railways and attends the meetings which are held occasionally with a view to finding out the best way to conduct the railway? I am afraid there is something wrong about this whole business.

Intercolonial Railway—new machinery for locomotive and car shops, $8,000.

The MINISTER OF FINANCE. The details of this are as follows : Ferguson flue welding furnace, operated by oil as fuel, $200; 300 horse-power engine, $3,000 ; buzz planer, $120; 100 horse-power engine, $1,500; turning lathe to take 16 feet between centres, $1,600; little giant pneumatic drill, $40; combination cold saw cutting-off machine, $1,000; belting, &c., $540. The machinery asked for is of the latest and most improved design, and is to facilitate the repairs of locomotives and cars. The present engines are too small to furnish power required to run shops with the new machinery placed and enlargements made, and it is proposed to replace them with engines asked above. The present engines will be used at other points on the line.

Hon. Mr. HAGGART. Was the $10,000 voted last year all expended for machinery?

The MINISTER OF FINANCE. Yes.

Hon. Mr. HAGGART. What is the total cost of the machinery in these shops now?

The MINISTER OF FINANCE. I cannot give that to the hon. gentleman, but I will give it to him at a later stage.

Intercolonial Railway—to equip ten passenger cars with Pintsch gas apparatus, $8,000.

The MINISTER OF FINANCE. This is found to be the latest and most satisfactory system. The cost is $800 per car, and we propose to equip 10 cars.

Hon. Mr. HAGGART. How many remain to be equipped ?

The MINISTER OF FINANCE. The total number to be equipped to the end of the year will be 26. That will complete the work.

Hon. Mr. HAGGART. When you discard one system of lighting on the Intercolonial Railway and introduce another, you charge the cost to capital account?

The MINISTER OF FINANCE. The apparatus for the Pintsch system is entirely new, and is charged to capital account. All the new cars are fitted with that apparatus; and when we take an old car which is only fitted with a gas lamp and put in the Pintsch system, that is charged to capital account.

Hon. Mr. HAGGART. Many of the cars were lighted with electric light.

The MINISTER OF FINANCE. There were a number of cars equipped with electric light on the storage battery system; but that was found to be inconvenient and not economical, and we are adopting the Pintsch system instead.

Hon. Mr. HAGGART. You put out the electric light and put in this, and charge the whole to capital account?

The MINISTER OF FINANCE. Yes.

Mr. BARKER. Then, the principle on the Intercolonial Railway seems to be this, that if the management in one season fancy a particular lamp and buy it, and the next year think another kind is more suitable, they turn out the first and put in the new one, and charge both to capital account. Is that the principle? If it is, it is a most extraordinary one.

Mr. BLAIN. Is this a cheaper system of lighting than electricity?

The MINISTER OF FINANCE. Yes, the officials think it is decidedly cheaper than the system of a storage battery. Some railways are introducing dynamos, but they have not been introduced on the Intercolonial Railway.

Hon. Mr. FIELDING.

Mr. BLAIN. Does it cost less to fit up a car with the Pintsch system than with the electric light apparatus?

The MINISTER OF FINANCE. Yes, that is the opinion of the officials.

Mr. FOWLER. How many of these cars are fitted with electric light?

The MINISTER OF FINANCE. I cannot give the hon. gentleman the number, but I will get that at a later stage.

Mr. SPROULE. What is the nature of this new system ? Does it generate gas ?

The MINISTER OF FINANCE. It is a system of cylinders and piping—a storage system of gas. The gas is made at the shops in Moncton and stored in these cylinders and pipes. It is called the Pintsch gas system, which is used on most of the railways that do not use the electric lights. It is made from oil.

Mr. SPROULE. It is very costly, $800 per car. Is it expensive to keep up afterwards ?

The MINISTER OF FINANCE. The chief expense is in the fitting up.

Mr. BARKER. I do not think there is much dispute about the Pinsch system being a good one. But I think the real question is this. If the officials of a railway, who may change from year to year their ideas with regard to the kinds of lamps to be used in the cars, are allowed to have their way, we will have all sorts of experiments tried, according to the fancies of the gentleman, who for the time being is the superintendent. If you adopt the ordinary principle that when officials want to try from one year to the other, which is the better system, they must do it at the expense of their current account, they will have some motive to be economical and careful, but it is almost historical that when you allow officials to expend anything they like and charge it to capital, they will say : Why should we not expend the money so long as parliament votes it. There is no check whatever and no inducement to officials to be economical and careful so long as they can get whatever they please without adding one cent to their working expenses. The only safety in the operation of a road, whether run by a government or a company, is to have the officials who are responsible run up their working expenses by every purchase they make and not have these purchases treated as an additional mortgage on the property.

Rolling stock, $637,000.

The MINISTER OF FINANCE. I propose to reduce that to $327,000.

Mr. BARKER. We should have an explanation why the amount was put in the first instance at $637,000 and why it was subsequently reduced ?

The MINISTER OF FINANCE. If I give an explanation of the sum I ask the House

to vote, the hon. gentleman should be content.

Mr. BARKER. Certainly not.

The MINISTER OF FINANCE. We propose to furnish :

Six second-class sleepers at $10,000.. ..	$ 60,000
Four parlour cars at $20,000	80,000
Ten first-class cars at $16,000..	160,000
Six baggage cars at $4,500..	27,000
Total..	$327,000

Mr. FOWLER. We are entitled to know why the first amount was reduced. Before this amount of $637,000 was arrived at, the estimates must have been made up by the officials, passed upon by the minister, submitted by the minister to the council, and passed upon by the council.

The MINISTER OF FINANCE. If my hon. friend insists on giving me the whole amount of $637,000, I will have to take it.

Mr. BARKER. We want to know why you have changed your mind.

The MINISTER OF FINANCE. It is not an uncommon thing to reduce estimates. So long as we do not increase them, there is not cause to complain.

Mr. FOWLER. I do not quite agree with the hon. minister. This first amount of $637,000 was not put in the estimates without having been carefully considered, and we should know why this serious reduction is now being made in it. Is it because we do not require as much rolling stock as the government thought at first we did ? Does the hon. gentleman find that the trade on the Intercolonial Railway is not increasing but diminishing or is it not increasing at the rate expected ?

Hon. Mr. HAGGART. Perhaps the hon. minister is going to charge the rest to revenue instead of to capital. He has found he has made a mistake.

The MINISTER OF FINANCE. That is a very charitable suggestion.

Mr. FOWLER. I would like to have it confirmed by the hon. minister.

The MINISTER OF FINANCE. I do not want to contradict the hon. member for Lanark, who is an old and experienced railway man.

Mr. FOWLER. If the minister accepts that explanation and says that what the hon. member for Lanark stated jocularly is really the case, we must accept his statement, but we should have some reason given us. Some one must have erred greatly in connection with the matter.

Mr. BARKER. I think that possibly the explanation of the hon. member for Lanark may throw some light on the matter, but they would require a little more than this reduction to make up for the cars out of service and which ought to be charged to revenue account. There is another explanation to which I might probably draw attention. In the revenue account for the year ending 1902, I find that the government has received for mileage of its own cars on other lines in excess of what it has paid to companies for mileage of their cars on the Intercolonial Railway, $16,743. This indicates that instead of the government wanting freight cars, it has more than it needs, and probably after attention was called to this during this session, the government reconsidered the matter and deemed it expedient to take $300,000 or $400,000 off what a month or two ago it thought it should ask parliament for.

Mr. SPROULE. I think the hon. minister is to be commended for striking off this sum. It is the first reduction we have seen for a long time.

The MINISTER OF FINANCE. I must thank my hon. friend for coming to my rescue for I felt I was being badly treated.

Hon. Mr. HAGGART. Would the hon. minister give a statement of the total amount expended on capital account in the purchase of rolling stock from 1896 up to the present day, including this vote ?

The MINISTER OF FINANCE. The expenditure from the 30th June, 1896, to the 30th June, 1902, which was the last official report, was $4,896,843.

