Some hon. MEMBERS: No.

Mr. STEVENS: Practically what I said.

Mr. DUNNING: As a matter of fact, it reads better than I thought it did.

Mr. STEVENS: It was written, so naturally it agrees. Let me tell the minister that I was citing it for this reason: We talk about doing what the British have done. The government is subsidizing the Canadian Pacific Railway to repair its right of way. That is what we are doing to-night. Why not do what the British have done and subsidize some of our industries to enable them to reemploy workmen in their industries? Assist them in going so far as to relocate; move them from one place to another. That is a part of the British program that we do not have.

Mr. DUNNING: My hon. friend will appreciate that in this instance I specifically referred to the financial problem.

Mr. STEVENS: And that is her financial problem.

Mr. DUNNING: Oh, I see.

Mr. STEVENS: That is part of the British financial problem of which we are not taking notice.

Mr. DUNNING: It is not a financial problem at all.

Mr. STEVENS: Absolutely, it is. It comes out of their general provision for financing for unemployment; that is what it does. We are doing nothing in that respect, with the exception of this matter for which I commended the minister some weeks ago. In so far as it accomplishes the return of men to normal employment, it is good and it is commendable. But do not let us blind our eyes to the fact that it is a straight subsidy to the Canadian Pacific Railway as well as to our own Canadian National Railways, and I can see no reason in the world why the hon. member's question, asked a minute ago, is not a reasonable one. Why should we not extend the subsidizing of private corporations from the Canadian Pacific Railway to other industries, if you like? It may be to the lumber industry; it may be to the factories and it may be, as I said a minute ago, by way of an enlarged vote for grade separation. Why should we not subsidize some of these almost bankrupt municipalities in which there are extremely dangerous level crossings? Of what use will $1,000,000 be in the work of

grade separation? Some of this work is costly, and we could spend $5,000,000 to the greatest advantage. I should like to say to the government that I believe it is their duty earnestly to face that situation and to recognize the reasonableness of this question: Why should we not subsidize some other lines of industry, in addition to the Canadian Pacific Railway?

Mr. HOWE: In fairness to the railways permit me to say that this is not a subsidy to the railways in any way, shape or form. This government had a serious problem on its hands. There were from 10,000 to 20,000 men in the relief camps, the numbers fluctuating with the seasons. Those camps cost the country $9,000,000 in the past year. The men are performing work which, to say the least is hardly commensurate with the cost of maintenance of the camps. For a number of years conditions in those camps have been the subject of complaint, and there has been considerable discontent in them. Some of our authorities consider them a serious menace to peace and order.

Faced with that problem the government went to the railway companies and asked their assistence. In handling the problem it was necessary to have large scale employment within the capacity of men in the relief camps, and by that I mean work which would require perhaps less than the average ability of the men. It is necessary to have the men work under supervision, and work under an organization capable of handling 10,000 men, using decent equipment and working under good conditions. As I say, work was required which would put the men on a basis of equality with other workers in the same class of employment.

We went to the railways with that problem and asked for their help. I may say that they found it rather difficult to help, because their budgets for the year had been brought down, and the employment of large numbers of men required large expenditures, for which they had made no provision. The railways went as far as we could reasonably ask them to go, and in order that they might be enabled to bear their full share we had to help them out by way of loans. But after the railways had come to the aid of the government, as they have, I must object seriously to any man saying in the House of Commons that we are subsidizing the Canadian Pacific Railway, or our own road the Canadian National Railways.

Mr. STEVENS: The minister may object if he likes, but that does not end the matter by any means. It is all very well for him to say that the government had a problem. Of course they had a problem. No person criticizes them in that respect, and I am commending the minister and the government for having worked out the problem, so far as it has been worked out. But to say that the Canadian Pacific Railway and the Canadian National Railways are doing this country a favour by accepting $4,000,000 in restoration of their degenerated—I think that is the best word—

An hon. MEMBER: Reconstruction.

Mr. STEVENS: —right of way is, I think, sheer nonsense. The minister may take objection to what I say, and to the way I put it, but I know what I am talking about. Both railway companies are in dire need of restoration and maintenance of way work. They are in very serious need of it, and everybody knows it. By the way, one or two members spoke about the placing at work of the maintenance of way gangs of the railways. I want to say to the hon. member who appeared to know what he was talking about, and to the hon. member for Fort William, that neither of these railways is restoring its maintenance of way gangs to normal conditions. They may be doing just about one-tenth of the normal work, as they have been doing in the last four or five years. But when hon. members talk about normal maintenance of way work carried on by the railway companies may I say that if it were undertaken it would easily absorb 10,000 men, without a dollar from the government. The railways are not doing that. If the agreement calls for it, and the minister and government will check on it, they will find that a few thousand more men will have work than those for whom provision has already been made.

The minister has objected to my observations, and I take just as strenuous objection to any person who gives out the impression that the Canadian Pacific Railway have come to us, like philanthropists, and have taken 5,000 men off our hands. What that railway is doing is this: It is accepting $2,000,000 from the taxpayers of Canada to help it pay normal expenditures incurred in connection with its right of way. That is what it is doing, and it is not fair to the taxpayers of Canada to suggest anything else.

I had no intention of making these observations, but to-day and other days I have listened to the suggestion that we, the parliament of Canada, were receiving some great favour from the Canadian Pacific Railway and the Canadian National Railways because we were being permitted to pay the cost of their

maintenance of way work. I think it is about time that the country should realize that in this and in other respects we have been very kind to the Canadian Pacific. I am not criticizing that at all; I am quite willing to be kind, but I am not willing to be kind to the Canadian Pacific much longer if they abuse the Canadian National Railways the way they have been doing during the last four or five years. It is about time that the taxpayers of this country who own the Canadian National Railways should realize that they have a good plant and a valuable asset. True it was overbuilt, overextended, but let us look also at the overextension of the Canadian Pacific Railway. Some of these days, when I have an opportunity, I shall indicate some of those facts. I think it is about time that we had a little consideration for the Canadian National railway system, and that the country should recognize that it does not owe to the Canadian Pacific Railway any very great debt of gratitude for accepting two million dollars or so in this case, four or five million dollars in another case, and a loan of sixty million dollars in another case. Let us recognize that we have been a fairy godmother to the Canadian Pacific Railway as well as to the Canadian National Railways.

Mr. CAMERON (Cape Breton): I have listened with a great deal of interest to the remarks of the last speaker, but I scarcely think they are germane to the matter before the committee. I am intensely interested in the question raised by the hon. member for Inverness-Richmond (Mr. MacLennan). If I followed the Minister of Railways this vote is to take care of 10,000 men from the relief camps, and their employment is not to interfere with the ordinary maintenance work of the railways in each season. Along the line of railway with which I am familiar—and I suppose my experience is not different from that of other members—not only does that ordinary work include the usual maintenance work of the railway, but every spring a considerable number of extra men is taken on who, although not permanent, are dependent for employment on that class of labour. But during the last few years, owing to the economies put into effect, their employment has been more intermittent than usual. I am anxious to know whether this extra work will interfere with that class of labour.

Mr. HOWE: Perhaps I should read from the agreement which has been signed by the railway companies but not by the government:

> The company will arrange to extend its program of maintenance of way and betterment work during the season of 1936 so as to provide employment on its line of railway for approximately five thousand men in addition to those who would otherwise be engaged in such work during the said season, and will as far as practicable carry out such work over a period of from four to six months but so that the wages of such additional men will not exceed in the aggregate the sum of $1,502,450.

So the agreement states definitely that these men will be in addition to the men who would otherwise have been employed during the season.

Mr. McCANN: What year do they base that on?

Mr. HOWE: I do not know that they base it on any year. It is 1936 requirements, I assume.

Mr. McCANN: Is the maintenance work this year going to be equal to that of last year or of those years when times were good?

Mr. HOWE: It is in addition to the men they would ordinarily have employed in 1936.

Mr. McCANN: There is a good deal of difference between the number employed in 1929 and in 1935.

Mr. STEVENS: Mr. Chairman, may we ask now that the minister table the agreement because it is one of the recognized rules that any document a minister quotes from shall be tabled? There can be no objection to tabling the agreement because it is signed by both companies and merely awaits, I suppose, the authority of the statute which is before the house. We would have a more intelligent idea of the matter if the agreement were tabled, and it would probably save a good deal of trouble.

Mr. HOWE: I shall be very glad to table the agreement as soon as it is completed.

Mr. McCANN: Will the wage cheques be actually issued by the government or by the railways?

Mr. HOWE: By the railways, and they will be reimbursed by the government.

Mr. McCANN: Might I ask if the government has considered the plan of deferred wages such as they have now in the relief camps? I would suggest that this would be a good plan because after these men have worked a few months, if no part of their pay is held back, a great many of them will be back upon the country again; whereas under the deferred payment plan, if twenty-five per cent of their wages was withheld until the end of the season, and paid to them on

leaving when the work was all finished, they would have something to tide them over the winter months. If that is not done I am afraid that at the end of the season a great many of them will find themselves in exactly the same position as when they started work in midsummer, and the consequence will be that they will continue to be a charge upon the country and probably land back in the relief camps whence they came.

Mr. STIRLING: Does the agreement state what the rate of wages will be?

Mr. HOWE: It will be the standard rate of wages paid by the railways for the class of work the men are doing.

Mr. STIRLING: From the answer of the minister to the question asked by the hon. member for Rosetown-Biggar (Mr. Coldwell), I do not yet know who is going to pay the board of these men. Will the $300, roughly, which will reach each of these men be after board is deducted, or will they have to pay their board out of that $300? If the latter is the case, I do not think the hon. member for South Renfrew (Mr. McCann) need worry very much about deferred pay because the men will not have very much left.

Mr. HOWE: How does my hon. friend arrive at his computation?

Mr. STIRLING: Ten thousand into $3,100,000.

Mr. HOWE: This employment is from four to six months.

Mr. HEAPS: That makes it worse.

Mr. STIRLING: During the period each will get about $300.

Mr. HOWE: It is the ordinary wages for track men, which I believe is twenty-five cents an hour in some sections and thirty-five cents an hour in others; that is for ordinary labour. Board, of course, is provided by the men. I may say in answer to my hon. friend opposite that the question of holding back part of the wages was considered, but we decided that as we were trying to get these men back to active private life, it would be improper to distinguish between the men ordinarily employed by the railways and the men taken from the camps. We wished to rid the minds of these men, some of whom have been looked after by the government for several years of the idea that they were wards of the government. Otherwise it might be hard for them to understand that they were on their own resources. If they want to squander their money, as my hon. friend suggests, they will have to reap the rewards of that sort of thing.

Mr. CAMERON (Cape Breton): I object to being termed, "hon. friend opposite." Our criticism is intended to be helpful. I agree with the minister when he says that we cannot make saints of men, whether they are in the labour camps or on the railways. They have as much right as we have to be foolish in spending their money. My concern is that the labour situation, especially in the municipalities along the lines of railways, shall not be made more difficult by bringing in these men from the relief camps. I know it is a difficult problem with which the Minister of Labour (Mr. Rogers) and the Minister of Railways and Canals (Mr. Howe) have to deal, but my contention is that the problem should not be made more difficult for the municipalities through which the railways pass.

Mr. FINN: I did not catch the exact words of the agreement with the railways. The minister referred to certain specific purposes such as the betterment of roads and so on, but I should like to have the exact language.

Mr. HOWE: The agreement reads:

> The company will arrange to extend its program of maintenance of way and betterment work during the season of 1936 so as to provide employment on its line of railway for approximately 5,000 men in addition to those who would otherwise be engaged in such work during the said season.

Mr. FINN: How much goes to the Canadian Pacific Railway?

Mr. HOWE: Half of the amount, or $1,550,000.

Mr. FINN: I agree with many of the statements made by the leader of the reconstruction party (Mr. Stevens). It is quite true that that party is not very large, but while they did not succeed numerically, they sent the best brains in the party to the house. For that reason I compliment them. It seems to me that the leader of the reconstruction party is largely right and partly not wrong. He takes a view different from that which I take. I do not think this parliament or this country is under any obligation to the Canadian Pacific Railway to warrant our placing money directly in its hands. That railway is not poor; it never has been poor; it is rich in lands; it is rich in assets; in some directions it is rich in brains although to some extent the greatest brains are underneath the

ground. I am afraid that they are, shall I say, stooping to underground methods. What do we find when we read the annual report of the Canadian Pacific Railway? After applying $3,500,000 on the depreciation of their ocean steamships, which are under a separate corporation, the Canadian Pacific Ocean Steamships Limited, with a European manager who was recently knighted and who lives in London, they show profits of $1,348,526.

The CHAIRMAN: In my opinion the hon. member is out of order. The time will come when he can discuss the Canadian Pacific Railway, but I think such a discussion is out of order under this item.

Mr. FINN: As I said this afternoon, it seems to me that other hon. gentlemen are allowed a great deal of latitude, but I have to take the gun. My hon. friend opposite, the leader of the reconstruction party, has been longer in this house than I have; he knows the rules, and so do I, but when I speak I am the one who gets the gaff. I should like to know the reason why.

Mr. HEAPS: You are on the wrong side of the house.

Mr. FINN: If that is the reason, if I have to take the gaff, I shall take it.

Mr. MacNICOL: The hon. gentleman should move to the northeast corner.

Mr. FINN: The hon. gentleman will be lucky if he gets back into any corner after the next election.

Mr. MacNICOL: My hon. friend should apply that statement to himself. I am safe enough; I shall be back.

Mr. FINN: The hon. member may be back in Ottawa but not in the house. I do not desire to depart from the rules of the house.

Some hon. MEMBERS: Hear, hear.

Mr. FINN: If that is a compliment, I accept it; if it is not, I reject it. I can quite understand giving money to the Canadian National Railways because that would be just taking it out of one pocket and putting it into another. It is Canadian money and it would be going back to the Canadian people, but as my hon. friend said—I was going to say my right hon. friend, and perhaps some day he will be—when you take a similar amount and hand it over to the Canadian Pacific Railway, they relieve themselves first and relieve the reliever afterwards. I can see many many ways in which that money could be better employed. As I say, this company wrote off nearly $3,500,000 as depreciation on their steamships; they took that amount out of earnings and were still able to show a profit of $1,348,000. When they were asked why they did not declare a dividend they replied that they wanted some ready money. For what? It was not to be used in connection with anything in Canada; they wanted it in order to be ready to hand over to the Minneapolis, St. Paul and Sault Ste. Marie Railway.

An hon. MEMBER: Order.

Mr. FINN: Order, quite true. Furthermore, we have to deal with the facts. If they are not dealt with here, they will be dealt with under some other subject. There is no sound reason why, to use the words of the leader of the reconstruction party, we should subsidize the Canadian Pacific Railway in the manner indicated. The Canadian Pacific Railway is a private corporation; let it look after itself. The company's own statement shows what they have. Their ships are practically new. The Empress of Britain is just new, the Duchess boats practically new, the "M" boats are not yet in their prime, and the Beaver boats, 10,000 ton freighters, are absolutely new.

The CHAIRMAN: Order. I must ask the hon. gentleman to observe the ruling of the chair.

Mr. FINN: I respect your ruling, Mr. Chairman.

The CHAIRMAN: The hon. member must confine his remarks to the item under discussion. He is entirely out of order and I must ask him to observe the rules of the committee and see that his remarks bear entirely on the item under discussion.

Mr. FINN: The item we are dealing with is 419, which reads:

To provide for reimbursement to the Canadian Pacific Railway Company and to the Canadian National Railway Company, upon such terms and conditions as the governor in council may determine, of expenditures to be made by each of the said companies for:

(a) Labour in the employment of certain unemployment relief forces on special work in extension of the said companies' programs of maintenance of way and betterment works during the year 1936;

(b) Workmen's compensation liability relative to such labour;

(c) Certain allowances for transportation of such labour;

(d) Certain other expenditures for labour, material and overhead incurred by the railway companies if such expenditures are made during 1936 in preparation for or in completion of work expected to be performed by the unemployment relief forces but not performed because of shortage of unemployment relief forces, not exceeding in the aggregate, $3,100,000.

Now I wish to ask a question and not to make a statement, and in that respect I do not think I shall be infringing the rule. In discussing an item which has to do with expenditures on maintenance of way, and other purposes to be determined by the governor in council, is it or is it not competent for me or any other hon. member to turn to the sheet in the company's annual report in which this very question is dealt with, wherein they appropriate certain moneys themselves, and to compare their program with what we are to give them, in order to ascertain whether they need more or less than is being provided? If I am to make comparisons of this sort it is necessary for me to look at the Canadian Pacific Railway Company's annual report, which has come into my hands. If I am told, in discussing this item, that I may not refer to that report in urging the Minister of Railways to exercise the discretion that remains in the governor in council, by order in council, to do certain things; if I may not, in my own feeble and humble way, offer what I regard as sound reasons why perhaps the matter should be reconsidered, but am told that I am out of order, then I respect the ruling of the chair. I respect the hon. gentleman who is in the chair, the Deputy Speaker and Chairman of this committee, and I shall always be prepared to bow to his ruling. But I ask the chairman now whether I am out of order when I use this report to assist me in giving my reasons why some change should be made in this particular vote.

The CHAIRMAN: I have already given my ruling and the hon. member can appeal against it if he sees fit.

Mr. FINN: Since I have been in the parliament of Canada I have never taken exception to any ruling of the Speaker or of the Chairman and I do not propose to do so now. I accept the ruling and will confine my remarks strictly to the subject matter within the four corners of the item. But as we all pray before going to bed at night, if we pass away before morning, that He be merciful to us all as sinners; with the generosity of a Nova Scotian—and I see two of my Nova Scotia friends across the way—I leave it at that.

The Minister of Railways referred to squandering, and I think that is true. I was trying to find the cause, and I think I see it in the reconstruction act which is now up in the red chamber. As I see it, at the end of the season so much is paid to the men employed; whatever is due is paid in a lump sum, and that is to help to carry them over the winter. Now we all know that everybody has good intentions and we know the name of the place the way to which is paved with them, and the suggestion I have to offer is this, that the balance should be paid monthly or weekly and not in a lump sum. In a great many cases they might not intend it, but when the grey cold dawn of the morning after comes they will find they have nothing. They should be protected against themselves; their families should be protected. That is the only suggestion I make. If the balance due were distributed over the period of time during which the men might not be working, it would help their families. It might involve a little extra bookkeeping, but if it brought a little more happiness to the homes it might well be considered by the Minister of Railways. I know from my short acquaintance with him that his ability is outstanding and his kindness of heart is not excelled by any hon. gentleman's in this house. With that last word I shall not intrude again into the debate on this particular item.

Mr. HEAPS: Before this item is carried there is one matter to which I wish to refer. I have no objection to this item. When the Minister of Labour brought it in a few weeks ago as part of the government's scheme to close down the relief camps, I was heartily in favour of the proposal. I felt it was a good thing to try to liquidate these relief camps as soon as we possibly could. But as the Minister of Labour has said on several occasions during the past few weeks, we ought to take the long range view of this problem of unemployment, and I want to apply that principle for a moment or two to these particular items which are now before the committee. If I recall correctly what was stated to-night, the men are to be employed, not for six months as the minister has stated, but for four months in these camps. They will receive on an average approximately $275 each in the form of wages for four months' work in the camps; it may not be full time; it may be short time, but if the whole of the $3,100,000 were to be divided among ten thousand men it would be approximately $300 apiece. From that sum, however, must be deducted transportation, probably costs of construction of the camps, maybe one or two other items. Therefore I think, when it is all boiled down, the average amount of wages received will be in the neighbourhood of $275. Out of that sum the men will have to pay for, say four months' board. I do not know what that will amount to, but I have an idea that it will be about $1 a day. Add to that other expenses incidental to staying in one of those construction camps, and I venture

to assert that when the four months have gone the minimum expenditure of a man in the camps will have been about $175. In that event, when he leaves the camp he will probably have $100 at his disposal. At the time the camps close down the winter months will be upon us, and the first thing those young men will require will be a certain amount of winter clothing. When the individual has equipped himself in that respect he will be left with a comparatively small amount of money.

Now, taking that long range view which the Minister of Labour has suggested to the house and to this committee upon so many occasions during the past few weeks, I am wondering what will happen to these men who will be employed on construction work after they have left the camps with a small amount of money in their pockets. Has the government any considered policy based upon what may be expected to become of these men once they leave the camps? Do ministers suppose that if the men leave with $50, $75, or $100, that will be a solution of the unemployment question? That does not seem to me to be looking so very far ahead. We are now in the month of May. The men will soon be working in those construction camps if they are not doing so now. When September comes round they will have to leave those camps, and their natural course will be to drift to the larger industrial centres. In September or October very few will be available for any farm work, assuming that farm work can be found for them. Has the Minister of Railways or the Minister of Labour any plans in mind or any suggestions to make as to what will be the policy of the government once these relief works close down? In asking this question I am merely adopting that long range view of the situation which the minister himself urged should be taken.

Sir GEORGE PERLEY: I should like again to call attention to paragraph (d). As I understand the explanations made by the two ministers in discussing the bill, the agreement is intended by the government in the first instance to take care of single men from these relief camps, and if there are 10,000 of them they will be used for that purpose. The Minister of Labour said that there was nothing in the bill to prevent the government from using other unemployed if it should turn out that there were not 10,000 men available from the relief camps for this purpose. In view of their effort to close the camps there is a certain amount of justification, so far as the government is concerned, for this item in the estimates, but paragraph (d), it seems to me, should not be there. I do not think that, as has been explained by the two ministers, any part of this money should be used for anything but the payment of labour, wages to the relief camp men if they are available, or to others if there are not enough men from the relief camps. Why should the Canadian Pacific or the Canadian National Railways be paid for materials that are not used? Those materials will not be lost; they will be needed for other purposes. The expenditures made upon them by the railways will not be wasted if 10,000 men are not provided by the government; and on the minister's own explanation paragraph (d) should not be there. The purpose of this is to give work. All the money provided by the government should be used to pay wages. The railways should be perfectly willing to supply all the materials, and if by chance some of them should not be used this year they can be sold or used next year.

Mr. HOWE: This is what the lawyers call a saving clause. The Department of Justice has put—

Sir GEORGE PERLEY: Saving the railways.

Mr. HOWE: No, it is a saving to this government. The department has to be very careful that it does not get the government into difficulties. Without that clause we might be agreeing to supply the railways 10,000 men, and in this free country it might be difficult to do that. We have no power to order these men as we like. If my right hon. friend will look closely at this paragraph he will see that it provides for this payment only in the event of our not fulfilling our agreement to furnish 10,000 men, and if we ask the railways to make elaborate preparations to receive men who are not supplied, we simply compensate them for expenditures they made, due to our fault or failure to furnish men. Common sense assures us that we shall be able to furnish a substantial number of men and there will be no such costs involved to the railways as this paragraph contemplates.

Sir GEORGE PERLEY: If there are not sufficient men from the relief camps, are the government prepared to take other unemployed? They know 10,000 men can be provided, and I do not understand the object of this paragraph. If the Canadian Pacific buy ties which cannot be used this year because sufficient men are not supplied by the government, the ties are there, and they are worth the money; why should the government pay for them?

Mr. YOUNG: I should like to ask the minister whether there is any doubt that other labour will be employed provided sufficient men cannot be obtained from the camps. It seems to me there should be no doubt at all on that point. In every city in this country we have a large number of men who are not on relief owing only to the fact that they have such a pride that they would rather almost starve to death to keep off, and for their pride or patriotism they are being penalized under this legislation. To me that is the worst feature of it. Men who are not quite so patriotic, who more willingly went into the camps—and I know many of them are there against their will—are to be the first to get help, while these others, many of whom I know personally, who struggled to keep out of the camps, are not going to get employment under this provision. I would like to have assurance from the minister that if there is any chance of the number of unemployed men in the camps not being sufficient to supply the number required on the railways, these other men of whom I speak will be employed. I recognize that the purpose of the government is to do away with the unemployment camps, and that is the reason for taking these men first. I think we all agree with that, but I want to be assured that these other men of whom I have spoken will have an opportunity of employment. All the more should that be done because it appears that if we are not able to supply the 10,000 men we must give the companies the money which they are supposed to be out of pocket in preparing for the work to be done. I say "supposed to be" because I feel that there is not going to be very much preparation in advance for this work except such as will be useful later on. So if I can have from the minister the assurance that these men will be given work I shall be much better satisfied.

Mr. HOWE: I should be very glad indeed if it turned out that the government was unable to find ten thousand men in the camps for this work, a contingency which is contemplated in paragraph (d). Only a lawyer versed in technicalities would think of that, but I understand how a man who desired to ensure the protection of the government would foresee it. But I think I can assure my hon. friend that there will be no such difficulty.

Mr. YOUNG: My point is that if they are not in the camps—

Mr. HOWE: They will be furnished in some way.

Mr. WOODSWORTH: My colleague has raised a question which has not been answered, and which I think should be answered. We are to some extent handicapped in this committee on account of the way in which the votes are divided up. On an earlier estimate we asked a question of the Minister of Labour and he said that he could not answer because certain matters came under other departments. Now we have come to one of these other departments, the Department of Railways and Canals, and although we are dealing with the estimates of that department I take it that we are in reality dealing with the question of unemployment. The only reason we have an estimate of this kind is that of unemployment. Now for some days we have been discussing the general question, how to deal with the large numbers of unemployed men. Apparently the scheme for dealing with the men now in the camps is to put 10,000 of them to work on the railways and hope that the remainder will go on farms. We are dealing now with the provision for the 10,000. I think the minister who is in charge of this estimate cannot avoid looking at the larger question of unemployment, with which the item is supposed to deal. I need not go over the ground covered by my colleague the hon. member for Winnipeg North (Mr. Heaps). This estimate, as he points out, makes provision for the men for a few months. They work; they get wages; that is an improvement on the old camp arrangement. But remember that the railways, including the Canadian Pacific, a privately owned road, get the dole. The railways get relief, their portion of the $3,100,000. And they take no chances whatever, they are protected fully, even against the possibility of loss. The men are employed for the time they can be used; they give something in return for their wages; they give something in return to the public road in one case and in the other to the private corporation. Now, what is going to happen when they have done this four months' work? There is adequate provision that the railways may suffer no loss, but have we any way of providing for the men at the end of the four months? What does the government propose to do? Are these men to be turned out when the winter comes, as the contractors in the west used to turn out the horses, to forage for themselves? In that case, with the dismantling of the camps, the situation will be worse than ever. I think my colleague is quite within his rights in asking a question which relates to an essential feature in the whole scheme,

whether any provision is to be made for the men at the conclusion of the four or five months' work. That is a reasonable question on which we should have some information from the minister.

Mr. HOWE: It is scarcely possible for a minister or anyone else to chart the future course of 10,000 individual men. The difficulty of the men in the camps—they have expressed it frequently in the public press and otherwise—is that in the camps their prospect is hopeless. They have no opportunity of securing employment and they receive no money. Now we are finding them employment; surely that is the first step towards rehabilitation. A great deal of concern has been shown here as to why these men should be picked out for this preferment as against other men. At any rate they are being provided with work, ordinary work that ordinary men can perform and live by. My hon. friend lives in a country where employment is seasonal and he knows that a great many men never do anything but this seasonal work, and in spite of that some of them raise families; yet these are all single men. I am confident that these men are similar to other men, who follow seasonal work and are never sure of employment for longer than a four or five month period, because construction work is always seasonal. I know that many men have done well in that class of work. We are starting these men in such work. Some may fail. My hon. friend is acquainted with the machinery for looking after the unemployed in this country; they are not going to be allowed to starve. We are placing these men's feet on the ladder of employment; we believe they will do as other men following the construction industries; when one project is completed they will find other employment. In other words we are establishing these men in employment for a period at least.

Mr. WOODSWORTH: Then the minister has no plan for continuing employment for the four months?

Sir EUGENE FISET: Have you?

Mr. HOWE: Has my hon. friend?

Mr. WOODSWORTH: No, we have not power, but this government went into power on the express understanding that they were to deal with this matter. Apparently they are dealing with it by exactly the same methods as employed by the late government, except they are trying to do it on a little cheaper scale. If anyone is to be helped by this arrangement is is the railways.

[Mr. Woodsworth.]

Sir EUGENE FISET: And the men.

Mr. WOODSWORTH: The railways are being protected against any possible risk. It is all very well to say that these men are having their feet set on the ladder, but are we going to kick away the ladder just when it is set up? Does the minister really believe that in four months, at the rate of pay proposed, these men can save enough to see them through the winter? I do not think he can really believe that. With the whole unemployment situation as it is—and a lot of us know about seasonal unemployment in the west—what are these men going to do when October comes, with no provision whatever made? Surely, if this is the government's plan, or an important part of their plan to deal with unemployment, they ought to be able to see things through a little further than four months.

Mr. FINN: I should like to ask the Minister of Railways a question. No doubt he believes in equity, yet I find the amount of money being paid the Canadian Pacific Railway is the same as is being paid to the Canadian National Railways, although the latter named system has a mileage of 24,000 as against only 17,000 miles of the former. Therefore there is a difference of 7,000 miles. Why should not these moneys be apportioned according to mileage, so that each railway would get its fair share, and the Canadian Pacific Railway would not get the unearned increment.

Item agreed to.

Amount to be applied by the Board of Railway Commissioners for Canada towards the cost of actual construction work for the protection, safety, and convenience of the public in respect of highway grade crossings of railways, as the governor in council may from time to time determine, $1,000,000.

Sir GEORGE PERLEY: Has the minister any particular schemes in view for the expenditure of this money, or will he simply pass it on to the board of railway commissioners? As I remember it, the Minister of Railways recommends the points at which this work is to be done. Is that the procedure?

Mr. HOWE: My understanding is that application may be made by any one to the board of railway commissioners.

Sir GEORGE PERLEY: Directly?

Mr. HOWE: Yes, either by the railways or by persons. The board of railway commissioners examine the situation, and if they

approve the work they make application to the Department of Railways and Canals for the expenditure. The million dollar fund will be administered entirely by the board of railway commissioners.

Sir GEORGE PERLEY: The Minister of Railways has to give his approval before any of these schemes is put into effect, does he not?

Mr. HOWE: Recommendation is made to council by the Minister of Railways.

Sir GEORGE PERLEY: The board of railway commissioners consider the application. If the minister receives one in the first instance he passes it on to the board; it is considered by them; inspection is made on the spot, and if they think the work may be done properly under this vote the recommendation will come back to the minister who has it in his power or discretion either to ask for an order in council approving, or to let the matter drop.

Mr. HOWE: I assume that is correct, although as a matter of fact, if a recommendation is made by the board, it is passed on automatically.

Sir GEORGE PERLEY: The minister has discretion which is not often used; is that correct?

Mr. HOWE: Yes.

Mr. REID: Before the item is carried there are one or two figures I should like to lay before the minister. I do this in an endeavour to show where we are drifting in connection with money spent in the elimination of crossings. I do not know whether hon. members are aware that in the past twenty years, out of a total of 31,784 crossings only 1,252 have been protected, leaving 30,532 unprotected crossings. In that time the total amount of money spent in Canada on crossings has been $36,000,000. My reason for presenting these figures to the minister is that I am endeavouring to point out where we are drifting, and I am asking if we are spending the money to the best advantage. A few years back the system was changed by the railway companies, at which time they displaced workmen by eliminating the watchmen and taking away barriers, instituting a new system known as the wigwag signal. May I point out to the minister that the installation of the new system costs about $5,000, an amount equal to a watchman's pay for eight or ten years. The strange point is that the change has not protected the lives of the people, at all. As a matter of fact deaths and accidents have increased since the elimination of the watchmen and barriers and the installation of the so-called new system. I for one would like to know who receives the royalty on these installations, and possibly the minister could find out why the Canadian National Railways are charged more than the Canadian Pacific Railway for the installation. This is a serious matter. It is true that a bill has been introduced by a private member. I do not know whether it will bring about the desired result, but I know that after looking through the report of the board of railway commissioners I have come to the conclusion that never in the lifetime of any member of this house, nor in the time of any generation yet born will we eliminate railway crossings in Canada if we proceed at our present rate, unless we pull up the tracks.

The information in the publication by the board of railway commissioners shows that crossings are increasing rather than decreasing and yet we have spent only $36,000,000 in twenty-five years, and are spending only $1,000,000 at this time. We are satisfied with saying: Oh well, by spending a million dollars we are doing something to protect life and limb at railway crossings. The matter has only been scratched. I listened attentively to the observations of the hon. member for East Kootenay when he stated that $5,000,000 would not be sufficient to eliminate the great number of unprotected crossings. We must protect those crossings, if we are going to do the job properly. I would ask the minister to investigate the matter carefully. I believe we would do well to replace the barriers on our highways. It is true that most provinces have regulations stipulating that buses must stop at crossings, but I do not believe we will ever pass laws compelling every motor car to stop before attempting to cross. We may do that, but I have my doubts.

It is my view that the whole matter should be given careful consideration. When one considers the number of accidents which have taken place he is at once aware of the serious nature of the problem. In 1935 there were 242 accidents, in which 114 persons were killed and 304 injured. That is not a complete total of the injured people, because all the figures are not given by the board; only serious accidents and deaths are reported to them. If one examines the figures available for the period between 1915 and 1932 he will find that crossings protected by gates showed a death ratio of fourteen per thousand as against thirty-eight per thousand protected by the modern method.

As I have pointed out, crossings are increasing in number, and deaths are increasing. Yet

we are spending these large sums of money. I know the minister is anxious to have the item passed, and I shall not hold it up, but I thought it was my duty at least to show him that the matter is far more serious than has been hitherto indicated.

Mr. LENNARD: Do I understand that none of this money will be used for the elimination of level crossings?

Mr. HOWE: The whole sum will be used for that purpose. The board of railway commissioners will have the disposition of it, and I understand practically all of it will be for the elimination of level crossings.

Mr. LENNARD: I am familiar with crossings along trunk roads in Ontario, and I know that those crossings have been death traps for years. It is indicated in the vote that "the governor in council may from time to time determine." He is taking a mighty long time to arrive at his determination. I agree with the hon. members for Kootenay East and New Westminster in their statement that the amount should be augmented ten or fifteen times. We should speed up the work of removing level crossings and death traps in Canada.

Mr. STEVENS: May I add a word to my earlier observations. It must be obvious to hon. members that this vote does not represent a serious attempt to face the question of the elimination of level crossings. In the first place it is applicable only to places where applications are made and where local authorities are prepared to shoulder their share of the cost. The minister will correct me if I am wrong when I state that under the law the municipality, or the applicant, must pay one-third, the railway must pay one-third and the balance comes out of this provision. Some division of that kind is made, I believe. I may not be quite correct, but there is a division. It is obvious that it will be only certain municipalities or cities that will make application. As the hon. member said a moment ago there are within fifty miles of this city crossings that anyone who drives a motor knows to be veritable death traps, but the local municipality is either unwilling or unable to make application with respect to them, and so the death trap continues to exist. There is no impelling force to induce any authority to take hold of the situation, and so it just stays as it is, and that is all there is to it.

This is a great national problem. Canada ought to be ashamed of its highways in relation to grade crossings. My hon. friend said that $36,000,000 has been spent in twenty-

[Mr. Reid.]

five years, but he must remember that those tremendously expensive crossings in Montreal and at the station in Toronto come under this grade separation fund, and I imagine that the major portion of that $36,000,000 has been used in the great cities, which does not touch at all the situation we have described as it exists throughout the country. I am sorry that the minister and the government seem to resent suggestions of this kind. It is a vital matter. In the first place there is a tremendous need for employment, and this is a case where provision can be made not only for employment but for the elimination of one of the greatest outstanding, shall I say, national dangers.

When I said $5,000,000 I think I put the amount very low. I would suggest that the minister and the government consider increasing this expenditure by an additional sum, though perhaps not in this estimate, because I know a great many members of this house are very much in earnest about this particular problem. Members, particularly those supporting the government, do not like to embarrass it, but I want to say to the minister and the government that these are constructive and useful suggestions which catch the ear of the people of this country who understand the situation, and they are willing to support any government which will take the necessary measures. It is not a political question; it is not a question affecting any section; it is a national question. This is a great opportunity to meet a great national need. I urge upon the minister once again to consider a definite policy apart altogether from the present statute, which, although it may operate all right in normal times, is restrictive, and seriously to consider a forward movement and the establishment of a national policy in this matter.

Mr. MASSEY: I speak as a prejudiced witness, which I admit very frankly, in view of the fact that there are in my riding, which is the municipal riding of the east part of Toronto, three grade crossings, not only exceedingly dangerous but also very important from the point of view of the amount of traffic that is compelled to pass over them. For many years the question has been discussed and rediscussed of the possibility of changing these grade crossings into subways or otherwise, and if my hon. friend from Broadview (Mr. Church) and my hon. friend from Davenport (Mr. MacNicol) were here they would bear me out in what I have to say.

I would ask the minister if this vote that we are asked to pass to-night may be regarded

as simply the first vote along the lines suggested to him by those who have spoken during the last few minutes. One could say a great deal under this item on the necessity of such work as is here contemplated being done on a wide national scale, and I earnestly urge upon the minister that not only in municipalities but throughout the country, on the highways and byways, there is much work of this kind that needs to be done in the interests not only of safety but of subdividing traffic, which is something very much to be desired. I would ask the minister if this may be regarded as simply the first vote along these lines.

Mr. HOWE: This vote is supplementary to the ordinary grade crossing vote, which as we all know is a statutory grant towards the removal of grade crossings. This, in the opinion of the railway commissioners, will cover the government's share of the applications which are made to the board and of which the board approves. If more money is needed I think the government will be glad to consider a larger grant next year.

Item agreed to.

To provide for repairs and improvements to the canals, harbours, and elevators maintained and operated by the Department of Railways and Canals, $167,600.

Sir GEORGE PERLEY: This seems to be quite in order, but why should this item not appear in the ordinary estimates? Why is it in the special supplementaries?

Mr. HOWE: This amount is for work that could be done this year or could be deferred. While the work is necessary, it is not necessary in the immediate year. The item has been put in because the work covers a series of small projects that will employ considerable labour rather widely distributed.

Item agreed to.

Deficit of Canadian National Railway Company

Amount not exceeding $39,900,000 to be paid from time to time, under such conditions as the Minister of Finance may prescribe, to the Canadian National Railway Company (hereinafter called "the national company") and to be applied by the national company in payment of the net income deficits arising in the calendar year 1936, including such supplementary contribution to the Intercolonial and Prince Erward Island Railways, employees' provident fund as may be necessary to provide for payment in full of monthly allowances under the provisions of the Intercolonial and Prince Edward Island Railways Employees' Provident Fund Act, notwithstanding the limitation contained in section four of the said act, and including such supplementary contribution to the Grand Trunk Railway of Canada superannuation and provident fund as may be necessary to enable payment to be made of monthly allowances under the rules and regulations of the fund, notwithstanding the limitation contained in section thirteen of chapter sixty-five of the Statutes of Canada 1874, and including profit and loss but not including non-cash items and interest on dominion government advances, of the national company or of any other or others of the companies comprised in the Canadian National Railways (as defined in chap. 10 of the Statutes of Canada, 1929), or any company controlled by stock ownership or otherwise by any company comprised in the Canadian National Railways or by the national company in respect of any of the Canadian government railways entrusted to the national company, $39,900,000.

Sir GEORGE PERLEY: Perhaps I am not thoroughly conversant with the matter, but is not this item the same as is covered by a bill which is now before the house?

Mr. HOWE: The same item is covered by a resolution of the Minister of Finance, yes.

Sir GEORGE PERLEY: I think this item should stand. Is it to go to the special committee?

Mr. DUNNING: It has been to the special committee and was reported back to the house. I think the chairman of the special committee is present.

Sir EUGENE FISET: The committee reported to the house on April 30, approving this resolution.

Sir GEORGE PERLEY: That is what I thought, but it seems to me that the item should stand until the bill has been passed. I am unable to see quite why there should be both a bill and an estimate. There are so many of these things coming along just now that I find it a little difficult to follow them. I always thought that a vote in a bill was sufficient without an estimate. But here we have an estimate and we also have a bill by the Minister of Finance dealing with the matter. I would like to have my leader here to discuss it, and I would suggest that it stand in the meantime, and come up again perhaps to-morrow.

Mr. DUNNING: The bill of the Minister of Finance based upon the resolution which I introduced the other day is still on the order paper, the debate on the second reading having been adjourned. That bill was to provide entirely for the capital expenditures of the railway, not for the deficit. The capital expenditures embodied in that measure amount to $9,959,000, which requires to be voted in a measure of that kind. The estimate before

the committee now is for the deficit only, and is not contained within the four corners of the bill to which my right hon. friend has just referred. I can assure him that the procedure is quite regular, to vote this after it has been examined by the special committee and reported upon.

Sir GEORGE PERLEY: I understand the explanation given that there is both a resolution and estimates, but it is an entirely new departure to have beforehand an estimate for a deficit. How does the minister know there will be no further deficit? Why does he not wait until the end of the year? Why change the system that has always been in vogue and ask for an estimate beforehand? There is danger in doing so because there will be an urge on the part of the railway authorities to have a deficit as large as the estimate. Human nature is the same all over the world, and I say to the minister that it is dangerous to ask parliament to provide beforehand a large sum of money for a deficit. At any rate, it is something new and I ask the minister to let this item stand as the leader of the opposition (Mr. Bennett) would like to say a few words on the subject.

Mr. DUNNING: I shall not oppose the request of the right hon. member for Argenteuil (Sir George Perley) to defer consideration of this item in order that his leader may make some further remarks upon it. With reference to his last remark I would point out that even though no advance estimate was voted by parliament in previous years for Canadian National deficits, that did not absolve the Minister of Finance of the day from the necessity of endeavouring to forecast for his own budget purposes the amount necessary to take care of the Canadian National during the year. If the result feared by my right hon. friend had any real basis, it should have occurred ere this. In each of the last few years the Minister of Finance in presenting his budget has been compelled to make provision for a sum which could be known and was known to the Canadian National officials.

Sir GEORGE PERLEY: But not voted.

Mr. DUNNING: But not voted by the house. I can remember years ago when I was Minister of Railways and Canals that complaints were made in the special committee on railways that we were voting something which was relatively meaningless because the money had been spent anyway. I believe that nearly all hon. members who have had experience on that special committee will bear out what I say. By dealing with the matter in this way, it is possible to cross-examine the officials of the railway regarding their intended expenditures. In other words, they are put on the spot in exactly the same manner as the members of this committee put each minister on the spot with reference to the expenditures he intends to undertake. That is the whole principle involved in the change. While I appreciate that there may be something in the contention of my right hon. friend, after close examination of the whole matter I am convinced that by and large the balance of good will be on the side of this procedure rather than on the side of the former. It will give the committee examining in advance the expenditures contemplated the ability to ask: Is this wise? Should this be done this year? The operating officials will find it necessary to give reasons for contemplated expenditures rather than reasons for expenditures which have been made.

Mr. STEVENS: I have not been a member of that committee for a number of years, but I am under the impression that it has been the practice of the committee not only to examine the statements of the past year which were brought down, but also to receive from the officers of the railway estimates of their expenditures during the current year.

Sir EUGENE FISET: I was chairman of that committee in 1927, 1928 and 1929 and I can remember that we had a discussion while my hon. friend was a member of the committee as to the advisability of examining any arrears in connection with the expenses of the Canadian National. The opinion was expressed that an estimate should be submitted to the committee. I have taken the trouble to look over the records of the past and I found that opinion expressed by my hon. friend, by other members of the committee and by myself. For the first time in the history of the Canadian National Railways, the officials are being asked this year to submit a detailed budget of their future estimates, upon which is based the estimate at present being presented to the committee. It was only because we had before us complete details of the proposed vote of $39,000,000, as included in these estimates, that the committee agreed to let them go through after full examination.

Mr. STEVENS: I agree entirely with the procedure of bringing before the committee an estimate of future expenditures. I think I recollect that when I was a member of that committee some years ago we discussed the matter and I believe the stand I took then

was as indicated by the hon. gentleman. I am not taking any great objection to this procedure, but I say to the Minister of Finance that it does not follow that it is necessary to vote an anticipated deficit in the current year. The deficit is not incurred until December 31. In the past the railway was always able to finance on short term loans for the accumulating deficit, and then at the end of the year when the full deficit was known they came to parliament and parliament usually voted it fairly early.

Sir EUGENE FISET: The practice in the last three years has been just what the Minister of Finance is doing this year by resolution. A resolution was passed upon which a bill was based authorizing the railway to float loans in advance. In this instance there are only two special cases, amounting to $9,000,000, which are not provided in these estimates and which are to be submitted to the committee. They are to be covered by a resolution introduced by the Minister of Finance and upon which resolution a bill will be based. These special cases were dealt with in the budget submitted to the members of the committee for examination by the railway staff. My hon. friend will realize the great help it is to the members of the committee to have before them detailed estimates with which they can deal intelligently. They will know the specific amount to be provided for, just as is known in connection with every other branch of the administration.

Sir GEORGE PERLEY: There are other things I could say to-night, but if the minister is willing, I should like to have this item stand.

Mr. DUNNING: All right.

Mr. HOWE: I have no objection to its standing, but I must say that it is only a slight departure from the program of last year. Last year the resolution introduced by the Minister of Finance provided for capital expenditures and advances by the Minister of Finance to the railway up to a certain amount. The only difference this year is that we are substituting a definite vote for the provision for advances. If the right hon. member wishes the item to stand, it may.

Item stands.

Loans and Investments

To provide for advances by way of loans to the Canadian Pacific Railway Company and to the Canadian National Railway Company with interest at a rate to be fixed by the governor in council and upon such terms and conditions as the governor in council may determine of expenditures for wages to be paid by each of the said companies (other than wages to be reimbursed to the said companies as provided for in vote No. 419) to employees engaged in special works in extension of the said companies' programs of maintenance of way and betterment works during the year 1936, and certain transportation allowances in respect of movements of the unemployment relief forces from point to point during the progress of the special works, not exceeding in the aggregate, $1,109,400.

Sir GEORGE PERLEY: I think the minister has already given an explanation of this. He is proposing to advance to the companies this amount of money in order to provide them with funds to meet the expenditures which it will be necessary for them to make for the purposes of utilizing the labour provided by the government under item 419; is that right?

Mr. HOWE: That is correct, about one third of their expenditure, their expenditure for labour in that connection. In addition they will have expenditures for materials and equipment which they will include in their usual budget.

Sir GEORGE PERLEY: By way of loan.

Mr. HOWE: This item is by way of loan.

Mr. WOODSWORTH: The chairman of the railway committee told us that the Canadian National had given an estimate of the amount which would be required. Why was not this amount put into that estimate and included in the sum we have just considered? Why this separate item for the Canadian National Railways?

Mr. HOWE: The budget of the Canadian National Railways had been submitted to the government and the budget of the Canadian Pacific had been submitted to that company's shareholders before we made this request to the railways to use this additional labour. I may say that the making of a railway budget is about as complicated as the preparation of the budget presented by the Minister of Finance; it is not done in a moment.

Mr. WOODSWORTH: But it seems to me that the Canadian National Railways ought to be dealt with as a unit. We have just had under consideration an item which has been allowed to stand, which it seems to me ought to include the total amount to be spent by these railways. I cannot see why we should have another item to put in later on. If we are to make a favourite of the Canadian Pacific Railway and make loans to that company without requiring interest for a certain period, then I say that we should let the Canadian Pacific Railway stand on its own feet as an independent entity. But let us keep the Canadian National Railways

by itself as a government owned road. Let the Canadian National make its own estimate and put that in as one united estimate covering the whole of the Canadian National Railways. That would be a reasonable way of dealing with the matter, instead of introducing subsequent votes involving loans without interest. I should like to know why that could not be done in this case.

Mr. HOWE: This is an accommodation loan to enable the companies to do the work and not to charge it to their budget in the ordinary way. They are not in a position to spend for maintenance in one year all the money which would be involved, and there is an appropriation for maintenance of a million and a half in the case of each railway. We are lending them the money so that they can absorb the item gradually without disturbing the budget for this particular year. It is not at all a loan without interest; it is with interest.

Mr. WOODSWORTH: For a time, I said.

Mr. HOWE: Interest starts from the day the money is borrowed. The loan in the case of the Canadian Pacific Railway will undoubtedly be paid when due, and as regards the Canadian National, if they are not able to pay the loan, it will be absorbed into the deficit of the year in which the loan falls due.

Mr. LAWSON: Despite the minister's explanation I still cannot understand one phase of the matter. Under item 419 which we have already passed, paragraph (c) provides for certain allowances for transportation of labour, that is labour which the government really expects to supply. When we get to item 427 we find that it contains two clauses. Apparently it is to provide for two things: First, for advances by way of loans to the railways, and, second, certain transportation allowances in respect of movements of unemployment relief forces from point to point during the progress of the work. Is one not a duplicate of the other? If not, what is the distinction?

Mr. HOWE: The first item we voted a little while ago is for the actual wages of the men at the site of the work. This item provides for the labour that will be required to supervise the men, and for the cost of transporting them from one locality to another. Naturally men engaged in maintenance of way cover considerable distances and this provides for the cost of moving them.

Mr. LAWSON: Am I to take it then that the latter class to which the minister refers comprises employees of the railway companies?

[Mr. Woodsworth.]

Mr. HOWE: Yes, experienced employees.

Mr. LAWSON: Apparently we are agreeing by item 419 to pay the wages of unemployment relief labour, and also to pay the cost of transportation from one point to another, and under these items we will loan the railways money with which to pay the cost of transporting their own experienced employees and to supervise the work to be done by relief labour.

Mr. HOWE: That is correct.

Mr. LAWSON: Then the only comment I have to make is this: I by no means agree with all that has been said about these measures being a matter of subsidy for the railways, but I cannot refrain from saying that during the last election those most active in heckling me from the public platform were Liberals who howled to high heaven about the fact that the government of which I was a member had made loans to the Canadian Pacific Railway to enable them to give additional employment in their shops, every dollar of which loans I am informed has since been paid back. I want to make it clear that this government is doing the very thing for which we were so roundly condemned.

Mr. MacNICOL: Does the minister say that the railways will be paid for transporting their own men? They travel free at all times now. Why should the government undertake to pay them? I should like to know why the fares of railway men are to be paid when railway men now travel free.

Mr. HOWE: I suppose it costs some money to transport men, whether they travel free or not. People do not exactly travel free; someone has to pay for moving them, I take it.

Mr. MacNICOL: It seems to me that this is going too far. In Washington they talk about pork barrels, but this whole matter begins to look more or less like a pork barrel. I cannot see any reason why this country should pay the railways for transporting their own men whom they now transport free. If they have certain employees moving from one job to another to-day they carry them free. This country, in the present state of affairs, desires to have every dollar find its way into the pockets of the men who are to be employed in this work; it wishes to give every unemployed man a chance to earn every dollar he can. But here we are proposing to pay the railways for transporting their own men. They would transport them free if they were transporting them to an employment job.

Mr. HOWE: I should explain to hon. members who, evidently, live in cities that these men on maintenance of way work live in cars; they sleep there and eat there; and as the work progresses these cars have to be moved, and the men in them. This procedure involves certain cost. An engine has to be brought out and hooked on to these boarding cars, in order that they may be moved to a place which is suitable as a camp for these men. That is the purpose for which we are lending the railways the money. It is a real expense to the railroads, and we are loaning the money, not giving it to them; they will pay it back.

Mr. BEAUBIER: It is customary for employees on a railroad who are maintenance of way men to be transferred from point to point free of charge, as they are passed from one location to another. Do I understand that there will be a deduction from the men's pay for transportation; that that will be a charge against the men?

Mr. HOWE: No, it is a cost to the railway. Of course the railway moves these men; it costs the men nothing when they are employed. The place in which they live is moved somewhere else, and they move with it.

Mr. WOODSWORTH: Will the minister give us some idea of the rate of interest to be paid and when payment is to be made? I see that all this is left to the governor in council. Surely this committee has a right to know, if the government is to be banker to the Canadian Pacific Railway, what rate of interest the railway is going to pay for this accommodation.

Mr. HOWE: The arrangement with the Canadian Pacific Railway was that this loan should be a short term accommodation loan and that the rate should approximate what the government pays for short term money, that is, the cost to the government of a loan for an equivalent period. It was left to the Minister of Finance to determine what that rate would be, and I do not think it has yet been decided. I assume that it will be around three, or three and a half per cent.

Mr. WOODSWORTH: For how long is this loan to be made?

Mr. HOWE: It is payable annually over five years in equal instalments.

Mr. STEWART: Is it the intention of the minister that unemployed men shall be engaged in this work? Is it an unemployment relief scheme?

Mr. HOWE: This is to cover the railroads' supervision for using the unemployed for whom we voted the $3,100,000 item a while ago.

Mr. COLDWELL: To return for a moment to the question of interest. It strikes me that the railway company is getting a rate which is not accorded to any other group of employers or industrialists in the country. If the government is going into the banking business, giving loans at three or three and a half per cent to the railways, it would seem only right and just that the farm loan board, for example, should reduce its interest rates to farmers who are borrowing money and who are another type of employer, of course in a smaller way, but nevertheless, in the aggregate, larger employers than even the railway itself. I think this principle is all wrong. I think also the discussion to-night has brought out in relation to this agreement a number of points which cannot be defended in the light of what other people are doing in the country. Although I am in favour of finding employment for the men, I am not in favour of these heavy subsidies to the railway companies, and I believe that resolutions which have already been passed, to my own knowledge, by farmers' organizations asking for the same treatment as the Canadian Pacific Railway is getting, are fully justified by the discussion that we have had in this chamber to-night.

Item agreed to.

To provide for commitments incurred under the authority of section 9, Supplementary Public Works Construction Act, 1935, and that the governor in council may authorize the Minister of Finance to sell or lease the railway equipment so acquired to either or both the Canadian National Railway Company and the Canadian Pacific Railway Company under agreements whereby the railway company or railway companies shall reimburse His Majesty the full amount of the cost of the said equipment with interest except in respect of the first and second years covered by the agreement at a rate to be fixed by the governor in council and that such agreements shall provide that security be furnished to secure and indemnify His Majesty in respect of the debt due to His Majesty, $5,303,000.

Mr. STEVENS: Will the minister explain what this item refers to?

Mr. HOWE: It is entirely a revote of loans which were begun in 1935 as an employment measure, and which were repayable as the equipment was put into use. This is the balance of the moneys that will be expended for this purpose this year. Of course this money is on loan to the railway companies.

Sir GEORGE PERLEY: Will the minister give us some details of the amounts and the dates? These arrangements were made at various times, I take it?

Mr. HOWE: Yes.

Sir GEORGE PERLEY: And both railways have them? The minister must have some statement giving the details and the dates on which these arrangements were made, and the amounts in each case.

Mr. HOWE: This was work authorized under the 1935 Supplementary Public Works Construction Act. This equipment was to be built and sold to railways on an equipment rental basis. It includes: Canadian Car and Foundry Company, 80 sand cars; expenditure last year, $269,566.40; required this year, nothing. Canadian Car and Foundry Company, 250 automobile cars; expenditure last year, $903,015; required this year, nothing. Eastern Car Company Limited, 200 refrigerator cars; expenditure last year, $900,793.60; required this year, $244,006.40. Eastern Car Company Limited, 250 gondola cars; expenditure last year, $834,657.25; required this year, nothing. National Steel Car Corporation Limited, 8 snow ploughs; expenditure last year, $75,457.44; required this year, nothing. National Steel Car Corporation Limited, 150 automobile cars; expenditure last year, nothing; required this year, $552,525. Canadian National Railway Company, 250 refrigerator cars; expended last year, $901,000; required this year, $424,000. Montreal Locomotive Works Limited, five locomotives; expended last year, nothing; required this year, $609,500. Montreal Locomotive Works Limited, five locomotives; expended last year, nothing; required this year, $556,500. Canadian Locomotive Company, Limited, five locomotives; expended last year, nothing; required this year, $492,900. Contingencies this year, $36,078.91.

Sir GEORGE PERLEY: Is that all?

Mr. HOWE: That is the Canadian National loans. Then the Canadian Pacific Railway have some: Montreal Locomotive Works, five locomotives; expended last year, nothing; required this year, $570,600. Stone, Franklin Company of Canada Limited, one electric locomotive; expenditure last year, nothing; required this year $89,500. National Steel Car Corporation Limited, four steel baggage and buffet coach frames; expended last year, nothing; required this year, $72,151.64. National Steel Car Corporation Limited, four steel mail and express cars; expenditure last year, nothing; required this year $148,559.04. National Steel Car Corporation Limited, eight steel coach frames; expended last year, nothing; required this year, $140,063.28. National Steel Car Corporation Limited, one hundred hopper cars; expended last year, $345,551; required this year, nothing. National Steel Car Corporation Limited, 170 gondola cars; expenditure last year, $728,019.80; required this year, nothing. Canadian Car and Foundry Company Limited, 700 box cars; required last year, $1,425,116.24; required this year, $996,197.76. National Steel Car Corporation Limited, 150 refrigerator cars; expenditure last year, $860,524.50; required this year, nothing. Canadian Pacific Railway Company, completion of baggage and buffet cars, mail and express cars, and coaches, required last year, nothing; required this year, $353,716.64. All these contracts were made between August 26 and October 30, 1935.

Sir GEORGE PERLEY: Do they all add up to this $5,303,000? That is simply to take care of commitments already made?

Mr. HOWE: Yes, that is commitments payable this year. These commitments were payable in certain years, and the amount payable this year is $5,302,706.02.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

---

## Tuesday, May 5, 1936

The house met at three o'clock.

### MISCELLANEOUS PRIVATE BILLS

Second report of the standing committee on miscellaneous private bills.—Mr. McPhee.

### STANDING COMMITTEES

#### CHANGES OF PERSONNEL

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That the name of Mr. Kirk be substituted for that of Mr. Duff on the standing committees on privileges and elections and banking and commerce; and that the name of Mr. Cameron (Cape Breton North-Victoria), be substituted for that of Mr. Duff on the standing committee on marine and fisheries.

Motion agreed to.

### PRIVATE BILLS

#### REFERENCE OF CERTAIN PETITIONS TO COMMITTEE ON STANDING ORDERS

Mr. S. W. JACOBS (Cartier) moved:

That the petitions for private bills listed below, together with the reports of the clerk

of petitions thereon, be referred to the standing committee on standing orders for the purpose of considering the suspension of standing orders 92 and 93 (3) (a) and (c) in relation thereto:—

No. 49—Madeleine St. Clair Peacock Milroy (divorce).
No. 50—Mildred Eileen Champion Webster (divorce).
No. 51—Howard Murray and others, to incorporate Quebec and Montmorency Railway Company.
No. 52—Lillian Gladys Cheney Perry (divorce).
No. 53—Edith Astroff Nevitt (divorce).
No. 54—Edythe Mary Ross Brown (divorce).
No. 55—George Marcoux (divorce).

Motion agreed to.

## COPYRIGHT AGREEMENT

ARRANGEMENT BETWEEN CANADA AND THE UNITED STATES EFFECTIVE DECEMBER 1923.

On the orders of the day:

Hon. FERNAND RINFRET (Secretary of State): Mr. Speaker, yesterday the hon. member for St. Lawrence-St. George (Mr. Cahan) asked the Prime Minister (Mr. Mackenzie King) to lay on the table copy of an agreement respecting copyright entered into between Canada and the United States in December, 1923. I may say in reply that the extract from the Canada Gazette of December 29, 1923, reproducing the order made by the Minister of Trade and Commerce of Canada, in whose department copyright and patents then were, under subsection 2 of section 4 of the Copyright Act of 1921 is published as an appendix to the report of the commissioner of patents for the fiscal year ended March 31, 1924.

The proclamation issued by the President of the United States under date of December 27, 1923, is also published as an appendix to the same report. That report was laid on the table of the House of Commons on February 9, 1925.

It will be observed that the arrangement between the government of Canada and the government of the United States was not the subject of a treaty or agreement expressed in a formal document, but was effected by action, under statutory authority, by the Minister of Trade and Commerce of Canada and by the President of the United States.

For the convenience of the hon. gentleman and other members of the house I now beg to lay on the table three copies of that agreement.

## PUBLIC WORKS CONSTRUCTION ACTS

On the orders of the day:

Hon. CHARLES A. DUNNING (Minister of Finance): Mr. Speaker, the right hon. leader of the opposition (Mr. Bennett) asked me, yesterday I think it was, with regard to a statement of moneys expended under the authority of the Public Works Construction Act. I find that I tabled the statement on Monday, February 10 last.

Mr. BENNETT: Oh, that was the statement? I thought it had to be after the end of the year.

Hon. H. A. STEWART (Leeds): On February 20 an order of the house was made for a return covering certain information in connection with the Public Works Construction Act of 1934 and the similar act of 1935. The return has not yet been brought down and I should like to ask the Secretary of State to see if he can expedite it.

Hon. FERNAND RINFRET (Secretary of State): Mr. Speaker, the return is still with the Public Works department. I will undertake to see the minister and have it brought down as soon as possible.

Mr. STEWART: Thank you.

## THE BUDGET

DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE MINISTER OF FINANCE

The house resumed from Friday, May 1, consideration of the motion of Hon. Charles A. Dunning (Minister of Finance) that Mr. Speaker do now leave the chair for the house to go into committee of ways and means.

Right Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, I desire to congratulate heartily the Minister of Finance (Mr. Dunning) upon both his arrangement and his presentation of the budget on Friday last. In my opinion it was highly creditable alike to the minister and to the officials of the Department of Finance, and I am bound to say, if he will permit me, that he read a very long document with very great distinctness so that everyone in the house could hear what he was saying.

I should like also to congratulate him upon having delivered a budget speech. For the first time in recent years at least, we have had a budget delivered by a member of the Liberal party; for his predecessor in office prior to May, 1930, did not deliver a budget for the succeeding year, and the now Minister of Finance in May, 1930, merely reviewed the expenditures for the year that had ended on March 31, 1930, and indicated the revenues as they were then known, but made no forecast as to the probable expenditures during the year which was to close on March 31, 1931. Neither did he make any estimate of the

probable revenues. I pointed out frequently in years prior to that, that such a course could not by any stretch of the imagination be described as constituting a budget statement. It is therefore a matter of great satisfaction to have before us now a statement that is a budget for the year ending March 31, 1937. The minister has indicated the probable revenues of the country and the sources from which they will be derived, and also the probable expenditures and the channels through which they will be made.

I should like, however, to direct attention to the fact that speaking on May 1, 1930, the then Minister of Finance apparently had no appreciation of the great world forces that were marching toward a world depression. He apparently had entirely overlooked the fact that we were on the edge of, in fact had already entered into, that depression period. The government of that day seemed to have had exactly the same view; for I recall that the then Prime Minister, speaking only in April of that year, said:

> The fact that hon. members are obliged to restrict themselves to naming individual municipalities and are able to name them in numbers that can be counted on one hand so far as the Dominion of Canada is concerned, demonstrates more strongly than words could how little we have a national problem of unemployment in this country at the present time.

That was in April, 1930. When in 1928 and 1929 attention was directed from this side of the house to world movements which, in our judgment at least, meant inevitable disaster to the prosperity which then was abroad and to the movements in the stock exchanges, we were regarded as pessimists, and we find that as late as May 1, 1930, the Minister of Finance said:

> Before touching on the dominion's finances for the fiscal year just ended may I survey a few of the events which have indirectly influenced the balance sheet. As we all know, national revenues are dependent on the volume of business transacted. During the year certain unusual factors made themselves felt, in particular, the delayed marketing of the grain crops and the great decline in prices of stocks in the latter months of the year. While these factors are important they cannot be considered as permanently prejudicial to our economic structure.

Further in his opening observations, having referred to the fact that our harvest had not yet been moved and that it was very remarkable that in the preceding year harvester excursions had not been run to provide the west with harvest help, and having referred also to the condition of industry, he said:

> We have marshalled our resources to meet the problems arising from delayed marketing of the grain crops and, at the same time, absorbed the shock resulting from tens of millions of dollars being suddenly withdrawn from the ordinary reservoirs of credit.

I point that out for this reason: that as the Minister of Finance was in May, 1930, wholly unable to appreciate conditions that indicated a world catastrophe, so I venture to think that on Friday last he somewhat overestimated the forces making towards world recovery. I do that because I regard it as somewhat important that we should have no misunderstanding as to the extent to which the forces of recovery have operated in the world at large and in our own country in particular. Within three months of the date of the making of that statement by the Minister of Finance it was apparent that the views that were held by those who then sat to the left of the Speaker were sound; for our customs duties for April, May, June and July in the year 1930-31 as compared with the year 1929-30 had fallen by $15,815,000, excise taxes by $5,800,000, and excise duties by $547,000, being a net decrease in revenue during that short period of over $22,000,000. I think it is equally true that the income tax collections were somewhat larger than in the previous year, because they were collected on the incomes of 1929. But the absolute, shall I say, disregard and overlooking of these conditions constituted in my opinion a grave error in judgment on the part of the minister.

There has been much misunderstanding about the many things that have happened during the last five years and I am going to refer shortly to some of the events that have brought about the conditions to which the hon. gentleman referred. If I took up a much longer time I could not more clearly indicate the progress of this country during the last year or two than to use the words of the Minister of Finance. I am sure there is not an hon. member of this house who will say for a single minute that any policies of the present government had anything to do with the condition of affairs in Canada on December 31, 1935. Those conditions, whether good or bad, whether evil or otherwise, were brought about because of the policies pursued by the previous government from August, 1930, up to the end of October, 1935. As there was no opportunity for parliament to meet between October and December, it is obvious that the great improvement to which the hon. gentleman has referred and the figures which he has given are a complete vindication of the policies pursued by the government of that day during the last few years. Perhaps this could not be summed up better than it was in a single

paragraph in the speech of the minister. I quote from page 2367 of Hansard, as follows:

I am pleased to be able to report, for the fiscal year just ended, an important gain in our total trade with other countries, amounting in round figures to 152 million dollars. This is an increase of 12·8 per cent over the previous year. It is true that world trade generally has improved during the past year, but it should be noted that while the average increase in trade of 24 leading countries in the calendar year 1935 was 4·1 per cent our own trade increase was 11·3 per cent. As a result of this marked expansion in our foreign commerce Canada has moved up from eighth to sixth place among the nations in total world trade.

In that paragraph is contained a complete vindication of what, during all those long years, those who now sit opposite to me denounced in season and out of season with a heartlessness which at times I think aroused the animosity of some Canadians. They pursued their guerrilla warfare and, as I say, constantly in season and out of season denounced the policies that I have lived long enough to see a minister of finance of a new government stand in his place and say have brought to this country that regeneration for which we are looking and that improvement for which we are striving. Hon. gentlemen smile; they may smile but they cannot change the record as it was made by the minister. When the other twenty-four great trading nations of the world showed an improvement of only a little over four per cent, the improvement in our country was more than eleven per cent. Under these circumstances should we not as Canadians be proud that those who toiled, though they did not have the same political faith and opinions as the government of to-day, by their efforts and through the policies which they formulated, have been able to accomplish the ends for which the minister now takes credit?

If recovery has commenced, it is a recovery based upon policies that this government did not initiate or control. That, I think, will have to be admitted. If that recovery is greater than it has been in the other twenty-four great trading countries of the world, three times as great, then there must be some credit given to those who initiated the policies that brought about that result in Canada. When the Liberal government resigned in 1930, this is the legacy they left us: First of all, commitments had been made for millions of dollars, many having been initiated and created under orders in council passed between the date of the defeat of the government and their resignation. Second, a treaty with New Zealand terminated on that very day. Third, a shrinkage in trade that amounted to over twenty per cent of the trade of the preceding year, as well as a shrinkage in revenue of a like per cent. Fourth, our railway revenue had diminished to such an extent that immediate steps were necessary to provide funds for the enterprise. Fifth, the reports made to the bureau of statistics showed that at that time unemployment was shown to the extent of 113,000, by reporting companies or enterprises which constitute about half of all those engaged in industry in Canada.

Mr. EULER: One hundred and thirteen thousand half of the total employment?

Mr. ROGERS: Not one-half of the total number of employees in Canada?

Mr. BENNETT: I said as reported by industry to the bureau of statistics, reports being received from about one-half of the industrial enterprises of the country.

Mr. EULER: That is entirely different.

Mr. BENNETT: I think I said that very clearly. We found the stock exchanges in the condition to which the minister referred. On May 1, 1930, we found the provinces practically unable to pay their obligations and looking for means for that purpose. I shall not go into the matter at greater length, although I could if I so desired.

During the ensuing five years, what has been the result? One hon. gentleman opposite referred the other day to the fact that trade through his port had fallen off by more than one-half what it was in 1930. I think it is very desirable that our relations with the other countries of the world should be clearly understood. The other day the Minister of Finance stated something that people sometimes forget when he said that we in Canada are powerless to remove the uncertainties in the world's political outlook. So in this country with eleven million people we have to compare our position with that of the other countries of the world. I think it is very important that we should have a clear understanding of just what has been our position with relation to the other countries of the world since 1929. Let me point out, first, that according to the League of Nations reports, during the great depression world trade fell to 34·3 per cent of what it was in 1929. Some put the figures at just exactly one-third of what it was, but the figures collected by the League of Nations show the figure as 34·3 per cent. This represents the extent to which world trade had decreased.

Mr. CRERAR: That would be in value.

Mr. BENNETT: Yes, but in similar terms. What the League of Nations collected was comparisons of comparable things reduced to a common denominator. Let us look at 1929 to see what Canada was doing. That was one of our great years. In that year our export trade was 3·71 per cent of the world's total export trade. That is not imports, but exports—I want to make that clear. In 1929, 3·71 per cent of the world's export trade was done by the Dominion of Canada. In the calendar year 1930 we did 3·42 per cent of the world's export trade. In 1931 it had fallen to 3·29 per cent, and in 1932 it was 3·78, there being an increase over the preceding year. In 1933 it was 3·59 per cent, in 1934, 3·99 per cent, and last year, the calendar year 1935, the League of Nations reports that the export trade of the Dominion of Canada had risen to 4·32 per cent of the world's export trade. That, it will be observed, is a considerably larger percentage of the world's export trade than we did in the year 1929. Our proportion of imports however, for reasons to which presently I will direct attention, was much less because we were steadily diminishing our import trade. The reasons for that were I think apparent to every thoughtful Canadian. In the calendar year 1929 we did 3·65 per cent of the world's import trade; in 1930, 3·47; in 1931, 2·91; in 1932, 2·75; in 1933, 2·28; in 1934, 2·60; and in 1935 we did 2·71 per cent of the world's import trade.

Now take the two, add your imports and exports together and ascertain what percentage of the world's trade was done by the Dominion of Canada during the dark five years from 1930 to 1935. In 1929 we did 3·68 per cent of the world's entire trade; in 1930, 3·45 per cent; in 1931, 3·09; in 1932, 3·24; in 1933, 2·94; in 1934, 3·27; and in 1935 we did 3·49 per cent of the entire trade of the world. I give these figures because they bear closely upon the statement made by the minister himself and which I have just read. Then there was another significant fact, one to which the minister referred the other day, and I think very properly, namely, that during the last few years we have modified to a great extent the visible commodity trading balances of the country; and by reason of gold being exported as a commodity we had been able to create a very large favourable balance.

The minister referred the other day to our tourist trade, but I leave that entirely out of the matter for the reason that you have to consider other factors as well as the tourist trade. There are insurance premiums; there is interest that has to be paid abroad and there is interest from abroad; and there are other items that go into the invisibles that make up the ultimate balance of trade. So that I will leave out the tourist trade for the moment and confine myself entirely, exclusive of gold, to our commodity balance.

Our commodity balances when we came into office were running steadily against us. In 1930 I could not understand the government of the day reducing the sales tax by half, as they pointed out, and taking other action that was suggested to be a lessening of the burden of taxation at a time when we were urgently in need of revenues; and the shrinkage in these revenues was apparent during the operations of the month of April itself. Now without going into it at length, let me say that in 1921 we had a favourable balance of $17,000,000; in 1928 we had a favourable balance of $151,000,000; but in 1929 we had an unfavourable commodity balance of $103,000,000, and in 1931 of $10,000,000, because the corrective measures that were put in operation in the fall of 1930 had not immediately become apparent. So that in 1932 we had a favourable balance of $49,000,000; in 1933, $136,000,000; in 1934, $146,000,000, and last year, $192,000,000, exclusive of gold, which we will treat as a commodity and which brings about the situation to which the minister referred.

The other day it was pointed out, not improperly, that too much importance may at times be attached to what is called the balance of trade; but there is no possible likelihood of anyone ever gainsaying what was said by the minister the other day as to the importance of the balance of trade when you come to consider its effect upon the stabilizing of the value of your unit, your dollar abroad among the selling and purchasing countries of the world. It was that factor which we had to consider when we dealt with the matter in 1930. These significant facts indicate, I think, just what we had to face when we came to assume the responsibilities of government in 1930. But there are two or three other matters that might be mentioned when dealing with trade.

In 1935 we increased our domestic exports over 1932 by 47·7 per cent; over 1933 by 37·2 per cent and over 1934 by 11·6, showing that we had made steady progress during those years. Now we come to what I regard as one of the most important matters with which we had to deal, namely, the steps to be taken to correct the conditions to which I have referred. What steps would be suggested? First of all, as has been pointed out in this house very frequently, we raised the tariffs. We certainly

did. We raised tariffs in the fall of 1930 at the special session for a very deliberate and definite purpose. We were confronted with a situation such as this country had never faced before, and it became absolutely essential for us to take some steps to safeguard the integrity of the nation.

Now raising tariffs does not necessarily mean increased costs to the consumers. I realized then as I do now the difficulties that have always to be met when tariffs are raised, because it is contended that there is an increased price to the consumer; and so we had regard to the fact that there was, as is pointed out in one of the reports of the tariff board to which I may refer before I conclude, a chaotic condition in many industries in the United States which were seeking, under the lower tariffs that prevailed between Canada and the United States, to find here a market for their surplus products. And they were finding that market. If you take the trade figures you will realize that they were finding that market in increased volume; and every time a dollar's worth of goods came in from that country, industrially chaotic at the time, it displaced a dollar's worth of Canadian industrial effort and deprived the Canadian of his work, throwing him into the ranks of the unemployed.

Faced with that situation we determined that the proper course to pursue was to enact tariff leigislation that would give Canadians an equal opportunity with those who competed with them in their own markets; secondly, legislation that would ensure employment of Canadians to supply the wants of Canadians; and thirdly, we had to take such steps as might be necessary to ensure the consumer against exploitation. How did we do it? If hon. gentlemen will take the trouble to turn to Hansard of May 13, 1930, they will find there a list of communications signed by various industrial firms in Canada, by which they undertook that they would not raise prices to the consumer in Canada if they were afforded an opportunity to secure the Canadian market for their own products. That was in 1930, in the fall.

Mr. DUNNING: Not in May.

Mr. BENNETT: It was on September 22, 1930.

Mr. DUNNING: You said May.

Mr. BENNETT: Thank you so much—September 22, 1930. I take for instance one letter:

Re Boots and Shoes

Keen and unrestrained domestic competition amongst approximately 190 shoe factories in Canada affords abundant protection to the trade and the public that the selling prices of Canadian boots and shoes will at all times be very close to actual production costs in the most efficient plants. Moreover, we offer you our pledge that our members will not take any advantage of higher tariff duties to increase their prices, but on the contrary that they will pass on to the trade and the public the benefits of whatever reductions in production costs per pair may result from enlargement of the home market and the increase in Canadian production.

The Shoe Manufacturers' Association of Canada.

John T. Tebbutt, President, The Tebbutt Shoe, and Leather Co. Ltd.
H. Tétrault, Tétrault Shoe Mfg. Co., Ltd.
J. B. Goulet & Son, Inc.
F. S. Scott, Getty & Scott, Ltd.
Alfred Lambert Acton Shoe Co. Ltd., and Alfred Lambert, Ltd.
Oscar Dufresne, Dufresne & Locke, Ltd.
J. D. Palmer, Hartt Boot & Shoe Co., Ltd.
Allan A. Mark, The Empress Shoe Co., Ltd.
John J. McHale, Scott & McHale, Ltd.
J. E. Warrington, The John Ritchie Co., Ltd.

With respect to that commodity, not only has there been no increase in the cost of boots and shoes by reason of that tariff increase, but the consumer was able to purchase them at a better price than before, and assured employment was given to Canadians during that period of depression.

I pass now to another article. They are all set out at length, but I will refer briefly to farm implements, because I am going to say something more about them before I conclude:

The manufacturers are of the opinion that consumers of agricultural implements should not pay higher prices for them, and they are equally emphatic in the statement that if the Canadian market is supplied from Canadian factories, instead of being supplied in such volume by goods manufactured elsewhere, they will not increase prices of implements to consumers, provided the factors entering into manufacturing costs are not increased.

That statement was lived up to in its entirety. I say more: the implement producers

of this country reduced their prices in 1932, and despite the fact that in 1933 and 1934 there was an increase in the prices of implements in the United States there was no corresponding increase in the Dominion of Canada, and to-day prices in Canada and the United States are practically on a parity; in some cases our prices are less than theirs. I think it may be a matter of interest, when we discuss this matter in committee, to present a complete analysis that was secured, partly by my own personal efforts and partly otherwise, as to prices of like implements at a given point in Montana and a given point in Saskatchewan. I want to pay this tribute to the manufacturers who signed that agreement. Although it was suggested at one time that they should raise prices, they did not do so, and there was no increase of prices in this country until the Canada-United States agreement was signed, when, of course, they were released from their obligation.

Some hon. MEMBERS: Oh, oh.

Mr. BENNETT: That is the fact. You may laugh, but it is a fact that cannot possibly be successfully challenged. The facts speak for themselves.

Then with respect to electrical products, and printed matter, to which I shall again refer, there was another undertaking, somewhat of the same character as that with respect to implements. As regards gasoline the letter was as follows:

Re Gasoline

The adoption of these recommended revisions will not result in any increase of prices to the retail consumer because of them.

The British American Oil Company, Ltd.,
Per A. L. Ellsworth, President.
The Canadian Oil Companies Limited,
Per F. H. Littlefield, Vice-Pres.
Imperial Oil, Limited,
Per C. O. Stillman, President.
McColl Frontenac Oil Company, Limited,
Per J. Irwin, President.

With respect to these items that I have referred to, the manufacturers kept their obligations and respected their undertakings, and did maintain their prices within the terms they stated, excepting in so far as raw material may have increased in price.

Bearing in mind what I have indicated was our intention, we placed upon the statute books the tariff changes of the fall of 1930. That resulted at once in a diminution of our imports, and it assured a measure of employment that was not otherwise available for those who were maintained in their work in the factories to which I have referred. There is a long list of them. One man said he could keep 400 more people permanently employed, another man, 40; another, 50; and so on. I put to the house this question: What would have happened to this country had that legislation not been enacted? That is the issue, plainly put, in view of what the minister has proposed in a part of his budget to which I shall refer. What would have happened had those steps not been taken? It is all right to appeal to the passions and the prejudices of men, and say, look at what it has done, this wall higher than Haman's—

Mr. MACKENZIE (Vancouver): —gallows.

Mr. BENNETT: Haman's gallows, I think was the phrase my hon. friend from Vancouver Centre used. I see he remembers it. It is all right to do that, but let us deal with realities. These tariffs were for certain given purposes. The purposes I have indicated. They accomplished the purposes for which they were enacted. True, they were emergency tariffs. We made it clear that that was so. True, it was purposed that in the end those tariffs should of course be reduced, but during the emergency, during that period of time that we were endeavouring to bring this country back to something like stable conditions and to enter upon an era of recovery, it was essential that we should enact the measures we did for the purposes I have indicated.

It is true that these measures did not provide employment for all the unemployed in the country. It is true that the numbers of unemployed increased greatly. The reasons have been given over and over again, but they bore no relation to the work of our industries. I put this to the house: in view of what transpired in respect of unemployment, the increased numbers that became unemployed, what would have been the condition had the steps I have indicated not been taken? That is the test. Bear in mind that those who now sit on the treasury benches condemned by every just and lawful means within their power the measures that were taken.

Then we said: We will endeavour to increase the demand abroad for our goods. We will increase exports while we diminish imports, in order that we may bring about an even adjustment with respect to our commodity balances. What did we do? The very next step was to endeavour to secure a trade agreement with the British empire, because as will be recalled by members who were in the house in 1928 and 1929, we then said that if we were put in office the first thing we would do would be to send an invitation to British empire countries to meet here for the purpose of discussing measures

of preferential trade. As the result of the efforts of 1932 we succeeded in making what are called the empire trade agreements. Who in this house who was present in 1932 does not recall the almost venomous way in which those agreements were attacked? I wonder if our new friends who have not been in this house before will take the trouble to read Hansard of that day. I wonder if they are interested enough to read the discussions with respect to those empire agreements.

An hon. MEMBER: That is why I am here.

Mr. BENNETT: One hon. gentleman suggests that these agreements are the cause of his being here. He, then, must have taken credit for them. Apparently he was strongly for them, but what he means to convey, I fancy, is that the opposition to them was so great that he came in as a protest against the government that negotiated them. Well, that may be, but I have lived long enough to hear the Minister of Finance of to-day (Mr. Dunning) rejoice in the result of those agreements. All you have to do is read his speech; I will not take up the time of the house to read the references that he made to the result of those agreements.

Mr. DUNNING: I think the right hon. gentleman had better read what I said instead of interpreting it; it is much safer.

Mr. BENNETT: If the hon. gentleman desires that the time of the house should be taken up in that way I shall do so. It will be found at page 2368 of Hansard. The hon. gentleman gave the figures for eleven months, though we have the figures for twelve months now. I will not give the twelve months figures.

Mr. DUNNING: I did not have them at that time.

Mr. BENNETT: They were just being completed by the bureau of statistics for publication in the National Revenue Review. The figures quoted were as follows:

Trade of Canada with Empire Countries
(excluding gold coin and bullion)

| | Eleven months ended | |
|---|---|---|
| | Feb. 28, 1935 | Feb. 20, 1936 |
| Imports from the United Kingdom | $102,602,618 | $108,177,173 |
| Exports to the United Kingdom | 253,488,637 | 293,002,334 |
| Imports from the British Empire | 143,989,314 | 163,429,300 |
| Exports to the British Empire | 313,665,822 | 362,178,462 |

But the interpretation of the figures does not await a Joseph; the minister interpreted them himself. These are his words, starting at the bottom of page 2368:

Upon analyzing our export trade, it is found that the United Kingdom is still our largest market having taken 293 million dollars or 41½ per cent in value of our goods exported in the eleven months ended February 29, 1936, which is approximately the same proportion of the total as in the previous similar period. The British empire as a whole purchased 362 million dollars worth, which was 15½ per cent more than for the same eleven months a year ago. Within the empire the increased purchases from us were distributed as follows: the United Kingdom 15·6 per cent, Australia 35·1 per cent, New Zealand 28·7 per cent, and South Africa 7·1 per cent. Exports to British India decreased by 17·2 per cent.

Not only do our increased exports bear witness to the steady growth of our trade with empire countries, but the same trend is also revealed in the figures of our purchases from these countries. While our exports to empire countries gained by 48·5 million dollars, our imports increased 19·4 million dollars or 13½ per cent in the eleven months period. This increase in imports from British countries was shared as follows: the United Kingdom 5·4 per cent, Australia 16 per cent, British India 13·4 per cent, New Zealand 21·7 per cent, and South Africa 41·3 per cent.

There is the interpretation of the figures as given by the minister himself, and when I point out that since 1932 there has been not only a steady increase in imports and exports with the United Kingdom but also a steady increase in our trade with the British empire as a whole, I only indicate the importance of that trade as it has been indicated by the language of the minister. These words I commend to the house:

Over fifty-six per cent of our imports come from the United States. At the same time they take only thirty-seven per cent of our exports. From empire countries we purchase about one-third of our imports and sell to them just over one-half our goods exported.

Mr. DUNNING: The next is very important.

Mr. BENNETT: I shall read that:

Approximately eighty-nine per cent of our total trade is with the British Empire and the United States.

That is only a very simple problem in addition. There you have the export trade of this country, one-half of it with the British empire by reason of the agreements that were concluded in this very chamber in 1932.

What is more, every fair-minded man admits it. I have not seen any man who has really taken the figures and analyzed them who would not say that this was the result of those agreements between the Dominion of Canada, the motherland and the British empire. But for some strange reason men think it improper to admit a fact. Politics produces strange effects upon given people.

Some hon. MEMBERS: Hear, hear.

Mr. BENNETT: Yes, hon. gentlemen may say "hear, hear," but the truth of the matter is indicated by the records. You may take the imports and exports of this country with the British empire in 1931, in 1932 and in succeeding years, and I say that no reasonably fair-minded Canadian reading that record will deny that the agreements then entered into brought about the conditions to which the hon. gentleman referred in his speech the other day. That being so, Mr. Speaker, recall the language that was used in those days: "A Tory conspiracy." Those were the words that were quoted with respect to the men who gathered here from every part of the far-flung empire to make agreements that have had the effect these agreements have had: over one-half our exports have gone to empire countries. Look at our trade with Australia and South Africa; look at the increased trade under the treaty we made with New Zealand. We had to make a new treaty with New Zealand, and that treaty has brought about increased trade and has added wealth to both countries. Take Australia or South Africa or Great Britain; analyze our trade with any one of them, and you will find exactly the same trend. I was glad to hear the minister indicate the other day what the trend was.

I am going to put it this way now: If hon. gentlemen opposite attach no importance to these agreements and loudly cheer the sentiment that they have no value to Canada; if they are of no value, as the hon. gentleman says, I venture to suggest that he will not find much difficulty in discovering other countries who would be willing to take over these agreements, if they could have them. More than that, he will find it somewhat difficult to convince many people that these agreements have no appreciable value, and especially will that be so when he is confronted with the necessity of renewing them in 1937. That is the position he will have to face then. Of course it will be very simple at that time to say, "Well, we are not particular about that; there is no value to us in these agreements. You can have this, that and the other thing; they are of no value to us." That is the atttitude that has been taken by hon. gentlemen opposite this afternoon, and of course that will make it very simple to deal with those with whom you must negotiate next year.

Then there arises another point, and I might as well deal with it now. The other afternoon the hon. gentleman referred to the fact that in the budget there had been a great extension of free entry to British goods coming into Canada. I wondered if he had been reading what had taken place since 1932. When we made the agreements in that year, this country was at the lowest level of its economic life. We had to face a situation in which we could not, for the reasons I have already given with respect to trade and finance, throw down our tariff barriers, if you call them such, and permit free trade, or, shall I say, a very low tariff trade, to come into this country. We told our friends in Great Britain what our position was, and I think you will find that since 1932 we have steadily, although slowly, enlarged their market in this country. If the hon. member will look at the budget delivered last year by the Minister of Finance he will find that the number of items affecting goods from Great Britain that we placed on the free list amount altogether to over 250. He will find that between 1932 and 1935 there had been an increase of the original number by something like 100. There had also been a removal of the excise tax of three per cent, one and a half per cent in one year and one and a half per cent the next year, and a diminution or lessening of specific duties in other cases. So we had widened and broadened opportunities for British products in our own market. We had done that, explaining to them that we could not maintain the integrity of Canada if we were to permit duties to be so low as to lead to the destruction of our industrial structure, and throw out of employment large numbers of people.

A treaty with New Zealand; a treaty with France—what did we do with respect to France? We gave notice to terminate the treaty then existing with France. We were told at the time that it was a terrible thing for a young country of eleven million people to dare to terminate a treaty with an old and populous country such as France. Nevertheless we terminated that treaty. Why? All you have to do is to look at that treaty, and you will realize the reason why. Then we negotiated a new treaty. My friend the then Secretary of State spent many weeks in France, and in 1934 we made a supplementary treaty. The other day the Minister of Trade and Commerce (Mr. Euler) referred to the fact that the extensions that were referred to

by the Minister of Finance were arranged by the preceding government, not by the present administration at all.

So much for the treaty with France. Then we made a treaty with Germany by which we gave Germany the intermediate tariff, a procedure which was much approved at that time, because it was said it gave a wider opportunity to us to sell goods in Germany by reason of securing the minimum tariff. In some of the tariff items about to be considered by this house and the committee of the whole it will be found that the extension of the favoured nation treatment to the United States involves also an extension to all countries enjoying favoured nation treatment from Canada. We extended the intermediate tariff to Austria, and made a trade agreement with them. It was largely negotiated in London by the then Secretary of State. We made a treaty with Brazil and we made a treaty with Poland. Notwithstanding the conditions under which we lived, depressed conditions and a shrinkage of trade throughout the world, we were able to make treaties of commerce and trade with the countries to which I have referred, thereby extending the market for our exports on terms and conditions which I have already indicated. That in itself, if hon. members opposite had done it, would have been heralded from the housetops as a wondrous achievement. The fact that the other day the Minister of Trade and Commerce made slight reference to a few items in the French treaty, which were arranged by his predecessor, necessitated the Minister of Finance making special reference to it in his budget. The reference is in this budget.

Then, let us go a step farther. How long had we been endeavouring to extend our trade with Germany? The former minister of finance, of the Liberal party, had been endeavouring unsuccessfully to make arrangements, but we did succeed in making an agreement with them by which we gave them the intermediate tariff in exchange for their minimum tariff. That applies to Austria. With some slight modifications it is true with respect to Poland.

And what about the new treaty with France? In this connection I shall quote an independent authority. I do not know how accurate his view may be, but he says that "it is the most workable and fair-minded treaty that has ever been made between France and Canada." We have had a treaty ever since very early days. There has been a general recognition by each of the position of the other. We arrived at arrangements which I believe were fair and equitable to both, and they were not difficult to arrange. From time to time they have purchased large quantities of our wheat, although our export figures did not show anything like the amount indicated by their import figures, due to the shifting of the ports to which wheat is delivered. One year since 1930 they took from us 36,000,000 bushels of wheat, and they made it abundantly clear to us that they were prepared to take all available wheat that they might require so long as they could secure in Canada a fair market for certain of their products, notably wines and champagnes. We introduced into that particular treaty a provision which stated that the treatment received by us with respect to our wheat production should be in the very same spirit as that accorded to France with respect to the products of her vineyards. We carried that into effect. I mention this because in the light of what has transpired it becomes important to realize that during all the depression period, with all the attacks that were levelled against the administration of the day, there was a gradual and continued expansion of our markets; greater opportunity was afforded to sell our wheat abroad. We could not have maintained the integrity of our economic life had we not taken such action, and the concessions offered in our markets were made coextensive with the possibility of maintenance of our own economic structure. Wherever we could we granted concessions to those who had been granting concessions to us.

Some reference was made to the relations of this country with Japan. I shall not do more than say that the matter has been discussed at some length in the house. It remained for a Canadian government to provide by legislation that when a nation complains of a value fixed by the Canadian minister and an appeal is taken to the tariff board, which is constituted as a court, and the appeal is not prosecuted or terminated within a certain time, Canada is non-suited and the appellant is restored to his original position without further question. That applies to all nations, not only to Japan. When I make that statement, of course, I refer to all nations receiving favoured nation treatment from Canada. So that so far as we are concerned we have afforded opportunity for appeal and then provided that if the appeal so taken is not disposed of within a given time we must lose the appeal, so far as Canada is concerned. The minister is overruled by the other country, whatever that country may be, and is held up to ridicule for having placed upon a commodity a wholly erroneous value for duty purposes. That is the first time I have ever known of the introduction of such a principle into the fiscal or judicial life of a country.

Let me deal now with the problem connected with the exemption to the extent of $100 on goods coming from the United States. Perhaps this is the better time to deal with the matter, although a discussion on it might be more logical a little later. The minister will recall that he referred to the treaty made between Canada and the United States. I observe already the shrinkage in customs revenues resulting from that treaty, a shrinkage which will result from it to a greater and greater extent. There has not been a minister of finance in Canada in the last forty years who has not desired to make such an arrangement, but those ministers knew they dare not do it without at the same time endangering their country's integrity. Why? This agreement made with the United States extends to every country to which we give favoured nation treatment. Travellers who cross the sea may all bring in, if they so desire, one hundred dollars' worth of commodities if they have been forty-eight hours in a foreign country, and they can do that three times a year. I wonder if it is known just how many travellers, for instance, went from our ocean ports last year. From ocean ports there left this country last year, apparently as travellers and tourists, some 28,-152 people, without including those who went from the Pacific. So it is not too much to say that by water we have about 30,000 people leaving our ocean ports. But when we come to the United States of America and ask how many automobiles and how many passengers entered that country from Canada, I fancy that a great many of our friends will be as greatly surprised as I was, for according to the figures given by the United States authorities, 2,135,999 persons entered the United States from Canada in the year 1935 by automobile, and by rail and steamer another 366,288, making a total of 2,502,287, and if you include the 30,000 odd that I have mentioned you have a grand total of 2,532,287. I desire to point out that these people did not all have their own automobile, but the average was three people per automobile, or slightly over that, and the number of automobiles that entered the United States from Canada was 659,259.

Now, I put this to you, and it is a fair question: Can this country stand the entrance into its markets free of duty of twenty dollars' worth per head of commodities for two and a half million people? To the extent that goods are acquired from foreign countries under the provisions of that arrangement, whether it be from Great Britain or France of Belgium or Spain or the United States, we have made Canada a free trade area within their country. I say this, sir, that previous ministers of finance felt that they dare not—and I use that word advisedly, because I have discussed it with many of them—take the risk that is involved in a country with only eleven millions of people giving free entry to the extent of possibly $300 a year per head of those who come back to this country after forty-eight hours stay in France or Spain or the United States. I take that figure of two and a half millions of people, and at $20 per head it means fifty million dollars; at $40 per head it means one hundred million dollars; and when you remember the figures I gave as to the volume of our trade with the United States then indeed the members of this house may well ask themselves whether we can afford that luxury or not.

Would I like to see it done? Yes, sir. Would I like to see it carried into effect? Yes, sir. Would every Canadian who goes to and from and trades and barters like to see it done? I think the answer is yes, but there are many things that this country must now learn it cannot do that it would like to do. We would like to have built three railroads across the country, and we did so, but we now know that we should never have done it. I could mention other matters of the same kind, and I mention this because it seems to me it is just as well to mention it here as anywhere else, and dispose of that once and for all.

Now I will deal with our financial position. Shortly after the late government came into office it examined our financial position, and on the first of October we had to go to the market of New York and borrow $100,000,000 at four per cent. We were confronted with the necessity of finding money for the railroad with maturing obligations, and after consulting with the best financial minds it was determined that that was the moment, then or never, having regard to what was happening in the world at large, to raise this money, and so we raised it in the United States at that time. That $100,000,000 is still a liability in the United States of America, being practically all held there. That was our first venture into the market of the United States to secure money to meet our situation at home.

But in 1931 we realized that this country could not continue if it did not make some effort to lessen the burden of debt service, and so we asked the people of Canada to convert their high interest bearing securities to a lower rate. I recall the circumstances very well. It was said that it would be hopeless to undertake to do such a thing at that

time, and yet the government of the day believed that the Canadian people would respond. The result was that nearly $650,000,000 of these securities were converted, effecting a saving larger than any other that was made, a saving in interest of over $6,250,000 per annum. As a result of that conversion and of the sale of treasury bills, to which I shall presently refer, brought about through the creation and organization of a central bank, the Bank of Canada, we were able to reduce before we left office the annual interest charge upon this country by approximately $16,000,000. When I heard my friend the Minister of Finance the other day refer to the saving of interest I thought he might at least have pointed out that $16,000,000 of that saving had been effected by his predecessors in office, that $16,000,000 of that saving in interest charges had been brought about by the conversions to which I have referred.

Mr. DUNNING: I gave the dates; they speak for themselves. I took no credit.

Mr. BENNETT: I do not think the dates were set out. If the minister will turn it up—

Mr. DUNNING: I certainly intended to take no credit, nor to apportion any. I was simply reciting the facts.

Mr. BENNETT: If the hon. gentleman says that in the papers that were put in the dates were set out, I think that is all that could fairly be asked of him. I say that very frankly. But I want this house to understand that as a result of these efforts in the financial world the late government reduced the annual obligations of this country by $16,000,000.

Let us go a step farther, and I think this is important. The Minister of Finance said on Friday that the annual interest charge last year was over $130,000,000; in the details of our unmaturing funded debt and of our treasury bills he shows that the amount required for one year's interest on the debt as it now stands is $128,597,577.18, as of March 31, 1936. So that notwithstanding the borrowings that have been made, and to which I shall presently refer, it will be found that the late government at least discharged its stewardship to the people of Canada by bringing about through the methods I have indicated an annual saving of $16,000,000 in interest. How was that done? It was done not only by appealing to the self-interest, if you will, and the patriotism of the Canadian people, but also by the creation of the Bank of Canada. I wonder, Mr. Speaker, if my friends realize the full significance of the part which the Bank of Canada has played in enabling us to arrive at the financial position in which we now find ourselves. I recall what was said when it was first suggested that we should endeavour to make short term treasury bill sales. We had been able to sell treasury bills for one year or two years, but when it was suggested that we should make treasury bill sales for three months or six months, it was said that there was no market in Canada for them. I replied that Australia found a market for them to the extent at one time of over $400,000,000. I replied that in England the outstanding treasury bills at one time amounted to over £800,000,000, although this total has been greatly reduced during the last few years. As I say, we found a market for short term treasury bills. A short term treasury bill is nothing but a promissory note of the Dominion of Canada to pay in three or six months a sum of money. Tenders are sent to the various financial institutions of the country, including the chartered banks, which indicate by their bids what they are prepared to pay for these bills.

If you will follow the minister's speech you will observe that we have been able to reduce very considerably the average rate of interest on our borrowings. For instance, the last sale, as the minister pointed out the other day, was at the rate of nine-tenths of one per cent. In Great Britain a lesser rate than that sometimes prevails, while in the United States it is rarely that low. The average rate in that country is between one-quarter and one-half of one per cent. We have been able to bring this about through this organization called the Bank of Canada, although the Bank of Canada is not the only purchaser of these bills. The Bank of Canada is the depository of the reserves of the banks, and the Dominion of Canada guarantees those reserves. Naturally, having taken them out of the custody of the banks and put them in the custody of the Bank of Canada, we guarantee the banks against loss. One of the unconscious prices that the banks pay for this guarantee is the fact that the money of their depositors is placed in the hands of the Bank of Canada and made available for the purchase of treasury bills. The tenders for treasury bills by the Bank of Canada have constituted a substantial part of the whole, but obviously that institution cannot invest all its reserves in treasury bills. As they became more popular and better known, the banks, the insurance companies, the financial institutions and sometimes other organizations that had money they were willing to let out for three months at less than one per cent in order to be certain to get it back at the end of a short period, invested

in these treasury bills. Therefore treasury bills have played a large part in the financing of the last few years, and I am still delighted to think that the government is still able to utilize the machinery of treasury bills at lower rates for the purpose of carrying out its obligations.

Side by side with that, was the great drive the government made to secure lower rates of interest. Does anyone think that these lower rates of interest came about by accident? Does he think for a single moment there was no conscious action on the part of any government or organization to bring about that end? First of all. it was necessary to secure a lowering of the rate of interest for deposits in the banks. The provincial authorities had to be considered, because in some places they were maintaining savings institutions and paying a higher rate of interest. There were also the building and loan organizations and trust companies to be considered. First, there was the securing of a lesser rate on deposits and then the making of a lower market. In that regard it will be recalled that when the imperial conference met here in 1932 we adopted a resolution which had for its purpose that very end. It will be recalled that one of the resolutions we adopted was in these terms:

As regards monetary factors, the conference recognizes that the central position of the United Kingdom, not only among the countries of the commonwealth but in world trade and finance, makes the United Kingdom a main factor in anything that can be done. The conference therefore welcomes the following statement made on behalf of the United Kingdom by the Chancellor of the Exchequer:

"His Majesty's government desire to see wholesale sterling prices rise. The best condition for this would be a rise in gold prices and the absence of a rise in gold prices inevitably imposes limitations on what can be done for sterling. A rise in prices cannot be effected by monetary action alone, since various other factors which have combined to bring about the present depression must also be modified or removed before a remedy is assured. His Majesty's government nevertheless recognize that an ample supply of short-term money at low rates may have a valuable influence, and they are confident that the efforts which have successfully brought about the present favourable monetary conditions can and will, unless unforeseen difficulties arise, be continued."

(d) The conference recommends the other countries of the commonwealth represented here to act in conformity with the line of policy as set out in the statement of the Chancellor of the Exchequer, so far as lies within their power.

In the monetary sphere the primary line of action towards a rise in prices should be the creation and maintenance, within the limits of sound finance, of such conditions as will assist in the revival of enterprise and trade. Among these conditions are low rates of interest and an abundance of short-term money. While regard must be had to the different conditions applying to various types of loans, the rate of interest for all purposes should be kept as low as financial conditions permit. At the same time it is necessary that these favourable monetary conditions be achieved, not by the inflationary creation of additional means of payment to finance public expenditure, but by an orderly monetary policy, safeguarded if the necessity should arise, by such steps as will restrain and circumscribe the scope of violent speculative movements in commodities or securities.

[Mr. Bennett.]

Upon that policy His Majesty's government in Canada acted. At the world economic conference in 1933 it was pointed out that twenty-five cent metal coverage was ample for most purposes. In June, 1934, we amended the Dominion Notes Act to provide that up to $120,000,000, a coverage of twenty-five per cent in gold was all that was required, and that silver might be bought to the extent of 1,671,802 fine ounces of newly-mined Canadian silver in each of the calendar years 1934, 1935, 1936 and 1937, which silver shall be purchased and held by the minister pursuant to the section. Then on July 5, 1935, there was enacted a provision for the revaluation of the gold held by the Bank of Canada under the provisions of the Bank of Canada Act, and, further, that there should be established, if it was thought desirable, a stabilization exchange fund. That fund has not been set up because we thought it desirable at that time not to make it imperative upon the Bank of Canada to take that action, but rather to provide that it could be set up, if it was thought desirable, by proclamation bringing into force the provisions of that statute. As I understand it, at the present moment the provisions of that statute in connection with the exchange fund have not been brought into force.

Mr. DUNNING: There are some investments, of course.

Mr. BENNETT: That has nothing to do with it. The result of all this was to secure a much lower rate of interest, such a rate of interest as we have never had before in this country, a rate which was undreamed of a few years ago and one that was thought almost impossible of achievement.

In this regard I think this is possibly the best place to discuss the situation that has developed in Australia. Sometimes our friends point to Australia as an example that could readily be followed here. Those who are interested will find that in January, 1931, the average yield basis of Commonwealth of Australia domestic issues was about 7½ per cent for a government borrower, a very high

rate. In November, 1935, an internal issue of 3¾'s, due in 1949, was placed at 99·75, a yield basis of just over 3·75 per cent. In that same month an issue of the Dominion of Canada 3's, due in 1955, sold readily in our own market at 98·75, to yield 3·08 per cent. Turning to the London market we find Australian 3¼'s, due in 1948, selling at around 99, while Canada 3¼'s, due in 1955, were selling at 102. On the New York stock exchange we find Australian 5's, due in 1955, at 105, as against a quotation of 112 for Canadian 5's, due in 1952. An economist connected with a Canadian financial house has asked whether one might be pardoned for wondering if Canada's credit, both in domestic and external markets, is not perhaps overrated. Later figures show that our credit is even better than it was according to what I read a moment ago. That is the achievement of the last few years.

I might point out further that we provided for farm loans at a lower rate of interest, for debt adjustment, as is known, and for loans to provinces, with respect to which I shall have something to say at this moment. The minister the other afternoon pointed out that the government of the day had made loans to provinces. That is absolutely correct; we did make loans to provinces. I am not satisfied that in all cases the provinces have responded as they should with the most careful economy in the expenditure of the moneys thus loaned. In fact the evidence which I have is very clear that such has not always been the case. Nevertheless we were confronted with this emergency: Should we permit the provinces to default or should we endeavour to save them until such time as recovery would warrant our taking the view that if they did default they would do no great injury to the credit of the Dominion of Canada? As the minister fairly said, wisely or unwisely, we took the step we did; we did provide these provinces with money with which to meet maturing obligations in New York and London, money with which to carry on relief works and for relief purposes, and in some cases, as was pointed out the other day, for part of the work of government itself. But I ask you, Mr. Speaker, I ask my fellow members of this house, whether in the days of the darkest depression, when every part of the world where money was available was watching and waiting to see whether or not this or that security would fall, we dared take the risk of permitting default on the part of any of the western provinces. I think not; I still think that that was sound. At times I have had grave doubts as to whether it was wise to continue it beyond a certain point; but certainly at the time we first did it, had we not done so, I am satisfied that the gravest disaster possible would have overtaken Canada. At least this was the advice I received from those who were informed and were well able to speak with authority. And the government of the day, realizing that they might be subject to severe criticism both in their own country and in other places, felt nevertheless a compelling sense of duty that necessitated their coming to the rescue of these provinces.

May I point out here that in my opinion it was a great mistake for the minister to suggest that he had arrived at some modified scheme in connection with loan councils and national loans. I say that for this reason. Did Alberta have a fair chance? The correspondence was tabled here. Alberta declined. But Alberta did not have what has now been suggested, a modified scheme; Alberta did not have that scheme before it at the time default came about.

Mr. DUNNING: She has now.

Mr. BENNETT: Yes, but the harm has been done; that is my point. If Alberta accepts it now, then you have this terrible situation, that the government presented a proposal to all the provinces and after one had declined and defaulted the government modified the plan and put it up again to all the provinces. Is that fair?

Mr. DUNNING: I know that my right hon. friend does not want to leave any impression that might be injurious to the situation. It is true that Alberta refused the original arrangement, an arrangement which by the way still stands. But it is also true that just before the maturity date the province of Alberta indicated its intention of proceeding with a forced conversion on its own account which rendered negotiations all but impossible at that time. I should say, in order to avoid even a suspicion of any intention to discriminate, that efforts were under way then, and discussions of every kind with the provinces affected, including Alberta, to find some method which would meet the situation not only for one but for all; and it was rather unfortunate that the maturity date brought an end to the Alberta negotiations.

Mr. BENNETT: The hon. gentleman has not changed the situation in the slightest. I do not desire for a moment to misrepresent it, but reading his speech I think it is clear that a modified proposal has been made to all the provinces.

Mr. DUNNING: Yes.

Mr. BENNETT: Now I say that there is nothing worse in the world, in finance, when dealing with a situation of that kind than to make a proposal which is not a finality, because if default occurs between the date of the first proposal and the date of the second proposal, by reason of the first being rejected and being still open, although it has been rejected—if there happens to be default in between these two periods you have given grievance to those who have defaulted if they think that the second proposals are satisfactory. I think that is a fair way to put it.

Mr. DUNNING: No.

Mr. BENNETT: And what is more, it is calculated to be open to a construction which I know is not a proper one, for I know that the minister was not discriminating; and the fact that Alberta passed a statute providing for compulsory conversion has nothing to do with the question whether or not they would undertake to come within the provisions of the proposal made to all the provinces.

Mr. DUNNING: Oh, yes.

Mr. BENNETT: I think not.

Mr. DUNNING: It has a very vital bearing.

Mr. BENNETT: I think not, because one would nullify the other; there would be no possible chance of a forced conversion taking place if the arrangement with the dominion were carried out.

Mr. DUNNING: And vice versa.

Mr. BENNETT: Now I come to the question as to the creation of national councils and loan councils. I ventured the belief, rightly or wrongly, wisely or unwisely, that until such time as there were evident signs of recovery there could be no real conversion of the securities of the provinces, the municipalities and the railways. That is to say, we might do it spasmodically; we might deal with some millions in connection with the railways, and we might save two or three millions per annum, as we have; but if we are to do it on a broad and comprehensive scale it must be in the light of a recovery, and I do not think we could have done what we did do had it not been for the evidences to which the hon. gentleman has referred.

I will not anticipate the discussion on the resolution which appears on the order paper; that would be improper. But surely it is not intended to amend the constitution by asking the British parliament to enact retroactive legislation that could never find a place in a people's constitution. It does seem to me extremely doubtful whether we should ask any parliament to enact legislation of that sort. But when you say that you propose to clothe the provincial legislatures with power over indirect taxation, even though you limit it, you have created a situation of the greatest gravity, one which we will discuss when we come to the resolution. As I say, I will not anticipate that discussion except to point out that as a result of what has transpired the province of Alberta did not accept the proposal made and has defaulted. And of course the effect will not be felt for some time. People who hold securities do not dump them on the market the next day or the next week or month; they await events. And it is the waiting on events that causes me to make a protest against a new proposal being made at this particular time.

Mr. DUNNING: It is to help Alberta that it is made.

Mr. BENNETT: I know, but it is a new proposal; and in dealing with financial matters, as I think the hon. gentleman will agree with me, there is nothing more destructive of credit than the lack of finality with respect to proposals that affect great bodies of people.

Mr. DUNNING: I agree, but my right hon. friend would be the first to admit that during the last five years arriving at finality, in finances, has been a difficult matter

Mr. BENNETT: That was exactly the point I was endeavouring to make, by stating that I could not quite understand why the proposals made were modified as they were, having regard to the change that is contemplated in the constitution.

Having dealt with the financial situation, and the proposals that have been made from time to time and that have resulted, I think, in what the minister has very properly described as manifest evidences of recovery and in low rates of interest for our borrowings, I shall proceed to discuss shortly the proposals which he has made dealing with the tariff. But before I do that I think I should say a few words with respect to the debt. The hon. gentleman pointed out the other day that in the last six years there has been an addition of $867,000,000 to the national debt. That is undoubtedly quite correct. But $65,000,000 of that was for capital expenditures, and under the public works construction act something over $38,900,000 was expended, the reason being that on all sides in this house and in the country there was a continuous clamour for a public works program. A public works program could come

into being only if the money were provided for it, and the expenditure amounting to $38,905,000 that is mentioned as part of the national debt was incurred for that very purpose. Then, of that total of $867,000,000, you have these two items: (a) Canadian National Railways, $264,677,000; (b) Canadian National Railway and indirect, including the steamships, $40,310,000; making a total of about $305,000,000 that was borrowed for the purpose of maintaining these properties. Then we have relief; that took $231,900,000, or substantially $232,000,000, more; and we wrote off dead assets, that is soldier settlement expenditure, $11,000,000. That gives us, of the whole $867,000,000, a total of $652,000,000, leaving the deficits to be responsible for the balance, after adjustments, of $212,000,000. That is a yearly average, as will be observed of less than $40,000,000, and if there is added to that the whole of the contemplated loss with respect to wheat, that would make a total average of about $40,000,000 per annum during the last five years, the balance of the money being for the purposes I have indicated.

That in itself, having regard to conditions in Canada, is not an unfavourable result. I should be glad if it had only been $4,000,000 or $400,000. But if in this vast country we were to keep people from starvation; if we were to care for the drought-stricken areas; if we were to take care of what at one time amounted to over 300,000 people in one province receiving benefits; if we were to carry on relief for men, women and children numbering at one time nearly 1,300,000 souls, there is only one way in which this could be done, and that was through the utilization, in the manner intimated, of the credit of the dominion. If on the other hand we were to endeavour to supply employment, as we did, because a broad public works program was urged by this house, that too could be done only by money expended for the purpose. So there you have it both ways. You have the addition to the national debt; you have that money being utilized for relief, on the one hand, and for work to prevent the necessity of relief, on the other. That is all I have to say with respect to the national debt, without going into it in detail as we may do later on. Of course there was also the enormous item in connection with the railways and the steamships, amounting to over $300,000,000.

I desire to make one observation only with respect to the question of the tariff. When in 1931 we enacted legislation creating the tariff board, those who are students of history and will take the trouble to read Hansard of that day, particularly the observations of the right hon. the Prime Minister, will see some reason why the ridiculousness of the attitude taken then is apparent in the light of the performance to-day. This will be found in part in Hansard of October 17, 1932, and a later statement of it when certain changes were being made. We were dealing with the old country tariff. Members of the Liberal party of that day said that it was a scandal to have the country come and appeal to the tariff board. By legislation passed this session, all may do this. The Prime Minister said: if one, why not all? It is a matter of principle, so he has given the privilege to all. Second, we had the idea that the tariff board could not make recommendations. It does not; the statute does not give them power to do so. The minister the other day referred to their "recommendations"; I have them under my hand; and, Mr. Speaker, the tariff board do not make recommendations; they do just what the act says; they find the facts and then they find the tariff which would be necessary to give to Canadians an equal opportunity with those from the outside who might be their competitors. Take, for instance, the automobile industry, reference No. 91. That matter was referred to the tariff board by the late government, not by the present government.

Mr. DUNNING: I said so.

Mr. BENNETT: Yes. The proceedings were protracted, and finally the board gave judgment. In that judgment they set out existing conditions and they set out what in their judgment would be a tariff that would meet the situation which was presented by the users of automobiles in the country. The governments of the various provinces were represented; others also were represented; they made their cases, and as a result the government has adopted that as its tariff to-day. I cannot find a single change in it. So far as I can see, the tariff as written in the resolutions with reference to automobiles is the judgment of the board as to the kind of tariff which it would be necessary to pass to meet the situation.

Mr. DUNNING: There is just one difference.

Mr. BENNETT: Which one is that?

Mr. DUNNING: The difference is the suggestion that the government should take power to increase the tariff. That suggestion—

Mr. BENNETT: I had reference only to the actual enactments and not to the question

of suggestions as to what might or might not be done. The government never take power by order in council to increase the tariff; they can always lower it, but never increase it. But the judgment of the board (a) as to the facts and (b) as to the tariff which should be enacted to meet the situation provided by the act, namely that Canadians should have equal opportunity with others, is found now in the resolutions that have been introduced in the house.

Take the next items, artificial silk yarns, forged steel rolls, rhinestones and metals, photographic appliances and equipment; all those are items that have been placed on the resolutions now before the house, and not by other than the tariff board's consideration. The tariff board that was so roundly condemned a few short years ago is now accepted as the proper tribunal to deal with this matter. I desire only to point out that with respect to gasoline, which was referred to the board by the predecessor of the present Minister of Finance, there is a masterly review of the whole situation, a finding of the facts and then a statement that a certain operation would bring about a certain result, namely the equalization, using the word in a broad sense, of opportunity between those inside and those outside this country. That is, owing to conditions to which reference is made, Canadians would be enabled to have an equal opportunity. But before I leave the automobile industry there is just one point that I desire to place on Hansard, because I think it is very important. The effort to secure lower freight rates is referred to, and in chapter V of this report they say:

> The board is of the opinion that the existing methods of distribution of automobiles in Canada are unnecessarily wasteful.
>
> In chapter IV of this report the board reviewed the condition with respect to the used car problem and indicated the seriousness of the situation arising out of the unjustifiable allowances made on second hand automobiles. The board, in that chapter, also mentioned that the losses made by dealers on the automobiles taken in trade tend to increase with the net amount of commission allowed on the sale of a new car and, from the facts before the board it is evident that dealers receiving high commissions are the ones most disposed to overbid on used cars traded in, with resultant demoralization of the market.
>
> It would appear, therefore, that it might be expedient for the automobile manufacturers, if they are intent on correcting the above abuses, to reduce existing discounts and to establish—after consultation among themselves—a policy of uniform all-embracing dealers' discounts which would eliminate extra payment to their dealers, referred to in chapter III, in the shape of profit on freight or handling and other charges.
>
> The board is of the opinion that the industry, if it would carry into practice the suggestions made above, would in time correct some of the major ills existing in the marketing of automobiles and at the same time effect substantial economies that should be passed on to the Canadian consumer.

Then they refer to the provincial governments and the representations made by them as to the necessity of having reduced transportation charges on cars to the respective provinces, and they say:

> The board indicated that the selling price in Canada of copper and lead of Canadian origin sold to automobile and automotive parts manufacturers is substantially higher than the price at which these same metals are being sold for export by the Canadian producers.

I see in the budget no evidence of any attempt to remedy that situation, and I think it is high time that it was remedied. I certainly made some effort in that direction, and the former Minister of Finance endeavoured to do so, but nothing except drastic legislation will accomplish that end. I think it is high time that we who are doing so much to assist the provinces and the dominion should see to it that there is no discrimination against Canadian consumers with respect to metals produced in our own country. That was placed very clearly before the board.

Then, in view of this finding, there is one other matter in connection with which I think legislation should be enacted at this session. This is not a new matter, and would have been dealt with last session but for the fact that the matter was being referred to the board.

> The board is of the opinion that wholly owned Canadian subsidiaries of foreign automobile corporations should be requested to publish annually their balance sheets and financial statements to the same extent as public Canadian companies. This seems to the board to be specially advisable in the case of corporations seeking and obtaining tariff protection for their products.

I think that can be easily accomplished by an amendment to the Companies Act.

Mr. DUNNING: That is under consideration.

Mr. BENNETT: Therefore, as far as the tariff items are concerned all those that bring about the changes to which reference was made, with the exception of one large item, are based upon hearings held before the tariff board. I now come to that one, namely, the question of agricultural implements. I ask you, sir, and I ask this house: Do you think it is fair treatment of any industry in Canada, however much you may have feeling arrayed against it, to say that it should not have an opportunity to be heard? When you set up a committee, charge it with responsibility, send these companies questionnaires, have

them spend large sums of money for the purpose of getting the information ready and then, without giving them any further opportunity, cut their tariff from 12½ per cent to 7½ per cent, is that fair? Is that the conception we have of fair treatment, when with respect to gasoline, automobiles and other items an opportunity was afforded to be heard before the tariff board? Why should the agricultural implement business be singled out for treatment such as I have described? That is what I ask, and I think it is a fair question because, during the period we were in office, I happened to see something of the figures of the enormous losses incurred by these companies and of the allowances they made to their customers in the dark years of the depression. To say now, after you have told them that they are to get busy and prepare their case for presentation to a committee, that without notice you are going to write down their tariff to 7½ per cent, while you give the automobile industry, the gasoline industry and other industries to which I referred an opportunity to be heard before the board before any action is taken, does not seem quite fair. Why should the board be disregarded in this case and relied upon in the others? Why should the board be regarded as satisfactory in the one case and disregarded in the other? Why should the government adopt all the recommendations, or rather all the findings, of the board with regard to these other matters and not refer the agricultural implement question to the board? The agricultural implement question was not even referred to the board; the agriculture committee undertook to deal with it.

I have no particular prophecy to make. I do not know whether 7½ per cent is too little; I think it is. But this I do know, that to discriminate in that way against that industry, which has incurred such losses in every part of Canada for the benefit of the primary producers of this country, is neither fair nor just. You can easily make appeals to prejudice; you can easily point to past earnings and to the fact that these industries have made a lot of money in times past. Is that any reason why they should be forbidden an opportunity to present their case to the tribunal created by law, whose findings have been adopted by the government? I leave it at that.

We now come to the question of the other change in the tariff, with respect to ink, paper, plates and various other appurtenances to advertising. I put this to the house: Is it just and right and fair that on a certain type of paper brought into the dominion for a certain specific purpose there should be a rebate of fifty per cent of the duty paid, and that we should ask the taxpayers of Canada to pay the balance? Is that right? If it is, then the government is to be commended. But when the government negotiated the United States agreement they lost over half a million dollars worth of revenue through the elimination of the tax on advertising. The minister put it at $600,000. I thought it was more than that, though I have made no further inquiries since. That is lost. We did more. We stopped, to some extent, the resistless propaganda that is carried on through these magazines and journals in this country, magnifying one form of government and deprecating another, leaving in the minds of the people the advantages that come from living in another country rather than in our own, the superiority and lessened cost of their goods as compared with ours. They create a distress, a suspicion and an unrest on the part of the Canadian people, through reading these advertisements. More than that, we have lost the revenue, and we have lost the benefits which came to us by reason of stamping down to some extent that ceaseless propaganda which went on in this country from south of the line, by lessening the circulation of the magazines. Now, that having been done, United States publications having been give free access to our country, what form is the compensation to take? Is it extended to all the people? It is not. Ink, paper, plates—all these are to enter at a lessened duty, and then when you turn to the last of the budget you find a rebate of fifty per cent on certain types of paper. I ask again: Is it just or fair that the Canadian people, as a whole, should be called upon to pay half the amount of the tax that is received from one who buys his paper outside Canada rather than in it? That is the question. I cannot think that is fair. I cannot think that is a just exercise of power. I cannot think it is right or just that the rich or poor, whoever they may be, should be called upon to pay half of the duty which one may pay who seeks to use paper made in the United States rather than paper made in Canada. It is true that the type of paper made in Canada is made by few manufacturers; there are not many of them. There is a firm in Quebec and one in Upper Canada near Fort William, the Provincial mills, which make this paper. But is it fair that the Dominion of Canada which supplies raw material for so much of the paper made in the United States and which supplies the greater part of their newsprint should rebate half of the duty paid by a magazine publisher to get paper for his magazine?

I am not unmindful that the mere making of this statement will probably single me out for attack. I am prepared to make it,

anyway. When the other day I saw part of the advertising in connection with this very propaganda to have the reduction made, and when I saw the photograph of an industry in 1911 and the great and magnificent structure in 1936, I did not give much consideration to the cries of poverty which will be put up by that industry, and neither would anybody else. I repeat that that is a feature of the budget calculated in every possible way to be unfair to Canadian producers.

There is another feature of the budget about which I should like to speak, namely countervailing duties. I do not make the statement offensively when I say that countervailing duties represent the cowardice of an administration not prepared to raise the duty. They are frightened, because they say that it is contrary to their general policy, although they admit that under the present budget they have raised the duties in some instances. But look at this: Eggs, cut flowers and potatoes are under countervailing duties. Yes, eggs, flowers and potatoes are under countervailing duties.

Mr. DUNNING: They have come back, after six years.

Mr. BENNETT: Yes; the eggs are pretty stale; the flowers are wilted and the potatoes have sprouted. Let us look at these countervailing duties. As between the United States and Canada, these duties were first set up by the United States and the effect of them was to destroy the market in nearby states for Alberta coal. Making it applicable to the whole country they said, "If a country has a higher duty than we have with respect to coal, then the coal which comes in from Canada must carry a higher rate." The result was that coal from Lethbridge was denied a market in certain parts of the United States.

We tried countervailing provisions in 1930, and now rather than raise the duty frankly, rather than just raise it and say, "Our duty is so and so on eggs, flowers and potatoes," what do we do· We say, "The existing duty is two cents on eggs, but inasmuch as you reduce your duty to two cents, we are going to have the same rate of duty as you have, which is ten cents a dozen."

Mr. DUNNING: That is all right.

Mr. BENNETT: With 130,000,000 people in the United States and 11,000,000 people in Canada? Countervailing duties existing between this country and a great people 130,000,000 strong, with climatic conditions about which we know nothing, a people growing flowers, raising potatoes and producing eggs! And, mark you, this applies to other countries as well. It applies to China. What is the duty on eggs going into China? Are we now to be supplied with Chinese eggs, such as we received some years ago? Is that to be done?

Mr. DUNNING: The right hon. gentleman knows better than that.

Mr. BENNETT: I do not; it is a fact. I know that in this country for purposes of production of confectionery large quantities of eggs came to Canada from China. So far I have been unable to ascertain what the Chinese duty is, but I think the Chinese duty is no higher than ours. Therefore, if the Chinese duty is nothing we shall be subject to competition from Chinese eggs at two cents a dozen.

Mr. DUNNING: In that case it does not change our duty in the slightest degree.

Mr. BENNETT: No, but what it does is this: It says that we shall not make our tariff, but that if the United States will place a duty of two cents on eggs we shall place ours at two cents, knowing all the time that congress has not been dealing with tariffs; knowing all the time that the president has no power to reduce the duty, and knowing that under the provisions of the law he can reduce it to only five cents. Is this not just a gigantic gesture which means nothing? The minister knows that the president cannot deal with the tariffs. He knows that congress is not dealing with tariffs at this session, and he therefore must know that this is absolutely nugatory, so far as results are concerned. The same applies to the 40 per cent rate on cut flowers.

The other day the hon. member said that we had left no tariff for the intermediate and the British preference, and neither we had. They were free. They were intended to be free, and 40 per cent was the general tariff. The United States was then under the general tariff. When we changed and gave the United States the intermediate tariff, the simple thing, having reserved our right to do so, was to place a reasonable duty against cut flowers and eggs. They have a 40 per cent rate against us. We are to have a 40 per cent rate. That is the position. Is that the idea of Canada's nationhood?

Mr. DUNNING: Because flowers go both ways; so do potatoes, and so do eggs.

Mr. BENNETT: Yes; I notice, though, that baby chicks are taken care of.

Mr. DUNNING: Because they do not go both ways.

Mr. BENNETT: They do not go both ways?

Mr. DUNNING: No.

Mr. BENNETT: I think that is hardly correct, but they do not go in substantial quantities. But to say to the Canadian people that we have to buy eggs from the United States and that there is a two-way traffic in them is a straining of words, because relatively speaking we buy very few eggs from the United States.

So far as cut flowers are concerned we have this simple point to consider: We have a country of which the major part is in the north temperate zone. In the United States are found varieties of climates, and as a result they can produce when we cannot. Eggs, and early potatoes at 75 cents—the minister and every hon. member must know that congress cannot deal with these, because congress is not dealing with tariffs at this session. The effect of this is what, so far as we are concerned? It is to place a duty of 10 cents on eggs, 40 per cent on flowers and 75 cents on potatoes.

Then we come to one further point in the budget, namely the statement made by the minister with respect to the mining industry. I want to ask a question with regard to a clause which comes to me as not a wholly new recommendation. A year ago the government of the day provided for the development of the mining industry by appropriating a million dollars for such development. But when the price of gold was raised from $20.67 to $35 per ounce, the government of that day, knowing that this was not a provincial matter and had been brought about not by provincial but by national happenings, took steps to collect part of the money, and did collect it. I know of no reason why one industry should be singled out for freedom from taxation. But for a moment let us see how the minister puts it. His statement at page 2386 of Hansard is a wonderful one, because it is so seldom one has an opportunity to read on the records of this house a statement of this kind. These are his words:

> I desire to add that as uncertainty of taxation is a definite deterrent to the making of new commitments in a hazardous industry, the mining industry may rely upon it that this government will not impose discriminatory taxation with respect to mines.

We will all agree with that. He continues:

> While the present government is in power, mining enterprises can depend upon treatment at least as favourable as that accorded to other industries under the corporation income tax.

Now I want to ask this question: Will the minister say that all other industries in Canada will receive treatment as favourable as that accorded to the mining industry? Will he say that? If not, why not? Let us look and see what has happened. Take the income tax imposed against the profits of a mine; whether it was rich or not, whether it had greater reserves or not, fifty per cent of the profits was free from taxation and the 12½ per cent corporation tax was reckoned only on one-half. That is, if the profit was $2,000,000, the tax was 12½ per cent on $1,000,000. But that was not all. When the dividend went into the hands of the shareholder, the shareholder before he paid his income tax, deducted fifty per cent from his dividend on the ground of exhaustion and depletion, and some of these mines, according to their own published statements, had reserves ample to take care of anything that might arise for from thirty-five to fifty years. So we cut the exemption down to 33⅓ per cent as regards the corporation tax and to 20 per cent on behalf of the shareholders, and of course we incurred much enmity for that. We were abused, and I think we paid a rather high price for it.

But, sir, let us have a clear understanding. Is it not right and just and fair that, so far as possible, everybody in Canada should stand equal under our taxation laws? That is what we endeavoured to do. I am wholly in accord with the minister's willingness to grant exemption from income tax at the start to those who may be engaged in this hazardous undertaking, but I point out that he must do something to prevent—he cannot prevent it but he must see to it that the provinces do—this wild speculation that takes place, which sweeps away the earnings of a lifetime and makes paupers in the end of those who speculate. I get letters every day, as the minister does, with respect to this, and surely something must be done about it.

Mr. DUNNING: I must say that the provinces are doing a great deal.

Mr. BENNETT: To start with Alberta; that province passed a law which was held intra vires by the privy council, and its action was followed by other provinces. This does a great deal to prevent abuses in that regard. But when a minister makes a statement of this kind:

> While the present government is in power, mining enterprises can depend upon treatment at least as favourable as that accorded to other industries under the corporation income tax.

The converse of that should equally be said, that while he is in office other corpora-

tions will receive the treatment as favourable as that accorded to the mining industry. That will involve the necessary investigation of the situation for the purpose of determining to what extent provision has been made by way of reserves and otherwise for the return of capital and the continued existence of the enterprise itself.

Now I come for a moment to what the minister proposes for the purpose of raising the revenue necessary for carrying on government. Two methods may be pursued: (a) economies, and (b) taxation. The minister may effect further economies, if they can be effected, or he can place the burden by taxation on the people.

Mr. DUNNING: Or borrow.

Mr. BENNETT: That is the same thing; that is what I mean by taxation. Or he may combine both. He said the other day that the government are investigating the question of economies. One of the first things that the late government had to do was to make investigations in connection with that very matter. But, Mr. Speaker, I am not at all impressed with the great sincerity of the government when the minister talks about the question of economies, for I hold in my hand the report of the civil service commission down to the end of 1935—I have not the report for 1936—and I find on page 9 how much we actually spent in this country to keep the machine going. In round figures we spent in 1925 and subsequent years the following:

| | |
|---|---|
| 1925 | $74,200,000 |
| 1926 | 74,600,000 |
| 1927 | 76,200,000 |
| 1928 | 82,300,000 |
| 1929 | 87,500,000 |
| 1930 | 90,800,000 |
| 1931 | 94,300,000 |

That is the year for which we did not budget, the year 1931 prior to March 31.

| | |
|---|---|
| 1932 | $92,500,000 |
| 1933 | 79,500,000 |
| 1934 | 77,100,000 |
| 1935 | 74,460,000 |

That was necessary to take care of a grand total of permanent and other employees of 38,946 in 1925, 45,581 in 1931, and 40,792 in 1935.

We did succeed in effecting some economies. We did succeed in making it clear beyond peradventure that the country was overstaffed, but I cannot seriously regard the minister's statement of his desire to effect economies when I find a position in the chief electoral officer's office which was vacant when we came into office, and which had not been filled because there was nothing to do, filled after the election of which Mr. Castonguay took charge by the son of the president of the Liberal Association in Ottawa. After the election he was appointed to that position as assistant to Mr. Castonguay. Can it be explained what he has to do? Can anybody tell us what he has to do? If for nine years there was no necessity for such an appointment, why has that appointment been made? Take the case of Brigadier Caldwell, who had taken his retiring allowance and was about to leave the service, who had taken his six months' leave. We find him appointed master general of the ordnance, a position which had not been filled since the death of General Morrison, and that was years ago.

I think the people of this country like myself will not regard these proceedings as evidence of any serious desire to economize. How many have been added to the service since October 23 last? It is true that this government has displaced nearly every man who held a position and could be displaced by appointing someone favourable to the administration. That we understand, and I am not complaining or cavilling at it. But how many additional men have been placed in positions in the civil service, and why should we discuss this question of taxation or economies until we have dealt with the great problem that is connected with economies? Part of these economies were brought about by the ten per cent and then the five per cent deduction in salaries. I recall that my hon. friends opposite complained in bitterest terms about that economy, but I notice that they continue the five per cent deduction this year by special enactment.

The point I desire to make is this: The minister is confronted with a crisis, and no one knows that better than I. I do not say this in any boasting sense, but I have a clear appreciation of the difficulties of the minister, and I sympathize with him and am willing to do anything I reasonably can to assist him in his difficulties. But I say this, that he has a stupendous task, and we cannot save Canada unless we are prepared to hew to the line and make sacrifices on a scale such as were made by the old country when they formed the government in 1931. I know that hon. gentlemen opposite with their great majority are in a position to do anything. Never in the history of this country has a government been so situated, and that is why I congratulate the first minister upon the steps taken at the very opening of the session with respect to all these matters. He had to do it.

When I say to the minister that in my judgment an eight per cent sales tax is one

which Canada cannot bear, I but reflect the opinion of at least two or three former ministers of finance. We all know that Mr. Fielding thought the country could stand a higher tax than six per cent, but he found out it could not and he had to get the tax back to six per cent. We know what succeeding men have done. The minister succeeded in reducing the tax to one per cent in 1930, but does he think the capitalist system can survive with an eight per cent tax? I think the hon. member for Winnipeg North Centre (Mr Woodsworth) must have rejoiced when he heard this budget, because he knows, as I know, that nothing will strike a greater blow at the whole capitalist system than an eight per cent sales tax. The price of small automobiles goes up $18. All we have to do is realize that the sales tax is one-third greater than it was. Just reckon up what that means. Hon. gentlemen have seen the operation of sales taxes in the provinces and in some of the states of the American union. New Jersey employed this tax and the city of New York imposed one to deal with unemployment relief matters. These were turn-over taxes; no matter if your purchase was only a cent, you had to pay the tax by means of a token. That was found to be an onerous tax, but one that produced large sums of money.

Can this country stand an eight per cent sales tax? In my judgment it cannot. I have given as much thought to this as I can, because I have no desire to interpose any objections to the efforts made by the government to do what it is so anxious to do, namely, to establish an equilibrium between income and outgo. But we must face the facts frankly. I do not see how this dominion from what I know of its economic structure, can stand an eight per cent sales tax. This is a tremendous tax. It is a tax which the minister's predecessors felt could not safely be imposed. It will be recalled that considerable discussion was held as to whether this rate could not be increased, but we got down to six per cent as the maximum. I am bound to say that there were those who suggested that the rate should be higher than six per cent. The former Minister of Finance, the Hon. Mr. Rhodes, looked into the matter with great care. I believe there are men in the department who believe that an eight per cent tax is sound; that the tax could be increased 33⅓ per cent, but I cannot see how this country under present conditions can stand an eight per cent sales tax.

There was one other tax about which I used to hear a great deal, the tax of one cent a pound on sugar. I wonder how many hon. members promised that that was going to disappear just as soon as the first budget came along?

Mr. HOWARD: We did not have to make promises the last time.

Mr. BENNETT: I am not discussing that phase of the matter now; I am only pointing out that that was so.

Mr. DUNNING: Nothing would give me greater pleasure than to put it where it was.

Mr. BENNETT: The minister has indicated in his answer just what I desired to say. At the close of his speech the minister said that the government were making a conscientious effort to grapple with the problem. May I say that he has no monopoly in that regard. For five years men quite as honest and almost as capable as he were endeavouring to deal with the same problem. In dealing with these problems, if it became necessary to have some certainty with respect to revenue, you must tax something that is of universal consumption and will produce a certain revenue. I agree with the minister when he says that nothing would give him greater pleasure than to remove that tax if he could, but he cannot. But I do not think this argument applies with respect to the eight per cent sales tax. There are other methods, which it is not my duty or privilege to discuss, by which the situation might be met. I can conceive of nothing more disastrous to the capitalist system; I can conceive of nothing that will impose greater hardship and difficulty upon the people of Canada than an endeavour to collect an eight per cent sales tax.

The allegation is made that our tariffs are going to be reduced in order to lessen the cost to the consumer. I have endeavoured to point out that that will not accomplish any such purpose. To the extent that business goes from Canada, to the same extent is lessened the ability of this country to survive. That is quite obvious.

The hon. gentleman has provided for a deficit with respect to wheat and oats extending over a period of five or six years. He knows as well as I do, that the guarantees given to the banks are against ultimate loss and until there has been a liquidation of these stocks, that amount cannot be determined. It must be determined when there has been an ultimate liquidation. The banks were willing to accept a guarantee which provided for the payment of an ultimate loss. Whatever that ultimate loss may be, this is not the time or the place to discuss what I believe to be the ill-conceived policy of the government with respect to wheat. I cannot discuss that at the moment as this may be done at another time. It is the ultimate

liability or loss that was guaranteed and until such time as that is determined, why anticipate it in this budget or in any other?

Mr. DUNNING: I assure my right hon. friend I have not anticipated an ultimate loss at all.

Mr. BENNETT: Yes.

Mr. DUNNING: Oh, no.

Mr. BENNETT: The ultimate loss cannot be measured by the taking over of the stocks by the new wheat board. It is provided in the act that the ultimate loss will come when there has been a liquidation of the final stocks held by the board. That is the position.

Mr. DUNNING: But in the meantime under the guarantee a definite loss has occurred which will undoubtedly be very much greater in reality.

Mr. BENNETT: But there is no loss under the guarantee until the liquidation of the stocks is complete. That is the position. I did not desire to interrupt the hon. gentleman when he was speaking the other day, but I recall vividly a discussion which I had with my colleagues in connection with this matter. We decided that it was an ultimate liability, an ultimate loss and not a question of the payment of a loss to be ascertained as you went along. The wheat is all pledged to the banks and when the stocks have been liquidated and the last payment made, whatever the balance may be is the balance for which we have assumed liability.

Mr. DUNNING: I hate to interrupt my right hon. friend, but the guarantee was with respect to loans to the wheat producers and that liability has been definitely established.

Mr. BENNETT: No, it has not been established for the simple and obvious reason that the statute itself provides that the wheat board shall take the place of the producers.

Mr. DUNNING: I wish it were not a loss, but I am afraid it is.

Mr. BENNETT: The loss may be much greater, but it cannot be ascertained until there has been a liquidation of the stocks. As I say, the wheat board has taken the place of the wheat producers and that is the end, until there has been a complete liquidation.

Mr. EULER: When the final loss is established it might be very high; should that all be chargeable to the one year?

Mr. BENNETT: It is chargeable to the country and it will have to be provided for when the ultimate liquidation takes place. That is the answer with respect to that.

One step more. The hon. gentleman dealt with the position of the provinces, but I am not going to do more than refer to another statement he made. He said that we had two problems before us, the problem of unemployment and the problem of our railways. He made that abundantly clear and I do not think there is a member who differs from him. He then pointed out that we loaned the provinces $116,500,000 and that that created a situation which required action and immediate action, too. I think most of us agree as to that. But when he dealt with the railway question he left it merely at the substitution of five directors for three trustees and referred to the bill.

Mr. MACKENZIE (Vancouver): Seven.

Mr. BENNETT: Yes, seven directors for the three trustees. He left it at that, with a reference to the bill which is now before the house. Let me point out that at page 18 of the Canadian National report there appears this interesting statement:

> Profit and loss statement, system net loss, $115,281,689.79.

That is substantially the same figure as the money loaned to the provinces, but that was the loss for one year. The net loss for one year is $115,281,689.79. The Minister of the Interior (Mr. Crerar) looks very much alarmed. If he will take the report and look up the statement he will see that it is as I have said.

Mr. CRERAR: Does that include interest?

Mr. BENNETT: No, that is merely the profit and loss statement, the largest item being debits for retired road and equipment, $29,000,000.

Mr. DUNNING: The budget deals only with cash deficits.

Mr. BENNETT: Yes, the Minister of Finance is correct; it deals with the cash deficit. The net loss, therefore, is $115,000,000 and we have loaned the provinces in six years $116,500,000. The problem of relief is, of course, closely allied to the problem of provincial financing; and with the relation of the provinces to the relief problem I have nothing to say at the moment, because that can be discussed on another occasion. But if the problem of the provinces with respect to this $116,500,000 is of transcendent importance, as it is, how much more important than all other problems is the problem of

the net loss of $115,000,000 last year in the Canadian National Railways? And what have we done with regard to it? We know what is to be done with respect to the problem of making good a deficit; we know that we are to provide for an eight per cent sales tax and a corporation tax. The corporation tax is a matter to which I should have made reference, for it presents a very serious difficulty to corporations having regard to the imposition placed upon them by the provinces in connection with collections which are now made against corporations in two or three of the great provinces with respect to taxes on the wage roll. In British Columbia, Manitoba and elsewhere, all these additional burdens—the fifteen per cent corporation tax which has been made retroactive to the beginning of the year, the tax of seventeen per cent in connection with consolidated balance sheets —are imposed upon these companies which are now faced with the collection of an eight per cent sales tax. To this matter I should have referred before.

But what have we done, sir, at the instance of this government, to solve the problem involved in the net loss of $115,000,000 in the railways last year? That is the problem. In view of the protestations and promises made from this side of the house by hon. gentlemen opposite when we were in office, I had expected that some legislation, worthy at least of the name, would be introduced to deal with the problem. But instead of that the major part of the existing legislation is left alone, while there will be substituted seven directors for the three trustees, ultimately, the minister says, largely for the purpose of getting rid of the chairman of the board. Is that the government's conception of its responsibility to the Canadian people in that regard? If it is, let it be known; let it be understood, for this is not something that is the accumulation of years but something that took place last year, 1935. I put that question to the government and to those who support them. They have the majority; they have the power, and I trust they have the inclination. Let them proceed to give effect to their inclination and they will receive the support of those members of the house who are interested in the solution of this problem, who are concerned about it, and who realize that the condition of the provinces to which the minister referred is but trifling as compared with the constant strain and drain upon our resources, brought about by conditions which I have indicated.

And we still go on in the same old way. No one seems to be greatly concerned about it, and if we suggest that the situation is critical, as we tried to do in days gone by, we are laughed at; if we speak about it as something that is critical, we are told it is purely political.

An hon. MEMBER: Hear, hear.

Mr. BENNETT: That is the idea of the hon. member. How can the people of this country ever appreciate this problem if members of this house, responsible members, say it is purely political.

I close, sir, with this note, because of all the problems confronting the dominion to-day there is not one that is so serious, none fraught with graver possibilities of disaster. There is not one problem more critical than that connected with the railway situation. This problem will not wait; it should not wait. A government fresh from the people and having shown courage to deal with some of the problems in the manner in which they have done, for which I have given them such commendation as it is possible for me to give, should not wait longer to deal with this problem. For it is not a problem that can be solved by the substitution of one man for another. It calls for a bold and determined course, to get to the very bottom of the matter, so that this country may continue, as the minister says, its progress towards recovery. It has made progress; that has been admitted by the minister in stronger terms than I would have used had I been indicating it myself. There is an indication of a reward of the efforts that men made during five long years when they gave their best to the state in which they live and which they serve. But we have now reached the stage where, unless we are prepared to deal heroically with the cancer that is gnawing at the very vitals of our national life, I do not think we can continue our progress towards recovery, and that for two reasons: first, because our credit will suffer and the minister will be confronted with difficulties the magnitude of which he contemplates but does not care even to mention; and, second, because it will bring disaster to confederation itself and destroy the very fabric of this dominion.

Mr. J. H. BLACKMORE (Lethbridge): In rising to take part in this debate I should like first of all to commend the Minister of Finance (Mr. Dunning) for this budget. I regarded it as having been carefully studied and very well arranged, and it was given to the house in good form and with a clear and pleasing delivery, which seems to be a rare thing in this house. I did not find in this budget evidence of that progressiveness of outlook which I believed the people of Can-

ada were justified in expecting of the Liberal party. There are in evidence no changes of policy for the future. The budget, I feel impelled to say, is reactionary and strictly of the old order. The great problem for us and for Canada at the present time is that of getting purchasing power into the consumers' hands. This budget actually is designed to take purchasing power out of the consumers' hands. This it does by an exceedingly painful sales tax, and we know that a sales tax is the most effective means of tapping, shall we say, the purchasing power of every individual, particularly the poor and those who are struggling with small incomes and endeavouring to raise families and carry on the responsibilities of life. It is precisely in this class that we must have the purchasing power. While I do not blame the Minister of Finance for getting money where he can, I deplore this as a definite means of taking purchasing power away from the very people in whose hands purchasing power should be, and, I contend, must be, if this country is ever to recover its economic stability.

I noticed that there was no plan designed to replace this purchasing power either immediately or ultimately. As I see it, the great thing we require at this time is monetary reform. I heard a good deal of the propaganda which our Liberal friends used throughout the last election, and read a good deal of what appeared in the press. As a result of all that I was encouraged to believe that there was to be monetary reform; that the Liberal party was committed to it. I therefore came here expecting to find that very early after this parliament assembled, definite and progressive steps would be made towards monetary reform. Either no such steps are being taken, or my vision is too thoroughly dulled to enable me to see them. Monetary reform must take two forms: First of all, a method of obtaining money without interest and without debt; second, a method of distributing the money so that it can get into the consumer's hands.

We are living among changed conditions. I deprecate therefore the tendency to continue as though we shall be able to get out of this depression, as people have come out of previous depressions, by natural, normal means. I feel distinctly alarmed, as the previous speaker also expressed himself, because I do not find evidence that we are in normal conditions. I find no evidence that we are, as Stuart Chase tells me that people were, in previous depressions; rather the indications seem to be that we are in conditions such as our fathers have never known.

[Mr. Blackmore.]

A number of men, I find, have a similar idea to this. May I draw to the attention of the house some studies which have been made recently in the capitalistic system. I hold no opposition whatsoever towards the capitalistic system. Just the same, we must be warned when signs of decay such as are here indicated are brought to our attention. Mr. Arthur H. Adams, in an article called Key Ratio to Balance, appearing in the American Federationist magazine, November, 1934, makes a definite contribution to the study of the present system as we are experiencing it to-day. He uses a fraction. He makes the numerator of that fraction the real wages of consumer goods workers, and the denominator he makes by taking the output per man hour. It is designed to be a scientific critical study of conditions as they are. He finds that real wages must increase as fast as productivity. Now, sir, this is the very condition which we find no longer exists in our economic life, either in the United States or in Canada. He finds that if his ratio, arrived at by his fraction, falls to 90 per cent the economic life of the country is in danger; if it falls to 75 per cent, the economic system is unworkable. In 1922 his ratio was 100, which is normal; in 1929 his ratio was 73, which was impossible, and in 1934 his ratio was 75. I neglected to say that these figures are based upon conditions in the United States. Our country is economically so closely knit to the United States that I assume conditions are very much the same here. He uses these words in commenting upon his findings:

> The unbalance we have reached this time is so big that natural or automatic restoration of balance, or recovery, cannot occur. The buying power of all consumer goods workers in the United States needs to be raised about 35 per cent on the average, and with no increase in their producing power, before an intelligent man should even hope for business to become self-sustaining at normal levels.

Hon. members will find the investigation described in Stuart Chase's fine book, Government in Business, at page 99.

Another student of the situation Chase says is a man named A. A. Berle, Junior. This man published his findings in a book called Liquid Claims and National Wealth, published by the Macmillan Company in 1934. He has an entirely unique and startling way of attacking the problem, but he feels that it is thoroughly worth considering. He discovers, in going back over past years, that the amount of liquid money existing in a community has a definite bearing upon the stability of that community. He finds, for example, that in

1880 sixteen per cent of the total wealth of the United States was liquid. Of course we all know that "liquid" means money which is readily available through bank deposits or through the sale of gilt-edged bonds and the like. In 1912, he found that twenty per cent of the money was liquid. In 1926 he found that the percentage was twenty-eight per cent. You notice, Mr. Speaker, a most alarming rise there, indicating that new conditions were developing the like of which man never saw before. In 1929 he found that the percentage was thirty-eight per cent; that was the year of the depression. In 1930 it was forty per cent. In 1933, notwithstanding the heroic efforts which were put forth to recover conditions in the United States, thirty-four per cent, or one-third of the national wealth, was found to be liquid. He makes this general observation, that if a country has fifteen per cent of its wealth liquid it can weather a depression, but if it has twenty per cent liquid its chances of weathering that depression are very slight. He makes this statement:

It was a stampede for liquidity which closed every bank in 1933, a phenomenon unheard of in any former depression.

This will be found recorded in the book of Stuart Chase to which I referred before, at page 102.

Another interesting study of this situation, scientifically conducted, is that by Professor Rautenstrauch, of Columbia university. He approaches the question again from another most unexpected angle; he finds that in 1917 producers among the workers of the United States comprised sixty-three per cent of the total employed. That is, the farmers, the miners and the men who were producing totalled sixty-three per cent of those employed, and they received one-half of the national income. But in 1932 see the surprising change that has taken place; he finds that fifty per cent of the employed were producers and that they received only one-third of the national income. In other words the producers had dropped from sixty-three per cent to fifty per cent of the total employed between 1917 and 1932, and instead of receiving one-half of the national income they received only one-third. This is an alarming change in such a few years, and again indicates that it is doubtful whether we can get out of this depression by normal means. Professor Rautenstrauch according to Chase has this to say:

In other words, in 1917, when producers got one dollar for making goods, overhead people got another dollar for the various services leading up to the sale of goods to the consumer. But in 1932, when producers got one dollar, overheaders got $2.30. In 1929 they got $1.60. Overhead costs marched rapidly forward during the 1920's, and broke into a run with the coming of the depression. Business on the down grade; overhead on the up grade—Here is abundant evidence of shocking management.

If the ratios between direct and indirect labour were about right in 1917, to recapture them we should now need to:

1. Shift 12,300,000 more workers to the producers' group.
2. Increase producers' income about 56 per cent.
3. Increase farmers' income about 216 per cent—as their proportionate share in the producers' group.

Again, Mr. Speaker, this outline was discussed at page 104 of Stuart Chase's book Government in Business. Let me repeat that according to Chase the article I have just read was by Professor Rautenstrauch, entitled Who Gets the Money, appearing in Harper's Magazine in 1934. This is a serious situation indeed. It does not by any means indicate that hon. members on either side of this house are justified in taking this matter calmly. Rather it indicates that we should be bestirring ourselves with a great deal of energy, not expecting to go sliding along on a laissez faire policy. Unless we bestir ourselves we are going to be held accountable by an indignant people who sent us here to make things right.

Now let me refer to another serious matter which has been discussed in this house many times. I refer to technological unemployment. I have a number of excerpts dealing with that question which, with your permission, sir, I should like to quote. The first comes from Stuart Chase's pamphlet Technocracy, an Interpretation, at page 15:

From 1912 to 1917 the Buick Motor Company increased its production 1,400 per cent and its labour force only 10 per cent.

I intend to quote these excerpts, which I have found at random in my reading, because a number of people are disposed to smile at these changes which have arisen, thinking they will pass by. These signs which I have found do not indicate any justification whatever for any such optimism. In The Problem of Unemployment, at page 122, Paul H. Douglas says:

There were in 1929 approximately 500,000 or nearly six per cent fewer wage earners in manufacturing than there had been a decade before, while there were 300,000 or 15 per cent fewer workers on the railways.

Notice that these figures are taken from the period before the depression; consequently we must look upon them as being drawn from normal times such as we hope will return. My next quotation is from Stuart Chase's

book Men and Machines, at page 210, where I found the following words of interest:

The decline in 1929 registers over 2,000,000 and all recent counts of factory workers show a greater output with not only relatively, but absolutely, fewer men. For a hundred years every census tabulated an increasing number of persons employed in factories; now suddenly since the war, with an increasing population, there are fewer persons in factories. Something cardinal has happened; some mighty corner has been rounded.

That is exactly my contention. Let us be well advised before taking too much for granted. Something cardinal has happened; some mighty corner has been rounded. The next extract which I found of interest also comes from Stuart Chase's book Men and Machines, at page 210:

Evans Clark in the New York Times shows the phenomenon by index numbers.

| | Factory employees | Production |
|---|---|---|
| 1914 | 100 | 100 |
| 1919 | 129 | 147 |
| 1924 | 116 | 158 |
| 1927 | 115 | 170 |

Production sailing upwards; employees dropping since 1919; with 1927 less than 1924. Between April, 1923, and April, 1928, more than 1,250,000 factory workers were permanently laid off, according to a recent survey of the United States Department of Labour.

Again there is evidence of some mighty corner having been turned. Then, from page 209 of the same book, I read the following:

Again it is agreed by all competent economists that purchasing power has not kept step with invention. Purchasing power is the final arbiter of all jobs under the prevailing financial system. Unless prices fall as fast as labour saving devices increase, the saved labourer must whistle for employment. With a static price level, he will have to keep on whistling. Prices have not been declining rapidly in recent years.

At six o'clock the house took recess.

## After Recess

The house resumed at eight o'clock.

Mr. BLACKMORE: When the house rose at six o'clock I was proceeding to show how changed are conditions confronting us from those which confronted our fathers when previous depressions occurred, and I was making reference to the technological unemployment which exists in our civilization to-day, largely as a result of the development of machinery. I had cited evidence from certain authorities to show that we had turned some mighty corner. Going on with the evidence to bear out this contention let me cite the following from page 214 of Men and Machines by Stuart Chase:

Mr. Ethelbert Stewart, a most qualified observer, sees the higher level of unemployment in the spring of 1928 as perhaps only the beginning of a more or less permanent unemployment, because a growing number of industries are equipped to produce more than consumers have money to buy, together with the supplanting of workers by machines.

Quoting again from page 214 I read:

Mr. Horace Taylor is sure that "all evidences point to a steadily increasing technological unemployment," and many competent economists agree with him.

Before I proceed further may I point out that a considerable amount of disagreement exists, and there is a tendency to quote one authority against another. Making all due allowances for all just differences of opinion I believe we are safe in assuming what the testimony of these men tends to bear out. Quoting from Technocracy, an Interpretation, page 30, I read:

The automobile industry created 4,000,000 new jobs out of thin air. There is no such industry on the horizon.

In other words, although by reference to certain industries such as the automotive industry, we can see some evidence that new machines create new jobs—and a great deal of argument is adduced to show that this is so far true as to justify a great deal of optimism—notwithstanding that fact, unemployed continue to exist in terrifying numbers.

As an example of a man who argues that increased machinery does produce new jobs we might mention William J. Cameron of the Ford Motor Company, whose article is printed at page 4 of the March 25 issue of the Christian Science Monitor. His message is that going back over forty years the evidence tends to show that machinery has increased the number of jobs. It is strange to observe that against this man's contention all the evidence I have cited to-night bears overwhelmingly. It may be true that a large number of new jobs are created by new machinery. For example, when the automobile business developed we know the garage business had a corresponding development. But we shall find that the displacement of men is not equalled by the replacement of men. So frequently do the new jobs require so little of men's time and so quickly are machines developed to take the place of men that I feel quite certain we are justified in going forward upon the assumption that there will be in our civilization a permanent technological unemployment which must be met by adjustments in our economic behaviour sufficient for the occasion.

Another serious evidence that we are in a changed condition is to be found by reference to agriculture. A few days ago I made a citation, but there were so few in the house I shall impose upon the good nature of hon. members to the extent of reciting it again to-night. Quoting from Government in Business by Stuart Chase I find this startling information at page 39:

> Even in such a prosperous year as 1927, "Recent Economic Changes" shows a net loss of $1,717,000,000 to farmers as a class, a loss enormously accelerated by the depression. Agriculture has failed as a self-sustaining sector of private business.

If these considerations I have adduced are not sufficient to show that we are living in changed conditions which have brought upon us an alarming new situation, then I simply have not the power to draw sound conclusions. Notwithstanding all of this there is no cause for great alarm, provided we go forward to meet the situation calmly and sanely, and do not assume that it will right itself. Although the patient is desperately sick it is possible to perform an operation which will save his life, if we approach the problem in time and with sufficient skill.

In the first place there is no need for poverty. Throughout this dominion, sir, there is absolutely no need for it, and any government which continues to permit poverty either does not know what to do or is not trying to find out. We have plenty of food; we can produce, in greater abundance than we need, practically all the food we can consume. Lately I have found among hon. members the disposition to argue academically about this matter. But on this occasion let us appeal to common sense. Is there any hon. member who questions that Canada can raise all the wheat she wants? Not a soul. Does anyone question that she can produce all other grains she needs? Not a soul. Or that she can produce grain products such as flour, oatmeal and the like? Not a soul. It is absurd to make such a suggestion, is it not? Will anyone argue seriously that we cannot produce all the beef, pork, mutton and other meats that we need? It is absurd to raise that question, is it not? Will any person doubt our ability to produce all the dairy products such as butter, milk and cream that we need? If we were unable to do so we would find the prices of these products at something like a living rate, instead of at a level so low that they are driving men out of production. Will anyone seriously question our ability to produce all the potatoes we need, or to produce all other vegetables we require? Can we not produce the greater portion of the fruits we require? While we are not so abundantly equipped for the production of fruits, yet our production is surprising.

Turning from that to clothing we know that certainly we can produce all the woollen goods we require, all the shoes we need and a wide variety of other articles of clothing. Therefore there is no need of any lack of clothing, even if there are some things we cannot produce. Will anyone seriously question our ability to produce all necessary shelter? We have an abundance of building material, and no person would attempt to question our ability to build. Right here in this Canada of ours all we need is to set men to work to produce those needs. Is there anyone who will seriously question our ability to produce all the fuel we need to keep us warm? Think of the vast coal fields of Alberta and other sections of the country. It is simply absurd to suppose that we cannot produce all the fuel we need in Canada. Again, we are able to produce all the entertainment we need. Why should our people go without entertainment in this country?

I turn to education and culture. Surely we can get in this dominion all the education we want. We have our teachers and our schools. Why cannot we get all the education and culture we need in Canada? It is here, and what we have not here we can soon get through the intelligent people we have.

Again, our transportation facilities are abundant. No one should want for transportation in this country, equipped as we are.

Take health and other services. The means of obtaining these things are here. Numbers of men are to-day unemployed who could doctor our children and do their dental work. Why should we not have health service?

I contend, Mr. Speaker, that in the light of present day conditions it is utterly absurd that we should even seriously contemplate the idea of having poverty in this land. The question is: How are we going to proceed to the solution of the difficulty, because there are manifest difficulties in getting this plenty available? There is a reason why. For a number of years we have been much concerned over the causes of this depression, but most of the authorities whom I have read are now agreed that the cause of all the trouble is money. It centres right around that one thing, money, and the question how we can get the money, and, second, how can we get it into the hands of the people who need it, are the two great questions that face this parliament and the country to-day. Most of the men whom I have studied are of opinion that we can have national money issued nationally. If we are afraid to issue national money lest the banks

might get it, and on the basis of that national money extend credit to dangerous proportions, thereby risking inflation, we can issue national credit. May I quote a few statements from a man whose standing must be recognized in this house. I know that a great many members look with a certain amount of indulgence and smiles upon the social credit people, thinking us somewhat crazy, but I am now going to quote someone whom I think everyone in this house will treat seriously, the Hon. Robert L. Owen, senator of the United States, living in Washington, D.C. He has been, I am told, director of a United States bank for forty-six years, and president of a bank for ten years. There is a man, I submit, who ought to know something of what he is talking about, and the words he utters we can safely give credence to. In his article entitled, Money, appearing in the Instructor for April, 1936, I read on page 54:

> It is the failure of governments to discharge their constitutional duty of regulating the value of money, including bank money, which has caused the enormous disaster from which we have recently suffered.

This gentleman is prominent in the monetary movements of President Roosevelt. While many may question President Roosevelt's wisdom, we may one day wake up to find that he is a long way ahead of anyone else in the Anglo-Saxon world in the matter of monetary reform; at least, there is a serious chance that he may be so. I quote from the same article, at page 60:

> When one-half of our money supply is destroyed, it means that one-half of the market price of American property is destroyed. It is of supreme importance that the administration and its advisers should clearly understand the necessity for expanding the money supply until working capital is made available to the small business enterprises in sufficient volume to restore to employment the unemployed millions who still walk the streets unable to sell their labour at any price.

Again, at page 87, I read:

> When the government creates an adequate supply of money to furnish all the working capital required by our people for transacting the business possible in this country, under favourable circumstances, there would be available the money that is needed, with which to employ all employable people and pay them good wages for reasonable hours.

Again, at page 92, I read:

> A study and the understanding of money, how it is manufactured, and by whom; the study of constitutional money created by governments and how governments can regulate its value, is a solemn patriotic duty resting upon every adult citizen, more particularly members of governments, federal, state, provincial and municipal.

[Mr. Blackmore.]

There is no doubt in that man's mind, is there? I contend that the solution of the problem which confronts us lies somewhere along the path of money. I know there is a good deal of easy merriment about the matter and a good deal of discussion whether it would not produce inflation and all that sort of thing. It is a good deal like irrigation. I come from a land where they irrigate. Unless you are careful in applying the water to your land, you will wash your young plants away and destroy your soil, but if you use irrigation as it should be used, expertly, wisely applied, it is a blessing. It gives the plants just the thing they need to grow. It is so with money power. If you use it with wisdom it will do no harm; it will be a blessing. Only when unwisely used does it cause trouble.

Of course, in order to make sure that this inflation or abuse of new money will not occur, the banks would have to be controlled to prevent inflation. I maintain that one of the duties of this government, a thing which I expected it to do and which it may yet do for all I know, for the session is not yet ended, is to appoint a banking commission to investigate the whole banking situation and determine the absolute truth about our money needs, so that the government may be prepared to handle banking and money scientifically. In addition, I think this government should begin to plan and encourage industry where industry is needed. There are many processes which could be introduced into this country. Processing plants could be established that would be of manifold advantage to the Canadian people, producing the things we need. There are for instance, the potato processing plants that I referred to the other night. Think of the tremendous advantage that coal processing would be to those coal areas where miners are to-day languishing in unemployment. It would change the whole aspect of the country, and we should be able to produce an abundance of goods which we are now importing, thereby helping to bring upon ourselves an unfavourable trade balance. We could introduce more sugar factories, but all I have seen anyone do since I came here is to put blocks in the way of the sugar industry. Canada produces only fourteen per cent of the sugar she needs. Where would we be in case of war? Why should we not ourselves produce all the sugar we need, in case of difficulty? Why are we not doing this? Those are just a few samples of what we could do. There are mills for processing trees and pro-

cesses of many other kinds which would enable us to help ourselves and help us use a new money system more safely.

Why should we not have in this country a Canadian Brookings Institute to provide us with the actual economic facts about Canada? You cannot quote in this country a book that people will accept because there is nothing to tie it up to, and so we have to quote from figures in the United States. I say that that condition does not reflect credit on the Canadian people. We have men in Canada intelligent enough to find out these things for ourselves.

Having once established a system of getting new money, I contend, Mr. Speaker, that the day is coming when we must unquestionably have scientifically planned methods of getting the money into the hands of the people. I know there are plenty who laugh at that kind of thing, but before I sit down let me quote one set of figures to show that the thing is not quite so silly as it might at first appear. If you turn to page 49 of Stuart Chase's book, Government in Business, you will find, according to his figures, that the United States already had 51,000,000 of its total population receiving money from the government directly or indirectly right then. We are rapidly approaching that condition, so why should we not organize on a scientific basis so that we can effectively give men purchasing power? How else are we going to get into their hands consuming purchasing power? The day will come when we shall look back at this time and wonder how we could have been so short-sighted as not to see that distribution of consumer credit was the solution for our problem. We should be taking measures to find out the exact conditions in our economic and national life and we should be preparing ourselves for the production of new money nationally created, nationally backed, so that it will be sound money, and nationally managed in the interests of all the people of the country.

We should be prepared to distribute purchasing power to the fullest possible extent by giving people work, yes, through reforestation, the building of roads, the erection of great public buildings and that kind of thing. But still the day will come when there will be vast numbers of our people who can never again be profitably employed and we must be prepared to give such people purchasing power through the direct issue of purchasing power. You may call it $25 per month, dividends, or anything else, but that must be done. These are the suggestions I offer. We should take forward looking measures and not depend upon laissez faire and the hope that in some way we may grow out of this condition. I contend that we are suffering from a malady out of which we cannot grow.

Mr. WILLIAM HAYHURST (Vegreville): Mr. Speaker, before I begin I should like to quote a few words of the Minister of Finance (Mr. Dunning). He said that extremes defeat their own purpose and that violent fluctuations one way or the other are mere leaps in the dark. I know there are many people who consider that the great province of Alberta, of which some Canadians are very proud, is making an experiment which is a mere leap in the dark. The Minister of Finance also said that he was not an alarmist, that on the contrary he was confident that common sense and sound economic policies could solve our immediate problems. We believe that the proper solution to our problems is different from the solution suggested by the orthodox economist, those to whom the previous speaker (Mr. Blackmore) referred to as laissez faire economists. I believe in the integrity, honesty and good judgment of the Minister of Finance and of this government, but the world has progressed and, as the previous speaker has said, we are living in a new age. New times demand new measures and new men.

When the Minister of Finance referred to leaps in the dark which would be unwise to take, possibly he was thinking of untried experiments in finance. That is quite likely as he is the Minister of Finance. The greatest experiment being attempted to-day is the one being tried in Alberta. We wish to see that experiment succeed. We do not believe that all people are equal. I have heard it said by some in this house that giving dividends to all citizens would make them equal with each other; that to do so would be attempting to standardize humanity. We do not believe that all people are equal, neither do we believe that is is possible to give an equal opportunity to every individual. This cannot be done because of the fundamental difference in individuals in their capacities for taking pains, which is genius. We differ according to our genius and ability.

However we do believe in removing poverty and distress by giving dividends to everyone irrespective of whether they are poor or rich. We do not believe in making fish of one anc fowl of the other. According to biologists all living things furnish an infinite variety of form. If you observe the dandelion on the lawn or by the wayside you will see that no two are alike. People say that persons or things are alike as two peas in a pod, but we

know that no two peas in any pod are alike. There is a tremendous variety of form in all living things around us and we believe that all people are different. Because we believe this, we believe in removing the stigma of poverty or the dole from people so that they may be able to develop their own initiative and personal welfare, become real citizens of this great Dominion of Canada and contribute something to the greatness of our country.

Modern education realizes that all children are different, and we are proud of this. I have a family of my own and I know their individual differences. The natural capacities and attitudes of each individual should be developed to the full. That is the new education, and because it is the new education, we need a new economy and a new line of thought entirely different from the old. We believe that the payment of dividends will permit a greater choice of professions. Thus, the talent to be found in our young people will be given an opportunity to express itself. Poverty must be abolished so that the activities of mankind may have an opportunity to develop themselves in a more varied way than they have in the past.

The urge is to push back the frontiers. The mysteries of science and the wisdom of philosophers will ever challenge our mental capacities. We should try to abolish toil and drudgery. That is what science is for. Every little tool ever invented was invented in an effort to remove toil and drudgery so that our lives might be made more attractive. Life is made less sordid when our environment is cleaner, broader and happier. Initiative and competitive spirit will find an outlet in better production.

Social credit, which is not mentioned very often in this house, will not pave the way to a loafers' paradise, as so many people would have us believe. Some people hold the view that men will not work simply because they are receiving basic dividends, but labour will always be required to attend to the machines. Social credit will lead to more leisure, which in turn will bring about an increased production in necessities and luxuries. The social credit movement aims at economic security for every man and woman. Once the hazards of our physical maintenance are removed we shall be able to develop our individual differences unhampered. It has been stated by the members of the government, especially by the Minister of Finance, and by the leader of the opposition (Mr. Bennett), that a tremendous change took place in the financial world between October, 1929, and October, 1930. Is it reasonable to assume that the world was suddenly impoverished in those years? It is well known that for every loaf of bread which was baked we could have baked four. There was a surplus of practically every form of goods and there was also sufficient machinery idle to have increased the supply of goods threefold. The main trouble was that the purchasing power of the people had been largely destroyed.

The question is often asked: Where is the money to come from? Why should there be periods when there is a great insufficiency of money or purchasing power in the hands of the people, in these days when money is mostly paper in the form of cheques and bank notes? Money that is created by banks is usually called bank credit; it represents merely figures written in a book. There is no value in money of itself. Its proper function should be that of tickets to purchase goods, and the number of tickets to be created should be in precise ratio to the quantity of goods made for the people. The tickets would thus serve industry and the number would rise or fall in proportion to the amount of real wealth produced.

The first step in setting up the necessary machinery would be the establishment of a national credit account. We have heard nothing from the government about the establishment of a credit account, which is absolutely essential if we are to have a new and better economic and social order. This account would give an estimate of all the nation's real wealth as represented by buildings, factories, railways and the capacity to produce. Money is the life-blood of industry and should be taken from the control of private individuals and handed back to the state, and the state should appoint experts to carry out the will of the people. Political democracy without economic security is a farce. The fact, which has long been obvious to a few and is now being recognized by many, is that the industrial nations are suffering poverty and insecurity in a world of enormous physical wealth simply because the incomes of individuals are too small to purchase goods. Modern power production with the wonderful machinery of to-day could supply the wants of everyone. Producers cannot now sell their goods because the incomes of the majority of people are not large enough. Incomes cannot under present conditions be issued fast enough to enable people to pay the prices asked for the goods produced.