Hon. Mr. HAGGART. With this vote, the total is about $5,200,000. The government, through its Minister of Railways and Canals, congratulated the House upon having a surplus instead of a large deficit. But I find that for the year ending June 30th, 1902, the number of cars of the Intercolonial Railway that were on other roads was 1,012, with a day use of 13,100, and for last year there were 1,522, with the number of days nearly 15,000.

Mr. BARKER. An increase of nearly fifty per cent in the number of cars.

Mr. FOWLER. Would the minister give us an idea of the present value of the rolling stock ?

The MINISTER OF FINANCE. I could not, off-hand, give that information.

Mr. FOWLER. But, surely, with the general manager at his elbow, the hon. gentleman can get the facts.

The MINISTER OF FINANCE. The books are kept at Moncton and I presume they include that item. The valuation is not made every year, but only from time to time, I will get the latest valuation for the hon. gentleman.

Mr. FOWLER. You do not take stock ?

The MINISTER OF FINANCE. Yes, but the cars stand at their cost.

Mr. BLAIN. Is the rolling stock purchased in Canada, and is it purchased by tender, or how ?

The MINISTER OF FINANCE. Cars are purchased in Canada whenever they can be obtained here, and always by tender.

Mr. FOWLER. As to the system of stock-taking, if the replacement of cars were charged to maintenance, the system of taking the cars at cost would be fairly correct. But where the replacement is charged to capital, as on the Intercolonial, to take the cars at cost does not give a fair estimate of the present value of the rolling stock. An ordinary railway is supposed to keep its rolling stock up to the original valuation, and, in the case of such a road the valuation at cost would be fair. But that is not the system on the Intercolonial, and to take the cars at their original value would be to represent the rolling stock at a much higher value than it actually has.

The MINISTER OF FINANCE. The hon. gentleman is mistaken in his assumption that all these renewals and repairs are charged to capital. That is not so; on the contrary, once a car is bought on capital account it has to be maintained, and the maintenance is charged to current account. Only additional purchases or improvements are charged to capital.

Mr. FOWLER. Where do you draw the line? For instance, in the matter of lighting, you put in electric light and charge it to capital. Soon after that you throw out that system and put in the Pintsch system, and charge that to capital. If, next year, some better system is invented, you discard the Pintsch and put in the new one and charge that to capital. You will have all these changes, costing an average of say $800 or $2,400 per car, charged to capital. In view of the hon. minister's explanation of this subject, I think I was justified in the assumption I made.

The MINISTER OF FINANCE. There may be some room for the hon. gentleman's point as respects the lighting; that may be a matter of discussion. But as respects the general maintenance, I can assure him that it is not so charged.

Hon. Mr. HAGGART. Some time ago when the minister was making a statement as to the benefit accruing to the Intercolonial from the cars that were being procured, I said I thought most of the small railways in Nova Scotia had their rolling stock virtually supplied by the Intercolonial. I find full confirmation of that in the return. For instance, here is the railway of the Dominion Iron and Steel Company, the number of cars of the Intercolonial they had was 59 for 297 days; and we had ten of their cars for fifteen days. The Sydney and Louisburgh road had eighty-four cars for 281 days; we do not appear to have had one of theirs at all. The Nova Scotia Steel Company had 135 cars for 1,073 days, but the Intercolonial does not seem to have had any other of theirs. The Inverness and Richmond Railway had 115 Intercolonial cars, and we had six of their cars for thirteen days. The Dominion Atlantic Railway had thirty-three of the Intercolonial cars, but we do not seem to have had any from their road. The Quebec Central Railway had 137 Intercolonial cars for 1,936 days; and we had seventeen of theirs. Under the system in use, it would appear that these concerns are supplied with Intercolonial cars to run their roads.

Mr. DEPUTY SPEAKER. Carried.

Hon. Mr. HAGGART. No, I want to know what is the reason for this.

The MINISTER OF FINANCE. The traffic goes in that direction. Take Cape Breton for example, the cars go down loaded with the produce of the west, and then they are sent to these various coal mines where they are loaded with coal to come back. The traffic is chiefly going down, and when the cars are there they want to make some use of them.

Mr. FOWLER. Do you charge anything for the use of these cars?

The MINISTER OF FINANCE. The usual charge is 20 cents per day.

Mr. BLAIN. Is any portion of thise $637,000 for the purchase of freight cars?

The MINISTER OF FINANCE. No.

Hon. Mr. HAGGART. I suppose all this, the supply of cars, buildings, and everything else, is done in the usual way by contract and tender?

The MINISTER OF FINANCE. Yes, all are matters of public tender.

Mr. FOWLER. Where will these cars be built for which you are asking this appropriation?

The MINSTER OF FINANCE. They will be built either in Ontario or Nova Scotia.

Increased accommodation at Stellarton, $32,000.

The MINISTER OF FINANCE. That item is made up as follows: New station, $16,000; machine shop, $4,500; car repair shop, $4,000; building to store wrecking train, $1,500; building for stores and offices, $3,500; engineer inspection, $2,500; making a total of $32,000. Stellarton is an important junction and locomotive station, the centre of the Pictou coal fields. A large business is done in connection with the coal trade, and it is necessary to do considerable repairing of cars.

Hon. Mr. HAGGART. There were $32,000 spent last year.

The MINISTER OF FINANCE. The appropriation last year has been largely spent in providing yard room and an engine house. The present appropriation will finish all that is contemplated.

Mr. FOWLER. When was the old station built?

The MINISTER OF FINANCE. At the time of the construction of the Pictou town branch, in 1889. The business has outgrown the station facilities, but the old building will still be used.

Mr. FOWLER. As the general manager is present, I want to call attention to the lack of station accommodation at Sussex. That is one of the most important towns on the Intercolonial. A very large amount of business is done there, and it is the largest railway town between Moncton and St. John. There is a station there, built when the railway was first constructed, some forty odd years ago. It is an old wooden structure, and is a disgrace to the Intercolonial and to the town itself. I am afraid that if the people of the town were not so law-abiding, some one would apply a torch to it and get rid of it in that way. This is a matter that ought to be taken into consideration at once. Besides the lack or station accommodation, they have a disgraceful old shed for an engine house, entirely dilapidated ; indeed a man out in the new North-west would not use such a structure to keep his hogs in. There is a train made up at Sussex which runs only between Sussex and St. John, and the engine is kept there all night. There was an engine house, a brick building, but it burned down, and instead of erecting a new brick building the old bricks were actually carted away to some other point, and this old shed put up, out of old second-hand boards—I do not know where they obtained them—with a wooden smoke-stack sticking out. No one-horse railway through a back country district would have such a structure as this. I hope the acting minister will attend to this. I am sorry the hon. gentleman whom we expect to see occupying this important post in the near future, is not here, so that I might bring this matter to his attention, and that it might be one of the first acts of his administration to provide decent and reasonable railway facilities to the important town of Sussex.

The MINISTER OF FINANCE. The Sussex case must stand upon its own merits. Of course, there is no comparison between the business of Sussex and that of Stellarton. However, there is no reason why the case of Sussex should not be considered. In regard to the engine house, I may say that it is the intention of the department to rebuild the engine house, and I am sure my hon. friend would be pleased to learn that it is not going to be charged to capital account either. The old engine house was burned down, and recognizing the sound principle that only proper things should be charged to capital account, we shall charge this to income. As to further accommodation at Sussex, I will give the subject consideration, and our desire is that these stations shall be properly equipped all along the line.

Mr. FOWLER. I would say to my hon. friend that I might find it in my heart to forgive him if he gave us a really first-class building, even if he did charge the cost to capital account.

Mr. GOURLEY. I regret very much to have to object to this expenditure at Stellarton, but I am instructed by the people of Truro to protest against this aggrandizement of Stellarton at the expense of Truro, because that is what it amounts to. All these votes which have been made during four or five years past have been made in furtherance of a departure in policy since the incoming of the present government. Under the old administration Truro was the central point for the management of the Cape Breton Railway. After the advent of this government, with the view, perhaps, of strengthening some political interests in the county of Pictou, and in the vain attempt, I presume, to defeat my hon. friend from Pictou (Mr. Bell), or perhaps in the attempt to aggrandize Stellarton, a policy was adopted, the result of which has been that Truro has been distinctly and permanently injured. Numbers of people who formerly lived at Truro have been obliged to remove from that place. That is the point at which trains were made up for the Cape Breton Railway, and at which trains coming from Cape Breton changed their conductors and their men. Consequently, Truro was the central point from which this railway was operated. Now, an attempt has been made, and successfully made, to take away a large number of railway men from Truro and locate them at Stellarton by making that the divisional centre, and the result has been a complete drain upon the population of Truro. The people of Truro have put up with this injustice without complaining publicly to the House, thinking that the government, and especially the members of the government representing the province of Nova Scotia, would no longer tolerate an injustice of that character. Truro has been one of the centres of education and one of the centres of general intelligence in the province of Nova Scotia for years. It has led in dominating the public sentiment of the province and counties like that represented by my hon. friend the Minister of Finance have derived whatever intelligence they possess in a large degree from the overflow of intelligence and education which exists and which is growing in the town of Truro.

Hon. Mr. HAGGART. Did the hon. Minister of Finance emanate from there ?

Mr. GOURLEY. No, but I say that the county he represents is indebted largely for whatever intelligence it possesses to the overflow of education and intelligence that has its home in Truro. Truro was the Athens of Nova Scotia, and when the hon. Minister of Finance wants a little inspiration, he stops off and rests in Truro.

Hon. Mr. HAGGART. I thought it was a temperance town.

Mr. GOURLEY. I have wondered if that is not the attraction which causes members of the government to treat Truro with great deference in stopping there for a few hours. It has become a crying shame that every vote is given for Stellarton, and that that town is being built up at the expense of Truro. We have a miserable station at Truro. The government have a large railway property there and, while the rest of Truro is made beautiful these large railway grounds are permitted to have anything but an aspect of cleanliness or beauty, and the result is that the town is disfigured. We tried to improve these grounds a few years ago, but we were prevented, and the railway will not improve it. The station is a laughing-stock as far as railway accommodation is concerned, and as far as the requirements of travel from and to Truro are concerned. The point I am chiefly desiring to urge now is that the government should reconsider this whole question of Stellarton. It was done purely as a political move, and the result of it is that they have prevented the town of Truro from being the headquarters of the Cape Breton branch, from which it should be managed, and from which it had been managed very largely since the building of the Cape Breton branch. Then, the government decided upon a change, and during the last four or five years Truro has been passed by and an abnormal terminal point has been established at Stellarton, from which the Cape Breton branch of the Intercolonial Railway has been managed, with the result that there has been a lessening of population, wealth and of business in the town of Truro. I ask the hon. Minister of Finance to look into this matter and attempt to cure this grievance. I have no doubt he will receive some assistance from his officials, because I have no doubt that his officials at Moncton, as well as the deputy minister, have received many petitions and communications with reference to this matter, because the people of Truro, a few years ago, endeavoured to impress the government with the iniquity of the whole proceeding and to have it corrected. I hope that will be accomplished. I could not allow this vote to pass without making these representations as strong as I could. I can assure the hon. gentleman that when a change of government comes, which would not, from the state of public opinion, I think, be considered very far away, we shall have to make a prompt and immediate change if it does not occur before that time.

Mr. BELL. I feel sure that my hon. friend from Colchester (Mr. Gourley) has not considered this matter as fully as he should have or he would not attack this particular vote. It is quite possible that to a certain extent the gain of Stellarton has been at the cost of Truro. That is probably a result of the change of management upon the road, but I do not see any reason why the people of Truro should have any ill-feeling against the people of Stellarton on that account.

Mr. GOURLEY. We have not.

Mr. BELL. Or against the railway management for making a change in the method of conducting the business of the road. It is quite clear that at the time of the adoption of Truro as the terminal, Truro was the chief headquarters, but as soon as the Eastern Extension Railway was built the business of the Eastern Extension leading from New Glasgow to Cape Breton was made independent and separate, and now in reality the business of the Oxford to Sydney line is managed from New Glasgow, which is two or three miles from Stellarton, and that has been done because that is the junction of the Sydney and Oxford road with the old Pictou extension, running from Truro to Pictou. I would remind my hon. friend from Colchester that an enormous part of the business which is done on the road between Truro and Sydney and between Oxford and Stellarton originates either in New Glasgow or in the immediate vicinity of Stellarton. There is an immense traffic in coals, all of which originates at Stellarton or Westville, two or three miles distant. The large works of the Nova Scotia Steel Company at New Glasgow have given an immense proportion of the business which has been done over the Intercolonial Railway for a very long term of years. It seems to me that that point at which the business of the road to a very large extent originates is entitled to derive a greater part of the benefit from the working of the road, if there should be any discrimination at all between the different points. I have no doubt that the road can be managed there efficiently under the system that has been adopted. Practically Stellarton and New Glasgow are almost one point; there is only two and a half miles between the stations, the despatcher's office is in New Glasgow and the engine house and round house are at Stellarton. In reference to this particular vote, I feel that there is every justification for giving the people of Stellarton, or the people of the county of Pictou who have to use that junction constantly, a much better station than the one that is there now. The present station is an old building entirely inadequate to the business of the day. I am inclined to think that it never was large enough to afford convenience for the immense passenger traffic at that point. At no station in Nova Scotia, except possibly Truro, are so many people brought together by the passenger traffic of the county as at Stellarton. The passengers for Prince Edward Island leave the main line there; it is a very important point and certainly it

deserves a better passenger station than it has. I am glad to see that the government is recognizing the requirements of the road, and I trust they will give Stellarton a building that will be suited to the large passenger traffic that passes that point. The fact of a certain change in the management of the road may have diverted some business from the town of Truro, and that we have to regret, although, I suppose, it is of benefit to the county which I have the honour to represent. But, that is not a reason at all why Stellarton should be denied what are its rights. I travel around Canada a good deal, and I really do not know of any place, considering its size, where you see such a thronging passenger traffic. There are a great many trains in the course of a day between Stellarton and New Glasgow and they are all filled and very often crowded. I have no doubt there is no part of the Intercolonial Railway that pays as well as the small section in the vicinity of New Glasgow and Stellarton. I presume that it is the intention of the government, judging by this vote, to put up a decent station building at Stellarton. I am very glad that they are making this provision.

Hon. Mr. ROSS (Victoria, N.S.). I can bear testimony to what the hon. member for Pictou (Mr. Bell) has said. Last January and the January previously, I passed some hours at Stellarton station, and it is as shabby a railway station as a person could see. There is no comfort for the passengers in it, and it badly requires to be put on a modern footing. I was pleased at the remarks made by the hon. member for Colchester (Mr. Gourley) about that higher education which permeates the whole province of Nova Scotia, and that of course explains the large number of Liberal members that are returned from Nova Scotia to support the present government.

Mr. FOWLER. I call the attention of the minister, and of the general manager of the Intercolonial Railway who is on the floor of the House to the barn-like structures that are being put up as stations along the Intercolonial Railway. They might have been well enough forty years ago, but they are out of date to-day. They are a disgrace. On other lines of railways you see artistic stations, pleasing to the eye, but when you approach some of those new Intercolonial Railway stations you do not know whether they are farm barns or what. At a very slight additional cost, and perhaps at no additional cost, artistic buildings could be erected which would be a credit to the road. This is a thing the management should attend to. Of course this criticism does not apply to expensive structures; the station at Moncton for example, is a very handsome building and so is the station at Amherst, but I refer to the smaller stations, and there is no excuse whatever for building them in their present style. In my county there have been several new stations erected in the last few years, and there seems to be an entire lack of taste in the architect who designed them. If a nice artistic building is put up the person in charge would take a pride in it and in the grounds around it. Any one who has travelled on railways in western Canada or in the United States must be charmed with the ornate appearance of the small stations and their surroundings. It adds much to the appearance of the country and strangers are much impressed, just as they are disenchanted when they see these hideous barn-like structures which characterize the line of the Intercolonial Railway.