The immediate need of the people to-day is a national dividend to enable them to purchase the plenty and security which money can buy. It has been proven conclusively, I think, by the previous speaker that an age

of potential plenty is at hand. Real wealth is possible immediately, but we are cheated out of our heritage, like Esau with his mess of pottage, by a faulty economic mechanism. Money in itself is worthless; it derives its value only from real things. If there were no real things for sale, things that people desire, money would be actually worthless. Does anyone deny that there is an abundance of real wealth, food, shelter, clothing and services, or at any rate that real wealth can be produced? The main purpose of production is to satisfy human needs as long as our productive powers permit. In this day of plenty the problem of production has been solved. Our financial system provides the means of distributing the things we produce; it regulates the distribution, collection and cancellation of money. The earliest distribution of goods was conducted on a barter basis; that is, goods and services were exchanged for goods and services. In time, however, we find a series of currency tokens. At first these tokens had an intrinsic value—cattle and gold, for instance—but such tokens eventually gave way to tokens without intrinsic value, which nevertheless can readily be exchanged for goods and services.

The trouble with the present financial system is that the ultimate control of money rests with the banks. In the Encyclopaedia Britannica there appears this statement:

> Banks lend by creating the means of payment.

This is a significant statement. They do not merely lend the means of payment but create it. Banks control the supply of cheque money and make it plentiful or scarce at their pleasure. Naturally moneylenders do not wish the people to be well off because they might cease to borrow; and what is worse, these financiers buy and sell money of other nations. They realize that people must have money and it is in their interest to keep it scarce. In times of inflation such as 1929 the banks were able to create nine or probably ten times as much new money as there was on deposit. The Right Hon. Reginald McKenna, in his book with reference to post-war banking policies, says that the amount of money in existence varies only with the action of the banks. This simply means that they are able to create credit at will, and as this credit performs the functions of money the bankers have the power of creating and destroying money at will. We are not opposed to bankers; they are men like ourselves. But we want them to carry out a policy which will be in the interests of mankind in general.

Credit should bear an accurate proportion to the amount of real wealth; but financial credit as we understand it, that is debt, does not do this. Credit which is provided by the modern financial institutions, and which is commonly called financial credit, is really debt credit. The monopoly of credit by the financiers should cease. These monopolists wish to keep the supply of credit and money scarce so that they may charge interest on it. Because the bankers control this money they are the real rulers. It is time the community took control; Canada should control its own credit. The credit of Canada, which needs no financing, may be called social credit. The attempt made by international financiers to gain control of the world by financial means, through the setting-up of international banker settlements, should be stopped. The Canadian people should be given their economic freedom and control of their own credit. Greater liberty and security would thus be given all the people. Canada could become overnight rich beyond the dreams of avarice. We have the potential capacity, the sources of supply; all we need is to control credit in the interests of all the people and not of a few.

It is evident that our difficulties lie not on the productive but on the financial side. Why do nations search for gold? I know in the budget speech it was said that this government will not propose discriminatory taxation with respect to mines. Of course we want all possible encouragement of enterprise in the development of mines. Under social credit gold because of its export value is just as valuable as under any other government. The minister stated:

> While the present government is in power, mining enterprises can depend upon treatment at least as favourable as that accorded to other industries under the corporation income tax.

It seems strange that nations should search for gold as they do, presumably because they believe gold gives more backing to currency expansion. Of course we know that even in Canada that is a fallacy. Periods of prosperity have always been coincident with new gold discoveries or produced by increasing the amount of currency relative to the amount of gold. Gold being a scarce metal has tended to make money tokens scarce. Currency manipulators who are interested in international finance and in the manipulation of currency and credits for their own selfish benefits are attempting to wreck a scientific age. Discoveries of gold have made nations rich, but surely the purchasing power of our people should not be subject to chance.

Gold or any other metal is a poor basis of money, because the value of money is governed by its quantity, and the quantity of paper money issued can be readily controlled according to the real wealth of the nation. Each nation should control its own credit and currency, and this should be issued in proportion to its production.

Possibly the greatest curse which has operated to control trade in the past has been the gold standard. It has been said that the gold standard is the basis of hatred; it begets war. It has been said that you might as well talk about a standard of love as talk about a standard of gold. It would really be better to call it a standard of hatred. It is a standard of scarcity, and because nations want to keep goods within the nations scarce, and export their surplus, very often they go to war with their neighbours to create markets. That has been the work of a few financiers interested in the creation of debt in all countries. Upon no subject are the people as a whole so blissfully ignorant as upon that of finance, by which the wealth of money-lenders is increased at the public expense. Money should be controlled by the people of a state in the interest of all its citizens. Why give the control of the blood-stream of society to a few to use it for their own personal and selfish acquisition of power? The happiness of the citizens of any nation depends upon the policy of those in control of its credit, and that nation wherein the control is exercised for the good of the people will become the greatest nation in the world.

Mr. ISNOR: I wonder whether the hon. member would give us a short definition of just what he means by "credit control."

Mr. HAYHURST: That is something which is very subtle. For instance, we have the idea of a national government controlling a national bank. I do not know what the Liberal government proposes to do with regard to this national bank, but I understand they are going to bring forward a measure to buy fifty-one per cent of the shares. The bill has not yet come before the house, so I cannot speak with certainty, but fifty-one per cent of the shares would enable them to control the group of men who will sit at that caucus table, and through them, direct banking policy. We believe that the government should control the men who sit at that table. They should employ experts in finance who will control Canada's finances in the interests of the people. They should build up a national credit account, an account which will show all the imports, all the production of the nation, all the real wealth of Canada, and put it down in a book, much as was done in the Domesday Book in England away back about 1086. The real wealth of the nation is shown on the credit side of the account, and we should constitute what we shall call a debit account on the other side. I may say that we did not hear anything in the budget speech about either a debit or a credit account. The debit account would record all the real destruction of property as it goes on to-day; it would show also our total exports. If at the end of the six months' period we had not more goods or a greater supply of real wealth than we had when we began, there would be something wrong with us as Canadians. We should have a greater capacity of production as the years go by and our credit power grows and develops. The balance would be the difference between real consumption and real production, and the surplus would be given to the people as a dividend, so that they could purchase the overplus, or the supply which to-day is destroyed.

Mr. ISNOR: May I ask the hon. member one more question? If I understood him correctly, he stated that credit control must come through the Bank of Canada.

Mr. HAYHURST: No, I did not say it came from the Bank of Canada.

Mr. ISNOR: The hon. member built his whole argument round it.

Mr. HAYHURST: I am going to answer the hon. member's question if possible. I say: If the people of Canada demand that the government of Canada control the policies of the banks, and if the people get behind the government, then they can control banking policy, because their representatives would not dare to oppose them. If the people of Canada demand a dividend they can get it, because they could elect enough people to see that that policy is carried out according to the real principles of the new economics. It is a unique opportunity for every person to get behind the movement for the emancipation of the people from the present money control. Orthodox economists call us heretics. Probably we are. In days gone by there were religious heretics; there were also political heretics; our fathers had to fight for political and religious liberty. But the greatest battle is still to be fought and won; it is the fight for economic liberty.

Think of who control the finance of Canada to-day. Have hon. members considered that wealth is more and more going into the hands of a few people? That being so, how can one expect to raise the standard of the people who are living in poverty and distress?

Dozens of them call at my home in the city of Ottawa, the capital city of this great dominion, asking for the bare necessities of life. There is plenty of wealth in Canada, but it is controlled by a few absolutely for their own welfare; they pocket the dividends. I am sorry that the Minister of Finance did not put a larger tax on some of the biggest incomes.

If each nation would control its own credit and its own monetary policy, it could be rich, in terms of real wealth, beyond the dreams of avarice. Skill in every human endeavour is wealth just as much as the farmers' wheat and the bakers' bread. The economic difficulties of the present time are largely due to the lack of the occupations for which many young men and women have spent time and money in training themselves. The previous speaker mentioned educational systems. Not long ago I read in the press that McGill university needed money in order to enable its young people to get a better education. There is the university; there are the professors; there are the young men and women, but they need money in order to provide an education. It is a tragedy that men and women at this stage of life should have their hopes shattered and their enthusiasms broken for lack of money. This would naturally lead us to the conclusion that there is something fundamentally wrong with society as it is constituted at the present time.

Possibly the subject least understood, because in past years it was considered a sacrilege to question it, is the subject of money, which controls our education, our life work, and which causes untold suffering through fear of insecurity, poverty and an old age unprovided for. Money is so vital to our welfare that the question of its control is the most important subject facing mankind to-day. Money may be said to exist in three forms, coin, notes and credit, of which a bank cheque is the most familiar example. Nine-tenths of all the world's money consist of credit of one kind or another. Control of our bank credit should be vested in the people, and the struggle for this control is the great problem with which the people of all modern nations are confronted. We have fought for our personal freedom. In the United States they had to fight in order to free the slaves. I suppose, sir, your ancestors were practically serfs; I know mine were. To-day, however, in the new age in which we are living, with the development of machines and so on, all that need not exist. In a degree we have obtained our political freedom, as hon. members know, through the reform acts of Great Britain as they have been applied to Canada. Our men and women have been given full voting privileges, but to-day we must fight for our financial freedom. The great bankers of the world, practically without exception, have used expressions such as that used by Rothschild, who said, "Those who control the credit of a nation control in the hollow of their hands that nation's destiny." This subtle power which exercises control over parliament and industry, and which in turn is controlled by a few men for their own selfish interests rather than for those of humanity as a whole, must be brought within the control of the people of the nation.

We are now at the cross-roads of history. We have heard that expression before, but I believe it to be true. One road leads to untold prosperity through the organization of our power and technological improvements. The other leads back to the dark ages, which were the ages of scarcity, manual toil and human drudgery. The financial system as at present constituted must have booms and depressions. We talk about the boom of 1929 and the depression of 1932. We must have these booms and depressions in order that the financiers may retain control. It is the aim of the financial system to prevent good borrowers from accumulating money of their own, so when a boom has reached its peak those who have loaned money begin to call in their loans. Otherwise those borrowers would become too rich to want to borrow any more money. After a boom has progressed so far, high prices rule, and with high prices more and more money is required to carry on trade. Bankers have to honour their promises to pay, and as money is withdrawn from circulation the demand for goods decreases and goods fall in value, less money is loaned and a depression is started on its course. The banks follow the policy of alternate expansion and contraction of their loans and their purchases of securities. The business cycle which is caused by this policy brings in its wake bankruptcy, debt and the curtailment of industry. That is what we have passed through, a period of bankruptcy, debt and the curtailment of industry, through the curtailment of this purchasing power which should have been distributed more freely to all people.

The great prizes of this earth go to those who are in control of the financial machinery, but we believe that with human initiative and enterprise unchained it will be possible to have "a car in every garage and a chicken in every pot."

Some hon. MEMBERS: Oh, oh.

Mr. HAYHURST: That sounds very nice to my hon. friends across the way. So many think that because we are financially poor, of necessity we must be really poor. We

know that money is not real wealth, but it becomes scarce and goods cannot be purchased. Money is one of the most ingenious and potent inventions of man, but people buy and sell money as a commodity, as other people buy and sell wheat. Real wealth decays, like the potatoes to which the right hon. leader of the opposition (Mr. Bennett) referred this afternoon, but financial credit and debt have taken on the spirit of immortality. They are always growing; they always increase. We borrow the money with which to construct a building. The building deteriorates, but the debt increases. I am reminded of those words of Goldsmith's:

> Ill fares the land, to hastening ills a prey,
> Where wealth accumulates, and men decay.

Even in the days of Goldsmith they recognized the truth of the statement that finance controls the destiny of the people. The debts of countries and of individuals increase with each succeeding year. Thus we are establishing a debt creating structure whose subtle charm seems to hold the people in a hypnotic power. That is quite poetic for me. It is not suggested that credit should be so plentiful that unlimited quantities of money would be required to purchase the bare necessities of life. What financial expert would permit such a condition? At all times the credit supplied would bear a just proportion, neither too much nor too little, to the real wealth which a nation produced. It is like a man rowing in a boat on lake Superior. Would he jump overboard if he wanted a drink? Naturally we would not create huge amounts of credit, even though it only consists of figures in a book.

There are many monetary reformers today, as the house knows, but they are mere adventurers. When asked if they believe in dividends for all the people they immediately reply: No, we do not believe in people; we believe in the money system. They have no faith in their fellow men. Control and power mean more to them than the general uplift of all the people. How often has unemployment been held up as an incurable curse, when it should be looked upon as a triumph, and those unfortunate enough to be unemployed should have the satisfaction of knowing that they will always be paid. What a tragedy it is for those on the dole; there is the fear, the threat that to-morrow's dole may cease to be. Think of the tragedy of little children under the stigma of relief which has no permanency and which instils a fear of insecurity into their minds. I wonder whether any hon. members are living next door to families on relief. Will people be able to unlearn the things they have learned and to alter the direction of their thinking before a greater crisis arises? Some people are afraid of a new crisis. We need not fear it, because a new crisis would take away the fear of poverty and insecurity. That nation, which I hope will be Canada, which produces real wealth in abundance should be the greatest nation on earth, and will be the greatest nation if it gives purchasing power to its people.

Industry and all mankind are travelling in a vicious circle. Here is the question: Why cannot goods be sold? The answer is this: Because people have not the money. Why have not people the money? The answer is: Because wages are low; people are on short time, or are unemployed. Why are their wages so low? Why are they on short time or unemployed? Because factories cannot sell their products. Why cannot factories sell their products? Because the people have not the money to buy. No wonder poverty increases; no wonder bankruptcies and insanity increase. Perhaps there is no insanity in eastern Canada, but I am sure some hon. members think we in this corner of the house have a certain amount of it. I know, however, that in Alberta insanity is one of the greatest problems we have to face.

An hon. MEMBER: Hear, hear.

Mr. HAYHURST: It is the same in Ontario, so you do not need to say, "hear, hear." And all the insanity is not on this side of the house, although we are all a little insane, you know.

Mr. GRAY: Or we would not be here.

Mr. HAYHURST: In our province insanity is becoming one of the greatest problems, and that insanity is due to a fear of insecurity.

Mr. SPEAKER: The hon. member has spoken forty minutes.

Mr. DENTON MASSEY (Greenwood): Mr. Speaker, last Friday afternoon hon. members listened to a most able presentation of the 1936-37 budget. Some of us who know the personal record and career of the gentleman who is now Minister of Finance (Mr. Dunning) could not help at least silently congratulating him upon the success of his career and the manner in which he carries the honours which have been heaped upon him. Concluding his speech the minister used this language, as reported at page 2391 of Hansard:

> The government of Canada is making earnest and sustained efforts to meet this challenge and to grapple with the manifold problems of the country. I would ask the house and the

country to accept the proposals I have made to-day as part of a conscientious effort to promote the best interests of the people of Canada.

Not for a moment would any hon. member question the sincerity of the minister, but perhaps some of us do not subscribe fully to the "efforts" or to the methods of "grappling." In the first place, not so many days ago, to be exact on Monday, April 6, we listened to the Minister of Finance use this language when speaking about the housing problem of Great Britain:

> The great bulk of it has been carried forward by the degree of confidence and leadership inherent in the people themselves, by the abolition of fear and the creation of confidence in the minds of men and women who have a little money, who need a home, to spend that little money in cooperation with the money of the state, possibly, in order to acquire that which they need. That is the sort of leadership we need in this country. We need confidence on the part of those who could do things by cooperation if only they did not fear so much.

Then, speaking on Friday when introducing the budget the minister said, as reported at page 2383 of Hansard:

> That purpose the government intends to pursue steadily as an essential condition of the restoration of business confidence and the free functioning of private enterprise. This, it is believed, will contribute more effectively to the solution of the problems of unemployment and depression than any other single thing which governments can do.
>
> I am not an alarmist. On the contrary, I am confident that common sense and sound economic policies can solve our immediate problems.

I wonder whether it tends to restore confidence to call the attention of the consumer, every time he makes a purchase, to the fact that his country is hard up and that he must be taxed accordingly.

Introducing the question of the sales tax the minister referred in his speech to the necessity for the tax. As I listened to him speak last Friday afternoon I could not help remembering "the forgotten consumer." My mind carried me back to the campaign of last year, during the course of which from one end of Canada to the other we heard presented the case of "the forgotten consumer." I am not standing in my place to-night to plead the case of the forgotten consumer or to draw attention to him or to her. Many people listened to what was said during the course of the campaign. If we may judge by the vote, many people felt that the forgotten consumer would be remembered.

I wonder whether it tends to create confidence in the present government when, in the first budget brought down after an election in which the forgotten consumer was proclaimed so loudly, we find an increase of 33⅓ per cent in the sales tax. It seems to me that confidence must be shaken in the present government—and the minister has admitted that confidence is essential to recovery!

During the course of the last campaign many statements were made in an attempt to convince the electorate that the country faced a most serious situation. It was either "King or chaos," the insinuation being, of course, that chaos, if not already at hand, was just around the corner. On the air from coast to coast we heard language descriptive of that condition. There was a certain innocuous old gentleman who had a nasty mind, who was called "Mr. Sage," I believe. Mr. Sage had certain things to say, but they apparently did not mean very much, one way or the other. In one of the special committees we have spent a great deal of time in the last few weeks inquiring into who this innocuous but nasty-minded old gentleman was.

Mr. CHURCH: They ought to give Mr. Sage a gold watch and an illuminated address.

Mr. MASSEY: I hazard the guess that when prominent gentlemen, citizens of this country, take the air and proclaim from coast to coast that chaos is just around the corner far more serious harm is done than could possibly be done by an innocuous old gentleman with a nasty mind, who does not mean very much.

Confidence was shaken by many things that were said during the course of the last campaign. Confidence was shaken in the minds of many people, judging by the fact that they listened to the cry of "King or chaos." The first part of the speech introducing the budget should, I suggest, be spread from coast to coast and every Canadian should read it, for it is the written record of the results of the activities of the late government, and of which activities any government, Conservative or Liberal, might well be proud. This afternoon the right hon. leader of the opposition dealt fully with that fact.

In the second place, Mr. Speaker, and still along the lines of confidence, I would draw the attention of hon. members to page 2376 of Hansard where the hon. Minister of Finance (Mr. Dunning) used the following language on Friday last:

> I direct attention to the fact that in the last fiscal year nearly 62 per cent of the dominion's revenues were required to meet fixed and uncontrollable expenditures, such as interest; war and old age pensions and superannuation; care of returned soldiers;

subsidies to provinces and certain other outlay of this nature. In the year 1913-14, the last fiscal year prior to the war, only 19 per cent of the revenues were allotted to items generally regarded as uncontrollable, and even in 1929-30, when the effect of the war cost had been shown in our expenditures, the proportion was but 44 per cent, as compared with 62 per cent last year. Although it is not possible at this date, except by certain arbitrary assumptions, to make exact calculations, nevertheless it is obvious from an examination of the expenditure statements that the burden of the war cost, both direct and indirect, is even to-day a major factor in our budgetary situation.

We to-day as a nation, as part of a great empire, are definitely concerned in international affairs. We read the daily press with great care and much interest, and we realize that to-day once again over in Europe there overhang war clouds. The dispatches which we read are dated from London, Rome, Paris, Addis Ababa, or wherever it may be, but do we see a single dispatch on the war situation dated from Ottawa, Canada? Are we not a member of the League of Nations? Have not the people of this country a right to expect that those of us who are here representing them in this House of Commons should interest ourselves directly through the government in international affairs? War is preventable only when nations do not want war. Disarmament alone is not enough. Nations must be educated against war. There has grown up a generation since 1914-18 that knows not war, that had no experience with it. Figures such as I have quoted from the budget speech of last Friday are startling, and the minister says, "The burden of the war cost, both direct and indirect, is even to-day a major factor in our budgetary situation." His language should echo and reecho throughout this country to impress upon those who are young, and perhaps more foolhardy than those of us who are growing slightly older than we were, what the burden of war may mean.

There is in Canada a League of Nations' Society. Of its activities I have nothing to say. Unfortunately it is not a very prominent society. It is attempting to do its best in its own way, but does it receive support from this government? I am sure, Mr. Speaker, that confidence in Canada is the most important factor in her recovery, and one way in which Canada must demonstrate her confidence is to convince herself that in her own active field she is doing her bit to prevent war.

In the third place, Mr. Speaker, no one would question for a moment the desirability of balancing the budget. No one could question for a moment the desirability of taking steps in that direction. But what is the cost of balancing the budget? What is the cost of attempting to balance it to the degree suggested by the Minister of Finance? What confidence may be shaken in the process? Confidence! We have to-day in Canada a national radio. This is a medium that can be put to fullest use by this government for its own needs, not as a partisan government, but as the government of the nation, in an attempt to educate the people of this dominion that after all Canada has in the affairs of the nations of the world a position of which she may well be proud, and that, after all, we are not facing chaos but are, or at least were, on the road to recovery. Have we made any attempt to develop further any sort of newspaper or magazine campaign directed towards the restoration of confidence?

There also is the great question of the reestablishment of youth, on which on two occasions I have already spoken in this house. The other day some hon. member was speaking on pensions for those who voluntarily might retire from work at the age of sixty, and of what might be done in that regard. It was suggested by the hon. member for Melfort (Mr. McLean), I think, that it would cost $522,000,000 to put such a plan into effect, a figure so astronomical that even the most powerful political telescope could not even locate it. Actually the cost of such a scheme might well be estimated at around $10,000,000, and what would such a scheme mean to the youth of Canada to-day as far as the opening up of jobs is concerned? What if the deficit is $100,000,000 or $110,000,000 when the extra $10,000,000 might be put to such a service as that? To break the depression, means that confidence must be restored. I quoted from the words of the hon. Minister of Finance on April 6, referring to what the restoration of confidence had meant to the United Kingdom in connection with their housing program if in no other way.

In the fourth place I wonder, Mr. Speaker, whether it builds confidence when industry commences to lose its position in its own home market. What does it mean when Canadian workmen lose their jobs or fail to get jobs as a result of the influx of foreign goods? How far-reaching is the effect? It might be said that there are only a few jobs lost, but what does that mean to a whole municipality, to a whole industrial centre? Five or eight hundred men out of work as a result of a change in the tariff may be a very small number as compared with the total number of men at work in

Canada, but what is the effect so far as confidence is concerned? Who is going to be next? Those of us who live in industrial centres know full well the effect of the loss of a few jobs as a result of governmental action, and by a reduction of tariffs at a time such as this we are inviting the foreign manufacturer to sell in Canada, hoping, we are told, that perhaps we may be able to sell a little to him in return. Speaking on Friday last the hon. Minister of Finance, as reported at page 2368 of Hansard, said:

> Imports from the United States for the full year just ended were $319,610,706, which is an increase of 16 million dollars over the preceding year. 7·2 million dollars of this increase were recorded in the first three months of this year under the operation of the trade agreement.
>
> Over 56 per cent of our imports come from the United States. At the same time they take only 37 per cent of our exports.

One cannot listen to such figures as these without some degree of alarm. I have in my hand a report from the Department of National Revenue, showing the duty collected for the months of March, 1935 and March, 1936. In 1935 in that month, $8,395,859 was collected in duty while in the month of March of this year, $7,508,479 was collected. Thus in one year the loss of duty would be equal to one-half of the increase in sales tax revenue which the minister intends to collect if we may assume that that loss in duties is maintained for twelve months. In the face of such facts, do we contemplate further tariff reductions?

Let us take one class of goods only by way of illustration, the tariff on which is reduced by this budget. I refer to farm implements. I realize that in so doing I place myself in a peculiar position. My family's name has been closely identified with the implement industry in Canada for upwards of ninety years. Perhaps I may be accused of impropriety in introducing this subject and I do so at the hazard of being misunderstood. I should like to attempt to make my position as clear as I possibly can. I and my family have no connection whatsoever with the Massey-Harris Company, nor have I had for nearly four years. Some years ago I started to work in the shops of that company and until 1932 I was employed there. I left in 1932—I was not fired, I may say—to enter another sphere of activity. I worked in all the shops and ultimately became works manager of the Toronto factory

When I left, I left behind me in that factory a great many friends, men who had been pals of mine, men who earn their living with their hands, grand fellows in every way. As a member of parliament, I have an obligation to those men, not simply because they are friends of mine but because I know their problems. When I speak of the men in the Massey-Harris factory I know whereof I speak. I have an obligation to them and I would be remiss if I did not raise my voice in this house on their behalf. It is on their behalf I speak. I am not much interested in the implement industry as an industry, but I am deeply interested in the men employed in the industry and in their jobs. I am a protectionist. When I say "protectionist" I do not refer to the protection of industry; I refer to the protection of jobs. That is the way I interpret protection, and that is why I am a protectionist.

Mr. BAKER: That is what protection is.

Mr. MASSEY: It seems to me that the way in which we can increase our home market most effectively is by paying wages to men. The reduction of the duty on farm implements to 7½ per cent does one thing and one thing only; it spells disaster to the implement industry of Canada. This means that the jobs of 18,000 men are threatened by the introduction of this tariff.

Let me refer to one particular company, the Massey-Harris Company. In the last ten years that company has paid in wages and salaries, $37,312,000; it has paid in commissions to agents, $10,817,000; in pensions, $1,020,000, a total of $49,149,000. That is not a bad contribution to the pay-rolls of Canada. Has there been exploitation of the farmer during the course of this business?

Some hon. MEMBERS: Sure.

Mr. MASSEY: Those who do not know say, "sure." This company has experienced a loss, from 1930 to 1935, of $25,700,000. Does that look like exploitation? Then in the twenty years from 1916 to 1935 there has been a net loss of $7,400,000. Many weeks ago we listened to the Minister of Agriculture (Mr. Gardiner) reading a long list of implement prices, showing changes from 1913 down to the present day. Do hon. members know that since 1913 wages have doubled, western freight rates have increased 38 per cent and eastern freight rates, 83 per cent, and that there have been many changes in design due to the demands of the farmers themselves. For instance, there has been developed a one-way disc seeder which performs simultaneously the four operations of ploughing, harvesting, seeding and drag-harrowing. This machine sells at a saving of $286 to the farmer even though its selling price is $420.50, or the cost of four machines needed to perform the four operations it performs would total $706.50. The operating costs of those four machines would be $1.40 per acre, whereas the operating cost of the one-way disc seeder is 47 cents per acre.

The Canadian implement companies have been challenged in connection with Canadian as against American prices. It is interesting to compare American and Canadian prices in a list of thirteen major machines, including an eight foot binder, a twenty double-disc drill, a five foot mower, et cetera. Taking the prices at Oswego, Montana, and Consul, Saskatchewan, the Saskatchewan prices are only 94·54 per cent of the Montana prices. Taking prices at Sweet Grass, Montana, and Coutts, Alberta, the Canadian prices are 98·96 per cent of the Montana prices. Taking Pembina, North Dakota, and Emerson, Manitoba, the Canadian prices are 99·73 per cent of the American prices.

Will a reduction in the duties mean a saving to the farmer? That is the question. Let us see what has happened. In 1935 the total volume of implement business in the United States was valued at $360,000,000, whereas the total volume of the Canadian implement industry in the same year was valued at only $16,000,000. In 1935 one company in the United States had a turn-over in that one year greater than the turn-over of all Canadian companies in nine years. Take the years from 1926 to 1935, in some of which the duty was low. There were $139,000,000 worth of implements produced and sold in Canada as against $165,000,000 worth of implements imported into Canada. How long can an industry expect to continue with that sort of set-up?

Why should I, with no interest in the industry as an industry, stand here and attempt to plead its case? Why should I or any other member rise in this house to plead the case of this industry? Was there not a committee set up to investigate this whole matter, to give the implement industry of Canada a chance to present its own case before anything was done? Was there not a committee set up to see if the farmer were being damaged and if the implement industry were playing the game? I believe that committee is still sitting. There were handed out to the implement industry questionnaires which would require some three months to answer at a cost of many thousands of dollars, many of these dollars having been spent already, but has the industry yet been permitted the opportunity to plead its case? Why should I or any other member stand and plead the cause of the implement industry when there is a tariff board before which that industry might have appeared? For the reason that the case has been prejudiced! The alleged criminal has been apprehended and sentenced before trial. That is not British, Mr. Speaker.

[Mr. Massey.]

I am sent here by an industrial riding; I am sent here to represent the industrial worker, and so long as there is breath in my body and red blood in my veins I will plead his cause. And I say to-day that the jobs of 18,000 men are at stake. Yes, and how many more jobs are there at stake in industries which contribute raw materials? Sympathize with the farmer? Of course I do. I know something of his problem for I have been privileged to stay on farms and I know many farmers. Of course I sympathize with his problems. This country owes him a debt of gratitude which it can never repay. But will this tariff benefit him? That is the question. And will the government juggle with the jobs of 18,000 men hoping that perhaps it may benefit the farmer? And to what end? Why pick on one industry? Let us consider other commodities which the farmer buys. The price per pound of implements is 12·80 cents in Canada. The prices per pound of a number of articles the farmer uses are as follows:

| Article— | Price per pound cents |
|---|---|
| Water pail, galvanized | 11.46 |
| Steel range | 13.00 |
| Steel bed | 13.25 |
| Washer, hand | 14.46 |
| Steel sink | 15.60 |
| Davenport | 15.75 |
| Wood pump | 16.00 |
| Wringer | 16.00 |
| Incubator | 17.72 |
| Post drill | 17.40 |
| Chain hoist | 24.77 |
| Swivel vise | 25.00 |
| Churn (five gallon) | 33.50 |
| Sewing machine | 35.93 |
| Sprayer (hand) | 41.87 |
| Axe | 46.25 |

The average price per pound is 22·37 cents. These are all articles purchased by the farmer. Yes; why single out the implement industry only? Why not inquire into those industries having protection running up to 35 per cent and down as low as 15 per cent, whose products are listed above, and whose prices are more per pound than those of the implement manufacturers? Out of every $100 the farmer spends, he spends only $3 on farm implements. There was an increase in the prices of farm implements on January 1, 1936, of 3½ per cent which means, to the farmer, ten cents out of every $100 he spends; and yet there was a shout to high heaven that made the welkin ring with the hideousness of the cry.

One must admit and admit readily, that prices of commodities purchased by the farmer, implements included, are definitely out of joint with the prices of the things

he produces. But is it reasonable to expect to estimate the price of a binder in accordance with the price of a bushel of wheat and have that relationship always hold true? Yes, and why take just one industry? Among all the industries that sell goods to the farmer, why single out one and expect that a slight difference in price will readjust the whole situation for the farmer?

I have said what I have said only because I am a member of parliament representing an industrial riding and it is my pledged duty to do all in my power to protect the jobs of the people who elected me.

I am at a loss to understand the attitude of some hon. members who cry free trade in farm implements and make that cry without lack of knowledge of what they are saying when they advance the mouldy doctrine of free trade. Surely the creation and preservation of the home market is dependent upon the payment of wages. Let us assume—and this figure is the best one I could possibly obtain—that the average family food bill in Canada is $400 a year. This means that the annual family food bill of the families dependent upon the implement industry is $7,200,000 a year! Let us assume that the price of implements is reduced by the full 17½ per cent of the duty that has been taken off since the first of January of this year. That would mean to the farmer 52½ cents out of every $100 he spends. And for this are we prepared to jeopardize a market, his market, to the extent of $7,200,000? Is that reason?

In conclusion, and in words similar to those of the Minister of Finance, let it be assumed and hoped that the government of Canada is making an earnest and sustained effort to grapple with the manifold problems of the country. Confidence—it has been the keynote of what I have attempted to say to-night. Confidence—it is a great word. Confidence—it is the prime prerequisite to complete national recovery. Confidence—let every step taken by this government be a step towards restoring confidence.

Mr. J. S. WOODSWORTH (Winnipeg North Centre): I must congratulate the Minister of Finance upon his very clear and comprehensive statement. I welcome the downward revisions in the tariff; that it seems to me is all to the good, notwithstanding the position taken by the hon. member who has just sat down (Mr. Massey).

A recent writer pointed out that the ancient Romans built roads and the Chinese built walls. The Romans went forth to conquer the world while Chinese civilization became very largely stagnant. I believe there is a little parable there for us all. We cannot very well live behind walls; we must build roads to the wider society about us. But I venture to say that in these days we need to build not merely physical roads and we need to do more than lower tariff barriers; we need to build roads along new lines instead of trying to conserve old institutions and to hide behind them. Instead of doing that we should strike out along new lines. The alternative is build roads or build walls.

The minister admitted that agriculture was very far from being in a satisfactory condition, but he did not suggest any means by which we could materially help that industry. I was reminded of the statement of the Minister of Labour (Mr. Rogers) a few days ago to the effect that it was useless to repair the superstructure of our economic life as represented by our secondary industries if its foundation, as represented by our primary industry, is crumbling away. I regret that although he made that statement, he actually advocated back-to-the-land policies, and certain members talked of a better balance between the cities and the country. I would urge upon the house that it is largely useless for us to try to bolster up the secondary industries, as we have been doing in the past, and as we are continuing to do, if we allow our primary industries to languish. It is all very well to point out with pride that we have moved up from the eighth to the sixth place among the nations in total world trade. That does not help very much unless the majority of the people of this country are living a satisfactory life. I was surprised that in his excellent speech the hon. member for Greenwood (Mr. Massey), although he was able to quote quite extensively concerning the financial condition of the agricultural industry and the prices of farm implements, and although he was pleading for the workers in industry, had nothing to say with regard to the real wages paid. I should have liked to have him give at some length the wages paid to all grades of labour in the agricultural implement industry.

Mr. MASSEY: Would the hon. member permit an interruption? The average for 1935 was 45 cents an hour for all classes of work.

Mr. WOODSWORTH: Does that include salaries?

Mr. MASSEY: That includes hourly wages. Putting in salaries would make it too high; the hon. member might question it.

Mr. GOLDING: I should like to ask the hon. member for Greenwood where he gets these figures of the average wage in the implement industry.

Mr. WOODSWORTH: Possibly it is a little out of order for the discussion to go on, although I too would like to secure the source of these figures, and also the sources of some other figures used by the hon. member for Greenwood. I should like to know where he got the figures as to what proportion of a farmer's income was used in the purchasing of farm implements.

Mr. ROWE (Dufferin): Anybody can get those who wishes to work out the statistics.

Mr. WOODSWORTH: Well, possibly. I would point out, coming back to agricultural matters, that Canadian farmers were in the happiest condition before we developed industry in this country at all. At that time they lived a self-contained life. Instead of industry helping the farmers to a fuller and richer life, it has in fact impoverished the farm life of this dominion. I think we must recognize that.

Some hon. MEMBERS: Oh, oh.

Mr. WOODSWORTH: I for one do not want to go back to the past. I do not think you can turn the clock back. But I do say that a readjustment is necessary, and that in that readjustment the farmer must not be neglected as he has been in the past.

The minister tells us that industrially and commercially conditions are beginning to show improvement. He pointed out that an analysis of the record of earnings of 241 leading Canadian corporations discloses that net earnings are about eight per cent greater for the fiscal year than for the previous fiscal period. That statement in itself might be satisfactory, but let me put two others alongside of it. The second statement he made was that common factory labour was up 2·4 per cent. I was not quite clear whether that meant that the total wage bill was up 2·4 per cent or that individual wages went up 2·4 per cent. But in any case I do think it is very unsatisfactory. We find a rise of eight per cent in industrial improvement, that is for the industry itself, and only a 2·4 per cent rise in the wage bill. The minister seems not to have taken those two into consideration and placed them side by side, or he would hardly have gone on to increase the sales tax from six per cent to eight per cent, because that tax falls most heavily upon the poorest of our people. It may be said that the corporation tax was increased. That is true. But the corporation tax is very largely passed on, as the minister knows. The minister shakes his head. I am sure he must have read the financial statements of the great corporations where they definitely arrange for the corporation tax before even declaring their dividends.

Mr. DUNNING: Yes, but, if my hon. friend will permit me, the corporation tax is definitely a tax on earnings. I agree with him that most taxes are passed on, but this is a tax which is not payable unless the earnings are made. That is, it is definitely payable out of earnings.

Mr. WOODSWORTH: But it does not come out of the individual; it comes from the general public. My point is that the individual's tax is not readily passed on, whereas essentially the corporation tax is passed on to the general public.

An hon. MEMBER: No.

Mr. WOODSWORTH: In the next year's budget. It does not rest on the individual as an individual income tax does. The sales tax also is a burden on every individual consumer. It seems to me that if the minister had put those two statements of his together and looked at them carefully—the one statement that industrial and commercial earnings are up eight per cent—

Mr. DUNNING: I did not say that.

Mr. WOODSWORTH: "An analysis of the record of earnings of 241 leading Canadian corporations discloses that net earnings are about eight per cent greater for the fiscal year than for the previous fiscal period." Those were the exact words that the minister used. I say that if they are up eight per cent and factory labour is up only slightly over two per cent, we might have expected that the taxation on the industries would have been greater and that on individuals would have been lessened, instead of having the sales tax increased as it is.

The minister declares that dominion credit must be protected at all costs. In that, he represents the attitude of big business. I am one of those who challenge the attitude of big business in that regard. In a general way I recognize that our interests are all interrelated, but I do not think it follows that because big business is prosperous the great majority of the people are necessarily prosperous.

Mr. DUNNING: Neither do I.

Mr. WOODSWORTH: I am glad of that. But the credit of the country, we are told, must be maintained at all costs. That means in effect that in several western provinces we have to cut down on the costs of relief, of education, and of social services of all kinds. "Credit must be maintained at all costs!" A few weeks ago the minister said he was quite

sympathetic with the idea that there should be pensions to the blind, but under present conditions he could not find the money. The credit of the country must be maintained at all costs! Mr. Speaker, I respectfully submit that the credit of the country so-called can be maintained at all too great a cost to the mass of the Canadian people. The minister makes that argument the basis for the proposed loan council legislation. Personally I think some such legislation as that is almost an inevitable development. But I submit that it is a dangerous thing to centralize financial control unless at the same time we centralize responsibility for social services. If we are going to take the position that the dominion government should take care of our education, our hospitals, our unemployed, our old people, then a good deal might be said for some such arrangement as a loan council. But if it means, as I think it must mean, that financial men will be very largely in control and that they will assume the attitude which the minister has enunciated, that is that the dominion credit must be maintained at all costs, then I say that the situation ahead is very serious indeed.

The minister made another statement which is half true and half false, when he said that foreign trade was the very lifeblood of Canada. Well, it is consoling to know that we are to have an increase in the dressed and dyed rabbit skins that come to us from Belgium. I do not know whether that is an indication of how vital trade is to this country, but I should like to quote a statement by the dominion statistician under date of December 20, 1932. The proportions are not much different to-day, I should think.

It would appear that in 1930—

This was at the last census, I assume.

—the net value of production (i.e. value of products less the cost of any raw materials involved), amounted to $3,216,747,000 in value, whereas our exports amounted to $885,996,000. The difference was consumed in the country.

The minister exalts something like one-quarter of our entire production to the predominant position. I do not think that is a fair way to look at the situation in Canada. Foreign trade, says the minister, is the very lifeblood of Canada. Well, it should be remembered that it is only a quarter of the entire production which is given that exalted position. If we swept foreign trade aside altogether, we would still consume in this country three-quarters of the entire production. I quite agree with the hon. member for Greenwood when he urges that we should develop the home market. We should do that; we should pay wages to everyone, and see that the wages are as high as possible. That would be the surest way of taking up the apparent overproduction that we have in certain Canadian industries.

Mr. DUNNING: Who would be here to pay the wages?

Mr. WOODSWORTH: We would all be here to pay the wages. As to foreign trade I quite recognize that certain commodities can be produced to greater advantage in other countries than in Canada, and we should have a certain amount of what really should constitute trade, the exchange of the things that we could produce to advantage for the things that could be produced to advantage elsewhere, but I urge that it is not the profit motive which should lie behind an exchange of that kind. As I have said before in this chamber, I believe that the old basis of foreign trade, which is the shipping of our production in order to make profit, will have to be altered, and that the foreign trade of the future will have to be on the basis that I have just indicated.

Again, the minister says that in the fiscal year just ended our gold sold abroad amounted to $119,000,000. I like the phrase, "our gold," but I should like to ask the minister who owns most of the gold mines in this country. If I am rightly informed a considerable amount of the stock of those gold mines is owned abroad. It should be "our" gold, but it is not "our" gold. The dividends about which the minister thinks so much are paid not so much to the people of this country as to foreign investors. Who owns the gold mines? It is true that the miners get wages, sometimes very pitiable wages too, but in the gold mines they are always in danger of that dread disease silicosis, which is carrying off so many of them. We hear very little about that. Oh, no, it is not "our" disease; we do not boast of that, nor do we boast of "our" wages that are paid to the gold miners, but it is "our" gold! Again, there is in this connection something into which I have never inquired very carefully, but I should like to ask the minister to explain at some time just what are the arrangements with regard to depletion allowances. It has always seemed to me that, if we are going to make depletion allowances, one of these days, especially with the very high percentage that is allowed, depletion will theoretically be complete. My idea would be that if these mines have been alienated from the crown, and if allowances are made for depletion, once the depletion is complete the mines should revert to the crown. Why not?

Then there was a statement made by the minister which I was very glad to hear, that there was a payment of $272,000 to maintain reserves in the government annuities fund.

In this connection perhaps I should call attention to a mischievous article which appeared in Saturday Night of April 25 of this year, entitled Life Insurance versus Social Security, by some writer named Mr. W. A. McKague. I quote one statement from that article:

> The dominion government has some $23,000,000 of deposits in its post office savings bank, and some $40,000,000 belonging to those who have paid for annuities. Where is this money now? ... what we find is that there are no real assets—the money turned in by depositors and by purchasers of annuities, has been all drawn into the bottomless pit of expenditure, and has gone the way of other receipts from taxation and borrowing.

Is that true, Mr. Minister? If it is not true I think we should have a statement from the Minister of Finance. It does not seem fair that we should allow such propaganda, condemnatory of governmental institutions and containing so many misleading statements as are contained in the article to which I have referred, as well as some other articles in the same issue.

Mr. DUNNING: Did I understand my hon. friend to ask me a direct question?

Mr. WOODSWORTH: Yes, and some time I should like to have the minister answer it.

Mr. DUNNING: If my hon. friend desires to know whether those moneys are in the form of gold or some tangible form of wealth, in that case of course the answer is no.

Mr. BENNETT: They were paid into the consolidated revenue fund of Canada.

Mr. DUNNING: Yes, they were paid into that fund, as they have been from their inception.

Mr. WOODSWORTH: Then the minister regards this as perfectly safe?

Mr. DUNNING: As long as the government of Canada continues to honour its obligations these funds are perfectly safe, and I cannot conceive of a government of Canada not honouring its obligations.

Some hon. MEMBERS: Hear, hear.

Mr. WOODSWORTH: I am very glad to hear that statement from the minister; I wanted to get that. Would the minister mind explaining just how this payment of $272,000 to maintain the reserve in the government annuities fund is handled?

Mr. DUNNING: It is part of the consolidated revenue fund. From its very inception payments made by annuitants have gone into the consolidated revenue fund. The contracts represented by the annuities are a charge on that fund, which is the money of Canada. The money owned by the people of Canada is charged with the annuities. That is about the simplest way I can express it.

Mr. BENNETT: It is the same with the superannuation fund.

Mr. DUNNING: Yes, it is the same with the superannuation fund.

Mr. WOODSWORTH: I do not wish to have the time for the minister's explanation taken off the time allotted to me to speak, but possibly he could explain briefly how the payment of $272,000 to maintain the reserve in the dominion annuities fund is handled.

Mr. DUNNING: It is a payment made to bring the reserve up to the actuarial requirements stated to exist for the fund. It is to keep up the basis. Perhaps I would take too much of the hon. member's time if I were to give a detailed explanation, but I do not believe any recent Minister of Finance has been quite satisfied with the actuarial basis of the annuities fund. I can give a reason for it in two words; it is still based upon the mortality table of years ago. The expectancy of life in the meantime has increased, tending to lower insurance rates but to raise annuity rates. My hon. friend follows me?

Mr. WOODSWORTH: Yes.

Mr. DUNNING: Consequently several of my predecessors and I have looked into the matter, and at present I may tell the hon. member that an inquiry is being made into the actuarial basis of the fund. Meantime, when there is a shortage, such shortage is made up by a payment such as the one to which the hon. member refers.

Mr. WOODSWORTH: I introduced the subject simply because I had been reading the Saturday Night article a few days before, and felt quite assured when the minister made that statement, although I did not know exactly the way in which the fund was managed.

Mr. DUNNING: I am not criticizing the article; I am just trying to give the facts.

Mr. WOODSWORTH: May I also recall that the minister stated that the interest burden last year was $134,550,000, or an amount which used up 36·2 per cent of our total revenue. I should like to emphasize what a heavy burden that is.

We have heard a good deal about old age pensions, but in this year old age pensions use up only 4·51 per cent of the total revenue. Therefore, heavy though the charge

may be, it is very small when compared with what we pay to those who hold the bonds of Canada. Then, although we have heard a great deal about unemployment relief, and the terrifically heavy burden it has placed upon us, we find that relief expenditures last year were only $51,987,307, including expenditures on public works and in the drought area. Hon. members say that is an enormous sum? Yes, but it is not much more than a third of the burden entailed by interest charges.

The minister has said that we must do something to make an appreciable approach to balancing our budget. He desires to have a definite and positive program which will assure the attainment of our financial objective within a limited period. Is it not possible that the government now only entering office might have something like a five year plan, under which we could look ahead not for one year but for five years? I was interested to note that Mr. Thomas Bradshaw, president of the North American Life Insurance Company, made the following statement at the general meeting held on January 20:

> Whatever we may think of Soviet Russia's five-year plan, or that set forth in the recently issued book, The Next Five Years, and to which general support was given by a group of 152 of Britain's outstanding men and women, representative of all shades of thought, there is much to be said for the intelligent planning of the future over a definite term of years, and adhering as closely as possible to program.

It seems to me that notwithstanding the uncertainty of the future something of that kind is much better than what might be called the hand-to-mouth policy prevailing to-day. We plan only a few months ahead. I do not like to be too severe in my criticism of the government at this time, because it seems to me that it is facing a task of trying to work a system that is rapidly becoming bankrupt.

To-day the leader of the opposition referred to the sales tax as a possible indication of the approaching end of the capitalist system. There are many other indications. The large number of people on relief that cannot be absorbed into employment is a good indication that the system cannot be maintained much longer. It is true that the minister is making some little effort to balance the budget. He is not nearly balancing it this year, and I cannot see that he has given any ground for hoping that he can balance it next year. When we have reached the point where we can balance our budget only by increased borrowing, thus pyramiding our debts, it seems to me that this is another indication that something is radically wrong with the system.

The minister points out that there are two main obstacles to balancing the budget, the cost of unemployment relief, amounting to $51,987,307 and the deficit of the Canadian National Railways amounting to $42,590,000. The sum of $5,818.000 has to be added for the eastern lines, making a total of about $100,000,000. Let me point out that in this connection the minister did not mention the large amount of $134,000,000 for interest charges. That is, in singling out these great obstacles one might also have thought the Montreal Star was talking.

Mr. DUNNING: Oh, no; that is the unkindest cut of all.

Mr. WOODSWORTH: The minister mentioned the millions spent on unemployment relief and other millions spent to cover the railways deficit, but why did he not go on to point out this great burden of interest debt?

Mr. DUNNING: I had already done so; the hon. member has quoted it.

Mr. WOODSWORTH: But the minister did not point it out in that connection, and I want to point out that it amounts to almost one and a half times the sum of the entire obstacles he mentioned. Further than that, may I say that apparently the minister has done nothing towards the conversion of the enormous burden of debt.

Mr. DUNNING: My hon. friend does me an injustice. Read the speech. I am sure he would not intentionally say something that is incorrect.

Mr. WOODSWORTH: In what respect do I do the minister an injustice?

Mr. BENNETT: In reading his speech.

Mr. WOODSWORTH: I wish to point out that so far as I could gather in listening to the minister's speech he has taken no steps towards converting these bonds and lessening the debt. I have not since read all the speech.

Mr. DUNNING: If my hon. friend would permit me, may I say I pointed out that last year for the first time in years the actual interest burden of Canada decreased.

Mr. WOODSWORTH: Yes.

Mr. DUNNING: And I gave the reason why it had decreased. The leader of the opposition referred to the matter again this afternoon. It is brought about as a result of conversions at a lower rate of interest.

Mr. WOODSWORTH: Yes; as some of these bonds have matured they have been

renewed at a lower rate of interest, but the amounts are not relatively very great, and we are not doing anything on a large scale to bring down this enormous burden of interest charges. That is the point I want to emphasize. Further than that, the budget might be balanced in another way, and that is by increased revenue. I would point out to the minister that the income tax amounts to only $66,808,000. Is not that correct?

Mr. DUNNING: No.

Mr. WOODSWORTH: I will go on in the meantime. I took the figure from the minister's budget statement. One-third more would go a long way towards overcoming the obstacles which the minister sees in his way, but the minister apparently does not propose to increase this kind of taxation. Indeed, why not go a little further than income tax and make a levy on wealth? We have very large sums of money concentrated in a few hands. Why should there not be a levy on wealth in order to lessen the burden of the debt? They are doing it in other countries in one way or another. They have an inheritance tax in Great Britain, but there is nothing of that kind in Canada so far as the federal government is concerned. Why cannot we balance the budget by levying a very much greater proportion of the taxation upon large fortunes?

Mr. DUNNING: I have before me the correct figure on the income tax. I said in the budget speech:

> The increase in tax revenue is more than fully accounted for by the income tax which yielded $82,700,000 as compared with $66,808,000 in 1934-35.

My hon. friend took the figure for 1934-35, and did not allow for the very large increase which took place in income tax revenue in the last fiscal year.

Mr. WOODSWORTH: I was quoting the figure given in the statement of the minister for last year.

Mr. DUNNING: No.

Mr. WOODSWORTH: I will take the minister's figure, but I was quoting the figure for last year.

Mr. DUNNING: No, last year's figure was $82,700,000.

Mr. WOODSWORTH: I was quoting the figure for the year before from the minister's own statement of revenues.

With regard to income tax, two considerations stand out sharply in an examination of the income tax returns for Canada: (1) The folly from a financial point of view of taxing small incomes, and (2) the wide range remaining for higher taxes on the higher incomes. An analysis of the 1934 returns yields the following: 93,316 taxpayers with incomes under $2,000 paid $989,083; 6,133 taxpayers with incomes of $10,000 to $50,000 paid $12,199,435; and 307 taxpayers with incomes of over $50,000 paid $8,785,854. The income classes are defined as "taxable incomes." The minimum exemption in 1934 was $1,000. Consequently the "net income" for this group ran as high as $3,000. Therefore the revenue of $989,083 comprises the total derived from all taxpayers whose income was not more than $2,999. I would submit that in taxing small incomes the Minister of Finance is evidently not influenced by financial considerations. He could get far more revenue by taxing a little more heavily the people of greater wealth.

The real measure of the severity of income taxes is the income which is left to the taxpayer after his tax is paid. The person of small income pays his full share of the cost of government quite apart from income taxes. The head of a family with a small income pays heavily in customs taxes and in sales tax. The amount of these taxes paid by the wealthy head of a family is not a great deal more than that paid by a person of small income. Certainly the greater amount paid by the man of wealth does not increase proportionately to his wealth, very far from it. An analysis of the tax revenues of the dominion in 1934 shows that the most profitable source of revenue for the Finance minister, from the financial point of view, is the group of classes whose taxable income ranges from $10,000 to $50,000. An analysis of this group yields the following results, and Mr. Speaker, with the permission of the house, I should like to place this table on Hansard:

Analysis of Income Tax Returns, 1934—$10-50,000 Groups

| (1) Income class | (2) Number of taxpayers | (3) Total taxes paid | (4) Minimum individual income | (5) Average tax paid | (6) Minimum income after tax paid |
|---|---|---|---|---|---|
| | $ | $ | $ | $ | $ |
| 10-15,000 | 3,284 | 2,735,469 | 10,000 | 833 | 9,167 |
| 15-20,000 | 1,254 | 2,032,264 | 15,000 | 1,620 | 13,380 |
| 20-25,000 | 665 | 1,881,997 | 20,000 | 2,830 | 17,170 |
| 25-30,000 | 349 | 1,439,868 | 25,000 | 4,125 | 20,875 |
| 30-35,000 | 228 | 1,289,887 | 30,000 | 5,657 | 24,343 |
| 35-40,000 | 162 | 1,114,983 | 35,000 | 6,883 | 28,117 |
| 40-45,000 | 116 | 947,111 | 40,000 | 8,165 | 31,835 |
| 45-50,000 | 75 | 757,856 | 45,000 | 10,105 | 34,895 |
| Total | 6,133 | 12,199,435 | | | |

The first three columns of this table are taken directly from the publication of the Dominion Bureau of Statistics entitled: Incomes Assessed for Income War Tax in Canada 1934. Column 4 is the minimum income for the class and is, of course, subject to addition for exemptions. Column 5 is the result of dividing column 3 by column 2. Column 6 is obtained by subtracting column 5 from column 4.

To single out a few instances from the table above, in the income class from $10,000 to $15,000 there are 3,284 taxpayers, and the total taxes paid by this group amounted to $2,735,469. The minimum individual income was $10,000 and the average tax paid $833. The minimum income after the payment of tax was $9,167. A significent entry in the table is column 6, which shows the wide margin of income remaining after payment of tax. None of these taxpayers would be poor if his tax were doubled, and most of these taxes would stand trebling. Take, for instance, the man with an income of from $25,000 to $30,000. The minimum income he had left after the tax had been paid was $20,875. So he would be very far from poor. It follows, of course, that there is also abundant room for increasing the taxes above $50,000. The materials for detailed analysis are, however, not available. In fact, the former Minister of Finance told the house that the information was not in the public interest.

In closing, may I point out that while the minister is apparently trying to preserve a very conservative point of view with regard to public financing, the situation is very rapidly changing the world over, making changes in policy highly imperative. I might quote the concluding paragraph of an interesting pamphlet, the Formation of Capital, issued by the Brookings Institute:

> At the present stage in the economic evolution of the United States, the problem of balance between consumption and saving is thus essentially different from what it was in earlier times. Instead of a scarcity of funds for the needs of business enterprise, there tend to be an excessive supply of available investment money which is productive not of new capital goods but of financial maladjustments. The primary need at this stage in our economic history is a larger flow of funds through consumptive channels rather than more abundant savings.

I cannot see why taxation should not be definitely and consciously used for an adjustment of the wide discrepancies which now exist in the distribution of wealth in this country. The Minister of Finance the other day had this to say:

> There must always be a limit to the extent to which money can be taken from all of our citizens of Canada to be given to some of our citizens of Canada.

He had in mind that there must be a limit to social services such as unemployment relief which, in his opinion, took from all—

Mr. DEPUTY SPEAKER: I must inform the hon. member that his time has expired.

Mr. WOODSWORTH: I will just finish my sentence, Mr. Speaker. As I understand the Minister of Finance, he says that there must be a limit to these social services which involve the gathering from all to give to some, but may I point out to him that to a considerable extent his budget is taking from all of us to give to a very small group of the people of Canada. This government is becoming a vast debt collecting agency through which we turn over the greater portion of our revenues to a small group of bondholders and other people who to-day are largely the recipients of those amounts now classed as "uncontrollable expenditures," which constitute some sixty-two per cent of the entire revenues of this country.

Mr. VICTOR QUELCH (Acadia): Mr. Speaker, it would hardly be correct for me to say that I am disappointed in the budget. Realizing, as I do, that the Liberal party is a reactionary party, I do not look for any

really progressive action which would lead us to permanent prosperity. I do not believe there is any solution within the narrow confines of the present capitalist system. It is true that rates of interest on the new dominion loans have been reduced, but as the national debt is only a fraction of the total bonded debt of Canada and as these low rates are not being extended to the provinces and municipalities, it is hardly to be expected that the bonded debt of Canada will decrease. At no time during the last twenty-three years, even in times of the greatest prosperity, has Canada proceeded without going progressively further into debt. So long as we continue to operate under a debt creating system, so long shall we be bound to go further into debt.

Many of those who voted in the last elections were of the belief that the government of Canada would issue its own credit, but from the statements of various Liberals, it has become very clear that such is not the policy of the government and that it intends to still go on pledging the real wealth of Canada to the financial interests. Such action can be continued only by keeping the standards of living down to an unnecessarily low point. We shall find that the present intolerable situation will be made even worse by the placing of an eight per cent sales tax on the consumer which will undoubtedly tend further to reduce his purchasing power.

The main problem to-day is that of stimulating the purchasing power of the people to a point where it is equal to the capacity of industry to produce and deliver goods. Any necessary increase in taxation should be made against surplus incomes, that is, incomes sufficiently large that the recipients are under the necessity of spending only a portion as purchasing power.

Some people take the stand that the government has no right to issue credit against the real wealth of the nation held collectively, when it is actually owned individually. We are actually doing that to-day in the form of dominion bonds. Bonds are nothing more or less than promises to pay at a future date. These bonds are recognized as a sound basis for the issue of money, for the issue of legal tender. Legal tender is recognized by the banks as a sound basis for the issue of credit up to nine or more times the amount of money held by them. That being the case, and as the federal government issues the bonds, why cannot the government issue credit backed by legal tender, with the full resources of the nation behind it?

I believe this example has been given before, but I should like to give it again just to bring out my point. In November, 1932, the federal government sold to the chartered banks of Canada $35,000,000 of treasury notes bearing interest at four per cent. The banks increased the government deposit by $35,000,000. Then, in a short time the banks applied to the treasury board for a currency loan of $35,000,000, under the provisions of the Finance Act. The government issued the new currency and charged the banks three per cent, the security put up by the banks being dominion government notes. Why could not the government have credited themselves with $35,000,000 of currency in the first place and thereby saved the nation many millions of dollars annually? This is pointed out by Sir Thomas White in the November, 1935, issue of the Canadian Bank of Commerce Review, which states:

> When credits are created in favour of customers, whether borrowers or savings depositors, a bank must be always prepared to meet cash demands of depositors—in legal tender. This is the reason why a bank must always keep liquid to the extent found necessary under the experience of bankers in the conduct of the business along safe lines. To maintain the requisite degree of liquidity, varying with varying conditions, banks must hold a considerable percentage of the assets (about ten per cent of their liabilities) in legal tender.

When the banks received the loan of $35,000,000 in currency they were then in position to loan out from $300,000,000 to $350,000,000 at interest. The currency loan itself was based upon treasury notes, which in turn were based upon the real wealth of the nation. We claim that the nation could have issued that credit in the first place, thereby saving the people of Canada millions of dollars in interest. I know many people would call this inflation. For instance, the hon. member for Huron North (Mr. Deachman) is reported on page 1854 of Hansard as follows:

> When you give something to the unemployed you in reality give them a call upon goods; and when you do that by printing money I do not think you will get very far, because your money will not be of much value and you will find it a great deal more difficult to finance than you did before. When you borrow money what do you do? You take from people who have and give them in return a certain allowance called interest; we pay them for the use of their money with a promise, which I hope we shall make good, of repaying them in due course when the time comes. But when you print money what do you do? You start upon a course of inflation—

I am sure the hon. member for Huron North would not have us take that statement too literally. He said, "When you borrow money you take from the people who

have," and yet Sir Thomas White says, "The banks can loan up to about ten times the amount of their cash deposits." The Macmillan report states on page 34:

It is not unnatural to think of the deposits of a bank as being created by the public through their deposits of cash, representing either savings or amounts which are not for the time being required to meet expenditure. But the bulk of the deposits arise out of the action of the banks themselves, for by granting loans, allowing money to be drawn on an overdraft, or purchasing securities, a bank creates a credit in the books which is the equivalent of a deposit.

I quote from a speech delivered by the Right Hon. Reginald McKenna, in January, 1925, as follows:

I am afraid the ordinary citizen will not like to be told that the banks can create or destroy money. We do not like to hear that some private institution can create it at pleasure. It conjures up a picture of an autocratic and irresponsible body which by some black art of its own contriving can increase or diminish wealth and presumably make a great deal of profit in the process.

We find, therefore, according to these financial experts that when we borrow money from the banks instead of borrowing money already in existence, we are borrowing newly created money, and the total deposits of the banks are written up by that amount. The point is that it is new money. Therefore, if under certain conditions when we borrow money from banks it is inflation, so also under the same conditions if we borrow money from the government it will also be inflation. On the other hand, if under certain conditions the creation of credit by banks does not cause inflation, then the creation of credit by the government under the same conditions cannot cause inflation. So long as only sufficient credit is issued to balance effective purchasing power with the total collective volume of prices of goods available for distribution, instead of having inflation you have stabilization. This is upheld very well by charts of Mr. Carl Snyder, chief statistician of the New York Federal Reserve Bank. These charts were published in the May, 1931, issue of the Royal Bank of Canada Economic Review, and Doctor Donal Marvin, Royal Bank economist, commenting on them, says, in part:

This relationship between volume of production and trade and volume of credit is one of the most important discoveries which has ever been made by the statistician. It implies that there is a mathematical relationship between the volume of production and credit on the one hand and the price level on the other. In fact, by dividing each volume of credit by the corresponding volume of production, the level of prices at any particular moment is approximated.... Can it be that had the growth of credit paralleled the increase in the volume of production and trade, there would have been no substantial changes in the general price level, no major business cycles, no booms, no severe depressions? This is indeed a startling concept, affording hope that the social injustices inherent in all major changes in the general price level might be avoided by proper control of credit.

It would seem therefore, according to Doctor Donal Marvin, that so long as you do not issue more credit than the volume of production and trade, there is no real danger of inflation. Nevertheless I realize that it would be a dangerous procedure to endeavour to equate the volume of effective purchasing power with the volume of potential production of ultimate goods unless first of all effective means were introduced to control prices so as to establish a fair price level based upon cost of production. The actual level would not be so important as would be the bringing about of a fair relationship between wages and prices and ensuring that the price of one article was commensurate with the price of another. Then, once having established a fair relationship, the purchasing power of the people could be raised until it was equal to the total collective volume of prices of ultimate goods, by an issue of credit direct to the consumer. This payment would have to be made outside the present industrial system because as credit passes through the industrial system it accumulates costs in excess of the purchasing power it distributes, thereby failing to bring about an equation as between purchasing power and prices of ultimate goods.

Whilst advocating a change in ownership of the banks, I realize that this in itself would be useless unless the policy of the banks were also changed, because owing to the policy of the banking system at the present time the volume of financial credit in circulation at any given time bears no relationship to the requirements of the people. It is argued that the restriction of credit is forced upon a banking system by their knowledge of conditions. This claim, however, is not upheld by some notable authorities on banking. Mr. W. L. Baker, former superintendent of branches for the Standard Bank of Canada, in a criticism of the system and not as a monetary reformer, referring to the great deflation of midsummer, 1921, states:

The reduction of $43,000,000 in three months was not a national slacking-off of industry, but was without doubt due to the concerted action of the banks in curtailing and calling in loans in all directions, and contributory in a general way to other conditions which were calculated to stagnate industry.

So we may believe from this statement that instead of loans being called in on account of

a general falling off of business, it is just the contrary, that business falls off on account of restriction of credit by the banks, resulting in the closing down of factories and increased unemployment. This action is to a certain extent no doubt forced upon the banks on account of their practice of loaning promises to pay up to ten times the amount of their actual cash, with the result that in times of great expansion they become panicky as soon as their margin of safety has been reached.

To quote again from Mr. Baker:

> Bankers easily take fright. As demands for loans increase, in direct ratio comes their unwillingness to lend. When result of curtailment comes in decreased business activity, they raise the cry, "Now is no time to borrow; we are calling in our loans; you must restrict operations." And the cycle of deflation sets in, hastened by an ever-increasing timidity of bankers.

As an example of such panic I would refer the house to a statement made by the hon. member for St. Lawrence-St. George (Mr. Cahan) in a speech at Toronto in November, 1933. He is reported as having stated that from September, 1929, to September, 1933, $932,000,000 was taken out of circulation. No one would suggest that that was a natural slacking off of industry.

Money is termed a measure of value, but we find it at present to be a very elastic measure, at times swelling and at times shrinking, and we have placed the power of expanding and shrinking the dollar in the hands of a private monopoly so that they can manipulate this measure to their own advantage. When they expand credit at a greater rate than production the dollar shrinks, and when they restrict credit so that it fails to keep parallel with production the dollar expands, bringing about in a general way a depression with its consequent misery and bankruptcy. At such times we find the credit houses taking over these bankrupt concerns at a fraction of their real value, and later on selling in a time of expansion at a considerable profit to themselves. Such cases I have known in the west. Such power should not be placed in the hands of any private corporation, because their large profits can be made only by the general exploitation of the public.

Then, again, we are told that the banks are anxious to loan money to-day but that they cannot find reliable concerns willing to borrow. Industry is not prepared to expand until it is assured of a market for its products, and as industry fails to distribute sufficient effective purchasing power to buy back its own production, consumption has to be financed by direct relief or a program of capital goods production. This condition applies not only to Canada but to a majority of nations, with the result that every nation is endeavouring to sell more goods than it buys. But, if we take the world as a collection of nations endeavouring to sell more than they buy, the absurdity of the situation becomes apparent, resulting in international friction.

We in this corner take the stand that the main justification for foreign trade is to export our surplus production and exchange it for those commodities which we cannot produce economically in Canada. The chief point to remember is that if there is an insufficiency of purchasing power available to buy the total production of the country, there will also be an insufficiency of purchasing power available to buy the goods for which our surplus products are exchanged. Therefore we contend that the main problem confronting this government is to stimulate the puchasing power of the people until it is equal to the capacity of industry to produce and deliver goods. In the past we have endeavoured to accomplish this by production credit, and we have failed in our objective, for the three following reasons: Every creation of credit has been at the same time the creation of a new debt. By the very nature of its existence it has been interest bearing. Lastly, as this new credit passes through the present industrial system it will create as many additional costs as it subsequently cancels, thereby failing to bring about an equation between consumption and production. We therefore claim that in the future we must recognize the absolute necessity for financing consumption by consumption credits. This credit money might well be paid in the form of a dividend directly to the consumer so as to ensure as high a standard of living for our citizens as our total productive capacity might be able to supply.

Mr. NORMAN JAQUES (Wetaskiwin): I desire to make a few remarks during this debate. I wish to say something about unemployment and sound money, because I believe those are the keys to our trouble.

In bringing down the budget, the Minister of Finance (Mr. Dunning) stated that while trade had largely recovered, employment had not kept pace with production. That is true also in the United States. We have been told that the vital things to-day are to balance the budget and to put everybody to work. But I suggest that the vital thing to-day is to abolish poverty and destitution, and that the way to do this is neither to balance the budget nor to put everybody to work, because I believe that it is quite impossible designedly

to do either, let alone both. We cannot tax ourselves into prosperity, and we cannot borrow ourselves out of debt.

It is claimed that England has balanced her budget. But that is a result, not a cause. It is the result of spending vast sums of money on munitions and housing and other national programs, and her budget has been balanced only by going further into debt, while there are still two millions unemployed and half her population is undernourished. An individual may balance his budget by saving, but a nation can balance its budget only by spending more money.

Worth while employment and really sound finance are the results of sound economic conditions, which are the maximum production of goods and services, and that is absolutely dependent upon maximum consumption—the exact opposite of tightened belts. The latter policy, which is called sound money, is really unsound. For sound money is scarce money, and scarce money means underconsumption, and therefore underproduction and unemployment. What we can and ought to do is so to adapt our financial system that we can produce to the limits of our powers and consume to the limits of our desires. We can do no more, and we should do no less.

I have heard in this house a great deal in favour of hardship and poverty, and that these two conditions are necessary for the morale of the people. If this is true, then unless members of the House of Commons are supermen many of us are in deadly peril from working under very pleasant conditions and being by no means badly paid. Evidently this does not worry a number of the members. It does not worry the advocates of sackcloth and ashes; but then, of course, they are supermen. My belief is that we are no better and no worse than the people who send us here, and if it is right and proper that we should work under these pleasant conditions and should not be—as we certainly are not—destitute, then I say it is right and proper that those who send us here should work under the most pleasant conditions possible and be as far removed from destitution as this country can possibly afford.

I agree with the Dean of Canterbury when he says:

> It is a poor estimate of mankind that would hesitate to cure its ills for fear of its misuse of health.

He says, also:

> Poverty is a dangerous disease. It breeds sickness and evil manners, and in our efforts to avoid it we feed the very fires which produce the ruthless and acquisitive man.

Neither of those types is altogether desirable as a citizen; still less are they desirable as legislators.

It is proposed to encourage or to force people back on the land to do subsistence farming. This seems to meet with favour in this house, especially from those who know nothing about it and who have no intention of learning. The test is simple: Would you desire it for your wives and children? Well, I know what it means, because I have lived it. I say it is not good enough for my wife and children, and therefore it is not good enough for the wives and children of those people who sent us here. Absolutely, it is not good enough. I believe that true Christianity, sound economics and common sense are inseparable. If it can be shown—and it can be—that subsistence farming or any other unnecessary work or hardship, for that matter, is not common sense, then I submit that it will neither help to balance the budget nor preserve our morals. It will do the very opposite. In the main these people are unemployed because they have been replaced by machinery, and if the products of the machines are to be distributed those who have been displaced must be provided with enough purchasing power to buy back those products, or the machines must stop. Farming to-day is highly mechanized, yet it is proposed to turn thousands and perhaps hundreds of thousands of people into the bush armed with axes and picks and shovels, to make a living practically with their bare hands. I have seen the results. These people have no purchasing power; they cannot even buy tea, sugar or coffee, still less radios, decent linen and the other commonplaces of modern production. They cannot even send their children to school, because they have not the clothes with which to send more than one child at a time. Of what possible use are such people to the industrialist? Subsistence farming is not common sense to-day. There is much to be said for the simple life, but the simple life is not a sordid struggle for a mere existence; it is not a philosophy of "root hog or die," and it is quite impossible without economic freedom.

No man can serve two masters. No man can serve sound money and the people of this or any other country. What of the majority of those who are working in industry? Sweated wages cannot buy back the products of sweated industry. That is common sense. But if scarcity cannot be induced in the home then tyranny cannot be imposed in the factory. That also is common sense as well as true Christianity. We social crediters say that the object of industry is neither work nor wages but the production and distribution of goods

and services, and the only sound economy is that which will produce and distribute the maximum amount of goods and services with the minimum amount of work and trouble. That is pure common sense. Further, we claim that under the existing financial set-up it is impossible to distribute enough purchasing power to sell what is produced; that is a mathematical truth. The orthodox economists deny it, but they are paid to twist the facts to fit theories, whereas we try to fit theories to the facts, and that also is common sense.

Let us for a moment consider the replacement of men by machines. I remember some years ago working in a jam factory. It was a cooperative affair, and the local berry growers used the factory as much for the purpose of obtaining work and wages as they did for making jam, so that no effort was made to instal machinery. While that lasted, of course, it was all right, but after a time other companies came in who wanted to make jam, pure and simple. Well, they installed all the machinery they could and employed as little labour as possible; consequently they were able to undercut the prices of this cooperative factory. The cooperative company got into difficulty; the government foreclosed the mortgage and they went out of business. Two or three years ago I was through that factory again, and the superintendent showed me all this automatic machinery. Where I had pushed and shoved there were belts, conveyers and every modern convenience. I congratulated the superintendent upon his ingenuity and he said, "Yes, it is all very fine as a factory, but what I would like you to tell me is this: If we do not pay out the wages who is going to eat the jam?" If anyone can answer that question I should be very glad to hear it, because outside social credit I do not think there is an answer to it. It may be said, of course, that machinery as used in those factories will cause work of other kinds. I happen to know the history of many of those people who worked with me in that factory, and I can assure hon. members that to-day if they get their bread they certainly are not getting any jam on it.

What is the remedy? We believe that we must finance consumption so that what is produced can be distributed. Let us look after consumption and production will look after itself. We propose national dividends. We consider Canada to be one great going concern and its citizens to be shareholders, and as such entitled to dividends. No one is better qualified to speak on this subject than that very great Englishman, Doctor Hewlett Johnson, scholar, scientist, engineer and Dean of Canterbury.

[Mr. Jaques.]

Mr. SPEAKER: Eleven o'clock.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

---

## Wednesday, May 6, 1936

The house met at three o'clock.

### SUPPLEMENTARY ESTIMATES, 1935-36

A message from His Excellency the Governor General transmitting further supplementary estimates for the financial year ending March 31, 1936, was presented by the Hon. Charles A. Dunning (Minister of Finance), read by Mr. Speaker to the house, and referred to the committee of supply.

### QUESTIONS

(Questions answered orally are indicated by an asterisk).

BOUVIER HOTEL, VERCHÈRES, QUE.

Mr. LACROIX (Beauce):

1. Since 1930 to date, did the federal government purchase the Bouvier hotel at Verchères, Quebec?
2. If so, at what price and from whom was it purchased?

Mr. RINFRET:

1. No.
2. Answered by No. 1.

CANADIAN COMMODITY EXCHANGE, INC.

Mr. LECLERC:

1. What is the Canadian Commodity Exchange of Montreal?
2. Has this organization been incorporated, and if so (a) whether by dominion or provincial letters patent, and (b) upon what date?
3. When did the commodity exchange commence operation?
4. What is the nature of its business?
5. Does the organization deal in futures in agricultural products such as butter and cheese?
6. Has the organization received a permit from the Department of Agriculture to carry on business in futures as applied to agricultural products?
7. Is such business in futures advantageous to the agricultural industry, and, if not, can the government take measures to prohibit it?

Mr. RINFRET:

1. No information.

2. (a) Not incorporated by letters patent under the Dominion Companies Act. The Quebec Gazette, September 22, 1934, at page 3957, contains notice of incorporation by letters patent under Quebec Companies Act of Montreal Silver Exchange, Inc., incorporated August 24, 1934. The Quebec Gazette of October 13, 1934, at page 4266,

announces issue of supplementary letters patent dated October 1, 1934, changing name of company to Canadian Commodity Exchange, Inc.; (b) answered by (a).

3, 4 and 5. No official information.

6. No.

7. There is considerable difference of opinion as to whether trading in futures is advantageous.

ROSARIO TREMBLAY

Mr. WERMENLINGER:

1. Has Rosario Tremblay, of St. Joachim, county of Charlevoix-Saguenay, been dismissed from his position at the experimental farm at St. Joachim?
2. If so, for what reason?
3. Upon whose request?
4. What was the nature of the charges preferred against the said Rosario Tremblay?
5. Who laid such charges?

Mr. GARDINER:

1. Yes.

2. To make it possible to reemploy Antonio Tremblay whose services had been satisfactory but who had been previously dropped.

3. Antonio Tremblay.

4. No charges were preferred against Rosario Tremblay.

5. Answered by No. 4.

GEORGES HORACE TREMBLAY

Mr. WERMENLINGER:

1. Has Georges Horace Tremblay, of St. Joachim, county of Charlevoix-Saguenay, been dismissed from his position at the experimental farm at St. Joachim?
2. If so, for what reasons?
3. Upon whose request?
4. What was the nature of the charges preferred against Georges Horace Tremblay?
5. Who laid these charges?

Mr. GARDINER:

1. Yes.

2. To make it possible to reemploy Ludger Simard whose services had been satisfactory but who had been previously dropped.

3. Ludger Simard.

4. No charges were preferred against Georges Horace Tremblay.

5. Answered by No. 4.

SILVER DOLLARS

Mr. REID:

1. What arrangements have been made either by the Bank of Canada or the dominion government to meet the heavy demand for silver dollars in the province of British Columbia?
2. How many silver dollars can the mint produce per day, and (a) how many are they producing daily during the present time?

Mr. DUNNING:

1. The coins are issued by the Royal Canadian Mint to the Bank of Canada to meet requisitions received from chartered banks.

2. Minting exclusively silver dollars, 10,000; (a) 5,000.

*PROPOSED SURVEY RESPECTING ONTARIO AND QUEBEC TAXATION

Mr. CHURCH:

Will the government consider the appointment of a royal commission to make an immediate survey as to rights and position of the two central provinces, Ontario and Quebec, in confederation, with a view to giving Ontario and Quebec some relief under the British North America Act, from the present heavy burden of bearing approximately 80 per cent of the cash taxes of Canada, such survey to be on the same basis within the British North America Act as the royal commission which investigated maritime, prairie and Pacific rights within confederation?

Mr. MACKENZIE KING: Mr. Speaker, I think I had better answer this question orally. The first part of the question reads:

Will the government consider the appointment of a royal commission to make an immediate survey as to rights and position of the two central provinces, Ontario and Quebec, in confederation?

This is a matter of government policy, which will be made known when it is thought advisable so to do.

The remainder of the question purports really to give information instead of asking for it, and as such is not in order.

GUYSBOROUGH RAILWAY

Mr. McCULLOCH:

1. In what year was the legislation passed which provided for the construction of the so-called Guysborough railway by the Canadian National Railways?
2. What was the amount of bonds which the railway company were permitted to issue for the construction of the said railway?
3. What amount of bonds were issued and sold for this purpose by the railway company?
4. When was the contract let for the construction of said railway, and who was the contractor?
5. How many miles of road-bed were constructed under the contract?
6. What was the amount paid the contractor for his work under the contract?
7. When was the work of the said railway stopped?
8. What amount of money was expended from the sale of the said bonds?
9. In whose custody is the amount of the unexpended balance of said money?

Mr. HOWE:

1. 1929.
2. $4,025,000.
3. $3,568,564.81.
4. November 14, 1939—Dominion Construction Company, Limited.
5. 67 miles (grading and bridges).
6. $2,852,340.72.

7. August, 1931.

8. Expenditures under contract and expenditures not under contract absorbed entire sum realized.

9. Answered by No. 8.

USE OF NIAGARA RIVER WATERS FOR POWER PURPOSES

Mr. CHURCH:

1. Are any negotiations pending between the government of Canada or any officer thereof, and the government of the United States or any officer thereof, regarding the joint use of additional waters from Niagara river for public ownership power purposes to conserve the scenic beauty of Niagara falls?

2. If so, what has been accomplished?

Mr. MACKENZIE KING: Provision for the preservation of the scenic values of Niagara Falls and for the experimental diversion of water for power purposes was contained in the Niagara convention signed at Ottawa on January 2, 1929. In February, 1931, the convention failed to meet the approval of the United States Senate. The problems involved have been discussed with the United States authorities from time to time since that period, but no definite conclusions have been reached.

MAHONE BAY DREDGING

Mr. BROOKS:

1. Did the Department of Public Works have a contract with the Southern Salvage Company of Liverpool, for the dredging of Mahone bay in 1935?

2. How much of this work was completed?

3. Was the contract cancelled?

4. If so, why?

Mr. CARDIN:

1. Yes.

2. Approximately seventy-three per cent.

3. Yes.

4. To permit reconsideration of dredging requirements in the harbour.

MAJOR ROSS PLATO

Mr. LOCKHART:

1. Was Major Ross Plato employed on the staff of the Welland ship canal?

2. Has he been discharged from the Welland ship canal, and, if so, for what reasons?

3. Did he serve overseas?

4. Does he draw a pension, and, if so, how much?

5. Is he engaged in military activities; if so, what position does he hold?

Mr. HOWE:

1. Yes.

2. (a) Yes; (b) political partizanship.

3. Yes.

4. $120 a year.

5. No information.

[Mr. Howe.]

FRENCHMAN'S BUTTE POST OFFICE

Mr. McINTOSH:

How many dollars' worth of money orders, postal notes and stamps respectively, were sold through the Frenchman's Butte post office during the years 1930 to 1935 inclusive, respectively?

Mr. ELLIOTT (Middlesex):

| Fiscal year | Value money orders sold | Value postal notes sold | Value postage stamps sold |
|---|---|---|---|
| 1930-31 | $11,371.79 | $208.98 | $292.04 |
| 1931-32 | 15,625.92 | 307.25 | 409.42 |
| 1932-33 | 12,703.62 | 352.25 | 404.80 |
| 1933-34 | 16,860.84 | 615.79 | 446.50 |
| 1934-35 | 20,107.83 | 909.71 | 489.23 |

## QUESTION PASSED AS ORDER FOR RETURN

MINES DEPARTMENT METALLURGIST

Mr. BOULANGER:

1. Who selected the examiners who determined the qualifications of the candidates for the position of metallurgist in the Department of Mines, to which Mr. Farnham was recently appointed?

2. Did the examiners personally interview each of the candidates, and if not, who were the candidates not personally seen?

3. How did the examiners proceed to determine the relative merits of the candidates?

4. Upon what basis did the examiners determine that Mr. Farnham's qualifications were superior to those of the other candidates?

5. What was the nature of the examination to which the candidates were subjected?

6. Were all the candidates required to submit to the examination and who were those who complied?

7. What is the address of N. B. Davis, one of the examiners, and by whom was he selected for this duty?

8. What is the address, vocation, salary and age of Mr. W. B. Timm, one of the examiners, and by whom was he selected for the duty?

9. What are the addresses, vocations, salaries and ages respectively, of C. E. Garrett and L. P. Cliche, two of the examiners, and by whom were they selected for the duty?

## MOTIONS FOR PAPERS

RELIEF TREKKERS AT REGINA

Mr. DOUGLAS:

For a copy of all correspondence, letters, telegrams and other documents passing between (a) Sir James MacBrien and Commissioner Wood; (b) the Department of Justice and either Sir James MacBrien or Commissioner Wood, prior to and subsequent to July 1, 1935, pertaining to the arrival and dispersal of relief trekkers in the city of Regina, Saskatchewan.

Mr. LAPOINTE (Quebec East): I am sorry I cannot agree to the adoption of this motion in its present form. With regard to

(a), it has always been held that police communications are of a confidential nature. I think the house will realize that it would be impossible to have an efficient police system if such communications were subject to production in this house. I have no objection to (b), provided that the documents are not of a confidential nature, and that their production would not be detrimental to the public interest. Subject to these reservations, I have no objection to the motion.

Motion agreed to.

ST. LAWRENCE SEAWAY

Mr. CHURCH:

For a copy of all letters, correspondence, proposed agreements and all other documents, between the government of Canada or any officer thereof and the President and government of the United States of America or of any province of Canada, regarding a new St. Lawrence seaway, including any correspondence or documents regarding a new proposed waterway from Montreal and New York via the St. Lawrence and Hudson rivers through lake Champlain. Motion to include above papers of 1935 and 1936 only, and to include copy of proposed treaty by Canada and the United States which was rejected by the United States Senate, and of any amendments proposed thereto since.

Mr. MACKENZIE KING: The hon. member for Broadview (Mr. Church) is of course aware of the customary reservations with respect to the publication of the confidential communications with foreign governments. Subject to this reservation, documents asked for will be brought down.

Motion agreed to.

## PRESIDENT OF THE UNITED STATES

INQUIRY AS TO POSSIBILITY OF MR. ROOSEVELT VISITING CANADA

On the orders of the day:

Mr. S. W. JACOBS (Cartier): I should like to ask the Prime Minister (Mr. Mackenzie King) if he can give us any official information with respect to the proposed visit to Ottawa this summer of the President of the United States.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I regret I am not able to give my hon. friend any official information. It is hoped the president will visit Canada this year, but what may be possible will necessarily depend upon the president's own engagements.

## THE BUDGET

DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE MINISTER OF FINANCE

The house resumed from Tuesday, May 5, consideration of the motion of Hon. Charles A. Dunning (Minister of Finance) that Mr. Speaker do now leave the chair for the house to go into committee of ways and means.

Mr. NORMAN JAQUES (Wetaskiwin): When the house adjourned last evening I was quoting from an essay of the Dean of Canterbury on national dividends, and I continue as follows:

The national dividend is not only possible, it is ethically warranted: Justice demands it. The increase, by which men are enriched when they work in association, is a corporate and not an individual perquisite. This increment of association which comes to us through the machine, and the harnessing of solar power, and which now fills our garners full to overflowing, has been given at the price of individual craftsmanship and independence.

Far back in time man worked alone, independent of his fellows, but ineffective as a producer. Moving out of his isolation, his production increased, but at the cost of his independence. When he tilled his own land, raised his own sheep, and wove his own cloth, he was a craftsman and independent of his fellows. When he was torn from the soil, set at specialized tasks, and organized in close association with other men, he said good-bye to independence. He constructed boots perhaps, but others wove for him and ploughed for him. He could no longer stand alone. His productive powers grew but not his wealth. He was merely—I speak of workers in general—granted a maintenance allowance. That was the initial robbery.

When, however, with machines constructed still more scientifically he made not one pair of boots but a twentieth part of one, his craftsmanship as well as his independence departed. Only his maintenance remained and, in spite of the ever-increasing production which ensued, he was still rewarded with bare maintenance and no more. The robbery increased and unrest with it. And when at last the machine reached its maturity, and the robot arrived, man had lost everything: independence, craft and maintenance as well. He was palmed off with the dole and the robbery was complete.

For all this increase of riches is in reality a corporate inheritance. It is the private property of none. It springs up in an organized society, and upon an organized society it depends.

And again:

Consider it more closely, or in the miniature as it were. If a dozen men can do more work in combination than by operating singly, and if by their combined effort they succeed in so organizing their work that at last only two are needed in its performance, are the remaining ten treated justly if left to starve whilst the two who are the last to be displaced reap all the benefits? Justice surely demands that all shall share the increment, even if wage plus benefit goes to the fortunate two.

And further:

The national dividend is the alternative to sabotage. It removes irritation, disarms the social rebel, and ends the class war. It supplies the incentive for working together and makes for social solidarity. It carries the promise of a wide extension of our fundamental liberties, crowning political with economical freedom. The dividend makes every man a freeman. It takes the shackles off the manufacturer, supplying him with customers, and saving him from the threatened alternative of government control, which all too often subjects the first-class expert to the dominance of a second-class mind. It removes the hindrance to innovation in technique and equipment and encourages invention and organization.

The national dividend gives security as well as liberty.... The dividend saves us from the menace of an acquisitive society.

And further:

Dividends give choice of a profession. Talent in young inventors, scientists, musicians or writers—and every true teacher knows what abundance of talent exists—need no longer wither because "Father says there is no money in music, art, or scientific research." Neither will there be shortage of teachers when class numbers drop from thirty to ten; nor of curates when expense of training no longer debars men from entry upon the noblest of all vocations.

A new and amazingly creative society is immediately possible; a form of society secure of its maintenance and raised above the gross materialism which degrades us now; for money ceases to engross us when we leave the world of artifical scarcity as water ceases to engross our thought when we leave the sands of the Sahara. Poverty ended and the fear of want removed, then at last indeed personality has the chance to grow and man may sally forth to the noble tasks which await him and are yet untouched.

Mr. WILTON: What authority is the hon. member quoting from?

Mr. JAQUES: I have been quoting from an essay by the Very Reverend Hewlett Johnson, Dean of Canterbury, Social Credit and the War on Poverty.

An hon. MEMBER: What page?

An hon. MEMBER: Order.

Mr. JAQUES: I have heard it remarked outside that if some members would read more and talk less it might be better for the country. We offer the national dividend as an alternative to subsistence farming, sweated labour, tight belts, bankruptcy, lunacy, suicide and war. I submit that the problem is to end poverty because to end poverty is to end all these things. Our object is to enslave the machine and free mankind, but under present conditions the machine is steadily enslaving mankind. Let us suppose that a company of men have decided to cross the desert. They know beforehand that there will be no food or water on the way, so they meet and discuss plans and elect leaders, and of course they realize that everything depends upon the strict observance of rules. They will submit to the most stringent discipline for the simple reason that the rules must be kept, their very safety depending upon this. That largely has been the condition of the world up to the present, an age of real scarcity, natural and unavoidable. But having crossed the desert and having reached the land of plenty, suppose their leaders said to these men: You shall not have what water you want; you shall not have all the food you need because if you did you would be demoralized. What would anyone say of such leaders? I suggest that they would cease to be leaders and become dictators and the members of that expedition would have either to revolt or to become slaves. That is the state of affairs to-day. This is an age of plenty, and it is precisely because the people realize in a dim sort of way that this poverty is artificial and not real that so much ill-feeling exists in society. Apparently that is what is desired by those who oppose economic freedom. We on the other hand submit that if we are to preserve our political freedom we must have economic freedom at the same time or we shall lose both. Already they are lost in Russia, Germany and Italy. In those countries every man has been put to work, but in that sense unemployment has not been solved in the British empire or in the United States or anywhere else where freedom exists; and it never will be solved in that sense, for when it is there will no longer be freedom.

Mr. W. H. GOLDING (Huron-Perth): In attempting to make a few observations on the question now before the house and a few general remarks as well, I should like at the outset to congratulate the Minister of Finance. I offer him my sincere congratulations upon having been appointed to his present position. It seems to me that this country is fortunate in having as its Minister of Finance a man with the honour, integrity and sound business judgment which our hon. friend is well known to have. Our hon. friend has, I think, pretty definite knowledge of the problems with which we are confronted, for he has had practical experience as a worker, as a farmer and as a business man; and having had that practical experience he has, I believe, the confidence of the people of Canada to a degree of which we might well, I think, be proud. The Prime Minister (Mr. Mackenzie King) is to be commended for having chosen our hon. friend for this important position.

I wish to extend to the leader of the opposition (Mr. Bennett) my congratulations

upon his contribution to this debate. Anyone who listened to his address must realize that the grasp he has of our whole economic situation has been gained only by plenty of study and hard work. Let me assure him and every other member of the house that if I say anything which differs from the views of those in opposition to us I credit them with the same sincerity as I believe I have myself. I am sure we are all interested in the problems with which we have to deal and are all trying to solve them.

It is hardly necessary for me to point out that I have not been a member of this house very long, having been elected in one of the byelections in the last parliament. But during the time I have been a member and during this depression I have looked forward with keen interest to the proposals of the government, whether in the speech from the throne, in the budget, or in any other form, whereby they have hoped to improve the position of our people. I have noticed that on every occasion the government has always been optimistic and has endeavoured to lead the people to believe that the policy submitted would improve their position. I am very glad, as I am sure every member of the house is, to note that since 1932-33, which seemed to be the low point in the depression as far as Canada is concerned, there has been a slight but gradual improvement. That improvement, however, has not accomplished what was expected in the way of ending unemployment or of improving the condition of agriculture, and I am persuaded that until the lot of our agriculturists is improved we can never hope to have prosperity or to see our unemployed back at work.

As I have listened to the discussions this session, I have been pleased to hear so many members, coming from different sections of the country, speaking in praise and satisfaction of the way in which the government has endeavoured to handle the problems that have been brought before it. If we have given the matter any study at all we must realize what a tremendous problem it is to formulate a policy which will be entirely acceptable. Realizing the vastness of this Canada of ours, the varying needs of our people, and the different ideas and viewpoints which are bound to prevail in different sections of the country, we must recognize that skilful leadership is required to formulate the policies which have been endorsed to the extent that the government's policies have been endorsed thus far this session. I think it must be a source of satisfaction to every member of the government to see how generally their policies have been supported.

In speaking on this question this year, I cannot but be impressed—and I imagine the feeling is common to many other members who have spoken since this session began—with the tremendous change that has occurred in the personnel of the membership as compared with what it was when parliament was dissolved last July. As we recall some of those who were then members of this house, our thoughts naturally go back to some of the debates which took place at that time and in which they took an active part. When our friends of the Cooperative Commonwealth Federation group moved their amendment to the address this year, I could not help recalling that in 1934, in the debate on the address, the Co-operative Commonwealth Federation or independent group submitted what I think was considered to be a very unusual subamendment. The amendment moved by the official opposition on that occasion was, of course, to the effect that the government had lost the confidence of the country. In view of the results of the various byelections, in which government candidates were repeatedly defeated, it was my opinion that the official opposition were justified in moving an amendment of that sort, which, of course, was a want of confidence motion, and of putting themselves on record to that effect. But in view of what happened to the Cooperative Commonwealth Federation candidates who appealed to the people for support, I could not understand then, nor can I understand now, how they were justified in submitting the unusual subamendment to which I have referred, and which was to the effect that not only had the government lost the confidence of the country, but the official opposition had also lost the confidence of the people.

Miss MACPHAIL: Well, they will in five years.

Mr. BLACKMORE: Less than that.

Mr. GOLDING: If I remember correctly, it was the then hon. member for Acadia who submitted that subamendment; and, by the way, I always had a very high regard for him. If we reread the debates which took place at that time we cannot but be impressed with the fact that the then leader of the opposition (Mr. Mackenzie King) had pretty definite foresight and knowledge when he moved the amendment which he did. Certainly his opinion was amply confirmed by the result of the vote which took place on October 14 last. I think we must all admit that the people have expressed in no uncertain terms their lack of confidence in the late government and, also, in those who submitted the unusual subamendment to which

I have referred. The Alberta group, who, I understand—when they first came to the house I was not a member—were in the first place Progressives; then, I think, United Farmers of Alberta; then Cooperative Commonwealth Federationists—

Miss MACPHAIL: Mr. Speaker, may I correct the hon. member? They were United Farmers of Alberta when they were elected, and they were United Farmers of Alberta when they were defeated last year.

Mr. McLEAN (Melfort): They were Co-operative Commonwealth Federation and Progressives.

Miss MACPHAIL: Is that in the Parliamentary Guide?

Mr. GOLDING: I was not then a member of the house, and I did not take it. But what I wanted to say is that the group which moved that subamendment were completely wiped out, while those who, they contended, had lost the confidence of the country were returned with the largest majority ever given any straight party in the history of Canada.

Mr. POOLE: I would like to point out that it was not the Liberals who wiped them out.

Some hon. MEMBERS: Order.

Mr. GOLDING: The majority is now so large that there is not sufficient seating capacity on this side of the house, and the government whip has found it necessary to provide on the Speaker's left seating accommodation for government members, something that has never before happened, I assume, in the history of this house. There are some who try to minimize this victory by telling us that only thirty-five out of every hundred voted for the Liberal party. Shortly after the election I noticed a summary according to which the Liberal candidates polled an average vote of something like 8,000; the Conservatives polled about 5,800; the Social Credit, 3,600; the Cooperative Commonwealth Federation, 3,300, and the Reconstruction party, 2,300. That is the average, not for those elected but for the total candidates in the field. I merely cite those figures; any one who wants to get any comfort out of them can have all the comfort he wants.

With reference to the Alberta group which has disappeared, while we may not have agreed with their ideas or their viewpoint, we recognized that they were always diligent in their duties. I believe they were honest in their convictions; they did endeavour to improve the situation for their constituents, and they did contribute some worth while ideas to the debates of the house, in which they always took a very active part. I know they will be missed very much indeed. The same could be said of many members who were in this house last session but who, as a result of the election, are no longer with us.

As I pointed out, Mr. Speaker, one cannot help but be impressed with the changes that have taken place. Of the cabinet that formerly occupied these front benches but very few remain. Some resigned because of ill health; some went to the senate and others endeavoured to secure safe positions where they would not be required to face the electors of their constituencies. All these have been contributing factors to the many changes that we noticed when we took our places in the house at the opening of this session. I should not like to overlook the fact that as a result of the election we have in this parliament another lady member in the person of the hon. member for Yukon (Mrs. Black), who I am sure will prove to be a useful member and who is to be congratulated on her success in the far away Yukon. Then, too, we have in the far corner a new movement represented by the social credit group. While the social credit theory has been advocated in this house before, as well as in the banking and commerce committee by Major Douglas in 1934, this is the first time any group has been elected definitely to advocate the social credit theory in the House of Commons. In the province of Alberta we have a government pledged to put these theories into effect. I want to say that the leader of that government is a native of my home town, a gentleman whom I know well, and who, while living in our town, was highly thought of and highly spoken of. As a young man he was one of the finest athletes you would want to meet. Naturally, since he is a native of my own town, I am anxious to see him make good. Therefore I want to appeal to my colleagues on this side of the house to give a good hearing when our social credit friends endeavour to present their views. After all, Mr. Speaker, I think we are all interested in trying to solve the problems with which we are confronted, and we should take the best of our collective ideas. I just leave that thought with my hon. friends on this side of the house.

Now I should like to say a few words in reference to my honoured leader (Mr. Mackenzie King). As we occupy our places to-day, and as we view the results of the election, I think we can all agree that the Prime Minister is certainly deserving of our sincere congratulations upon the splendid victory achieved and upon the confidence that has

been placed in him by our people in this critical time in our country's history. The citizens of Canada have confidently placed in the hands of the Prime Minister and his colleagues the task of trying to restore trade and industry in order to give employment to many who have been unemployed for years. It must be a source of satisfaction and pride to the Prime Minister to find that after occupying the position of leader of his party for some seventeen years and the important office of prime minister for nine years, the people should again turn to him and his followers in such a definite way and ask them to reassume control of the country's business. As I pointed out, on October 14 the Canadian people indicated their confidence in the Liberal leader and in Liberal policies by the most overwhelming vote on record. It was a tremendous victory, but I want to remind the government that this wonderful victory carries with it great responsibilities. As supporters of the government I think we should all realize that we shall be expected to do our utmost to solve the problems that we know are impeding the progress of this country and in many cases making it exceedingly difficult for our people to carry on. We should make every possible effort to put into effect the policies which were submitted to the people for approval, the policies of which they did approve and which I know they will expect to see implemented. I think the government should be congratulated upon the effort they have put forth and the progress they are making in carrying out that undertaking.

I should like also to congratulate my honoured leader, the Prime Minister, on the attitude he took immediately before and during the campaign, when he absolutely refused to enter into any promising contest, in which each candidate would endeavour to promise more than his opponent. It does appear to me, Mr. Speaker, that the people are fed up with this sort of electioneering. It is utter foolishness that we should try to kid ourselves and the public into believing that governments can wave some magic wand and transform things overnight. It simply cannot be done, and as far as I am concerned I made that perfectly clear to my constituents. All that any government can do is give sound, sensible business administration; I think the people expect that from any government, and they do not expect anything more.

During the campaign the Prime Minister relied entirely on the program which he submitted to this house, on behalf of his party, in February, 1933. That platform was not formulated on the eve of an election in order to win a snap verdict. The policies embodied therein were placed on the records of the house two and a half years before the election, and I am persuaded that the great mass of our Canadian citizens gave far more attention to these policies than was given by many who were then members of the house and by many candidates in the recent election. Notwithstanding the fact that these policies had been placed on the records of the house and had been given to the electors in various by-elections in which splendid victories had been achieved it was repeatedly stated during the election that the Liberal party had no policy, no program and no platform. I confess I was surprised to hear that statement made so many times by those who, to say the least, should have known better, and in my opinion they did not add to their prestige by repeating them. On the eve of the election, when the present Prime Minister went on the air, the people, some of whom were expecting sensational promises, were eager and anxious to know what he would have to say. When he simply reiterated the statements he had made in this house, and frankly told the people he would stand or fall on that platform, I can assure him it was a source of satisfaction to every one of his followers throughout the land. I say to the government that the people expect these policies to be implemented.

We should profit by experience. We should not overlook the fact that five years ago last July there was elected in this country a supposedly strong government, a government that had sufficient numerical strength to put through any measure it deemed to be in the interest of the country. That government had practically a free hand to enact its legislative program without having to cater to independents or oppositionists of any kind. It was conceded by all at that time that the then government occupied a very strong position. I think it is conceded also that that government did not long enjoy the confidence of the people. There was reason for that. I doubt very much whether a government was ever elected from which so much was expected, and I doubt also whether a government was ever elected which had given such definite promises as to what it would accomplish. I am not for a moment questioning the sincerity of those who made them, but promises were made that seemed quite impossible to fulfil, such as the promise to end unemployment. Through that failure to fulfil its promises the government lost

prestige, and it was a significant thing that notwithstanding its numerical strength in the beginning, on the eve of the last election we found cabinet ministers giving up their positions in unprecedented numbers. There was of course a reason for that; for during the late government's term of office there were from time to time strong indications that the policies which were being put into effect did not meet with the approval of the people. There were the by-elections, in which their candidates were repeatedly defeated. Provincial elections also indicated that the people were far from satisfied. With all these indications of dissatisfaction it is little wonder that on the eve of the general election cabinet ministers were deserting their leader who five years before had placed them in these important and prominent positions. True it is that there were those who filled the breaches by accepting portfolios, but many of them were swept aside by an avalanche of votes against themselves and their government. With the exception of the province of Alberta public opinion as expressed by the ballot indicated that the Canadian people believed that the policies of the Liberal party as outlined by its leader were best suited to the needs of this country. I again urge the government to see to it that these policies are put into effect.

These are some things which we should endeavour to do. We should endeavour to reduce the cost of government. This is a matter which has been discussed many times and on many platforms. Indeed I referred to this question when I spoke on the budget in 1934. It is a question that can be taken up in the federal-provincial conference. Then we should endeavour as far as possible to get back to a condition under which the members themselves will have to take more responsibility. In this way I believe the cost of government can be reduced, and the burden of taxation which is crushing our people can be lightened. We should also endeavour in every way possible to lessen the spread between the price that the basic producer receives for his product and the price he has to pay for the commodities he has to purchase. It is essential that this be done if Canada is to come through.

We should economize in every way possible in the expenditure of public funds. I stand behind the Finance minister in his endeavours to achieve that end. I confess I have been surprised, in listening to the discussions this session, to hear suggestions made which if put into effect would involve the expenditure of many millions of dollars. Hon. members complain about the sales tax. I assure them there is no one in this house who is anxious to have a sales tax of eight per cent, but when they suggest enormous expenditures I say that if we are going to do that sort of thing we must not complain about taxation. The municipalities and the provincial governments are complaining that they are not able to meet their obligations, and they ask the federal government to come to their assistance. But we must keep in mind the fact that the federal government derives its revenue from the pockets of the taxpayers, and unfortunately too often they are the very taxpayers that the municipalities and the provincial governments claim they cannot tax any further. In all fairness to everyone we must keep that in mind when we are making requests for our constituencies. In listening to the discussions in this house and reading the demands that are made, one would think there is supposed to be some sort of reservoir in connection with the federal Finance department out of which all could take sufficient to satisfy their needs and never touch bottom. The sooner we get rid of that idea the better it will be for all concerned. There are those who suggest that we ought to print money, or that the government ought to issue credit and currency without any interest, and all that sort of thing. I am not going to attempt to debate that question. Personally I have sufficient confidence in the gentlemen who are now occupying the treasury benches to believe they will go as far as they possibly can and as far as they think it is wise to go along this line. I leave the matter at that.

Another thing I think we should do, although I know there are some hon. members on the other side who will not agree with me, is to reduce to as low a point as possible the tariffs on essential articles. Now is the opportune time to do it, because I am satisfied that many countries which have been trying to make themselves prosperous by sending trade barriers skyrocketing are ready to consider a reduction in tariffs. This, therefore, is the time to make new trade arrangements as quickly as we can.

I listened to the discussion last night of the implement business and the position of the industrial worker. I have heard these discussions many times. I have been an industrial worker myself and I am as much interested in the industrial class as anybody in this country, but listening to the discussion last night I was surprised to hear some of the statements that were made. I venture to make this assertion, that if one will look into the books of the machine companies since 1890, to go back that far, it will be found that

during the years a Liberal government has been in power these companies have made more money and been more prosperous than at any other time.

My hon. friend from Greenwood (Mr. Massey) speaking in the debate last night said:

> I am sent here by an industrial riding; I am sent here to represent the industrial worker, and so long as there is breath in my body and red blood in my veins I will plead his cause. And I say to-day that the jobs of 18,000 men are at stake.

He was referring to the implement industry. I have in my hand, Mr. Speaker, figures supplied by the bureau of statistics as to the number of men employed in the implement industry since 1920, and I find that during the nine full years from 1922 to 1930, both inclusive, the average number employed in the implement industry was 8,780.

Mr. MacLEAN (Prince): He was only ten thousand out!

Mr MASSEY: Will the hon. member permit an interruption?

Mr. GOLDING: Certainly.

Mr. MASSEY: The figures just given by the hon. member are absolutely incorrect.

Mr. McLEAN (Melfort): They are bureau of statistics figures.

Mr. GOLDING: I do not wish to quote any figure that is not correct, but when I get a table of figures like this from the bureau of statistics I accept it.

Mr. MASSEY: The figure of 18,000 includes those who are employed directly in factories and those who are indirectly employed in the warehouses, agents and all that sort of thing.

Mr. McLEAN (Melfort): The latter class would be required if all our implements were imported from other countries.

Mr. GOLDING: The hon. member for Greenwood said last night:

> And I say to-day that the jobs of 18,000 men are at stake. Yes, and how many more jobs are there at stake in industries which contribute raw materials?

Well, Mr. Speaker, I am giving the figures of the bureau of statistics on the implement industry, and they show that the average number employed in the industry from 1922 to 1930 was 8,780, and that the average number employed during the last four years—I have the figures only up to 1934—was 3,500. They also show that the average wages and salaries paid in the nine years from 1922 to 1930 was $1,206, as compared with an average of $1,010 for the last four years. I want hon. gentlemen also to note this: The average production per annum in the nine years from 1922 to 1930 was in round figures, $31,723,000, and the average for the last four years was $7,457,000. So that I do not know why any industrial worker should get so enthusiastic about high tariffs. Of course I appreciate the fact that these are figures for previous years and that we have the conditions of the present to deal with, but so far as that is concerned I would be quite willing to go back to 1890 for figures on this question. I cannot understand, Mr. Speaker, how people will get so enthusiastic for a high tariff with figures like this before them.

What is more, in 1929, the last full year the Liberals were in power, there were in operation in this country sixty-two implement plants, and in 1934 there were only thirty-five, not much more than half. Those are figures supplied by the bureau of statistics. Yet during the last election, and we heard the same thing in 1921, hon. gentlemen opposite told the people that if the Liberal party came into power these workers would be out of employment. I think the industrial worker is pretty well fed up on that sort of thing, and I speak as one who has had practical experience for many years.

There is another point I want to make.

Mr. SPEAKER: I must inform the hon. member that he has spoken more than forty minutes.

Mr. T. L. CHURCH (Broadview): Mr. Speaker, coming from the industrial province of Ontario, I think the budget will be of very little help to the industries of our province or to agriculture.

Those who sit in this part of the house have always had a consistent tariff policy for the people of Canada, which policy through the dark days and the good days has proved to be the only salvation of industry and of agriculture. We believe in a protective tariff, brought up to date to meet any abuses which may have got into the system, a tariff that will serve not only for revenue purposes but to protect the working people of this country. That has been the consistent policy of the Conservative party since 1878, and it has made Canada the industrial nation she is to-day. We believe in a fair and equitable application of the doctrine of protection on behalf of the Canadian people. A right application of the doctrine of protection, brought up to date, will meet all our economic ills, whether in the maritime provinces, the central provinces, or right across the country to the Pacific coast province.

What is that doctrine? Its objects are twofold: the preservation of our own work for our own workmen, and of our own markets for our own products. But this budget forgets all about the home market. It forgets all about the industrial and suburban worker. Industrial ridings like Hamilton, London and parts of Montreal and Toronto stood fast in the last election against all the propaganda which was put on the bill-boards, "Vote Liberal, beat Bennett and bad times, and end unemployment." I come from an industrial city which has been built up by protection. Away back in the early seventies many people left Toronto and as a result of free trade Chicago became the third largest Canadian city. What have we in this budget? On the one hand, we have the peak of taxation, the highest taxation we have ever had, and on the other, we have the other extreme, the lowest protection ever given in this country. This particular budget will act as hangman and undertaker for the great agricultural implement industry. The farmers may save a few dollars in buying their machines, but before long they will rue the day because as soon as the American implement trust finds out what is going on over in Canada, up will go the price of machines. That has been the history of the industry on both sides of the border.

The primary function of this budget is to take $30,000,000 in cash from the taxpayers in the industrial provinces. That is where the money is going to come from. I notice that the treasury benches are practically empty this afternoon. Many of those who sit there seem to consider that the bringing down of the budget should be celebrated by a holiday. There are enough people away on holidays without this house being practically vacated when the budget debate is on. This budget means life or death to the merchants of this country and yet the members of the press gallery and most hon. members retire from the chamber. I do not know what is going to become of the industrial workers.

The sales tax is being raised to eight per cent, a prohibitive rate. Six or seven years ago there was almost a rebellion in the United States against a proposed sales tax. The workers rose up in all the large cities and protested, with the result that the government had to come to time. When the new deal was brought into being by the present president, the sales tax policy was withdrawn. The sales tax is one of the innovations of modern times. It is an imposition that is passed on to the consumer, the working classes, the only man not protected to-day. The sugar tax remains.

I notice that the corporation tax is to be increased from 13½ per cent to 15 per cent, and the rate in connection with consolidations is increased from 15 per cent to 17 per cent. The Minister of Finance (Mr. Dunning) has announced a deficit of $162,000,000. The minister has been everything by fits and starts on the tariff, and nothing long. When he was out on the prairies he was a free trader. The political party opposite has always been on the tariff everything by fits and starts and nothing long. The farmers in the west have been told that their enemies are the manufacturers east of the great lakes, but their greatest enemies are really west of the great lakes. I refer to the middlemen and profiteers, the elevator combine, the grain exchanges and the dealers and gamblers in futures. They are more deadly enemies of the man who grows grain than is the agricultural implement industry east of the great lakes.

I am for the protection of the jobs of the people in the province from which I come. The minister has said that there is a deficit of $100,000,000, but the way I figure it this deficit is about $162,000,000. This is a staggering amount. The country is on the verge of bankruptcy. These taxes will come from the earnings of the industrial workers in Ontario and Quebec. There are not many hon. members from Ontario present in the chamber, although some of those who sit to my right have been always in attendance. However, there are some left here to protect the old province of Ontario.

Drastic reductions have been made in the duties on gasoline, automobiles and agricultural implements. No doubt these reductions have been made at the instance of the Prime Minister (Mr. Mackenzie King). During the debate on the reciprocity trade agreement that right hon. gentleman said that he hoped the Minister of Finance would bring the tariff down still further from 12½ per cent, and rates on agricultural implements have been reduced now further to 7½ per cent. This is a sort of Alphonse and Gaston performance from one minister to the other, an effort to make a political football out of the agricultural implement industry. Wait until they see what happens to the farmers of Ontario. This industry employs 18,000 men altogether many of them in the city of Toronto. I notice that the hon. member for Parkdale (Mr. Spence) and the hon. member for Davenport (Mr. MacNicol) are present this afternoon. The greater parts of

wards five and six were built up after the national policy came into effect. The Massey-Harris industry is located in this part of Toronto where their workers also live. Hundreds of homes were built by them and a home market for the farmers was provided in the Toronto district by them for the farmers in the counties of York, Peel and Ontario. These workers will have mostly now to go to the United States.

I notice that the countervailing duties are brought to life again. These were introduced by the minister in his budget of six years ago and are apparently thrown out as some sop to the industries in view of reciprocity. I suppose this has been done because of what some hon. members heard when they went back home over the week-end. This parliament never meets without making millionaires out of some and paupers out of others. This budget, following as it does the Canada-United States trade agreement of a month ago, is going to have a devastating effect upon the industries of Canada. Spring is here; May 1 is past, and many industries were going to take on additional workers, but now that cannot be done because of the uncertainty and doubt and burdens imposed on business conditions under this tariff. No business man will be able to expand his business and the result will be that the depression will be continued. I do not know of any greater blow delivered to the unemployed of this country during the past five or six years than this budget which will make millionaires out of some and paupers out of others.

If there is one thing for which the previous government could be commended, it was the enactment of the Farmers' Creditors Arrangement Act. Eleven thousand farmers who owed $51,000,000 have been able to reduce their liabilities by more than $15,000,000. The saving in interest charges has amounted to $1,228,000. This was a most remarkable achievement in a time like this. The farmers were freed from the burden of their mortgages; they were given a chance to have a broader outlook for the future. What is more important, they were kept on the land. By legislation passed last session, this act was extended to the fishermen of the dominion. The right hon. gentleman who leads this party (Mr. Bennett) announced in his radio addresses that this legislation would be extended to the industrial workers. No doubt this extension would have been put into effect had it not been for last October. This record of achievement has not been excelled even in the United States. I have a copy here of the home owners' loan act and the housing act in the United States which has saved the homes of one million farmers and others, but if we consider our population, their achievements have been exceeded by the Bennett acts for our farmers, and the farmers have been left in their homes on a new basis to cope with the future.

I was very much disappointed on hearing the attacks made on the agricultural implement industry. With this budget the International Harvester works in Hamilton will be able to or may have to close up entirely. All the implements now manufactured there can be manufactured in Chicago and shipped to Canada as the protection here will not equal the taxes here. This company will be able to save the Canadian taxation made up of federal and municipal taxes. They will be able to manufacture in Chicago under sweated labour and child labour conditions and under conditions permitting child labour. We should not forget 1880 when there was a great exodus to the city of Chicago. As the late mayor of Chicago, Carter Harrison said, that city became the third largest Canadian city in the world. The plight of the three main implement companies will be terrible. The Massey-Harris Company lost their export market because of the depression abroad and their home market is now being taken away from them with the reduction in their protection to 7½ per cent. That protection will not pay the dominion, provincial and municipal taxes on their plant.

I may say that the raising of the tariff does not of necessity mean a rise in wages. It gives the producer larger markets at home and reduces the cost of production. The whole history of this industry in Canada shows that the reduction in the tariff gives the cream of the market to alien manufacturers, and the moment they crush their competitors prices go up again with a jump and the consumer is forgotten. This budget will practically ruin this great industry, in which 18,000 Canadians, many of them returned soldiers, are engaged. The industry manufactured $26,000,000 worth of agricultural machinery in 1924, and now it is jeopardized. I am not pleading protection for the manufacturer's sake but for Canada's sake and for the sake of the jobs of these men. I believe in protection to protect the consumer against unjust prices, just as I believe in a truly protectionist policy to protect the manufacturer against unjust and unfair competition. I am not here with any brief for the Canadian manufacturers of agricultural implements, but I am concerned about the jobs of Canadian

workers in Canada. We do not want to see too many Canadians driven out of the land for which they fought at the risk and hazard of their lives.

If one-tenth of the time that has been devoted in this building to the Hon. Mr. Sage were devoted to a consideration of the problem of the unemployed it would be far better for the country. The government has come to worry over Mr. Sage. Well there are other sages but not of that type. The best informed sage is the man on the street; he knows how this tariff will affect him and he is sick and tired of the way the present government is playing the game of politics in this House of Commons in the committees and on commissions the game of the ins and the outs. We have no committee on unemployment but we have a committee investigating Mr. Sage. The government has been in office for six months and what has it done for the unemployed? Nothing. And we have no committee on unemployment. But the government has seen to it that Mr. Sage should be the star of a committee.

While this has been going on Mr. consumer has been relegated to oblivion and with this eight per cent sales tax the average citizen will be unable to buy anything. The textile and clothing manufacturers have got their goods on the shelves of the stores and now they have done that the government comes along and imposes an eight per cent sales tax so that the average citizen not being in a position to buy these or any goods, the goods will remain on the shelves till next fall. The situation is aggravated by the fact that people with motor cars will cross the border and buy goods of $100 value in the cities bordering on the great lakes at the expense of our retail merchants who pay taxes. And what is the great sage of the Labour department doing? I do not see him here this afternoon but it has been announced that he is going to Toronto to deliver an address—to whom? Is he going to address the working classes and read Carlyle to them? No. He is going to address the Canadian Manufacturers' Association. I hope that while he is there he will visit some of the retail stores on Queen street, Danforth avenue, Yonge street and other business sections and find out from the retail merchants what they think of this new policy of enabling the owners of motor cars to go to the United States and bring back $100 worth of goods. What will become of these merchants? We saw the suffering of these men when the mass buying investigation was going on. Instead of looking into the plight of these men the house has been engaged in investigating Mr. Sage. What does the man out of work care about Mr. Sage? The sooner this sort of thing is abolished the better.

The government has done nothing to help to provide jobs for the working classes. It seems to me that it is time for the Minister of Labour to announce a change in the name of that department, for under his auspices it has never been a department of labour. The sweatshops and child labour are flourishing as never before. Look at the condition to-day—child labour, combines in restraint of trade, chisellers, and banks paying their young employees, after two years, $33 a month. So that we find the statement being made that it is no wonder some of these men are forced to take money out of the till once in a while. Why does not the minister regulate this? Why is he not up and doing when he has the report of the mass buying commission? What does he want Mr. Purvis of St. James Street for? That gentleman had better bring about labour wages and proper conditions in the Bell Telephone Company, the Sun Life and all these other companies—one in my own constituency—before weeping copious buckets of tears for the industrial workers of the country. I say that the department should change its name and should be known, not as the Department of Labour but as the Department of Capital. That is all it amounts to under the present Minister of Labour. I want to know the time and the place where the present government ever did anything to protect the consumer or to give Canada relief from sweatshops, child labour and chisellers, who have made a Roman holiday out of the exploited worker, as the investigation of last year shows. This government does nothing but refer to the supreme court the social legislation passed by the late administration.

What has the government done in this budget in connection with unemployment insurance? One of the planks of the Liberal party's platform in 1919 had to do with sickness, unemployment and health insurance. What has become of that? After seventeen years not one word about it is mentioned in the budget; there is not one word for the workers. Yet we have a labour department. The minister, a former college professor, has been advising people to go back to the land. There is nothing to go back to the land for except starvation; for the men on the land cannot make production costs under this free trade policy. Why do not some of the college professors themselves go back to the land? Why does not the Minister of Labour advise some of the manu-

facturers to spend three or four months on the land? Why does he not advise Charlie Burton of Simpson's store to go back to the land? That gentleman snaps his fingers at parliament. He proposed a policy last summer for the regimentation of youth. Why does he not go back to the land? He can snap his fingers at parliament; he can snap his fingers at the fourth estate and say, "I dare you to report the proceedings of a committee of the House of Commons because if you do you will lose your advertising to-morrow."

At Washington an investigation has been held into the newspaper business, and you would be surprised to read what I have been reading. Last session the senate here threw out a bill intended to cope with that situation and disclose the identity of ownership. The press of the United States is being corrupted with propaganda. I have here the proceedings at Washington and they have crossed into Canada, and we have seen what they have been attempting to do to destroy the press, this great protector of our liberties. For, let me say, we have a splendid press in Canada and I wish to speak in admiration of it as a unit. The press as a whole has done wonders and admirably during these dark days of depression. If we had not had a courageous public spirited press throughout Canada the state of affairs would have been worse. This parliament should come to the support of the free press of this country, both the urban press and the rural papers which are doing so much to maintain the free institutions of Canada.

In my opinion this large sales tax will mean the end of the capitalistic system. This government has done more than any other agency, by means of this budget to let in the socialists in 1940, or 1945 at the outside. A wise Frenchman once said, "With what little wit the world is governed." When he wrote those lines he must have been thinking of Canada under the present government, because after all these commissions and committees and subcommittees finish their work they will almost rival the celebrated committee of 100, the committee which, under Liberal auspices in the province of Ontario, was to close the bar and save the boy. Once they closed the bar they forgot all about the boy, and the bar is reestablished in a new form. Now that all these commissions and committees have been reappointed, we find that the House of Commons is just going through its paces; that parliamentary government is a farce; that we have no real parliamentary government here because in all these proceedings the house, as I say, is just going through its paces; the real debates and work is done behind closed doors in a star chamber. The executive and caucus and the main problems of government are settled in secret. What will the people back home think of this system of commissions and committees and subcommittees? You have as a result the government of Canada reduced to what? To a government of caretakers; that is all they are, since the powers of parliament are being crucified and its functions handed over to useless commissions. The government have no cause to worry over Mr. Sage. I think if they appointed Mr. Sage to the senate it would be a proper recognition of what he did, or give him a gold watch and illuminated address.

Some hon. MEMBERS: Hear, hear.

Mr. CHURCH: I hope that the Minister of Labour (Mr. Rogers) when he meets the Manufacturers' Association to-morrow night, will tell them that in Canada the economist has been exalted to a position he is unable to sustain. Economic thought is very useful, but no nation can rule itself by the advice of economists. Their advice varies and their conclusions are as far apart as the poles. In the last century science came, very rightly, to occupy a high place in the opinion of the people of the world. But economics, as preached from the housetops by the Minister of Labour and his friend the late Thomas Carlyle, is not and never has been a science like physics, or medicine or chemistry; it has never been able to predict anything with accuracy; its convictions are all in the realm of opinion and doubt, and you can take your choice from among them.

The main fight in Canada is not with Liberalism, but between socialism and communism. The man in the street is sick and tired of the way the politicians are playing this game. A truly national policy would not allow the Canadian farmer or any other consumer to be stung for an unfairly high price for agricultural implements, automobiles or any other unit of Canadian industry. A truly national policy would provide an excise duty that would put into the public treasury every cent charged for agricultural implements or automobiles or any other product manufactured under protection at a price which represented fair wages to the workman and a fair profit to the manufacturer. I know this proposal will be met with the shout of "paternalism." I would sooner have the paternalism of a protectionist government than the paternalism of the Winnipeg Grain Exchange and its allies, and the paternalism of a free trade that robs the growers of the best wheat in the world out of $25,000,000 per annum in the price of wheat, and puts that $25,000,000 into the pockets of

the American middleman who handle that wheat. We shall have to have more paternalism in the management of this country's reserves and the promotion of this country's welfare.

Canada is not being carried along the road to a fulfilment of its destiny as fast and as far as we could wish. Too many Canadians are being driven to carry themselves along the road that leads to a job under the stars and stripes. I am no more a defeatist on the issue of Canada's future in peace than I was a defeatist on the issue of Britain's victory in war. I believe in the certainty and greatness for the Canadian nation inside the British empire. I admit the height and number of certain obstacles to the attainment of that greatness. These obstacles are no visitation sent upon us by providence. The worst are of home manufacture, the product of laissez faire, free trade and the teachings of the Manchester school. We are back to 1924. Ontario took four years to recover then, up to 1928, from the free trade preaching and blue ruin prophecy. In 1924, Ontario gave a negative answer to the question: Shall a province that was saved by Brock be ruled by Drury? Ontario sent the Progressive end of the Liberal party about its business when it preached free trade. Ontario learned then in 1924 that a few months will not suffice to bring back the business opportunities which were driven away from the province by the Hon. E. C. Drury and the other would-be Progressives who called themselves farmers, but who were party-first agrarians, not genuine, patriotic Ontario farmers. What I said on this matter ten years ago is true now. When the issue of protection is raised in peace the farmers of Ontario have never failed to stand by their country in the polling booths. When the issue of Canada's existence is raised in war the farmers of Ontario—I mean the genuine farmers who actually work on the farms, not the party-first farmers—have never failed to go themselves or to send their sons to the battlefield. When free trade is preached, as is being done here, by those who wish to destroy the agricultural implement industry, I predict that its supporters will meet with the farmers the same fate when they go to the polls again.

The Conservative party has been consistent. Why has there been no prosecution of these coal people? Are we to wait until next winter to inquire into the high price of coal? Why has there been no aid to the municipalities? Winnipeg can get $900,000 for a trunk sewer. I am glad to see the city get it, but let other municipalities in on it. I have never opposed grants to the prairies. But I want to see equality of treatment. I know the way in which the people of the west are suffering through drought and many other conditions, and a national emergency created, and Ontario and industrial Canada want to see them get all they can; God knows they need it. But I wish to see equality of treatment, protection for all the people all the time and not protection for some of the people some of the time. I am not objecting, and never did, to prairie votes, in anything I have said here, to proper votes for the prairies and for the suffering there, or for the farmers all over Canada as well as aid to industrial workers who now get nothing. But what I ask for is protection along specific lines. For railway services we are handing the Canadian Pacific and National Railways $3,100,000, which is nothing but a bonus, subvention and subsidy. Not a word has been said in this house, even by those of a socialist tendency, as to what should be done for the suburban workers, yet the suburban workers of this country are suffering untold hardship. Instead of putting people on the land on the outskirts of the provinces, if the government would only get some land near the cities, and give some of these men who are out of work a two or three acre lot, with enough agricultural implements, and some cash help for two or three years, it would get them out of the slums and solve the housing problem, with the assistance of the Canadian National Railway in the matter of commutation cheap tickets. We could usefully copy what has been done in London, England, where industrial workers are housed in an intelligent way in the outskirts. But no, the government wants to have professors in this house and out of it, while industrial workers are carted up to new Ontario, where they will never make anything out of the land, and where those who are now there cannot make anything now, even production costs.

I believe in a policy along the lines I have suggested, because under it, in my opinion, some of the deficits threatening the national railways would be eliminated. This vote for a national trunk highway across Canada is, in my view, an economic wastage. Here we have one, two, three transcontinental railways, and now you are going to build a big national transcontinental highway for motors. What is the result of that policy? You are simply handing out a subsidy—to whom? To the oil industry and the automobile people. While we have three national railways built by the Canadian people, you are going to build a competitive route and a free right of way for the use of motor trucks and motor buses to compete

with those railways and to increase the deficits of this country and these national highways are a direct subsidy to the oil industry at the expense of our railways and a competitor. Our road policy herein is notoriously uneconomic. This is nothing but a direct subsidy to the oil industry. These railways have had to create rights of way of their own, unaided, at the expense of the people of this country while the motor industry has a right of way given to it free, with which to parallel the three existing national railways. I admit that provincial good roads are necessary; my hon. friend from Parkdale (Mr. Spence) and I were pioneers in the good roads movement in Toronto in 1907. But I say this elaborate and uneconomic road policy is all wrong; it is not going to do anything for the suburban worker; it is only giving a direct subsidy to the oil industry and these huge expenditures could wait and are uneconomic at present, and increase taxes.

Now, Mr. Speaker, I should like to say a word or two about constitutional and parliamentary cabinet and law reform, because I think that is the main question before the Canadian people to-day. We must change our method of doing business in this house. The past year has witnessed the decay of parliament and the decline of the House of Commons. Parliamentary, constitutional, cabinet and law reform is long overdue in Canada. I have not time to go into the question in detail, but my main grievance with our parliamentary system here is that it is well on the way to being upside down. We sit here in a committee composed of 245 members. The committee is too large; it is unwieldy. If we were not three hundred years behind the times we would have a committee on estimates. When we take up estimates in committee of the whole we are simply holding a post mortem. The government should not fall by reason of the reduction of a vote. At the present time if an expenditure is reduced to $1 the government must resign. In my opinion that system has seen its best days. We should adopt the municipal system and set up a committee on estimates. Some of the private members of this house who have not a large amount of work to do —and that would include some of the ablest members—could sit on that committee. They could sit round a table with the heads of the various departments, and I venture to say that aided by our able officials they could strike $100,000,000 off the estimates of the country. In the municipalities the city councils and boards of control follow that practice when their estimates are under consideration.

There are many points with which I could deal in connection with this question of reform. There is the question of the senate. I have never opposed having a senate in this dominion. Far from it; I have always supported the senate. They are all fine men. I believe it serves a very useful purpose, but I want to see the senate do something along the line of work done by the senate of the United States. The history of the world is the history of minorities, but the history of Canada has been the history of compromises. The senate might perform useful work; it contains some very able men who have given a great deal of time and attention to the affairs of this country and some from here are its best members. The senate should consist of the lords of mind and intellect of Canada. Like the United States senate, it has all the powers it needs, if it would only enforce them and assert its functions. Let the senate go into St. James street and big business as they did at Washington and let it deal with many other matters, including the question of unemployment and get reforms.

In my opinion the time is coming when income tax returns should be made public. You can go to the registry office and look up a particular chattel mortgage, a bill of sale, a deed or a will, but you can get no information about income tax returns. No free nation has been prevented from developing along those lines. In the United States Pierpont Morgan did not pay a penny of income tax for years, and no one outside the house of Morgan was any the wiser. The United States senate held an inquiry into Wall street and financial racketeering there, and showed what was going on. They also disclosed what had been taking place in the way of newspapers being bought up in order to destroy public rights and the country's natural resources and public men who stood for public rights.

In conclusion, Mr. Speaker, I should like to say a few words with regard to the League of Nations. I believe the British fleet has been the only form of collective security of any value for some time past. I believe that before God the people of Great Britain stand as the appointed trustees for the peace of the world. Canada, which was first in the Diamond Jubilee procession, has been a slacker and has not contributed a cent to the maintenance of this fleet which in peace and war alike has kept open our trade routes and defended our shores. The boy scouts and girl guides are about all we have to show by way of an offensive force to-day. The league is failing; one by one its members have become covenant

breakers. After joining the league and agreeing to act as a moral police force whose authority was to be imposed collectively against treaty and sanction breakers without distinction as to race or creed, what have the members of the league done against covenant breakers? They have done nothing. Canada refused to impose certain sanctions and would not contribute a farthing to help keep open Canada's trade routes on the seven seas. She would rather listen to the pacifists and depend upon the British taxpayer for maritime security, while the British taxpayer was taxed on his tea and coffee in order to pay the cost. If socialism and pacifism are allowed to go their gait any longer, this will lead to the dismemberment of the British empire. If ever a nation wanted a George Canning it is England to-day. The whole foreign policy of England has been built up round Locarno and now that pact is a mass of ruins. So is the League of Nations and it is now in retreat. There are seven separate Locarno pacts all broken.

In my opinion, the league is to blame for its complacency in allowing slavery in Ethiopia, where five million slaves are simply chattels for profiteers. The league has never been anything but a piece of diplomatic machinery, dealing in compromise and never settling any question aright nor concerned with justice per se. We are still entirely dependent upon the British fleet to protect our shores. I think it was well that Mussolini went south and landed in Ethiopia instead of coming west to some of the British dominions. God forbid we should ever have war again on our own soil. If he had done so we would have had a rude awakening, and we may have it yet. There are those who want to hold an election in time of war and trouble, which by the grace of God we hope will never come. I am opposed to war, as is everyone else in this country, but the people of Canada will never allow Mr. General Election to become commander in chief of the British forces or Mr. General Election to ever become admiral of the British fleet. Before Mr. General Election could get his ballot boxes out the enemy will have sailed up the St. Lawrence, blown down the citadel probably and bombed this building. Let us face the facts. When that happens we shall learn something of what we owe to the maritime security of England.

No effective support for the League of Nations can be hoped for while it deals in compromise and platitudes and refuses to face the facts; recent events have shown that to be so. In my opinion Canada should get out of the league while the going is good.

[Mr. Church.]

Since 1919 the league has been nothing but an institution for the promotion of strife, ill-feeling and mischief between nation and nation. It has failed, as similar leagues of the past have failed. I am not opposed to the league in many ways; it has done some useful work, but it has made many mistakes. Formed to prevent war, by its mistakes it has brought about war. Instead of sticking to its last it has meddled in the internal affairs of every petty state with regard to labour and capital, and its meddling has kept the world in a perpetual turmoil. Now, after fifteen years, we see the utter failure of Woodrow Wilson's fond dream of open diplomacy. Of the great powers four, the United States, Germany, Russia and Japan, are now outside the league. At present it consists of little more than the allies who won the war. The withdrawal of Japan and Germany means that in future the smaller states will exercise more influence at Geneva, and as they have been the principal cause of international unrest for the last ten years this development is not reassuring. Now we find that Italy and France are none too keen about the league.

I sympathize with those who are friendly to the League of Nations; I am friendly to it myself, but I think it should be reorganized and made more useful and should include the United States, Germany, Japan and Russia. It is no use as it is now, without a police force. These covenants are made only to be broken. Why, we have had seven Locarnos and they have been broken seven or eight times. In future we cannot rely on any more of these Locarno gentleman's agreements, such as we have had with Italy and other countries, without the possibility of war facing us, because the only way to enforce these pacts and covenants is by war. We are at the parting of the ways; this league has failed every time it has had to deal with a major problem. The United States and Russia and Japan will not join the league until they can secure for their people a weight in the councils of the league at least equal to that exercised by the nations of western Europe. These agreements and pacts are never binding, are never intended to be without a war. The world is back where it was in 1914; it is an armed camp. The pacts will be kept as long as it is in the interest of all parties to keep them, but any party that feels like doing so can waive them. The pacts are impossible. The treaty of Locarno can be enforced only by war; sanctions mean war. Canada, which was first in the Diamond Jubilee procession, backed out of Locarno. It now remains for

Mussolini to take what he wants; he has captured Abyssinia and we are back where we were. No doubt, Germany will get Austria and her colonies next. The league is in flight. Since the great war there have been over one hundred pacts and treaties between the powers but those pacts and treaties have disappeared and the league is reduced to a modern tower of Babel, and is powerless against an aggressor. British foreign policy which relied on Locarno as a pedestal is a mass of ruins. So is the league. Italy is discredited.

Canada is at the parting of the ways and the sooner she wakes up to the realities and faces the facts of the situation the better. I am not opposed to the principle of a League of Nations; I am a supporter of a real league. But as long as it is conducted as it has been it will never be a success. Canada can thank the mother country for membership in a real League of Nations; the British fleet is the only collective security the world has against tyranny and oppression.

Mr. DEPUTY SPEAKER: The hon. member has spoken for forty minutes.

Mr. ANGUS MacINNIS (Vancouver East): In rising to speak in this debate I wish to associate myself with those who preceded me in congratulating the Minister of Finance (Mr. Dunning) on the way in which he presented his budget on Friday last. I regret however that while I associate myself with the hon. member for Huron-Perth (Mr. Golding) in his attitude regarding the importance of these great questions and in his wish to feel that every hon. member is interested in finding a solution for them I cannot associate myself with his approval of the budget or the policy that it implies.

There are two points with which I wish to deal immediately. First the increase in the sales tax. There is no doubt that this will be very unpopular with the people of Canada. There is no doubt whatever that it will make still harder the position of those who have had difficulties enough to face in the past. It will increase the revenues of the government at the expense to a great extent of the low paid and underpaid workers. Even those who are on relief who get their subsistence from the government itself, will have to hand back a certain amount of what is already far too inadequate. On the other hand we find that the taxes on great wealth have not been increased, and no steps have been taken to reduce the debt of the country by taking from the large accumulations of capital that are now available. For that reason, and before I proceed any further with my remarks, I wish to move an amendment to the motion made by the Minister of Finance on Friday. I move, seconded by Mr. Douglas:

That all the words after the word "that" be struck out and the following substituted therefor:—

"this house regrets that the proposals submitted by the Minister of Finance on May 1 are entirely inadequate to meet the serious and acute situation prevailing in Canada, and would appear to be based upon the assumption that poverty and debt are inevitable conditions within the country.

Whilst the reduction of the tariff on certain commodities is to be welcomed, this house deplores the increase in the sales tax, which falls so heavily on those least able to bear it, thus further reducing the already inadequate purchasing power of the masses.

This house also regrets that the government has taken no steps to lessen the inequalities of income by increased taxation on the larger incomes and by a levy on large accumulations of capital for the reduction of national debt."

The increase in the sales tax is not likely to lessen that unrest to which the present Prime Minister (Mr. Mackenzie King) referred in one of his radio talks prior to the election. I would like to read that reference, as reported in the Vancouver Province of August 1, 1935:

With the return of the Liberal administration to office and the adoption of Liberal policies carried out on broad and generous lines, and with more concern for human relations than for the methods of big business, of high finance and of high pressure salesmanship there is no reason why this period of depression should not be followed by a new era of prosperity, and why the unrest and discontent which have brought these third parties into being and to which they owe their existence should not also disappear.

Anyone who listened to the budget speech on Friday last would be hard put to it to find Liberal policies in it. It was the most conservative, or if I may use the term, the most "Tory" budget we have ever listened to. If these are the policies that are to be carried out on broad and generous lines, policies such as increasing the sales tax, which is bound to reduce and depress the living standards of the people, I am satisfied that they are not going to lessen that unrest, but on the contrary will greatly increase it.

There are at least three major problems—I have no doubt there are more—that confront this government and the people of Canada. There is first the problem of unemployment. Then we have the problem of debt and the problem of lack of markets in which to dispose of the great surplus production of this country. The minister pointed out that despite the increasing physical volume of production, unemployment has not decreased in the same proportion. I find in the April issue of the Labour Gazette that the index of employment on March 1, 1935, was 96·4 and on March 1

1936, it was 98·9, an increase of 2·5. When we come to the figures of the physical volume of production given by the Minister of Finance we find that in 1935 the index stood at 94·2 and on the same date in 1936 it was 103·3, an increase of 9·1. How long is it going to take employment to catch up with production at that rate? What is going to happen, and in the very near future—it is what always happens—is that we shall again have a glut of goods on the market, and again we shall find industries slowing down and the numbers of the unemployed increasing. Let us remember, when we are dealing with the history of capitalism, that it has always been a series of ups and downs, a time of acceleration of business followed by a period of depression. Analyzing those cycles we find that the periods of prosperity, if we wish to call them that, are continually getting shorter and shorter, and the periods of depression, or bad times, continually getting longer and longer. We are now in a period of depression that has lasted for the past six years, and there is no indication that we are anywhere near the end of it yet. So I think we are safe in assuming that, unless some miracle happens, conditions such as we have now will be the normal state of capitalism in the future, and I am apprehensive as to how long we shall be able to keep going without a definite collapse. That is the point I would impress upon the members of this house in dealing with the question of unemployment.

I think it was the hon. member for Lethbridge (Mr. Blackmore) who said yesterday that the thing to be done was to try to find out what is wrong, and we can find out what is wrong only by analyzing conditions, not only here, but elsewhere. The question of unemployment has been before this house in some form during most of the present session. The hon. member for The Battlefords (Mr. Needham) said, and I think he put it very well indeed, that the first result of the machine is unemployment. He was pointing out to the house that unemployment is caused by the use of labour saving machinery in industry. While what he said is to a large extent true—that is, it is true at the present time—the first result of the machine was not unemployment. The first result of the machine was employment and then still more employment. It is only lately, for reasons that are quite clear if we will only seek them, that the result of the machine has been unemployment. As I have said, the first result of the machine was to create employment. Let me follow that a little further.

[Mr. MacInnis.]

This system of society as we know it today, and as economists, I believe, deal with it, what we call the capitalist system, came into being around 1776, with the use of steam applied to industry in the British Isles. This was the beginning of what is termed the industrial revolution. When Great Britain began manufacturing with steam driven machinery one of her difficulties was to find enough labourers. There was no talk then of back to the land. As a matter of fact, history shows it was not a back to the land movement in those days, but, on the contrary, the people were driven off the land into the factories. Their houses, their homes, were burned over their heads, and they were driven into the shambles of industry. That continued for some considerable time, and we can understand the present situation only if we understand the developments that have taken place from then until now. It is only by understanding them that we shall be able to find a solution for the difficulties that confront us.

Let us remember that industry produces two kinds of goods. Industry produces, first of all, consumers' goods; that is, the goods we use in our everyday life, such as clothing, boots and shoes, and all that sort of thing, goods that we use up every day. But industry also produces another kind of goods, what we term producers' goods, or capital goods. We must remember that the greater proportion of production is in producers' goods. I was much surprised at seeing the figures given some little time ago in a book published in 1934, What Everybody Wants to Know About Money, by Mr. E. F. M. Durbin and Mr. Gaitskill. They stated that nine-tenths of all goods produced in the British Isles were producers' goods and that ten-elevenths of all goods produced in America were producers' goods. The proportion seems very large to me, but I believe this authority is quite reliable.

Now let us see what happened when Great Britain began, about 1776, producing with steam driven machinery. Take a typical industry, one that has been associated with Britain at least since the industrial revolution began, the textile industry. We find that with the use of power driven looms and spinning machinery Great Britain was producing large exportable quantities of textile or cotton goods, which she was marketing in all parts of the world. There was a market everywhere for British cotton, in the countries of Europe, in the orient and in America, because at that time Great Britain was the only country in the world pro-

ducing cotton with steam or motive driven machinery; and had that situation remained as it was Great Britain, I asume, would still have her markets. But conditions did not remain as they were, because industry, under capitalism, can never remain stable, and that is something I would like the members of this house to understand. Capitalism will never and can never remain stable. It has to expand or it dies.

The next thing that happened was that Great Britain began selling the machines, the engines, the looms and spinning machinery with which she was manufacturing cotton goods, to the very countries that were buying her cotton goods, with the result, of course, that these countries in turn began to manufacture their own cotton, and with the further result that they also began to have surplus goods and to ship them into the markets that were formerly supplied by Great Britain. But that was not the end of it. They also began to sell the machines that were used in the making of cotton manufacturing machinery. And so Great Britain first lost a large part of her cotton goods trade, and then began to lose the cotton machinery trade as well. A few years ago I placed some figures on Hansard, and as they are very illuminating I think it would be worth while again to place them before the house. In 1913 the total exports of British cotton goods amounted to 7,075 million yards. In 1929 the total exports amounted to only 3,765 million yards, a drop of 47 per cent in sixteen years. When I gave these figures to a friend of mine in Winnipeg some time ago, he told me that there had been a further decrease in 1933. In that year the total exports were below the three billion yard mark.

In 1913, of the total imports of cotton into China, Great Britain supplied 68 per cent, Japan 23 per cent and the United States and Russia, 9 per cent. In 1925, twelve years later, Great Britain supplied only 26 per cent while Japan supplied 74 per cent. During those years Japan had bought an enormous amount of cotton manufacturing machinery from Great Britain and Germany. These figures show that we are faced with a peculiar situation, one of the contradictions which appear in capitalism. Although capitalism requires foreign markets above everything else, it must destroy those markets if it is to keep going.

Coming down to the present day, I have here a news item which I clipped from the Manchester Guardian of March 18, 1936. This refers to the cotton trade, the heading being "Japan maintains cotton trade hold." The article reads:

> "Made in Japan" has become the big bogy of cotton spinners here as they survey possible world markets to absorb the increased output of their mills.
>
> Another large piece was cut from Britain's cloth export bolt last year when the Japanese maintained the dominant hold on the trade which has been theirs since 1933. Analyzing trade statistics by countries, the Lancashire spinners are alarmed most by the fact that the greatest shrinkage in their exports has been in British Empire countries, where Japan has made corresponding gains.

Then further on:

> A decrease of 23,000,000 square yards in British cotton goods exports to Australia in 1935 also is attributed to the inroads made by Japan.
>
> Japan's advantage in world markets, say Lancashire spinners, has been primarily due to a lower wage scale, although depreciation of the yen also has been a factor.

Further on is this very significant paragraph:

> Opinion in the industry is moving toward the view that Japanese competition should be met not so much by legislative experiments and foreign trade agreements as by increasing efficiency through technical advancements, in which Lancashire has excelled since the 18th century.

If in the end every country is to come to that position, where is the hope of decreasing unemployment and improving the standards of living of the masses? If the spinners and weavers of Lancashire are compelled still further to improve technical development in their plants in order to displace workers and produce cotton more cheaply than Japan, Japan will be compelled to produce cotton still more cheaply and Canada will have to do the same. It will come to the point where the workers in all countries will be forced to a lower standard of living in order to enable capitalism to sell in world markets instead of providing goods for the people in their own countries. That is the inevitable result of capitalism.

What is true of cotton is true of many other commodities that we use in our everyday life. Let us come nearer home. Canada is interested in the sale of agricultural products, such as the wheat grown in our prairie provinces, but Canada is also interested in the export sale of agricultural machinery. What do we find? We find that although we need the markets of Europe, we are ready to help these countries to supply their own agricultural needs by furnishing them with agricultural machinery. In the Trade of Canada for 1933 appear the exports of agricultural machinery from Canada in 1930. Under the item covering harvesters and binders, I find that we sold 2,535 machines to Germany; 2,045 to France; 396 to Great Britain, and 349 to Italy. These are the

countries in which we hoped to sell our surplus wheat. But that is not all. We also supplied our competitors in the sale of wheat with machinery. In that year we sold 2,838 machines to Russia; we sold 804 to Australia and 50 to the Argentine. Besides the machines referred to, we sold other agricultural machinery to the value of $5,000,000.

The system of production under which we live is not designed to produce the goods and services necessary to human welfare. It may do that, but its real purpose is to produce profits which may be reinvested as new capital in order to produce more profits which may be again reinvested. Unemployment has been caused largely by inability to reinvest these profits in new investments. Through the adoption by every country of inventions and scientific methods they are all able to produce what they need provided they can obtain the raw materials. Every country is now able to produce the same goods as other countries. If this government hopes to get out of the position in which it finds itself, if its only hope of helping the people of Canada is by extending foreign trade, the prospect for a solution of our problems is very remote indeed. It is nowhere in sight, because the day of the foreign market is gone.

I was going to show how Great Britain had supplied the countries of the world with capital goods. I overlooked it in the place where I intended to use it, but I think it is worth while to give it now. In 1850 Great Britain's total capital invested abroad amounted to £230,000,000; in 1876, twenty-six years later, it amounted to £1,200,000,000, a great deal of which was invested in the building of railways in the United States. By 1914 British investments abroad had increased to £4,000,000,000 or some $20,000,000,000. Before 1914 the United States had very little foreign investment but after that date and during the world war and immediately thereafter her foreign investments increased, so that by 1925 they equalled if they did not surpass those of Great Britain, amounting to something over $20,000,000,000. One of the conditions confronting the world to-day is that while the function of capitalism is to produce more capital, there is no place in which that capital can be profitably invested, and we have not yet learned to make it available to our people at home. The same is true of investment in Canada itself. In 1871 the total capital invested in manufacturing in Canada was only $78,000,000; by 1881 it had increased to $165,000,000, by 1891 to $353,000,000, and by 1929 it had increased to $5,093,000,000. In the same period, we find that wages and salaries increased from $40,000,000 to only $813,000,000.

[Mr. MacInnis.]

If the nations of the world could only find a place in which to reinvest new capital, the problem of unemployment would be solved for the time being and so would the problem of trade. For the trade of the countries of the world during the few years before the depression was to a large extent made up of the sale of producers' goods from one country to another. We can see I believe that the question of unemployment and the question of trade are one.

Now we come to the question of national debt, which has increased so enormously during the last few years. To me the increase in the national debt and in all kinds of debt is not hard to understand, because the capitalist system itself is debt. Every investment is debt, and national debts increase the faster when we cannot find a profitable investment in private industry. When we cannot increase private debt then government debt must increase. So under the present system there is no possible hope of ever paying our debts, because in the last analysis the debt can be paid only in terms of goods and services, and those who own the debt, our creditors, cannot possibly accept the goods and services that would be necessary to pay it off, any more than the United States could accept goods and services from the allied countries to pay off the war debt. Indeed, they found it cheaper in the end to cancel the debts altogether than to accept payment in goods.

When the Minister of Finance was speaking about the national debt the other day and of the great problem which it presented to the government and to the people of the country, I was wondering whether he had heard about the scientific expansion of currency; and if he had not heard of it I do not see any reason in the world why he should not learn something about it. All he has to do is to turn round in his seat and face the hon. member for Vancouver Centre (Mr. Mackenzie), the present Minister of National Defence, who had quite a scientific scheme for the reduction of debt in the election campaign last year. In fact, I believe he mentioned it in the house during the session of 1935. I have here the Vancouver Province of August 1, 1935. I am sure the hon. gentleman will remember that day because there was a great gathering in Vancouver. In regard to the national debt he had this to say:

> Referring to Canada's national debt, the speaker was of the opinion it could be greatly reduced by the introduction of scientific expansion of currency. At present Canada owns $180,000,000 worth of gold. According to investigations of the world economic conference of 1933 a country may issue currency to four times the value of gold held without

endangering its credit, giving Canada the right to issue an additional $460,000,000 in currency.

This I assume was going to be used to reduce the national debt. He had another solution. I did not observe that it had made any impression upon the Minister of Finance for I have not seen any mention of it in the budget speech. He spoke of:

—a national conversion or refunding scheme on a voluntary basis but with compulsory features should the voluntary appeal be unsuccessful.

And then of course followed the establishment of a publicly owned and controlled bank entirely responsible to the government, and scientific expansion of currency. I would suggest that the hon. member, possibly with the valued assistance of the hon member for Vancouver-Burrard (Mr. McGeer), although their currency and finance schemes may not quite fit in together, might try to impress upon the Minister of Finance the value of these schemes in reducing Canada's national debt.

In bringing these matters to the attention of the house, and making our criticisms and suggestions, may I point out the essentials in which the small group in this row of seats —I do not think we can call it a "corner" any more, because others occupy it besides ourselves—differ from the other political subdivisions which are represented here? We differ from them, not because we are more high-minded, or have any better intentions than other members, for I assume that all of us want to help the country out of its difficulties, because all of us feel daily the stress of those difficulties. But all the other political parties are trying to solve those problems within the ambit of the capitalist system.

Mr. SPEAKER: I am sorry to have to inform the hon. member that his time has expired.

Mr. MacINNIS: Mr. Speaker, while the Deputy Speaker occupied the chair I moved an amendment, and having moved an amendment, I am entitled, I think, to continue speaking.

Mr. SPEAKER: I think the hon. member is right.

Mr. MacINNIS: I thank you. I was pointing out in what way those of us in this section of the chamber differ from the other political parties in this house. All of us are anxious, I take it, to solve the great social and economic problems confronting our people, but all the other political parties are trying to solve these matters within the limits of the capitalist system, that is, without interfering with the property relationships which exist within the present capitalist structure of society. We take the position that the difficulties and trials we are meeting to-day are due to the workings of that system and not to maladministration by government, to bad business, or to lack of business ability on the part of individuals, and we hold that those troubles cannot possibly be solved under the present system. Therein lies the essential difference between other parties and ourselves, and I think modern history is with us, because it goes to show that those governments which have made any progress towards solving their social and economic problems in the past few years are those which have taken steps to control the economic life of their respective nations. So then, we say, the only solution for the world to-day, the only way to end unemployment, to get rid of our debt, to bring prosperity and to establish peace is for the countries of the world to adopt socialism as their economic system. I am quite sure that this does not seem so fantastic to-day as it did a few years ago. As I go round, talking with people in all walks of life, I find that, whatever they may say in public, they have no hope that they are going to solve their problems under the present capitalist system. They will say that socialism is bound to come but it will not be just yet. I am reminded of a statement supposed to have been made by Herbert Hoover, ex-President of the United States. He is reported as having said:

When I contemplate capitalism I see a precipice leading either to communism or fascism.

He sees a precipice where the drop will be either to communism or to fascism. It is not necessary to fall into either of these states, providing we do the right thing in time, but if we allow the conditions that exist to-day to get worse, something will happen and we may not be able to control the situation. What may develop then no one can say. But in all countries where democracies exist it is within the power of the people to go easily and surely into a new social order where production will be carried on to supply human needs and not for the making of profits. Under our present system the attempt to find markets in which to dispose of surplus goods, leads inevitably to war.

I have taken three different countries which have made some progress in dealing with their social economy during the depression years. The first one, Great Britain, was mentioned the other day by the Minister of Finance (Mr. Dunning), who remarked, I think, that Canada had followed Great Britain in almost

all things with the exception of balancing our budget. Canada has not followed Great Britain at all. There were certainly some lame and hesitating attempts made to follow Great Britain during the last parliament. I am not suggesting for one moment that Great Britain has accepted socialism, but she is providing a certain amount of social control over the economic life of the country. I have taken excerpts from an article which appeared in Current History of November, 1935, and I would like to read some of them:

To the older generation, familiar with the British slogan of "No food taxes" and the doctrine that only through cheap food for the working man could there be low wages, low costs and a competitive advantage in world markets for British manufacturers, it is almost incredible that to-day about one-third of British agricultural produce is under price-raising marketing schemes, implemented in nearly every case by highly effective protection against foreign trade. The first to be thus dealt with was wheat—it is strange to remember that it was for free wheat that the battle of the corn laws was fought and won in the hungry forties. Instead of a marketing scheme, wheat was given a subsidy or "quota" in 1932. A levy was imposed on every sack of flour imported into Great Britain or milled within the country. The proceeds went to the British wheat grower to make up the difference between the price he actually received and the standard price of about $1.40 a bushel.

And yet we wonder why British imports of wheat from Canada are not so great as they were some years ago. Then the next paragraph:

The acquiescence of the greater part of the people in a program that involves taxation and increased costs of living for 93 per cent of the population in behalf of the 7 per cent who derive their income from agriculture indicates that rugged individualism as an ideal is fast vanishing from the British mind.

There is very much more of this that is worth reading, but I shall content myself with one more excerpt from the article, and I should like to draw the attention of the government to the necessity of doing something along these lines in the Dominion of Canada, because after it is done we shall have an asset to show, and it will bring comfort to many of our people. I quote again:

The most effective subsidy and possibly the greatest influence in the government's whole recovery program, is the aid that has made possible the immense housing program now being carried out in Great Britain. Since the armistice there have been built in Great Britain about 2,700,000 houses, almost one-half of which have been subsidized by the government or by the localities. Under the present government, the program has been speeded up. During the four years ended on March 31, 1935, about one million houses were built in England and Wales. In its last session parliament passed a housing bill under which within five years all officially condemned slums will be demolished and sufficient houses provided to do away with overcrowding. At the most this program is expected to cost the public treasuries only $50,000,000 a year—not a staggering sum, the proponents of house construction as a recovery measure like to point out, in comparison with the money spent upon battleships, heavy guns and bombing planes.

Then it goes on:

The worst criticism is that it cannot last forever, and the slump may be bad. To this the government replies that it can see good results for at least five years ahead, after which, come what may, the British masses will be decently housed.

So, if the slump comes after the government have taken the first step in the organization and control of the economic and social life of the people, they will be better prepared to take the next step, if that slump should come before they have embarked upon a fully socialist program in that country.

During the last year we have heard a great deal about Sweden. So much that to-day Sweden has become a competitor with Russia for the tourist traffic, for the people who are anxious to see what has been accomplished in the last few years. I have under my hand an article which appeared in the La Fleche Press of February 20, 1936, and reprinted in the Saskatchewan Liberal of February 27, 1936, so I suppose there will be no objection if I read it in this house. The article states:

The cooperative societies of Sweden own and operate ten per cent of all industry and handle some 50 per cent of all retail trade in such essentials as food, clothing and shoes, says Stuart Chase in Government in Business, and continues as follows:

"They broke one private monopoly after another by threatening to organize their own supply. This has proved far more effective than anti-trust laws. The price of lamps was driven down from thirty-seven cents to twenty.

"Sweden has obviously mastered the yardstick technique with which Mr. Roosevelt is now struggling. She has the highest standard of living in Europe, higher even than for the mass of Americans. She is now about fifty per cent collectivized—including the cooperatives as public business. Private business has resigned itself to the inevitable, and from time to time actively cooperates in some aspect of state enterprise."

In addition Sweden has maintained the democratic principle in government and in industry, so that if we do not wish to follow other more drastic examples certainly we should not be afraid to follow the example which has been set by Sweden.

Now I wish to mention another country, which during the last sixteen or seventeen years has received a great deal of attention, some favourable and some not quite so favourable. It has this outstanding distinction,

however, that it is, I think, the only country in the world which has made continuous economic and social progress through all these years of depression. I refer now to the soviet union, and I am going to quote an authority to whom I do not think the house will object. The individual who wrote the article is, I believe, above reproach, and I think the periodical in which the article appeared will be quite acceptable to hon. members. The article is by Sir Frederick Banting, K.B.E., and it appeared in Canadian Business, the official organ of the Canadian Chamber of Commerce, of February, 1936. May I say, for the benefit of those who do not know—though I do not suppose any hon. member needs to be told—that Sir Frederick Banting is one of the discoverers of insulin and is in receipt of an honorarium, I think it is called, from this government amounting to some $7,500 yearly for his services to the people of Canada and of the world. My hon. friend from Davenport (Mr. MacNicol) says that Sir Frederick Banting receives something from the Ontario government as well. He writes:

> The greatest experiment that the world has ever known, has just been carried out within the Soviet Union ...

Note this:

> In the successful carrying out of this experiment, science was a major factor. Science and the fruit of science had been almost denied these people from the beginning of their history, until 1917. The Bolsheviks suffered privation, fought and if necessary died for those far-sighted leaders who promised the people education and science.

Then he goes on:

> In order to understand the situation in the Soviet Union to-day it is necessary to realize that before the revolution only about ten people out of every one hundred could read and write.... The vast majority of the people were backward, down-trodden peasants who lived on farms or in small villages. Of the 170,000 doctors (at the rate of one doctor per one thousand population)—

That is the number they should have had.

> —there were but 19,000 and these were, for the most part, located in the cities of the west and in the army and navy.... During the past ten years progress has been stupendous.

Then he goes on to indicate the progress that has been made in education, medical science, scientific research, production, and so on. I shall content myself with reading the last paragraph in the article:

> All of these huge enterprises—

Referring to the industrial life of the country:

> —require men of executive capacity, intelligence, foresight and judgment. These qualities are to be found in the men who rise to office within the Soviet Union. The life and activities of their great commercial and industrial men do not greatly differ from the life and activities of industrial men in our country—nor does the financial man, banker and organizer of industry, differ so much from those that perform this service in other countries. There are privileges and luxuries that our financial leaders buy. In the Soviet Union these privileges and luxuries are given to him by the people. They honour service. Honour, appreciation and trust of comrades spur and inspire men to plan and work for the common good of all.

We are told in this country that unless there is the incentive of profit people will not do anything. Could anything be more false? We are told that in Russia people in every walk of life are continuously working for the common good without any thought of profit or private gain. But all the industries of Canada have the profit incentive. Here the means of production are used by their owners not to provide goods and services for the needs of the people but as a means of levying tribute on the people. Dr. Banting goes on to say:

> There is no unemployment in the Soviet Union. Conditions are improving very rapidly. Everyone is tremendously enthusiastic. The health of all is cared for by the state. All people have the opportunity to rise as high as their talents and industry will permit in whatever field of endeavour they may select. Every person's future is invested in the state. The state in turn provides for the education of children and an old age pension. This sense of security brings happiness and peace of mind and permits true culture.

Can we say that in this country? Is there a sense of security here, even among those who are in employment, even among those who are in business, even among those who are fairly well off? No; there is no sense of security to-day for anybody. He continues:

> The soviet government is building a gigantic structure on the solid rock of science and research. For this reason there now remains not a vestige of doubt as to the future success of the Soviet Union. Her future is doubly secure because no people in the world so fully realize that the science of to-day is the research of yesterday, and the research of to-day is the science of to-morrow.

When you compare that with what we have been attempting to do in this house during the last three months—unplanned activity when there was any activity at all; a dribble here, a dribble there; no coordination and no connection—it is no wonder that people are almost in despair.

I have another item here from Doctor Banting. Speaking in Hamilton, Ontario, on November 27, 1935, he said:

> You rarely see a case of tuberculosis that requires bed treatment in Russia. Trade union

doctors examine the workers before they enter factories and they are placed under care immediately if any signs of disease are detected.

But in this great rich country whenever anything of the kind is mentioned we are always met with the question: Where can we find the money?

There came into my hands to-day a copy of the Monthly Review of Lloyd's Bank Limited for April, 1936, a rather conservative publication, I assume. In it I find a leading article by R. J. Truptil entitled The Economic Evolution of Soviet Russia, 1917-1936. It says:

It must be remembered that although the peace of Brest-Litovsk was signed in 1918, the Bolsheviks had to fight for several years, until 1921, against insurrections and interventions on many fronts.

And we helped in the fight against them. Even now we have not the trade relations with Soviet Russia that most other nations of the world have. After giving a very complete summary of the situation and the increase in production, he ends the article with this statement:

The economic revolution achieved in the Soviet Union is without parallel. In fifteen years—for it is fair to reckon only from the end of the civil war—one of the poorest and most backward nations has achieved simultaneously an industrial equipment and a complete transformation of its agricultural methods. Through many changes of policy, the Bolsheviks have gradually extended social ownership to all the means of production, transport and trade.

Yet they are keeping up their enthusiasm. They are working, they do not expect the state to keep them; they are themselves the state.

Their system is socialist. Although individual property can be acquired in the form of savings, state bonds, a house, a car, or a few animals, and although such property can even be inherited up to an amount of 50,000 roubles, there can be no individual ownership of the means of production.

That is, they are not allowing anyone to exploit the people for private gain.

As the system develops we may see issues of industrial debentures, but it seems reasonably certain that shares will not reappear.
Furthermore, it is not possible in the U.S.S.R. to live on unearned income....

Evidently they are finding no difficulty with the A plus B theorem either. They are finding it quite easy to increase the welfare of their people as production increase, and they are not issuing social dividends or social credit. All the production of the country belongs to the people, and until the production of this country belongs to the people I do not care how much the money system is manipulated, you are not going to get anywhere. Then the article concludes:

As it is, the system works,—

That is the final proof of any system.

—and this in a country of 170 million inhabitants, which for size, diversity and natural wealth can be compared only with the United States. The Soviet Union is thus becoming a leading factor in the world and it would be a profound mistake to ignore it.

In that connection let me say that to-day, because of the national control of its working class, Russia is the greatest factor for peace in the world. In fact so far as there is any guarantee of peace it comes from Russia and from the working class in the other countries where they have any voice at all in the government of the country.

I will conclude, Mr. Speaker. I had no intention of speaking so long. But I hope the house will realize that we cannot go backward, much as in my opinion the finance minister would want us to do. We are out of that stage just as surely as the chick that has left its shell, and we can never return to it, any more than the chick to the shell. So let us look to the golden age of the future, not to the golden age of the past—because there never was a golden age of the past.

On motion of Mr. Blais the debate was adjourned.

At six o'clock the house adjourned, without question put, pursuant to standing order.

---

## Thursday, May 7, 1936

The house met at three o'clock.

### ROYAL ASSENT

Mr. SPEAKER: I have the honour to inform the house that I have received the following message:

Ottawa, 7th May, 1936.

Sir,—I have the honour to inform you that the Right Honourable Sir Lyman P. Duff, Chief Justice of Canada, acting as deputy of His Excellency the Governor General, will proceed to the Senate chamber to-day, 7th May, at 5.45 p.m. for the purpose of giving the royal assent to certain bills.

F. L. C. Pereira,
Assistant Secretary to the
Governor General.

### PRIVILEGE—MR. McPHEE

On the order for motions:

Mr. G. W. McPHEE (Yorkton): Mr. Speaker, I rise to a question of privilege in connection with a matter that concerns the dignity of the members of the House of Commons and

contravenes the House of Commons Act, being chapter 145 of the revised statutes of Canada. I refer to an article which appears in this morning's Citizen, written by Miss McGee of the Canadian Press. This is headed "Women M.P.'s Give Verdict on Best Looking Men in House." Perhaps I should read just a few short paragraphs of this article in order to lay a foundation for what I am about to say. The article reads:

While the members of the House of Commons have been debating legislation in long hours of argument, the two women members have had ample opportunity to consider their masculine confrères from the standpoint of pulchritude. Yesterday they disclosed their preferences.

They then give their reasons.

Mr. SPEAKER: May I ask the hon. member kindly to state his question of privilege?

Mr. McPHEE: That will be seen from the next paragraph of the article which reads:

The reasons she gave for not listing any members as "handsome" are that "too many have eyes too close together, ears that stick out, crooked noses, weak chins, avoirdupois and bad carriage."

Right Hon. W. L. MACKENZIE KING (Prime Minister): I do not like to interrupt my hon. friend, and I hope he will not think I do so because I have not been mentioned in the list to which he is referring, but I do submit that this is hardly a question of privilege and he should not continue.

Mr. McPHEE: It affects the dignity of the house.

Mr. SPEAKER: This is not a question of privilege. The hon. member is out of order.

## QUESTIONS

(Questions answered orally are indicated by an asterisk.)

### OLYMPIC GAMES

Mr. CHURCH:

1. On what date was the grant to the 1936 olympic games paid, to whom and on what terms?

| Date incurred | Amount |
|---|---|
| April, 1936 | 69 |
| March, 1936 | 147 52 |
| March, 1936 | 1 53 |
| April, 1936 | 20 67 |
| April, 1936 | 131 02 |
| Total | $301 43 |

2. Will the government lay on the table all correspondence as to the 1936 olympic games?

3. Will further consideration be given to cancel further participation by Canada for 1936 at these games owing to European conditions?

Mr. MACKENZIE KING:

1. Cheque for $5,000, being one-half of amount voted in supplementary estimates (item No. 386) in favour of the Canadian olympic committee, for their use in connection with the winter games, was handed to Mr. P. J. Mulqueen, chairman of the committee, on October 31, 1935. There was no stipulation as to the use to be made of this money. Balance of $5,000 not yet paid.

2. Yes.

3. Should such consideration be deemed necessary, it will be given.

### CANADA AND GULF TERMINAL RAILWAY COMPANY

Mr. LAPOINTE (Matapedia):

1. Does the Canada and Gulf Terminal Railway Company, which operates the railway between Mont Joli and Matane, province of Quebec, owe any moneys to the government of Canada, or to the Canadian National Railways; if so (a) what are the dates upon which these debts respectively were incurred; (b) what are the amounts; (c) what rate of interest is charged; (d) when do these debts mature, and what are the conditions of payment?

2. Are there arrears of both capital and interest with reference to these debts, and what are the amounts respectively?

3. Has the government of Canada or the Canadian National Railways provided for these deficits of the Canada and Gulf Terminal Railway; if so (a) on what dates; (b) for what amounts; (c) upon what conditions; (d) at what rate of interest?

4. What is the total amount actually owing on capital and interest by this company to the government or to the Canadian National Railways?

Mr. HOWE:

1. Due to government—Nil.
Due to Canadian National Railways:

| Interest rate | Particulars |
|---|---|
| Nil | Telegraph tolls |
| Nil | Joint facility rent |
| Nil | Overcharge claim |
| Nil | Overcharge claim |
| Nil | Express interchange |

All due for current settlement

2. No arrears due to Canadian National Railways.

3. No deficits of the Canada and Gulf Terminal Railway have been provided for by the Canadian National Railways, or the government.

4. $301.43 due to the Canadian National Railways.

ROSAIRE BLOUIN AND GEORGES PREMONT

Mr. WERMENLINGER:

1. Were Rosaire Blouin and Georges Premont, of St. Jean, Ile d'Orleans, Montmorency county, named or appointed to their positions by the civil service commission after passing the examinations of said commission?
2. If so, were their successors appointed in like manner?
3. If not, why?
4. If they were appointed by the civil service commission, could they be dismissed without intervention of the said commission?

Mr. HOWE:

1. Yes, but temporary certificates only were issued by the civil service commission, each season.

2 and 3. Two employees have been taken on in a temporary capacity pending examination and appointment by the civil service commission.

4. Yes. They were not dismissed however. The temporary certificates issued by the civil service commission expired on the 15th December, 1935.

## LEAGUE OF NATIONS

On the orders of the day:

Mr. J. S. WOODSWORTH (Winnipeg North Centre): Mr. Speaker, in view of the debate that took place yesterday in the British House of Commons and the intimation given that this government was to be consulted with regard to its attitude toward the League of Nations, may I ask the Prime Minister (Mr. Mackenzie King) whether the government will set a day in the not distant future when this matter can be discussed in the house?

Right Hon. W. L. MACKENZIE KING (Prime Minister): The government naturally will seek to meet the wishes of the house. There have been reasons why we have thought it inadvisable just at this moment to bring on a debate on the European situation. We shall wish to consider carefully all matters that should be considered in that connection. There is however no desire to delay discussion if hon. members deem it advisable to have league matters debated at an early date.

[Mr. Howe.]

## LOSSES IN OATS

On the orders of the day:

Mr. E. E. PERLEY (Qu'Appelle): I wish to direct one or two questions to the Minister of Trade and Commerce (Mr. Euler). Has the minister seen the article appearing in the Leader Post, Regina, May 4, headed:

Who pays $200,000 losses in oats deal? Ottawa inclined to deny all responsibility.

If the minister has seen this article would he care to make a statement to the house with respect to it? This article states that the Saskatchewan government is preparing a case to be presented at Ottawa. Has the minister received this report? If so, would he care to make a statement?

Hon. W. D. EULER (Minister of Trade and Commerce): My hon. friend did not convey to me any notice of his intention to ask the question. I may say to him and to the house that this is the first intimation I have had of the matter; I had not seen the article. However, I shall be glad to make inquiries and give a reply later.

## PRIVILEGE—MR. BENNETT

On the orders of the day:

Right Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, I think it desirable that I should bring to the attention of the house, purely as a matter of privilege, not so much of my own as of the house, that there has been an apparent misunderstanding of the use of words in connection with the Canadian National annual report. I was very careful the other day when I read from page 18, and the figures I gave were those of "system net loss." The Minister of Finance realized of course that that was entirely different from the cash deficit, and I answered, yes. But apparently in the press the use of the words "net loss," as occurring in the profit and loss statement, has been attributed to me as the use of the word "deficit," which was not so and could not be so, because it is taken for granted that anyone with an elementary knowledge of bookkeeping realizes that cash deficit and net loss in profit and loss account are not necessarily the same thing. I desire to make this correction lest there be misunderstanding, and I do so not only in the interests of the house but in the interests of the railway itself. It is important that the distinction between net loss and cash deficit should always be kept in mind.