The MINISTER OF FINANCE. The hon. gentleman has appealed to my artistic taste, but, I am told that some of these stations are copied from models on the lines of railway which he commends so highly. However, if the great railways of the United States are deficient in taste, that is no reason why we should be. It is possible to put up a small building of artistic design, and I should be glad to have the attention of the engineers and architects drawn to it, so that we may do better.

Mr. FOWLER. If they copied from models in the United States they have selected the wrong railways to imitate. The stations on lines running out of Boston are in marked contrast to the stations on the Intercolonial Railway, in the vicinity of St. John, for instance.

Mr. BLAIN. Could the Minister give us a statement of the details of the $32,000 expended at Stellarton last year?

The MINISTER OF FINANCE. The accounts for the year are not closed, but the manager tells me the money was chiefly expended for yard room, and some of it for finishing an engine-house previously commenced.

Mr. FOWLER. Was it for the purchase of land?

The MINISTER OF FINANCE. Some portion of it was for land. I have not the figures of the quantity, but it was not a large sum.

Mr. BLAIN. Was a new building put up last year?

The MINISTER OF FINANCE. A building which had been begun before was finished.

Mr. FOWLER. How was the land purchased?

The MINISTER OF FINANCE. Valuators were appointed, and it was purchased at the price they put upon it.

Mr. FOWLER. Have you an official valuator?

The MINISTER OF FINANCE. In this case the engineers of the department made the valuation. In special cases valuators are appointed from time to time. There is no one person whose special duty it is to value.

Mr. FOWLER. Judging from the number of officials appointed lately on the Intercolonial Railway, I cannot understand why valuators have not been appointed.

Mr. BLAIN. Last session when this item was going through, the minister made a statement which I will read. He said :

We intend to put up a two-story building for the accommodation of the engine men, register rooms and foremen's office, master mechanics office, train engineer's lunch room and oil room, which will cost $6,500; heating offices and building, $1,000 ; new electric lighting plant, $2,000 ; office furniture, $1,000 ; building for storing wrecking car, $1,500 ; tracks and laying tracks, $5,000, which makes a total of $17,000.

The minister now states that most of the money was expended for yard room. Will the hon. Minister of Finance say whether this money was applied in the way the minister said it was intended to apply it last year ?

The MINISTER OF FINANCE. Certainly, the items which the hon. member has read do not correspond with the information which I have given. I will look into the matter and see what the explanation is, and bring it down at a later stage.

Mr. BLAIN. Is the estimate of $16,000 to complete the station ?

The MINISTER OF FINANCE. Yes.

Mr. BLAIN. Does that include heating and fitting ?

The MINISTER OF FINANCE. There is no special item for heating, and therefore this covers everything.

Mr. BLAIN. Is the work done by contract.

The MINISTER OF FINANCE. Yes.

Mr. BLAIN. This must be an important point, because I believe there has been more than $150,000 expended there. Last session the hon. member for South Lanark (Hon. Mr. Haggart) asked : 'What is the total amount expended at Stellarton ?' The answer was $116,000, then $17,000 was voted last year and now the committee is asked for $32,000 more. When is this to stop ?

Hon. Mr. HAGGART. When the hon. member is asking for a sum of money to be voted, he should be able to state the total amount expended at the place in question.

The MINISTER OF FINANCE. I will promise when later estimates come on to have the information.

Intercolonial Railway—new superstructure for Restigouche bridge, $123,000.

Mr. FOWLER.

The MINISTER OF FINANCE. $42,000 of this is a revote. The estimated cost of the steel superstructure is $163,000; for flooring, $6,000; for handling and storing, $5,000; for painting, $2,500; for inspection, $500; for engineering and other expenses, $6,000; in all, making the total cost of this work $183,000.

Hon. Mr. HAGGART. Do you charge the taking down of the old bridge and the putting up of the new one to capital account ?

The MINISTER OF FINANCE. Yes.

Mr. BARKER. How long had the old bridge been in use ?

The MINISTER OF FINANCE. Since 1876.

Mr. BARKER. That is twenty-seven years, and there has been nothing charged to maintenance for that worn-out bridge ?

The MINISTER OF FINANCE. The question of what credit, if any, is to be given on account of the old bridge has yet to be considered. Because no determination has yet been reached as to what is to be done with it.

Mr. MARCIL (Bonaventure). In the closing days of last session I had the opportunity of calling the attention of the members of the government to certain petitions which had been sent here from Restigouche county and Bonaventure county. You are aware that the Restigouche river forms the boundary between the province of Quebec and the province of New Brunswick, and when it became known that the government were going to put up a new superstructure, inquiries were made by the hon. member for Restigouche and myself as to what was to be done with the old superstructure. We have since ascertained that it cannot be put to any use on either the Intercolonial or the Prince Edward Island Railway, and if this superstructure is removed, probably the only opportunity which that district will have of having an interprovincial bridge will be gone.

Restigouche river is very shallow in the summer, but in the spring it carries large quantities of ice, and up to the present the district has not been able to put a bridge across that river. Farmers coming down the Matapedia valley have to go to Cross Point, a distance of twenty miles in order to cross the river to Campbellton, or to Dee Side, eight miles above the bridge, to wade across the river. Petitions have been presented to the government asking the government to allow us to use the old iron structure as a highway bridge. The piers are wide enough for two bridges. The hon. gentleman for Restigouche (Mr. Reid) and myself expect, if the Dominion will allow us to use the old bridge, to get sufficient assistance from the provinces of New Bruns-

wick and Quebec and the municipalities immediately interested, to meet the requirements regarding the approaches and the enlargements of the abutments. I hope that the government will give this matter full consideration. It is one of great importance to the district. When the Intercolonial Railway was first built the Matapedia valley was a wilderness, but during the past fifteen years settlements have sprung up all along the line. The parish of St. Alexis, situated near the bridge, has a population of nearly 2,000. The market town for all this Matapedia valley—the lower portion of it—is the town of Campbellton, and this river has to be crossed in order to reach it. As this superstructure is not being used anywhere else on the Intercolonial Railway, it seems almost a pity to demolish the bridge and carry the iron elsewhere, when it could be of such service to the people of that district and a connecting link between Quebec and New Brunswick. The district is not very rich. It is settled largely by pioneer settlers, farmers who have gone in there during the last few years, and who consequently have not the means to erect an interprovincial bridge of their own. If this opportunity be not taken advantage of, we shall probably not see an interprovincial bridge there in our own lifetime. Besides there are precedents for the government coming to our relief in this matter. The Dominion government has already paid money for an interprovincial bridge over the Ottawa river. We are not asking the government to spend anything, but to allow us to use the superstructure on condition that the provinces of New Brunswick and Quebec and the municipalities interested will meet any additional cost required for making this bridge serviceable as a highway.

Mr. BARKER. On the statement of the hon. gentleman, it seems to me that if this bridge cannot be used for railway purposes elsewhere, this might be a fair opportunity to utilize it for the purpose he mentions. I presume that the two provinces and the municipalities would be willing to allow the government the fair value of the superstructure for the purpose for which they need it. Assuming that it cannot be used for any railway purposes, it would possibly have to be converted into scrap or used for the purpose mentioned by the hon. gentleman, and in such case the parties interested would no doubt pay a reasonable price for it.

Mr. MARCIL (Bonaventure). The hon. member for Hamilton has not caught what I intended to convey. If this bridge is demolished and taken away, it will lose all its value. It is twenty-seven years old. If we had to purchase the bridge outright, it would be a very good transaction on the part of the administration of the Intercolonial Railway to sell the bridge, but the district is newly settled and I do not believe that I could induce any of the municipalities to pay the amount that would be required to meet the value of this bridge, which, I think, is estimated at some $40,000. All we ask is to be allowed to use the bridge as a highway and let that be the contribution of the Dominion to the interprovincial bridge, the province of New Brunswick paying the additional cost on the New Brunswick side, and the province of Quebec the additional cost on the Quebec side. The Restigouche is a very difficult river to cross, especially in the spring, when the ice is sometimes twenty feet high at that point. Any bridge with wooden pillars which the municipalities might put up would be swept away. We want to use the large piers, which are sufficiently wide, and ask the Dominion government to allow the old bridge which cannot be used anywhere else, to be used by us. It would be a pity to remove it when, by keeping it in position, it would be of such good service to the district.

Hon. Mr. HAGGART. Could they erect a new railway bridge on the same piers and let the old bridge remain as it is ?

Mr. MARCIL (Bonaventure). Yes, by enlarging the abutments, I understand there would be room for both bridges.

Hon. Mr. HAGGART. Is it in a good position for crossing ?

Mr. MARCIL (Bonaventure). The province of Quebec side is all that could be desired, but there would be some difficulty on the New Brunswick side because it is right at the base of a mountain. That difficulty, however, is not insurmountable. For all these reasons I hope that the government will consider our request favourably. The population of Bonaventure has increased 5,000 in the last ten years, which increase is largely due to the opening up of the Matapedia valley. The Dominion government has a direct interest in developing that region. We voted last year and this year certain sums for the purpose of enabling a Montreal colonization society to send settlers into this Matapedia valley. From Matapedia to Ste. Flavie, you have a distance of seventy-five miles, partly not settled at all, and you have a railway running through that district. By encouraging the development of that district, you will furnish the Intercolonial Railway with the means of meeting the expenses incurred in running through this Matapedia valley. All through the valley new settlements are springing up, but these people, if they are going to live along the government line and give it business, must have some encouragement. I would refer the government to what the Canadian Pacific Railway has done in Algoma and Nipissing during the last few years as an example which should be followed. All we ask of the government is to not demolish

the old bridge, but allow it to remain so that our people can reach the market town of Campbellton over it.

The MINISTER OF FINANCE. My hon. friend from Bonaventure (Mr. Marcil) has made out a very strong case. We do in some cases grant aid to interprovincial bridges. If that precedent were to be followed, I suppose that something could be said in favour of the policy suggested. If we were willing to do that, we could put some value on the bridge and make it a gift to the place and credit it to the Intercolonial as the hon. member for Hamilton (Mr. Barker) suggests. These are matters of detail. I will bring the subject before my colleagues, and, perhaps, later on, we can give the committee some further information. There is some force in the suggestion that, if this bridge is not useful to us and we should only have to take it down, the least we can do is to make it of some use to the people of the locality. If the province of New Brunswick and the province of Quebec and the municipalities interested were prepared to contribute a fair share, I think that would be a reasonable and fair arrangement.

Hon. Mr. HAGGART. I do not say anything in opposition to the request of the hon. member for Bonaventure (Mr. Marcil). But I think that the widening of the piers and erecting of a new bridge would greatly exceed the cost of providing for a carriage way on either side of the new bridge that is to be constructed. If this is regarded as a necessity in that section, I would advise my hon. friend (Mr. Marcil) to use his influence with the government—and I think the influence of an important supporter like the hon. gentleman would have great weight —to get a carriage way put on either side of the new structure.

New superstructure for South-west Miramichi bridge, $90,000.

The MINISTER OF FINANCE. The whole cost of the steel superstructure will be $170,000, of which there was to have been paid during the past year according to the estimates, and, I suppose, has been paid, as the year is closed, $75,000. So, we need $95,000 more to pay for the steel structure. Then we have to provide for labour, false work, painting new spans, flooring, engineering and other expenses, and other items which will bring this $95,000 up to $122,000. Against that we have the value of the old span which is estimated at $32,000, leaving $90,000 to be provided. These are the spans which it is proposed to transfer to Prince Edward Island.

Hon. Mr. HAGGART. I suppose this amount will be taken out of the vote for Prince Edward Island, and the cash made available for the Intercolonial ?

The MINISTER OF FINANCE. Yes, it will be charged to one and credited to the other.

Mr. MARCIL (Bonaventure).

Hon Mr HAGGART. This is the first time we have had a clear statement of a proper credit. Does this finish the bridge ?

The MINISTER OF FINANCE. Yes.

Mr. BLAIN. Last year, the minister stated that $60,000 was to be received for this old bridge. How does it come that the value has shrunk $30,000 since last year ? Then, we were told that the superstructure would cost $132,000. It seeems to have crept up about $40,000 above that amount.

The MINISTER OF FINANCE. Is my hon. friend (Mr. Blain) sure it is the same bridge ?

Mr. BLAIN. The item of last year is to provide a new superstructure, six spans, for the Miramichi bridge, $72,000, which sum the committee was asked to vote.

The MINISTER OF FINANCE. There are two Miramichi bridges. The appropriation for this one last year was $123,000.

Mr. BLAIN. Yes, this is the one.

The MINISTER OF FINANCE. I cannot explain the difference.

Mr. BLAIN. How much is the total cost of this to be ?

The MINISTER OF FINANCE. $200,000.

Mr. BLAIN. For the superstructure alone?

The MINISTER OF FINANCE. No, for everything.

Mr. BLAIN. How much for the superstructure ?

The MINISTER OF FINANCE. $170,000.

Mr. BLAIN. That is $40,000 more than the minister said it would cost. And we were to get credit for the old bridge which was to be sent to the province of Prince Edward Island, this is the same bridge, I take it of $60,000.

The MINISTER OF FINANCE. Perhaps the contract was not let at that time. Which may explain the difference.

Hon. Mr. HAGGART. I think the hon. gentleman will find that a statement was made by the minister last year as to the purchase of the bridge to be made from the Hamilton Bridge Company or the company in Toronto. Evidently, he had an understanding and a price fixed before he asked for a vote ?

Mr. BLAIN. Will the hon. minister bring down a fuller explanation ?

The MINISTER OF FINANCE. I will bring down the exact contract price and all the other information possible.

Mr. BLAIN. And perhaps he will give a reason why he is charging the old bridge at $30,000 less than last year.

The MINISTER OF FINANCE. I will get that information if I can.

Mr. BARKER. No doubt the minister last year had details before him as the hon. minister has now. Perhaps they can be produced, they would give the explanation.

The MINISTER OF FINANCE. We will look into it.

Improvements at Point Tupper, $25,000.

The MINISTER OF FINANCE. We have spent more of the vote of last year than we had supposed, when these estimates were prepared, would be spent. Therefore, I propose to reduce this item to $6,000, all of which is a revote. I move that the item be reduced to $6,000.

Item, as amended, voted.

Yard for freight business at Rivière du Loop, $10,000.

The MINISTER OF FINANCE. This is to continue the work started in 1902-3. It was estimated that the $25,000 would be expended, and, as the year has since closed, I suppose it has been expended. The work consists in filling, grading, renewing of sidings and so on. And this $10,000 is for the building of sidings and to provide additional yard accommodation, including the removal of buildings.

Hon. Mr. HAGGART. This is a total of $35,000, which seems an enormous sum for a freight yard at Rivière du Loup.

The MINISTER OF FINANCE. Rivière du Loup is an important station.

Hon. Mr. HAGGART. But there is another very important vote besides, for Rivière du Loup, of $50,000, for engine house, machine shops and cars. This is only the expenditure for the yard.

The MINISTER OF FINANCE. This is to finish the yard improvements, irrespective of the vote for buildings.

Hon. Mr. HAGGART. Out of this $35,000, what is the amount for building? $35,000 would buy the whole place.

The MINISTER OF FINANCE. The total expenditure on this particular time to the end of 1903 will be about $26,000 for the yard only. My papers do not contain the information as to the total expenditure, but I will get that. To what particular date does the hon. gentleman want it ?

Hon. Mr. HAGGART. What has been done at the yard there?