## WHEAT POOL

EQUALIZATION OF 1930 PAYMENTS ON WHEAT

On the orders of the day:

Mr. J. G. ROSS (Moose Jaw): I wish to ask a question of the Minister of Trade and Commerce (Mr. Euler). From information I have received from the west I understand that certain people are receiving some of the payments that were to be made to farmers in connection with the 1930 wheat pool equalization payments. I want to know whether these payments were made direct to the farmer, using only Canadian Cooperative Wheat Producers Limited for the equalization in the distribution of these funds, and also whether Canadian Cooperative Wheat Producers Limited had any right whatever to deduct from these funds fees for the United Farmers of Canada, Saskatchewan section, or fees for the publication in western Canada of a paper called The Western Producer.

Hon. W. D. EULER (Minister of Trade and Commerce): Just a moment ago my hon. friend mentioned the matter of which he speaks. I have had no opportunity to make inquiries; I had not complete information on the point. I would suggest that he place his questions on the order paper and they will receive attention.

## THE BUDGET

DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE MINISTER OF FINANCE

The house resumed from Wednesday, May 6, consideration of the motion of Hon. Charles A. Dunning (Minister of Finance) that Mr. Speaker do now leave the chair for the house to go into committee of ways and means, and the proposed amendment thereto of Mr. MacInnis.

Mr. FRANK BLAIS (Chapleau) (Translation): Mr. Speaker, I should like first to congratulate the hon. Minister of Finance (Mr. Dunning) on the splendid budget which he presented to the house on May 1. With the exception of a few discordant views—always emanating from the same quarters—this budget has been highly welcomed throughout the country, and I feel certain that the resolutions which will be approved shortly will contribute to the improvement of our economic solution.

Bill No. 19, introduced in the house by the hon. Minister of Labour (Mr. Rogers) and passed on April 22 last, is an Act to relieve unemployment, promote agricultural settlement, and assist in the conservation and development of our natural and other resources. The section of the country which I represent is so closely interested in these important problems that I would be remiss to my duty were I not to indicate here the means whereby this country could benefit from the development of the various natural resources to be found in Abitibi.

I approve this government's policy of undertaking and getting undertaken public works that do not involve too heavy an expenditure for the state, in order to provide work for our people and thus do away, as much as possible, with direct relief, while improving the financial situation of the country. Many unemployed desire work that will permit them to live decently and provide for the future, thus setting a good example to the growing generation, instead of continuing to receive the dole which has developed into national exploitation, as may be readily seen in a number of localities.

I have pleasure, sir, in pointing out a few of the national resources of the Abitibi district, the development of which, I am sure, would alleviate unemployment, which threatens our country with disaster. In the vast territory comprised in the Abitibi district numerous gold mines are being worked and many others will be developed in the near future. Besides the mining industry, agriculture offers great possibilities, as well as the lumber industry, which enjoys an excellent local market for its products. There are splendid water powers which, when developed, will supply electric energy for which there will also be a ready market as this form of energy will soon become indispensable.

I shall speak first of the gold mines of my Northern Quebec constituency. Ten years ago they were absolutely unknown. Noranda Mines Limited, scarcely ten years in operation, already have an annual output of over $14,000,000, give employment to more than 2,000 men and provide a livelihood to a population of 16,000. In the same locality, a number of similar industries will soon be in operation, doubling the town's population, increasing the number of men at work and relieving unemployment.

To the northeast, in the same mining area, nine other gold producing mines have started operations in the course of the last six years. They are: Beatty Gold Mines Ltd., O'Brien Gold Mines, Ltd., Canadian Malartic Gold Mines Ltd., Siscoe Gold Mines Ltd., Shawkey Gold Mining Ltd., Sullivan Gold Mines Ltd., Greene Stabell Gold Mines Ltd., Lamaque Gold Mines Ltd., and Perron Gold Mines Ltd. All these enterprises are very promising; although only at their first stage of development, they may be expected in the near

future, to double, even quadruple their output. At the present time, these mines employ more than 5,000 men, and have become the mainstay of the farming population of this section and provide an additional market for the products of the lumber industry, the yearly output of sawmills being over 35,000,000 feet of lumber, used in the mines and for building purposes in villages and towns. These industries provide part of the livelihood of a population of 40,000.

I do not think that I am too optimistic or far from the truth when I state that by the end of 1936, at least three other gold mines in that section of the country, will get on a production basis, and gradually increase their output as the years go by, thereby increasing the number of workers and reducing unemployment.

The mining bureau at Amos, which is a branch office of the Quebec Department of Mines, gave me, on the 1st of February last, the following data. There are at present twenty-five mining undertakings showing satisfactory progress to date and likely to produce gold in the near future, that is, as soon as good roads for the transportation of their machinery and other material can be built in the district. I shall refer in a moment to the question of good roads, as they constitute, to my mind, the principal means of obtaining satisfactory results.

Furthermore, 125 claim holders employ at present more than 500 men, and their outlook seems most encouraging. As a sequel to these operations we may expect many industries to be established.

The section of Abitibi comprised in Quebec covers an area of 10,000 square miles. Its natural resources are beyond estimation. This region comprises 3,500,000 acres of good farming land on which 35,000 families could be settled. May I add that this district holds a splendid future for the farming class, since, at present, we must import nine-tenths of the farm products required by the mining population. Three carloads of provisions are shipped weekly to Amos alone, yet it would be possible to raise these in our district if agriculture were given more encouragement.

The most practical way to carry out a program of development would be, first, to build a good road from Amos to the district of Chibougamau, then to extend it as far as James Bay with crossroads as the development of the country required. Many of the mining properties at Chibougamau are in the hands of reliable capitalists who have long been asking for a suitable highway for the transportation of the material and machinery required to erect plants.

The distance between Amos and Chibougameau is about 154 miles, and many promising mineral prospects are to be found along this projected road which would be a factor in developing this large territory for colonization and farming. It would also be necessary to build 15 miles of road from the Sigma Gold mines to Ovicourt so as to facilitate the transportation of machinery to a number of mining properties the outlook of which, to date, is among the promising of the north country. The carrying out of this project this spring, would employ thousands of workers, to the great benefit of the unemployed, while developing our natural resources. I note, sir, that from 1930 to 1936, $189,000,000 have been distributed in direct relief, running the country into debt to that extent, while giving no value in return. I believe that if, in the last five years, the government had expended part of that amount in the district I represent, for the development of its natural resources, we would have to-day a smaller debt and fewer unemployed.

Although I am now engaged in farming I have for a long time been interested quite extensively in business, and I am familiar with the conditions existing in the Abitibi district. I have been living there for the last twenty-three years and have closely followed its development, being in contact with every mining company and the business men of a number of localities. I have come to the conclusion that the most effective way of developing our natural resources would be to build good roads. I am aware that the construction of roads is a provincial responsibility; however in a special case such as this one, I think the dominion government should take charge, as the matter has become a national one.

May I refer to the Trans-Canada highway which has now almost reached the Quebec boundary; it should be continued to Amos and Senneterre, from which points, two roads, now under construction, lead to Mont-Laurier, Maniwaki, Montreal and Ottawa. I know that my good friend, the hon. member for Cochrane (Mr. Bradette), is also eager to see this road, which would be of very great service, continued into the Abitibi district.

Before resuming my seat, may I quote a statement made by the hon. Minister of Mines (Mr. Crerar) on February 14 last, at the banquet of the Mining Institute held at the Windsor hotel, in Montreal. In the next fifteen years, he stated, the future of our country will be found in the development of our mining industry, which is highly prosperous and most profitable, not only for those directly

interested in it, but for the whole country. The hon. minister quoted data found in a publication of the Department of Mines, dated February 14, 1936, and which show that this industry can compare favourably with any other Canadian industry. He added that the small mining district of Cobalt, Sudbury, Porcupine and Kirkland Lake had produced various minerals to an amount exceeding $1,500,000,000. What can we not expect then from our immense district which enjoys the bright prospects I have just shown? The hon. Minister of Mines also referred to the mines of Northern Quebec which, though only at their initial stage of development are on a production basis: Noranda, for example, with an annual output of $14,000,000; Siscoe, which, since its inception has produced approximately $9,000,000; one might also mention the Beatty Gold mines, the O'Brien, Malartic, Lamaque, Sullivan, Green Stabell mines, all gold-producing properties still in their primary stage and which will become important mines at an early date.

I wish to congratulate the hon. Minister of Finance for having exempted from the income tax imposed on companies all metalliferous mines becoming producers before 1940. These exemptions will cover the first three years of production. This is a strong encouragement to financiers interested in the development of these natural resources.

I cordially invite all the members of this house, but especially the hon. ministers to pay us a visit, in order to see for themselves the great prospects existing in our district.

What I have suggested is quite feasable and we should immediately set to work in our country's interest so as to provide employment for a large number of people and thus conform to the Divine command: Thou shalt earn thy bread by toiling and not by exploiting the toiler. I have set forth a few suggestions in good faith, in the interest of this country, trusting that they may be seriously considered by the house and even put into practice.

Mr. J. R. MacNICOL (Davenport): While it is my intention to criticize, I hope in a constructive manner, some of the points advanced by the Minister of Finance (Mr. Dunning) in his speech, I want to compliment him upon the arresting tabulation of facts which he presented in relation to the economic situation of this country as he sees it, and I also want to compliment him upon the evident sincerity of his remarks as well as the non-partisan way in which they were delivered.

I propose to confine most of my observations to the speech made by the Minister of Finance. If I have any time left I shall refer for a moment or two to the speech made yesterday afternoon by the hon. member for Vancouver East (Mr. MacInnis).

At page 2362 of Hansard the Minister of Finance referred to the increase in the physical volume of business in this country, and he very clearly pointed out that from a low point of 67 in 1933 there had been a gradual increase in business to 79·7 in 1934, 94·2 in 1935, 102·4 in 1935-36, and the present economic index, he stated, is at 103·3. Then he added this significant sentence:

> The increases are impressive, particularly when one recalls that this index measures the physical volume of output in nearly all our leading industries as well as freight traffic on our railways, building activity and domestic trade.

That was a generous statement for the Minister of Finance to make, and in my humble opinion it was a remarkable tribute to the business ability and foresight of the former prime minister and his government. A little further on the minister referred to manufacturing, and particularly to the iron and steel industry, with which I was long associated, and he used these words:

> In the latter half of 1935, this industry showed striking advances, steel output increasing 23 per cent and pig iron 48 per cent over 1934—

Here again was a tribute to what was done by the previous government in connection with the production of steel in this country. When the late government came into power I believe Canada protected steel plates up to 40 inches in width, but not over that. The late government, rising to the occasion, increased the width to 66 inches, and the steel makers themselves went one step further and rolled steel up to 78 inches in width and an inch and more in thickness. During the last three or four years steel plate production in this country over 40 inches in width, and largely over 66 inches, has been what has kept the steel makers in the city of Hamilton busier than they have been for many years in the wider sizes. So I hope that when the revision of the British trade treaties, to which the minister referred, comes up later, he will jealously guard the interests of the steel makers of this country and not lower their protection, under any consideration, below what it is now. On the contrary, if possible I hope he will protect plates up to a width of 78 inches, which they are now rolling. In my humble opinion the late government deserves unstinted praise for what it did in connection with steel, and the minister was generous in refering to this subject.

Further down the page the minister used these significant words in connection with construction:

The construction industry, while still operating on abnormally low levels, enjoyed substantial percentage gains in 1935 over 1934, and the present outlook for building appears to be the best in several years.

I want to pause for a moment or two in connection with construction, for I believe this provides a splendid opportunity for the government now in power to provide thousands of men with work. The minister is correct when he says construction is increasing; for last year the returns from fifty-eight cities of Canada showed construction in this country at the level of $48,000,000 as compared with $27,000,000 in 1934. All constructive work, such as roads, bridges and so on, rose to the total of $160,000,000 in 1935. That is why I said at the outset that the minister was generous in his statements, which were non-partisan. In tabulating our economic gains he has paid a well deserved tribute to the former prime minister and his government, and the result of the policies of the late government in their endeavour to advance prosperity all along the line in this country.

Some days ago I read an article dealing with construction in England, which sets out the remarkable progress that has been made in that country, which is one of the reasons why to-day England is leading the nations of the world in providing employment. When the armistice was signed there were eight million homes in England. As a result of their construction policy in England to-day there are 10,804,888 homes. This has given employment not only to a great number of artisans but also to a large number of factory workers in connection with the necessary material that enters into construction. In addition large orders have been placed in Canada for British Columbia, maritime, Ontario and Quebec lumber. It has been said in the house many times since the beginning of the session that this country should get on with construction. I have endorsed that statement before; I am going to endorse it again. Many of our towns and cities have slums, and if it is at all possible those slums should be removed and adequate homes provided instead. Just how the minister is going to get the money I do not know, but during the last four or five years the federal government has put up $400,000,000 for relief and has voted many millions for the rehabilitation of the western provinces. And rightly so; I am one of those who will support anything reasonable that will make conditions better in the west. I believe the minister can find the money in some way.

The late government was one of the first advocates, I believe, of lowering the gold content of our dollar to 25 cents. I know that up at Milton, Ontario, there is a very able man, Mr. Peter Robertson, to whom the late Mr. George Nicholson, who formerly sat for the constituency represented by the last speaker (Mr. Blais), referred in a very excellent speech in this house a few years ago. Mr. Robertson has some excellent ideas on gold. He wrote a book on the subject which was translated into several languages at his own expense. This book was sent all over the world and had a good deal to do with the lowering of the gold coverage behind our dollar.

There may be some other way of getting money with which to proceed with construction, but it should be found in some way because in Canada we have 240,000 men who in normal times are employed in the construction industry, but thousands of whom are now unemployed. Taking as a basis the figures as to the amount of labour given per thousand dollars of expenditure in connection with the government building now under construction in Winnipeg, which will cost a million dollars or more, it would take something over $200,000,000 to put at work again the 240,000 men who should be engaged in the construction business but who for the most part are idle. In any event, sir, something must be done to provide more employment.

An. hon. MEMBER: Social credit.

Mr. MacNICOL: No, not social credit; I am not in favour of that at all. I have confidence in the ability of the minister to find some sound way of providing money that can be used for proper government support. According to the spring number of Building in Canada construction magazine, taking 1929 as normal, 100. which is different from the usual computation, in 1933, our low point, construction activities stood at 9·2 and by 1935 had risen to 19·7 That is a fairly healthy advance over 1933, and if we continue to advance with increased speed the construction business of this country will soon be back on its feet. But in Great Britain it has got back to 152·5.

I said a moment ago that all works such as roads, and so forth, should be counted in the program to provide work. As we go about this country over our fine concrete roads we frequently come to a narrow bridge. I have in mind two of them on the Dundas road from Toronto to Hamilton, on which

road fifty miles an hour is about the usual speed. But when the motorist arrives at the bridge west of Oakville and the bridge at the next river he finds himself in a regular bottle neck. Numerous accidents have occurred there, because the roadway is reduced from about thirty feet to about sixteen feet. In industry manufacturers are compelled to safeguard their employees with all sorts of appliances to keep them from getting hurt in operating or working with the machinery. But the government, responsible for the roads, is causing more deaths by these narrow bridges than industry is causing, and if the provincial government will not act it is high time the federal government did. It could thus give employment to a large number of men.

On page 2366 of Hansard there is a statement made by the minister with which I have to disagree. I quote:

> The fruits of economic nationalism in reduced business activity, shrinking governmental revenues and widespread unemployment are such as to justify in abundant measure the efforts which the present government has made, and will continue to make, to free the channels of international trade and expand the markets for our primary and other industries which must otherwise suffer stagnation and drastic readjustment.

The policy of the late government certainly was not economic nationalism, judged from the results it gave, results which the minister himself so highly praised in the quotations I gave a few moments ago.

I would point out further that one of the results of the policy of the late government was, according to Industrial Expansion in Canada, that from August 15, 1930, to the same date in 1935, 272 branch factories came into this country from the United States, Great Britain and other countries. These 272 factories make automotive parts, electrical parts, foodstuffs, machinery, metal products, chemicals, drugs, wood products, textiles and leather, etc. That is a very substantial amount of new business brought into this country by the activities of the late government. If the present minister and his government can do as well in the next five years they will be doing very nicely indeed.

I have a clear recollection of the last time this same policy, lower and lower tariffs, was introduced in this country, and I hope the same disasters will not result that accrued between 1922 and 1926. On several occasions I had to attend employment conferences of one kind or another, and I know that in September, 1924—the present Minister of Finance was not then a member of the government, but the Minister of Justice (Mr. Lapointe) was in the house then and he will remember—there were deputations from all over the country protesting against the free trade policy of the government of that day. There were protests from boards of education, city councils, township councils, county councils, labour organizations and every kind of organization in the country. In September, 1924, a delegation came to Ottawa and presented figures to the government indicating the contraction in business and manufacturing. Taking into account new industries started the net contraction was as follows, as a direct result, I believe, of the trade policy of the government of the day:

| | No. of industries closed |
|---|---|
| Food product | 87 |
| Tobacco and cigars | 12 |
| Fertilizer | 14 |
| Oil and chemical | 26 |
| Manufacturers of building supplies | 32 |
| Agricultural tools | 25 |
| Carriage makers | 8 |
| Iron and steel works | 38 |
| Leather products | 12 |
| Footwear | 21 |
| Rubber | 2 |
| Furniture and musical instruments | 30 |
| Automobiles | 19 |
| Toys | 6 |
| Textiles and apparel | 48 |

We do not want anything more like that.

A new plant in this country means a great deal in addition to the direct employment it gives. There is a new can factory going up—I believe it is practically in operation now—in West York. The minister referred to it some time ago, but his facts were inaccurate as I understood him, if he said that the trade treaties had something to do with its coming here. The trade treaties had no more to do with it than the man in the moon, because the arrangements were made last September; in fact the original designs were prepared some three or four years ago, after the Campbell Soup company itself came to this country. The new can factory to which I refer is about the same size as the Campbell Soup factory, and if it takes the same amount of material as the Campbell plant it will require some seven or eight hundred carloads of material of all kinds, such as sand, gravel, brick, piping, glass, paint, roofing and machinery, etc. So that every new factory started in this country means business not only for the men erecting it but for the factories supplying the building material. I hope the proposals of the government will not result in the lessening of factory building.

A day or two ago I read in a publication of the Department of Trade and Commerce of May 2 something which shows that all is not gold that glitters. In shipments of grain products to the United States for the first three months of this year compared with the first three months of last year there is shown to

be a material decrease. The figures are as follows:

| | Three months ended March 31 | |
|---|---|---|
| | 1935 | 1936 |
| Bran, shorts, middlings, cereal foods and screenings | $1,162,746 | $342,048 |
| Hay | 467,319 | 13,945 |
| Seeds | 272,200 | 38,182 |

It is to be hoped that the treaty will result in a different picture.

On page 2367 of Hansard there are two or three items to which I should like to refer. First, the minister referred to the conference in connection with the Ottawa trade agreements. I want to warn the minister and through him the government to be very careful, because every thousand men given employment in England for exports to Canada means a thousand less men given employment in Canada. Our own textile and steel plants are taking care of our requirements. If we have to buy outside of Canada, however, I should prefer to trade with England first, and after that with the United States. Above all I prefer to provide employment in Canada for the Canadian worker.

The minister made a generous reference to the balance of trade. In that connection he used this sentence:

> This is the fifth successive yearly balance in our favour and is the largest since 1927.

Immediately prior to this observation he had referred to the fact that this year the balance of trade is favourable to the extent of $216,000,000, whereas in 1931, the first year in which the late government held office, there was an adverse balance of $89,000,000, and when the late government first took office it was met with an adverse balance to the extent of $103,000,000. I hope nothing will interfere with a continuance of balances of trade in our favour.

I was further pleased to read the minister's statement that while the average increase in trade of twenty-four leading countries in the calendar year 1935 was 4·1 per cent, our own trade increase was 11·3 per cent. I cannot help feeling that the leader of the opposition (Mr. Bennett) must have been pleased to hear that statement from the minister, because it was very different from the brickbats that had been hurled at the right hon. gentleman during the last few years he held office. Political parties have the best intentions and do the best they can for Canada, and it is an act of generosity when one of the leaders on the government benches refers to the splendid results brought about by a predecessor in office.

May I hasten along to a discussion of the schedules, touching upon them only briefly.

[Mr. MacNicol.]

My first reference will be to item 362c dealing with nickel-plated ware, gilt or electroplated ware, n.o.p., under which the duty as against the United States has been reduced about 25 per cent from the general rate. I know that in Canada we have some first class nickel plating and enamelware plants. During the Easter recess I made it my business to make a tour of several of the big stores, and I am sorry to say that in one of them I found large quantites of these products which had come from six different states. I have no fault to find with those products, and I cannot blame the Canadian people for buying them because they are well made. But we can make them in Canada, and Canadian housewives whose husbands, sons and daughters are working in Canadian factories should be in a position to buy Canadian material. However, if the government makes it easier for them to buy products made in the United States those housewives cannot be blamed for buying goods made in that country. But if workers in a West Virginia plant are engaged in making the enamelware or nickel-plated ware which is distributed for sale in Canada, the purchase of that article by the consumer does not help the Canadian worker one iota. I saw products of this kind which came from Wisconsin, Ohio, Illinois, Pennsylvania, Massachusetts and West Virginia. I repeat that every thousand men employed in the United States to make enamelware or nickel-plated ware for Canadians displaces a similar number of men in Canadian plants.

Pursuing my investigations, after the agreements came into operation I found in the city of Montreal two full carloads of the common type of thirty-gallon kitchen boiler, with which all hon. members are familiar. I suppose those cars had in them a thousand boilers, and in that instance they came from the city of Pittsburgh. Men working in Pittsburgh plants made the steel for the boilers, performed the galvanizing operations, put them together and shipped them to Canada. Every man engaged in producing thirty-gallon boilers in Pittsburgh for the Canadian market displaces a man in Canada who could have performed those operations just as well. We make just as good steel in Hamilton as they do in Pittsburgh; we can galvanize boilers as well as they can. But if the duty rate makes it easier to import them, in my humble opinion such rate represents a retrograde step. We should be trying to give employment in Canada, not to give it to people in the city of Pittsburgh.

I should like to refer briefly to the agricultural implement industry. This phase of the subject was well covered by the hon. member for Greenwood (Mr. Massey), and for that

reason it is not necessary for me to say much about it. I must say however that on numerous occasions I have been greatly concerned to hear hon. members of this house denounce the agricultural implement people as bandits and everything that they should not be. I have heard the manufacturer denounced as a bad employer, and hon. members have heard statements that he is harsh in his treatment of his employees. On inspection of the plants, however, I found just what I expected to find, after my own knowledge gained from twenty-five years in industry. My investigation disclosed that there is no truth in the allegation. In one of these plants I spent four hours talking to the men, as well as the bosses, and I am free to say that in every case I found that the men spoke well of their company. Men in the Massey plant in Toronto told me that 206 of their number who had served the company for twenty years and had reached the age of sixty-five were now drawing a pension, to which they had not contributed, and which is fully paid by that company. Last year the company's expenditures in that behalf amounted to $95,000. When hon. members rise in their places and say that a company such as that has no soul, I say they do not know what they are talking about.

Up and down the years I have seen the same kind of bogey raised. Some years ago the western provinces denounced tractor manufacturers, and the result was that the government allowed tractors to enter Canada free, thereby destroying the Canadian tractor business. The next cry arose in connection with binder twine, with the result that to-day we have only three small binder twine companies whereas in earlier years we had a much greater number.

If the duties are lowered any further the industry cannot live. In fact, I do not believe it can live under the present rate. Canada a country manufacturing $16,000,000 worth of agricultural implements and machinery cannot compete with the United States manufacturing to the extent of $360,000,000. An industry supplying less than three-quarters of a million farmers cannot compete with one supplying six and three-quarter million farmers. Owing to our exports the Canadian industry is able to sell machinery at a fairly low rate to Canadian farmers. I wish time would permit me to put all the information on Hansard, but I shall take time to give some prices which were not mentioned by the hon. member for Greenwood. The following figures will give a comparison between prices of agricultural machinery in Hallock, Minnesota, and Emerson, Manitoba:

| | 1936 Retail list price Hallock, Minn. | 1936 Canadian list price f.o.b. Emerson, Man. |
|---|---|---|
| 3-fur. 14-inch tractor gang | $203 40 | $202 25 |
| 8½-ft. cultivator | 144 40 | 141 00 |
| 11½-ft. tractor cultivator | 202 50 | 184 00 |
| 20 Double D. Drill, LL | 263 00 | 250 00 |
| 28 Double D. Drill, LL | 384 55 | 358 00 |

I have not given the whole table. On several of the items the Emerson prices were higher, but taking the seventeen items before me I find that the retail list price at Hallock, Minnesota, is ·1808 cents per pound, and in Emerson, Manitoba, it is ·1810 cents per pound.

Mr. WEIR: Where did the hon. member secure those figures?

Mr. MacNICOL: I have quoted from the Canadian Farm Implement Journal, published in Winnipeg in April, 1936, and I accept the figures as being correct.

Mr. DUNNING: If those figures are correct, and I assume that they are, why does my hon. friend fear the sale in Canada of farm machinery at prices which, as he puts it, will put Canadian workmen out of business?

Mr. MacNICOL: That is a very fair question. Because of the cuts in tariff brought about by this government, the Canadian manufacturer has had to speed up and cut down his profits, until he has reached the point where he is manufacturing without any profit. As the hon. member for Greenwood (Mr. Massey) has stated these manufacturers are carrying on at a loss. I have asked some why they did not quit, why they did not close up their plants. They told me that it was impossible to get any money for a dead plant in which they had many millions of dollars tied up, and they were carrying on in the hope that things would improve. If the minister does not believe me—

Mr. DUNNING: The fact that I do not follow my hon. friend's argument does not mean that I disbelieve what he is saying.

Mr. MacNICOL: The minister seems to be listening to the advice of the hon. member for Saskatoon (Mr. Young), the hon. member for Melfort (Mr. McLean) and the hon. member for Moose Jaw (Mr. Ross), but I suggest he consult also with the hon.

member for Ontario (Mr Moore) and the hon. member for Brantford (Mr. Macdonald), and put into effect the policies they suggest.

Mr. DUNNING: Will the hon. member give me some advice himself?

Mr. MacNICOL: Yes, I would advise the same way. Something was said about shipping to the United States, and I went into this question very carefully. I find in our own Commercial Intelligence Journal, from which I quoted a few moments ago, certain information in connection with the shipment of agricultural implement parts to the United States. It states that $242,000 worth of implement parts were shipped to the United States. Upon inquiry I found that one of the large companies in the United States, with a Canadian plant, had an immediate need for parts which the Canadian plant had on hand. A number of carloads of parts were shipped over to supply this need and in this way the shipments to the United States looked to be much more than they really were.

The minister must have worn the thickest and darkest glasses possible to obtain when he considered item 431b covering many different motor parts. This item which covers many different parts manufactured in two fine plants in Brockville and St. Catharines is the cutest thing in the whole budget. The minister must have been wearing these heavy glasses when he considered this item. Among the directors of these companies are to be found the Hon. George P. Graham, a senator; Mr. Fulford, provincial member for Brockville, I believe, and Mr. Gordon Edwards, of the city of Ottawa.

Mr. DUNNING: I never knew of the existence of the companies.

Mr. MacNICOL: It is very cute to see them overlooked in the cuts, but I am pleased to see that 431b was not reduced. According to the information I have received the automobile industry has received a substantial blow because of this tariff. Perhaps there are some extenuating circumstances, but the trouble is that one manufacturer appears before the tariff board and tells them what he is up against. When he is asked to suggest something, he asks that his raw products be allowed to come in a little cheaper. These industries are being crucified in one way or another by this lowering of duties. I believe there are 82 companies manufacturing automobile parts in Canada. Altogether they manufacture 310 lines; they employ over 12,000 people and their payrolls amount to over $13,000,000. My information is that these factories have received a blow through this proposed tariff schedule. I hope there will be some way out of it. There are many members in this house from Ontario and Quebec respresenting towns in which are located these factories. The time has passed when members should be so party bound as to be afraid to speak out. I compliment the hon. member for Brantford for getting up in this house some time ago and defending the workmen in the city of Brantford. He had courage, and other hon. members should follow suit. More of the government members who represent fine plants and fine towns should get up to defend them.

Members who represent furniture companies in Hanover, in Durham, in Kincardine, in Southampton, in Stratford, in Kitchener, in London, and in other centres of Ontario, should defend them. This industry employs considerable labour. I have associations in the constituency of Grey-Bruce and I know one of many farmers who sold to a furniture factory in Hanover a large quantity of maple, ash, birch and other timber. If these factories are closed down the farmers in Grey, in Bruce, in Perth, in Waterloo, and in some of the other fine counties of Ontario will not be able to obtain such good prices for their timber.

I should like to refer for a moment to the Japanese situation, because I am greatly concerned about what will happen to the magnificent plants erected in Cornwall and two or three other points in Quebec, largely through the efforts of the previous government. I believe there are 4,000 people engaged in the rayon and allied industries, but at the present time this industry cannot compete with Japan. I should like to quote the wages paid in the Tokyo-Osaka areas in Japan, which are conceded to be higher than are paid elsewhere in that country. The daily wages in these Japanese areas, translated into Canadian currency, are as follows:

| | |
|---|---|
| Silk reelers, female.. .. .. .. .. .. | $0.21 |
| Cotton spinners, female.. .. .. .. .. | 0.24 |
| Silk throwers, female.. .. .. .. .. | 0.22 |
| Weavers, female, cotton, machine.. | 0.21 |
| Weavers, female, silk thread.. .. | 0.39 |
| Hosiery, knitters, female.. .. .. .. | 0.33 |
| Hosiery knitters, male.. .. .. .. .. | 0.61 |

If the minister would listen to me instead of to some of the western free traders, I would tell him what to do—raise the tariff and then regulate prices. If I had control, I would not allow exploitation. The purpose of a tariff is to give men work, and every factory closed throws men out of work.

Mr. YOUNG: Does the hon. member defend the differential in the prices of automobiles as between Canada and the United States?

Mr. MacNICOL: This government is going to collect a very substantial tax from

automobiles; I suppose it is needed and we will have to pay it.

Mr. SPEAKER: The time of the hon. member has expired.

Mr. J. A. MARSHALL (Camrose): Mr. Speaker, for weeks prior to the introduction of the budget I had a feeling of pleasurable anticipation that the Minister of Finance (Mr. Dunning) would depart from the old orthodox economic forms of taxation and by some means known to himself balance the budget and lessen the burden of taxation. When the Liberal party was swept into power on October 14, 1935, and the Prime Minister (Mr. Mackenzie King) looked over his vast following, there was no one in the ranks who was so capable of balancing budgets as his former Minister of Finance, the present holder of that portfolio. Then we find an urgent call going out to the minister, who had retired from active politics, to "come over to Macedonia," as it were, "and help us out." The cry did not fall upon deaf ears; the invitation was accepted and this amiable gentleman was taken into the cabinet and immediately undertook the greatest of all tasks, the work on the national budget. Since this budget came down last Friday I have wondered whether or not the Prime Minister has regretted his action on that occasion, because in my opinion the present budget differs little from previous Liberal budgets. In my humble judgment there are in the Liberal ranks men who are just as capable of balancing the family accounts—and I would refer to the genial and patient Minister of Labour (Mr. Rogers) and the alert and businesslike Minister of National Revenue (Mr. Ilsley)—as is the present Minister of Finance.

When the budget was introduced last Friday all the galleries were packed and I understand that four of the premiers were present. Had we had the other four or five the family circle would have been complete, and these premiers would have gone back to their respective provinces having received a splendid lesson in the attempt to balance budgets. I wonder whether this budget has had the approval of the Liberal party.

Mr. BLAIR: Pretty well.

Mr. MARSHALL: Pretty well, I hear. When the Minister of Finance announced a reduction of 1¼ cents per gallon in the duty on gasoline—it was reduced from 2¼ cents to 1 cent—I noticed there was a wonderful burst of applause from Liberal ranks. It was evident the party had given its blessing to this particular reduction. To my surprise, however, picking up the Ottawa Citizen on Monday, this was what I read:

> Canadian oil companies expressed concern at the government's move in reducing from 2¼ to 1 cent a gallon the duty on gasoline imported from United States. There was a suggestion the consumer might benefit by a slightly lower price for gasoline. Should conditions under the lower duty become impossible, President John Irwin of the McColl-Frontenac Oil Company, Limited, said at Montreal, "naturally they will have to consider closing." "As far as Mc-Coll-Frontenac Oil Company is concerned, we believe in continuing as we are now and if we find we cannot operate by manufacturing crude oil into gasoline in Canada, we have already made our plans whereby we will close our Canadian refineries and convert our crude oil tanks at Montreal and Toronto into gasoline tank farms," he said. The Toronto unit would be the first to be closed, he said, but said the company would first do the best it could.

This is the paragraph to which I would draw special attention:

> Addressing a Liberal meeting at Sarnia, the member of parliament for Lambton West said he was confident the government would correct the situation if the oil industry suffered from the duty change.

And then:

> "I must admit I was disappointed in the reduction of the gasoline tax so closely concerning this city," he said—

Mr. GRAY: I said that first.

Mr. MARSHALL:

> "—and I am not prepared to say what the result will be until it has been given a chance to work out."

May I suggest to the house that the same consideration be given the farmers in the event of their finding that they are unable to stand the sales tax increase from 6 to 8 per cent. At page 2363 of Hansard the Minister of Finance made this statement with reference to gold mining:

> Total output of gold amounted to 3,283,000 fine ounces with a total value at current market prices of nearly $115,000,000.

I want the house to keep that figure in mind—$115,000,000. On the evening of Friday, April 24, just a week prior to the introduction of the budget, at 10.30 p.m. eastern standard time the Minister of Mines wound up a series of addresses with the following sweeping statement:

> Is it too much to expect that a production of gold in Canada of from $200,000,000 to $250,000,000 a year would give the following results?
>
> 1. Decisively and permanently settle the problem of unemployment.
>
> 2. Bridge the gap between the east and the west with mining camps and communities established at numerous points.
>
> 3. Bring a constructive and probably a permanent solution to our railroad problem.
>
> 4. Create an even greater market than at present for foodstuffs, clothing, structural materials, mine machinery and equipment, electrical supplies, electric power, fuel,

explosives and innumerable other commodities including household furnishings and automobiles.

5. Revitalize the whole national economic life of the dominion.

6. Open up careers for coming generations of university graduates.

7. Ease the financial problems of the dominion, provinces and municipalities.

8. Alleviate the burden of our international indebtedness.

9. Assure the stability of the Canadian dollar; and, finally,

10. Stimulate the opening up and development of our resources in those north lands about which we know little to-day.

Then he concluded with the words:

We must not fail to grasp the opportunity that lies before us.

May I respectfully suggest to the Minister of Finance that sitting usually right at his elbow—he is not in his place to-day—is the man who holds the key to the solution of our problems.

On page 2384 of Hansard the minister said:

The two major obstacles to a balanced budget are the cost of unemployment relief including relief undertakings and the Canadian National Railways deficit.

I agree with him entirely in that statement. The solution which is proposed is a national commission. We are going to attempt to solve this problem by means of a commission. I say "attempt" because I do not believe that the unemployment situation is capable of being solved in its entirety. At the head of this commission is to be placed a man from Montreal named A. B. Purvis. I am very anxious that the people of my constituency, particularly the farmers, should get to know this amiable gentleman, and towards this end I sought out his record. Two sources of information are open to all who are seeking a man's record: one is the record kept by the Department of Justice, and the other is Who's Who in Canada. I found a very comprehensive record of this gentleman in Who's Who, so it was quite unnecessary for me to pursue my investigations further. I may say that my name does not appear in Who's Who.

An hon. MEMBER: It will.

Mr. MARSHALL: This is what I found about Mr. Purvis. He is (1) president and managing director of Canadian Industries Limited; (2) president and director of Dunlop Tire & Rubber Goods Company of Canada, Limited; (3) president and director of Canadian Safety Fuse Company, Limited; (4) director of the Bank of Montreal; (5) director of Bell Telephone Company of Canada; (6) director of Canadian Investment Fund Limited; (7) director of Canadian Lastex Company, Limited; (8) director of Consolidated Paper Corporation; (9) director of Liverpool & London & Globe Insurance Company, Limited; (10) director of Sun Life Assurance Company, Limited; and last, but perhaps not least, director of General Motors Corporation of New York.

Mr. LANDERYOU: He will never be unemployed.

Mr. MARSHALL: Surely a very imposing record. No doubt a man with a record of that kind is fully capable of protecting the interests of the farmers of western Canada. I have found that if you have a really knotty problem to solve or a difficult task to perform you should always take it to a busy man. That, I imagine, was the reason this task was assigned to Mr. Purvis. If the Minister of Labour is burdened down with the multifarious duties of his office, what must we say of Mr. Purvis? However, there is no doubt he will resign from all these positions and give his full time and attention to the solution of the problem of unemployment.

I know, too, it will be welcome news to the farmers of western Canada that the excise tax on Canadian brandies has been reduced from $4 to $3 a gallon, and that there has been a rearrangement of excise and customs taxes on automobiles designed to lower the prices of small cars to the consumers. I know it will be especially welcome news to those in many parts of the west who have found it impossible to feed and clothe their families decently, not to mention payment of taxes and the interest on their mortgages.

On page 2386 of Hansard I read:

In view of the decline in interest rates, it is intended to reduce the rate of interest on unpaid instalments of income tax from 6 per cent to 5 per cent, and to lower the penalty rate of interest with respect to overdue tax from 4 per cent to 3 per cent.

It would be interesting to know how many private individuals and how many corporations have given the government promissory notes in settlement of their income tax, and to what extent that is going to help balance the budget this year.

On page 2385 of Hansard I find that the grand total revenue for the coming year has been estimated at $387,850,000. In one place it is given as $385,850,000, but what is a couple of millions between friends? Below that we find:

As the main estimates and the special supplementary estimates call for expenditures of over $509,000,000, to which will have to be added any further supplementary estimates, it is apparent that the deficit for the year would probably total over $125,000,000 without taking into account possible losses on wheat, unless provision is made for additional revenue by the way of new or increased taxes.

After I had scanned that in Hansard I thought I would while away a few dull moments in this house—and you know there are some occasionally—by checking the estimates. Here is what I found. I am taking the estimates from the bluebook and also from the two white papers. General estimates total $384,427,548.64—we must not forget the cents; supplementary estimates, $51,167,229.11, and further supplementary estimates, $131,161,143.42. Making a total of $566,755,921.17. I was out of balance just a small item amounting to $57,000,000, but I suddenly remembered a statement made by the leader of the opposition (Mr. Bennett) on the evening of May 1. It is to be found at page 2445 of Hansard:

> In these supplementary estimates we are dealing with about $30,000,000 that this house pased last year, item by item. There was no limitation as to time placed upon these items; in other words the appropriations thus made by parliament, item by item, were not appropriations that lapsed on the 31st day of March, 1936. We are now engaged in passing these same items in their entirety, although part of the expenditure has been made and apparently the auditor general has found them satisfactory. I cannot understand just why we should ask parliament to pass a second time items that have been considered and passed by parliament in detail.

Mr. BENNETT: Hear, hear.

Mr. MARSHALL (reading):

> This is not a question of a blank cheque; these are items that were considered and passed in detail; the numbers of the items of last year could be given and were given this evening.

And here is the significant sentence:

> In these circumstances it would seem that these estimates have been padded by something like $30,000,000.

I deducted $30,000,000 and I am still out of balance to the tune of $27,000,000. The point I wish to make is this: What are the correct figures? Are we to understand that the figures as given—

Mr. DUNNING: Will my hon. friend permit me to answer that question now? I should like to explain that the error he has made has been in adding in with the figures he is using certain supplementary estimates for the last fiscal year. He has added those to the estimates for the current year which are now before the house. That is really the explanation of his error.

Mr. BENNETT: The $30,000,000 is stated to have been already voted.

Mr. DUNNING: I am not referring to that at all.

Mr. MARSHALL: To me the budget is nothing more or less than a big guess. Municipalities and business corporations are compelled to keep their expenditures within their revenues. If they do not, and I am talking particularly of municipalities, they are not only severely criticized; they are taken to task by the provincial governments. I never could understand why there should be one set of rules for municipalities and a different set of rules for the provinces and the dominion, but apparently such is the case, for with the latter unbalanced budgets are the rule rather than the exception. In my humble judgment the dominion budget should have been balanced this year. It is safe to assume, I think, that any government that does not take drastic measures to balance its budget within the first year will find it increasingly difficult to do so as its term of office gradually draws to a close.

There is a fast growing conviction that the great Liberal party is not fulfilling the pledges it made to the Canadian people, through the Prime Minister, on the evening of October 14. I realize, of course, that such a vast and far-reaching proposal as the restoration to the government of control over credit and currency issue cannot be brought about in a day or a week or a month, but surely the people of this country have a right to expect some declaration from the government before the close of the present session of parliament. It will do much to reassure all Canadians that this far-reaching policy has not been entirely lost sight of.

In conclusion I should like to quote from an article by Colonel E. M. House which appeared in a recent issue of Liberty:

> We are now faced by universal insolvency. The entire framework upon which modern society rests is tottering.

I say, Mr. Speaker, that it rests entirely with the Prime Minister, with the Minister of Finance and their vast array of supporters, whether or not Canada is going to be drawn into this abyss.

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, first of all I should like to compliment the Minister of Finance (Mr. Dunning) upon the very clear and excellent exposition he gave to the house on Friday afternoon. I think those of us who were privileged to listen to him on that occasion realized that he had an unsurpassed grasp of the problems confronting the country. I should like to commend him also for some things I find in the budget. To those of us who come from western Canada and who represent rural constituencies the tariff reductions are indeed well received. I have particular reference to the reduction in the duty on gasoline, and to something which I think must have escaped the scrutiny of most hon. members, the comparatively large reduction in the duty on dis-

tillate, which, as we all know, is of primary importance to the producers who use that form of fuel for the operation of their tractors in the agricultural sections of Canada.

I am also glad that the duty on agricultural implements has been reduced to 7½ per cent, but after listening to the hon. member for Davenport (Mr. MacNicol) a short time ago I wonder why the duty has not been wiped out altogether. If agricultural implements are purchased in the town of Hallock, Minnesota, at higher prices than in the town of Emerson, Manitoba, there is no reason in the world why a protective tariff should be necessary for the Canadian implement industry. May I say to the hon. member for Davenport that those of us who come from western Canada are just as mindful of the interests of the men who work in the implement factories as are any other members of the house. But I should like to point out that an ever increasing percentage of the material and work entering into the production of agricultural and other implements is provided by means of machines, and the human element enters less and less into the production of implements and other commodities. I noted with a great deal of interest and some pleasure that one of these implement companies had set aside pensions for 206 of its work people who had reached the age of sixty-five. But may I point out that in all probability some of the funds for those pensions was provided by farmers who, because of the high prices of implements and for other reasons, lost their equities in their farms and now have no pension except the old age pension to guard them in the future.

The contention is made constantly that the implement companies are losing money, but I am hopeful that the inquiry into the agricultural implement industry which is now going on will demonstrate that at least a part of the losses are due to overcapitalization and overbuilding. Very recently, for example, the British government sent a commission to Canada to investigate the automobile industry in regard to the provisions under which imperial products may enter the British market. I happen to know that this commission refused to include in the overhead of at least one of our great corporations a plant in the city where I live which was not being used, and warehouse space in Walkerville, in this province of Ontario. Overbuilding and overcapitalization will account in no small measure for some of the difficulties of these companies.

We are pleased also to note the reductions, substantial in some respects and small in others, in relation to textiles. That is an industry which for a long time has had not only quite adequate protection but comparatively high protection. And, coming from the west where once in a while the people cross the border, we are pleased with the provision that we are to have the same privilege that is enjoyed by United States tourists coming into Canada, under which tourists returning to Canada from other countries will be allowed to bring in $100 worth of goods free of duty. I hope that some day not only the people who are privileged to have automobiles or who can buy steamship tickets, but people who cannot afford these things will be able to bring in one hundred dollars' worth of goods from time to time. But these provisions please me.

There is, however, one thing in the budget which I am exceedingly sorry to see, and that is the increase in the sales tax, which will fall very heavily upon the masses of the people who cannot afford to pay it. In Alberta for example the provincial government has also placed in effect a sales tax of two per cent, so that the people of Alberta will be charged a sales tax of ten per cent, which is exceedingly high. Already the effect of the sales tax can be seen in relation to automobiles; for it has been stated that the price of cars will be raised to the extent of the tax, which will restore the former price that was reduced by the trade treaty with the United States. I had hoped also, having regard to the criticism that was levelled against the sugar tax when it was instituted by the late government, that that tax would be wiped out. It is a tax upon the luxury of the poor. I well remember how a few days after the tax was first instituted I was driving in Saskatchewan with the reeve of a muncipality, who had a large family. He had bought a sack of sugar, paying the increased price of $2 per hundred pounds. He said: "I do not think the government of Canada realize just what that tax means to me." He pointed out that he had to take to the store forty dozen more eggs at five cents a dozen to pay the tax. It is indeed a tax which bears heavily upon the poor, a tax even on the candy used by our children.

Tariff reductions have received a great deal of discussion in this house, but again let me repeat what I and others of our group have said before, that tariff reductions, while useful, will not solve our problems of trade. Why not consider what other nations are actually doing at this time, namely, directing trade to those who will trade with them? In that connection the policy should be to trade as nearly as possible to the same extent with those who trade with us. Of course that involves controlled exports and imports, something which perhaps the present government is not prepared even to consider, and for which public opinion and public support will have to be moulded as the days

go by. Our sister dominion, New Zealand, is, I believe, taking control of the milling and wheat industry of that country from the first of May. Of course it is not comparable with the same industry in Canada, for in New Zealand wheat production is quite a secondary industry. But on August 1 of this year the government of New Zealand will also take control of all dairy produce, will export it and set its domestic price through a single governmental agency, guaranteeing to the farmer a fair return and selling the product abroad with the government's stamp upon it. That industry is comparable with our wheat industry because it is the primary industry of New Zealand. Switzerland demands direct trading relationships; Germany, Sweden and to a degree France, Italy and some other countries are demanding a quid pro quo in commerce with foreign nations. The world trading relationships are moving in that direction. Russia under a different plan and perhaps for a different purpose has been conducting her external trade along much the same lines for a considerable time.

Canada, we are told, faces grave problems. One hon. member has said that unemployment is our greatest problem; another says the railway problem is the most serious. But transcending both in my opinion is the problem of agriculture. In his speech the minister recognized its gravity. But I submit that other than the items to which I specifically referred there is little further hope in the budget for the agricultural producer. One thing that worries me at the moment, in connection with the reports we are getting from western Canada of weather and soil conditions there at the present time, is; What will happen if this year western Canada produces a bumper crop? What allotment of money have the government made to cope with the situation that may conceivably arise? What plans have the government for financing the situation which may come about this autumn? Drought, grasshoppers and rust have relieved us of the necessity of facing that problem in the last two or three years. This year, although the carry-over will be reduced, it will still be large. We congratulate ourselves that during the past year we were able to find a market in the United States for some of our farm produce. But speaking at Lincoln, Nebraska, last Monday evening in the state university, the Secretary of Agriculture, Mr. Wallace, said:

> The main fact to bear in mind, however, is that these increased imports were due to an absolutely unprecedented situation. I suppose the same situation is not likely to occur in the same degree for another one hundred years, unless our climate is changing drastically. There is simply no point in viewing the farm imports of 1935, which were caused by the drought of 1934, as reflecting a normal situation facing the American farmer.

Our recent trade treaty with the United States will not help us in relation to that problem. In the same speech Mr. Wallace went on to say:

> One might go on to show the extremely small size of farm imports, even in the face of the terrible drought of 1934, as compared with our normal production. It is truly surprising that quite the worst drought since the Civil War should result in imports of corn representing only about two per cent of our average production; wheat a little over three per cent, beef, including canned beef, three per cent of average slaughter; pork one-tenth of one per cent of average production; and butter one per cent.

Even under drought conditions the American union imported relatively little, and once good conditions return they can probably satisfy their own market to the full. Not only that, but Secretary Wallace indicated that under such conditions he hoped they would be able once again to enter upon the export of agricultural goods. In the same speech he said:

> As supplies of wheat and pork and other export products increase with normal weather, we should regain a part of our foreign trade in these products, too.

So that not only are we faced with a loss of the market we had to the south, but we are faced with competition in the world market from surplus products of farms in the United States. This year those United States farms may become a real factor in the world agricultural situation, and should Russia also go on the expor market the situation would be considerably aggravated. Of course, as was shown yesterday by the hon. member for Vancouver East (Mr. MacInnis), fortunately for Canada farms, Russia has a rising standard of life, and as the standard rises consumption increases; consequently the danger of competition from Russia decreases proportionately. But we cannot lose sight of the fact that Russian agricultural sowings of grain in this year are higher than in preceding years, and with improved methods and a scientific background we do not know what the future has in store for us so far as competition with Russia is concerned.

And so I say: Will not the government realize that old-fashioned or "normal" trade, as it is called, is done? Our producers need blankets, boots, clothing, cutlery and a multitude of other things. One has but to travel and visit the homes of the producers to find that what I have said is abundantly evident. In Great Britain and other European countires there are people who are unemployed

and who could make these goods. They are underfed because they are unemployed. France, Germany, Great Britain and other countries need wheat, beef, butter, pork, fruit and so on. "Oh," some one says, "if we attempted to exchange their commodities for ours we would close our factories." Well, gentlemen, the factories are closed now. It is true that we face a dilemma; I realize it. We face that dilemma because of the unplanned and unintelligent economic system to which we have bound our faith. Sooner or later we shall have to make a choice, and to my mind the choice will be between the encouragement of native, natural industries in Canada and the continued encouragement of tariff-nurtured ventures which are monopolistic and powerful and have sheltered themselves behind tariff barriers of various kinds.

I heard the leader of the opposition use the word "parasitic" in one of his radio addresses, but perhaps in another connection. I use the same word when I say that these parasitic industries, if I may so describe them, are destroying the basic industries upon which they feed. We must face that fact. Much of the soil drifting and soil depletion in western Canada is due to that same kind of economic structure. Again may I quote from the same speech by Secretary Wallace:

> Farmers know that the reasons for ruthless exploitation of soil have often been economic—that under pressure of extreme supply and price fluctuations they have been alternately forced by ruinously low returns and induced by boom conditions to mine and sell soil fertility, or to expand the farm plant by turning under millions of acres of grass lands which should have remained in sod. I believe that farmers understand the public and private importance of stabilizing production, stabilizing prices, and of maintaining the productivity of farm land for years to come.

If that is true of the United States it is equally true of Canada. What hope do we find in the budget of stabilizing agricultural conditions in this dominion? Unplanned production with unplanned markets are bringing Canada, in common with may other parts of the world, to the very brink of economic and social chaos; for reduced purchasing power on the farms and in industry reduces consumption. By rational control and by trade exchanges abroad we must increase purchasing power and consumption in Canada. Of course that is a tremendous undertaking, and I do not envy the task of a finance minister who has to cope with it, but I submit that it is not an impossible task.

What preparations are being made by the government, the Minister of Finance and the Bank of Canada to meet the possibility of financial chaos in the near future? When we pick up our daily papers we read disturbing accounts of the financial activities of almost every country in the world—the United States, France, Germany, Italy, of course, and even Great Britain. What preparations are we making to meet the situation which will develop? Are we going to follow the United States in the inflation which at the moment looks almost inevitable? If so, to what extent and how will that affect our trade relationship with our best customer, Great Britain? Conceivably it may assist us for a time, if we follow the American dollar. On the other hand, unless we are prepared to meet the situation, the ultimate dislocation may have disastrous results. Of course this involves a discussion of banking and finance. I do not purpose discussing those matters this afternoon, except in so far as they relate to the budget proposals.

It seems to me the time has come when national ownership of our central bank, our currency and our credit, and their use for national ends, is tremendously important. Before parliament prorogues we should give these matters full consideration.

The minister aims at something more nearly approaching a balanced budget. In the course of observations I made on a previous occasion I said I was not particularly interested in balancing the budget, but that I was more interested in the balancing of human welfare. That is still my opinion. The minister admits that there may be hon. members who will criticize the budget as a move in the direction of further deflation. I should like to hear the hon. members for Vancouver-Burrard (Mr. McGeer) and Rosthern (Mr. Tucker)—the latter is in his seat—comment on that particular opinion expressed by the minister.

In that connection I should like to place on Hansard a quotation as it appears in a publication known as Index, No. 123, of March, 1936, published by the Swedish central bank, and which is an authoritative document on the Swedish financial system. Professor Bertil Ohlin, referring to the improvement in Sweden, has this to say:

> This change of circumstances is all the more remarkable if we compare them with conditions in a typical gold parity country such as France. As part of their deflationary policy the governments there, in order to wipe out the deficit on the budget, have effected one reduction in expenditure after another, yet they have found, much to their chagrin, that the revenue has declined as speedily as the expenditure and that there is still a huge deficit. This actually applies also to the budget for 1936. Formally it is balanced, it is true, but the equilibrium has been achieved by the transfer of heavy non-profitable expenditure, e.g. considerable defence items, to a special budget. It cannot be said therefore that the budget is effectively balanced.
>
> This course of development leads us to a very important conclusion regarding financial

policy in periods of severe and prolonged depression. The falling-off in government revenues caused thereby and the increase in expenditure that is generally called for, e.g. for combatting unemployment, are so heavy that neither economies nor higher tax rates effected on a scale that is practically feasible can fully compensate for them. In other words, it is not possible to balance a budget so long as a policy of deflation is pursued.

Recent events in a number of countries show, on the other hand, that as soon as the deflation ceases and economic conditions improve the equilibrium in the state finances is restored. Government revenues rise and expenditure on unemployment goes down. It is really something of a paradox that in a country such as Sweden, where no attempt was made during the crisis to arrive at a balance, the budget is nevertheless now balanced, whereas a lack of equilibrium in the state finances has presisted in France, where the governments have made the balancing of the budget the primary object of policy.

It seems to me that that is an opinion worthy of study. In some degree it is the same contention which we in this little group have made so often. The balancing of a budget curtails consumption and to that degree makes economic improvement more difficult. Whilst I mention what Sweden had done in this regard, I am not forgetful of what it has done in the utilization of some of the great monopolies to assist in the financing of social services. Sweden is considering the utilization of further monopolies for this purpose. I commend this suggestion to the government and the minister, not for inclusion in this budget, as that is manifestly impossible now, but for consideration as a means of improving our economic position sometime during the next two or three years, when I fancy the minister will be faced with a financial situation even graver than that facing him to-day.

The amendment moved by the hon. member for Vancouver East (Mr. MacInnis), in which I concur, advocates a levy on accumulated wealth to reduce the burden of our national debt. I believe this must come. Increased taxation of incomes in the higher brackets will undoubtedly have to come. In this regard may I say I have been told on quite good authority that there are men with comparatively large fortunes made in this country who have transferred their domiciles from one province to another in order to escape death duties or to obtain a reduction in such levies. I heard of one gentleman who has removed himself to the Bahama islands, I believe it is, and obtained domicile in order to escape taxation upon his fortune by the country in which he made it. That is not patriotism, and it is an action which should be prevented by the parliament of Canada. Such things should be treated as criminal offences.

Mr. DUNNING: How?

Mr. COLDWELL: The Minister of Finance says "how." All that a man can remove from a country are the figures and documents pertaining to his wealth; the real wealth remains. If the documents removed are bonds of the Dominion of Canada, then the indebtedness to the dominion can be dealt with.

Mr. DUNNING: We have no trouble with that now.

Mr. COLDWELL: If he has shares in Canadian industries—

Mr. DUNNING: We have no trouble there either.

Mr. COLDWELL: Then I hope the Minister of Finance will do a little better than his predecessors in collecting income and other taxes from those who receive substantial incomes. When we compare our tax rate with the rate in Great Britain—

Mr. DUNNING: Perhaps my hon. friend will permit me. The dilemma is not precisely as he puts it. It is possible for a resident of Canada to own forms of wealth which do not relate to Canada. That has been so in many of the cases I have investigated. Naturally the first move of the man who contemplates escape from taxation is to transfer his wealth into some form which will more easily enable him to avoid that taxation. Once he has obtained domicile elsewhere, it is rather difficult to act. That is why I asked my hon. friend how he would deal with it. I am always looking for suggestions.

Mr. COLDWELL: I thank the minister for that information. We publish the names of criminals, whose activities have been subversive of the best interests of the country, and we should publish also the names of those who seek to escape their just share of the burdens of this country. We should let the people of Canada know precisely just who they are. I think that would be a salutary method of dealing with them; it might not be wholly effective, but I make the suggestion to the minister.

Mr. DUNNING: I think in one case that has been fairly well done.

Mr. COLDWELL: Not only have we to consider the public debt of Canada, but we have to consider the tremendous private debt. Of course the budget does not deal with this particular form of debt except in some minor details. At this point I should like to say that I am rather disturbed at the tremendous burden of debt upon people who have produced, who have worked in an endeavour to obtain a competence in the country in which

they live, and who now find that under present economic conditions the things for which they worked are passing from them. I was sorry to learn from some farmers in my constituency that they had been informed that the payments made in relation to the 1930 certificates were no longer under their control. In many instances they had hypothecated them because of financial obligations and to-day they find themselves in no better position on account of these payments, except for the reduction of their debt, than they were in before. When the matter was before the house I was under the impression that the payments would be made only to the person who owned the certificate and who had delivered the wheat to the country elevator.

I see that my time has just about expired, and in closing I would say this. This house and the country as well will be faced with a tremendous problem in the next two or three years. Every constructive thought should be brought to bear upon the problem that confronts us, and we should not frown upon ideas because they are new, no matter from what quarter they may come. If we study the solutions that have been arrived at elsewhere and examine suggestions that are put forward here and in other places from time to time, I am quite convinced that we shall pass through the difficulties that we face to-day to a better and a fairer social order.

Mr. PIERRE GAUTHIER (Portneuf): Mr. Speaker, may I be permitted to speak in French, with which I am more familiar and which is my mother tongue. I am well aware of the courtesy of hon. members and I am sure that the house will extend to me the same hospitality that is shown by the old French legislature in Quebec when once in a while a member speaks in English. I am proud of the spirit of fraternity displayed by the different races composing this assembly.

Before continuing my remarks in French I wish to say this to the Minister of Marine (Mr. Howe). A speaker of the unionist party in Quebec, who happens to be the local member for Portneuf, said the other day on the radio that the political spirit and fanaticism had induced federal Liberal members representing the different counties in Quebec to leave the portfolio of Marine in the hands of an Ontario member. I simply say that this local unionist member was talking through his hat, and though a pilot and a director of the Montreal Pilots' Association, he was certainly not speaking on behalf of that body. The permanent members of the Montreal pilots' organization had an opportunity to confer with the Minister of Marine and they were absolutely satisfied with the interview and the interest which the hon. gentleman showed in receiving them. This organization has always fought for its rights and has never acted in that way before towards the marine and pilotage authorities. It is true the minister is from Ontario, but we see beyond the limits of our own province and we believe that Ontario is a part of Canada just as much as is Quebec. The pilots know that the minister is a Canadian through and through and is doing splendid work, and this isolated attack will not stop him from devoting himself to maritime interests on the St. Lawrence and elsewhere in Canada.

(Translation): Mr. Speaker, may I be permitted to continue in French the few observations I have to offer.

In spite of the eight years I have spent in the Quebec legislature, it is not without emotion that I rise to address a gathering composed of so many of Canada's most eminent public men. I would not wish any utterance of mine to hurt anyone's feelings. A soldier of the valiant Liberal army, I cherish but one wish: to bring to the discussions of the house the expression of my ideas, believing them to be worthy of utterance before the representatives of the nation, and I have but one thought, a thought which, I believe, should fill the mind of every good patriot—that of contributing, in the measure of my capacity, to the welfare and advancement of our glorious country, the finest in the world.

I do not wish to continue, Mr. Speaker, before tendering to you my most sincere congratulations on your elevation to the speakership of the house. The glorious exception whose voice was raised in objection to your nomination as First Commoner of the land only served to confirm the general sentiment. Your personal qualities and your deep knowledge of parliamentary procedure give you an indisputable right to your high office. Your manner of conducting the proceedings of the house has established your worthiness to occupy it.

May I be allowed to congratulate the Minister of Finance (Mr. Dunning) on his clear and frank statement of the financial and economic situation of the country. The Minister of Finance has confidence in the future of Canada and of the Canadian people. He said the other day—and all Canadians should ponder his words—that we must have confidence and that we must preach that confidence without which the nation cannot advance and which is the antithesis of all ideas based on the interests of groups, of cities or of provinces.

To seek to enlist popular support for a theory by holding before the people prospects of ease to be obtained at the cost of

a minimum of effort; to group forces sometimes produced by entirely different energies, in order to ensure the momentary success of a party; to preach a theory the application of which would load on the shoulders of the state all the charges of the country; to make the government the controller of all the activities of the people; to create a sort of national bureaucracy by restraining the hand of the individual; to establish in the nation a system of extreme paternalism; to try to divide a country by calling up questions of rights disregarded and of differences of interests; in short, to create a small state within the larger one, those are some of the ideas—I have certainly not enumerated them all—that are current in the world and in this country to-day, and whose progress we should not fail to watch.

I said a moment ago that I was a soldier of the Liberal army; I may add that I am proud of it and that I have no hesitation in following the lead of my chiefs. Let us open the pages of our political history; let us read the ones that the great Sir Wilfrid Laurier wrote from 1896 to 1911; let us recall the economic situation as it was under his successor the right honourable the present prime minister (Mr. Mackenzie King), and let us compare that period with the years of Conservative rule. On the one hand, we find Canada enjoying a flourishing trade and profitable international relations, the efforts of Liberal governments being always directed to the same end: lowering of taxation and reduction of the debt by the exercise of rigid economy. Under Conservative governments, on the other hand, we find our debt ever increasing, our trade strangled by excessive tariffs and the people increasingly burdened by the weight of taxation. A good Canadian summarized the situation very clearly in saying: "Conservative governments pile up debts and Liberal governments pay them off."

I do not wish to be too hard on those who have nearly all disappeared—the Canadian people having made sure that they obtained a well-deserved rest—but I cannot help remembering the election of 1930, with its butter in the province of Quebec, the numerous conferences that were to raise Canada from its ashes, the manner in which the present Minister of Justice (Mr. Lapointe) was attacked for advocating the repeal of Section 98, and the famous posters, as grotesque as they were insulting. I will refrain from mentioning Mr. Sage's course of economics and apologetics.

In 1930 the people decided to try an experiment. In 1935 they thought better of it. And that government, that cost the people the large sum of 800 millions of dollars, is still deploring the fragility of things human and wondering at the good sense of the voters.

We, also, hear the cries of the mothers, but we heed them. Instead of treating the symptoms, as inexpert physicians do, the government attacks the disease at its root. Our trade, freed from its bonds, is back into its normal course, and the Canadian people find opening up before them, in consequence of the reciprocity agreement, a market of 100 millions consumers. The late government had understood at last, but too late. The tories tried, in 1935, to make an issue of their efforts to negotiate the famous treaty that they had killed with the aid of the nationalists of 1911. Their repentance was tardy, but their contrition did not seem to be perfect—then came their penance.

The Liberal party must now reconstruct. As all sound builders, they must start at the foundation. The edifice cannot possibly rise in a night. Being a skilled architect, the Prime Minister of this country has surrounded himself with able men. They are only too ready to place their knowledge at his disposal and, judging from the numerous testimonials which are unceasingly pouring in since the Minister of Finance presented his splendid budget, the Canadian people have regained confidence and hope to live again years of prosperity and peace.

I stated just now that the economic structure of this country cannot be built up in a night; there will be delays and setbacks. Among these will be found unemployment. Many are astonished to hear it still spoken of; it was to have been solved so rapidly! Unfortunately the problem is still with us. I recognize with many others that strenuous efforts were made to alleviate unemployment. Public works, colonization, etc., are so many remedies used to relieve it. Public works are a palliative, a treatment of symptoms; no sooner are they completed than the unemployed reappear as numerous as ever, waiting for further works to start. But governments must find revenues to meet all these expenditures.

The freedom and development of trade, tested remedies resorted to by a Liberal administration, will soon relieve this constraint, anxiety and fear experienced by the victims of an unrelenting congestion. Like individuals, society must breathe, financial organizations must consolidate and expand, trade must be encouraged and mutual trust must revive between nations as well as between individuals. For twenty years, high tariff barriers have prepared the crisis from which we have so long suffered. Let us hope that the same blunder will never reoccur and that the

general interests of countries will displace selfish personal interests, be they those of the financiers, "corporatists" theorists, politicians or individuals.

The Canadian nation owes its birth and development to the loyalty and self-sacrifice of its citizens. It cannot continue if self interest is to prevail. Inhabiting the same country, belonging to different races and creeds, having interests often diametrically opposed to each other, we must even bring a strictly national viewpoint to the solution of the problems with which we are faced. Away with interprovincial boundaries and with racial distrust! Loyal subjects of one king, governed by federal or provincial laws of one country, all Canadians, be they French, English, Scotch, Irish, living in the west or in the maritime provinces, should feel that they are brothers of those belonging to the same races living in the central provinces. To each one his rights, his creed, his language and his aspirations! The confederation of the Canadian provinces has survived to this day and it behooves us all to strengthen it, if possible, and cause other countries to envy the harmony that reigns here. May I recall the old but always true saying, dear to my colleague from Quebec South-west (Mr. Parent) "United we stand, divided we fall."

I referred, sir, to the means of relieving unemployment; I mentioned colonization. I reside in a province which has understood the necessity of directing its activities towards that goal; an extensive program of settlement has been carefully prepared by the Quebec government and is now being carried out. Thousands of settlers coming from the cities, many of whom are farmers' sons and urban workers, have been settled on lands chosen by agents or colonization missionaries. New centres appear here and there: Abitibi, Temiskaming, Gaspé, Témiscouata and others which will open up new avenues to trade and industry, to the worker and even to the professional man, thereby relieving the overflow of our cities by directing it elsewhere. Is this not, sir, a true remedy, is this not attacking the root of the evil, that is the disproportion existing between urban and rural populations? I believe so, and the highest church and civil authorities have realized it long before I did. The movement should spread to the whole country, in spite of adverse criticism and of opposition from whatever source.

Our fertile lands are great in extent and only require to be stirred to produce. Many of our natural resources still lie idle and only await the appearance of the hardy toiler. Why not have recourse to the strong arms of Canadian citizens?

[Mr. Gauthier.]

Canadians are still willing to work and if we direct them well, if we place at their service the means at our disposal, if we furnish their initiative with the opportunity to manifest and develop itself, there will be no need, in order to revive their confidence, to preach so many doctrines, sometimes brilliant but too often deceptive, because of their false conception of the relation between the state, whose duty it is to govern wisely, and the citizen.

The state helps its citizens to live; it cannot undertake to provide a living for everybody. The state, by its laws, encourages and facilitates work. It is not a fountain of plenty in which all may dip without accomplishing any work. The state works; the people must do likewise. I place too much faith in the Canadian people to doubt of their abounding resourcefulness. The Liberal government recognizes this and its entire program breathes work and reconstruction.

Statistics show that nearly 2,000,000 persons still depend on direct relief. Although industrial employment is on the increase—I think it is the young and brilliant Minister of Labour (Mr. Rogers) who made that statement the other day—the number of those who depend on direct assistance is not decreasing. The constant increase of the population with its new contingent of industrial workers, the inventions and use of new machines and new processes explain the present situation. May I, sir, mention another explanation. I wish to speak of the important and delicate subject of immigration, and with that I will close my remarks.

I well recall that in 1930 Conservative speakers decried the Liberal party for having permitted immigration. The Conservative government were going to prohibit it entirely. This promise, like the one in connection with butter, was carried away on the winds as easily as are the autumn leaves. The Conservative government did make an effort and, by order in council No. 695 of March 21, 1931, restricted the flow of immigration. On September 6, 1931, another order in council, No. 2115, was passed in connection with Asiatic immigration. And here is the result. To a question I asked in the house, I received a reply that from March, 1930, to March, 1934, 147,660 immigrants entered Canada. Of this number 73,846 came from the British Isles. From April 1, 1934, to January 31, 1936, 21,996 immigrants entered Canada, which must also be added to the figure given in the first reply, making a total of 169,656 immigrants. And immigration had ceased!

I am not called upon to establish a parallel with immigration previous to 1930 or 1911;

it was much greater. But at that time we had not, out of a population of 10,000,000 people, 2,000,000 persons depending on direct relief. When the government is making every effort to find and provide work, why should they add a new problem to the existing one?

A few moments ago I asked that new centres be opened to settlement and that the unemployed be put to work at the development of our natural resources. But if immigration does not cease, there will be no end to unemployment. In spite of all that may be said, I cannot believe that it is only capitalists who are entering the country.

No, sir, to my mind our immigration laws should be revised once more and we should tell those who feel an irrestible urge to come to Canada, to wait until we have solved the unemployment problem and have so amended our laws as to greatly restrict the choice of immigrants.

I quite admit that there is room in this country for many more millions of people. I am in favour of admitting people from the British Isles and British born or French citizens! But it is rumoured, as may be seen by articles in a number of Canadian newspapers, that people from other countries cross over to England, become naturalized, and then enter Canada. I do not wish to ostracize any race. All are entitled to a place on this earth. But each nation is also entitled to choose its new citizens. Let those who are obliged to resort to subterfuges to enter Canada remain in their own country. We wish to ascertain where we are at and know something about those who wish to settle here. That is all I have to say for the present on this question. I trust that the government will accept my remarks on immigration in the same spirit as those I uttered a few moments ago.

Still speaking from a national viewpoint, having but one object in mind, the welfare, harmony, prosperity and progress of Canada, I remain true and loyal to my compatriots, to the Liberal principles which are dear to me, and to the Canadian fatherland for which I cherish a great love. It is my intention to keep posted, by every possible means at my disposal, on the human capital that comes to us.

Mr. Speaker I wish to pay homage to my constituents of the beautiful county of Portneuf. I have their interests at heart and I count on their loyal cooperation and frankly Canadian support to carry out my work on their behalf.

May I, sir, direct the attention of the government to a rather important problem interesting the county of Portneuf: that of the production and sale of charcoal. I have already discussed this question in the Quebec Legislative Assembly and I now ask the federal government to help us find markets for this product of Portneuf county, especially to help us in meeting a ruinous, I may even say an unfair competition. I rely on the full support of the right hon. Prime Minister and of the Minister of Trade and Commerce (Mr. Euler), to find, in the near future, a satisfactory solution to this question, in order that our producers of charcoal may carry on with the confidence that is essential to the success of their industry. Mr. Speaker, in closing my remarks may I be permitted to express the wish—and in this I feel I have the support of my hon. friends in the far corners of the House—that some day, in order that we might better enjoy the splendid speeches delivered in the house, the government will at the suggestion of His Honour the Speaker, instal microphones with loud speakers in the four corners of the Chamber, thus enabling us, the back-benchers, to hear as well as those more centrally seated.

## THE ROYAL ASSENT

A message was delivered by Major A. R. Thompson, Gentleman Usher of the Black Rod, as follows:

Mr. Speaker, His Honour, the deputy of His Excellency the Governor General, desires the immediate attendance of this honourable house in the chamber of the honourable the senate.

Accordingly, the house went up to the Senate,

And having returned,

Mr. SPEAKER informed the house that the deputy of His Excellency the Governor General had been pleased to give in His Majesty's name the royal assent to the following bills:

An Act for the relief of Sonya Shenkman, otherwise known as Sadie Shenkman.

An Act for the relief of Louisa Markland Molson Blaiklock.

An Act for the relief of Rita Constance Beatrice Gurd Rykert.

An Act for the relief of Helen Elizabeth Ham Lilley.

An Act for the relief of Mary Kaydouh Massabky.

An Act for the relief of Dora Louise Gustiana York.

An Act for the relief of Violet Charlotte Dyke Duiven.

An Act for the relief of Irene Louise Penny McKee.

An Act for the relief of Esther Shapiro.

An Act for the relief of Thomas John Howard Fox.

An Act for the relief of Ruth Fitzrandolph McMaster.

An Act for the relief of Agnes Mercer Daniels.

An Act for the relief of Gerald Thompson Miltimore.

An Act to assist in the relief of Unemployment, the promoting of Agricultural Settle-

ment and Rehabilitation, and in the Development, Conservation and Improvement of certain natural and other resources.

An Act to authorize an agreement between His Majesty the King and the Corporation of the City of Ottawa.

An Act for granting to His Majesty certain sums of money for the public service of the financial year ending the 31st March, 1937.

At six o'clock the house took recess.

## After Recess

The house resumed at eight o'clock.

## THE BUDGET

DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE MINISTER OF FINANCE

The house resumed consideration of the motion of Hon. Charles A. Dunning (Minister of Finance) that Mr. Speaker do now leave the chair for the house to go into committee of ways and means, and the proposed amendment thereto of Mr. MacInnis.

Hon. H. H. STEVENS (Kootenay East): Mr. Speaker, I am happy to note that the Minister of Finance (Mr. Dunning) is in his seat, as I desire to extend to him my sincere and hearty congratulations upon the manner in which he presented the budget. The clarity of his language, the thoroughness of the examination of the public accounts and the general manner of presentation were admirable, and I have no hesitation whatever in extending to the minister my earnest congratulations.

Under our democratic system it has long been one of the cherished rights of the people to present their claims to parliament through their chosen representatives, and for an equally long time the occasion of the presentation of the budget by the Minister of Finance has been considered the most opportune moment for a statement of those claims by the people's representatives. Parliament is supposed, in theory at least, to give earnest consideration to those needs or grievances or claims as the case may be.

The budget itself discloses the maximum that the government is prepared to do to relieve the distress or to meet the needs and claims of the people. I shall discuss the present budget from that standpoint. It is my intention to leave the discussion of all detail until the committee stage when there will be opportunity to discuss and examine the various phases of the budget and the statement made by the minister, so I trust it will not be thought that because I do not in the limited time at my disposal to-night enter into a discussion of any of these matters, this is on account of any lack of appreciation of their importance.

[Mr Speaker.]

The Minister of Finance said, as reported on page 2384 of Hansard:

> I am confident that common sense and sound economic policies can solve our immediate problems.

These words suggest to me two questions: first what are our immediate problems, or what were the immediate problems that the minister had in mind as disclosed in his remarks; and second, what does he mean by "sound economics"? As to the problems the minister had in mind, I do not think it is difficult to recognize them. They are: First, the promotion of foreign trade; second, how to balance the budget, and third, the protection of Canada's credit. I do not think he would disagree with me when I say that these seem to me to rank first in importance in his mind. A vital question is: How does the minister apply his principle of 'sound economics' to the solution of these problems? Let us take first the promotion of foreign trade. I will again quote the minister, because it is highly important that we get a clear understanding of his attitude towards the general situation. On page 2366 of Hansard he is reported as saying:

> It is not putting it too strongly to say that foreign trade is the very life-blood of Canada.

These are very strong words. Perhaps I should quote a little further from the same part of his speech. He said:

> Every step which helps to provide markets for our agriculture brings nearer that day when the Canadian farmer, receiving more for his products than it costs to produce them, will once more provide, through the stimulus of his purchasing power, a sound basis for national prosperity.

I do not take exception to either of these sentences; that is, I do not take particular objection to their form. I object, however, to the assertion, which they seem to me to make, that the whole solution of Canada's problems, agricultural and others, is to be found in the extension of foreign trade. It will not be possible for me to examine that aspect of the question in detail, and I do not intend to go into figures, but I will make one or two observations about it. I prefer the term "external trade" rather than "foreign trade," because the largest proportion of our outside trade is done with the British empire and I do not think we should speak of that as foreign trade. The government seem to rest all their hopes for recovery on the increase of our external trade. I submit to the minister and to the government that they are blindly ignoring imminent domestic problems the solution of which must come from within Canada. I do not care to what extent our foreign trade is increased, there are most

imminent problems, to which I shall make reference later, that must find their solution within Canada. But this is the government's only answer to the appeals of those who are suffering. For instance, the Minister of Labour (Mr. Rogers) has on more than one occasion intimated that the measures which he has introduced for the relief of unemployment are temporary, bridging the gap as it were, until, as he said, our foreign trade restores us to a condition of prosperity. In my own riding of Kootenay East, in and around Fernie, Michel, and Coal Creek, we have a body of miners. Let me tell the minister and the house of the conditions under which these miners have been living for the past six years. A great many of them have not been working at all. Those who have been working, particularly at Coal Creek and Fernie, several hundreds of them, have for six years been getting two or three days' work a week, and no relief, because when they are working two or three days a week they are not allowed to go on relief. These are splendid men, fearless in the hour of danger; they are exactly the type of men who performed heroic service in Nova Scotia the other day. They are good fathers and husbands; most of them have families, and all they are asking is that they be permitted to work. Oh, the minister replies, we have recently arrived at a modus vivendi with Haiti for foreign trade. He says: We have under discussion some arrangements in regard to extending our treaty with France. He says also: We reduced the duty on rabbit skins from Belgium. Are these and other efforts towards the extension of foreign trade an answer to those miners? Is it a common sense answer?

Mr. DUNNING: If I may be permitted to interrupt, my hon. friend is unfair in making that observation. Taking the duty off rabbit skins from Belgium must in its relation to foreign trade be considered in connection with what Belgium took off Canadian imports.

Mr. BENNETT: Which was a violation of the most favoured nation treaty.

Mr. STEVENS: I quite appreciate that, but the minister must have a little sense of humour—well, I should not say humour—to understand the ghastly nature of such an answer, when those miners ask for an opportunity of providing food and clothing for their children, to tell them: Our answer is in the extension of our external trade. What I am seeking to impress upon the minister's mind is this, that in the presentation of this budget and in these matters to which I am now referring there is no answer to the miners of Fernie and, of course, to others in similar circumstances. But I say this: I doubt whether there is in Canada any place where men, women and children have suffered more than have the miners and their families at Fernie.

Mr. DUNNING: Due to the absence of foreign trade in their province.

Mr. STEVENS: The minister told us that last year foreign trade increased $151,000,000 over the figure for 1934. That, I think, is very creditable. But in that same year the numbers on relief did not decrease. There was no decrease, but there was a distinct advance in foreign trade. Supposing this year there is an advance of $150,000,000 or $200,000,000; if it has the same effect as it had last year it will not help these people on relief at all. That is the point I am trying to make.

But the minister says, no doubt: See how it helps the farmer. In fact, in my quotation a minute ago from the hon. gentleman's speech he indicated that an extension of foreign trade was the very foundation or basis of national recovery. Well, let us look at that statement briefly. No doubt an extension of foreign trade will help to some extent, but let us bear in mind that about ninety per cent or more of the products of the farm are marketed and consumed in Canada. I have before me a list which I shall not trouble to put on Hansard at present, but with the exception of cheese, wheat and apples, practically every other article produced on the farm is consumed and marketed in Canada to an extent of about ninety-five per cent. So, an extension of foreign trade is not going to help them so much, because world prices are invariably lower than domestic prices, and if there is one thing the farmer needs more than another it is an increase in prices. As the minister himself asserted in his thesis every step which helps to provide markets for agriculture brings nearer that day when the Canadian farmer through the stimulus of his purchasing power will introduce a sound basis for recovery. I have already indicated that the great bulk of these goods are marketed in Canada. External prices are invariably lower than domestic prices. How then can we hope, by an extension of external trade, to make such a recovery in the condition of the farmer, or, as the minister says, to lay a foundation for the recovery of conditions throughout the whole country.

For a moment let us turn to the question of balancing the budget, and here again I quote the minister:

> What we can and must do is to make an immediate appreciable approach to a balanced budget.

And then follows what is to me a very strange statement:

I feel it necessary to budget for a deficit this fiscal year of something less than $100,000,000.

He is budgeting definitely for a deficit. That is a policy of defeat, and it is disclosing a stubborn adherence to orthodox methods. I submit to the minister that times are not normal, and that this is not a time when we should consider the question of balancing the budget along orthodox and normal lines, because so far they have failed to permit of balancing it. However, let me deal with that later on.

Let me now turn to the third point, namely the protection of Canada's credit. Here again we have the minister dealing in superlatives:

If we continue this process of handing out unds without security—

And I submit that was not a very fair statement of the case.

—and without control of any sort, we shall be in danger of undermining dominion credit, which, in my opinion, must be protected at all costs.

I quite agree with the Minister of Finance that we must protect dominion credit. But when one takes that observation in conjunction with these other observations of what I call orthodox financial opinion of to-day it has a sinister meaning. We must protect the credit of Canada at all costs. If we are talking as patriotic Canadians—why, yes; everybody agrees. But if it means that we must protect the credit of Canada so as to ensure security to those who hold federal, provincial, municipal and corporate securities at high rates of interest, and maintain the sanctity, as they call it, of these contracts at their present level, then I do not agree with it.

One of the main criticisms by the orthodox group in this respect is the railway problem, or burden. Let me say a few things about it. I shall not speak fully to-night, because I hope to have an opportunity to speak more fully in the course of the discussion of the bill now before the house concerning the railways. I do, however, wish to say a few words on this occasion. I submit that unification means turning over the Canadian National Railways to a great transportation trust. In my opinion that is the plan which is behind all this agitation. So far as Canada is concerned, it is fascism in economics; that is what it is, and it will end in bondage of a more aggravated type than we have ever dreamed possible in Canada. I warn the house of the trend of affairs in that respect. I think the critics of the Canadian National Railways are grossly overstating the case. The people are being terrified into a surrender of this valuable asset at less than cost; that is my firm conviction. If you tell a man daily he is ill, he will become ill. Years ago when I was a mischievous young fellow a few of us undertook to test this out. We met a certain man, and one after another told him that he was looking badly. In less than a week to my consternation he was in the hospital.

The point is that constant reiteration of a certain statement will fix in the public mind until it cannot be removed, a conviction which may not be true. In this instance I do not think it is true. We hear the statement that the Canadian National Railways problem is such that it is impossible for Canada to survive. I do not agree with that. Let us look at the matter for a minute. Out of the interest charges indicated in the budget about $80,000,000 are directly due to the war; pensions and civil reestablishment account for $54,000,000 more. These two items add up to $134,000,000 of our present day budget. That sum has been accounted for during the last eighteen years; there has been no diminution and no asset is represented. When we talk about the country surviving and about the enormity of the problem presented by the Canadian National Railways, let us at least have some appreciation of other sections of the financial burden of Canada.

By the way, during the nine years hon. members opposite were in office, and while the succeeding government held office there has been no diminution of any amount in the debt. There was a slight drop for a few years, but it again increased. The point is that $134,000,000 of the minister's problem of $162,000,000 is due to the war, and, of course, we cannot avoid that; it is there and we have to face it. But why point to the Canadian National Railways, which in the last few years has had deficits of alarming dimensions, and say: This is what is going to ruin this country; this is what is going to destroy us? Well, Mr. Speaker, we have not been destroyed after eighteen years of paying $134,000,000 a year in interest and pensions on account of the war, for which expenditure we got nothing. That money all went up in smoke. But in the Canadian National Railways we have, as I said the other night, a magnificent plant. Do not let the people of this country be deluded into thinking they have nothing for the money which was put into the Canadian National Railways.

What is the suggestion of the government with regard to the railway problem? It is to substitute a board of directors for a board of trustees. That appeals to me as a sort of playing with tweedledum and tweedledee. It

does not make any very great difference which system of management you have except in this one case—and here I am going to say something very plain to the government—have they any serious grounds for this change? Is this action the fore-runner of a deliberate plan conceived by forces inside and outside this house to secure this great national asset at a mere fraction of its real value? Obviously the present proposals to deal with the problem of the Canadian National Railways are meaningless unless they are part of a deliberate plan hitherto undisclosed. And I think before the session closes there should be a full and complete disclosure to parliament of all the factors that lie behind this bill for the restoration of a directorate instead of a board of trustees for the Canadian National Railways.

I am told by those who know more about this question than I do that under the present statute under which the board of trustees was appointed it would be virtually impossible to bring about a scheme of amalgamation. But in the meantime the public mind is being poisoned. Apprehension, alarm, distortion of facts, despair of a solution, are being instilled into the public mind, which already is harassed to the point of confusion and hopelessness by other troubles and discomforts. As I said a moment ago about the man who is driven sick by continually telling him that he is sick, by constantly instilling into the public mind the idea that our railway problem is hopeless, that we are faced with disaster; by arousing apprehension and alarm, you are going to create a condition of public mind which, I believe, some people hope will lead to the surrender of this asset at something less than its value. Let me ask this question: What, after all, are our real problems? I do not agree with the emphasis that the minister placed upon the problem. I would say that these are our two main problems: unemployment and debt.

Mr. DUNNING: That is precisely what I myself said.

Mr. STEVENS: No. The minister's only reference to unemployment was a wave of the hand and a reference to the legislation before the house.

Mr. DUNNING: Oh, no.

Mr. STEVENS: Now I am going to ask this question: Can anything be done that has not been included in the budget? I think that is a fair question. Personally I think much can be done. The minister fears inflation, and the other day he certainly disclosed in a graphic way that he fears inflation. Of course, whenever the term "inflation" is used the suggestion is made that inflation of currency is meant such as Germany indulged in after the war. Usually that illustration is trotted out and it is said there is a long step between the inflation of the present government and what Germany did. I fear inflation of the kind that occurred in Germany just as much as the minister does, but what I fear more than inflation is deflation.

Mr. DUNNING: I fear them about equally.

Mr. STEVENS: I fear deflation more. That is just about the difference between us. After all, there are two degrees of inflation. There is inflation of currency, money, and there is inflation of credit. I am not going to discuss this question at length, but I will say briefly that between 1925 and 1930 the bankers of the United States, and to a much lesser degree the bankers of Canada, indulged in an orgy of inflation of credit which, it is stated, resulted in a loss to the American people of something like one hundred billions of dollars. I think that is correct. But when you talk of Germany's inflation, there is no doubt that the inflation of credit which took place between 1925 and 1930 in the United States was equal in its effects almost to the inflation that took place in Germany. I see my time is passing and I must hasten on.

What has Britain done? I believe that we can do much more than is proposed in the budget. Britain devalued the pound. It may be said that we followed, but we did not follow until after the United States, and the United States was about a year and a half after Britain. How well I remember, in the fall of 1931 and the spring of 1932, those who stood for sound money and all that sort of thing pointing to Britain as being the cause of a catastrophe to this country threatening the very life of the nation. I never agreed with them. It was not true, and we do not hear much about it to-day. Oh, no, it is a different story now. True, we have devalued the dollar, but we simply toddled along after Great Britain had given the lead, and after the United States had followed Britain's lead.

Britain has also adopted on a grand scale a housing scheme which has been discussed before in this house, and I mention it now to the minister only because we have hardly touched this question at all as compared with what Great Britain has done. The minister in his speech about Britain referred to what we had done along similar lines, but he differs from the interpretation I put upon it the other night, so I shall not press that point. I simply say that in regard to housing we have not touched the question at all in the sense that Great Britain has.

Britain also took up industrial restoration on a wide scale. Let me read very briefly from the Midland Bank Review of July last, and this is worth listening to because, while what I say may not be of much importance, this is an authority. It reads:

It was perceived that the restrictive policy was having injurious effects on our economic life, and from time to time its strict enforcement was modified in the interests of British industry and trade.

It goes on:

Stability of the value of the pound in terms of goods has replaced stability in terms of gold.

Do not let us forget that.

The essence of the matter is that Britain's monetary policy since 1931 has come to be formulated with first regard to the interests of British industry and trade.

That is what should be done in Canada, but it is not being done. Finance and banking are the servants of commerce and industry, and the sooner that truth is made clear in our financial activities the better it will be for this country.

Mr. DUNNING: Who says otherwise?

Mr. STEVENS: It is not the practice; that is what I am referring to. Let me read another brief extract:

No lasting world recovery can be achieved, and no reconstruction of an international monetary system accomplished, until the complex and irregular web of international debts is cut away where necessary and brought everywhere within the compass of the new structure of commodity prices.

That is what the Midland bank says. I shall not enlarge upon it; I submit it merely for what it is worth.

Before I pass on let me say this: Since the deflation of the pound, through the leadership of the Bank of England—I am quoting now from the statement of the Bank of England—they have lowered the average yield on prime commercial paper, business undertakings' securities, from 5·7 per cent in early 1932 to 3·4 per cent. That does not include, as the statement shows, British government issues of any kind. It is a lowering of commercial rates, and that is what this country needs: a lowering of commercial rates as well as of dominion rates.

What has Belgium done? In one year, Belgium has jumped from a condition of despair into a condition of almost complete release from depression. That was all done in one year, I repeat. A year ago last March she was in that condition; to-day her trade with the United Kingdom is up thirty-three per cent and unemployment has been reduced in the year twenty-six per cent.

[Mr. Stevens.]

Let me quote from Wigglesworth's, London, report of April of this year:

Fortunately there are rare examples of progress within the economic field, and Belgium provides an interesting lesson.

An article in the Sphere for 14th March gives a graphic account of the events in that country since the premier of Belgium, Mons. Van Zeeland, took office. On the eve of his retirement after twelve months of brilliantly successful ministry, it is profitable to record the marvellous progress made by this busy, highly industrialized little country of eight million inhabitants, which has blazed a trail for other countries whose financial and economic conditions continue unsatisfactory.... The banking system was the first to be reformed, and there can be no doubt that to this are due in no small part the credit facilities which contribute so much to the well-being of the country.

It goes on to show the result of the devaluation of the franc.

I quote now from the Midland bank review of April of this year:

To compare economic and financial conditions in Belgium to-day with those of a year ago is to observe a remarkable transformation, due mainly to the wisdom exercised in formulating and carrying out governmental policy in respect of business affairs. It is appropriate now to review the changes that have occurred for the end of March concludes a chapter of economic reconstruction in a country which, through pressure of deflation, had been reduced to a condition of serious distress. ... Power was taken to reduce its gold content by not less than 25 and not more than 30 per cent. On March 31 a new gold content was established at a figure 28 per cent below the old, and the exchange rates quickly adjusted themselves to the new level.

But listen to this:

The gold was revalued for the time being on the basis of the minimum prescribed reduction in the gold content of the currency, namely 25 per cent, and the immediate addition to the value of the gold holding, in terms of Belgian francs, was about 3,750 millions. Leaving aside minor sums, 1,000 millions or rather more was allocated to each of three distinct purposes: the establishment of an exchange stabilization fund; the formation of a fund for steadying the market in government bonds; and the general purposes of the treasury, in particular, it is thought, the financing of public works.

This sum of 3,750 millions of francs would represent, roughly, $500,000,000.

That is what Belgium has done; she has taken definite steps, all within the ambit of present day law and possibility, but a departure from the orthodox method of financing. The statement is made in these reports that the result has been highly satisfactory:

One further consequence of devaluation needs to be mentioned: the great strengthening of the position of the National bank.

And so on. One might cite Sweden, Norway, Denmark, South Africa and other countries,

all of which have openly abandoned the tight money policy and adopted what is known as the easy money policy. The have used the credit of the nation to help agriculture and to restore industry and commerce. The question is: What can we do in this respect? As my time is rapidly passing, I should like to read twelve suggestions which I have to offer. I know perfectly well they will be misunderstood and misinterpreted by some, but I make these suggestions as an indication of what I think could be done in Canada without disturbing what is known as the general economic structure of the country. I am sorry to say to my hon. friends of the Canadian Cooperative Commonwealth Federation that I cannot follow them in their amendment owing to the last clause which refers to a capital levy and, I think, intimates more or less socialistic action.

Mr. MacINNIS: The hon. member will come around in time.

Mr. STEVENS: My hon. friend says that I shall come around in time. Well, I have studied it for a great many years, and while I appreciate their point of view and give them full credit for sincerity, I cannot follow them. But I do not think such action is necessary, for there is ample room for progressive, almost radical action without adopting such measures.

These are the suggestions I have to offer:

1. Unreservedly determine not to increase our debt for three years—not even for deficits.

2. Adopt a policy of refunding all existing dominion government bonds or dominion guaranteed bonds at a rate of interest below three per cent.

3. On generous terms consolidate the dominion, provincial and certain municipal debts, providing such provinces or muncipialities as take advantage of the opportunity will undertake to make no new issues, the same as the dominion.

4. Make the Bank of Canada in a true sense the government bankers, and utilize its powers of issue to the full extent, consistent with the principle of a twenty-five per cent coverage of gold for all outstanding notes.

5. Use the system of issuing treasury bills as freely and as extensively as is done in Great Britain, having regard for difference in population.

6. Utilize all surplus funds thus created for stabilization of exchange, purchase of outstanding bonds and general purposes of the government in relieving unemployment, et cetera.

7. Retain in Canada a substantial proportion of our annual gold production for purposes indicated in the preceding paragraphs.

8. Adopt a vigorous policy to encourage mining production by moderating taxation for a five year period and also by assisting smaller but proven properties into actual production.

9. Relieve agriculture from the dominance of powerful quasi monopolies, especially in the live stock and dairy branch, and substitute friendly government cooperation for monopolistic private dictation. This can be done.

10. Adopt a housing policy on a nationwide scale, along the lines of that in operation in Great Britain and Sweden.

11. Provide useful and constructive employment by an extensive reforestation scheme and by elimination of level crossings—not in the petty way indicated in the estimates the other day.

12. Let parliament declare for a just price to the farmer for his products and a fair wage to the worker; for it is only by the restoration of the purchasing power of these groups that commercial and industrial recovery can be achieved.

Mr. REID: What about silver?

Mr. STEVENS: Well, my views on silver are well known. I would put that in too.

Mr. REID: But the hon. member left it out.

Mr. STEVENS: There are many more suggestions I could put in, but what I am suggesting now are proposals capable of application without, I think, very much trouble. It has been said of Thomas Jefferson, that great Democrat, that he failed when in office to put into practical operation the fine ideals he had preached when out of office. I think there is very much resemblance in that respect between the two great Democrats, the right hon. leader of the government and Thomas Jefferson.

I will now quote from a publication which will be accepted, I think, by hon. members on the other side of the house and at my extreme right. I am sure that this extract from the Canadian Liberal Monthly will be a fitting conclusion to my remarks:

> Liberalism recognizes the supreme importance of the individual man and woman and of creating conditions in which human personality can expand in freedom and express itself in works of usefulness and beauty, and on this account Liberalism offers the only practical policy by which the greatest happiness of the greatest number of men and women can be attained.... Liberals have to their credit the achievement of political freedom—the gift of the nineteenth century. Give them the power, and they will achieve economic freedom in the twentieth century.

Some hon. MEMBERS: Hear, hear.

Mr. STEVENS: Well, you have power—170 members out of 245. I say to the Liberals here to-day and I say to the Liberal party, having quoted from the last issue of their monthly review: These are fine ideals, fine words, but are they to be only words? When I read them this thought came to my mind: Almost thou persuadest me to be a Liberal.

An hon. MEMBER: Come on over.

Mr. STEVENS: When I thought of the sentiments expressed, and when I turned to my hon. friend's budget and found how far it was from realizing the splendid sentiments which are expressed in those words, I felt that I could not, as yet at least, offer myself for adoption by the Liberal party.

An hon. MEMBER: We are on the road.

Mr. STEVENS: I am afraid my hon. friends are on the road to the reactionary side of politics. That is not true of all of them, but I can pick them out; there are a lot whom I could pick out who are more reactionary than my friends sitting to my immediate right. But, as I said in my opening speech of this session, there are many of them who came to this house imbued with the very sentiments which are expressed in this Liberal Monthly. I am now calling upon them, at this time of opportunity, the occasion of the budget, when as representatives of the people they are supposed to speak for their people, to make good their faith and to heed the cry of the people for relief from distress, not in the form that is indicated in this budget, which will give little or no relief, but in some practical way. I have made some suggestions. I do not presume to say that they exhaust the question. If there are others, coming from the government, which are better or equally good, I shall gladly support them, but I cannot feel in my heart that in the budget which has been presented the minister or the government has done justice to the problems of this country.

Hon. J. E. LAWSON (Yorth South): Like many of those who have preceded me in this debate, I desire to extend to the Minister of Finance (Mr. Dunning) my congratulations upon his budget speech. His grasp of Canada's financial problems was commendable; his diction indeed was praiseworthy, and his delivery worthy of the highest praise which I can give him.

I regret that I cannot join with my hon. friend from Rosetown-Biggar (Mr. Coldwell), who spoke this afternoon, in congratulating the Minister of Finance upon the tariff provisions of his budget. I listened with a good deal of pleasure and considerable profit, as I usually do, to the address of my hon. friend from Rosetown-Biggar, but when he was dealing with the reduction in the tariff upon agricultural implements I could not help thinking that he and I approached the problem from different viewpoints. He approached it from the viewpoint of the agriculturist, and his main desire apparently was to procure for agriculturists cheap agricultural implements. I approach the problem from the standpoint of the worker in industry, the people whom I represent, and I am free to confess that my concern is: Will it create jobs or will it not create jobs?

Yet, Mr. Speaker, I could not help feeling that probably the hon. member for Rosetown-Biggar and I would not be far apart in trying to arrive at some solution of our problem if only we had before us the facts relative to the situation. I am not one of those who have been of opinion that tariffs should be, as some one expressed it in this house the other day, as high as Haman's gallows. I am one of those who have always believed that we should have protective tariffs, and I am inclined to the view that my friend from Rosetown-Biggar would not disagree with that principle so long as he was satisfied that, included in that measure of protection, there was not a return upon watered stock and what was not true capital. But in connection with the provision in this budget for agricultural implements, we had no opportunity to ascertain what was the correct and fair rate to provide protection in that industry, protection to provide jobs for those in whom I am particularly interested, and to provide reasonable prices to those agricultural consumers in whom my hon. friend is primarily interested. Here we had a case where an investigation was pending that would have given us all those facts which we should have. In the midst of it, for some reason best known to the government, there is this drastic reduction made in the protective tariff applicable to the agricultural implement industry. I suggest to my hon. friend the Minister of Finance that, as undoubtedly he will be replying in closing this budget debate, in doing so he give me some reason to believe that the action of the government in taking this step in the midst of the inquiry was other than to pacify an insistent demand from some of his agricultural representatives and supporters in the House of Commons from western Canada who wanted a cut in the tariff on agricultural implements, no matter what might be the result to industry or to the job-hunters of this country.

I could almost believe, as I heard the budget, that my hon. friend had adopted some of the psychology which was being advocated by the hon. member for Kootenay East (Mr. Stevens) to-night, except that I think the minister probably proceeded according to that system which is known as Coué ism, and instead of dealing in his budget with the major problems of Canada, he proceeded to say: Every day in every way things are getting better and better.

Surely there were in this country problems to be taken care of at this session of parliament, problems for which the Canadian people expect a solution. They were: a balanced budget, which, as far as the business community was concerned, included a solution of the railway problem and the problem of relief and, as far as the ordinary man on the street was concerned, the problems of unemployment, prices of agricultural products, and relief. Since the last election I have heard some hon. gentlemen opposite boast in this house of the results of the election, as far as they were concerned, and of the great majority which they had in this chamber. Well, Mr. Speaker, I have made one or two observations in connection with the last election. Probably a great many will not agree with my conclusions, but briefly they were these: The business community sought a balanced budget, a solution, as they call it, of the railway problem, and the ordinary man on the street wanted employment and he wanted to be rid of relief. They felt that those things had not been done which might have been done by the previous government. They, the people of this country, were not prepared to go the length of voting for what to them were such radical ideas as those advocated by my social credit friends or those advocated by my Cooperative Commonwealth Federation friends, but they were in favour of a change and so the vast majority of them voted for the Liberal party. Why? Because they were led to believe, by the utterances not merely of the leader of that party but also of several gentlemen running under that banner, that if they but returned that party to power their problems would be solved. The other night my hon. friend from Sherbrooke (Mr. Howard) was boasting in this house that the Liberal party made no promises. Well, you do not have to sign a promissory note in order to make a promise. How well I remember the handsome Minister of National Defence (Mr. Mackenzie)—

An hon. MEMBER: The hon. member should be a good judge.

Mr. LAWSON: I am glad my hon. friend pays me that tribute. How well I remember the Minister of National Defence advocating for this country a national credit, and telling the people how this credit was to be administered in order to meet public needs. How well I remember Liberal gentlemen advocating a reduction of taxes. How well I remember seeing an edition of the Vancouver Sun of the day following the speech of the right hon. Prime Minister (Mr. Mackenzie King) in that city. There listed in flaming headlines were ten policies of the Liberal party, and last but not least on the list was the reduction or abolition of the sales tax. They have demonstrated that reduction or abolition by increasing it from six per cent to eight per cent. How well I remember the present Prime Minister leading the unemployed and those on low wages in this country to believe that if the Liberal party were but returned to power their problems would be solved. Do we not remember how he went about this country and said in nearly every province, "We now have Liberal governments in power in every province. If you will but put a Liberal government into power at Ottawa, then we can all get together. We can sit round the same table; we can agree upon policies, and we shall not have these disagreements as to the jurisdiction of the respective legislative bodies." Well, the people accepted that dictum; they elected a Liberal government. That government did meet with the provincial governments; they did put their feet under the same table and they did agree, but upon what? They agreed on referring the maximum hours of labour measure, the minimum wage bill and the unemployment insurance bill, which might have brought benefit to the people, to the Supreme Court of Canada. So they have succeeded in getting those measures out of the road for some months instead of bringing them into operation. That was the extent of their agreement. I remember further that the Prime Minister not only said, "Put the Liberal party into power in Canada and we shall all be able to agree"; he also said, "Send us back with a great majority; send us back with a large enough majority and you will not require any national government in Canada."

Some hon. MEMBERS: Hear, hear.

Mr. LAWSON: I am glad I am such a good imitator of the Prime Minister that my hon. friends applaud. "Send us back with a large enough majority and you will not require any national government in Canada. We will be a national government, and as a national government we will solve your problems of railways, unemployment and taxation."

Some hon. MEMBERS: Hear, hear.

Mr. LAWSON: I am glad my hon. friends approve the solution. So far the solution we have for our railway problem is to include in this budget a sufficient number of millions of dollars to pay the deficit.

Mr. BRADETTE: We have had only five months.

Mr. LAWSON: I want to say to my hon. friends that even if they have had only five months they will never have a better opportunity in their lives to deal with Canada's problems. This is the time to do it.

An hon. MEMBER: You had five years.

Mr. LAWSON: But, my good friend, you went on every platform in this country, and you did not tell the people that if you were returned to parliament, instead of bringing in legislation which would solve their problems you would sit in your place and howl across the floor of the house, "What about the last five years?" That was not what you said on the stump in Canada. Oh, no; far from it.

Well, I mentioned the solution that has been offered for the railway problem. What solution has been offered for the problem of unemployment? We have seen the creation of an employment commission, to which has been assigned just one of the jobs that were to be undertaken by the unemployment and social insurance commission which was created months before. By their actions the government have prevented that social and unemployment commission from proceeding with the job, and in spite of the fact that legislation has been passed setting up the new commission it still has not been appointed and has not started to work to solve Canada's unemployment problem.

Then, what solution has been offered for the taxation problem? Is there in this budget a single provision that reduces the taxes paid by anyone. Not a bit of it; instead of that new taxes have been added.

An hon. MEMBER: What about the gasoline tax?

Mr. LAWSON: Well we shall wait and see what effect the reduction in the gasoline tax will have. We have not found it putting any money into anyone's pocket. As far as I am concerned no one will ever hear me raise a complaint in this house against any reduction in tariff based upon a report of a judicial or quasi-judicial tribunal such as there is now in the tariff board of Canada. That is what I call a scientific approach to a protective tariff. My complaint is when without investigation, or in the middle of one, a haphazard stab is taken at the tariff, thereby causing the loss of jobs to people in this country.

Mr. McNEVIN (Victoria, Ont.): If I may ask a question, what action did the hon. member's government take to raise it?

Mr. LAWSON: Raise what?

Mr. McNEVIN (Victoria, Ont.): To raise tariffs. Did they take advice from an expert body?

Mr. LAWSON: The answer to that question is: No, we did not take advice from an expert body, because there was no such body in existence in Canada when we came into power.

And hon. MEMBER: Yes, there was a tariff board.

Mr. LAWSON: If the hon. member talks about the old tariff board will he tell me who in this country, outside the Minister of Finance, ever knew what the recommendations of that board were? In addition to that, the chairman of that board was elected to and was a member of this house. No, there was no expert tariff board from which we could take advice. What we did was this, we immediately raised tariffs. I offer no apology or defence for that. We did it for the purpose of creating and holding jobs for Canadian workers in Canadian factories. But having raised the tariff our next step was to set up a tariff board, a board with the standing of a court, before which people could go with their complaints, a board whose sittings and hearings were open to the public, and whose reports and findings must ultimately be brought to the attention of parliament and the people of this country. I say to my hon. friend: No, we did not have scientific advice, but we created a board that will give to this government scientific advice, and we took the advice of that board once it started to function.

Some hon. MEMBERS: Oh, oh.

Mr. McNEVIN (Victoria, Ont.): Did the hon. member's government's high tariff cure what they set out to cure?

Mr. LAWSON: Yes.

Some hon. MEMBERS: Oh, oh.

An hon. MEMBER: That is not even funny.

Mr. LAWSON: I was not endeavouring to be funny. I flatter myself that I have

a discretionary sense of humour which knows when to be funny and when to be serious. I started to answer my hon. friend to the right and I said yes. We never hoped by the creation of a higher protective tariff in this country to solve a world-wide problem of depression, but we did hope to maintain as many jobs as possible for Canadians in Canada, and we accomplished that purpose.

Now I really intended to be very short, but if my hon. friends keep up this running fire I shall probably fill out my time. I had reached the point where I asked what relief of taxation upon the people was effected by this budget. To almost one-third of all the people in the riding I represent, who are on relief, it is a nearly intolerable burden. To ninety per cent of the people in the riding I represent it is a hardship. Let me point out why. No one, I am sure, would suggest for a moment that the schedules of relief which are in effect in this country afford more than a mere subsistence to those who live under them. As a result of this increase in the sales tax one on relief who has to buy a pair of shoes that cost, say, two dollars, has to pay an additional sixteen cents in sales tax.

Mr. DUNNING: Is the hon. member sure of his calculation?

Mr. LAWSON: I think so, I figure eight cents on one dollar is sixteen cents on two dollars.

Mr. DUNNING: And he has to pay that much additional?

Mr. LAWSON: I did not say additional.

Mr. DUNNING: Oh yes, distinctly. Hansard will demonstrate.

Mr. LAWSON: All right, we will stand by the demonstration of Hansard; I did not use the word "additional." On a $20 suit of clothes the same person now will have to pay a tax of $1.60.

Mr. DUNNING: What did he pay before?

Mr. LAWSON: He paid $1.20. And on all consumable goods there is an increase in the rate of sales tax that is just one-third greater than it was before this government came into power.

Mr. DUNNING: That is not correct.

Mr. LAWSON: Yet this government had enunciated as its policy the reduction or abolition of the sales tax.

An hon. MEMBER: And we will reduce it.

Mr. LAWSON: I hope so. On every occasion on which you do I am confident you will have the support for that purpose of all Conservative members of this House of Commons.

Mr. DUNNING: I did not get it the last time I reduced it.

Mr. LAWSON: Did you not, in respect of the reduction?

Mr. DUNNING: No, it was opposed.

Mr. LAWSON: I thought you got it in respect of the reduction, but I think in order to vote for that reduction we had to swallow your sweet pill of countervailing duties, and that was something we could not swallow.

Mr. DUNNING: Your party spoke against reducing the sales tax.

Mr. LAWSON: Well I can only say that I did not speak against reducing it.

Mr. BENNETT: It shows how little they knew about world prices. They did not know anything about them.

Mr. LAWSON: And I shall not speak against reducing the sales tax. So here we have a government elected to power by the largest majority any government in Canada ever had, a government to which the people of this country looked with high hopes for the solution of their railway, their economic and their unemployment problems. And the solutions we have had offered this session are the appointment of an employment commission, one or two other bills equally ineffective, and now so far as the budget is concerned, the last hope for reducing taxation or providing more jobs is gone. I sincerely trust that my hon. friends of the government, before this session finishes, will bring down some measure of legislation which will more speedily afford a solution of the problems of those who are suffering from unemployment and want.

Mr. J. S. TAYLOR (Nanaimo): Mr. Speaker, my speech will not be a very long one.

Some hon. MEMBERS: Hear, hear.

Mr. TAYLOR (Nanaimo): In answer to that I might say that some day this house will value a speech not for the parvum in "multissimo," but for the multum in parvo.

Mr. LAPOINTE (Quebec East): That is good French!

Mr. TAYLOR (Nanaimo): Mr. Speaker, I thoroughly enjoyed the orderly presentation of the budget by the Minister of Finance (Mr. Dunning), but that thorough enjoyment related not to the matter but to the manner. I am compelled to express much regret over the matter of the budget, and I do this with

a deep feeling of reluctance because upon reading it I find it to be the careful and honest work of a careful and honest Minister of Finance. But, sir, I cannot fight away the impression that it is purely a bankers' budget conceived and worked out by a banker mind—and I say this without reflection upon that profession—I believe it has been worked out by a banker mind with an orthodox banker's attitude. In this corner of the house we believe that among us we have some banker minds, but they are unorthodox banker minds. And we have sufficient aplomb to assert that this country will shortly demand financial direction of its conditions by unorthodox banker minds.

In the budget there is a strange subservience to the code of that stratum in our country's life which we call big business. Had its own heralded representative, whoever he might be, talked in this house he could not have delivered a better budget, from that point of view. And it may well be, therefore, that many in Canada will approve the orisons made before the god of things as they are. I can see the Minister of Finance with his whole strength attempting to withstand the surging force of public opinion and public need, and I can see him bolstering himself with the thought and the hope that if prosperity would only turn the corner the strong rays of its beneficent sun would bleach the red blood of the people into an indeterminate pink, and the glorious sun of capitalism would save the country again.

I am reminded of my own remarks in my maiden speech when I warned hon. members that the group of seven in this corner of the chamber constituted the real opposition, and I find that to-day the efforts of the government and the Conservative party in opposition are alike directed strenuously towards anything at all which will ease the situation within the ambit of the capitalist system. I say to hon. members that this cannot be done. Chickens can live on a dung heap, but they live there precariously and cannot exist very long. All the people of this Canada of ours cannot rake the ashpits and dungheaps of a slowly dying and defeated capitalist system.

The long, long sufferings of the plundered poor, as Edwin Markham has so very carefully and beautifully expressed it, will not very much longer be tried. They must have relief from the conditions in which they now find themselves. I look in vain in the budget of the Minister of Finance for any ideas which would tend to bring this about. Relief cannot be brought about by any idea such as the promotion of external trade, nor can there be any relief obtained therefrom. The hon. member for Vancouver East (Mr. MacInnis) gave an illustration of conditions in external trade and the defeat of capitalism by its own strength. It would not be amiss at this point to quote from a Japanese trade paper printed in English in Osaka. It is called Japan Trade, and is edited by the Osaka Commercial Museum. I have before me volume 6, No. 10, and at page 44 thereof Mr. Koyata Yamamoto states:

> In the face of the intensified worldwide depression, Japan's export of the industrial products has been exceptionally animated of late. This phase is most salient in the trade of cotton goods which invariably dominate our export list. It is noticeable that the cotton industry in this country, with 9,000,000 spindles, is catering overseas more than Lancashire with as many as 50,000,000 spindles. What accounts for such activity is, after all, the low price, and nothing else.

And again:

> The replacement of old-fashioned machinery with new one of higher efficiency has been conducted in Japan all but recklessly.

I pause here to say that in Vancouver to-day there still lives the man who first imported spindles and looms into Japan, and taught the Japanese how to set them up and make use of them. The article continues.

> In addition, the curtailment of operation agreed upon among the manufacturers as a measure against over supply eventually put old-fashioned, far less efficient machinery out of service, resulting in the substantial enhancement of working efficiency.

And again:

> This is attributable mainly to the use of Japan-made automatic loom, which is the last word in this type of weaving machine in the world, and also this is where Japan's weaving industry holds a higher position than—too high to be put in the same category with—those abroad which are still in the experimental stage as regards the operation of automatic looms.

> In parallel with such elevation of mechanical efficiency, there has taken place a striking increase in the operatives' efficiency, too, as evidenced by the facts which follow.

Then:

> Taking it for granted that the installation of automatic looms is chiefly responsible for such an enormous gain of output in the textile industry, a tangible increase in labour efficiency is likewise a factor.

Hon. members will note that I am picking out the salient points in the article. It continues:

> Apropos, mention should be made of the number of looms which a mill hand can tend in this country. The installation of automatic looms, aided by frequent improvements on them has enabled a mill hand to look after from 30 to 40 looms to-day. This is another advantage

of the cotton industry in Japan over that in other countries where one operative can not tend so many looms. The automatic loom apart, one operative in Japan can take care of 10 ordinary looms while one Indian mill hand can tend only 2.

Again:

In Japan the swingering—

Whatever that word means.

—majority (up to 90 per cent) of the operatives in cotton spinning and weaving mills are unmarried girls, mostly in their teens. Young as they are like this, they are doing just as great a volume of work as, nay, several times more work than, full-fledged men heading their respective families in Europe, America, and elsewhere.... The female operatives in this country need not earn funds on which their families have to live, but only those for their marriage paraphernalia. These female operatives, after two years' service on an average, leave the mills for their respective agrarian communities. In view of this fact, Japan's cotton spinning companies are exempt from paying high wages which are out of keeping with the amount of labour, merely in deference to age. This does not imply that the girl operatives are subjected to hard treatment, but on the contrary, they attend, when free from mill work, the secondary-grade schools established by the companies and have ordinary scholastic lessons, religion, music, etiquette, etc. taught entirely free of charge.

In the days of war boom it required something like 50 yen to spin one bale of 20s yarn, but the cost to-day has been reduced to about half as much, due to the betterment of efficiency as well as to a cut in wages.

This is particularly interesting in our understanding of external trade. We hope to force our industrial products into all countries. The article continues:

Wages, as a rule, never go down in sympathy with the fall in commodity prices, however great it may be. It is hard to lower the wages which the operatives are obtaining at present, but the case of starting-wages is quite another. In Japan, where constant changes are made in the force of mill hands as described already, the reduction of wages was made feasible within a short period.

I submit that the minister has said nothing in his budget speech to indicate how the fundamentally changed conditions in our world can be dealt with. Again he is apparently still quite content to place his faith in the inviolability of gold. With the nations of the world chained about by it they are covertly wondering how they can get the better of it. From a 100 per cent gold basis of security which the best nations were so proud to be able to have, they are now content to admit that a twenty-five per cent coverage is sound and efficient.

I quote from the minister's budget speech, from page 2386 of Hansard:

Moreover, the most important branch of the industry, namely, gold mining, is in the fortunate position of producing a commodity for which the demand appears to be unlimited. In other industries production cannot be speeded up without creating oversupply and breaking the market: In the case of gold, however, overproduction seems under present conditions to be impossible and the price remains fixed at least for long periods of time.

With that statement of the minister I do not agree. A discriminating study of the history of gold and gold movements shows that gold has been definitely divorced from its former impregnable and proud position and is to-day merely an expedient, the future use of which is not by present trade developments definitely determined. We are facing after the next election in the country to the south of us and the probable continuance of the present government in office there, a repegging of the gold content in the dollar at fifty cents, and in consequence an arbitrary fixation of the price of the gold ounce at over $40. I cannot discover that there is anything in the construction of the minister's budget to disclose his awareness of all the unusual conditions facing us or of the definite alternative, inflation, which is being consistently dammed up in the world and is sure to burst upon a money weary world before long. I want here to quote from Skandinaviska Kreditaktiebolaget, a Swedish publication, the April number, page 29, from an article, Monetary Prospects by Professor Gustav Cassel. I pick out pieces here and there to show my point. The article commences:

In view of the lack of real equilibrium in the world monetary system, startling changes may be expected at any time in this sphere. So great is the uncertainty that we cannot scan even the immediate future, and people everywhere are anxiously asking what is going to happen next.

And again:

What is to be expected most immediately is presumably an inflation of the dollar. The monetary supply is extremely abundant, and, what is more, there are possibilities of extending it almost indefinitely, without departing from traditional views regarding gold cover.

Again:

The necessity for doing something to combat unemployment and to relieve agricultural distress is compelling the government—

That is the United States government:

—to involve itself in immense expenditure. But this is not the end of the matter. There is a widespread desire that the government should spend money with the deliberate aim of getting the price level to rise, thus bringing production into full swing. The United States government is indeed trying to combat this undiluted inflationism, but is now and then compelled to make considerable concessions to it.

Again:

And indeed, so long as the budget shows a considerable deficit, the government has no real power to oppose an inflation.

Again:

Thus the probability is that during the present year—

That is this year, 1936:

—we shall witness some reduction in the value of the dollar. There will be two alternatives to consider: on the one hand, a new devaluation, on the other, an inflation with the maintenance of the present gold parity.

Again:

If a country cannot bring its budget into real equilibrium, it cannot in the long run withstand an inflation of the currency, no matter what means are tried.

My final quotation is this:

An inflation in America could not fail to affect the currency position in England.

And, of course, by inference in Canada.

In that country too everything is prepared for a price advance. The country is well provided with means of payment, which could be better utilized than is the case at present. The official financial policy, as formulated at the London conference and in the program of the sterling bloc, aims at a moderate price advance, which must be considered desirable also from the point of view of the combating of unemployment. If such a rise of prices could be attained in harmony with the trend of development in the United States, this would no doubt be viewed with favour in England. The conditions in Sweden are similar, and indeed the sterling bloc in general would gladly join in a moderate price advance promoted by England and the United States jointly.

So that the whole situation is that we are face to face with conditions in our financial system which may change overnight, and there is no evidence, none at all in the construction of the budget or in the inferences to be developed from a study of it, that these matters are in the mind of the government.

Again, the hon. Minister of Finance, while regretting the fact, is still content to accept the burden of interest so that thirty-six per cent of the country's revenue is to be earmarked to that contribution. As I have already said, the distressing claim of interest which, like a canker, eats into every part of the body politic, is in every business, every home, every activity of our lives and must be eradicated. I cited Ruskin a few days ago. Can anyone cast a stone at him? Can anyone cast his efforts aside in preference to those of, say the much quoted Carlyle? Ruskin became conscious of the curse of interest and realizing his assets, he eschewed all interest on his investments and spent capital sums. Thirty-six per cent of our country's revenue absorbed in interest! It is there that the axe must be laid at the root of the tree, and I propose to point this out again and again, for the fact is that interest must go. As I have already said, our personal and social activities will fail whereever in any particular they transgress the laws of nature or, as some say, the laws of God. The squirrel does not get interest on the nuts he stores in the hollows of the tree. The camel does not get interest on the fat he stores in his hump or in the water he stores in the cells of his stomach lining. The butter-tailed sheep does not get interest on the fat it stores in its tail. I can discover nothing to justify humanity in prostrating itself before the Juggernaut of interest, that Juggernaut which humanity itself has so laboriously constructed. Interest must go.

Again, I see very little sympathy between the recent trade agreement with the United States and this budget; they do not conform. They have been constructed by minds which have very little in common, for otherwise the minister would stand absolutely condemned for giving with one hand and taking away with the other. I consider the increase in the sales tax an oppression of the poor of the country. I notice in the newspapers that the leading merchants of Ottawa and district, speaking last Saturday of the budget and this sales tax in particular, said that it would not bother them; that they could take it in their stride and still preserve the status quo. If that is correct, it shows a situation that needs investigation, but I cannot think it is true. I am satisfied that the raising of money by this increase in the sales tax is an added burden on the wage earners of Canada. But more important than all else is the awful burden of debt. Year after year big business escapes its just share of taxation. By one plea after another, by one threat after another those who have encourage the government to take from those who have not. The freedom of the big business man from his relative share of the public obligations has continued so long as to develop a condition of immunity which has been very strongly reflected in this budget. There is not a plutocrat in the country who can quarrel with the Minister of Finance in his sublime capitalist effort. But that will not bring prosperity to Canada; it will not reduce our national debt. That can come only by the government inserting itself between the big business man and the successful gouges by which he achieves his wealth. It will come only by a forthright effort to compel the abundantly wealthy to

tighten the traces when pulling this country out of the slough of despond in which we find it.

A plea was made earlier in the session for pensions for the blind of the dominion. This plea was refused on grounds of budget necessity, but in view of the acceptance of a probable loss in budgeting of $100,000,000, I am still quite unable to see why the blind should not be permitted to realize some satisfaction entering into their lives even during this session. Apart from all these large issues I cannot sit down without drawing attention to the plight of the small fruit and vegetable farmers all over the country already labouring under the physical disadvantages of a colder climate than that of their competitors to the south. They are having the salt rubbed into their wounds with no possible signs of relief. I commend that thought to the Minister of Finance.

Miss AGNES C. MACPHAIL (Grey-Bruce): In beginning I sincerely wish to congratulate the Minister of Finance (Mr. Dunning) upon his budget address delivered on the first of May. It was a pleasing address, interesting in its content and construction, in the beauty and simplicity of its language, and in its forceful and agreeable delivery. Though it lasted two and a half hours the Minister of Finance held the attention of the whole house for that long time. He must have found it an exhausting task, but it was certainly one which was exceedingly well performed.

I find that all budgets are alike in this, that each contains some things which one likes and some things which one does not like. If you vote for a budget you are voting for some things with which you do not agree, and if you vote against it you are voting against some things with which you do agree. It seems impossible, therefore, to avoid that dilemma. I felt that the hon. member for Rosetown-Biggar (Mr. Coldwell) expressed my thought almost perfectly this afternoon and there is no use in going over it again in detail. There were in the budget things which anyone representing an agricultural constituency would be pleased with, but I could not be pleased over the eight per cent sales tax. I am opposed to the sales tax because it taxes most heavily those who spend their entire income on consumptive goods, while those who spend only a very small portion of their income on such goods pay a relatively small sales tax.

Then, too, I am unorthodox in the matter of balancing budgets. In times when individuals cannot borrow and when individuals cannot spend, governments must borrow and governments must spend. I do not say that governments ought to borrow, but under the present financial system they must and they do. The balancing of the budget is not by any means as important as it is generally thought to be, because the payment of sums of money without which it will not balance, would undoubtedly in practice divert large sums of money into already bulging pockets. For, as I said a moment ago, there are people, many of them bondholders, who do not spend their incomes in order to live; and since, as has been stated in this house, I believe, thousands of times, a loan creates a deposit and the repayment of a loan destroys a deposit, the balancing of the budget might conceivably destroy a portion at any rate and possibly a large portion of the $162,000,000 by which the budget does not balance. In other words, it would, as the Minister of Finance admitted, tend to cause severe deflation. I believe there are a great many people both in the house and outside who still think that governments should act like individuals and should not spend, particularly in a time of depression. I hold the other view, that in times of depression governments should spend, in order to make up the amount which individuals cannot spend; and in good times, when individuals can spend, governments should curtail their expenditures.

We have heard a lot, particularly in this debate, about the need of a change in the financial system. I enjoyed very much this evening the speech made by the hon. member for Kootenay East (Mr. Stevens). I have enjoyed, too, other speeches during this debate which have related to money. A large number of Canadians—not yet a majority, but an increasing number—believe that a change in the financial system is necessary; that we shall come to base our credit and currency upon real wealth; that it will be issued in the first place by a federal authority—possibly the Bank of Canada when it becomes a government bank—without interest, and that we shall benefit largely from it in one way or another. I suggest that one method of using a government issue of money, which could well be considered under such a system, would be the cutting of farm mortgages in two and reimbursing the creditors by the issue of non-interest bearing bonds.

Since the Liberals came into power with such a very large majority, there has been a tendency rather to scoff at monetary reform. If a certain newspaper story is to be believed, pressure is being brought to bear upon two Liberal members who have done great service

to the party and to the country by the speeches they have made this session in the house. That, during the campaign, other Liberals talked similarly, this little pamphlet shows. It was issued by the Parkdale Liberal Association during the campaign, and it is really a very intelligent production. It states:

At present the privately owned banking system of Canada has the exclusive right to manufacture money (bank credit and currency are both money).

The Liberal party proposes to take this exclusive right away from the banking system and give it to the federal government.

And then the candidate goes on to say:

I agree with the Hon. J. L. Ralston, who says that he does not favour universal public ownership, but that the control of currency and credit is properly a public utility and should be operated as such.

I feel that I must take time to put on Hansard one or two other paragraphs:

The banking system manufactures "money" just as definitely as Massey-Harris manufacture ploughs.

Apparently that is not going to be very definitely.

But they do not "sell" this money—(and they certainly do not give it away)—but what they really do is to rent it and they call the rent "interest."

It goes on:

Now, if the government can authorize private banks to create money, why can the government not create money itself?

For a long time I have been looking for an answer to that question. Then the pamphlet says:

This is what the Rt. Hon. Mackenzie King means when he says:—

"Usury once in control will wreck any nation. Until the control of currency and credit is restored to government and recognized as its most conspicuous and most sacred responsibility, all talk of the sovereignty of parliament and of democracy is idle and futile."

That is very good. At the bottom of the next page they say, in red letters:

What Difference?

The difference between banker and national control of the creation of money is briefly this:—Under banker control the bank creates money and rents it to the government. Under government control the government creates its own money and pays rent to nobody.

Then the names of certain people are given. I quote:

In a pamphlet this size one can only scratch the surface of this all-important, all-embracing subject. There is no other subject of such vital importance to the happiness and well-being of 95 per cent of the Canadian people. It is being stressed by an imposing list of people, among whom I mention—

Right Hon. W. L. Mackenzie King.
Hon. Mitchell F. Hepburn.

Ian MacKenzie.
Hon. J. L. Ralston.
G. G. McGeer.
Harry Hallatt.
Major Douglas.
Father Coughlin.
The Dean of Canterbury.
The Archbishop of York—

Mr. JACOBS: May I ask my hon. friend, is the name of Haile Selassie also attached to it?

Miss MACPHAIL: No, Haile Selassie has escaped.

—and a host of others including the financial editor of one of the most prominent dailies in Canada, F. B. Housser, of the Toronto Daily Star.

There is much more. I recommend the pamphlet to the Liberal party for study. It is an interesting production, and if the Liberals intend to go as far as this pamphlet says they will go, I see no reason why we should not have some more excellent speeches by the hon. member for Vancouver-Burrard (Mr. McGeer) and the hon. member for Rosthern (Mr. Tucker).

I want to speak on only one other matter, and that is the agricultural situation. My remarks apply particularly to Ontario, since I know conditions there better than in other provinces. I notice that the Finance minister in his speech regretted that the condition of agriculture had not improved as the condition of some other industries had. Last evening I looked up current prices of leading products of Ontario farms on which mixed farming is engaged in, for this year, for 1935, and for 1934, on the Tuesday that came closest to May 6, and I found to my disappointment that prices this year are well below prices last year, except in respect of hogs. May I give them to the house? Cattle, heavy: 1934, from $6 to $6.25 a hundred pounds; 1935, $6 to $7.50; 1936, $4.50 to $5.25. Butcher, 1934; $4.75 to $5.50; 1935, $6 to $6.50; 1936, $4.75 to $5. Common: 1934, $4.25; 1935, $4.50; 1936, $4. For calves the prices were just about the same; for choice the prices were the same all the way across, and for medium, from $5 to $6 in 1934, and $4.75 in 1936. Hogs were higher, running from $7.50 in 1934 to $8.50 in 1935 and $8 in 1936, less than last year but more than 1934. Butter was the same as 1934, well below last year. Number 1: 1934, 19¼ cents; 1935, 23 cents; 1936, 20 cents. Cheese, to the country shipper: 1934, varying from 9¾ cents to 10½ cents; 1935, 10½ cents; 1936, 10 cents. Eggs, top: 20 cents in 1934; 20 cents in 1935, and 21 and 20 cents in 1936. That was one cent better.

These figures, disquieting as they are, bear out the experience I have had on the boards of two cooperative companies. One was a small local company, and we found that for the months of January, February and March, although the number of customers was steady, or, if anything, had increased, the volume of business went down noticeably. In a much larger cooperative company we found the same thing to be true, that while we believed the number of customers was as many, and the general manager assured us there were more, the volume of business had gone down noticeably. So I would say seriously, and certainly with no joy, to the Finance minister, that in budgeting for next year I think he can reckon on a lessened consuming power on the part of the farmers of Ontario. That may or may not apply to western Canada.

Agriculture is suffering more, I think, than anyone not connected with it knows. The farmers are suffering because they are working very hard. Farmers work desperately hard, and though there are so many unemployed it is with difficulty that they can secure help. Even if they can get it they cannot afford to pay reasonably high wages. In various country places I hear that they have difficulty in securing help, and the standard of living for farmers is much too low. They have not those things which we think of even very poor people in the cities having. I obtained some figures from the bureau of statistics yesterday; they have been used in other years, but I do not think these more up to date figures have been quoted this year, showing the great potential market which exists in the farm homes of Canada for all kinds of manufactured goods. In 1931 there were 728,623 farm homes, with a population of 3,289,140. Out of that total number of farm homes 88·3 per cent have not running water in the kitchens; 95 per cent are without running water in bathrooms, to use the language of the bureau of statistics; 67·9 per cent are without telephones, and that percentage would be much greater now because many telephones have come out since 1931; 83·6 per cent are without radios and 89·9 per cent are without electricity or gas. I did not get the figures concerning automobiles, but all this goes to show that the standard of living on the farms is away below what it ought to be for the service the farmers perform, the work they do and the commodities they produce. In the same statement coming from the bureau of statistics the average farm revenue for 1935 is given as $836, out of which the farmer must pay the expenses of farm operation and living costs. There could not be very much luxury maintained on that amount of income for a whole year. When one remembers that not a great deal of the goods used in the farm home is now produced on the farm, the impossibility of bringing about a high standard of living on that income of $836 becomes more apparent.

I feel that the greatest market for goods in Canada consists of these farm homes, the homes of the 1,300,000 people on relief, however many homes they have, and the homes of the low paid workers. These three classes constitute a tremendous potential market for all kinds of goods and services in the Dominion of Canada, and I feel that we ought to do everything possible to cultivate that market. It is more important, I feel sure, than any export market. Possibly we are thinking too much in terms of trading with other countries instead of in terms of trading needed goods and services within the Canadian nation, among the Canadian people. To-night the hon. member for Kootenay East (Mr. Stevens) said that 95 per cent of farm products other than wheat, apples and cheese was consumed in Canada. Quite likely the hon. member for Kootenay East is right, but in order to be perfectly safe let us say 90 per cent of our farm production with the exception of those three commodities is consumed in Canada, and only 10 per cent is exported. That being so, it seems to me, and has seemed for some time, ridiculous that the prices which farmers receive for the 90 per cent consumed in Canada should be influenced, and one could almost say set, by the price they get for the 10 per cent exported. It is exactly like having the tail wag the dog instead of the dog wag the tail. I do think we are fast coming to the time when we shall see that it is just as reasonable for farmers to have the prices for their products based upon the cost of production, including interest charges and wages for the farmer and those of his family who assist him in production, as it is for manufacturers to base their prices upon the cost of production. If one is fair the other is fair, and I am inclined to think both are fair.

I quite recognize that this cannot be done until we have one hundred per cent organization of agricultural people, possibly on a commodity basis. I voted for the marketing act, and I believe in the marketing act. Just here may I say to the whip of the Liberal party that when he gets all excited over a debate going on for three days he should just cast his mind back to the four weeks during which the Liberals held up the marketing act. If he is not careful the very

likable whip of the Liberal party is going to have apoplexy before the session is over, hustling debates to a close. To proceed, there never was a time when agriculture needed organization more than it does now, and unfortunately the industry is poorly organized at this time. In order to do anything effective towards basing the selling price of farm products upon the cost of production there will have to be one hundred per cent organization of agriculture and there will have to be export and import boards; in other words pretty definite planning of agricultural production and sale, will be necessary and we are coming closer to this all the time.

Before closing, I should like to suggest one other point that, I think, would help agriculture. It is that a good deal of the loss to agriculturists, as is well known to every member of the house, takes place somewhere between the time the goods leave their farms and the time they arrive at the tables of the consumers. Not only is that true; the increased cost to the consumer takes place in the same interval. It will not be so very long before we shall be driven to the construction of cooperative processing plants on a very large scale, with government assistance and direction, or government controlled or owned processing plants, because until agriculture is again able to purchase the goods that are being turned out so rapidly by the machines and until the unemployed and the low paid workers are able to purchase goods there will be no revival of prosperity in Canada. There may be spasmodic upward turns, but they will not last until the mass of the people of Canada are free to use the products and the services which they themselves produce.

Mr. LOUIS P. A. ROBICHAUD (Kent, N.B.): Mr. Speaker, may I crave the indulgence of the house in the few observations that I am about to make in the language better understood by the majority of hon. members. I confess that I do so with some degree of apprehension, inasmuch as I have ventured to make this maiden speech in a tongue not my own. I take the opportunity at the outset sincerely to congratulate the Minister of Finance (Mr. Dunning) upon his able and brilliant exposé of the budget. He has done honour not only to himself but to this house and to the country.

Now, Mr. Speaker, may I be permitted to give some of the impressions of a new member since coming to this house in February. Adverting first to the speech of the right hon. leader of the opposition (Mr. Bennett) on the address, since "a tout seigneur tout honneur," may I be allowed to say, with all deference and respect, that despite the no small admiration aroused in me by his great ability, his masterly handling of the English language, and his brilliancy of delivery, I have not as yet been able to shake off the impression I received at the time that the speech was what I would call a "Bourbon" speech.

Coming to the speech of the hon. member for Kootenay East (Mr. Stevens), may I be allowed to congratulate the hon. member most sincerely upon having, after "walking so long in the valley of the shadow of darkness," at long last seen the light. I like to believe in the sincerity of the hon. member's conversion, but if I may be permitted to say so, instead of leaving the fold and venturing abroad to evangelize and convert the Gentiles, would it not have been the better thing to do for him to remain in the "shepherdy" and with his splendid eloquence and great powers of conviction to apply himself to the role of the leaven to leaven the whole inert mass of his party?

Coming next to the speeches of hon. members of the extreme left, I say I am in accord with many of the sentiments they expressed. We all realize that the world this last five years has been passing through a period of travail, misery and pain. But, may I ask, was there ever anything worth while came to this world except through travail, misery and pain? Mr. Speaker, I believe that an evolution, though, perhaps imperceptible, has been operating not only for the last five years but for the last ten, yes, the last fifteen years, and that the world is gradually shaping for and moving towards a rebirth. But let me warn my hon. friends of the extreme left to be careful not to apply the injection used in such cases prematurely lest it bring about a miscarriage.

I am convinced that the heart of every hon. member is in the right place and goes out to poor suffering humanity. Indeed, I believe it is the same old heart wherever man may be found on the face of the earth, and has been the same in all ages, the same old heart that pulsated in the very breast of the father of mankind; with this difference, however, that to-day man has a more profound knowledge of its intense longings and aspirations. The secret of life as I see it is to acquire a better understanding of such longings and aspirations. Indeed, was it not Socrates who set before man as the highest attainment of human wisdom, to know oneself, in other words, to know in all their intricacies the workings of the human heart?

Here, sir, may I compare the old human heart to a finely cut diamond with innumerable facets and angles, slowly revolving upon itself, and that revolving movement accelerated by the passing of generations and the advent of new civilizations, and may I suggest that with the advent of Christianity a powerful impulse was imparted whereby the full revolution was completed at one stroke?

It is sometimes said that the trouble to-day is that man is living in a new world, but so far has been unable to adapt himself to his new world. But I have a different philosophy. The trouble, sir, is that after a struggle of nineteen centuries' duration man has not yet been able to conquer that world and its ways, and attune it to the vibrating radiations of those new facets and angles of the human heart uncovered by the advent of Christianity. To illustrate: I am sure, Mr. Speaker, that at one time or another you have come into contact with some of those men described in this very house, I believe, as gangsters of high finance. Tell me, sir, as man to man, did you find them very much different from yourself? Yet the moment they enter into their councils of deliberation we are asked to believe that they lose all humane feelings. It is a sad reflection, but can it be that they partake of the nature of the wolf, the lone wolf being very timid and harmless, while the pack wolf is terribly daring and cruel? If that be so, there you have it: the ways of the world versus the human heart.

It has been said in this house that politics is a science. I am not in full agreement with that view. To my mind politics is more an art than a science. It has to do with the heart rather than the head. In this connection I am reminded of an ex-Prime Minister of this country—he is not now a member of this house—to whom I once listened with great intellectual delight. He certainly was and is an intellectual giant, and one could not help being fairly amazed at his power and keenness of mind. He could split a hair in four and pursue the four splits to their bitter ends. But as a politician and a leader of men he was not a success. To be a successful leader of men one has to keep a fairly even balance between head and heart. Let the heart give in too much to the head and we have the type of government with which my hon. friends to my immediate left have afflicted the country in the immediate past. On the other hand let the head give way unduly to the heart and we would have the kind of government that would afflict this country should my hon. friends on our extreme left take the reins of power. So I say with Bobby Burns:

> The heart ay's the part ay
> That makes us right or wrong.

One often hears it said that the government should be run on business lines; that there should be more business men in the house instead of lawyers, doctors and so forth. Well, all I have to say to that is, that badly as the political business of the country has been managed in the past, the good Lord help the country had it been as badly managed, or rather mismanaged, as industrial and financial business has been. We hear on every side how highly developed and efficiently organized industry is to-day. If that is meant to apply to the individual units of industry, I concede. But I feel that industry considered as a whole and as a single entity has not yet learned to walk. That is a strong statement.

We have heard it said in the house that there is many an industry which should never have been established in Canada because it was economically unsound. But on account of vested interests thus created the question was asked: What can we do about it now? What I am concerned with is this: What are we doing to prevent a repetition of the same course of events in the future? Apparently we are doing nothing. But remember, Mr. Speaker, I am not placing the responsibility on parliament; I am placing it where it belongs, on industry itself, for I believe that the greatest incentive to progress is not so much profit and greed as it is vesting people with responsibility and developing in them a due sense of that responsibility. And so I believe the time has arrived for industry to provide itself with a general staff—call it "The national council of industry," or whatever suitable name you wish to give it—and proceed on really scientific lines. It would be the business of that general staff to keep industry informed as to the needs and requirements of their own people and the people of foreign countries, and to keep a sharp eye on racketeers of high and low finance. It would be the business of that general staff to see that no investment is directed to the building up of a unit of industry economically unsound, or to the overbuilding in any given line such as has been done in the paper industry in Canada, or the textile industry of the United States.

In this connection I am reminded of a mission of English business men who two or three years ago made an investigation of the American and Japanese textile industry. What did they report? They reported that the social condition of textile employees in Japan was just about on a par with that of American and English employees, but that with her 9,000,000 spindles Japan produced as much as the United States did with their 31,000,000 spindles. I leave hon. members to draw all

the inescapable conclusions. May I add that thought would have to be given to the advisability or otherwise of giving representation on that council of industry to the other partners interested, namely labour and the consumers.

I am not a prophet, nor indeed the son of a prophet, but may I venture to make a few predictions which I believe, will see their fulfilment in the not far distant future.

First, I see the day when each and every nation will confine itself to converting its own raw materials only into the finished product.

Second, I see the day when the proletarian army will have acquired a much greater mobility than it has to-day and so, like a military army in the field, it will be directable to any needed point on short notice. In view of that I have my doubts as to the wisdom of encouraging members of that army to build and own their own homes. I believe industry should build the homes needed by that army. They could build on a large scale and much more economically than the individuals themselves, to whom such homes would be let at a cost rental.

Third, and as a consequence of predictions numbers one and two, I foresee the day—I may not see it myself, but verily I believe my children will see it—when we shall have free trade throughout the world, preceded of course by an evolutionary stage when geographical economic units will constitute themselves along the line of the dream of the late Aristide Briand for the European nations, and of the fact of the forty-eight states to the south of us.

In the nature of things, this is bound to come about. Does it stand to reason that nations should spend millions and billions of dollars in removing natural obstacles from the channels of trade, and the next moment erect artificial obstacles by way of tariff walls. In this connection it is a consolation to think that the insane frenzy of economic nationalism from which the world is just emerging will have been the most potent factor in bringing about this final desired result.

Fourth, I foresee the day when the net surplus exports of a nation will be paid for directly by the people of that very nation, and be considered as an extension of their own domestic market, instead of the indirect way in which those exports are now paid for, namely by the exporting nation investing the proceeds of that surplus in the country of importation. To-day that is the only way in which such surplus exportation can be paid for, since there is no gold to pay for them and the said exporting nation will not accept any more goods in return. They simply invest the proceeds of the surplus in the country of importation.

Now, as to the remedies, in addition to the ones already suggested. People will say that what we need is inflation or deflation. We have had considerable of that in the various nations of the world since the fatidic year of 1929, but the inflation and deflation which I have in mind are of another sort. They are not so much a monetary inflation and deflation as an inflation of hearts and a deflation of heads.

Again I could say with the Tiger of France, Clemenceau, who at one time could hardly be accused of being a Christian, "If every Christian was a Christian in fact as well as in name, there would no longer be any social question." But that might sound too much like a sermon. So I would prescribe as the proper tonic for our patient, the world, preparatory to the many operations he will have to undergo, just a little more inflation of hearts and a little more deflation of heads.

I am convinced that, I will not say the doctrine, or even the principles of Liberalism, but simply Liberal and democratic philosophy or Liberal and democratic state of mind will provide the best cure for the economic ills of the world. It has been said in the house by the hon. member for Kootenay East (Mr. Stevens) that because of its history and its ancient principles the Liberal party had an opportunity unsurpassed in scope. May I say that there are no ancient principles of the Liberal party. The principles of that party are ever young and living, constantly rejuvenated to suit the times and always abreast in the march of time.

Mr. Speaker, I trust I have not bored you unduly with these vagaries of mine, and in conclusion may I express my deep appreciation to my colleagues and to you for the kindly forbearance and considerate attention which they and you have accorded me.

Mr. J. C. LANDERYOU (Calgary East): Mr. Speaker, our industrial, financial and political leaders assured the people year after year during the depression that we were on our way to better and happier days; that prosperity was just around the corner. At the same time the policy of wage cutting, "tighten your belt," and other policies of economy were introduced. All this has led to a great shrinkage in purchasing power. Prices to farmers for their products fell below the cost of production; credit was withdrawn by financial institutions, and this great reduction to the farmers because of

this decline in the prices of their products has been estimated by Premier Bracken of Manitoba at approximately one billion dollars for a period of four years. This great shrinkage in purchasing power has led to a reduction or restriction in consumption, which in turn has been reflected in the slowing up of factories, adding to the number of the unemployed, and thereby increasing the difficulties of municipal, provincial and federal governments in their financing. It has also increased the burdens upon our taxpayers. If we are going to solve this problem we must restore to the people this lost purchasing power.

The years of the depression have caused the people of this country to make a thorough analysis of our economic system. They are becoming convinced that this policy of "tighten your belt," economize, produce below the cost of production, will not solve the problem. Apparently they realize to-day better than ever before, especially those many millions who gaze at the various articles on display in our so-called stores—I refer to them many times as museums—where people go to see the things they would like to buy if they only had the money, or who look at the catalogues sent to them by the great merchandising corporations in this country, gazing at them as they would at the family album, seeing there the things they would like to buy if they only had the money—the great masses of our people, I repeat, realize to-day better than ever before that they must have restored to them the purchasing power necessary to bring back prosperity. This can be done, I believe, by the use and control of national credit by the government, that national credit to be used in the interest of the people to meet the needs of the people. We hear a great deal these days about sound money. What the people of Canada want is more money and less sound. The farmers want more purchasing power for their production, the worker more for his labour, the fisherman more for his fish, and industry in general requires more for new and greater developments.

We in this part of the house are in favour of sound money; we want sound money. We are not inflationists; we are not deflationists. However we do not believe that money to be sound must be based upon the intrinsic value of gold or silver. We believe that money should be based upon our collective ability to produce real wealth and render service one to another, and that it should actually reflect any increase in our ability to do so. Our wealth should not be measured only in dollars and cents; it should be measured in our volume of goods that are being or can be produced. The link between production and distribution is money or purchasing power, and we must restore purchasing power to the people to do away with these stored up surpluses that we have in the midst of this distress and suffering.

We have another problem, and that is the problem of debt. This problem of debt must be faced. To-day our money and our credit have been used as an instrument to create debt. By the creation of these enormous interest bearing debts this instrument has been used for the purpose of destruction, and we should bend our efforts to the reduction of private and public interest bearing debts. We do not say, repudiate, nor do we say, default, but if the creditor in this country is going to insist upon the pound of flesh from a debtor already reduced to skin and bone there will be left nothing but a skeleton, of little use to the creditor, the debtor himself or his country.

To-day the banks pay lower rates of interest to depositors. The enormous sum of $600,000,000 has been dropped in one year by holders of life insurance policies. Then we have a decline in revenue from real estate properties. I have in mind the memory of those 600,000 men who went overseas prepared to give their lives in a period of national crisis, and now the question is being asked of those who hold the bonds: Just what sacrifice are you prepared to make at this time of national crisis? The people of Canada are awaiting the answer. They insist upon cooperation. I do not blame the municipal or provincial governments to-day who, faced with bankruptcy, faced with the choice of needs of their people or meeting these interest bearing charges, insist upon refunding their obligations at lower rates of interest. Rather I would place the blame or responsibility, if there is any blame or responsibility to be placed, upon the governments that preceded them and borrowed these huge sums of money and spent them as they have done. They are the ones to blame, if there is any blame to be put upon anyone.

From time to time people point with pride to the fact that we have sound money and safe banking institutions. Is it necessary that all classes of society should sustain great losses; that 1,200,000 people should remain on relief; that the farmers of Canada should produce wealth below cost of production? Must people lose their homes and must the conditions of distress now prevailing in the

country continue in order that we may be able to point with pride to the fact that our banks are safe? I believe our banking institutions can remain safe and our money sound and still allow us to solve the problem that faces us. The solution lies in the proper use of the national credit. Many people contend that favourable balances of trade will bring prosperity. The United States has enjoyed favourable trade balances for many years; in fact it is estimated that all told they amount to over $27,000,000,000. Can we truthfully say that the United States is enjoying prosperity? The answer is no. Canada, for the last five years, has enjoyed favourable trade balances, and yet at the same time, as has been pointed out, unemployment has increased. The problem in Canada is to provide out of our natural resources sufficient to saturate the domestic market, creating at the same time a surplus which could be used to exchange those things not naturally produced in Canada, possibly on a quid pro quo basis or goods for goods.

The question has been asked of us in this house: Just what do you mean by control of credit? We do not believe that the purchase of a controlling interest in the central bank is a solution. Changing the ownership of the monetary system will not solve the problem but changing the policy will do something towards bringing about a solution. We believe that credit should be controlled by the three principles advocated by social credit, namely: a just price which will guarantee to labour a just wage for its contribution; a just price to the farmer and all others who provide the raw materials necessary for the production of wealth, and a fair commission to those who own or supervise our industries. We believe also in the continuous flow of credit, which means the circulation of money or purchasing power that can be assured by various methods, especially by the payment of a national dividend to all citizens of the country, assuring them economic security and providing for them at least the bare necessities of life. This would encourage the spending of money and do away with the fear which seems to grip the consumer to-day. Many people neglect to buy to-day the things they need because of fear of economic insecurity which may overtake them to-morrow. The people of Canada want economic security. They do not want the feasts or the famines of the past created by a monetary system, possibly I should say by the uncontrolled, unsupervised manipulation of the monetary system by private individuals, which eminent economists and statesmen declare will chill, check and destroy genuine economic freedom. This question of money has been brought up in the house many times, but apparently the government is not yet prepared to introduce any monetary reforms; at any rate the budget does not disclose any such intention. They still imagine that we can tax our way to prosperity or borrow ourselves out of debt.

We have been referred to as radicals, as leftists, but I contend that we have a sane solution to offer to the people, and I am looking forward to the day when a social credit minister of finance will bring down a budget which will indicate a solution of the many problems that confront the country to-day, problems which some of our leading statesmen declare will bring ruin and disaster to Canada. We see no ruin and disaster to the credit of this country if we will but make use of our national credit. We do not fear the collapse of financial credit as long as the real credit of the country remains intact. As long as we have our great railways running; as long as there are men on the farms; as long as the laws of nature are favourable to the production of goods which we need; as long as we have all the real wealth in the country and the ability to produce, we need not fear anything. The collapse of financial credit is, therefore, not of much concern to us. We say that that which is physically possible will be financially possible under a just monetary system.

Mr. H. E. WILTON (Hamilton West): I wish to congratulate the hon. gentleman who has just spoken (Mr. Landeryou) upon his ideas of old age; I am glad to know he feels that he is going to live to be a very old man. In passing, I noticed in to-day's morning papers that the hon. and might I add charming, lady members of this house can divert their minds from the serious business of unemployment, added taxation and budget overdrafts to the more pleasing study of masculine defects due to lop ears, crooked noses and avoirdupois. Perhaps this interesting analysis of our physical defects may have the subduing effect of shorter speeches and thereby prove of great value in solving the perplexing financial problems which confront us. Perhaps when the members for Grey-Bruce (Miss Macphail) and the Yukon (Mrs. Black) next have their teacups read, a Prince Charming will be revealed. Let us hope for the best.

As an individual member, representing an individual but outstanding constituency, I realize my duty to that constituency, but I also realize my duty in a broader sense to every citizen of Canada, particularly to that important majority known as "the taxpayer."

The outstanding feature of the revised tariff act, according to its supporters, is that it will increase the buying power of the Canadian dollar. Last Saturday, while I was in Hamilton, a hardware merchant of that city showed me a certain article on sale in his store retailing at ten cents. He told me that this article was manufactured in the city of Hamilton and that he purchased it at forty-five cents per dozen. Quite recently representatives of Japanese firms had called upon him and offered him this same article at thirty cents per dozen. The point is this, as he said, "Although I may and probably will buy those Japanese goods at thirty cents per dozen, as against the forty-five cents per dozen asked here, I shall not sell them at less than the price I am selling them at now, so that the only person who will benefit by that will be the retail dealer and not the man who buys to use."

Hamilton, because of its hundreds of large manufacturing concerns, is known far and near as the Pittsburgh of Canada. What will this new reduced tariff act do to that great city? It will decrease employment; it has done so already, and it will increase public relief, which in turn will increase taxation to the already overburdened taxpaying homeowner. Of what use is increased buying power to the man out of work and without money? The reduced tariff on automobiles would imply reduced cost to Canadians, but such is not the case, because the increase in sales tax more than offsets the tariff reduction. Last week I was told by a representative salesman of a large automobile sales concern in Hamilton that the agents of that company had been called in to their head office last Saturday morning and instructed to add $18 to the price of every car they offered for sale. I said to him, "Your cars should sell cheaper, due to the reduction in tariff," and the answer was "They should, had it not been for the sales tax, which more than offsets the reduction in tariff and adds $18 to the price of our car." This is a low priced car.

There is an old saying that nothing is so bad but it might be worse. So, perhaps we should be thankful that the situation is no worse than it is. I do not agree with those who say that we have passed through the worst depression the world has ever known. Ancient history belies the statement. A hundred years ago, yes, and two hundred years ago, the same cry was being made, as is indicated by an extract I have in my hand, taken from the writings of Lord Macaulay Writing in 1830, he speaks of conditions over a century ago, and also makes reference in this essay to a period one hundred years prior to that time:

> The present moment is one of great distress. But how small will that distress appear when we think over the history of the last forty years; a war, compared with which all others sink into insignificance; taxation, such as the most heavily taxed people of former times could not have conceived; a debt larger than all the public debts that ever existed in the world added together; the food of the people studiously rendered dear; the currency imprudently debased, and and imprudently restored. Yet is the country poorer than in 1790? We firmly believe that in spite of all the misgovernment of her rulers—

They were complaining about misgovernment then.

> —she has been almost constantly becoming richer and richer. Now and then there has been a stoppage, now and then a short retrogression; but as to the general tendency there can be no doubt. A single breaker may recede but the tide is evidently coming in.
>
> If we were to prophesy that in the year 1930 a population of fifty millions, better fed, clad, and lodged than the English of our time, will cover these islands—that machines constructed on principles yet undiscovered will be in every house—that our debt vast as it seems to us, will appear trifling to our great-grand-children, many people would think us insane. We prophesy nothing; but this we say: If any person had told the parliament which met after the crash of 1720 that in 1830 the wealth of England would surpass their wildest dreams—stage-coaches would run from London to York in twenty-four hours, that men would be in the habit of sailing without wind, and would be beginning to ride without horses, our ancestors would have given as much credit to the prediction as they gave to "Gulliver's Travels."....
>
> We cannot absolutely prove that those are in error who tell us that society has reached a turning point, that we have seen our best days. But so said all who came before us, and with just as much apparent reason.

So, after all, we find that two hundred years ago, and again one hundred years ago, the same cry we hear to-day was in evidence. Perhaps we may be glad that conditions are no worse than they are. Regardless of tariffs, budgets, politics and pessimists, the great problem of unemployment, public relief and a rapidly increasing national debt will never be solved by the vicious system of borrowing money with which to pay debts. Borrowed money never paid a debt. It simply adds to the burden, and finally finds its way to the tax bill of the homeowner. We reduce national income by reducing tariffs, and adjust the financial loss by increased taxation. This tariff act in its present form will divert Canadian manufacturing concerns to the United States, and put Canadians out of work. The only solution is new, additional sources

of revenue, which I think I referred to a few days ago, other than by direct taxation. If I had in my garden a good crop of potatoes, it would be most ridiculous for me to borrow from my neighbour money with which to go out and purchase potatoes. It would be no more ridiculous, however, than what our governments are doing. With our national back yard filled with gold, silver and valuable minerals of various kinds, we go out and borrow money, leaving our rich mineral deposits in the hands of private concerns to exploit and profit by, while we as a government continue to sink deeper in the mire of borrowed money debts. So long as we continue this kind of thing, this vicious circle of borrowing money with which to pay borrowed money, we shall have no good reason to complain if the lady members of this house refer to us, not only as lop-eared, but as irresponsible incompetents.

On motion of Mr. Rowe (Dufferin) the debate was adjourned.

On motion of Mr. Lapointe (Quebec East) the house adjourned at 10.53 p.m.

---

## Friday, May 8, 1936

The house met at three o'clock.

### ELECTIONS AND FRANCHISE

Third report of the special committee on elections and franchise.—Mr. Bothwell.

### CANADIAN RADIO COMMISSION

Hon. ERNEST LAPOINTE (Minister of Justice) moved:

That the name of Mr. Graydon be substituted for that of Mr. Plunkett on the special committee appointed to inquire into the operations of the Canadian Radio Commission and its administration of the Canadian Radio Broadcasting Act of 1932 and amendments, and the regulations made under authority thereof.

Motion agreed to.

### PETITION

Petition from the Canadian Authors' Association with respect to Bill No. 55, to amend the Copyright Act Amendment, 1931.—Mr. Vien.

### CRIMINAL CODE

Mr. T. L. CHURCH (Broadview) moved for leave to introduce Bill No. 60, to amend the criminal code (trial of young persons).

He said: The object of this bill is to provide, on the trial of youths up to nineteen years of age, that their parents, guardians, next of kin or some friend shall be notified and that wherever possible they shall be represented by counsel. I appreciate all that the overworked judges and magistrates are now doing to help this work in the depression. I know too that some of the worst housebreakers we have are of this age. But this bill seeks to help youths of high school age who are not of the criminal class and who travel through the country seeking work. They are being sent down as vagrants, although they have never been in trouble before. Their only offence is that they cannot get a job. This bill will involve little expense, because in the large cities the Lions Club, the Big Brother and Big Sister movement and the various community clubs are doing a great work voluntarily. Here in Ottawa the Lions Club is especially active. The bill is a measure of law reform to help suffering youth who are in need of work and who get into trouble.

Motion agreed to and bill read the first time.

### PRIVATE BILLS

FIRST READING—SENATE BILL

Bill No. 59, respecting Thousand Islands Bridge Company.—Mr. Stewart.

### SUPPLY

The house in committee of supply, Mr. Sanderson in the chair.

DEPARTMENT OF NATIONAL DEFENCE

Projects Already Undertaken

Calgary, Alta.—Barracks for permanent force—
Officers' mess and single officers' quarters, $110,000.
Veterinary sick lines, $10,000.
Surfacing permanent roads, $40,000.
Grading, seeding and terracing, $10,000.
Interior fittings, including telephone system, $8,988.
Mess building No. 6, $15,350.
Sewers, $55,005.
Grading landing field, $18,670.
Administration building No. 1, $35,712.
Garage and forage barn, $4,856.40.
Electric underground distribution system, $7,892.
Married officers' quarters, $4,640.
Salaries, wages, architects' fees and travelling, $40,712.
Miscellaneous, $14,941.74.

Mr. STIRLING: Would the minister give the committee some information with regard to this scheme, also whether he is carrying out the scheme as laid down, or with alterations?

Hon. IAN MACKENZIE (Minister of National Defence): This is just carrying out the policy which was laid down a year ago. Of the total sum of $376,000, $261,000 is for commitments and works which were undertaken before the end of the last financial year, and

$115,000 is to carry out work such as grading and seeding which will be consequent upon the completion of the contracts involved in the former amount. If my hon. friend looks at the items under the Public Works department, he will find there another total of $175,000 to carry out other projects which were contemplated a year ago. The entire scheme as first devised in 1934 is not yet carried out. The amount voted in the first estimates was $1,250,000, supplemented by another vote of $400,000 a year afterwards. There are some items in the first scheme which would bring the amount to about $2,500,000 which are not carried out, even under the estimates of this year. It goes a long way towards making the project a composite barracks scheme.

Mr. WILTON: I notice that the first item under "national defence" is $110,000 for barracks at Calgary, followed by various other items which total $376,767 for the city of Calgary. When the original estimates came down I asked the Minister of National Defence if some consideration could be given to the city of Hamilton by providing for the rifle range there, and I was promised then that it would be included in the supplementary estimates which are now before us. I do not see that item in these estimates, and it strikes me as strange that Hamilton, a city more than twice the size of Calgary, cannot get an appropriation of ten or fifteen thousand dollars, when Calgary can get $376,000.

Mr. BENNETT: That is only a small part of it.

Mr. WILTON: It seems to me that if we are going to—

The CHAIRMAN: I do not like to interrupt the hon. member for Hamilton West (Mr. Wilton), but we are discussing a certain item, and discussion should be confined to that item.

Mr. WILTON: May I suggest that I am only using this as an illustration, pointing out that $376,000 is being spent in a city half the size of Hamilton. If I am not in order, all right, but if I am, I should like to continue for just a few moments.

The CHAIRMAN: The hon. member is out of order.

Mr. MACKENZIE (Vancouver): I am quite sympathetic with the hon. member for Hamilton West in what he is advocating. I am well aware of the claims of Hamilton with reference to the rifle range, and I intend as soon as possible to comply with his desire in that regard.

Miss MACPHAIL: Where are you going to get the money?

Mr. MACKENZIE (Vancouver): There is an amendment to be moved with respect to the architects; it applies to architects all over Canada. I will ask the Minister of Justice (Mr. Lapointe) to move it.

Mr. LAPOINTE (Quebec East): I move to amend this item "Salaries, wages, architects' fees and travelling, $40,712," by adding after the word "travelling" the following:

in connection with Calgary barracks and any other works and buildings included in the several votes in these estimates for national defence.

Mr. BENNETT: What is the purpose of the amendment?

Mr. MACKENZIE (Vancouver): The idea is that the amount for architects' fees is not all required at Calgary; it is required for general purposes all over Canada. A specific amount of a little over five thousand dollars is required in respect of Calgary, but this item includes additional amounts and is for general purposes in connection with the department's special supplementary estimates.

Mr. BENNETT: It is not proposed to change the architects who are doing the work?

Mr. MACKENZIE (Vancouver): Not as far as I know.

Mr. DOUGLAS: When this amount for the barracks at Calgary has been spent, what will have been the total amount expended?

Mr. MACKENZIE (Vancouver): Roughly speaking, the amount spent so far, according to a calculation I made the other day, is $1,400,000.

Mr. DOUGLAS: Not including this?

Mr. MACKENZIE (Vancouver): Yes, including this item.

Item as amended agreed to.

Kingston, Ont.—Royal Military College—

South wing to Fort Frederick dormitory and connecting passage to new mess and recreation building, $150,000.

New mess and recreation building—equipment and fittings, $31,600.

Grading, turfing, sidewalks, roads and incidentals, including extras in connection with main contract, $14,039.55.

Miscellaneous, including general repairs to existing buildings and grounds, etc., $10,334.72.

Mr. BENNETT: How much of this is already spent?

Mr. MACKENZIE (Vancouver): The amount of $56,000 is really a revote. The south wing is the natural corollary of the north wing, which was completed last year by the previous government, and the mess.

Item agreed to.

Montreal, P.Q.—armoury for the 17th Duke of York Royal Canadian Hussars, $1,444.24.

Mr. STEWART: Do you not pass the whole of the item?

Mr. MACKENZIE (Vancouver): This is a revote.

Mr. BENNETT: Why a third? Why do we not pass the whole item?

The CHAIRMAN: I understood that two-thirds was passed on supplementary estimates in interim supply. This is for one-third.

Mr. BENNETT: There were some items that made up two-thirds; is that so?

The CHAIRMAN: Yes.

Item agreed to.

Ottawa, Ont.—new photographic building at the Royal Canadian Air Force station, $939.82.

Mr. MACKENZIE (Vancouver): This is also a revote.

Mr. STEWART: Has this building been constructed and the money spent?

Mr. MACKENZIE (Vancouver): All the money has been expended except the amount in question here.

Mr. STEWART: Again the question arises why items such as this should not appear in the regular estimates, and the further point that already it has been voted, and we are therefore voting it twice.

Item agreed to.

Vancouver, B.C.—armoury for Seaforth Highlanders, $19,433.25.

Mr. MACKENZIE (Vancouver): This is in exactly the same category.

Mr. MacNEIL: What is the total expenditure on this project?

Mr. MACKENZIE (Vancouver): The total cost will be about $240,000.

Mr. STEVENS: The building is finished, is it not?

Mr. MACKENZIE (Vancouver): The building is finished and has been unofficially opened; it will be officially opened this year.

Miss MACPHAIL: I recognize that there is no use in protesting against any of these items, but with regard to this one—and the same applies to all—I think there are a lot of things that we as a nation need a great deal more than we need this total vote. For instance, there is this armoury for the Seaforth Highlanders. I will admit that highlanders add to the beauty of the surroundings—

Some hon. MEMBERS: Oh, oh.

Miss MACPHAIL: In kilts, I mean, but as far as being effective in the wars of the future, if they are to be chemical wars and aerial wars, I think in the highland costume they would make excellent targets but would be rather ineffective in any kind of retaliation. This total amount for armouries is quite large. It has been said very often from this corner this session, but it will bear saying again: We could not afford to pension the blind at forty; we cannot find money with which to take care of people who are incapacitated; we cannot find money for a great many useful things, but we can find money for the construction of barracks. It is a very sizable sum of money, at that, and I just want to register my protest. I do think this is money wasted. If we have the money let us spend it sensibly, so that it will help the greatest number of people. Undoubtedly this amount will be voted, but certainly it will not pass with my approval and consent.

Mr. MacINNIS: Did I understand the minister to say that the work represented by this $19,433.25 has been completed?

Mr. MACKENZIE (Vancouver): Yes, the work has been completed. They are still doing some grading, I believe, around the armoury in Vancouver.

Mr. MacINNIS: The question has been asked so often that I suppose there is not much use in asking it again, but why is there a vote in this year's unemployment program covering work already done? I think this is not only deceiving the house; it is deceiving the country as well. They expected the government to bring down an appropriation for the relief of unemployment; a very large sum of money has been mentioned, but now we find that a great deal of the work has been completed already. This was last year's appropriation, not this year's.

Mr. MacNEIL: Would the minister indicate just what activities will be housed in this armoury and what justification there is for such an enormous expenditure in Vancouver at this time?

Mr. MACKENZIE (Vancouver): Of course that immediately raises a question of policy. This armoury was decided upon a year ago, and in my opinion is one of the most necessary in the Dominion of Canada. I have not seen the armoury since it has been completed but I am informed that it is one of the most beautiful buildings in Canada, and the citizens of Vancouver are exceedingly proud of the building as such. Strictly speaking these armouries are not supposed to be used for ordinary purposes, but that rule is relaxed very frequently. Only the other day in the city of Vancouver we were able to have the armoury used for a tremendous motor show, which drew thousands upon thousands of the citizens of Vancouver for five or six days, thereby adding quite substantially to the communal pride of that city. I think these strict regulations could be relaxed very successfully in many cases, to make them available for communal purposes and so on.

In regard to the necessity for armouries, of course that is entirely a question of policy. But as long as we have defence forces in Canada; as long as we are concerned with the essential problem of national security, we must have armouries. My own judgment is that as far as possible we should endeavour to combine the essential purpose of armouries with communal enterprise and have these buildings used for other purposes to a certain extent.

Mr. MacNEIL: Did I understand the minister to say that this armoury will be available for all community endeavours in addition to those he has mentioned? If my recollection serves me aright, when an armoury is requested for charitable purposes or for the use of service organizations of the city usually the association of officers commanding is very reluctant to give consent, complaining that the activities of the militia are interfered with. From my knowledge of the activities of the militia in Vancouver I do not think they are so great as to warrant any reluctance in giving consent in such cases.

Mr. MACKENZIE (Vancouver): My hon. friend is quite correct, that all this must be subject to the necessities of militia training, because the primary function of an armoury is to permit the militia to carry on their training, whatever it may be. As far as possible, however, with the consent of the district officer commanding, they might be used for other purposes, subject to certain conditions.

Mr. BENNETT: I just want to ask the minister what part of this $19,433.25 is unexpended.

Mr. MACKENZIE (Vancouver): It is all committed and I think by now it is practically all payable.

Mr. BENNETT: Then what are we voting it for? The payments have been made as the work has progressed, under the statute of last year. The auditor general cannot pay under this statute that has not been passed, but payments are being made from day to day.

Mr. MACKENZIE (Vancouver): This is the unpaid balance due and owing to the contractors, Smith Bros. and Wilson, on this particular armoury.

Mr. BENNETT: But part of these payments have been made since these estimates were brought in, in one case at least. I do not know whether that is so in this case.

Mr. MACKENZIE (Vancouver): Not in this case.

Mr. MacNEIL: I desire to ask the minister if he would indicate exactly what form of training is carried on in this armoury. Is it confined strictly to military training or is any attention given to the physical development of youth?

Mr. MACKENZIE (Vancouver): No, I think not; I think the training is confined entirely to the militia training as laid down, combined with lectures by company officers and the ordinary processes of militia training.

Mr. MacNEIL: Are any units of the permanent force to be housed in this armoury?

Mr. MACKENZIE (Vancouver): No.

Mr. DUPUIS: I should like to know from the minister how many armouries have been built by the Canadian government in the last five years, and the number in each province.

Mr. MACKENZIE (Vancouver): I am sorry, Mr. Chairman, but I have not those figures under my hand at the present moment. I shall be very glad to secure them and give my hon. friend the information later.

Mr. DUPUIS: Although I am in sympathy with the hon. member for Grey-Bruce (Miss Macphail) in regard to the desirability of spending money for other purposes which are apparently of greater importance, I agree with the minister that it is necessary to build these armouries for national defence and to maintain national peace and order. I am against war, of course, but may I say to the

hon. member for Grey-Bruce that as long as there are misunderstandings among ourselves, such as we noticed yesterday in the judgments rendered upon members of this house, giving rise to jealousy and envy; as long as human nature shows defects and inequalities, it will always be necessary to prepare for war. I say that having in mind that I requested the Minister of National Defence to see that an amount of money be appropriated for the construction of an armoury on the south shore in the district of Montreal. I know he is in sympathy with the project—

Mr. STIRLING: On a point of order, Mr. Chairman, is this more in order than a reference to the rifle range in Hamilton?

The CHAIRMAN: No, the hon. member is out of order, just as was the hon. member for Hamilton (Mr. Wilton).

Mr. DUPUIS: Well, I am glad to be out of order, because otherwise we would not be noticed. I shall try to abide by your decision, sir, and I hope that in the next estimate there will be an appropriate amount for the citizens of my district.

Mr. MacNEIL: The minister I hope will bear with me in questioning this item. Request has been made frequently for funds to be appropriated for other purposes. The minister may take pride in the construction of this armoury, but he will agree that it is impossible to take pride in the housing conditions in the same area. In my opinion the money would be much better spent on the improvement of housing conditions. I do not see that the activities for which facilities are provided in this building justify the expenditure. I urge the minister for the benefit of hon. members of the committee, to make at this point a frank statement in regard to the policy of his department. A former minister of defence, under whose auspices the project was commenced, stated that these preparations were necessary not so much for national defence as to deal with the possibility of civil disturbance. Disquieting rumours in this regard have been spreading in Vancouver, and I would like some statement from the minister as to the preparations in regard to the possibility of civil disturbance.

Mr. MACKENZIE (Vancouver): I think that question could with more propriety be raised on the general estimates than on these special supplementaries. But I would say at once with reference to the question asked that the policy of the Department of National Defence is concerned with the national security of the Dominion of Canada.

[Mr. Dupuis.]

Mr. CHURCH: The minister may expect the same criticism as was voiced in this house last year. Armouries are necessary in Canada. In the large cities the militia cannot much longer stand things as they are. Officers, non-commissioned officers and men get no pay; they provide funds out of their own pockets for equipment and so forth to operate their unit. They get very little of the money that they used to get under the Militia Act. Since I have been in the house the estimates of this department have come down from $24,000,000 to $13,000,000. This is a revote. The unit concerned is a splendid unit which had a fine record in the war. It was the armed strength of the barons that made magna charta possible, and the same principle holds to-day; the disarmament of the free is the tyrant's opportunity, as we have seen in Ethiopia. We shall have a rude awakening in this country some day. We are dependent on the motherland, the permanent militia is run down, the militia in general run down, the camps are going to pieces, the cadet movement has been destroyed. We would not have been able to take the position we did in 1914 but for the cadet movement. Let me say to the hon. member who spoke before the hon. member for Vancouver North that no province owes more to the protection of the British fleet than the province of Quebec. These armouries are necessary at the present time not only in Vancouver but in every province. Owing to the depression the department has not been able to support the militia. These men in the Seaforth battalion give their services for nothing; many of them are returned men, and they are just as fond of peace and security and just as much opposed to war as are the hon. gentlemen who are opposing this vote, for whom they fought on land and sea and in the air in the last war. They are opposed to war because they were overseas and know what war is, as those of us who stayed at home do not. Yesterday the minister was a hero; he was one of the few that could take it. Yesterday he was a thing of beauty and a joy forever, but to-day it is different; this is wash day.

The CHAIRMAN: Order. Shall the item carry?

Mr. BENNETT: This item and other items of the same kind, I should say to the hon. member for Vancouver North, were included in the public works bills of 1934 and 1935 for two reasons; first, because they were necessary works; second, because they were works that afforded a maximum of a certain type of employment. In all these the proportion of

material and labour was very great. They were scattered over every part of the country.

As far as the Seaforth Highlanders are concerned, I have only this to say: that that armoury had to be built if the unit was to be maintained. The unit has a record of which this country has been justifiably proud. The officers who give their time to this and other units of the kind are spending their own money, whether they be honorary officers or otherwise, and finding themselves at the end of the year much poorer than at the beginning. It must not be forgotten that the foundation of our national effort in this country in 1914 was the militia. These men, these young citizen soldiers, if you call them that, are assuming, by the very terms of their enlistment, the possibility of losing their lives in the defence of law and order in this country. They may be called to do such police duties as are provided for by the act. Surely the country is not so lacking in gratitude to men who thus offer their services for the preservation of our institutions as not to provide them with decent quarters in which to train and make a home for their unit. But the primary object that brought into being these items was the necessity for providing employment, and while so doing completing useful and necessary structures. We spent I believe several weeks on the second branch of that discussion in the years 1934 and 1935, and I think it is only fair to say that the house by a very large majority, including many of those who sat to the left of the Speaker, were satisfied that these were works that afforded a substantial amount of direct employment and an expenditure for material that gave employment in factories and various other industrial undertakings throughout Canada and local work on a large scale. Hon. members were satisfied that these works were a present and urgent necessity if we are to maintain the efficiency and effectiveness of our units of voluntary citizen soldiers that we call our militia. That is the story.

Mr. WOODSWORTH: I think the minister was quite right when he intimated that matters of policy should be discussed on the main estimates rather than on these supplementaries. But since certain remarks have been made by various hon. members, those of us who are in a minority in this house in holding different views can hardly let those remarks pass without at least a word of comment.

The leader of the opposition (Mr. Bennett) has just suggested that those whom he calls these young citizen soldiers who are willing to lay down their lives in police duty are the people who are defending and maintaining the institutions of this country. I dissent decidedly from that point of view. The people who are maintaining the institutions of this country are the ordinary people of the country who are carrying on, living decent lives and trying to provide for the maintenance of our community affairs. If the institutions of this country fail it will be because those in charge of them have failed in their duty of providing for the common people. I do not think there is any section of Canada that holds anarchistic ideas or that wants to tear down, but I do assert that there are limits beyond which no free people can be driven. As we have stated so often, when we have over a million people on relief and large numbers of people who continue to be unemployed year after year, until they become almost desperate and occasionally break out in rioting, I say it is the people who are neglecting to provide work and opportunity who are responsible for any fracas that may occasionally break out.

If we are going to maintain our institutions we shall do so by carrying out the principles for which our institutions should stand. If we are going to depend upon the police to maintain our institutions, a rather popular doctrine to-day I am afraid, then we may as well abandon these institutions. We are a free people. Our forefathers adopted these institutions because through them they expressed their community and national life. In the old days they did not think it necessary to have a group of hirelings, a group of mercenaries to maintain our institutions. Each stood ready to defend our institutions in the very best way, namely by using them to advantage. I regret exceedingly that we have lapsed so easily into the idea that our national institutions have to be defended by force.

I shall not discuss the matter in further detail, but shall make only one or two observations on the point mentioned by the leader of the opposition, that these operations were begun because it was considered they would supply a very considerable amount of work for the unemployed. At the time the suggestion was made, some of us protested against this type of project. In the first place, if we are to have public works, in the old sense in which the term is used, that is public buildings devoted to public service, there are other types that are needed more than barracks. We need places where the great masses of our people in our communities can come together for various community enterprises.

In this city of Ottawa there is one building that is denounced as a disgrace; I refer to

the supreme court building. I should fancy that a dignified home for the Supreme Court of Canada would be more desirable than a great number of barracks erected across the country. That is one suggestion, if we are to have public buildings.

But most of us would go farther than that and say that under conditions existing to-day we do not need public buildings as much as another type of building, namely homes for our people. In my home city of Winnipeg one of these huge public buildings has been erected. Well, it is a fine building; I do not object to it as a building, but I do know a great many owners of private office buildings were not very glad when the new federal building was erected. I know, further, that according to the housing report of the city of Winnipeg there are most abominable housing conditions almost within the shadow of that big federal building. The point I should like to emphasize is that the building of houses for the people would provide just as much work and probably more than would the erection of a building such as the one under discussion. I believe the building of homes would give more work, because a smaller amount of the work is done by machinery used so extensively by contractors on big structures. The building of homes would provide work and at the same time it would provide in large sections of our community a very real and vital need.

A difficulty arises because of the way in which we handle the estimates. They are brought forward and we are asked either to accept or to criticize them. We cannot reject them, but we can criticize them. But there is no way in which we can balance one kind of enterprise against another kind. I may be in favour of this particular kind of building; possibly I should not like to vote it down, in so far as it may provide a certain amount of work. But the only thing we can do is to criticize it as severely as we can, knowing that there are many other works much more vital to the welfare of the community which could be entered upon. The performance of those other works would accomplish the end of providing employment. That is one difficulty in this haphazard departmentalized way of introducing the government's program. We have not any general review of the whole situation.

I should not have made these remarks at this time but would have reserved them until later had it not been that I feel I must protest against the opinion so generally and freely expressed by some people that we must maintain a military establishment.

[Mr. Woodsworth.]

By the way, the hon. member for Broadview (Mr. Church) referred rather slightingly to some of us who remained at home during the last war. I am not a bit ashamed of having remained at home in the last war, although I like a great many others was not in the eligible class. I am not ashamed that I did not go to the front; that is one of the things of which I feel proud. But may I say that in his slighting remarks the hon. member for Broadview included the hon. member for Vancouver North (Mr. MacNeil).

An hon. MEMBER: No, he did not.

Mr. WOODSWORTH: I thought that was done.

Mr. BENNETT: No.

Mr. WOODSWORTH: All I wish to say in passing is that if there is any virtue in having gone to war and having been among the most distinguished there, then my colleague from Vancouver North has that advantage. In the development of our country we have reached the stage where, whether we went to war or stayed at home, we ought surely to be able to express ourselves on matters of national defence without having any slurs cast upon us. Some of us feel that in opposing these military defence estimates we are just as patriotic as any hon. members who propose them. We look at things from a different angle, but as hon. members of the house we think we ought to be in a position frankly to state our position with regard to matters, without being subjected to slurs from any part of the house.

Mr. MacNEIL: In questioning the expenditure I did not intend to cast any slur on the record of the Seaforth Highlanders. I know the record of that regiment, and would not wittingly cast any reflection upon its record or glorious traditions. But may I point out that the men who to-day form the Seaforth Highlanders of Vancouver are not the men who gained glory and distinction for that regiment from 1914 to 1918. I cannot let the occasion pass without reminding hon. members that many of the former members of the Seaforth Highlanders, a regiment which gained glory and distinction on the field of battle, are to-day begging bread in and around the city of Vancouver. We should not overlook that fact.

I rather regret the suggestion that the regiment is now being maintained and housed in the manner suggested strictly for police duty. I cannot believe—

Mr. BENNETT: No one said that.

Mr. MACKENZIE (Vancouver): No, that has not been suggested.

Mr. MacNEIL: I understood it was to maintain law and order.

Mr. BENNETT: The statute covers the matter.

Mr. MacNEIL: I am glad to hear that correction. I should not like to have the suggestion go out that the regiment would be standing to, as it were, waiting for some civil disturbances.

Mr. MACKENZIE (Vancouver): No.

Mr. MacNEIL: I wish to make it clear that I question our readiness to spend money in such large sums merely for the purpose of policing our country when those expenditures should be counterbalanced by even greater expenditures designed to remove the causes of discontent which may lead to disorder. The point I wish to make clear is that it is vastly more important to prevent disorder than to suppress it once an outbreak has occurred.

Item agreed to.

Barriefield, Ont.—Royal Canadian Corps of Signals depot—
Administration building, $75,000.
Barrack block No. 2, $130,000.
Training building, $115,000.
Single officers' building, $100,000.
Sergeants' mess, $40,000.

Mr. BENNETT: How much of that has been spent ?

Mr. MACKENZIE (Vancouver): Only a small amount under the unemployment relief scheme. The work in the first item, providing for an expenditure of $75,000, is well advanced. In connection with the second item only the basement has been completed. Under the third item excavation has been done, while the fourth and fifth items are entirely new.

Mr. BENNETT: Contracts are outstanding for the first three?

Mr. MACKENZIE (Vancouver): There are no contracts outstanding. In connection with the unemployment relief projects certain preliminary work was carried out, but there are no contracts for the main projects which are outlined in this vote.

Item agreed to.

Ottawa, Ontario.—Royal Canadian Air Force station—landplane hangar, $50,000.

Mr. BENNETT: Was this item covered in the last appropriation?

Mr. MACKENZIE (Vancouver): Only the steel framework has been erected to date; the main work is still to be done.

Item agreed to.

Valcartier, P.Q.—dominion arsenal buildings for filling and ammunition groups, $200,000.

Mr. MACKENZIE (Vancouver): This is to provide further funds for the projects already undertaken with regard to the filling and ammunition groups at Valcartier.

Mr. STEWART: How much has been spent on this work?

Mr. MACKENZIE (Vancouver): Altogether $1,605,000 has been spent at Valcartier from relief funds.

Mr. STEWART: Was anything spent last year under the Relief Act and the Public Works Construction Act?

Mr. MACKENZIE (Vancouver): The expenditures already mentioned were made under the Relief Act.

Mr. STEWART: How much was spent last year?

Mr. MACKENZIE (Vancouver): I will get that in a minute for my hon. friend.

Mr. BENNETT: The minister can give that later. We can go on to the next item.

Mr. MacNEIL: Perhaps I could take advantage of this item to ask the minister what progress has been made in compiling the official Canadian history of the war.

Mr. MACKENZIE (Vancouver): That would come under an item in the main estimates dealing with adjustment of war claims but I shall be glad to answer my hon. friend's question now. The first volume of this history will be completed by January 1, 1937. For some time there was some doubt as to which period in the war the first volume would refer to, but it has been decided that that volume will bring the history of the war up to the time of the formation of the Canadian corps as such. The remaining eight volumes cannot be completed more quickly than at the rate of one volume per year. The first volume will be completed next year, and the eight subsequent volumes at the rate of one per year.

Mr. MacINNIS: The minister stated that this work at Valcartier involved expenditures amounting to over a million dollars. Were there any contracts let in connection with this work?

Mr. MACKENZIE (Vancouver): With the possible exception of some steel framework it has been done under the unemployment relief project and other special undertakings.

Mr. MacINNIS: What wages were paid for labour on that work?

Mr. MACKENZIE (Vancouver): In connection with the unemployment relief projects the usual sustenance allowance was paid. Naturally, higher allowances were paid to the supervisory personnel, and wages at regular rates in cases where skilled work was carried out.

Mr. MacINNIS: Am I to understand that most of this work was carried out on a sustenance basis?

Mr. MACKENZIE (Vancouver): Apart from the special work, that is correct.

Mr. MacINNIS: I do not know that there is very much I can say about this except to draw attention to the fact that this country has reached a very inglorious position when its defences have to be carried out on a sustenance basis of food, clothing, shelter and twenty cents per day to the labour employed. Is it any wonder that we have to have an armed force to maintain peace, order and good government? Is there any incentive to people to be interested in good government under conditions of this kind?

Mr. MACKENZIE (Vancouver): That policy will be changed after June 30.

Mr. BENNETT: It is only fair to say that the steel and other technical work was done by men who were paid regular wages. There was a camp there and work had to be provided for the men, if only for exercise purposes. If any of the men in the camp could get a job, they were free to take it. In the meantime they were supplied with food, clothing and shelter. Many of these men came from Montreal and other parts of the province of Quebec; this camp was not in any sense a local camp. The supervisory staff was composed of men well qualified for that purpose, who were paid regular wages. The technical work in connection with the erection of the steel frames was done by men who had a working knowledge of those particular trades. There was no difference between this camp and any other; they were all in the same position.

Mr. MacINNIS: I think there was a considerable difference between the work done here and the work done in other parts of Canada.

[Mr. MacInnis.]

Mr. MACKENZIE (Vancouver): The projects in all the camps were carried on under the Relief Act and by the payment of wages to special labour.

Mr. WOODSWORTH: Apparently the supervisors were paid good wages, as well as the skilled men who had trade unions behind them. These men were able to maintain their wage rates. But why should the unskilled labour be given only sustenance? A few minutes ago we were told that we should recognize the very worthy work being done by certain officers.

Mr. BENNETT: I said officers and men. I do not want any misunderstanding as to that.

Mr. WOODSWORTH: It was said that these men had paid their expenses out of their own pockets, but they were already in receipt of pay, or pensions or other allowances. As the Minister of Finance (Mr. Dunning) told us the other day, the depression was caused largely by the war, so why should we load the dead weight of this burden upon the shoulders of the poor unskilled labourers?

Mr. MACKENZIE (Vancouver): In reply to the question asked by the hon. member for Leeds (Mr. Stewart), I may say that $638,000 were expended last year. I believe that figure is correct, but there may be some slight difference.

Item agreed to.

Quebec, P.Q.—rebuilding city walls, $100,000.

Mr. STIRLING: Will the minister tell us just what sections of the city walls are to be rebuilt under this vote?

Mr. MACKENZIE (Vancouver): These are the old fortification walls of Quebec, not the citadel walls.

Mr. STIRLING: What sections are to be rebuilt?

Mr. MACKENZIE (Vancouver): The walls have been inspected and they have more or less to be reinforced as there are many weak spots.

Mr. WOODSWORTH: Is this a national defence project or is it the preservation of an historical site?

Mr. MACKENZIE (Vancouver): Basically it is to provide employment, but it will also provide much needed protection against accidents.

Mr. BENNETT: It is not the citadel wall?

Mr. MACKENZIE (Vancouver): No, the city walls.

Mr. STEWART: Are these parts of the walls enclosing the citadel which have been turned over to Quebec? On whose property are they located? It looks like a municipal work.

Mr. MACKENZIE (Vancouver): Strictly speaking, it is a combination of relief with a very necessary work.

Mr. STEWART: It is a purely municipal work.

Mr. MACKENZIE (Vancouver): Practically so. The walls have always been looked after by the government.

Mr. BENNETT: This really constitutes a grant to a city.

Mr. STEWART: Was it authorized under the Public Works Construction Act? Where was the authority for it?

Mr. MACKENZIE (Vancouver): It was partly under the unemployment relief project of last year. We devoted $25,000 to it and this is a supplementary vote of $100,000. There are dangerous spots in the walls of the city and for the purpose of preserving life and limb the work is necessary. Moreover it is a good way of giving direct employment to people who are on relief in the city of Quebec.

Mr. STIRLING: The reason I asked the question I did was that a previous piece of work of this sort was a wall which might be called a piece of the citadel wall and a piece of the city wall at the same time. It was in a desperately dangerous condition and an extremely clever bit of work was done by the men in the unemployment relief camp in the taking down of that piece of wall and rebuilding it lest it should fall on the street. I merely wanted to know whether this was intended to carry that same piece of work along towards the harbour.

Mr. MACKENZIE (Vancouver): It is a continuation of the same process.

Item agreed to.

Winnipeg—Fort Osborne barracks—erection of garage, $15,000.

Mr. STEWART: What is the total cost?

Mr. MACKENZIE (Vancouver): The total is $22,970.

Mr. STEWART: I assume the difference between the amount voted here and the $22,000 has already been spent.

Mr. MACKENZIE (Vancouver): Committed.

Mr. STEWART: Has any more than that been spent?

Mr. MACKENZIE (Vancouver): No, that is the total.

Mr. MUTCH: Has the minister been informed that the living quarters of officers and the married quarters in the barracks have been condemned on more than one occasion?

Mr. MACKENZIE (Vancouver): That has been brought to my attention and is receiving consideration.

Item agreed to.

Public buildings generally — improvements, additions and maintenance, $3,126.

Mr. STEWART: Is this the remnant of a larger vote?

Mr. MACKENZIE (Vancouver): It is made up of these items: Painting exterior and interior of Coaticook, Quebec, armoury, $207; Edmonton, Alberta, interior painting, decorating and repairs to Prince of Wales armoury, $590; military buildings generally, repairs and renovations, including amount required to cover closing out of the Public Works Construction Act vote, $2,329, making a total of $3,126, all being a revote of public works construction votes.

Item agreed to.

To provide for expenses in connection with the continuance of unemployment relief projects now organized and conducted for the relief of single homeless men, $2,770,687.

Mr. WOODSWORTH: This evidently contemplates maintenance to a very considerable extent of the relief camps. Will the minister indicate the kind and the location of these projects?

Mr. MACKENZIE (Vancouver): Does the hon. member want the complete list?

Mr. WOODSWORTH: I think we had better have it.

Mr. MACKENZIE (Vancouver): The following is a list of the unemployment relief projects which will be proceeded with as from April 1, 1936:

Nova Scotia:
1 Halifax, N.S.
153 Dartmouth, N.S.

New Brunswick:
2 Cambridge, N.B.
4 Upper Brockway, N.B.
29 Saint John, N.B.
41 Havelock, N.B.
123 Colter's Siding, N.B.
152 Gr. HQ., Saint John, N.B.

Quebec:
5 Mégantic, P.Q.
6 Bishopton, P.Q.
7 Quebec, P.Q.
39 Valcartier, P.Q.
53 St. Johns, P.Q.
Ontario:
8 Diver, Ont.
9 Gillies, Ont.
11 Pagwa, Ont.
12 Nakina, Ont.
13 Kowkash, Ont.
15 Wagaming, Ont.
16 Sioux Lookout, Ont.
17 Amesdale, Ont.
18 Vermilion Bay, Ont.
27 Ottawa Air Station.
28 Trenton, Ont.
30 Camp Borden, Ont.
33 Long Branch, Ont.
35 Gr. HQ., Nakina, Ont.
37 R.M.C., Kingston, Ont.
40 Petawawa, Ont.
42 Barriefield, Ont.
45 Reay, Ont.
47 Gr. HQ., North Bay, Ont.
50 Kapuskasing, Ont.
51 Lac Seul, Ont.
59 N.D.H.Q., Ottawa, Ont.
81 Cranbrook, Ont.
91 Round Lake, Ont.
92 Ramore, Ont.
106 Allanwater, Ont.
109 Kenora, Ont.
112 Savant Lake, Ont.
113 Sunstrum, Ont.
138 Hearst, Ont.
141 Grant, Ont.
144 Lake of Two Rivers, Ont.
146 Killaloe, Ont.
150 Gr. HQ., Killaloe, Ont.
160 Pendleton, Ont.
Manitoba:
19 Whitemouth, Man.
21 Winnipeg, Man.
103 Duck Mountain, Man.
104 HQ. M.D. 10, Winnipeg, Man.
107 Caddy Lake, Man.
110 Shilo, Man.
151 Vivian, Man.
Saskatchewan:
44 Dundurn, Sask.
Alberta:
49 HQ., M.D. 13, Calgary, Alta.
58 Coleman, Alta.
119 Sarcee Camp, Alta.
120 Banff-Calgary, Alta.
121 Edmonton-Jasper, Alta.
122 Frank, Alta.
155 Kananaskis, Alta.
156 Cooking Lake, Alta.
162 Summit, Alta.
British Columbia:
22 Yahk, B.C.
23 Kitchener, B.C.
48 HQ. M.D. 11, Victoria, B.C.
55 Hope-Princeton, B.C.
56 Princeton-Hope, B.C.
57 West Coast Road, B.C.
61 Crow's Nest-Michel, B.C.
63 Long Beach, B.C.
64 Goatfell, B.C.
65 Nelway, B.C.
67 Shoreacres, B.C.
68 Rock Creek-Tadnac, B.C.
70 Gr. HQ., Yahk, B.C.
71 Gr. HQ., Nelson, B.C.
73 Hope-Rosedale, B.C.
74 Agassiz-Harrison, B.C.
75 Esquimalt, B.C.
76 Hope-Boston Bar, B.C.
77 Gr. HQ., Hope, B.C.
78 Gr. HQ., Princeton, B.C.
79 Gr. HQ., Sooke, B.C.
86 Gr. HQ., Spence's Bridge.
95 Gr. HQ., Salmon Arm, B.C.
97 Salmon Arm-S-G., B.C.
98 Roosville, Cutoff, B.C.
102 Revelstoke-Sicamous, B.C.
105 Point Grey, B.C.
108 Boston Bar, B.C.
111 Gr. HQ., Point Grey, B.C.
114 White Rock, B.C.
116 Pender Harbour, B.C.
124 Taghum, B.C.
125 Aldridge, B.C.
128 Dead Man Creek, B.C.
131 Nahun, B.C.
134 North Vancouver, B.C.
149 Rock Creek, B.C.
154 Canal Flats, B.C.
159 Midway, B.C.
157 Oliver, B.C.

Mr. WOODSWORTH: Are all these camps to remain open? These are projects; are there camps connected with them all?

Mr. MACKENZIE (Vancouver): Yes. The men are being gradually taken from these camps for railway purposes, as outlined in the house the other day. My information is that to date 14,276 men are still in the camps, and I believe that about 3,250 are in process of being transferred to railway work.

Mr. WOODSWORTH: How many men will this vote take care of?

Mr. MACKENZIE (Vancouver): The estimate for the vote was prepared on a basis which was computed some time ago by the financial advisers of the departments concerned when we actually had in these camps over 20,000 men. That would leave at least 10,000 men in the camps after the railway labour was all absorbed, and it is purely a matter of estimating what will be necessary to take care of all those who may be left in the camps until June 30 of this year. The estimate may be slightly more than will be required; I cannot say as to that; but it was an estimate made about two months ago, having reference to the number of men then actually in the camps, and allowing for the gradual absorption of about ten thousand of them into railway labour.

Mr. BENNETT: In his last sentence the minister made a statement which, I think, covers and controls the whole thing. In any event, on July 1 they will all be out?

Mr. MACKENZIE (Vancouver): Yes.

Mr. BENNETT: They are no longer to receive the fifty cents a day and food and board and shelter, but the responsibility for them will have to be discharged in some other way than through the relief camps?

Mr. MACKENZIE (Vancouver): That is quite correct.

Mr. STEVENS: I wish to draw attention to one feature of this and preceding votes in this section of the special supplementary estimates. This is the last item of a vote aggregating $4,343,000. Having listened to the explanations given by the minister—and I must say he gave them very frankly and courteously—I am impressed by the thought that a very substantial portion of this money has already been spent, and I imagine that April, the first month of this fiscal year, has increased the amount that has been spent, and that the balance, or most of it, will be absorbed within the next two or three months. The largest item of all will definitely end on June 30. So that it is a fair statement, I think, to say that of this sum of approximately four and a half millions, very little can be said to be a contribution to the solution of our national unemployment problem. We have a total vote of $58,000,000, plus $26,000,000 in grants in aid, or about $84,000,000, which, it is stated, is for the purpose of solving the problem of unemployment. This particular group of items is only an illustration, because the same argument applies in about the same ratio to the other groups of estimates that we have already dealt with. We may therefore be justified in saying that, of this sum of $30,000,000 which is described as "projects already undertaken," a very substantial portion has been spent or will be spent before the end of June in cleaning up projects already entered upon. It follows that the amount provided to meet this overwhelming problem of unemployment is not $80,000,000, as indicated, but a sum very much less than that. I believe that the government must take cognizance of that fact. I am one of those who feel, and I am pretty certain that the minister whose estimates happen to be before us shares in a measure this view, that the problem of unemployment is not going to be solved by these more or less temporary measures. Many of the projects which are indicated in these estimates should be undertaken on a much larger, more definite, and nation-wide scale in order adequately to meet the problem of unemployment. As I have said on other occasions, I pin my faith much more to projects wherein the expenditure can be largely shared by private funds, particularly the one of housing referred to here to-day and so often before. I feel it a duty to direct the attention of the committee, and particularly the attention of the government, to the fact that while the people imagine that some eighty million dollars are being voted, a substantial portion of that sum is either already exhausted, or in the immediate future, before any project of a substantial character can be undertaken, will have been expended.

Mr. EMMERSON: The camp at Havelock, New Brunswick, has been opened up recently. I understood that the government were not going to open up any further camps.

Mr. MACKENZIE (Vancouver): That is quite correct. But some camps in various parts of the country had to be closed down on account of winter conditions and have reopened recently. So far as possible the men employed in those camps were not freshly taken on; they were brought from other camps or other projects. I may say frankly that that fact occasioned in some localities a certain amount of dissatisfaction, where local men were unemployed and could not be taken on, and men were taken from other projects.

Item agreed to.

Other Projects

Extension of Existing Facilities

Trenton, Ont.—Royal Canadian Air Force station—
Single officers building, $160,000.
Married airmen's quarters, $160,000.
Married officers quarters, $110,000.

Mr. BENNETT: This is to complete that unit, I suppose?

Mr. MACKENZIE (Vancouver): Yes. It is just an extension of what has already been done.

Item agreed to.

Ottawa, Ont.—Rockcliffe Air Station, Royal Canadian Air Force—men's barrack building, $160,000.

Mr. DOUGLAS: Are all these projects that have already been begun?

Mr. MACKENZIE (Vancouver): Not exactly. These projects we are dealing with now are the extension or development in certain specified localities of work done in the last three years. In other words, these are the inevitable developments or extensions of projects already undertaken, although this is, actually and strictly speaking, new work.

Mr. STEVENS: Is no portion of this a revote?

Mr. MACKENZIE (Vancouver): No.

Mr. DOUGLAS: That is, it is not unfinished work that is being completed?

Mr. MACKENZIE (Vancouver): In a way it is. It is an unfinished project being extended, not an unfinished project being completed.

Mr. BENNETT: That is putting it a little strongly. It is not necessary to do this in order that other work may be completed; these are completely new undertakings—for instance, at Rockcliffe and at Trenton, but they are necessary if you are going to make completed projects.

Mr. MACKENZIE (Vancouver): In order that the work may be properly completed, these are necessary.

Mr. BENNETT: For instance, there is the work on the armoury at Fredericton, the reconstruction of the roof.

Mr. MACKENZIE (Vancouver): The two ends of the building are in good condition, but it is necessary to reconstruct the central portion.

Mr. DOUGLAS: I did not say anything while the estimates on the uncompleted works were being discussed, because there would be no value in leaving work uncompleted. But these are new works, although they are following out old undertakings. I do not care to enter into a discussion as to whether they are necessary, but it seems to me the matter is one affecting our sense of values, whether these works are more necessary than others upon which an equal amount of money might be spent. A certain limited amount of money has been taken from the people in the form of taxes, and we as the parliament of Canada must decide whether or not one project is more necessary than others. When it comes to voting money for these purposes I desire to register a protest, not because I think these things are unnecessary, but because I think there are other things that are more necessary. All across Canada there are isolated areas, municipalities and small towns, with, for instance, no hospitals, which would be very glad to build by means of federal assistance small ten or twenty bed hospitals and pay back the government over a period of years. Projects of this sort would be of much more value to the community than those we are discussing. For illustration, the city of Ottawa has not a decent auditorium where a large public meeting can be held. It seems to me that this is a challenge not so much to a policy as to our sense of values; whether we consider a vote for a barracks more important than a vote for a hospital, whether we want something that is to be used exclusively for military purposes or on the other hand something that will be of public service. In view of the fact that we are talking now about new work I should like to register my protest against voting money for this, not because it is unnecessary but because in my opinion there are so many other things that are more urgently needed.

Item agreed to.

St. Johns, P.Q.—
Garage at permanent force barracks, $22,000.
Administration building, $100,000.

Mr. DUPUIS: Is this an additional amount to complete work started last year?

Mr. MACKENZIE (Vancouver): It is an extension of the project; it is in exactly the same category as the last vote. This is aditional money to be expended.

Mr. BENNETT: This is not an extension of a new project; it is making good the old buildings that are worn out.

Mr. MACKENZIE (Vancouver): Exactly so.

Item agreed to.

Fredericton, N.B.—armoury—reconstruction, $40,000.

Mr. BENNETT: There was an item in the estimates of the Public Works department providing for part of this work; in fact the contract was almost let, but, as the minister says, I think it was found that the building was in worse condition than was anticipated. I believe this is to make possible complete renovation and complete reconstruction of the building. Is that right?

Mr. MACKENZIE (Vancouver): That is correct.

Item agreed to.

Esquimalt, B.C.—joint service magazine, $125,000.

Mr. STIRLING: What is this and where is it?

Mr. MACKENZIE (Vancouver): This is at Esquimalt. For a number of years past the service magazine there has been con-

demned by the authorities as being very dangerous to the community. It was condemned in 1905, to be precise, by the admiralty experts. It is now located at a place called Cole island, near Esquimalt. It is intended to construct a new joint service magazine to accommodate not only the naval and militia forces but also the air force, so that we shall have a joint service magazine for all three services. Probably my hon. friend saw an item of $75,000 in the main estimates, which is intended for the purchase of land on the mainland in connection with which expropriation proceedings have been commenced. This money is for the preliminary work after the purchase of the land has been completed. The total cost will be in excess of this figure.

Item agreed to.

Esquimalt, B.C. — H.M.C. dockyard — extension of jetty, $20,000.

Mr. MACKENZIE (Vancouver): This is to extend the jetty from three hundred feet to five hundred feet, to provide better accommodation for ships at Esquimalt.

Mr. BENNETT: I recall this matter very clearly. Is it regarded as essential that this work should be done? I remember considering the proposals that came before us, and the question was whether it was absolutely essential in the public interest that there should be such an extension of that jetty as is indicated. If the public interest necessitates it I have nothing further to say, but I remember the circumstances connected with it.

Mr. MACKENZIE (Vancouver): The advice I get from the technical officers, who are responsible, is that this is absolutely necessary and essential work.

Item agreed to.

Prince Rupert, B.C.—increased accommodation at the R.C.N.V.R. headquarters, $7,000.

Mr. BENNETT: What are the particulars?

Mr. MACKENZIE (Vancouver): There is a very effective and efficient unit of the Royal Canadian Naval Volunteer Reserve at Prince Rupert, which is very inadequately housed. This modest sum is to give them proper training quarters.

Mr. BENNETT: It has nothing to do with unemployment, I take it?

Mr. MACKENZIE (Vancouver): Oh, it will help.

Item agreed to.

DEPARTMENT OF RAILWAYS AND CANALS

Deficit of Canadian National Railway Company

Amount not exceeding $39,900,000 to be paid from time to time, under such conditions as the Minister of Finance may prescribe, to the Canadian National Railway Company (hereinafter called "the national company") and to be applied by the national company in payment of the net income deficits arising in the calendar year 1936, including such supplementary contribution to The Intercolonial and Prince Edward Island Railways employees' provident fund as may be necessary to provide for payment in full of monthly allowances under the provisions of The Intercolonial and Prince Edward Island Railways Employees' Provident Fund Act, notwithstanding the limitation contained in section four of the said act, and including such supplementary contribution to the Grand Trunk Railway of Canada superannuation and provident fund as may be necessary to enable payment to be made of monthly allowances under the rules and regulations of the fund. notwithstanding the limitation contained in section thirteen of chapter sixty-five of the statutes of Canada 1874, and including profit and loss but not including non-cash items and interest on dominion government advances, of the National Company or of any other or others of the companies comprised in the Canadian National Railways (as defined in chap. 10 of the statutes of Canada, 1929) or any company controlled by stock ownership or otherwise by any company comprised in the Canadian National Railways or by the National Company in respect of any of the Canadian Government Railways entrusted to the national company, $39,900,000.

Mr. BENNETT: It will be recalled, Mr. Chairman, that the other evening the Minister of Finance (Mr. Dunning) introduced a resolution dealing with a proposed measure anticipating the prospective deficit for 1937. Apparently this is a supplementary estimate which covers that situation.

Hon. C. D. HOWE (Minister of Railways and Canals): The resolution introduced by the Minister of Finance was to cover the estimated capital requirements of the railway. This is to cover the requirements for the operating deficit.

Mr. BENNETT: That is the anticipated deficit?

Mr. HOWE: Yes. I may say that last year they were both included in the one item; that is, the bill introduced by the Minister of Finance provided for accountable advances to be made, and then at the end of the year a supplementary estimate was passed allowing those advances to be charged to the consolidated revenue fund. This year we propose to follow the usual practice and vote the money in advance, just as we do for any other project.

Mr. BENNETT: Then we contemplate a deficit of $39,900,000, as set out in this estimate, and there will be no legislation with respect to this contemplated deficit. This is the estimated cash deficit?

Mr. HOWE: Yes.

Mr. BENNETT: In previous years that was done in the same way; I have looked into the matter since. I think on one or two occasions, owing to the time at which parliament met and for reasons of that kind provision was made for an anticipated deficit before the year was actually ended. Four months of this year have elapsed; we are now in the fifth month, and this is to take care of the estimated cash deficit for the whole twelve months. That is the idea?

Mr. HOWE: Yes, for the calendar year 1936.

Mr. BENNETT: The bill to be introduced by the Minister of Finance deals only with capital expenditures?

Mr. HOWE: Yes, I think that is quite correct.

Mr. BENNETT: The other evening I suggested that we should wait until this estimate came up for consideration. At that time we were considering order No. 30 on the order paper, as follows:

> The house again in committee on the following resolution:
> Resolved, that it is expedient to bring in a measure respecting the Canadian National Railways, to authorize the provision of moneys to meet expenditures made and indebtedness incurred during the calendar year 1936, and to provide for the refunding of certain maturing financial obligations.

That has nothing to do with this at all?

Mr. HOWE: No, that covers only the refunding of capital obligations of 1936.

Mr. BENNETT: Then what we are doing is slightly changing the order of things by introducing into our supplementary estimates in advance a provision to pay $39,000,000, although the Minister of Finance has on the order paper a resolution providing for meeting the expenditures made and indebtedness incurred during the calendar year 1936. I gather from what is said that it is the opinion of the government that it is advisable to anticipate a deficit of $39,000,000 and to vote it although it has not been incurred. It is an admission that there will be a deficit of at least $39,000,000, according to the opinion of the officers of the railway?

Mr. HOWE: Yes.

[Mr. Howe.]

Mr. BENNETT: The discussions that took place as recorded in the minutes with respect to this involved the committee approving of the item, and it was to be sent to the house. To adopt the item now means passing it before the report of the committee has come to the house, although the committee had the matter referred to it.

Sir EUGENE FISET: No; when I submitted the second report I moved concurrence. The sum of $9,600,000 had become due Friday of last week and I explained then that it was in accordance with the wish expressed by the leader of the opposition when the resolution was brought down by the finance minister that this should be submitted to the committee for concurrence by the committee and reported to the house.

Mr. BENNETT: But did the report cover the whole $39,000,000?

Sir EUGENE FISET: Yes, it covered the whole thing. The second report covered the estimate for 1935-36, 1936-37 and the capital commitment of $9,600,000.

Mr. BENNETT: Then this item covers both capital and the contemplated deficit?

Mr. HOWE: No, the bill of the Minister of Finance covers the estimated capital expenditure.

Mr. BENNETT: For 1936?

Mr. HOWE: For 1936, which I believe is some $9,000,000, and this covers the operating deficit. This amount we are voting is for the advance to the railway of sums required to meet operating deficit.

Mr. BENNETT: Well, Mr. Chairman, it is a question always of what the government of the day think is the better course to pursue, particularly the minister—whether or not it is better to contemplate a deficit and provide for it before the time has run out. That is not the usual method employed by corporations in dealing with matters of the kind, because they are not usually free to admit that a deficit is inevitable. But as in this case a deficit must be inevitable I suppose it is just as well to meet it now. The only point I make is whether it is desirable to endeavour to anticipate the exact amount of the deficit. Is it an encouragement to economy and efficiency, or may it possibly result in the theory so long advanced in connection for instance with the purchase of three steamships, "The money is there, we might as well

use it?" May it have that effect? If the minister thinks this is the better and more satisfactory way, obviously he should be given the opportunity to carry his views into effect.

Mr. HOWE: We think it necessary to authorize the advance of moneys to a certain point as was done last year in a finance bill. It is the policy of the government this year, as hon. gentlemen will have noted, to put in the estimates every item that will be expended this year, so that the people may know in advance what may be expected in the way of expenditures. In taking this from the bill and putting it in the estimates, the only purpose is that the people of the country may know what the situation is as affecting the railway.

Mr. STEWART: Is it not a fact that the bill last year disclosed what was expected in that connection?

Mr. HOWE: Yes, I thought I made that clear; it did that. There is no difference in that regard except that this year we are putting it in the estimates, so that if anyone cares to total up the estimates for the fiscal year he will have the whole story.

Mr. STEWART: You are putting it in an estimate which ultimately becomes a bill, whereas last year it was put in a bill by itself.

Mr. HOWE: That is correct.

Mr. STEWART: The minister having been on the railway committee, which has not yet finished its work, recalls that it is probable that this will not be sufficient, in view of the fact that some extraordinary expenditures have been incurred in connection with the removal of snow and flood damage, which I think leaves them about $2,000,000 down on the estimates. Does the minister think that ought to be taken into consideration in this item? At the same time I assume this will be advanced by order in council from time to time as required, as was done last year?

Mr. HOWE: That is correct. While it is true, as developed in the committee, that due to abnormal weather conditions of one sort or another the railway is about $2,000,000 behind the budget at the moment, yet such factors as the size of the wheat harvest next fall will have a great influence on the railway earnings. So that while we are a little down I do not think we should be discouraged at this time.

Mr. STEWART: I did not wish to suggest that I am not entirely favourable to the position of the Canadian National Railways. What I was thinking was that possibly the minister is hampering himself in the amount he is providing. I think it is desirable that the Canadian National Railways should be provided for in these items. If this amount restricts the minister unduly, perhaps we ought to consider increasing it to what now appears to be inevitable. The size of the crop of course depends on circumstances. The minister is optimistic in that respect; we all are, but again it depends on how much moves out of the country.

Mr. HOWE: The railway officers feel that this sum will be sufficient. If disaster comes and more is required it will have to be voted next session as a supplementary for the year 1936.

Mr. BENNETT: Last year by chapter 17 of the statutes of 1935 we dealt with it in this way:

> 4. The Minister of Finance with the approval of the governor in council may make from time to time during the fiscal year 1935-36, accountable advances not exceeding in the aggregate $44,000,000 to the national company out of any unappropriated moneys in the consolidated revenue fund of Canada to be applied by the national company on account of the net income deficits,...

That was short by several millions, and we faced a supplementary estimate. The only point is that there does not seem to be any difference in the result.

Mr. HOWE: Quite right.

Mr. BENNETT: It was done by a separate statute on previous occasions; now it is being put in the estimates. I should like to correct the minister when he says the estimates will show the total expenditures. There is one item of tremendous importance to this country, involving a very large sum and which is a charge against the consolidated revenue fund without an estimate at all, and it was enacted by a previous Liberal government; I refer to the old age pensions. I would like that to get into the mind of the minister and the mind of his Prime Minister, because the province of Quebec now says it is going to adopt old age pensions, and that will immediately change the whole scheme of the Minister of Finance's estimates as he gave them the other day. It is a glaring instance of a charge being made against the consolidated revenue fund without any limitation, or any knowledge being brought home to the minds of the people, to use the language of the minister, that they are liable for that sum of money. In the same way we had the difficulty that arose out of the guarantee of the bonds of the harbour bridge. There was no limitation placed upon the

amount of the bonds of the Montreal harbour bridge that had been guaranteed by the government, and I myself was fiercely attacked the other day because I had not taken action to arrest someone who sold bonds, on the ground that he was alleged to have exceeded parliamentary power by selling guaranteed bonds for $19,000,000 when it was alleged the amount should have been only $6,000,000. As a matter of fact it is an illustration of exactly the same thing. I mention this only because the minister suggested that the people should know about all possible expenditures. He will find that there is one which will amount to several millions about which there is no intimation. Whether or not the method proposed by the minister is better than the method heretofore followed, it has this disadvantage, that whereas it was an accountable advance that was to be made, now it is stated in practically the language of the statute. It is practically a summary of the statute, and of course as my colleague has said it will constitute one of the supply bills and therefore be a statute itself. But whether or not to limit the amount to $39,900,000, in view of the evidence given before the committee that at the end of three months the difference between income and outgo, regardless of all payments for rental for cars or joint terminals, was $76,000, is a matter which will have to be determined between the minister and, I suppose, his new directors of five, who may be able to work that miracle which the trustees, three in number, could not do.

Mr. GREEN: What is the approximate cost of completing the Canadian National hotel in Vancouver?

Mr. HOWE: We are not appropriating anything at this time, but I believe it will cost about $3,000,000 completely to furnish it.

Mr. GREEN: What length of time will be required to put it into operation?

Mr. HOWE: I understand it will be two years.

Mr. GREEN: What is the plan with regard to the hotel? I believe it is the only one of the system which is standing idle at the present time.

Mr. HOWE: I may say that there is no plan at this time. We would like very much to open it, but we do not wish to open it until we are quite sure that it will not add to the losses of the system any more than it does at this time. As soon as we can be sure of that, steps will be taken.

Item agreed to.

[Mr. Bennett.]

To provide for commitments incurred under the authority of section 9, Supplementary Public Works Construction Act, 1935, and that the governor in council may authorize the Minister of Finance to sell or lease the railway equipment so acquired to either or both the Canadian National Railway Company and the Canadian Pacific Railway Company under agreements whereby the railway company or railway companies shall reimburse His Majesty the full amount of the cost of the said equipment with interest except in respect of the first and second years covered by the agreement at a rate to be fixed by the governor in council and that such agreements shall provide that security be furnished to secure and indemnify His Majesty in respect of the debt to His Majesty, $5,303,000.

Mr. HOWE: This was the item under discussion on the last occasion the estimates were considered. It is the balance required of an appropriation of $15,000,000 made under the Public Works Construction Act of 1935 for the purchase of equipment for the railways. The thought was that the government was to purchase this equipment and turn it over to the railways on a rental-purchase basis. This is the balance to complete all payments under the item.

Mr. STEWART: What are the total commitments under these arrangements?

Mr. HOWE: $15,000,000.

Mr. STEWART: The total?

Mr. HOWE: Yes, the total was $15,000,000, and of that $9,697,293 was paid to the end of the fiscal year 1935-36. This appropriation covers the balance of the payments, all of which will be made in the fiscal year 1936-37.

Mr. BENNETT: I think it should be made clear that for lower interest purposes this legislation is merely to enable the country to take the place of the purchasers of equipment securities which were not saleable owing to market conditions abroad. We have always sold Canadian National Railways and Canadian Pacific Railway securities in New York at a very low rate of interest, but under present conditions and having regard to the requirements of the securities act of the United States it was almost impossible for us to contemplate that at this time. The country is merely assuming the position of the purchasers of these securities, in the same way as purchasers previously in New York were buying what are known as equipment trust securities. The equipment which is purchased under the provisions will be properly marked in the same way as all purchases of equipment have been marked in times past, whether for the Pennsylvania, the New York Central or other roads. That is the position. So far as we are concerned, we are paid back our money

with interest at a rate we fixed, in instalments that are provided for. The whole story is that owing to economic conditions the nation has taken the place of security purchasers heretofore in the market for equipment trust certificates. We reserved the right to sell them—at least, that is my memory—if opportunity arose. If there was the usual demand abroad for these securities that there has been in times past we could sell them in the markets in which they have usually been sold, certainly not at a loss and possibly at a profit, having regard to the low rate of interest which prevailed with respect to such investments.

Mr. HOWE: That is correct, except that the interest does not start for two years.

Mr. BENNETT: Yes.

Mr. STEVENS: What is the rate of interest to be charged on this loan?

Mr. HOWE: Does my right hon. friend remember?

Mr. BENNETT: I am not going to make a statement, because my memory alternates between two figures. I should like to be accurate about it. I remember a discussion which took place, and I am not sure what the final rate was.

Mr. HOWE: It is four per cent for the balance.

Mr. STEVENS: What is the rate of interest on equipment bonds of the Canadian National Railways now outstanding?

Mr. HOWE: I think at present we are borrowing on a lower rate; it is about three and a half per cent.

Mr. STEVENS: Yes, that is the rate on your borrowings at the present time. What is the rate of interest on equipment bonds outstanding?

Mr. BENNETT: If the minister would look up a New York paper for the day before yesterday he would find the quotations. They vary, depending upon the rate. Some of them are selling as high as a four and a half per cent basis, and some are selling on a five per cent basis.

Mr. HOWE: I believe I can get the information in a moment or two.

Mr. BENNETT: As a matter of fact the interest rate was fixed slightly higher than it otherwise would have been, having regard to the fact that for the first two years they paid no interest. Perhaps the minister recalls the situation.

Mr. HOWE: Yes, that is correct.

Mr. BENNETT: My colleague points out that on page 28 of the annual report the rates payable are mentioned. The Grand Trunk Western has some 6's; Canadian Northern has some 7's; The Grand Trunk Railway, some 6½'s; The Canadian National some 4½'s; again, the Canadian National with 4½'s; Canadian National 5's; Grand Trunk Western 5's; Central Vermont 5's; Canadian National 4½'s.

Other issues are mentioned in the list on page 28, the lowest there being 3½ per cent first mortgage guaranteed debenture bonds. But that is part of the funded debt, and not the equipment trust issue. The equipment trust issues are as I have indicated. Apparently they comprise in all $44,000,000 outstanding, upon which the interest in 1935 was about $2,000,000.

Mr. HOWE: I have a few later issues. I notice there is one equipment loan at three per cent.

Mr. STEVENS: What is the amount of that?

Mr. HOWE: That expires in 1950, and the amount is $609,000. There is one two per cent three-year bond, $187,000. There is a three per cent three-year bond, $698,000, and a two year bond which expires this year, $114,000. This type of borrowing carries a fairly low rate.

Mr. STEVENS: I am afraid the minister is scarcely fair to the committee in that respect. The reason I asked the question was that the statement had been made that these bonds carried very low rates of interest. I have been over this thing and I know perfectly well that many of these bonds are outstanding at five, six and seven per cent. The figures just quoted show there are some $44,000,000 running from five, six and seven per cent, only a small portion being at four per cent. What is the term of this equipment trust bond?

Mr. HOWE: Fully repayable in instalments by 1950.

Mr. STEVENS: The minister stated a moment ago that these bonds carried very low rates of interest because the rate was only four per cent and there were two years without interest. It is fourteen years to 1950, and two years without interest would not make very much of a reduction. This is a fine class of security. I was curious to know what these six and seven per cent bonds were selling at on the market. I do not think they are quoted in the Montreal Gazette, but I do see Canadian National Railway 5's, 1954,

quoted at 115 and 116. These quotations indicate the value of this class of security. The 4½'s are quoted at 111 and 113. The minister referred a moment ago to rates of 2½ per cent and 3 per cent, and I think it is only fair to point out that these are short term loans. They are similar to government securities and should be obtained at the very lowest rate of interest. Two and a half or three per cent is too high a rate for that class of security. Do any of the $40,000,000 outstanding equipment bonds contain a provision for repayment before maturity?

Mr. HOWE: They are serial bonds issued under the Philadelphia plan, and my understanding is that they are not callable.

Mr. STEVENS: There is no question about that?

Mr. HOWE: No.

Mr. STEVENS: I think it would pay the government to make every possible effort to secure the retirement of these outstanding equipment bonds. There may be some difficulty in doing it, but it is certainly worth the effort. It is the payment of high rates of interest on this class of security that contributes so largely to the deficits of the Canadian National Railways, to which attention is so often drawn. It is my view that the rates of interest charged on these bonds should be just as low as the rates paid by the government itself when it borrows money. I do not think the government should seek to make any money out of these bonds. It strikes me it would be possible to get this money at less than four per cent. It may be said that a fraction of one per cent or one per cent on $5,000,000 would not amount to much, but it is by watching this sort of thing that we are going to reduce the deficit. If accommodation of this kind can be extended to the railway at three per cent, I think it should be done. A definite attempt should be made to buy up the bonds which bear these ridiculously high rates of interest. I do not believe these bonds are guaranteed directly by the government, but the fact that Canadian National Railway bonds are outstanding and carrying rates of interest of six and seven per cent is a challenge to the government to make every conceivable effort to bring about their retirement. All these issues should be examined to see whether it is possible to buy them up.

I have not been a member of the railways and shipping committee for some years, but when I was I believe there was a provision in the equipment trust bonds for retirement before maturity. Apparently I am mistaken in that, but the minister does not seem to be quite certain himself. He has not the information before him, and as the matter is so important I urge that these issues be carefully examined with a view to ascertaining whether or not it is possible to retire some of those which bear the higher rates. An attempt should be made to bring them within the range of present day rates, and they should bear the best rate the government itself can secure, possibly around three per cent. In regard to the year and a half or two year issues, these in my opinion might well be carried by the government in the form of treasury bills. Two and a half or three per cent is a pretty high rate to pay to-day for a two year term paper.

Mr. STEWART: If the minister will look at page 28, I think we can give the hon. member for Kootenay East some of the information he seeks. The 6 per cent series, Grand Trunk Western, was issued on January 15, 1920, and apparently matured on January 15, 1935. That would be included in last year's statement. As regards the 7 per cent Canadian Northern, the date of issue is May 1, 1920, and it matures on May 1, 1935. I suppose these were paid on time, because in the adjoining column, under principal outstanding at December 1, 1935, there is a blank. The 6½ per cent Grand Trunk, issued on February 1, 1921, matures on February 1, 1936, so that would be retired this year. From that time on there are 4½ per cent, 4½ per cent and then 5 per cent Canadian National series issued May 1, 1929, due May 1, 1944; another 5 per cent Grand Trunk Western, issued December 14, 1929, due in 1944; 5 per cent Central Vermont, issued December 14, 1929, due in 1944; and 4½ per cent—the last issue—Canadian National, issued June 1, 1930, due in 1945. That is as I read the statement.

Mr. HOWE: That is correct.

Mr. BENNETT: There is, of course, no comparison between the funded debt of a company and its securities, issued under the Philadelphia plan or otherwise. Page 28 of the Canadian National Railways report for 1935 makes that quite clear. Issues that sell at 112 are the funded debt of the corporation. Its equipment trust certificates, which are serials, are dealt with, not on the basis of a yield or payment of so much interest but on the basis of how much per $100 they will realize. They do it the converse way. We say interest at 4½ per cent, so and so; they say it is to yield such and such a rate, and it is the rate yield which they pay and on which the certificates are bought and sold on

the market. So far as 4½ per cent and other rates charged are concerned, these were the rates negotiated by the companies themselves without reference to the government, because the security for the loan was the equipment. The government does not guarantee. The security is the equipment itself, and on each piece of equipment there is a metal strip indicating that the particular piece of equipment is the property of the trust company, that is to say, the trustee under the arrangement under which the equipment is bought. So far as the 4 per cent rate is concerned, it is a lower rate than the railway negotiated for any of its securities prior to 1930. In 1930 the last negotiation for equipment made by the Canadian National was the L series, 4½ per cent, the date of issue being June 1, 1930, and date of maturity June 1, 1945, and the principal outstanding December 31, 1935, was $10,500,000, the interest being $492,187.50. The lessening of the interest for two years meant, of course, two years' interest on the entire $15,000,000, because the serials did not begin to be paid until the transaction was completed. Then they would have free interest for two years; and that, of course, reduced the rate below 4 per cent, a lower rate than they could secure on their own if they went on the market. Neither of our railways was able to sell equipment trust securities. The Canadian Pacific Railway is registered under the Securities Act, but the Canadian National is not, or was not until recently, although before the late government went out of office the dominion government did register under the provisions of that act. Efforts were made to register the Canadian National, but I do not think this has yet been done.

Mr. HOWE: Yes; we sold some bonds a short time ago.

Mr. BENNETT: The requirements were onerous. The information which was required involved a vast amount of detail. When the dominion government secured its authority to go on to the American market it had to supply information going back to very early days and brought down to date, and in the case of the Canadian National a considerable amount of information was called for. At the time we made this arrangement with the railways it was the only method which was available at the moment to enable them to get the equipment. They were not so anxious about getting the equipment as we were to afford employment, which was the primary purpose for which this action was taken. The primary purpose behind this effort was to give employment to a class of men who were and had been idle for years, except for such work as they had obtained in consequence of government orders in Hamilton, in Montreal, in New Glasgow, Nova Scotia, and possibly in some other town, as well as in the shops at Point St. Charles and one of the western shops and the shops at Angus, Montreal. That was the purpose of this arrangement and it is limited to $15,000,000. So far as the arrangement can possibly be said to be a governmental one, it is based upon negotiations which the railways themselves made and which were regarded as exceedingly reasonable, because it is not limited to the Canadian National. The Canadian Pacific received—

Mr. HOWE: Seven million dollars.

Mr. BENNETT: And the Canadian National eight million dollars. The arrangement was made after a good deal of negotiation and the rate fixed, having regard to the period of time for which no interest was paid, was regarded as very fair.

Mr. STEVENS: I should not like to leave the impression that I am criticizing the item. I am entirely in favour of the action taken, of making a loan of $15,000,000; I think it is perfectly sound. I still press this point, however, that where we are making loans to railways or anywhere else it is desirable to get the interest rates down to the lowest possible level, because this will have an influence on the general rate of interest. I know there are two schools of thought on the question of lowering interest rates, but I am deeply impressed with the effect of the burden of debt, whether public or corporate or private. So great is it that we must take every possible means and seize every opportunity to reduce that burden, and the best way in which we can do so if we desire to escape some form of repudiation is to reduce the rate of interest. I have never at any time, in my arguments on financial matters, given countenance to the suggestion of repudiation, but I cannot escape the conviction that we must not overlook any opportunity of beating down the rates of interest on any of these new issues. In regard to these matters in connection with the Canadian Pacific and the Canadian National, if we loan them money we should try to secure the lowest rate possible, in the hope that this will have an influence on the general rate of interest for commerce and industry throughout the country as a whole.

Item agreed to.

DEPARTMENT OF PUBLIC WORKS

Projects Already Undertaken—Public Buildings

Nova Scotia

Amherst—new public building, $26,500.
Halifax—new public building, $901,000.
Mahone Bay—public building, $2,000.
Shelburne public building — repairs and improvements, $4,000.

Hon. P. J. A. CARDIN (Minister of Public Works): This item covers expenditures in Nova Scotia, on projects already undertaken in that province.

Mr. STEWART: These items, four in number, will all be found in the schedule to the Public Works Construction Act of 1934 or, possibly, some supplementary contributions in the act of 1935. That brings up again the same point, as to why we are here voting money which we have already voted and appropriated to a particular purpose, respecting items already allocated and gone over in detail. I wonder whether the minister can throw any additional light on that unusual and confusing situation. So far I have not been able to get much light.

Mr. CARDIN: I cannot say much more than was said on the subject when it was previously discussed. Of course the only justification would be to give a little more detail as to the expenditure.

Mr. STEWART: The details were given in the first instance in respect to each building. I assume these items are amounts still to be expended; is that right?

Mr. CARDIN: Yes, exactly.

Item agreed to.

New Brunswick

Centreville—customs building on boundary, $12,160.
Fredericton — entomological laboratories, $8,000.
Moncton—public building, $44,500.
St. Stephen—building for customs and immigration purposes, $137,000.

Mr. CARDIN: This is for New Brunswick, and the same explanation applies. It covers projects already undertaken, already under way, and authorized under the Public Works Construction Act.

Mr. STEWART: Am I right in supposing that the sums here appropriated are to cover the balance which is required to complete the work, the balance of the original items which had not been expended prior to the time that this estimate was made up?

Mr. CARDIN: Exactly.

[Mr. Stevens.]

Mr. STIRLING: Would the minister be without money required if this were not passed?

Mr. CARDIN: Yes, unless we took advantage of the Public Works Construction Acts of 1934 and 1935.

Mr. BENNETT: It is under the Public Works Construction Act that all payments have been approved by the auditor general.

Item agreed to.

Quebec

Brownsburg—public building, $12,000.
Cantic — building for immigration and customs purposes, $16,500.
Coaticook public building — addition and improvements, $8,500.
Farnham—public building, $68,000.
Montreal—public building, addition and alterations, $540,000.
Montreal—postal terminal building, $430,000.
Quebec West—public building, $11,500.
Rouyn—public building, $10,000.
Valois—public building, $5,000.

Mr. CARDIN: The same explanation applies to this item.

Mr. STEWART: As we go on, would the minister be good enough, if the circumstances are different from those he has explained, to call the fact to the attention of the committee? I am not in a very good position to oppose these items, having put them through the house, and this being the balance required to complete the work on buildings which were authorized under the Public Works Construction Act. If that is true all the way through I have not much to say about them.

Item agreed to.

Ontario

Blackwell—onion warehouse, $14,250.
Bradford—public building, $11,500.
Cobalt—public building, $54,000.
Cochrane—public building, $54,000.
Fort William—public building, $4,000.
Galt—public building, $40,000.
Guelph—new public building, $23,000.
Guelph—public building, $30,000.
Hamilton—public building, $715,000.
London—public building, $445,000.
New Toronto—public building, $8,000.
Ottawa—central experimental farm—administration building, $33,000.
Ottawa—central experimental farm—storage building (cereal division), $1,500.
Ottawa — National Research buildings — improvements, $57,500.
Ottawa—postal terminal building, $410,000.
Ottawa—record storage building, $450,000.
Ottawa—Justice building, $525,000.
Ottawa—Royal Canadian Mint, $83,000.
St. Catharines — public building — additions and alterations, $13,000.

Thorold—public building, $3,500.
Toronto—new postal station "D," $29,000.
Toronto—customs building, $75,000.
Trenton — public building — alterations and additions, $4,000.

Mr. BENNETT: It is always pleasing to have hon. gentlemen opposite supporting what they so vehemently opposed a year ago.

Mr. CARDIN: We live and learn.

Item agreed to.

British Columbia

Huntingdon—building for immigration and customs purposes, $4,500.
Pacific highway—building for customs and immigration purposes, $29,000.
Vancouver—public building, $960,000.
Vernon — public building — alterations and improvements, $3,500—Total, $997,000.

Mr. BARBER: I understand that this building at Huntingdon, British Columbia, was completed some time ago. Does that mean that this amount is still due by way of payment?

Mr. CARDIN: This amount of $4,500 is to provide for the fittings in the building.

Mr. BARBER: What is the total cost?

Mr. CARDIN: The probable total cost is $19,000.

Item agreed to.

HARBOURS AND RIVERS

Nova Scotia

Avonport—repairs to roadway and wharf, $2,500.
Barrington passage—wharf repairs, $600.
Big Island (Merigamish)—wharf, $800.
Boulardarie Centre—repairs to wharf and road approach, $600.
Brooklyn—breakwater extension, $40,000.
Brule—wharf repairs, $2,600.
Burke's Head (north Ingonish) — wharf repairs, $7,000.
Carr's Brook—wharf repairs, $4,500.
Chester Ironbound—breakwater, $6,100.
Cheticamp—dredging, $40,000.
Church Point—groynes, $1,600.
Dingwall—dredging, $2,000.
East River—dredging, $30,200.
Finlay Point—dredging, $600.
Five islands—wharf and vessel bed repairs, $3,000.
Flat Mud island—breakwater, $2,300.
Framboise—breakwater, $800.
Iona—wharf repairs, $800.
Jordan ferry—breakwater, $900.
Little Harbour—roadway with cribwork retaining wall, $1,000.
Lockeport—breakwater, $22,000.
Long Pond—dredging, $1,000.
Lower Jordan bay—hand dredging, $700.
Malagash—wharf extension, $6,100.
Neil's Harbour—breakwater repairs, $7,500.
North Ingonish, McLeod's cove—breakwater repairs, $3,400.
Pictou island—dredging, $2,700.
Port Hood—closing northern entrance, $2,200.
Port Medway—breakwater extension, $2,000.
Port Mouton—dredging, $10,500.
Pugwash — wharf extension and repairs, $26,500.
Scotch cove—breakwater repairs, $19,000.
Swin's Point—wharf repairs, $1,000.
Trout cove—breakwater repairs, $1,400.
Wadden's cove—hoisting equipment, $700.
West Advocate — breakwater improvements, $3,000.
Wreck cove—pier, $1,700.
Yarmouth harbour — sweeping, to complete, $1,000.
Purchase of creosoted materials for district No. 1, Halifax, $5,000.
To provide for completion of works already undertaken, the amount allocated to any one work not to exceed $500, $10,000.

Mr. STIRLING: Is that in the same position?

Mr. CARDIN: The same explanation applies.

Item agreed to.

Prince Edward Island

Annandale—wharf repairs, $2,500.
Georgetown—repairs to warehouse flooring, $5,000.
Lower Montague—wharf repairs, $600.
Montague river—dredging, $7,700.
St. Mary's bay—dredging, $25,900.
Rocky point—breakwater repairs, $4,300.
Tignish—beach protection, $800.
To provide for completion of works already undertaken, the amount allocated to any one work not to exceed $500, $1,000.

Mr. CARDIN: The same is true of this item.

Item agreed to.

New Brunswick

Cape Bald—dredging, $5,000.
Escuminac—breakwater extension, $23,100.
Indian island—wharf, $2,700.
St. Thomas (Cocagne bar)—bridge reconstruction, $1,500.
Shippigan—dredging—repairs to dredge No. 4, $1,900.
To provide for completion of works already undertaken, the amount allocated to any one work not to exceed $500, $3,000.

Mr. CARDIN: The explanation is the same

Item agreed to.

Quebec

Anse St. Jean—wharf repairs, $7,600.
Berthierville—dredging, $12,000.
Bonaventure—wharf repairs, $1,500.
Bromptonville — protection work repairs, $1,400.
Cap aux Meules, M.I.—wharf reconstruction and improvements, $81,300.
Cap aux Os (The Gulch)—landing, $3,300.
Chambly basin—protection wall, $21,000.
Châteauguay river—concrete dam, $9,100.
Dundee—dredging, $7,400.
Ferme Neuve—protection work, $2,500.
Grande Rivière—rebuilding wharf, $25,400.

Grand Ruisseau—completion of approach, $2,000.
Ile du Pads—wharf, $800.
Lacolle river—survey and dredging, $7,300.
Laval sur le Lac—dredging, $5,200.
Norton creek—improvements, $3,000.
Petite Rivière au Renard—extension of south jetty, $10,300.
Petite Rivière Est—construction of fishing harbour, $42,000.
Pointe au Pic (Murray Bay)—wharf extension, $1,400.
Portage du Cap—dredging and repairs to sand pump, $1,600.
Richmond—protection wall, $6,500.
Rivière Ouelle—wharf reconstruction, $23,500.
Rivière St. François—dredging, $39,000.
Ruisseau LeBlanc—dredging, $24,000.
St. Barthélémi—dredging, $1,400.
Ste. Anne du Lac—wharf, $2,200.
Ste. Geneviève—dredging, $4,700.
St. Romuald—protection wall, $3,700.
Sorel—dredging, $41,000.
Sorel—repairs to wharf, $11,500.
Tobin—wharf, $12,000.
To provide for completion of works already undertaken, the amount allocated to any one work not to exceed $500, $3,000.

Mr. CARDIN: The same explanation applies. They are all covered by the Public Works Construction Act, 1934 and 1935.

Item agreed to.

Ontario

Byng inlet—dredging, $43,400.
Gananoque—dredging, Clarence street wharf, $3,680.
Green island—dredging, $1,400.
Hudson—construction of scow for aeroplane landing, $710.
Keewatin—wharf reconstruction, $5,660.
Michipicoten river—wharf extension, $2,000.
Parry Sound (two, five and seven mile narrows)—dredging, $12,800.
Penetanguishene—wharf extension, $7,850.
Port Elgin—dredging, $15,000.
Port McDiarmid—breakwater, $13,050.
Rondeau—east pier reconstruction, $4,400.
Sault Ste. Marie—dredging, $6,800.
South Bay mouth—property acquisition and legal services, $980.
Tiffin (Midland)—dredging, $16,000.
Toronto—completion of ship channel walls, $144,000.
Toronto—new dock at marginal way, $149,200.
Toronto—tunnel, $127,800.
To provide for completion of works already undertaken, the amount allocated to any one work not to exceed $500, $3,000.

Mr. CARDIN: The same is true of this item.

Item agreed to.

Manitoba

Dredge Winnipegosis — transferring machinery, $800.
Selkirk—bridge over Red river, $146,000.
Wanipigow river—operation and repairs to dredge "202," $1,900.

[Mr. Cardin.]

To provide for completion of works already undertaken, the amount allocated to any one work not to exceed $500, $1,000.

Mr. CARDIN: The same thing.

Item agreed to.

Saskatchewan

Bridge at Ceepee, $240,000.
Outlook — bridge across the south Saskatchewan river, $186,600.

Mr. CARDIN: The same thing.

Item agreed to.

Alberta

Lac la Biche—breakwater, $3,900.
To provide for completion of works already undertaken, the amount allocated to any one work not to exceed $500, $1,000.

Mr. CARDIN: The same thing.

Item agreed to.

Northwest Territories

Fort Resolution—breakwater wharf extension and repairs, $45,000.
To provide for completion of works already undertaken, the amount allocated to any one work not to exceed $500, $1,000.

Mr. CARDIN: The same thing.

Item agreed to.

Mr. STEWART: "To provide for completion of works already undertaken, the amount allocated to any one work not to exceed $500." That is the new item, is it not, or is it part of the old one? It is carried anyway.

British Columbia

Columbia river narrows — dredge Arrow Lakes—maintenance and operation, $800.
Courtenay river—protection work replacement, $5,700.
Esquimalt dry dock—completion of fill behind wharf, $1,100.
Fraser river—improvements, $211,700.
George harbour—float and approach, $2,500.
Gowland harbour—float and approach, $4,200.
Kelowna—breakwater, $4,000.
Kingcome inlet—float and freight shed, $2,000.
Nanaimo assembly wharf—travelling crane, $27,500.
Naramata—breakwater, $2,500.
New Westminster—fisheries station, $11,500.
Okanagan lake—survey, $1,000.
Port Alberni assembly wharf—improvements, $5,300.
Shalalth—floating landing, $5,200.
Prince Rupert—improvements, $18,400.
Sidney—float extension, $1,000.
Sidney—breakwater repairs, $7,200.
Taku river—improvements, $1,000.
Tachi river—improvement of Grand and Austin rapids, $600.

To provide for completion of works already undertaken, the amount allocated to any one work not to exceed $500, $1,000.

Mr. CARDIN: Projects already undertaken; that is the same.

Mr. TAYLOR (Nanaimo): Has that travelling crane been already supplied to the Nanaimo wharf?

Mr. CARDIN: The contract has been awarded, but the work is not done yet.

Item agreed to.

Generally

Harbours and rivers generally—surveys and inspections in connection with above mentioned works, $31,000.

Mr. CARDIN: The same thing.

Item agreed to.

Miscellaneous—additional staff, $75,000.
To provide for balance required to complete any of the above projects, no new works to be undertaken, $200,000.

Mr. STEWART: This is a special item, is it not, this $75,000?

Mr. CARDIN: I may say that the staff we had under the Public Works Construction Acts of 1934 and 1935 were discharged on March 31, and this item provides for the staff that will be necessary to carry on these undertakings.

Mr. STEWART: Under what item was the staff paid the year before?

Mr. CARDIN: It was paid from the general items, Nos. 9 and 10.

Mr. STEWART: What were the amounts of those items?

Mr. CARDIN: They amounted to $2,400,000 and $4,000,000.

Mr. STEWART: Those were comprehensive items, not just for the staff.

Mr. CARDIN: I am informed that they were general items, including the staff, and that they covered both harbours and rivers and public buildings.

Mr. STEWART: This is the item intended for harbours and rivers?

Mr. CARDIN: This amount covers the expense of an additional staff for public buildings, as well as harbours and rivers. It applies to all projects already undertaken.

Mr. STEWART: It seems to me that the staff should not be large in view of the fact that most of these works have been completed. I do not know exactly what would be the advantage in discharging the whole staff and engaging a new one, but possibly the minister can explain that. I should imagine the old staff would be familiar with the work being carried on, and the new staff would not.

Mr. CARDIN: It is not exactly correct to say that most of the work has been completed. We still have to expend, on projects already undertaken, a total of about $9,000,000.

Mr. STEWART: But the plans must be all prepared and the work under way.

Mr. BENNETT: I think it might be well if the minister would take the committee into his confidence and say that he just got rid of all the employees as of March 31 in order that he might employ those of his own political faith and thereby find it possible to give some realization to the insistent demands of his supporters that provision should be made for them. I had occasion the other day to give the minister some evidence in that connection. Notices were sent out, but on inquiry it would seem that the pressure was too insistent, and the notice had to be made effective at an earlier date than was expected; the poor unfortunates had to leave employment in order that those who had voted right in October last might find employment. If the minister makes that frank statement to the committee I am sure it will be appreciated, because it happens to be in accordance with the facts.

Mr. CARDIN: I am afraid my right hon. friend exaggerates my ability to see things so far in advance. That was not the idea. The idea was to get rid of the staff as of March 31 because we did not want to continue in effect the Public Works Construction Acts of 1934 and 1935; we wanted to have all the items listed in the estimates. I assure my right hon. friend that any request or representation he might make will receive my most careful consideration.

Mr. BENNETT: Any representations I make to the Minister of Public Works are always received with the courtesy which is characteristic of him. He always gives them his best consideration, and the suavity with which he expresses his opinion is equalled only by his ability to forget that consideration does not necessarily mean to-day or to-morrow. It may mean some time in the long, long future. It is amazing how this consideration seems to get lost on the road, but there is always the most courteous reply, always the greatest possible assurance of consideration. Alas, consideration is so long

delayed that very often the unfortunate person concerned becomes the subject of the funeral sermon of the minister, the parson or the clergyman, and serious consideration becomes a matter of post mortem instead of an interest in the welfare of an individual.

Seriously, however, what happened was that the department gave notice to those who were employed under the Public Works Construction Acts of 1934 and 1935 that inasmuch as probably there would be no money after March 31 their services would be dispensed with at that time. But, alas and alack, some of them had to go at the end of December, 1935. I recall some with two letters, one from their chief giving them notice that their services would not be required after the end of March. They were making their arrangements accordingly, but along about Christmas, as a reminder of the season and of the bounties of providence intended for others, they were told that they would have to leave at the end of the year. When I pressed the minister for the reason he was good enough to explain frankly that their employment by the crown was during pleasure, as I well realized. He said, of course I would know that, and he was quite right; I did. Later on, not in connection with this item but when the main estimates are under consideration, I am going to deal with the matter far more seriously, because I realize that the minister has to yield to the pressure of those who are insistent that their friends should find employment. I have seen enough of public life to know that this is one of the evils or virtues of public life, that those who are able to secure sufficient assistance from their friends very often find themselves in positions which otherwise would not be given them. But when a member of parliament signs his name to a document saying that of his own personal knowledge he knows that a man has been guilty of partisanship, when he did not know the man at all, and the minister to whom that letter was sent dismissed the man, I think we shall have to have a much more serious discussion of the subject than this pleasant little interlude between the minister and myself. I have seen enough to know that the hardships of life are not much considered when it comes down to a question of yielding to the demands that are made by members of parliament upon their ministers.

I have a few instances which at the appropriate time I propose to give the house. Sometimes the son has suffered for the political sins of the father; sometimes the father has suffered for the sins of the son. The case I have in mind affects a far more serious principle, one which was discussed in this house some years ago by the hon. member for St. Lawrence-St. George (Mr. Cahan) and which involved one minister giving effect to a recommendation made by another minister. The Minister of Trade and Commerce of that time felt that he was in duty bound to give effect to the recommendation of his then colleague in the government. This is not the case of a colleague; this is the case of a member of parliament writing a letter—the return has been brought down—in which he pledges his word, which, of course, means a matter of honour, that this man was a partisan. As a matter of fact he is not even acquainted with the man. The person in question has pledged his oath that he has never taken any part in politics. He was appointed in 1915, and he is a man of family. Now he is thrown out on the street, without having an opportunity to be heard or to say a word in his own defence, because a member of parliament has pledged his honour—for that is what is involved—that this man was a partisan. Later on we shall have to discuss that matter, with the names and all details, but I think it would be unfair to discuss it on this item.

I desire, however, to point out that it would be much better if the minister would say frankly: This sum for salaries is the pork barrel provided for our friends who will take the places of your friends, and we trust there will be an extended program and a greater demand for services and more people employed than at present, and we hope that this summer this $200,000 odd will be sufficient to recompense them for their toil and the services they render to the state in their new status.

Mr. CARDIN: I was profoundly touched and very much pleased by the kind words of the leader of the opposition in the first part of his observations, but he has been spoiling my pleasure and satisfaction in the latter part. I would not like to ask the right hon. gentleman for any details—

Mr. BENNETT: The minister will get them.

Mr. CARDIN: —but as far as I am concerned in regard to the projected accusation that he has just mentioned I can plead not guilty. As far as giving some consideration to the claims which are being put up to me by friends of mine or of my party, well, I have been long enough in politics and I know enough of humanity, I think, to say that, if this is a fault, to a certain extent I am guilty, but I am not alone.

Mr. BENNETT: Quite so.

Mr. CARDIN: We all try to do the best that we can. Speaking personally, I think that if my humble record were searched no injustice would be found to have been perpetrated on account of my political partisanship. In my own locality I am known—

Mr. BENNETT: And highly respected.

Mr. CARDIN: —and I receive the very opposite criticism from that which has just been made by the leader of the opposition. I am criticized for not being severe enough to those who may have offended the feelings and sentiments of my partisans. At all events I repeat that if there is any case which my right hon. friend can make against me for any injustice I stand ready to correct it, because I understand the sufferings of poor people and I have always done all I can to help anybody, whatever his party spirit. But I plead guilty that, like all other politicians on both sides of the house, I am a little more sympathetic, when the law permits it, to those who have been working for my party.

Mr. BENNETT: The statement made by the minister is an eminently fair one. He says that he is doing the best he can for everyone but he cannot overlook the claims of his partisans. That is a fair statement and one which I suggest he might have made at the very start, as to what is really covered by this item. That is the real truth about it; it is a pork barrel item and has to be taken care of. I will say this, that the hon. gentleman has a most sympathetic heart and his feelings find expression in the writing of the most courteous and kindly letters it would be possible for anyone to write, and that the action which is sometimes harsh and the subject of criticism is taken never by himself but by others. It would be impossible for him; his feelings would be so harassed and upset by such a thing that he could not contemplate it without emotion.

Mr. MacLENNAN: In regard to the nice words spoken by the leader of the opposition of the Minister of Public Works, I read in the paper yesterday that the leader of the opposition was the most distinguished looking man in the house. I must say that this is the first time I have seen him smile continuously for a minute or two, but seeing him smile it seems to me that he is not only the most distinguished but the most handsome man.

It is a serious matter for a member of parliament to say that to his personal knowledge an officer has been guilty of political partisanship. My constituency is over three hundred miles long. I know that some of the office holders there were active in politics; I am sure of it, but I cannot say it of my own personal knowledge. While I do not wish to say anything here to discredit my predecessor, I may tell the committee that on one sheet of paper he placed the names of twenty-seven office holders who, he declared, were guilty of political partisanship, and they were beheaded forthwith. I do not want to follow that up at all, but the party on my immediate left really ought to practise what they now preach. I am not a bit averse to the Minister of Public Works starting now to scrutinize very carefully the representations of members of parliament who say that they know of their personal knowledge that dozens and dozens of office holders are active partisans. I assure him and this committee that when I say that an office holder has been active in politics when he should not be, I shall be very sure of my ground and I shall not submit any names to him except those that I am sure of from personal knowledge.

Mr. BENNETT: Hear, hear.

Item agreed to.

Other Projects—Public Buildings
Nova Scotia

Guysboro public building — alterations and improvements, $2,500.

Halifax customs building — repairs and improvements, $7,700.

Mr. STEWART: I think the minister ought to give the committee information in connection with these items, because they are new. The observation that I wish to make about the items which follow is this: They would appear to be of a class which should appear in the regular estimates. I see no reason why they should be in special supplementary estimates. With equal propriety they might have been included in the main estimates of the department or the supplementary estimates.

Mr. CARDIN: As regards the first item, for Guysboro public building, this amount is required for alterations and improvements to the postal facilities in the public building there, requested by Mr. Underwood, chief superintendent of post office services.

The second item is for repairs and improvements in the Halifax customs building, asked by the commissioner of customs. Whether these items should have been in the main estimates or in these supplementary estimates is a matter of opinion, but I suppose that on a number of the items designated "other projects" the information was not complete in the department when the main estimates were prepared. There is no doubt

that a certain number of items which we shall find on going through the list could very properly have been included in the main estimates, but at the time we had not all the details necessary.

Mr. STEWART: Will the minister tell the committee the amount of the main estimates for public works this year, and the amount in the main and supplementary estimates of last year?

Mr. CARDIN: The main estimates amount to $13,411,000.

Mr. STEWART: That is for this current year?

Mr. CARDIN: Yes.

Mr. STEWART: What about last year?

Mr. CARDIN: Last year it was $14,530,320 in the main estimates, and in the supplementary estimates for the year 1935-36 the amount was $2,906,150. This gives a total of $17,436,470, outside the Public Works Construction Act. Under that act the amount was $7,892,243.

Mr. STEWART: I take it that would make the $24,000,000 provided last year in the main and supplementary estimates and the Public Works Construction Act.

Mr. CARDIN: Yes.

Mr. STEWART: For work to be undertaken by the Department of Public Works?

Mr. CARDIN: I must correct a statement I made a moment ago. The amount of about $7,000,000 is for expenditures under the Public Works Construction Act.

Mr. STEWART: Could the minister tell the committee in round figures the amount of the vote under the Supplementary Public Works Construction Act, 1935, that was allocated to the Department of Public Works? I am trying to get the total amount of expenditures through the Department of Public Works last year. In the main and supplementary estimates I take it that the amount was about $17,000,000, and under the Supplementary Public Works Construction Act a certain amount was assigned to that department; I have forgotten how much.

Mr. CARDIN: I am informed that it was $15,000,000 in 1935 and $26,000,000 in 1934.

Mr. STEWART: Does the minister refer to the total of all?

Mr. CARDIN: Yes; I am informed that the total was $26,000,000 in 1934 and $15,000,000 in 1935.

[Mr. Cardin.]

Mr. STEWART: That $26,000,000 does not include the amount under the Public Works Construction Act, 1934?

Mr. CARDIN: Yes.

Mr. STEWART: The amount must refer to expenditures.

Mr. CARDIN: No, that is the Public Works Construction Act.

Mr. STEWART: It must be expenditures.

Mr. CARDIN: I am informed that this is the share received by the Department of Public Works under the Public Works Construction Act.

Mr. STEWART: Could the minister give me the total for 1934? I do not want details. I should like the figure to include everything, main and supplementary estimates, and the Public Works Construction Act.

Mr. CARDIN: In 1934 the total ordinary appropriation for the Department of Public Works amounted to $10,240,080. In the same year the amount allotted to the department under the Public Works Construction Act was $26,476,444.96. In 1935, out of the amount voted the amount allotted to the Department of Public Works was $7,892,243. So the total amount allotted to the department was $34,368,688.

Mr. STEWART: That is the information I wanted. Could the minister supplement it by giving the committee the total amount that goes to the Department of Public Works this year? He has said that the main estimates amount to $13,411,000. Would he tell the committee what amount of new work is included in the estimates he has submitted? Possibly we could have the corresponding total for the current year.

Mr. CARDIN: Under projects already undertaken, which we have just passed, the amount is $9,615,930, and those which we are considering presently amount to $5,340,655. We have the main estimates of about $13,411,000.

Mr. STEWART: I take it that for the current year provision is being made for expenditures on new projects, through the Department of Public Works, of about $19,000,000, $13,000,000 of which is in the main estimates and the remaining sum in the new projects now before us. In 1935 the amount placed at the disposal of the department, through the Supplementary Public Works Construction Act, was $34,000,000, and in 1934 it was $36,000,000. Therefore, notwithstanding the demand in the current year for relief of

unemployment through expenditures on public works, the amount of new money or new appropriations is substantially less than it was in the last two years. We have to deduct the appropriation made in prior years under the Public Works Construction Act of 1934 and the Supplementary Public Works Construction Act of 1935.

That brings me to the same position I have taken several times in committee, namely that the summary at the back indicates that in these estimates there is provision for an expenditure of $124,748,743.42. If we take the $30,418,341.66 shown in the summary for projects already undertaken, and the deficit of the Canadian National Railways, which has never before appeared in the estimates, the result will be to reduce substantially what appears to be the appropriation of the government this year for the relief of unemployment by means of public works.

Item agreed to.

Quebec—Cap de la Madeleine—public building, $49,000.

Mr. STEWART: Was there not some provision for this building in the estimates prior to this?

Mr. CARDIN: Yes.

Mr. STEWART: If it was provided for previously under the act, why is it inserted in these special supplementaries as another project, as if it were a new undertaking?

Mr. BENNETT: They want to spend twice as much money.

Mr. CARDIN: The money was provided for but the building was not proceeded with. That is why the amount is repeated here. There was some difficulty with the tenders as the lowest tenderer did not send his certified cheque as required by the regulations of the department. He was asked to have his cheque accepted by the bank but he never came through.

Mr. BENNETT: He must have been a Conservative.

Mr. CARDIN: No.

Mr. STEWART: The minister will clear up this matter if he will just tell the committee whether this item was in the main or supplementary estimates of last year or under the Public Works Construction Act. I think it was in the estimates and, if so, it would lapse and would be properly in these items. If it had appeared in the main estimates there would be a revote. It should appear as a revote instead of as a new project.

Mr. CARDIN: It is practically a revote.

Mr. BENNETT: That is the reason why it should not be in the supplementary estimates.

Mr. CARDIN: There was an appropriation for this building in the estimates of 1935-36.

Mr. STEWART: I suggest that the proper place for this is in the main or supplementary estimates of this year. It should not be placed in the special supplementary estimates for the relief of unemployment.

Item agreed to.

**Ontario**

Belleville—building for entomological branch, $5,000.
Burlington—public building, $23,000.
Kingsville—public building, $11,500.
Mildmay—public building, $10,000.
Ottawa Connaught building — alterations, $16,600.
Ottawa East block—improvements and reconstruction, $250,000.
Ottawa forest products laboratory—improvements, $15,000.
Ottawa parliament building, $15,000.
Ottawa Victoria Memorial Museum—improvements, $17,000.
Ottawa West block—improvements, $23,500.
Toronto post office—fittings and alterations, $13,000.
Toronto—postal station "K", $172,000.

Mr. STIRLING: Would the minister explain what he proposes to do to the East block upon which there is to be an expenditure of $250,000?

Mr. CARDIN: I will tell the committee quite frankly that we are not in a position to state exactly what work will be undertaken. I do not know if other hon. members of the committee are aware of the condition of this building—I know I was not until informed by the officers of the department—but the fact is that the roof, being constructed of wood, is a bad fire hazard. The employees of the Department of Finance are working in inadequate quarters.

Mr. BENNETT: And the Department of External Affairs.

Mr. CARDIN: A fire would probably destroy that part of the building and endanger the lives of the employees. The building is to be surveyed by the engineers of the department, and it is hard to estimate

in advance just what reconstruction will have to take place. The idea is to make the roof as fire-proof as possible. It would be very expensive to make the whole building absolutely fire-proof, but I am advised that the roof and certain other portions of the building occupied by the Department of Finance and the Department of External Affairs can be made fire-proof.

Mr. BENNETT: This is an important building as it contains the vaults of the Department of Finance which, until recently, contained, and, I dare say, at the present time, contains the gold of the country. I think that part of the building may be said to be safe, but the upper storey is not. The roof is constructed of consumable material and I think the danger is very great. My own observations, coupled with what I was told, have led me to believe that it might be possible to make the building fairly fire-proof. It will be recalled that a floor was put in some years ago and that the government of 1911-17 put in a sprinkler system. The battleship linoleum laid on the floor makes that part of the building fairly safe, but the wooden partitions are dangerous. It might be possible to put in a steel frame as was done in Westminster Hall, to relieve the present partitions of any strain, but it might not be possible to do that without practically tearing down the whole building. I think something should be done to make the building safe. I believe the employees could escape in case of fire as the building is not too high, but some of the records in the building are invaluable. I understand the Department of Justice is to vacate the building for another one, and it might be possible gradually to substitute steel girders for the wooden partitions which now exist. I know this would be an expensive process, but I know the minister well enough to realize that he would enjoy having to carry on a more expensive program. In that way more people could be employed and greater relief given to unemployment. I believe that would be entirely satisfactory to him.

Mr. CARDIN: Is that a compliment or a criticism?

Mr. BENNETT: Provided always the members from Ottawa were able to give the necessary recommendations.

At six o'clock the Speaker resumed the chair and the house took recess.

---

[Mr. Cardin.]

## After Recess

The house met at eight o'clock.

## PRIVATE BILLS

CONSIDERED IN COMMITTEE—THIRD READINGS

Bill No. 49, for the relief of Birdie Louise Coleman Wilson.—Mr. Jacobs.

Bill No. 50, for the relief of Solomon Hyman, otherwise known as Saul or Sam Hyman.—Mr. Jacobs.

Bill No. 51, for the relief of Lewis Gould. —Mr. Jacobs.

Bill No. 52, for the relief of Hyman Stotland.—Mr. Hanson.

## FISHERIES ACT AMENDMENT

The house resumed, from Tuesday, April 28, consideration of the motion of Mr. Reid for the second reading of Bill No. 20, to amend the Fisheries Act, 1932.

Hon. J. E. MICHAUD (Minister of Fisheries): When this bill was last before the house I was trying to explain, when the hour for private bills expired, the purpose of the act and the reasons for the regulations complained of by the hon. member for New Westminster (Mr. Reid). That purpose is to prohibit by statutory enactment fishing with seine boats in a certain area at the mouth of the Fraser river in the bay of Georgia. Under the Fisheries Act the governor in council, on the recommendation of the Minister of Fisheries, may approve regulations permitting such fishing in that area. This bill is to prevent such permission being given either by order in council or by the Minister of Fisheries.

The regulation authorizing this mode of fishing came into force in 1933, the year following the adoption by order in council of regulations with regard to the inspection of canned salmon on the British Columbia coast. It has been alleged that these regulations for the sanctioning by order in council of this mode of fishing were passed for the purpose of favouring a particular class, namely, the canners. As I have already said, I cannot judge the motives which inspired those who were responsible for the legislation, but I said and I repeat now that I cannot believe they were actuated by such motives. It seems that the regulation permitting this manner of fishing in the area in question was passed solely for the purpose of assisting a class of fishermen who otherwise would not have derived any great benefit from the catch of the late run of salmon in these

waters towards the end of September and in October every odd year. That is the late run of sockeye salmon in the fall.

It is admitted by some, at least, that during the late summer, the end of August and the early fall in every odd year, there is a class of fish which come up the Fraser river for the purpose of spawning along the upper regions of that river, and before they reach the mouth of the river, while they are still in sea water, they are in such a condition that they can be caught and properly packed, provided they are properly graded later. The Americans, who are permitted to fish with seines and seine boats up to the imaginary boundary line in the gulf of Georgia, derive great profits from that mode of fishing, and if it were thought advisable to allow our Canadian fishermen to derive the same benefit, obvious advantages would result. A certain area has been mapped out and is well known to those familiar with conditions on the coast, and since 1933, on two occasions, as I am informed, fishermen of that region derived monetary benefits from large hauls of that fish, which, when caught with seines in the cold salt water, were packed, graded mostly to standard, and put on the market, to the profit of both fishermen and canners. I could give figures as to the quantities caught, but my hon. friend the member for New Westminster put on the record the other evening certain figures which are correct and which show the value to these people of being allowed to catch that fish at that time of the year.

As I said before, this regulation was passed and made it possible, in view of previous regulations of the year 1932, to inspect the fish when packed, and it was possible to detect in some degree whether the fish caught in the fall was then in marketable condition.

The privileges set forth in this regulation can be availed of only in every other year. This year, I understand, there will be no fall run of pink or sockeye, so the regulation will have no application in 1936.

Mr. BENNETT: That is a fact, is it?

Mr. MICHAUD: That is what is reported by the officers of the department. In making that statement I rely on their report.

Mr. BENNETT: Quite so.

Mr. MICHAUD: I believe that all the salmon caught either with seine or with gill nets at that period of the year is Canada first grade or extra good quality. From information available to the department it seems that it is only the fish caught in cold, salt or sea water that comes up to grade 1 or grade A or Canada first, as it may be called, and can go on the market as such. The house will readily understand that it is of great benefit to the fishermen to obtain the fish in that condition, because if they do not catch it with seines it gets into warmer water, where it can be caught with gill nets, but it is not as firm, as hard, or as good as when caught right in the sea. Further, under those circumstances our fishermen are not on the same footing or enjoying the same advantages as are the American fishermen, who are privileged to catch the fish while it is in colder and salter water.

It is possible that the area over which these people are permitted to fish with seines is too large, and that over part of it the gill netters could catch the same quantity of fish. If it is found that this regulation is detrimental to the interests of some class of people on the coast there is no question but that it will be revised. But before doing so, I submit, the department will need a more careful investigation of local conditions. It is possible that for the year 1937 the extent of the area to be reduced could be limited only to that part of the water at the mouth of the Fraser river and in the gulf of Georgia which extends between the boundary line across the gulf and, say to Lulu island on one side, and to Galiano or to Valdes island on the other. In this way we could reduce by about fifty per cent the area, limiting it only to that area which is covered by clear, cold, salt sea water, limiting it to the area close to the boundary line where our competitors can avail themselves of a privilege which we are trying to deny to our British Columbia fishermen. If the house think that they should enjoin the minister or the governor in council to prohibit by law this mode of fishing, I submit that, from all the information which is before us, we do not think this would be in the best interests of the fishermen themselves. It might enable them to catch the same quantity of fish in the fall, but it would certainly not enable them to catch the fish in as good a condition as they can do by means of seines further down in the gulf, and so would deprive them of the privilege of competing with American fishermen just across the line.

I can assure the house that these regulations are not continued or enforced with a view of hurting any class or unduly benefiting any other class of persons interested in the fisheries of British Columbia. As far as the department is concerned the fishermen have to be protected. I believe that the interests of the canners are just as much the interests of the gill net fishermen as of the seine net fishermen.

After all, if the fish is not good and in first class condition the canners will not pay the highest price for it; they may not can it, or if they do it will be classified, on inspection, as grade 2 salmon, of a lower quality. Thus, I believe, the interests of those whom we are trying to protect by this legislation would be injuriously affected.

I submit to my hon. friend that before revoking the power which has been given and before prohibiting this mode of fishing, we should give some consideration to the effect this would have on our trade, as well as to the effect on the fishermen themselves. It may be that if they were not allowed to catch that special class of salmon with gill nets, we would have either to prohibit the late fishing of salmon, as was the case years ago, or to make more stringent regulations regarding inspection, and brand as inferior salmon caught at the mouth of the Fraser river. I submit that either of these alternatives would be more injurious to those fishermen than to regulate their mode of fishing, even though some of them are not privileged to catch as much as are the others. Therefore I submit that my hon. friend should wait another year before seeking to repeal this regulation. In the meantime the department will look into the matter; we will make a special study of conditions, and if we find that for the protection of the industry it is necessary to do away with this regulation we certainly will repeal it without hesitation.

Hon. H. H. STEVENS (Kootenay East): Mr. Speaker, I regret that I must say to my hon. friend sponsoring this bill (Mr. Reid) that I do not see my way clear to support the measure at this time. Knowing as I do how earnest he is in his views on this matter, this adds to my regret, and I may say if I felt that his apprehensions with regard to the injury to the gill net fishermen were well founded I certainly would support him. However I think he is perhaps unduly alarmed in that respect and their interests will not be affected nearly as seriously as he apprehends. Indeed, I question if they will be affected at all, if the seining operations are kept at a reasonable distance away from the mouth of the river.

Let me indicate why I believe that to be true. It is of course known to all, and it should be remembered, that at one time the Fraser river was one of the most marvellous salmon rivers in the world. I can recall that when I first went to British Columbia, now forty-two years ago, the run of salmon up the Fraser was such that if one were to tell what one had seen he would be branded as the champion liar of the fishing season. So I shall not risk my reputation by indicating what I have actually seen, not only at the mouth of the Fraser river but hundreds of miles up in the interior, on the tributaries of that great river. It will be recalled also, however, that one of the most severe blows to fishing on the Fraser river was occasioned by the construction of the Canadian Northern railway, as it was then called. While this work was proceeding down the Fraser canyon the side of a mountain was blasted out, and a huge quantity of rock fell into the river, literally blocking the gorge in such a manner that salmon were very seriously impeded; in fact it threatened the extinction of salmon fishing on the Fraser river. Then, at considerable cost—I think almost wholly to the government, though part of it may have been borne by the railway—steps were taken, in order to give the fish freer passage, to remove this slide or to minimize the damage that had been done. Since then, fishing on the Fraser river has substantially improved, though of course it is still pitifully low in comparison with what it used to be.

Another point to be borne in mind is this: The salmon runs that come up the Fraser very largely enter—I am not going to be dogmatic about this—through the strait of Juan de Fuca, come up through the gulf of Georgia and strike the mainland coast below the boundary, on the Washington side. Then they come up the coast and go up the Skagit and other smaller rivers emptying into the gulf, and into the mouth of the Fraser, and of course some of them go further up. Along through that area there are quite extensive shallows, and the fish like to hover round those shallows for a few days before proceeding up the river. That, I think, is the habit of the salmon as far as that is concerned.

For many years the Americans have allowed fishing out in the gulf with those great purse seines described by the hon. member for New Westminster the other evening. These very numerous vessels of United States registry would go into the gulf and, as indicated the other night, sight the schools of fish coming in and catch very large quantities of them. On the Canadian side we did not allow seining. For many years this question has been before each succeeding government, but seining was not allowed until very recently, within the last couple of years; I have forgotten the exact date. I see no reason at all why we should not permit purse seine fishing on the Canadian side providing it is kept at a considerable distance from the mouth of the Fraser river.

I hope the minister will accept what I have to say in a kindly way if I differ with him on one or two minor points, because it is not reasonable to expect him to be completely familiar with all the details, and particularly with the geography of the country. The minister mentioned that if the area were restricted by a line drawn from Lulu island across to Galiano island, and so on, it would keep purse seines far enough back. I submit, however, that this would not be the case, because Lulu island is the delta of the Fraser river. One arm of the river runs out to the north and the other main arm runs to the south. Certainly I believe purse seine fishing should be kept beyond some point very much further out than that. I would suggest that the line should be drawn three, four or possibly five miles out, because the flats or shallows run out for a considerable distance, and no purse seine fishing should be allowed there.

My hon. friend in his bill has indicated a certain area, running I think directly west from Point Grey—he will correct me if I am not describing this correctly—to the northern end of Galiano island and thence southwesterly, I suppose, to the international boundary, the outer range light, which, I assume, is the one on the westerly side of the gulf of Georgia where it intersects the international boundary on the westerly side of the gulf, thence back to the point of commencement. The area so described means taking in the whole of the gulf between the islands on the west and the mainland south of that line. So, instead of that, I suggest that if purse seine fishing were prohibited within a certain distance, say five miles, of the mainland and the Lulu island shore line at the mouth of the Fraser, and permitted out in the gulf beyond that, I do not think any injury would be done to the gill net fishermen. The gill net fishermen fish largely in and off the mouth of the Fraser, over the sand shallows along the coast and up the river. I do not think there is much gill net fishing far out in the gulf, so that I see no particular damage to be done to the gill net fishermen if purse seine fishing were limited in that way.

I regret the frequent attacks which are made upon the officers of the Department of Fisheries. We may differ in opinion regarding the policy followed by the department; I see ample room for that, but it is unfortunate that officers of the department should be in a sense held responsible for the policies adopted. It is true that these officials advise the minister, but I would remind hon. members who are prone to be bitterly critical of them, that we members of parliament have ample opportunity to present any views we may hold which conflict with those advanced by officers of the department. It is a mistake publicly to denounce these officials, because during the twenty-five years that I have been in parliament—and I think some of them have been in the department during almost that whole period—I have always found them extremely careful men who used their best judgment. I have heard it stated that they are unduly influenced by the canning interests, but I do not think that is the case. I cannot recall in my memory of the record of the department that these officials have been unduly influenced by the canners. I know that the canners have frequently advanced views which were peculiarly in their own interests and which conflicted with those of the fishermen. That, of course, is to be expected, but I believe that the department generally, speaking through its permanent officials, has been reasonably impartial in that respect. I know there are hon. members who will differ perhaps sharply from this statement, but that is my view based upon considerable experience with the department. So I believe, not that the officials are infallible, but that their advice might very well be followed in this matter, particularly in view of the fact that the fishing is of a kind which will not seriously compete with or affect the gill net fishermen.

There is another point, which again I think is a question of fact. It has been stated positively that fish caught in the purse seines are damaged; I think some claim that they become smothered in the mass that naturally is drawn together when the seine is pursed and ready for lifting. I do not profess to have expert knowledge, but I have some familiarity with the matter and my impression is just the contrary. There might occasionally be an unusually heavy purse and some fish damaged; I think that is without doubt, but on the whole I believe that the fish caught in the purse seines would be in just as good or better condition than those caught in the gill nets, particularly if the latter were caught any distance up the river.

At this point I would like to differ in a very kindly way with the minister in his reference to the condition of fish as they are caught in the gill nets and in the purse seines. He said that there was a very great advantage in having the fish caught in clear water. There is a measure of truth in that, but I think the minister over-emphasized the point, because when the salmon come into the brackish waters, the fresh waters flowing out of the mouth of the Fraser, which by the way turn largely down the coast—you can easily see the line of demarcation some miles

out from the shore—the water, changed somewhat by the tide, turns southward and the salmon hover in that area. I do not think a particle of damage is done to the salmon while they are there. In fact some hold the view that the salmon improve in condition while in that area, not if they remain there long, but I believe it is not their habit to remain there very long. So I do not attach much weight to the suggestion that the fish caught in the gill nets in the mouth of the Fraser are in any sense deteriorated by their stay in that area.

Then there is the question of inspection. Here, again, I know that certain hon. members will differ sharply in opinion with me, and I respect the sincerity of their views; yet I am bound to say that careful consideration has convinced me that the system of inspection has been definitely and distinctly beneficial to Canadian interests. I had some experience in connection with exports from Canada and external trade matters, and an opportunity of discussing the subject from many angles with disinterested persons, and I am convinced that inspection is desirable and the need of it imperative. I am not saying that the present scheme of inspection is perfect, but I say that it is a very good one and I certainly do not agree with the denunciation of it that I have heard. When a certain part of a pack is discovered to be not No. 1 but grade No. 2, or some other grade, the department placed in its regulations an order that a second lid should be put on, which second lid would be stamped with the second grade mark, so as clearly to indicate it.

Then it was charged that certain exporters or those who were handling the export business, would remove that second lid and leave the can in its original condition, namely showing the No. 1 mark. Of course that is most reprehensible, and any one found to have done this should certainly be punished. It is fraud of the rankest kind, and should not be allowed under any circumstances. The minister and his department should and, I believe, could devise some method which would overcome the difficulty. I have no doubt that the question has been already considered and I hope measures have been provided to deal with it.

I wish to register definite approval of the general system of inspection, which I hope will be continued and maintained. If it can be improved or strengthened I certainly would approve any such action. Perhaps I had better put it in this way: I would urge the minister not to give way in any sense by removing or abandoning the system of inspection or, I will put it in this way, "a" system of inspection, because I believe that inspection such as was inaugurated a few years ago is decidedly to the benefit of the export business in salmon. We must remember that a great deal of this is export business, and it is most desirable that the high standard of our salmon should be maintained.

Perhaps I might as well say, in passing, that there are many varieties of salmon packed for export and for sale, and it may well be that the department could take into consideration a clearer distinction between the different grades or types of salmon placed on the market. Sometimes there is a tendency to use a name which would indicate that the article was British Columbia salmon. While the label might not indicate that it was sockeye, it would convey the impression that it was No. 1 salmon when, as a matter of fact, it might be a very poor pink, a humpback, a cohoe or some other distinctly inferior brand. That part of the business should be carefully guarded. The high standard of British Columbia sockeye should be maintained in its integrity, at all costs.

I believe I have nothing further to say. I say to the hon. member most earnestly that I do not see my way clear to support his bill. I believe he would be well advised to accept the suggestion of the minister, let it rest for another year and give it still further consideration and study. I want him to know I am sympathetic towards the interests of his constituents, the fishermen, because they, along with other fishermen in other parts of the country, have certainly had a hard enough time. However I do not think this bill would be of any distinct advantage or help to them. It is for these reasons that I cannot support the hon. member's bill.

Mr. H. J. BARBER (Fraser Valley): Mr. Speaker, I feel inclined to support the suggestion set forth in the bill, namely to change the boundaries within which seine fishing is carried on. The last speaker referred to the fish gathering in schools in the brackish water, as they enter fresh water from the salt water. So far as my information goes, I think this is where the great destruction is carried on. These salmon gather in large schools and play around there for some time before entering the fresh water. That is the time when the seiners come along with their nets and scoop them up. I believe this has proved disastrous to the fish, and particularly to those varieties which we expect to enter the river at that

time of the year and upon which gill netters depend for certain revenues during the fall.

I say that I am inclined to support the suggestion. I do not know whether or not the boundaries are just correct, but they should be set further out from the mouth of the river. I know that if this bill does not become law at this session, a large number of fishermen in the New Westminster and Fraser Valley districts will be disappointed, because my hon. friend stressed his views to a great extent during the last election campaign, and no doubt as a result of those views he received a substantial support from the fishermen of his constituency. Now that the party to which he belongs is in office and has a very large majority, about which we have heard so much at the present session, those men have a perfect right to expect some action and I shall be prepared to support the principle of the bill, as I did on a previous occasion when a similar bill was before the house.

I think the question as to boundaries might very well be considered. Whether it is necessary to have a bill or whether the result could be brought about by regulation is a matter for consideration. The minister should give careful thought to the suggestions which have been made. The last speaker (Mr. Stevens) has suggested that the matter might be laid over for another year. Similar suggestions have been acted upon every year for a number of years and I believe the time has now arrived for action. I suggest to the minister that if he cannot accept the bill at least he should do something to change the regulations so that the boundary will be changed, and these fishermen will not be permitted to come so far up into the mouth of the Fraser river.

Right Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, I desire to congratulate the hon. member for New Westminster (Mr. Reid) upon the moderation with which as a layman he presented his case. It was admirably presented in every way, and had he not devoted his life to acquiring skill with the bagpipes he certainly would have been an admirable legal practitioner.

I rise for only one purpose. If the statements made by the hon. member regarding the frauds practised by those who can salmon are accurate, then immediate action should be taken. That a double can should be prepared and that the methods indicated by the hon. member should be followed is a sad reflection upon this country. I stress the hope that the minister will take immediate steps to see to it that there will be no repetition of the frauds practised upon the purchasing public if—and I put the word "if" in large letters—the facts as stated by the hon. member are correct. I am sure he stated them as he believed them, but it is difficult to think that reputable manufacturers would resort to the methods indicated for the purpose of selling their product fraudulently.

So far as the general question is concerned it is, of course, competent for the minister to recommend that the order in council be rescinded. That would end the matter, without any bill. All you have to do is stay as you were. It is satisfactory to note that the hon. member for Kootenay East (Mr. Stevens), who at the time the order in council was passed was a representative from British Columbia in the goverenment, is still of opinion that the order in council was properly passed, because as regards the passing of that order in council we relied more or less on local knowledge. The terms in which it was enacted indicate clearly the purpose which was to be accomplished. If there are any substantial reasons why the action was not warranted, then it is always open to the government, as it was to that government, to rescind or to repeal the order in council. But the bill proposes to accomplish something more than that. It does not propose entirely to cancel the effect of the order in council, but to some extent to modify the field of its operation.

I have no personal views with respect to the matter and I only desire to make it perfectly clear that if the facts are as stated we should not hesitate for a minute to take every possible action to prevent the continuation of such frauds upon the purchasing public.

With respect to the other matter it is always open for the government of my right hon. friend with its vast majority, to which my hon. friend sometimes refers, to accomplish his purpose without having any reference whatever to a bill in parliament, presumably like General Parkinson's reference to Disraeli, who had a resolution in his pocket but would proceed by bill if advisable. It is competent to rescind the order in council by order in council, rather than proceed by a bill.

Mr. THOMAS REID (New Westminster): Mr. Speaker, the few minutes left before nine o'clock will not allow me to deal with all the arguments that have been advanced this evening. At the outset let me say that I appreciate very much the kind words of the right hon. leader of the opposition (Mr. Bennett), and I can assure him in regard to his remarks about me that if I were as good a lawyer as I am a player, I would be some lawyer.

I also appreciate the fact that the minister who is in charge of the Fisheries department (Mr. Michaud) does not know the district in question as those of us from British Columbia do, but I am pleased that he is going to go out there to look over the situation for himself, and I was glad to hear his statement that if it is found that a wrong has been done to the gill net fishermen, the regulations will be changed. I realize that close to the international boundary there is clear water, but the greater part of the area has been fished by gill net fishermen since confederation.

The hon. member for Kootenay East (Mr. Stevens) referred to my attack on the officials of the department. It is true that in the House of Commons I personally have criticized the officials, but I have done so only after coming to the conclusion that their attitude was against the fishermen; at least, that is my belief. I shall give only one instance, and that is in connection with the embargo which had existed from confederation against the export of sockeye salmon from the Fraser river to the United States. When we urged in this house, and were supported by the hon. member for Comox-Alberni (Mr. Neill), that the embargo should be lifted and the fishermen allowed to sell their fish in the highest market, the officials said: If that happens, Gabriel might as well blow his trumpet, for all is over with the fishermen. Every time we advocated this they said that it should not be done, and that it would be just too bad for the fishing industry if it were done. Well, it was done last year and nothing serious has happened. The fisherman is still there and will be for a long time. The cannery men are still operating there even though the fishermen are allowed to ship their fish, and nothing that was predicted by the officials of the department has happened. That is why I am pleading with the minister and with this house to-night. The officials had not one good word to say on behalf of the gill net fishermen on the Fraser river when we discussed this matter in committee last year.

I might have asked the minister to accomplish by order in council the object sought by this bill, but realizing the stone wall of officialdom that we are up against, I felt that this was the proper place and this was the proper manner of proceeding in order to bring the matter forcibly before the new members of the House of Commons, and to get the matter remedied.

As I have pointed out, I have not the time this evening to refer to every argument that has been made by the minister and by the hon. member for Kootenay East. The minister said that I had introduced four or five different subjects, but I would point out that most of them are related to the bill under discussion. The treaty which Canada has signed but which has not yet been signed by the United States is related to sockeye salmon entering the Fraser river.

Mr. BENNETT: Signed but not ratified by the senate.

Mr. REID: Exactly. Now in regard to quality, I notice that the director of fisheries in British Columbia stated publicly last year that the reason seines were allowed to fish there was in order that the fishermen might catch the fish in larger numbers. We know that to be the truth. We know that the seine boats had mobile traps and that they moved from one district to another, and they were largely owned by the canners, but that was not the reason given as in 1933. This was the last area precluded to them. The gill net fishermen had been fishing there ever since confederation, but after the seine fishing started there, the gill net fishermen were driven out, and not only that but other varieties of fish in those waters have been diminishing, for the seine boats catch almost everything within the school of fish.

I do not want to press this bill to a vote because, as stated, it does not affect the fishermen this year as the seines will not become operative in the area this year, but I think it is only right that the seine fishing industry should be given notice now that next year seine fishing will not be allowed in this area. I know that some seine fishing is necessary in open, clear water, but the district dealt with by this bill is the brackish water of the Fraser river. Under the circumstances, and looking for good results, I am perfectly willing to withdraw the bill at this time, in the hope and expectation that the minister will really look over the district for himself and not take too seriously what his officials tell him about the matter, and that seine fishing, if allowed in there at all, will be in very small proportion and confined as closely as possible to the international boundary. Believing that the minister will do something, under the circumstances, therefore, Mr. Speaker, I would ask permission to withdraw the bill.

Bill withdrawn.

## SUPPLY

### DEPARTMENT OF PUBLIC WORKS

The house in committee of supply, Mr. Sanderson in the chair.

The CHAIRMAN: When the committee rose at six o'clock we were considering item No. 399, public buildings in Ontario.

Ontario

Belleville—building for entomological branch, $5,000.
Burlington—public building, $23,000.
Kingsville—public building, $11,500.
Mildmay—public building, $10,000.
Ottawa Connaught building — alterations, $16,600.
Ottawa East block—improvements and reconstruction, $250,000.
Ottawa forest products laboratory—improvements, $15,000.
Ottawa parliament building, $15,000.
Ottawa Viotoria Memorial Museum—improvements, $17,000.
Ottawa West block—improvements, $23,500.
Toronto post office—fittings and alterations, $13,000.
Toronto—postal station "K", $172,000.

Mr. STIRLING: I see there is an item of $15,000 for this parliament building. Would the minister explain what work is to be done here?

Mr. CARDIN: This amount is to provide for carving, as requested by the chief architect of the department in a memorandum dated a few weeks ago. As the hon. gentleman and other hon. members know, there is still a large amount of carving to be done round this building. It is being done a little at a time each year, a small amount of money being placed in the estimates each year for this purpose. This will by no means complete the work, but a small amount will be undertaken this year.

Mr. STIRLING: For relief?

Mr. CARDIN: It may be for relief because the stonecutters are in very difficult circumstances.

Mr. MacNICOL: What relation has the item of $11,500 for a public building at Kingsville to the item of $14,500 in the main estimates for a public building at Kingsville? Is this for the same building?

Mr. CARDIN: This is a supplementary amount to complete the building.

Mr. MacNICOL: Has something been added to the original plans?

Mr. CARDIN: No.

Mr. STEWART: It would occur to me, then, that this item should properly appear under the heading of "Projects already undertaken." It is not a new project at all; it is not another project but just an amount to complete a building for which provision had been made.

Mr. CARDIN: I am informed that this item was in the ordinary estimates of the department and not under the Public Works Construction Act. What comes under the title "projects already undertaken" refers to the Public Works Construction Act.

Mr. STEWART: That leads me to the conclusion that this ought to appear in the regular estimates or in the supplementaries instead of in a program of special supplementary estimates which are described as having been prepared for the purpose of indicating the amount that the government was making available for relief in an emergent situation. Clearly this item is out of place in a schedule such as this. As regards carving, that does not appear to be work of an emergent character or one which will greatly relieve unemployment. In years gone by we had the matter under consideration at different times and it was thought that a similar amount spent in other ways would give a larger volume of employment, though it is undoubtedly true that stonecutters, those doing work of that kind, are out of work. But what I have indicated was the reason no provision was made for the item earlier in the estimates. Will the minister be good enough to break up this item and indicate which are new projects and which are revotes. The Belleville public building was in the estimates last year.

Mr. STEVENS: While the minister is looking up the information he might answer another question. In connection with these items for Ottawa I see there are six. Will it be necessary for those who secure work on these different projects in this city to do, as the hon. member for Ottawa West (Mr. Ahearn) indicated shortly after his election, secure a card from the Ottawa Liberal Association. It is interesting to know whether that is the system under this relief measure.

Mr. DUPUIS: They are all Liberal anyway.

Mr. BENNETT: Those on relief in Ottawa? Oh, no.

Mr. DUPUIS: I have never met a Conservative in Ottawa outside this house.

Mr. CARDIN: In this vote the new expenditures are, first, Mildmay, in the constituency of Grey-Bruce; the East block in Ottawa, improvements and reconstruction—

Mr. BENNETT: The Connaught building too.

Mr. CARDIN: No; these are alterations. Then we have the parliament building; that is a new vote, and the Victoria Memorial Museum, improvements. That is evidently a new vote. Then there is the West block, Ottawa, improvements. These items have no connection with those under the title "projects already undertaken." With regard to the question asked by my hon. friend (Mr. Stevens) in all probability—in fact—the recommendations of the hon. members for Ottawa will be considered. There is nothing unusual about that; it is a practice that has prevailed for years.

Mr. BENNETT: Not in connection with relief.

Mr. CARDIN: Other representations also will receive proper consideration in due time.

Mr. SPENCE: I suggest that the minister should withdraw this item of $15,000. Of course, it is not worth while talking about $15,000 here, for every item ranges from $200,000 to $1,000,000, and so on. I submit, however, that $15,000 could be saved in connection with carving in this house. Go into the lobby and look at the carving; it is spoiling good stone and is a waste of money.

Mr. CARDIN: I might be inclined to agree with the hon. gentleman, but then my taste may not be good. I do not know much about the arts.

Mr. SPENCE: There is nothing artistic about it. It is spoiling good stone.

Mr. MUTCH: Are the new projects mentioned all in Ontario or are there similar new projects elsewhere in the dominion?

Mr. CARDIN: There are new projects in other sections. As far as Ontario is concerned, there are also projects covered by harbour and river developments. As regards buildings, these are the new items.

Mr. BENNETT: Outside the main estimates.

Mr. CARDIN: Certainly.

Mr. MacNICOL: I want to ask a further question in connection with the Kingsville building. In the estimates submitted some time ago an amount of $14,500 was indicated for that building. When the original vote was introduced a year ago the amount asked for was $25,000. I assumed at the time that was to be the total cost of the Kingsville building. If you subtract the revote of $5,500 from the item of $14,500 in the main estimates, it leaves a net amount of $9,000; and then in the estimates before us there is another $11,500, or an additional $20,500 altogether. I cannot understand how a building that was to cost $25,000 in the first place will cost now, according to my figures, $45,500. Either the building must have been doubled in size or a more expensive property must have been purchased. There must be some explanation.

Mr. CARDIN: The contract price for that building was $26,690. This amount of $11,500 is in addition to the amount which is included in the main estimates. The explanatory note that was given to me is that last December, at the time when the main estimates were being prepared it was anticipated that the contractor would perform work to the extent of $18,000 in the year 1935-36. Instead of that, work to the extent of $10,000 was done, leaving $8,000 to be provided. In addition to that, a clock and gable are to be installed at a cost of $1,250. The cost of fittings is increased from $3,000 to $4,500, and contingencies are increased $250, from $1,810 to $2,060.

Mr. MacNEIL: What will be the total cost when it is completed?

Mr. CARDIN: It will be $40,000. Of course, the original contract of $26,000 did not ininclude the interior fittings of the building.

Mr. MacNEIL: I should like to have a clear understanding of the statement made by the minister a moment or so ago. I was astounded to learn of the procedure followed in permitting men to work in the city of Ottawa. It seems to me a very vicious principle of discrimination that men who are competent to work and desire work are not granted it unless their political beliefs are favoured by the party in power.

Mr. DUPUIS: The minister did not say that at all.

Mr. MacNEIL: I understood that a man must have a card from the Ottawa Liberal Association. However I should be glad to hear what—

Mr. CARDIN: That is not the case.

Mr. MacNEIL: I understood from the words of the minister that that was the usual practice.

Mr. CARDIN: No, that is not the case.

Mr. BENNETT: Perhaps the minister will tell us what he proposes to do with the forest products building. It is a testing laboratory which, in my judgment, should be under the control of the National Research bureau. The late government declined to spend any money other than to keep up the building; I refer

to the building at Montreal. We have now no public domain on which we have forests to sell, except in the northwest territories, and we cannot sell them there. Now, that we have handed over the railway belt to British Columbia, and the natural resources to the western provinces, the provinces have complete control of all the timber in the country, but we maintain the laboratory at Montreal. It seemed to me that this was very improper, because it could be worked out with the National Research bureau, and steps were taken looking to the accomplishment of that end. To put more money into this laboratory would be, I think, wholly improper; we should have the work carried on by the institutions set up for that purpose. We are testing the tensile strength and other qualities of woods; just why, I do not know; I never was able to understand why. In view of the fact that we parted with our resources and turned them back to the provinces, and parted with the railway belt lands, we no longer have any areas of timber over which we could exercise any effective control.

The same thing comes up in connection with planting trees. The provinces now have complete control of the situation. There was a time when we had control of the whole of the northwest territories and the western provinces, but that day has long since passed. I think the minister might give some consideration as to why we are now spending money on this laboratory.

Mr. CARDIN: This laboratory, as my right hon. friend said, is in Montreal on the grounds of McGill university.

Mr. BENNETT: Exactly.

Mr. CARDIN: And if my information is correct, the companies interested in our forests are contributing a certain amount of money towards the maintenance of that laboratory. At all events the Department of Public Works, in making this grant, is only acting for another department. I, of course, have no control over this laboratory; if I am not mistaken, it is under the Department of the Interior.

Mr. BENNETT: That is right.

Mr. CARDIN: I am taking care of it only as I take care of all the public buildings for all the other departments. It is not for me to speak as to the policy involved in transferring this organization to the provincial authorities. This amount of money is for improvements only.

Mr. BENNETT: I know that. But the place is about through.

Mr. MacINNIS: Could the minister tell the committee how these works, having particular reference to the Ottawa projects, are to be done? Will tenders be called for the various projects, with the exception of the one for the Ottawa parliament buildings? I assume that no tender will be called for that. Will tenders be called for the other items on the list having reference to Ottawa?

Mr. CARDIN: Yes, it is proposed to ask for tenders on all these works, when it is possible. Of course there are certain works that can be done by the ordinary employees of the departments, but, generally speaking, we shall follow the rule and ask for tenders.

Mr. MacINNIS: Touching on the point which was raised by the hon. member for Kootenay East (Mr. Stevens) and was again the subject of a question by the hon. member for Vancouver North (Mr. MacNeil), I understood the minister to say that in engaging employees for these works the usual procedure would be followed, and that to get work a person would have to have a card from a city member.

Some hon. MEMBERS: No.

Mr. MacINNIS: If the minister did not make that statement I wish he would make clear to the committee just what he did say, because I do not want to go away from here with a wrong impression as to what he said.

Mr. CARDIN: What I said was this: Nobody will complain, I suppose, if I give consideration to the representations being made by the members for Ottawa. They have the right, as has anybody else, to make recommendations with the view of providing work for certain people who are in need of work. That these persons may be friends of the members is no objection; members should not be prevented from recommending persons to be employed on public works because they are their friends. They have the right, like anybody else, to make recommendations. I said that we would, no doubt, take into consideration such recommendations. That has been the practice followed for years, ever since confederation, by, I suppose, all politicians. I added that as far as possible, where circumstances permitted or justified such action, any other recommendation would also be considered and the requests granted.

Mr. MacINNIS: To me that does not sound very convincing. I understand that this is a vote of the public moneys of Canada. Irrespective of party, the people of Canada will be taxed to raise this money, and the unemployed are not confined to supporters

of any one party. Regardless of what the practice may have been in the past, I cannot see why we should continue a practice unless it is a good one, and I doubt whether there is anybody in this house who will say that it is a good practice. They may say so when they are in office, but not when they are out of office. I believe that many of the people who voted for the Liberal party expected it to adopt new ideals, to adopt new measures, new principles and new policies, and not to follow the old practices even if they have been followed since confederation. See where such policies have landed us. In this city of Ottawa I have spoken to a great many unemployed, and the impression among them is that they cannot get jobs on government works unless they receive recommendations from the sitting member or someone else who is influential in the Liberal party. Whether that has been the practice or not, it seems to me that the more such a practice has prevailed, the stronger the reason why it should be abolished and we should get down to a proper basis, whereby we shall not take away the independence of our people by making it a condition that if they are to get work they must vote for a certain party.

Mr. DUPUIS: May I be allowed to answer the hon. member for Vancouver East (Mr. MacInnis)?

Mr. BENNETT: Coming events cast their shadows before.

Mr. DUPUIS: I just want to cite my own experience, and what I am going to say I can corroborate. My experience as a member of parliament, whether the party in power was Liberal or Conservative, was that whenever work was required and undertaken for the purpose of providing employment, generally speaking the local member recommended not only those of his own party but anyone unemployed, whatever might have been his political allegiance, provided he was the head of a family and in need of work. Since the Liberal party has been in power I am sure that we have always given recommendations to those who deserved work, irrespective of their party allegiance.

Mr. BENNETT: The minister has entirely misstated the case. What he has said might be applicable to normal conditions, but it cannot possibly be applicable to the abnormal conditions under which these expenditures are being made. The contractors who secure the contract for the construction of a building are told—it is part of their contract in many instances, though I do not know whether or not that is the case now—that they must give employment to those who are really in necessitous circumstances. I will put it as broadly as that. Whenever there is an attempt to interfere with the contractor in connection with relief undertakings I think the minister should be adamant in preventing that being done. It is a terrible thing; I say it is terrible because I saw evidences of it in one case. It is distressing—I will put it as mildly as that—to think that a man whose children are suffering from lack of food, except such as may be obtained from relief, cannot be permitted to work for a contractor unless he is endorsed and recommended by some member of parliament in this capital city, on work which is being carried on with the money of all Canada, not of one part only, and which is being maintained by the people generally.

I knew the problems of the Minister of Public Works of the recent government in that connection. I had knowledge of what perhaps hon. gentlemen have read in the newspapers, in connection with the contractor who was building the addition to the mint here. He brought to this city men from the west, and when I say the west I mean as far away as Sudbury. One of those young men came to see me, and I took the matter up with the Department of Labour. On investigation that department found that this contractor was taking ten cents an hour off the pay of this poor unfortunate. That man got his money back from the contractor, but of course that ended any possible chance he might have had of being employed there any longer, so now he is out of a job. It is unfair to say that necessitous persons must be vouched for, in connection with relief undertakings, by a political organization. As far as it was possible every effort was made by the former government to eliminate that sort of thing in the last few years.

In Quebec, I am sorry to say, in provincial undertakings in connection with roads they went so far as to put in writting a perfectly clear statement that in the particular district the vote usually had been in the proportion of, we shall say, eight to four, and they thought that those who might be recommended by the opposition to the Taschereau administration might have one-third and the other two-thirds should be recommended by the representatives of the government that was in power. And, mark you, we were contributing to that work. When the Minister of Labour raised a question about the matter, as he did, he had a good deal of difficulty. We were told that this was a

recognized custom, and that it had the sanction of authority and long usage behind it.

We have never had such relief conditions in this country as we have experienced in the last few years; we have never had to meet exactly the same situation. The minister is not lacking in courage nor in, shall I say, a most earnest desire to appreciate sympathetically the wants of those in necessitous circumstances. I should like to hear the hon. gentleman say that so far as contractors are concerned they will be told that as far as possible they are to give employment to those requiring work, as indicated by the Minister of Labour, and that they should proceed accordingly. I well recall my first experience of anything to the contrary, when a contractor who was about to tender for a job was asked if he would have a free hand in the employment of his staff. I said, "I have no reason to think to the contrary." That was many long years ago; I was much more innocent then than I am now, and he replied, "That has not been my experience." He was a very old and experienced contractor. If we interfere with the contractor, except as determined by the provisions of his contract, we lay a foundation for a claim for extras, and we have trouble at once. On the other hand, if we say in the contract, as we have been endeavouring to do, that the fair wage scale shall prevail; that local men shall be employed up to a certain number; that returned men shall be employed up to a certain number and that necessitous tradesmen or artisans, skilled or otherwise, shall find employment, I think that is as far as we can go in connection with relief.

As far as ordinary expenditures are concerned I am not prepared to differ seriously from what was said by the minister of the hon. member for—

Mr. DUPUIS: Chambly-Rouville. The name was changed by the last government.

Mr. BENNETT: Well, apparently not to its advantage. At any rate I suggest that the minister should make it abundantly clear that in dealing with relief matters we are not going to have the Dominion of Canada placed in that humiliating and embarrassing position, and if he takes a firm stand I am satisfied that he will be supported by public opinion in every part of this country. To me it has been distressing that any opposite attitude should be taken. I am not discussing the general political situation; I have seen too much of it to endeavour to suggest that we should be hypocrites enough to say that while in opposition we should condemn the other man for doing the same thing we did when in office. It is all bad, but there it is. But this is relief, and it must be placed upon another basis.

Mr. CARDIN: I desire to add only one word, in order to relieve the minds of hon. gentlemen opposite. I may say that as far as I am concerned no order of any kind has been given by me or by my officers to any of the contractors under the Public Works Construction Act; I have never interfered with the liberty of contractors in hiring the men they wished to hire, according to their own needs. I know very well in what a difficult position I would place myself if I interfered with a contractor and dictated to him as to what men he should employ on his work. He is absolutely free to hire the men he desires to hire; I have not interfered in the past and I do not propose to interfere during my term of office and during the time necessary to expend the money being voted by parliament at the present time. As to the other phase of the question, I do not want to be dragged into it. The last observations made by the right hon. gentleman relieve me of the necessity of going into details. We are agreed on many points, but in certain points we may differ, and I do not want to go into that at the present time; it is not necessary.

Mr. BENNETT: What points?

Mr. CARDIN: I would have said that there is another side to the picture he has been giving, but I do not want to go into that now; no good is to be derived from doing so. However I assure my right hon. friend and the other hon. members that I have not interfered and do not propose to interfere with the contractors when they are doing the works provided for in these estimates.

Mr. BENNETT: Will the hon. gentleman prevent them from being interfered with?

Mr. CARDIN: Yes.

Mr. STEWART: I take it from the statement of the minister that these works will be carried on under the provisions of the Public Works acts which provide that for any works costing more than $5,000 public tenders shall be invited. The act contains a further provision that in cases of emergency, or where the officers of the department certify that in their opinion the work can better be done by the officers and servants of the department, tenders need not be invited. Obviously that is the case with respect to some items; repairs and overhauling of a building I know from experience

you cannot always prepare specifications for, and if they are to be done economically and if the party who does the work is to have a fair chance they should be done by day's work. Am I right in assuming that these works will be carried on under the provisions of the Public Works Act I have outlined?

The other matter to which I wish to draw the attention of the minister is a clause that appeared in the Public Works Construction Act of 1935, chapter 34, section 2:

> The governor in council may authorize the execution and completion of the several works and undertakings mentioned in schedule A to this act, and for such purposes may authorize the performance of such acts and the execution of such contracts as may be deemed necessary and expedient: provided, however, that in the execution of such works, as far as practicable and consistent with reasonable efficiency and economy, first consideration shall be given to the employment of those who if available and competent are most in need in the locality in which the works are to be performed, without any discrimination whatsoever; preference being shown to unemployed ex-service men and unemployed married and single men with dependents; and that the minister of the department responsible for the execution of such works may take such action as he may deem necessary and proper to enforce compliance with the foregoing provisions.

Mr. MACKENZIE (Vancouver): That was moved by the hon. member for Lambton West (Mr. Gray) last year.

Mr. STEWART: No, that is not exactly his wording; we really improved on the wording suggested by the hon. member for Lambton West. However it goes back to the other side of the house, so I am sure my hon. friend will see that the recommendation of his fellow member is carried out.

Mr. BENNETT: We propose to move it to the bill anyhow.

Mr. STEWART: A clause similar to this is found in a bill that has passed the house in regard to works under the unemployment relief act. In pursuance of that provision, that clause, as I recall, was embodied in the contracts of the Public Works department last year for works set out in the schedule. I suggest that if the minister wishes to follow that precedent it should be embodied in the specifications of the contracts this year. I know it is a difficult matter for the contractor, and the only way is to put the provision in the specifications so that he knows beforehand what is expected; then there is no interference with him when he is asked to carry out the provisions of the contract.

With regard to work done by the department by the day, they are free to employ whomever they choose, but it seems to me that this provision might well be followed as far as practicable in carrying out such work. I know the officials of the department gave serious consideration to that in the program of 1935, and I suggest that the minister follow the precedent so set.

Mr. CARDIN: I have no hesitation in stating that I am in complete accord with the spirit of what my hon. friend has just said. I agree with his views.

Mr. STEWART: There is one other question, that is with respect to this postal station "K" at Toronto. That is an item which appeared in the estimates of last year, I believe, and for which tenders were invited. I am not sure that they were received prior to the change of government; at any rate the contract was not awarded. I think the tenders were not due until shortly before or shortly after the election. Is it the intention of the department to award the contract on the basis of those tenders?

Mr. CARDIN: Yes. The contract has been awarded on the tenders.

Item agreed to.

Manitoba — dominion public buildings — improvements and repairs, $15,000.

Mr. STEWART: I do not want to raise this question too often, but here again is a small item which should appear in the regular estimates. It is not special in any way. In the general estimates of every year there has, I think, been something of the kind.

Mr. BENNETT: Yes, always.

Mr. CARDIN: I quite admit that there will be found in these supplementary estimates a number of items which usually go in the ordinary main estimates and supplementary estimates of the department. But in preparing these estimates with a view to helping to relieve unemployment we included some items which usually would go in the ordinary main and supplementary estimates. As I said before six o'clock, in many cases we had not the necessary information to cover all the items when the main estimates were prepared. The main estimates were prepared in December last, and since December the department has been receiving reports from the resident engineers of the department all over the country suggesting repairs to be made to public buildings.

Mr. STEWART: But this is a blanket item which is usually put in to cover contingencies, apart from any special report. I venture to think this is not in any special report. That suggests to me that as far as these items are

concerned the word "special" should be removed. They are ordinary supplementary estimates. I ask the minister: Is it likely that his department will bring down another special supplementary estimate, or does he think he has included everything here to cover the whole program for the rest of the year?

Mr. CARDIN: Well, I hope I have included everything. There is always the possibility of something else being brought to the house a little later.

Mr. STEWART: Well, are we to have these special supplementaries and then further supplementaries? When are we going to get to the end?

Mr. CARDIN: As my hon. friend knows, the reports and requests come in regularly to the department even after the estimates have been tabled, and we have to consider requests coming in from all over the country. There is no stop. Requests and petitions keep coming in all the time.

Mr. STEWART: I suggest that if the minister announce that he has closed the chapter for this year he might save himself a lot of trouble.

Mr. CARDIN: I would not undertake to do that. I might even hear from my hon. friend; there might be some reports coming from his constituency for works which are justified, so I want to keep the opportunity open of giving something to him.

Mr. STEWART: I think things are in fairly good shape in the county of Leeds.

Mr. CARDIN: No doubt.

Mr. STEWART: There was one item I wrote the minister about, a little bit of dredging which I thought would have been done out of the general fund, and I so suggested. But he was kind enough to give it the publicity of appearing in the regular estimates.

Mr. CARDIN: I welcome any suggestion to reduce the length of the estimates.

Mr. BENNETT: The hon. member would prefer a blank cheque, I am sure. May I put it in this way; in fact, may I put it exactly as it was put by one who used to occupy this seat? Is this not an effort, and a very clear one, to lessen the apparent capital expenditures of the country in the main estimates, and to pad these as relief, thereby escaping, what everybody knows now, the swollen estimates of 1936-37?

There have not been presented to this parliament, I suppose for half a generation, main estimates that did not contain a general provision for dominion public buildings, improvements and repairs, in the western provinces. That provision is found in all the estimates. Where it should have been was in the main estimates, or in the supplementary estimates which come at the end of the session. What is happening is that this is so arranged as to make it appear that for relief purposes we are voting this money, when in reality it is not a vote for relief at all. The main estimates are swollen accordingly; we all know that. I wonder that you thought we were so foolish for so long. The minister makes the situation quite clear; this estimate should not be here, but it looks well to put it here rather than put it into the main estimates and make those estimates look larger than they should.

Mr. MACKENZIE (Vancouver): There are provisions in the main estimates for dominion public buildings in every province. This is supplementary.

Mr. BENNETT: Then you simply double the amount; that is all. The amount was not sufficient. Now you say: Look how we are practising economy; look how we cut down on the estimates. And now in these special supplementaries we are asked for another $15,000 for Manitoba, another vote for British Columbia and another for Alberta. The Minister of National Defence knows that is a very simple way to do it—put it into the main estimates, but do not put in enough and say: Behold the economy practised by thy servant. Then turn the other way and say: Look at what we have done for unemployment. No wonder the Minister of the Interior laughs. Even his sense of humour—and that is saying a good deal—is appealed to. And anyone will admit that if this appeals to the sense of humour of the Minister of the Interior it must be very clear indeed, so I will leave it at that.

Mr. CRERAR: I assure you, Mr. Chairman, that no one more frequently appeals to my sense of humour than does the leader of the opposition.

Mr. BENNETT: Quite so; I thought the hon. member would be able to say that.

Item agreed to.

Saskatchewan—dominion public buildings—improvements and repairs, $15,000.

Mr. BENNETT: The same thing.

Item agreed to.

Alberta

Calgary — barracks — guard room, meter building and airplane hangar, $175,000.
Dominion public buildings — improvements and repairs, $15,000.

Mr. BENNETT: This is part of the air policy of the government, and I am bound to say that I was not consulted with respect to it, pleased as I am to see it here. If they could get it anywhere else they would not put it here.

Item agreed to.

British Columbia

Dominion public buildings — improvements and repairs, $15,000.
Vancouver—addition and alterations to R.C.N.V.R. building, $9,000.

Mr. STEWART: What about the additions to the Vancouver building?

Mr. BENNETT: That is for the naval cadets.

Mr. MacNEIL: I wish to direct the attention of the minister to what I consider to be a serious omission. Some time ago I brought to his attention the necessity for the erection of a public building at Powell River, and he assured me that this matter would receive consideration in the preparation of the supplementary estimates. Perhaps I am not familiar with the practice followed in allocating expenditures to various areas, but it strikes me that there is the need for a public building in the town of Powell River as great as that existing at many of the points for which provision has been made in the supplementary estimates.

May I remind the minister that in 1914 a sum was voted for the erection of a public building at Powell River, but the construction of that building was not proceeded with because of the intervention of the war. It is now important to note the remarkable development of this important industrial community, and the fact that it has wholly inadequate facilities for the transaction of post office, customs and excise business. The buildings now in use are so inadequate that during the busy hours serious congestion occurs.

Powell River has a population of 5,400, a pay-roll now in excess of $1,125,000 annually. Goods are produced each year to the value of $7,000,000 and exported each year to the value of $4,490,000. These figures will give an idea of the amount of business transacted in the community. The registered tonnage of sea-going ships entered annually stands at 472,000 tons. I know the minister has on file a photograph of the present post office building, and I may tell him that when the men are off shift and call for their mail the congestion and delay are serious. I made a personal inspection of the premises, and on the testimony of the local officials I may say that it is impossible efficiently to transact the business of this rapidly growing community.

The customs business is carried on in a converted bunk house which is also quite inadequate for the accommodation of the customs' officers. I understand the Powell River Pulp and Paper Company has agreed to provide a site for the erection of a public building in Powell River and has made representations to the department setting forth the necessity for the erection of a building at that point at an early date. In view of the justification given for other appropriations which have been made, may I say that the need is as great in Powell River as at any other point in Canada. Considering the matter strictly from the standpoint of good business, I had reason to hope something might be done this session. I am grievously disappointed that the minister has not seen fit to introduce in his supplementary estimates an appropriation for this building.

Mr. CARDIN: May I say to the hon. member that the project he mentioned is like many others on the list. It has been considered by the department, but at the last moment it was decided as much as possible to reduce the number of public buildings for which provision would be made in the estimates. However I assure the hon. member that the representations he has made will receive proper consideration, and judging from the importance of the locality, in view of what he has just said he may be sure I shall do the best I can to meet his request when another opportunity offers.

Mr. NEILL: Will the minister—I was going to say "peddle," but I won't—give the same line of talk with regard to a public building at Tofino, which building he practically promised me?

Mr. CARDIN: Yes.

Item agreed to.

Harbours and Rivers

Nova Scotia

Big Bras d'Or—wharf extension, $6,000.
Broad Cove Marsh — breakwater extension, $7,100.
Brooklyn—dredging—revote, $20,000.
Caribou Harbour—breakwater, $10,000.
Crescent Beach—protection work, $2,800.
Digby—harbour improvements, $45,000.
Dingwall (Aspy bay)—harbour improvements, $10,000.
Drum Head—dredging, $15,700.
East River locks—removal of walls, $36,100.

Freeport (North East cove) — breakwater, $9,500.
Gabarus—dredging, $10,000.
Iona—wharf extension, $13,500.
Liverpool—dredging, $20,000.
Moose Harbour—improvements, $3,000.
Pictou Landing — wharf improvements, $20,100.
Port Hood — closing northern entrance, $25,000.
Seal Island—breakwater, $12,300.
Sydney—wharf extension and warehouse, $75,000.
Yarmouth harbour — dredging, $143,000.

Mr. MacNICOL: There are three items in this vote about which I should like to ask.

Mr. CAMERON (Cape Breton): Before the item carries I should like to ask the minister a question concerning projects intended especially for relief. As I understood from the discusison this afternoon, some of these projects are not specifically for relief purposes. On what basis are those intended for relief selected by the department? I have in mind the item of labour, for instance.

Mr. CARDIN: It is very difficult to draw the line, and to answer the hon. member's question directly. In dealing with estimates for the Department of Public Works we have kept in our mind the desirability of undertaking certain works which might relieve unemployment in a locality. It is a matter of judgment as to whether one project would provide more work than another, and would relieve unemployment in a locality to a greater extent.

These estimates are not what could really be called relief estimates. The relief assistance given by the government is given by the Department of Labour. In each case we decide more generously than is the custom to undertake a work with a view to providing employment in a locality and to a certain extent relieve unemployment, although we execute a work which one day or another would have to be undertaken by the government. The main object of these estimates is not to relieve unemployment but to undertake now, in view of the large amount of unemployment, certain works that might otherwise be postponed. By making these expenditures now, instead of next year or the year after, we are not only doing work that is necessary but helping to relieve the difficult unemployment situation by providing work in different localities where it is needed. To draw the line between what is strictly relief work and what is not would be very difficult, and we do not start from that basis because relief, of course, is primarily a matter for the Labour department. We are advancing the program of the Public Works department a little bit in order to relieve unemployment. I do not know whether with my incomplete knowledge of English I have made myself clear to my hon. friend.

Mr. CAMERON (Cape Breton): The minister has made it perfectly clear so far as I am concerned, and I am going to take that one statement of his, that on occasions public works are advanced a little bit where it would serve the double purpose of providing a useful public work and helping to relieve unemployment. Taking that as a basis, with which I thoroughly agree, I desire to direct the minister's attention to a small undertaking which I sought to have carried out in the harbour of North Sydney. This work was intended as a shelter for fishermen at that port. Some work was undertaken in that regard by the former government, and a considerable amount of dredging was done last fall at a place popularly known as Ballast Ground at North Sydney. The object of that work was to provide a shelter for fishermen engaged in what is commonly called inshore fishing. Ballast Ground itself formed a fairly good shelter for the boats, but it was felt that it was not sufficient, and the late government sent a dredge down there last fall and opened up a small shelter for the boats inside Ballast Ground. But the work stopped there, with the result that the shelter which the boats had is now taken away from them, and the shelter intended to be prepared is not completed. Since last December I have pressed this on the officers of the department both as a necessary public work and as a matter of relief, and in view of the groundwork laid by the minister here this evening, that the rule of the department is to "advance" a public work where it would furnish relief, I cannot understand why this work is postponed. I say that particularly because there is not a single bit of accommodation for these fishermen at North Sydney. The department has placed in the estimates a vote of $75,000 for an extension to a wharf five miles up the harbour at Sydney, where there is some accommodation, not sufficient, I admit, but still some accommodation, and I have been unable, speaking on behalf of the fishermen of North Sydney, to obtain any accommodation for them at all There is some dredging required to complete the work, and I am informed that it has been postponed until late in the fall as the only dredge available has been sent to another portion of the riding to carry on work there.

I was glad to hear the minister say that he has not completely shut the door on a necessary public expenditure, and I sincerely hope that his departmental officials will yet see the reasonableness of the request made by the fishermen of North Sydney. I understand that a petition largely signed has been sent in to the department within the last few days. Perhaps the minister has not received it yet, but I understand it is on the way, and I hope before parliament prorogues this matter will be given consideration.

Mr. MacNICOL: I would ask the minister why the votes for Dingwall, Iona and Port Hood were not included with votes for the same purpose on page eight of these special supplementaries.

Mr. CARDIN: The information I have here with reference to Dingwall is that this further amount is required in addition to the amount of $6,600 provided in the main estimates, to complete the reinforcement of the breakwater under contract with Mr. Walter L. Ball of Cheticamp, Nova Scotia. The amount of the contract is $45,927. The district engineer reported that the reinforcement work is necessary due to severe action of the teredo and storms.

Mr. STEWART: Is the last item $143,000, dredging of Yarmouth harbour, new work?

Mr. CARDIN: Yes.

Mr. STEWART: Just where is the work to be done?

Mr. CARDIN: It is for dredging in the channel in Yarmouth harbour.

Mr. STEWART: I thought we had made provision for pretty well taking care of that in the estimates of the previous year. A large sum was provided to give the necessary accommodation for two large steamers that came up from Boston and New York.

Mr. CARDIN: The work we are proposing to undertake is in the channel.

Mr. STEWART: There was some work required in the basin, close to the wharf; and also near Bug light.

Mr. CARDIN: The work in the basin has been completed, this work is in the channel.

Mr. STEWART: At what point in the channel?

Mr. CARDIN: This is to do away with a very difficult curve which the vessels have to navigate.

Mr. STEWART: Does the minister think this will complete the dredging of the channel to make it satisfactory for these vessels?

[Mr. D. A. Cameron.]

Mr. CARDIN: No; I am informed that this is not going to complete the work. It will require a larger amount of money to complete it.

Mr. STEWART: Has the minister the estimate of the total amount required to put the channel into good shape?

Mr. CARDIN: No.

Item agreed to.

New Brunswick

Barachois—wharf extension, $7,000.
Bathurst—dredging, $22,700.
Black's Harbour—improvements, $3,500.
Campbellton—wharf improvements, $20,000.
Durham—wharf extension, $25,000.
Fort Dufferin—breastwork repairs, $33,000.
Harvey Bank—wharf extension, $24,000.
Ingall's Head—breakwater extension, $60,000.
Little Cape—breakwater extension, $5,000.
Little Chockfish—breastworks and breakwaters, $5,000.
Little Lameque—wharf repairs, $13,000.
Portage Island—breastworks, $10,000.
St. John (Negro point)—repairs to harbour works, $50,000.
Tracadie harbour—dredging, $40,000.

Mr. STEWART: Are these new works?

Mr. BENNETT: There is a large sum for dredging at Tracadie, for a small port on the north shore as compared with other places.

Item agreed to.

Quebec

Amos—wharf extension, $3,325.
Anse a Beaufils—repairs to harbour works, $15,000.
Anse a Brillant—fishing harbour, $45,000.
Belœil—protection work, $7,700.
Black River—dredging—the provincial government to contribute a like amount, $4,000.
Bonaventure—protection work, $9,000.
Cap Chat—protection work, $7,700.
Chandler—wharf repairs, $7,000.
Cross Point—dredging, $12,000.
Etang du Nord, M.I.—harbour improvements, $25,000.
Granby—protection work, $6,000.
Gros Cap, M.I.—landing pier, $3,100.
Havre Aux Maisons, M.I.—wharf, $6,500.
Lac Duparquet—wharf, $2,600.
Lac Rouyn (Mercier)—wharf, $2,300.
Lanoraie—extension to protection wall, $2,800.
Laprairie—icebreakers, $4,200.
Laprairie—repairs to dyke, $28,000.
Lavaltrie—extension to protection wall, $3,100.
Lévis—wharf, $50,000.
Malbaie—small landing pier, $1,780.
Matane—extension to east breakwater, $60,000.
Mont Louis—protection work, $5,600.
Moffette—wharf, $3,500.
Moisie—protection wall extension and repairs, $2,500.
New Richmond—protection work, $7,000.

Notre Dame de Pierreville—protection wall, $16,000.
Notre Dame de Pierreville (Chenal Tardif)—icebreaker, $3,200.
Notre Dame du Portage — wharf repairs, $10,000.
Paspébiac—wharf extension, $46,000.
Peninsula—wharf extension, $2,600.
Petite Rivière St. François—wharf extension, $15,000.
Petite Vallée—wharf extension, $27,000.
Pointe Claire — completion of approach, $2,000
Pointe du Lac—protection work, $10,000.
Pointe Jaune — improvements to fishing harbour, $27,000.
Pointe St. Pierre — wharf reconstruction, $12,500.
Richelieu river—improvement of river and Chambly canal system, $500,000.
Rimouski—harbour improvements, $150,000.
Rivière aux Rats—wharf, $4,900.
Rivière Beaudette—protection work, $2,000.
Rivière Blondelle—protection work, $5,200.
Rivière des Hurons — contribution towards dredging, the balance of cost to be borne by the province, $75,000.
Ruisseau Pariseau — contribution towards dredging, the balance of cost to be borne by the province, $15,000.
Ste Anne des Monts (river)—extension of training pier, $8,000.
St. Antoine de Tilly—wharf reconstruction, $17,000.
St. Etienne de Malbaie (Casgrain wharf)—fill spans, $5,000.
St. Godfroy (Rivière Nouvelle)—protection work, $16,650.
St. Grégoire de Montmorency—repairs and completion of protection wall, $5,000.
St. Maurice river—dredging, $18,000.
St. Michel des Saints—extension to protection works, $1,800.
St. Omer—raising protection work, $4,400.
Ste. Rose—protection wall, $4,900.
St. Simeon de Bonaventure—protection work, $12,200.
Saguenay river—dredging, $200,000.
Sorel—harbour improvements, $85,000.
Tadoussac (Anse Tadoussac)—wharf improvements, $15,000.
Val Barette—protection work, $3,000.
Varennes—protection wall, $15,000.
Verchères—protection wall, $10,000.
Victoriaville—protection work, $5,000.
To provide for payment of salaries and expenses in connection with the investigation in Canada of the improvement of the waterway from Montreal through lake Champlain to the Hudson river, $20,000.

Mr. STEWART: Are these all new items?

Mr. BENNETT: There is one item with respect to which there will have to be an extensive explanation, namely, $500,000 in connection with the Richelieu river. It will be observed that there is also $200,000 for dredging on the Saguenay river and $20,000 to provide for payment of salaries and expenses in connection with the investigation in Canada of the improvement of the waterway from Montreal through lake Champlain to the Hudson river. This is a matter of first importance.

Mr. CARDIN: Perhaps I should say a few words on these items, for I realize their importance.

Mr. STEWART: I notice in the main estimates in connection with Richelieu river improvements, an item of $122,000. Perhaps the minister would discuss that in connection with the item before us, showing the relation, if any, between the two.

Mr. CARDIN: This is a revote of a contract which was awarded last year for the deepening of the Richelieu river from St. Ours to the Chambly canal.

Mr. STEWART: Is one item a continuation of the other?

Mr. CARDIN: Yes. It is a project for developing the Richelieu river, deepening it and improving the channel. It is not a new undertaking, having been before the department for a number of years, going back as far as 1902. In 1907 also, proposals were placed before the department for the development of the Richelieu river and the improvement of the channel for navigation in that river; and if my memory serves me, the information I obtained was that as far back as 1913 the department was practically ready to ask for tenders for the construction of a regulating dam which was to be built between the city of St. Johns and Chambly, in order to regulate the flow of the Richelieu river and at the same time to protect the low-lying lands above St. Johns, between St. Johns and the boundary line near lake Champlain. This project was not gone on with owing to the war, which broke out in 1914. The question has been before the department for a considerable time. The Richelieu river has been dredged from the St. Lawrence up to St. Ours, and the lock at St. Ours was rebuilt a number of years ago, with the same depth and the same dimensions as the locks and canals in the American territory, from lake Champlain to the Hudson river.

Mr. BENNETT: What is the depth?

Mr. CARDIN: Twelve feet. That is the depth of the New York state barge canal which runs from lake Champlain to the Hudson river. The St. Ours lock was rebuilt by the Department of Railways a few years ago at the same depth and with the same dimensions as the New York state barge canal, and in 1934 or 1935—I believe it was 1935—a contract was awarded for the deepening of the Richelieu river from St. Ours, which is being carried out to a depth of twelve feet up to Chambly, making it twelve feet from the St. Lawrence up to Chambly. What I

propose here is the building of the dam which was proposed many years ago to regulate the flow of the Richelieu river for the purpose of protecting the low-lying lands above St. Johns and at the same time to shorten the length of the Chambly canal by half. If that regulating dam between St. Johns and Chambly is built, the distance being twelve miles, it will reduce the length of the canal by six miles.

Mr. BENNETT: Using the river instead of the canal.

Mr. CARDIN: Yes, on that section. This project for the development of the Richelieu river is one which the United States have had in mind. One project which the authorities there referred to the International Joint Commission is a canal starting from lake Champlain and passing through American territory to St. Francis lake outside Montreal. What they contemplate is a canal of twenty-five or twenty-seven feet and approximately of the same depth as the proposed St. Lawrence development. That is one of their projects, and another is to have a similar canal started from St. Johns; that is, twenty-two miles in Canada from the boundary and running from there to somewhere near Laprairie. This would be entirely an inland canal and would be of the same depth as the first project, running through lake Champlain to lake St. Francis. The third is a project which would include the reconstruction of the Chambly canal, starting from the Chambly basin at the foot of the Chambly canal. The canal would be dug from that place up to a point near Montreal—Longueuil or Laprairie or St. Lambert. Those are the three main suggestions which the United States authorities have referred to the International Joint Commission. The fourth one is a purely Canadian project, having for its object the development of a purely Canadian watercourse.

Mr. BENNETT: As a matter of fact, No. 4 has been in use for years but was allowed to go into disuse.

Mr. CARDIN: The Chambly canal was built a long time ago, but it is not used to-day as it should be, because the depth is only five and a half or six feet. When I was a boy I used to see the Richelieu river at and above Sorel practically full of canal boats carrying all sorts of goods and materials from Quebec, Three Rivers, Montreal and even Ottawa. Many of these canal boats would start from Ottawa and go to Montreal and as far as Sorel, going through the Richelieu river and on to the United States. To-day, however, as we know, these small boats are no longer in operation; they cannot be run to advantage. The size of the boats has been increased materially and it is impossible to take advantage of this natural and important waterway, which is second to the St. Lawrence. Advantage cannot be taken of it owing to the size of the boats operated at the present time.

Mr. BENNETT: It is a matter not of widening but of deepening.

Mr. CARDIN: And widening to a certain extent as well, because the canal is very narrow. But even in its present condition that water route is extensively used, and increasingly so every year, by the paper manufacturing companies of the province of Quebec and even by shippers in Ontario.

Mr. BENNETT: And by pleasure boats.

Mr. CARDIN: And pleasure boats as well. It is a natural route, and in my opinion it is advisable to revive this whole proposal and try to develop this purely Canadian route. There is no danger that we shall suffer in any way from this development. The depth that we contemplate is between 12 and 15 feet. That would be sufficient, according to the reports which we have from the companies, for navigating much larger boats than they are using at the present time.

Mr. BENNETT: It would be no good to make it 15 feet if the American canals are only 12 feet.

Mr. CARDIN: No. The proposal is to make it twelve feet at the present time. I do not want to hide anything.

Mr. BENNETT: I understand that. What is meant by the item that is connected with it on the other side?

Mr. CARDIN: Of $20,000?

Mr. BENNETT: Yes.

Mr. CARDIN: That is to meet the expenditures of the survey parties working at the present time with the American engineers on the proposals to be placed before the International Joint Commission.

Mr. BENNETT: That is on lake St. Francis, is it not?

Mr. CARDIN: Yes, on three projects, lake Champlain to lake St. Francis; St. John to Laprairie; Chambly to Laprairie, and the fourth, the Richelieu river. The American engineers have estimated that the project through the Richelieu river is worthy of being studied and considered. This sum of $20,000

is to cover the expenses of the survey, to inform the Canadian section of the International Joint Commission in their discussion with the Americans regarding the project. Of course I am incapable of going into the technical details that the engineers have given in their report of the project for the development of the Richelieu river, but I feel that generally speaking it is a good policy for Canada to undertake the development of so interesting a natural watercourse as the Richelieu River. Since the opening up of Canada that river has been used for transporting goods; even in the first days of the colony it was so used.

Mr. BENNETT: Three hundred years ago.

Mr. CARDIN: Yes; and later on the governments of Canada attempted improvements of that river and the canalization, because they built that old Chambly canal a long time ago. We are developing that water route only in order to bring it to the present needs of our trade and commerce. Besides this large aspect of the problem, the development of the Richelieu river is going to prove very important for all the localities situate along its banks. It affects the counties of Richelieu, Verchères, St. Hyacinthe, Iberville, St. John, Missisquoi, Chambly, Rouville, and also Huntingdon.

Mr. BENNETT: You have got them all now, so it won't make much difference.

Mr. CARDIN: I do not think I can add anything to the general statement I have made. I ask the committee to consent to the item.

Mr. STEWART: Assuming that one of the three first projects which the minister outlined as having been suggested by the American government should be undertaken at some later date, what would be the effect upon this work if one of these other projects was completed? Would it be to render this of practically no value?

Mr. CARDIN: No, because, as I said, this development of the Richelieu river is undertaken as a purely Canadian enterprise; it will provide a channel only twelve feet deep; and it is going to be useful to the residents of the counties that I have just enumerated. It will also be a natural link between the St. Lawrence and lake Champlain. Even if the other projects were carried on we still must consider the development of our own proper channels and the dredging of our own rivers, which can render useful service even though the other projects are undertaken. Suppose, for example, that the first proposal of the Americans is accepted; that is, the building of a canal from lake Champlain to lake St. Francis, traffic coming from above Montreal would go right through to lake Champlain, the Hudson river, Albany and New York.

Mr. BENNETT: That would cut out the harbour of Montreal, using the Richelieu river entirely.

Mr. CARDIN: Exactly. So we would still have to consider the desirability of developing the river Richelieu to a depth of twelve or fifteen feet for our Canadian use, if I may so phrase it. It would help materially the traffic of the east, and this development is of importance to Three Rivers and even to Quebec and Montreal.

Mr. BENNETT: Does the minister think we should spend any money, either on surveys or otherwise, for the purpose of cutting a canal from lake St. Francis to lake Champlain? The effect of it, obviously, would be to create business for the port of Albany. There is no question about that; we might as well face it frankly: it would certainly divert traffic entirely into the Hudson river and the new port of Albany. In my opinion we should think a long time before we spend a dollar either for surveys or for expenditures on that project. Let us assume for the sake of the argument that it is possible and feasible: what we should be doing would be spending our money just for the purpose of destroying our own ports. The little study I was able to give the matter some time ago convinced me that this is one of the projects to which we are not warranted in giving any consideration.

Mr. CARDIN: I quite see the point made by the right hon. gentleman. However, conceding my ignorance of the terms of the treaty between England and the United States establishing the International Joint Commission, I think we could not refuse to study the problem which the Americans have submitted to the International Joint Commission.

Mr. BENNETT: I see the minister's point.

Mr. CARDIN: This study is to inform our representatives as to the conditions. At the same time the survey that is to be made will be helpful for the development of the Richelieu river, because the four projects are going to be studied at the same time.

Mr. BENNETT: Yes, but this was on an entirely different basis.

Mr. CARDIN: I admit that.

Mr. BENNETT: There is no relation of one to the other. I have been fearful from the time I first saw the announcement in the paper; and I think most Canadians are. The Richelieu river project is one that needs no support from any quarter; it is merely for the purpose of surveying what it always has been, a drainage river running south from the main St. Lawrence. It has been utilized for two or three centuries—two and a half centuries, anyway—for going down to that country; it could never become a serious menace to our own ports with respect to transatlantic shipments. I think that is reasonably clear, because I assume we should not go beyond the twelve foot depth provided for by the Americans in their canals. But when you get to discussing the question of a canal from lake St. Francis to lake Champlain you are dealing with an entirely different matter, because it means the diversion of traffic coming down the St. Lawrence river, at lake St. Francis, into a canal that carries it to lake Champlain, and from there to Albany and the Hudson river, and that means going out of New York harbour to the open sea. The money that has been spent on Albany and the facilities of that port are perhaps little known to Canadians who have not given much study to the matter. The Hudson river from Albany to New York, or to the mouth of the river, is now available for very large seagoing ships carrying a larger quantity of grain than is carried by the tramp ships out of Montreal during the grain season. From 250,000 to 275,000 bushels would be a fair cargo for the average run of tramp ships that ply between Montreal and the continent of Europe. I must say that when I saw that this matter had been referred to the commission, I felt that it was one for which, if we could avoid it, we should not undertake any responsibility, for the reason I have indicated. I ask the minister whether or not he thinks, in view of the present financial conditions to which the Minister of Finance directed attention the other day, we are warranted in making this appropriation at this time. That is what it means. We may as well face it frankly. I use that word with great precision in this case. Here we have over $1,600,000, which the minister says is not calculated for relief alone, and more than $800,000 for Ontario in the following item. These two together make a total of more than $2,500,000, of which $200,000 is for dredging in the Saguenay river; $85,000 for Sorel harbour improvements, in view of the elevator that is to be constructed there, east of the port of Montreal, and a further expenditure of $150,000 in Rimouski for harbour improvements. Is this country in a financial position to stand that sort of thing at this time, in view of what was said to us by the Minister of Finance the other day? I quite understand the main estimates; I quite understand a reasonable amount of supplementary estimates the year following an election, but when I look at these appropriations, knowing what I have learned as to just what they involve, I wonder whether or not we are in a financial position to stand that sort of thing.

Mr. STEWART: I should like to ask if this appropriation of $500,000 will complete the work in the Richelieu river.

Mr. CARDIN: Oh, no.

Mr. STEWART: Will it make the canal useful?

Mr. CARDIN: Oh, yes.

Mr. STEWART: Will it just complete one section of it?

Mr. CARDIN: Yes, that is my information.

Mr. STEWART: It will do one section?

Mr. CARDIN: Yes.

Mr. STEWART: That will not be of much use unless the other section is completed, will it?

Mr. CARDIN: No.

Mr. STEWART: Can the minister tell us how much he thinks will be required to complete the remaining section, which will make this expenditure useful?

Mr. CARDIN: It is very hard for me to state what amount will be required to complete this work, because the plans for the reconstruction of the channel have not been prepared as yet and no survey has been made to ascertain what it would cost or what would be the requirements for the reconstruction of the canal. Some time or another, however, that canal will have to be repaired and reconstructed, or it will have to be abandoned. It is a very old structure and in the course of a short time it is going to be useless unless something is done, so at some time or another, now or later, we shall be forced to either do something to the Chambly canal or to abandon it.

Mr. STEWART: Apparently this expenditure will commit the Dominion of Canada irrevocably to the expenditure of a very large amount of money, just how large the minister is not able to give even an estimate to the committee.

Mr. CARDIN: No definite estimate.

Mr. STEWART: I submit that this is not a very sound policy.

Mr. CARDIN: At one time I made an estimate, but it was a risk; it was a mere guess, but since that time it has been taken as a definite statement.

Mr. STEWART: I think the minister will agree that it is a sound policy that parliament ought not to be asked to make an expenditure of this kind without knowing in a fairly accurate way what will be the ultimate commitment. I am sure that is a policy which the minister will agree is sound.

Mr. CARDIN: I have a rough estimate; there is nothing definite about it, and I want that very clearly understood, but I am told that when the whole project is completed it may cost in the vicinity of $8,000,000. That is only a rough guess because, as I have said, the engineers have not had an opportunity to make the necessary surveys in order to ascertain what the reconstruction of the canal is going to cost. Let me repeat, however, that some time or another we are going to be faced with the necessity of either doing something with that canal or abandoning it. It is a very old structure; before long it is going to cost a great deal for repairs, so why not start now? The project is not going to be completed this year, next year or even within two years; I am told that it will take four years and possibly longer before it is really completed.

Mr. BENNETT: The last appropriation, I should think, would be just before the next election.

Mr. CARDIN: It may be even after another election.

Mr. STIRLING: What will be the chief freight carried on this canal eventually?

Mr. CARDIN: All kinds. It may be coal; it may be pulp and paper. A great deal of pulp and paper is being shipped out that way now, and there will be the great variety of freight which is transported in that section of Canada. The farmers and merchants of that region may also take advantage of navigation on that river.

Mr. BENNETT: How far east of Montreal is the mouth of the Richelieu river?

Mr. CARDIN: Fifty miles.

Mr. STEWART: This seems to me to be a case where the work to be undertaken does not meet either of the fundamentally sound propositions laid down by the minister in connection with work of this kind. They were: first, that the work should be useful and, second, that it should afford employment for those out of work. I take it that the expenditure of this amount of money is not going to result in anything useful, except doing an instalment on a work that must be done some time. We all know that dredging does not afford a very large measure of employment.

Mr. CARDIN: Dredging is a small part of the undertaking.

Mr. STEWART: Does the minister say that the amount to be expended on dredging under this item will be small?

Mr. CARDIN: Yes, relatively small.

Mr. STEWART: What will be the other work, the reconstruction of the canal?

Mr. CARDIN: Yes, the reconstruction of the dam and of the canal, which is all cement work, of course, which is a kind of work that will provide much employment.

Mr. STEWART: Then I revise my statement with respect to that; I thought a large part of the money was to be spent on dredging which, as the minister knows, does not afford a large measure of work for those out of employment because it is all done by machinery. It does seem to me, however, that the other objection is sound, that this is not really a useful work at the present time. This expenditure of money is not going to advance us any further; it will not bring about any results, and it seems to me that the minister should hesitate to ask parliament at this time to make an expenditure of half a million dollars which, as I say, will commit the country to a further expenditure of an unknown sum which the minister says may be $6,000,000 or $8,000,000, and which may run to $10,000,000 or $12,000,000. I really think it is a very serious matter in view of the financial situation of Canada at the present time and the comparative uselessness of the work to be done.

Mr. BENNETT: Why should we spend $200,000 at this time for dredging in the Saguenay? That is a pretty large item.

Mr. CARDIN: I am informed that there are certain sections of the river in which the depth of water is not sufficient, and this dredging will connect the harbour with the deeper sections of the river.

Mr. STEWART: Does the minister mean the harbour of Chicoutimi?

Mr. CARDIN: Yes.

Mr. STEWART: This is to afford access to Chicoutimi harbour?

Mr. CARDIN: Yes.

Mr. STEWART: To improve the channel to Chicoutimi?

Mr. CARDIN: Yes.

Mr. STEWART: What length of channel is involved in this improvement?

Mr. CARDIN: There are seven miles.

Mr. STEWART: Seven miles of channel which will be improved?

Mr. CARDIN: Yes.

Mr. STEWART: Will this expenditure complete the work in that channel?

Mr. CARDIN: No, it will take, if I remember aright, another $100,000. I asked the whole amount, but I am sure my hon. friend as Minister of Public Works has gone through the same experience; we prepare estimates and when we place them before the treasury board we are forced, in order to help the Minister of Finance to come nearer to balancing his budget, to make certain reductions. In the list I submitted I provided an amount which would practically complete the work but I was forced to reduce it, because this amount is all that could be spent during the season.

Mr. STEWART: Will this afford any real relief without the further expenditure that the minister mentions as being ultimately needed?

Mr. CARDIN: Well, it means certain assistance. Even if it is true that dredging does not employ large numbers of men directly, yet that machinery which is being used for dredging is built and maintained and repaired by other men, who get employment that they would not otherwise get. I admit it is not as productive from the point of view of employment as the building of a dam, but this is to permit taking advantage as much as possible of the facilities which have been established in the port of Chicoutimi for vessels navigating the Saguenay river, permitting them to reach the port without having to wait for the change of level by the tide.

Mr. STEWART: Perhaps I did not make my question clear. What I wanted to know is whether the expenditure of this money will enable any vessel to get to the wharves at Chicoutimi that cannot now get up?

Mr. CARDIN: Yes.

[Mr. Cardin.]

Mr. STEWART: Or whether there will have to be further expenditure?

Mr. CARDIN: Vessels cannot now go every hour of the day to the wharves at Chicoutimi; they have to wait until the water rises as a result of the tide, but when that dredging is completed the vessels will be able to go there every hour of the day.

Mr. STEWART: I understand that, when it is all completed, but with the expenditure this year will they be able to reach the wharves?

Mr. CARDIN: With the expenditure this year the work will not be completed, so they will not be in a position to take full advantage of it, but it is a start towards completing the channel.

Mr. BENNETT: Are not these the facts: that the Chicoutimi harbour commission was created in 1925-26 for the purpose of building a harbour at Chicoutimi; that the harbour never should have been put there; that the only place that there should be a harbour is at Ha! Ha! bay which is across from there; that now that the harbour has been built, unless dredging goes on, there will be no practical use for those wharves or that harbour for steamers of a draft of, I think, eighteen feet—I forget the exact figure; leave that out for the moment, but for steamers of substantial tonnage—and that this proposal to spend $200,000 will have the effect only of accentuating the value of the harbour at Ha! Ha! bay and indicating how absolutely useless this Chicoutimi harbour is because it will fill in again with the currents as they have been all these ages. It is a sandy bottom, I am told, and silt and sand will fill the very channel that you dredge. That is my information, that there is no justification for it, never has been. The minister of transport to be has been dealing with the harbour; we know exactly the money that has been spent and the money that is to be spent; we know the circumstances under which the harbour came into being, and we know that the harbour across the way is the one which is being used by large ships that load paper from the big mill which sends its product down to that harbour. Under these circumstances can we justify in these days the expenditure of this money for that purpose?

Mr. DUBUC: May I be allowed to correct the statement of the leader of the opposition. The harbour of Chicoutimi when the channel is straightened out will be able to accom-

modate steamers of any draft up to thirty feet, and if the coal and paper have to pass by Ha! Ha! bay it means an extra charge of $1.50 to $2 a ton.

Mr. BENNETT: Because there is no wharf there. The wharf is at Chicoutimi.

Mr. DUBUC: There are three thousand feet of docks at Chicoutimi with thirty feet at low water and all the facilities to load—

Mr. BENNETT: And none at Ha! Ha! bay.

Mr. DUBUC: —for the pulp or paper and the coal required to maintain that industry, which is at the end of navigation on the Saguenay river.