The MINISTER OF FINANCE. Grading and laying the sidings. This is asked now to complete the sidings and other necessary work, and provide the necessary accommodation, including the moving of the building.

Hon. Mr. HAGGART. Do you charge rails and ties in that also?

The MINISTER OF FINANCE. Yes, these will be additional sidings, which will be a proper charge to capital.

Hon. Mr. HAGGART. Are rails and ties charged in these improvements?

The MINISTER OF FINANCE. Yes.

Hon. Mr. HAGGART. Then there is a double payment for ties and rails. All the ties purchased for the Intercolonial are charged to capital account. You take them out of store and charge them to it.

The MINISTER OF FINANCE. When they are purchased they are charged to stores account, when they go out on the road they are charged against it.

Mr. BARKER. What additions to the lengths of the siding have been made in this yard for this $35,000?

The MINISTER OF FINANCE. There is a considerable increase in the length of the sidings. I will get the figures later.

Mr. BLAIN. How much was spent last year?

The MINISTER OF FINANCE. $25,000, and $10,000 more is wanted.

Mr. BLAIN. Last year, under the item 'To provide yard for freight business, Rivière du Loup, $25,000,' the Minister of Railways and Canals made this statement :

This is for yard room and track. The yards are altogether too restricted. A portion of this is for land. We have not got the land yet, but it is estimated that $15,000 will be sufficient to buy the land and grade it and put it in shape, and $10,000 will put down the tracks.

There is a straight statement from the ex-Minister of Railways and Canals when he took his $25,000 vote last year. Now the acting minister comes forward and says that he wants $10,000 more.

The MINISTER OF FINANCE. The manager informs me that he is not aware at this moment of anything having been spent for land. But the location was changed from the point where it was first contemplated, and yard improvements were made upon our own land, and we did not buy land.

Mr. BLAIN. That makes the position worse. They asked for $15,000 last year for land, and now the minister says they did not require to purchase the land because they had land of their own. Notwithstanding that, he comes forward and says he has expended $15,000 in improvements that were voted to purchase the land, and $10,000 in addition ; and now $10,000 more are wanted. Is this the old policy, or is it a new one under the new minister?

The MINISTER OF FINANCE. We will have to investigate before answering that question.

Hon. Mr. HAGGART. This is extraordinary. You get a vote of $15,000 for the purpose of purchasing land, but instead of purchasing land you use it to build a yard.

Mr. BLAIN. Will the minister bring down an explanation about this?

The MINISTER OF FINANCE. Certainly. But the explanation why the land was not required is because there was a change in the location.

To change air-brakes of passenger cars to quick action brakes and apply air signals, $2,000.

Hon. Mr. HAGGART. If you want to change your air-brakes and apply your signals, you charge the amount to capital account?

The MINISTER OF FINANCE. It is an improvement.

Hon. Mr. HAGGART. Certainly it is, but why charge these things to capital account? Last year you took $20,000 for this purpose, and now you want $2,000 more. Will this new vote complete the work?

The MINISTER OF FINANCE. No. Up to the end of 1904 there will remain 55 cars still requiring this change.

Hon. Mr. HAGGART. I would ask the minister to take measures that whoever has charge of that department shall see that none of these items after this are charged to capital account. In fact, the whole capital account should be closed on the Intercolonial.

Mr. BARKER. On how many cars were brakes changed for the $20,000 authorized last year? I ask this because, from the quotation made from the 'Hansard' last year, it is clear we must have these details, or the money will be applied as the department pleases. Money is asked for a particular purpose, and there is no security whatever that the money will be expended in the way it is voted. The only security we have is to get the minister in charge of the estimates to commit himself on 'Hansard' to precisely what he is going to do with the money.

The MINISTER OF FINANCE. Up to June 30, 1902, the number of cars equipped was 55; to be equipped in 1902-3, estimated, 100; to be equipped for the current year, 1903-4, 40; making the number to be equipped at the end of 1904, 195. The average cost per car is $50.

Hon. Mr. HAGGART. $50?

The MINISTER OF FINANCE. Yes.

Hon. Mr. HAGGART. How could you expend $20,000 last year?

The MINISTER OF FINANCE. We have not a statement of the actual expenditure for the year just closed.

Hon. Mr. HAGGART. It was $20,000.

The MINISTER OF FINANCE. That was the appropriation.

Hon. Mr. HAGGART. Yes, and it is marked as the expenditure.

Mr. BARKER. That would be $400 a car. The money must have been used for some other purpose.

Hon. Mr. HAGGART. It may have been used in the yard at Rivière du Loup.

The MINISTER OF FINANCE. We will have to give the hon. gentleman a statement of the actual expenditure for the year.

Mr. BARKER. I think the hon. minister ought to look into this.

The MINISTER OF FINANCE. We will allow the item to stand if the hon. gentleman wishes it.

Item allowed to stand.

To extend freight car shop at Moncton, $27,500.

The MINISTER OF FINANCE. The amount of this appropriation last year was $25,000, and the expenditure estimated to the end of June, $12,500, showing the revote necessary to be $12,500, and an additional amount of $15,000 is asked for the work. The total estimated cost of the extension is $40,000.

Hon. Mr. HAGGART. Will that complete the work?

The MINISTER OF FINANCE. Yes, it is intended to complete it.

Mr. BLAIN. Is it a new building that is being put up there?

The MINISTER OF FINANCE. It is an extension of an existing building.

Mr. BARKER. Can the hon. minister tell us the area of the extension?

The MINISTER OF FINANCE. The extension is to be 345 feet x 78 feet.

Mr. BARKER. In wood?

The MINISTER OF FINANCE. Yes, a wooden building.

Mr. BARKER. And it costs how much?

The MINISTER OF FINANCE. $40,000 is the total expenditure estimated.

Mr. BARKER. For the extension of a wooden shop? It is a pretty good price.

Hon. Mr. HAGGART. The hon. ex-Minister of Railways and Canals (Hon. Mr. Blair) did not get it for an extension at all last year.

The MINISTER OF FINANCE. The item read: 'To extend freight car repair shop at Moncton.'

Hon. Mr. HAGGART. The ex-minister said last year:

We propose to put up an entirely new building, 150 feet x 50 feet and about 50 feet high.

The MINISTER OF FINANCE. Perhaps the hon. gentleman is referring to another item?

Hon. Mr. HAGGART. No, the hon. ex-Minister of Railways and Canals said that this was to provide an addition to the workshop at Moncton. Here are his words :

We propose to put up an entirely new building 150 feet x 50 feet and about 50 feet high.

It may refer to another item.

The MINISTER OF FINANCE. The item was $25,000 in last year's estimates and it read :

To extend freight car repair shop at Moncton.

Mr. SPROULE. It was the same last year.

To extend freight car repair shop at Moncton.

This is an extension of the car shops at Moncton ?

The MINISTER OF FINANCE. Yes.

Mr. SPROULE. Is this a one storey building ?

The MINISTER OF FINANCE. It is practically a one storey building ?

Mr. SPROULE. And a wooden building ?

The MINISTER OF FINANCE. Yes.

Mr. SPROULE. And it is to cost how much ?

The MINISTER OF FINANCE. $40,000.

Mr. SPROULE. What kind of a finish will there be ? Will it be dressed lumber and finished with California siding ?

The MINISTER OF FINANCE. It is a plain wooden building.

Mr. SPROULE. There would be a material difference in the price if it were a plain wooden building in the rough as compared with a building constructed of dressed lumber which would make it more suitable for cold weather.

The MINISTER OF FINANCE. This includes the heating, I am told. It is under contract so that it is fair to assume that the estimate is reasonable.

Mr. BLAIN. How much was expended on the building last year ?

The MINISTER OF FINANCE. It is estimated that for the year just closed there was spent $12,500. This is not the actual sum but it is the estimate made some little time ago.

Mr. BLAIN. That was the expenditure last year and the hon. minister is asking for $15,000 this year to expend upon this building.