Mr. STEWART: There is an item, Rimouski, harbour improvements, $150,000. Would the minister outline what is required there?

Mr. CARDIN: This is to provide additional wharfage facilities in the port of Rimouski. During the last season and the previous one very great quantities of wood have been shipped from Rimouski. It is the centre of distribution for all the supplies that are needed on the north shore of the St. Lawrence.

Mr. BENNETT: How much money has been spent there during the last few years?

Mr. CARDIN: In the vicinity of $100,000, I am informed. There is only a small wharf there which at certain periods is crowded, and vessels have to wait even several days before getting their turn at that wharf. I am satisfied from the figures which have been placed before me that the traffic justifies the development of that harbour. I am not sure whether it is 35,000,000 feet of wood or more that have been sent to England from that port. It is not only for coasting vessels; ocean vessels are loading planks and boards there for shipment to England.

Mr. BENNETT: They do not load at the wharf; they anchor out in the road, do they not?

Mr. CARDIN: No, they load at the wharf

Mr. BENNETT: Large ocean ships?

Mr. CARDIN: Yes, but there is a limited section of wharf at which they can load. There is ample justification for the development of Rimouski; there is no doubt the traffic is there, and the present facilities are quite inadequate.

Mr. BENNETT: What length of wharf will this construct, and how far out into the road? To what extent will this add wharfage facilities?

Mr. CARDIN: The idea is to develop the inside section of the harbour, about one thousand feet, to give berthing facilities to three or four ships.

Mr. STEWART: Does this involve dredging?

Mr. CARDIN: A certain amount of dredging.

Mr. STEWART: Would there be some revenue from the traffic over this wharf?

Mr. CARDIN: Yes.

Mr. STEWART: I know that revenue is collected not by the minister's department, but by the Department of Marine.

Mr. CARDIN: Yes.

Mr. STEWART: Has the minister any information as to the amount of revenue?

Mr. CARDIN: No, I cannot say. The revenues of this harbour, as well as those of Sorel harbour, and others, are collected by the Department of Marine, according to a schedule of fixed rates for wharfage dues in the harbour. There is a schedule which applies to all harbours that are not governed or directed by the harbour commissioners.

Mr. CAMERON (Cape Breton): What would be the annual traffic over the Chambly canal?

Mr. CARDIN: I cannot say what the traffic would be over that canal, when it is completed. I am informed that when the St. Lawrence canals had no greater depth than the Chambly canal the traffic on the Chambly canal was greater than that on the St. Lawrence canals.

Mr. BENNETT: But the Chambly canal is only six or seven feet, is it not?

Mr. CARDIN: At present it is six, but most of the time during the summer season it is only five and a half feet. At one time the St. Lawrence canals had the same depth.

Mr. BENNETT: At one time there was no canal there at all.

Mr. CARDIN: But when the depths were the same the traffic was greater on the Chambly canal than on the St. Lawrence canals. Of course the St. Lawrence canals have been deepened on several occasions and there is no comparison now as to the traffic.

Mr. BENNETT: I want to ask the minister this: Does he not think he should reconsider this item? I put the situation to him fairly, and then I am through. First of all he asks for $60,000 for a breakwater at

Matane, and he will tell me, no doubt, that that is another north shore harbour which has to be looked after and, I suppose, is very important. Then we come to the next one, a vote of $46,000 for Paspebiac wharf, and then a vote of half a million dollars for improvements in the Richelieu river, just an earnest for $8,000,000. Does it not look like the Montreal harbour bridge? There are $8,000,000 in sight, and that means $10,000,000. To use the language so familiar to some of my hon. friends the ante is a half a million, that is all. Is that quite fair to Canada at this time?

Then, the next one is a vote of $150,000 for harbour improvements at Rimouski. All along the coast of New Brunswick and Nova Scotia in years gone by ships used to lie in the roads and loaded with deals from scows. They did not expect to have a wharf at every door. Rimouski has had $100,000 spent on it during the last two years for purposes of providing it with wharf accommodation facilities for schooners and smaller vessels, and if ocean-going steamers come to take deals there is no reason why they should not do what is done, for instance, at Ha! Ha! bay, namely load from scows or barges where there is not sufficient wharfage accommodation.

Coming to the next item we find an expenditure of $75,000 for a contribution towards dredging at Rivière des Hurons, the balance of the cost to be borne by the province. If the dominion is getting half in this case, why is it not getting half on a dyke being put up at Laprairie? That work stands in the same position. Having regard to the claims made so successfully by the province with respect to waters, as distinguished from navigation—property in the waters—why should we have half paid by the province in this item, when we have not in other cases?

Then we turn to dredging in the St. Maurice river. I can understand that dredging must be done there, because Three Rivers is an important port connected with the shipment of paper to various countries of the world. But we come next to a vote of $200,000 for dredging in the Saguenay river, which serves no purpose unless a still larger sum is expended. That is, the expenditure of $200,000 must be followed by another expenditure perhaps as large, or perhaps much larger, because, as a report of engineers indicates, the silt and sand will fill in during a winter to the extent it has been taken out in the preceding summer. It is one of the finest dredging contracts in the world.

The next item is an expenditure of $85,000 for Sorel harbour improvements. I have every sympathy with the minister's love of his native community. Sorel is a port at the mouth of the Richelieu river, is it not?

Mr. CARDIN: Yes.

Mr. BENNETT: That is another Richelieu expenditure. There is already an item in the main estimates, which the minister tells me is not to be regarded as being too closely connected with this one. But is it not desirable to consider whether or not we should move at this time in connection with projects involving large expenditures? You see $10,000,000 is involved in these expenditures, and $10,000,000 becomes a matter of great importance to the Minister of Finance and to the people of Canada at this time. Can we afford to do it? I suppose most hon. members are familiar with the statement not long since of a very famous American. He said, "We must make up our minds there are many things that we want that under the present system we cannot have, unless we are prepared to destroy the system." Then we would not have it. I put these facts to the minister, and I do not wish to urge the matter further. I do suggest, however, that he should give the matter the most careful consideration and should consider whether or not the item could be revised.

This item does call for careful consideration, and without anticipating something which is not yet before the committee could he not consider whether the government is warranted in spending the large sum of $180,000 at the port of Port Arthur for harbour improvements? On one occasion I went over that work with great care, to satisfy myself about it, and I shall make special reference to it when the item is under discussion. However, I do ask the minister to give careful consideration to that phase of the matter.

Mr. CARDIN: I think it is universally agreed in Canada that the best method of combating unemployment is to make expenditures which are considered justifiable. It is believed to be much better to make those expenditures for useful purposes, although all the benefits may not be derived in the first year, than to give money for direct relief or for the maintenance of relief camps. We have spent on these relief proposals—they were necessary; I do not dispute it—millions upon millions which have been profitless. We have not received any returns, and we canot get any. Although in certain cases the justification for the expenditures indicated in these estimates may be disputed, there can be no doubt that they are works which from a certain point of view can be considered justifiable.

The development of our railways, our highways and our waterways have the same object in view, namely the development of Canadian trade. It is with that object in view that we have felt it desirable to place these amounts in the estimates. Although it may be said, "Well, now, let us wait another year," we must remember that those who are in need of the opportunity to earn money cannot wait another year. It is better to provide works so that they may earn their daily bread than to hand them the dole in its most offensive form.

Mr. BENNETT: I understand that.

Mr. CARDIN: I admit that these estimates may be considered a little large at the present time, but they have been submitted to the Minister of Finance, and he felt that even with these expenditures he was capable of preserving the financial condition of our country. These are useful works. As I said a few moments ago, some of them, the Chambly canal for instance, have to be undertaken one day or another. Something has to be done at some time or another. I really believe we are justified in asking for these expenditures, and as I said before, the large amount of $8,000,000 for the development of the Richelieu river will be spread over a period of four or five years. It represents a very small amount as compared with other expenditures that have been made in the past, and I think the main object, the developing of our transportation facilities, deserves to be favourably received and accepted by the committee. Like the right hon. gentleman, I apprehend the difficulties through which our country is passing and the responsibilities of those charged with administering the affairs of this country, but I think in view of the experience we have gained we are justified in developing our transportation facilities in the province of Quebec as well as in other sections of Canada.

Mr. WALSH: To what depth is it proposed to dredge the Chambly-St. Johns canal?

Mr. CARDIN: To twelve feet.

Mr. WALSH: That will involve almost the building of a new canal?

Mr. CARDIN: It certainly involves the building of a new canal.

Mr. WALSH: And the amount here is only a very small initial payment towards the ultimate cost of developing that system?

Mr. CARDIN: Quite so.

Mr. WALSH: Does the minister think the amount of traffic which can be carried over that system to lake Champlain would justify the ultimate expenditure? This amount of $500,000 is only a bagatelle compared with the ultimate expenditure. Does the minister honestly think there will be enough traffic over that system to justify its development?

Mr. CARDIN: I certainly do; otherwise I would not propose this expenditure.

Mr. WALSH: What possible large traffic could we have over a system of that kind down to lake Champlain when lake Champlain itself is bottled at the far end?

Mr. CARDIN: I have already explained what I think are the justifications for this expenditure. At present, even with the limited depth of water in the Chambly canal, there is a substantial traffic passing through the canal, consisting mainly of pulp and paper shipped by the mills of the province of Quebec, and these people are very anxious that the canal be deepened in order that they may be in a position to carry further quantities of their goods through the canal.

Mr. WALSH: I have been up and down that canal quite frequently during the summer. I used to spend my summer holidays at Chambly, and I know the pulp and paper traffic has never been congested at the mouth of the canal at Chambly. There has always been ample opportunity to lock the few boats which go through. Personally I am fully persuaded that this expenditure in particular is not justified under present conditions; I am quite certain of that. I would hate to suggest any ulterior motive in a development of this kind, but it certainly does not appear to me to be justified either by the amount of freight which has gone through that canal or the amount which could go through. It is true that a considerable amount of pulp and pulpwood goes through, but it goes through on scows with a draft of four or five feet; that traffic is being amply cared for at the present time by that means, and under present conditions I do not see why the canal could not continue to handle it. I am advocating not the saving of this money, but rather the spending of it on some other enterprise where more people could be legitimately employed and more satisfaction given to the people of this country through the expenditure of this sum.

I notice another item of $10,000 for wharf repairs at Notre Dame du Portage. I had the good fortune to spend the summer at Notre Dame du Portage not very long ago, and not a vessel called at that port. We found the wharf a very convenient spot at which to swim, and that was the only use to which the wharf was put. Now it is proposed to spend $10,000 on repairing and renovating that wharf. I would neglect that wharf absolutely because there is no traffic

there, and you cannot develop any there. You have very good wharfage facilities three miles further up at Rivière du Loup. I cannot see how the minister can justify the expenditure of $10,000 on the wharf at Notre Dame du Portage. I do not think there are one hundred people living there, and as I say, there is a splendid wharf three miles away at Rivière du Loup. If the hon. member for the riding were in the house to-night—and it is his privilege to be in the house if he would be here—he would corroborate my remarks. For political reasons he might have suggested an expenditure of $10,000 at Notre Dame du Portage, but for other reasons I do not think he could justify it, in view of the fact that he is so anxious to develop ocean facilities at his home town, the beautiful Rivière du Loup.

Mr. STEWART: I wish to return to the large item for the Chambly canal. As the minister says, it is not a new item. It has been up for consideration over a period of years, and the reasons the minister has given to-night for the undertaking of this work were just as strong in the years that are past as they are now. But even in times of prosperity, when revenues were buoyant and expenditures were made more freely when they were justified, conditions never seemed to warrant undertaking this work in past years. I know it has received consideration in the last three or four years, but the reasons why it should not be undertaken were so overwhelming that it was not considered at all. I say that the conditions have not changed, but that on the contrary the reasons why it should not be undertaken at this time are stronger than ever they have been in the last fifteen or twenty years. I really think the minister ought to give this further consideration. It is a large amount and we do not seem likely to get any immediate return for this expenditure. It also means a very heavy future commitment. I do not think we ought to be asked to pass this item until the minister is able to give more definite information as to what the ultimate cost will be. I know that one of the reasons why there was hesitation in the past in submitting such a vote to parliament was that we did not know what it ultimately meant, but we did know it meant such an amount that the finances of the country in days like these did not warrant even the commencement of the work. I say that the conditions which delayed this work and rendered it inadvisable to undertake it in years past are even stronger to-night than they were before.

[Mr. Walsh.]

Mr. BENNETT: Perhaps the minister will give this item a little thought between now and next time. I have nothing more to say about it. It is opposed not because of the amount, but because of what is involved in the way of future expenditure.

Item stands.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

---

## Monday, May 11, 1936

The house met at three o'clock.

### QUESTIONS

(Questions answered orally are indicated by an asterisk.)

#### SHILO CAMP PROJECT

Mr. MacKENZIE (Neepawa):

1. How many men have been kept, by months, in the Shilo Camp project since November 1, 1935?
2. How many labourers have been employed monthly other than the $5 a month men during the same period?
3. How many carpenters and other skilled workers have been employed monthly since November 1, 1935?
4. How many of these carpenters and other skilled workers were employed from the constituency of Neepawa; who were they and what was their work?
5. How many came from Brandon?
6. What officials hired the men employed, and what were his duties?

Mr. MACKENZIE (Vancouver):

1. November, 491; December, 509; January, 519; February, 664; March, 641.

2. Four (4) men—Two (2) days in November and eight (8) days in December.

3. The following skilled workers have been employed on a rotational basis of approximately 2 weeks' duration since November 1, 1935:

| | Nov. | Dec. | Jan. | Feb. | Mar. |
|---|---|---|---|---|---|
| Carpenters. . . | 47 | 29 | 34 | 28 | 29 |
| Bricklayers. . . | 26 | 15 | 12 | 13 | 14 |
| Plumbers. . . . | .. | .. | 2 | 6 | 6 |
| | 73 | 44 | 48 | 47 | 49 |

4. Carpenters, 5: From Carberry—J. Gilmore, W. Armstrong, P. Hannah, George Elliott; from Douglas—P. J. Donohue. Bricklayers, 1: From Carberry, J. Naylor.

5. From Brandon City: Carpenters, 63; bricklayers, 12; plumbers, 5.

6. All skilled workers were supplied by employment services of Canada, through Brandon and Winnipeg offices.

JAMES BEACOCK

Mr. McGREGOR:

1. On what date was James Beacock, postmaster at Myrtle, county of Ontario, dismissed?
2. What were the reasons for his dismissal?
3. How long had he held the office?
4. Had his resignation been received, and, if so, to take effect on what date?
5. Would any extra pension have been payable to him if he had held office until the date of his resignation?
6. Was the conduct of this office investigated by the postal inspector?
7. If so, what was his report?

Mr. ELLIOTT (Middlesex):

1. April 16, 1936.
2. Change of site. Postal inspector reported accommodation for office and service both unsatisfactory.
3. Appointed 1st September, 1906.
4. Yes, to take effect from 1st September, 1936.
5. Not entitled to any pension.
6. Yes.
7. See No. 2.

CRIMINAL CODE AND LAW REFORM

Mr. CHURCH:*

1. Will any legislation be brought down this session regarding the complete revision of the criminal code of Canada to bring it up-to-date, as a measure of law reform?
2. Will the government consider the appointment of a committee of both houses of parliament to study and make a survey of the whole problem of law reform in this country during the recess of parliament?

Mr. MACKENZIE KING: This question is partly argumentative and partly relates to a matter of government policy. In so far as it is argumentative, it is out of order, and in so far as it relates to government policy, that will be made known in due course.

## LOSSES IN OATS

On the orders of the day:

Hon. W. D. EULER (Minister of Trade and Commerce): On Thursday last the hon. member for Qu'Appelle (Mr. Perley) directed certain questions to me with regard to an article that appeared in the Regina Leader Post on May 4, headed:

Who pays $200,000 losses in oats deal? Ottawa inclined to deny all responsibility.

Apparently the matter has reference to the purchasing of seed oats and feed oats by Canadian Cooperative Wheat Producers Limited for the Saskatchewan government. It is alleged that a loss of $200,000 was suffered through the operation, and there is now some doubt whether the Saskatchewan government or the federal government is responsible for that loss. A similar question in the matter was addressed to the Minister of Finance (Mr. Dunning) on April 2, and a reply was made on April 6. As no negotiations whatever have taken place between the two governments since that time, I can add nothing to what was then stated by the Minister of Finance.

Mr. PERLEY (Qu'Appelle): Has the minister seen a reference in the Regina Leader Post of the next day, May 5?

Mr. EULER: I have not seen it.

Mr. PERLEY (Qu'Appelle): It states that the committee which was inquiring into the wheat business might make an order of reference; that a royal commission would be set up and to this commission there would be referred the matter of this oats deal.

Mr. EULER: The report to the house of the committee investigating the wheat situation, as my hon. friend knows, since he is a member of that committee, has not yet been prepared. It is quite within the purview of that committee, if it thinks fit so to do, to refer this question also to the royal commission. I cannot say anything further.

Right Hon. R. B. BENNETT (Leader of the Opposition): I think I shall be within my rights in saying to the hon. gentleman that the circumstances in connection with this matter are well known to me. At the instance of the Saskatchewan government, Canadian Cooperative Wheat Producers Limited was used as an agent to enable the province of Saskatchewan to acquire oats; the buying and selling of them were directed entirely by the Saskatchewan government and neither the federal government nor the cooperative enterprise had anything to do with it in any way, shape or form.

## THE BUDGET

DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE MINISTER OF FINANCE

The house resumed from Thursday, May 6, consideration of the motion of Hon. Charles A. Dunning (Minister of Finance) that Mr. Speaker do now leave the chair for the house to go into committee of ways and means, and the proposed amendment thereto of Mr. MacInnis.

Mr. A. B. HYNDMAN (Carleton): Mr. Speaker, as a new member, and one who for the first time is addressing this assembly,

I should like to avail myself of the privilege of congratulating you upon your elevation to the chair as Speaker of this house. I think all hon. members will agree that you are not insensible to the duties of your high office, and I am confident that you will carry out those duties with distinction and honour.

Since some other hon. members have described the constituencies from which they come perhaps it would be well for me to describe my own constituency. I represent one of the oldest constituencies in the dominion, that of Carleton county, which borders on the city of Ottawa. Carleton may not boast the distinction of quintuplets, as the hon. member for Parry Sound (Mr. Slaght) boasted of his constituency, but I venture to say that given time we may have that honour also. I noticed that the hon. member for Peel (Mr. Graydon) said his was one of the best counties in the dominion. I would go one step further and say that my constituency of Carleton is the best constituency in Canada. It has two of the great rivers of the dominion flowing through it, the Ottawa and the Rideau. We have a large hydro-electric power plant, one of the units of the provincial hydro system. We have the central experimental farm; one of the best tubercular hospitals in Ontario is located in this constituency, and last but not least we have the town of Richmond. If the Duke of Richmond had not been bitten by the fox we, as members of this House of Commons, might easily have been meeting in the town of Richmond, as the capital city of the dominion.

My constituency, Mr. Speaker, is made up of urban and rural sections; therefore I am interested in two classes of people, the urban and the rural residents. Those living in the urban sections of the riding are mainly civil servants. Bordering the urban sections there are a number of market gardeners, and then we have the rural sections where the farmers carry on mixed farming. They are not farmers of the type we know in the west; they engage in mixed farming, shipping their milk to the cheese factories and the dairies and buying and selling cattle in the spring and fall of the year. These are the people in whom I am interested, and these are the citizens of whom I wish to speak this afternoon.

First of all, Mr. Speaker, I should like to make a brief reference to the civil servants in my constituency. I want to make the clear statement now that I was absolutely against any cut in the salaries of civil servants receiving less than $3,000, and I feel that the deduction of five per cent should be restored to civil servants who have been receiving and are now receiving less than that amount. In connection with salaries of more than $3,000 I believe the cut should continue.

I am not going to make any particular comment with regard to the market gardeners in my constituency. Their position has been described in this house on other occasions, and I do not think it necessary or desirable to make any further comments in that connection. Suffice it to say that I believe our markets in the various cities should be retained, to the greatest extent possible, for the market gardeners located in close proximity thereto.

Now we come to the farmers of Carleton county, and what I have to say will apply equally to the farmers of the provinces of Ontario and Quebec and the maritime provinces, those who do not go in for the growing of wheat to any large extent but who really specialize in the raising of dairy cattle and the shipping of milk to cheese factories and dairies. Before proceeding to discuss this matter, however, I should like to compliment the Minister of Finance (Mr. Dunning) on the splendid budget speech he made in the house the other day. I think his speech was very flattering to the late administration; he outlined clearly the finances of the country and told us exactly where we stand as far as the dominion government is concerned. I do not agree with the minister when he says that our national debt amounts to something over three billion dollars; I think it is a great deal more than that, but I shall discuss that point a little later in the course of my remarks.

A moment ago I said that in my opinion the budget speech praised the administration of the Conservative government for the last five years. Several passages from that speech have been quoted during this debate, but I should like to read a few short extracts to support my contention. At page 2362 of Hansard the minister said:

> Nevertheless, one cannot view the picture broadly without realizing that improvement—however gradual—is real and steady, and that the general undertone is one of definite strength.

Again on the next page the minister said:

> For the first three months of this calendar year, 1936, manufacturing of all kinds showed an average expansion of 8·5 per cent over the first quarter of 1935.

And again:

> The forestry group of industries showed marked expansion in 1935.

And again:

> One of the most important signs of a more healthy business condition is that industrial and commercial earnings are continuing to show improvement. An analysis of the record of earnings of 241 leading Canadian corpora-

tions discloses that net earnings are about eight per cent greater for the latest fiscal year than for the previous fiscal period.

In another section he says:

A very interesting feature of our Canadian economy is the remarkable degree of stability in the price level during the last two years.

Then I come to what impressed me as the most striking statement of the minister, the one which interests me most:

Unfortunately, our most important primary industry cannot boast such results. Agriculture has again suffered from climatic hazards, restricted markets and low prices.

Not only are these statements of the Minister of Finance a tribute to the last administration, but I think the minister therein puts his finger on the crux of this whole situation. In other words, agriculture has not progressed as it should in the past five years. We have to do something for the agricultural class in this country. I do not mean the farmers of the west; in my opinion, as I will show later, the farmers of the west have been getting too much. It is true, as the hon. member for Parkdale (Mr. Spence) stated in this house, that the western farmers have been spoon-fed long enough. Go over the budgets of the past, as far back as you like, and if you can show me one instance in which the farmers of Ontario, Quebec or the maritimes were helped in any shape or form, outside of the small bonus on cheese given last fall by the late Conservative government, I shall be very much surprised. I can take you back over the budgets of the last number of years and show you where millions and millions have been passed out to the western farmer. I have every sympathy with the farmers of the west, but, I say it with all sincerity, the farmers of the west have absolutely no one to blame but themselves. Some twenty years ago I graduated from college, and when I came home the big cry was, "Go west, young man; go west"! I did not go west; I stayed here in the east and practised my profession. For the next few years my friends were coming home from the west spending money like drunken sailors; they were prosperous and chaffed me about staying here in the east. But I stayed in the east and got along without any help, and that is what the farmers of Ontario and Quebec have been doing. They have not been complaining much; they have not asked for much, and they have been getting no help. But in the west it is a different story; the farmers there are continually coming to this government and asking for bonuses on wheat—we have heard so much here about wheat since this house opened that it is disheartening to the members of this house from Ontario and Quebec and the maritime provinces. True, as I said, I have every sympathy with the farmers in the west, but let them buckle down themselves and suffer a little bit. I fully realize that I am going to be followed this afternoon by a number of members from the west and I know I shall be roasted for that statement. That is quite all right. I want them to go over the budgets and the estimates of the last number of years and if they can show where the eastern farmer has received anything, then I will retract my statement.

Mr. COLDWELL: What about the eastern manufacturer?

Mr. HYNDMAN: I am not saying anything about the manufacturers; I am talking about farmers. I might say also that in my constituency we have no manufacturing concerns whatever. But I am going to have a little to say about the manufacturers; in fact I might say it right now, and I know this will be very agreeable to the western farmer. There has been a great deal of discussion in this house regarding lower tariffs on farm implements. Speaking of that prompts me to branch off a litttle, as I am very highly honoured in having as my deskmate the finest looking man in this house, from the ladies' point of view. I would also like to say that in my opinion the judge of the contest is the finest looking single lady in this house.

However, to return to the subject, the farmers of my county can be divided into three classes. There is the farmer who has a herd of dairy cattle and is shipping his milk to the dairies in Ottawa.

An hon. MEMBER: What does he do with the cow's milk?

Mr. HYNDMAN: That is right; we have the farmer who is shipping the cow's milk to the cheese factory. We also have the farmer who has no dairy cattle but who buys cattle in the spring and sells them in the fall or buys in the fall and sells in the spring, using in that way the feed he grows on his farm. I want to point out to hon. members, if they do not know already, although they ought to know—there are members here representing rural constituencies who have never said anything on behalf of the farmers in their constituencies—I want to point out what these farmers have been going through. First I shall take the dairy farmer shipping milk to the dairies, and I want it clearly understood that I have not picked out the worst case I could find. This farmer is one of what I would call the most prosperous farmers in Carleton county. He is one of the biggest shippers of milk to the dairies in

Ottawa. He has a splendid 225 acre farm with good buildings and eighty head of cattle, so you will see that he is a real dairy farmer. His cows are the best grade of Holsteins, with ten or fifteen Jersey cows mixed in to improve the quality of the milk. Last year his gross income was $4,380. His total expenses were $3,976, therefore he had left for himself $404. What did he have to do with that amount? He had to keep himself, his wife and five children, pay his life insurance, and pay the mortgage. You can imagine how much he could pay on his mortgage with a net income of $404. Now, I think the trouble is with the dairies. I never could get this through my head: 100 pounds of milk, 40 quarts, during the war brought $2.80, and the dairy sold it at 13 cents a quart; therefore the dairy received on the transaction a gross profit of $2.40 out of which to pay interest, depreciation, upkeep and cost of delivery. At the present time the farmer receives $1 per 100 pounds of milk and the dairy sells it at 10 cents a quart, or $4 representing a profit of $3. Yet the dairies in Ottawa say they are going behind. I cannot understand that, because labour is cheaper; they are making a greater profit on the milk than they were during war time, although they made money even then. I think this government would be doing a great deal for the milk producers of Ontario and Quebec if an investigation were held into this matter.

Another class of farmer that we have is represented by the one who ships his milk to the cheese factory. As in the other case, I picked out a real honest-to-goodness farmer; I did not pick a gentleman farmer but one who himself is working on the farm. I take a man who is a practical thrifty farmer and not one who spends his money in motor cars, running all over the country. I am speaking of a good practical farmer. This man has a hundred acres of land valued at $7,000, and 14 cows. His income last year from the cheese factory was $525; from the bonus on cheese he received $56, and he sold some veal calves for which he received $70. Therefore his total income from that hundred acre farm was $651. But he had expenses to meet—taxes, insurance on his buildings, extra feed, interest on mortgage and some miscellaneous items making a total expenditure of $497. After he had shipped his milk to the cheese factory he had $154 to live on, and with that he had to keep his wife and three children. He had to pay life insurance and part of the principal of his mortgage.

[Mr. Hyndman.]

There is another class of farmer I mentioned, the man who buys cattle and sells them again. We were told—at least we thought; certainly this farmer thought—that when the agreement with the United States was made last fall, coming into effect at the first of the year, we were going to have a great market for our cattle in that country, and on the strength of that this farmer bought up last fall a good many head of cattle. He fed them with his own feed, as many as he could, paying $8 a month to different farmers for raising the others. Now he finds himself in the spring, wishing to sell his cattle, being offered the same price as he paid for them last fall. What chance has that farmer to make money or to keep going? Let me mention another farmer in that part of the country. All winter he has separated milk, shipping the cream to the creameries in the city. With a wife and four children he has been living on an income of $15 every two weeks, or $7.50 per week. I do not see how he can get along.

I have mentioned the trade agreements, and as far as I can gather from the facts with which I have become acquainted those agreements will not result in increased prices to the farmer. Cattle last fall were selling at five cents a pound and now they are selling at 4 and 4½ cents a pound. I am not referring to the price of cattle in the markets of Montreal, Toronto or Chicago; I am speaking of the price paid to the farmer himself, the actual producer. Last fall he received 5 cents and now he is getting 4 and 4½ cents. Pork last fall sold at 8 cents and it is also 8 cents to-day. Lamb has certainly improved; it was 7 cents last fall and at the present time is 10 cents. Mutton was 4 cents last fall and is now 5 cents; veal was 5 cents then and is 5 cents now; and cheese is 9½ cents. So much for the farmer.

The Minister of Finance has given us a clear statement of the financial condition of the country. He told us that the liabilities on March 31, 1936—this was an estimate—were $3,432,671,000 and that the assets were $424,380,000, leaving a net debt of $3,008,291,000. This is not a very bright picture, I must say; and in my opinion it does not reflect the true financial situation of Canada at this moment. True enough, that is our dominion debt. I as a resident of Canada am responsible for part of that debt; but as a resident of Ontario I am also responsible for my share of a certain debt;

as a resident of the township of Huntley I am responsible for a certain debt; and as a resident of school section No. 3 in the township of Huntley I am again responsible for a share of debt. Adding all these various debts together we find a staggering debt facing the country, and that I think is the true debt situation in Canada to-day. I have segregated these debts into the money we owe to the United States, to the mother country and to Canada itself. When I refer to this debt I am referring to dominion debt, provincial debt, municipal debt and school section debt, and I find that to the United States the following Canadian debts are due: Ontario, $574,000,000—I am giving only round figures; Quebec, $747,000,000; British Columbia, $122,000,000; New Brunswick, $43,000,000; Manitoba, $98,000,000; Nova Scotia, $42,000,000; Alberta, $77,000,000; Saskatchewan, $56,000,000, and Prince Edward Island, $1,000,000. The federal government owes the United States $1,005,175,156.

To Great Britain the following Canadian debts are due: Ontario, $511,000,000; Quebec, $578,000,000; British Columbia, $165,000,000; New Brunswick, $44,000,000; Manitoba, $83,000,000; Nova Scotia, $40,000,000; Alberta, $69,000,000; Saskatchewan, $50,000,000; Prince Edward Island, $1,000,000. The federal government owes to Great Britain, $727,157,402.

To Canadian investors the following Canadian debts are due: Ontario, $1,741,133,005; Quebec, $1,000,000,000; British Columbia, $305,000,000; New Brunswick, $104,000,000; Manitoba, $192,000,000; Nova Scotia, $118,000,000; Alberta, $160,000,000; Saskatchewan, $138,000,000; Prince Edward Island, $7,000,000; the federal government, $2,342,243,442. This makes a total which we as a country—federal, provincial, municipal and school sections—owe to the United States of $2,769,668,294; to Great Britain, $2,270,847,255; and to Canadian investors, $6,387,180,943, making a grand total of $11,427,696,492. In other words we have a per capita debt in Canada to foreign creditors of $485.87 and owing in Canada, $615.68, or a total per capita, including foreign and domestic, of $1,101.55. That is the financial situation of Canada, and it is a startling one. But I find nothing to worry about even though the figures are stupendous, because if we turn to other countries we find that they are just as badly off.

In my opinion, sir, we have three great problems to solve in this dominion. First of all we have our unemployment problem; secondly, the problem which I mentioned a little while ago, the condition of our farmers in the whole of Canada, not necessarily only in the west; and thirdly, we have our railway problem.

Dealing first with the unemployment problem, I feel that the finance minister or the Prime Minister (Mr. Mackenzie King) or the government as a whole has a perfect right to ask me: Well, what are you going to do about it? There has been a lot of criticism in this house, but very little constructive criticism, and I feel that if a member is going to criticize he should also have something to offer. I will therefore humbly submit, as a new member, what I think is the right way to solve this unemployment problem.

I know that the Minister of Finance, after the figures I have just quoted, may wonder why I am going to make this suggestion, but my first suggestion for solving the unemployment problem in this dominion is the spending of $200,000,000 for the next five years, or at least until the depression is over. I would like to see the money spent on public works, and have ninety per cent of the work done by day labour, not by machines. I would like to see the money spent on such projects as have already been suggested—reforestation, the doing away with level crossings, road building, housing and slum clearance. But if the government is going to spend millions of dollars on white elephants in the cities, and allow the contractors to take most of the money, we shall never get away from unemployment. The money must be spent among the unemployed.

The Minister of Labour (Mr. Rogers) has appointed a national commission to look into the unemployment problem and allocate in different categories those who can work at lumbering, for instance, and so on right down the line; but there is another class of people who I claim should be helped even more than those who are at present on relief. It is the class that has been referred to in this house by the hon. member for Peel (Mr. Graydon), those who have been struggling along on five or six dollars a week and have never gone on relief. They are the people, in my opinion, who should receive first consideration.

The Minister of Labour has told us that he is going to close the relief camps. I think that is unfortunate; it would be bad policy to close the relief camps at this time. I think we should aim to close them as soon as possible, but if the minister is going to close them by July, what is he going to do with the thirteen thousand men who are now in the

camps? He says they will be absorbed on the Canadian National railway and the Canadian Pacific railway. I noticed an item in the press the other day to the effect that the Canadian Pacific Railway Company expects to start to pay a dividend soon, and so I imagine that railway will be able to absorb some of these workers who are on relief, but I cannot see how the Canadian National can absorb them, because it is going behind every year. As I said a moment ago, Mr. Speaker, I think those who have been struggling on by their own efforts and have never gone on relief should receive first consideration.

Another thing I should like to see done to relieve the unemployment situation is the introduction of a shorter working day and a shorter working week. If we shorten both the day and the week, we should be able to absorb more of those who are on relief.

Fair wages is another thing that I should like to see firmly established. I have already mentioned the restoration of the five per cent cut for civil servants receiving up to $3,000 a year.

There is one bill which, if it is ever brought before the house, I shall certainly support. We know of course that a number of bills that are placed on the order paper are withdrawn, perhaps because pressure is brought to bear; but one bill which I hope will come before the house, and which I shall support, is that providing for pensions for those over sixty years of age.

I do not want, sir, to get in wrong with the ladies, but it seems to me we should employ the heads of families, the man power of the country, instead of women who have no dependents. We have men holding down good positions in the government, drawing large salaries, whose daughters are also employed in the government as stenographers or in other capacities. That is not fair; it is not giving a fair chance to others. I would like to see a little discrimination shown in that regard; employment such as that of a stenographer should be given to those who are responsible for the support of dependents at home.

I have already mentioned the condition of the farmers, the plight they are in, and hon. gentlemen have a perfect right to ask me: What do you suggest should be done? As I said before, the eastern farmer has received no help whatsoever other than the bonus on cheese last fall. I regret very much that the Minister of Agriculture (Mr. Gardiner) could not see his way clear to continuing that bonus, because it was a boon to the dairy industry in the province of Ontario. I should like to see that bonus of at least one and a half cents a pound on cheese restored, and continued not only for this year but for a period of from three to five years, in order to give the dairy farmer a chance to get on his feet again.

I should also like to see a moratorium for the next five years on all government farm loan mortgages, federal and provincial. We might as well come to that situation first as last. The farmers of Ontario and Quebec, and of the maritimes too, so far as I know, cannot possibly pay the mortgages on their farms at the present time. You may increase your trade as much as you like, but the farmers are not going to be able to pay off their mortgages. They are not trying, I know farmers in my district who have government loan mortgages on their farms, and they are sitting back in their seats and saying that they are not going to pay anyway; that you cannot collect anything; that it is a government mortgage. They run up a store bill and won't pay it; they run up a doctor's bill and won't pay the doctor, and the consequence is that we are all suffering. But if we could tell the farmer that he is free for the next three or five years from any payment of interest or principal on his mortgage, thus giving him a chance to get back on his feet and to start in where he left off, it would be a great help to the farmers. I repeat that I would like to see the bonus of one and a half cents a pound on cheese continued for five years.

I have made a statement in the house this afternoon as to the help the western farmers have received, and I think I should be prepared to back it up. I think I can do so, Mr. Speaker. I have gone over the main estimates for 1936-37 and the supplementary estimates, and I have checked up on what was paid out to agriculture last year. I find that to agriculture last year the government paid out $25,181,697.87, and of that large amount $17,247,449.38 went to the western provinces, the rest of the dominion receiving only $7,934,248.49. That is what I mean when I say that the western farmer has been getting everything from this government while the Ontario farmer has been getting nothing.

There is another interesting item here that I should like to present to the house, one dealing with the amounts spent on the different departments. I have mentioned what has been spent on agriculture, and I may say that that money has been well spent. In fact, I should like to see more spent on that industry, even though it goes to the western farmer. But there are other departments of

government upon which less should be spent. I refer particularly to the Department of National Defence. I cannot understand why we should spend money on this department because we have our representative at Geneva who makes certain decisions and then we wire him to withdraw them. The expenditures for this department amount to $18,695,857. I have in my constituency one of the finest rifle ranges in the Dominion of Canada, in fact one of the best in the world, the Connaught rifle ranges, and when I speak like this I am really speaking against my own interests because thousands of dollars are spent each year upon those ranges. But what do we find? We find old shots coming down from the west and up from the maritimes to shoot there for two or three weeks in the summer time. Money is spent, but I cannot see that it is doing the country any good. If we are really in favour of peace, I would suggest that we spend less money on national defence and more on agriculture or labour.

We are spending $26,476,000 on labour this year, and this amount should be increased by some of the expenditures now made on national defence. I do not want it thought for one minute that I am talking against pensions for the great war veterans, because I agree entirely with the payment of pensions to those who fought in the great war. In the little town of Carp, which has a population of only 700, in a township with a population of only 1,800, we have erected a memorial to the eighteen who lost their lives in the great war.

Mr. SPEAKER: I am sorry, but the hon. gentleman's time has expired.

Mr. H. R. FLEMING (Humboldt): Mr. Speaker, I do not think the hon. gentleman who has just taken his seat (Mr. Hyndman) has been very fair to the farmers of western Canada. Surely the farmers of western Canada were not responsible for the grasshoppers; surely they could not help the rust or the drought, and many other disadvantages from which they suffered.

The budget, sir, presented as it has been to the house, with all proper dignity and due regard to its importance, offers an opportunity to every member of this parliament to register on behalf of the Canadian people his endorsation or otherwise of the soundness of its principles, which are calculated to lift the people of this country out of such a financial depression as has heretofore not been known in its history. It is one period when parliamentary discussion transcends the plans of party considerations and moves into the higher realm of national duty.

With this necessary preface to my discussion of the budget, I am glad to make this my first contribution to debate in the House of Commons. I should be lacking in my duty to my constituents did I not rise at this time and give expression to the sadness and sorrow which I know is theirs in the passing of His Gracious Majesty, the late King George the Fifth. The citizens of the constituency of Humboldt take second place to none in their unswerving loyalty to Canadian institutions. Racial differences have never disturbed the serenity of its public life. The diversity in the complexion of its representatives for the past thirty years is surely evidence of a breadth of view and a tolerance that could be emulated by other sections of this dominion. In the late Doctor Neeley, whose eloquence rang through this chamber on many a momentous question, Humboldt sent you a man thoroughly representative of the best in Canadian citizenship. When Union government was formed and the exacting problems of the war and reconstruction called for men with experience along these lines, Humboldt sent you the late Colonel Lang whose war record was of the highest; when peace was restored and domestic issues assumed the ascendant, and when a wave of progressivism or advanced liberalism swept over the prairies, we sent you C. Wallace Stewart, who made a splendid contribution to the problems of that day. In 1925 Humboldt sought out and obtained in Mr. Albert Frederick Totzke the man with the necessary business experience to cope sanely with the problems not only of the depression period but of the wildly speculative days that preceded it. It is therefore with diffidence and some apprehension that I approach the task which Humboldt expects of me, namely to carry on the torch laid down by my predecessors, and emulate, so far as in me lies, their high ideals of service to my constituency and my country.

In these new and yet strange surroundings I find one steadying and directing force around which seems to revolve all the activities of this house, and which has impressed me most profoundly. It is the authority which is vested in your office, Mr. Speaker, and which makes for order and decorum in our deliberations. That you were the choice of the house to assume this great responsibility is your guarantee that your authority will be respected, and in expressing my satisfaction that the execution of this authority has been placed in such able hands, I pledge you, on my own behalf, my fullest cooperation in your efforts to discharge your duties in a fair and impartial manner.

To those, Mr. Speaker, who sat in the last parliament and in the one preceding it, and who were returned to the present one, you have seen demonstrated in the last fifteen years the boon of democracy and the efficacy of democratic institutions. You have seen the policies which you advocated accepted, and whether you are a Liberal or a Conservative, you have seen them rejected in turn by your constituents, who in all matters that pertain to the administration of our common affairs are the court of final appeal. With that as a safety valve, the system of party government has long since been accepted as the best medium through which to conduct public affairs. The great majority, Mr. Speaker, of the electors of Humboldt constituency apparently decided that the administration of their affairs and of this dominion at the present time should be entrusted to the party of lower tariffs, and that the government should be led by the man who has the Liberal conception of Canadian nationality and who at the same time is prepared to place her international negotiations upon a higher plane than that of commercial bargaining. To recognize that we have such a man in the hon. Minister of Finance (Mr. Dunning) and to pay him the tribute that is his due, cannot be interpreted therefore as narrow partisanship. In his budget speech he says:

> Canada cannot give everything to-day and bargain to-morrow, but Canada can, and this government does, give to-day to empire countries, such concessions as will, I am sure, be accepted in the spirit in which the British preference was conceived. In this spirit this government, since coming into office, has seen to it that unnecesary impediments to interempire trade have been removed, that vexatious restrictions have been lessened and that arbitrary regulations have been altered or abolished. It has interested itself in the increase of interempire trade both by imports from the empire as well as exports to the empire; and under to-day's resolutions it proposes easier access to this country for certain empire commodities. The proposed reductions in the British preferential tariff are in no sense elements in a bargain. Concessions they are, both to Canadian consumers and to British producers, but concessions made in the firm belief that only from mutually advantageous exchange of commodities can come that common benefit in which should lie both the origin and the objective of intraempire trade arrangements. Canada knows full well that Great Britain, when the day of conference comes, will not be unmindful or forgetful of Canada's past record in the matter of preferential treatment in this market for British products—a record crystallized to-day in the fact that close upon seven hundred items in Canada's tariff schedules, practically half the items in the entire list, have against them the word "free" in the British preferential column.

It is said that one of the secrets of Napoleon's military success lay in his capacity to choose competent generals, and the same has often been said of the late Sir Wilfrid Laurier, who, in forming his first government, surrounded himself with a "cabinet of all the talents." The force of this example would not of itself be sufficient to account for our leader's success. There must have lain behind it a native political astuteness; for, lookifng over the men who occupy the treasury benches in the house to-day and comparing them with any group of men who have preceded them in a like position, no one will deny that, in background, in citizenship and in achievement, they hold second place to none. Who could have brought more credit to Canadian statesmanship than the Minister of Justice (Mr. Lapointe) and Senator Dandurand at the world court? Who could have made a more substantial contribution to Canada's economic prosperity than did the Minister of Finance in his famous May day budget of six years ago, and than he did when he presented another May day budget this session; and who in their respective spheres could have any fairer record in public achievement or private accomplishments than the former premier of Saskatchewan, the present Minister of Agriculture (Mr. Gardiner)?

And what has been said of these men can be aptly applied to the others who hold portfolios in this administration. What the Prime Minister did in selecting his lieutenants in the government, he did with equal efficiency on two previous occasions. Whether he will accomplish all he has planned and all that he wishes for this land which he loves and serves so well, will not debar him from a place in history equal to that of any man who has filled this high post. The Prime Minister's is a leadership that is indigenous to the soil from which have sprung the cardinal principles of Liberalism. It is a leadership provocative of initiative in thought and action among his followers, a leadership which welcomes independent views on the many problems which are pressing for practical solution. It is a leadership which recognizes the political principle enunciated by Edmund Burke over a century ago, a leadership which would call out, from the more circumscribed affairs of constituency interest, the best in both thought and judgment that the representative is capable of giving in the broader field of national affairs. It is a leadership that goes further in encouraging us to study not only national problems, but international issues. It is a leadership that expects us to bring to our discussions and our deliberations the most advanced views on every question pertaining to the nation's welfare. The problems which prior to the great war were national

only in scope have now become international in their ramifications, and the world situation to-day, complicated and intensified as it is by European involvements of the past few months, calls for the greatest circumspection in legislation from within and in negotiations from without. In international negotiations thus far, the leader of the government has demonstrated that he is alive to the requirements of the times and will proceed in a manner that will enhance the standing of this country abroad and inspire confidence at home.

The Washington treaty was a consummate piece of work—a work of high diplomacy and masterly statesmanship. The depression, born of the economic disintegrations of the late war, has brought us a new problem—the problem of the individual. We have always had problems of state, problems which we felt were matters that could be adjusted by legislation, problems that were therefore impersonal in their application; but it was not until the intensive nationalism which has been developed by the war spirit rendered impotent the most generous impulses of the League of Nations that we came to realize that if a start in the direction of real reconstruction were to be made, we had to get back to fundamentals. We had to get down to the individual and the things which motivate him in his relations with his fellows. State control, without realizing it, had gone too far. The right of the individual to life, liberty and the pursuit of happiness in the highest sense was being more and more disregarded. Society was becoming mechanized to a point where the freedom of the individual was being restricted and in some cases infringed upon.

In the new era of exaggerated state control, the initiative that went with individual enterprise is gradually disappearing, and with it the dignity that goes with personal responsibility. Men and women are to-day saying to all governments: "You have taken over the direction of most of the things which before we had in our own control, or you have done worse in allowing these things to get into the hands of selfish interests. Why should we be further concerned with the things which you call economic interests? You have created a situation by the infringement of our rights. It is your business, therefore, now to do for us what we could otherwise have done for ourselves." It is that state of mind which has given us this new problem. It is that attitude which is swelling the ranks of the unemployed, created in the first instance by the erroneous policy that restriction of trade would lower the cost of living and increase the purchasing power of the dollar.

In advocating the restoration to the individual of these rights which are his, I am not advancing a new theory. It is philosophy that is as old as Christianity itself. Man, by his very nature, by the dignity which his God-given faculties impose, and the responsibilities which his station and purpose in life demand, must be given a dominating place in the scheme of things, and so I hold it is the duty of government to reorientate the relationship which now exists between man and his economic environment, and to establish upon an unassailable basis the sanctity of human rights. Just how that is to be done is the problem of this government and of this parliament, with honest men sent here to help solve the problem. I have no quarrel even if men differ in their ideas as to the treatment of our national ills and in their estimate of the efficacy of proposed remedies. A solution will be evolved by calm and rational discussion, but with propagandists and designing theorists I have no patience. Any doctrine that would set lawful authority at defiance is fundamentally wrong; and yet that doctrine has permeated the minds and inflamed the hearts of hundreds of our unemployed and set them trekking across the country from capital to capital in search of relief. The unrest which naturally results from long periods of enforced idleness is not in itself a matter seriously to disturb us, but the rancour which is fomented by an organized band of agitators, directed and financed from communistic centres such as Moscow, is in my judgment, a matter which should give us grave concern.

In the broad Canadian outlook and the optimism for the future which this budget manifests, I am in hearty accord. It is to be hoped, however, that the almost unanimous endorsement of such a sane and sensible policy will breach the void between the producer and the consumer, and will still forever the voice of the sectionalist, the man who says that the harmonizing of these two interests defies solution, so long as we have a west, where agrarian interests dominate, and an east where the industrial position must be conserved. Next to the socialistic crank who would destroy our national integrity, the greatest enemy to national harmony is the sectionalist who would divide us on geographical grounds.

With a railway problem that has thrown the whole financial structure out of plumb, a marketing problem that has so far baffled our experts, a trade problem with wide international implications, and an employment problem that most vitally affects the well-

being and the happiness of our people, we have before us a task that calls for the greatest patience, the greatest skill and the greatest resourcefulness, a task to the accomplishment of which I feel certain the government is equal, provided the effort is a united one, wholehearted and determined. If I judge aright the temper of the Canadian people to-day, it will brook no delay in the handling of these matters. In this monumental task there is no place for political recrimination, no time even for criticisms of those who tried and failed. I do not think we should harbour any feelings of illwill towards hon. gentlemen opposite, or feelings of resentment because of their failure when in office to overcome our difficulties. I think the great issues should be approached in a spirit of cooperation, forgetful of any acrimony that may have been engendered in the heat of a political campaign. It is in no spirit of pessimism that I make these observations. They are suggested, perhaps, as much by self-interest as by public duty.

The appeal for good will in the solution of our domestic affairs I would extend to the wider one of international negotiations. Experience has proven that you cannot blast your way into the good will of others. Good will in international dealings, like good will in human relations, rests upon mutual confidence and respect. It is something which has to be cultivated and won by an approach obviously prompted by motives that are above suspicion. I am not impracticable, therefore, when I say that cultivation of good will is a step which should precede any efforts to engage in commercial bargaining. One envoy bearing messages of good will to the people of another nation will in my judgment accomplish more than a coterie of trade experts armed with statistics and obviously commissioned to drive the hardest bargain possible. Again let me quote from the budget speech, at page 2390:

> As a gesture of good will and an earnest of intention to widen Canadian trade with the Irish Free State, reductions in duty, to be applicable under the British preferential tariff only, are proposed on certain products peculiarly identified with the Irish Free State and requested by that country, namely, stout, prune wine and Irish poplin.

I am not saying that in such dealings we should allow such things just to happen; I am merely indicating what I consider the most logical and diplomatic way to proceed in any efforts that may be made to extend our commercial relations with other nations, when a feeling of distrust already exists. The success already achieved under this policy is evidence, I think, of its efficacy and of the wisdom of extending it to many other nations, offering opportunities for trade. There is much in the force of example, and I am confident that other nations seeing the advantage of this policy will adopt it also, and from that will follow a breaking of the commercial stalemate and a solution of that world problem, the legacy of the great war.

I might follow those who have preceded me in the field of figures, Mr. Speaker, and proceed to analyze the trend of business from comparative statistics, but on this, my first attempt to speak on the floor of this house, it seemed to me that I should attempt only to offer for your consideration a few saving principles consonant with Liberal philosophy. I leave the statistical task to those who may have a mathematical complex, and whose minds move more naturally in that orbit.

I intend, sir, to vote for the budget. Some say it does not go far enough; others say it goes too far. Some say it is dominated by the big interests; others say it is intended to please eastern Canada. But after careful study I think it is the best budget that could have been brought down. I have no hesitation in saying that the people of my constituency trust and always have trusted the Minister of Finance, and that trust has been justified in the reduction in the duty on agricultural implements from 25 per cent to 7½ per cent and the reduction in the intermediate tariff on gasoline from 2½ cents to one cent. I have every confidence that after such a fiscal policy has been in operation for a few years the old Tory "whisper of death" will disappear, and from the very furrows of this Canadian land the rural rustics will produce the murmur of life.

Let me close with the words of Lord Morley:

> We must not judge human institutions by the white light that blazes in Utopia. Allowances must always be made for the frailty of mankind. Believing, as I do, in the capacity of democracy to rule, I shall record my vote and record it for the Liberal cause for one reason only—history and the present facts tell me that Liberalism is the one hopeful political cry in the world to-day, carrying with it a note which still rings true in the time of many delusions.

Mr. E. G. HANSELL (Macleod): Mr. Speaker, I suppose it is in order for me to follow the other speakers in this budget debate and offer the congratulations of this group to the Minister of Finance (Mr. Dunning) on his budget speech, and consequently on his budget. However, we have a good deal to say with regard to the feeling of dissatisfaction that seems to ring in our minds and the disappointment that is within our hearts

as we read the budget more carefully and recognize its real intent. Before I conclude I desire to present to this house an amendment to the amendment, but before doing so I should like to refer to a certain portion of the budget speech which reveals that after all this is what is known as a so-called sound money budget, and I emphasize the words "so called." I was a little reluctant to refer to this paragraph until the hon. member for Kootenay East (Mr. Stevens) practically built his entire argument upon it; therefore I fancy it will stand repeating. The minister said:

I am not an alarmist. On the contrary, I am confident that common sense and sound economic policies can solve our immediate problems. Moreover I am convinced that this country can bear all the burdens which the war and the depression and past mistakes have saddled upon it, great as they have been. Nevertheless I believe that no country can go on indefinitely with heavily unbalanced budgets and continue to maintain either the confidence of investors or the basis upon which her economy can fuction healthily and vigourously. We have now reached the stage where delay should no longer be tolerated. We must make an immediate approach to a balanced budget and we must be able to show that complete equilibrium can be reached within a reasonable time.

One or two points in particular strike me forcibly in connection with this sound money policy as I find it embodied in this paragraph. The minister says:

... no country can go on indefinitely with heavily unbalanced budgets and continue to maintain either the confidence of investors or the basis upon which her economy can function healthily and vigourously.

The budget aims to maintain the confidence of investors. That may sound well and good to those who believe in the so called sound money policies. In this connection I wish to refer to another statement made during the budget speech, appearing at page 2365:

Moreover, if we continue this process of handing out funds without security and without control of any sort, we shall be in danger of undermining dominion credit—

I fancy the Minister of Finance is speaking of financial credit, and we make a distinction.

—which, in my opinion, must be protected at all costs.

The protection of financial credit; maintaining the confidence of investors—it seems that no matter what else we do we must safeguard ourselves against hurting the feelings of those money interests which are centred in, perhaps, shall I say Montreal; shall I say New York; shall I say London, or shall I even go to that centre of international financial institutions, Basle, Switzerland? Must we continually assume that we are tied hand and foot to these interests? I wonder if we have not got to maintain the confidence and protect at all costs the interests of the great masses of Canadian people who in the last election put their confidence in the present Liberal administration. Yet there seems to be very little said concerning that in the budget. I do find in this paragraph:

I am confident that common sense and sound economic policies can solve our immediate problems.

Sometimes I wonder whether there is anything in the present so-called sound money policies that partakes of common sense. Let me point out one or two things that we find very prevalent to-day. There is a deficiency of purchasing power; is it common sense that we should have a deficiency of purchasing power? We have factories able to produce goods; we have our arable lands able to produce; our great transportation systems run clear across the continent, and we have plenty of coal and oil to run those transportation systems. We have highways almost clear across the continent, and great motor trucks and an abundance of gasoline and oil. Yet somehow it is impossible to transfer the goods from the factories and from the land and put them into the hands of our people. Why should it be impossible? Why is it thought incredible that it should be possible? The only reason it is not done is that there is a deficiency of purchasing power. Is that common sense?

Again, the upholders of the present so-called sound money policies have in some cases advocated the destruction of goods. Perhaps that has not been done to any very large extent in Canada—the hon. member for Red Deer (Mr. Poole) says it has been done in the Okanagan valley. Some years ago we recall that there was a reduction in wheat acreage, and we know that sound money people in other countries have advocated the destruction of goods. Is it common sense to destroy goods while millions of people need them? Is it common sense to talk of higher prices—and we have heard a great deal about that in this house during the past little while—when millions of our population have not the wherewithal to buy even at very low prices? Is it common sense to suppose that a nation can borrow itself out of debt? Is it common sense to treat money, which has no particular intrinsic value, as a commodity on a par with other commodities? Not so many weeks ago the Minister of Finance declared that money is after all a medium of exchange. Money, we all recognize, has become more

than a medium of exchange; it has itself become a commodity. Men buy money, men sell it, rent it, exchange it, just the same as they would a farm, a house or a cow. In this connection I refer to one or two statements from the budget speech which to my mind are striking. On page 2364 of Hansard I read this statement:

> One price whose falling tendency is watched with considerable enthusiasm in many quarters is the cost of money; in other words, the rate of interest.

On the following page I read:

> One factor retarding the full revival of confidence and the healthy functioning of the capital markets—

In another place:

> ... these provinces have not been able to borrow economically in the public markets.

In another place:

> I trust that the position which the government has taken in these matters and the action which it proposes to take will commend themselves generally to the good judgment of members of this house. The record of Canadian securities in the investment markets of the world has been a most enviable one.

You will notice in these quotations the phrases that I am calling attention to—"cost of money," "capital markets," "borrow in public markets," "investment markets of the world." I declare that it is not common sense to take money, which is supposed to be a medium of exchange, and recognize its function as that of a commodity on a level with that of other commodities. Is it common sense for one body of citizens to be taxed in order to keep from starving another body of citizens? Is it common sense to apply human genius to the task of taking the burden of labour from the backs of mankind and putting it upon the machine, and then to say to men that the only way they can get enough to eat is to work? That is not common sense, yet we find that very principle advanced over and over again in this house. Is it common sense to perpetuate a system which produces fear—fear for the future because of that insecurity which threatens almost everyone in the nation? I was speaking some time ago to a gentleman whose name I shall not mention, a very well known gentleman who at present is engaged in research work for one of our leading grain concerns. He also is a sound money man, not an exponent of social credit. But he said to me: "It is not all greed for more that characterizes the people of this country; it is rather the fear of going broke or of losing that which they already have." That is characteristic of the life of individuals throughout the length and breadth of this country—fear lest they should not have provision for the future. Fear and insecurity are very real things. Is it common sense to perpetuate a system which produces fear and insecurity?

When we know that the purchasing power of the nation, which comes mainly from the processes of production—that is wages, profits, dividends and so forth—does not equal the price of the goods produced, is it common sense to say that we can buy those goods? Is it common sense to assume that it is impossible to provide a standard of living commensurate with the high productive capacity that characterizes this highly developed industrial civilization? Is it common sense to suppose that these nonsensical opinions which I have enumerated can be obliterated by the operation of what is usually known as the orthodox sound money policy which the Minister of Finance advocates and which is responsible for these evils? At least this much will be admitted, that these things have been in evidence during the reign of the so-called sound money policy. Right here I might digress for a moment and declare that a sound money system, in order to be sound, must work. A money system is not sound unless it can provide for every man, woman and child bearing the nation's name as high a standard of living as it is possible for our productive capacity to give them.

Quite often in the last few weeks we have heard that we on this side of the house, particularly perhaps in this corner, have not offered any great constructive criticism but have been more or less destructive. It seems to me that in the proper form and order of debate those occupying benches on the government side should speak on behalf of the affirmative, in every debate, while those on the opposite side should speak to what might be termed the negative; and I fancy I am correct in assuming that the purpose of the negative in any line of debate is to discover the flaws in that which the affirmative affirms. However, be that as it may, a perusal of Hansard within the last few days will disclose that we have suggested some very sound things that should be taken into consideration. Lest I be accused of not offering anything constructive I am going to offer at this time three fundamental principles which we believe should characterize a sound policy for the distribution of the abundance we are able to produce.

First, then, there should be the setting up of a national credit account; and right here

I wish to distinguish between financial credit and real credit. Financial credit is the ability to borrow money; real credit is the ability to deliver goods and services whenever and wherever required. There should be the setting up of a national credit account as the first step. The second principle is the principle of the just price—a just price that would give a just wage and a just profit and a just dividend to those who work and produce, a just price that would not exploit the consumer and yet would not depreciate the standard of living of producers. The third principle is the payment of a dividend to enable a nation of shoppers to buy their own goods. I am not going into a detailed discussion of these principles, but I maintain that this is absolutely possible.

It has been said that perhaps we in this corner are advocating something new. I do not wish to labour this point, but there are other countries that are trying something new and they seem to be solving some of their problems. However, in this connection I wish to read a brief excerpt from that great philosopher, poet and legalist, Goethe. He says:

> If anyone advance anything new, which contradicts, perhaps threatens to overturn, the creed which we for years respected and have handed down to others, all passions are raised against him, and every effort is made to crush him. People resist with all their might: they act as if they had never heard nor could comprehend; they speak of the view with contempt as if it were not worth the trouble or even as much as an investigation or a regard; and thus a new truth may wait a long time before it can make its way.

I said that other nations were proposing something new, and other nations seem to be forging ahead. I wish to read from a little pamphlet by the Very Reverend Hewlet Johnson, a great mind—scientist, economist and thinker. "Why poverty in the midst of plenty"? is the title of this little pamphlet. I call the attention of the house to it simply because he refers to another country which was not afraid to try new things—Japan. He says:

> Japan enters the competitive field and leaves her rivals standing still. England outclassed. Germany outclassed. The United States outclassed. How in the world is it done? . . . Some say sweated labour is the secret, and advocate a drastic cut in wages. Japan's prosperity rests, they maintain, on the worker's misery. Let us examine the charge. I paid a visit to Japan two years ago and learned much. I went fiercely critical, quick to detect the social rottenness at home. Japan's proletariat, they told me, were underpaid, underfed, underhoused and overworked. I sought for the signs of it.
>
> I found none. Such things may exist. They hide them very well away. I passed through Kobe and Yokohama. On foot I examined Kioto and Tokio, penetrating the poorer quarters of those cities, and contrasted them with the wealthier suburbs of the same.
>
> I saw, indeed, such sights as sadden English eyes in London or Manchester; but the contrast between wealth and poverty is less marked in Japan than in England, and the people who thronged the streets were not notably oppressed or overstrained; nor were the houses I scrutinized notable for squalor. . . . We can at least deny that Japanese price-cutting rates in any peculiar way on the worker's misery. We can deny that it rests on low wages at all. For wages, in any event can hardly account for so wide a difference in price when wage-costs form so small an item in total charges. I would ask those who run a modern rayon factory if their wage-costs amount to more than half of one per cent? Real wages, in short, are not phenomenally low in Japan, and certainly no wage adjustment could appreciably affect the disparity between Japan's price and ours. Japan's secret lies elsewhere. It lies in realms of money creation, and not in realm of factory manipulation, Japan employs her social credit, and therein alone lies the secret of her dominance. An assertion not, perhaps, so wild as it sounds. Apart from the fact that no other adequate explanations ever advance to the field, let alone hold it, there is the solid fact of Japan's keen interest for many years in the social credit movement; in that movement whereby a nation creates its own money against the backing of its own real goods, and puts no toll of interest upon it. The movement, which, by a proper national accountancy, estimates the real national appreciation of value, and on the strength of it grants a national discount, with a consequent price reduction.

This point is interesting:

> Mr. Osaki, sometime Minister of Justice in Japan, represented Japan at the Disarmament Conference at Geneva in 1931. Starting on his mission in July, 1931, via America, he took with him a copy of "The Nationalisation of Credit," purposing to lecture on the subject in Europe and America.
>
> Let me add to this.
>
> Some years ago two Japanese gentlemen called at a London office and asked a friend of mine for information. They were economic investigators bound for Geneva to examine European economic systems. My friend presented them with copies of Major Douglas' Social Credit to read by the way.
>
> After five days they returned. They had not been to Geneva. They had no reason to go there now. "All we sought we have found here," they said, pointing to the Douglas book.

If other nations such as Japan are trying something new, and succeeding comparatively well, why should it be thought incredible that something new might be suggested in this country that would bring us out of our economic bondage and slavery? I am not going to quote the finance minister's paragraph again because time will not permit, but I suggest that the minister all through his budget speech evidenced that he was in agreement with what is commonly known as the sound money policy. I believe I am

correct when I state that this country expected some very drastic monetary reform to come out of this present session. I fail to see it coming; at least, if I am to judge by the speech of the Minister of Finance on the budget, I fail to see it there. If the Minister of Finance had worded this paragraph a little differently and had made another budget commensurate with the different wording, I wonder how it would have sounded? I drafted a paragraph that I would like to have substituted for the one in the budget speech which I have quoted, and it reads something like this—of course this is my own wording, not that of the Minister of Finance. Suppose that paragraph had read this way:

"I am not an alarmist in the generally accepted usage of the term. Yet I wish to sound an alarm. I wish to say to this parliament assembled that unless we take immediate steps to take absolute control of currency, which must be a medium of exchange only, and the control of our real credit, which is the nation's ability to deliver goods and services wherever and whenever required; if, I say, we do not take immediate steps to do this we will never be rescued from the quicksands of financial debt and death in which we are rapidly sinking. Moreover, I am convinced that by the application of sound common sense to the problem of distribution of our very high productive capacity we will not betray the confidence which the people of Canada have been pleased to place in us. Let us stand together in our endeavour for a new economic order which will give to the eleven millions of people constituting this nation economic security, liberation from the grim monster of fear for the future, and bring to them that high standard of living and resulting happiness that we believe our wealth of production is able to give, and which they so much deserve, and which we believe can be done within a reasonable length of time."

If his whole speech had been commensurate with something like that, Mr. Speaker, I claim that the Minister of Finance would have gone down in history as one of the greatest emancipationists of our modern age of economic slavery.

I wish now to present an amendment to the amendment. I do so, Mr. Speaker, because we do not feel we can vote for the amendment as it now reads, owing to the fact that we do not believe in, and our policy is not that of, a socialistic state. I therefore move, seconded by the hon. member for Red Deer (Mr. Poole):

That all the words in the amendment following the word "country" be struck out, and the following substituted therefor:

[Mr. Hansell.]

"This house also regrets that no steps have been taken to provide

(1) That every increase in the real wealth of the nation will be accompanied by an increase in the possible effective demand for the goods its citizens require;

(2) That the distribution to individuals of claims to goods and services must be progressively less and less dependent on employment;

(3) That the regulation of the issue and recall of money must automatically be adjusted to the requirements of the economic system. Financial policy must be made to serve industrial and national requirements, and thus remove all hindrances to the efficient production and distribution of goods and services so that all the people of this country may be enabled to enjoy the benefits to which their productive capacity entitles them."

I submit this amendment, Mr. Speaker, for the consideration of the house.

Mr. R. J. DEACHMAN (Huron North): Mr. Speaker, I rise to make a few observations on the comments made by those in this house whom I may designate as the members of the dissenting minority. My remarks will be brief, partly because some of those comments answer themselves, and partly because a great many of the speeches contradict those which have been previously made.

I took particular interest in the speech which was made about a week ago by my hon. friend the leader of the social credit party, the member for Lethbridge (Mr. Blackmore). I confess that I rather like to hear him. There is a freshness and vivacity about his presentation, and I know that he actually believes what he is saying. The lance of his enthusiasm has not yet been dulled against the bleak intransigency of things, and I believe that when he sat down he felt that the house as a unit should rise and try to carry into effect the things he had suggested. My hon. friend is very keen on quotations. He made many in that speech, some of them were indeed excellent. I can agree myself with a great many, but there was one which, I take it, touched the crux of the whole question. It was an extract from an address by Stuart Chase, contained in these words:

Again it is agreed by all competent economists that purchasing power has not kept step with invention. Purchasing power is the final arbiter of all jobs under the prevailing financial system. Unless prices fall as fast as labour saving devices increase, the saved labourer must whistle for employment. With a static price level, he will have to keep on whistling. Prices have not been declining rapidly in recent years.

I want the house to note particularly one sentence in that paragraph as follows:

Unless prices fall as fast as labour saving devices increase, the saved labourer must whistle for employment.

Beyond question that statement is true; the enigma of our economic situation to-day is that prices do not fall with the advent of labour saving devices, and therefore men are thrown out of employment. While I commend my hon. friend for the very complete statement he has made in those few sentences, may I also be permitted to point out that unfortunately he does not agree with his own conclusion. The hon. member for Lethbridge does not want to adopt a policy which will bring about a decrease in price and thus provide increased purchasing power.

In his recent speech he argued in favour of the production of sugar from beets. Let me point out to the house that to-day sugar can be laid down in the port of Montreal on a free trade basis at $1.70 per hundred pounds. It cannot be produced profitably from beets in the Dominion of Canada at the present time for $3.70 per hundred pounds, and I doubt whether it can be produced profitably for $4 per hundred pounds. There are 8,000,000 hundredweights required. The hon. member for Lethbridge comes from a centre which produces beets and he is anxious to have sugar produced in Canada, yet if his policy were put into effect the added cost of the production of sugar consumed by the Canadian people would amount to somewhere between $16,000,000 and $20,000,000 over and above what they would be asked to pay upon a free trade basis. Why is that? Because the cost of producing sugar from beets is very high, while the cost of producing sugar from cane is very low. The sun in the southern countries works for the production of sugar more efficiently than it does in the northern countries. We are asked to bonus the manufacture of sugar, to fight against the sun and to provide subsidies or bonuses against that power. I claim that in the long run the sun will win and bonuses will be beaten.

My hon. friend is ready to support such a measure, but what position does he take in connection with other measures? Where does he stand when the manufacturer of agricultural implements comes along and asks for a tariff of twenty-five per cent? Where does he stand when the textile manufacturer rushes to the Minister of Finance (Mr. Dunning) and asks for a higher tariff? Where does he stand when the iron and steel men ask for aid from the public? Where does he stand upon these issues which are vital to the prosperity of the country? There can be only one place for him, and that is on the side of the high protectionist manufacturer. He has backed measures which would increase the cost of the production of sugar; he is in favour of a measure of protection which would be equal to sixty or seventy per cent of the value of the product.

My hon. friends on the social credit side of the house have gone so far as to return to their own constituents and suggest that this house had been paralyzed, that it had listened with rapt attention to the statements they had to make. I suggest that here is one thing which my hon. friends might answer, and I am quite sure that we would be very glad to hear from them. I should like to know if this is what they define as a "just price." Is this one of the things they would put into force with their social dividends? I wonder how they feel about these important questions?

My hon. friend suggested in his speech of a week ago that in the United States the total value of all production in 1934 was 60 billion dollars, but that the total paid out in that production was only 40 billion dollars. In some strange way 20 billion dollars' worth had disappeared. There was an explanation for 5 billion dollars' worth of this in the payment of life insurance, but there was no explanation for the disappearance of the 15 billion dollars' worth of purchasing power. I have seen magicians stand upon a platform and pull rabbits out of a hat, hand them to a boy and have them disappear the next minute, but I have never seen a rabbit cause a man to disappear from a platform. Here we have a member of the House of Commons who has been able to accomplish the impossible. By a mere twist of the fingers, 15 billion dollars' worth of production disappears. I challenge my hon. friend and the members of the social credit party in this house to tell us where that 15 billion dollars' worth of production went.

They say that perhaps this production is lying on the shelves of the merchants, but I would never accuse capitalism of producing 15 billion dollars' worth of goods which it could not sell. Has it disappeared into the pockets of the bankers? I do not think our banking friends are so smooth as to get away with that much without losing their equilibrium. I do not believe that has happened, and I do not know where this amount has gone. My hon. friends say that it has disappeared, and I ask them to search for it and find out where it is.

I have here a book. I did not buy it; it was sent to me by a devotee of social credit, probably in the hope that I might be a brand saved from the burning. Let us assume that this book is worth one dollar. I submit that when the merchant sells this book for one dollar, every part of that dollar goes to someone engaged in the long chain of production,

from the time the tree stood in the forest right to the time the book passed over the counter. If anything disappeared, where did it go to? Production constitutes the basis of consumption. When the money was paid out for the production of that book there was constituted an equivalent volume of consumption through the money paid out in the cost of production. There is only one thing which could possibly arise, and I should be very glad indeed to hear my hon. friends deal with this matter. There is a possibility that in some part of the process some man might have got too much while others got too little. It is following largely the teaching of Major Douglas when I say that perhaps someone got too much—I doubt very much whether any of it disappeared.

I put it to the house in another way. Despite everything that has been said, the factors of production are still land, labour and capital. Part of the price of that book went back to the land owner, part of it went to labour and part to capital. But I search in vain for any part that has disappeared. The enigma of the social credit system is the disappearance of the value of production which they cannot trace and which they have made no attempt to trace.

I come now to another point, and perhaps I could not do better than to take the book to prove it. This book tells us that we ought to have social dividends. All right, we should like to have them. Here are the words:

> The dividend which is declared over the equivalent period represents the division of the difference between actual consumption and actual production.

That is, my hon. friends, in the social credit section of the house, make the claim that production is vastly in excess of consumption; that there is therefore a large surplus, and that this surplus could be distributed. During 1928 and 1929 there probably was a fairly substantial surplus; it went into savings, into investment, into expansion of plant. But if you are going to get a dividend out of the surplus you must first take it from the people who have it, tax it into your government and then distribute it again as a dividend. But I want to point out that there is not always a surplus. I hazard this statement—I think it is capable of proof—that during the last few years consumption exceeded production. Our stocks of goods are disappearing; besides, depreciation is a part of consumption, and as everyone knows, during the past few years the physical plant throughout the dominion of Canada has been running down, because maintenance has not been provided. So, during the last few years total consumption exceeded production. What follows from that? I think it is very simply and clearly stated if we put it in this way: In good years you might conceivably pay, let us call it for the moment the social credit dividend; let us assume that that was paid to the people of Canada; but what would happen in bad years? During the last few years the process would have been reversed and the Canadian people would have been obliged to pay a social credit dividend to the government. This would please my hon. friend the Minister of Finance; he would like it if he could get it. But this is the process. See where it would lead us. My hon. friends of the social credit party are very keen for a national bank. They are anxious, and have been anxious ever since they came into this house, to have a nationalized central bank. The object of the central bank, I take it, is to control the issue of credit. If we restricted it to some extent during periods of prosperity, in order to take the top off the boom, we would let it out in a period of depression so that we might level up economic curves and reduce the intensity of the boom and also the depth of depression. But my friends of the social credit group will pay their dividend in a period of boom or good years, and the people of Canada will have to pay it back in periods of depression. The result is that social credit will be operative in direct opposition to the ideas and conceptions of those who are agitating for a central bank.

Mr. POOLE: May I ask my hon. friend a question?

Mr. DEACHMAN: I would answer every question that is asked, and more, but my time is limited. One section of the program of the social credit party is working in a direction exactly opposite to the other. They propose to steer in reverse northeast by southwest without knowing the port of departure or the destination. Derelicts of that kind ought to be taken out of the open highways of the world.

There is one other point to which I wish to direct attention. They propose what has been called a cultural inheritance. That is, they say that we are the inheritors of all that has passed; all these things that we have are the product of the past, and therefore we ought to be able to pay a dividend out of them. But I submit that we are getting our dividends right now. Take, for instance, the business of printing. Does any man imagine that in the days before the power printing press the standard of living among printers was as high as it is to-day? Could one have had three or four hundred years ago, though one possessed the wealth

of the world, a copy of the Citizen or the Journal on one's breakfast table? Could we have had an industry like those two publishing houses in the city of Ottawa three or four hundred years ago? No. We have now the cultural inheritance that has come to us through the spread of the art of printing during the past century.

An hon. MEMBER: Who is "we"?

Mr. DEACHMAN: It is paid to us. That is true of all the great inventions which we have. We are enjoying the dividends now, and my social credit friends are asking that another dividend shall be paid on what we are getting and spending every day? What basis is there for such claim? It is sheer mist, pure will-o'-the-wisp and nothing else.

I have touched lightly upon one or two of the problems in relation to social credit. It would be interesting if we had in this house a free discussion of the question, because I think there is nothing quite so easy as to puncture some of these bubbles. Nevertheless I am very glad that my friends of the social credit party are in this house, because after all they hold these views; one of the things which is our cultural inheritance is that we permit freedom of discussion, and the mere fact that we do not agree with the views of those who are opposed to us is no reason why they should not be represented in the House of Commons to the full extent that these views are held in the country.

Having touched upon the social credit program, let me turn to another phase of the discussion. I refer to the argument which was advanced by my hon. friend from Greenwood (Mr. Massey), the Adonis of House of Commons. He told us a few days ago about the agricultural implement industry, and he performed at least one service for which I am very grateful to him and for which I shall always hold him in regard. We have heard for over a generation that the great feature of protection was that it enabled us to enlarge our market and to adopt mass methods of production, and therefore we would be able to lower prices. But, speaking from his place in the house, the hon. member for Greenwood said this the other day.

> In 1935 one company in the United States had a turn-over in that one year greater than the turn-over of all Canadian companies in nine years.

There we have a perfect illustration of mass production to the *n*th power. Were they able to produce any cheaper than we were in Canada? Not according to my hon. friend the member for Greenwood, because in the next sentence or two he says:

> The Saskatechewan prices are only 94·54 of the Montana prices. Taking prices at Sweet Grass, Montana, and Coutts, Alberta, the Canadian prices are 98·96 per cent of the Montana prices. Taking Pembina, North Dakota, and Emerson, Manitoba, the Canadian prices are 99·73 of the American prices.

Apparently the nearer they get to the border the closer they get to the American price. Perhaps in the Peace River they are away below American prices. My hon. friend from Greenwood has smashed the time-honoured argument that mass production is the important factor, because he has told us that this little company with which he was formerly associated is able to compete against the great American companies which have a turn-over in one year nine times greater than all the companies of Canada. And what else do we know about the matter? That the Massey Harris company has a plant in the United States, and it is standing up against the giants on the other side; but when it comes to do business in the Dominion of Canada it wants protection. Those who speak for it tell us that the reason is not to increase their own profits. Oh, no, the sole thing they are worried about, when it comes to that, is the Canadian worker. I want to show how the Canadian worker is getting along with the tariff. My hon. friend pointed out that the men working in his factory were supposed to consume, per family, $400 worth of food in a year. In an average family of four that would be $100 each. I do not know exactly where they got the food, because that would make a total of $1,100,000,000 of food consumed. I assume that the hon. gentleman referred to Canadian food, and the net production of Canadian farms was less than $600,000,000, so we must have provided a tremendous market for food products in Canada. According to my hon. friend, however, that was the total consumption. But I looked up the wages paid by the Massey-Harris Company during the past few years, and I found that in 1934 their average wage amounted to $837. Follow me for a moment while I make this calculation. We have $400 for food, and let us assume that the family spent $360, or $30 a month, for rent, which would not be too much in a city like Toronto. That makes a total of $760, so after paying for food and rent—I am only quoting the authority of my hon. friend from Greenwood; I may be wrong—they had left only $77 out of which to pay for fuel, water, light, transportation, holidays, amusement, sickness, charity, and every four years a small contribution to the Conservative party, the party of the full dinner pail and

ample protection, with perhaps a little contribution for Mr. Sage.

But enough of that. This is the situation: The price of agricultural implements now is sixty-one per cent above the 1913 price. As far as I know, the spread between the 1913 level and the 1936 level is greater in agricultural implements than in any other commodity in Canada. I have before me an index of the Searle Grain Company, Limited, of Winnipeg, a very carefully worked out index, which takes as a basis the average for 1913-14, so the conclusions are a little different from my own. The 1913-14 average is given as 100, and in comparison the present day averages are as follows:

| | |
|---|---|
| Groceries | 111 |
| Clothing | 115 |
| Household equipment | 145 |
| Farm equipment, other than agricultural implements | 126 |
| Farm machinery | 155 |
| Taxes and miscellaneous items | 155 |

That gives an average index figure of 126. As I understand it, Mr. Speaker, the Liberal party is endeavouring to solve a definite problem, and we want the help of everyone in this house together with any suggestions they may see fit to make. In the past the agricultural implement industry has been prosperous when the Liberals have been in power, call it accident or call it what you will. It was prosperous when the Liberals left office in 1930, but to-day the agricultural implement industry in the Dominion of Canada is paralyzed. Why? There is only one answer: Because the purchasing power of the farmer in Canada has been destroyed—I come back to a suggestion emanating from my hon. friends of the social credit party—and when the purchasing power of the farmer is destroyed the agricultural implement industry perishes. So we have an investigation taking place to-day. That is not a persecution of the agricultural implement industry, for every true Liberal who sits here to-day would like to see that industry prosper as it did in the old days of the Liberal administration. But we say to the manufacturers of agricultural implements that if the present extreme tariff system, which we are now trying to lower, continues in Canada it can have only one effect. Capital and labour will be driven out of the production of agricultural implements and into the production of other things, and so the agricultural implement industry will be killed not by the removal of protection but because this country has tolerated for too long a fiscal policy which has meant the ruin of agriculture, paralyzed trade, increased taxation and finally wiped out the industries which should provide the machinery used by the farmers in their business.

[Mr. Deachman.]

That is the situation. I am sorry my hon. friend from Greenwood is not in the house. If he were I would appeal to him, with the inherited knowledge that he must have of the past ninety years of this industry. When was it prosperous. Only during periods of relatively low tariffs, and it can never be prosperous if the high tariff is pressed down upon the Canadian people until their purchasing power is destroyed and taxes are forced out of them as they have been by this process during the last few years.

Now I come to another utterance by one of the distinguished dissenters. I refer, of course, to my right hon. friend the leader of the opposition (Mr. Bennett). It is thirty-one years since I started to listen to the right hon. gentleman, and I have always considered it a pleasure to hear him speak. I am frank to say that I have written about him for almost the same length of time, and never in all that period have I said an unkind word about him personally. I have said many things about the views which he has expressed, however, and if my health holds out I hope to say a good many more if he does not change his views. My right hon. friend has many engaging qualities. I like the cosmic sweep of his mind. I like his great capacity for infinite detail, but above all I like that note of final and ultimate authority with which he says, "This and this is so. Believe it, or you will be destroyed." Only the other day he stated in this house that he had made a very careful examination in regard to the sales tax, and what was his conclusion? He concluded this, and nothing else: That if the sales tax was raised another two per cent it would mean the destruction of the capitalist system. Think of that situation, Mr. Speaker. Karl Marx and all the great host of socialists, right down to Stalin, worked and laboured to destroy capitalism, and now, just in a breath, according to my right hon. friend, it has been destroyed by a few brief words delivered by the Minister of Finance (Mr. Dunning).

Well, my right hon. friend should know something about the sales tax. He was present when it stood at one per cent, and within a few years he had raised it to six per cent. He would not go above that; he stopped there. That was the brink of the precipice, but he was by no means so careful in regard to the tariff. Here are some of the items on which he raised the tariff. On blankets the tariff was raised from 20·45 per cent in 1930 to 44·82 per cent in 1934. I am including

in these figures, of course, the landing charges, sales tax and all the other things which operate to increase the price. Think of that, Mr. Speaker. Two years ago there was in Ontario a frost so keen that it killed every apple tree in the orchard of the old farm back home in Huron county, and at the same time the right hon. gentleman was raising the tariff on blankets until it was more than double the rate of previous years. On art silk the tariff was raised from 43¼ per cent to 86¾ per cent; on wool overcoats from 26½ per cent to 52½ per cent; on silk and wool hosiery from 26½ per cent to 70¼ per cent. These are only samples, and remember these are tariffs and imposts levied upon goods entering this country from Great Britain. Yet my right hon. friend was filled with the idea that we might be ruined by a paltry eight per cent sales tax. These are tariff heights indeed! Piling Pelion on Ossa, Everest on Aconcagua, and when he had reached these heights he gazed upward and wept because there were no further tariff heights to scale.

Then we have the dear old balance of trade. No, there is another one of which I would like to speak. There is the question of magazines. I want to quote the words of my right hon. friend on that, because they are very interesting, a wonderful sentence:

> Is it just or fair that the Canadian people, as a whole, should be called upon to pay half the amount of the tax that is received from one who buys this paper outside Canada rather than in it?

That is a bit confused, I am not sure what that means. Here it is:

> Is it just and right and fair that on a certain type of paper brought into the dominion for a certain specific purpose there should be a rebate of fifty per cent of the duty paid, and that we should ask the taxpayers of Canada to pay the balance? Is that right?

Now, when there is a reduction in duty the consumer does not pay it, he gets paid. That is what happens in this case; there was a reduction in the duty levied upon paper, and the Canadian consumer will get his dividend—I was going to say national dividend—out of the higher quality of the magazines produced.

What is the brief history of this industry? Simply this, that some years ago the magazine publishers of this country wanted a tariff, but later Mr. Fielding, instead of putting a tariff on magazines, because he protested against the idea of a tariff against thought, gave a drawback on the duties levied upon paper. In 1931, after duties had been imposed upon magazines or upon the advertising content, the Publishers' Association of Canada and the Agricultural Press Association of Canada wrote to the leader of the government of that day and said:

> The money paid by Canadian publishers in higher costs of materials and equipment should be available to them for use in increasing the effectiveness and number of their editorial pages. Canadian readers compare Canadian periodicals with all others and it is only by the production of publications of superior quality Canadian publishers can win and hold the interest of the Canadian people. If our publishers are compelled to surrender their revenues for unwarranted costs of materials and equipment they are prevented from making their editorial pages as good as foreign competition demands.

What does that mean? The publishers wanted the opportunity to develop in Canada a kind and style of publication which in appearance and editorial content would be equal to the best American papers, and what they asked of the government of that day was that paper, ink, engravings, art work, machinery and supplies used in production should have the duties reduced to a lower basis. They said:

> Given an even chance in cost of production Canadian publishers are able and willing to meet all competitors.

Mr. STEWART: Might I ask the hon. gentleman from what he is reading?

Mr. DEACHMAN: I am reading from a letter sent by the Magazine Publishers' Association of Canada and the Agricultural Press Association of Canada to the Right Hon. R. B. Bennett, Prime Minister and Minister of Finance, dated January 16, 1931, and I shall be very glad to let my hon. friend have the full text. It continues:

> If, in the national interest, it is considered advisable to lessen the forces of foreign literature in Canada, a growing benefit, over a period of years, will accrue to Canadian publishers.

And then this underlined sentence:

> But the solution of their pressing difficulties in the production of publications which will compare with all others lies in lower editorial and mechanical costs.

That is what they asked. They asked for what is given to other manufacturers, a chance to reduce the cost of their product so that they could compete fairly with American publications. They did not from that date until this ask for a duty upon magazines. Now that the Minister of Finance has done something for the magazine industry I predict that it will go forward with increasing prosperity just as it did in the days of Mr. Fielding. I have under my hand an item which shows what they did accomplish in that time. When the drawback came into effect eight leading maga-

zines were using 1,912 tons of paper per annum. At the time the drawback was cancelled in 1930 these publications required 5,283 tons per annum, an increase of 3,371 tons, indicating greater progress in eighteen months than had taken place in the previous ten years. I predict greater progress in the magazine publishing business in Canada in the next two years than has taken place in the last five under high protection.

Now a word about this ever-recurring question of the balance of trade. My right hon. friend the leader of the opposition, speaking in regard to it the other day, stated that too much emphasis had been given to it in the past. To-day I attack this general fallacy of the balance of trade on the ground that as far as Canada is concerned an increase in tariff is not conducive to a favourable balance of trade. Personally I care little whether the balance of trade is favourable or unfavourable. There have been times when we have been prosperous with an unfavourable balance; there are other nations which have been prosperous for generations with an unfavourable balance; also the reverse has been true. But I say that a high tariff policy is not conducive to a favourable balance of trade, and I prove it from Canadian history. Between 1878 and 1896 there were only five years in which there was a favourable trade balance; that is the time when protection was in flower and was guided by the master hand of Sir John A. Macdonald. During all the years of Canadian history, leaving out the war years and the immediate post-war years, the high favourable balances have been in times of low tariff and the unfavourable balances in times of high tariff. And may I point out—I am sorry that the leader of the opposition is not in his place, for I know he would agree—that in the years 1912, 1913, 1914, the adverse trade balance of Canada was larger in proportion to total trade than ever before, especially the balance with the United States, and what was happening then? My right hon. friend was in the house and he had not one word to say because at that time the Tory flag flew at the masthead and all was right with the world.

Now what is the problem before us? ? It is simply this: Are we to go forward under low tariffs, giving a chance for expansion and development, or go back to stagnation under high tariffs? I have no hesitancy as to which course we are going to follow. If you examine the history of all the depressions of the past what do you find? The nations moved out of these depressions when tariffs were lowered and trade expanded, or when there came into the situation some new factor which produced exactly the same result as an expansion of trade. In England one of the greatest world depressions followed the Napoleonic wars. Great Britain was not clear of that until 1846, the time of the repeal of the corn laws, but in the next ten years British trade made more progress than from the days of the invasion by Caesar until then. Why? Not only because of free trade but because about that time there came the industrial expansion which meant the development of England. Take the United States following the civil war; what happened? They passed through a depression; then came the opening of the west and the expansion by that means of the free trade area, and the United States moved forward into a great period of expansion because of the same basic cause; the free trade area of the country was expanded. Coming to our own country in 1896 what had we? Sir Wilfrid Laurier expanded trade by the adoption of the British preference; Sir Clifford Sifton helped in opening up the west and thus expanding the free trade area in Canada, and we entered upon a great period of development. That is the history—every time the world has moved out of depression it has been because trade has expanded and greater freedom has come to the people.

But what do we hear to-day? From various corners of this house, from all over the dominion we have other suggestions; let us try this; let us try that; let us have a little more currency; let us have a social dividend—whatever that means—let us have a just price; let us have some of the things which Premier Aberhart is promising to the people of Alberta anything except the thing which would make use free. Always and forever the human race seeks distant Pharpars and Abanas and will not take the remedy that lies at home. Under the government we have to-day we look forward to a movement in the right direction. We have made a start and are going forward. It is forward with Liberalism, freedom and progress, or backward to stagnation with the opposing forces.

Mrs. MARTHA LOUISE BLACK (Yukon): Mr. Speaker, it has been my privilege to listen to the budgets brought down from the time of the Right Hon. Mr. Fielding. I heard him bring his budgets down; he was followed by the Hon. Mr. Robb, the Hon. Mr. Dunning, the Right Hon. R. B. Bennett, the Hon. Mr. Rhodes and again Mr. Dunning. I have yet to hear one budget that has carried with it the unanimous support and approval of all parties; in very commonplace language, "someone's ox had always to be gored."

During the early part of this session we had the treaty between Canada and the United States. I did not want to vote against that treaty because I knew it was going to be of help to the Yukon. In the Yukon we import everything we use—our clothes, our food, our machinery. But in thinking the matter over, I felt conscientiously that I had to vote against that treaty because it affected the whole of Canada, and to explain my reason for voting against the treaty I must go back to the reciprocity agreement of 1911. During that campaign, when my husband was working very hard for the election of the hon. gentleman to my left (Mr. Stevens), I received from my father in the United States a letter written to him by an uncle of mine who at that time was president of one of the largest manufacturing concerns in that country. In that letter this uncle said, "There is an election campaign going on in Canada. It is for a reciprocity treaty, and we have stopped our building in Montreal. We are not going ahead in Toronto. If the treaty goes through, all our manufacturing will be done in the United States." Naturally, therefore, I felt that this treaty would hurt the factories, the manufacturers of Canada, and that is the reason I voted against it. As I have said, the Yukon imports everything and it exports what the world needs—gold, silver and a small quantity of other metals. I was pleased as a Yukoner when the treaty went through; as a Canadian I am still wondering.

During this session I have listened to speakers on all sides with reference to the railway question. First one speaker brings forward everything he can possibly think of against the Canadian National Railways. The Canadian National is the heaviest drain on the national resources, and the speaker will inveigh against carrying it on. A part of the press inveighs against the expenditures of the Canadian National system. On the other hand, speakers rise in the house and inveigh against the Canadian Pacific Railway, and a part of the press does the same. The Canadian Pacific is the heaviest taxpayer in Canada to-day. I have no brief for either railway, but at the same time it seems to me that as sensible men and women we should stop this continual sniping, first against one road and then against the other. As sensible people, as we value this country, as we value the future not only of ourselves but of our children and of our grandchildren, we should think of business first and of political sniping afterwards. I for one am sick of it.

I sometimes wonder how many people in this house or in the country would recognize the name of Onderdonk, one of the greatest railway builders Canada has ever known. In the early nineties I knew that man as intimately as any family friend; he was very much at home in my father's house in Chicago. I heard him tell tales of romance, hard work and the investment of capital in the building of the Canadian Pacific railway in the west, how those men blasted their way through the fearful mountain ranges. Others will say: But the government gave the Canadian Pacific a kingdom. Well, maybe the government of that day did give something to the Canadian Pacific Railway. But who wanted that kingdom at that time? When the United States bought Alaska, why did not Canada, why did not Great Britain buy it at the time for the paltry sum of $7,200,000? Because no one wanted it; and afterwards we say that we have done this and done that. Let us have some sense.

The Minister of Finance, to bring down a budget that would please everybody, would have to be a magician, a hypnotist and a prestidigitator all in one. I have never yet heard of that man in any country in the world. The sales tax will hit the Yukon quite a bit but I am hoping the treaty will offset that. The Yukon, as I said in very few words a short time ago, suffers some injustices from the federal government. Consider those civil servants who for years paid into the superannuation fund on both salary and living allowance. Some on retiring received from the fund the amounts which they had paid in. Suddenly the government, seemingly for no reason whatever, changed the order; retiring civil servants were told that they would be paid only on their salaries. The money paid into the fund on living allowance was refunded or an order was made that it should be. This was a most unjust, and, to me, an absolutely dishonest ruling. It is just as though one of you gentlemen had paid for life insurance amounting to $5,000 or $10,000. You paid your premiums year in and year out and you died. Your wife and family went to the insurance company to collect the insurance and were told by the officials, "Yes, true; we are sorry. Your husband did pay the premiums but we have decided that we can hardly afford to pay you the $5,000 or $10,000, so we will give you half." I have been told that the government should never have made this promise. I am not disputing that, but the government did make the promise. When a man retires, too old to take out other insurance, too old perhaps to work, why should he then be cheated in connection with what he has paid in?

As regards the Yukon—and I may say it is about all I know in this world—one heavy

charge that is made against us is on account of the telegraph line through northern British Columbia. I would suggest that the hon. member for Skeena (Mr. Hanson) try to get the government to put part of that charge on his constituency because it certainly is not fair that the Yukon should be charged with an amount of money which is spent in British Columbia.

Our government in the Yukon consists of a commissioner and council of three members, elected one from the Whitehorse district, one from the Dawson district and one from the Mayo district. I do not believe that in any place in Canada to-day is a more honest effort made by any government in power to spend every dollar to the greatest advantage. Our crying need is always roads, and yet more roads. This year the government in power has seen fit to be more generous to the Yukon, and the mining industry, which is the backbone of our life there, will benefit by that generosity.

In the early days of the Yukon mining was carried on largely by individuals, but in a few years that was changed. Huge grants of land were given to political favourites. One mining recorder walked from Dawson to The Forks at night and reported to the government at Ottawa that the tract of land over which he had walked in a few hours was not fit for individual mining, and these huge concessions were given to pampered favourites. The Klondike concession, forty miles of the Klondike river from rim to rim, the richest country in the Yukon, was originally given outright. The concession has changed hands from time to time until finally it is now owned by the Yukon Consolidated Gold Corporation Limited. That company has put up hundreds of thousands, nay millions of dollars, but owing to dishonest, corrupt or incompetent managers, it has always been in the red. It has changed its managership within the last year. During the recent campaign, in every small public meeting I held, I did not hesitate to say that the bunk houses furnished by this company for its men were not fit habitations for a well-bred dog. I am told that this company is now putting up, notwithstanding its failures in the past, another two million dollars this year. It is putting this money into new dredges; it is adding to its hydraulic machinery; it is digging new ditches, and there are also to be new camps for its men. I had letters recently saying that some of these bunk houses, the new ones, are well built, with large rooms, but as yet no accommodation for bathing, showers or anything of that sort has been provided for the men. This is not quite fair.

[Mrs. Black.]

Then, too, our work in that country is practically all seasonal; when the men sign on they sign on for eight hours, ten hours, or even twelve hours a day, and when these men sign on for the summer work for ten or twelve hours a day they must sign a paper saying that they will work for twenty-five cents an hour for any extra hours. That is not just. Someone may say: But why do they sign on then; why do that work? Well, I would say to you men here: If you had a wife and family or if you had no other way of living than by taking that work you would certainly take it if you were honest and decent and preferred to work rather than be on relief. The men work so hard during the summer of five, six or seven, and in very rare cases eight months, that they become almost automatons. They are worn out; they are weary; they are dragged, and they have little at the end of those eight months to show for the work they have done. One may say that they need not sign on, but they must sign on if they would do anything.

Then, again it is said that living up there is so much cheaper. Well, living is cheaper than it was in the early days when we had to pay $1 a pound for sugar and $3 a pound for butter, and everything else accordingly. Now, while living is cheaper, bread still costs twenty-five cents a loaf. In the summer when the fresh fruit comes in, watermelons are $3 apiece; honeydews or muskmelons—and we seldom get a muskmelon—are from $1.50 to $2.50. Chickens the year round run from $2.25 to $3.50 each, depending upon the size of the bird and the time of year. During the summer in the north we pay $18 a cord for wood, $10 a month for water for the house and garden, and $10 a month for our telephone.

So it does not seem to me that any reasonably minded man should hesitate if we could pass a minimum wage law in that north country providing for, say $4.50 a day for an eight hour day, with board, and for the extra hours accordingly. The past government tried to put through $1.25 for the regular hours. We have an eight hour law in the Yukon, but the government official who drafted that law is also an official and director of this mining company. I must say that the hon. Minister of Labour (Mr. Rogers) gave me an interview the other day and said that he would carefully consider this matter of the eight hour law in the north. At the present time the price of gold is twice what it was when the company first commenced work and had to

work under much more difficult circumstances than now.

We in the north are anxious to do what we can. I do not think we complain. We want to do the best we can not only for the north but for Canada as a whole. I think in my thirty-eight years of living in that north country I could count on the fingers of one hand the men who preferred loafing to working—yes, and then I would have several fingers left.

Under no circumstances do I wish to be unfair or to put an unnecessary handicap on industry. I want to be fair to the men who elected me. They were the labouring men of the Yukon. I want to be just as fair to the company which did everything in its power to prevent my election, because I understand perfectly well that no matter where we are, labour needs capital and capital needs loyal labour, and if capital and labour are always ready to spring at each other's throats the rest of us are hurt and the world is hurt.

The Yukon is pleased to learn that the topographical and mining surveys are to be continued this coming summer. I would only like to be allowed to suggest to the hon. Minister of the Interior (Mr. Crerar) that his deputy consider putting on these mining surveys some of our own boys in that north country.

I was elected as Yukon's representative by the combined vote of stand-pat Conservatives, friends of thirty odd years standing, and as well by the support of a number of genuine Liberals who were certainly not well treated by the representatives of their party in British Columbia and the Yukon. The Yukon is an enormous territory with great potentialities, and I would like to feel that the two ministers in the government who are most interested in that territory, the hon. Minister of Labour and the hon. Minister of the Interior, would visit us. They would receive the warmest kind of welcome. A few years ago it would have taken them weeks, nay months to make the trip, but with present day flying conditions they could make the trip from Ottawa to Dawson and return, going by way of the Hudson bay if they so desired, in less than two weeks. They would see things at first hand and could understand better than ever our needs and necessities. While not always agreeing with the policies of the government, as I said before, I do wish to thank the ministers for what they have done this session to help the Yukon. Again I extend an invitation to the members of the government to visit us and to know at first hand what we need.

Mr. O. B. ELLIOTT (Kindersley): Mr. Speaker, I welcome the criticism of the hon. member for Huron North (Mr. Deachman), because I believe that any policy which cannot stand the criticism of this House of Commons is not worth advocating. I expect the minister will hear more in reply to the criticisms the hon. member has made. I wish to associate myself with hon. members who have extended congratulations to the Minister of Finance (Mr. Dunning) upon the very impressive manner in which he presented his budget speech. I am sure that all those within hearing distance must have been impressed with the sincerity with which he delivered his speech. However, things were different when one was away from the influence of his great personality. Upon rereading his speech we then saw that there were some things lacking in the fulfilment of our desires. It takes a considerable amount of, I might say intestinal fortitude for a new member to attempt to criticize an important document of this kind, and in speaking this afternoon I speak more in the spirit of suggestion than in that of criticism.

Practically every thoughtful person must have given considerable study to the various systems by which we hope to realize our desires in obtaining a solution of the present difficulties in our economic system. Reviewing some of the assertions made by different ministers with regard to cooperation between th federal government and the various provincial governments, I found a piece of legislation passed by the Saskatchewan legislature. Bill No. 120, an act to amend the Local Improvement Districts Relief Act, is somewhat in line with the principles that have been advocated. Section 2 reads as follows:

> The minister may make advances by way of loan to settlers resident in local improvement districts or in rural municipalities for the purchase of food, clothing and building material, for medical and hospital care and treatment, for the purchase of work stock, milch cows, brood sows, poultry, feed, fodder, petroleum products, seed, machinery, implements, repairs to implements and parts and binder twine, for the payment of freight on settlers' effects, homestead entry fees, timber or hay permit fees and for improvements on crown lands and other lands, for the purpose of breaking land, the surveying of drainage of land for settlement purposes, and the moving and reestablishment on land of persons on relief or about to become public charges.

The only difficulty in connection with this bill is to be found in section 1, which reads as follows:

> Subsection 1 of section 5 of the Local Improvement Districts Relief Act, as amended by section 4 of chapter 38 of the statutes of 1934-35, is further amended by striking out

the words "at the rate of four and one-half" in the sixth line and substituting "at a rate not exceeding six."

Subsection 2 of section 2 reads:

Every loan made under subsection 1 shall be a charge upon all the property, real and personal, of the person to whom it is made and shall be repaid at such time or times and in such manner as the minister may by regulation provide.

It seems to me that our financial system is always trying to saddle our people with the maximum load of interest they can bear instead of making a minimum rate, which is the most desirable. In Saskatchewan the rural population is 79·7 per cent of the whole and the welfare of the whole province is vitally dependent upon the success of the farmers. During the last five years the equilibrium of the province has been upset because of financial conditions which have compelled many farmers to seek avenues of revenue besides the farm. Many of them have gone to the towns to open up business ventures of various kinds. Most hon. members are familiar with the law of diminishing returns. A town with a given population can support only a given number of business places. Many of these farmers have opened up stores, trucking concerns, garages and other places of business, and the result has been disastrous to many of the old established places. Many of these old firms had extended credit to farmers during the difficult days of crop failures and they were forced to compete with new ventures which were opened up debt free and carried on mostly on a cash basis. The result was that many of the older firms eventually went into bankruptcy.

It seems to me that Canada is making exactly the same error in connection with our transportation system. We built thousands of miles of railway lines and then we proceeded to construct highways practically parallel to the railway lines to serve a population which was not increasing at the same ratio as we increased our transportation facilities. The trucking business is not sufficiently well controlled, as far as financing is concerned, and it is not compelled to abide by any fixed charges.

At six o'clock the house took recess.

## After Recess

The house resumed at eight o'clock.

Mr. ELLIOTT (Kindersley): When the house rose at six o'clock I was saying that the trucking business is not sufficiently well controlled to compel the operators to abide by any fixed charges. I know of many cases during the last few years where small truckers have gone into that business to provide themselves with some means of sustenance. They found the rates charged by going to the railway station and obtaining the classification and rates on freight between given points, and then, in order to obtain business, they transported their goods at a smaller charge. In addition to this we are also providing assistance to all manner of shipping, both foreign and local, through a free canal system. When hon. members consider that the Canadian National Railways spent during 1935 about $24,000,000 on their right of way, they will agree that it is hardly consistent with good business to provide free means of transportation for other systems. We have in Canada 509·4 miles of canals, giving us 1,846 miles of waterways open to navigation. Since the commencement of the building of canals, Canada has spent $336,564,618, on which revenues of $30,851,699 have been received, $14,000,000 of this being between 1868 and 1910, in which latter year canal tolls were cancelled. The estimates this year show that we are about to spend many more millions on harbours and canals.

Records shows that in 1934, 22,217 Canadian and 2,044 United States vessels, with a registered total of 17,736,818 tons, used our canals. Freight carried was as follows: Canadian, 10,813,922 tons, or 59·8 per cent; United States, 7,255,330 tons, or 40·2 per cent: passengers handled were 69,990. The 1935 returns show a total of 25,694 vessels, with a tonnage of 18,204,468 tons, or an increase of 135,216 tons. If hon. members will compare this with the revenue freight handled by the railways, it will be observed that on the Canadian National Railways the revenue tonnage was 38,807,718 tons, and on the Canadian Pacific railway, 26,094,183 tons, or a total of 64,910,901 tons, so that the canal handled almost 30 per cent of the total revenue tonnage. In addition to this, people in their criticism fail to make note of the thousands of tons of freight, both carload and less than carload, that have been handled free during the last few years of depression, and I might say that the people in my constituency who have received quite a large part of this relief appreciate the services of the railways.

I wish to place on record comparisons of the traffic between the ports to indicate the service given by our canal system: Between Canadian ports, upstream, 4,063,850 tons; down, 6,119,551 tons; Canadian to United States ports, 1,895,272 tons up, and 197,614 tons down; between United States ports, up, 398,815 tons; down, 551,523 tons; United States to Canadian ports, up, 162,102 tons;

down, 4,680,525 tons. During the season of navigation 140 cargoes, or 211,169 tons of freight, passed up the St. Lawrence canal from Europe and north American Atlantic ports. This included 22,704 tons of anthracite coal, all for Toronto, from England—and this, it may be observed, was in competition with our Canadian coal—56,058 tons of wood pulp, almost entirely for United States ports, from Norway, Sweden, Germany, Esthonia, and the maritime provinces; 61,372 tons of pulp wood for Thorold and Oswego area and other United States ports, all but one cargo being from the maritime provinces. A great deal of this freight was handled by Norwegian tramps in competition with our own vessels. In 1935 wood pulp carried on the St. Lawrence amounted to 380,876 tons, and pulp wood, to 619,907 tons, and a large amount of hard and soft coal was transported as well. During the present year, from April 24 to May 8, 148 Canadian, two American, and seven foreign boats, principally Norwegian, were engaged in handling wood pulp, china clay and merchandise.

I note also that, according to the Montreal Star of May 7, three more Norwegian tramps have cleared their ports with sulphite pulp billed to Montreal. On May 5 the Montreal Star states:

> More tramps have been chartered to go to the head of the lakes and take grain from there to Europe. Lake ship owners are anything but pleased, for they say they have plenty of ships available. One lake ship man bitterly complained yesterday that wages were about one-third on the Norwegian tramps what they were on Canadian ships. Canada has plenty of lake ships, but cannot compete against the Norwegian tramps on toll free canals, he complained.
>
> Among those going up to take Canadian grain at the head of the lakes are Audun, Komet, Lab, Rondo, Bette, Bonde, Ornefjell, and Asgerd.
>
> The Norwegian tramp, Margit R., which passed up the canal for the lakes, was the first ship to go by this year with her boilers on deck. She had a load of coal from Swansea to Toronto.

In the Star of May 6 I find the following criticism:

> An equally menacing form of competition to Canadian railways is to be found in subsidized waterways. Operators on these, who at one time were primarily occupied in moving bulk products, are increasingly encroaching on package and other freight. It is hoped that the government will give active consideration to plans for making inland waterways self-supporting. The development of the methods of transportation which compete with rail services has been very largely the result of large public expenditures made without any real consideration of the economic consequences. The railways are naturally interested in corrective measures, but it should not be forgotten that the interest of the taxpayers in the sound financial policies of public authorities is even more pressing....
>
> All railways on this continent are being subjected to increasing competition from highway transport. It cannot be doubted that the motor vehicle has a permanent place in our economy, but it is equally true that the railroad has not been supplanted as the most important element in the transport field. It would appear that the proper function of the motor vehicle is to serve as a supplement to, rather than a substitute for, railroads.
>
> Highway transportation of freight, in its present form, has suffered from acute internal competition and cannot be regarded generally as a proven economic enterprise.

Canadian railways have also lost a considerable amount of traffic through the Panama canal. Of 2,201,180 tons of Canadian traffic originating on the west coast, 498,706 tons were destined to Canada's east coast; of 196,204 tons originating on Canada's east coast 189,227 tons were destined to Canada's west coast. The report of the governor of the Panama canal zone for the year ended June 30, 1934, reveals that 5,553 vessels, with 28,566,595 canal net tonnage, passed through the canal, and the tolls collected amounted to $24,063,789. It seems to me that toll charges on a similar ratio on the Canadian canals would provide a return of possibly $18,000,000 or $20,000,000.

There is no doubt that the solution of our railway problem is increased business, and I believe also that there should be a department of transport possibly along the lines set out in the resolution which is No. 28 on the order paper, and which states:

> That it is expedient to provide for a department of transport to comprise the present Department of Railways and Canals—

The greatest deterrent to the business of Canada, of course, is not only the heavy taxation in the municipalities, cities and towns, but also the indirect taxation. As far as our housing scheme is concerned, it is impossible for the great majority of our people to build houses with money at five per cent and taxes at their present rate. If we take into consideration the income tax returns for 1934 we shall readily see the impossibility of a large number of Canadians ever owning their own homes. The income tax returns show that in Canada in 1934, 390 persons received $100,000 or more; 1,853 persons received between $25,000 and $100,000; 28,896 persons received from $5,000 to $25,000; 246,057 received between $1,000 and $5,000, and 3,765,971 had incomes of $1,000 or less.

We should take a lesson from the past; the enormous interest and tax burden that we have attempted to meet could be explained by the national policy introduced by Sir John A.

Macdonald in 1879. In its essentials that policy was based upon a protective tariff and sound money. It has been demonstrated that it was based also upon the mistaken idea that the individual Canadian must spend a lifetime working for the system built up under the national policy, and must be content to accept in return whatever may be left after all other demands have been met. It may be said that it is one thing to make this broad statement and another thing to prove it, but this is the experience of the last fifty-six years: In 1936 the population of Canada only slightly exceeds the population of 1879. In the interval Canada has absorbed some 3,000,000 people from Europe, who have displaced or replaced young Canadians who have moved to the United States, where the Canadian population is said to exceed 15,000,000. In the fifty-six years to which I have referred the existing public utilities and fixed assets of Canada, including the railways, have been put into place on such terms and conditions that Canada owes more than the entire cost of construction, and more than the replacement value. The weakness of our present system is that it maintains poverty as a necessary and recognized institution, and seeks to carry a religion of faith and idealism on the backs of the people who are oppressed by material necessities and human ills.

This is only another way of saying that the system has always insisted upon maintaining poverty in the midst of plenty, dividing the people into rich and poor, enforcing the rights of property by power of law, and restricting human rights to every extent necessary to keep money sound. An individual cannot eat ethics, and in all sincerity I say that there should be credited and devoted to the factor of restoration in Canada a fully adequate share of the credit and money of the nation. There must be a restoration, by immediate remedial action, of an adequate Canadian standard of living. Nothing less and nothing else will satisfy the electors of Canada. This country can be made the richest nation, per individual of population, in the world; the assets exist but are locked up most securely.

Mr. T. C. DOUGLAS (Weyburn): Mr. Speaker, I had not intended taking part in this debate, but in view of the fact that I seconded the amendment moved by the hon. member for Vancouver East (Mr. MacInnis), I feel that I ought to make a few observations with regard to the salient points of the budget.

May I begin, like others who have preceded me, by complimenting the Minister of Finance (Mr. Dunning) upon the comprehensive manner in which he presented his budget, and on the earnest and sincere way in which he approached this great problem.

First of all I should like to mention some of the features in this budget that seem commendable to me, coming as I do from an agricultural constituency in western Canada. The reduction in the intermediate tariff rate on gasoline and distillate, if it is reflected in a reduced price to the consumer, will be of great benefit to western farmers, particularly in those areas where they are largely machine farmers. There gasoline and distillates enter into the production of their crops. Covering large areas, as they do, this is part of their cost of transportation, and a large part of their income is used up in buying gasoline and distillate. Therefore, Mr. Speaker, if this reduction in the tariff rate is reflected in a reduced price, as we hope it will be, we feel that the Minister of Finance is to be congratulated upon having taken this step.

We believe also that the $100 worth of goods which may be brought into this country by tourists is a commendable feature. I do not feel that I want to take advantage of this provision; I have always felt that one ought to spend his money where he earned it, but while I would not want to take full advantage of this offer the fact remains that because of the times in which we live thousands of people are compelled to make their dollar go as far as possible. There has been a concerted demand, particularly from along the boundary, that the privilege now enjoyed by residents of the United States should be extended to Canadian tourists, and I feel that in taking this step the Minister of Finance has done something which will be in the best interests of our people.

I think, too, that the increase in the corporation tax to fifteen per cent is a move in the right direction. In the United States for some time past they have had a corporation tax of sixteen per cent, so a fifteen per cent tax is not at all out of proportion. It is only right that those who have made large profits out of the society in which they live, and have been able to make them only because of the existence of the society, should pay a fair share towards the maintenance of that society.

But most of all is the minister to be congratulated upon the lowering of the tariff on farm implements. The hon. member for York South (Mr. Lawson) said the other evening that while we of agricultural constituencies might be glad, he, thinking of the workers, was not at all happy about this. I would point out that never to my knowledge has a protected industry been an industry which has looked after the workers. In fact it is

commonly said that protected industries have been the most sweated industries and those in which wages are lowest. We, too, are interested in the workers, but I hardly think that the worker will be helped very much by high tariffs on farm implements. But if lowering the tariff on farm implements means a lower price to the farmer, this will be of great material benefit. I say "if"; it has not always been the case. I have in my hand a report of the Searle Grain Company dated Thursday, March 19, 1936, in which they list ten farm implements. I am going to read the prices in 1913, 1935 and 1936, and the increase in price from 1913 to 1936:

| | 1913 | 1935 | 1936 | % Increase 1913-1936 |
|---|---|---|---|---|
| Drag harrow. . . | $ 14 | $ 16 | $ 17 | 18 |
| Steel tray barrow. | 5 | 6 | 6 | 26 |
| Wagon and box. . | 101 | 143 | 156 | 55 |
| Walking plough. . | 23 | 28 | 28 | 22 |
| Seed drill. . . . . | 144 | 237 | 248 | 72 |
| Hay rake. . . . . | 36 | 57 | 59 | 66 |
| Eight foot binder. | 194 | 262 | 280 | 44 |
| Mower. . . . . | 60 | 94 | 102 | 71 |
| Disc harrow. . . . | 46 | 71 | 73 | 59 |
| Gang plough. . . . | 90 | 135 | 135 | 50 |

This reveals the fact, that to-day one would have to spend three bushels of wheat to buy the same amount of farm machinery that in 1913 could have been purchased for one bushel of wheat. It shows that the cost of farm implements had increased out of all proportion to that of the other commodities the farmer has to buy either to produce or to live. But the most significant fact is that out of the ten items I have listed seven have increased in price since last year. We heard a great deal during the general election that if only we could get a lower tariff on farm implements the cost to the farmer would come down; yet the fact is that of the ten listed seven are higher this year than last. Therefore in the west we are apprehensive. We are hoping, and I think the Minister of Finance is hoping, that this decrease of five per cent in the tariff on farm implements will mean a decrease in price. If it does he is to be congratulated. I am not going to say any more about this because a committee has been set up to investigate the matter and I do not wish to anticipate its findings, but if this reduction in tariff is not followed by a reduction in price there will be great disappointment among the agricultural producers of western Canada.

I am very glad to be able to congratulate the Minister of Finance upon these things: the lowered rate on gasoline, the increased corporation tax, the permission to bring back $100 of goods free of duty, the lower tariff on farm implements. Sometimes hon. gentlemen opposite have taken the attitude that we in this group delight to find fault. That is not true; we are only too glad to congratulate any minister upon a fine piece of work. When we criticize, as I must now proceed to do, it is not because we love the Minister of Finance less but because we love Canada more.

I shall confine my remarks particularly to the first part of the amendment moved by the hon. member for Vancouver East (Mr. MacInnis):

> This house regrets that the proposals submitted by the Minister of Finance on May 1 are entirely inadequate to meet the acute and serious situation prevailing in Canada.

I was interested to find that those words are exactly the amendment which was moved last year by an hon. gentleman who is now of the government party. I felt that conditions had changed so little since last year, that this amendment was still very much in order. There are in the budget two things particularly which do not commend themselves to me: first, the inequality in the raising of the national revenue, and, second, the inequality in the expenditure of it.

As to the inequality in the raising of the national revenue, one would naturally have expected that since the country is facing a large deficit there would have been a substantial increase in the income tax in the higher brackets. But such was not the case. Lest some might think that, perhaps, there are no higher brackets of any consequence, I have in my hand figures of the incomes assessed for income war tax in Canada, in 1934. Reading at page 5, I find the following figures:

| Number of Incomes $5,000 and Up | |
|---|---|
| 1930 | 41,455 |
| 1931 | 43,150 |
| 1932 | 39,305 |
| 1933 | 31,134 |
| 1934 | 23,344 |
| **Number of Incomes Over $25,000** | |
| 1930 | 2,293 |
| 1931 | 2,430 |
| 1932 | 2,358 |
| 1933 | 1,602 |
| 1934 | 1,237 |
| **Incomes of $50,000 and Over** | |
| 1930 | 603 |
| 1931 | 601 |
| 1932 | 614 |
| 1933 | 390 |
| 1934 | 307 |

A close scrutiny of these figures reveals the fact that about forty per cent of the population are receiving about seventy-five per cent of the national income, leaving about twenty-five per cent of the national income

to be divided among the other sixty per cent of the people. This means that those who are receiving large incomes have, in relation to what they receive, very little taken from their average purchasing power by the tax. Two things, it seems to me, ought to be done. First, the names of these people and the amounts on which they pay income tax should be published. We ought not to wonder that suspicion is rampant. We cannot wonder that people misunderstand, when the governments hesitates to print the names and amounts received by these individuals. The other thing is that without hurting these people very seriously, we could grade steeply the income tax, not only in steps of $5,000, but every $1,000, so that each $1,000 might pay proportionately higher than the preceding $1,000. One would have expected this to be done, but it was not. The Minister of Finance spoke quite longingly about Great Britain; yet we know that to-day Great Britain has very steeply graded her income tax, with the result that in some of the highest brackets as much as fourteen shillings in the pound is taken. But no such step has been taken in this budget.

Then we suggested that a levy might be taken on wealth.

Mr. DUNNING: Before my hon. friend leaves the income tax, would he permit a question? In making comparisons with Great Britain, has my hon. friend added to the federal income tax in Canada the provincial income taxes now prevailing? There is in Great Britain only one income tax whereas in Canada there are two and sometimes three.

Mr. DOUGLAS: No, I have not added the provincial income tax; but the fact remains that the provincial income tax, like the federal, does not emphasize the higher brackets. It is the people in the lower brackets, and not those in the higher brackets who pay the major part of the national revenue.

The second thing we suggested was a levy on wealth and undivided profits. The hon. member for Kootenay East (Mr. Stevens) said that he could not support our proposal because it was a move in the direction of socialism, and yet he proceeded to suggest a reduction in interest rates on bonds, which really would have the same effect but would not distribute the burden as equally. To cut interest on bonds indiscriminately—and we are in agreement with a reduction in interest rates—would strike not only at the large financier but at those people who are dependent for their livelihood upon small groups of shares, life insurance policies, annuities and so on. But by levying a tax on wealth you would take from those who have and who can best afford to contribute revenue towards the support of the country. Let me take an example. On page 52 of the price spreads report I find that the Imperial Tobacco Company and subsidiaries showed, from 1929 to 1933, undivided profits amounting to $11,886,573. On page 115 I find that the Macdonald Tobacco Company at the end of 1933 had undivided profits amounting to $594,432, despite the fact that the president had taken out $260,000 annually since 1930. These are two instances. Surely they are not isolated; surely there are in Canada other accumulations of similar undivided profits. Surely, therefore, these are places to which we ought to go in all fairness to gather some of the revenue by which to finance the dominion. It was suggested this afternoon that this is a socialist measure; yet it was tried in Germany by the government there, not socialist, on two different occasions to meet financial crises. I would not vouch for the authenticity of this, but it has been estimated that by a levy on wealth in Canada, spread over a period of five years, it would be possible to get somewhere in the neighbourhood of $2,000,000,000. I suggest that that is worthy of serious consideration.

We suggest further that some revenue might be raised by inheritance taxes. In Great Britain to-day when men are leaving behind them large fortunes to their next of kin the state feels that in view of the fact that they made those fortunes within the country and by the aid of all the people in the country, the people of that country have a right to some share of those fortunes. This would be a good place to work out what the hon. member for Huron North (Mr. Deachman) suggested. He spoke of our cultural heritage; he said that we have this and we have that. I could not help wondering whom he meant by "we"; a good many people are not included in that "we," for a good many people have not much of an inheritance. It is true that there are books and all the other fine contributions to our cultural heritage, but they are not procurable by thousands of people, and these things might be made available to these people through the collection of inheritance taxes on fortunes passed on from generation to generation. In Great Britain to-day by the time a fortune has passed through the exchequer, one-third has been taken for government revenue. But this government did not see fit to raise money in any one of these ways; rather, it chose to raise money largely by increasing the sales tax from six to eight per cent.

Mr. DUNNING: Does my hon. friend or his party advocate adding a federal inheritance tax to the already existing succession duties? It would help a great deal to have that clarified.

Mr. DOUGLAS: Most decidedly, and also equalizing them throughout the provinces so that no man might move from one province to another where the rates were lower. There can be no more pernicious form of taxation than the sales tax. I will not go into the details of it, but there are three facts to be pointed out in connection with it. In the first place, it takes from the consuming power of the great mass of consumers; the average man, in other words, will have two per cent less to buy goods with; there will be two per cent less for the storekeeper, and two per cent less going into circulation. I remember seeing last year large bill-boards showing a man tied up with ropes, and there was this inscription, "Let him free; vote Liberal." Yet here we are tying up internal trade in the most effective way possible by taking two percent more from the pockets of the people. But there is something else. Like the sugar tax, the sales tax affects largely those who have the biggest families and who have to buy the basic necessities of life. When people have to buy sugar for five or six or seven children they pay five or six times as much under the tax, whereas people who do not spend their money on basic commodities pay less. We all remember one of the axioms in the economic text-books, called Jevin's Criteria, where it is pointed out that the smaller the income the larger the proportion that goes for basic necessities, whereas, in the case of larger incomes, more goes in investments, education and in other directions. Consequently the major part of the sales tax will have to be borne by people who can least afford to pay it. The old couple with their $20 a month old age pension, buying a few groceries—

Mr. DUNNING: No.

Mr. DOUGLAS: It will work back indirectly to them.

Mr. DUNNING: Has the hon. member studied the list of exemptions?

Mr. DOUGLAS: Yes. The fact is that it will work back to them. We need not imagine that the storekeeper will pay.

Mr. DUNNING: How can it work back on an article on which it is not payable?

Mr. DOUGLAS: I am quite well aware of that, but the minister is stepping aside from the point. Industry uses machinery and it will cost industry more to produce certain articles; consequently the tax will be passed back in the price charged to the consumer. Whether we realize it or not, the consumer will pay indirectly. He will pay in the long run, and it is those who have to buy these commodities who will have to pay the large share of the sales tax. It seems to me that this budget will give us confidence, if possible, at the cost of human security. As one reads the budget one feels that the minister or the government evidently believes that "for whosoever hath, to him shall be given; and whosoever hath not, from him shall be taken even that which he seemeth to have."

May I say a word now about the amendment to the amendment moved this afternoon. We in this group feel that we can agree with the amendment to the amendment inasmuch as it is couched in general terms, indicating very generally the desire to have consumption brought into line with production. But we cannot vote for this subamendment because it is moved in substitution for the amendment we now have, and to vote for it would be automatically to support the sales tax which we have condemned in our own amendment. We feel that perhaps the most pernicious thing in the entire budget is the levying of the sales tax, which has been increased by 33⅓ per cent, and that to vote for this subamendment, agreeing with it as we do in general terms, would be to vote in favour of the sales tax, to which we are opposed whether it be levied by a provincial or federal government.

I should like now to turn attention to the inequalities in expending the national revenue. The main item of expenditure in the budget is the interest on the national debt of $3,432,000,000, an interest charge of $134,550,000, or 36 per cent of the budget. When we add to that the share of the Canadian National Railway deficit which the government pays, $47,000,000, that accounts for another 12 per cent of the budget, and with the loans which will be made to provincial governments to help clear up debts it will be seen that nearly fifty cents on every dollar of this budget is going to pay interest charges in one form or another. Now I would ask the government a question, the same question they have been asking us ever since this session started: Where is the money coming from? Almost $200,000,000 goes to pay in-

terest charges in one form or another. That is to say, 62 per cent of the entire budget goes to pay fixed charges. Where are you going to get the money?

Mr. DUNNING: Will my hon. friend permit a question?

Mr. DOUGLAS: Certainly.

Mr. DUNNING: My hon. friend, or his colleagues at all events, has made the suggestion that some of the money should come from a levy on large accumulations of capital. I would appreciate it, looking as I always am for constructive suggestions, to have that defined in simple terms because my hon. friend in discussing it to-night spoke merely of large accumulations of liquid capital. Just what is meant—large accumulations of capital of all kinds, or merely large accumulations of liquid capital?

Mr. DOUGLAS: The term used—I hope, Mr. Speaker, you will take note of the time occupied by interruptions—

Mr. DUNNING: My hon. friend asked a question.

Mr. DOUGLAS: That is all right. I am simply asking the Speaker to remember the time at my disposal. We said that there should be a levy on wealth, not on capital.

Mr. DUNNING: No, on large accumulations of capital.

Mr. DOUGLAS: The statement I made —and Hansard will bear me out—was a levy on wealth.

Mr. DUNNING: I am reading from your amendment.

Mr. DOUGLAS: All right. After all, capital is merely wealth used to produce more wealth, so it is merely quibbling over terms. Surely the minister will not deny that capital is wealth used to produce more wealth. We would place a levy on wealth. It might be liquid wealth, or merely frozen assets, and it could be paid over a period of time either in cash or in the form of securities.

Let me return to my question: Where is the money coming from? That is the question the minister asks us every time we propose anything. Here is $200,000,000 required to pay interest charges. Where are you going to get the money? Of course, we know where. The money will come from the revenues of the country. In other words, this is a fixed charge; it is something that must be paid. But the other 38 per cent of the budget is not composed of fixed items. In other words, social services are not to be recognized as uncontrollable items of expenditure in the budget; only these interest charges are to be so regarded.

Let us consider our sense of values for a moment. The interest that we have to pay on our funded lebt accounts for 36 per cent of the total budget. Unemployment relief last year took $49,469,000 in round figures, or 13 per cent of the total; the Canadian National Railway deficit, $47,400,000, or 12 per cent of the total; the amount paid on wheat and oats, $6,770,000, or 1·5 per cent of the total; the amount paid out by the farm loan board, $7,933,000, or 1·6 per cent of the total; old age pensions, 4·5 per cent of the total; public works, $80,000,000, or 20 per cent of the total. In other words, if we add the amounts for unemployment relief, Canadian National Railway deficit, wheat and oats, we are still paying less for all that than we pay in interest charges on our funded debt.

Mr. DUNNING: Why not include all pensions while you are at it?

Mr. DOUGLAS: Just a moment. On May 1 the minister spoke for two and a half hours, and I do not remember that I interrupted him.

Mr. DUNNING: I am sorry.

Mr. DOUGLAS: I have only forty minutes, and it is passing very quickly.

Turning to our expenditure, we find in the estimates, in round figures, $13,377,000 for national defence; $4,130,000 for the air force; and in the supplementary estimates $5,317,000 for national defence, making a grand total, in round figures, of $22,825,000, or an increase over 1935-36 of $1,284,000. That is what we are spending on military estimates and national defence. We are spending on our legation at Geneva $614,890, a decrease of $10,502 from last year. In other words, Mr. Speaker, we are spending over forty times as much for war preparations as we are in the interests of peace.

We do not expect the minister to find the money growing on gooseberry bushes. We know he has a limited amount of money to spend, and there are a great many demands upon him, but we submit that pensions for the blind, an extension of the old age pension, some type of health policy, and legislation to take care of those who are crippled and incapacitated, are all items which ought to have a place in the list of expenditures. When it comes to finding money for these things the reply is: We have not the money. But when it comes to finding the money for interest charges—that is a fixed charge.

What is the government's policy as revealed by the budget? I think I am right in saying it is three things: Extension of external trade, a balanced budget, and protecting the credit of Canada. The Minister of Finance said that our external trade had increased by ten per cent, but at the same time he said, as reported on page 2363 of Hansard:

> One of the most disappointing features of the business improvement so far is that the numbers of those on relief do not decline at the same pace as business activity recovers.

I think the government will come very slowly to the position to which we have come, that even with return of normal business activity we shall not have a return of prosperity, and a return to the former volume of trade and business activity will not mean the wiping out of unemployment or the solving of our economic difficulties.

The second feature which the minister stresses is a balanced budget. That can mean only one thing. There can be no cutting down on the fixed charges representing 62 per cent of the budget, and so it means that any cutting down must be on the other 38 per cent, unless we are prepared to tax these bondholders or cut the interest or principal of their bonds. Then a balanced budget must mean the cutting down of relief, pensions or some other type of social services. I wish to submit that wherever that has been attempted it has been a failure. It has meant higher taxes, fewer social services and a lower standard of living for the great masses of the people.

The other suggestion is that we shall protect the credit of Canada. What we mean when we talk about protecting credit is that we shall prevent any type of inflation which would hurt the creditor and help the debtor. Deflation has always been in the best interests of the creditor; inflation has always hurt the creditor. The Minister of Finance shakes his head, and yet is it not true that the creditor who has invested his money when money was cheap, and then experiences a period of deflation such as we have had in the last five years, finds that the return he gets from his money is a return in a dollar which will buy two or three times as much as the dollar he invested? Consequently a period of deflation is a paradise for him, but it is very different for the debtor who must pay back. Therefore, when we talk about protecting credit we really mean we intend to prevent anything which might upset the present state of deflation. In this corner of the house we are not inflationists, but neither are we deflationists. We have advocated managed currency, namely that currency and credit should be issued in proportion to goods.

In Germany there was a state of true inflation; she issued money which was valueless. Why? Because that money had nothing behind it. She did not produce goods in proportion to her money, so her money was worthless. In Canada we have done the opposite. We produce goods in abundance, but we have not produced sufficient money in proportion to purchase those goods, and the result is that we have deflation. Money without goods back of it is bad, but goods without money to purchase them is just as bad. It can be only by the issue of currency and credit in proportion to the goods issued that we can hope to establish a managed currency which will give the people purchasing power to consume the goods which they themselves have created.

A few days ago the Minister of Labour (Mr. Rogers) said that he did not mind going forward, but he wanted to know where we were going. He believed in progress, but he said that he wanted ordered progress. I look over the budget, and I wonder whether the government knows where it is going. Is there any ordered progress? I look through public works expenditures placed here and there in a haphazard fashion, and I see no concerted financial policy.

It is true that during the election campaign hon. members such as the hon. member for Vancouver-Burrard (Mr. McGeer), the hon. member for Rosthern (Mr. Tucker) and the Minister of National Defence (Mr. Mackenzie) did enunciate some type of financial policy which might have been of value, but to date we have heard very little about it in the budget debate. As a matter of fact we have heard nothing constructive, and nothing to suggest that the government knows where it is going. Instead of that the tone of the budget and the demand of the minister on May 1 was: Back to May 1, 1930.

I submit that this is no time to go back. We can hardly expect a policy which brought us into this mess to pull us out of it. If a program could not prevent the greatest economic crisis in history, then it cannot hope to pull us out of it. Surely no hon. member thinks we can get out of the mire by tugging at our own shoelaces. This is not the time to tread beaten paths; it is time for the government to blaze new trails. The slogan of the government ought not to be: "Back to 1930"; it ought to be: "Forward, to greet the new day."

Mr. H. C. GREEN (Vancouver South): Mr. Speaker, listening to the budget speech delivered by the Minister of Finance (Mr. Dunning), and reviewing it with its various statements and tables as reported in Hansard one could not help being impressed with the seriousness of the problems facing Canada; neither could one fail to realize the burden being borne by the Minister of Finance, and for this reason, and also because he bears his burden with a smile, I cannot find it in my heart to deal harshly with his budget. I must say, however, that in many respects I dislike it; time alone will tell whether or not he has been wise, and in due course he will have to answer to the people of Canada for any mistakes. Meanwhile I wish to offer one or two suggestions in regard to the budget, and to place squarely before the house the question of aviation in Canada.

Dealing, first, with the budget, I would earnestly suggest that the minister reconsider the provision whereby goods valued at not more than $100 may be brought into the country free of duty by Canadian residents, after an absence of not less than forty-eight hours. Surely a provision such as that should apply only to travellers or tourists, and not to shoppers. If it is properly restricted there is some justification for the provision, although as all hon. members are aware, it will seriously affect the revenues of the dominion. I suggest, however, that the provision in its present form is simply an invitation to Canadian people living near the border to shop in the United States. As such it will seriously affect Canadian retail business and will set up one more magnet to draw our people to the south, instead of having them transact their business east and west in our own country.

Let me give as an illustration the situation in the city of Vancouver. The people on relief and those who are not fortunate enough to own a car, will have to buy their goods at home and probably at higher prices; they will have to pay a sales tax on most of the goods they need, which, by this budget, is increased from six per cent to eight per cent; in other words the poor people will get no help from the provision. On the other hand the man fortunate enough to own a car could quite justifiably get into his car in Vancouver on Friday night, after his day's business is concluded, drive to Bellingham or Seattle and return Sunday night, bringing with him, under this provision in the budget, groceries valued at $100; or if he chose he could bring back $100 worth of clothing; he could even go there and buy furniture on a time payment plan; for example, he could buy a vacuum cleaner valued at, say $90, making an initial payment of $9 or $10 and agreeing to pay the balance under a hire-purchase agreement; and he can bring those goods back to Canada free of duty and free of sales tax. Surely the minister does not intend to have the provision go that far. If he does not, then I would suggest that the length of absence from Canada be extended beyond a period of forty-eight hours; that the exemption be cut from three times a year to twice a year; that a traveller be required to produce receipts showing that he has paid for the goods he is bringing back. Finally, I suggest that the exemption should be limited to purchases incidental to the trip, a provision which, I believe, appears in the United States tariff.

May I further suggest that the exemption be reduced from $100 to $35 or $50. It is so hard for us to remember that we have a population only one-twelfth that of the United States and to remember that most of our people are settled only 100 or 200 miles away from the border, which is not the case with the people of the United States. I do not think it is reasonable for us to expect to have everything the people in the United States can have, and to do everything that they can do. I suggest that if their exemption is to be $100 ours would be more than ample if it stood at $35 or $50.

I have this further suggestion in regard to the budget: I would ask that the minister reconsider the terms of the exemption from sales tax in connection with crushed stone or crushed gravel. At the present time the exemption reads as follows:

> Crushed stone or crushed gravel to be used exclusively in the building or maintenance of provincial, county or township roads.

That leaves out cities and municipalities.

Mr. DUNNING: Will my hon. friend permit me to state that cities and municipalities are already exempted with respect to crushed stone, etcetera, which they use themselves? This is an additional exemption.

Mr. GREEN: Take the city of Vancouver; perhaps they purchase some of their crushed gravel and crushed stone, but I believe that in most cases they have the work done by contract. If they are going to have work done by a contractor they must pay that sales tax, and I do not see why there should not be an exemption for cities and municipalities. After all, in my province of British Columbia there exist no county organizations and no township organizations, which means that the exemption will apply only to provincial roads, whereas a great deal of the province is under municipal government; I suggest that in all fairness the municipalities and the cities

should get the benefit of the exemption. When the history of the last five years comes to be written it will be found that the municipal governments have borne more than their share of the burdens; they are bearing more than their share at the present time, and I do not think it is fair that they should be discriminated against in this way.

Mr. DUNNING: Of course they are not, in fact.

Mr. GREEN: Now I have a word of praise for the minister. I am pleased to see that he is trying to do away with uncertainty in mining taxation. The same principle of doing away with the uncertainty of government interference could well be applied to other industries of Canada, such as the farm implement industry, but as I do not represent an agricultural constituency I have nothing more to say as to that. However, as far as mining is concerned, no one can question that that industry has played a cheering part in the dark days through which this nation has just passed. The prospector, the miner, the engineer, the promoter, the financier, and all others engaged in mining have done much to raise the morale and the spirit of the Canadian people. I think we should accord them our admiration and our praise, and anything within reason that will assist them should meet with our approval. The industry has been greatly aided by aviation. Many of these mines would never have been developed but for aviation, and I suggest to the government that the time has now come when Canada should adopt a bold and aggressive air policy.

Let me tell the house in a few words the present position of civil aviation in Canada. I intend to treat the question in a non-partisan spirit; it is a new problem and one which, in my opinion, should be dealt with in a non-partisan way. I wish that it were possible to discuss more of our difficulties in that way; we would get much further ahead.

First of all, let me give the house the bright side of this picture; that is, flying in northern Canada. I think it may fairly be said that flying has made possible Canada's great strides in gold mining and has advanced by decades the development of the northern section of our country. This is well set out in an article by Mr. J. A. Wilson, our own controller of civil aviation, to be found in the February issue of the Engineering Journal, from which I quote the following extract found at page 68:

> The surveyor, geologist, and prospector were not slow to follow the example of the forester and use aircraft as a better means of transportation and observation throughout the unsettled areas of Canada.
>
> The result of this policy has been that to-day there exist generally throughout northern Canada efficient commercial air services which have been self-sustaining, have required no subsidy, and which give access to the remotest districts of the country. More has been learned of northern Canada during the past ten years than in the preceding three hundred. The forester, surveyor, geologist, prospector, mining engineer; the clergy, the doctors, the nurses, the police; in fact, all whose activities lie in northern Canada find their task greatly lightened, their range of action multiplied many times and their efficiency increased by the use of aircraft. Journeys which a few years ago meant weeks or months, and sometimes even years of toil and hardship, are now performed in ease and comfort in a few hours. The expansion of Canada's mining industry has greatly helped to tide Canada over the dark days of the depression and this development has been immensely assisted and hastened by aviation. Many of our most promising new mining fields owe their discovery and their opportunity of present development entirely to aircraft.

The figures of passengers, freight and mail carried by air in Canada during the last few years show the remarkable progress which has been made. I give the approximate figures: Passengers carried in 1933, 85,000; 1934, 105,000; 1935, 177,000—practically all in northern Canada. Freight carried, 1933, 4,205,000 pounds; 1934, 14,440,000 pounds; 1935, 26,439,000 pounds. It has almost doubled in the last year. Mail carried, 1933, 539,000 pounds; 1934, 625,000 pounds; 1935, 1,126,000 pounds.

Details of the air mail carried are given on page 2146 of Hansard. The Postmaster General (Mr. Elliott, Middlesex) said, as reported on page 2140, that this mail was carried actually at a profit to the post office. All this development has been brought about by private enterprise, without subsidy of any kind from the government other than payment for mail, which, as I have remarked, was carried at a profit to the post office. In addition to opening up northern Canada, civil aviation has been the means of training airmen who are without superior anywhere in the world. For instance, we have Hollick-Kenyon and Lymburner, two famous Canadian airmen whose exploits have not been properly recognized by this nation, two airmen who have done wonderful things in the last few months in the antarctic. These men were trained through flying in northern Canada. I suggest that this is sound national development for Canada. Our future is in the north. I believe that our destiny is to become a great northern nation, not a vest pocket edition of the United States of America.

I turn from the more pleasant side of the picture to aviation in the more thickly settled parts of Canada. What do we find? Quite a lot of flying has been done on fishery patrol on the coast of British Columbia. There are five mail routes, and five only, in the settled part of Canada, each one, with the exception of the route from Moncton to Charlottetown, being from Canada to the United States in order to get the mail down to the trans-American airways. These five routes are to the south from Montreal, Winnipeg, Vancouver, and Victoria, and the one from Moncton to Charlottetown. So far as the trans-Canada airway is concerned, I understand it is hoped to complete the airway from Winnipeg to Vancouver in the summer of 1937.

Mr. MACKENZIE (Vancouver): During the year 1936.

Mr. GREEN: So much the better. And from Winnipeg to Halifax in 1938—

Mr. MACKENZIE (Vancouver): That is correct.

Mr. GREEN: —with feeders to the principal cities off the main route. When that is done we shall have an air mail service across Canada by which letters will go from Montreal to Vancouver in from eighteen to twenty hours, whereas it now takes four days, and from Montreal to Halifax in five more hours. Apparently this development has been brought about in this way: Municipalities along the main air route have constructed what are known as airports; these are the main ports of call. The government has adopted the policy of supplying all the aids to air navigation. If I am wrong in any of these statements the Minister of National Defence (Mr. Mackenzie) will correct me. I understand that these aids consist of intermediate aerodromes located every thirty miles or so, many of which are still to be constructed; airway lighting, comprising beacons; meteorological services; and radio services, consisting of radio beam stations; and in addition general research work by the technical departments of the government, leaving flying to private companies. In other words the government does not intend to carry on any of the actual flying.

Let us just realize what that means. Private companies will have to carry on this flying. They will have to acquire planes and train personnel for night flying, which is not carried on in Canada at the present time. They will have to train them also for very fast flying; I understand that the mail planes will have to fly about fifty miles an hour faster than our Canadian planes fly at present. All this means that the company or companies concerned must know well in advance the definite plans of the government, because it will take some time to prepare to give the service.

Then I come to the position of aviation in Canada in relation to world aviation. All other nations have far more extensive air services. Canada is the only nation not subsidizing civil aviation extensively. For example, in Great Britain the Imperial Airways is heavily subsidized by the British government, and as a result that government is able to say that certain mileage must be flown and certain routes must be kept open. The trans-Canada airway is one of the few important air routes in the world that have not yet been opened up. The only other two are the transatlantic and transpacific routes, and the former is to be completed shortly. I understand that test flights for the transatlantic air route will be made during this summer. The route over Canada is the shortest air route between Great Britain and the orient being three thousand miles shorter than the shortest route possible over United States territory. Let me repeat that: the air route from Great Britain to the orient over Canada is three thousand miles shorter than over United States territory. Yet here we are in the middle of the empire, the leading dominion, and we like to think, and I believe, the most progressive dominion, almost in the position of preventing the completion of an empire wide air service.

There is the picture, Mr. Speaker. I urge the government to adopt a bold air policy at once. Let them announce their plans; let them rush the trans-Canada airway to completion; let them establish a trans-Canada air mail service, and do everything possible to aid aviation. I am convinced that it is a workable policy, and that it would be comparatively inexpensive. The hon. member for Gloucester (Mr. Veniot), who was formerly Postmaster General of Canada, dealing with the air mail service, said, as reported at page 2141 of Hansard, that he thought it could now be operated at a profit. In any case the cost of establishing this air service would be very, very small. The government have a great majority and there is no reason why they could not go ahead with a progressive scheme such as this. Incidentally I believe that if they did so they would have the support of the official opposition.

Such a course—the initiation and development of an active air policy—appeals to me particularly for two reasons. In the first place I am sure it will help to draw the provinces together. Coming from British Columbia I

am always worried about the provinces of Canada drifting apart, and I am sure hon. members from the maritimes have felt the same way. Any policy within reason that will help draw the provinces together will have my support. I think at all times we in this national parliament should do everything possible to bring the provinces of our nation closer together. After all, during the depression the provinces have been hard hit and there have been many rumblings, many questions asked as to whether or not confederation was worth while. I think we must remember that it is our duty here in parliament to do everything possible to hold the provinces together.

I am also interested because I do not think anything will do more to strengthen the morale and raise the spirit of our people than to make Canada a leader in aviation. After all, the morale and spirit of our people are worth a great deal, far more, I think, than many realize. Look at our background in aviation. In the war we had a far higher percentage of pilots in the air force than any other part of the empire. We had outstanding leaders in the air during the war, men such as Colonel Bishop, Colonel Barker, Colonel Collishaw and Major Don MacLaren, the last two from my own province of British Columbia. Men like these were known all over the empire as famous war aces, and there were dozens of other famous Canadian airmen. That is the background of Canada in aviation, and we also have the deeds that have been done by our fliers in the north. There is no reason why we should not go ahead and lead the world in aviation. We have a people of courage and initiative, and I suggest that this Canadian parliament should give the people of this nation bold and aggressive leadership on this question.

Mr. E. J. POOLE (Red Deer): Mr. Speaker, as seconder of the amendment to the amendment, it gives me a great deal of pleasure to say a few words in connection with the budget on this occasion. First of all I want to thank the hon. member for Huron-Perth (Mr. Golding) for the kind remarks that he made the other day concerning this little group, when he appealed to the Liberal party at least to listen to those representing a new line of thought, or at least a line of thought foreign to this house. I thank the hon. member for his kind consideration, but we in this corner have noticed the lack of interest shown in anything coming from Alberta. It is unfortunate that such should be the case, in days such as these when we are faced with new conditions. I do not believe that any government in any country of the world to-day can afford to sit down and simply try to uphold the old status quo. We must be always on the look-out for new ideas to alleviate the distress that is with us.

I have read the budget; I have followed the debate keenly, but I have not noticed anything startling in what has been proposed. We in this corner have been patient, thinking that as time went on some new policy would be outlined, some hope would be given the Canadian people, but in everything that has been suggested the cause of all our economic ills has been left untouched. The minister made quite a lengthy address on May 1, which I enjoyed as I believe every member of the house did. In the first part of that address the minister spoke of trade, and he made some startling statements. He said—and I believe this has been the opinion of the Liberal party—that our hope for internal prosperity lies in the expansion of our external trade. There has been also an old theory carried on through the years, inherited from mediaeval days, that the way to measure internal prosperity is by your favourable trade balance. Yet the surprising thing is that when we look into our Canada Year Book we find that in 1932, which was recognized as the depth of the depression, we had a favourable balance of trade. Of course it may be said in answer that the volume of trade was less. That is true. But again the minister said that these conditions prevail because of the policy of economic nationalism in every nation of the world, and that we have no control over the policy of other nations. With that I agree. But those conditions are not being faced by the government, because if they recognized that nothing can be done externally to improve the lot of the Canadian people they would see that their attention must be focussed on internal problems.

An hon. member on the other side some days ago told us that the machine was not displacing labour; that the machine provided more work. How that statement can be accepted by anyone is surprising in view of the fact that we have a million Canadians unemployed. We find that in 1919 the leader of the Liberal party, Sir Wilfrid Laurier, recognized this fact more than do the government to-day. In his last address on January 14, 1919, he drew attention to the changed industrial conditions, and spoke of the necessity of cooperation between capital and labour and of the displacement of men from industry. But the Liberal party that promised so much to the people has not recognized this in 1936. There is, however, one thing that we can agree on—I suppose we have to be thankful for small mercies—and that is the reduction of the debt burden

through conversion and refunding. The only criticism we have to offer on that is that it is not broad enough, does not take in enough territory. I have been interested in observing the inconsistencies of government members. We may not be able to get our views over in this house, but at least we have an opportunity to listen to other hon. members, and we take advantage of it. I notice that in the policy laid down by the government so far as the unemployment problem is concerned the Minister of Labour (Mr. Rogers) provides for subsidies to industry. Then I turn to a statement by the Minister of Finance in his budget address, in which he tells us that if we speed up industry the inevitable result will be overproduction and breaking the market. I wonder whether the Minister of Labour and the Minister of Finance (Mr. Dunning) should not get together on this question and really decide upon the policy, because the inconsistency is glaring.

Referring to the criticism levelled by the hon. member for Huron North (Mr. Deachman) at us this afternoon in which he spoke of social credit theories, and I believe was endeavouring to prove us inconsistent, I know my leader would like to defend himself on this and I suppose the opportunity will present itself some day. The hon. member referred to the inconsistency of our leader when he spoke of protection or subsidies to the sugar beet industry. I would point out that the conditions prevailing in that industry are different from the conditions which prevail in many industries in this country. It is a matter of national protection to subsidize an industry that produces a consumable necessity which we must have during a time of war. I believe that was the whole purpose in advocating that. If war were to break out in Europe we would be dependent upon importations of sugar, although we can manufacture it here, because we cannot compete with sugar producers from outside.

I quote again the article that was read in the house by my leader some days ago, because the hon. member for Huron North has got a little mixed up. He told us that production in the United States was $60,000,000,000 and that the total amount of purchasing power was only $45,000,000,000, and he wanted to know where the difference went. Part goes back into savings, as this article describes, but part of it, the difference between $50,000,000,000 and $60,000,000,000, was never in existence. That is one thing which this group have endeavoured time and time again to make clear, that under the present system you cannot place in the hands of the people through the medium of wages, salaries and dividends sufficient purchasing power to purchase the total price values. Then, he says, these people suggest paying a dividend even in prosperous times, and he wanted to know what we would do when the depression came. I wonder what my hon. friend means by depression. A depression infers that we are short of something, but surely there is not a member of this house who would suggest that we are short of goods. They were never so plentiful, and if we were short of goods surely we have available productive power in Canada to produce more. There is no depression to-day. There is poverty, however, and nothing suggested in this budget will alleviate that condition. Tariffs might help some, but the minister says that we have no control over economic nationalism; that we cannot compel the nations to accept those things which they do not desire. If we could have brought prosperity to Canada by removing the barriers of economic nationalism, surely that could have been accomplished at one of those numerous international conferences which have taken place during the last five years.

When you take the tariff out of the Liberal platform you have nothing left; it is the peg upon which they hang their whole policy. When that falls, Liberalism falls. They must recognize that the purpose of an economic system is first and foremost to increase the standard of living for the citizens, not of China, but of Canada, and the only purpose of an export market is to exchange our products which we do not need at home, because we have such abundance of them, for those which are not common to the production of this country. In this year 1936 we are starting along exactly the same lines that have been followed down through the years, raising the same old ghosts. We have an unemployment problem. This is what Mr. R. J. Scrutton said in Prosperity, April, 1935, quoting the same article which was criticized this afternoon. This, I think, puts the situation plainly:

> It is useless trying to find work for the unemployed until the present financial system has been changed. Productive work merely increases the glut of goods and adds to our problems. Non-productive work such as road making will certainly provide wages, but those wages must be taken by taxation from those engaged on productive work. This is a method of sharing out the nation's poverty; and in no way shares out the machine made abundance.

And that is all that we have accomplished in this budget. What do you do when you borrow $75,000,000? You place a chattel mortgage on the future of the country; that is all you do. You do not solve the problem. We have spent $600,000,000 in the last five years and the problem is just as great as it ever was, plus this fact, that while our trade has increased unemployment remains the same. That is important in view of the statements which have been made in the house to the effect that machinery is not displacing man power. When you displace men you displace wages, and we claim that the wage system has broken down; it will no longer distribute goods. It was all right in the days when we had markets on which to throw our surplus production or could invest money in other nations for capital expansion. But those days are gone. The Minister of Finance told us that we have no control over the policy of economic nationalism which has been adopted by other countries. I agree. That being true, are we going to solve the problem or restore prosperity by indulging in a public works program? When you tax you deflate; when you tax you reduce the standard of living of the people. What happened in the United States two or three years ago? They poured out money. What followed? A man getting $15 or $20 a week found that his money would not buy as much as it did before. Prices began to increase when new money was poured in. I want to continue quoting from this article because it is valuable. It is something well worth putting on Hansard; if many members will not listen to the social credit party in the house they may in spare moments look at Hansard:

> There is only one way out of the difficulty. If we intend to keep the machines then we must devise a method of giving people the wages of the machines which do their work. Incomes must be based on wealth produced and not on human labour performed. In order to do this our financial system must be based on the capacity of a nation to produce goods and services instead of a gold or sterling standard which bears no relation to our real wealth. Then, if we produce goods priced at $10,000 we can create and provide the people with $10,000 to spend. The balance sheets of all industrial and business concerns, containing a special item giving average profit on turnover, would provide the government with the necessary information. By this means the total prices of consumable goods produced during the preceding six months would be made available, together with the total purchasing power issued in the form of wages, salaries, and industrial dividends. The total of prices would be found to be far higher than available purchasing power and would provide a figure representing the goods unsold and now glutting our markets. (According to the National Bureau of Economic Research, American industry paid out $45,548,000,000 in the form of wages, salaries, dividends, bonuses, pensions, compensation, etc. The value of consumable goods produced for the same year was $60,366,000,000. When savings and investments were deducted from these incomes only forty billion was available as purchasing power to buy goods valued at sixty billion.) We propose that these surplus goods form the basis of new money which shall be created by the government and issued free to the people so that the goods shall be bought. At present only production is financed. This takes place when the banks create and lend money to industry.

Under social credit the government would finance consumption by the method outlined. It would not borrow money but would follow the practice of the banks, creating money on the basis of something which is already in existence and which, I may add, is a sounder money system than the one under which we live to-day. The only basis for many of the bank creations is hot air. I think it is becoming evident throughout the world to-day that the system under which we live has served its purpose. Capitalism was adapted to general expansion, and while that expansion was possible capitalism could provide men with a livelihood through the agency of wages. But when you arrive at the point where you can no longer export goods, then the system is ready for the scrap-heap. Unfortunately we have inherited many conceptions that are not true. We have led men to believe that the only purpose of an economic system is to provide work. Hon. members will persistently tell us that we shall get out of the mess which we are in to-day. Surely that is absurd when you look at the increasing national debt—and it is bound to increase. In the budget debate some criticism has been levelled at the late administration because of an increase of a billion dollars during their regime. Surely that is not the fault of the late government; if it is, then the Liberal party might well be accused of the same thing, because the national debt of Canada has always increased. It increased from 1921 to 1936, not merely from 1930 to 1936, and the time is coming not only nationally but in every municipality when fixed charges will constitute the largest item. The amount available for what I consider uncontrollable expenditures, that is for public services, for relief, for indigent people, for the incapacitated, for pensions and so on, is becoming less, while the ability of governments to tax will diminish as time goes on, because the debt structure is top heavy.

The hon. member for Huron North this afternoon told us that we have our cultural

heritage. Maybe the hon. member has, but there are thousands who have not yet had it. I have in mind the ex-service men of Canada, the unemployed of this dominion. I wonder whether they have got their cultural inheritance. I do not think so; I do not think they have been considered very well. I recognize, of course, that as fixed charges increase the ability to give them any kind of inheritance which would be beneficial to them will decrease. On the other hand, I believe the only heritage the old line parties will ever leave to the dominion, if they do not change the monetary system, will be one of debt and mortgages. When we borrow $75,000,000, when we launch into public works schemes, for the purpose of giving bread and butter, we are looking for something to drop from the sky to help us out of the mess we are in so that we may remain politically secure, and twenty years hence it will be just another mortgage, another one of these fixed charges.

What I want the government to tell this group in this section of the house is this: In view of the fact that we have had a favourable balance of trade during the depression years, in other words, sold more than we purchased; in view of the fact that we have goods here, and in view of the fact that all the evidence which is required exists, showing that there is a downward trend in the standard of living and an increase in our national and all other debts, I wonder whether they could tell us, when they talk of putting men to work under the conditions that prevail, how they expect to do this and at the same time to reduce the national debt. There have been two Liberal members who have the idea, the hon. member for Rosthern (Mr. Tucker) and the hon. member for Vancouver-Burrard (Mr. McGeer). They are the monetary reformers. They know that the axis upon which this economic system turns is money. They know that the monopoly which controls it controls this government. It controls the ability of this government to collect taxes.

Mr. FINN: No.

Mr. POOLE: It does. I will go further if you wish, and prove it. During the deflationary period what does a bank do? It takes that which is just as necessary as the blood to the body; it takes purchasing power by restricting loans to industry, and by calling in loans already out, driving prices down and reducing property values. That is why the western farmer is in the mess he is in to-day. During the inflationary period what does a bank do? It gives to production something. It gives to agriculture financial credit based upon something. What? Something that belonged to the depositors? That is nonsense. It was something that belonged to the agricultural industry. The banker may give it with pen and ink, basing it upon the ability of the farmer to produce, the land and the machinery of production he has, and the desire on the part of people associated with him for the goods of production.

Mr. FINN: May I ask the hon. gentleman a question?

Mr. POOLE: Quite welcome.

Mr. FINN: Does the government of Canada or does this parliament of Canada, of which my hon. friend is a member, control or undertake to control the loans made by the banks to individuals or to corporations?

Mr. POOLE: No, it does not.

Mr. FINN: Then why is the government to blame for this present condition?

Mr. POOLE: My hon. friend has just mentioned the point I have been trying so hard to get over.

Mr. FINN: I am glad I helped the hon. member.

Mr. POOLE: The government does not control these things, and the very fact that the government does not control them places the banks in a position where they control the government because as the banks deflate they take from the people the means to pay taxes, do they not?

Mr. FINN: Absolutely no.

Mr. POOLE: They take from the government the power to extract taxation. You cannot get away from it. Then what do the government proceed to do? To borrow, increasing national, provincial and municipal debt. Then what do the government do? They suggest a public works program to cure all these ills, and they hope we may be able to expand our volume of trade and sell some wheat to the Chinese.

Mr. FINN: That is not fair.

Mr. POOLE: I quite agree with my friend that it is not fair, for I believe that we should feed our people at home first.

Mr. FINN: I meant the hon. member's statement.

Mr. POOLE: We should realize that the duty of this government is not so much to balance the budget, not so much to find work because work is not an end in itself. I repeat this because to me it is very im-

portant; it is one of these ideas we have inherited, and you will hear it expressed ten times a day. You meet a man who is hard up on the street and he wants a hand-out. The first thing he says is, "I wish I had a job." It is not a job he wants, it is what a job in the old days got for him. It is goods and services he wants. That is what the people want. We have these things now in abundance. What are you going to do? Do you suggest pouring more money into production, to glut the markets with more goods? Or do you propose to monetize the goods already in existence? If you would do that, then immediately the unemployment problem is solved because industry moves when the people have effective demand, purchasing power. But when you take that effective demand, purchasing power, from the people the industrial machine slows down, and no matter how large a volume of goods you have piled up they are not available to the people because they have not effective demand. I am speaking now, of course, of money, and this is true not only of this but of every country.

There is another angle which is very interesting if it is pursued. If you are looking for markets, there is one thing that will stimulate international trade. That is when you go to the markets of the world and bargain better, when you go and say, "I am not going to sell my wheat. It is my national purchasing power. I have come to buy." What would happen if you did that to-day and if you could ship out everything you had? You would have to say to these people, "We cannot buy your goods. We cannot take your imports into our country because our people have not the purchasing power to buy them."

I hope, Mr. Speaker, that some day in this Canadian parliament we shall have an opportunity to present the views of social credit.

Mr. DUNNING: Why not now?

Mr. POOLE: I should not like to attempt it in forty minutes. The Liberal party does not express its policy in two hours and fifty minutes. We are not afraid of any criticism that may be levelled against social credit. We are not afraid even when members leave the house. We challenge the government to solve the problem without monetary reform. We know they cannot do it. Even if you control fifty-one per cent of the capital stock of the Bank of Canada, that is not monetary reform, any more than it was monetary reform that we had in this country between 1930 and 1935 when we changed the size of the dollar bill but got no more of them. The kind of monetary reform we want is a change in policy. I do not care who owns the bank, I am not interested in who owns the bank or the factory. I want the producers to get a fair price for what they produce, and that can be done by placing effective demand, purchasing power, in the hands of the people. I am interested in the policy of the bank in seeing that it distributes sufficient purchasing power, wages, salaries, dividends, which will go from the bank into production and in addition, that the government place in the hands of the people a national dividend, and there is no member who will say that the people are not entitled to it. In this scientific age the machine has displaced man. What are you going to do? Throw him on the scrap-heap? Put him on relief for the rest of his life and jeopardize our whole national future? No, sir, not if we are here administering in the interest of Canada to-morrow as well as to-day. We will do something different from that. We will have the courage to remove from our economic life these bankers, this monopoly, and we will change the policy and make it conducive to a higher standard of living. That is the job which this government has to do, that, and nothing else. The first job it should have done before bringing down a budget and before doing anything else was to provide itself with the means to do these things. Then, I say, your unemployment problem is solved, because the moment you place purchasing power in the hands of the people goods will move, industry will revive and there will be a demand for labour. Until that time comes we shall never have prosperity.

In conclusion I should like to say a few words about the budget itself—

Mr. FINN: May I ask the hon. member a question?

Mr. POOLE: I am only too willing to answer.

Mr. FINN: Do you believe in confiscation?

Mr. POOLE: No; I am very much opposed to it, even the banks confiscating.

Mr. FINN: Then I should like to ask this question: Under the policy of the present government in Alberta, namely that of giving $25 to every woman and man, according to population, how much money would be required?

Mr. POOLE: I believe it is around $10,000,000.

Mr. FINN: That is pretty good.

An hon. MEMBER: A month or a year?

Mr. POOLE: A month, for the year. Hon. members opposite concentrate their attention

upon money, but we claim that we have $10,000,000 worth of goods which are not moving; that is the important point. Have we those goods in Canada? If we have not why have we unemployed? That is the question which hon. gentlemen opposite cannot answer.

An hon. MEMBER: Explain it.

Mr. POOLE: I would not try to explain it in five or six minutes. If an opportunity is given, this group will explain it; I promise you that.

Mr. FINN: You said "group"?

Mr. POOLE: Yes, this group, here, will explain it. Any time a full dress debate on the question is desired, we are ready to go to the mat, any one of us.

In conclusion, I wish to say that I always thought the difference between the two old parties was the height of the tariff wall, but I find on this occasion that the difference is $62,000,000, namely, the difference between the budgets of this year and last year. That, however, is not the interesting point. We find that last year the Conservative party then in power was more Liberal than the Liberal party in power to-day, and we find that the Liberal party has gone Conservative. I wish to say again that there has been some criticism about blank cheque legislation; I am in favour of the blank cheque, because, after all, whether we like it or not, I have a little different slant on it from some people. The fact is that an emergency did exist, and exists to-day; it has not diminished. The provision was made with the knowledge that the condition was critical and that to-morrow or a month hence there might be more unemployed. Provision was made for them. Whether we agree with the amount that was given is not the important question; we must remember that provision was made. That is the point. This government does not say that. They make appropriations and live within them. They restrict their own activities and restrict their opportunity to do anything for the people of Canada. Therefore I am in favour of the blank cheque, because I believe the most uncontrollable expenditures are those which have to do with human welfare. If any persons are going to go short, then those people who can afford to lose ought to be the ones. The first consideration should be the poorest people, namely the unemployed, the ex-service men, the incapacitated, and the old. When they are served it is time to talk about fixed charges for bankers and on bonds. The people I have mentioned are a sacred obligation.

The budget debate has almost reached a conclusion, but many other things could be said. Now we are waiting with a great deal of interest. The people of Canada are watching intently for your financial policy, and if you do not come through, then they will displace you for exactly the same reason that they displaced the last government.

Mr. FINN: Who will come in?

Mr. POOLE: And while we are on that question may I say there has been plenty of ego expressed by the Liberal party.

Mr. FINN: I do not believe in it.

Mr. POOLE: The first day I was in the chamber the leader of the government speaking to the leader of the opposition said, "The people have turned you down, and shown you where you get off at." He forgets that they turned him out in 1930. In a few more years, probably less than four, the Liberal government will go.

Mr. FINN: And they will come in again.

Mr. POOLE: It is not parties that are defeated. Governments are turned out when the people realize that the principles propounded are not sound and that the effect is poverty. I say to-day that the Liberal party will suffer a worse defeat than did the Conservative party.

Mr. FINN: Is that a prophecy?

Mr. POOLE: The Liberal party have been saying all along, "We have licked you; the people have rejected you." I want the Liberal party to remember that there is only one province in Canada, namely in Alberta, where there were social credit candidates to vote for, and what was the result?

Mr. FINN: That will be the last time.

Mr. POOLE: No.

An hon. MEMBER: What happened in Saskatchewan?

Mr. POOLE: We elected two, and campaigned for only three weeks. You have been campaigning since confederation, and what did you do? You see, Mr. Speaker, it is not only the age of the party that counts; that does not matter. When Liberalism becomes reactionary, then of course the rank and file will desert you, because in the final analysis the people of Canada are looking for security. If you cannot give it and they see the physical means of getting it, namely courageous legislation, they will move you out.

I am hoping as time goes on that the hon. member for Vancouver-Burrard (Mr. McGeer), and the hon. member for Rosthern (Mr. Tucker) can convert some Liberals to thinking along monetary lines.

Mr. FINN: Is that so?

Mr. POOLE: Do not be afraid of the banker. When he comes to dictate to you, for the first time you should tell him that you are the government. If the people require money or means to move goods and to increase prosperity, see that you provide the scientific machinery to provide it, and remove any obstacles which may be in your way.

Mr. W. K. ESLING (Kootenay West): Mr. Speaker, I am sure the Minister of Finance (Mr. Dunning) must feel gratified at the generous commendation he has received for his splendid presentation of the budget, and his perfect diction. Naturally the public will feel the effect of the eight per cent sales tax. They will hold the government responsible, and it will reply, "Well, it is as a result of having returned us with such a huge majority."

Naturally the Minister of Finance would like to withstand the numerous demands from his following, but it would be impossible for him to do so. While hon. members might like to be modest, their constituents will want this, that and the other thing, and the demands would be almost too insistent for the minister to refuse. I know he feels sorry for himself in having to sit through this long discussion, but that is one of the penalties he must pay for the honour and privilege of presenting a national budget.

I will not attempt to enter into this discussion beyond referring to one phase of the country's condition, that of unemployment. In that connection, will the government not consider some means of enlarging the present housing act, for the reason that there is no avenue of endeavour which goes so far, in its various ways of relieving unemployment, as that of construction? The housing act as it stands is confined to the construction of new homes. It was thought, perhaps, that it would contribute largely towards the building of the many homes which are required throughout the country. But the conditions which surround the arrangement with the government are such that the act is absolutely useless outside the large cities. Some twenty-two companies have entered into the agreement with the government, but, if we take the whole province of British Columbia aside from the cities of Vancouver and Victoria, absolutely no loans are being made towards the construction of homes. Not even in Vancouver itself is there a loan company, an insurance company, or a trust company which will enter into this arrangement with the government to lend sixty per cent for the construction of homes. In the interior, where we are very fortunate in having an industry which makes homes necessary, there is not a single company from Vancouver to the Alberta border which will lend a dollar in furtherance of this arrangement with the government for housing construction. My suggestion is that the government might see their way clear to go at this matter on a larger scale, in co-operation with the municipalities. When I say, "in cooperation with the municipalities," I mean four or five municipalities with five thousand to ten thousand population; let them form one cooperative concern in order to reduce the administration costs. If the government would realize how small the present housing act is in comparison with some other activities it would not hesitate to go a little further into the matter.

In our own little city of Trail, with a population of ten thousand people, we have an industry which has actually loaned to its employees one-tenth of all the money that the government of Canada intends to advance to the people of the whole dominion. The Consolidated Mining and Smelting Company has lent approximately one million dollars to its employees, and constructed and repaired for them more than one thousand houses. It charges only five per cent, and makes things so easy that an employee, if he has a permanent position, can build for himself not only a house within the municipality but a summer home up the lake. Then take the city of Nelson. Nelson has about eight thousand people, who have sufficient confidence in its stability and its future to spend during the last six months $250,000 on a civic centre, one of the finest evidences of municipal enterprise, for a city of its size, that can be found in the dominion. So I ask the government if it will not consider some way of acting jointly with the municipalities. I do not expect the government to lend a municipality of five thousand people a lot of money, because it incurs the expense of supervision; that is the reason these loan and trust and insurance companies will not give assistance in these small centres; it is not because they lack confidence in them, but because the cost of administration, supervision of construction, preparation of plans, and so on, is greater than the interest return of five per cent will warrant.

During the discussion which has occupied this house for so long, references have been made to the part that industry might play in relieving present conditions, conditions which have continued for five long years. Although some improvement has taken place, the government has to look forward to the coming five years, and while there is strong hope, yet there is absolutely no certainty of any

brighter future. We have to care for, not only the number of unemployed resulting from this depression, but the problem presented by the young men and young women who are reaching that age where they expect to enter the fields of labour. I took the trouble to call up the bureau of statistics, and I find that in the past five years the young people who have reached that age when they become a factor in the field of labour number 300,000. I mention that to show the government that even though conditions should continue as they are—and they are even now none too good—in another five years there will be 300,000 more looking for employment, and certainly that situation must be provided for in some practical way other than that of public relief.

If there is one proposal which, in my opinion, would benefit our young people and future generations of Canadians, it is a plan whereby young men will have an opportunity to learn a trade. It is all very well for them to take up various courses of study and to extend their education, but there is nothing in the life of a young man or any man that fits him more effectively to meet the contingencies of the times than the advantage of a trade, a basis for his living. Fifty years ago it was the habit of parents to say, as soon as their son was old enough: What trade shall the boy learn? And if there was one benefit above another in putting a boy to a trade, and making provision for his future, it was the element of compulsion in the arrangement as between the boy and his employer. I happen to be one of those fortunates who as a boy was bound out to a master, as it was termed in those days, for bed and board. I was bound to a printer. While I did not like it very much, and might have preferred to be a lawyer or a doctor, I became a printer, and I am very thankful for it, thankful because I was compelled to stay with it, and so laid a foundation for the future. If this government could go so far in welfare work as to provide means for the young men of this country to face the future with some degree of certainty, it could not engage in a much better work.

Here again I want to take the house back to my own city of Trail, because I like to show the people of this dominion that in an industrial way Trail sets an example not only to the government but to all phases of industry in Canada. In that city we have an industry which employs five thousand men, and not another industry in this dominion has the same keen sense of the human relationship between employer and employee that exists there. They recognize the great benefits which result from giving the boys a start by way of a trade. The sons of employees are taken into that plant. They may go into the carpenter shop, the paint shop, the foundry, the electrical department, the pattern making shop or any other branch of the works. There they are put to work on the basis of twenty-five per cent of a journeyman's wage, and every six months they are advanced until they receive the full wage of a master artisan. Then, if the department for which they have fitted themselves is not ready to receive them, they are simply sent to what we call the clearing house, the labour gang, where they work until there is an opening in their particular department, where they are given preference.

I should like to go a little further in emphasizing the part that industry might play in this period of depression. Recently it was my privilege to have a conversation with perhaps the foremost construction engineer and the foremost mining man on this continent. In their general conversation they referred to the fact that Doctor S. G. Blaylock, vice-president and general manager of the Consolidated Mining and Smelting Company, had gone further and accomplished a greater work than perhaps any other man on this North American continent. That work was purely and simply the creation of a cooperative spirit among the five thousand employees who carry on the work of the largest metallurgical plant, not only in the Dominion of Canada but in the world. Doctor Blaylock was so far-sighted as to realize that the time had come when there must be a uniform interest as between the employer and the employee. He wanted the employees to understand the ideas of the management, and they formed a cooperative so that the management might get the benefit of the ideas of the men, and to show hon. members that this is a plant which might well be copied by other plants in the matter of industrial relations, may I say this: Do you know that the Trail smelter, this huge metallurgical plant, paid 4½ per cent of the total freight revenue of the Canadian Pacific Railway in 1935? Do you know that it paid 1·9 per cent of the total freight revenue of both Canadian railways during that same year? So it will be seen that this is something of an institution.

There is one point I want to stress, because it applies not only to mining institutions but to all industrial plants in this country. If they could create a relationship under which the employee would feel not that he was only getting so much per hour but that he had an interest in the work, this would be a great step forward. This is only an indication of what must come in Canada if we are to

provide jobs for all who need them, not only now but during the next five or ten years. The one solution is the system now in operation at that plant; I refer to the five day week. That must come or work cannot be supplied for those who need it. The men there realized that fact. They had every opportunity in the world to maintain a full six day week, but rather than see some members of the community go without jobs they were quite willing to carry on with a five day week. What did they do when the depression began? The management called the men together; they picked out the married men and put them on three-quarter time and put the single men on half time. Then, as things picked up, they brought the single men up to three-quarter time, and finally the men were called again. The management said, "You boys can take your choice. Do you want to go back on six days a week and thus deprive some people of jobs, or would you care to carry on the five day week"? Unanimously the men chose the five day week. As a result they now have time for relaxation. If they are shift men they work fifteen days and lay off five days, while ordinary day labourers work five days a week. Seventy-five per cent of the men own their own homes, and when they have their five days off they fix up their gardens, mend their fences and generally improve their homes.

This whole plant is run on a cooperative basis. There are perhaps fifteen or twenty departments, and the men in those departments never air their grievances to anyone but their own delegates. Each department elects two delegates, who meet with the management—partly on the company's time—twice a month. Any man with a grievance as to working conditions, wages, safety or anything else takes that grievance not to the management but to his own representative. The delegates from the various departments discuss the grievance; if it is well founded it is remedied and if it is not it is simply sent back. I should like to point out some of the benefits which have resulted from that spirit of cooperation which pervades that plant. In the first place every man enjoys free insurance in the amount of $1,500. If he chooses to add to that it is at his own expense, but the $1,500 of insurance is provided at the expense of the company.

At the company's expense likewise a pension is provided for all old employees, a minimum of $240 a year, but determined on the basis of the earnings for the previous ten years. Then they have a benevolent association which includes practically one hundred per cent of the employees. The members pay $1 per month and they receive benefits in case of illness or accident at the rate of $1.50 a day for periods up to six months. The hospitalization is unequalled anywhere in Canada. It is not a case of a lot of doctors saying: We are going to charge this or that, but the men fix the rates; the workmen's cooperative committee calls the doctors, twelve in number, in a clinic and makes their own arrangements for medical attention and hospitalization, not only for themselves but for every member of their families. They have the very best attention in the most modern hospital that could be constructed. There are also all sorts of athletic and social facilities.

What more does this company do? The company says to its employees, We are not paying you so much an hour or a day, but we want your cooperation, your confidence, your interest in your work; and the men give it, they feel it is an honour to be an employee of that company. When a man has been there three years he is given outright a share of stock in the company; that share to-day is quoted at about $250, but it does not make any difference if it were quoted at $500; he gets it without cost. They have this elaborate housing scheme, under which they have advanced almost a million dollars to the employees, repayable in monthly payments. When Christmas comes there is not another institution in Canada that treats its employees better. Hon. members will forgive me for elaborating upon this, but I feel proud of coming from a community in which there is such an industry maintaining such fine human relationships between employer and employee. They say to the employees: In the first place we are going to give you a basic wage. When I left there the basic wage happened to be about $3.35 a day. That basic wage is fixed by the company, but there is a general discussion with the committee and the basic wage is largely determined by the Government's cost of living yardstick. If the cost of living goes up the basic wage goes up; if the cost of living goes down the basic wage goes down. To that basic wage is added first a bonus for efficiency, which is interest in the company's welfare. It is also based upon the price of metals; when the price of metals goes up the bonus goes up, and when the price of metals goes below a certain line the bonus ceases. When I left, the bonus in addition to that basic wage of about $3.35, was ninety cents a day. That wage is for common labour. The men in different departments of course have different scales, but that is the basis for common labour.

Every employee feels an interest in the company's welfare. A man goes to his work

in the morning not with a feeling of insecurity, like many employees throughout the country in these days of depression, not knowing whether he is going to have his job or whether he will be told when he reaches the shop that they do not want him. Not so at Trail. There a man cannot be discharged on account of some feeling on the part of his boss, who may have a dislike or a grievance against him. No man can be fired offhand, unless it be for some offence that could not be countenanced by anyone. If, for instance, a man does not get along in the carpenter shop what does he do? He goes to the employment manager. The employment manager asks him: What department do you think you could get along better in? The man says: Perhaps I could get along in the paint shop. So he is given a transfer to the paint shop. He is there for six months and perhaps he does not get along in the paint shop. So he goes back to the employment office. The employment manager says: You have had one transfer, you may have another, but if you cannot get along in the third place it is all off. But that man feels a sense of security in his job that few others have.

When Christmas came along what did they do? Every married man in the plant who had been in their employ before January 1 of that year was given $25 cash, and single men $12.50 in cash. Men who had been employed only six months were given a smaller sum, but everyone received something; a single man who had been in their employ for even three weeks was given a couple of dollars or an order on any store in which he chose to spend it. And every man received a turkey.

I tell this in order to show the house and the industrialists of Canada that it is possible to create a spirit of human relationship in industry not merely hiring men at so much an hour or a day. That company does not want men who are just working for so much an hour; they want them to feel that they are carrying on their work day by day with an interest in the business.

Now I appeal to the graciousness and generosity of the Minister of Finance. I have said all the nice things I can possibly say to him and about him, so through the Minister of National Defence (Mr. Mackenzie) I want to call the attention of the Minister of Finance to the fact that we have an airport in the city of Trail, one which probably surpasses any airport between Regina and the coast, I mean any which has been built without any assistance or support from the government. We did our own work, cleared the field; we have a field now almost equal to that of the Salmo airport which the government constructed at a cost of $67,000. We would like the government to find means of assisting municipally owned airports in places where the municipalities do a little more than their share. To-day our landing field is about 400 feet wide and 2,000 feet long; we would like to widen it to 600 feet and make it 3,000 feet long, which would make it the same as the government airport at Salmo. We ask that assistance. But we do not ask it outright; we ask it only after we have put in a beacon light and boundary lights at our own expense, so that it will be perhaps the most modern airport between Winnipeg and the Pacific coast, because you can land there on the water as well as on the land.

I trust that some hon. members will find it possible during the summer vacation to visit this plant at Trail and inform themselves of the extent of the interest which this company shows in its employees. It leaves nothing undone for their comfort, welfare and social betterment. It has a memorial hall which provides every possible facility; there are few halls in Canada which surpass the accommodation and perfection of appointments of that hall. The company has financed an artificial ice rink. There is nothing for the welfare and interest of its employees to which the company does not contribute.

I simply wish to express the hope, in closing, that some of the industrialists of this Dominion will follow the example set by Doctor Blaylock, which as I have stated is generally considered to be one of the greatest industrial accomplishments on this North American continent. It is not as if it began only yesterday; for seventeen years it has been working perfectly, so much so that every man in the employ of that company feels that he is honoured by being on its pay-roll.

Mr. H. E. BRUNELLE (Champlain): Mr. Speaker, I have heard it said by many English speaking members of this house that the French language is musical, and in consequence of that very kind compliment, which I have taken seriously, I will, in the course of the few minutes which will follow, use that most harmonious language. I am sure this will be a relief to the patient Minister of Finance (Mr. Dunning).

(Translation). I would not take up a single minute of the valuable time of the house to speak on the budget were it not for the

criticisms levelled by leading politicians, not only in this chamber but in the province of Quebec and particularly in my own constituency, against a certain item of the budget presented by the hon. Minister of Finance (Mr. Dunning). Before proceeding, I deem it my duty to congratulate the hon. minister, who presented such an admirable statement of the financial situation of the country.

As it is my intention to submit a claim on behalf of the French Canadian element in Canada, I shall address the house in my mother tongue, and in doing so, I offer no apology, for indeed it is a matter of regret that, owing to circumstances, we are so frequently called upon to use the English language.

As I was saying, in a circular published in a number of newspapers in the province of Quebec, a certain politician criticized the increase of the sales tax from 6 to 8 per cent. The taxpayers are well aware that in 1930, the sales tax had been reduced by the Liberal party to 1 per cent and that between 1930 and 1935, the same tax was raised to 6 per cent, which represents an increase of 5 per cent. At that time no circulars were printed to criticize the increase, nor was there a single voice raised in protest on the floor of the house. Other times, other ways!

Why is it necessary for the government to impose new taxes, and what are the facts? From 1930 to 1935, under the Conservative administration, our national debt increased by $867,000,000, which, at the rate of 3 per cent, represents an interest charge of $26,010,000.

Secondly, the country has to pay, in interest alone on our total debt, $134,550,000 a year.

Thirdly, for the last year of the Conservative administration, the deficit amounted to $162,191,000.

It is obvious that new sources of revenue were required to meet the obligations of the late regime. The sales tax reaches every one, and to a larger extent is paid by those whose purchases are greater; the wealthy will therefore pay more than the middle classes. So far as the unemployed receiving under direct relief are concerned, they will hardly be affected since practically all their requirements are purchased by the public authorities.

On the other hand, out of the $134,000,000 payable annually, the larger portion must go towards the payment of the war debt which, to use the words of the Minister of Finance himself, "is still the principal factor of our budgetary situation." We all know which party was responsible for the war debt and those who belong to that party should not find fault with the present government's earnest effort to pay off the enormous debt incurred by the Conservative party.

Once order is restored to the business of the country and our enormous debt has been reduced, the Liberal party will undoubtedly reduce the sales tax, just as they did in the past, and just as they succeeded in decreasing the national debt by $275,000,000 during their last administration. To achieve such a result, the present government will adhere to their usual policy of moderation and careful thought.

Should not, for instance, automobile owners rejoice at the reduction of the rate of duty on gasoline? Should not the farmers also welcome the 27 per cent reduction in the customs duty on farming implements?

I note with great pleasure that the budget presented by the hon. Minister of Finance is a fair one that distributes the burden of the national debt among all classes of society evenly, according to their ability to pay. In fact, legislation should not tend to penalize any class of the community, but aim to make for union amongst all classes, in the national interest.

In the few minutes to follow I should like, Mr. Speaker, to make a plea for union from a threefold viewpoint. I realize that agriculture is the basis of our wealth and the key to our national prosperity. In that connection, may I quote the statement once made by Hon. Honoré Mercier, a former prime minister of the province of Quebec:

> We are an agricultural country and upon the prosperity of agriculture depends our national progress. To seek to build our future on anything else but agriculture is to have recourse to artificial means that will prove just as useless as to attempt to stem the tide.

If it is possible for the government to subsidize a certain class of the community, for example by paying part of the cost of unemployment insurance, I believe they are also bound to pay part of the interest on farm loans and to provide loans for the farmers at a rate of 3 per cent. On the other hand, the procedure in connection with the obtaining of loans should be made more expeditious, less costly and more applicable to the laws and conditions existing in the province of Quebec. If farmers in a certain section of the country are to be granted subsidies or bonuses to stimulate the production of their chief commodity, would it not be equally fair that the farmers in eastern Canada also be paid a bonus on their production of butter and cheese?

The farmers of eastern Canada have their own problems as well as those of western

Canada. Let all be assisted or none. I consider that we should help every one and come to the assistance of all the provinces.

The sums recently appropriated for the western wheat growers was voted in order to redeem the pledges of the late government. Otherwise, I would have protested unless the eastern farmers had been assured of equal treatment. The farmers of the various provinces are not efficiently organized; their forces are divided. In every province there is a lack of practical unity in each province and a still greater lack of it among the farmers of the various provinces. All the farmers' unions in the country should be organized into a federation, so as to enable so important a class of the community to submit their claims more efficiently and expeditiously and to assert their rights. I therefore look forward to such a federation of Canadian farmers from the Atlantic to the Pacific. In order to achieve that result, the earnest cooperation of each province is required; only through good will can perfect understanding exist among all the citizens of the country. It is also necessary to dissipate all causes of envy, friction, misapprehension and prejudice.

As a second point of union, I shall now refer to a delicate subject. It is necessary that harmony should reign between the two great races composing this country. Personally, I have no fault to find with the element constituting the majority of the citizens of Canada. For nearly twenty years I have lived in Saskatchewan, among our English-speaking fellow citizens, and I have no cause to complain of them. On the contrary, they are endowed with business ability and a sense of discretion which we should seek to emulate. I must say, however, that a certain discontent seems to exist in the province of Quebec regarding the number of positions held by French-speaking Canadians in the federal service. I desire to quote a few figures on the subject. In 1932—and the situation has become much worse since—out of 40,638 civil servants, they numbered only 8,142, or 20·02 per cent, while on the basis of the French-speaking population of the country they should have had nearly 33 per cent of the number of federal civil servants, or 13,546. On the basis of salaries paid, the situation of the French-speaking civil servants is still worse. Out of a total of more than 66 million dollars, their salaries amounted only to $12,559,432, while based on the figures of the French-speaking population of the country they should be entitled to about 33 per cent of the total payroll, which is $22,325,347.

I do not wish my remarks to be misunderstood. I am simply stating facts. The time has not come yet to indulge in bitter protests, to show rancour and still less to resort to threats. I merely say that if a province must share the burden, pay its quota of taxation and contribute its share of sacrifice, it should receive its share of compensation. Let us render justice to whom justice is due. Let us not act in such a manner as to give any section of the population cause to feel itself unfairly treated or persecuted, for the discontent that will inevitably follow will react to the prejudice of all, and we are all here to stay and to live together.

At the celebration recently held in Orillia to honour the memory of Champlain, Dr. Cody, principal of Toronto university, proposed the toast to Quebec. Having paid tribute to a few great figures in our history, such as Champlain, La Salle, Laval and Montcalm, he added:

> These men have and still have descendants. Is it necessary to mention de Salaberry, Papineau, Cartier, Lafontaine and Laurier? The history of the past and of the present should help us better to understand each other. Our attitude towards one another should not be only one of tolerance, but of brotherhood and cooperation.

I congratulate and thank the Minister of Finance for having, for the first time, caused the budget statement to be translated into French and for having made possible its publication, in the French as well as in the English press, on the day of its delivery in the house.

As we all have at heart the future of our country, I wish to offer a third suggestion in connection with unity. The problem arising from unemployment, direct relief and the national debt is stupendous. It places our future in jeopardy. There is no reason why a young country like Canada should be unable to solve this problem. Should not the party leaders write on a single policy in the matter of unemployment? If extreme measures are necessary, we should take them. Could not the party leaders, meeting as a committee, decide upon a program to be carried, and then urge their respective parties to support such a uniform policy, not only in parliament but also at election time? The idea might appear impracticable to some, but I believe that every one should aspire to that ideal, for, as Lafontaine says in one of his well-known fables:

> L'histoire nous apprend qu'en de tels accidents,
> On fait de pareils dévouements.

I am not advocating a union or coalition government, but simply an understanding between parties, a union of Canadians for the settlement of the unemployment problem. I find the following in Le Droit, of the 9th instant: "All parties in France unite to save

the franc." Then, could not our own parties here also unite in an effort to protect our future?

The leader of the Conservative party (Mr. Bennett) is an able and public-spirited citizen and the right honourable the Prime Minister (Mr. Mackenzie King) is a sincere man, in whose veins flows the blood of a true patriot. In my opinion, one or the other of them should take steps to reach an understanding on unemployment. No doubt, the leaders of the other parties would join them in an effort to solve that all-important problem. The question of unemployment is such a distressing one that it hardly seems reasonable that a party should seek to sap the people's confidence in the government's endeavours to settle it. Bold and presumptuous as my suggestion may appear, I offer as excuse my frankness and sincerity. I am sure, Sir, that the illustrious Canadians who have passed away, Conservatives as well as Liberals, Macdonald, Cartier, Mackenzie and Laurier, would thrill with admiration at such a fine gesture made by their successors to preserve Canada from the dangers and consequences of unemployment and direct relief, two evils that can only spell disaster for Canada's younger generation.

In conclusion, I may say that the policy of this government is one which tends to end the present disastrous depression, and I trust that all parties having at heart the welfare of the country will give it their eager and sincere support.

Mr. JOSEPH NEEDHAM (The Battlefords): Mr. Speaker, it seems as if almost everything that could be said on the budget has already been said, but there are one or two points I should like to put forward.

Quite naturally I felt quite a thrill of pride in hearing the Minister of Finance (Mr. Dunning) present his budget on the first of May last, as he is one of my own countrymen who came out to this country just a year or two ahead of me and settled almost in the same district, and I have watched his progress from the time he went to the first convention in Prince Albert right down to the present.

The main subject I wish to discuss is the financial situation of the dominion, the enormous debt that has accumulated, $3,800,000,000, as presented in the budget of the Minister of Finance, and also the minister's statement that in making his budget this year he expects a deficit of not less than $100,000,000. To me those figures look very serious indeed. The national debt has been growing ever since confederation, at which time there was very little debt. Looking through the Canada Year Book I could count on the fingers of one hand the years since confederation when any reduction has been made in the national debt. That is a serious situation because we have passed through many years of prosperity as well as through some years of adversity, but the years have been one long, almost unbroken, succession of an accumulation of debt from confederation down to the present. No one government or party is responsible for that. There has been a succession of Liberal and Conservative governments in charge of the affairs of this country ever since confederation, except during the time of the Union government. One or other of the two old parties has always been in power; I understand that prior to the last election their periods of governing were just about equal, and so I say that no one government can be blamed more than another for the debt situation. In fact I suggest that there is very little difference when one analyzes the situation in its entirety.

The two old parties can be likened to a railway. The train runs along a certain track and reaches a certain destination. You may change the engineer periodically, but so long as the train goes along the same track it will arrive at the same destination. I think that is typical of the two old parties, and the results of their management are the present situation. After the election I received a letter from a friend of mine in Manitoba, and referring to the two old parties he said; "The Conservatives have been true to false principles and the Liberals have been false to true principles." That was his sizing up of the two old parties, and I think his comment is worthy of study in the situation in which we find ourselves at the present time. The wonder is that we continue with the same old system. The system that has produced the results we see at the present time surely is not a system that can bring about a change for the better. No corporation or company would pursue a similar line under similar circumstances, and yet we are doing it in government. I ask myself, do they not know a better system? I cannot satisfy myself that they do not know. When the leader of the opposition (Mr. Bennett) was Prime Minister he gave some radio addresses in which he indicated that he understood the situation and the remedies. I believe that had he implemented those radio pledges in the last session of the last parliament he would have been swept back to power with as great a majority as the Liberal party now holds.

Mr. BENNETT: But he did.

Mr. NEEDHAM: That was not the feeling where I lived.

Mr. BENNETT: But he did.

Mr. NEEDHAM: I shall have to analyze that statement, because I am satisfied that he did not. Had he done so he would have been swept back to office. I have not the least doubt that the present government understand the situation and the remedy just as well as do hon. members in this or any other part of the chamber. It seems to me it is just a matter of courage and the power to break with some force which is now holding them. That is the only solution to which I can come. I want to analyze the situation in a reasonable and fair way, because we think we have a solution; the Cooperative Commonwealth Federation think they have a solution; the Conservatives think they have a solution, and surely the government has something different from what has been going on since confederation. Mr. Speaker, I would ask you to call it eleven o'clock.

On motion of Mr. Needham the debate was adjourned.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

---

## Tuesday, May 12, 1936

The house met at three o'clock.

### BANKING AND COMMERCE

First report of the standing committee on banking and commerce.—Mr. Moore.

### PUBLIC BUILDINGS—COAL

On the orders of the day:

Mr. A. J. BROOKS (Royal): Mr. Speaker, on April 29 I asked the Minister of Public Works (Mr. Cardin) for information regarding the contract for the supply of coal to dominion public buildings in the maritime provinces, for the coal year 1935-36. I understood that the minister would table a return containing the information required. As yet I have not received this return, and I should like to ask the minister when I may expect it.

Hon. P. J. A. CARDIN (Minister of Public Works): I will undertake to make inquiry to ascertain the cause of the delay, and will have the report tabled as soon as possible.

[Mr. Bennett.]

### THE BUDGET

DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE MINISTER OF FINANCE

The house resumed from Monday, May 11, consideration of the motion of Hon. Charles A. Dunning (Minister of Finance) that Mr. Speaker do now leave the chair for the house to go into committee of ways and means, and the proposed amendment thereto of Mr. MacInnis, and the proposed amendment to the amendment of Mr. Hansell.

Mr. JOSEPH NEEDHAM (The Battlefords): When the house rose last evening I was asking how the government could justify its action in regard to the budget in not presenting some real monetary reform. At the outset I said I wished to deal with debt, and the interest incurred in connection with it. That is the theme I want to discuss.

Our problem as I see it throughout the dominion is one of interest. The interest on the debt of this country, federal, provincial, municipal, etcetera, is so staggering at the present time that it has become a question of deep concern to almost all our citizens. Faced as we are this year with another deficit of $100,000,000, the prospect does not look very bright. I say that interest is the biggest problem we have to face. Two questions were asked at the beginning of this session. One was: How much is the national debt at the present time? The answer given was that on January 31, 1936, the national debt stood at $2,895,124,222. The other question was: How much interest has the dominion paid since confederation? The answer given was $2,823,245,404. So you see the national debt and the amount of interest that has been paid are practically equal. This raises the question which is in many people's minds at the present time: Why should the federal government pay interest? This is a question which I want to consider with hon. members for a little while this afternoon.

I say there is a feeling in the minds of thousands and tens of thousands of people in this country that the national government should not pay interest on money, because we see that if we have to pay interest we are bound to go into debt more and more. If the country could be relieved of this one item we would have little or no debt. That is the problem I want to present. Without interest we would have practically no debt, and with interest we cannot help but have debt. Look at it in this way: If a person borrows money, say $1,000, and has to pay

eight per cent interest, eighty dollars a year must be provided from somewhere. Where is it to come from? He cannot make it. He can produce goods, but the bank will not take goods. He can produce wealth sufficient to pay his loan and his interest perhaps over and over again, but that wealth cannot be used to repay the loan; it will not be accepted. You will agree with me that every dollar that leaves the bank leaves it as a loan to someone. How can it be paid back when the borrower cannot make that with which to pay it back? May I use a simple illustration which will perhaps bring out the point clearly. Suppose a community starts up and a bank goes in there with say $20,000, and there are twenty people who borrow that $20,000, $1,000 each, at eight per cent. They go out and work, and when the notes are due in a year suppose ten of them have been very active, have produced and sold their products and have acquired the amount of the principal and interest due on the loan. They go to the bank and pay their loan and interest, which would aggregate $10,800. How are the other ten going to make out? They are bound to be $800 short, assuming there is no other money in that community but the $20,000; they can pay only $9,200. So there you have $1,600 that cannot be paid. They may have produced wealth sufficient to meet it, but they cannot find money, which is the only thing the bank will accept. What are they going to do? The bank has the $20,000 back, just what it loaned them, but there is a shortage of $1,600. The bank can again lend that $20,000, but in order that the ten people may again secure $1,000 each they will first have to borrow to pay the interest. That is the problem that we are up against at the present time. It does not matter how you analyze it; I do not see any other solution.

Take it from another angle which may present a point that has been raised very often during this session. Suppose a bank starts in a community, and twenty people deposit in the bank $1,000 each. The bank therefore has $20,000. All right; everyone in the community is working. Someone goes to the bank and says, "Will you lend me $1,000? The bank make inquiry and decide to make the loan. They place $1,000 to the credit of the borrower do they not? The $20,000 is in the bank; that is all right. The banker does not ask the other twenty people whether they will agree to lend the $1,000. But after that $1,000 has been lent those twenty-one people could write cheques for $21,000, yet there is only $20,000 there. Where does it come from? There is the situation. As you analyze these things they show the situation that exists at the present time.

As I said before, we have no quarrel with the bankers; it is the system that is wrong. Bankers are just as necessary as farmers or any other class of people in order to carry on the business of the country. I want to read an article taken from The Instructor, published at Gardenvale, Quebec, which shows how the thing works out:

> In 1919 the dominion government loaned to the Garden City Press the sum of $126,500 under its housing act, same to be paid back with interest in twenty years as follows: $3,157.50 on the first of every January, and $7,058.45 on the first of every July. These payments have been made regularly and on July 1, 1939, the full amount of the loan with interest at five per cent will have been paid back.

They have had the benefit of those homes. It continues:

> When this loan of $126,500 has been all repaid (on July 1, 1939), it will have cost the Garden City Press $377,800.60—($10,215.95 a year for twenty years at five per cent compounded interest). Of this sum $126,500 was expended for the building of homes and the balance, amounting to $211,300.60 will go, not into the treasury of the dominion government, but into the pockets of the few individuals who own and control the banking system of Canada, which has been modeled after the British system.
>
> If the dominion government had made this loan direct, or through a bank owned and controlled by the government, the dominion treasury would have been benefitted to the amount of $211,300.60. This is the amount, which the privately owned banking system of Canada will have made out of this loan, without any outlay or risk on its part. This amount is first paid into the treasury of the dominion government and the treasury hands it over to the privately owned banking system. This privately owned banking system did not even have the trouble and expense of collecting it. The dominion government does that work for the banking system of Canada, free of charge. Why all this generosity? No one seems to be able to give a satisfactory answer to that question, except that it has always been done that way.

That is one phase of it. We will suppose that the mayor of Montreal came to Ottawa and said, "We have a slum district; we would like to pull down five hundred houses and replace them with new ones. I believe we could dispose of the houses and in that way repay the money to the government. It would take a million dollars, and we believe we could pay you back $50,000 a year." The natural question would be, "Have you available the men required to do the work?" To which he would reply, "Yes, we have." The next question would be, "Have you enough carpenters, masons and other men in the build-

ing trades?" "Yes." "Have you the necessary material, such as bricks, cement and the like?" "Yes." What would prevent the dominion government from advancing that million dollars, and having it paid back at $50,000 per year for twenty years, without interest? That is the question thousands of people are asking to-day. Where and how will the Minister of Finance (Mr. Dunning) take care of the $100,000,000 deficit, I suppose he will write a government bond issue in favour of some financial interests, and they will give back what? They will give either figures or bills. Why could not the Department of Finance do this on the credit of the country?

It is true the banks have not the wherewithal to lend one hundred million dollars. What have they?—just buildings and equipment, that is all. The minister has to give them the credit of the country, and in return he receives figures. If it cannot be done, I want the Minister of Finance to place on record the reasons why, because there are thousands of people throughout the dominion who want to know. If this action is feasible and if it is right, it is the first move that could be made to alleviate our present financial difficulties. In my estimation it is the action which should be taken.

We have heard this session about the staggering debt of Canada, and the statement has been made that we must furnish $350,000,000 per year to pay the interest on federal, provincial, municipal and school debts. It is a staggering amount—almost a million dollars a day for interest payments. But it is only part of the debt, because according to the Canada Year Book for 1935 I find that private company and indvidual loans on October 31, 1934, amounted to $1,015,472,167. This amount is in addition to the eight billions of government debts. When we remember that all revenue originates in industry, and that the greater the amount of revenue taken for interest on capital debt the less there is left for wages, one begins to wonder how industry survives at all. Of course the answer is that industry does not survive; it commits suicide. Ninety per cent of all industries fail. The average life of all industry is only seven years; only four per cent of our greatest industries have existed thirty years or more. The situation in Canada is serious, and it is not getting better as time goes on.

Mr. VIEN: Will the hon. member tell us from what source he got his figures?

Mr. NEEDHAM: They were from The Instructor, published in Gardenvale, Quebec.

[Mr. Needham.]

Mr. VIEN: I am satisfied.

Mr. NEEDHAM: Speaking a few days ago the hon. member for Huron-Perth (Mr. Golding) made this statement:

> The Liberals have a tremendous majority in this house, but with that goes a tremendous responsibility.

There is no doubt about that. If ever a government was on trial in Canada, surely it is the present one. I take it every hon. member feels he represents all his constituents, and for that reason Liberal members in this chamber represent a great majority of the citizens of Canada. These citizens are looking to you for action and for relief. You are the dominion government; in reality you are the dominion people, between elections. Just so far as you know why you were sent here to represent your constituencies, and just so far as you are aware of the responsibility to which the hon. member has referred, to that extent will the government act as you decide. When I make that statement I refer not to the cabinet but to hon. members of the Liberal party generally. There is the responsibility which rests upon each and every one of you.

On every coin in this dominion there is a picture of the king, and I think the king's picture should be on every currency bill as well. I want to know by what authority any chartered bank got the power to print money and put on it a picture of Sir Herbert Holt or of M. W. Wilson or of some of the other bank presidents. By what authority do they do that? I have been told ever since I came to this dominion that these bills are not legal tender. If they are not legal tender, there is only one conclusion, and that is they must be counterfeit, and if they are counterfeit it is time this government took some action about it. If the banks have no right to do what they have been doing, and we asked them to return the interest which they have been receiving illegally, we could readily deal with the national debt, could we not? I say again that the picture of our sovereign should be on all currency that is issued in this dominion, backed by one hundred per cent of the wealth of the country.

I call upon this government to fulfil its pledge given on the eve of the election by the Prime Minister (Mr. Mackenzie King) in these words:

> Usury once in control will wreck any nation. Until the control of currency and credit is restored to government and recognized as its most conspicuous and most sacred responsibility all thought of the sovereignty of parliament and of democracy is idle and futile.

I wonder just what those words mean, "restored to government?" There is the implication that the control should be there now, and that the government has never legally transferred it anywhere else. That is what this country is looking to the Prime Minister to do, but so far we have had no indication of any move in that direction. I believe, Mr. Speaker, that the words of the Prime Minister which I have just quoted are a distinct pledge of the Liberal party, one of their main planks, and I believe that the two gentlemen who are responsible for that plank being included in the Liberal platform are the Hon. Mitchell Hepburn, now Premier of Ontario, and Hon. Ian Mackenzie, one of the members of the present government. I appeal to them to see that that part of their pledge is fulfilled.

I had thought, sir, of dealing with the question of monetary reform being taught in our schools, but that is really a provincial matter. I would, however, call upon the departments of education throughout the dominion to see that our monetary system is taught in our schools so that people will understand the conditions under which the present system is functioning.

One cheering aspect of this whole thing is that public opinion is aroused as never before on this question. The people are on the march; they are investigating, and public opinion, I believe, is the factor that will decide the issue sooner or later. If this government want to kill communism, if they want to check socialism, if they are not in favour of social credit, let them get busy and reform the present system themselves, or the people will put someone else in power that will. The opportunity is yours and the country is behind you; there is no doubt about that, and if you act now you can do something for this country that will make the Liberal party immortal. If you do not, I hesitate to say what may happen.

Hon. W. R. MOTHERWELL (Melville): Mr. Speaker, it has been my privilege to listen to fifteen budget speeches in this house and to about as many more up in Regina, and I do not think I have ever taken quite so much satisfaction and pleasure in listening to any of them as I have in listening to the one delivered by the Minister of Finance (Mr. Dunning) a week ago last Friday. It was a wonder for candour and comprehensiveness. I think I like it best because there were no phony money stunts in it, and that sort of thing—Doctor Townsend's plan, Upton Sinclair's, that kind of highly infectious economic disease that usually befalls the nation every time we have a period of great depression. I do not want to become too personal but I must say that this house has not been entirely free from that infection. However, it is just a nursery disease that we get over easily and we hope that will be the case here.

There has been one notable omission in the debate that followed the excellent budget speech of the finance minister, and that is there has been no reference, with one exception, to the virtues of honest toil. Honest labour faithfully performed has ceased to be a commendable attribute in man, in the estimation of some of our people. I was brought up on the wholesome doctrine that early to bed and early to rise makes a man healthy, wealthy and wise. It may be foolish in some respects, but it is mighty sound in others—I hesitate to use the word "sound" for fear it means something unsound in these days. I am sometimes not only amazed but saddened when I hear hon. gentlemen in this house and in the country speak of hard work with disdain, as if it were not a desirable attribute of man at all, but something to be shunned, something that should belong to the age of scarcity. This is an age of plenty, we are told, and therefore we should talk more about leisure, how to put in our time, how to shorten the working day, and enjoy the comforts of modern civilization. So far as applying that doctrine to agriculture is concerned, I do not know any land that has become great as an agricultural land or any farmer who has succeeded by sitting down and counting the hours till sundown, and pleading for a shorter working day and a shorter working week. Agriculture is of necessity a seasonal occupation, and you cannot gauge it by the hours of industry and do justice to both.

The leader of the C.C.F., that abbreviation for Cooperative Commonwealth Federation, which is a disguise, and a thin disguise, for state socialism, suggested that farming could be run on a six-hour day, and that if we could not get our work done in six hours, then have two or three shifts as they do in industry. I do not think I ever heard anything so effective against the C.C.F. and their theories as when I heard that astonishing doctrine enunciated right in this room.

I like the budget, too, because I think it gives more consideration, especially from the tariff standpoint, to agriculture than has any other first budget of a new parliament as far back as I can remember. My recollection is that there were few if any changes in the first budget presented by the government of Sir Wilfrid Laurier and I know there were many but small changes in the first

budget presented by the King government which came into power late in 1921. In fact, they were so small that those of us who were anxious to have larger changes made were a little dissatisfied. However, the changes increased in the aggregate until they culminated in the Dunning budget, which was condemned by the people of Canada but which is now being endorsed so successfully, not only in this house but throughout the country generally.

This is all the more so when we take into account the trade agreement recently entered into between Canada and the United States. When we consider the changes made under that agreement plus the changes made in this budget we find the largest number of worthwhile changes in respect to agriculture ever made by any government in Canada at its first session. There have been two or three challenges as to the soundness of this budget, but that is quite natural. As the farmers approve of the changes in the budget, so do the manufacturers and their friends not approve. In the session of 1930 the previous government shot the tariff upwards, especially with regard to agricultural implements. The duties on some implements were doubled; on others they were tripled and on others they were quadrupled. They were put up to twenty-five per cent. Under the trade agreement recently entered into with the United States, plus the budget reductions, the average duty on agricultural implements has been reduced to 7½ per cent.

Can any exception be taken to these reductions? It is only a case of "as you were." If the manufacturers got a break in 1930, surely the farmers are entitled to a break now. Unless we do get a few breaks like this, we will soon be broke ourselves beyond mending. I look forward to the time when our manufacturers will be able to thrive under a low tariff just as they throve under the low tariff of the Liberal government from 1922 to 1930. It may be a little presumptuous of me to make a suggestion to the Minister of Finance, but I am going to do so because I realize he is in urgent need of revenue. I believe he could find additional revenue from one or two other sources. The free list does not produce any revenue, and only very little revenue is produced from a prohibitive tariff. I know it is almost like heresy for a Liberal to suggest anything like making a free article dutiable even temporarily, but this government is not a free trade government. The Liberal party is a low tariff party; we believe in the lowest tariff consistent with revenue requirements. The only ones in the opposition who do not believe this are those who do not want to understand. There is a gentleman on the tariff board who used to use his spare time trying to prove that the Liberal party was the high tariff party; I wonder what evidence to that effect he will be able to produce now after this budget is completed? I think this budget shows that there is a real cleavage between the two major parties, notwithstanding the fact that the third party fondly tries to convince itself that there is no difference.

I suggest to the minister that he explore the possibilities of additional revenue by investigating the articles now on the free list. Many of these article could be taken off the free list temporarily in order to meet the present emergency. I want to help the minister in every way possible to get revenue, because we cannot balance our budget without revenue. I would not like to see the sales tax raised any higher, but I think additional revenue could be got in the way I am suggesting. I once had occasion to go over the free list and I saw how extensive it was. A small tariff could be placed against some of these items or an excise duty levied, if we want it that way. This could be taken off automatically in the course of two or three years, or whatever time might be decided upon. I am looking to the time when it will be possible to bring the remaining high tariffs down to a revenue producing basis. If that were done I believe we would obtain a greater amount of revenue and also ease the consumer's burden.

I leave these suggestions with the minister. It is only a layman's advice, but it is not long since the minister himself was a brother layman and I think he will understand.

The budget debate is sometimes used as a means of directing attention to the grievances of one's constituents. There has been a particular grievance in Saskatchewan, and perhaps throughout the west generally, namely that our wheat is being tampered with at the terminals before it is exported. Before 1900 there was no law governing the transportation and warehousing of our wheat, but in that year the Canada Grain Act came into force. Prior to that time the grain dealers had debauched the business so completely that they themselves applied for remedial measures, and they joined with the farmers in asking for the Canada Grain Act in 1900—it was then called the Manitoba Grain Act. But there has always been a tendency to go back to the old ways. Eastern members will notice that quite often a royal commission is being appointed to inquire into the grain trade. We get things fixed up for a time and then all of a sudden trouble breaks out some-

where else. Practices prohibited under previous legislation are evaded in some way or other. I should like to show what I mean by quoting from Hansard of last year. On March 25, 1935, the house was in committee of supply dealing with the estimates of the former minister of trade and commerce, Hon. Mr. Hanson. I should like to quote from the discussion that took place in connection with an item pertaining to the administration of the Canada Grain Act. The former member for Macleod (Mr. Coote) started the discussion, which continued for about an hour and a half, and I recommend the reading of this discussion to hon. members who are interested in this matter. I quote from page 2066 of Hansard of last year as follows:

Mr. Coote: Mr. Chairman, a few years ago the Canada Grain Act was amended so as to prohibit the mixing of wheat in grades Nos. 1, 2 and 3 northern, and before this vote is carried I hope the minister will tell us what steps are being taken by the grain commission to see that that provision of the Canada Grain Act is being carried out.

While I am on my feet there is another matter I should like to bring to the attention of the committee. Even if those provisions for the prevention of mixing may be carried out, another practice apparently has grown up which lowers the standard of No. 1 and No. 2 northern in particular so far as shipments overseas are concerned. It is quite a common practice, I am told, for cars of No. 1 and No. 2 northern wheat which are sampled at Winnipeg to be tested for protein content by the grain companies. Word is sent ahead to the terminal at Fort William, and if this wheat is of a high protein content in many cases it is binned by itself and certain bins apparently are held for what is called selected No. 1 northern, high protein. The result of this practice, it seems to me, must be to lower the grade of the bulk of the wheat that goes out to our overseas customers.

That is the complaint. While the mixing of grades was prohibited, the selecting of high class protein cars was not prohibited. We are told that there is a principle in law that you cannot do indirectly what the law prohibits your doing directly. In my estimation this is not only a wrong practice, but an illegal one. The best cars are skinned out, as it is termed, and sold on a premium basis in the United States. The depreciated balance is sent to the overseas markets where we have to meet the strongest competition in the world. That is wrong. Mr. Hanson admitted that it was being done, but he said that it was done in such small proportions that it did not materially affect the overseas shipment. He admitted however, in a statement which I will read, that if it assumed larger proportions then of course it would be another matter. Here is his reply:

With respect to the second matter to which my hon. friend alluded, namely, the special binning of wheat at terminal elevators, I am advised that a perusal of the grain act will show that this is a perfectly legal process under the provisions of the act itself. This special binning of select wheats by terminal elevators is legal under the grain act and is controlled by the commissioners, in so far as the special bins leased for this purpose have to be authorized by them. It would not appear that this matter is of any considerable importance, because out of a total of 62,000,000 bushels which came to the head of the lakes during the past season, only 820,000 bushels have been so binned. This is only about one and one-quarter per cent of the total. This facility of special binning is open to all interests, including the Canadian mills. In order to specially bin wheat it is necessary for the purchaser to obtain the owner's consent, thereby assuring an equitable return of the premium paid in this connection. An objectionable practice which was stopped in 1930 was that of permitting the diverting of special wheat without the owner's consent and frequently without any premium compensation being paid to the owner. I am advised by the commission that the only possible objection to this practice is that it more or less reduces the average quality of the outgoing shipments, that is the shipments which go to the export trade.

Think of the guilelessness of that gentleman—no, that is not a good word. He was a new minister and we felt sympathetic towards him, and he could not properly have been expected to understand the wheat trade in the few months he had occupied that position prior to this debate. So that I will not call it guilelessness. But call it what you will when he said "the only possible objection" would be that it more or less resulted in a deterioration in the quality of shipments that went overseas. The evidence is on record and I point to it once more this afternoon in the hope that when the report of the special committee on marketing is submitted and the government refers it, as I assume it will be referred, to a royal commission—that is what is forecast—the scope of the commission's inquiry will be sufficiently wide to enable it to deal not only with marketing but with these evils that have again crept into the handling of wheat at the head of the lakes. Let me read another Hansard extract from my own remarks:

Each year that this item has been under discussion up to the present time I have inquired of the previous minister whether there was any evidence of the restored mixing of wheat grades. The practice was general years ago. The answer which that minister gave was invariably, no. Well, each year I hear further reports of it. I am not making any charge just now but I want to put the

government on their guard. It is easy to start these practices but difficult to stop them. These practices invariably begin under Conservative governments and then it takes the succeeding government nearly all their time in office to stop them. In 1930 an attempt was made by some of us to prohibit the mixing of grades and a compromise was reached, prohibiting mixing in the four top northern grades and permitting it in the rest of the grades. As a matter of practice anything that is not prohibited under the grain act is usually done; that is the substance of the matter. It is not particularly made illegal, but it is not prohibited and therefore it is gone ahead with. I have grave suspicions and pretty reliable information that the law is being broken with respect to the four top grades. I did not hear the first remarks of the hon. member for Macleod (Mr. Coote), but I understood him to be drawing attention to the special binned top grades. These grades are isolated and special binned for their quality and are sent to the United States, where a premium is paid therefor. That is exactly the way it started before, only it was with carloads; carloads were switched and cut out and sent somewhere—usually to our millers. To the extent that that was done, what was exported overseas was correspondingly impoverished in quality.

There can be no doubt about that. If you have a dozen apples on that table and you take out the three best, then the other nine will be of a lower average than the original twelve. Anyone can understand that. Mr. Hanson, replying to Mr. Vallance, stated as reported at pages 2069 and 2070:

As regards the degradation,—

He uses a stronger word even than I used.

—by reason of this special binning, of the quantity that goes into the export trade, I agree with the hon. gentleman. But it is permitted by the act and I do not think that any great harm is done where the quantity is so small. I believe that is the opinion of the commission. Of course, if it assumed larger proportions it would be a different matter.

I have not the exact figures from the bureau of statistics, but I know that the export of milling wheat to the United States has greatly increased this year. Earlier in the season it was estimated to be between 35 million and 50 million bushels. There is nothing however to indicate how much of that has been special binned in the manner I have described, or how little, but the opportunity is there, and I think it is high time we dealt with that questionable practice.

About a year ago I received from a former superintendent of a terminal elevator at Port Arthur a statement to the effect that the mixing practices that had been prohibited, not only those that I have described but the actual physical mixing of wheat, had been reintroduced by some terminals in every conceivable way, as much as they dared and could get by with. I have no reason to doubt the accuracy of that statement. I purposely refrained from bringing it with me, for I do not think it is wise to disclose the identity of this gentleman, because prospective witnesses sometimes have a habit of disappearing. I must ask the house to take my statement. I hope it is not stretching a privilege too far when I assure the house that I have in my possession a very lengthy document volunteered by a former superintendent of a terminal elevator indicating that these practices are being largely carried out now.

Mr. BENNETT: What year was that?

Mr. MOTHERWELL: 1933 and since. If that is so, I do not think there is an hon. member in this chamber who will not want our Canadian wheat protected from debasement. We speak of defaulting on bonds, defaulting on anything, and we shrink from it. When we do not live up to our wheat certificates, or for that matter our cheese certificates or any other certificate which the government of Canada is behind, we default just as much as we do when we default on bonds, and I hope that this will be the view taken by the committee, and that this investigation with respect to marketing will be sufficiently wide to take in the question of maintenance of quality. I hope to see this done, first, to remove the evil, and secondly, for the reason that the very first prerequisite of marketing is to have a good article to market. There is an old adage that if you buy an article right it is half sold. I do not know whether the chairman of the price spreads committee will agree with that. In order to buy properly you must buy in bulk, and that means mass buying. And this is equally true. In order to sell wheat or any other cereal or commodity properly you must produce right and deliver to the prospective customer right, and then your product is half sold. Anything that works to our disadvantage, anything that removes the edge we have over other wheat, puts us at the mercy of our competitors. We must compete against the depreciated currency of two of our very strongest opponents, the Argentine and Australia, but we have two advantages to offset that. I am going to make one admission now in the presence of the right hon. leader of the opposition (Mr. Bennett). After inquiry I believe we have a slight edge by reason of this six cent British preference on wheat. I will not go into that matter at length, but I think I owe the right hon. gentleman that admission.

Some hon. MEMBERS: Hear, hear.

Mr. MOTHERWELL: It is very slight, though. I mention this because we violated the conditions of the contract which entitled us to that preference when we sold wheat not at the world price but at sometimes ten to twelve cents above it, so that preference was liable to be taken away, which is not the case now. I had no opportunity at that time to make this admission, but if it will do my right hon. friend any good I make it now. Possibly I am doing this more for my own sake than for his, but I feel I should say that because of that preference we have a slight edge under certain circumstances. The other advantage is in the quality of our wheat. If in hard times we put our price too high and above competitive prices, the consumers are going to use just as little of our wheat as possible. Wheat must be sold at competitive prices with comparable wheat of other countries. There is no other way to sell it and still get your share of the sales; there never has been any other way and I do not expect there ever will be any other way. An attempt was made, for four years, 1932 to 1935, to sell our wheat in another way, but it failed.

That is about all I wish to say with regard to this question. Now that we have gone into this business of wheat marketing, we do not know for how long, let us all get behind that wheat board and behind any government which may occupy the treasury benches. Let us see that the quality of our wheat surpasses the quality of any other wheat which goes on the market, and in that way we shall be able to offset the disadvantages that are apparent. We are up against the problem of distance, for one thing; our wheat is grown away in the interior of a great continent, far from the ocean no matter which way you look. Then there is the disadvantage of the depreciated currencies, already referred to, of other countries. I think I will leave it at that; I think hon. members are sympathetic with these views, and I just wish to say to the house that this is a situation which cannot be taken care of if we confine this prospective royal commission strictly to what is called marketing, or marketing methods.

Well, Mr. Speaker, I think I have gone over that without making very much of a break, though I have had to do some plain and fancy skating, and that will be even more the case in connection with the next subject. If I had any hair, this question of debt would make it stand up, sometimes, when I think of it. The vortex, the maelstrom of debt in which we find ourselves, individually and collectively as a people, did not start yesterday or the day before or after the war. It started early in this century, or maybe before that. Speaking of the west, which I know more particularly, in the early days we did not have any opportunities of getting into debt because until about 1894 no one would trust us. The early settlers went in there in 1882, and for the next twelve or fourteen years you might as well have asked a moneyed man to take a mortgage on a square mile of sunshine or atmosphere as on a square mile of land. There was an abundance of both, but land had no value as security for a loan until it was demonstrated what the land would do. Then we had a period of fair prices and large crops, and moneylenders crowded the money on to us until it nearly amounted to an orgy. As treasurer of a school district I was in a position to know how this thing was going on, and long before it was known publicly I was horrified at the number of men who were putting mortgages on their land. I often wondered how they were ever going to get them off, when the land became older and dirtier, the equipment worn out and the men themselves older and worn out. As a matter of fact many farmers did pay off their mortgages and then contracted new debts during the war, so they found themselves in a more difficult position than ever.

In the beginning of the borrowing era about 1894, mortgages were taken on a bunch of ponies, or any other chattels, for $300 or $400. That was all you could get. Then one or two private banks came in with plenty of capital, which permitted them to take pretty good risks considering the interest that was charged, ranging from 24 to 36 per cent. Then the chartered banks came in, sometimes two or three of them in a town like Indian Head. They would come out on the street and canvass for loans. In the old days of the open bar it used to be, "Come in and have a hooker." The banks said, "Come in and have a thousand, and later on when you sell your wheat you can pay it back." How could frail flesh resist that enticing offer and appeal? Then came the mortgage companies, competing for our business and vying with each other as to which one would give a farmer the largest mortgage. Later many began to find it difficult to pay back the money with interest at eight per cent, nine per cent, or whatever it was.

Then a great agitation arose for the government of Saskatchewan, of which I was a member, to go into the farm loaning business. Four other provinces were induced by pressure of public sentiment to go into the very doubtful business of lending money to their constituents. I do not need to enlarge on what happened to them; I think the Minister of Agriculture (Mr. Gardiner) knows. I believe

Saskatchewan lost less than the others, because that government administered the money pretty carefully and handled the loans in a pretty businesslike way, but they all lost money, including this old province of Ontario. Then, not satisfied with that, public pressure came to the highest government in the land, the federal government, and induced it to go into the loaning business. That was started in 1927, with perfectly good intentions. Just as the legislation of last session and the session before, in regard to the Farmers' Creditors Arrangement Act, and the enlargement of the amount available under the Farm Loan Act, was intended to adjust farm debts and make farm loans, so the original federal Farm Loan Act of 1927 was introduced primarily not so much with the intention of doing a lot of lending but for the purpose of controlling interest rates, and it achieved that purpose. In Saskatchewan we have an act called the municipal hail insurance act that has been on the statute books for nearly a quarter of a century. It does not pretend to do everything in the hail insurance business, but it is a great factor in controlling the rates of private companies. It was with much the same idea that the federal farm loan board was created in 1927, not to make many loans but to control interest charges.

Then two years later came the smash, and all commercial companies loaning money to farmers disappeared. I do not know where they went; they scooted out of sight and were not to be found. To-day I do not know of any corporation or individual throughout Canada making a business of lending money on farm mortgages. The result is that we have unconsciously, unwittingly, drifted into the same position with farm loans as we did in regard to the nationalization of our railways. It was not with deliberate intent that the railways which now form the national system were taken over as a government proposition. There was an alternative, as we all know—put them up at auction, get what you could out of them. But that course was not taken. I am not criticizing that, but I am pointing out that inadvertently they came into the hands of the government, and now this government is pledged to give them a fair chance. That is our policy; now that we have them, give them a fair opportunity to make good.

I do not know whether I am in a position to say that about the farm loan board. I have a great many complaints about the farm loan board, about the amount of money borrowers are getting. The mania for borrowing has become so impregnated into the very fibre of our people that a great many seem to think the best way out of one hole is to get into a deeper one. That has been tried all too often and has nearly always failed. We have exhausted every commercial means of borrowing. Surely the collective wisdom of the cabinet can devise some better way to assist agriculture than by the state lending money to its subjects. I submit that for consideration by the cabinet. It is said that fools rush in where angels fear to tread; well, on the other hand it was also said by the red men of yore that you cannot scalp a bald man. Believe me, it is in the interests of the country that we should hesitate at this stage before we go too far, and find out—but I am not suggesting another commission—whether there is not a better, a more abiding, a more effective way of helping distressed agriculture than by the state lending its subjects money. I cannot state what attitude I took in the Saskatchewan legislature except to accept my full share of responsibility back in 1917; I think my obligation as an adviser of the crown forbids my stating that; neither can I make it plain what attitude I took here in 1927. But I am at liberty at least now to warn the house of the danger, not only to the treasury—because half the money will be lost if provincial loaning experience goes for anything—not only is the treasury in danger of being smashed, but every government that administers a lending policy like that is itself in danger of being smashed, and the ultimate result will be of very doubtful benefit to the farmers themselves. Why? Because it is perpetuating the same idea, that the only way to get along is to borrow oneself into prosperity. That is wrong. A little borrowing may be a great blessing, but unlimited borrowing such as we have had is a great curse. I have sometimes used strychnine as an illustration; it is a great heart tonic, but if you double the dose you will soon turn up your toes. It is the same with debt. A moderate mortgage may be made helpful, but if we ever get on our feet out of this morass of debt I hope that whatever authority is in charge will see that there is a maximum limit put upon the mortgaging of farms, something that in reason can be paid back. If we do that we shall reap the blessing, but as it is now, we are reaping the curse. We have sown the wind in the past, and are now reaping the whirlwind. Canada is a young country; it is only a little over a hundred years since this city was founded, since Colonel By dug the Rideau canal. That is only a tick of the clock compared with the age of the old countries of Europe. We can easily correct these mistakes that have been made if we

are so disposed. Some people say: What is the use of looking to the past? But what is the use of living if we are not to learn from the mistakes of the past? If we are going to commit them over and over again without heed to the lessons to be learned, then we are living in vain.

I may be asked; How would I do it? What suggestions would I make to better farming conditions. After hearing the remarks of the hon. member for Carleton (Mr. Hyndman) yesterday, some of which I think were wise and some otherwise, I am going to mention one, the wise one. That hon. member takes the ground that dairying should be helped in some way, and I agree. Dairying is the chief cornerstone of eastern agriculture—dairying plus its allied industries, the raising of hogs and poultry. In theory we are all opposed to subsidies, and I think there is a more excellent way for the dairy industry to be helped than by subsidies, although I am saying nothing against that proposal as a last resort. In the budget debate of 1931 I made the suggestion to the then minister of agriculture that if the government were going to spend money on a building program some of the buildings to be put up should be for agricultural purposes; that would assist us to get back to normal. Inasmuch as agriculture is now and must be the major primary industry in Canada—of course mines have come to the front very rapidly, while timber and fishing are also important primary natural industries—I was speaking then more particularly on behalf of agriculture; I then took the ground that if you are going to have a building program the money should be spent for productive buildings, to help Canada to get on her feet again.

Now, how can we do that? I have had the opportunity of seeing the dairy industry of other countries, seeing their facilities for making cheese and butter—great, fine modern buildings, not too extravagant, but suitable for making all the major products into which milk is processed. If the market calls for cheese, make cheese; if for butter, make butter, and so on. There they are, well located, ready to make whatever products the market call for, in these combination factories. Not only that, but the turn-over is great; they manufacture in such large volume that they are able to keep down the cost per pound and thereby give the producer more for his milk. Now, that is no dream. It is contrary, I know, to the doctrine of the Bull Moose of the price spreads committee, that mass production and mass buying are evils. The man who tries to run a cheese factory on the basis of ten or twelve cheese a day will be convinced that it is going to cost a lot more than a larger make. Such a small factory cannot afford to hire the best cheesemaker and then the quality tends to go down. The principle of mass production and mass buying is sound generally. Lest some hon. members may think that is a theory which has not been well demonstrated in dairy practice, I may say—and I can talk all the more freely of this because it was started by a good Tory government—that in 1916, under the Hon. Martin Burrell, right in the middle of the war, the Department of Agriculture, the deputy of which was then Doctor Grisdale, one of the many who disappeared during the exodus of deputies in the last five years, established a large combined factory at Finch in Stormont county. They bought three or four old factories and combined them into one. They produced butter and cheese and other processed commodities of milk so cheaply and with such satisfaction to the patrons that they could not take care of all the milk which was offered.

The DEPUTY SPEAKER: I am sorry to interrupt, but the hon. member has exceeded his time.

Mr. MOTHERWELL: Well, to be continued in my next.

Mr. C. G. MacNEIL: (Vancouver North): Mr. Speaker, I consider it my duty to support the amendment, for I cannot accept certain principles laid down by the Minister of Finance (Mr. Dunning) in his capable presentation of the budget. My reasons, which I will state briefly, are mainly concerned with the welfare of the majority of those whom I represent in this house. The financial policy of the government as outlined by the minister is frankly a plan, as he stated, "to end an era of recurring deficits as an essential condition of the restoration of business confidence and the free functioning of private enterprise." In this plan when considered in connection with the general policy of the government as now outlined, I cannot discover any hope for immediate and substantial improvement of the living conditions of the many who must now endure the intolerable burden of insecurity and poverty. I am at a loss to discover the intention fully to utilize the material resources at hand with our productive capacity to elevate the material basis of living in our country. I can find no assurance that we may achieve that form of economic recovery required to rescue the submerged

sections of our population. A plan which contemplates greater freedom for private enterprise as now functioning in Canada simply provides a screen behind which the poor will grow poorer and the rich will acquire greater and greater economic power. The government policy does not disclose any intention to control those forces which are making for the disintegration of the national economy. The trends of business as directed by private enterprise will not permit anyone to say that we may plan that the poor will remain poor but not get any poorer, and the rich will remain rich and not get any richer. On the contrary, greater latitude given private enterprise inevitably spells greater misery for the workers.

It is most unjust that the workers of Canada should be asked at this time to bear the additional tax burden represented in the increased sales tax of eight per cent. Authorities on taxation generally agree that the sales tax is at best a crude method of taxation. It is a tax on consumption, on expenditure. It was originally introduced as an emergency measure only, during the war years, and it has always been held for sound reasons that it should be counterbalanced, if used, by a progressive income tax, more especially on the higher brackets of income. Its chief defect is that it falls heavily on the poorest consumers. The poorer sections of the consuming public spend a larger portion of their incomes on things which are necessary for decent living and save a smaller portion of their incomes than the wealthier sections. A sales tax disregards the number of dependents, the sources and amounts of income. Furthermore, if by reason of the sales tax prices are raised on a commodity with an elastic demand, such business is curtailed. If for the same reason prices are raised on a commodity with an inelastic demand, the consumer curtails his purchases in other directions. The final effect is a general reduction in business. In addition there is always a tendency on the part of mercantile interests to seize upon any increase in the sales tax as a pretext for an unwarranted increase of prices. This becomes evident in the process by which the sales tax after the merchandise leaves the hands of the producers is usually absorbed in the purchase price paid by the various distributive agencies through which it passes. As in the process no distinction is made between commodity and tax, and the usual gross profit is successively added thereto, the increased price the consumer must pay when the merchandise actually reaches his hands is in that degree greater than the actual increase due alone to the sales tax. These defects, which are apparent always upon the imposition of a sales tax, become all the more pronounced when the sales tax is increased to it present level. Thousands of our workers are at this time on relief; thousands are desperately striving to make ends meet on the most beggarly incomes, and maintain the decencies of life. Any increase in the cost of living without commensurate increase in wages, any depreciation in real wages, means for them not less saving but greater deprivation.

Taxation should be levied with regard to the ability to pay, and should be designed so as to remove the inequalities apparent on every hand. The member for Winnipeg North Centre (Mr. Woodsworth) made a telling case when the other evening he placed on the record an analysis of income tax returns for those in receipt of incomes in excess of $10,000. In the table furnished it is shown that in the $10,000 to $50,000 class the minimum incomes after income tax has been paid ranged from $9,000 to $34,000, involving some 6,133 taxpayers, not including those with incomes over $50,000. It has also been shown on other occasions that 56·2 per cent of Canadian income receivers have incomes of less than $1,000 per annum. 23·7 per cent receive between $1,000 and $1,500. The remaining 20 per cent of the income receivers secure almost one half of the total national income. Those over $10,000 receive an aggregate income equal to that of more than 400,000 of the lowest paid group. If it were the intention of the government to protect rather than imperil the living standards of the toiling masses, surely these statistics indicate the manner in which any additional tax burden should be levied.

The minister anticipates a revenue of $88,700,000 from income tax receipts during the current fiscal year. He anticipates an additional $23,000,000 resulting from the increase of the sales tax. In this connection it is worthy of note that if the Australian income tax rates were made applicable here, making due allowance for differences in population, wealth, and distribution of income, these rates would yield Canada about $114,000,000 or an additional $26,000,000. Practically the same comparison may be made with New Zealand. I submit that in the interests of national stability it would be safer to explore these avenues of taxation than to demand another $23,000,000 from the consuming public by means of an increased sales tax.

In view of the enormous concentration of wealth and centralization of control over our

economic enterprises that has arisen in Canada, it is reasonable to suggest that this parliament should now consider the levy of a dominion inheritance tax, over and above the succession duties now levied by the provinces. Similar taxes in the other dominions have yielded substantial revenue and have contributed to a more equitable distribution of wealth and income. Statistics will show that if the Canadian government taxed inheritances on the Australian scale, the national revenue would be increased from $18,000,000 to $24,000,000, after deducting the present provincial taxes of approximately $13,000,000. An inheritance tax comparable with that of New Zealand should provide a net yield of $25,000,000. I could quote eminent authorities to show that this may now be done without any dislocation of the economic machinery or any serious discouragement to enterprise.

Even to a novice in matters financial it is a matter of simple arithmetic to calculate that we cannot hope for many years to come to balance the budget in the orthodox manner and at the same time substantially reduce the debt burden. Our national debt with its interest charges has assumed such proportions that we cannot safely rely on any anticipated increase in the aggregate national wealth or increase of population. To do nothing about it means that we must continue to pay heavy annual tribute to those who own our debt. Already this tribute amounts to 36·2 per cent of our national revenue. To do nothing would mean the virtual adoption of the policy so frequently and vigorously opposed by the finance minister. We will be taking from all of us to pay some of us. Any attempt to reduce the debt from ordinary surplus revenue would require an unpleasant increase in taxation, as well as substantial reduction in government expenditure. Taxation is already high, and any substantial reduction in public expenditure would necessarily spell the forfeiture of necessary and desirable social services. The most expert conversion operations, as contemplated, cannot possibly reduce the debt in any substantial degree in the next decade. For this reason we propose in the amendment, a debt redemption levy with the object of paying off quickly, by a special emergency effort, a large proportion of the debt, thus allowing a permanent lowering of the level of annual taxation and a permanent raising of the level of social expenditure.

Such a debt redemption levy would constitute a special emergency payment by all individuals owning more than a specified amount of real wealth. Payments might be graduated according to individual ability to pay. The basis of assessment would be individual and not corporate. The greater the wealth of the individual, the greater the proportion he would be required to pay. The levy would be secured in one payment, and not annually like the income tax, though provision would undoubtedly be made for payment in instalments over a period of years. The sum secured through such levy would be earmarked for debt reduction and would be applied so as to ensure, as I have stated, a permanent reduction in taxation and a permanent expansion of social expenditure.

As the minister has stated, the index of prices levels fell from 96 in 1929 to 72·4 in March last. It may therefore be said that the purchasing power of the dollar, and with it the burden of the debt, has risen by about a third. No one may safely predict the future of prices or of currency systems, but a further fall in the price level is at least a serious possibility. This would still further increase the burden of the debt, and would make it difficult to balance any budget without the most ruthless economy and increase of taxation. The yield of taxes in terms of money would shrink, expenditure in terms of money would not shrink as rapidly, and the biggest single item of expenditure—interest on the debt—would not shrink at all. As a writer has stated in reviewing the present economic situation in Canada, "It is surely not unreasonable to ask the wealthier members of society to surrender, at long last, the windfall gift of the depression." It is surely not unreasonable to suggest as well that we protect ourselves as far as possible against that which may occur in the future adding to an already intolerable burden. Another economist has stated:

> In two respects however, history does seem likely to repeat itself, if we choose to give it the opportunity. In so far as we rely upon future conversions to reduce the annual interest charge on the debt, we are likely again to achieve very little. And if we make no serious attempt to repay a large part of the debt in the near future, false economies in social expenditure will almost certainly be repeated and wide fields of human hope and promise will continue to lie waste.

The proposal of a debt redemption levy was placed before the Liberal summer conference of 1933 by Professor K. W. Taylor, and is set forth in that well known book entitled The Liberal Way, with which hon. members are no doubt well acquainted. Speaking of the annual interest charges, Professor Taylor says in part:

> The serious economic effects are that it increases taxation, that it prevents governments undertaking useful and proper expansion of

social services and other desirable expenditures, and, under the regressive system of taxation in Canada, it results to a considerable extent in the transfer of income from the poor to the well-to-do.

Again he states:

The fairest and most satisfactory of the drastic measures is the capital levy, which is practicable, fair and theoretically sound. Detailed specifications have been worked out in England, both officially and unofficially. No such calculations have been made in Canada but probably at least $2,000,000,000 could be wiped out in this way without any serious disturbing effects on the foundations of our economic life.

So we submit that the proposal of a debt redemption levy is sound, practicable, and should now be considered by the government. We advance it not as a panacea or cure-all for our economic ills, but as presenting a safer and more practicable method of reducing the national debt than any yet proposed, within the ambit of the present economic system.

My chief concern is that the policy of the government will tend to crystallize conditions described in an editorial in the current issue of Maclean's Magazine. This editorial referring to the appointment of the national employment commission, says in part:

Neither the bill which outlines the powers and duties of the commission nor the debate over it in the house indicated that the government is proceeding on the premise that unemployment is a permanent problem and not an emergency which, though protracted, will pass away.

The depression cannot be held responsible for the basic problem of unemployment. A revival of trade may alleviate it, but cure it, no.

The truth is that Canada never has succeeded in absorbing its population.

From 1867 to 1933, 6,450,000 immigrants came into this country. Yet the total population increase at the end of that time was only 7,000,000. In sixty-five years we lost almost the equivalent to our entire natural increase during that period.

Even in our most prosperious years there wasn't work for all who wanted it. In the ten years from 1921 to 1931, 1,245,555 people left Canada. Most of them went to the United States to seek work or better themselves.

Between 1914 and 1918 the war took up the slack. Before that there was unemployment. Its effects were not so obvious because those were the days of free land. Men would work for established farmers part of the year and during the remainder work on their homesteads. That phase passed. The supply of easily accessible land diminished. Farmers could not give year-round employment. Workless men flocked to the cities where there were not enough jobs to go round.

On top of all this, throughout the years the advance of science has further complicated the problem. Improved machinery has steadily reduced the amount of labour necessary for the production of any given volume of goods. This trend continues.

In February of this year there were 1,080,831 Canadians receiving direct unemployment relief. That did not include 156,944 farmers receiving aid in the dried-out areas.

How many of the men of fifty and over will ever get work again? Very few. A new generation has come up to take available jobs older men once had. There are 2,000,000 Canadians between sixteen and twenty-one years of age. It seems that the number of employables is increasing faster than the number of jobs. In recent months relief expenditures and employment figures have risen together.

Unemployment must be regarded as a permanent problem.

The main point is that the national unemployment commission is only going to be worth the money spent on it if it is enabled to consider the problem of unemployment in its broader and most far-reaching aspects; if it is encouraged to evolve a definite policy that will, in the course of time, take care of all interlocking social burdens.

It isn't a matter of plugging a leak in a dyke. It is a matter of an entire reconstruction plan.

I am frankly dismayed that there is not greater readiness to engage in the program of reconstruction demanded by this alarming prospect of conditions of permanent unemployment in Canada. The policy of the government contemplates little more than the attempt to stop some of the dykes that have been torn away by unregulated private enterprise. In any event I cannot agree to anything that would in any degree aggravate the distress of those involved. In my opinion the security of our Canadian homes is of infinitely greater importance than the security of special privilege as now maintained by the existing financial structure. In the last analysis there can be but little security or stabilization of the financial system unless it is founded on the security and well-being of the workers. We have reached the point in our affairs where we have discovered that we can produce so abundantly that business cannot prosper unless the masses live abundantly.

If we listen to the voice of private enterprise we learn of an insistence to lower living standards so that relief may not check the downward revision of wages desired. C. H. Carlisle, president of the Dominion Bank, recently declared:

We cannot maintain everyone on relief on a scale of comfort. The vast masses of the people, if kept on a scale of even bare comfort, are not sufficiently inclined to get out and vigorously hunt for work and accept work when it is offered.

This is but one of many statements made recently which quite ignores the realities of the situation, and indicates the ruthlessness

with which private enterprise would abandon any attempt to improve living standards in order to preserve profits and special privilege.

Coupled with such statements we hear the statement often repeated that unemployment might easily be cured if we inaugurated a "back-to-the-land" movement. Little attempt has been made to analyze the magnitude of the drift to the cities, or the impetus given that migration under planless private enterprise. According to a recently published statement of Professor Burton Hurd, in the intercensal decade, 1921-1931, there was a net movement away from rural sections of 440,000 over and above the gains in population through immigration. In the same period occupied farm land increased by 23,000,000 acres, or 16 per cent. Improved land on farms increased by 23,000,000, or 21 per cent. One factor contributing to this movement was the increased use of science and machinery, enabling the farmer to meet the requirements for farm products on the domestic and foreign market with a decreasing proportion of farm population, thus releasing an increasing number for employment elsewhere. It has also been shown that the birth rate is about sixty per cent higher in the country than in the city, and this also supplies an additional reason for the migration to the city. Since 1930 emigration to the south has practically ceased, and this has tended to dam back the accumulating rural surplus, awaiting more favourable employment conditions in the cities. Any back to the land movement of proportions to relieve the unemployment situation would simply add to existing agricultural surpluses, further depress prices, and increase the pressure on excess farm population to seek employment in the cities. It has been proposed that the unemployed in the cities should be settled on the land in such a manner as to enable them merely to produce their own requirements. This means the setting up of a peasant agriculture side by side with modern commercialized farming. It is unjust to expect the unemployed to endure the primitive living conditions imposed, while neighbouring farmers and the workers in nearby cities enjoy the comforts and conveniences of our society. They would quite naturally move back upon any signs of improvement in employment conditions, and therefore the plan has no semblance of permanence. In any event under present conditions it would only be accompanied by a contrary cityward movement which would defeat the purpose of the scheme.

We have depended on private enterprise for a solution of our housing problem. The speculative or profit making element has completely frustrated all our efforts to meet an acute housing shortage and achieve the recovery of our construction industry. It is estimated by those making a close study of the situation that we require an additional 200,000 dwellings in Canada. Based on the figures given by the Bank of Nova Scotia, the accumulated demand for backlog for residential construction resulting from the lack of building since 1931 is now $266,000,000. Only 126 loans have been granted under the housing act of 1935, while under the housing measure of 1919, some 6,250 houses were built. A total of 6,376 houses have been built in Canada as a result of state assistance. In order to compare these results with those achieved in other countries where the state definitely assumed some measure of responsibility for the problem, I should like to refer to a summary in Modern Housing, by Catherine Bauer.

In Holland, with a population of 7,527,000, a total of 450,000 dwellings were constructed during the period of 1919-1928. The total number built with state aid was 250,000, the number built by public authorities, 40,000, and the percentage of population living in state-aided dwellings was 15. In Belgium, with a population of 7,466,000, 250,000 dwellings were constructed during the period 1919-1933. The total number built with official aid was 200,000, the total number built by public utility societies was 70,000, and twelve per cent of the population lived in state-aided dwellings. Denmark, with a population of 772,000, constructed 45,800 dwellings in the period 1920-1929. Thirty-five thousand dwellings were built with state aid, 9,300 by public authorities, and twenty per cent of the population were living in state-aided dwellings. In 280 towns in Sweden with a population of 2,000,000, 129,800 dwellings were constructed in the period 1917-1929. The number built with official aid was 57,400, the number built by public authorities 12,200, and thirteen per cent of the population were living in state-aided dwellings. In five large towns in Norway with a population of 478,000, the total number of dwellings constructed was 16,600. The total number built with official aid was 14,900, and fourteen per cent of the population were living in state-aided dwellings.

In practically all these countries definite provision has been made for slum clearance and the provision of housing for those receiving extremely low incomes. In Canada we must sooner or later face the fact that a large portion of our population receives an income too small to provide itself with a minimum of decent living quarters. We are now committed to a policy of encouraging

building among the higher income groups only, evidently with the intention of providing for the lower income groups with their cast-off houses. This will mean an increase in our slum areas, for eventually the poorer families will be able to secure living accommodation only in structures not fit for human habitation. There is no economic or profitable way of providing decent housing for people who cannot afford decent housing. We will not solve this problem through reliance on profit making private enterprise. No form of trick financing will make decent houses available at rentals the lowest income groups can afford. It is only through a non-profit making state project under social control that this problem can be satisfactorily solved. It has been shown in the experience of other countries that a step in this direction has meant a step towards recovery.

Members of this group have been criticized for suggesting the necessity of fundamental changes in our economic structure. It has been said that change might lead to disorder or chaos. We are as anxious to avert disorder and chaos in Canada as any other group or party. In achieving orderly progress there are certain unalterable principles that must be adhered to, but I know of no principle more definitely established in our world than the principle of constant change. There never was a normal year which could be safely used as a pattern for other years, hence every effort to get back to the norm of past years must fail. If we do not ring out the old and ring in the new, we may be quite certain that events will ring us out. Astronomers can predict with precision to the very minute coming eclipses, because they not only study the location of the stars and the planets, but also where they are going and at what rate of speed. I suggest that we should study our business more in the terms of the changes which modern methods of business are bringing about.

The government policy suggests that the nation's work should be left as far as possible under the control of private enterprise. The evidence shows rather conclusively that the system of private enterprise, with its profit motive, and the institution of property in the means of production, is so poorly adapted to the machine age that it threatens us with disaster. A persistent attempt to maintain a system that has been proven unworkable does not make for orderly progress. Private enterprise produces not for the sake of the product or to serve the ends of human welfare, but solely for the sake of profit. It can only aim at the production and appropriation of profit. Along this line the only possible plan is a plan of greater profits and greater concentration of profits, a plan which necessarily must mean lowered living standards for the working class. While the entire aim of our economic mechanism is directed toward the amassing of a maximum surplus in private hands, this surplus must always defeat any attempt properly to equate production and consumption. Furthermore, private enterprise under modern conditions means the growth of monopolies, which necessarily aim at something less than the good of the entire community. From bitter experience we have learned through the years of the depression that the profits of the few have destroyed the prosperity of the many. We have learned that we cannot achieve a well ordered economy on the basis of conflict between private interests. Unregulated and competitive private enterprise sacrifices the security of one group to the superior privileges of another, and thus does not open the way to an orderly solution of our problems. We can plan for orderly progress only when we decide to establish social control of our economic enterprises and direct those enterprises not for the profits of the few, but for the prosperity of the many.

[Mr. MacNeil.]

Mr. A. MacG. YOUNG (Saskatoon): I should like to join with others in this house in extending congratulations to the Minister of Finance (Mr. Dunning) on the presentation of one of the ablest budgets ever submitted to the parliament and the people of Canada. His method of presenting it left nothing to be desired. I believe that everyone, both in this house and outside, will agree when I say that we have before us a document that challenges our attention. The minister put before us very clearly and carefully a picture of affairs in this great dominion at the present time. That picture was indeed so arresting that I fancy, no matter in what part of the house we sit, we are all compelled to analyze its contents. There is one statement he made which I think is worthy of very strict attention. He said:

> It is not putting it too strongly to say that foreign trade is the very lifeblood of Canada.

I might take that as a text for the first part of the remarks I have to make—it is not putting it too strongly to say that foreign trade is the very lifeblood of Canada. I must congratulate this government on having gone farther and more quickly than any other government in Canada along the line of removing those barriers that stand in the way of increased trade. The first thing we did was to negotiate a reciprocal trade agreement with the United States, and I believe that has

done a great deal to assist the movement of goods north and south over the boundary. It will eventually prove, in my opinion, very beneficial to both countries.

When the leader of the opposition (Mr. Bennett) was speaking the other day he discussed our trade, and in that connection I was reminded of a remark he made on a former occasion, when he said:

For we must commonly agree that there can be no continued sale without purchase.

Now if we once learn that, we are less likely to go astray. He went on, however, to show that the percentage of export trade in Canada during the last year exceeded the percentage of world export trade. He compared it to the year 1929, pointing out that the percentage of export trade in that year was 3·71; in 1930 it had dropped to 3·42; in 1931 to 3·29; in 1932 it was 3·78; in 1933 it was 3·59; in 1934, 3·99, an increase; and in 1935 it was 4·32. He pointed out at the same time that the imports had not quite followed the same trend; they were somewhat lower.

There is something unique about percentages, no matter how they are used. Sometimes percentages do not give a correct picture. I remember once a gentleman said that the increase in the export of horses to another country had gone up by 200 per cent; the previous year one horse went out of the country and the next year three were shipped out, and therefore there had been an increase of 200 per cent. I wish to put on Hansard detailed figures I have here from official sources showing our trade in the five years prior to and including 1930 and in the five years following 1930:

| Exports | |
|---|---|
| Fiscal year: | |
| 1926 | $1,328,700,137 |
| 1927 | 1,267,573,142 |
| 1928 | 1,250,598,034 |
| 1929 | 1,388,896,073 |
| 1930 | 1,144,938,070 |
| 1931 | 817,028,047 |
| 1932 | 587,565,517 |
| 1933 | 480,713,797 |
| 1934 | 585,654,469 |
| 1935 | 667,133,957 |

| Imports | |
|---|---|
| Fiscal year: | |
| 1926 | $ 927,328,732 |
| 1927 | 1,030,892,505 |
| 1928 | 1,108,956,466 |
| 1929 | 1,265,679,091 |
| 1930 | 1,248,273,582 |
| 1931 | 906,612,695 |
| 1932 | 578,503,904 |
| 1933 | 406,383,744 |
| 1934 | 433,798,625 |
| 1935 | 522,416,844 |

| Total Trade | |
|---|---|
| 1926 | $2,256,028,869 |
| 1927 | 2,298,465,647 |
| 1928 | 2,359,554,500 |
| 1929 | 2,654,575,164 |
| 1930 | 2,393,211,652 |
| 1931 | 1,723,640,742 |
| 1932 | 1,166,069,421 |
| 1933 | 887,097,541 |
| 1934 | 1,019,453,094 |
| 1935 | 1,189,550,801 |

In 1930 we had a total trade of $2,393,211,652. In 1931 that had dropped to $1,723,640,742, and by 1933 our total trade had dropped to less than $1,000,000,000, in round figures $887,000,000. By 1935 it had again increased to $1,189,558,801.

I analyzed rather carefully what the leader of the opposition said in discussing our trade figures. He said that the balance of trade had been against this country, and secondly that the unemployment situation was very bad. I quote:

First of all, as has been pointed out in this house very frequently, we raised the tariffs. We certainly did. We raised tariffs in the fall of 1930 at the special session for a very deliberate and definite purpose. These tariffs were for certain given purposes. The purposes I have indicated. They accomplished the purposes for which they were enacted. True, they were emergency tariffs. We made it clear that that was so. True, it was purposed that in the end those tariffs should of course be reduced, but during the emergency.

I have already indicated the two purposes he had in mind, the balancing of trade and the correcting of the unemployment situation. He added:

It is true these measures did not provide employment for all the unemployed in the country. It is true that the numbers of unemployed increased greatly.

With regard to balanced trade, I think we may safely assume that that is a very unsafe factor on which to rely. If we had to do what was actually done our total trade would diminish as it in fact did diminish from $2,393,000,000, in round numbers, to $887,000,000. That is what happened under a policy of that kind, and I am afraid we must conclude that from the standpoint of balancing trade the policy carried out by hon. gentlemen opposite proved very unsatisfactory. And what is even more serious is the fact, which the right hon. gentleman admitted, that unemployment increased very considerably.

My hon. friends opposite say very frequently that they worry about reductions in the tariff by reason of the effect on employment. Their hearts bleed so for those in employment, and they are afraid that there will be less employment in Canada if tariffs are reduced. May I point out however—and

this is admitted by any student of our history —that at any time since confederation when the imports of the country have been greatest unemployment has always been at its lowest level. And the figures I have given very definitely and clearly bear that out.

The right hon. gentleman went on to say:

> We had to make a new treaty with New Zealand, and that treaty has brought about increased trade and has added wealth to both countries.

That statement is true and is worthy of note. We did make a new treaty with New Zealand and that treaty has brought about increased trade and added to the wealth of both countries. He says that the same thing may be true of other countries. That is exactly what does take place. Before we went out of power we had a trade with New Zealand of $35,000,000, $19,000,000 of which we exported to that country, importing from them $16,000,000. But after the policy of my hon. friends opposite had been in force for a short time, that trade was cut seven ways; less than one-seventh of it remained between the two countries. It was less than $5,000,000. The right hon. gentleman said that his government negotiated a new treaty with New Zealand, and I think we were all glad to see that happen. He also said, with regard to this so called excise tax of three per cent which is actually an additional tariff of three per cent, that as far as Great Britain was concerned one and a half per cent had been removed one year and the other one and a half per cent the following year. He went on to say that the previous government made a treaty with France, gave the intermediate tariff to Germany and Austria, and made treaties with Brazil and Poland. The result has been reflected in the figures I have just quoted; in 1933 our total trade was only approximately $887,000,000, while in 1935 it increased to about $1,189,000,000. So apparently hon. gentlemen opposite, who were in power for five years, found that their policies had to be reversed or conditions in this country would not improve.

I have before me some facts with regard to the customs duties paid on goods entering Canada from Great Britain. I could put a great many figures on Hansard, but I have not time for that to-day. On raincoats and trousers suitable for farm wear, coming into this country from Great Britain, the duty was over 55 per cent. On ties coming into Canada from Ireland there was a duty of over 45 per cent. On men's hosiery, both woollen and fine, coming from Great Britain, the customs taxes of one kind or another totalled over 64 per cent. On sweaters and hose used by workmen the actual duty paid was over 69 per cent.

[Mr. Young.]

And yet at one time the right hon. leader of the opposition said:

> For we must commonly agree that there can be no continued sale without purchase; that if we expect to market our goods in the United Kingdom we must expect to purchase goods from the United Kingdom.

I should like to say that a great deal of relief has been afforded by this United States trade agreement. I see on the floor of this chamber a carpet. I have in my hand a bill to which a customs bill is attached, dealing with a carpet imported into Canada from the United States very recently, but before the trade agreement was concluded. The carpet cost $50.07 in the United States, and I find that the total customs duty amounted to $70.06, the sales tax to $7.26 and the excise tax to $3.63, or a grand total of $80.95 on an article costing $50.07 in the United States. If we eliminate the sales tax, though it should not be entirely eliminated, this means that the duty on this carpet amounted to $73.69, or a tariff of over 145 per cent. Even to-day, under the intermediate tariff, we are still paying more than 100 per cent on carpets coming in from the United States.

At this point I should like to congratulate the Minister of Finance (Mr. Dunning) upon reducing the duties on textiles coming into Canada. In my judgment one of the features of the budget worthy of special attention is what has been done in the interests of Canadian consumers in that regard. I have not as yet had time to analyze the changes which are proposed; perhaps I am not capable of analyzing them fully, but as I understand it I think this is a great step in the right direction. Let me say, however, that the figures which I have presented to the house to-day show that we have yet a long distance to go before the tariffs are down to where they should be.

In our part of the country, Mr. Speaker, we cannot benefit by tariffs. We sell on a free trade market, and unless in some way we can first get the opportunity to sell and then be permitted to purchase at reasonable prices we cannot continue to exist. Professor Rogers of Queens university, now our very able Minister of Labour, in his leisure moments figured out that the tariff costs the province of Saskatchewan approximately $26,000,000 annually. To-day in this house we hear men say that certain bonuses, subsidies and all that sort of thing have been given to Saskatchewan recently, and that may be true. I am not one of those who believe in subsidies but I say that under the present set-up it may be necessary to continue that practice although the principle is not sound. We

in Saskatchewan want the right to purchase as freely as possible. Then we shall be able to sell our goods, and make a fair exchange.

I should like to touch on one or two other features of this budget. I congratulate the minister upon what he has done with respect to the duties on agricultural implements. It is vital to us that we obtain these implements at the lowest possible prices. When we came to power there was a duty of 25 per cent, plus this three per cent excise tax, on agricultural implements coming into Canada. Under the trade agreement with the United States, which applies the intermediate tariff to goods of that country, the rate was reduced to 12½ per cent, but just as soon as we came to office we found that the agricultural implement producers actually increased their prices. No man in this chamber can tell me that those prices were increased because of the reduction of duty, and I congratulate the minister upon accepting the challenge of the implement manufacturers by again reducing that tariff, this time to 7½ per cent. But it is not only 7½ per cent; there is also the three per cent excise tax, and if these prices continue at their present levels I suggest that at some subsequent time we should take further action.

The question of automobiles has aroused a great deal of controversy. There is manufactured in Detroit a car which sells wholesale for $518. The retail price of that car to the purchaser in Windsor exceeds the retail price to the consumer in Detroit by $177. To my mind, there is something wrong when an article which can be produced and sold wholesale in Detroit for $518 retails to the purchaser in Canada for $177 more than the retail price in the United States.

Mr. ROWE (Dufferin): Would the hon. member permit a question? How much more do cars cost than they did before the budget was brought down?

Mr. YOUNG: They have increased in price by approximately the amount of the two per cent increase in the sales tax. What I was going to say is that if that industry cannot sell cars in Canada for a smaller differential than there is at the present time, there is still something wrong with regard to our tariff or the industry is not a legitimate one in this country. If the industry cannot do better than that it may be classed as one which is not of any great advantage to this dominion. I would also say to the automobile manufacturers that I think they had better look very carefully over the price lists which they issue for Canadian consumers, otherwise on some subsequent occasion something further may have to be done with regard to the tariff on cars.

I might say the same thing in regard to gasoline. We have this year reduced the tariff on gasoline by one and a half cents a gallon under the Canada-United States trade agreement and the present budget. But I have not noticed that the price of gasoline has gone down accordingly. I trust that the oil companies also will take notice and reduce their prices. I suppose it is not recognized by everyone that where the gasoline manufacturers get their greatest protection is in the differential in the freight rates on crude oil and gasoline brought into this country, a differential of at least five or six cents a gallon. So with this additional one cent a gallon still remaining under the tariff they should take great care to see that the consumers of Canada are not penalized any longer. I might say a great deal more about that, I feel very keenly about some of these matters. I feel that the prices the consumer is paying in this country are too great.

But I want to pass on to the financial picture as I see it. The Minister of Finance clearly pointed out all the details. He did a great service not only to the members of this house but to the whole country in placing before them exactly what has taken place. He showed that last year we had in Canada a deficit of about $162,000,000. That is a very serious matter. If we go back to the year 1914, the total debt of Canada was then $335,000,000. We paid less than three and a half per cent interest, and the total interest on the national debt was less than $13,000,000. That is a striking fact, that the entire debt of Canada from 1867 to 1914 amounted only to $335,000,000, and the interest to less than $13,000,000. After the war that debt rose by 1923 to about $2,400,000,000, and we paid a total yearly interest bill of $140,000,000 in round figures. That is a serious matter. During the past five years the public debt increased by about $800,000,000; perhaps I might be more nearly right if I said $1,000,000,000. The total amount of the debt is now $3,265,287,604. Surely that is something to make every one of us pause and think it over. The Minister of Finance told us that to-day we are paying $134,000,000 interest yearly. For soldiers' pensions we are paying between $40,000,000 and $45,000,000 and other grants and allowances to soldiers bring the amount up to probably $50,000,000. If we put this into percentages, the interest on the debt of Canada last year was 36·19 per cent of the total revenue; European war pensions,

11·19 per cent; care of returned soldiers, 2·9 per cent; a total of 50·28 per cent. These figures go to show that a very large portion of the debt of this country and the interest thereon is due to the war.

Mr. Speaker, I ask this question: From whom did we get that two billion dollars which we borrowed during that war? Am I to be told that in Canada there were men who during the war were actually making money and lending it out at high rates of interest to this country? If not, where did the money come from? Am I to be told further that we at that time—not this government or the former government—issued bonds which were tax free, so that we were not even able to tax those who made profits out of the war on the income from those bonds? Everyone knows that is true. Today that debt has increased until now it is over three billion dollars. I know, we all know, that there is great difficulty in financing not only the dominion but every province of Canada. We see the premiers or the provincial treasurers coming to Ottawa; they came to former finance ministers and they come to the present Finance minister. If I were premier of Saskatchewan or any other province I am not quite sure that I would like to subscribe to the principle of a loan council. On the other hand if I were the Minister of Finance I am not sure that I would like to have all the provinces coming to me and asking for money unless I had some control over them. But we must recognize that all these governments have sovereign authority, if we do not stretch that term too far, the same as the federal government. Surely it is a serious matter if the federal government find it necessary to impose some form of control with regard to what the provinces may do. Personally I think it is serious. But the Minister of Finance cannot be expected to continue to hand out money the way in which it has been going out unless there is some control. Take our own province of Saskatchewan; in 1929 when the Liberals went out of office the debt of Saskatchewan was about $65,000,000. The Conservatives were in power for five years, and at the end of that time that debt had increased to about $160,000,000. For twenty-four years while the Liberals were in power building up that section of the country the total debt amounted to $65,000,000, but in five short years it increased by $95,000,000. The other day I heard the leader of the opposition suggest that he was afraid that some of this money which had been provided by Canada had not been too wisely spent in some of the provinces. I suspected that he was thinking of our own province. When we see that happening there we also see similar things happening in other provinces that are now in financial difficulties.

It is a very serious matter when we consider that there is approximately $10,000,000,000 owned by the people of Canada in the form of either federal, provincial, municipal or private debts. What are we going to do about this? Is there any hon. member who really believes that we are ever going to pay these debts, under the conditions in which we are now living? This country is up on financial stilts; we must at least get one foot on the ground, and begin somewhere. In my humble judgment we must refinance the debt of Canada, federal, provincial, municipal and private. It might surprise the leader of the opposition if he were in the house if I told him that on the platform during the election campaign I gave him the credit, and was proud to give him the credit, for the refinancing which he did, by which he saved some interest to the Canadian people. But I suggested then, and suggest now that what has been done is nothing to what must be done. My suggestion is that we should set up in this country a committee of experts to analyze the situation. There is no man in the house, no man in Canada more proud than I am that we have perhaps one of the ablest Ministers of Finance who have ever occupied that position. I suppose all hon. members are probably a little fed up with what we call royal commissions, but I am going to suggest to the minister that we set up a committee of experts who would analyze the federal, provincial and municipal situations, and would even consider the private debt of the country. After having done that, we must not be afraid to do that thing which in my humble judgment must be done, and will ultimately be done before once again we can get on an even keel.

I do not believe any federal government in Canada should be paying an interest rate higher than two per cent. I do not believe we can continue to do what we are doing. When commercial firms get into difficulties, what do they do? They meet their creditors to make arrangements. In Saskatchewan the Farmers' Creditors Arrangement Act is operating, and we have set up a debt adjustment board. On this occasion I want to pay tribute to the men actually engaged in that work, but they can work only within circumscribed limits. All they are doing is to touch the

hem of the garment, the fringe of the difficulties through which we are passing.

Let us consider the farmers in Saskatchewan. Men come to see me and write me saying, "Doctor, we are losing our equity here; what are we going to do about it?" Let us, for example, take the case of a farmer who has a farm which is worth, let us say, $1,000. His equity amounts to 60 per cent and the mortgage amounts to 40 per cent. Well, if the farmer is a poor one who gets up late in the morning and goes to bed early at night, allows weeds to grow in his fields, and all that sort of thing, there may be no objection to closing out the mortgage and his getting his $400. But we have the other farmer—we have had them for five years—and what is the picture in connection with him? Again the unit is worth $1,000; the equity of the farmer is $600 and the mortgage is $400, but through no fault of the farmer, due to conditions in Canada and perhaps throughout the world, the value of the farm has been squeezed down from $1,000 to about $400, and in that way the farmer has lost all his equity. What we are now doing results merely in preserving the other 40 per cent for the coupon clipper.

In my humble judgment this matter must be given serious consideration, or we shall reach a state where the real owners of this country will be squeezed out of their equities, and we shall have what? We are going to say that all those who loan mortgage money at a high rate of interest shall have their full 100 per cent. In my opinion that sort of thing cannot be permitted to continue. The other day I was proud to hear the leader of the opposition say that this Bank of Canada of ours has done some real good to this dominion. I am a believer in the Bank of Canada. But we have all these institutions privately owned to-day; all money institutions are privately owned. I am proud to say that there is now before the house a measure which will bring control of the central bank into the hands of the government and of the people of Canada. That is a step in the right direction.

I trust I shall not be one charged with saying that you can put faces and figures on pieces of paper to create wealth, because that cannot be done. But while that cannot be done I recognize that we could use the central bank much more than it has been used hitherto for the destruction of debt. There is a great difference between the creation of wealth and the destruction of debt. I look forward with pleasure to the time when we shall have that institution under our own control. I do not wish to do anything that is foolish; I am not one who believes in wrecking institutions. I recognize full well that Canadian insurance companies hold a large amount of Dominion of Canada bonds; I recognize full well, too, that we could absolutely wreck the insurance policies held by our people if we were to take foolish action. I am advocating nothing of the kind, but I do suggest once more that we should have a committee of experts to inquire into the whole situation to see in what way we can best revalue, reassess and refinance the whole debt structure of Canada, and at the same time not do violence to any interest therein concerned.

To me this matter is so serious that it must be given consideration. I recognize that the government cannot do everything in one year. I am not asking that everything be done in one year, but I suggest that the time has come when we must give full consideration to a matter of vital importance not only to the farmer who owns his farm or the business man who owns his business, but to those men who are interested in the other angle, namely those who loaned the money. I do not know how far the government is prepared to go, but I suggest that the matter is of such vital importance that it should be thoroughly investigated, because our farmers and business people cannot continue to do what they have been doing. They must not be permitted to suffer as they have been suffering. If we permit this to go on, the last condition will be worse than the first.

I close with a few words concerning the Canadian National Railways. One point which strikes me as being very interesting—I am arrested by it all the time—is that men within and without the house paint a horrible picture of the Canadian National Railway situation. A few days ago the leader of the opposition said that the net loss for one year amounted to $115,281,689.79. That figure, as he stated it, is to be found in the annual report of the Canadian National Railways, under the heading of profit and loss. But in the same document there is another statement showing that the cash deficits of the Canadian National Railways last year amounted to $47,000,000. How is the right hon. gentleman's figure arrived at? It is arrived at by writing off abnormal retirements to the tune of $29,000,000 last year and in addition about $35,000,000 is charged up for interest due the government covering not only last year but an accumulation for many years. Some of the charges go back almost to confederation.

Therefore I say that when a statement of that kind is made in a profit and loss account

it does not give a proper picture of the situation. The hon. member for Mount Royal (Mr. Walsh) not long ago said in this house —and I take it he was enunciating the policy of the Conservative party—that they were not in favour of amalgamation, and that they did not like that term. I am not surprised that they do not like the term. But he did say that they were in favour of unification. I asked what unification meant and he said that it was retaining two entities under one management. He did not go to the extent of saying what management, but contented himself by recommending one management. Perhaps I may assume that he intended to say that all the railways of Canada should come under Canadian National Railways. He is not in his seat to-day, but if he were I would ask him if that is what he meant, and this further question: Does he believe that the Canadian Pacific Railway, which is well managed, would be satisfied to turn over all its assets to and be managed by the management of the Canadian National Railways? I am inclined to think there might be some difficulty about that. Let us put it the other way about: Is the suggestion this, that the management for both railways shall be that of the Canadian Pacific Railway? I am inclined to think that something would be said by the people of Canada if we turned over all our assets in the Canadian National Railways to be managed by the Canadian Pacific Railway.

Unification will do what? Under one management, either one or the other, what would we have? Just let that condition exist for five years and, while I have a great respect for cooks, I defy any cook to unscramble scrambled eggs. We would have both railways before us, and certainly an amalgamation, and we could never unscramble it again. I am opposed to amalgamation. I believe it is bad business to have a monopoly of the kind that such a railway monopoly would be. When we hear men inside this house and out of it painting a horrible picture of the Canadian National Railways, let me say that in my humble judgment this is done for one purpose and one only, to try to scare the people of Canada to the extent that they may be willing to submit to a plan which will bring about the greatest monopoly this country has ever had. That monopoly cannot be permitted to come. I am not so hopeless as some are about the Canadian National Railways. I am not so hopeless as some are about the general condition of Canada. We are living in a great country, a country with unbounded resources. All we require to do is to get down to better principles and better practice, and then with the splendid natural resources and man power we have there is no doubt at all that this dominion is going to come out of the depression through which we are passing, and when that time comes, the Canadian National Railways, which has been maligned from coast to coast by some, may become one of our greatest assets.

Where is that railway located? It is located chiefly in the northern parts of Canada, in that part of the country where in the future will be found the greatest development, and as that development takes place we shall find that the Canadian National Railways will become more and more a valuable asset. Let us not lose faith in Canada; let us not lose hope. We have a country of immense possibilities, with unbounded resources, and as one who has passed a great many years in this dominion I feel that the end of this depression is going to come about and that we shall once more enter upon a reign of prosperity similar to what we had before.

There is one other thing that I should like to say. What are we passing on to the youth of this country?

Mr. SPEAKER: I am sorry, but the hon. gentleman's time is exhausted.

Mr. D. J. HARTIGAN (Cape Breton South): Mr. Speaker, in rising to make a few comments on the budget I wish like other hon. members to take this opportunity of congratulating the Minister of Finance (Mr. Dunning) upon his able presentation of the annual statement. The clear and concise manner in which he gave the facts and figures pertaining to the debt of Canada and what he proposed doing about it, and the expenditures which we shall be called upon to make for the ensuing year, I am sure must have been enlightening to us all. The able grasp which the minister showed of his subject leads us to hope that within a year or so we shall be well on our way to recovery.

I should like also to take this opportunity of associating myself with the miners of Nova Scotia who made the heroic rescue of Doctor Robertson and Mr. Scadding at the Moose River mine a few short weeks ago. Like everybody else in the country I felt proud of what those miners did. They wrote what I believe will go down as an epic in the history of mining all over the world. I would point out, however, that accidents of a like nature and even great catastrophes are not uncommon in Nova Scotia or in any other province where mining is carried on as a major operation. It is not unusual for us in Nova Scotia to have numerous deaths in the mines. I myself know of one catastrophe in which through a mine

explosion seventy-six men lost their lives on one level, only one man out of seventy-seven coming out alive. I am not saying that at all in derogation of what the brave miners did in rescuing Doctor Robertson and Mr. Scadding at Moose River, and I should like to congratulate these two gentlemen on their fortitude and their great nerve control under such trying conditions. I should like also to condole with Mrs. Magill. I think we can look upon the action of the miners at Moose River as typical of the actions of all miners throughout Canada. Take them as a pattern of the miners throughout our whole country, protagonists in the reign of right over might. That is how I feel those miners would wish their actions to be construed. If we wish to measure accurately the deed they performed, we must study their background, the conditions under which they lived during this period of time, to use a term which seems to have endeared itself to the leader of the opposition (Mr. Bennett) in this house. Ever since the late government came into power in 1930 the miners of Nova Scotia, yes, and of eastern Canada—I represent about one-third of the total number of bituminous coal miners in the Dominion of Canada—have been working on short time, their wages hardly, if at all sufficient to meet their ordinary expenses and enable them to keep their families in good condition and get sufficient of this world's goods to give them a decent living. It was under such conditions that those men displayed such fortitude, such courage and such persistence, without any thought of pay, because pay was not in their minds at all when they attempted the rescue. They had made up their minds to rescue those entombed men, whether dead or living. That was the motive behind their efforts and their tenacity of purpose. Somebody needed succour, and they were going to go through and rescue those men dead or alive in spite of every obstacle which might be imposed by man or nature.

I do not wish to be considered parochial, and I am not talking, I assure you, Mr. Speaker, for the benefit of the constituents back home, but there has been so much talk in this house on the budget and on various other matters, some academic, some problematical, and some prophetic—you would think some hon. gentlemen were possessed of occult powers the way they can tell us what is going to happen in the future—that to-day I would like to bring to the attention of the government and of Canada the condition in which our coal miners have been existing during the past five years especially. I assure you, Mr. Speaker, that I shall not trespass on the generosity of the house by dwelling too long on the subject of the coal miners. They are a unit in our national life; they are nationals. The first duty of Canada or of any other country is to protect its nationals. That is why we have embassies and protective systems. The miners of Canada are nationals of Canada, and under the British North America Act they have rights and privileges just the same as any other group. We want no more than what is our due, but we expect no less.

Our total imports of coal amount to 13,000,000 tons and we mine a total of 6,500,000 tons in our eastern provinces. Under these conditions there is no excuse for any one of the 30,000 miners to have to go hungry or without the necessities of life. There is something wrong in our national make-up when the people of Canada are ready to tolerate such conditions in one of our basic industries. You cannot blame the miner if at times he is driven to wondering whether there is any equity or fairness in the government when such conditions of affairs are allowed to persist. We import a total of 13,000,000 tons of coal, but when these miners come to Ottawa or to any other source of authority in an effort to expand their trade, they are met with the answer that it is economically not feasible. If it is not economically feasible to sell our coal in Canada, is it economically feasible to permit a group of nationals to exist on one day's work per week, as has been the case for the last number of years?

This is what is happening and yet government ships are bunkered with imported coal. The Canadian National Railways, our own railway system, a system which should be working in the interests of the people of Canada, is actually working coal mines in the United States. The coal miners in Nova Scotia or in Canada have no objection to the coal mined in the United States being used on the American lines of our system, but they have a definite objection to the use of American or other imported coal on the Canadian lines. I do not think one can find either equity or justice in the procedure followed. However I do not propose to go into this question to such an extent as to burden the house with a lot of figures. I always say that figures are tiresome. I shall endeavour to deal with conditions as they exist to-day.

The manner in which the Canadian National Railways has been managed for the last number of years is responsible to a very large extent for the situation prevailing to-day in the coal trade of Nova Scotia. Our markets in Ontario have been extended to

some degree and I appeal to the people of that province to use the coal mined in eastern Canada. There was a time when we did not have to appeal to the people to use our coal. During the period of the war transports were coaling at Sydney, Halifax and other points for overseas. There is no doubt that the quality of our coal is good. It has made good under the most severe stress and strain. But our bunker trade has gone and we are looking for additional markets. Salesmen of various fuels talk about the quality of their products. You will hear it said that American fuel has more heating units, has a higher fusion point, has more carbon and less ash than Canadian fuel, but that is all bunk. Nova Scotia coal has been tested out in the liners sailing the Atlantic and other seas and there is no doubt in the mind of anyone that it will stand up.

I should like to refer to the diabolical ingenuity with which the Canadian National Railways have constructed for their engines stokers which will use only American or other foreign coal. This is not fair to the coal miners of Canada. I shall not deal with the Canadian Pacific Railway at present, but at another time I should like to go into the question of the Canadian Pacific aids to the industries of this dominion, especially to the coal trade. It does not speak very well for the ingenuity of our mechanics when they cannot construct a stoker to be used on the engines of the Canadian National Railways or any other railway capable of using Canadian fuel. We are told that only a certain type of fuel can be used for high speed engines, but I contend that any fuel is suitable provided it can keep up steam to the required point. After all, steam is all that is required to drive the pistons of an engine, so the argument falls flat. When we take into consideration the installation of these stokers we are faced with the problem of whether or not the Canadian National Railways have been managed along unpatriotic lines during the past four years. I do not like to say this, but the fact is that they are tending to subversive usages, as far as Canadian fuel is concerned.

The miners of Canada are not radical. They are not labouring under any delusions or illusions; they are practical, hard-working people. This has been shown on every occasion when the need arose. In our end of the country a certain movement has taken root very rapidly among the mining population. Credit unions have now reached the stage where they have approximately $175,000 in their funds. A total of approximately $200,000 has been loaned out without the loss of one dollar. This goes to show that these people must be pretty honest and straightforward when such a large amount of loans can be made without a loss. They also have their cooperative stores.

The credit union movement as carried on in Nova Scotia flourishes very often even in places where there is abject poverty, because after all there are very few of us who do not spend a few dollars, or at any rate some cents, foolishly. When that money is put to one side by a number of people it is surprising how rapidly it increases, so that to-day they have roughly about $175,000 saved up over a period of years. That union is sure to spread to other provinces; it is more than a parochial movement; as soon as it comes into contact with the next parish or county it establishes itself. It is something that is worth considering seriously, and in the next five or perhaps ten years it will be an institution to be reckoned with. It is sponsored by the university and its ramifications are well known.

We in Canada have paid handsomely for a number of years for the maintenance of a research organization in Ottawa—a federal research council—and I am bound to say that so far as we are concerned the research that has been devoted to our coal has not amounted to very much in the way of returns to the pockets of the workers or in the affording of work to miners in Nova Scotia or in any other province. If our research bureau cannot do any better than it has done with our coal, so as to make it less obnoxious from the point of view of smoke, then the sooner we have other men who are capable of carrying on research that will attain that end the better for us and for the miners of Canada.

Mining is really the life-blood of Nova Scotia; indirectly it supports one-fifth of the population, and it is vital to the people of Nova Scotia, New Brunswick, Saskatchewan, Alberta and British Columbia whether progress is made in the use of our fuel. If we want to find a solution for the problem that faces us in connection with the contraction that has taken place in the coal industry in the past four years, we must look to the Canadian people as a whole; they must be encouraged and induced to use Canadian fuel. We appeal to them to use it and we do so with justification. The miners are fellow-Canadians, and the more Canadian fuel that is used the more purchasing power will be given to the people of Canada. We are importing some 13,000,000 tons of American and foreign coal, and if we could get one-half of that it would mean $60,000,000 to $80,000,000 of additional pur-

chasing power in the hands of the Canadian people. What would that mean to Ontario and Quebec? The people of Nova Scotia and New Brunswick are large buyers of goods manufactured in Ontario and Quebec. All our beef comes from the western plains. Owing to his arduous labour the miner must have the best meat to sustain his strength so that he may continue unimpaired in the strenuous toil from which he makes his living, and as I say we get all our beef from western Canada. We buy all our clothing from Ontario and Quebec, and we get a good many other manufactured articles produced in the great province of Ontario. Look at a shovel in any house in Nova Scotia and you are sure to find on the back of it, "Steel Company of Canada." We do not manufacture smallwares in Canada although we have large steel works and many coal mines.

Our coal mines have undergone great contraction. There is one in my constituency—this is no exaggeration—where half the men have been unemployed for some considerable time. These men get on the train at noon, the workmen's train, which takes them seven miles to work because their own coal mines are closed. They go down in the three o'clock shift and they come up at eleven o'clock. It is two or two-thirty in the morning before the workmen's train brings them back again. To make matters worse they work only one day or perhaps two, and in the winter they are very fortunate if they get one day's work a week. That state of affairs should not exist. It is not as if we were looking for an artificial market; the market is there, as evidenced by the fact that 13,000,000 tons of coal are imported into Canada. We are not asking for the creation of an artificial market. Subventions are granted to aid coal going into eastern Ontario and that is all right as far as it goes; it is a palliative. But that does not fill all the requirements to enable the coal miners of Nova Scotia, New Brunswick and other provinces to get on their feet, pay their debts and have something over for the education of their children and to provide their families with the ordinary comforts of everyday life such as we have in Canada. As I say, we have those subventions, roughly about $1,240,000, and in this house we have seen estimates amounting to $1,840,000 for a superannuation fund for employees who, mind you, are in sheltered employment. The miners are not in any sheltered employment and they have nothing to leave to their families if death strikes as it often does when a rock falls or a man is crushed by a car. When this happens the miner's children are left fatherless. When he goes to work they do not know whether he will come back to them at night. Yet we talk about a miserable subvention of $1,200,000. I say that subvention should not be necessary if the rates on the Canadian National Railways were so regulated as to help the movement of goods from east to west. As it is now, the preponderance of assistance is in the movement of goods from west to east.

At six o'clock the house took recess.

---

## After Recess

The house resumed at eight o'clock.

## PRIVATE BILL

### THOUSAND ISLANDS BRIDGE COMPANY

Hon. H. A. STEWART (Leeds) moved the second reading of Bill No. 59, respecting Thousand Islands Bridge Company.

Mr. CHEVRIER (Stormont): Will the hon. gentleman explain the purport of the bill?

Mr. STEWART: Mr. Speaker, the object of this bill is to make two minor amendments to the act incorporating the Thousand Islands Bridge Company. That act authorized the company to enter into an agreement of amalgamation or cooperation with a company in the United States, but it did not contain a provision authorizing the company to enter into an agreement with a government authority. The state of New York has constituted an organization known as the Thousand Islands Bridge Commission, and it will be necessary to amend the act to authorize the Canadian company to enter into an agreement with this corporation which has been constituted by the state of New York. There is another minor amendment to the bill providing for an extension of time and there are sections added to the bill which are applicable to this corporation that has been formed by the state of New York. These are minor amendments. They have been approved, I am informed, by both the state of New York and the province of Ontario. In the ordinary course the bill would go to the private bills committee for consideration.

Mr. CHEVRIER (Stormont): If I am in order I should like to ask the hon. gentleman one or two questions. Has the consent of the governor in council been obtained as far as the Canadian side of the bridge is concerned?

Mr. STEWART: I am informed by the legal gentlemen in charge of this matter that approval of the plans has been granted by the government of Canada.

Mr. CHEVRIER (Stormont): Does the hon. gentleman know the date when that approval was given?

Mr. STEWART: No.

Mr. HOWE: I should like to ask one question. Is there any change in the terms under which the deposit is made by the bridge company with the Canadian government?

Mr. STEWART: No, the deposit is still required.

Mr. HOWE: Is there any change in the terms?

Mr. STEWART: Yes, there is some change in the terms.

Motion agreed to and bill read the second time.

## CRIMINAL CODE

### PENALTIES FOR INFRACTIONS OF MOTOR VEHICLE REGULATIONS

Mr. T. L. CHURCH (Broadview) moved the second reading of Bill No. 57, to amend the criminal code.

He said: Mr. Speaker, I arranged with the Minister of Justice (Mr. Lapointe) last Friday that this bill should be gone on with to-night. To me it is one of the most important bills with which we have to deal. When you think that between now and next Christmas over three thousand more people in the city from which I come, more than ten times as many as would be required to fill up all these seats, will have suffered injury in automobile accidents and about 50 more killed, I am sure you will agree that this is a bill which should be considered. I should have preferred to introduce this subject by means of a separate resolution, as I did last session. At the beginning of this session in the house here I suggested that a committee of both houses of parliament should deal with this problem, but I was unable to get the matter before the house in any way other than this. This matter is far more important than any resolution in the budget, since it concerns the life and death of the people on our highways. In every constituency of Canada people are being slaughtered in this way; men, women and innocent children are being injured and killed, and the House of Commons does nothing about it. They can talk about Mr. Sage; they can waste time deciding who should be the ten men to constitute the House of Commons Follies for 1936, but they cannot give consideration to this bill which deals with such an important matter.

According to the rules of the house, on the motion for second reading I cannot take up the bill clause by clause, but I can discuss only the principle of the bill and the necessity for it. Is the present law adequate to protect the public at level crossings and on highways? That is the principle of the bill. If the bill reaches committee I will explain every clause contained in it or later seek to add it all to any government bill. The first section refers to level crossings, and I should like to remind the house that only a few weeks ago five people were killed on a level crossing at Delhi, and not so very long ago four people were killed at Whitby while returning from a hockey match. I seek to have the law of Quebec in regard to motor vehicles being compelled to come to a full stop at level crossings made to apply all over Canada.

I wish at this time to deal only with the principle of the bill, because if the house agrees to the principle we may do what should have been done long ago. Canada is lagging far behind the times in connection with this work. We are the only country in which something has not been done to protect the public. Long ago we should have had a committee of both houses of parliament studying this problem. Why, Mr. Speaker, you might be knocked down on the street to-morrow and be unable to preside over the sittings of this house again. There are 245 members of this House of Commons. In 1934 the number of those killed in automobile accidents in Canada would be sufficient to fill all the seats of this chamber four or five times over, and that is the result of the failure of parliament to deal with this question.

This matter was discussed by the house for a whole day last year, and everyone agreed from all sections of the house that something should be done. That debate will be found in Hansard for February 13 of last year, at page 786. This bill is not a criticism of the motorists, ninety-five per cent of whom are usually careful. I own a car, though I do not drive; I should like to live a while longer, and that is why I do not drive. Ninety-five per cent of the people who drive automobiles try to obey the law, but facts are facts and we must face them. These death cars are on every highway, and with the exception of a few newspapers no one does anything about it. In my opinion transportation in Canada should be a means to an end and not, as is becoming fashionable in this country.

an end in itself. Everyone has the speed fever in this country. One of Ontario's ablest judges, the late Chief Justice R. M. Meredith, addressing the grand jury at the assizes in London more than seven or eight years ago, said:

> And as now nearly everyone is a car owner and car driver, young and old of all sorts and conditions, it is difficult to get justice in even a civil action. Car-driver-jurors have nearly all the speed fever; and self-preservation instincts are so strong that they will not be persuaded to decide against drivers who have been no more unlawful than they themselves often, if not commonly, are.
>
> What then is the remedy? I think it should be: make the laws plain and reasonably severe and enforce them; and cancel licences freely.

Since that time parliament interfered in 1930, and now no one can tell what the law is. I have read three or four presentments of the grand jury of the county of York at the assizes. It is impossible to convict men of manslaughter or criminal negligence owing to the loopholes made in the criminal code by that statute. As Mr. Justice Meredith said, everyone has the speed fever. He might have added, except the House of Commons. We ought to have been through here long ago. If the statute of limitations were amended to provide that parliament could sit for only four months, we might get some relief from large sessions, no one but a millionaire will be able to afford to belong to parliament. The senate is exempt from this statement; they do not suffer from the speed fever, except in the last days of the session.

It would be misleading and mischievous to attribute all blame for the present state of road traffic, with all its ghastly horrors, to those who drive and use motor vehicles. But it is beyond dispute that they have a very large portion to their discredit. This small minority of drivers appear to have exploited for their pleasure or profit the generous tolerance of others in a very irresponsible, callous and appallingly cruel manner. Their fault is grievous and they can have no ground for complaint if they are put under restraint. Ignorance and thoughtlessness are but small palliation. Obedience is the only reparation they can make; it is very long overdue. Last year I brought this matter to the attention of the house and I said it is one of Canada's greatest scandals; so it is, this daily slaughter of men, women and children, and one of the worst features is the absolute public indifference. I find it hard to explain this indifference. The church, the pulpit, the general public and legislative bodies take it all as a matter of course and form and toss it aside, while public officials and legislators go out and collect a few statistics about it, and the net result of their effort does not lessen the slaughter; it leads to nothing but a shameful and glorious fiasco. The highway department collects statistics but the slaughter still goes on. The press with a few notable exceptions say nothing about it, but devote pages to reports of a selection of ten handsome men here, a House of Commons Follies of 1936 with a star cast, making out of this House of Commons a house of nonsense.

People of sober thought in this country are becoming fed up with all this. The other day I attended the funeral of a great newspaper man, Harry W. Anderson, one of the greatest men this country has produced, and before attending that funeral I attended the funeral of a man killed in the riding represented by the hon. member for Greenwood (Mr. Massey). The breadwinner was taken from a family of five small children, and I promised the widow that I would bring this matter once more to the attention of the house. The fact that two hon. ladies are in this house does not mean that they represent all the women of this country; they do not. I represent the women of my constituency. They are the people who are suffering, and they are fifty per cent of the voters of the country. They know what it is to lose the breadwinner and be put out on the street with a family of small children, and they are crying out to this house against this reckless slaughter. Let us cease being a house of follies and do something to protect the long-suffering public of this dominion who are being massacred and slaughtered on the highways. The past few years have shown the decay of parliament, as we see in the way this question is being dealt with. In the death of our people we are reaping the result of this inaction. If the invader were at our gates we would mobilize our whole effort to defeat him, yet in Canada a most shocking and un-Christian slaughter and legalized murder go on day and night, winter and summer, a carnage that is worse than war, that stains red all the main roads of this, a civilized country, and the world goes on just the same as ever.

The abuse of the motor car is one of the unpardonable sins of the age; it is a real menace to organized society in Canada to-day. If a baffling disease were taking the toll of life exacted on our highways day by day science would know no rest until a remedy was found. Great Britain and the United States are waging war against this slaughter. Mayor LaGuardia of New York has had a committee appointed; they are getting results, but we are not. The privation and sorrow,

broken lives and shattered homes resulting from this holocaust are terrible to contemplate. The abominable and domineering indifference of some drivers of motor cars to the convenience of others is hard to explain. There are three features which appear to be predominant in the conduct of motor traffic, namely, a domineering indifference to the convenience of others, excessive speed and congestion. Ever since man learned to mount and direct a machine more powerful than himself he has asserted his superiority of force over his neighbours. "Make way or take the consequences" has been his instinctive cry, and he has gone on his way largely indifferent to their admiration, tolerance or resentment. Nearly every motor driver, if he be honest with himself, must agree that when he drives he is imbued with that same primitive instinct to assert his superiority to demand the right of way and freedom to progress as rapidly as he thinks necessary. One of independent mind cannot but think that the condition of motor traffic on our highways is just as discreditable to Canada as was the effect of prohibition in the United States, where the law was just laughed at. We must examine the problem with an open mind to get the truth, no matter how distasteful it may be. Thou shalt do no murder; Thou shalt not kill; that is the law of God. Our duty to our neighbour is also involved, as well as selfishness, one of the worst defects of human nature. Pope says, "Worth makes the man." Human life should be sacred on the highways; yet many men of real worth, by selfishness and carelessness violate the laws of God and man and send many men, women and children to their graves. The paths of glory lead but to the grave in this daily slaughter.

There is no invention that has contributed more to the education, pleasure and enjoyment of the people than the motor car, but its use is one thing, its abuse another. Like other inventions of science, medicine, the arts and discoveries in physics, pathology, chemistry, biochemistry, preventive medicine and trade and commerce, the right use of inventions has been a boon and a blessing to humanity, but the motor car has also been a curse, like the use of gas in war. It involves awful misery and suffering, sorrow and pain, equal only to that of plague, pestilence and famine, battle, murder and sudden death. The abuse of the motor car is one of the unpardonable sins of this age and is a real menace to organized society in a so-called Christian country. Widows and orphans are crying out to us in the House of Commons in their agony for relief. Are we going to do our duty? In every constituency represented in this house poor people are being legally murdered. I may say that men, women and children have been killed, and the dependents of many of those men and women have not been provided for. I myself have seen some of them suffering. For this reason I think women should be on the jury; they should comprise a third of it. They have equal rights; they are voters; they can be members of the senate or of the House of Commons. They cannot sit on the bench, but probably if they were permitted to sit on the bench a great many of these reckless drivers would not get off as easily as they do. I can say that at least fifty per cent of women are voters, and they should be permitted to sit on juries so that cases might be properly considered and digested. I admit that pedestrians on the highways are careless and reckless; of course they are. The causes of accidents would run about fifty per cent for drivers and fifty per cent for pedestrians.

This bill contains no criticism of the driver of the motor car, nor of the motor car owner, ninety-five per cent of whom are law-abiding at heart. I limit it to five per cent of those drivers. Some of the jurors are so soft when they consider the cases of drivers that they are almost at the point where they present a gold watch and an illuminated address to the accused. All the world, with the exception of Canada, is considering this matter. President Roosevelt has appointed a committee under secretaries Wallace and Moore to make a study of the matter, and Great Britain has done likewise. It is making a study of the problem, especially the psychological aspect. Psychological principles may be discovered there which will have a worldwide application. Last year on the roads of Great Britain 6,521 men, women and children were killed by violence, and in addition 219,000 were hurt or maimed for life. This number, in one year, is 500 less than Canada's total casualties in her part in the great war. In Canada in 1934, 1,106 were killed and last year 1,316 were killed. In the Netherlands, a small country, 744 were killed and 14,900 injured. In the United States 36,000 were killed, hurled to death and 954,000 were injured.

The public puts up with this slaughter, this economic waste of man power, wages and disasters, some of which plunge whole nations into mourning and sorrow. Hon. members will recall the Moose River tragedy. The men who were trapped in the mine suffered horror and tribulation. Look at the amount of space

given to that tragedy in the newspapers. On that occasion there were three men whose lives were endangered, but in this instance tens of thousands of people are killed and injured in this and every other country in the world, and in Canada nothing is done about it, except to talk. The attitude of the public is appalling.

In my opinion there should be an investigation into the matter, and a committee of the house or both houses should be appointed. If the bill reaches the committee stage I will give reasons for that section of it which deals with the functions of judge and jury and I will cite cases showing what has been done, notably a case which has been much criticized in the Toronto district. In that instance repairs were being made on a roadway; thirty or forty lights were on the works, stretching out nearly a quarter of a mile. The repairs were being made at night. A motorist drove through at a reckless rate of speed causing great damage, but the case was taken to the jury. Functions of judge and jury are set out in the bill. The measure does not seek to interfere with the primary functions of judge and jury but seeks only to interpret the law and to untangle difficulties in connection therewith. Some grand juries have been asking for this very amendment.

The present state of affairs on roads in Canada built at great expense by the taxpayers is not creditable to the people of our country. The pedestrian has been altogether forgotten. We must remember that, under common and civil law, he has rights on the highways, equal to those of the motor. From time immemorial he was compelled illegally to make way for the mounted man, and he did so for his own safety. Let us contrast that unsportsmanlike conduct with the customs of the sea. Seamen, on account of their continued conflict with the forces of nature, are more broadminded and tolerant than are landlubbers. The seafarers' rule is that the strong shall give way to the weak, and the swift to the slow. The rule of the road on land is just the opposite: Make way, or take the consequences. There is no doubt that all road accidents are avoidable. Why are they not all avoided? Because the pedestrian is unorganized; he is one of an unorganized and helpless body.

The poor pedestrian, however, is in the majority. In Canada it seems to me that we are always thinking of the rights of minorities. True, the history of the world is the history of minorities, and the history of this country is one of compromises. Pedestrians and others who are the majorities have been slaughtered in this way because they are unorganized and helpless and have no rights despite the fact that they are voters. No one has any interest in them, even their rights in this parliament. No one does anything to prevent their injury and slaughter, whereas the rich and well organized motor industry takes care of its own interests in the legislative halls of the country and by press publicity.

While we sit here the slaughter is going on night and day, causing a dreadful loss of life. The number killed in Toronto last year would form a line two deep from here half way to the union station. In 1934 there were more people killed and wounded in England and Wales than in the Boer war. In nearly three years fighting in South Africa 5,744 were killed and 22,829 were wounded. In 1934, 5,855 were killed and 159,257 were injured on the roads of England. In ten years the number killed has doubled and the number injured trebled. In the same period of years only eight people were killed and sixty-three wounded on British railways. Only a few people have been killed or wounded on our railways.

There has been a clamour by certain sections of the press against uneconomic roads, and the stopping of public expenditures for the benefit of the motor, thereby relieving the pressure of deficits on the railways. The beauty of the countryside is being destroyed, and these expenditures are being made. I am not opposed to good roads; as I said the other day, I was the author of a recommendation and development of fifteen miles of good roads outside the city of Toronto. The Toronto good roads program of 1907 was an example for the rest of Canada.

If the country can take such an interest, and quite properly so, in three men trapped in a mine, how is it that every year thousands of people can be placed in a cemetery, and tens of thousands injured, without much being said about it or any public interest whatever. Hardly a word is said in this house or out of it about this terrible loss. The public is utterly indifferent; it is impossible to get anything done. In the present year the score in the city of Toronto to date is this: Dead, twelve; fifteen surgeons called in to treat fifteen people there severely injured on the streets of the city on one day, Sunday; hurt, 943. That means in a little over four months nearly 1,000 people have been killed or wounded by motor cars in our city. The figures go on to show that there were twenty-nine drivers gaoled. The totals for 1935 are these: Dead, fifty; hurt, 3,087; drivers gaoled, 151.

The minister has shown a great deal of interest in this matter. Last session while dealing with my motion, the then Prime

Minister (Mr. Bennett) gave his support to the appointment of a committee of both houses to go into this problem. He has taken a great deal of interest not only in public health measures, but in matters relating to hospitals and medicine. Last year he told me in the house he would give me a committee, but that was rather late in the session and I did not have an opportunity to attend to it. The matter should be dealt with in the criminal code and should apply to all provinces, because whether a man is killed by a burglar's pistol shot or by a motor car makes very little difference, because he dies anyway.

At common law all the king's subjects, including drivers of any kind of vehicle, had a lawful right to travel upon and use every part of the highway, and a cause of action arose only when one used the highway in an unreasonable or careless way, or in a way causing damage or loss to another. The liability of the owner or driver of a motor vehicle is not new law but is based upon admiralty law and the general common law respecting negligence, and includes all cases of injury by any other sort of traffic on the highway. Mr. Justice Hodgins said in 1926 in the Yellow Cab case—Volume 59, Ontario Law Reports, 1926,—referring to the motor statute:

> That statute is really a collection of duties and obligations imposed upon drivers and others, based on the use and operation of motors on highways for which owners of cars are made responsible. It is not intended to be exhaustive as to all other liabilities which arise at common law or otherwise due to the negligence of a servant who is in charge.

The common law right of an action for damages has been replaced in motor accidents by an action under the act for negligence of a definite kind, and the owner or driver is liable for damages because of that negligence. The common law regarding the use of highways goes back to ancient times. The law on motor vehicles commenced in 1903 with 3 Edward VII, chapter 27, as amended in 1905 and almost every year since.

I have dealt with the principle of the bill, Mr. Speaker, and coupling what I have said to-night with the debate which took place in the house last year, you cannot blame me for feeling a little aggrieved. I was chairman of the board of police commissioners in Toronto for several years, and I saw these deaths occur by hundreds, yes, and injured by thousands, but it was almost impossible to get anything done to prevent them. I have great sympathy with anyone who is suffering, and I appeal to the two lady members of this house to support this bill. I have seen men, women and children, injured in motor car accidents, carried away in ambulances, and it is my duty to bring this matter to the attention of the house as I did last year. I do not blame any member of the house particularly, because this is a new parliament and hon. members may not have had an opportunity of bringing the matter up. I do hope that something will be done to stop this slaughter.

I notice that one of the motor league men in Toronto is opposing this bill. Of course they will oppose this bill, just as when I was on the board of police commissioners in Toronto some people opposed the erection of traffic lights and the making of stop streets in the city. They said it was ridiculous to compel a motorist to stop at an intersection, and all that kind of thing. Everybody knows the accidents that have been caused, for instance, at level crossings, and if every driver were careful there would be no necessity for a law such as this, but it is our duty to guard the people of this country against reckless drivers. Only a few days ago at Mimico four young fellows were driving at sixty miles an hour and all four of them were killed. In another case in the police courts there in the county a driver was clocked going at ninety miles an hour up Yonge street, and another was doing seventy-five miles an hour on Yonge street. What chance have women and children with drivers like those on the roads? Have pedestrians no rights on the highways for the upkeep of which all the people pay?

Children playing on the street are the most frequent single cause of pedestrian accidents. Then comes accidents from children darting from behind a parked car or crossing the street between intersections. We should recognize that the automobile driver has some rights and see that children and everybody else cross only at intersections, instead of doing all this jay-walking. As I said at the outset, pedestrians themselves are very largely to blame for many of these accidents. When one considers the lot of the pedestrian, he has been from time immemorial looked upon as of an inferior order, and the only safe place when we see some drivers coming down our highways is to climb up on the bank, keep out of the way and give the reckless driver the right of way.

This bill may not be perfect, but it is the only way in which I can bring the matter before the house at this session. By the law of New York, motor buses are compelled to stop and throw open their doors when they come to level crossings. Everybody knows how the big motor buses are eating into the

earnings of the Canadian National Railways and other railways on this continent. The Grey Line buses and several other lines of buses travel between the large cities of Ontario and some go with their connections as far south as the gulf of Mexico. There is a law in some states that these buses must come to a full stop and throw open their doors at every level crossing. That is not only the rule of many of the companies but the law of the state. This bill does not apply where there are gates or bells at level crossings, and it applies only to steam railways and to trunk lines, where most damage is done.

Another section of the bill deals with juries. Women have made good in the House of Commons and in the Senate, and I believe they can do still better work on the jury. They might better as jurors see that women and children get compensation for injuries caused in these automobile accidents. They might also insist upon legislation being passed making motor car insurance compulsory so that the injured can get some relief.

I appeal to the minister himself. I do not wish to give him too much trouble, but I believe the time has come when we should have a complete revision of the criminal code. It started away back in the early days of this century, but there have been many discoveries and inventions since then, and I think a committee of both houses should be appointed to bring about law reform and a new criminal code. It may be too late to do it this session but I am here to-night to plead the case of these helpless people on the highways. I am pleading for the pedestrians, the men, women and children whom I have seen killed or injured in these accidents.

The onus is on the government of the day so long as they are the government. The onus is not on me as a private member. I have nothing to do with these matters except as a member of parliament representing the constituency of Broadview. Danforth avenue is the busiest street in Canada for traffic and in that constituency I must say that I hate to cross at nights part of Danforth avenue because of the chance of being knocked down by the hundreds of cars of outside traffic passing along the road at a rate of speed that I have never seen anything the equal of. I am simply doing my duty to my constituents in bringing this matter up this session as several of them have been killed. I brought it up last session when we had a debate covering forty-six pages of hansard, and all parties agreed that something should be done. As I said, the onus is on the government of the day to solve this problem. In the British House of Commons the Labour members have insisted on something being done. They have spoken out against the slaughter of their workmen and have asked for compensation as well. I admit, Mr. Speaker, that I am a little impatient when I see what is being done in other countries and, after bringing this matter up last session, getting no results here, I suggest that this bill be read a second time and perhaps then it might go to a committee, or in the recess the minister might consider appointing a committee of both houses or some other form of committee or commission to go into the problem, as they are doing in Washington, with three members of the cabinet on the committee. Otherwise what is going to happen between now and next Christmas? It simply means that three thousand more people will be killed or injured and put into hospital. The motor car is more successful in creating jobs, through killing people, than all we do in this parliament for unemployment. We are side-tracking this issue, but the people back home will ask us what we did here in Ottawa about it.

Hon. ERNEST LAPOINTE (Minister of Justice): Mr. Speaker, I am grateful to my hon. friend for the information he has given the house in support of his bill. As the Prime Minister (Mr. Mackenzie King) told the house the other day, it is the intention of the government to introduce a bill to amend certain sections of the criminal code. I should not like to anticipate the introduction of that bill by making remarks, even in connection with the private bill introduced by my hon. friend, but I can assure him that the law officers of the department will carefully consider the argument he has offered in support of his request for certain amendments. If it is possible to insert some of his proposals in the government bill, it will be done. If we come to a different conclusion as to some of the provisions in his bill, the hon. member will be at liberty to move them as amendments to the government bill. In the meanwhile, if he will agree to my suggestion, I will move the adjournment of this debate and further discussion can be had on the matter when the government measure is before the house.

On motion of Mr. Lapointe the debate was adjourned.

## THE BUDGET

DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE MINISTER OF FINANCE

The house resumed consideration of the motion of Hon. Charles A. Dunning (Minister of Finance) that Mr. Speaker do now leave the chair for the house to go into committee of ways and means, and the proposed amendment thereto of Mr. MacInnis, and the proposed amendment to the amendment of Mr. Hansell.

Mr. D. J. HARTIGAN (Cape Breton South): Mr. Speaker, when the house rose at six o'clock I was dealing with some of the disabilities under which the coal miners of Canada suffer because of the limitation of markets. I had intended to go on with this matter for a while longer, but in view of some of the remarks made by the hon. member for Broadview (Mr. Church), I will summarize my remarks and then proceed to another subject which is very important to the people of Canada. I contend that the Canadian National Railways should use nothing but Canadian fuel. This system is owned by the Canadian people, the Canadian people have to pay any deficits. Canadian money should not be expended for the employment of American labour to supply coal for our railway lines. That is one of the points I wish to postulate.

The other is that the people of Canada are not willing to forego ownership in the Canadian National Railways. Despite accusations that may be made by certain hon. members, the Canadian people are not going to be deprived of this great public ownership undertaking which they have started. This is the greatest public ownership project in existence. I noticed in the Ottawa Journal of last Thursday that it was expected that the Canadian Pacific Railway would soon resume the payment of dividends. This statement must have created amazement in the minds of many Canadians; they must have been surprised to learn that after going through a period of depression identical to that gone through by our own railway system, this privately owned system was about to resume payment of dividends. To my mind this is evidence of only one thing; it implies that there must be some resistance by the Canadian people to the public ownership of the Canadian National Railways. We have no objection to using the product of American coal mines for the American units of the Canadian National Railways, or even of the Canadian Pacific, but we contend that Canadian fuel should be used on the Canadian lines, especially of our own system.

[Mr. E. Lapointe.]

Since the British empire trade agreements came into effect in 1932 an increasing quantity of Welsh and Scotch fuel has been coming into this country. It has been found that English crickets are being brought in with this coal. This cricket is different from our Canadian insect; it being brownish instead of black. It may be innocuous enough in its own habitat, but there have been instances where insects have thrived, when they found congenial conditions in the country into which they had been introduced, to such an extent as to constitute a pest in that country. I merely mention this so that the entomological branch may look into the matter. I am not saying that this is what will happen; I am not prophesying at all, but I do say that in the past there have been instances where insects have been brought in from other countries and have multiplied to such an extent as to constitute a pest.

I now leave this question to go on to deal with a question of great national urgency. On almost every second corner we hear people talking of this social question. I noticed a reference in the Ottawa Journal of May 7 to the introduction of a resolution by the hon. member for Greenwood (Mr. Massey) along similar lines. The hon. member asked: Is there a problem of youth in Canada? Yes, Mr. Speaker, I say there is. There is a serious problem, a problem which is national in scope. I say that it ill-becomes any member of the Conservative party to bring forward a resolution seeking to ameliorate the condition of youth in this country. Why do I say this? If we investigate the records we find that in 1921, 3,081 ounces of pure codeine were imported into Canada. In 1931 the importations amounted to 15,918 ounces; in 1932 they had increased to 17,010 ounces; in 1933 they had risen to 26,361 ounces. An astounding amount of codeine has been imported into this country. Under the League of Nations the importation of opium and its derivatives is forbidden and I am well aware that codeine is not specifically mentioned in this prohibition. At the same time that did not give the government of the day the authority or the right to narcotize the people of Canada to the extent indicated by the importations of 1933, which had amounted to the astounding total of 26,361 ounces. It got so bad—this is illuminating—that at a meeting of the opium advisory committee of the League of Nations at Geneva, Canada's attention was directed in 1930 to the fact that the codeine consumption of this country was the highest in the world. That is something to ponder. But that did not daunt the then

Prime Minister or the government so far as the importation of codeine was concerned, not at all. They were not faced with an increasing use of the drug. In 1934 there were imported 28,915 ounces, or an increase of 2,000 ounces. In other words, the League of Nations conventions were flaunted; its advice to Canada to cut down the consumption of codeine was not heeded, and in that regard the then Prime Minister of this country may have started the vicious circle by which other dictators in Europe disregarded both the conventions of the League of Nations and other treaties that existed. It would be illuminating to have the papers bearing on this question, the communications passed between this government and Geneva, tabled. I will not call for them. It is sufficient for me to point out the effects of this evil.

The hon. member for Broadview has been speaking of the recklessness of motorists. What else could he expect? You can go to any country store and for forty-five cents obtain twelve tablets containing a grain and a half of codeine. There is not an ethical doctor practising in the dominion who would give more than an eighth or at most a quarter of a grain. He would be satisfied to give an eighth of a grain and repeat that prescription if necessary. But, as I say, you can go to a store in the country and for forty-five cents get twelve tablets containing a grain and a half of codeine. I am aware that resistance can be built up, but who knows the untold suffering caused by the use of this drug? Only someone who is in close contact with the addict and who knows the conditions prevailing in his home. And then people will tell us that there is a youth problem in the country. Yes; and the previous government aggravated that problem to a great extent during the last five years. If you put a grain and a half of codeine into the hands of someone who does not know how to use it, some deluded woman who thinks it is an ordinary headache tablet which can be given to a child, you know very well what to expect. The hon. member for York South (Mr. Lawson) said the other night that he had the happy faculty of judging when anyone was serious. I do not know whether it was as a result of that proclivity that someone put a label on the package advising purchasers not to give the drug to children under two years of age. Just fancy! According to that, it is all right to give it to children of three, four, five or six, or to give it to a man or woman or some girl and let them drive an automobile. The hon. member for Broadview told us ably about traffic conditions in the cities. Well, what do you expect when you allow people to use this drug? How many mothers are there to-night who are not in sorrow for some son who has been paying for some crime, or who probably has already paid with his life the penalty, for some crime committed under the influence of this drug.

If the government wants to do anything to elevate the people and to improve social conditions it should begin with the prohibition of the promiscuous use of the drug, for at present anyone in the country may obtain it. Anybody can get the drug; when he sits behind the wheel of an automobile there is no coordination between his mind and his muscles, and his vision is distorted. Under its influence such people think they can go over houses or mountains. But apart from the effects the use of the drug is having on the population generally, consider the distress it is bringing to our workmen, the men in the mining districts and in industrial centres. Forty-five cents is not much as far as money goes, but it is a good deal when it is subtracted from the daily budget. The people who become addicted to the drug think it is a harmless headache tablet and they do not hesitate to spend forty-five cents for it. Take men working in the mining districts, getting one day's work a week; when you take away forty-five cents from such a man's wage to pay for this drug you can imagine how he is going to support his children for the rest of the week on the balance The former government, through its attitude to the narcotic question in the last five years, has driven the workmen of the country into an almost untenable position. And the workman is not to blame. But would-be reformers will get up and offer advice, and it is remarkable that when a Liberal government gets into power advice soon begins to pour in from Conservative sources. The hon. member for Broadview spoke fervently a short while ago; why did he not persuade the government, when his party was in office in the last five years, to do something towards the alleviation of this drug evil? It is said that a conference of youth is needed. What will be done? Will they meet and indulge in platitudes as we have seen in the past?

Mr. SPEAKER: The hon. member has spoken forty minutes.

Mr. HARTIGAN: I realize that my time is up, but perhaps you will allow me to say this in conclusion, Mr. Speaker. The Prime Minister might very well attend a

youth conference, and the happiest message that the youth of the country could possibly receive would be his assurance that the government would prohibit the promiscuous use of codeine, as has been done in the United States and nearly every other country in the civilized world.

Mr. W. F. KUHL (Jasper-Edson): Mr. Speaker, most hon. members who have spoken thus far on the budget have commenced their speeches by offering a tribute of praise to the Minister of Finance (Mr. Dunning) for his good work. Just to be different, I am not going to follow the beaten path; I will tell the minister and the government exactly what I think. When I think of the deplorable conditions of poverty throughout this Canada of ours; when I think of the hopeless condition of the young people throughout this country; when I think of the mental agony of both young and old; when I think of the pitiable condition of the blind, the maimed and the halt; when I think of the medical care that people require and cannot obtain; when I think of the possibilities of this age of plenty; when I think of the untold suffering, misery and agony that is being endured; when I think of the veritable hell that people are going through in these days, I cannot have any mercy whatever for the monetary policy which is supported by the minister or for his banker-bondholder budget.

I do not wish the minister to think I am criticising just for the sake of criticism. That is not my nature. The minister can rest assured that if he proposes any real, genuine reform I shall be one of the first to support it with both hands, both feet and every inch of the seventy-seven inches of my physical anatomy. But, Mr. Speaker, in view of the untold suffering that is abroad to-day I think it is time we dealt with the facts as we find them. I think the time is long overdue when we should quit playing and pussy-footing around; I think we should bore right into the heart of the problem, attack this citadel of high finance from every corner and deliver broadsides at it from every angle until it is demolished.

I do not wish the minister, however, to think that I harbour no kindly feelings whatever towards him on his presentation of the budget. I think his address certainly demonstrated his excellent business acumen and the many qualifications he has for the position of Minister of Finance. However, if intelligence and ability could be measured in that way I maintain that one ounce of intelligence and ability applied on behalf of the people would accomplish infinitely more than a hundred pounds of intelligence used only for the benefit of the bankers and the bondholders. This budget is undoubtedly the best the minister can do under the existing monetary policy, but that is the whole point, the existing monetary policy. I am sure no one in this house expects the minister to do much better as long as he permits himself to be bound by the shackles of an obsolete and outworn monetary policy. I am quite sure that if, before making up his budget, the minister had tasted some of the economic food of which some of his colleagues have partaken, I would find in his budget more that would merit favourable comment. As it stands, however, I must say that the whole thing can be summed up in one sentence: The people have asked for bread, and they have received a stone.

Many members of the Liberal party have been proclaiming from the housetops that their presence in this chamber in such overwhelming numbers is a definite and positive indication that the people of Canada approved of their trade policy. I contend that such statements are an entire misrepresentation of the facts. If there was in the Liberal platform anything at all of which the people approved it was the monetary reform which they hoped they would get. Anyone who knows what monetary reform means realizes that, as far as any indication of it in the budget is concerned, it is conspicuous by its absence. If the people of Canada voted on a policy at all certainly it was not a policy of trade. The people of Canada were under the impression that the Liberal party was going to restore to government its sovereign right, the industry of manufacturing money, as the hon. member for Vancouver-Burrard (Mr. McGeer) indicated in his speech not long ago. The speeches delivered from time to time by the right hon. Prime Minister (Mr. Mackenzie King) certainly gave the people of Canada the impression that this was going to take place. Let me repeat just one of the statements frequently made by the right hon. gentleman:

> Usury, once in control, will wreck any nation. Until the control of currency and credit is restored to government and recognized as its most conspicuous and most sacred responsibility, any talk of the sovereignty of parliament and of democracy is idle and futile.

We are still looking for indications of the implementation of promises of that kind. In view of that statement I say that if there is going to be no more monetary reform than is indicated in the proposed legislation, the inaction of the Liberal government in this connection will constitute one of the greatest

betrayals of public confidence ever recorded in the history of the parliament of Canada. During the election campaign back in Alberta we heard those of Liberal persuasion, if there is such a thing, say again and again, "Why should we vote for you inexperienced social crediters? The Liberals are going to give us monetary reform and they can accomplish far more for us in that direction than you can, for they are experienced parliamentarians." I am quite convinced now, however, from what I have seen of the proposed legislation, that the people who harboured such hopes are doomed to disappointment. Again I say that if the people did vote on a policy in the last election it was one of monetary reform and not one of trade.

As far as trade and tariffs are concerned not one elector out of a thousand can give an intelligent explanation as to the difference between the policies of the Conservatives and the Liberals. That is not because they are not intelligent; it is because there is no fundamental difference between Liberalism and Conservatism, and I think we have had first-hand proof of that right in this house. There have been just as many good arguments presented for high tariffs as have been presented against them. Furthermore we have been voting tariffs up and down ever since 1867, and during that whole period of time the public debt has been steadily increasing. Consider the period from 1913 to 1933, during which time we had changes of government from high tariff to low tariff. What happened? The population increased by thirty-five per cent; the production of wealth increased by ninety-five per cent, and the bonded indebtedness increased by 324 per cent. As far as trade benefiting the people is concerned there is no indication of it there. This quibbling and squabbling over tariffs is just camouflage for the bankers' money and credit racket. Liberals and Conservatives have always supported bankers controlled money and credit. There is only one difference that I can see between Liberals and Conservatives: The Conservatives swear by the tariff and they never raise it; the Liberals swear at it and they never lower it.

I wish to say a few words with respect to debt but before doing so I wish to accept the challenge offered in this chamber yesterday afternoon by the hon. member for Huron North (Mr. Deachman). At page 2689 of Hansard he is reported as saying:

> I challenge my hon. friend and the members of the social credit party in this house to tell us where that 15 billion dollars' worth of production went.

I tell the hon. member that if he has a chip on each shoulder I am going to knock both of them off. Whether the hon. member intended to or not he made statements, as reported on this and the following page, which left the inference that the leader of the social credit group was lacking in intelligence. Let me say that the hon. member should be more careful in future not to judge the intelligence of either the leader or the members of this group according to the standard of his own intelligence. On page 2689, referring to the leader of the social credit group, he spoke as follows:

> My hon. friend suggested in his speech of a week ago that in the United States the total value of all production in 1934 was 60 billion dollars, but that the total paid out in that production was only 40 billion dollars. In some strange way 20 billion dollars' worth had disappeared.

Then a little further down:

> By a mere twist of the fingers, 15 billion dollars' worth of production disappears.

Well I maintain that the hon. member has set up a straw man and knocked him down.

An hon. MEMBER: Where did the hon. member get those figures?

Mr. KUHL: They will be found on page 2689. I do not know where the leader of the social credit group obtained them, but those are the figures that were quoted. The point the hon. member makes is this: "In some strange way 20 billion dollars' worth had disappeared." I do not believe that any social crediter in this house ever maintained that the difference between the price values of goods and the total income ever disappeared. What we have constantly maintained is that the difference between the 60 billion and the 40 billion never existed as money. That is one point which the orthodox economists apparently are unwilling to accept. To-day a manufacturer makes goods and he makes prices, but he does not make money. When I say "make money" I am speaking in the literal sense and not as we ordinarily speak of making money. The only institutions which make or create money are the banks. Factories made goods and prices but not money. This 15 billion to which the hon. member for Huron North made reference never existed as money. He continues:

> There was an explanation for 5 billion dollars' worth of this in the payment of life insurance, but there was no explanation for the disappearance of the 15 billion dollars' worth of purchasing power.

The hon. member is mistaken when he draws the inference that any social crediter ever maintained that that 15 billion repre-

sented purchasing power; it does not; it never existed as money; it existed only as prices. Then he continues:

I have seen magicians stand upon a platform and pull rabbits out of a hat, hand them to a boy and have them disappear the next minute, but I have never seen a rabbit cause a man to disappear from a platform.

Well, I maintain that is exactly what the hon. member is endeavouring to do by supporting the monetary policy which he has supported. He is endeavouring to get this country out of debt by going further into debt. He is trying to make the rabbit make the man disappear from the platform. He can no more get this country out of debt by a debt creating system than he can get out of a hole by digging the hole deeper. He continues:

Here we have a member of the House of Commons who has been able to accomplish the impossible. By a mere twist of the fingers, 15 billion dollars' worth of production disappears.

The leader of the social credit group did not make the inference or the statement, that the production disappeared. The hon. member continues:

I challenge my hon. friend and the members of the social credit party in this house to tell us where that 15 billion dollars' worth of production went.

Well, this is where it went. In the United States, as all hon. members know, consumption was financed, and financed in different ways. All money that was issued as relief money was financing consumption. We know that many millions of dollars have been paid out by the federal government of the United States to producers of wealth for not producing, for restricting their production. We know that a great deal of wealth has been sabotaged. That is where the 15 billion dollars' worth of production went. But all this money which was issued for consumption was written up as debt, and the debt of the United States has constantly increased because of that. It is much the same thing that social credit members would be instituting with the exception that this consumer purchasing power would not be written up as debt. Then the hon. member continues:

They say that perhaps this production is lying on the shelves of the merchants, but I would never accuse capitalism of producing 15 billion dollars' worth of goods which it could not sell.

There is no accusation in that. What has that to do with accusation? Then he continues:

[Mr. Kuhl.]

Has it disappeared into the pockets of the bankers?

No it has not, because it never existed in the first place.

I do not think our banking friends are so smooth as to get away with that much without losing their equilibrium. I do not believe that has happened, and I do not know where this amount has gone. My hon. friends say that it has disappeared, and I ask them to search for it and find out where it is.

His hon. friends never did say it disappeared. As social crediters we maintain that the difference between total income and total price values exists only as prices, not as money or purchasing power anywhere in the system.

Then the hon. member continues with an illustration of a book, and then he says:

There is only one thing which could possibly arise, and I should be very glad indeed to hear my hon. friends deal with this matter. There is a possibility that in some part of the process some man might have got too much while others got too little. It is following largely the teaching of Major Douglas when I say that perhaps someone got too much, but I doubt very much whether any of it disappeared.

Major Douglas does not teach that principle. Major Douglas maintains that there is never sufficient money in existence to buy all the goods that are produced.

I should like to quote one passage from page 125 of Major Douglas' book Warning Democracy:

Economic advantage to the ordinary man means money advantage, and he has the idea, if he thinks about the matter at all, that there is only just so much money in the world, and if one man has more then the other must have less.... The poor are poor not because the rich are rich, but because there is not enough money, or more correctly, purchasing power, to make the poor rich, or even comfortably well off, even if the whole of the money possessed by the rich were taken from them and equally divided amongst the poor. The result of attempting to enforce the latter policy, and such an attempt is being made in many countries to-day under the stress of public pressure and democratic politics, is merely to accentuate the difficulty and still further to increase the grip of the financiers since the distribution of purchasing power, largely through the agency of wages, depends to a considerable extent on the buying of articles which would not be produced at all if the existing amount of money were equally divided, since no one would have enough to buy articles which may be said to be above the most mediocre standard of living.

The hon. member continues:

The enigma of the social credit system is the disappearance of the value of production which they cannot trace and which they have made no attempt to trace.

I cannot comprehend what the hon. member means by that statement. Apparently he knows the price of everything and the value of nothing. He continues:

That is, my hon. friends in the social credit section of the house, make the claim that production is vastly in excess of consumption.

That is correct; we do maintain that production exceeds consumption, not only actually but potentially. He continues:

... that there is therefore a large surplus, and that this surplus could be distributed. During 1928 and 1929 there probably was a fairly substantial surplus; it went into savings.

I am at a loss to understand what the hon. member is talking about in this instance. Is he talking about money or goods? He says that through 1928 and 1929 there probably was a fairly substantial surplus. There was a surplus of what? Was there a surplus of money or a surplus of goods? Then he says:

It went into savings, into investment, into expansion of plant. But if you are going to get a dividend out of the surplus you must first take it from the people who have it, tax it into your government and then distribute it again as a dividend.

Mr. Speaker, the hon. member has not made the statement correctly. Social crediters do not maintain that dividends can be obtained from existing income. If all incomes as they exist were distributed there would never be enough to buy the total of the goods offered for sale. He continues:

I hazard this statement—I think it is capable of proof—that during the last few years consumption exceeded production.

What does he mean by that? Does he mean that we consumed goods which were never produced? I am very much tempted to repeat the words we often hear, "Consistency, thou art a jewel." I should like to take more time than I have taken, but the time is passing and I must turn to the last part of the hon. member's speech. He continues:

They propose what has been called a cultural inheritance.

Social crediters have never proposed any such thing; the cultural heritage is here. It was obtained for us by our ancestors; we did not propose it. The hon. member continues:

But I submit that we are getting our dividends right now.

I wonder whom he means by "we," when he makes the statement "we are getting our dividends." If he means the bankers, bondholders, and presidents of corporations, then probably he is correct. His remarks continue:

It is paid to us. That is true of all the great inventions which we have. We are enjoying the dividends now.

I would ask the hon. member if he would dare go into the homes of unemployed or people who are living from hand to mouth, or living on subsistence incomes, and tell them that we are enjoying our dividends to-day? He concludes with this statement:

I have touched lightly upon one or two of the problems in relation to social credit.

I think he was correct when he said that he touched lightly. Then he makes this further statement:

It would be interesting if we had in this house a free discussion of the question, because I think there is nothing quite so easy as to puncture some of these bubbles.

I insist that the hon. member who composed this article is the one who is blowing the bubbles. He certainly cannot demolish the social credit theory with arguments of that kind. When he begins to attempt to demolish the social credit theory in that manner he has his head against a stone wall, and it will take a better head than his to move it.

An hon. MEMBER: Time is up.

Mr. KUHL: I think I have about ten minutes yet. An hon. member has suggested that time in this chamber costs $2,000 an hour. Well, I would like to suggest that much of the time which has been already spent in this house has been absolutely wasted. I think if the time taken up in the discussion of high or low tariffs had been spent in a discussion of the creation of money it would have been of far greater benefit to hon. members and to the people of the country generally.

I have not half finished my remarks, so I will content myself with dealing with the last portion of my address. I should like to say a few words with respect to the unemployed and work. During the course of the debate on measures respecting unemployment we heard a great deal of discussion concerning unemployment relief, old age pensions, pensions for the blind and for ex-service men. I think it is a shame that in this day and age we should be debating questions of that kind; they should be history. Economic security to-day, in this age of mass production, should be an established fact. We should not be debating as to whether or not the unemployed should have relief, or whether old age pensions, pensions for the blind or for ex-service men should be given. We should be debating the best type of policy which could be instituted to make the lives of these individuals most happy. I repeat that in this day and age economic security should be an established fact.

It has been often said during this session that we are struggling through a depression.

We have not depression; we are in an oppression. The so-called depressions we have had were not depressions. The only depressions we have experienced are those in which providence has failed to bestow its blessings on this earth, and there have been very few years since this country was settled when we have had a depression.

Mr. WILTON: Do not blame providence.

Mr. KUHL: We certainly do not blame providence. What we have been suffering from is an oppression by the bankers. What we call a depression is man-made, and it lies within the power of man to help himself out of this so-called depression, which is actually oppression.

We have had a great deal of discussion on motions and resolutions seeking to provide employment for the unemployed. In this day and age I think we should be more careful with respect to the terms we use. There are several ways by which the term "work" may be explained. I agree with all attempts by the government and others to provide necessary public works. I believe that necessary work is necessary, but I disagree entirely with the idea of deliberately trying to provide work. We have to settle in our minds, first of all, when we talk about work, what is the object of our economic system. Is it to provide work or is it to provide goods and services? I believe that the object of an economic system is to provide goods and services irrespective of whether or not it takes work through human hands. I believe, if we get down to fundamentals and agree on them, we can make some progress, but so long as we maintain that the object of an economic system is to provide work we shall not get anywhere. The unemployment situation is not a sign of decay; it is a sign of progress. We should be using the machine wherever possible. If the object of an economic system is the provision of work, it would be very simple to provide it. Why not put all the unemployed on the highways with teaspoons and table-knives? You could put the unemployed to work in that way. The purpose of an economic system is to provide goods and services and not work, and when you introduce the necessity of work into an economic system you are introducing something that is purely extraneous.

We must also distinguish between voluntary work and involuntary work. It is necessary for man to do voluntary work if he is going to obtain the most out of life. There are two kinds of involuntary work, or forced labour: that forced by man, and that forced by nature. That forced by nature is dignified and is necessary; that forced by man is unnecessary and servile. Man has been endeavouring to free himself from both kinds of forced labour ever since the history of man began. He has achieved to an outstanding degree freedom from nature's forced labour, but he still has to obtain freedom from man's forced labour.

The only method by which we can to-day distribute the goods which are produced and are upon the shelves, and for which there is no purchasing power in existence, is by placing purchasing power right in the hands of the consumers. There is absolutely no other way. The facts have been presented again and again to show that it is absolutely impossible with existing incomes to distribute the goods that can be both actually and potentially produced. I had intended to deal in some detail with the question of consumer purchasing power, but the time has gone by and I trust I shall have another opportunity to do so.

In conclusion, I should like to give two quotations to refute the argument that dividends would tend to demoralize people. But first let me say that so far as demoralization through the dividend is concerned, I do not think that is a matter with which the government should concern itself. A government should see that all goods which are produced are distributed. When it comes to demoralization as a result of consumer purchasing power, the government is stepping outside of its realm in dealing with that. That is a matter for the church and the school to deal with. Nevertheless I would like to place on Hansard two quotations to show that a dividend or consumer purchasing power or leisure does not tend to demoralize people.

During the boom period which came soon after the end of the war, the international labour office issued a questionnaire on the subject of the use of leisure by those whose shortened hours had made the question a live one, and in the following year, 1924, they reported on the replies, as follows:

> It has been ascertained that excessive drinking has become less frequent in those centres in which the working day has been shortened. Excessive drinking is frequently the result of overwork, since the workman, tired by the continuous effort required by long working hours, is tempted to seek relaxation by going from the workshop to the public house. It is clearly shown by the general tenor of the evidence given and the declarations made by representatives of employers' and workers' organizations, by secretaries of provincial councils, by industrial employers, etcetera, that not only has the new system failed to produce any increase in intemperance, but that, on the

contrary, it has been one of a number of other important causes of the marked decrease in drunkenness which is attested by fiscal and judicial statistics. The worker welcomes the opportunity of improving his home and taking exercise in the open air. Workers' gardens and sports clubs have increased in number, and sport has a beneficial effect upon health and character.

Elsewhere we read this:

In all countries the introduction of the eight hour day has resulted in increased attention to sport on the part of the workers. The movement for physical development is rapidly gaining ground amongst them. In many cases the workers' organizations themselves take the initiative in founding sport clubs. This is particularly true in Great Britain and the United States. In Germany also; according to information supplied by the Commission for Physical Training, the number of members of the chief sports clubs increased from 1,586,000 in 1914 to 2,955,000 in 1922. The number of members of workers' associations exclusively devoted to sport and athletics increased from 186,000 in 1914 to 382,000 in 1920.

Mr. SPEAKER: The hon. gentleman's time is exhausted.

Mr. KUHL: I would like permission, Mr. Speaker, to conclude in one sentence. I verily believe that we are actually on the verge of a promised land, but I wonder very seriously whether ours will not be the fate of Moses of old, that of merely viewing it from afar without actually participating in its pleasant benefits.

Mr. D. A. McNIVEN (Regina City): Mr. Speaker, I do not intend to follow the hon. member for Jasper-Edson (Mr. Kuhl) in two respects. In the first place, I intend to support the budget for certain reasons which I shall outline. In the second place, in the most emphatic language and in the most generous terms possible, I hasten to associate myself with others who have preceded me in extending my sincere personal congratulations to the Minister of Finance (Mr. Dunning) upon his clear, logical, lucid, analytical and comprehensive statement of Canadian finances. That statement and its presentation justify the confidence and satisfaction which spread clear across Canada when it became known that the hon. gentleman had accepted the invitation of the Prime Minister (Mr. Mackenzie King) to join his government. Nowhere did that wave of confidence and satisfaction find a more sincere expression than in the city of Regina and the province of Saskatchewan where the hon. gentleman had spent a great part of his life.

The budget statement itself presents the actualities of Canadian finance. It contains the possibility of development in the future that will redound to the advantage of the Canadian consumer. There are in the budget four matters, among others, which appeal to me:

(1) The reduction in the duty on agricultural implements;

(2) The reduction in the duty on automobiles;

(3) The reduction in the duty on textiles;

(4) The removal of artificial valuations for duty purposes which had existed previously. These are moves in the right direction, and they were introduced as a means of benefiting the Canadian consumer and the Canadian citizen. They constitute a substantial variation and departure from that economic nationalism, that system of bonuses, high tariffs and subsidies which during the last five years have so successfully dammed the limpid and fertilizing stream of trade.

I am not enthusiastic about the sales tax, but neither is the Minister of Finance. However there is no occasion for pessimism as this tax was increased only as an absolute necessity. When the Liberal party came into power in 1922 it was faced with a large deficit, a large adverse balance of trade, and every field of taxation had been fully canvassed. The government of that day found it necessary to increase the sales tax. This tax finally reached a maximum of six per cent. In 1924 the late Mr. Robb found that he was able to balance the budget, and in succeeding years there were annual reductions in the sales tax until it reached a minimum of one per cent in 1930. When Liberalism has had an opportunity to clear the channels of trade; when it has had a chance to put its principles and policies into effect, then we may expect a balanced budget and a gradual reduction in the sales tax resulting in its ultimate elimination.

I hope it will not be regarded as presumptuous on my part if as a lawyer and a representative of an urban centre I deal for a few moments with the question of agricultural implements. The reduction in the duties on agricultural implements, as contained in the Canada-United States trade agreement, was welcomed by the agricultural population of Canada. The increase in prices which followed shortly thereafter has since become a matter of grave concern and anxiety to that population. Nothing that has happened in recent months has so aroused the agricultural population of this country as this increase in the price of implements at a time when the farmer found himself in a desperate condition. The reduction in the duties on agricultural implements as contained in the budget is a welcome gesture on the part of the government, and is so received by the farmers of Canada.

This is not the first time that the question of the duties on agricultural implements has been discussed in this house. This has been a moot question at many sessions since 1876. I should like to make one or two references to incidents that have occurred in this house and in committee. In 1876, under the government of Sir Alexander Mackenzie, a committee of the house heard evidence given by Mr. Frost of the Frost and Wood Company, who was asked these questions, to which he gave these answers:

Q. How does the cost of material, rent, and labour in the United States compare with the cost in Canada?

A. The machine we sell at Prescott at $75, twelve months' credit, is sold by the American manufacturers at Ogdensburg, at $100.

Q. Still you sell cheaper than the manufacturers in the United States?

A. Yes, 25 per cent. By competition we succeeded in driving them all out of the country.

Apparently the manufacturer of those days was made of sterner stuff than the manufacturer of to-day. John Watson, of Paris, Ontario, also appeared before the committee in 1876. He said:

I have worked up my business, commencing with two men up to what it is to-day, increasing each year. Just as my capital increased I put it in the business.

He was asked this question:

If we adopted a policy which would require protection to iron manufacturers as well as other trades, the effect of that would be injurious to your trade?

To which he replied:

Yes; I think our business is protected just as much as it is necessary to protect it. The American can do nothing in the way of sending their goods here. We can compete with them in any shape, and we produce an article which they cannot excel.

Mr. Watson was then asked this question:

Do you believe the policy of the present government in not protecting home industries is a good policy, allowing the Americans to flood our markets with goods?

This venerable gentleman answered as follows:

I think it is better to do that than to increase the tariff—because the foundation of this country is agriculture and if you increase the tariff for the benefit of manufacturers, of course it must be disadvantageous to the farmers. I have noticed that in a season when the farmers were prosperous, the better position they were in, the better position I was in.

Industry does not seem to have yet learned that lesson in a practical way. We heard from the hon. member for Greenwood (Mr. Massey) with respect to the Massey-Harris Company. It seems to me that the management of that company has not now the same breadth of vision which it had in 1876.

[Mr. McNiven.]

Mr. MASSEY: I should like to correct the hon. member. I stated very clearly in my remarks that I have had no connection with the Massey-Harris Company for four years, nor has my family.

Mr. McNIVEN (Regina): I did not allege that my hon. friend had any connection with the Massey-Harris Company at the present time. I might go on to say that it is my regret, that it is probably too bad that my hon. friend's family did not continue their connection with that company. Had they done so it might have been better for that company and for the farmers of Canada. Mr. Massey, the president of the company, said in 1876:

We may also add that the existing tariff is satisfactory to us—

It was then fifteen per cent.

—and is sufficient protection. Perhaps even a little less would also be. A still further advance in the tariff would certainly prove adverse to our interests.

That continued until 1883 when, under the national policy, Sir John A. Macdonald increased the tariff to thirty-five per cent, and remained there until 1894 when industrial and agricultural conditions throughout the length and breadth of the country had reached such a stage—had been driven into the doldrums—through the operation of that industrial policy that the tariff was reduced in 1894 to twenty per cent, where it remained until the year 1907. In 1907 the tariff was reduced to 12½ per cent under the British preference, 17½ per cent under the intermediate, and 22½ per cent under the general. May I point out that prominent men in the Conservative party have not always thought as they do now with regard to the duties on agricultural implements, for in the spring of 1911, when he was representing a rural constituency and sitting in opposition, the Right Hon. Mr. Meighen moved in this house a resolution in these words:

That in the opinion of this house a substantial reduction in the import duties on agricultural implements is now due the agriculturists of Canada and is in just accord with the true end of a protective tariff.

Enlarging upon that motion, Mr. Meighen used this language:

Now, sir, what are the manufacturers of agricultural implements enabled to do? They are able, under this tariff, to exact a higher price than they could exact if the tariff were lower. I do not say that a reduction will, to any very enormous extent, affect the price; I believe it will materially, and I think it will render some relief to, particularly, the farmers of the west, many of whom, notwithstanding any statements that have been made

here, are struggling between success and failure every hour. It will accord some relief to them and I believe it is the bounden duty of the government to so afford it.

If ever there was a time in the history of this country when the farming population both east and west needed relief, now is the time.

Mr. Meighen continued:

From 10 to 20 per cent is about the addition which these manufacturers are able to obtain from our farmers, by reason of the increased protection afforded them by this government.

But it has remained for this government to push the line far beyond that, and they have not only given the manufacturers a grip on the whole home market, but practically given them a monopoly of it and they have taxed the consumer in order to push the manufacturers and their industries successfully into the markets of the world.

He was speaking of a time prior to 1911 and it seems to me that that paragraph is eloquently descriptive of conditions which have existed during the last five years. He concludes with this statement:

But before I go into that, let me give a few figures to show that the conditions of manufacture at the present time do not warrant a very material duty of any kind ... and I think I will convince the house that there is very little, if any difference in the cost of production of these machines on this side of the border and in the United States.... They (the manufacturers) are able under this tariff to exact a higher price than they could exact if the tariff were lower. It (the reduction of the tariff) will accord some relief to consumers and I believe it is the bounden duty of government to so afford it.

For a generation or more the farmers of Canada have been definitely of the opinion that the tariff did increase the price of agricultural implements, and they were confirmed in that opinion by the statements of such leading men as the Right Hon. Mr. Meighen. In 1914 the duty on agricultural implements was reduced to 12½ per cent under the general tariff. In 1920, speaking on this subject, the president of the Massey-Harris Company said:

Speaking on behalf of the company which I represent, I emphatically state that the privileges which are conferred on us by the protective duties have not been of very great advantage to us....

So far as the Massey-Harris Company is concerned, even to-day, examining it from the only standpoint of money making the company would perfectly be willing to face the withdrawal of the protective duty on farm implements, "if at the same time the tax was lifted upon all material which enters into their manufacture."

In 1922 when the Liberal government came into power there was a slight reduction in the duty and in 1924 that duty was reduced to six per cent. Reading the debates of that time I am amazed that our Conservative friends of that day should have regarded that tariff rate as free trade. They painted a gloomy picture of a destitute industrial life, migration to the United States and the devastation of industry generally. It is all very difficult to follow. The hon. member for Parkdale (Mr. Spence), speaking on May 1, 1924, used this language:

For free trade would drive away our population. Free trade would shut up our industries and the population would leave the urban centres.

He was concerned for the future of the city of Hamilton, for he went on to say:

As a result the population of Hamilton would soon be reduced from 110,000 to 50,000. This may actually occur, because a free trade policy is bound to bring about such a result if it does nothing else. My hon. friend here (Mr. Senn) is a truck farmer and lives within twenty miles of Hamilton. He does not do any growling. On the contrary, he is bringing in his produce and finding a ready market for it in Hamilton, for the city has a population sufficient to consume all the fruit and garden truck grown within forty miles of its boundaries. But what is going to happen when we depopulate this urban centre? What are we going to do? Land will drop in value fifty per cent because the price of land fluctuates with the price of farm products.

Addressing the treasury benches he said:

You gentlemen need a little more experience. Your mind is too narrow; you are continually thinking of yourselves to the exclusion of everybody else.

Is that not a gloomy picture? Well, we are happy to say that that picture was not realized. The city of Hamilton, then with a population of 110,000, by 1931 gloried in a population of 155,000, and we have the hon. gentleman to whom he referred in such lugubrious terms, the member for Haldimand (Mr. Senn), sitting in this house looking hale, hearty and prosperous.

Then too at this time Mr. Thomas Bradshaw, who was then general manager of the Massey-Harris Company, gave evidence. I will not refer in detail to that evidence except to read this:

I will not say all our machines, because that is not the case, but some machines are manufactured more cheaply in the States than they are in Toronto, and vice versa.

I cite that just as an illustration of the fact that the question was gone into with great thoroughness and in great detail. I was also interested in reading the speech delivered by the present hon. member for Broadview (Mr. Church), who at that time declaimed against the reduction in the duty on agricultural implements, because he said it would foment and augment the migration of workers to the United States. He pictured the disappearance of the Massey-Harris Company; he seemed afraid that they would take Massey

Hall and the Hart House string quartet with them. He was in a gloomy mood when he spoke on that occasion, and he concluded with this bit of verse:

> Ill fares the land to hastening ills a prey,
> Where free trade flourishes and men decay.