The MINISTER OF FINANCE. $25,000 was voted last year.

Mr. BLAIN. What is the hon. minister asking for now ?

The MINISTER OF FINANCE. $27,500—$12,500 of a revote and $15,000 additional.

Mr. BLAIN. To further extend the building ?

The MINISTER OF FINANCE. To cover the cost of the same building that the hon. ex-Minister of Railways and Canals referred to last year.

Mr. BLAIN. How are these estimates made up ? Is there any plan prepared in the department upon which the minister asks for an appropriation ? I suppose that before he asks for an appropriation an officer from the department goes to the place, looks over the ground and estimates as to how much the work will cost ?

The MINISTER OF FINANCE. Yes, the engineer makes a plan and estimate.

Mr. BLAIN. How is it possible that the officers of the department are so wide of the mark in their estimates as they appear to have been in this case ? I am quite sure the hon. minister does not endorse that sort of thing.

The MINISTER OF FINANCE. I would certainly like to see estimates made more closely.

Mr. BLAIN. Does the hon. minister not think that it is misleading ?

The MINISTER OF FINANCE. I think it needs an explanation.

Engine house, machine shop, car shop, stores, office at Rivière du Loop, $50,000.

Mr. BARKER. This is a revote ?

The MINISTER OF FINANCE. It is entirely a revote.

Mr. BARKER. Perhaps this may be considered unnecessary after a little inquiry. Do you really want such an expenditure at Rivière du Loup ?

The MINISTER OF FINANCE. This money was not expended because the work was not needed but there was some difficulty in getting a site and therefore the work has not gone forward. There is no question that the work is needed.

Hon. Mr. HAGGART. What will be the total cost ?

The MINISTER OF FINANCE. I do not find the engineer's estimate for this work, but tenders are being invited now.

Hon. Mr. HAGGART. After the experience we have had in the past I am afraid we must insist upon the details of the expenditure.

The MINISTER OF FINANCE. Very good; let the item stand.

Item allowed to stand.

Engine house, &c., at Chaudière Junction, $50,000.

Hon. Mr. HAGGART. What is the explanation of that ?

The MINISTER OF FINANCE. This is to provide for a stationary boiler plant, 80,000 gallon tank, water service and heating, sidings in new yard, grading, ballasting, &c., for same, engineering, inspection, &c. The stationary boiler plant tank and water service and heating are required in connection with the round house at this point. The yard room at Chaudière Junction is not sufficient for the business and it is proposed to provide additional siding accommodation. The estimated cost of the work was $113,000. We took an appropriation last year of $63,000 and we now add $50,000 to it, making $113,000.

Hon. Mr. HAGGART. That covers the whole ?

The MINISTER OF FINANCE. Yes.

Mr. BARKER. How many stalls will there be ?

The MINISTER OF FINANCE. We have not that information. I think the questions are very fair and reasonable, and I do not want to press the item if hon. gentlemen wish it to stand.

Item allowed to stand.

Increased accommodation at St. John, $106,000.

The MINISTER OF FINANCE. The estimated cost of the new round house is $38,000 ; the balance on the machine shop, $25,000 ; coal shed, $10,000 ; engineers and so forth, $3,000 ; making $76,000, in addition to $30,500 which is revoted from last year.

Hon. Mr. HAGGART. You spent $60,000 last year and you are asking for $106,000 this year. What is the total amount required ?

The MINISTER OF FINANCE. The total expenditure on work under this head up to the end of 1902, is $2,366,536, and since then we have expended last year $60,000.

Hon. Mr. HAGGART. One would think you would have accommodation enough at St. John for over $2,000,000. Is there any portion of this expended outside of St. John where you intend to build these shunting yards ?

The MINISTER OF FINANCE. Yes.

Hon. Mr. HAGGART. What was paid for the land ?

The MINISTER OF FINANCE. I do not think the expenditure of last year included any land. Of course land was purchased before and I will get the information later.

Mr. BARKER. Has the new engine house been completed ?

The MINISTER OF FINANCE. It is contracted for and some work done.

Mr. BARKER. How many stalls are there ?

Hon. Mr. HAGGART.

The MINISTER OF FINANCE. I cannot say.

Mr. BARKER. How much has been expended on the new yard at St. John, and how much on bridging the creek and laying the tracks on the new sidings ?

The MINISTER OF FINANCE. We have not got these figures but we will get them.

Hon. Mr. HAGGART. We must get that information.

The MINISTER OF FINANCE. Let it stand.

Item allowed to stand.

Increased accommodation at Halifax, $104,500.

The MINISTER OF FINANCE. This is a revote for a round-house, re-arrangement of yard, and additional sidings. It has been delayed owing to the difficulty of getting a suitable location. The memo. here says that the railway is much cramped for room and although the matter has been given a great deal of attention, it is impossible to come to a decision as to what shall be done. The available land is very limited and some land may have to be acquired and a considerable amount of rock has to be blasted. There has been difficulty in obtaining the land and we do not wish to indicate the precise place because that would probably not lead to a decrease in the price.

Hon. Mr. HAGGART. It would be an interesting comparison to know what has been spent for terminal facilities at Halifax and St. John.

The MINISTER OF FINANCE. The total cost to January, 1903, which is the latest date I have, for improvements under this head at Halifax was $2,521,193.

Hon. Mr. HAGGART. You are running St. John pretty close.

The MINISTER OF FINANCE. These comparisons between St. John and Halifax are very invidious, and I hope my hon. friend will not press them. I do not see any one here representing Halifax to-night.

Mr. SPROULE. Better hold the vote until the member for Halifax (Mr. Borden) comes in.

The MINISTER OF FINANCE. You had better pass it or he will want more when he is here.

Hon. Mr. HAGGART. How much do you intend to spend on the round-house and how much on the land ?

The MINISTER OF FINANCE. I will get the information later.

Hon. Mr. HAGGART. Let it stand.

Item allowed to stand.

Increased accommodation at Pictou, $36,500.

The MINISTER OF FINANCE. There is a revote of $16,500. There is a dispute here about the value of land.

Hon. Mr. HAGGART. How did you expend $50,000 last year if you did not buy the land ?

The MINISTER OF FINANCE. When these estimates were made up it was explained that this expenditure would be made, but the land has not been bought and the expenditure did not amount to that.

Hon. Mr. HAGGART. Perhaps we had better adjourn. The minister has not the information regarding these items. It is now twelve o'clock.

The MINISTER OF FINANCE. I have the information, but some of the questions asked are a little unusual. However, I am not complaining ; they are perfectly fair.

Hon. Mr. HAGGART. Nonsense ! It is stated in the estimates that $56,000 was expended last year and now we find out there was no money expended at all.

The MINISTER OF FINANCE. The only difference is that at the time that estimate was prepared it was expected that that expenditure would be made. The actual expenditure last year was not so large as that, and we will have to ask for a supplementary vote. There has been some expenditure besides the purchase of land, and when the further estimates come down we will bring the information with regard to that.

Mr. SHERRITT. I would like to draw the attention of the acting Minister of Railways to a state of affairs that exists in Toronto and west of Toronto, in connection with the shipping of stock over the Grand Trunk Railway. There seems to be some difficulty between the Union stock-yards at Toronto Junction and the old stock-yards, and I have been credibly informed that the Grand Trunk Company are discriminating against the new stock-yards to the amount of $7 or $8 a car. Not only that, but at Stratford they selected the cars with stock for the West Toronto yards and left them standing on a switch at Stratford for about eight hours. The minister will pardon me bringing the matter up at this time, but I thought the attention of the government should be drawn to it, so that if anything can be done by the acting minister to remedy this state of affairs, the sooner it is done the better. It is a matter of great importance to the stock shippers that they should be able to send their cattle to these new stock-yards, and it is a very serious matter to have the stock left eight hours in the cars on a siding.