He affirmed his belief in the Bible, but he said, "I have no belief in either Exodus or Lamentations." That was the situation in 1924, but happily what he feared did not come about; his fears did not materialize. But in 1930 he was the supporter of a government that created for him a condition which brought to realization his fondest hopes. It gave him protection to the *n*th degree, and then from 1930 to 1935 we had an exodus of employees from the factories of this country, an exodus from the payrolls, and throughout the length and breadth of the land there were lamentations. At that time, in 1924, Mr. Massey confirmed what had been done. He said that he was perfectly satisfied with the reductions in the duty and that, as far as the Massey-Harris Company was concerned—and he said no doubt this would apply to other implement companies—there would be passed on to the farmers by way of reduced prices the complete saving effected by the remission of the sales tax and the lessened duties on raw material. The farmers of this country expect the implement industry to do now what was done in 1924.

In the most eloquent terms the hon. member for Greenwood (Mr. Massey) followed the practice of Conservative members during this session and deplored the reduction of any duties because of the effect that would have on industrial workers. He feared for their financial future. He was in favour of a high tariff and a monopoly for the benefit of the industrial workers. The names Massey and Cockshutt have been associated with the implement industry for generations, and I hope the hon. member will not take offence when I say that in the mind of the agricultural population the names Massey and Cockshutt have been associated with great wealth, accumulated in the farm implement industry. Therefore, when they speak of colossal losses so far as agricultural implements are concerned, it is difficult to understand, particularly where the Massey-Harris Company is involved. At page 63 of the report of the price spreads commission it is stated that in the years 1927, 1928 and 1929 the agricultural implement companies made $16,000,000, while in the years 1930 to 1934 they lost $11,000,000. The report goes on to state that their method of doing business since 1929 was an "inflexibility in price" and "a flexibility in production." There is just one expression appearing on page 62 of that report to which I should like to refer, because it sums up the situation pretty well:

> The result has been that the farmer, the industry's sole customer, whose income has been drastically reduced through the falling prices of primary products, and who has relatively little bargaining power, has been compelled to pay what he regards as high prices to a monopolistic manufacturing group for the essential tools of his trade, at a time when he could least afford it.

At page 66 the price spreads committee also state that there is no competition in price so far as the farm implement industry is concerned. There may be some competition in the matter of service, as to parts and in salesmanship, but the managements have seen to it that the price has been maintained. The viewpoint of the farmer is pretty well summed up at page 298 of the report, and I think this is well worth placing on Hansard because it comes from a man who, by reason of his clear-headed thinking during the progress of that inquiry, made himself a national figure. I refer to Mr. Ed. Young, who said:

> The implement manufacturers made a mistake many years ago when they joined the Canadian Manufacturers' Association in support of a fiscal policy calculated to exploit the only customers they had. Now that the exploitation is complete they find themselves without customers. Had they joined the farmers' associations in their fight against tariffs they might have created a saner sentiment in regard to these matters throughout the country and perhaps have saved us from some of the extreme tariff rates we now endure, and which have been the major factor in rendering the farmer unable to buy the implements he needs.

I have said that there was no competition. This report also indicates that the difference between the cash and credit price to the farmer is about fifteen per cent. It is also stated that in 1927, without the importation of agricultural implements to the tune of nearly $20,000,000, the production in Canada would not have been sufficient to take care of the export and domestic trade. Prior to the war the Massey-Harris Company devoted sixty per cent of their production to export trade, and this report indicates that since the war they have exported between sixty and eighty per cent of their production. It does seem to me that the Massey-Harris Company and other similar organizations are suffering to-day from loss of markets, particularly the loss of that export market due to the very conditions—increased tariffs—which they would perpetuate in this country. It appears to me that as a result of high tariffs the consumer pays more to a monopoly. He pays more to enable that monopoly to produce goods of which a large part find their way to the export

market. He pays more in another direction, also, because industry in the doldrums finds ways and means of reducing costs, generally at the expense of labour and, as has happened time and again, during the last five years the cost of maintaining that unemployed labour has fallen upon the state at large. The agricultural population of Canada asks for a reduction in the duties on agricultural implements; they ask for reductions in the price of agricultural implements. They ask for such reductions because they desire to place themselves in a position to produce at a price that will enable them to sell their product in the markets of the world in competition with Russia, Roumania, Argentina and other countries.

The hon. member for Greenwood wailed and lamented over the hardships of the industrial worker. May I tell him that if western Canada gets a crop and can market that crop at a fair price he need have no misgivings or worries so far as the industrial worker is concerned. Owing to conditions in western Canada during the last five years there is not a farm that does not need new implements, new hardware, new furniture, paint, glass, repairs of every kind that you can think of. If we get that crop—and it is coming, six inches of snow in western Canada last Friday—that good crop we are always hoping for, I say to the hon. member that he need have no worry about unemployment in the industrial plants; they will be so busy supplying the wants of western Canada that they will not even be able to take time off for lunch.

Yesterday the hon. member for Carleton (Mr. Hyndman) deprecated and deplored the fact that large amounts of money were being voted for western Canada without corresponding votes for Ontario, and he asked the reason. May I briefly tell him. In the years 1928 to 1935 in western Canada farmers have been frozen out, everything except the mortgages, dried out, everything except the mortgages, rusted out, everything except the mortgages, blown out, everything except the mortgages, prices declined for everything except the mortgages, and there is to-day such an accumulation of debt and such a condition has been created because there was no production that they were unable to maintain themselves. Because of the conditions the former government advanced large sums to western Canada—and I commend them for the action they took—and this government has continued and enlarged upon that policy for the benefit of those people who have suffered in what may rightly be called a national calamity. And may I say to the hon. member that if his county of Carleton should ever be so afflicted, which God forbid, the province of Saskatchewan and western Canada will extend to that county a helping hand. They would marshal the assets of western Canada to come to their rescue, as an expression of our conception of what confederation means, and in direct and definite appreciation of what has been done for us.

There is another point I had intended to deal with; I shall touch on it only in one way, and that is to express the disappointment and dissatisfaction of the general public at the fact that the automotive industry has found it necessary to increase the price of cars by the increase in the sales tax which has been imposed. Canada has dealt kindly and generously with the automotive industry. General Motors has 43,000,000 shares issued, and at to-day's price they have a value of $2,870,000,000. No one ever believes that General Motors is able to maintain fifty-three high-priced executives in the United States on a profit of only seventy-five cents on a car. Then look at Ford Motor Company, incorporated in 1904 with an initial investment of $125,000. That company has paid in cash dividends $22,813,000. They have reinvested undistributed profits approximating $27,000,000. That original $125,000 investment is now represented by 1,400,000 no par value shares which have a value on the markets of New York to-day of over $31,000,000. The people of Canada have dealt kindly and generously with the Ford Motor Company. I agree that it is a great institution, but I think the Ford Motor Company might have found ways and means of absorbing that small increase in the sales tax and set an example to Canadian industry, inspiring some degree of confidence in the minds of the afflicted farmer and those who have suffered so much.

Now, if I have a moment I would like to say a word on behalf of the blind. For twelve years the blind people have been coming to this parliament. For twelve successive years they have been showered by this house with platitudes. We have sympathized with them in their affliction; we have spoken to them in the most generous language, but we have never done anything for them except a minor vote once in a while. We were taught in our youth that nature and divine providence have a simple way of exacting compensation for our refusal to obey her laws and precepts. If that applies to individuals it applies likewise to nations, I firmly believe. It may be that the troubles and difficulties which we have

experienced during the last few years have come to us partly because of our refusal to recognize and act upon our responsibilities to these unfortunate people who are afflicted in a way that it is impossible for any of us who have our sight to appreciate. Let us give further consideration to their request. I never saw the Finance minister in a more disheartened mood than on the evening when he announced that it would not be possible to carry into effect that resolution. He would like to have done so; let us encourage him. The supplementary estimates are still to come down. Let us follow the poet, who said:

> Because right is right
> To follow right were wisdom
> In the scorn of consequence.

I see my time has expired and I will therefore conclude.

Main motion (Mr. Dunning) agreed to, on division.

## WAYS AND MEANS

### CUSTOMS TARIFF AMENDMENT

The house in committee of ways and means, Mr. Sanderson in the chair.

Progress reported.

## ADJOURNMENT—BUSINESS OF THE HOUSE

Mr. MACKENZIE KING: To-morrow it is proposed to take up the resolution which appears in the name of the Minister of Justice

(Mr. Lapointe) with respect to an amendment to the British North America Act, and if time permits such of the special estimates as remain.

Mr. CAHAN: Might I suggest that it was agreed by the Minister of Justice (Mr. Lapointe) that prior to the discussion of this motion for the adoption of the address, he would bring down what correspondence there was with the provincial governments dealing with its subject matter. We have been waiting for correspondence dealing not only with the proposed loan council but with the other to some extent radical amendment to the British North America Act with regard to indirect taxation. It is almost unprecedented as far as this parliament is concerned, and if there is correspondence it certainly should be brought down in time to be considered before the discussion of the address.

Mr. LAPOINTE (Quebec East): I do not believe there is much correspondence with regard to this special feature of the address, namely, the right given to the provinces to impose some sort of indirect taxation. I think those matters were discussed orally at meetings of the conference and subconferences. However, I will look into the matter and possibly I may supply my hon. friend with whatever correspondence there is.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

---

## Wednesday, May 13, 1936

The house met at three o'clock.

### STANDING ORDERS

First report of the committee on standing orders.—Mr. Jacobs.

### QUESTIONS

(Questions answered orally are indicated by an asterisk.)

#### CIVIL SERVICE COMMISSION

Mr. McCULLOCH:

What was the total cost in the financial year of 1935 of the Civil Service Commission for all purposes?

Mr. RINFRET: $253,676.46.

#### *FEDERAL TAXATION BY PROVINCES

Mr. CHURCH:

What is the total amount of the actual cash taxes paid to the government per annum by provinces, deducting federal subsidies, for the last year of record?

[Mr. Mackenzie King.]

Mr. DUNNING: With reference to this question I find that a similar question was asked in the 1932 session. The then prime minister answered in a manner of which I wholly approve, and I quote his answer:

The question which the hon. gentleman asks I submit should be dropped. It is impossible to tell what sums have been derived from each province for the last five years, and by what department of the dominion government. It is possible to ascertain, as is known to every hon. member in this house, sums collected at the customs houses and income tax offices in each of the provinces. Obviously however, imports at cities like Montreal, Quebec, Saint John, Halifax, or other cities at the seaboard do not always show their destinations, and questions which have been asked in times past in this connection have not produced results. The bureau of statistics have not been able to get the information. It is not a question which the government could accurately answer, and an inaccurate answer would be worse than none at all.

For the same reasons I suggest that the question be dropped.

Mr. SPEAKER: Dropped.

#### HERVAY CHEMICAL COMPANY

Mr. BOULANGER:

1. Why did the Hervay Chemical Company of St. Basile, Portneuf county, as already stated to the house, refuse to produce its books to Mr. Allaire, the auditor, if the said books were correct?

2. How was it that this company in bankruptcy in the spring of 1931 owed the government $21,079.62 for arrears of sales tax if its books were correct and its returns were truthful?

3. Why has the company been prosecuted for refusing to produce its books, if the said books were accurate?

4. Why did Mr. Savary, accountant for the company, make the statements credited to him by the Department of National Revenue in its reply to previous questions, if the books and returns were accurate and truthful?

5. Has the company's indebtedness of $21,079.62 been settled by the Department of National Revenue for $5,227.65 and has the department given the company a receipt in full for the balance of the debt?

6. Who was the legal representative who made the settlement for the company with the Department of National Revenue?

7. Why did the Department of National Revenue allow the company's arrears of sales tax to reach the sum of $21,079.62?

8. Who is responsible for the fact that the sales tax owing by this company to the Department of National Revenue had not been paid and that the tax arrears were permitted to accumulate to the amount mentioned?

Mr. ILSLEY:

1. It has not been previously stated that the Hervay Chemical Company's books were correct. It has been stated, however, that books submitted to auditors were accurate.

2. It has not been stated that returns were truthful. After threatened prosecution by the department concealed records were produced from which Mr. Allaire established his assessment of $21,079.62.

3. Prosecution proceedings were instituted but were withdrawn when concealed records were produced.

4. Mr. Savary's declaration does not deal with accuracy of the company's records.

5. The company went into liquidation in 1932 and the department received $5,227.65 on account of its claim from the trustee in bankruptcy. No receipt in full was given to the company.

6. A settlement was not made. The company went into liquidation.

7. The department had no knowledge of the arrears until the concealed records were discovered.

8. Certain records were concealed. No departmental official was responsible.

PORT MAITLAND, ONT., FERRY

Mr. SENN:

1. Is it the intention of the Department of Railways and Canals to operate the ferry at Port Maitland this year?
2. What is the name of the operator of the ferry in former years?
3. How many years has he served in this capacity?
4. Has the appointment of an operator been made for this year?
5. If so, what is his name?
6. Upon whose recommendation was the appointment made?

Mr. HOWE:

1. Yes.

2. Allan David Ross.

3. Regularly, each season, from 1912 to 1929, inclusive. In March, 1930, ferry service was ordered discontinued, and Ross granted two months' retiring leave with pay.

In July, 1930, ferry service resumed for balance of season only, and George Siddall temporarily employed. Siddal resigned following the 1930 election, when Ross was re-employed. Since 1930, ferry service has been maintained from season to season on a temporary basis, and Ross' services continued in similar capacity up to and including 1935 season of navigation.

4. Yes.

5. George Siddall.

6. Frank Laidlaw.

BORSTAL SYSTEM

Mr. CHURCH:

1. Has the Borstal system been established in any of Canada's penal institutions?
2. If so, where?
3. What has been spent on this to date?
4. Will the government lay on the table of the house a copy of a report made by one of its departmental officers on this whole question after his visit to England last year?

Mr. LAPOINTE (Quebec East):

1. No.

2. Answered by No. 1.

3. Nil.

4. The report referred to is included in the annual report of the superintendent of penitentiaries which was tabled on February 10, 1936.

NATIONAL PARKS—ONTARIO

Mr. CHURCH:

1. Has the province of Ontario any federal national park?
2. If so, where is it located?
3. Has the government received during the last two years any correspondence or application with reference to establishing a federal national park in the Muskoka, lake Simcoe, Georgian bay and lake of Bays districts?
4. Has any action been taken on the said request?

Mr. CRERAR:

1. Yes—three.

2. St. Lawrence islands national park comprising part of the Thousand islands in the St. Lawrence river.

Point Pelee national park comprising all the crown lands as shown on the plan of the naval reserve at Point Pelee in the township of Mersea, as surveyed by Alexander Baird, provincial land surveyor, dated September 10, 1881.

Georgian bay island national park comprising Beausoleil island and 28 other islands or parts of islands in the Georgian bay lying opposite the townships of Freeman, Baxter and Gibson. In addition Flower Pot island near Tobermory is also administered as part of the Georgian bay islands national park, although not yet formally added to the park.

3 and 4. No record.

JAMES M. DOUGLAS

Mr. BENNETT:

1. Is James M. Douglas a stipendiary magistrate for the Northwest Territories?
2. If not, was he removed from office, and when and for what cause?

Mr. LAPOINTE (Quebec East):

1. No.

2. Yes, by order in council dated March 30, 1936. He was not removed for cause but for purposes of economy and good administration. His successor is an officer of the Department of the Interior, who performs the duties without additional remuneration.

EXPERIMENTAL FARM EXPROPRIATION

Mr. PERLEY (Qu'Appelle):

1. Has the west half of section 30, township 44, range 18, west of the 2nd meridian, been acquired by the government for experimental farm purposes?
2. If so, were expropriation proceedings taken to secure title to the said property, and what offer was made therefor?
3. Has a price in excess of the offer, if any, made in the expropriation proceedings been paid or agreed to be paid for the said half section?
4. If so, what sum, and when paid or payable?

Mr. GARDINER:

1. Yes.
2. Yes, $11,200.
3. Yes.
4. Cheque for $14,800, issued March 28, 1936.

## QUESTIONS PASSED AS ORDERS FOR RETURNS

SUGAR

Mr. BLACKMORE:

1. In 1935, what was the total number of tons of beets delivered by the farmers to each sugar factory in Canada?
2. What was the total price paid for the sugar beets delivered at each factory in Canada?
3. What was the total number of pounds of sugar manufactured from beets by each of these factories?
4. What was the total market value of the sugar?
5. What was the total revenue of the dominion government derived from the levy on the sugar from each sugar factory?
6. This government revenue is what percentage of the total gross price received by the farmers for their beets?

Mr. RINFRET: Return tabled herewith.

1. How much sugar did the Canadian people consume in each of the years 1930, 1931, 1932, 1933, 1934, and 1935?
2. From what countries did this sugar come, and how much from each of these countries?
3. What percentage of Canada's sugar supply is now produced in Canada?
4. In case of war, would sugar be contraband of war?
5. What encouragement, in the form of subsidy, or in other form, is the United States giving to her sugar producers?
6. What other countries of the western world, Europe and America, are giving some special encouragement to sugar producers?

Mr. RINFRET: Return tabled herewith.

PENSIONS TRIBUNAL STAFFS

Mr. PATTERSON:

1. What were the names and the salaries and expenses per annum of each member of all the provincial staffs, employed under the pensions tribunal from 1930, when the said pensions tribunal was created, until 1933, when the same was abolished?
2. Were the members of the pensions tribunal under contract for any stated period of time?
3. When the pensions tribunal was abolished, did the salaries of the members automatically cease, or were they further reimbursed for loss of anticipated salaries?
4. What were the total amounts expended by the board per annum in each province, including total salaries, total expenses and total administration costs?

## MOTIONS FOR PAPERS

COAL INQUIRY—FALSE MINUTE BOOK

Mr. LACROIX (Beauce):

For a copy of all letters, documents and report of proceedings sent the Attorney General of Quebec by the Registrar of Combines referring to the presentation of a false minute book by the Quebec Coal Dealers' Association during the investigation into an alleged coal combine held at Quebec and as referred to in the English transcription of the report of the registrar on page 147, lines 11 to 22 inclusive.

GOVERNMENT APPROPRIATIONS AND EXPENDITURES BY PROVINCES

Mr. MUTCH:

For a return showing: (1) the total amount asked for in the estimates, special estimates and supplementary estimates, for the fiscal year ending March 31, 1937; (2) the total amount to be expended by each of the several departments of the federal government in each of the nine provinces of Canada.

Mr. DUNNING: May I point out that the information sought in part 2 of the order cannot be given accurately, because there are so very many expenditures of the federal government which cannot be divided into provinces. There are matters of interest, war pensions and others which will occur to the minds of hon. members. Subject to this qualification I have no objection to the motion.

Mr. BENNETT: It cannot be completed until supplementary estimates are brought down, if any.

Mr. SPEAKER: Adopted, with the reservation mentioned.

QUEBEC WHARF RENTALS

Mr. BOULANGER:

For a copy of all leases and transfers of leases, actually in force, concerning the renting of space on the wharves in the harbour of Quebec

Mr. HOWE: May I point out that this motion refers to all wharves in the harbour of Quebec. Manifestly many of those are

not in any way connected with the government. Some are railway property, in respect of which it is not customary to give information of this kind. It is doubtful whether such information should be given as to harbour leases. I submit that the hon. member should either reword the motion or drop it, preferably the latter.

Mr. BOULANGER: I should be content with copies of leases granted by the former harbour commission on wharves belonging to the harbour commission. May I say further that I should be satisfied with abstracts of leases, showing the names of the parties, the consideration, length of term of lease, and so on.

Mr. HOWE: If the hon. member will recast the motion in that way, I can see no objection to it.

Mr. SPEAKER: Carried, with that reservation.

## BRITISH NORTH AMERICA ACT

### PROPOSED AMENDMENT RELATING TO TAXATION AND GUARANTEE OF PROVINCIAL DEBTS

On the notice of motion of the Minister of Justice (Mr. Lapointe) for an address to His Majesty the King praying that a measure be submitted to the parliament of Great Britain and Ireland to amend the British North America Act with respect to taxation and guarantee of provincial debts:

Hon. ERNEST LAPOINTE (Minister of Justice): Mr. Speaker, last night the hon. member for St. Lawrence-St. George (Mr. Cahan) objected to our proceeding to-day because some correspondence referring to the matter had not been tabled. I have looked into the matter—

Mr. CHURCH: Mr. Speaker, I rise to a point of order, as to whether this resolution is in order.

Mr. SPEAKER: Order.

Mr. CHURCH: I wish to speak to a point of order.

Mr. SPEAKER: Order; I ask the hon. member to sit down. The Minister of Justice has the floor.

Mr. LAPOINTE (Quebec East): There is some little correspondence in the Department of Justice, which will be tabled this afternoon. Then there is some with the Department of Finance, and it will be laid on the table at the same time.

Hon. C. H. CAHAN (St. Lawrence-St. George): There was evidently some misunderstanding last night at adjournment. I referred particularly to correspondence dealing with the authorization to provinces to impose indirect taxation in certain instances. The misunderstanding was partly due to an incident which occurred during the unavoidable absence of the Minister of Justice from this chamber. On April 1 the Minister of Finance (Mr. Dunning) read into Hansard the correspondence between himself and the government of the province of Alberta. Then, on May 1, in his budget address he stated:

> I may add that after the most careful consideration we are prepared to recommend certain modifications to the loan council arrangement originally suggested.

Then the Minister of Finance proceeded to say:

> I might advise the house that the modification to which I have just referred is being communicated to all the provinces, particularly those primarily concerned, and of course will have their consideration, and we shall hear from them with respect to it before very long.

It is this correspondence, which has not yet been laid upon the table of the house, to which I also particularly referred last night.

Mr. LAPOINTE (Quebec East): The correspondence mentioned by the hon. member does not relate to the subject matter of the resolution. It is with regard to the details and particulars under which a loan council in Canada would be established, and the advantage which would be taken of the authority which the parliament of Canada would receive to guarantee loans made by provinces, and the taking of security on account of those guarantees. It is rather in relation to the legislation which will be submitted to parliament once the amendment to the British North America Act is enacted. I do not think it has relation to the subject matter of the address itself.

Mr. CAHAN: I find it almost impossible to understand clearly the purport of the amendment proposed to the British North America Act dealing with matters relating to the proposed loan council. I thought possibly the correspondence might clarify the intention of those who drafted the proposed address.

Mr. LAPOINTE (Quebec East): If there is no objection, I should be pleased to table the whole thing.

Mr. BENNETT: As long as we get it sooner or later.

Motion stands.

Mr. T. L. CHURCH (Broadview): Mr. Speaker, I would like to ask the Minister of Justice (Mr. Lapointe) a question. In addition to bringing down the correspondence

that was asked for by the hon. member for St. Lawrence-St. George (Mr. Cahan) with reference to the resolution standing in the name of the Minister of Justice, will the minister consider widening the discussion on his resolution to include a discussion of the resolution in my name at the top of page 12 of the order paper, which has been standing on the order paper since the twenty-fifth of February? My point is that the minister's resolution deals with only one phase of amendments to the British North America Act.

Mr. SPEAKER: Order.

Mr. CHURCH: I am quite in order, Mr. Speaker.

Mr. SPEAKER: The hon. gentleman can present his views when the resolution is reached.

Mr. CHURCH: I am asking a proper question, Mr. Speaker, under the rules of the house, and am now simply laying the foundation for my question. Shall we be afforded an opportunity of discussing the whole question of amendments to the British North America Act along the lines of my resolution, which involves a much larger question?

Mr. LAPOINTE (Quebec East): Mr. Speaker, it is not the intention to extend the scope of the resolution as it stands on the order paper.

Mr. CHURCH: I intend to raise that question as to the anticipation rule when the resolution is under consideration.

Mr. SPEAKER: Order.

## CODEINE

### STATEMENT AS TO CONTROL OF IMPORTATION AND SALE

On the orders of the day:

Hon. C. G. POWER (Minister of Pensions and National Health): During the course of the debate last evening the hon. member for Cape Breton South (Mr. Hartigan) made certain statements respecting codeine which possibly he would not have made had he been in full possession of the facts. So far as the figures given by the hon. member with respect to the importation of codeine into Canada are concerned, the facts related by him are strictly accurate. But in so far as during the course of his remarks he reflected to some extent upon my predecessors in office, and particularly upon the present leader of the opposition (Mr. Bennett), I think it would be well to read a statement furnished me by the department, in order that the house may be in full possession of the facts with respect to this drug.

Codeine was included in part II of the narcotic schedule during the year 1933, which placed the control of the import and export of such drug in the hands of this department, and which drug as a result could be legally imported or exported only by licensed narcotic wholesalers. The whole question of codeine has been referred to the health committee of the League of Nations for investigation into its addiction properties, which question is under study at the present time, and no report has so far been received. The only country so far as I am aware which has placed codeine on the addiction list is the United States of America.

As a result of a discussion with the Canadian Pharmaceutical Association and subsequently with a number of narcotic wholesalers, a cooperative scheme of control of sales not covered by any legislative authority was initiated on December 1, 1934, whereby narcotic wholesalers undertook to supply codeine only to those mentioned in section 5 of the Narcotic Act, namely, other licensed wholesalers, physicians, dentists, veterinary surgeons and retail druggists, and report such sales monthly both to this department and to the registrars of the provincial pharmaceutical associations concerned. These figures were to be coordinated, and when in the opinion of the provincial pharmaceutical associations any sales to retail druggists were found to be excessive, they were to recommend that further sales to such druggists be prevented, the wholesalers in turn having undertaken to accept and act on any recommendations which they received through this department. As a result of this cooperative control there are at the present time fifty-nine retail druggists whose names appear on the codeine restricted list, which prevents their obtaining any supply of codeine whatever from licensed wholesalers.

In October, 1935, all licensed narcotic wholesalers in Canada were requested to limit their sales of codeine to all retail druggists to one ounce in any one month, unless special authority to exceed such amount had previously been issued by this department.

During 1919, when the Patent and Proprietary Medicine Act was amended, the use of codeine was prohibited in patent medicines.

The increased consumption of codeine in Canada is due to the effective control of the importation, manufacture and sale of other narcotics such as opium, morphine and its

derivatives, and cocaine. The inability of drug addicts to obtain these drugs has driven them to the use of codeine. When they first found their supply of these drugs cut off they resorted to paregoric. As soon as it was ascertained that the consumption of this drug was increasing it was brought under the active control. They are now using codeine. The use of codeine has been discussed by the representatives of Canada on the League of Nations, with the object of endeavouring to impose the same measures of control upon it that have been put into effect on other narcotics.

Successive governments have cooperated fully with the opium traffic and social welfare sections of the League of Nations in controlling the illegal traffic in narcotics. Canada has actively participated in the work of the advisory committee on traffic in opium and other dangerous drugs to which the chief of the narcotic division of the Department of Pensions and National Health was appointed as Canadian representative in 1934, and is at the present time chairman of this committee, and has for years proceeded to Geneva at least annually, at the expense of the Department of External Affairs of the Canadian government. He is at the present time acting in the capacity of chairman of the narcotic division of the League of Nations at Geneva, having been sent there by the government.

Right Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, I wish to express my grateful appreciation of the statement the minister has just read; for I had intended as a matter of privilege to make some statement in view of the use of my name very frequently last evening, and the charge made against me of personal responsibility for codeine being purchased by people in this country.

I desire to add just this word to what has been said. The services of Colonel Sharman, who is chief of the narcotic division of the health department, have been so highly spoken of by the League of Nations that it resulted in his being appointed chairman of a special committee dealing with narcotics, and, as I understand from the minister, he is now in Geneva.

During the time we were in office the Department of External Affairs saw to it that Canada was represented at the League of Nations, and Colonel Sharman discharged his duties in a manner that brought to us warm commendation upon his efforts and his appointment. I resent the idea of being charged personally with responsibility for the acquisition by people of the habit of using dangerous drugs, simply because I happened for a time to hold office.

## LEAGUE OF NATIONS

### IMPOSITION AND ENFORCEMENT OF SANCTIONS AGAINST ITALY

On the orders of the day:

Mr. J. S. WOODSWORTH (Winnipeg North Centre): Mr. Speaker, according to the press Geneva has been considering the question of sanctions. May I ask the Prime Minister to state whether in the recent discussions Canada voted in favour of a continuance of sanctions against Italy?

Right Hon. W. L. MACKENZIE KING (Prime Minister): In reply I would say to my hon. friend that Canada is not a member of the council and therefore did not have a vote in the matter.

Mr. WOODSWORTH: May I ask, since there has been consultation between the British empire and the dominions, what is the attitude of Canada in regard to the question of continuing sanctions against Italy?

Mr. MACKENZIE KING: So far as I am aware, there has been no consultation in respect to the matter to which my hon. friend refers.

Mr. WOODSWORTH: May I ask one other question, whether the Prime Minister will shortly inform the house as to what the attitude of Canada is in regard to the continuance of sanctions against Italy?

Mr. MACKENZIE KING: I have already intimated that when we come to discuss the estimates we have still one item relating to the League of Nations, and at that time questions with reference thereto may be asked and will be answered so far as circumstances and information available will permit.

Mr. WOODSWORTH: Does the Prime Minister intimate that no opportunity is to be given this house to discuss this matter before the estimates are under consideration? That was not my understanding the other day.

Some hon. MEMBERS: Order.

## PUBLIC BUILDINGS—COAL

On the orders of the day:

Hon. FERNAND RINFRET (Secretary of State): Mr. Speaker, yesterday the member for Royal (Mr. Brooks) inquired for a return regarding contracts for a supply of coal to dominion public buildings in the maritime provinces in the year 1935-36. I may say that the return involves several departments, and

as the information must come from outside Ottawa it may still take a few days before the return is completed.

## COPYRIGHT AMENDMENT ACT

On the orders of the day:

Mr. H. E. WILTON (Hamilton West): May I ask the Secretary of State (Mr. Rinfret) when he intends to proceed with Bill No. 55, to amend the Copyright Act, which received its second reading about three weeks ago? If permissible, I should also like while on my feet to call the attention of the Minister of Finance—

Mr. SPEAKER: Order.

Right Hon. W. L. MACKENZIE KING (Prime Minister): May I answer my hon. friend by saying he will be advised in the usual way as to the order in which the different measures will be taken up. It is not possible to indicate at this stage what may be taken up possibly some days or even weeks hence.

## SALES TAX ON AUTOMOBILES

On the orders of the day:

Mr. H. E. WILTON (Hamilton West): Mr. Speaker, I should like to take this opportunity of calling the attention of the Minister of Finance (Mr. Dunning) to a telegram which I received yesterday from the automobile dealers of Hamilton. I believe a similar telegram was sent to the minister. They are complaining about the sales tax being imposed on automobiles which were purchased prior to the bringing down of the budget. In other words, they object to the tax being made retroactive, and they ask if something cannot be done to relieve them of what they regard as a burden.

Hon. CHARLES A. DUNNING (Minister of Finance): I have received several such telegrams.

## SUPPLY—LEAGUE OF NATIONS

### STATEMENT OF MR. WOODSWORTH ON MOTION OF MINISTER OF FINANCE

Hon. CHARLES A. DUNNING (Minister of Finance) moved that the house go into committee of supply.

Mr. J. S. WOODSWORTH (Winnipeg North Centre): Mr. Speaker, before you leave the chair I should like to refer once more to the question I put a few moments ago with reference to the situation at Geneva. Some days ago I asked the Prime Minister (Mr. Mackenzie King) if he would afford an early opportunity for the house to discuss the present world situation and our attitude toward the League of Nations. He intimated that he was willing to do so, but apparently to-day he has altered his decision. He suggests that there will be an opportunity to discuss this matter when the estimates of the Department of External Affairs are being considered. In years past, however, these estimates as a rule have been presented very late in the session. I think I am correct in stating that for the last two years there has been no discussion on external affairs estimates.

Mr. BENNETT: We held them open to give you a chance.

Mr. WOODSWORTH: They were held open on one occasion, but last year there was a switch in the estimates late one evening, of which no notification was given beforehand, and some of us who were interested in discussing these matters had no opportunity of doing so. I do not say this by way of reflection on the previous government or even on the present government; I say it simply to emphasize the fact that on the whole the house has not taken any very great interest in external affairs.

Perhaps it may not be quite fair to precipitate a debate of this kind without giving hon. members an opportunity for preparation. The government certainly should be given an opportunity to make a careful canvass of its own position. I would not have introduced this matter to-day were it not for the fact that the Prime Minister apparently is determined to give the house no information whatever as to the foreign policy of the government at this very important crisis in world history.

I do not think it is necessary to review the events that have taken place within the last few weeks in Europe. Some people seem to think that Europe is so far away from us that we need not worry a great deal. As the Minister of Finance (Mr. Dunning) reminded us the other day, the last war is still with us and still offers one of the main budgetary factors to be considered. Only a few moments before I came down to the chamber I was interviewed by one of the victims of the last war, something which I have no doubt happens to many hon. members from time to time. All this is saddening. But surely it should mean consideration of policies for the future.

The world situation as it is to-day is too important a matter to be passed over so easily. I am not suggesting that the Prime Minister or the members of the government are indifferent to the matter; I am sure it must be

causing them a great deal of worry, but the fact is that the government ought not alone to decide the most important matters of public policy. We spend weeks going into great detail on matters which have been determined already, such as the trade treaty between Canada and the United States; surely we can devote one day to a discussion of foreign affairs. I would remind the house that we are not without responsibilities in this regard. As a member of the League of Nations we are committed already to the league and apparently to a program of sanctions. In view of the situation that has developed, I think it is only reasonable that we should know what is the attitude of Canada at this time of crisis.

This is not a secret which must be rigidly maintained within the confines of the cabinet itself. Occasionally I see dispatches from England stating that the British House of Commons has discussed freely certain government policies with regard to foreign affairs. I think that is only right. If war or disaster of any kind comes upon this country, the people will be forced into service. They have the right to know beforehand what are the policies of this government and what we are heading for.

I think most citizens of Canada, in fact most citizens of the leading countries of the world, have been greatly perturbed over the failure of the League of Nations in this Italo-Ethiopian affair. The league has been regarded as the bulwark of peace, and we have been told that we ought to rely upon collective security, but it would seem that the league as it is now constituted has failed dismally. It failed in the Sino-Japanese affair a few years ago; it failed in connection with the South American trouble, and it has failed in the most spectacular way in connection with Ethiopia. What are we going to do with regard to the situation? Are we to continue as members of a league that apparently will afford us no security against war in the future?

We know that this kind of failure is producing armaments on all sides. We know that England has abandoned her old idea of having comparatively small armaments and has begun to speed up the manufacture of armaments. This raises another question. What is our attitude towards Great Britain? Are we going to permit Great Britain to speak for us in the councils of the world? Are we to have no independent voice? Are we simply to acquiesce after the event and be expected to contribute our Canadian boys to forces that may be called up because of the possible bungling of British statesmen or because a political party that happens to be in power to-day is pursuing a policy not in the interests of world peace? These are important questions for our Canadian people, too important to be passed over lightly.

I did not come prepared for this discussion to-day, and I think we should all be fully prepared when we consider this situation. I do not intend to ask the government to-day for a definite answer or to precipitate a general debate, but I cannot pass up the opportunity afforded by the motion to go into supply without stating my strong conviction that in the very near future the government should take this house into its confidence and tell us very clearly what the obligations of Canada now are with regard to sanctions; what the attitude of this country is going to be towards the League of Nations in the future, having regard to the failure of the league as now constituted to give us any security; and further than that, and I think even more important, what our attitude is going to be with regard to Great Britain herself in the new program of armaments which she has undertaken. Last of all, as we think of the preservation of our own country in the future, we should know where our own reliance is to be placed.

Some of us have tried from time to time when the estimates of the Department of National Defence have been under consideration to draw from the cabinet information of some sort as to what the general defence policy of the country is, whether we alone are to stand against all comers, whether we are to depend upon the United States or whether we are to revert to the older imperial policy and try to come under the wing of Great Britain, with all the advantages and all the disadvantages of that course, or whether some other course is possible. We ought to know these things, and to-day I would, if I might, give notice to the government that some of us at least will expect to discuss this matter in greater detail in the near future I would ask, therefore, that the government give us some opportunity in the near future—and I should prefer it according to regular procedure—to discuss this whole matter. The question is urgent. I do not think anything is to be gained by a pussyfooting policy.

Right Hon. W. L. MACKENZIE KING (Prime Minister): First of all may I draw my hon. friend's attention to the fact that I have in no way changed my position as to when a discussion should take place on any particular matter. I have always said that the government would seek to meet what it believed to be the convenience and the wishes of the house. I have before me the reply I gave my hon. friend the other day. On May 7 I said:

The government naturally will seek to meet the wishes of the house. There have been reasons why we have thought it inadvisable just at this moment to bring on a debate on the European situation. We shall wish to consider carefully all matters that should be considered in that connection. There is however no desire to delay discussion if hon. members deem it advisable to have League matters debated at an early date.

I may be mistaken, but I believe that the great majority of members in this house as well as the great majority of the citizens of Canada are of the opinion that we shall be contributing more effectively to an amicable adjustment of the very difficult situation which faces European statesmen at the present time if we consider very carefully the time at which we enter upon discussion of that situation. I ask my hon. friend to consider what the effect of a discussion in this parliament two months ago, one month ago, two weeks ago, might have been upon the matters that are being discussed at Geneva and in London at the present time. Would a discussion have been of assistance to those who are wrestling with these great problems which, it might almost be said, are the most critical the world has been faced with at any time? Has the government not pursued the wiser course, of proceeding as rapidly as possible with the matters which are of immediate concern to us here and which we feel should be considered first because of their great importance to Canada at present. We have adopted the course we have indicated because we believe it to be the best one to follow, all circumstances being considered.

I did say that when we came to a discussion of the estimates of the Department of External Affairs ample opportunity would be given for a discussion of all matters pertaining to the league, and one item was reserved for that purpose. I believe I am right when I say that it is the view of the great majority of members of this house that it would be better not to enter too precipitately into a debate upon the European situation but rather to consider very carefully the time at which it would be best to take it up. The government will endeavour to select the best possible moment but while I say that, however, I wish to make it clear that I am not precluding any member from bringing on a discussion at any time he may wish. The fact that the hon. gentleman has made a speech this afternoon on the subject indicates that he has the right to speak at any time when the house is being moved into committee of supply or committee of ways and means. I believe, however, that the fact that other members have not followed his example in that regard is evidence that the house generally feels, as I am sure the country feels, that the situation in Europe is very grave and critical and that great caution should be used on the part of members of this House of Commons with respect to discussions which may take place here on the European situation.

[Mr. Mackenzie King.]

Right Hon. R. B. BENNETT (Leader of the Opposition): When the other afternoon the hon. member for Winnipeg North Centre (Mr. Woodsworth) asked the Prime Minister (Mr. Mackenzie King) to set aside a day for discussion of the relations of Canada to the League of Nations, I recalled that a few weeks ago the Prime Minister indicated to the house that when the External Affairs estimates were under consideration the fullest opportunity would be given for discussion. It is obvious that in view of the fact that questions must be asked and answered a much fairer opportunity for real discussion would be given by that procedure than would be afforded by making set speeches in the house with the Speaker in the chair, inasmuch as a good deal of information must necessarily be obtained as to what attitude has been taken by Canada at various times during the last few months in connection with the matters under consideration. For my own part I think the Prime Minister has discharged his duty to the house by making it clear that before the house rises there will be ample opportunity for us to be fully informed, through, as well, discussions in the country itself, of everything that is connected with the European situation.

I do not share the view of the hon. member for Winnipeg North Centre, that discussion in this chamber is going to have any particular effect upon the world situation at large, nor do I share the Prime Minister's view in that regard. I realize that at the moment these matters are in the hands of the council of the League of Nations; that Canada is not a member of that council, and that any observations which might be made in this house, and which would embarrass an already embarrassed situation, would be, in my judgment at any rate, not only unsound but calculated to retard rather than to assist the accomplishment of the purposes and ends we have in view.

I feel quite certain that when the appropriate time comes—that is when the External Affairs estimates are under consideration—many of those at least with whom I am associated will be glad to be informed of the progress of events and no premature or merely academic discussion with a view to determining in theory what we are or what we are not, what we should do or what we should not do, will advance the purpose we have in mind. Our effort must be to uphold the hands of those who are endeavour-

ing to maintain the peace of the world, and I believe that view is held by every member of this house and by the people of Canada at large. How best we may do that is a matter which might admit of differences of opinion. Hon. gentlemen on this side of the house may hold an opinion which is wholly in accord with that held by gentlemen on the other side, and it may equally be that opinions held by various members on the other side differ one with another. In the same way there may be differences of opinion among members who sit on this side of the house, because it is obvious that this question never can be, at least it never should be, a matter of party difference. These matters far transcend party differences; they have to do with the very fabric of our social and economic life and with the peace, happiness and prosperity of individual citizens, regardless of their views or beliefs as to politics, religion, economics or any other question. I am certain that we shall all approach the discussion of the problem with an open mind and with the desire not hastily to prejudge it by any statement which is made in this chamber, because more importance will attach to what we say in the house than to what we say outside it, and no statement should be made here which could be construed as, on the one hand, in any sense provocative, or on the other, as unduly optimistic. We must remember that we are merely trustees, upon whom a certain measure of authority has been conferred by the people as a whole.

In dealing with international questions this parliament is not in the position of the British Foreign Office, though that department, it is to be observed, endeavours to divorce itself from political considerations when discussing problems affecting the welfare of the nation and the empire. We must endeavour to deal with these issues in a manner which will demonstrate that in so doing we are without party bias. After all, a Prime Minister is seized of information that we have not, and in the very nature of things, as I have frequently said when my views were not very highly regarded by those who now sit on the treasury benches, he must accept responsibility for determining whether or not it is in the public interest —not party interest—to precipitate a discussion of questions which affect the welfare of the nation as a whole. I do not frequently give my confidence to the government, but I believe that, in delaying for the moment a discussion of the position of Canada with respect to the League of Nations and our relations to other nations in regard to the present European situation, no Prime Minister with a sense of proper responsibility would do other than give to the problem the best judgment he could, and when he advises the house that in his opinion the public interest will be best served by delaying any discussion of that kind, I for one am prepared to accept his statement.

Hon. ERNEST LAPOINTE (Minister of Justice): May I say a word in support of the stand taken by the Prime Minister (Mr. Mackenzie King) and the leader of the opposition (Mr. Bennett)? The council of the league is naturally seized with the question; it is a very difficult problem, so complicated and so fraught with danger that even they, with the information they have, have thought it better to adjourn, until some time in the month of June, any discussion of the matter. Surely if they could not do otherwise, we in this house are not in a position to do better than those who are assembled at Geneva. In the second place, we are not members of the council. When a decision is reached there, it will be time enough for Canada to take a stand as to following the decision and accepting the views of the council, or refusing to do so. I appreciate the earnestness and the sincerity of my hon. friend from Winnipeg North Centre (Mr. Woodsworth), but I am sure he will agree with us that for the present it is better to let the matter be discussed over there, without bringing before the house material which might make the situation more difficult.

Motion agreed to, and the house went into committee of supply, Mr. Sanderson in the chair.

## SUPPLY

### DEPARTMENT OF INDIAN AFFAIRS

#### Project Already Undertaken

To provide for completion of the Qu'Appelle Indian hospital at Fort Qu'Appelle, Saskatchewan, $30,000.

Mr. BENNETT: These are supplementary estimates?

Hon. T. A. CRERAR (Superintendent General of Indian Affairs): Yes.

Mr. PERLEY (Qu'Appelle): Would the minister give us a little more detail with respect to this $30,000 vote? Is it an added amount needed to complete the building?

Mr. CRERAR: No, it is not an added amount. Ordinarily this would have been expended under the Public Works Construction

Act. Following March 31, this is the amount under the new vote. As I explained the other day with respect to some other estimates, this is required to complete the building.

Mr. PERLEY (Qu'Appelle): When will the building be completed and ready for opening?

Mr. CRERAR: In the near future. I understand they are waiting for the completion of the arrangements for a water supply.

Mr. TAYLOR (Nanaimo): Is any provision being made to assist the Nanaimo hospital to provide an Indian wing? I addressed the minister in that connection some time ago.

Mr. CRERAR: There is no provision under this item, which deals only with the completion of the hospital at Fort Qu'Appelle.

Mr. TAYLOR (Nanaimo): Will the minister state if he intends to make any provision for the purpose I have mentioned?

Mr. CRERAR: That may be considered under another item. I will answer the hon. member at that time, after this item has passed.

Item agreed to.

Other Projects

To provide for repairs and improvements to government buildings and new buildings, and assistance to building projects relating to Indian administration, $135,708.

Mr. BENNETT: Will the minister give us particulars of this item?

Mr. CRERAR: This item, as stated, is to provide for repairs and improvements to government buildings and new buildings, and assistance to building projects relating to Indian administration.

Mr. BENNETT: What new buildings?

Mr. CRERAR: There is a new agency office building at Caughnawaga reserve. There are repairs to agency buildings in Quebec, I am not at the moment able to give particulars of those.

Mr. BENNETT: The question was as to the new projects.

Mr. CRERAR: In Manitoba there are repairs to the Swan Lake home, farm and buildings. There is a combined office building and store house at the Fisher River Indian reserve, also an expenditure for a new agency residence at Norway House. There are proposals for a new office at The Pas Agency, some improvements at the Battleford agency, the Carlton and Crooked Lake and Duck Lake agencies. In this vote might also come the point raised by my hon. friend from Nanaimo (Mr. Taylor). All the details of this vote have not been worked out, but it is contemplated that where arrangements can be made assistance may be given in the manner suggested by my hon. friend. I cannot at the moment state whether that will apply to his particular instance or not, but I can tell him that it will have the fullest consideration. We have been asked for assistance in several cases in extending hospital facilities for the care of Indian patients. I am not at the moment in a position to say precisely where that action will be taken, but I can assure the committee and the hon. member that it will be taken according to the best judgment of the officers of the department and myself.

Mr. PERLEY (Qu'Appelle): The minister mentioned new buildings and improvements in the Crooked Lake agency. Can he state whether that is a new residence for the agent, or what is it?

Mr. CRERAR: I am informed that it is a house for the agent of that reserve.

Mr. NEILL: In connection with the matter he mentioned to the hon. member for Nanaimo, is the minister fully informed of the representations made to him in connection with the hospital at Tofino?

Mr. CRERAR: Yes, we have full information on it, but as I said a moment ago I am not in a position at the moment to say what particular hospitals will be assisted. That requires a good deal of care and examination into all the relevant circumstances. It is the intention that this money shall be spent where it is most needed and will do the most good, according to the best judgment of the officers of the department and myself.

Mr. TAYLOR (Nanaimo): For years the existing hospital at Duncan has been taking care of these Indians; the situation is really desperate and the necessity for building and enlarging is due in large measure to the need for special provision for the Indians. The request has gone forward to the minister's department, and I shall be glad if special consideration is given to it.

Mr. CRERAR: I assure my hon. friend that it will have full consideration.

Item agreed to.

To provide for the erection of Indian schools, $70,700.

Mr. SENN: Will the minister give some explanation of this item, and where these schools are located or to be located?

Mr. CRERAR: The points at which these Indian schools will be erected, as given me by the officers, are as follows: Restigouche Indian day school. This school is located on the Restigouche Indian reserve, No. 1, Bonaventure, Quebec.

The next is in Ontario at Christian Island, and one at Rabbit Island, and one at Mattagami and one at Seine River.

In Manitoba there is one at Poplar River, one at Deer Lake, one with a rather peculiar name, Uponcashing, one suggested for Sandy Bay; there is some difference of opinion with the authorities as to whether or not a day school should be erected there.

Mr. BENNETT: Is that the one where they want a boarding school?

Mr. CRERAR: They have a boarding school now, but it is pretty well out of date. I am inclined to think the boarding school is what they need, but we have not funds for it this year.

In Saskatchewan it is proposed to erect one at Montreal Lake. There is another at Ahtahkakoops; I do not know where that is located.

In British Columbia it is proposed to erect at Bella Bella, an Indian school building, another at a place with an unpronounceable name, Gitladamicks, and another at Kitselas.

In the Northwest Territories there is one at Fort Ray.

These are the points where the officers of the department, after going into the matter, have suggested that these schools should be built. I should say that personally I have not had an opportunity to review all these particular cases, and there may be some local circumstances that might change the decision, but these are the proposals at the present time.

Mr. BENNETT: The sum of $70,000 will not go very far in building all these schools, will it?

Mr. CRERAR: Well, they are all day schools.

Mr. NEILL: I would suggest that the department think seriously before they start a policy of abandoning or departing from the policy of boarding schools in favour of day schools, although of course the minister did not exactly indicate that. I heard some mention, before the present government came into office, that that was the idea among the officials. As far as the west coast of British Columbia is concerned this would be a great mistake. I have been long familiar with the situation and there is no question that the boarding school is the most successful method of educating Indian children. I have seen children who have been ostensibly attending day school for eight or nine years; yet they did not know the first words of English and could not add two and two together. It is not that they lack intelligence; it is that when they are at home in their villages they are allowed to do as they like. The father would never think of saying to a child: You go to school. It would be: Do you want to go to school? In addition, there is the constant moving about. Indians follow the run of the fish in the season and often move away to places where there is no day school. When they are put into a boarding school they are under constant supervision and do not go out except in the holidays. They get a first-class education, comparable with some of what our own children would get, and when they leave they have had thorough instruction and are able to make their way among the white people, working for canneries and so on. It is hardly right even to say it would be more expensive, because nothing is cheap that is almost entirely useless. It may be that in some of the big reserves on the prairies where they have settled communities, a day school is appropriate, but in a large part of the western portion of the British Columbia mainland and Vancouver island I earnestly hope that the government will continue to provide the boarding schools. The Indians now realize the benefits of the boarding schools. There was a time when they objected to parting with their children, as Indians naturally would. The children would be away months at a time and parents would not see them. However, they now realize the benefit of these schools, and my practical knowledge has been that more money spent on the day schools would be to a great extent so much money thrown away.

Mr. CRERAR: I believe I agree largely with the remarks of the hon. member. At the same time I must confess I have not yet had an opportunity to study the whole matter thoroughly. So far as I have been able to ascertain, the various churches under whose auspices many of the residential schools are conducted are, I believe almost without exception, in favour of residential schools, and for the reasons indicated by the hon. member for Comox-Alberni. When we were considering the estimates questions of cost were involved. I have had requests for the erection of residential schools, one of which, located in northern Mantoba, was destroyed in 1930. It has not yet been replaced.

Mr. BENNETT: We never had the money to replace it.

Mr. CRERAR: That has been the problem. There are instances where the church authorities entrusted with the conduct of many of the schools have suggested day schools to suit particular needs. I have not yet had an opportunity to make a thorough study of the different aspects of the question, and quite frankly I hesitate to give any judgment until I have had such opportunity. I understand the schools indicated in the estimate will render a definite service in the communities in which they will be built.

Mr. NEILL: In fairness I must say that there is one service which these day schools render, however inefficient they may be otherwise. They are always under the control of churches, and they form a sort of recruiting ground for boarding schools in districts perhaps fifty miles away. Also, as a rule missionary work is done, and some elementary ideas in religion are taught. They do some good in that connection, but more particularly as a recruiting ground so that the children may be sent to boarding schools when they reach the proper age. But as to teaching them, in comparison with boarding schools the day schools are not in the picture at all.

Mr. McIVOR: Having taught in an industrial Indian school I should like to give hon. members the benefit of my experience. There can be no doubt about the value of the surroundings in these schools. I noticed, however, that when the spring came and the tents of the older Indians were placed on the ground a feeling of restlessness would take possession of the children. Rules had to be made so that the children could not visit the tents, because if they did they had to be properly cleaned when they came back to school. It is a fact however that these schools have proved of great value in Saskatchewan. I taught in the school at Regina.

Item agreed to.

To provide for construction of roads, bridges and other engineering works on Indian reserves, $24,512.

Mr. PERLEY (Qu'Appelle): Crooked lake is on the north side of the Crooked lake agency. The reserve is on the south side of the Qu'Appelle valley, and contains some beautiful lakes. For the last fifteen or twenty years a number of campers have located on the south side of the lake. I believe some of them have leased small lots and built cottages. There is no satisfactory road to get to the cottages. The hill which must be descended is very dangerous, and any improvements which have been made on it have been at the expense of the cottagers and campers. At the top of the hill there is a good landing field, and on Sunday afternoons it is a common sight to see four or five aeroplanes on the field. People come in from North Dakota and land their aeroplanes on the top of the hill, after which they go down to the lakes to fish and bathe. It is one of the outstanding beauty spots in Saskatchewan, and is worthy of development. The government is spending a large amount of money in the development of national parks, and I would ask the minister to investigate this beauty spot in the Qu'Appelle valley and ascertain whether or not it would be possible to have a road built to the lake. It would have to be about six miles long, and would run through the agency. Sometimes as many as a hundred cars visit the lake on a Sunday, and they must pass through the reserve. It is annoying to the Indians and to the agent to have people passing through the reserve, and this traffic no doubt interferes with the agency. When the Indian Act was amended two years ago there was a provision for the expropriation of land in a reserve for road purposes. If it was handed over to the provincial government, they might share some of the cost of building the road. The construction would be through a level section of country, and would not be expensive. I am asking the minister to give the matter consideration, and to ascertain whether some money could be spent to develop this beauty spot in Saskatchewan. The lakes are teeming with fish, and there are splendid bathing and boating facilities.

Mr. CRERAR: The representations made by the hon. member will certainly receive consideration. In looking over the suggested expenditures under the vote I find the work he indicates is not included, but it may be possible to arrange expenditures so as to meet his request. All I can say is that we will give the matter consideration.

Mr. GREEN: I believe the minister has received a letter from the parks board of the city of Vancouver asking that his department clean up Kitsilano reserve, which is situated almost in the centre of the city. It is at the end of the Burrard street bridge, which connects the business district with one of the residential districts. There are no Indians on the reserve, nor have there been for about twenty-five years. There is considerable second growth, scrub timber, old stumps and garbage on the land, and it is really an eyesore. Furthermore it has been used as a hideout for criminals. I suggest the request of the parks board is reasonable, and federal authorities should get busy at once and have the reserve cleaned up. The

expenditure would not be great. This year the city of Vancouver is celebrating its golden jubilee, and it is most important that the work be done quickly. Has the minister made any provision for it?

Mr. CRERAR: My deputy tells me that there is no provision under this vote for the matter my hon. friend mentions, which I understand is now the subject of correspondence with the city authorities in Vancouver. I do not know just what amount would be involved in my hon. friend's proposal, but I am afraid I cannot hold out much hope that any very considerable expenditure may be made upon it under this vote.

Mr. GREEN: If the minister will confer with his colleague from Vancouver Centre (Mr. Mackenzie) he will find that this is really a project that should be undertaken promptly. The amount involved would not be very large. I suggest that the department ascertain by wire what the cost would be, and the work might then be done within the next few weeks. The jubilee celebration opens on the first of July, and right in the city of Vancouver across from the Seaforth armoury you have this big Indian reserve. It is an eyesore and should have been cleaned up long ago. Certainly now is the time to do it; and I would ask the minister to look into the matter within the next few days and try to have the reserve cleaned up certainly before the end of June.

Mr. CRERAR: I shall be very glad to look into it, but I would point out that we receive requests in very large numbers for work of one kind and another—schools, roads, hospitals and everything else associated with the Indian department—and we have only a certain amount of money to spend. We try to spend it where in our judgment it can most usefully be spent. I shall, however, consider the request made by my hon. friend, and if we can find a little cash out of this vote with which to make the beautiful city of Vancouver a little more attractive to the countless numbers who will probably visit its jubilee celebration, we shall be glad to do so.

Mr. GREEN: I do not suppose a similar situation exists anywhere else in Canada. It is really ridiculous. There you have an Indian reserve in the centre of the third largest city of the country, and certainly it should be kept in proper condition.

**Item agreed to.**

DEPARTMENT OF THE INTERIOR

Projects Already Undertaken

National parks—
Administration building at Banff, Alta., $38,000.
Other buildings — construction and repairs, $115,500.
Landing fields—construction, $5,000.
Municipal services—construction, improvements and extensions, $27,500.
Recreational areas—extensions and improvements, $9,200.
Roads—construction and repairs, $109,000.
Townsite development — Kootenay park, $2,500.
Engineering supervision and general, $12,500.
Relief—permanent residents of the parks, $102,000.
Relief—single homeless men, $50,000.

Mr. BENNETT: My information is that the last item of $50,000, for the relief of single homeless men, has all been spent, and that the $102,000 for relief of permanent residents of the parks was spent when the winter was over. The money for engineering supervision is nearly all spent, and the amount for road construction and repairs was largely expended last fall. I know that the administration building at Banff is practically completed, as well as other buildings and parks throughout the country that were under contract. I think most of them have been completed. How much of this item of $471,200 is unexpended? I should be surprised if there was much of it left.

Mr. CRERAR: This covers projects already undertaken under the Public Works Construction Acts.

Mr. BENNETT: I know; that is what I am talking about.

Mr. CRERAR: These are the amounts required to meet the expenditures as from the first of April.

Mr. BENNETT: I am afraid, Mr. Chairman, that is hardly the fact.

Mr. CRERAR: That is the information my officers give me.

Mr. BENNETT: I think they had better look at it again. For instance, take the last two items, $102,000 for relief, permanent residents of the parks, and $50,000 for relief, single homeless men. There was an order in council that appropriated a certain amount of the money under the Public Works Construction Act to the Department of the Interior for these two purposes, and that money was expended during the winter. These are projects that are already undertaken. I want to know how much of this money is

unexpended, because these are estimates for the year ending March 31, 1937, and they have already been included in the public works items. The money has already been voted once for that purpose by parliament. The auditor general has been making payments on the authority of the Public Works Construction Act, and these payments the Department of the Interior had placed at its disposal within the provisions of the act under an order in council by which certain sums of money were set aside for certain definite purposes. The money has been spent and cheques have been issued by the department. The auditor general is charging them up against the appropriation. I am asking how much of that money is left at this time.

Mr. CRERAR: Under the Public Works Construction Acts of 1934 and 1935, there was $570,300 unexpended, $168,000 under the 1934 act and $402,300 under the 1935 act.

Mr. BENNETT: At what date?

Mr. CRERAR: March 31, 1936.

Mr. BENNETT: But since then, within the last two months, we have spent money on that account, and that is what I want to know about. Relief has been paid in the parks, to my knowledge, and likewise expenditures have been made on the administration building under contract at Banff and on buildings at other points.

Mr. CRERAR: The only thing paid subsequent to March 31 out of the votes under the Public Works Construction Acts of 1934 and 1935 are bills that were due by March 31 or progress estimates made at that time. The amounts necessary since then to complete these various projects already undertaken are in this vote. The decision was reached by the government, whether wisely or not, not to continue payments on these projects under the Public Works Construction Acts subsequent to March 31, 1936, and consequently it was necessary to include in these votes the amounts estimated to complete the various undertakings. That is the explanation of these items. With reference to the last two items, $102,000 for relief of permanent residents of the parks, and $50,000 for relief of single homeless men, to which my right hon. friend referred, these are largely estimates. The last item in the vote is to cover relief requirements for April and probably May. The other one is for the present fiscal year.

[Mr. Bennett.]

Mr. BENNETT: It could not be the present fiscal year because these are projects already undertaken. The minister cannot say that there is a project already undertaken in connection with relief for the fiscal year beginning April, 1936, and ending March, 1937.

Mr. CRERAR: Technically, my right hon. friend may be quite right, but I am informed that the vote is to care for these relief requirements during the present fiscal year. I may say that I hope to get the relief costs in these parks down very substantially for the next winter season.

Mr. TAYLOR (Nanaimo): Has the minister anything to disclose in connection with the Ivy's Green area north of Ladysmith? At one time this was an Indian reservation, but there is no residence on it now and the Ladysmith people have petitioned to have this area made a park.

Mr. CRERAR: So far as I am aware there is before the parks branch no such request as that referred to by the hon. member.

Mr. TAYLOR (Nanaimo): For many years they have been using this area as a park, but commercial interests have been trying to secure it for oyster beds.

Mr. CRERAR: So far as I am aware no request has come into the parks branch for the establishment of a park in that area.

Mr. TAYLOR (Nanaimo): What would be the attitude of the minister should the people of Ladysmith ask that this be set aside as a park?

Mr. CRERAR: I think it would be scrutinized very carefully indeed.

Mr. TAYLOR (Nanaimo): Would a commercial application be scrutinized more carefully?

Mr. CRERAR: No, I would not say that it would.

Mr. BENNETT: I am very grateful to the minister for the clear explanation he gave in connection with item 320, but he will observe that that part of the actual vote of $471,200 which is represented by progress estimates or certificates of expenditures made before March 31 must be deducted. I do not know whether he has these particulars before him, but it is obvious that the amount will thus be reduced. First of all the item is practically $570,000; you expend $100,000,

which leaves practically $471,000, and from that stands to be deducted all progress estimates and any expenditures which are certified as having been made anterior to March 31, 1936. I just wanted to know if the minister had any idea how much this was.

Mr. CRERAR: I am informed that the amounts mentioned here are the estimates which are necessary in the judgment of the officials of the department, after making allowance for payments and progress estimates under the Public Works Construction Acts.

Mr. NEILL: The hon. member for Nanaimo (Mr. Taylor) represents the riding next to mine. I have the greatest respect for him, but I must endorse what was said by the minister when he told the committee that he would consider with a great deal of care an application for a park in the area referred to by the hon. member. I hope I shall not be accused of selfishness when I suggest that the place to put this park is in the district of Comox-Alberni. The parks board has already four mountain parks in British Columbia; they do not need any more of that type, but what they do need is a park on the beach level to accommodate, not only tourists from the United States, but our own men and women from the prairies who have been suffering from the high altitude. A beach park in British Columbia would permit these people to have even a brief holiday at low altitude. I do not know whether there is such a park in Canada; there certainly is not one in British Columbia. Such a park is needed to round out the policy of having parks indicative of the various portions of the dominion.

I had the privilege of a conversation with a member of the parks board to whom I outlined this idea. I shall not go into the details of where this is, but the area I have in mind is ideal for the purposes. It is only a small area, but there is nearly a mile of beach composed of very fine sand with no stones. It is quite shallow so that the water gets warm enough for bathing and is safe. It is close to the public highway and it would not be necessary to expend large sums to construct a road. We know what the department expends in making roads into some of the interior parks in British Columbia. There is some very good trout fishing close by to provide entertainment for the older people. Behind the beach is grass with a number of scattered trees, something very near to the general idea of an English park. The whole area could be obtained on very reasonable terms. The acreage is comparatively small, but it is ample for the purposes. I know it has been the policy of the department in years gone by, and no doubt it still is, to get a beach of this kind and I know of no other beach in British Columbia that can be obtained, except at an enormous cost.

There is one in my district which I should like to advertise, a place called Long Beach, but the conditions are not so ideal. The water is colder; there is an undertow and the area is more difficult of access. In years to come it will be developed as a scenic resort, but this other place to which I refer is easy of access now. A man could leave Vancouver in his own automobile at eleven o'clock in the morning and be in this park at three o'clock in the afternoon. I have an intimate knowledge of this area. I know nothing whatever against it as a park and I believe it has everything in its favour. I heartily commend it to the parks branch and the minister. As I say, other sites have been put forward, but I do not know of any as perfect as this one. It is close to the highway; electricity is available and everything is there to make it a perfect park.

Mr. STIRLING: Where are the landing fields to be constructed under this vote.

Mr. CRERAR: The landing field at Banff national park which was partially constructed will be completed under this vote.

Item agreed to.

Forest service—water supply system, building construction and repairs at Petawawa and Acadia forest experiment stations, $3,500.

Mr. BENNETT: This is to complete the water supply systems?

Mr. CRERAR: Yes.

Mr. BENNETT: Certain work was undertaken.

Mr. CRERAR: Yes.

Item agreed to.

Northwest Territories — continuation of development and improvement of landing fields and air harbours, $9,800.

Mr. BENNETT: What is being done in the Northwest Territories under this item? I remember that under the Public Works Construction Act provision was made for certain work, which was undertaken by the Department of the Interior, but I should like to know what work was actually started, which requires $9,800 to complete.

Mr. CRERAR: The landing fields and air harbours to be improved are at Fort Smith, Resolution, Hay River, Providence, Simpson,

Laird, Norman, Good Hope, Arctic Red River, McPherson, Aklavik, Cameron Bay and Rae. It is in connection with the completion of the work at the points I have mentioned.

Mr. BENNETT: What harbours are provided for seaplanes?

Mr. CRERAR: I am informed that half of them are seaplane bases.

Mr. BENNETT: The minister referred to air harbours.

Mr. CRERAR: Air harbours and seaplane bases are the same thing.

Mr. BENNETT: I know that. I want to know what harbours have been provided for. Harbours are equipped of course for the purpose of permitting seaplanes to come to rest, and landing fields are entirely different. But I wanted to know what harbours had been provided for.

Mr. CRERAR: There are ten hydroplane bases and three winter landing fields.

Mr. BENNETT: All mentioned?

Mr. CRERAR: Yes.

Item agreed to.

Yukon Territory—highways, bridges, landing fields and air harbours—construction and repairs, $65,000.

Mr. GREEN: What taxes are levied by the Yukon territorial council? I believe they levy some taxes for certain purposes in the Yukon.

Mr. CRERAR: There are taxes levied for local purposes and that is supplemented by the grant from the federal government so as to give them sufficient to carry on their administrative work and do other necessary work.

Mr. GREEN: If the old age pension scheme were made effective in the Yukon territory, where would the money come from? Would that money be raised by the Yukon territorial council or would it come from the dominion government? As the minister knows, the provinces pay one quarter of the old age pension. If the scheme were made effective in the Yukon, where would that one quarter come from?

Mr. CRERAR: It would come from the territorial government, and I assume in the last analysis it might really be provided for by the federal government.

Mr. GREEN: The federal government would really have to pay the whole shot.

Mr. CRERAR: It is federal government territory.

[Mr. Crerar.]

Mr. GREEN: That would not come out of local taxes raised by the Yukon council.

Mr. CRERAR: I could not say, speaking offhand.

Item agreed to.

Other Projects

National parks—
Buildings—construction and repairs, including buffalo abattoir, $20,000, $100,000.
Forest and game conservation works, $25,000.
Municipal services—construction, extensions and improvements, $25,000.
Recreational areas—extension and improvements, $25,000.
Roads—construction and repairs, including Golden-Revelstoke highway and improvements to main tourist routes from international boundary to Banff, Yoho and Kootenay parks, $850,000.
Townsite development, $25,000.
Wharves and beach protection works, $13,200.
Development of new parks—maritime provinces, $140,000.
Miscellaneous, $25,000.

Mr. BENNETT: This item includes one detail which we are not yet in a position to discuss inasmuch as we have not made any provision for new parks in the maritime provinces. The late government felt that the maritimes had a claim to national parks but the financial position was not such as to warrant the expenditure. That phase of it I think will have to be discussed. It involves the expenditure ultimately of many millions of dollars for upkeep and, as I say, we did not feel that we could do it. In view of the picture disclosed by the minister I desire to discuss that item at some length. As there is yet no provision for the parks that item will have to stand. The other detail can be dealt with. I would ask the minister whether there is still standing in the main estimates an item with respect to parks which would enable me to discuss one matter I desire to bring to the attention of the committee. I could do it then.

Mr. CRERAR: None of our parks estimates in the main estimates is through.

Mr. BENNETT: Under those circumstances I will not discuss now an item which I wish to deal with in connection with electricity in western Canada, at Banff. I can do that when the main estimates are before the committee. Perhaps the minister would give us some idea of what he has in mind in connection with buildings, especially as to the necessity for spending $20,000 on a building in which to kill buffalo. That work heretofore has been let out by tender. Apparently we are now to start in the slaughter business ourselves. Are we going to sell the carcasses, or is it intended to continue the tender system of disposing of them?

Mr. CRERAR: I suppose we shall continue the tender system, which has been followed in the past. This item is inserted for the reason that the abattoir which was in the buffalo national park was destroyed by fire last November. The result was that, not having the facilities, we were unable to slaughter buffalo. This is merely to replace the building that burned down.

Mr. BENNETT: Some were shot at Wainwright at one time.

Mr. CRERAR: I do not profess to have expert knowledge of the subject but I know that the slaughter house which had been there for several years burned down last November. This item is to replace that building.

Mr. BENNETT: What other buildings are in mind in connection with that item?

Mr. CRERAR: There is a fire hall at Jasper, a community hall addition at Prince Albert, and the rest of the vote is for similar structures of various kinds required for administrative purposes, recreational areas and camp grounds. I cannot give the details.

Mr. STIRLING: Can the minister give some information with regard to what is usually known as the Big Bend highway, the Golden-Revelstoke highway referred to here? What portion of the $850,000 will be spent there? Is the work proceeding at the present time? Is the eastern leg of it quite completed and the bridge built? Is the minister proposing to proceed with the western leg to Revelstoke?

Mr. CRERAR: As regards the eastern leg of the Big Bend highway, it is pretty well on to completion; I am advised it is estimated that about $70,000 will complete the east leg of the road. On the western leg, which is a much more expensive part, comparatively little work has been done. I am informed that something a little in excess of a quarter of a million has been spent on it by this department. The estimated cost of completing that western leg is almost $2,000,000. That is a matter which I hope to discuss with the Minister of Public Works for British Columbia, who is in the city at the present time. I think the federal government is committed to complete that project.

Mr. STIRLING: "Is committed"?

Mr. CRERAR: There is no formal agreement to that effect.

Mr. BENNETT: No, but we said we would do it.

Mr. CRERAR: That is the deduction to be drawn from letters and telegrams.

Mr. BENNETT: We said that if they did not, we would do it.

Mr. CRERAR: I was not aware of that. Might I ask my right hon. friend if there was a limit as to time?

Mr. BENNETT: No. This is the position. The minister will recall that there is outstanding an agreement between the province of British Columbia and the dominion whereby the province was to contribute to the cost of the completion of the highway in that area which was within the provincial boundaries; we were to pay the entire cost until it came up to a certain point. Unfortunately the province felt that they were not in a financial position to do their share, and we decided that, inasmuch as this road must be completed if we are going to complete the highway through to the coast, we would advance the money for that purpose even though we ourselves had to oversee the construction work. The Prime Minister of British Columbia represented to us his inability to secure funds for the purpose, although they had ample with which to construct the bridge across the Fraser river. Apart from that, we concluded that inasmuch as this was a national undertaking, and that it would be blocked entirely if the road were not finished, we should assume the obligation. There remains to be built a small extent of road linking the extreme westerly side of the road on the east side that is now completed, and the completed portion on the coast side, and until that gap is filled up you have no road at all. That is the story in a nutshell. I think we told Mr. Pattullo that we would try to make the necessary advances to enable the work to be done. My memory is—and I speak in that regard entirely subject to correction—that we felt that as we were carrying on the work, and had the facilities, possibly we had better complete the work for them under the terms of the agreement; in other words, take their place for the moment under the agreement and complete the road. I speak guardedly with respect to that.

Mr. CRERAR: What agreement does my right hon. friend refer to?

Mr. BENNETT: The original agreement made between British Columbia and the dominion contemplated the dominion undertaking a certain portion of the completion of that highway, and the province was to do its part. As a matter of fact the province did a certain amount of work, and then was unable to continue, but there has been no delay, because we have not completed, or had not completed when I was last informed of it, all the work on the east side. I understand

from the minister that about $70,000 is still to be expended. I think everybody agrees that it is an extraordinarily fine piece of road. It was largely under the supervision of the gentleman who is now the deputy minister; that remark is not intended by way of compliment, but that is the fact with respect to that piece of road.

Mr. CRERAR: The Boat Encampment is the apex of the road.

Mr. BENNETT: Yes. It was west of that where the province was to do the work. I think the minister must have in his files the original agreement made between British Columbia and the dominion.

Mr. STIRLING: Four or five years ago.

Mr. BENNETT: Yes, four or five years ago.

Mr. CRERAR: Made by Hon. Charles Stewart, I think, in 1929.

Mr. BENNETT: Quite so; and, I think, the government of Mr. Tolmie. At any rate this is the fact, that the province recognized there was a certain obligation outside the park area altogether. The minister realizes that this has to do with areas outside the park; that we are doing the park side of it on the east end. What is the last town that is the boundary of the park? Is it Revelstoke?

Mr. CRERAR: The East leg ends at Canoe River.

Mr. BENNETT: That is right. From Canoe River west the obligation rested upon the provincial authorities.

Mr. MACKENZIE (Vancouver): That is correct.

Mr. BENNETT: Their inability to finance led us to the view that, inasmuch as the work had to be completed if it was to be of any value, we should take over their position under the agreement. I think it was suggested that, inasmuch as we had been building the road under contract up to Canoe River, we might as well continue the work; but it was never agreed that the expense of the work should be borne by the dominion, if that is what the minister has in mind, and I was going to ask him to what extent this contemplates the completion from Canoe River west of the road so as to make it available for traffic.

Mr. CRERAR: As I understand the history of this undertaking, the government that was in office prior to 1930 reached an agreement, through Hon. Charles Stewart, who was then Minister of the Interior, to construct the east leg of the Big Bend highway, carrying it from Donald to the apex of the bend, which is known as Boat Encampment. That work has been very far advanced towards completion, and it is estimated that $70,000 will complete it entirely. A good portion of the money is required for a bridge over the Columbia river at the apex. So far as the west leg is concerned the arrangement perhaps may be as stated by the leader of the opposition.

Mr. BENNETT: I am speaking only from memory. I have not seen the agreement for a long time.

Mr. CRERAR: Well, I think that may be correct. The British Columbia government, according to my understanding, were to construct the west leg, but in 1935, by arrangements between the provincial government and the then federal government, the dominion assumed the responsibility of proceeding with the west leg. That will involve an expenditure altogether of about $2,000,000; I think $1,950,000 is the estimated amount required.

Mr. BENNETT: But there is no settlement of the question of financial responsibility.

Mr. CRERAR: My understanding is that that was to be done at the expense of the federal government. Am I correct in that impression?

Mr. BENNETT: Part of it was undertaken in connection with relief work. That part of it was charged against relief. But my memory is that no conclusion was arrived at with respect to the relieving of the province of its obligation to complete the west leg.

Mr. MACKENZIE (Vancouver): Oh, yes, there was.

Mr. BENNETT: There was, clearly, with respect to what was done under relief; we assumed all responsibility for that, but it was a question of whether or not we were to bear the cost of completing it.

Mr. MACKENZIE (Vancouver): There certainly was an exchange of telegrams and correspondence to indicate that that was the understanding.

Mr. BENNETT: I remember the discussion, but as I say—

Mr. CRERAR: The statement of the Minister of National Defence is correct. I think a reading of the communications exchanged

between my predecessor in the Department of Interior and the Minister of Public Works and also the premier of British Columbia, in the summer of 1935, gives—

Mr. BENNETT: Oh, I think that is so.

Mr. CRERAR: —evidence that the expense was to be borne by the federal government. Now the question arises as to the time in which this was to be done. I can find nowhere any time limit as to when the work was to be completed.

Mr. BENNETT: There was, I think, in the original agreement with the province.

Mr. CRERAR: So far as the east leg was concerned.

Mr. BENNETT: I thought, as to the west leg too.

Mr. CRERAR: I am informed that in the agreement covering the construction of the east leg there was a time limit. There is another important question which I might mention that has been giving me some thought. We have spent very considerable money—it would probably run to nine or ten million dollars—on the Banff park and parks adjacent.

Mr. BENNETT: That is from their inception?

Mr. CRERAR: From their inception.

Mr. BENNETT: I should think that is right.

Mr. CRERAR: Yes, I am informed that the expenditure on the Banff park alone is somewhere between nine and ten million dollars.

Mr. BENNETT: Over a period of forty years.

Mr. CRERAR: Last year the total number of American tourists' cars registered in Banff was, I think, 4,800. The difficulty in getting tourists from the United States to this very magnificent park—it is one of the finest in the world—is the lack of good roads between the international boundary and the park. I have been told by different people from that section of the country who are aware of the circumstances that it is not an uncommon thing for American tourists, leaving their hard-surfaced roads south of the international boundary and entering Canada, to proceed a few miles on a gravel highway with dust and high wind, and then turn round and go back. One thing that has impressed itself on my mind is the necessity of getting a type of road which will do away with the dust nuisance between the international boundary and Banff national park. If we could do that, probably we would increase the number of American tourists coming to Banff four or fivefold. The problem, of course, is to find the money to do this work. There is also the problem to which the leader of the opposition referred I think once before, the matter of getting an arrangement with the provincial government concerning a road outside the park boundaries. We do not wish to be committed indefinitely to the principle of building provincial roads. That matter is one which should be considered very fully. I am not at the moment in a position to say more to the committee than this, that the question of getting dust-free roads into our national parks is receiving the careful consideration of myself and the officers of the department, and if some arrangement could be made we might for the time being at any rate cut down the expenditure on the west leg of the Big Bend road, use some of the money to get rid of the dust nuisance on the roads leading to the national park at Banff and adjacent parks, and thereby greatly increase the revenue that would come to the province and the country.

Mr. BENNETT: Perhaps the minister has not given very great detailed attention to the matter for this reason: The number of points at which tourists enter Canada from the United States is considerable, and if you are going to take care of one you have to take care of all. For instance, there is the Waterton lake park; the tourists come in south of Lethbridge. That park is in just the same position, because you have there roads which are gravelled, as free from dust as you can get a natural gravel road built under the conditions under which those roads were built. Then, going further west you come to Macleod. The road from Macleod to Fernie was built by the province of Alberta; it is not a hard-surfaced road, but is an excellent road with very little dust. From there it leads south to the international boundary. But when you get further west, the traffic being somewhat limited at the moment, those roads are filthy with dust. You cannot drive along them for more than a few miles without being choked with dust yourself and your car covered with it. Now, which of those are you going to take care of? Are you going to put a coat of some plastic material over the top of one, or two, or three? The claims, for instance, in con-

nection with Waterton park, to which large numbers come from the United States, are very considerable. The reason there has been a falling off in the number of tourists visiting the Banff and Kootenay parks is very clear; it is because when people get in they cannot get out again without retracing their course. Remember, the distance from the international boundary to Banff park is substantially the same as the distance from the further west park, I do not know what name is given it now, whether they call it Kootenay or Yoho valley. In the United States there are hard-surfaced roads to the boundary. The reason for the falling off in the number of tourists at Banff is that the road to Jasper is not yet completed, and the road west is not completed; they cannot get to the coast; they have to strike south from Kootenay park or whatever it is called. Part of the roads within the park are covered with some dustproof substance.

But my difficulty always was—and I think it is the difficulty the minister has—if you select one road, what about the others? They are so far apart that one road will not serve. It is no good to put a concrete surface or plastic material on the road from Waterton park south in the hope that road would serve that vast territory south of the park. There is a very fine park there in British Columbia, connected with the Banff park. There is a continuous road from Banff park into it, an excellent highway. What we were always hoping long before we were in office as a government was that that road would be put through to the coast so that the people who come to Banff would be able to get out by going through to the coast on this Big Bend highway. That is or shortly will be finished up to Canoe River, but if operations are discontinued there we shall not have the road any further advanced, because the road cannot be used unless that link is completed. The only way in which Canadians can get through to the coast now is to go south into the United States; that is made necessary by the incomplete state of the road on the west leg of the Big Bend.

The Minister of National Defence says that telegrams clearly indicate financial responsibility. I do not think it went as far as that; my memory is that we undertook to find the money to enable the province to do the work, and we made it clear that as far as relief work is concerned that would be charged against our own appropriation and the province would not be liable. But with respect to the balance of the work done in pursuance of the province's undertaking I do not think there is anything which makes it clear that the money was not to be refunded by the province at some time. I would be surprised if it were so, but it may be that it is, because the British Columbia provincial authorities said frankly that they did not know when, if ever, they would be in a position to see their promise implemented.

I wholly agree with what the minister says, that something must be done to rid the parks of the dust nuisance. The highways leading to the parks, however, are completely under provincial control. For instance, people who come in from the south motor up on the Macleod highway to Calgary; there is no other way by which they can get into that park reasonably at the present time. That is not a hard-surfaced road. Once they get to Calgary the road from Calgary to Banff, which was very dusty, has been oiled. Shall we undertake to eliminate the dust nuisance all the way from Calgary to the boundary? I refer to the road from Calgary to Macleod and then from Macleod south. Shall we eliminate the dust nuisance on the road from Macleod west to Fernie? I motored from Fernie to Macleod on one occasion, and the dust was not as bad as I had expected, although it was still unpleasant. Shall we do that, and then shall we provide an oiled, hard or plastic surface on roads leading from the parks in British Columbia to the United States? If so, the task will be a tremendous one, and at once we will invite discussion and invidious comparisons will be set up. Statements will be made that one part of the country has been served and others have not. That has been the difficulty. I make these observations only by way of pointing out that one cannot get into Banff park with a motor car, as I understand it, unless he travels a substantial distance from the boundary, up to the park. At the present time Alberta is spending a large sum of money on the improvement of these roads.

This is equally true when we come to the province of Manitoba, because in that province there is the main highway from the park south to the boundary. No doubt the minister is familiar with the road to which I refer. A large sum of money was spent in an effort to make it free of dust. The Minister of Public Works for Manitoba pressed the necessity of spending $1,100 or $1,200 per mile for the purpose of eliminating the dust nuisance and attracting visitors to the park. I was astonished when I learned the number of people from the United States who visited the park in Manitoba. Then, there are other visitors from surrounding areas in the western provinces. The effort to eliminate dust will have to be on a most generous scale and cover a

tremendous number of roads if the government is not to incur the resentment of others who are not thus served. That has been a real difficulty. I agree that if we are going to have people come to the country, we must do something to eliminate the dust.

Mr. STEVENS: I am tremendously interested in this matter, because two of these parks are really in the constituency of Kootenay East, and Banff park adjoins. The three parks are close together and closely connected. Access from the American border to the Kootenay park, through Radium, gives access to all three parks. On the other hand there is the desire of tourists to return by some route other than the one by which they entered. There is no question that if they were given access to these three mountain parks they would visit them in large numbers. After all, Banff park, the oldest and most highly developed, together with Yoho and Kootenay parks, form the major portion and basis of our great parks system. Access could be given to these parks through Alberta, around by Calgary to Banff, and then through Kootenay park and the Radium area south to Kingsgate. I quite agree that a considerable distance is involved, and that it opens up the question of connecting other national parks with the international boundary. My own opinion is that we ought to adopt as a national policy the principle of giving access to our national parks to the great population south of the boundary line. Because, now that the motor car is used to such a large extent in tourist traffic, it is not sound business to provide inadequate facilities for automobile tourists. There was a time when the Canadian Pacific Railway gave virtually every access to Banff park, but that day has long since passed. To-day we have a great tourist traffic in which the automobile is the means of transportation.

Here is something which is being overlooked: every motor car which enters the park gates pays the sum of $2. When motoring around these roads I have had the opportunity of talking to scores of tourists, and, while I shall not use strong language, I shall be content with saying that they damn Canadian roads and declare they will never come back. There is no doubt that tourists go back to the United States and tell their friends not to come to Canada because our roads are bad. This is a real danger. I have motored many times along the road running south of Calgary, and also on other roads in that locality. Particularly in British Columbia in many places the roads run along the sides of the mountains, and the dust is so thick that motoring is dangerous; on occasions one cannot see for some time after he has met another motor car. One overtakes a car almost at the risk of his life, because in doing so he must pass through a cloud of dust.

I suggest that the minister be not deterred by the fact that there may be claims for roads to other parks, because I believe we should adopt this road building as a progressive national policy.

Mr MACKENZIE (Vancouver): One in every province.

Mr. STEVENS: We could make it one in every province, and I would extend it until we had roads efficiently and effectively connected with international boundaries. After all, the tourist trade is a real industry, and is not as unimportant as we used to think it was in years gone by.

People particularly from the congested areas in Ontario and Quebec go in large numbers to the United States. They travel for the pleasure of motoring, and carry with them a certain amount of wealth that is left in that territory. Our hope is that we may draw from the great republic to the south of us, and thereby bring to Canada a substantial amount of wealth. Under present circumstances we cannot do it. From my intimate knowledge of the situation I am positive that we could not only double but quadruple—and possibly more than that—the traffic into our national parks. I believe the increase would be shown immediately after people in the United States learned that our roads were improved. Large expenditures would be necessary, but the number of cars that would come to Canada and the direct cash revenue to the parks that would result would in substantial measure meet the interest charges on the investment.

In securing access to Kootenay, Banff and Yoho parks on the west side, tourists must pass through the Columbia valley, a farming district almost as isolated as the Peace River country, and possibly one of the most isolated farming sections in Canada. In the summer months the tourist traffic forms a good market for local produce such as milk, butter and eggs. Increased tourist traffic would be a godsend to the farmers in the valley. I would urge the minister to give earnest consideration to this point.

With reference to the Big Bend highway, may I say that the dominion government staff or authorities have done a wonderful job on the east leg of the highway. I have been over it several times; I have watched with keen interest the progress made, and I want to repeat that they have done an excellent job. They have opened up a country that for beauty of scenery, hunting and sporting facil-

ities, and general attractiveness is, I think, unequalled anywhere in the whole mountain area of British Columbia. It is a marvellous country, and it will be a most attractive route for tourists, in addition to the attractions of the parks.

Last year when I heard that the provincial government and the dominion government had come to an understanding about the west leg of that highway I was naturally pleased because it is highly desirable to complete that highway. Unfortunately the work which has been done by the provincial public works department in the years that have passed has not been of the standard set by the dominion government on the east leg; there is no question of that, and it will undoubtedly cost quite a considerable amount of money to put that stretch of roadway into good shape. But here again I emphasize this point. This is not money thrown away. It is a real investment. We who live in British Columbia know the number of tourists who come up in the summer to our province from the states along the Pacific coast, from the great state of California, in particular, and the states of Oregon and Washington, also Idaho, but I mention California particularly, because the Californians love to go north to British Columbia in the summer, and if you were in British Columbia in the summer you would observe on the roads throughout the province and on the streets of Vancouver probably three California cars, I think I am safe in saying, to every one of all the other states put together. I have no accurate figures but that is my impression, and I have observed carefully. We get a large number of Californians. They are attracted by the mountain scenery and the cool, green verdure of our parks and province, which furnishes such a contrast to the heat and glare of a California summer. Our people go south in the winter. There is thus an interchange of traffic. I want to make this point very clear to the minister, that when he is building or making dustproof—and that is the main thing—the roads from Kootenay park and Banff park, east and west to the boundary, or completing the Big Bend highway, the work must be considered as a form of national investment, which I believe will bring to the country excellent dividends commensurate with the effort made. I repeat what I said a moment ago, that I would not be deterred by the fear of demands from elsewhere because I believe that we should adopt it as a national policy to open up access to our great parks to American tourists from the south. It should be a part of our general national policy. The item as it appears in the estimates naturally, therefore, gave me a great deal of satisfaction and pleasure, but I also think it is sound business to carry on this work.

Mr. McDONALD (Souris): I would like to suggest to the Minister of the Interior that under this vote of $25,000 for miscellaneous, a few thousand dollars be included for the peace garden, situated on the boundary between North Dakota and Manitoba immediately south of the town of Boissevain. Mr. E. F. Willis, member for Souris in the previous parliament, put on Hansard a very fine description of the beauties and value of the peace garden, which will be found at page 2340 of Hansard of 1933. For the information of the committee I might say that our American friends have so far spent about $100,000 on that garden, but we as a government have spent nothing yet.

I listened to the right hon. leader of the opposition (Mr. Bennett) and the hon. member for Kootenay East (Mr. Stevens) speaking of the value of the tourist trade, and again for the information of the committee I would like to say that the town of Killarney in the constituency I represent has the second largest number of entries for tourists who came through the port of entry south of that town. Many of these tourists no doubt were on their way to the Riding Mountain national park. It was proposed to spend $1,000,000 on this peace garden in Turtle mountains to perpetuate the peace that has existed between Canada and the United States for one hundred years. If that amount were spent, or if the sum of $5,000,000 which was first contemplated for building and endowing the garden were spent, it would draw tourists from hundreds and hundreds of miles. I would suggest to the Minister of the Interior that he include at least a few thousand dollars to get this thing started.

I am hopeful, and I believe I have good reason to hope, that the government is going to complete the road leading to the garden. There is a fair road there now, but I understand the government intends to complete it. When it is completed, and if the garden is built, it will be a wonderful attraction for tourists.

Mr. GREEN: I would like to make one or two suggestions to the minister in connection with the Big Bend highway. I think he would be making a big mistake if he placed more importance on feeder roads to the boundary than on the completion of the trans-Canada highway. After all, I think Canadians should come first, and Canadian tourists too,

and if that gap on the west side of the Big Bend highway is finished we shall then have a passable trans-Canada highway from Vancouver to Fort William, I believe, but at any rate as far as Winnipeg. That point should not be overlooked. I think the Big Bend gap should be given first consideration.

There is also this fact. The hon. member for Kootenay East (Mr. Stevens) has said that there are thousands of California cars coming up to Vancouver in the summer. They come up the Pacific highway. A great many more American cars come that way than come up from the states of Idaho and Montana, and I suggest that the very best source from which to draw American tourists would be to have them come up the Pacific highway and then over our trans-Canada highway into Banff park. But that can be done only by completing this western gap of the Big Bend highway, and I suggest that it should be given the preference. I hope the minister will not lose confidence in the trans-Canada highway.

Mr. BROOKS: Do I understand, Mr. Chairman, that the item for the development of new parks in the maritime provinces stands? I know that the leader of the opposition asked that it stand.

Mr. CRERAR: I understand that my right hon. friend who leads the opposition raised the point that until the legislation creating these parks had been submitted to parliament it was inappropriate to discuss a vote to develop them. The item might stand if my right hon. friend wishes, and be discussed later.

Mr. BROOKS: I notice there is an item here of $140,000 for the development of new parks in the maritime provinces, and in the press of the maritime provinces I have noticed that there is to be a park established in Nova Scotia. One article said that $100,000 was to be expended for that purpose, and that a national park was also to be developed in Prince Edward Island. I should like to know if a national park is to be developed in New Brunswick.

Mr. CRERAR: There is no vote contemplated to go ahead with a park in New Brunswick this year. Some examination was made, I think in 1934 of possible sites in New Brunswick. There is some difference of opinion as to the best location for a park in that province. I would point out something that I think is obvious to everyone acquainted with the situation. A park located in Nova Scotia or in Prince Edward Island is bound to be of some benefit to New Brunswick because of the fact that tourists could reach a park in Nova Scotia only by travelling through New Brunswick.

Mr. BENNETT: Oh, no, they come to Yarmouth in large numbers. There are ships specially adapted, running from New York to Yarmouth.

Mr. CRERAR: Then I am not correctly informed. Tourists from the New England states would come through New Brunswick and on into Nova Scotia. Some might ship their cars by ferry and avoid passing through the beautiful province of New Brunswick, but I think a large number would travel by road. In any case the question of a site in New Brunswick is yet to be determined, and in this connection further surveys will be made this summer.

I agree with one observation made by the hon. member for Kootenay East (Mr. Stevens). I think the tourist business is an industry and should be so considered. We have an investment of almost $30,000,000 in our national parks scattered throughout the different provinces. Both the Canadian National and the Canadian Pacific have also spent large sums at Banff, Jasper, Lake Louise and other parks in providing hotel accommodation and general facilities for tourist traffic. The thing is to develop this traffic. If we could treble or quadruple the number of United States tourists coming to Canada within the next two or three years, the result would be a substantial contribution to general economic improvement.

This brings me to the question of roads. In the Glacier national park and in the Yellowstone national park the United States government has spent millions of dollars upon the construction of the best kind of hard surfaced roadways. Americans come up from the south to visit the Yellowstone park or the Glacier park. Having heard a lot about Banff, they make inquiries and find they can reach Banff in a day or a day and a half. They decide to come to Canada, but when they get on Canadian roads they find they are entirely different from those they have been travelling on in the United States. The result is that they get disgusted and discouraged and turn back, and we do not get their business.

Mr. BENNETT: That depends upon where they come in.

Mr. CRERAR: Yes, it depends upon where they come in. Where tourists come up through

California and proceed to Vancouver, the conditions are different. It would take them two or three days to get to Banff from Vancouver by road, but many of them would travel that road if it were completed. It has been estimated that the completion of this road will attract from 15,000 to 20,000 tourist cars per year. On the other hand, many of these tourists visit the United States parks in Montana immediately south of the Alberta boundary.

Mr. BENNETT: They come in by Waterton park.

Mr. CRERAR: If we had sufficient funds we could build roads into all these parks, as has been suggested, but I recognize the importance of the point raised by the leader of the opposition (Mr. Bennett). If you once begin to build roads from the international boundary into these parks it would be difficult to stop unless you wished to be charged with discrimination. On the other hand, there are certain circumstances that vary the conditions. Take the Riding Mountain national park, for instance in Manitoba. With the exception of a portion of the trans-Canada highway and the road leading from Winnipeg south to Emerson Junction, and some mileage east and north of Winnipeg, all our roads are gravel roads. The roads in Dakota are also of this type.

Mr. BENNETT: Manitoba roads are better.

Mr. CRERAR: The roads in Dakota are gravel and I believe they are inferior to the Manitoba roads. A tourist might arrive from Fargo or some point even further south and then decide to visit Winnipeg. He might then inquire as to parks and be informed of the Riding Mountain park, which he could visit. All this time he would be travelling over the type of road with which he is familiar, at least no worse and in many cases better than the roads in his own state. In my judgment this is the explanation for the large number of American cars which come into Riding Mountain park.

Mr. BENNETT: How many went in there last year?

Mr. CRERAR: I am told that over 100,000 tourists registered into the park. A large number of these would be Canadian, but many were American. This condition is changed completely when you consider the Banff park.

Mr. BENNETT: What number entered Waterton Lakes park last year?

[Mr. Crerar.]

Mr. CRERAR: I have not that information at the moment, but perhaps I can get it.

Mr. BENNETT: I was just curious about that.

Mr. CRERAR: Undoubtedly a road from Kingsgate into Banff would attract a lot of tourists from the south, because Kingsgate is only a little west of the Glacier national park.

Mr. BENNETT: Is the road into Kingsgate hard surfaced?

Mr. CRERAR: You mean from the United States?

Mr. BENNETT: On the United States side.

Mr. CRERAR: It is not completed, but my deputy informs me that it is being hard surfaced.

Mr. BENNETT: The last time I was over it it was the same as ours.

Mr. CRERAR: A tourist might decide to go from Kingsgate to Banff, or, if the Jasper road was completed, he could go on to Jasper. He could then come out by Edmonton. The chances are that after visiting Banff or Jasper he would go down through Canada and back home. I certainly do not want to make a mistake in judgment in connection with this matter, as it is important, but I am rather intrigued with the notion that if our roads were dustproofed from Kingsgate to Banff and from Banff to Calgary and down into Waterton Lakes park, a large number of American tourists would be attracted to Canada. They would have to travel considerable distances through our country. I do not wish to create the impression that there is any thought of abandoning the Big Bend road. At the moment it is merely a question where you can spend what money you have and obtain the best results, and I can assure the committee that that is the basis upon which this whole matter is being considered. I intend to discuss the question with the representative of the British Columbia government, who I understand is in the city at the present time, though I have not seen him. In the correspondence exchanged last year between the federal government and the government of British Columbia with respect to the completion of the west leg of the Big Bend highway, the suggestion was made to the province that the road from Kingsgate to Kootenay park should be properly maintained, and the British Columbia government gave a commitment, though a rather indefinite one, as to

the amount of maintenance work they could do on that road. It was subject, they said, to two limitations: first, the amount of cash available, and second, the demands for similar road construction in other parts of the province.

I believe that the development of this tourist business offers a great opportunity to Canada. There is no question of the value of it in the economic sense.

Mr. BENNETT: In the international economic sense.

Mr. CRERAR: Yes, as my hon. friend says, in the sense of our economic relations with the United States. When we get tourists to visit our parks we are exporting scenery, and it is good business as rapidly as we can to provide facilities that will attract them to this country and induce them to stay as long as they reasonably can. That business is valuable to Canada, but I am firmly convinced that if we are to develop it one of the first considerations is the matter of dustproof roads from the United States into our Canadian parks. I realize as much as anyone in the house does the limitations, owing to our heavy expenditures in other directions, but I hope to work out a sensible plan whereby we can spend a certain amount each year and spend it in the most effective way. I would certainly welcome suggestions from any part of the house as to how that can best be done. My hon. friend from Souris (Mr. McDonald) referred to the peace garden which lies in his constituency. That is a matter of the first importance. The peace garden symbolizes a state of international amity between Canada and the United States that is one of the finest things we can contemplate. There is no provision in this vote for roads into the peace garden, but the completion of the road commenced last year is to be provided for in the projects that are being arranged for between the government of Manitoba and the Department of Labour. That I know has been the subject of discussion between representatives of the Manitoba government and the Minister of Labour.

Mr. MacKINNON (Edmonton): The discussion that has developed has grown out of the consideration of an item for furthering the construction of the Big Bend portion of the trans-Canada highway along the Columbia river. A large number of the people of the prairie provinces—the central and northern parts of the prairies particularly—have their eye on a highway which they want to see built to connect them with the Pacific coast, from Jasper, the centre of the great Jasper national park. In this discussion I do not think it necessary to dwell on this natural ambition of the people of the prairie provinces, because we remember that the people who favour the construction of a highway from Jasper west to Vancouver recognize that it must link up with the highway in course of construction along the Columbia river. For that reason I am not pressing at the moment further consideration for the construction of a highway connecting Jasper along what is known as the Blue River route west from Jasper in the direction of Vanderhoof, south along the Canoe river or along the present right of way of the Canadian National tracks to a point on the Big Bend portion of the trans-Canada highway. That is a matter in which we are greatly interested in Alberta, in Saskatchewan and in the western provinces generally. I am induced to make these remarks particularly by reason of an observation made by the minister in referring to the motoring which a possible tourist would do in arriving at Banff. The hon. member who speaks on behalf of Banff may suggest that a highway is being constructed now from Banff to Jasper and that this will give us coast connections. That in itself will be a wonderfully scenic highway when completed, but in addition to that I would point out to the minister that we will request a highway west from Jasper direct to the main trans-Canada highway, along what is known as the Blue River route.

Mr. BROOKS: The minister a moment ago said that the national parks in Nova Scotia and Prince Edward Island would benefit the province of New Brunswick. I assume the idea is that it would satisfy New Brunswick. If that is the minister's opinion I wish to disabuse his mind at once because the people of New Brunswick would not be satisfied, nor would they be justified in being satisfied, with such an arrangement. There might be some benefit to the people of New Brunswick from a park in Nova Scotia and a little from a park in Prince Edward Island, but we would be only constructing roads for tourists to get to these other two provinces, and the amount of benefit to us would be very small. I hope that is not the intention of the minister; I hope the government does not intend to construct parks in the other provinces and neglect New Brunswick. If it is a matter of determining the site and the department cannot decide on a site I will willingly assist them. I think I could pick out one of the best sites in the province.

Mr. COLDWELL: The minister stated that dustproof highways would be an attraction to what he called the tourist industry. I was wondering if the government had looked into the utilization of the tar sands of Alberta. Several years ago the Canadian Pacific Railway laid its platforms in the city of Regina with tar sands brought down from Alberta. I do not know whether or not that was an economical way of handling the tar sands, but I was discussing the matter at the time with an engineer, and he told me he thought that ultimately the tar would be extracted from the sand, mixed with local sand and utilized, and then it might be an economical project. If Alberta has vast deposits of tar sands—and I understand it has—and by cooperation with the dominion government a scheme could be worked out whereby this material could be utilized by the people of Canada as a nationally-owned resource, and if the project is economically feasible, I believe there is a possibility of getting dustproof roads.

While I am speaking on this matter may I add that in my opinion not only tourist traffic but the traffic of our own people from the southern parts of the prairie provinces to the northern regions would be greatly facilitated and improved if here and there, at one or two places where trunk highways cross rivers by means of ferries, bridges were built. I have in mind particularly the area from Swift Current north. At certain seasons of the year it is necessary, along that particular highway, to travel many miles out of the way around to the Elbow and there cross the bridge over the Saskatchewan river, although there is a splendid highway, No. 4, I believe, running straight north from Swift Current to North Battleford. We have a number of links of that description. It seems to me that if we are going to spend money for the encouragement of tourist and other traffic these gaps in our highways might well be considered.

However I rose to ask the minister, since he has mentioned the possibility of dustfree roads, if any consideration has been given to the utilization of the tar sands of Alberta.

Mr. CRERAR: In reply, I want to deal for a moment with the point raised by my hon. friend from Royal (Mr. Brooks). It is the intention of the department to have a further investigation of New Brunswick made this summer with a view of locating a park site.

Mr. BENNETT: There is a report on the subject now.

[Mr. Brooks.]

Mr. CRERAR: We have a report now, but there is a difference of opinion on the report, and a difference of opinion in New Brunswick itself.

Mr. BENNETT: Not in the department. They made the recommendation.

Mr. CRERAR: My hon. friend from Royal must also keep in mind that the province has to deed over to the federal government the whole park area that it is proposed to develop. That matter will receive consideration this summer. Whether or not an amount can be put into our estimates a year from now for the development of a park in New Brunswick depends upon factors, upon which I would not care at the moment to pass an opinion.

As to the other point, raised by my hon. friend from Rosetown-Biggar (Mr. Coldwell), experiments were carried on with the tar sands of northern Alberta, particularly in Jasper national park, and I think it can be said that these sands make a suitable hard-surfacing material. The difficulty is the cost of transporting the sands and the bitumen which they contain to the park areas where they can be utilized, or indeed for purposes of roads anywhere else. I understand, however, that lately a company has been promoted, has secured capital, and will undertake this year the separation of the bitumen from the sands in this tar sands area of northern Alberta.

Mr. BENNETT: And the oil?

Mr. CRERAR: And also the oil. If that experiment works out—and apparently they have conducted their preliminary experiments to a degree where they have sufficient confidence in the enterprise to put capital into it—possibly supplies of material for hard-surfacing roads will be available from that source. At present the taking of this heavy untreated material from the northern part of Alberta, where it is located, is not practicable owing to the cost.

Mr. CLARKE (Rosedale): With regard to the $13,200 for wharves and beach protection improvements, what section of the country are they in?

Mr. CRERAR: That is mainly in the Prince Albert national park and Riding Mountain national park.

Mr. FAIR: I wish to direct the attention of the minister to the great Wainwright Buffalo park. On the south side of this park we have good roads. On the north side there is a gravelled highway from Edmonton to Wainwright. But through the park we have no

roads whatever, except a prairie trail which was fairly good for travel in the days of the old model T, but at the present time, when cars are being slung lower and lower, the bottom of your car, as you drive along, rubs on the road or you have to get off the road and drive over the prairie. For some time organized bodies around Wainwright have been trying without success to have a road constructed through the park. As hundreds of visitors from all parts of the United States and Canada visit this park every year, I believe that it would be good business to go ahead and put the road through from the north to the south. As the minister no doubt knows, Wainwright is also a great oil-producing centre. Facilities in that respect have been provided by the province through the construction of a gravelled highway. There is a good road on the south side, and the people of the district are very anxious to have a road through the park from north to south. I should like to see the minister give this proposal his attention.

Mr. BENNETT: The question of an appropriation for parks in the maritimes will depend upon the bill, and I think we should have something to say about that before we appropriate this item. I understand that it is to stand; there is something I desire to point out in connection with what has been said. I suppose the minister realizes, although nobody has pointed it out, that we cannot do a dollar's worth of work, in resurfacing or otherwise providing for dustproof roads belonging to a province, unless the province permits us to do so. The provinces own the roads, and when we talk about doing this or that it must be remembered that the roads are the property of the people of the various provinces, and we cannot deal with them without provincial consent. I do not intend at this time, because it is six o'clock, to get into a discussion of that matter. I merely point out that in the ultimate analysis the province is going to select the road on which we do the work. It is their road, not ours.

Mr. CRERAR: That is right.

Mr. BENNETT: It is for them to say whether or not we shall put tar on it. Therefore, when we talk about making dustproof roads to the boundary, Alberta will have the say as to whether it shall be the one at Waterton park, or the one from Banff to Fernie.

Mr. CRERAR: Before the committee rises I just wish to say that I am quite aware of what the leader of the opposition has pointed out, and earlier in my remarks I intimated that this is one of the matters that I propose to discuss with the Minister of Public Works of British Columbia, who is in Ottawa at the present time.

Mr. BENNETT: Another question that should be touched upon, as the hon. member for Yale (Mr. Stirling) suggests, when the item comes up again, is that of continued maintenance.

Item stands.

Progress reported.

## BRITISH NORTH AMERICA ACT

### CORRESPONDENCE WITH RESPECT TO PROPOSED AMENDMENTS TABLED

Mr. LAPOINTE (Quebec East): Mr. Speaker, I desire to lay on the table of the house correspondence with respect to the proposed amendment to the British North America Act.

Mr. BENNETT: Has the minister an extra copy for the hon. member for St. Lawrence-St. George (Mr. Cahan)?

Mr. LAPOINTE (Quebec East): I have only one extra copy.

Mr. BENNETT: Perhaps the minister will be able to let the hon. member have a copy to-morrow morning.

At six o'clock the house adjourned without question put, pursuant to standing order.

---

# Thursday, May 14, 1936

The house met at three o'clock.

## STANDING COMMITTEES

### MINES, FORESTS AND WATERS—CHANGE OF PERSONNEL

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That the name of Mr. Clarke (Rosedale) be substituted for that of Mr. Plunkett on the standing committee on mines, forests and waters.

Motion agreed to.

### STANDING ORDERS—CONCURRENCE IN FIRST REPORT

Mr. S. W. JACOBS (Cartier) moved that the first report of the standing committee on standing orders be concurred in.

Motion agreed to.

## QUESTIONS

(Questions answered orally are indicated by an asterisk.)

QUEBEC CITY POSTMASTER

Mr. BOULANGER:

1. Who is the postmaster of Quebec city?
2. When was he appointed?
3. Was he appointed by the Civil Service Commission?
4. Who were the other applicants?
5. What are the names, ages, occupations, salaries, qualifications and addresses of the persons who determined the qualifications of the applicants?

Mr. RINFRET:

1. Jean-Baptiste L. Morin.
2. January 1, 1933.
3. Promoted following a promotional competition held by the Civil Service Commission.
4. Alleyn, John Alexander; Arteau, Jean-Baptiste Henri; Pelletier, Pierre Alphonse Jules; Pouliot, Joseph Alphonse.
5. The candidates were given ratings by the district superintendent of postal service, Mr. S. Tanner Green, whose headquarters was Quebec city, on—(1) Seniority (length of service); (2) Efficiency of service; (3) Fitness to fill the vacant position. Weights to these ratings were given in the commission.

Mr. Green, who entered the postal service in 1885, (July 1), was sixty-nine years of age in 1933, and his salary was $4,620 per annum when, as district superintendent of postal service he rated the candidates in this promotional competition. Mr. Green was resident at Quebec city.

DOMINION HOUSING ACT

Mr. MALLETTE:

1. How many loans have been made since January 1, 1936, under the Dominion Housing Act, 1935, through authorized institutions (a) in the city of Montreal; (b) in each of the other municipalities situated on the island of Montreal?
2. What was the total amount of such loans made in each municipality?

Mr. DUNNING:

| | | |
|---|---|---|
| 1. (a) | 20 (representing 55 family units). | |
| (b) | Mount Royal | 12 |
| | Pointe Claire | 5 |
| | Hampstead | 4 |
| | Westmount | 1 |
| | Hudson Heights | 1 |
| | Cote St-Luc | 2 |
| 2. | Montreal | $ 201,615 |
| | Mount Royal | 96,639 |
| | Pointe Claire | 17,978 |
| | Hampstead | 31,300 |
| | Westmount | 13,000 |
| | Hudson Heights | 4,000 |
| | Cote St-Luc | 8,350 |

[Mr. Jacobs.]

CANADIAN TRAVEL BUREAU

Mr. MALLETTE:

1. What firms have been given contracts for publicity by the dominion tourist bureau?
2. Where are these firms located?
3. What is the amount of each contract?
4. When does each contract expire?

Mr. HOWE:

It is assumed that these questions relate to the Canadian Travel Bureau.

1. 1935—McConnell, Baxter & Eastman.
   1936—MacLaren Advertising Company.
2. Toronto.
3. 1935—$173,608.32.
   1936—$176,459.11.
4. These contracts cover the placing of advertising in certain periodicals, both newspapers and magazines, in the United States. They are not term contracts, but are for certain stipulated services, as and when required.

## QUESTIONS PASSED AS ORDERS FOR RETURNS

GOVERNMENT ANNUITIES

Mr. WARD:

1. What number of annuity contracts has been issued by the government annuities branch during the fiscal year ending March 31, 1936?
2. How much was received as premium payments during that year?
3. What are the names of the special full-time representatives who received commissions from the sale of government annuities during the fiscal year ending March 31, 1936?
4. In what cities were they located?
5. What total remuneration did each representative receive, as commission or otherwise, during that year?
6. What total amount of money has been transferred from the consolidated revenue fund for the maintenance of the government annuity reserves from September 1, 1908, to March 31, 1936, over and above the 4 per cent interest credited to the fund each year?
7. Are the reserves at present set up by the government annuities branch higher or lower than the reserves which life insurance companies would be required to hold for the same contracts under the Canadian and British Insurance Companies Act, 1932?
8. Is the single premium charged by the annuities branch for an annuity guaranteeing a male age 60, $100 per annum for life without guaranteed payments higher or lower than the rate of $1,262 charged at present by the British government through the national debt commissions for a similar contract?
9. What single premium does the annuities branch charge for this contract?

GOVERNMENT OWNED GRAIN ELEVATORS

Mr. CHURCH:

1. How many grain elevators of all kinds are owned by the government of Canada?
2. Where are they located, and what is the capacity of each?

3. When was each of such elevators constructed?
4. What was the cost of each of such elevators?
5. By whom were the said elevators designed?
6. What money compensation was paid for such designs?
7. By whom were the plans and specifications for the construction of each of such elevators prepared?
8. What money compensation was paid for the preparation of such plans and specifications?
9. By whom was each of such elevators constructed?
10. Who supervised the construction of each of such elevators?
11. What money compensation, if any, was paid for such supervision?
12. Are any of such elevators equipped with special hoppers?
13. If equipped with such special hoppers, by whom were such hoppers designed, what money compensation was paid for such designs, and what was the cost of such equipment?
14. Is any royalty being paid in connection with hopper equipment used in such elevators?
15. If so, what is the amount of such royalty, to whom is it paid, and what was the amount paid during each year since such equipment was placed in the several elevators?

## BRITISH NORTH AMERICA ACT

### PROPOSED AMENDMENT RELATING TO TAXATION AND GUARANTEE OF PROVINCIAL DEBTS

Hon. ERNEST LAPOINTE (Minister of Justice) moved:

That an humble address be presented to His Most Excellent Majesty the King, in the following words:—

To the King's Most Excellent Majesty:
Most Gracious Sovereign:

We, Your Majesty's most dutiful and loyal subjects, the Commons of Canada in parliament assembled, humbly approach Your Majesty praying that you may graciously be pleased to give your consent to submitting a measure to the parliament of the United Kingdom of Great Britain and Northern Ireland to amend the British North America Acts, 1867 to 1930, and the British North America Act, 1907, and that such measure be expressed as follows:—

An act to amend the provisions of the British North America Acts, 1867 to 1930, relating to taxation and to enable the government of Canada to guarantee debts of the provinces of Canada.

Whereas an address has been presented to His Majesty by the Senate and Commons of Canada requesting the enactment of the provisions hereinafter set forth:

Be it therefore enacted by the King's Most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and the Commons, in this present parliament, assembled, and by the authority of the same, as follows:—

1. (1) Section ninety-two of the British North America Act, 1867, is amended by adding thereto as clause 2A the following:—

2A. Indirect taxation within the province in respect of:—

(i) retail sales, other than of all alcoholic beverages, spirits, malt, tobacco, cigarettes and cigars which are subject to customs and excise duty or tax in Canada or other than of all goods and articles for delivery without the province;

(ii) the patronage of hotels, restaurants and places of amusement or entertainment;

in order to the raising of a revenue for provincial purposes.

(2) The said clause 2A shall be deemed to have retroactive effect with respect to provincial legislation in force at the passing of this act.

2. The parliament of Canada may authorize the government of Canada to guarantee the payment of the principal, interest and sinking fund of any securities (hereinafter called "guaranteed securities") which any province of Canada may from time to time make or issue, and, subject to the provisions of this act may prescribe the terms and conditions upon which any guarantee so authorized shall be given, and the provisions of this act shall, in the event of any such guarantee being given, apply and have full force and effect notwithstanding anything contained in the British North America Acts, 1867 to 1930, the British North America Act, 1907, the parliament of Canada Act, 1875, the Canada (Ontario Boundary) Act, 1889, the Canadian Speaker (Appointment of Deputy) Act, 1895, session 2, or any acts, orders, rules and regulations passed or made thereunder or pursuant thereto establishing a province or admitting a colony or province into the union or affecting the constitutional relationship between Canada and a province.

3. The legislature of any province of Canada may, with reference to the principal, interest and sinking fund of securities which the province may from time to time make or issue, authorize the government of the said province to enter into an arrangement with the government of Canada whereby the government of Canada shall guarantee the payment of the principal, interest and sinking fund of such securities.

4. (1) For the purpose of securing Canada against loss resulting from the giving of a guarantee under the authority of this act, the government of Canada, whenever in its opinion any default has occurred in respect of any payment on account of principal, interest or sinking fund of the guaranteed securities, may:

(a) withhold any payment to the province on acount of any grant payable by the government of Canada to the province for its local purposes or for the support of its government and legislature or on account of interest in respect of its public debt or in lieu of public lands or on any other account whatsoever;

(b) effect payment in whole or in part of any such grant by payment direct to a creditor of the province of any amount owing to such creditor on account of the guaranteed securities. In this and the next succeeding paragraph "creditor" shall include a trustee of a sinking fund;

(c) out of any revenue received or collected by the government of Canada or any department or officer thereof for or on behalf of the province, make payment direct to a creditor of the province of any amount owing to such creditor on account of the guaranteed securities.

(2) The legislature of any province may charge the principal, interest or sinking fund of the guaranteed securities on any revenue of the province, upon terms that such revenue shall, if the government of Canada so requires, be disbursed exclusively in payment of such principal, interest or sinking fund and may, if the government of Canada so requires, provide for the depositing of all funds from the revenue so charged in a trust account in a bank or banks for the purpose of implementing the said charge.

5. This act may be cited as the British North America Act, 1936, and the British North America Acts, 1867 to 1930, the British North America Act, 1907, and this act, may be cited together as the British North America Acts, 1867 to 1936.

He said: Mr. Speaker, the purpose of the resolution, as every hon. member will have learned from reading it, is that an address be presented to His Majesty the King asking for amendments to the British North America Act respecting two particular matters.

The resolution comes as a result of deliberations and discussions which took place at the dominion-provincial conference of 1935, and at meetings of various subconferences and committees subsequently held. There is no connection with the wider subject of Canada asking for power to amend its own constitution. That matter is still being investigated, and when the work is completed the result will be submitted to the various provinces before it is placed before the house for discussion.

The two subjects dealt with in the resolution are matters of particular urgency because of the serious financial difficulties in which some of the provinces have found themselves in the last two or three years, and indeed in which they find themselves at this time. The purpose of the resolution is to help relieve a situation created by an emergency, but one which might occur again if a similar situation developed.

The first change suggested is one respecting taxation. It is to widen to some extent the field of taxation allocated to the province, or rather to remove doubts as to the validity of taxes which have been already actually levied by the provinces and have been in force since.

This subject of taxation has always been a difficult one. It was so when confederation was entered into. It was the subject of many discussions at the Quebec conference and in the confederation debates which took place afterward. Of course at the time the only revenue of the various provinces which entered into confederation was customs and excise. They had to relinquish that source of revenue, but something else had to be provided in order to enable them to provide for local improvements, local administration and provincial matters generally. Various alternatives were suggested and discussed, one being that they should retain customs and excise revenue, another that the federal power should give to the provinces part of the revenue derived from customs and excise. There was also the alternative of giving them a subsidy, and another of direct taxation. Many of the delegates who took part in the discussions were strongly opposed to the policy of paying subsidies to the provinces as not being conducive to economy and to the proper supervision of expenditure by the local authority, but finally a compromise was reached under which a certain subsidy was to be paid to the provinces in lieu of customs and excise revenue. There was a fixed subsidy, another based on per capita of population; and the field of direct taxation also was given to the provinces.

Subsection 2 of section 92 of the British North America Act gives to the province direct taxation within the province in order to the raising of a revenue for provincial purposes. Two conditions are imposed: first, it is to be direct taxation; and second, it is to be within the province.

I said that many of the fathers of confederation were strongly opposed to financing the provinces by means of subsidy. Mr. Brown especially was opposed to that method of financing the province. Mr. Duncan in the confederation debates also took a very strong stand against it; I could quote his words but I do not think it is necessary. Later the same stand was taken by the statesmen who dealt with this matter. I have here the words of Sir Wilfrid Laurier when he introduced the Alberta and Saskatchewan bills. He said:

It is a sound principle of finance and a still sounder principle of government, that those who have the duty of expending the revenue of a country should also be saddled with the responsibility of levying and providing it. That principle has been departed from in our case.... I do not think it is sound; it is the duty of everybody in this house and in this country to take confederation as we find it, with its good points and its blemishes, and carry it to the end of the principle upon which it was established.

He even said then:

The day may come probably at no distant time, when the whole subject of the provincial subsidies will have to be taken up in a more radical way than any in which we can deal with it to-day.

He reaffirmed that stand in 1907 when the provincial subsidies were increased. He said:

If the principle be admitted of a contribution being made from the dominion treasury to the provinces, the provision made by the

British North America Act for contributions to the provinces has proved to be absolutely insufficient and inadequate. The experience of forty years had brought this fact again and again to the attention of parliament and the people of Canada; ... not once, not twice, nor thrice, but periodically and systematically parliament has been asked at almost regular intervals to vote in favour of now one province and now another province appropriations far in excess of anything that had been stipulated by the British North America Act.... All these have been made by parliament without any guiding principle, but simply as the expediency of the moment suggested, or rather as the financial difficulties of one province or the other were more or less urgent.

At the same time Sir George Foster, then Mr. Foster, a former minister of finance, suggested that the province should be allowed a certain percentage of the customs revenue in preference to an increase in subsidy. He said that such an arrangement would do away with future raids on the federal exchequer.

Hon. gentlemen can see by reading the debates that took place on these various occasions that every time an increased subsidy was granted it was stipulated that this last arrangement was to be final, that there should not be in the future any more demands for increased subsidies. Even in the British North America Act itself, in section 118, which is the one relating to grants to the provinces, you will read these words:

Such grants shall be in full settlement of all future demands on Canada ...

And so forth. But, Mr. Speaker, those hopes and expectations were not realized, because periodically since there have been movements for increases in these grants. When such requests for increases were granted it was always with that same condition of finality, but apparently in this case it cannot be final.

I said that there have been movements periodically to increase the subsidies. Even after the increases I have mentioned had been granted, in 1913, the year before the war, an interprovincial conference passed a resolution along the lines suggested by Sir George Foster in the debates of 1907, asking that ten per cent of the revenue collected by the federal government in customs and excise should be paid to the provinces. The war came a few months afterwards and no action was taken on that resolution, but conditions became worse on account of the situation created by the war. Until 1914 the federal government's main source of revenue, in fact almost the only source, was customs and excise. There were certain revenues from the Post Office Department, when there were surpluses; there was some revenue from the head tax on Chinese, but apart from these sources of revenue there was practically no other taxation in Canada. On account of the exigencies of the war, the federal government had to adopt forms of direct taxation as well as the indirect taxation in the form of customs, excise, and so on. When this was first done, Sir Thomas White, then Minister of Finance, said he was doing it reluctantly because he thought the field of direct taxation should be left to the provinces if it were at all possible so to do. However, the federal government could not obtain the necessary revenue in any other way than by the full use of its powers in that regard. Thus all the fields of taxation were invaded—perhaps I should say "used" rather than "invaded," as this was done legally—by the central government.

Of course the provinces complained bitterly about this new situation. They were forced to resort to many new taxes for the purpose of securing required revenues. Commodities were taxed in such a way as to throw some doubt upon the legality of the action. In order to show the house what was done in this connection I shall refer to the taxing of gasoline and fuel oil in British Columbia, which illustrates very well the situation with regard to this sort of taxation. In 1924 the province of British Columbia imposed a tax on oil. This was challenged, the matter going as far as the privy council in the case of Attorney General of British Columbia v. Canadian Pacific Railway Company. I should like to read the decision of the privy council in this case, because it shows the nature of the action. It reads:

Held, the British Columbia Fuel Oil Tax Act 1923, which provides that every person who shall purchase within the province fuel oil sold for the first time after its manufacture in or importation into the province shall pay a tax thereon, comes within the general principle which determines that the tax is an indirect one and, therefore, invalid within the meaning of the British North America Act 1867, s. 92, head 2.

This particular tax was declared invalid. However, the province of British Columbia wanted to tax fuel oil and gasoline, so they proceeded in another way. Another statute was passed which was also challenged and submitted finally to the privy council in the case of Attorney General for British Columbia v. Kingcome Navigation Company, in which it was held:

The Fuel Oil Tax Act, 1930, of British Columbia, which imposes a tax upon every consumer of fuel oil according to the quantity which he has consumed, is valid under s. 92, head 2, of the British North America Act, 1867; the tax is direct taxation, because it is demanded from the very persons who it is

intended or desired should pay it. As the tax does not relate to any commercial dealing with the commodity it does not fall within the category of customs and excise duties, which are within the legislative powers of the dominions, both because they are by nature indirect taxes and having regard to s. 122 of the act. The act being within the legislative power given by s. 92, head 2, and not purporting to regulate trade and commerce, is not invalid as infringing the dominion authority under s. 91, head 2, to legislate for that purpose.

This second act was declared to be constitutional and within the authority of the province. In this case the person was being taxed, it was not the commodity. The privy council adopted the definition of John Stuart Mill as to direct and indirect taxation. This definition is as follows:

Taxes are either direct or indirect. A direct tax is one which is demanded from the very persons who it is intended or desired should pay it. Indirect taxes are those which are demanded from one person in the expectation and intention that he shall indemnify himself at the expense of another; such are the excise or customs. The producer or importer of a commodity is called upon to pay a tax upon it, not with the intention to levy a peculiar contribution upon him, but to tax through him the consumers of the commodity, from whom it is supposed that he will recover the amount by means of an advance in price.

Lord Thankerton said:

Customs and excise duties are, in their essence, trading taxes, and may be said to be more concerned with the commodity in respect of which the taxation is imposed than with the particular person from whom the tax is exacted.

The privy council decision of 1934 has practically settled the law with regard to direct and indirect taxes, but even now it is difficult to come to a definite decision in connection with some sorts of taxes. At the dominion-provincial conference of 1927 this matter was discussed. It was found that when one province imposed a tax on oil, the other provinces followed suit. Taxes were imposed on other commodities and the provinces complained that their power was being challenged, not by the federal authorities but by certain taxpayers, and they were always being subjected to litigation and to the necessity of having to defray the cost of very expensive trials. Mr. Price, then Attorney General of Ontario, was particularly emphatic about it. Mr. Baxter, then Premier of New Brunswick, suggested that the British North America Act should be amended for the purpose of defining what a direct tax was, and that it should mean anything apart from customs and excise. This was supported by some of the other provinces, but nothing was done with regard to that suggestion. At the last dominion-provincial conference it was again suggested that the field should be extended to them, including everything apart from customs and excise.

Mr. BENNETT: Including income tax.

Mr. LAPOINTE (Quebec East): Including income tax, yes. So as I have stated the taxation virtually exists at the present time. They have taken the power of taxing in the way I have indicated, and when we pass a resolution here agreeing thereto we are practically doing what Lord Chesterfield advised his son to do: What you cannot avoid doing, do gracefully. They wanted us to drop the income tax and many other fields of taxation, to which of course the dominion did not agree.

The feature of the amendment which seems to meet with objection is its retroactivity. My right hon. friend alluded to that in the debate on the budget and I believe the hon. member for St. Lawrence-St. George (Mr. Cahan) also indicated his opposition to it. Of course the principle of retroactivity is not generally desirable in legislation, I am free to admit; but what makes it undesirable also makes exception to the principle necessary perhaps, and it is after all public interest, the social good. The principle of retroactivity is not desirable because it would affect, for instance, criminal matters. If a man does something which is not a crime you cannot three years afterwards declare it to be a crime and say that the penalty should apply to what had been done at that time. The matter under consideration here, however, is not at all similar. It is rather to remove doubts as to the power of taxation in the provinces with respect to certain matters like fuel oil and gasoline. Moreover, it is not, as has been claimed, so unprecedented that an amendment to the constitution should contain a retroactive clause. As a matter of fact, in most of the amendments that have been made to the British North America Act since 1867 there has been a retroactive clause. For instance, the British North America Act of 1871 was for the purpose of ratifying the Manitoba act which had been passed by this dominion, creating the province of Manitoba, in 1870, and section 5 of the amending act declares:

The following acts passed by the said parliament of Canada and intituled respectively, "An Act for the temporary government of Rupert's Land and the North Western Territory when united with Canada"; and "An Act to amend and continue the act thirty-two and thirty-three Victoria, chapter three, and to establish and provide for the government of the province of Manitoba," shall be and be deemed to have been valid and effectual for all purposes whatsoever from the date at which

they respectively received the assent, in the Queen's name, of the Governor General of the said Dominion of Canada.

And the preamble of the imperial statute specifically states that the purpose is to remove doubts as to the power of the dominion parliament to enact the act creating the province of Manitoba. It may be said that there was nothing there concerning taxation. I think there was. The province of Manitoba had been in effect constituted. The lieutenant governor had been appointed in 1870, a general election in the province took place in that year, there was a government there, and there was a session of the legislature of Manitoba in which taxation was imposed, before the amending act of 1871 gave the full powers to create the province of Manitoba.

In 1875 there was another amendment to the British North America Act in which the preamble also stated that doubts had been expressed as to the power of the dominion parliament with regard to the matter concerning that act, and section 2 reads:

The act of the parliament of Canada, passed in the thirty-first year of the reign of her present majesty, chapter 24, intituled "An Act to provide for oaths to witnesses being administered in certain cases for the purposes of either house of parliament," shall be deemed to be valid and to have been valid, as from the date at which the royal assent was given thereto by the Governor General of the Dominion of Canada.

In 1886 there was another amendment to the British North America Act. Section 2 reads:

Any act passed by the parliament of Canada before the passing of this act for the purpose mentioned in this act shall, if not disallowed by the queen, be, and shall be deemed to have been, valid and effectual from the date at which it received the assent, in her majesty's name, of the Governor General of Canada.

And so on. In 1895 there was an amendment with respect to the appointment of a deputy speaker, in which the act of the parliament of Canada was also deemed to be valid and to have been valid as from the date at which royal assent thereto was given. But more recently, prior to the statute of Westminster, 1930, there were doubts and there had always been strong controversial debates as to whether this and other dominions of the British commonwealth had the right of extraterritoriality with respect to legislation. The courts had decided that the effect of a law of Canada did not go beyond the limits of this country; others had decided that there was the power of extraterritoriality. However, this was settled by the statute of Westminster, section 3 of which provides:

It is hereby declared and enacted that the parliament of a dominion has full power to make laws having extraterritorial operations.

This was the language used in the Westminster statute. It was for the purpose of giving retroactive validity to all legislation in which extraterritoriality—

Mr. CAHAN: Will the minister please expand that idea? From what does he infer that the Westminster act with regard to the territorial jurisdiction of the parliament of Canada was retroactive in effect?

Mr. LAPOINTE (Quebec East): I cannot do better than quote the dominion statute of 1933. As far as I am concerned I cannot concede that Canada did not have this power of extraterritorial jurisdiction; I always claimed that we had, and that this was merely declaratory of a power which the dominion already possessed. But that was not the view of everybody: I heard different views expressed in the house prior to 1930. However, in 1933 parliament thought fit to enact the following statute, chapter 39 of the dominion statutes:

Every act of the parliament of Canada now in force enacted prior to the eleventh day of December, 1931, which in terms or by necessary or reasonable implication was intended, as to the whole or any part thereof, to have extraterritorial operation, shall be construed as if at the date of its enactment the parliament of Canada then had full power to make laws having extraterritorial operation as provided by the Statute of Westminster, 1931.

Mr. CAHAN: That is the Canadian act, but not an act of the United Kingdom.

Mr. LAPOINTE (Quebec East): Obviously the Canadian government and the Canadian parliament in 1933 thought it better to pass an act, in exercise of the powers conferred by the statute of Westminster, declaring that any act passed before 1931 in which there was a clause of extraterritoriality was in effect as if that power had always been possessed by parliament.

I quite admit that it would be better if we were not compelled to make any such changes in the powers of taxation. It would be much easier, it would be along the line of least resistance, to stay as we are and leave to the provinces the power of direct taxation and nothing more. But we are forced by circumstances created through the economic difficulties in which the provinces find themselves, and because they cannot have sufficient revenues without using the power of taxation which we are conceding to them. The only alternative would be more subsidies, and all our statesmen in the past—the fathers of confederation as well as those who have dealt subsequently with this matter—have been of the opinion that it is wrong to subsidize the

provinces instead of giving them the power to levy and collect their own revenues by taxing their own people with the authorization of their respective legislatures. As I say, that is the alternative, and as far as I am concerned I am inclined to favour letting the provinces possess the power of using this method of taxation which they have been employing during the last few years.

As to the question whether it is desirable that the provinces of a federal state should have this power, it is to be observed that it is possessed by members of other confederations. In the nation to the south of us the states have the power of indirect taxation, except customs and excise—the very thing that our provinces have been asking for, and which we are not willing to grant them, even at this time. In Australia they have the same difficulties as we have. But this consideration would apply more to the second part of the resolution, though it will be noted that the statutes of Australia empower the commonwealth parliament to come to the relief of the states when they are in financial difficulties and to lend them money, in a way which is not mentioned at all in our own constitutional act.

It is the unanimous wish of the provinces that this should be granted to them. They have accepted it, although they wanted more. The drafting of the amendment was their work as well as that of the law officers of the crown, and this amendment meets their views.

The power of indirect taxation is not given to them except with regard to the retail sales tax, and from this tax are excepted certain commodities upon which there is already a very high rate of customs or excise duty, so that it was thought undesirable that the provinces should invade this field. There is another exception, as to goods which might be sold and delivered outside the limits of a province; this, according to the experts of the finance and other departments, can be easily adjusted. The financial advisers of the government have approved of the scheme which is embodied in this resolution.

The second matter mentioned in the resolution, and which is a subject of this amendment, is the provision of some method of financially helping the provinces. I believe it is the universal opinion in Canada that the system of lending money to and piling debts upon the provinces by the Dominion of Canada must be ended. This is for the purpose of helping the provinces when financially embarrassed to obtain the guarantee of the dominion government, subject to certain conditions, for their borrowings and to empower them to give securities to the dominion in pursuance of that guarantee. Here, again, all the provinces through their representatives have agreed. Most of them stated that they would not take advantage of the scheme which may be devised in virtue of this agreement, but they are all agreed that they and the dominion should have the power, if it comes to a special difficulty, to take advantage of it.

The question of a loan council, which is not referred to at all in this amendment, is a matter that may be discussed later. If it should be established it would be for the purpose of devising a method of coming under the provisions of this amendment, but that question does not come within the sphere of the discussion of this resolution. It is not fair that the present system should continue without some guarantee of this kind. It is not fair to the provinces concerned; it is not fair to the dominion, and more particularly it is not fair to the other provinces which are meeting their obligations, and which would have to share the loss if anything should happen to prevent the reimbursement of the loans made by the dominion to some province. In some newspaper, within the last week or two, I read that this was a colonial move, which would subject Canada to imperial control, and all that sort of thing. Well, Mr. Speaker, I claim to be a good Canadian national, and I think I am as jealous as anyone of the autonomy of Canada. I fail to see where anyone could find any such thing in this address. Quite the contrary; this amendment will empower Canada to settle its own financial affairs; it is designed to create some structure which will permit Canada to deal with its own problems, in its own way, by its own citizens. How could anyone find some dangerous imperial scheme behind it? I fail to see it, and if someone else sees it I wish he would explain it to me.

I have taken longer than I had intended, Mr. Speaker, but I repeat that this amendment is for the purpose of enabling the dominion and the provinces to try to solve their present difficulties. As a Canadian I have the hope, and I am quite sure, that Canadians will find a way to deal with their difficulties and that the provinces and the dominion will cooperate in the future as they have in the past. It is with that hope that I submit this resolution and ask for the support of the house.

Hon. C. H. CAHAN (St. Lawrence-St. George): Mr. Speaker, the address now under consideration has been divided by the Minister of Justice (Mr. Lapointe) into two

parts which cannot be said to be interrelated. With regard to the second part, dealing with the power to be given the parliament of Canada to authorize the government of Canada to guarantee payment of the principal, interest and sinking fund of certain provincial securities and to receive pledges or guarantees with respect to the liquidation of provincial indebtedness, personally I should have thought—and I have seen no legal opinion to the contrary—that at present Canada is authorized to do that by legislative enactments of the parliament of Canada under the general provisions of section 91, dealing with peace, order and good government. I can see no reason why it should be suggested that the loans which have been made during recent years to the provinces were not validly made and were not within the jurisdiction of this parliament and the government of Canada.

As to the other suggestion contained in this address, that the legislatures should be authorized to give certain guarantees to the dominion government with respect to the payment of the guaranteed securities and the interest thereon, I should have thought that end could have been accomplished by statutory enactments of the provinces concerned, in other words that by cooperation between this parliament and the legislatures of the provinces the same end could have been achieved more quickly and equally effectively.

There is, however, one element that enters into this part of the address. Paragraph 4 authorizes the government of Canada, in payment of principal, interest or sinking fund of the guaranteed securities, to withhold payment to the provinces of subsidies which have been granted in part by statute of the parliament of the United Kingdom and in part by statutory enactments of the parliament of Canada. It may be that in order to authorize the government of Canada to withhold the payment of subsidies when provincial governments are in default, or to withhold the payment of other funds in the nature of revenues received or collected by the government of Canada on behalf of the province, or to make direct payment of these funds to the creditor of the province, some additional statutory authority is required to remove any doubt as to the authority of parliament and of the government to deal with such matters by virtue of legislation of the parliament of Canada. But I do say, by way of suggestion, that instead of the rather verbose and extensive enactment suggested in this address, the desired end might have been accomplished by a short enactment of the parliament of the United Kingdom expressed in ten or a dozen lines. However, a short time ago I noticed that on March 23 the Minister of Finance (Mr. Dunning) wrote:

> The dominion government to-day were strongly of the view that it would not be advisable to go forward with constitutional amendment bill resolution for which is now on the order paper if any of the provinces object to its being proceeded with.

I have read the correspondence as submitted, but I fail to find that the government of any province has acquiesced in this legislation with the exception of the government of one province, Saskatchewan. Therefore it may be premature to invoke the legislative power of the parliament of the United Kingdom before it is ascertained at least that the governments of the several provinces are disposed to acquiesce in and carry out the general policy which the Minister of Finance has announced. I do not know when he changed his mind, but apparently it has been changed. I say that because the tenor of the correspondence, as I understood it, was that he would not proceed with the address to secure a statute of the parliament of the United Kingdom unless there was clear evidence that the governments of the provinces would acquiesce therein, and by virtue of the same statute enact provincial legislation to authorize the province to enter into such an agreement.

Mr. DUNNING: I do not think the correspondence the hon. member quotes quite bears out that statement.

Mr. CAHAN: Possibly not, but the inference I have indicated can be fairly drawn from it. I do not wish to misrepresent the position of the hon. member. I remember a smile of approval that awakened some controversy in the house, because that was one of the matters of which I approved at the time the Minister of Finance made his statement.

However that may be, it seems to me opposition to that part of the address is not justified to the extent that opposition to the first part of the address may be fully justified. We have reached a situation in Canada which has been brought about partly by the undue expenditures of some of the provinces, expenditures which if their nature were well known to the public of those provinces could not have been justified by public opinion. On the other hand some of the western provinces have been overtaken with emergent conditions by reason of which the parliament of Canada has been fully justified in extending such necessary financial aid and assistance as lay within the power and disposition of

parliament. Therefore with regard to the second part of the address I for one will not vigorously oppose it. I should prefer to have had it drafted in somewhat clearer terms and to have limited it to dealing with emergent conditions, as we now know them; because I clearly foresee that this address, if expressed is an enactment of the parliament of the United Kingdom, will simply lead to more intense agitation in the future to compel the parliament and government of Canada to assume the existing liabilities and to guarantee future liabilities of the several provinces whenever and however they may be incurred, reasonably or otherwise.

The Minister of Justice has called attention to the fact that from the day parliament began to grant subsidies there has been continuous agitation by the provinces for additional legislation of either the parliament of the united kingdom, or of this parliament, under which the federal treasury would undertake to provide increased additional annual subsidies to meet provincial expenditures. And as pointed out by Sir Wilfrid Laurier in the quotation read by the Minister of Justice, we never will be free from recurring difficulties of that kind until some way is found by which the responsibility of the government spending the money shall be extended to and include responsibility for providing revenues by taxation or otherwise to meet the expenditures so deemed necessary.

Referring to my native province of Nova Scotia, may I say that a government with so distinguished a member and attorney general as the late Sir John Thompson was turned out of office in that province because of the large annual expenditures it was making on public services, an amount which at that time was less than $400,000 a year. The people were so much aroused over this enormous expenditure by a province the population of which was then not much less than its present population, that they rose in their wrath and by the ballot box turned that government out of office. And yet no province has been more persistently and continuously demanding financial assistance from the federal treasury. And to-day, although renewed grants have been given, I notice that with annual expenditures reaching at least several millions of dollars the government of Nova Scotia assumes it will have a large deficit on financial operations for the current year.

I was hoping, somewhat from a personal point of view, in view of the position taken by the Prime Minister (Mr. Mackenzie King) when in opposition, that with the support of all provincial governments and premiers following the last general election he would be placed in a position whereby through conference, discussion and agreement he could reach some final disposition of these great difficulties, through curtailment of the large and excessive expenditures of the provinces or by insisting that they assume full responsibility for raising the revenues necessary to cover their expenditures. I suggest there are no difficulties under the present Canadian constitution in the way of a province providing revenues necessary to meet its reasonable expenditures, if it will assume that responsibility. The reason the provincial governments do not wish to exercise the powers they now have is that the imposition of direct taxation would bring to the minds of the electorate the absolute necessity for curtailment and restriction of provincial expenditures to a limit reasonably within the financial means of the people resident within those provinces, who are subject to provincial taxation.

I do not contend therefore that the house should reject the second part of the address. I wish it were expressed in other terms; preferably that it were expressed as a definite amendment to one or more sections of the British North America Act, or in the alternative that it were made the subject of a new British North America Act for the year 1936. But apart from that, and dealing now with the first part, I entertain very strong objection to the first part of these proposed enactments. In the first place, as one who has lived since the confederation was formed, and as one who within twenty years of the confederation opposed two very earnest, exciting and strenuous campaigns in Nova Scotia in favour of secession of the province and the repeal of the union—the first part I ever took in political life—

Mr. DUNNING: You are in favour of repeal, are you?

Mr. CAHAN: No; I met Mr. Fielding night after night for weeks debating his program of secession and although he carried the province in the provincial election of 1886 I think I contributed something, and I have thanked God that I did contribute something towards reversing that decision in 1887. No one could later in life admire that gentleman more than I, but he so developed in Canadian politics, as a member of this house and as a member of the Canadian government that you could hardly conceive in his later life that he had entertained the narrow views which he attempted to perpetuate when leading as premier of the province in the legislature of which I was leader of the opposition.

Mr. BENNETT: He even disfranchised civil servants.

Mr. CAHAN: Amendments to the constitution are not matters that can be dealt with so frivolously as amendments to or changes in municipal regulations with regard to the imposition of a dog tax or something of the sort. One of the younger members of this house stated, as reported the other day, that the British North America Act was hurried in its preparation of two or three weeks. I suggest to him that he study more carefully the history of the French and British communities that settled north of the forty-ninth parallel. The germs of the confederation idea came from the sixty thousand men of the French race and of the Catholic religion who were left practically deserted when the naval and military and civil authorities of France evacuated Quebec and Montreal, and left those people under the guidance of their clergy to work out their own destiny on the banks of the St. Lawrence river. The germs of the confederation idea were in the minds of the tens of thousands of men who left the New England states, and especially the state of New York, and came down and settled in western Nova Scotia, which then comprised the shores of New Brunswick to the Maine border, and there attempted to work out their own destiny as British subjects, enjoying, as they hoped to do, the liberties and privileges which appertain to British citizenship. I know something about that. I cannot give this as a fact but I know that in my early days it was stated in western Nova Scotia, where I was born, that so many people came to Nova Scotia and settled there as a result of the war of revolution in the United States that at the close of that revolutionary war there were more graduates of Harvard university settled in Nova Scotia than in all other parts of the world—men of education and men of culture who assisted with the other immigrants from the United Kingdom—and from Germany even; because the German settlers of Lunenburg were among the best—in working out the constitutional reforms which give full liberty and parliamentary privileges to colonials of British citizenship.

I do not know so very much about Ontario, but I do know this, that after the battle of Culloden the followers of Bonnie Prince Charlie under Flora Macdonald left by thousands and settled in northern Carolina, forming there new Scotch settlements. At the outbreak of the war which we call the revolutionary war they enlisted in hundreds and thousands in the ranks of the British, and when finally New York fell, those men with their families, Scotsmen who had fought in favour of the Stuarts, Scotsmen who had fought against the British crown in their day, came with their oxen and with their teams, and others by boats up the Hudson river, across the frontier, and established the Scotch settlements at Glengarry, Cornwall, Argenteuil and along the banks of the Ottawa river, and attempted, as they did successfully, to re-establish for themselves homes under British sovereignty. These men brought with them the ideas which germinated and found expression in the British North America Act, that act representing an expression of the profoundest emotions of these people and of others who had been born and bred in this country, all of whom agreed, irrespective of their political affiliations, to unite to carry the confederation program to success. And entertaining those ideas—because I have lived for a certain time of my life among men who would rather fight and die than see any changes made in the British North America Act which they regarded as contrary to their best traditions and their best aspirations—I look upon that act, I look upon the constitution of Canada as something that should not be amended frivolously or without impartial and anxious investigation and study.

The program which we are initiating on this occasion is, I think, to be regretted because the adoption of this address will reaffirm the past procedure by which amendments to the British North America Act of 1867 may be procured from the parliament of the united kingdom, upon an address from the parliament of Canada alone, and without any express acquiescence or consent on the part of the legislatures or governments of the several provinces of Canada. All the prolonged discussions which we have had during the years with regard to new arrangements for amending the constitution of Canada by the acquiescence and consent of minorities and by the acquiescence and consent of the several provinces are now abandoned so far as this amendment is concerned, and we reaffirm the procedure adopted in times past, and always accepted by the parliament of the united kingdom in times past, that amendments to the British North America Act are made and will continue to be made on an address from the parliament of Canada alone. To proceed in this manner is establishing, in view of recent discussions of, a very unfortunate precedent.

The Minister of Justice has said that there has been so much doubt as to the legislative authority of the provinces in respect to taxation that the legislation suggested in the first part of this address should be passed to remove those doubts. I suggest that we have reached

a stage in the development of judicial decisions in Canada when there is now no doubt with regard to the division between the acts of the provinces which are ultra vires in that they imposed indirect taxation, and those which are intra vires by reason of the imposition of direct taxation. Section 92 of the British North America Act provides:

In each province the legislature may exclusively make laws in relation to matters coming within the classes of subjects next hereinafter enumerated; that is to say,—

2. Direct taxation within the province in order to the raising of a revenue for provincial purposes.

If this proposed amendment is sent to the British parliament in the form in which it is now expressed, I do not think it will prove creditable to whatever department drafted it. It proposes the addition of a new paragraph to section 92 of the British North America Act, to be known as paragraph 2A. Where do you add it? Do you add it at the end of section 92? Do you incorporate it with paragraph 2, or is it intended that paragraph 2 shall be divided, one part comprising the present paragraph 2 and the other part comprising the new paragraph 2A? As it is provided in this address, the imposition of indirect taxation within the province is not related to the governing preamble, if I may call it that, of section 92. At least it should read thus:

In each province the legislature may exclusively make laws in relation to matters coming within the classes of subjects next hereinafter enumerated; that is to say,—

2A. Indirect taxation within the province in respect of:

(i) retail sales, other than of all alcoholic beverages, spirits, malt, tobacco, cigarettes and cigars which are subject to customs and excise duty or tax in Canada or other than of all goods and articles for delivery without the province;

(ii) the patronage of hotels, restaurants and places of amusement or entertainment;

in order to the raising of a revenue for provincial purposes.

I doubt even if one had the enlightenment and perspicacity of the famed Philadelphia lawyer, whether he could decide what is meant by the patronage of hotels, the patronage of restaurants and the patronage of places of amusement or entertainment. In a constitutional amendment of the importance of this one, which tends to undermine and, I think I am safe in saying, to destroy the financial stability of the government of the Dominion of Canada, we should not use the language of ordinary parlance; we should so express ourselves in English or in French as to convey a clear and definite and unambiguous meaning. I suggest, therefore, that the address should set forth the exact words and form of the proposed amendment. I suggest that the end would best be obtained by repealing the existing clause 2 of section 92 of the British North America Act and substituting therefor a new clause to cover the old clause and the proposed amendment. If we were amending an act of the parliament of Canada we would deal with it with a certain degree of circumspection so as to have it appear properly upon the statute books.

[Mr Cahan.]

What does this clause imply? There is only one exception with regard to indirect taxation within the province. You can impose indirect taxation with respect to all commodities except alcoholic beverages, spirits, malt, tobacco, cigarettes and cigars. On the other vast range of commodities which enter into the ordinary consumption of the people of Canada, the provinces are left free to impose such indirect taxation as they may be disposed to enact.

The hon. gentleman referred to certain decisions which have been given with respect to what is direct or indirect in connection with the imposition of taxes by provincial legislatures. He referred to several decisions and I intend to refer briefly to two or three in an effort to show that there is no real inconsistency or confusion between those decisions; that there exist clear and express definitions of the indirect taxation which it has been sought unlawfully to impose and of the direct taxes which may be lawfully imposed under the British North America Act as it exists at the present time. I quote from the case of the Attorney General for Manitoba v. the Attorney General for Canada, 1925 Appeal Cases, page 561. The question here was in connection with sales of grain on the exchange in Manitoba. Viscount Haldane says at page 566:

As to the test to be applied in answering this question, there is now no room for doubt. By successive decisions of this board—

The judicial committee of the privy council.

—the principle as laid down by Mill and other political economists has been judicially adopted as the test for determining whether a tax is or is not direct within the meaning of s. 92, head 2, of the British North America Act. The principle is that a direct tax is one that is demanded from the very person who it is intended or desired should pay it. An indirect tax is that which is demanded from one person in the expectation and with the intention that he shall indemnify himself at the expense of another. Of such taxes excise and customs are given as examples.

A clear definition was also given in 1925 by the judicial committee of the privy council. The only difficulty was that the provinces

were,—I dislike to use the word—endeavouring to filch jurisdiction from the parliament of Canada. I trust I am not using that word improperly. They were endeavouring to increase their jurisdiction with regard to taxation at the expense of the federal taxing authority. Therefore they were not prepared to accept that clear definition as to direct and indirect taxation.

Mr. DUNNING: Is the case the hon. gentleman is quoting that referring to the Manitoba tax on futures?

Mr. CAHAN: It had to do with the sales of grain, but futures are involved to a certain extent.

Mr. DUNNING: They were trying to tax the people of another province, which is a different question.

Mr. CAHAN: That was not the ground of the decision.

Mr. DUNNING: One of the grounds.

Mr. CAHAN: The decision which I have just read was on the question whether it was indirect or direct taxation.

Mr. THORSON: The question whether it was taxation within the province was also involved.

Mr. CAHAN: Quite so, but in citing the decision I am confining myself to the distinction between indirect and direct taxation.

The next decision which I think is important is that of the Attorney General for British Columbia and the Canadian Pacific Railway Company, 1927 Appeal Cases, 934. This case arose out of a statute of the province of British Columbia authorizing taxes to be imposed on sales of fuel oil, and the judgment of the court may, I think, be summarized in this form. If from the terms of the act there appears an expectation and intention that the person required to pay the tax will indemnify himself on resale of the commodity taxed, the act is ultra vires of the provincial legislature. The act in question provided that every person who purchased within the province fuel oil sold for the first time in its manufacture in or importation into the province should pay for provincial purposes a tax equal to ½ cent per gallon on the oil purchased. It was held by the judicial committee of the privy council that under the terms of the provincial statute this tax would apply even if the first purchasers bought and resold the oil they had bought and that therefore the tax became an indirect tax and its imposition was ultra vires of the provincial legislature.

The next case which seems to be of importance is that of the King v. Caledonian Collieries, 1928 Appeal Cases, 358. In this case the provincial legislature sought to impose what they called a direct tax payable by the owner of a mine upon the gross revenue of his mine as received during each preceding month. The tax was imposed upon the gross revenue and it was held by the judicial committee of the privy council to be in reality a tax upon the aggregate of sums received from the sales of coal and equivalent to a tax upon every sum received from the sale of coal and therefore that this tax was ultra vires of the provincial legislature. It was in fact a tax imposed upon the gross retail business of a mining company, compelling the mining company to pay the tax and leaving the company free to collect compensation for the tax from those who purchased and consumed the coal.

The next case, in my opinion a very important one, clarifies the situation; it is the Attorney General for British Columbia v. Kingcome Navigation Company, 1933 Appeal Cases, 45. The material provisions of the act of the British Columbia legislature for 1930, as amended by the act of 1932, which came under investigation in this case, were as follows:

2. For the raising of a revenue for provincial purposes every person who consumes any fuel oil in the province shall pay to the Minister of Finance a tax in respect of that fuel oil at the rate of ½ cent a gallon.

3. The tax imposed by this act shall be paid and collected at such times and in such manner as the regulations may prescribe.

4. The amount of any tax imposed by this act may be recovered by action in any court as for a debt due to the crown in right of the province, and the court may make an order as to the costs of the action in favour of or against the crown. In every action for the recovery of any tax imposed by this act, the burden of proving the quantity of fuel oil consumed by the defendant, and of proving that the tax has been paid in respect of the fuel oil in question, shall be upon the defendant.

The burden of proof was made very clear. Their lordships in their decision quote the previous decisions of the judicial committee to which I have referred, and declare:

These decisions, in their lordships' opinion, make clear that if the tax is demanded from the very persons who it is intended or desired should pay it, the taxation is direct, and that it is none the less direct, even if it might be described as an excise tax, for instance, or is collected as an excise tax.

And at page 59 they continue:

Turning then to the provisions of the Fuel Oil Act here in question, it is clear that the act purports to exact the tax from a person who has consumed fuel oil, the amount of the tax being computed broadly according to the amount consumed. The act does not relate to any commercial transaction in the commodity

between the taxpayer and someone else. Their lordships are unable to find, on examination of the act, any justification for the suggestion that the tax is truly imposed in respect of the transaction by which the taxpayer acquires the property in the fuel oil, nor in respect of any contract or arrangement under which the oil is consumed, though it is of course possible that individual taxpayers may recoup themselves by such a contract or arrangement; but this cannot affect the nature of the tax. Accordingly their lordships are of opinion that the tax is direct taxation within the meaning of section 92, head 2, of the British North America Act.

It is clear therefore that this Fuel Oil Act of British Columbia, imposing a tax upon every consumer of fuel oil according to the quantity which he has actually consumed, is valid and that it is direct taxation because it is exacted from the very persons who it is intended or desired should pay it.

Any lawyer or layman who reads and compares carefully that decision of 1933 and the decision of 1927 may clearly determine, I believe, the difference between an indirect and a direct tax in regard to sales made in Canada.

Mr. FINN: Were both those judgments which the hon. gentleman has read delivered by the same tribunal?

Mr. CAHAN: Yes, the judicial committee of the privy council—a different personnel from year to year, I assume, but the same judicial tribunal.

Under this proposed amendment, if it goes into effect, the provincial legislature will be enabled to levy an annual tax or a monthly tax upon the gross retail sales of each and every department store, general store, merchant, druggist or village grocery, compel returns to be made by each and all of the retail sales which each of them has made, and enforce payment of such a tax, for which compensation may in turn be collected in the increased prices charged for all commodities sold and comprised in such retail sales.

The provincial legislature, if this amendment is adopted, may impose and collect such taxes from certain commodities—I repeat, from certain commodities—and exempt other commodities from such taxes. The provincial legislature in any of the provinces may, if this amendment goes into effect, impose such taxes on the products of other provinces when retailed in the one province which enacts the legislation, while exempting from tax the commodities produced in that province which exercises its legislative jurisdiction by imposing indirect taxation. This fact opens up a very broad inquiry. The very basis of the British North America Act was that customs duties on interprovincial trade were abolished, and therefore, under section 122 of the British North America Act, all customs and excise duties were vested in the parliament of Canada and in the government of Canada. But this proposed amendment will clearly authorize each of the several provinces to impose discriminatory excise taxes upon the retail trades, and so in effect retard or practically preclude interprovincial trade with the other provinces, and so impose these taxes as to raise a protective wall of excise duties, instead of a protective wall of customs duties, against the trade of that province with the other provinces of Canada. This proposed amendment, I suggest, nullifies the most important provision of the British North America Act with regard to the imposition of taxes and will thus retard or preclude free interprovincial trade between the several provinces of Canada.

Mr. THORSON: The dominion government will still have the power of disallowance of provincial legislation.

Mr. CAHAN: That is another thing. I have not seen any such stubborn and vigorous resistance, on the part of this or previous governments, to any prejudicial provincial legislation as to suggest that they will have the courage to disallow, as my hon. friend suggests, provincial legislation of that kind. Take it for what it is worth, but as a matter of fact my opinion is that the power to disallow provincial legislation should play a very important part in the administration of dominion and provincial affairs; but this government will recognize, as previous governments have recognized, that a province which is powerful and strong, and whose political support is required for other purposes, will not be restricted by the administration of effective veto power.

Mr. MACKENZIE KING: We might leave out the last qualification.

Mr. CAHAN: Effective veto power?

Mr. MACKENZIE KING: No,—"whose political support is required." I do not think that needs to be mentioned.

Mr. CAHAN: Well, perhaps not. I was not applying it to the right hon. gentleman; I was applying it generally. We who have watched the development of political affairs, and especially of partisan organizations, in Canada for a number of years know that there are powerful influences of that kind which may be brought to bear against the exercise of the veto power in respect of provincial legislation prejudicially affecting any other province of Canada.

Let us see where we are at. If hon. members wish to study further the probable results of this amendment, I ask them to apply to the Department of National Revenue or to the King's Printer and secure an office consolidation to date of the Special War Revenue acts and amendments, and they will find, under sections 85 and 86, the law under which the existing sales tax is imposed in Canada. Speaking generally—there are some slight exceptions—it is payable by the producer or manufacturer at the time of the delivery of such goods to the purchaser thereof, and it is payable by the importer or transferee in Canada of the importer of foreign goods, upon the value as fixed, according to the statute, of the imports so brought into the country. Then you read, in schedule 3 to section 89 of the act, the large number of commodities which the parliament of Canada in its wisdom has exempted from the operation of the sales tax, and, remembering that this proposed amendment to the British North America Act will allow each and every province to impose sales taxes upon the retail of each and every one of these commodities now exempted, you will see the wide scope of this proposed legislation. More than that, when you realize that, under the decisions of the judicial committee of the privy council, each and every of these provincial legislatures may impose the tax, not upon the purchaser of the commodity, but by entering every village store and compelling a return of the total of its retail sales for a year or month or any other period—

Mr. DUNNING: You mean they can do that now?

Mr. CAHAN: No, they can do it under this proposed amendment.

Mr. DUNNING: But not now.

Mr. CAHAN: That is the one thing they cannot do now, under the decision I read. The judicial committee held that that was indirect taxation, but you are now opening up anew the whole scope of indirect taxation.

Mr. TUCKER: Is the hon. member not overlooking the words, "indirect taxation within the province"?

Mr. CAHAN: Oh, I am dealing with it generally. I am not overlooking it. These retail sales are made in the province. It may be possible—though I do not wish to enter into that for the purposes of this discussion—that a resident of Ottawa could go across to Hull, make certain retail purchases, ask to have the articles delivered in Ottawa, and thereby escape the Quebec provincial retail sales tax. But I am now dealing with general principles.

Now let us look at the facts. In his budget address the Minister of Finance gave certain figures. They are general figures, and for 1935-36 they were subject to adjustment as of March 31, but I take the figures as he gave them in his budget address. For the year ending March 31, 1935, the sales tax of the dominion aggregated $72,447,000, in round figures. For the year just closed on March 31, 1936, it was estimated that the sales tax would aggregate $77,000,000, and while in his estimated revenues for the current year the minister did not take fully into account the proposed increase, yet he very frankly stated that the increase in the sales tax from six per cent to eight per cent, as far as he could say at that moment, probably would provide an additional revenue of $23,000,000. Of course I am not quoting these figures for the purpose of holding the minister to these estimates but simply for the purposes of illustration. Assuming that the proposed sales tax of eight per cent on commodities sold by either the producer, the manufacturer or the importer bring in a return of $100,000,000 for the present year, I ask hon. members to compare that with the actual amount raised annually through customs duties in recent years. The suggestion is made that because the federal department and government have jurisdiction with regard to customs taxes, and because these customs taxes are so immense, the federal treasury should share these receipts with those provinces who have been clamouring for assistance. But I call attention to the fact that the total customs duties collected in Canada for the year ending March 31, 1935, were only $76,562,000, and the estimated collections for the year ended March 31, 1936, there being a few odds and ends which might come into the account as of March, amounted to only about $74,000,000.

Mr. DUNNING: That is approximately correct.

Mr. CAHAN: Then if you are to give these provinces this wide jurisdiction which will enable them to impose what are virtually excise taxes, indirect taxation, upon every dealer who is not a wholesaler—unless he engages in the retail trade also—and upon every petty store throughout the whole country, a tax upon the aggregate retail sales made by that store, you are authorizing a taxation which must directly compete with the federal sales tax which you are imposing at

a very high rates for the purpose of assisting us to do what I am glad to see the Minister of Finance endeavouring to do, that is, to come somewhere near meeting the annual expenditures of this dominion.

In view of that result; in view of the door that you are opening up to excessive taxation; in view of the fact that, even if you do not extend dominion taxation, just between the dominion and the province you are now authorizing a turnover tax upon everything sold in the retail trade of this country, do you not think parliament should hesitate before passing this address in the form in which it is expressed and without more consideration than has been given it by the public? I have looked through the report of the recent dominion-provincial conference. I listened to the suggestion of the Prime Minister when he laid that report upon the table, that for the first time in recent history there was laid upon the table a full, complete and accurate account of what had transpired at a dominion-provincial conference. Therefore with hope and expectation I took up the volume, thinking I would find some definite information which I had never been able to obtain from a public document of that kind, but I found nothing. I found nothing of any discussion that took place, either in the conference itself or in the meetings of the several committees, which disclosed that there had been any clear, intelligent and earnest effort to ascertain what this proposed amendment would mean to the people of Canada and to the trade and commerce of this country. In fact I could not find a single reference to that. I may have overlooked something; it is some days since I examined this report and perhaps my memory is not as good as it used to be, but I do not remember finding a single suggestion in the whole report that it was proposed to transfer to the provinces authority to levy indirect taxation on all retail sales.

I suggest, therefore, that such an important change in the operation and administration of the finances of Canada should not be made, or at least such an amendment to the constitution of Canada should not be made until this proposition is laid before the people of Canada generally so that there may be full, fair and frank discussion of its import and of its prospective results. On that ground, therefore, I am opposed, and must express my opposition, to the first part of the address.

There is a further point. I do not intend to return to the question of what the patronage of hotels means. I do not know. It may mean that I must pay a tax every time I enter the door of a hotel in order to buy a cigar, as I sometimes do in the city of Montreal on my way from my residence to my office. Does it mean a tax on the entire receipts of the hotel from all the people who attend that hotel during six months or a year? It is indirect, and therefore you can compel each hotel in each city and town to make a return under oath at the end of a month or a year showing the entire receipts of the hotel from its customers, from those who are lodging there or others who may be transient visitors.

Mr. BENNETT: Excluding liquors and beers.

Mr. CAHAN: Except the purchases of their liquors, cigars and cigarettes. But upon the entire receipts of the hotel, with the exception of those of the bar, you can compel returns and impose a very heavy retail tax upon them. The scope will be wide, if it is carried out to the full extent that it may well be carried. As a result, I suggest that in the course of the next two years the Minister of Finance will be on his knees before the provincial governments praying that they come to his aid and share with him something of the spoils they will be able to acquire out of this amendment to the British North America Act.

Mr. DUNNING: That is a new thought.

Mr. CAHAN: Well, it is an obvious thought, when one compares the greatly reduced revenues we obtain annually from customs taxes, revenues which I believe are to be still further reduced—at least I thought I heard that suggestion from hon. members on the Liberal side of the house who discussed the budget.

Mr. DUNNING: I think the hon. member may depend upon the volume of revenue returned being rather higher.

Mr. CAHAN: I should hope so. If retail sales are to be taxed to any extent provincial authorities may desire, we will undermine and involve in extreme difficulty the whole administration of federal finance.

The address contains these words:

(2) The said clause 2A shall be deemed to have retroactive effect with respect to provincial legislation in force at the passing of this act.

Well, I confess that when some doubts were expressed as to the original admission of Manitoba under a clause of the British North America Act which provided for the admission of Rupert's Land, as Rupert's Land was somewhat more extensive than that part of it which was described as Manitoba when Manitoba was formed into a province, it was deemed expedient in dealing wtih an important con-

stitutional matter to have the admission of Manitoba confirmed. That is altogether different from this retroactive legislation.

In this instance the courts of the country have declared that the imposition of indirect taxation by the legislatures of the several provinces is and has been unauthorized, that it was illegally effected; that it was as much illegal as if I, passing on the street, put my hand in another person's pocket and took out his pocketbook. The only difference would be that if I took the pocketbook I would be subject either to civil action for the return of the money or to criminal action for violence and robbery upon the public highway. But the provinces were able to protect themselves from civil action by refusing petitions of right to allow civil actions to be brought against them. They exercised the prerogative right of the crown in refusing, in many cases, to allow such action for the return of money they had improperly and illegally exacted from those who had made the payments. Here the government asks parliament, by passing the address, to confirm the validity of all that illegality, and asks the parliament of the united kingdom to pass such legislation as will give such confirmation as will undoubtedly validate all this past illegality, and allow the process to continue for the future. I suggest you will not be maintaining due regard for the reputation and probity of this parliament if you ask the parliament of the united kingdom to enact such retroactive legislation.

Mr. J. H. BLACKMORE (Lethbridge): Mr. Speaker, at this time I do not wish to quarrel with the first part of the resolution, but with the second part I have a quarrel. I am deeply concerned with certain words appearing in that part, namely, the words "prescribe the terms and conditions upon which any guarantee so authorized shall be given." Those words are capable of a wide variety of interpretation, and as they stand are capable of taking away from the province accepting the agreement all the power that is worth while which the province possesses.

Mr. FINN: To what section does the hon. member refer?

Mr. BLACKMORE: I am referring to section 2, line 5, and the words "may prescribe the terms and conditions upon which any guarantee so authorized shall be given." We must be constantly watchful that our liberties be not taken from us in an unexpected moment. So much of the management of the world is accomplished through secret diplomacy, and so many of the decisions which make or mar our happiness in life are made behind screens, so to speak, that the ordinary man on the street is rendered completely helpless either to express or to form an opinion.

As an instance of this may I read an article which, when I read it on my way to parliament, astonished me. I read an extract from New Democracy of January 1 to 15, 1936, under the heading Dynamics of Education:

> An article in the New Age of November 8, 1934, entitled Gold, History and Liberty set me studying the history of the agitation leading to the second Reform Act of 1832. It was amazing to learn in the article that "The true facts of that tremendous historical occurrence known as the passing of the second Reform Act 1832 have been deliberately suppressed by successive governments, and that standing orders have been given to the permanent officials in government departments to take the utmost precautions by means of the government secret service that none of the real facts connected with the passing of the second Reform Act shall ever be published in any history or book of historical reference, whether the same is intended for school boys, university students, or professional historians."
>
> It was in this article that I learnt for the first time of the existence of a permanent government official receiving a salary of £1,200 a year and pension—

Mr. DUNNING: Is it true?

Mr. BLACKMORE:

> —known as historical adviser, whose miserable degrading duty consists in advising the government of the day how to evade and suppress historical truth in the interest of the professional politicians.

Now, Mr. Speaker, I have told where I got the article. I have exercised extreme caution, which I propose to do in all my speaking before this house, to tell the people where I get the information, and let them argue with the authors and not with me. This comes from an extract from New Democracy, January 1 to 15, 1936.

Mr. DUNNING: Who takes responsibility for it? Does my hon. friend?

Mr. BLACKMORE: The author is Doctor Joyce B. Mitchell, and the extract is from a series of three articles on Social Credit Dynamics.

Mr. MACKENZIE KING: Does my hon. friend himself believe to be true the statement he has read?

Mr. BLACKMORE: I have no reason for doubting the truth of this statement, and inasmuch as I have never been connected with the British government the question lies open to my mind. I point this out merely to show how exceedingly careful we need to be lest we be trapped by forces which are working in secret.

In the first place there is a money power in this world. Let every individual in the Dominion of Canada and throughout the British empire know of a surety that there is a money power working in this world, and that it is seeking definitely to enslave mankind. If we are deluded into disbelieving that, it will not be to our credit when future generations look back upon the history of these days. Now, is this great money power at the present time seeking to gain control over Canada? I am going to quote another passage. This one, of course, a great many people will laugh at because it is Major Douglas speaking, in his evidence taken before the agriculture committee of the Alberta legislature, during the session of 1934. It is printed on page 103 of the report of the investigation which was made by that body. I commend the words of this man to every thoughtful person in the Dominion of Canada. In his evidence Major Douglas said:

Well, the answer to the first of those questions I gave a short time ago, that if you have no powers—

He was speaking to Alberta:

—you cannot do anything; but I feel fairly certain that the logical result of saying, "We must refer this thing to Ottawa," would be in effect, if not in words, "We must refer this thing to London." We are so interlocked with the international finance system that we cannot do anything in Ottawa. We must do it through London. And when you get to London you would be told, "Ah, yes, but we must do that in conjunction with the Bank of International Settlement." There is absolutely no point at which you are going to stop if you are going to surrender your liberty; that is about what it amounts to, absolutely no point at all. And in these financial questions, the definite strategy of the existing financial powers is to make this a world so that no section of the world will ever be powerful enough to have it altered. All I can say in regard to all these questions about Alberta is that if you want to get anything done the best way to get it done is to begin at home and find out how you can do it, and I believe that if you tackle it in that spirit you can do it, but you certainly are not likely to do it by referring it to Ottawa.

I regret to say that my experiences since I have arrived in Ottawa have all led me to agree absolutely with the truth of that statement.

Mr. FINN: With the consent of the hon. gentleman, might I ask him if he has read the statute of Westminster?

Mr. BLACKMORE: I will deal with any and all comers just as often as they come, including the hon. gentleman, if he will just let me deliver my speech first.