Mr. SPROULE. I might say that this matter was brought to my attention, and the shippers consider it extremely urgent. It seems that the Grand Trunk Company sent out one circular to their agents instructing them not to receive cattle shipped to these yards. That was brought to the attention of the Minister of Railways, who, I believe, from what I have seen in the papers, obliged the company to countermand that order. The company have since issued another circular. The stock-yards at Toronto and those at Toronto Junction are about five miles apart, and the Grand Trunk Company charges from $8 to $10 a car more for shipping the cattle from the west to the Union stock yard at Toronto Junction though it is the shorter distance, and these are left to stand on the track, not eight hours, but twenty-eight or thirty hours, before they are unloaded. Now, the law provides that cattle must not be left in a car more than twenty-eight hours, but that they must be unloaded and fed, and the company have been openly violating the law in this respect. Then they instructed their agents not to allow stock to be shipped to those yards at all. They have made no provision for unloading the stock, and have no sidings at the yards although the owners offered to put them in at their own expense. It seems to me that the company are in every way violating the law. The stock-men feel so keenly about this matter that they have entered an action for $20,000 damages against the company ; but it would take a long time to fight that out in the courts, and in the meantime they are suffering in their trade from not being allowed to use the stock-yards which are most convenient and suitable for them, owing to the action of the Grand Trunk Railway Company. I think the acting Minister of Railways has it in his power, if he chooses to put his foot down firmly, to bring the railway company to time. If he does, I am sure the stock-men will be very grateful to him, as every moment's delay is a serious matter to them.

The MINISTER OF FINANCE. I am informed that some representations were made to the department some time ago on this subject, that communication was had with the management of the Grand Trunk, and that there is a letter of explanation in the department from the manager. I have not personally seen it, but I will look into it, and if there is anything that can properly be dealt with by the department, I shall be glad to give it consideration. Of course, it may be necessary that formal application for a hearing may have to be made to the Railway Committee of the Privy Council, before which these grievances properly come and which has the power to deal with them.

Mr. SPROULE. I think that the Minister of Railways compelled the company to withdraw their first circular, and then they devised some other means of trying to hold up the stock-men. While they have obeyed the command of the Minister of Railways,

they have endeavoured to accomplish the object they have in view in a different way.

Some resolutions reported.

THE SOUTH AFRICAN WAR—SERVICE MEDALS.

The MINISTER OF FINANCE moved the adjournment of the House.

The MINISTER OF MILITIA AND DEFENCE (Hon. Sir F. W. Borden). Before the motion is carried, I would ask the privilege of saying a few words in reference to a question which was brought up this evening in my absence. The hon. member for West Toronto (Mr. Clarke) notified me the other day that he would ask some questions with reference to the granting of the King's medal to certain Canadians who served in South Africa, and I had prepared myself on the subject; but, unfortunately, I was absent this evening when the mattter was brought up. I am sure that the hon. member who brought it up would prefer that the answer should appear in the same number of 'Hansard' as the statement he made. I am at the disadvantage of not having heard the hon. gentleman's statement; but I think I know what the purport of it was. I may premise by saying that the matter is purely an imperial one, and is governed entirely by the regulations of the War Office. These regulations were promulgated by an order of the War Office, dated 1st October, 1902, called Army Order No. 232, which was republished in Canada in Militia Orders on the 28th October, 1902, as No. 246. Without going fully into the details of this order, I may say that the same regulations apply to colonial troops as to the troops of the imperial army; there is no distinction whatever. One of the conditions with reference to the grant of the King's medal is that no one who has not earned or is not entitled to the Queen's medal can receive the King's medal. A further provision is that they shall have seen war service in South Africa, covering 18 months prior to the 1st of June, 1902, and the wording is this: 'Eighteen months war service in South Africa.' Upon this point the whole difficulty has arisen. Certain Canadians have contended that the time of the voyage from Canada, after enlistment and prior to landing in South Africa, ought to be counted. As I have said, the same rule obtains with reference to Canadians as to imperial troops, and the authorities of the War Office have construed the order to mean that the service must be eighteen months war service in South Africa. That is sufficient answer of itself, but I have a memo. prepared by my officers, which I would like to place on 'Hansard':

Memorandum respecting the conditions governing the issue of the King's South African medal.

1. It is an error to suppose that individuals who had not served under Her late Majesty can receive both the Queen's and the King's medals.

It requires eighteen months service to qualify for the King's medal, and as only sixteen and a-half months elapsed between the death of the Queen (14th January, 1901) and the termination of the war (31st May, 1902), it is manifestly impossible for any individual to qualify for the medal if he did not put in part of his service under the Queen.

2. The King's medal was bestowned for two objects, viz.:—'In recognition of the services rendered by the troops in the later phases of the campaign in South Africa, and to reward those soldiers who, by their long service in the field have brought the war to a successful termination.'

To qualify for the medal the following service is necessary, viz.:—

(a.) To have been actually serving in South Africa on or after the 1st January, 1902, and (b.) that on that date to have completed eighteen months war service, or subsequently completed such service before the 1st June, 1902.

No individual can receive the King's medal without being also entitled to the Queen's. If the whole of his service was under the King, he would be entitled to the Queen's medal not the King's.

Now, I come to the important point. The contention of certain officers and soldiers of the Canadian contingent that they should receive the medal, was sent to the War Office by the government, and an adverse opinion was given. Not being content with that, certain officers petitioned to have the matter referred directly to the Commander in Chief himself. This was done by the government, but, still the same adverse opinion was given. It has been contended that the time occupied going to and returning from South Africa should be reckoned to qualify for the King's medal. The question was submitted to the War Office by the Militia Department and the reply was unfavourable to this contention. An appeal to the Commander in Chief, asking for special consideration, was made. The Commander in Chief's reply, received on the 20th of May last, was that, 'the order should not be relaxed in favour of the above mentioned corps,' i. e. the Canadian corps.

Mr. SPROULE. The contention of the hon. member for West Toronto (Mr. Clarke) was that, owing to the increased distance which the colonial troops from Canada had to travel in order to reach South Africa, as compared with the other troops, it was impossible for them to put in the time in South Africa that was required, and that if the attention of the Imperial War Office had been drawn to this fact, the regulations might have been amended.

The MINISTER OF MILITIA AND DEFENCE. I do not think it would be correct to say that all the troops from Canada were excluded on account of the distance to South Africa. The first, and I think, the second contingents were there in

time—certainly the first.—But in any case, the same rule applies to imperial troops.

Mr. SPROULE. They could get there quicker.

The MINISTER OF MILITIA AND DEFENCE. Very little. I may add that all the conditions in relation to this matter and all the arguments placed in my hands by the officers, notably, Colonel Evans, were made known to the Commander in Chief and the war office, and I have given their decision.

The MINISTER OF FINANCE. As Monday will be Private Bills day, the Grand Trunk Pacific Railway Bill will take up a good deal of the time, and we shall then probably go into the estimates.

Motion agreed to, and House adjourned at 12.15 a.m., Saturday.

HOUSE OF COMMONS.

MONDAY, August 10, 1903.

The SPEAKER took the Chair at Three o'clock.

MOUNTED POLICE ACT AMENDMENT.

The PRIME MINISTER (Rt. Hon. Sir Wilfrid Laurier) moved for leave to introduce Bill (No. 242) to amend the Mounted Police Act, 1894. He said: At present the North-west Mounted Police Act contains a disposition to the effect that the force shall not be charged with any duty under or in connection with any municipal Bill. There is no objection to that disposition as concerns the North-west Territories, because there the municipal authorities enforce their own by-laws. But in the Yukon Territory the mounted police enforce all laws and ordinances, including the by-laws of Dawson, and doubt has been raised as to their legal authority to do so. The amendment is merely to authorize them to enforce the municipal by-laws.

Motion agreed to, and Bill read a first time.

GRAND TRUNK PACIFIC RAILWAY.

House resumed consideration of the motion of Mr. McCarthy for the third reading of Bill (No. 64) to incorporate the Grand Trunk Pacific Railway Company, and the amendment of Mr. Fowler thereto.