Is this power definitely aiming at the present time to destroy British freedom? I am going to quote now from the Ottawa Citizen of Wednesday, February 26, 1936. I am reading from its editorial column on Bank of England imperialism. I believe that this has a serious message for all Canadians. The editorial says:

Statements by some of the highest authorities at imperial headquarters in the city of London leave no doubt about the will to bring Canada into the hegemony. The governor of the Bank of England, Montagu Norman, gave more than a hint of the aim of imperial finance when he spoke as reported in the Times, March 21, 1930. A previous speaker, Mr. Hargraves, had said: "They held the hegemony so far as this country was concerned in finance and he thought he might say, considering the way in which they were regarded in foreign countries, that they also held the hegemony of the world." The governor of the Bank of England commented as follows: "He was glad to note what Mr. Hargraves said about the hegemony in one place and another. He believed it was largely true so far as overseas were concerned, and if it was true it was largely the result of work which the bank had devoted, first of all to the stabilization of Europe, and secondly to the relatonships between the central banks, which were originally advocated at Genoa."

The editorial goes on to say:

On a later occasion at a banquet in honour of the Right Hon. Neville Chamberlain, Chancellor of the Exchequer, given by London financiers and merchants, the governor of the Bank of England, Montagu Norman, grew lyrical in drawing a picture of plums waiting to be plucked under this inspiring policy of imperial central banks. He said, as reported at the time by the Evening Citizen's London correspondent, A. C. Cummings—

Mr. VIEN: What date please?

Mr. BLACKMORE: These words are exceedingly important. I continue with the quotation:

"I want you to cast your minds back five or ten years to a time when in the dominions there were no central banks. I wish you to realize that beginning with Australia and South Africa, there have now been added to those, eight central banks actually in being or in course of being started in New Zealand, India and Canada.

Anybody a few years ago who expected to see that or who attempted to hope for that would have been looked upon as a visionary.

I hoped to see it. I was not called a visionary; I was called a fool.

I should like to assure you, and in particular the chancellor, that those banks and others for that matter, will have a common object.

Note the words. The editorial continues:

The desire, I know well, towards the community is to be of service—

What kind of service? We in Canada are already realizing what kind. I continue quoting:

—and towards governments to give advice, cooperation and loyalty. Take that from me. It is not much to take, but it is an important question and an important point.

Does that or does that not bear out what Major Douglas said in Alberta in 1934? I leave that to the members of this house to decide. We may smile at this thing, but the day may come when we shall regret those smiles in something deeper than tears. It would not be the first time the people have been utterly deceived and have regretted it in their sorrow. Onlookers are certainly filled with great concern about this matter, whether or not members of this house are. For example, these are a few words from a man who, I very much fear, knows a good deal about his subject. They bear directly on this matter we are considering in parliament right now.

(Quotation immediately following stricken out. See ruling of Mr. Deputy Speaker at page 2812.)

Whether or not that man knows what he is speaking about—

Mr. DUNNING: Who is the man, please?

Mr. BLACKMORE: I do not propose to give the name.

Mr. DUNNING: The hon. member should give the authority which he is quoting or accept responsibility for the statement.

Mr. BLACKMORE: I am simply stating that I have these words. Is that contrary to parliamentary procedure?

Mr. DUNNING: When my hon. friend is quoting, he must state from what he is quoting.

Mr. BLACKMORE: I am not free to give the name of the man whom I am quoting.

Mr. DEPUTY SPEAKER: When the hon member for Lethbridge (Mr. Blackmore) is quoting from an article, he must give the name of the author.

Mr. BLACKMORE: In case you do not wish to give the name, then what?

Right Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, I rise to a point of order. This is not the view which the present government took when they were in opposition. I do not think there is any authority for saying that an hon. member is bound to give the name of the author whom he quotes. I think all he is bound to do is to say that he is quoting. This would alter materially the position of hon. members who quote from the remarks of other hon. members. Sometimes these remarks contain quotations, the authors of which are not named, and for a member to be obliged to give the name of the person whom he is quoting would place him in an almost intolerable position. I have always contended that hon. members should not read from newspapers because to do so is to attempt to influence the 245 members of this house, which is not in accordance with the principles of good government.

Right Hon. W. L. MACKENZIE KING (Prime Minister): My right hon. friend has referred to a position taken by the present government when in opposition, but I cannot recall any time when the members of the present government took the view that an hon. member was not obliged to give the name of his authority when he brought into a debate an article or quoted from a communication with a view to making it an authority in support of what he was saying. An hon. member may not thus bring into a debate any document or quotation without giving the house full information as to the source from which he is quoting.

Mr. BENNETT: With your permission, Mr. Speaker. If the right hon. gentleman had received a communication from an unnamed person and he read it as something he had received, the question might be raised whether he was bound to lay it on the table, on the one hand, or give the source of it, on the other. He would not be quoting from a public authority or document. A private member would not be bound to lay such a document on the table, but if he took the responsibility of reading from a letter which he had received from some person, whether from a constituent or otherwise, the view taken was that he was not bound to give the name of his constituent; he was permitted merely to say that he had received a communication reading as follows. That was the view then taken.

Mr. LAPOINTE (Quebec East): Did my right hon. friend agree to that?

Mr. BENNETT: I am not saying that; I am only pointing out that that is what prevails in the house at the moment. Whether or not it is sound, I am not prepared to discuss at this time. I think the Prime Minister (Mr. Mackenzie King) will find that we have permitted letters and telegrams to be read without giving the names of the persons who sent them. I am quite familiar with the terms of the rule that covers this particular point.

Hon. CHARLES A. DUNNING (Minister of Finance): Mr. Speaker, on the point of order. Without quoting the rule to which my hon. friend has just referred, there is

still another very important point of order. Is an hon. member, under the shelter of that rule, permitted to read a communication or an alleged communication containing statements which he would not make on his own responsibility as a member, statements which by innuendo reflect upon this house or some member or members of the house, particularly when the extract read indicates a conspiracy against the wellbeing of this country? In the quotation the hon. member has named two or three parties and then leaves a blank. Apart from your ruling, Mr. Speaker, I appeal to the hon. member in the interests of the decency of debate not to follow such a course.

Mr. BENNETT: The limitation is that he assumes the responsibility of his statement.

Mr. DUNNING: He did not say so.

Mr. BLACKMORE: Am I permitted to go on, Mr. Speaker, or is it your ruling that I must withdraw the statement?

Mr. LAPOINTE (Quebec East): Unless you take the responsibility for it.

Mr. DEPUTY SPEAKER: The hon. member for Lethbridge (Mr. Blackmore) must reveal the name or take the responsibility himself for the article.

Mr. BLACKMORE: I must give the name, take the responsibility, or what? You see, Mr. Speaker, we do not know the rules by which you people play these games. All we want to know is what are the rules and we will play according to them. As soon as we learn them, we will play according to them pretty hard. I will withdraw the statement, if you say I must. Naturally, I do not propose to take the responsibility for the statement nor do I propose to give the name of the person who wrote it. It cannot be revealed at the present time, so I will withdraw.

Mr. DUNNING: The hon. member must withdraw or take the responsibility for it.

Mr. DEPUTY SPEAKER: My ruling is that the hon. member must withdraw the statement or give the name of the author.

Mr. BLACKMORE: I accept your ruling and withdraw the statement. I am glad the members of this house have had a chance to hear it.

Mr. FINN: Strike it out of the record.

Mr. BLACKMORE: The next thing is whether there is anything in this thing.

[Mr. Dunning.]

Mr. DUNNING: I rise to another point of order. The hon. member has just made a very qualified withdrawal which is in entire contradiction to the spirit of the rules of this house. In withdrawing his previous statement, which he was bound to do under the rules, he said, "I am glad the members of this house have had a chance to hear it." I submit that that is contrary to the rules; that the withdrawal must be absolute and unqualified.

Mr. DEPUTY SPEAKER: The point raised by the Minister of Finance (Mr. Dunning) is well taken and the hon. member for Lethbridge (Mr. Blackmore) must withdraw the statement completely.

Mr. BLACKMORE: I withdraw completely.

Mr. DEPUTY SPEAKER: The withdrawal must not be qualified in any way.

Mr. BLACKMORE: I withdraw completely. May I go on now?

Mr. BENNETT: Since we are discussing this matter and since the hon. member will not accept responsibility, I submit that the statement should be struck out. If the statement is made and no responsibility is accepted, it is obvious that it never should have been read. As it never should have been read, it should not appear in the record.

Mr. DEPUTY SPEAKER: The point of the leader of the opposition (Mr. Bennett) is well taken.

Mr. BLACKMORE: That is quite satisfactory to me.

Mr. DEPUTY SPEAKER: It will be stricken out of Hansard.

Mr. BLACKMORE: Must I ask that?

Mr. ELLIOTT (Middlesex): It will be done without request.

Mr. BLACKMORE: There are several sections of our own press that are distinctly apprehensive. May I quote again from the Ottawa Citizen of February 5, 1936, from the editorial column, in which there appears an article under the heading "Secession in Australia."

The loan council plan undoubtedly originated outside of Canada. The government of Australia adopted it after Sir Otto Niemeyer, from the Bank of England, had reported on the financial credit situation in the commonwealth. The same authorities at the seat of financial imperialism in London last year were urging the necessity of a so-called national government in Canada. They believed that national government would act as they desired,

to curtail the autonomy of the provinces... Secession is being discussed in Australian States: they were prevailed upon to submit to the centralized control of money power through a federal loan council.

I have another comment along exactly the same line. I quote these articles simply to show that there is really grave cause for concern. I am not in any way intimating that anyone in this house is insincere or has in any way been really guilty of any reprehensible act, but I am making this statement that there is grave cause for some concern. We find in the Ottawa Citizen of January 30, 1936, at page 28, an article entitled The Empire and the Octopus, from Overseas Notes by J.B.D. in Social Credit, London. These notes were written before the appearance of two consecutive articles on the proposed Canadian Loan Council, published in The Times on January 13 and 14:

If Canadians like the prospect of mounting debts and taxes, increased rioting of unemployed, loss of personal liberty, and regimentation of their daily lives "for their own good" by an alien power, the whole culminating in civil or foreign war, or both, they need not do a thing about it, for it will come of its own accord. If they don't want these things they will have to demand what they do want, and stop arguing about methods; otherwise they are lost. "No argument," says the Western Producer, "can dissipate the prime fact that if the provinces yield to the dominion suzerainty over financial matters, then they will have sacrificed the last vestige of power that remains with them which is of any consequence at all. The voice which suggests this drastic change may be the voice of the federal government, but the hand behind it is the banker's."

Mr. MACKENZIE KING: May I ask my hon. friend whether the matter he is now discussing could not be discussed more appropriately when we come to the Bank Act or to legislation with respect to financial councils. Has what he is discussing to do at all with the amendment to the British North America Act which is being considered by the house at the present time?

Mr. BLACKMORE: My impression is that this motion has to do with the introduction of a loan council into this dominion.

Mr. MACKENZIE KING: No, that is the point. I did not wish to suggest that the hon. gentleman might be out of order and for that reason I put my question to him in the form I did. It is conceivable that the amendment proposed may be passed and no loan council ever be introduced in this house as a consequence thereof. There will be time to discuss the question of a loan council when a measure with respect thereto is introduced.

Mr. BENNETT: It is the basis of it.

Mr. BLACKMORE: Is the Prime Minister in any way giving a commitment that this does not mean the introduction of a loan council? That is all I am concerned about.

Mr. MACKENZIE KING: It does not necessarily mean that. It is possible that in the course of this session, as the Minister of Finance has already indicated, a measure may be introduced which will have to do with loan or financial councils, but it does not necessarily follow that, because this amendment to the British North America Act is made, legislation will be introduced either at this session or at any other time with respect to such councils.

Mr. BLACKMORE: I had the impression that this had to do with a loan council. If it has not, then I agree that I had better reserve my remarks in that regard until such time as a loan council is discussed. But it certainly is the impression generally that this has to do with a loan council.

Mr. MACKENZIE KING: In order that there can be no mistake as to my position in the matter, I would say to the hon. gentleman that unless the British North America Act were amended in the manner here proposed it would not be possible for the government to introduce legislation of the kind to which he is now referring, but whether the government will introduce legislation in respect to loan councils or not will depend upon the course of events after authority is given such as is asked for by this particular amendment. The point I wish to make clear is this, that if such legislation should be introduced the hon. gentleman will then have ample time and opportunity and will then be wholly in order in discussing the matters with which he is now dealing.

Mr. BLACKMORE: I am very much pleased indeed to learn that this of itself does not mean the introduction of a loan council in the dominion, and if a discussion of the loan council is out of order in this connection I will desist at the present time. But if it means the thin end of the wedge, as a result of which a loan council is to be introduced in Canada by slow degrees, then I wish to register my protest in the most emphatic terms that are consonant with respect for the house.

Mr. MACKENZIE KING: Let me make it perfectly plain to my hon. friend. I should not like him to say, if later on legislation were introduced making provision for a loan

council, that the government had given a commitment at this time to the effect that such legislation would not be introduced I made it absolutely clear that all that this motion of the Minister of Justice does is to ask for an amendment to the British North America Act giving the government power to introduce legislation which at the present time it has not the power to introduce, and to legalize some matters which it thinks ought to be legalized.

Mr. BLACKMORE: I am at a loss to know whether to proceed or not, because what I have to say from now on does not bear particularly upon the loan council. I wish to be entirely within the rules; I want to make sure that this is the place where I may say what I want to say. Under these circumstances may I proceed?

Now there are several other matters which I wish to touch upon. I have one more set of quotations which I should like to read into Hansard for the benefit of hon. members, but inasmuch as the Prime Minister has indicated that perhaps this is slightly out of order, I will desist. However I would make these observations bearing specifically on the wording of the resolution. "Prescribe the terms" are exceedingly dangerous words to use. I do not wish to be unreasonably gloomy, but as I have said publicly time and again both inside and outside this house, I believe that what was stated on the platform and in the press by Liberal speakers and newspapers throughout the dominion before the fourteenth of October last justified the people of Canada in expecting that there would be monetary reform. So far, as I have already indicated rather mildly, I have seen no evidence whatever of monetary reform. Under the circumstances the people could not have asked more definitely for this reform than they did last October. If, having made that pointed and emphatic request, they are to be denied that which the rank and file throughout the country are coming to see is the solution of the problem, is there any possibility of their ever getting it through the medium of a dominion election? If there is not, there emerges a fact of very great importance. If the Dominion of Canada cannot be relied upon, after such a mandate as the government has received, to institute monetary reform, the only bodies which can bring it in are the provincial governments; and if they are to be bound hand and foot through the operations of a loan council which, perhaps, they do not understand, the situation becomes exceedingly serious. I do not know whether my time for speaking has expired, because I have been interrupted so much, but I should like to say a few more words.

An hon. MEMBER: Put your watch back.

Mr. BLACKMORE: While we are dealing with the loan council let me draw this fact to the attention of the house. In western Canada it was definitely understood that the budget speech last spring contained a proposal for a loan council, and that was one of the causes which contributed to the defeat of the Conservative administration; in other words, one reason why the people voted for the Liberal party was that they would not stand for a loan council. And now they are to have one. What does this all mean? I repeat, Mr. Speaker, that the situation is exceedingly serious.

Are the purposes of this act wholly innocent and harmless? I am prepared to go so far as to say that they are. But if the measure is innocent and harmless, it would be advisable for the government to change the wording so as to ensure that it will not be the means of introducing, under, let us say, some sort of misapprehension, a loan council, for the establishment of such a body in Canada at this time as could result in only the same kind of thing that has happened in the commonwealth of Australia.

In closing, let me add something which I have hitherto hesitated to say. I believe that the hon. member for Winnipeg North Centre (Mr. Woodsworth) yesterday struck a note which is of serious import. He made the statement that, as far as he could judge, the League of Nations had ceased to be of effect.

Mr. WOODSWORTH: As now constituted.

Mr. BLACKMORE: Yes, as now constituted; I thank the hon. member for the correction. We Canadians, as members of the great British race, are facing a future which holds the possibility of our being deprived of our protection. This is a serious matter. The greatest assurance of protection lies in our unity. The loan council as it has been introduced in Australia has already worked definitely towards the disintegration of that noble dominion. Plenty of evidence exists that that is a fact. If a loan council is introduced in this dominion the effect will be precisely the same.

An hon. MEMBER: Why?

Mr. BLACKMORE: Besides that, unless something is done, and done soon, to improve the economic conditions which obtain in British countries, those very conditions will

disintegrate the empire. People cannot stand indefinitely what they are enduring at present. They are blaming their condition on various things, and one of those things, before long, will be the British connection. For that reason, too, in the interests of our security, our unity, and our inter-commonwealth relations, I would urge most earnestly that until such time as we can carefully discuss the matter throughout the country and know exactly what we are doing we steer clear of a loan council.

Mr. J. S. WOODSWORTH (Winnipeg North Centre): It seems to me that this resolution involves three principles: first of all, the method of amending the British North America Act; second, giving the provinces the right to impose a certain type of indirect taxation, third, giving to the dominion, under certain conditions, control over provincial finances. Undoubtedly, although the measure may not immediately involve anything of great importance it has far-reaching consequences. The Minister of Justice (Mr. Lapointe), in introducing the resolution, said that the proposal had no connection with the general question of Canada's right to amend her constitution. In this house we have not in any formal way gone so far as to suggest that Canada had any right to amend her constitution. Last year we considered before a committee of this house the question of the best method of amending the British North America Act, so that in the words of the resolution I then moved:

> ... while safeguarding the existing rights of racial and religious minorities and legitimate provincial claims to autonomy, the dominion government may be given adequate power to deal effectively with urgent economic problems which are essentially national in scope.

It was found by that committee, which devoted its attention to devising a method, that there was not unanimity of opinion as to what method should be adopted. The committee itself had some difficulty in reaching something like unanimity, but apparently it was blocked by the pressure brought to bear by the different provinces, or perhaps I should say, more correctly, by the refusal of a number of provinces to send in submissions or representations of any kind. So the matter was left open. To-day the minister slides over the real difficulty fairly easily and suggests that in this case, at least, we might bring about the change merely by an address of both houses of parliament. I find myself in a difficult position in criticizing this matter. The minister comes of a race that is said to be logical and consistent in its methods of doing things. I come of a race that is said to adopt expediency and to muddle through somehow. In this particular instance it would seem that we have exchanged roles, and the minister is going to adopt this particular expediency and so to muddle through in some way while others of us are put into the position of insisting that we should have some sort of logic and consistency in dealing with questions of this kind.

Mr. LAPOINTE (Quebec East): My hon. friend is flattering himself.

Mr. WOODSWORTH: I should think the right way to proceed would be to adopt some method of amending the constitution. Of course if we are to adopt the "muddling through" process possibly I should keep very quiet about this measure and let it slip through without much notice. Then, when this particular measure slips through without any general notice being taken, we might be in a better position to slip some other matters through, because, forsooth, this will have created a precedent. Really what I am afraid of is that though a financial measure of this kind may go through, it will not be regarded as a precedent by which we may guide ourselves with regard to other matters of great importance.

The fact is that it is proposed to change the British North America Act fundamentally merely by an address. We are told that representatives of the provinces have been consulted. The provinces themselves have not officially stated that they are willing to have this measure go through. As far as I know the matter has not been before any provincial legislature.

Mr. FINN: Yes, New Brunswick.

Mr. WOODSWORTH: I do not think it has been before the provincial legislature of New Brunswick.

Mr. FINN: Yes, the question of amending the British North America Act.

Mr. WOODSWORTH: That is another matter; I am speaking of this particular resolution. As far as I am able to learn it has not been endorsed by any provincial legislature. Here, then, we are proceeding to pass a fundamental amendment to the British North America Act merely by means of an address by the two houses.

Mr. LAPOINTE (Quebec East): That is what my hon. friend has been preaching in the past.

Mr. WOODSWORTH: I am not saying what I have been preaching; I protected myself a few moments ago by saying that I was in a very curious position.

Mr. LAPOINTE (Quebec East): My hon. friend is muddling through backwards.

Mr. WOODSWORTH: No, to-day I am just pointing out what is involved in this resolution, and I am doing so because I want to plead that if we go this far we ought to go a great deal further. Surely the consent of representatives of the provinces is not enough. So far as I can learn, Alberta has not given its consent, and even the representatives of Alberta have not given their consent.

Mr. DUNNING: My hon. friend is quite wrong; Alberta has consented to the introduction of this resolution.

Mr. BENNETT: Where is the evidence of that?

Mr. DUNNING. It is there.

Mr. WOODSWORTH: I should like to have a statement from the minister on that point. Can the hon. gentleman give us any evidence that Alberta has consented to the introduction of this resolution?

Mr. DUNNING: I will find it in a moment. In the meantime perhaps my hon. friend might continue.

Mr. WOODSWORTH: Very well, but even the consent of Alberta's representative does not affect my argument.

Mr. DUNNING: In a telegram from the premier of Alberta, dated March 27, the following words appeared:

> ... we have no objection dominion government proceeding with constitutional amendment bill.

That is in the opening sentence, and it is the only reference contained in that telegram to this matter.

Mr. WOODSWORTH: Then we are clear, are we, that representatives of all the provinces have consented to this? I would still point out that the provincial legislatures have not consented to it. I think that is correct.

There is another point to which I should like to refer. This amendment provides for a voluntary arrangement. It is exceedingly magnanimous, we will say, for Quebec or Ontario, which provinces are fairly well to do, to consent to a matter which will not immediately affect them. That is magnanimous, because under the resolution it is left to the individual province as to whether or not it may come under the provisions of this act. That is something we ought to consider carefully. It may very well be that by the representatives of certain provinces giving their general assent to the introduction of legislation of this kind they may maintain their own freedom while placing a very great burden and a very great handicap upon certain of the other provinces. The minister says that this amendment is introduced to meet an emergency, to meet a practical situation. I think those were almost his exact words.

Mr. LAPOINTE (Quebec East): And to help the provinces, not to burden them.

Mr. WOODSWORTH: Quite so; to help the provinces. But I would point out that there are other emergencies, other practical situations, yes, and other kinds of help which the provinces need. Let us take the question of unemployment that has been before us for years. We have been told again and again that the dominion government, because of the British North America Act, cannot directly handle this problem, at least in a certain way as, for example, by unemployment insurance. We have been told that we cannot possibly do anything about unemployment insurance without fundamental changes first being made in the British North America Act. Will the Minister of Justice say that it is only necessary for us to pass an address of this house and immediately the dominion government will have the right to undertake unemployment insurance?

Mr. THORSON: He did not say that.

Mr. WOODSWORTH: I do not think the minister would say that.

Mr. THORSON: He did not say it.

Mr. WOODSWORTH: I quite agree; I do not think he did say it, but he will say that we can settle great financial problems involving the relationship between the dominion and the provinces merely by an address being passed by the two houses of parliament.

Mr. THORSON: No, he never said that.

Mr. WOODSWORTH: All that it is necessary for us to do is to pass this resolution, and by an address the amendment can be brought about by action of the British parliament.

Mr. DUNNING: Oh, no.

At six o'clock the house took recess.

## After Recess

The house resumed at eight o'clock.

Mr. WOODSWORTH: Mr. Speaker, when the house took recess I was congratulating the Minister of Justice upon his having discovered an easy way of amending the British North America Act. At one stroke we have swept away the old compact theory of confederation, and the knotty question as to whether we should have the consent of all the provinces, of a majority of the provinces or even of one province. We now recognize that all we have to do is to pass an humble address of this house and of the senate, and we may hope to obtain the desired changes in the British North America Act. But I would like to ask why it is that it is not possible to obtain similar amendments with regard to questions, such as, for example, unemployment insurance, the eight hour day, old age pensions, the minimum wage or, in fact, the right to amend our own constitution. If we can secure an amendment when it suits the policies of the financial people, I cannot quite see why we should not do it when it is in the interests of the great masses of our people. If I am not asking the house to stretch its imagination too far I may say that if ever the Cooperative Commonwealth Federation came into power and the Labour party again formed the government of Great Britain, about all we would need to do would be to pass a resolution by parliament. Of course we could put it into the form of an humble address. Such a resolution would be sufficient to obtain for us whatever we needed by way of amendments to the British North America Act. I am not quite sure whether, in such event, we would even need a resolution passed by the senate.

Mr. DUNNING: If you had the provinces agreeing with you it would be all right.

Mr. WOODSWORTH: Representatives of the provinces have agreed that this address should be introduced. That is a different thing, as the minister must know, from provincial legislatures agreeing, which they have not done. In any case, if the minister would allow his imagination to stretch, probably the provinces would be with us at such a time as I have suggested.

I have said the second principle involved is that of giving the provinces the right to impose a certain type of indirect taxation. No doubt something must be done to help the provinces; I think that is clear. There have been references to reckless expenditures on the part of some of the provinces. As a westerner I may say that I resent these little sermons we have preached to us by representatives from eastern provinces. On the whole I do not think expenditures in the west have been any more reckless than those in the east. It is true that the western provinces have developed under circumstances greatly different from those under which the eastern provinces developed. A new type of expenditure was necessary, if we were to open up the west, as the rest of the country thought it ought to be opened up, and if we were to prosecute the great war—if I may carry the argument that far—in the way in which the rest of the country thought it ought to be prosecuted.

Hon. members talk about economy, but without going into detail I would point out that the western provinces have cut their expenditures to the very limit, in fact, to the detriment of the ordinary people and to the serious disadvantage of our young people and even of our children in those provinces whose services have been cut down.

Several years ago pressure was brought by the present leader of the opposition upon the western provincial governments, urging them to balance their budgets. Hon. members will recall a letter sent to the provinces at that time. They have been trying to balance their budgets, at very great cost. Manitoba not only has an income tax but also had to enact a two per cent wage tax. Alberta has had to resort to the sales tax. Undoubtedly something will have to be done to help the provinces. For some time I think it has been recognized that the subsidy arrangements were far from satisfactory. But may I point out that this is not a recent development.

As the debate went on I recalled an article I read several years ago. It appears in the Canadian Forum for December, 1934, and is written by Mr. Norman McL. Rogers who, I am glad to note is the present Minister of Labour. In a carefully prepared statement he said this:

> The failure to develop a satisfactory scheme of federal public finance in Canada was due in the main to certain erroneous assumptions in the original settlement of 1867, which were carried over with minor qualifications into the revised settlement of 1907. These erroneous assumptions may be enumerated as follows:
>
> 1. That increased expenditures by the provinces would arise from expanding population rather than from the acceptance of new governmental obligations;
>
> 2. That the expanding provincial services could be supported adequately and equitably by territorial revenues and direct taxation;
>
> 3. That the ends of federal justice would be served by a uniform scale of per capita payments to all the provinces of the dominion;
>
> 4. That subsidies payable by the dominion to the provinces should be stabilized on the above basis of per capita grants.

It is not too much to say that the error of these assumptions and principles of the existing scheme of federal public finance would be exposed conclusively by any impartial and scientific investigation. A proper survey of dominion-provincial financial arrangements must now take account of the incidence of tariff policy as an integral part of the tax system of the dominion. It must be recognized, in other words, that the unequal effects of the tariff upon the wealth and income of the various provinces of the dominion should be neutralized by direct subsidies or developmental expenditures, or in the alternative that differences in the taxable capacity of the provinces should be recognized as an essential feature in any scheme for the readjustment of provincial subsidies.

I think that is a fair statement. The hon. gentleman then goes on to show that it is highly desirable that under these developments which have taken place the dominion should assume greater responsibility. In the next paragraph he says:

Broadly speaking, a reform program of federal public finance in Canada should include in the first place the assumption by the dominion of full financial responsibility for certain social services which now fall under the constitutional jurisdiction of the province. The services thus taken over by the dominion should be old age pensions, unemployment insurance and health insurance if and when the financial resources of the dominion will permit of this further extension of common minimum standards of social welfare. The assumption of these responsibilities by the dominion is recommended by a number of considerations. (a) They are services which were not in contemplation when the financial arrangements between the dominion and the provinces were established originally at confederation. (b) They are services which should be developed in accordance with common standards throughout the dominion. (c) They are services which ought to be established and controlled by the political authority which has access by taxation to the profits of industry and commerce throughout the entire dominion. It is evident that unless these services are assumed by the dominion with its unrestricted taxing powers the provinces with low taxable capacity will be compelled to maintain standards of governmental services inferior to those supplied by provinces which have been the chief beneficiaries of the fiscal policies of the dominion during the past sixty years. Their assumption by the dominion is one means of alleviating the continuing effects of the unequal incidence of the tariff upon the financial position of the provinces.

Again I commend that statement to the government, and I am glad that we have in the cabinet one member who has thought his way through some of these problems and will, I have no doubt, use his influence there to see that this program is carried out.

In the last line of the paragraph which I have just read, reference was made by the Minister of Labour to the unequal incidence of the tariff, and perhaps that should enter into the consideration of the legislation now before us. In a preceding paragraph he has this to say:

The tendency of the tariff system of Canada has been to concentrate manufacturing activity in the provinces of Ontario and Quebec, whereas the burden of maintaining the protective tariff has been distributed throughout all the provinces and falls with particular weight upon those provinces whose income is derived chiefly from primary production and export markets. The abnormal concentration of manufacturing activity in the central provinces has had important effects upon the productivity of income taxes and corporation taxes in the various provinces. It has increased to a marked degree the number of companies subject to direct corporation taxation in the provinces of Ontario and Quebec. It has also contributed materially to the larger corporation and individual incomes of these provinces. It is not too much to say that the protective system has fertilized the income tax field in Ontario and Quebec by a process which has resulted in the partial impoverishment of this field of taxation in other provinces whose economic development has been prejudiced by the effects of the fiscal policy of the dominion. When, therefore, the provincial distribution of income is considered in relation to the effects of fiscal policy, it is apparent that the withdrawal of the dominion from the individual income tax field would benefit most those provinces which stand least in need of additional revenues. It would exaggerate the disparities in provincial finance which already exist and which have been aggravated by the unequal effects of national fiscal policies.

I thought of this particularly when the hon. member for St. Lawrence-St. George (Mr. Cahan) was speaking. He suggested that it was quite open to the provinces to raise their revenues by income tax, but the trouble is they have a very poor field, especially in the most needy provinces.

One more brief sentence from this article by the present Minister of Labour:

A study of the income tax collections from the various provinces of the dominion will indicate that on the basis of existing rates the provinces which are mainly dependent on agricultural production would gain very little by an arrangement which would give them the proceeds of individual income taxes within their boundaries.

What are we actually doing by this legislation? Are we in reality helping these poorer provinces? It is true that we are giving them powers over a very limited field of indirect taxation which powers, if applied, will, I am sure, accentuate the evils of the sales tax. The main sources of revenue are still available only to the dominion government, and further than that, as the minister in this article has so well pointed out, are located very largely in the wealthier provinces and are thus not available to the western provinces.

It is in my judgment a serious question whether the first part of this proposed amendment will be in reality a help to the provinces; certainly it is more than a question in my mind whether this is the best way to afford help to the needy provinces.

The third principle which I mentioned was that of giving the dominion under certain circumstances control over provincial finances. Mr. Speaker, if the Sergeant-at-Arms could manage to exclude the noises coming from the exuberant Liberals in the lobby—

Mr. LAPOINTE (Quebec East): The hon. member is opposed to military methods, is he not?

Mr. WOODSWORTH: I suggest that the Sergeant-at-Arms is very much a civil official in this house.

I was going on to say that I agree with the hon. member for Lethbridge (Mr. Blackmore) when he suggested that the second part of this resolution, if adopted and carried out into legislation, would mean the surrender of the sovereignty of the provinces. We are faced here with the old question of political versus economic freedom. Perhaps a good many members have hardly stopped to consider that political freedom without economic freedom does not amount to a very great deal. If an ordinary workman finds himself in the position where his house is very heavily mortgaged and he is dependent for his job upon someone else, I suggest that there is very little freedom left to him. He must simply obey the orders of someone else in almost every sphere of his activity. He may have the right to vote and he may be induced to vote Liberal, but even if he does I submit that he has not achieved economic freedom.

Take the business man. If the business man is dependent upon the banks for a loan; if he cannot enlarge his business without going to the bank and having practically his every action under the dictation of a bank, or, if you will, if he is faced with the possibility of the bank vetoing whatever he does, I submit that although he may have political freedom he has not a great deal of economic freedom.

Further than that, I am quite confident that we cannot very long deny economic freedom without taking away political freedom. What did we have in Newfoundland? A few years ago that colony was declared bankrupt.

Mr. DUNNING: Dominion.

Mr. WOODSWORTH: Yes, it was a dominion at the time. A board was put in to administer its affairs. I think none of us would say that Newfoundland under those circumstances had any very large measure of self-government.

What is happening in a number of our municipalities across the country? They have become bankrupt and the provincial governments are having to put in administrators or supervisors—I think they go by different names in different provinces—and then what happens? The administrator or supervisor looks at the question very largely from the standpoint of those who hold the debentures or bonds of the municipality. The bondholders have a prior claim, and what is the result? I could point to muncipalities where the schools have been starved, and in some cases high schools completely closed. I do not need to have to go out of my own constituency, for an illustration of that. Municipal services are cut down to the very limit, and adequate fire service is not maintained. In fact, I was given the instance last summer of a man who had a little shack at the lakeside—his home in the village was small enough—who thought he would spend a week of the summer in his little shack by the lake. He was told by the administrator that he could not do that; that if he did he would be cut off relief. He was told they would declare that he was no longer a resident of the village. That I think is an intolerable situation. Where is our boasted freedom when a man cannot take a week's holidays without being told that he will lose his residential qualifications and no longer have a claim for relief on the town in which he was living and in which he has invested his little all?

Mr. ROGERS: Will my hon. friend give me the particulars of that case some time?

Mr. WOODSWORTH: I shall be glad to do so. I think I mentioned it in the house a year ago. This happened in the village of Brooklands. I am not quite sure whether in my records I shall be able to find the name of the man.

As I have said, it is very difficult to preserve even a semblance of political freedom when economic freedom goes. What will be the effect of this resolution passing this house? I do not object particularly to the method of its introduction, but if it passes there will be an amendment to the British North America Act, upon which no doubt will be based some legislation to create a loan council. Otherwise there would be no purpose in introducing legislation of this kind. What does the resolution say· It says:

> The parliament of Canada may authorize the government of Canada to guarantee the payment of the principal, interest and sinking fund of any securities (hereinafter called "guaranteed securities") which any province of Canada may from time to time make or issue, and, subject to the provisions of this act may prescribe the terms and conditions upon which any guarantee so authorized shall be given.

Section 4 gives further details, the second reading:

4. (1) For the purpose of securing Canada against loss resulting from the giving of a guarantee under the authority of this act, the government of Canada, whenever in its opinion any default has occurred in respect of any payment on account of principal, interest or sinking fund of the guaranteed securities, may:

(a) withhold any payment to the province on account of any grant payable by the government of Canada to the province for its local purposes or for the support of its government and legislature or on account of interest in respect of its public debt or in lieu of public lands or on any other account whatsoever;

(b) effect payment in whole or in part of any such grant by payment direct to a creditor of the province of any amount owing to such creditor on account of the guaranteed securities. In this and the next succeeding paragraph "creditor" shall include a trustee of a sinking fund;

(c) out of any revenue received or collected by the government of Canada or any department officer thereof for or on behalf of the province, make payment direct to a creditor of the province of any amount owing to such creditor on account of the guaranteed securities.

I submit that if that comes into force, a province would be practically in the hands of a receiver. If I have learned anything from the way in which business has been conducted in this house ever since I have been a member, it is that the financial interests predominate. Pressure will be put upon the province to cut still further its expenditures, more nearly to balance its budget, all of which means inevitably a starving of social services. Where then will be our schools, our hospitals and our various pension schemes which have been built up through the years?

I cannot say that I agree fully with the hon. member for Lethbridge in his conception of how the money power works. However I can assure the house that I am under no delusion as to the money power being dominant in our public affairs. I do not think it is quite so simple as the hon. member for Lethbridge puts it; I do not know that the influences will be recognized as being quite so sinister, but they are none the less real for all that. We see how they operate in this house. We have the money to pay huge interest charges which take thirty-six per cent of our revenue, but we have no money to help a few blind people who need help so much. That is so in this house where the members have an opportunity of exercising a certain amount of pressure on behalf of some of these needy people. What will be the effect in remote districts and in the provinces where boards of administration removed from popular control will be chosen to see that the financial obligations are lived up to?

[Mr. Woodsworth.]

I have just one more word to say. I assume that this resolution will go through, as I cannot conceive of a message of this kind being thrown out by the senate. The government has a sufficient majority in this house to pass anything and I do not know that there is likely to be very strong opposition from the official opposition. If this goes through I do not know that the result will be so much more disastrous than the present state of affairs. I would say that we are simply making statutory, conditions which now exist in fact. Whether or not the financial power exercises itself directly through the forms of this house, or indirectly through the pressure that may be put upon the legislatures of the various provinces, or upon various individuals, the power is there and, so I come to the conclusion that by this legislation we are simply making statutory a condition which has gradually developed and which is proving to be a very disastrous one to the large masses of the people of Canada.

Mr. T. L. CHURCH (Broadview): Mr. Speaker, the principle involved in this humble address to be presented to His Majesty is an amendment of the provisions of the British North America Acts, 1867 to 1930. This amendment refers to taxation and enables the government of Canada to guarantee the debts of the provinces. This is a most unfortunate departure from the basic principles upon which the British North America Act was consummated. It has been said that charity covereth a multiude of sins, but, so does taxation. This resolution covers nearly all the subsections of sections 91 and 92 of the British North America Act, which are correlated according to all the decisions given so far by the privy council. Practically all the subjects referred to in these sections and subsections require taxation to raise revenue to carry them out.

So far the provinces up to 1930 were able to get along and carry on with the cash subsidies allowed under the British North America Act plus direct taxation within the provinces for the purposes of raising revenue. What is proposed under this resolution? The provinces are now to be given the additional right of indirect taxation within the provinces. This indirect taxation is to apply to all kinds of commodities except what is set out in this resolution, liquor, tobacco, cigars and cigarettes. In my opinion the privy council is the one court in which a litigant under the British North America Act can get some justice and relief. We owe a great deal of the good work from confederation in our parliamentary government to the wisdom of the decisions of the

imperial privy council. There is no doubt that the British North America Act constituted a pact along certain lines. The answer to the question whether the British North America Act is or is not a contract is given in five or six leading decisions; in certain respects the answer is in the affirmative and in other respects in the negative, and these answers are correlated.

The proposed resolution is a grave invasion of the rights of the provinces, and so far there has been no petition for legislation of this kind. In the case of other amendments from 1867 to 1930 there were petitions. The foundation of the act itself was a petition from the old provinces of Canada. The courts will restrain this parliament if it goes too far. It can go so far and no further because under section 91 it must legislate as a national parliament. The four old provinces in 1867 gave up their sovereign rights with respect to certain matters in order that confederation might be consummated. They turned over to this parliament jurisdiction with respect to those matters while they retained sovereignty in respect of matters of local interest. In those days there were no large cities in the dominion and it was never imagined that Canada would some day have a population of 10,000,000. At the time of confederation the provinces handed over their rights to the dominion in trust, because it was a trust; and that trust is twofold: One has reference to the rights of minorities as of 1863, which rights must be preserved, but not extended. What was then done is final. In my opinion this parliament cannot invade those rights. But there were other rights and privileges which the provinces handed over to the dominion of a business nature and these contained no contract. They were passed on forever to federal power.

Now this parliament has itself the power to accomplish the objects which under the present British North America Act the minister has in mind, and it does not need to go to the mother of parliaments for any amendments. Last year I attended the committee that studied the question of amendments to be made to the British North America Act, and the question was then considered, how amendments could be made to sections 91 and 92. The deputy minister of justice Mr. W. Stuart Edwards, appeared before that committee and gave a summary of leading cases. At page 2 of the committee's report, speaking with reference to the powers of the dominion parliament, he made this statement:

It will be observed that the purpose is to enable this parliament to deal effectively with urgent economic problems which are essentially national in their scope. Well, in my view, problems of that kind are now within the competence of parliament under the British North America Act as it stands. A good deal has been said about the failure of the fathers of confederation to anticipate the necessity which might arise for the amendment of the constitution. Personally I do not think that they failed to anticipate such necessity; but I think they deliberately framed the constitution so as to make it subject to expansion by its own terms as the needs and as the problems of the country developed. In some of the self-governing dominions and in other countries where a federal system prevails, there are fixed provisions for the amendment of their constitution; but in most, if not all, of those countries, their constitutions are not similar to ours in this respect, that the residuary powers rest with the state, and not with the central authority as it does in Canada. Therefore I think that the fathers of confederation deliberately provided a scheme whereby all matters that are essentially national in their scope would be within the exclusive competence of parliament. They did that by vesting in the dominion parliament the residuary power, and in giving to the provinces their legislative powers they were very careful to make it clear that the legislative jurisdiction of the province was not, in any case, to extend beyond matters and rights situate in the province itself, matters of purely provincial or local concern.

There is a difference between a federation and a confederation, and by section 91 there are certain residuary powers retained by the federal power when not given the provinces in section 92. I contend, therefore, that there is no necessity for going to the mother of parliaments to have our constitution amended so as to give effect to the objects which the government has in view, for the reason that we now have all the powers we need for loan councils. Perhaps I should read one or two other paragraphs from the evidence given by Mr. Edwards:

By Hon. Mr. Veniot:

Q. In a consultation with the province in an amendment of the kind you refer to, do you need to have the consent of the province, or all the provinces?

A. Well, I wish to make it clear just before I answer that question; when I spoke a moment ago I meant that the protest is made by the provinces with regard to matters of provincial concern.

Q. By the provinces?

A. Yes. I would desire to negative any idea that any matter which relates to all the provinces, the mere fact that certain provinces object, would entitle them to have a voice at London or at Ottawa, wherever the constitution is being amended. That would be a matter of purely dominion concern which should be settled in this parliament; but where the amendment would affect what we would call actual provincial rights, and there is a body of provincial opinion opposing the amendment, I would say this parliament should consult the interested provinces.

Q. rovincial rights, common to the provinces as a whole?

A. Well yes. That is, common in the sense that each province has jurisdiction to deal with that matter in its own field.

Therefore, I repeat, there is no necessity for the proposed resolution to guarantee loans or bonds or debentures of provinces in so far as it refers to guarantees of these securities of the provinces and as it proposes also to create a regulatory body known as a loan council in respect of these matters. They have that power here now. There is one other answer which I should like to read from another page, with respect to the question whether or not a contract was entered into. The answer which the witness gave indicates, I think, what I have pointed out here, namely, that there is no necessity for this parliament to go to the British parliament to amend our constitution. I would point out that the proposed legislation is ultra vires of the parliament of Canada.

Under section 92 of the British North America Act the provinces have exclusive jurisdiction with respect to municipal institutions, property and civil rights, direct taxation in the province in order to the raising of a revenue for provincial purposes, the borrowing of money on the sole credit of the province, and generally all matters of a merely local or private nature in the province. I object to this gross invasion, as contemplated by the resolution, of the rights of the municipalities. If we passed this resolution it would be a grave encroachment upon the municipal institutions of the country. A few years ago, I remember, the Lemieux Act was upset in the privy council. It attacked a certain municipality or two which had guaranteed and sold bonds on the basis of a large public undertaking of $100,000,000 almost on cheap light, power and transportation, and this parliament thereupon proposed by the Lemieux Act to impose regulations upon them. Lord Haldane held that the Lemieux Act was ultra vires because it interfered with municipal institutions in the province, with employers and employees, with the right of contract and, in addition thereto, with property and civil rights in the province. It was attacked also on the grounds of public policy and vested rights.

It will be noticed also that in many respects this particular resolution collides with section 91. The provinces are assuming the right of taxation over whom? Over all business men. In the retail streets of my riding, every retail merchant is going to have new and duplicate taxation imposed upon him in an arbitrary way by federal and provincial authorities. I am surprised that a government which professes the principles of Liberalism should propose such an amendment as this, which in the first place interferes so much with the liberty of the subject and municipal institutions and their revenue, and, second, is so gross an invasion of the basis of confederation, namely that the provinces shall be satisfied with direct taxation plus a federal subsidy. Now the government has handed over to them assistance by way of relief measures, national emergency measures; many of the provinces are getting these grants, to help them balance their budgets at the expense of the municipalities, while other provinces do not receive any. The municipalities of the two central provinces are dangerously affected in their financial position and the stability of the bonds and securities which they have sold. By the decision of the privy council in the Alberta case, the Snider case, the Through Traffic case, the Aerial Navigation case and many taxation cases it was held where bonds and securities are sold and contracts have been made, under section 92, the rights of the provinces and of municipal institutions in the provinces shall not be interfered with as they have vested rights and contracts; they are safeguarded by both section 91 and 92, as I read the decisions of the privy council and the answers of Mr. Edwards and the other witnesses before the committee last year. The privy council, when a section is under review, considers the whole story of the British North America Act from beginning to end.

Supposing we pass this legislation and somebody appeals to the courts. Under our constitution the courts are subservient to the legislature as long as the legislature stays in its own field. Over here you have the federal field; over there you have the provincial field and the municipal field. More than two-thirds of the provincial field of legislation relates to the municipalities. There never should have been any provincial legislatures. They were created for political and not for economic purposes with overgovernment and overtaxation. They have been at the root of all dissension in this country; they have imposed untold taxation, with the result that we have overgovernment and overtaxation in Canada. Business men have a right to protest when you are going to hand over to the provinces indirect taxation, when you increase the imposts on retail merchants, when a few months ago the provinces took over the income tax—by what right I do not know; I doubt whether the legislation is legal—when this parliament imposes a direct tax in the manner they did a few months ago, though the decisions show that if the levy is made by a legislative body it is a direct tax. Now here you are imposing

a provincial income tax on a city, though the municipalities have had this whole field of taxation exclusively from confederation to 1918, and the income tax was reserved from confederation to 1918 for the municipalities to enable them to pay their debts. As soon as a municipality finds a new source of taxation under the British North America Act, the provinces grab it, and the federal authority takes away another source of revenue to which the municipalities are entitled under the act of confederation. Not satisfied with that, the provinces have taken away from the municipalities the exclusive field which they have always had of income tax by virtue of the British North America Act, and are collecting duplicate income taxes to which the municipalities are entitled. I never like to oppose a tax; I try to pay my taxes, if I may say so, gladly and willingly, but I assert that the imposition is an unjust one as far as the municipalities are concerned. Further, the method of this collection is indirect. There was no notice to the municipalities, and I predict that in a year those who passed it will be glad to rid themselves of it, because it is going to lead to a lot of trouble.

This resolution in its taxation feature is illegal and ultra vires of this parliament. Under this resolution parliament proposes not only to allow federal taxes to be imposed but to permit the provinces to impose duplicate indirect taxes on business men, and dear knows that the business men are struggling enough now to pay their bills. With all the artificial barriers and burdens they have to contend with, I do not know how they conduct their business. This provision is to help the bankrupt provinces out, not every province in the dominion. The western provinces, with the exception of British Columbia get this handout. The provinces can now impose a direct tax on business men; yet the government is proposing to give the provinces the right, with the exceptions named in the resolution, to levy an indirect tax on retail sales other than of all alcoholic beverages, spirits, malt, tobacco, cigarettes and cigars which are subject to customs and excise duty or tax in Canada or other than all goods and articles for delivery without the province. Of course, that is a federal provision. Wait till I show you how they are going to rob municipalities. They are robbing Peter to pay Paul; that is what the principle amounts to.

This resolution never should have come before the house. If the government wants to amend the British North America Act, let us have some petitions for it first. Let us start with getting social legislation for the workers. Who is asking for this legislation? Some of the bankrupt provinces that cannot pay their debts. Why should the central provinces, which are endeavouring to pay their debts, and pay eighty per cent of cash federal taxes, be imposed upon in this manner, by our conferring the right of indirect taxation so that every business one can think of will be taxed. Why should the powers of this parliament be diminished in this manner? There are many former members of municipal councils in the House of Commons to-day. I am surprised that they will sit idly by and see these barriers put on business and revenues taken away from the municipalities. What it amounts to will be confiscation of property. By the third clause of this resolution the government is handing over to the provinces the right to take municipal revenue. We have to maintain a city police force to protect life and property. This parliament is going to take away a lot of revenue in the way of licence taxes set out in clause 3, a source from which the city of Toronto raises a large revenue by means of the police commission and licensing. That is how we are helped to help maintain the police force. In Australia and New Zealand the capital cities get a subvention to help them maintain their police forces. In this country we are about to take all the money that is derived from the licence fund, from amusements, hotels, beverage places, all kinds of retail establishments in which various articles are sold, and which yield a large revenue to the cities, and hand it over to the provincial authorities in order to raise revenue for provincial purposes, and to help the province balance its budget at municipal expense. I cannot speak officially for the municipalities, but I am safe in saying this, that this matter will go to the privy council; it will be and should be contested, like all past legislation along this line. I do not know how business men, retail and wholesale merchants, with all this indirect and direct taxation that is being handed over to the provinces, will be able even to pay the rent of their stores.

I may add, having looked at the decisions, that the municipal scope of taxation is so seriously interfered with that the municipal institutions of this country might as well be abolished. If the provincial governments are ready to take over and run the municipalities of Canada, it will be a sorry day for Canada. A vote should be taken to abolish provincial legislatures. Altogether it amounts to this, that by this resolution the government of Canada is going to be transferred to the capital cities of the provinces. That is how the country is being governed to-day. Be-

cause every provincial government is friendly to the dominion government of the day, it is proposed to transfer, against the spirit of the British North America Act, to the provincial capitals the absolute power to impose indirect taxes, and the entire government of Canada is being run from provincial capitals. I wish to protest against this course, and I do so as the representative of a riding in which there is a very large number of retail merchants. Not satisfied at the first session with taking away from the municipalities the right to impose income tax, the government now goes further and is intending to give the provinces, by this resolution, the power to impose the indirect taxes I have referred to.

I do not believe that this parliament can interfere with bonds and guarantees and debentures signed on behalf of the municipality by the mayor and the treasurer. I have signed thousands of these debenture bonds and guarantees and treasury notes in advance of the taxes being collected. They are endorsed by the mayor and treasurer of the municipality, and have been sold all over the world. In the bond agreement is given the assessment of the municipality and the revenues with which the fixed charges are to be paid; yet without this matter ever going before a committee, what are we doing? We are going over the heads of the municipal institutions of this country, trying to make nothing more than scraps of paper out of these bonds and debentures which have been sold for hundreds of millions of dollars and which involve light, power, transportation and other utilities.

I wish to protest against this sort of thing. If this is what Liberalism in Canada amounts to to-day, the sooner there is a change the better. The people owning these bonds are located all over the world, in New York, London and every other city of any size. They will be an added complaint in the old country to-day over this kind of thing when it affects municipal securities and depreciates them. Now we are going to hand over to the provinces the right to levy both direct and indirect taxes. As I see it this is remedial legislation of the worst sort. We have never had legislation of this kind before, upsetting as it does the whole principle of confederation. The provinces have been getting along very well with their subsidies, their power to impose direct taxation and the federal hand-out of $111,000,000 to four western provinces. So I do not think this resolution should be passed until we have the opinion of the Supreme Court of Canada as to whether or not parliament has the power to pass this resolution in its present form.

[Mr. Church.]

Then, Mr. Speaker, I think the people should vote on this question. No mandate has been given in connection with it. The provincial premiers came here to see the government, and they got out a blue-book of that so called conference. The premiers asked for indirect taxation also. What right has the provincial cabinets of any province without the consent of the nine legislatures to barter away the bonds, guarantees and securities of municipalities and depreciate them? Does the provincial legislature consist of only one or two members of the cabinet? Are we back to the family compact of a hundred years ago, not only in Ontario but also in British Columbia and the maritimes? What right have provincial cabinets to come here and try to make a bargain with the government of the day in a conference room, over the head of the sovereign legislature and contrary to the wording of section 92 of the British North America Act, in which the sovereign powers of the provinces are set out to get added indirect taxation powers. I say the provinces have no right to do that, and it seems to me the sooner that sort of family compact with federal power is broken up the better it will be for the municipalities of this country. This indirect taxation is just about going to abolish municipal institutions by abolishing and grabbing their revenues and render them more bankrupt. Why does not federal power help the municipalities?

I also contend that this resolution is irregular, though I do not wish to urge this point strongly to-night. I am sorry that I was misunderstood yesterday. I always like to abide by your rulings, Mr. Speaker, and by the will of the house. I appreciate the difficulties of the government to-day in dealing with the many important problems before them, some of which were not of their making. Some were not of the making of the preceding government but were created by the war and the disturbance of industrial equilibrium which followed. I sympathize with any man who is premier or a cabinet minister to-day or at any time and who is trying to bring about harmony and order in this dominion, which is loaded up with provincial legislatures that we never should have had at all. That is where the mistake was made in the first place at confederation. However I wish to say that under the anticipation rule I fail to see how a part of the resolution of a private member can be incorporated in a government measure. As I read the rules of the house, and the authorities, even though government business

has precedence that cannot be done; you cannot take away from a private member the rights and privileges which he has enjoyed for two or three hundred years. I am not going to urge that, however, because I sympathize with the government in their endeavour to restore order to the finances of the country.

As I see it this resolution is also unfair to His Majesty's government in the old land, in loading them up with the settlement of this involved question without a petition from the provinces to the Governor General of Canada, setting out the exact terms on behalf of each province. I am not aware that any petitions have been presented so far this session, and there has been no conference with the municipalities to protect their rights from this invasion. Before this resolution was proposed why was it not considered by the banking and commerce committee or some other committee of the house? Last year a committee was appointed to consider the British North America Act, and this resolution runs contrary to the principles laid down by that committee and the opinions of its witnesses, which reviewed all the authorities and decisions I have already named, regarding sections 91 and 92.

If this resolution is followed by an act of the imperial parliament I say that not only will it destroy the municipal institutions; it will also constitute a gross invasion of the property and civil rights of the provinces. It is against the ordinary principles of British justice to take away all these powers of taxation from the municipalities without their knowledge, consent or advice, because any act passed by any parliament in the British dominions must not be contrary to the ordinary principles of natural justice without a municipality hearing first of how it will affect them. What is going to become of the municipalities? How are they to be reimbursed for the amount of money that is to be taken from them and handed over to the provinces, that do not need it and that have natural resources, lands, mineral wealth, corporation taxes and so on, which the municipalities do not have? I wish to protest against such a gross invasion, because, as I see it, it is taxation without representation. This resolution hands over the right of indirect taxation to the provinces. I say that is taxation without representation, because the government of the day have no mandate from the people to upset the act which has been in effect ever since 1867. The government of the day, whether dominion or provincial, has no mandate to do this, and it should not be done without the knowledge and consent not only of the legislature but of the people as expressed at the polls. Here it is being done without even a conference with the municipalities.

As I have already stated, in connection with matters such as these the courts of the land will not deal with abstract cases. They want concrete questions. We found that out before the Beauharnois case in the reference to our supreme court, in connection with the rights of navigation as against power, as between the provinces and the dominion. We on this side of the house objected to some of the questions that were submitted. Those questions went to the supreme court, which decided they could not answer the questions categorically, in the abstract, that they would require some concrete evidence. Here, without any concrete evidence as to how this taxation clause is going to affect the municipalities, we are going over their heads in an abstract way. My hon. friend the former mayor of Hamilton can tell the house what is going to happen there. I would refer particularly to paragraph (ii), having to do with the patronage of hotels, restaurants and places of amusement or entertainment. These are very large features in the income of a municipality, so much so that the municipalities are required to maintain large police forces to regulate and protect them. In one of the rinks of a large municipality I know they have numerous policemen on duty, as well as firemen to enforce the fire regulations. Are the municipalities to be required to maintain all these free services without getting a copper from the present licence system towards their cost? I say that should not be done, and I believe this is a direct invasion of the principles of confederation. As I have said, we have all the power we need if we would only exercise it. Just because certain officials tell the Minister of Justice and Attorney General of Canada that they think we have not the power to create a loan council and need legislation does not make it so. I can find no decision of the privy council to support such an attitude, and I do not think any court of law would say so. I do not think any amendment is necessary in order to give effect to the policy of creating a loan council, if the government of the day wish to do so.

Mr. Edwards' opinion, as I have read it, indicates that the federal power has residuary powers which the provinces have not. That is one of the main differences between our constitution and those of some other federations and confederacies such as I mentioned before. The question is: Was confederation a contract or not with the provinces when

they gave federal authority power to rule them? The answer of the privy council is yes and no. I say yes, so far as the protection of the rights of minorities is concerned regarding certain schools in Ontario as of 1863. They retain this but these rights cannot be extended, and what was done in 1863 is final and any extension of it is ultra vires. I am in favour of a strong federal power as the British North America Act provided in disallowance to protect not only minorities but majorities. The time is coming in Canada when majorities will have to assert their rights and privileges under confederation as laid down in 1863-67. I believe that, when I see some of the legislation being passed over the head of the British North America Act and over the head of what Sir Wilfrid Laurier said in 1905 about the rights of minorities and majorities under confederation. I believe the Minister of Justice referred to that statement to-day, so far as I understand it, when he said confederation to that extent was a contract along those lines. It has been set out by many of the Lords of Appeal in the privy council what their views were or dictums were as to whether confederation was a contract or not. I contend federal authority should be up and doing to protect whom?—to protect municipalities from the taxation invasion of the provinces; to protect all those municipal institutions for which bonds and debentures are sold; I refer to hospitals, schools, court houses, harbours, parks, public schools, and those buildings for which municipal taxation is raised. If some federal or provincial authority over their heads tries to take rights and privileges away from them, as Sir Wilfrid Laurier said in connection with the 1905 Alberta and Saskatchewan acts, it is the duty of a strong federal power to offer some protection to the rights guaranteed at confederation, but there must be no extension of such minority legislation. This legislation may be attacked in the courts for many other reasons. In my opinion the bankrupt provinces of Canada are going to be allowed to act the part of the ungrateful son who agrees to take all from his parents and to give nothing in return. Ontario is a solvent province. In this instance the parent is the federal authority. That is the position in which we shall be placed. Who is going to pay for all these loans and guarantees, outside the British North America Act? The central provinces of Canada will pay for them. They now pay eighty per cent of the cash taxes. If a sinking fund is to be provided, as no doubt the loan council would arrange, these grants and interest would have to be made out of direct revenue, or out of income. From where do we get the income? Eighty per cent comes from the two central provinces, and I hope the authorities will look into that point.

The resolution indicates that a rider will be added to the effect that the dominion will be recouped, in case of loss. The loan council would have the powers set out in the second page of the resolution. Did hon. members ever hear of parliament collecting any loans or guarantees on bonds from railways? Canada has four billion dollars invested in railways, private and public. Did hon. members ever hear of the government collecting guarantees from loans to harbours or publicly owned railways? Has the Quebec harbour paid its interest? This has not been paid; yet the government puts into this resolution the very same principle they have had for the last fifty years regarding loans, guaranteed bonds, cash grants and hand-outs of all kinds, which, from experience, will not be repaid.

We talk about a loan council; I say that parliament has been looted enough, and the time has come to put the brakes on in connection with loans, loan councils and all sorts of loans, running into hundreds of millions of dollars. Is it any wonder we have the great taxation under which the country is groaning? As I say, we should have some regulatory power to put a check on it. The only regulation the federal power has is that of disallowance. We disallowed some British Columbia statutes, to some of which I referred. Are we going to have any protection at all for municipalities?

The hon. member for St. Lawrence-St. George read an opinion in this house on one occasion during 1930, the last year I was in the house. The learned and eloquent member read the opinion of Sir Wilfrid Laurier as given in 1905 concerning the two prairie provinces of Alberta and Saskatchewan, having to do with the lack of right of minorities to schools in Alberta and Saskatchewan in 1905. They had no right to them under the law as it was then to them. The only regulation we have under which we may get our money back is what?—a scrap of paper. How can a bankrupt province pay any money back on this guaranteed bond? If an individual is bankrupt he is put out on the street. He has to start all over again, but under the proposed amendment hundreds of millions of dollars can be paid out to bankrupt provinces. In my opinion that new legislation is not necessary; it is just a sop to the four western provinces. In that statement I except British Columbia, to some extent. In my opinion that is all it is.

I wish by some regulation of Mr. Speaker the learned treatise I have before me of the British North America Act of 1935, could be handed to each hon. member; I refer to the report of the committee which considered the British North America Act. Every hon. member should have a copy of this before the resolution is passed. The municipalities are becoming alarmed. In my opinion, instead of passing the resolution, we should have the vote of the people of Canada to abolish, if possible, provincial legislatures altogether. That would be a godsend to the Canadian people, and if it were brought about we would have some harmony throughout the country. Their creation has led to racial and religious jealousies in Canada, and overgovernment and overtaxation.

Confederation was brought about by compromise, because the history of the world has been one of minorities. The history of Canada has always been the history of compromises. Confederation was a compromise. When confederation was passed the rights of minorities in Ontario were settled for all time in 1863-67, and the people in the province of Ontario thought the door was closed forever and that certain school questions were settled which we now find are not settled, and which could not be extended.

The fathers of confederation handed over the regulatory power of disallowance to federal power, though, to protect Ontario.

Mr. SPEAKER: The hon. member has spoken forty minutes.

Mr. R. E. FINN (Halifax): Mr. Speaker, it seems to me that perhaps the most important document in our dominion is the British North America Act. Its provisions respecting federal and provincial rights are sacred, as are the powers of the parliament of Canada and our legislatures as set out in sections 91 and 92. When this afternoon I listened to the hon. member for St. Lawrence-St. George (Mr. Cahan) a fellow Nova Scotian, a gentleman of years and of fine texture of mind, well able to interpret statutes, I was impressed by the statements he placed before the house. I was pleased, further, to listen to the observations of other hon. members, including the leader of the social credit party (Mr. Blackmore) from the province of Alberta.

It seems to me that to some extent we are losing sight of an act which to a certain extent supersedes the British North America Act. I refer to the act of 1931, passed by the imperial parliament, entitled the Statute of Westminster. If I recall rightly, the present Prime Minister of Canada (Mr. Mackenzie King) was the one who first at a conference in London outlined the position of Canada and stood for its status as a component part of the British empire, daughter within her mother's house but mistress in her own, and it fell to the lot of the right hon. the leader of the opposition to-day (Mr. Bennett) who, as Prime Minister of this country attended the conference in 1931 to approve the draft statute of Westminster which became law. Therefore all the clauses contained within that statute bear his imprimatur, so to speak, more than that of my right hon. friend the Prime Minister because the proposed statute was only in posse in his time and was in esse when the present leader of the opposition was Prime Minister. The statute of Westminster gives an entirely new status to Canada and to the other component parts of the empire which are looked upon as independent, self-governing and absolutely free, save in the one respect, and one only, as regards Canada that the British North America Act can be amended only by the parliament of Great Britain upon request of the parliament of Canada through the government of Canada, and the provisions of section 92 of the British North America Act only with the consent of all the provinces of Canada.

This afternoon I heard the leader of the social credit party, the hon. member for Lethbridge (Mr. Blackmore) make the statement in this house, honestly, I believe, but without knowledge, that we were subservient; that there was in existence to-day a sort of combination between the Bank of England and the independent parliaments of what are called the dominions, which are defined under the interpretation clause of the British statute of 1931, and that these parliaments through some sort of understanding were attempting to keep behind the screen, to keep away from the people whom they represent things that they would not like to come out in the open to do.

I desire to compliment the hon. member for Broadview (Mr. Church) upon his reference to the late Right Hon. Sir Wilfrid Laurier, and I say to hon. gentlemen opposite of the great Conservative party of the past and of the present as it is—and I hope, Mr. Speaker, that its day will be greater still some time when the people of Canada so decide—when I heard the hon. member for Broadview complimenting Sir Wilfrid Laurier upon the stand he took with reference to the carving out of the new provinces of Alberta and Saskatchewan and the preservation of the rights of minorities, I felt that that compliment should re-echo from one end of Canada to the other because it is in such contrast with the attitude of the right hon. the leader of the opposition of that day,

Sir Charles Tupper, who sought to force upon the parliament and people of Canada, through his influence and that of his government, something that would have brought about, in my judgment, the disruption of confederation. But the fine texture of mind and the noble vision of Sir Wilfrid Laurier stood out pre-eminently and he said, "Put me in power and I will settle this question by a happy compromise." And did he do it, Mr. Speaker? The question has never been heard of since; the mantle of that great French-Canadian has fallen upon the shoulders of the right hon. leader of the government to-day, and as I survey the situation, I know of no man in Canada who stands more firmly for the broad principles of democracy, who stands and hews more closely to the line of the rights of the people as expressed through their representatives in parliament here and in the legislatures of the respective provinces, than the right hon. gentleman who leads this government in the Dominion of Canada to-day.

In the light of these facts it is well to look down the vista of the past; it is delightful to be reminiscent and to be able to feel that you stand behind a leader who has nothing to apologize for in respect of the positions he took, as I believe the right hon. leader of the government to-day will have no apologies to make to the people of Canada when he again appeals to them for their support and comes back to give Canada a second five years of prosperity as he gave us when he was in power from 1921 to 1930. I do not disparage for one moment the right hon. leader of the opposition or the hon. gentlemen who sit about him. I believe he tried to do his best, but minds sometimes run in grooves, and when they do it is often pretty hard to get them out. That was the trouble with the leader of the opposition. His mind got into a groove and he could not get it out. That is the reason—and I say it kindly—that the people put him out and gave him the honourable position of leader of the opposition in this parliament to-day.

As to the statement of my hon. friend the leader of the social credit party, I noticed this afternoon that he quoted from newspapers, and evidently he is looking at one now as I see him passing it over to one of his confreres. I should like to call his attention to the preamble of chapter 4 of the statutes of 1931 of the British parliament at Westminster, intituled the Statute of Westminster. What does the preamble of that act say?

> And whereas it is meet and proper to set out by way of preamble to this act that, inasmuch as the crown is the symbol of the free association of the members of the British commonwealth of nations, and as they are united by a common allegiance to the crown, it would be in accord with the established constitutional position of all the members of the commonwealth in relation to one another that any alteration in the law touching the succession to the throne or the royal style and titles shall hereafter require the assent as well of the parliaments of all the dominions as of the parliament of the United Kingdom.

Does any hon. gentleman in this house whether he belongs to the social credit party, the Conservative party or the party led by the hon. member for Winnipeg North Centre, think for a single moment that England did not extend to the full to Canada and her parliament the greatest autonomy ever given, in connection not only with matters that go to the foot of the throne, but with matters that go to the very throne itself? This cannot be altered unless the dominions which make up the commonwealth of nations are consulted and agree thereto.

The leader of the social credit party is smiling. I am glad to see him smile. This afternoon he made reference to a certain gentleman who has gone to a bourne, not below the ground but across the seas. He is one of those travellers who will never return, Mr. Douglas who was the chief adviser of the Hon. Mr. Aberhart. I suggest to my hon. friends that when they return to their native soil in Alberta they induce some of their friends in the provincial legislature to introduce a bill entitled an act to change the name of the premier from Aberhart to Have-a-heart. Hon. gentlemen of the social credit party undertake to tell this government that they are overstepping the mark; that they are overreaching and doing things not within the constitutional right of this parliament to do, but I think they should put forth their efforts to see to it that Have-a-heart has a heart for his people and gives them that $25 a month which he promised them instead of coming to Ottawa to seek it from the government of the present Prime Minister. They are ready to criticize that right hon. gentleman because he desires to guarantee the bonds of the provinces of Canada in order that the credit of Canada may stand higher.

Mr. FAIR: The bondholders are taken care of, but the poor of the provinces are to be allowed to starve. What about them?

Mr. FINN: If my hon. friend means to tell me, or to tell the Prime Minister, or to tell any minister of the crown, or to tell any hon. gentleman who sits on this side of the house, that we stand for any legislation to help the rich and starve the poor, then he is

speaking out of turn. That is not written in the book; it is written only in his imagination. When he wakes up in the morning it will not be there. I do hope hon. gentlemen opposite will have a heart.

We come now to the resolution as presented to this house by the hon. Minister of Justice (Mr. Lapointe). It has to do with certain amendments to the British North America Act. It confers upon the provinces a new power of indirect taxation of a certain kind. No one disputes their right to impose direct taxation. Section 92 refers to works of a local character and surely we should not start to split hairs in connection with this resolution and what it stands for. May I recall the fact—and I do it kindly—that hon. gentlemen opposite, not of the Social Credit party, not of the Reconstruction party, not of the Labour party, but of the Conservative party, have stretched the constitution and its provisions to the breaking point. It did not break because they knew the right hon. Prime Minister was going to come into power. I believe it was through providence that they held—although by a great effort—to our constitution because they stretched it to the utmost under the peace, order and good government provision. They did every thing but murder the people of this country. They issued their blank cheques and carried on by order in council. Parliament was told: Take it or leave it; I am a dictator. I was surprised to hear my right hon. friend stand up in this house the other day and admit that he was a dictator. He said bluntly, plainly, openly and sophisticatedly—

Mr. BENNETT: I shall have to ask the hon. gentleman to withdraw that. No such statement was made; it was quite the opposite.

Mr. FINN: If I recall the words of my right hon. friend correctly, he said: Dictator as I was, I was unable to get hon. gentlemen who sat with me—

Mr. BENNETT: I shall have to ask the hon. gentleman to withdraw.

Some hon. MEMBERS: Hear, hear.

Mr. FINN: They say: "Laugh and the world laughs with you; weep and you weep alone." They do that in the quiet of their chambers. I believe that statement is correct although the right hon. leader of the opposition may say at this moment that he did not say what he did say and what I heard him say. His words were to this effect: Dictator as I was, I was unable to place upon the statute books the legislation I desired based upon the Sir Alexander Gibb report because my followers would not follow me. He blamed the former Minister of Marine, Mr. Duranleau. What did he do with him before he went out of office? He placed him on the superior court bench of the province of Quebec because of his disobedience to his leader and his dictator. These are great days. These are the days of happy recollections and pleasant memories.

Hon. gentlemen opposite, members of all the parties who represent a public opinion different from that of the people of Canada, different from the opinion represented by the right hon. the Prime Minister and by those hon. gentlemen who sit immediately behind and around him, have expressed their opinions. We support our leader because he is always right. Make no mistake about it; he has never made a mistake. There is an old adage, that by our mistakes we learn; therefore the right hon. leader of the opposition and his party still have a chance.

To return to the statute of Westminster. There is not on the statute books of England to-day a law save one which can stand if it conflicts with an act of the parliament of Canada. Is that doing something behind the curtain? Is that being dictated to by the head of the Bank of England? No wonder somebody coughs! But not only that. So far as the provinces are concerned, any imperial statute which conflicts with any provincial law—and that includes the Colonial Laws Validity Act—must go by the board, for all the legislatures stand supreme. The only act that is excepted, the only act that has absolute independence of Canadian parliamentary rights is the British North America Act. Subsection 1 of section 7 of the statute of Westminster of 1931 provides:

1. Nothing in this act shall be deemed to apply to the repeal, amendment or alteration of the British North America Acts, 1867 to 1930, or any order, rule or regulation made thereunder.

It further provides:

2. The provisions of section 2 of this act shall extend to laws made by any of the provinces of Canada and to the powers of the legislatures of such provinces.

3. The powers confered by this act upon the parliament of Canada or upon the legislatures of the provinces shall be restricted to the enactment of laws in relation to matters within the competence of the parliament of Canada or of any of the legislatures of the provinces respectively.

Therefore the hon. member for Broadview has his remedy. Therein lies the remedy for every person of whom the ex-Secretary of State (Mr. Cahan) spoke this afternoon with

respect to the carrying on of business and the various taxes that might be levied upon it by the provinces under the new authority for indirect taxation. They have their rights, as the leader of the opposition well knows, and as the ex-Secretary of State well knows, for they are both members of the legal profession, in which they stand high. If there is an attempt on the part of the legislatures to pass legislation which does not come within that section and the section that is proposed by way of amendment, there is recourse to the courts. My hon. friend from St. Lawrence-St. George this afternoon read extracts from judgments of the privy council in reference to the question whether various acts were ultra vires or intra vires, which were taken there on appeal either from the Supreme Court of Canada or directly from the supreme courts of the respective provinces.

All men are human. Every hon. gentleman in this house, the premier of every province, the governments of the provinces and the members who support them or who sit in opposition, are all apt to make mistakes, and if they do the courts are there to decide whether or not anything that has been done by a province with respect to indirect taxation comes within the purview of the rights and privileges of the provincial legislature, or within the rights and privileges of the parliament of Canada or under the new authority to be given through the imperial parliament, on petition of the parliament of Canada as set out in this resolution.

Certain new powers are being extended to the provinces in these dark days, though they are not so dark as they were; they are getting brighter every day. As Coué used to say: Every day in every way I am getting stronger and stronger. There is a lot of Couéism on this side and a lot of hooeyism on the other side, and the only thing is for hon. gentlemen opposite to have courage and faith. I say to them: Believe in the Prime Minister of Canada; believe in the great and sturdy stock from which he came; believe in his hopes and ambitions and in his fine desires, which are not selfish even to an infinitesimal degree. It is men of this calibre who will lead the country back to prosperity and have Canada take her place in the galaxy of nations that make up the great British commonwealth.

Mr. BENNETT: What about the resolution?

Mr. FINN: I would say to the right hon. gentleman that it may be a case of sour grapes with him, but I am paying a well deserved compliment to the Prime Minister of Canada. Caesar spoke once, and Mussolini spoke also; but there was a Mussolini who was not across the water, and he is not so far away that, if I had a few yardsticks, I might not be able to touch him on the shoulder.

Mr. BENNETT: What about the resolution?

Mr. FINN: When my right hon. friend asks me, "what about the resolution?" I put that very question to him: What about the resolution? Is he going to vote for it? My right hon. friend has been silent and silence gives consent. The hour is growing late; the time for voting is near at hand, and while the burning candle holds out the right hon. gentleman has still an opportunity to express his views on this subject. I shall be pleased to listen and to follow, and in so far as I can will agree with him. And that is saying a great deal. A gentleman who owns one of the great newspapers, or rather a chain of newspapers, in the United States, said that the world would be a happy place if it were not for the "ifs" and the "buts," and it seems to me—I hope this is not unparliamentary—that the "if-ers" and the "butters-in" are not on this side of the house. I will not say where they are, but I see quite a few of them around me. It is well to have a little bit of revelry, a little sunshine and pleasantry, but it is splendid to be serious, as I believe my right hon. friend the leader of the opposition desires me to be, and as I hope he will be if he speaks this evening.

As regards this power that will be conferred upon the provinces by amendment to section 92, subsection 2, "indirect taxation within the province in order to the raising of a revenue for provincial purposes," there is no provincial premier who is sane who will undertake to do things under that clause as amended, unless he feels sure that the people of the province are behind him, and has consulted his legislature before he undertakes to do it, and he cannot do it without legislation. And if the legislatures, composed of members sent there for that purpose, pass upon the amendment and the purpose to which it is proposed to apply it, can any person complain of that course? Is there anything wrong about that? Is there any sinister motive in the resolution as brought down in this house by the Minister of Justice in order that there shall be free discussion on all sides of the amendment it is proposed to submit to the imperial parliament to give wider authority to the provinces? If in the judgment of this house or of any future parliament this power is used by any province to an extent that was not intended, it is competent for the people of Canada to

ask that the British North America Act be again amended to provide for such a situation. My right hon. friend smiles. I know he was going to say, if he could interrupt me, that once the power is conferred upon a province it comes within section 92, and the parliament has lost control over the power. That is true. But the people have the right to speak, and if they do, any government they put into office will ask for an amendment with reference to this or any other amendment.

This is not the first amendment to the British North America Act to go to the imperial parliament. I heard the leader of the opposition recite some of them a few days ago, and I say to-day—and in so doing I compliment him—that the statute of Westminster was breathed forth first by Sir Wilfrid Laurier and then by his eminent successor the present Prime Minister, but it happened to be passed when the leader of the opposition was Prime Minister; not one section or subsection of that statute would have been placed upon the statute books of the imperial parliament if the leader of the opposition, when Prime Minister, had not said to the British government that Canada wanted it passed; and because of that it was passed. So, when hon. gentlemen of the social credit party say that there is a dark lantern brigade or something of the sort looming above the horizon, I reply that if there is, then let them look to the right of themselves; let the right look to the left of themselves, and we will look after ourselves.

That is all I desire to say, and I would not have injected myself into this debate but that I did not wish to allow a wrong impression to go abroad in the country at this time, when governments are at their wits' end to know what to do and how to do best those things that are necessary to keep the wolf from the door and provide for the poor people who to-day and during the past few years have been unable to find employment in the industries or the vocations with which they have been associated all their lives. This government has undertaken to grapple with that great problem, and in the midst of its endeavour is seeking, not to control the credit of Canada or the parliament of Canada, nor to evolve new banking institutions which would be superior to parliament, but to have placed upon the statute books at this session legislation that will permit them, in a democratic open way, to do their duty and live up to the promises made by the Prime Minister when in opposition and on the platform from Halifax to Vancouver. I believe that before this session closes every promise he made will be fulfilled, except that perhaps time will not permit one or two of them to be carried out at this time. But at the very earliest opportunity—I speak without authority or knowledge, but with confidence—the Prime Minister will implement every promise he has made, promises which to him are as sacred as his beautiful memories of those whom he loved and who have gone before. My last word is to ask hon. gentlemen opposite to help him in his awful task of trying to revive this great young Canada of ours, and not to cling to that retardism which happened during the days of the leader of the opposition, and for all of which he was not to blame, because there were conditions over which he had no control. For those he could control he was taken to task, and for those he suffered; and now I sit down.

Mr. DAVID SPENCE (Parkdale): The hon. gentleman from Halifax (Mr. Finn) who has taken his seat always entertains the house. We are all delighted to hear him, but I really cannot follow what he has been saying, so he will excuse me if I pay no attention whatever to it.

Mr. FINN: That is a sort of left-handed compliment. Perhaps my hon. friend may be deaf. If he heard all right I should like him to answer.

Mr. SPENCE: Yes, I heard all right; thank you. He seems to have great faith in the right hon. Prime Minister (Mr. Mackenzie King). I hope he retains his belief.

Mr. FINN: I have implicit faith in him.

Mr. SPENCE: I did not know that this proposal was of so much importance to the business world when I heard the Minister of Justice (Mr. Lapointe) introduce it this afternoon. I thought it was rather an argument to be taken up by my hon. and learned friend, and I was called from the house and forgot to come back. But when I returned I heard my hon. friend from Broadview (Mr. Church) making a splendid argument on behalf of the municipalities and the business world, both the wholesale and retail trades. He represents a riding in which there is more retail and wholesale trade than in any other riding in the city of Toronto, or even in Montreal, and he should know something of what he is talking about. He is to be commended for the argument he advanced. Men like myself, who are engaged in business, do not like to be continually under the necessity of rising to argue against legislation which is intended to hurt or has the effect of hurting the business world.

Business has been crucified for the last good many years. Everyone has the wrong con-

ception of it; everyone—and this is true of legislators in particular—thinks the business world is always making money and can stand anything. To-day it is becoming a gold-digging proposition with all governments to get money out of the business world in every possible way, whether or not it is making money. I hope this resolution will never pass this house, and if it does I hope it will not pass the senate. If the senate does not throw it out I hope it will be thrown out by the House of Commons in England, which I think will be the case. No provincial government should be given any such power as this.

Mr. MERCIER: You will have a tremendous amount of work.

Mr. SPENCE: I did not understand the question. If the hon. gentleman wishes to ask me something let him speak up, and if it is a sensible question I will answer it if I can. Do not be mumbling across the floor.

This means a great deal, and I wish to direct the attention of the house to some of the things that will result. Under this resolution we are to have indirect taxation within the province in regard to retail stores. Why should such power be given to a provincial government, say to our own provincial government in Ontario, that has set out to dig out of the public every dollar it possibly can get, and I believe the same applies to every other province? That seems to be the intention. Every bit of legislation that has been introduced in both provincial and federal parliaments for the last few years has tended to create more monopolies. This legislation is going to do the same thing; it will drive business into fewer hands. Thousands of independent retailers, along with thousands in the wholesale trade have been driven out of business, all due to interference by governments and legislatures similar to this. A few years ago the number of months you could stay in business depended upon how many thousand dollars you had, so hon. members can figure out how many more will fail and go out of business if this resolution goes through. It will take only another year or two to finish the whole lot.

Let me refer to Canadian Industries Limited as one example of a monopoly, and let me remind the house that legislation of this kind tends to create monopolies. The great terminal warehouse on the waterfront of Toronto was promoted by Sir John Willison and Sir William Hearst, two men of good repute, and many innocent men and women who had money with which to buy bonds invested it in that company. They constructed a building costing $7,000,000, thinking it would make money. This was another case of people who did not know anything about what they were doing promoting a proposition and deceiving the innocent public into putting money into it. They lost barrels of money; that concern has lost from $200,000 to $300,000 a year ever since the building was constructed, and now it has been sold to the Du Pont people in New York, who control Canadian Industries Limited. I have warned this house time and again that before long the United States will own this country through systems of that kind. No wonder the people of Toronto are discouraged to-day when, after investing their money in this concern, the Du Pont people of the United States were allowed to come in and acquire that building, which cost $7,000,000, for $2,400,000. Just imagine that!

Mr. FINN: Why did the hon. member not buy it?

Mr. SPENCE: How could I buy it? I had nothing to buy it with. I might have had the down payment a few years ago, but I would not have enough now, due to too much interference, I will not say by whom.

Some hon. MEMBERS: Hear, hear.

Mr. SPENCE: May I tell you this, Mr. Speaker? Ever since I have been in this house the Liberal party, which is in power to-day, has interfered with business. They tinkered with tariffs; they put this industry and that, this man and that, out of business, and to-day we do not know where we are. They were the first to start interfering with business, when they came into power in 1921.

This resolution will also give the provinces the right to impose a turnover tax, as I understand it. Just what would a turnover tax mean? Does anyone know anything about it? Take the business I am in; supposing I turn over $10,000 worth of grapefruit, oranges, celery, lettuce and commodities of that kind, which would not be too much for me to turn over. Supposing I lose $1,000 on the deal. Will they come along with a turnover tax of one per cent, say, and take another $100 away from me? How would hon. members like a turnover tax of that kind? No man should make laws unless he knows something about what will be the result, or gets advice from someone who does know. Did Sir John Willison and Sir William Hearst ask one man who had practical knowledge for any information when they promoted that great warehouse on the waterfront of Toronto? If they had done so, that warehouse would never have been built, but they did not ask anyone. They did not know anything about what they were doing,

and it is the same with this government half the time; they do not know what they are doing. I think they are acting innocently; I do not believe they are doing this purposely, intending to hurt anyone. I have every confidence in the Minister of Justice; I think he intends to be fair, but he is like many others—

An hon. MEMBER: Did he not ask the hon. member?

Mr. SPENCE: I did not expect him to ask me. Then there is the sales tax. We now have a federal sales tax of eight per cent, and heaven knows, if we have another three per cent or four per cent added by the Hepburn government in Ontario, we shall have nothing left. They already have a gasoline tax of six cents per gallon, and I suppose they will now increase that to ten cents. There is the amusement tax which should be going to the municipality which enforces the by-laws, but that tax is all going to the province. They are getting all the money from the amusement tax, and I assume they will be allowed to increase that tax as much as they wish without any interference on the part of this government, because they are its personal friends. Then there is this tax on the patronage of hotels. That is imposed in some countries already, and I have no doubt the gold-diggers in Ontario, as well as in the other provinces, will lose no time in imposing it in Canada.

Seriously, I do hope the minister will reconsider this resolution, and will withdraw the proposition entirely. As far as I am concerned I will do anything possible to defeat it, either here, in the senate, in the old country, or in any other place.

Some hon. MEMBERS: Oh, oh.

Mr. SPENCE: My hon. friends need not display so much ignorance by laughing. Probably I have just as much influence some other place as they have, and if I cannot exert it myself I will get someone else to do so. I have that much influence, anyway. I sincerely hope the legislation will not go through, having in mind where the taxes come from to-day. These taxes are always designed to take money from the man in business, and he cannot pay any more than he is paying to-day. Already he is paying more than he can afford. This will be the last straw that will break the camel's back; it is going too far. I do not wish to take up any more time—

Some hon. MEMBERS: Go ahead.

Mr. SPENCE: I like to say what I have to say in a few minutes, and I do not want to take up any more of the time of the house, though I cannot be accused of taking it up to any great extent.

Right Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, I regard this matter as one of some importance. It is a much more important resolution than possibly some of our hon. friends realize. It is the foundation upon which the imperial parliament is expected to pass a statute, for after the statute of Westminster the understanding is that the imperial parliament will give effect to any request made in proper form by the parliament of Canada as to the amendment of our constitution.

I should like to point out that what we are in terms doing is seeking an amendment of an imperial statute. It is the British North America Act, and at the same time it is the constitution of this country. That statute was enacted by the parliament at Westminster, and that parliament only has power to amend it. The proposed amendment to the constitution is dealing with a matter which, as I shall try to point out, is of very great importance. When I recall the plea made by the Minister of Labour (Mr. Rogers) on more than one occasion as to the manner in which amendments to the constitution should be approached I wonder that this resolution is in the form in which it is.

Possibly in view of the fact that so many hon. members are not members of the legal profession it might be well to point out just a few observations made in the privy council as to the nature of our constitution. I do not propose to do so at length, but it may serve some useful purpose in our appreciation of the importance of the matter we are now considering. First of all I should like to indicate that this statute, the British North America Act, is all-comprehensive, so far as our legal and constitutional position may be concerned. Notwithstanding the fact that there were Quebec resolutions upon which it was based the fact remains that those resolutions are no longer pertinent or relative to consideration of the act, from the standpoint of legality, and that we must consider the terms of the statute as construed by the courts.

For instance, one of the earlier references to the act in a judgment of the privy council is in the words following:

When the British North America Act enacted that there should be a legislature for Ontario, and that its legislative assembly

should have exclusive authority to make laws for the province and for provincial purposes in relation to the matters enumerated in section 92, it conferred powers not in any sense to be exercised by delegation from or as agents of the imperial parliament, but authority as plenary and as ample within the limits prescribed by section 92 as the imperial parliament in the plentitude of its power possessed and could bestow. Within these limits of subjects and area the local legislature is supreme, and has the same authority as the imperial parliament, or the parliament of the dominion.

Later, in reference to a case from New Brunswick the court said:

The act places the constitutions of all provinces within the dominion on the same level; and what is true with respect to the legislature of Ontario has equal application to the legislature of New Brunswick.

And again:

In 1867 the desire of Canada, for a definite constitution embracing the entire dominion, was embodied in the British North America Act. Now there can be no doubt that under this organic instrument the powers distributed between the dominion on the one hand, and the provinces on the other, cover the whole area of self-government within the whole area. It would be subversive of the entire scheme and policy of the act to assume that any point of internal self-government was withheld from Canada. Numerous points have arisen, and may hereafter arise, upon those provisions of the act which draw the dividing line between what belongs to the dominion or to the province respectively.

In the interpretation of a completely self-governing constitution, founded upon a written organic instrument such as the British North America Act, if the text is explicit the text is conclusive, alike in what it directs and what it forbids. When the text is ambiguous, as, for example, when the words establishing two mutually exclusive jurisdictions are wide enough to bring a particular power within either, recourse must be had to the context and scheme of the act. Again, if the text says nothing expressly, then it is not to be presumed that the constitution withholds the power altogether. On the contrary, it is to be taken for granted that the power is bestowed in some quarters unless it be extraneous to the statute itself as, for example, a power to make laws for some part of His Majesty's dominions outside of Canada or otherwise is clearly repugnant to its sense, For whatever belongs to self-government in Canada belongs either to the dominion or to the provinces, within the limits of the British North America Act.

And again:

They adhere to the view which has always been taken by this committee that the federation act exhausts the whole range of legislative power and whatever is not thereby given to the provincial legislatures rests with the parliament.

On another occasion the courts made similar observations, notably in the decisions pronounced by Lord Haldane, who became Lord Chancellor in the early years of the twentieth century and who, until the time of his death, was largely responsible for the construction placed upon our constitutional act. Speaking of the general powers conferred upon the provinces, he said:

The provinces were to have fresh and much restricted constitutions, their governments being entirely remodelled. This plan was carried out by the imperial statute of 1867. By the 91st section a general power was given to the new parliament of Canada to make laws for the peace, order and good government of Canada without restriction to specific subjects, and excepting only the subjects specifically and exclusively assigned to the provincial legislatures by section 92. There followed an enumeration of subjects which were to be dealt with by the dominion parliament, but this enumeration was not to restrict the generality of the power conferred on it. The act, therefore, departs widely from the true federal model adopted in the constitution of the United States, the tenth amendment to which declares that the powers not delegated to the United States by the constitution, nor prohibited by it to the states, are reserved to the states respectively or to their people. Of the Canadian constitution the true view appears, therefore to be that, although it was founded on the Quebec resolutions and so must be accepted as a treaty of union among the then provinces, yet when once enacted by the imperial parliament it constituted a fresh departure, and established new dominion and provincial governments with defined powers and duties both derived from the act of the imperial parliament which was their legal source.

That, Mr. Speaker, I conceive to be an important statement, having regard to what I shall presently indicate. I have quoted these statements as a foundation for indicating that the powers of the provinces and of the dominion were defined by our constitutional act. In view of the fact that when they dealt with financial problems they did so in the manner indicated by sections 91 and 92 of the act, I think it might be well to read subsection 3 of section 91. It will be recalled that section 91 defines the powers of the federal parliament, and the powers with respect to taxation are indicated under the third heading, which states that the parliament of Canada shall have exclusive jurisdiction over "the raising of money by any mode or system of taxation." That makes it clear that this parliament may and, in fact, has exercised the power of raising revenue both by direct and indirect taxation. With respect to direct taxation the reference given this afternoon, namely the income tax of 1917, affords a clear illustration. With respect to indirect taxation it is only necessary to refer to customs and excise.

But with respect to the power of the provinces to raise revenues we must turn to section 92 which provides that each provincial legislature:

... may exclusively make laws in relation to matters coming within the classes of subjects next hereinafter enumerated, that is to say,—

2. Direct taxation within the province in order to the raising of a revenue for provincial purposes.

It will thus be apparent that when this act was enacted by the parliament at Westminster there was a clear-cut division as to the methods to be pursued by the new dominion on the one hand and the provinces on the other for the purpose of raising their revenues. While the widest power was conferred upon this parliament to raise revenues by any scheme or plan, direct or indirect, the limitation imposed upon the right of provincial legislatures to raise money by direct taxation within the provinces only was one that was thought to be in the interests of the general scheme of confederation as a whole. In that regard it is important to bear in mind an observation made in a case to which reference was made this afternoon by my hon. friend from St. Lawrence-St. George (Mr. Cahan). I need not refer to the fact that in the very earliest days the problem of dividing direct from indirect taxation became important. We had a case from Quebec with respect to stamps to be placed upon policies of insurance, a case from Quebec with respect to stamps to be placed upon exhibits in the courts, cases with respect to taxing the banks upon their paid-up capital, and cases with respect to succession duties and matters of that kind, and it became necessary from time to time for the court of last resort to define what was meant by direct taxation. But in the earliest cases it was pointed out that it was no longer possible to define direct and indirect taxation with that finality of definition which may be attributable to works on political economy, but rather that these terms must be construed in the light of ordinary understanding. So, when a case, known as the Fairbanks case, came up from Halifax, in connection with the imposition of a business tax, it became necessary to restate the position, and that was done by the Lord Chancellor of the day, Lord Cave, in the following words, dealing with the question of the distinction between direct and indirect taxation:

The framers of that act—

The British North America Act.

—evidently regarded taxes as divisible into two separate and distinct categories, namely, those that are direct and those which cannot be so described, and it is to taxation of the former character only that the powers of a provincial government are made to extend. From this it is to be inferred that the distinction between direct and indirect taxes was well known before the passing of the act; and it is undoubtedly the fact that before that date the classification was familiar to statesmen as well as to economists, and that certain taxes were then universally recognized as falling within one or the other category. Thus, taxes on property or income were everywhere treated as direct taxes.... On the other hand, duties of customs and excise were regarded by everyone as typical instances of indirect taxation. When therefore the Act of Union allocated the power of direct taxation for provincial purposes to the province, it must surely have intended that the taxation, for those purposes, of property and income should belong exclusively to the provincial legislatures, and that without regard to any theory as to the ultimate incidence of such taxation. To hold otherwise would be to suppose that the framers of the act intended to impose on the provincial legislature the task of speculating as to the probable ultimate incidence of each particular tax which it might desire to impose, at the risk of having such tax held invalid if the conclusion reached should afterwards be held to be wrong.

What then is the effect to be given to Mill's formula above quoted?

References were made to the definition of John Stuart Mill, and when that definition was accepted by the privy council, references at that time and later were made to the opinions of Mill, Ricardo, Adam Smith and others. But counsel representing the appellants in the case came to the conclusion that Mill's definition of direct and indirect taxation was better suited for his argumentative purposes, and the court at least adopted that view in the judgment which was delivered, and these are the words repeated again in 1933 by the court in respect to the Fairbanks case from Halifax. In dealing with that definition, or, as he called it, formula, His Lordship said:

No doubt it is valuable as providing a logical basis for the distinction already established between direct and indirect taxes, and perhaps also as a guide for determining as to any new or unfamiliar tax which may be imposed in which of the two categories it is to be placed; but it cannot have the effect of disturbing the established classification of the old and well-known species of taxation, and making it necessary to apply a new test to every particular member to those species. The imposition of taxes on property and income, of death duties and of municipal and local rates is, according to the common understanding of the term, direct taxation, just as the exaction of the customs or excise duty on commodities or of a percentage duty on services would ordinarily be regarded as indirect taxation; and although new forms of taxation may from time to time be added to one category or the other in accordance with Mill's formula, it

would be wrong to use that formula as a ground for transferring a tax universally recognized as belonging to one class to a different class of taxation.

That is the judgment of the judicial committee in 1933.

Mr. MACKENZIE (Vancouver): What is the reference?

Mr. BENNETT: 1928 Appeal Cases, pages 117, 124, 125, quoted with approval in the judgment of Lord Thankerton in Attorney General for British Columbia and Kingcome Navigation Company Limited, reported in Appeal Cases, 1934, to which reference was made this afternoon. That exhausts all I desire to say with respect to the foundation of my observations.

Now I ask this question, Mr. Speaker: Having regard to the complex character of the financial relations between the dominion and the provinces; having regard to the acute distinction that was made by the framers of the constitution as to the powers to be exercised by the legislatures on the one hand and by parliament on the other, and having regard to the fact that only direct taxation was to be imposed by the provincial legislatures while any form of taxation was within the competence of this parliament, is it right or meet that this amendment should be made in the form in which we are now proceeding?

In the United States, if they were endeavouring to make this amendment to their constitution—and of course the powers of the states and of the federal authority are entirely different from what they are in Canada—the matter would first of all have to be dealt with by congress and then by each of the states until the adequate majority provided by the constitution was available. If in Australia they desired to deal with the matters that are being dealt with in this resolution they would have to proceed to amend their constitution in accordance with the provisions of their constitutional act, and seek the opinion of the people themselves with respect to both the amendment of the federal power and the amendment of the powers exercised by the states. That was done, as a matter of fact, in consequence of a condition which arose in Australia when in conference between the heads of states and the federal power it became clear that it was desirable to bring about very much the same condition as is being brought about by the resolution now before this house. But I shall point out presently, and I think show conclusively, that there is no necessity at all for this amendment with respect to the exercise of some of the powers which we are endeavouring to exercise. If we were seeking to make this amendment in South Africa, we would again, if the constitution were to be altered, have recourse to the various safeguards provided for that purpose.

An ordinary amendment to our constitution is not a matter of tremendous importance. An act to validate certain acts that were done when a province was created, as was Manitoba, an act such as that for which we sought authority in this house before 1930—all these are simple matters, but when you come to change the essential foundation of our whole financial system I submit that it should not be lightly done. It should not be done without there being at least some evidence of which one can say: Here is the evidence of the provinces having acted, or here is the evidence of the province requiring it, in the form of a resolution passed by the legislature of the province seeking the exercise of the powers sought in this resolution.

I will admit that that is not a tremendously important objection, but it is important when we come to deal with the fundamentals of the amending of a constitution in a matter of such transcendent importance as the financial power entrusted by the constitution to the legislatures, on the one hand, and to parliament, on the other. In this instance, if I seek to-day to ascertain whether or not the provinces have agreed, I can look in Hansard and all I can find is that some premier sent a telegram or some evidence of a meeting between gentlemen representing the federal government and gentlemen representing one of the provincial governments. Surely that is not the method which should be provided when one comes to deal with a matter so important as the altering by amendment of the whole financial system under which this federation came into being. That is my first submission with respect to this matter; that is the reason why I took the trouble to read these extracts in order that it might be apparent to even the lay members of the house that this distribution of power was not lightly made; that it represented the views as to how best the financial structure of the provinces could be maintained and within what limits they should exercise their taxing power, while on the other hand according to the federal parliament the power to tax by every means within the authority of a taxing power, namely, by either direct or indirect taxation.

Proceeding in the light of these observations, I desire now to direct attention to the first proposed amendment. This is an amendment to our constitution which will confer

upon the provincial legislatures a power not heretofore enjoyed. I shall not go over the argument so ably made this afternoon by my colleague, the hon. member for St. Lawrence-St. George. I shall content myself in a single sentence to point out that in the exercise of this power there is an effort to exercise jurisdiction which, under the constitution, belongs to the federal power. For many years the privy council has declared certain legislation beyond the competence of the legislatures or, as we lawyers say, ultra vires, and the law fell by the wayside. An instance in which Alberta sought to impose a tax in connection with coal mining was held to be bad, just as was the first fuel oil tax which British Columbia sought to impose. Other taxes in other provinces were held to be bad, because there was an effort on the part of the provincial legislatures to tax by indirect means when they had no authority or power so to do. Finally the second fuel oil tax of British Columbia came before the judicial committee for consideration in 1933. At that time it was pointed out that it was quite clear from the terms of the statute that it proposed to make the consumer of the fuel oil liable for the tax and it thereby became a direct tax, as distinguished from an indirect tax.

All taxes are paid by somebody and whether it be the last person or the first is not at the moment a matter of importance. For many years this distinction between direct and indirect taxation was the subject of much litigation, and this continued until the judicial committee decided in the fuel oil case that this power could be validly exercised in the manner and form provided by that statute. For that reason I point out that there is no necessity for this statute inasmuch as the principle established by that case gives the province every power it should have. In view of our exercising the powers we do, to confer upon the provinces the wider power of indirect taxation cannot but have reference to some form of taxation that one finds it difficult to conceive of in view of the judgment of the committee in that case.

A sales tax in Alberta is valid to-day, just as is the sales tax in New Jersey or New York city. If you buy a dollar's worth of goods, you have to provide two coppers or two cents as the tax imposed upon the consumer. Under the provisions of the sales tax in Alberta, a purchaser pays two cents, and so on as his purchases increase. That is a tax paid by the consumer. What indirect power to be vested in the legislature can one conceive of that could be validly exercised except for the purpose of, as I shall presently point out, crippling the power exercised by the dominion?

Let us go a step further. I trust the house followed me when I pointed out that section 92 of the British North America Act, to which this is to be an amendment, provides the matters in relation to which the provincial legislatures may exclusively make laws. When this new section becomes effective we shall have taken from this parliament the power of indirect taxation to the extent that we have conferred it upon the provinces.

Mr. LAPOINTE (Quebec East): Oh, no.

Mr. BENNETT: Just let us make it clear.

Mr. LAPOINTE (Quebec East): Section 92 does not take away the powers of section 91.

Mr. BENNETT: We have now taken the power away. We have conferred upon the provinces a right of indirect taxation which we ourselves were exercising and of which we have divested ourselves for the purpose of enabling them to exercise it.

Mr. LAPOINTE (Quebec East): I think that is going too far.

Mr. BENNETT: These are the words:

> In each province the legislature may exclusively make laws in relation to matters coming within the classes of subjects next hereinafter enumerated; that is to say,—
> Retail sales ...

If that exclusive power is conferred, that power cannot be exercised by the dominion. That power rests either with the dominion or with the provinces. If it can be exclusively exercised by the provinces—I will read it in a moment if it is so desired—it cannot be exercised by the dominion. There was before the privy council a very important case in which judgment was given by Lord Watson. This was to ascertain whether the subject matter of legislation was within the competence of the province. If it is within the competence of the province, it is exclusive and the federal power cannot be exercised. We had the power to impose both direct and indirect taxation, but after we have changed section 92 with respect to retail sales, the provinces will have exclusive jurisdiction, the federal power having divested itself of that authority. I do not think my friend the Minister of Justice followed me. I was not saying that it was broad enough to cover everything. I stated that it covered only retail sales. Under this resolution the power to tax retail sales becomes exclusively the power of the provincial legislatures.

Mr. ILSLEY: What about two income taxes, one for the province of Ontario and one for the Dominion of Canada?

Mr. BENNETT: That is perfectly simple.

Mr. ILSLEY: Both are valid.

Mr. BENNETT: Both are direct taxes. If we passed a law to exclude the exercise of that power with respect to incomes, if we changed the statute as it is being changed here, then we would no longer have authority. Will the hon. gentleman take the trouble to look at the resolution, which reads:

Section ninety-two of the British North America Act, 1867, is amended by adding thereto as clause 2A the following:—

2A. Indirect taxation within the province in respect of:

(i) retail sales,—

Mr. ILSLEY: If my right hon. friend will permit me, he is leaving out the concluding words, "in order to the raising of a revenue for provincial purposes." That does not exclude the dominion from imposing indirect taxes on retail sales in order to the raising of a revenue for dominion purposes.

Mr. BENNETT: That was the very point made by the hon. member for St. Lawrence-St. George. There is no doubt about it that the federal power could do it by any form of taxation whereas the provincial power could do it only by direct taxation. Under this amendment we say that the exclusive power to impose taxation with respect to retail sales for the purpose of raising revenue within the province rests with the provincial legislature.

Mr. ILSLEY: If my right hon. friend will permit me, he has left out a very important consideration in the words at the end of section 91.

Mr. BENNETT: Not in the slightest. The power to tax under section 91 is for the dominion for any purpose; but if the dominion sees fit, by its own act and at its own request, to grant to the province the exclusive power of indirect taxation for retail sales, then you change the constitution so as to deprive yourself of the right which you formerly enjoyed in that regard.

Mr. ILSLEY: Not in view of the words at the end of section 91.

Mr. BENNETT: I am familiar with the words at the end of section 91. We part with them and leave the statute with that much taken from it which was previously there. Section 91 has not been changed, but we by our own act have taken out of section 91 indirect taxation with respect to retail sales within the province.

[Mr. Bennett.]

To continue the argument—and I say this only in passing—what indirect taxation on retail sales is there that is not covered by direct taxation, as finally settled by the privy council? There can be only such as were mentioned this afternoon, taxes that will, if imposed by the province in the manner and form indicated, constitute with the dominion tax a complete turnover tax. But what will be the effect, having regard to the powers thus conferred upon the provinces?—because they are sovereign within their legislative jurisdiction; they can make such distinctions as they like. Let us assume, however, for the sake of argument, that they desire to place one form of taxation on sales of their own goods within their province, and then they see fit to place another form of taxation on goods that come from other parts of the world. We have not the power to limit them.

Mr. DUNNING: Have we now, if they place the tax on the consumption of goods?

Mr. BENNETT: Not on the consumption of goods; but it must be a tax paid by the consumer on the goods directly, at the time he purchases them. That is the position at the moment. I mention that only in passing, because it is important having regard to what I consider—I trust the Minister of Justice will not think this offensive—the loose way in which this resolution is drawn. There would be no difficulty if it were drawn as suggested by my colleague this afternoon; that would make it clear. But as it stands now there is a difficulty.

I go on to the next point. You have the right to taxation on retail sales, with the exceptions mentioned; then you can impose indirect taxation on the patronage of hotels, restaurants and places of amusement or entertainment. Now what indirect taxation can one conceive of on a place of amusement, when at the present time in practically every province of Canada there is imposed upon places of amusement a direct tax which is paid by every patron as he enters a theatre? What indirect taxation has any provincial premier or treasurer suggested in that respect which could be exercised, unless it be an additional tax against the earnings of the amusement hall? As the hon. member for Parkdale (Mr. Spence) pointed out, that tax would be taken regardless of profits; it would be taken whether or not there was any profit at all in the transaction. That indirect tax might conceivably be collected, in view of the statutes that have been passed, at least in Manitoba and one other province, imposing a tax upon the wages received by various persons; and coupled with the tax

that might be levied on amusement halls—let us say, for the sake of argument, that the tax is ten cents on each ticket, then an indirect tax imposed upon the receipts for the day of two, or five or six or eight or ten per cent—is that desirable? I submit to the house that every possible power which a province could reasonably desire to exercise with respect to theatres, places of amusement, restaurants or the patronage of hotels, can be exercised now. For instance, when a guest in an hotel gets his bill he can be asked to pay five per cent or ten per cent in addition; in the restaurant he pays five or ten per cent in addition; or it might be a place of amusement or entertainment, as I have mentioned. But the indirect power which it is suggested should be granted to the province would enable them to impose only taxes of the kind I have indicated; and I submit, having regard to the decisions made within the last two years, it is abundantly clear that such a power should not be thus exercised.

Now, as to the first point, with respect to the clause as to exclusive power, I merely mention that in passing as being open to argument. I do not think—I agree with the Minister of Justice—that the point is the strongest one in the world, but it has to do with the mechanics of the statute, and I think any difficulty on that score might be removed by a clearer statement of the position, by repealing head 2 of section 92 and substituting for it a new head which would include direct taxation and those forms of indirect taxation that are mentioned in the resolution, with the appropriate exceptions, namely, "alcoholic beverages, spirits, malt, tobacco, cigarettes and cigars, which are subject to customs and excise duty or tax in Canada or other than of all goods and articles for delivery without the province." Having regard to the fact that the privy council has decided that the province is limited in its power of taxing within the province, what suggested to me the argument with respect to the exclusive power was the fact that the draftsman had added "without the province"; that is, he had added articles for delivery without the province. It is difficult to conceive of delivery as being the test as to whether the tax should be imposed. In France, when the luxury tax was imposed, I made a small purchase in a store and was asked whether I was going to London. I said I was and was told, "Our office will deliver the goods to you in London and you will have to pay any taxation there is." I suppose it is the same principle here; that is to say, if goods go outside the limits of one province, there is no retail sale for purposes of the tax within that province. I assume that is the purpose which is in the mind of the draftsman.

Now, all this is in order to the raising of a revenue for provincial purposes. I really find it difficult to conceive of any case except one in which taxation is to be imposed as has been suggested in one of the provinces, and the effect of this legislation will enable that tax to be imposed. It means direct confiscation. The exercise of that power practically means that. The privy council has not directly in terms decided that a province may not confiscate; in fact, in the Florence M. mining case it decided that the province could confiscate. I will not anticipate the judgment in the case before the courts, but be that as it may, as regards some of the suggestions as to how, in Alberta, a social credit dividend is to be paid, this at least will afford the opportunity. About that there can be no doubt, and I suggest that one should pause and consider whether or not to grant such power of indirect taxation, when the powers with respect to direct taxation, in the light of the decisions to which I have referred, are sufficiently broad and comprehensive for every purpose that can now reasonably be conceived. That is all I have to say in that respect.

The second branch to which I desire to direct attention is that which makes this section retroactive. I will not traverse the argument so ably made this afternoon, but I should like to add just these words. In view of the decision to which I have referred, why should we say that a power admittedly invalid, exercised by a legislature authorizing the doing of an admittedly invalid act, admittedly taking from a man by force that which you had no right to, shall receive the sanction of this parliament to the extent of asking the parliament of Westminster to make it valid? I think that is extremely serious. I have never been able to understand the suggestion. All the cases to which reference was made this afternoon are entirely different from this. They had to do with problems of constitutional doubt, arising out of questions of boundaries, extension of title, such as the Hudson Bay title and the Rupert's Land title; they had to do with the question of whether, on the true construction of the statute, there was any power in this parliament to have an oath taken at an investigation. They were all problems such as those. But, mark you, this resolution does not say, "to remove any doubt." When I first looked at it—

Mr. CAHAN: It clearly states that there is no doubt, by stating that it is now illegal.

Mr. BENNETT: I am just coming to that. It makes it clear that there is no doubt as to illegality. Is that right?

The said clause shall be deemed to have retroactive effect with respect to provincial legislation in force at the passing of this act.

Having regard to the fact that all direct taxation, within the broad definition of direct taxation given by Lord Cave, is invalid, are we doing just the right thing in asking the imperial parliament at Westminster—they having undertaken to pass statutes when we ask them by petition to do so—to pass an amendment which says that the illegal taking of money from various persons shall thereby become legal, or to pass an amendment with respect to litigation that may now be pending? I submit that nothing can be better calculated to cast a slur upon our credit than that very thing, because it indicates a willingness on our part to connive at the doing of something which we now admit is illegal. Is that right? I do not put it upon legal grounds alone. The first occasion upon which I ever appeared in the privy council was on a case just such as that. Alberta passed a statute by which it was provided that $6,000,000 lying in the bank to the credit of the Alberta and Great Waterways Railway should become part of the general revenues of that province—just like that; the provincial treasurer issued a cheque for the amount and sent the cheque to the bank, and upon my advice the bank refused to cash the cheque. Ultimately the privy council held that the statute was invalid, because it purported to take money that had been raised for one purpose and use it for another. The act cast an aspersion upon our legislature. I submit that it is very unwise at this particular moment for the Dominion of Canada solemnly, through the Senate and the House of Commons, to ask the parliament of Westminster to say that the will of the Canadian people is that that which was invalid shall become valid, although it constitutes taking by illegal and improper means from the citizens of the country that to which the governments of the provinces had no right.

That is the position which I put to the house. I think I understand as fully as anyone may the necessities of the provinces in the matter of increasing their revenues. But I also feel, and very strongly, that to suggest there is any analogy between the retroactive provisions of the statutes which we have had before, and this statute, is to have a complete misapprehension as to the conditions and terms that are involved in the expression of the judgments of the courts, on the one hand, and of the legislatures and parliament, on the other. I would urge upon the government as strongly as I can the desirability of considering this matter, not from any party motive or standpoint, but purely from the point of view of what the effect will be upon our country when it is found that we here are solemnly asking the parliament which passed the British North America Act to add to it a provision that will be retroactive, regardless of litigation, and will provide that whatever has been illegally done is now legally done, and that money extracted by illegal means shall now be regarded as having been lawfully taken.

There is another point I desire to take with respect to this matter, as showing in my judgment why it is unnecessary that this resolution should be passed. It will be recalled that the provinces have power to create municipal institutions. Once that power is granted to a province, it can, of course, be passed on to the municipalities. The effect of that I hesitate to contemplate, knowing what I do know in connection with the grant of powers by legislatures to municipalities and what the effects have been in various parts of the dominion. I should like the house to contemplate the exercise of this power by the legislature of a province conferring jurisdiction on the municipal bodies to impose indirect taxation on retail sales within that province. It may be said that that is limited by the last words, "in order to the raising of a revenue for provincial purposes." But those words have not been held in times past to be ample to prevent a delegation of powers by a province to municipalities, and in the judgments of our courts it will be recalled that provinces have delegated to municipalities the power to licence, as long as it does not amount to a prohibition. These powers, delegated by the legislative body creating the municipality, give rise in my judgment to an almost intolerable situation. I conclude this by saying that you may have three taxes of the same kind with respect to the same matter. Bear in mind that we have in this dominion a sales tax; at one time we had a business profits tax, and we have other forms of direct taxation to which reference has been made; but now the provinces are going to exercise their powers of indirect taxation. I cannot put the situation more strongly than I did a moment ago, having regard to the declared purpose of at least one government in Canada and the methods to be used for the purpose of raising revenue. You do not have to make a capital levy, although that is what it amounts to. All you do is, by this indirect method, to make a levy which may amount to

confiscation; it still is legal, for the courts have no power to consider whether the tax is or is not a good tax; they say, "the legislature determines that; we determine only whether it is within the competence of the legislature to impose the tax," and under this section that would be so. I am not going to elaborate this point. I shall leave it at that.

We now come to the second branch of this resolution which, in my judgment, is wholly unnecessary. A moment ago I read the interpretation placed upon the powers possessed by the provinces, and if there were any doubts as to the right of the province to contract in the fullest and most ample sense of that term they were removed by the judgment of the privy council in the case of the city of Montreal and the Montreal Harbour Commissioners, in which they said that even by waiver the province might lose its rights. The judgment of the court, delivered by Lord Haldane, held:

> But this by no means disposes of the case. It was undoubtedly within the power of the province of Quebec, with a view to the improvement of the harbour of Montreal, to waive her strict legal rights and expressly or by inference to sanction the works undertaken for that purpose, and it must be considered whether such a sanction is to be inferred in the present case. In their lordships' opinion it is.... Having regard to all these facts, their lordships are satisfied that the provincial authorities have waived any claim to interfere with the existing works, and that, so far as they are concerned, they are bound by what has been done.

Having regard to that I think the Minister of Justice will agree with me that the dominion has complete power to guarantee the securities of a province and that the province has complete power to make a contract with the dominion in respect to them. There is the decision as to the completeness of the power of a province. Does anyone suggest that this parliament needs further legislation from London to enable us to guarantee the securities of any province of this confederation? We have the same power that enabled us to guarantee the securities of the Canadian Northern, the Grand Trunk, the Grand Trunk Pacific, the Montreal harbour bridge, by which power for years we have been going on giving guarantees, even with respect to the Canadian National. Does anyone say that we require further legislation to enable us to guarantee the bonds of the province of Alberta? We have guaranteed bonds of the harbour commissions. No one questioned the legality of that act; the wisdom of it only was questioned. We have guaranteed the securities of all these railways and of other enterprises. Does anyone question the legality or validity of such guarantees? Then why do we require any legislation to enable us to guarantee the bonds of a province? Just look at the words of this second proposed amendment:

> The parliament of Canada may authorize the government of Canada to guarantee the payment of the principal, interest and sinking fund of any securities (hereinafter called "guaranteed securities") which any province of Canada may from time to time make or issue, and, subject to the provisions of this act may prescribe the terms and conditions upon which any guarantee so authorized shall be given, and the provisions of this act shall, in the event of any such guarantee being given, apply and have full force and effect notwithstanding anything contained in the British North America Act—

Now, sir, I ask why we should cast doubt upon the guarantees heretofore given. Why should we say that this parliament has not the power to do as it pleases with respect to guarantees?

Mr. CAHAN: No one ever questioned it before.

Mr. BENNETT: It has never been questioned before; why should it now be questioned? Why should anyone say that we require a further grant of power from Westminster to enable us to guarantee the interest, the principal or the sinking fund of any provincial issue? I confess that I was amazed when I read that, and I put it to the minister: Does anyone suggest that this parliament has not that power now? That is the reason, sir, why I took the trouble to read, as the foundation for what I am saying to-night, the references as to the powers of this parliament. Westminster can confer upon us no powers we do not now possess. As was said by the lord chancellor of that day, there are no powers having to do with self-government that can be conferred upon the parliament of Canada that it does not now possess. Then why go and ask Westminster to grant us powers which, as a matter of fact, we already possess? Why should we ask, by a petition, for something in regard to which the learned lawyers either in the Commons or the Lords will say, "Why are we doing this? They already have the power." The answer will be, "Because they have asked for it." Is that sound? I submit that it is not.

Now let us go a step further, and I am pointing out these matters only briefly. The very provisions of that section weaken the position of Canada in the money markets of the world, because it calls in question the exercise of this power during all the years we have been exercising it. Every thoughtful

man must see that if we are going to deal with this matter at all we are going to raise a question as to the validity of our previous acts, what we have done in the way of guarantees and similar matters in the past. We have asked for a specific grant of power to deal with provinces when we have exercised this power without question with respect to every other body. What will be the result? Someone is going to ask: Why has the parliament of Canada thus blown upon its own credit? Why have we thus raised a question which has never been raised before, which everyone has accepted, and which even a layman who has followed what I said in the early part of my address this evening, as to the foundation upon which this constitution of ours was granted, will realize was wholly within our competence and power? If it is to be done at all then, for the reasons given by the minister this afternoon, at least it should be made retroactive to cover every power heretofore granted. Who has thrown doubt upon it? Have the law officers suggested that there was any doubt about it? I confess that I have never heard any question about it in times past. I know that if we go through the statute books we shall find that these guarantees have been given with respect to a very large number of transactions, notably in connection with transportation, sometimes with respect to interest only and sometimes with respect to principal and interest.

Mr. DUNNING: Not with respect to provincial bonds.

Mr. BENNETT: Not with respect to provincial bonds, but they do not stand in any different position. We assumed obligations by statute, for instance, when we took over the harbour of Saint John, for the payment of the bonds of that harbour. We have taken over provincial guarantees in connection with railways, without any statutory power.

Mr. DUNNING: We are merely paying them; the provincial guarantees still exist.

Mr. BENNETT: But without any statutory provision with regard to them, thus releasing the provinces of their debts. That was so in regard to British Columbia, which unfortunately had not a guarantee in the same terms as some of the others. We are paying that; we are paying the guarantees of Alberta and Saskatchewan. Then, in connection with Manitoba, though I have not thought of looking the matter up, in regard to the railway transactions of that province, the old Northern Pacific and matters of that kind, somewhere Manitoba is involved in guarantees, and legislation was passed here the exact terms of which I do not carry in my mind at the moment, because it was very much involved. But this I do say: Let us get down to fundamentals. Why should there be any provision such as this when the law clearly provides that which it is sought to obtain?

Mr. FINN: I do not want to interrupt the right hon. gentleman—

Mr. BENNETT: I assure the hon. gentleman that he does not.

Mr. FINN: I only want to know where the right hon. gentleman gets his authority for that statement.

Mr. SPEAKER: Eleven o'clock.

On motion of Mr. Bennett the debate was adjourned.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

---

## Friday, May 15, 1936

The house met at three o'clock.

### VACANCY

Mr. SPEAKER: I have the honour to inform the house that I have received a communication from two members notifying me that the following vacancy has occurred in the representation, viz.: of D'Arcy Britton Plunkett, Esquire, member for the electoral district of Victoria, B.C., by decease.

I accordingly issued my warrant to the chief electoral officer to make out a new writ of election for the said electoral district.

### BUSINESS OF THE HOUSE

#### ASCENSION DAY AND VICTORIA DAY ADJOURNMENTS

On the order for motions:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I have given notice of a motion for Monday with reference to adjournment of the house over Ascension day and the Monday following, Victoria day. It might be well for me to say a word at this moment as to the view of the government in the matter. We are anxious to suit the convenience and further the wishes of hon. members. The motion is to the effect that the house adjourn over Ascension day and also over the Monday following, Victoria day, but if it should appear after consultation between the whips that it is the wish of hon. members that the house should sit on either of those days, or on both, so far as the government is

concerned we shall be glad to be governed accordingly. I have been speaking to the assistant government whip and he informs me, after some consultation with members of the house on all sides that it would appear as though the general wish were to adjourn over each of these days, but if the general desire should be to the contrary the government will be glad in the interim between now and Monday to consider any other view.

Right Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, I think the opportunity afforded by allowing the motion to stand until Monday will enable us to ascertain what action is most convenient having regard to all the circumstances, and I shall communicate with the right hon. gentleman accordingly.

## PENITENTIARIES COMMISSION

On the orders of the day:

Miss AGNES C. MACPHAIL (Grey-Bruce): Mr. Speaker, may I ask the Minister of Justice (Mr. Lapointe) when he expects to be able to name the commissioner on the royal commission for the investigation of penitentiaries to fill the vacancy caused by the deeply regretted death of Harry W. Anderson?

Hon. ERNEST LAPOINTE (Minister of Justice): Mr. Speaker, the new appointment will be made at as early a day as possible, and that means pretty soon.

## BRITISH NORTH AMERICA ACT

### PROPOSED AMENDMENT RELATING TO TAXATION AND GUARANTEE OF PROVINCIAL DEBTS

The house resumed from Thursday, May 14, consideration of the motion of the Minister of Justice (Mr. Lapointe) for an address to His Majesty the King praying that a measure be submitted to the parliament of Great Britain and Ireland to amend the British North America Act with respect to taxation and guarantee of provincial debts.

Right Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, when we rose yesterday I was pointing out to the house that there was no necessity for having any legislation passed by the imperial parliament with respect to the second branch of this resolution. I need hardly point out that section 2 of the resolution contemplates the parliament of Canada passing an act to guarantee the payment of principal and interest and sinking fund of securities of the various provinces which may desire to have this action taken after arrangement with the federal power.

Yesterday it was suggested that we had never guaranteed the securities of provinces. On the contrary, under the provisions of the Relief Act enacted by this parliament, the government in the exercise of the power thus conferred upon it has given guarantees with respect to provincial obligations, the legality of which has never been questioned, nor has it ever been called in question by anybody representing the banks or others. I do not think I need do more than point out that when this parliament has enacted legislation empowering the executive to guarantee the securities of the province, that action has always been taken without question as to either its legality or its validity. Therefore the first paragraph of the second part of the resolution is wholly unnecessary and not at all required for our purposes. I could go into the matter in greater detail but I do not think it is necessary as it is so axiomatic. I do not think any counsel would for one moment suggest that this parliament has not the power to give any guarantee that in its wisdom it may deem it desirable to give.

The next paragraph reads:

> The legislature of any province of Canada may, with reference to the principal, interest and sinking fund of securities which the province may from time to time make or issue, authorize the government of the said province to enter into an arrangement with the government of Canada whereby the government of Canada shall guarantee the payment of the principal, interest and sinking fund of such securities.

That requires no legislation. That power now exists and is as complete and amply possessed by every province of this confederation as was possible for the imperial parliament in the plenitude of its powers to confer. Therefore that section is wholly unnecessary.

We come now to the fourth paragraph, which reads:

> (1) For the purpose of securing Canada against loss resulting from the giving of a guarantee under the authority of this act, the government of Canada, whenever in its opinion any default has occurred in respect of any payment on account of principal, interest or sinking fund of the guaranteed securities, may:
>
> (a) withhold any payment to the province on account of any grant payable by the government of Canada to the province for its local purposes or for the support of its government and legislature or on account of interest in respect of its public debt or in lieu of public lands or on any other account whatsoever;
>
> (b) effect payment in whole or in part of any such grant by payment direct to a creditor of the province of any amount owing to such creditor on account of the guaranteed securities. In this and the next succeeding paragraph "creditor" shall include a trustee of a sinking fund;

(c) out of any revenue received or collected by the government of Canada or any department or officer thereof for or on behalf of the province, make payment direct to a creditor of the province of any amount owing to such creditor on account of the guaranteed securities.

I need hardly point out that we have done that quite frequently. We paid the obligations of the Montreal harbour board direct to the holders of the coupons under an arrangement with the commissioners. We have paid and are continuing to pay sums in respect of the guarantees given by the provinces of Alberta, Saskatchewan, British Columbia and Manitoba to the railways. We are to-day meeting the guarantees given by the province of Nova Scotia to the Halifax and Southwestern Railway, which if paid by the province would result in its practical bankruptcy. We have paid all these sums. Therefore, so far as this matter is concerned, it requires no legislation on the part of the imperial parliament to authorize us to do so.

Let us proceed. The next and only question is whether or not this paragraph is competent for us to withhold from a province the payment of moneys which under various statutes it is entitled to receive, in the event of its making default in the payment of its guarantee or its obligation under an agreement made between the dominion and the province. In my judgment there is no doubt as to that power. I desire only to point out, first, that when the dominion has undertaken to guarantee the securities of a province, in pursuance of competent legislation, the province then enacts such legislation as it may think necessary for the purpose of enabling an agreement to be arrived at between the dominion and the province.

Last evening I read certain extracts to this house—I regret having had to take up so much time in doing so—to show that the province was an entity clothed with all the powers that the imperial parliament in the plenitude of its powers could confer upon it. It is the right of a province to borrow; it is one of the incidents of its being thus created. True, the power to borrow is set out in terms in the statute; but it is one of the implied powers that arises by reason of the creation of the entity called a province. Therefore, inasmuch as the power to borrow is incidental to these powers—it was pointed out in the harbour commissioners case—

Mr. DUNNING: It is expressed as a power in the British North America Act.

[Mr. Bennett.]

Mr. BENNETT: Surely, but I say it is part of the incidental power that arises in the creation of the entity; it is part of the powers that could be exercised by such an entity as a province. The province can do anything within the provisions of section 92, that is, within its legal competence. Every power thus granted may be exercised in any manner—that is within the discretion of the legislatures of the provinces. This discretion is exercised in various ways. At times provinces exercise their discretion in certain, and what are thought to be undesirable, ways. For instance, the legislature of one province may repudiate a contract which the legislature of another province would not think it desirable so to deal with. The legislature of one province may declare for publicly owned utilities, which another province may think undesirable, and so on in connection with all these matters.

So far as the borrowing of money is concerned, it is one of the powers given to the province under section 92, and one of the powers given to the dominion under section 91. Whether it be the dominion or the province, in the exercise of these powers they may make such arrangements as they think desirable in the interests of their respective communities. That is, the dominion may make any agreement it thinks desirable, and the province may make any agreement it thinks desirable, the governments of the day being chargeable with responsibility as to what they consider to be the best interests of their respective communities.

If one will observe the language of paragraph 4 of this resolution and then read the words of the judicial committee to which I referred yesterday, he will realize that all the power that is sought under section 4 now exists except with respect to possibly one matter, to which I now purpose to address myself. Has the province through its legislature the power to agree that sums of money payable to it by the dominion may be withheld for the purpose of satisfying debts due by the province to the dominion under an arrangement that may be arrived at? My answer is in the affirmative. At first I had some doubt about it, but if you look at section 118 of the British North America Act you will find these words:

The following sums shall be paid yearly by Canada to the several provinces for the support of their governments and legislatures:

| | |
|---|---|
| Ontario | $80,000 |
| Quebec | 70,000 |
| Nova Scotia | 60,000 |
| New Brunswick | 50,000 |

Two hundred and sixty thousand; and an annual grant in aid of each province shall be made, equal to eighty cents per head of the population as ascertained by the census of one thousand eight hundred and sixty-one, and in the case of Nova Scotia and New Brunswick, by each subsequent decennial census until the population of each of those two provinces amounts to four hundred thousand souls, at which rate such grant shall thereafter remain. Such grants shall be in full settlement of all future demands on Canada, and shall be paid half-yearly in advance to each province; but the government of Canada shall deduct from such grants, as against any province, all sums chargeable as interest on the public debt of that province in excess of the several amounts stipulated in this act.

That is, with respect to guarantees that have been given and amounts that have been lent by the dominion to the provinces, even during recent years, we have the right to deduct from the sums which we have obligated ourselves to pay, the amount that may be necessary for the purpose of the payment of the interest that is due in excess of the sums mentioned in the statute. That does not arise at the moment. The sole question is whether or not there is such power in the provincial legislature as will enable that legislature to authorize an agreement to be made with respect to the portion of its revenues derived from the federal power so that they may be utilized for the purpose of discharging the debts and obligations of the province to the central authority or power. In the very nature of things it seems to me that that is elementary. Why? Because this parliament has authorized the payments that are being made under the British North America Act. In the opinion of some, and it is an opinion that does prevail in some quarters, there should be an imperial statute. Subsidies were in a sense sacred as distinguished from other forms of payments which might be made, and could not be retained or dealt with by the federal power. The answer is this, that section 118 of that statute as it stood in 1867 has been entirely modified and amended so that we have paid increasing sums, to which I shall presently refer, to all the provinces. And as those moneys are voted by this parliament to a province and the province receives them as part of its revenue, it follows that if the legislature of a province authorizes the dominion to withhold a portion of that money for the purpose of interest or sinking fund, the payment of principal or otherwise that may be due by the province to the dominion, there can be no question as to the validity of such action.

Mr. DUNNING: Has the right hon. gentleman considered it in the light of sections 113, 114 and 115, respectively?

Mr. BENNETT: Yes, surely. The sections referred to are as follows:

113. The assets enumerated in the fourth schedule to this act belonging at the union to the province of Canada shall be the property of Ontario and Quebec conjointly.

114. Nova Scotia shall be liable to Canada for the amount (if any) by which its public debt exceeds at the union eight million dollars, and shall be charged with interest at the rate of five per centum per annum thereon.

115. New Brunswick shall be liable to Canada for the amount (if any) by which its public debt exceeds at the union seven million dollars, and shall be charged with interest at the rate of five per centum per annum thereon.

That has been modified; the whole financial position has been changed. The right of the provinces, for instance, to receive part of the money in the possession of the federal government in trust has been made abundantly clear, and they have absolutely taken from the public exchequer, under the terms and conditions of the statute in that behalf, sums of money that were receiving interest from the dominion, and which provided a portion of their revenues until they were expended for purposes mentioned in the act.

It will be recalled that we had one case of that kind not many years ago. During his premiership of New Brunswick, the late Mr. Blair thought it desirable to use money to greater advantage than leaving it on interest with the federal government, and he withdrew portions for the purpose of increasing the revenues of the province and enabling certain public undertakings to be proceeded with. If there were any doubts about the matter it would seem to me that it could easily be resolved by making a simple test.

This parliament had control of the money that it voted to the provinces; the British North America Act had nothing to do with that. It was done by act of this parliament. It was not under the British North America Act, but by arrangement made between the provinces and the dominion. And I shall presently show that during recent years certain steps were taken in connection with the western provinces that indicated an entire departure from the principle of finance which governed in days gone by.

Leaving that for the moment, it must be apparent even to laymen that it would be a very peculiar thing if the provinces and the dominion could not make arrangements without getting further power from Westminster to provide that the provinces and the dominion may arrive at an arrangement by which the money due to the one shall not be paid if that one owes money to the dominion. That is the whole story. There cannot be anything more to it than that.

Mr. THORSON: Has the right hon. gentleman given consideration to the words used in section 118, respecting the provincial legislatures, and the question whether these words might not constitute a trust binding both upon the dominion and upon the provinces?

Mr. BENNETT: I certainly can answer that question. Section 118 states:

The following sums shall be paid yearly by Canada to the several provinces for the support of their governments and legislatures.

That money becomes subject to the appropriations of the legislatures of the provinces—by statute; the supply bill. Therefore if a legislature in the exercise of its discretion indicates that for that province and for that legislature it is desirable to secure a dominion guarantee, and that the moneys made available shall be utilized for the purpose of making good obligations created, they have it within their power. These moneys enter into general revenue funds and become subject to the appropriation bill, the supply bill, such as you see from year to year in the statutes of the various provinces.

Mr. THORSON: But the question which occurred to me was whether those moneys might not first have to go to the provincial legislatures and governments.

Mr. BENNETT: I remember that point being raised on one occasion. Is not the answer to it, and is it not a fairly conclusive one, that if the legislatures deal with the money as being in their hands, by antecedent action of the legislature, that answers the question? I quite agree with what the hon. member has said, namely, that you might say that a legislature must have supreme and complete control over the subsidy money, but that power is complete if the legislature acts upon the matter in the way I suggest. In other words, if the statute is passed by the legislature by which it provides that moneys that are under its control shall be utilized for a given purpose, then it has constitutionally exercised its powers.

Mr. DUNNING: Even on a future occasion?

Mr. BENNETT: Yes, certainly. Obviously the power can be exercised antecedently to the time when the money has actually been placed there. The reason is this—

Mr. THORSON: There may be serious doubt.

Mr. BENNETT: There may be doubt about it, but this resolution is not drawn on that basis, and in my own judgment I certainly would have no difficulty in arguing as to the validity of any action which might be taken as to an agreement supported by statute of any province in this dominion and that of the parliament of Canada, in the first instance. And I do not think any person would seriously question it if they took time to investigate the whole matter from its fundamental foundation, onward. Why? Because section 118, in its terms says that this is a complete settlement. But it was not a complete settlement; it has not been. There have been changes from year to year; there have been increased subsidies. Who varied that settlement? This parliament varied it, by arrangement with the provinces. Having made arrangements or agreements with the various provinces, this parliament took action to increase the sums of money provided for in section 118.

Mr. DUNNING: Always by reference to the imperial parliament.

Mr. BENNETT: I will come to that; I am perfectly familiar with that phase of the matter. The late Sir Richard McBride went over to argue before the imperial parliament that such arrangements should not be final, and the imperial parliament said that the statute came from the Dominion of Canada, and coming from the Dominion of Canada it must be taken that they were exercising their power of amending our statute, pursuant to the request it had received. It will be recalled that that involved an increase of subsidy.

But there has been no ratification by the imperial parliament. There was no ratification in the sense that it was required. If hon. members will read the debates of that time and the words of Sir Wilfrid Laurier made at the time these increases were being granted, he dealt with them as being finally—

Mr. MACKENZIE (Vancouver): The words are "finally and unalterably."

Mr. BENNETT: The word "unalterably" had escaped me, but no doubt "finally and unalterably" are the words. It was those words Sir Richard McBride protested against. The point I wish to make is that successive governments of this country have endeavoured to secure finality and unalterability by taking that method. But so far as we are concerned, does anyone suggest that we require an amendment from Westminster to enable the legislature of the province of Alberta to make provision as to what it shall do with its moneys, to make an agreement as to the application of the revenues it derives? Does any one suggest for a moment that this parliament requires additional powers from West-

minster to enable us to guarantee securities of the province of Alberta? Can that be suggested? I think not. The very discussion that is now taking place indicates that this resolution should have been drawn in different terms. If it is to quiet doubts, one can understand it, but if it is a claim that the power does not exist, I am opposed to it. This parliament has the power, upon the broad general principles that in recent years have governed the construction of the British North America Act, to guarantee anything that it desires to guarantee as far as payment of money is concerned; and the legislature of each province has supreme and complete control over its own revenues. To say less is to indicate that the legislatures are subordinate to some body; and how can they be subordinate when the privy council has declared that each legislature is supreme within its jurisdiction, and has all the powers that the imperial parliament in the plenitude of its power can confer upon it? In other words, in the language of the Lord Chancellor which I read yesterday, they have exhausted the grant of their powers; they have given everything that can be given. If the purpose is to quiet doubts, I can understand it, but to ask for fresh powers is to imply that the province of Quebec, the province of Ontario, and the other provinces of this confederation have not been clothed with all the power that the imperial parliament can confer upon them. But the privy council, the court of last resort, has made it abundantly clear that the imperial parliament has conferred upon the legislature of every province of Canada all the powers it possessed with respect to such matters.

Further, it must be abundantly clear that there is no such thing in this regard as subordination to any parliament. This parliament is not subordinate to the imperial parliament, nor is the legislature of any province subordinate to this or any other parliament. That point was dealt with in these words by the privy council:

> Their lordships do not think it necessary to examine, in minute detail, the provisions of the act of 1867, which nowhere profess to curtail in any respect the rights and privileges of the crown, or to disturb the relations then subsisting between the sovereign and the provinces. The object of the act was neither to weld the provinces into one, nor to subordinate provincial governments to a central authority, but to create a federal government in which they should all be represented, entrusted with the exclusive administration of affairs in which they had a common interest, each province retaining its independence and autonomy. That object was accomplished by distributing, between the dominion and the provinces, all powers executive and legislative, and all public property and revenues which had previously belonged to the provinces; so that the dominion government should be vested with such of these powers, property, and revenues as were necessary for the due performance of its constitutional functions, and that the remainder should be retained by the provinces for the purposes of provincial government. But, in so far as regards those matters which, by section 92, are specially reserved for provincial legislation, the legislation of each province continues to be free from the control of the dominion, and as supreme as it was before the passing of the act.

The statement I have just read arose out of a case in which a province claimed priority in the right of the crown in winding up proceedings, and did so successfully. Likewise in the case which involved the granting of a patent for what was then queen's counsel. These cases established that within the ambit of the powers conferred upon it by section 92, the province is as supreme an entity as this dominion is, which possesses all the powers that it is possible for a self-governing country to possess. The construction placed upon section 92 makes it abundantly clear that the imperial parliament has conferred all the powers within its jurisdiction or power to confer.

Mr. THORSON: I do not wish to interrupt—

Mr. BENNETT: It is quite all right. As a matter of fact I should rather welcome it.

Mr. THORSON: Before the right hon. gentleman proceeds to his next point, may there not be some doubt as to the power of a province to divest itself by agreement of its constitutional right to receive money? A province cannot delegate its powers. Can it divest itself of such constitutional rights as it possesses?

Mr. BENNETT: One expression the hon. gentleman has just used, "the province cannot delegate," is not quite accurate. Delegatus non potest delegare does not apply with respect to a province, because—

Mr. THORSON: I meant the constitutional power of legislating.

Mr. BENNETT: The creation of municipal institutions implies a delegation of powers, looking at it from one angle, but the privy council has said that that is not a delegation in the sense in which that word is normally used. My hon. friend from Selkirk (Mr. Thorson) and myself will be in agreement that it is not competent for a province to divest itself of its constitutional powers—if that is what he means. For instance, that was settled in the referendum case from

Manitoba, in which it was held that you could not, by the initiative and referendum, enact legislation in which only the legislature and the people had to do, without the intervention of the crown, because it was not legislation within the purview of section 92.

Mr. THORSON: I was not referring to that point.

Mr. BENNETT: No, but that illustrates the point that it cannot divest itself of its legislative authority. The initiative and referendum case made it perfectly clear that a province could not divest itself of its legislative authority in the manner that it was there sought to do.

Mr. CAHAN: But it can exercise its legislative authority.

Mr. BENNETT: Exactly, it can exercise its legislative authority.

Mr. LAPOINTE (Quebec East): That is a very different question.

Mr. BENNETT: I wish to answer the point raised by my hon. friend from Selkirk (Mr. Thorson), because it is one of some importance. The legislature in the exercise of its powers is not subject to the control of this parliament or the judges of the country; it is subject only to the control of the people. That has been declared so often as not to require restatement. Recently, in a leading case, the court said, "It is not for us to say whether or not the legislature has been wise or unwise. We are here to determine a pure question of law, and the question of law is whether or not there is jurisdiction to exercise the power." That is the general principle, I think, which governs. In the exercise of that power the legislature of Alberta, if it were in session to-day, might authorize the executive to enter into an agreement with the government of Canada for the purpose of guaranteeing its bonds. That is obvious. I think no lawyer would question that it could enter into that agreement—my hon. friend nods his head—with the Dominion of Canada whereby the dominion would guarantee the bonds of the province of Alberta. The next step in the proceedings is this: Is it competent for that legislature at the same time to provide that, for the purpose of securing the dominion against loss by reason of the guarantee, it shall have a first charge, lien or claim against any moneys due, present or future, by the Dominion of Canada to that province? That is the question at issue. My hon. friend says that there may be some doubt about that, as it is a matter that has not been determined by the courts. I would not be prepared to say that there is no doubt about every question. There once stood in this house a solicitor general who boasted that the decisions of the courts amply warranted an opinion which he gave, that the decisions were all in favour of the attitude which he had taken. Within a few weeks afterwards the privy council spoke, and decided adversely to the view he had expressed. That was the case of the Calgary and Edmonton mineral rights.

Mr. LAPOINTE (Quebec East): It may happen again.

Mr. BENNETT: That is what I am saying; it may happen any time you are dealing with problems of that kind. But it is one thing to remove doubts; it is another question to declare, in terms such as are used here, that the power does not exist. I protest against the provinces being thus treated. I protest against this parliament being thus treated. For surely it does not require a parliament at Westminster to pass a statute to confer upon this parliament the jurisdiction to deal with its own revenues, nor does it require any legislation to enable a province, having had conferred upon it the powers I mentioned yesterday, to enter into an agreement with respect to its own bonds and its own securities. It might well be that there is doubt as to how far that would arise with respect to moneys that were covered by the original act, but not the subsequent acts, as I shall presently point out, because with respect to subsequent acts you have an entirely different set of considerations. You have confederation an accomplished fact; you have the dominion voting, through its representatives, that certain moneys collected from the people shall be utilized as the legislature of a province may think desirable or necessary. If they see fit to deal with those moneys in that way, that is all that can be said about it. There is no doubt, I submit, as to the powers existing with respect to all moneys other than those covered by original section 118, that is, all subsequent payments, whatever may be said as to section 118, and I leave it at that.

The next section of this resolution provides:

> The legislature of any province may charge the pricipal, interest or sinking fund of the guaranteed securities on any revenue of the province, upon terms that such revenue shall, if the government of Canada so requires, be disbursed exclusively in payment of such principal, interest or sinking fund and may, if the government of Canada so requires, provide for the depositing of all funds from the revenue so charged in a trust account in an bank or banks for the purpose of implementing the said charge.

That means that if the province of Alberta, we will say, desired to do so it could pass a statute providing that all moneys received from royalties on coal and oil and gasoline should be placed in the bank in a special fund and utilized for the purpose of making good any payments that might be payable or had been made by the dominion under its guarantee of provincial securities. That is a contract. If one looks at this provision carefully it merely says:

> The legislature of any province may charge the principal, interest or sinking fund of the guaranteed securities on any revenue of the province—

Does that power not now exist? Can it be successfully denied that it exists? Does anyone seriously question that it does not exist? Let me give an illustration. In Newfoundland they charged the gasoline tax for the purpose of making good the interest on securities, having conferred a monopoly upon an oil company that undertook to lend and did lend them certain moneys. Newfoundland had no larger powers with respect to this matter than has the province, under the decisions of the privy council. The province has supreme and exclusive control over property and civil rights. The province has supreme and complete control over the question of what it shall do with its revenues, unless indeed with respect to school funds where there is the limitation that they must be used for certain specific purposes. But eliminating that, they have freedom of action, and in the exercise of that freedom of action it is now said that they must go to Westminster and secure a statute saying that they may enter into a contract for the purpose of passing a statute that will enable them to charge a given fund with the payment of any moneys that the dominion may have to pay for the purpose of making good its guarantee on any bonds or securities that may have been guaranteed.

I think the mere statement of the proposition completely refutes the necessity for any such legislation. It places the provinces, each of them, in a subordinate position and denies them the powers which over and over again the courts have said they possess, that is, the power to make contracts of any kind, nature, form or description whatsoever, within the ambit of their powers, when once authorized by the legislature. Section 92 certainly would enable them to do anything they pleased with their revenues regardless of whether we thought it wise or unwise. Some of us may have thought that certain expenditures made by provincial legislatures were very unwisely made, yet we have no control over them. Certain provincial legislatures may have thought that expenditures made by us in this parliament were very unwise, yet they have no control over us except to the extent that they may be electors and thus able ultimately to express their opinions through the ballot box. Certainly there is no legal or constitutional authority to which reference can be had which deprives any province of the fullest possible power to make a contract on any terms or conditions it pleases within its jurisdiction.

That is the position I take with respect to this resolution. I do not do that for the purpose of opposing the resolution; I do it for another purpose. I do it for the purpose of trying to assert in my poor way the right of legislatures created under the British North America Act, and of this parliament, not to go to Westminster to seek fresh powers when powers already exist, for I believe the language used by the privy council in connection with our constitution makes it abundantly clear that there is nothing that could be done by that parliament that has not been done to clothe our legislatures with all the powers a province could possess under the constitution, and the dominion with all the powers a free nation could possess, subject of course to the question of our amending our own constitution and dealing with the rights of the crown.

The last paragraph deals only with the title to be given to the statute. Now I think I have concluded all I desire to say with respect to these various branches of the case. May I say to my learned friend the Minister of Justice (Mr. Lapointe) that I direct my arguments to him not as a partisan or as a political opponent but as a student of the constitution, and not a very close student now, for I have not the time to follow it with the care I once did. I speak, however, as one who has, as I believe the minister has, a realization that we must not seem to be clothed with less powers than we have. To admit that is to deny for the future—a position which I think would be something undesirable—that the provinces possess all the powers that the imperial parliament, in the plenitude of its powers, could confer upon them and that this dominion parliament has all the powers that any nation could have, with the limitations that I have mentioned.

Now let me go one step further. Yesterday the minister made some reference to observations that had been made by the late Sir Wilfrid Laurier with respect to the financial relations between the provinces and the dominion. No question has more closely engaged the attention of students of our constitution than that, and it will be remembered

that the hon. member for Winnipeg North Centre (Mr. Woodsworth) made some observations with respect to the attitude of the Minister of Labour (Mr. Rogers) regarding these matters. In a very excellent paper contributed to the Canadian Forum of December, 1934, the Minister of Labour dealt with the situation. Even the most backward school boy knows that a fundamental tenet of British government is that it calls for drastic revision. The minister said:

> Subsidy readjustments of past years have revealed a lamentable lack of allegiance to principle and a deposition to reach short term solutions under the pressure of political expediency. As a result of the haphazard methods of previous settlements the financial relationships of the Canadian federation have reached a condition of chronic instability. This has made for misunderstanding and friction in a field of government where the desideratum is harmony and cooperation.

This quotation is important, because it represents the considered judgment of a student of the situation as it has heretofore existed. The late Sir Wilfrid Laurier pointed out that it is a general axiom of government that those responsible for spending money should be responsible also for raising it, a view which is as old as the very first discussions that took place in connection with democratic institutions. But the British North America Act was founded upon the assumption that subsidies were to be paid to the provinces. The reason is obvious; the provinces gave up their rights of indirect taxation. The provinces of Nova Scotia, New Brunswick, Ontario and Quebec gave up the right to raise revenues by customs duties and excise taxes and other methods, in connection with post offices and matters of the kind, and in giving these up they stipulated for subsidies in lieu thereof. Hence was introduced into our constitutional statute a provision that the provinces were to receive subsidies. Now, the word "subsidy" is offensive to many minds. It is associated with ventures in past centuries by which it came to be a word of ill omen. Having once determined that we were to have subsidies, all the resultant evils to which Sir Wilfrid Laurier and the Minister of Labour referred at once followed. There has been a constant effort ever since to increase the subsidies payable by the central power to the provinces for their purposes. Therefore I do not think it serves any useful purpose to deprecate the action involved in the payment of subsidies. We commenced housekeeping with them in 1867 and have continued with them ever since. The only question is whether or not some arrangement can be arrived at which will place them upon a more scientific basis than that which now prevails. The late Sir George Foster suggested that the difficulty could be met by paying a fixed percentage of the customs revenues to each of the provinces in terms of their population. Many of the provinces were greatly in favour of such a scheme; others were not. It will be recalled that we made a special grant to the province of Prince Edward Island because of its geographical position and its relation to confederation, and only last year, for reasons which I shall presently point out, we made a special grant to British Columbia; for one had only to compare the amount received by that province from the dominion with the amounts payable to the other three western provinces to realize that even the $750,000 paid did not put them on a basis of equality.

But I am going to point out to the Minister of Justice three matters that are not to be lightly overlooked when he discusses a question of this kind. In 1905 we created two provinces in western Canada, Alberta and Saskatchewan. At that time the public domain was in the possession of the crown in the right of the dominion. After providing for subsidies to these new provinces, section 20 of the Alberta Act—and a similar section is found in the Saskatchewan Act—provided:

> Inasmuch as the said province will not have the public land as a source of revenue, there shall be paid by Canada to the province by half-yearly payments, in advance, an annual sum based upon the population of the province as from time to time ascertained by the quinquennial census thereof, as follows:—
>
> The population of the said province being assumed to be at present two hundred and fifty thousand, the sum payable until such population reaches four hundred thousand, shall be $375,000;
>
> Thereafter, until such population reaches eight hundred thousand, the sum payable shall be $562,500;
>
> Thereafter, until such population reaches one million two hundred thousand, the sum payable shall be $750,000;
>
> And thereafter, the sum payable shall be $1,125,000.
>
> 2. As an additional allowance in lieu of public lands, there shall be paid by Canada to the province annually by half-yearly payments, in advance, for five years from the time this act comes into force, to provide for the construction of necessary public buildings, the sum of $93,750.

The Saskatchewan Act is in the same terms except as to the amounts payable. Remember that in 1905, when these provinces came into being, they had no public lands, and it was provided by statute that we should pay them annually a sum rising to $1,125,000 in lieu of lands. But in 1930, just before an election the government of that day, much

to the surprise of everyone agreed not only to give them the public lands but to continue to make the payments to them which were granted in lieu of such lands. Of course that in itself created a situation of unfairness to the other provinces, unfairness to Manitoba, unfairness to British Columbia. And in chapter 41 of the statutes of 1930 it is provided by section 21:

In lieu of the provision made by subsection 1 of section 20 of the Saskatchewan Act, Canada will, from and after the date of the coming into force of this agreement, pay to the province by half-yearly payments in advance, on the first days of January and July in each year, an annual sum based upon the population of the province as from time to time ascertained by the quinquennial census thereof, as follows:

The sum payable until such population reaches one million two hundred thousand shall be $750,000;

And thereafter the sum payable shall be $1,125,000.

So that by reason of the action then taken they received not only their public domain but also the subsidy that in 1905 was provided for them in lieu of land. Some of us who did not profess the same political faith as hon. gentlemen opposite ventured to point out what would inevitably result. But I can recall that in 1905 it was pointed out how much better it was to have the money than the land. I remember these cries, and some of us stated that the time would come when the very party which made that arrangement with those provinces would have to agree that they must have their public lands—very few ever expected to get both lands and money. They received their lands in 1930, and then were given the money as well.

Mr. DUNNING: No.

Mr. BENNETT: Does my hon. friend deny it? Did not my hon. friend say the subsidy is not to be changed?

Mr. DUNNING: Not at all.

Mr. BENNETT: Then all I can say is I will read it again.

Mr. DUNNING: There is no need to; I know it very well.

Mr. TUCKER: The lands were already substantially alienated before the province got them back.

Mr. BENNETT: Not at all. I read the provisions of section 20. Let us have no doubt about that phase of it. I took Alberta in the former case; this is the statute with respect to Saskatchewan. There is a little difference in some respects, but not in article 21 of the agreement.

Mr. DUNNING: If my right hon. friend will permit—

Mr. BENNETT: Yes.

Mr. DUNNING: My point of disagreement was with the statement that the provinces received both the land and the subsidy.

Mr. BENNETT: They did, undoubtedly.

Mr. DUNNING: My right hon. friend had a royal commission to find how much more money they ought to get in lieu of lands already disposed of.

Mr. BENNETT: Is not that amazing! Does not the hon. gentleman know it was his government that provided that? Does he not know that I had to set up the commission because he agreed to it? One of the most infamous things ever done in the history of parliament, for purely political purposes.

Mr. LAPOINTE (Quebec East): What has this to do with the resolution?

Mr. DUNNING: My right hon. friend's own commission said they ought to get more money.

Mr. BENNETT: But wait until I read the terms of the agreement.

Mr. LAPOINTE (Quebec East): Let us get back to the resolution.

Mr. BENNETT: Quite right. I would not have dealt with this but for the speech made by my hon. friend yesterday about subsidies.

Mr. LAPOINTE (Quebec East): My three minutes on it did not invite my right hon friend's long speech.

Mr. BENNETT: A pinprick may involve death, and my hon. friend's three minutes may necessitate dealing with a matter in its entirety. Let us see what the agreement was.

I have pointed out that they received not only the lands but the subsidy as well. Then section 23 of the agreement provides that certain questions shall be submitted to the supreme court. They went to the privy council and were answered adversely to the contention of Saskatchewan. Then, mark this:

As soon as final answers to the questions submitted under the last preceding paragraph have been given, the government of Canada will appoint three persons to be agreed upon to be commissioners under part I of the Inquiries Act, to inquire and report whether any, and if any, what consideration, in addition to the sums provided in paragraph twenty-one hereof, shall be paid to the province in order that the province may be placed in a position of equality with the other provinces of confederation with respect to the administration and control of its natural resources either as from the first day of September, 1905, or as from such earlier date,

if any, as may appear to be proper, having regard to the answers to the questions submitted as aforesaid; such commissioners to be empowered to decide what financial or other considerations are relevant to the inquiry and the report to be submitted to the parliament of Canada and to the legislature of Saskatchewan; if by the said report, the payment of any additional consideration is recommended, then, upon agreement between the governments of Canada and of the province following the submission of such report, the said governments will respectively introduce the legislation necessary to give effect to such agreement.

In pursuance of that agreement made by the government led by the now Prime Minister, and of which the present Minister of Finance was then Minister of Finance—

Mr. DUNNING: And which you described as infamous.

Mr. BENNETT: I certainly said that not only did they get the lands themselves—

Mr. DUNNING: No.

Mr. BENNETT: They did get the lands under the agreement.

Mr. DUNNING: The lands were gone, alienated.

Mr. BENNETT: They were not any more alienated in 1930 than in 1905, except to the extent that compensation was provided for them. That is the whole point. In 1905 they agreed to take in lieu of lands the sum mentioned in the two acts I have read. In 1930 they agreed to take back their lands, and the government agreed to leave them with the subsidy they got in lieu of lands. It was not that they were without lands, but that they are going to continue to be. The hon. gentleman has not read it. They were to get this money, and they got it in lieu of not taking lands as a source of revenue. Then comes the agreement giving them the lands that were left, and giving them money which they got in lieu of the lands which then they did not have; they were to be compensated for the lands alienated from 1905 to 1930—or 1930 odd, whatever date it was—and they got the sum which was awarded to them by the commissioners. Manitoba got $4,000,000 odd, and it was referred to by the right hon. gentleman at the opening of the campaign in the west. He pointed out that a cheque had been delivered to the province of Manitoba for the sum of $4,000,000 under an arbitration, of which arbitration board the Minister of the Interior was a member. That is the position, and because Manitoba got the $4,000,000—

Mr. DUNNING: He did not promise it in the election.

[Mr. Bennett.]

Mr. BENNETT: What he did was to say that the cheque had been paid—

Mr. DUNNING: That is right; it had.

Mr. BENNETT: —under the agreement that had been entered into a few weeks before for the purpose of determining what Manitoba should receive, and when Maintoba received that money Saskatchewan and Alberta claimed to be put on an equality with the other provinces of confederation. In pursuance of that agreement the award was made to which the Minister of Finance refers. I quote that in view of what the Minister of Labour said in his article in 1934, not then I suppose expecting to be a colleague of the minister. He said:

Subsidy readjustments of past years have revealed a lamentable lack of allegiance to principle and a disposition to reach short term solutions under the pressure of political expediency.

Those were the words of the Minister of Labour with respect to these very transactions. That was what he was dealing with; they were the only ones that had taken place. That is what he said in 1934, only a year and a half ago.

Mr. DUNNING: In 1934?

Mr. BENNETT: That is what he said in December, 1934.

Mr. DUNNING: He might have meant something else.

Mr. BENNETT: No; they were the only transactions that had taken place with respect to the provinces. The hon. gentleman can smile, but that does not get away from the essential facts, nor will cynicism advance public finance. It will not make for public finance being dealt with as it should be. Those are the words of one of the minister's present colleagues with respect to the only subsidy transactions that had taken place between the provinces and the dominion between the years 1921 and 1934.

I mention this because the Minister of Justice yesterday seemed to indicate that the policy of the great leader of the Liberal party was not to continue to pay subsidies to these provinces in increasing sums. I give these illustrations for the purpose of indicating exactly what has taken place under Liberal governments since, in connection with these subsidies. The only payment for which the late government is responsible was with respect to the increased sum paid to British Columbia, which had to be paid by reason of the circumstances to which I have alluded; for that province found itself in a position

entirely different from that of the other three western provinces, and is still in a position of inequality in connection with payments from the public exchequer. Of that there can be no doubt. I mention that because it has two significances. One is because of what my friend said yesterday, but I mention it for another reason, and it is this: Is it desirable to nibble at this question?

Mr. MACKENZIE KING: What is the view of the great leader of the Tory party?

Mr. BENNETT: The observation of the Prime Minister does not advance it any. He has at least views which are coherent, and will express them; they will be founded upon his appreciation of the difficulties of the situation which confronts us, and questions such as that which he has just asked will not solve any problem connected with public finance. I have the right to express my views and I propose to do it. They may not be acceptable to the government; I regret it if they are not, but that will not deter me from expressing them. I am dealing only with the first branch.

Mr. MACKENZIE KING: The leader of each party has a right to express his views, and I think a like respect is due to the position of each.

Mr. BENNETT: If the right hon. gentleman would just practise that there would be no difficulty at all. I commend him to a reading of his own words, and if he puts them into practice he will find it much easier to get along.

Mr. LAPOINTE (Quebec East): Let us have reciprocity.

Mr. BENNETT: Exactly; that is what I said. One would expect that courteous answer from the Minister of Justice.

I was proceeding with the first branch of the case and pointing out that there are two reasons why I direct attention to these matters. One is that the whole problem of public finance to which the Minister of Labour refers in this article is one of the gravest character and affects this country in a way that he indicates; I commend a reading of that article as indicating the seriousness of the problem. Is it desirable now to take this step as an effort towards a solution of the problem? This step is going to do what? Clothe the province with the power to impose taxation by indirect methods on retail sales, and having regard to our constitutional position to confer such rights with such limitations as may be desirable upon municipalities. Is that a step forward? Does it ease the problem? Can it possibly be a solution of it? Does it in any sense assist us in its ultimate solution? I think not. Differences of opinion may arise as to that. The Minister of Justice may have one opinion, the Minister of Finance may have another, but I do submit that you cannot deal with this problem of public finance and of the relations between the province and the dominion in connection with public finance by simply nibbling at it as we are doing in this resolution. It is not possible to arrive at a solution of the problem by this process. It means that you confer upon the province the right to impose indirect taxation with respect to retail sales, with limitations. That is all. Therefore, I submit that a resolution of this kind is not calculated to assist in a solution of the problem, and that the government, rather than proceeding with this resolution and asking the imperial parliament to pass such legislation should, in the words of the Minister of Labour, institute steps to ascertain just how the problem may be dealt with, if possible, and then proceed to deal with it in a way that will commend itself, not only to a particular class in the community but to the provinces and the dominion as well.

With respect to the second branch of the resolution. I can only repeat that I protest against this assumption of inferiority on the part of either the dominion parliament or the provincial legislatures in asking for a grant of powers when powers are being exercised from day to day and from month to month of the quality and kind for which authority is now being sought. This is not only unsound, but I submit it is quite unfair to the imperial parliament itself. That parliament is bound to enact this legislation, coming from Canada as it does by way of resolution of this parliament, and we put them in a very false position if we ask them to confer powers upon us which we say we do not possess but which we have been using for many years. I think that is a fair statement.

I summarize the position which I submit to the Minister of Justice. I submit it to the Minister of Justice as though he were a judge sitting upon the bench listening to the pleas of counsel and determining in his own judgment how they should be acted upon. I have no purpose to serve save an earnest desire that in dealing with our constitution we should deal with it in accordance with settled precedents. I believe that the difficulty in the framing of this resolution has arisen because of a belief that there was an analogy

between our situation and that of Australia. It does occur to me that whoever was dealing with this forgot that the distribution of legislative powers in Australia is entirely different from the distribution in this dominion. In 1929 the commonwealth was faced with difficulties and it became essential to utilize the collective credit of the people by guaranteeing the securities of the various states. Amendments to the constitution were sought in accordance with the provisions of the Australian constitution. It does occur to me, from looking at what was done there and at the language of this resolution, that it was thought that the action taken in the one instance should be taken in the other. I submit that such is not sound.

May I repeat what I have said already? The position of the provinces and their powers have been clearly defined by judicial decisions. No one will question the power of the dominion to guarantee securities or deal with any problem that lies within our legislative jurisdiction. I submit to the Minister of Justice in all sincerity that the legislation should be clarified so as to remove what I consider to be certain anomalies. I may be putting it too strongly, but I cannot help thinking that if the minister will give the wording of the resolution careful consideration he will realize that it leaves much to be desired. To put a section such as the proposed section 2A in a constitutional document is not in accordance with the best principles of draftsmanship as laid down by Lord Thring, who drafted the British North America Act, or by the draftsman to whom the Prime Minister referred the other day when we were dealing with the preamble of a bill—I believe it was to Sir Courtenay Ilbert.

Second, I believe it is undesirable to extend the taxing powers of the provinces by conferring upon them the right to raise revenue by indirect taxation on retail sales. Under the interpretation of their powers in the later decisions of the privy council, all the power that is necessary to enable them to impose sales taxes and other forms of taxation usual for domestic purposes has been established. Third, the retroactive provisions of the statute should disappear, for to ask the imperial parliament to give validity and legality to acts declared to be invalid and illegal is to dishonour to that extent our conception of what is right and just, especially when we realize that in most countries, notably the United States, they have a constitutional provision that prevents such legislation being enacted.

Four, that part of the resolution dealing with the financial arrangements between the provinces and the dominion because (a) the dominion now possesses all the powers sought to be conferred upon it by imperial statute; (b) because the provinces now possess all the powers necessary to enable them to enter into any agreement or arrangement that may be thought desirable for the purpose of effecting the purposes indicated in the resolution; and (c) in any event the resolution, if it desires to deal with questions of doubt, should be in entirely different terms, even assuming, as the minister may, that there is some doubt with respect to the right to charge or otherwise deal with subsidy moneys payable to the provinces.

I repeat that I protest, so far as it is possible for me to protest as a member, against the assumption that this parliament does not possess all the powers necessary to enable it to deal with every phase of the matter mentioned in the resolution, or that the provinces do not possess all the powers necessary to enable them to deal with every matter sought to be dealt with by the resolution, with the possible exception of the subsidies payable under the provisions of section 118, and with respect to that, to contend that they have not the power to limit the right of the legislature to deal with the revenues of the province in any manner the legislature may so determine. The issue really is whether or not we should seek from the imperial parliament a fresh grant of powers when a grant has already been made as full and as ample as that parliament in the exercise of its plenary powers could grant or confer.

For these reasons I oppose the resolution. I realize, however, how futile it is to raise one's voice in opposition to it. It is one of the misfortunes, perhaps, of a new country that once having adopted a line of action, no government is prepared to admit that by any possibility it has made an error. That being so, it means that the government, with its majority, must impose this resolution upon this house and carry it through to the end. I can only say I believe that with respect to the first part it will not do other than bring many difficulties to the federal government, and with respect to the latter, it raises an issue which I prefer should not have been raised and which I believe in time will recoil against ourselves. For, possessing powers and not exercising them, and seeking a fresh grant of powers when all the powers the parliament at Westminster possesses have been granted, is but to admit a subservience which does not exist and a dominance which has never been exercised.

Hon. CHARLES A. DUNNING (Minister of Finance): Mr. Speaker, I hasten to assure the leader of the opposition (Mr. Bennett) that it would be presumptuous for me, a layman, to enter into the legal and constitutional discussion initiated by him with regard to the resolution. Naturally the government takes its legal advice from the Minister of Justice (Mr. Lapointe) who will, I am sure, in due course deal with the legal and constitutional phases to which my right hon. friend has been referring.

From the purely practical rather than the legal point of view, the resolution does point to certain facts which are inseparable from a federal system of government which has been passing through a testing time such as the last five years. The federal constitution involves a division of taxing powers. That division was made at confederation, and so far as the law is concerned I think I am correct in stating that it has not been altered since. During intervening years the necessities of governments, both federal and provincial, have changed and broadened in many respects. For many years past it was the consistent complaint of the provinces that their basis of taxation was not sufficiently broad to enable them properly to meet the obligations placed upon them by changed conditions, and particularly those obligations in connection with expenditures for social welfare, and activities of that kind.

In the capacity of a provincial minister and later of a provincial premier, I have attended interprovincial conferences as long ago as the years 1916 and 1917, and I do not recollect any conference at which the question of the powers of taxation of the provinces was not to the fore and presented vigorously by provincial representatives. During the past five years it has become more than ever apparent that the provinces have been unable within the ambit of taxation powers allotted to them to raise the sums of money necessary to enable them to carry out the obligations they have assumed towards their people. That condition became apparent, particularly with respect to the four western provinces, to a degree never before known during the period my right hon. friend opposite was Prime Minister. Finding it necessary to meet the situation in some way, his government commenced to do what had never been done before, namely, to loan money to the provinces from the federal treasury. I am not now criticizing the right hon. gentleman, but I am stating the fact as an indication of the condition which has arisen during the difficult years through which we have just been passing.

Surely it is evident to all of us that the revenues of at least the four western provinces, and, in some measure, of all provinces, have been unequal to necessities. The older and wealthier provinces, having better credit, have been able to weather the storm of recurring deficits. As is well known the four western provinces were assisted from the federal treasury to the extent of about $115,000,000. That is the amount up to date. Surely these are conditions which cause us to think seriously as to where we are going.

Undoubtedly at confederation it was intended that the provinces should discharge their sovereign functions and with respect to the discharge of them should be under no obligation to the federal authorities. No doubt it was intended that the provinces should be as free in their sphere as is the federal authority in its sphere. May I point out that if we continue along the road we have been travelling we shall soon reach a point at which, in connection with several of the provinces, the dominion will be the principal creditor. Indeed, continuing at the rate at which we have been accumulating obligations of this kind, we may be sure that we have not far to go until we reach the stage where the dominion might be the majority creditor of a province. Is that a desirable condition into which to drift? We have only to continue drifting along the lines followed in the past five years to reach that situation within a measurable time.

It is true that at confederation the principle of subsidy was adopted, but there is ample evidence of the fact that the fathers of confederation were conscious of the principle which has been mentioned in this debate, namely, that those public bodies responsible for the spending of money should be responsible for levying the taxation to raise it. The debates with respect to confederation revealed that if the subsidies from the federal parliament were so large as to infringe upon that sense of responsibility which ought to be present in the minds of public bodies spending money, the outcome could not be good so far as Canada was concerned.

As the years have gone by the amount of dominion subsidies in each case has been so relatively small, when compared with the total revenues of the respective provinces, that I believe we may say no evil results have accrued from the adoption of the principle of subsidies to the extent to which it has been adopted. But do we desire to go further in the direction of having one tax-levying body levy taxes upon the whole of the people of Canada, and handing over a substantial part of the proceeds to another

public body which would have an opportunity of making expenditures without assuming any responsibility for raising the money?

I have always believed, critics to the contrary notwithstanding, that in this country the most efficient governing bodies we have are the small ones such as township councils and local school districts. And why? Because they are close to the people who are being taxed. The people who are being taxed have an eye on the expenditure of every dollar. It is not filtered through as it is in connection with the larger municipalities, with the provinces, and with the dominion. I do not regard as an extravagant waste our multiplicity of small governing bodies. When I see figures quoted about the number of governments we have in Canada, I always bear in mind that by far the greater number of them consist of these smaller governmental units, small school district units, small township councils, which are most efficient in the expenditure of the taxpayers' money, yes, more efficient than this parliament is in its control of expenditures, because, as I have said, the individual taxpayer is in very close touch with his local governing body and sees where every cent goes; the expenditure is a matter of public discussion throughout the whole community; everybody knows about it; and that is the way to get economy in the expenditure of public funds.

I regard the maintenance of the principle to which I have just referred, that a public body spending money should be responsible for imposing the taxes to raise that money, as one of the most important principles of public finance. I said a while ago that the provinces have been insistent upon a broadening of their taxation power. At the recent dominion-provincial conference, after very lengthy discussion, the provinces were unanimous in requesting the amendment to the constitution covered by section 1 of the resolution now before the house. With all due deference to the leader of the opposition as a great lawyer, the government must take from the Minister of Justice (Mr. Lapointe) its advice, as to the way, legally speaking, to do things. But may I buttress the Minister of Justice by reminding the house that there are nine provincial attorneys general; these nine gentlemen were present at the dominion-provincial conference, and there is no doubt as to their view that, in order to effectuate what they desire in the way of a sales tax within the province, this legislation is absolutely necessary.

Mr. CAHAN: There is another question, as to whether it is expedient or not.

[Mr. Dunning.]

Mr. DUNNING: As to whether it is expedient or not—I will try to discuss that.

Mr. CAHAN: Or as to whether it gives the provinces access in this way to more revenues than they have by their present powers of direct taxation.

Mr. DUNNING: The first point has been subject to criticism. I know, of course, that in argument in court it is customary to say: Well, I make this point; if I do not succeed on this point I make the next point, and if I do not succeed on that I make a third point. And so on up to the umpteenth point, and the fourth point may be a flat contradiction of point number three. I am not capable of following that kind of argument.

Mr. CAHAN: Oh, quite, and quite capable of asserting it.

Mr. DUNNING: I can say this to my hon. friend, that there is no doubt that each province in Canada has been endeavouring to collect what are in reality retail sales taxes. The provinces have been assisted by legal minds to devise ways and means whereby an apparent prohibition is in some manner evaded; legally evaded, of course. Those things must be done legally. So we have at the present time a variety of what I might call pseudo-indirect taxes—

Mr. BENNETT: What are they?

Mr. DUNNING: —in the provinces of Canada, and, in some cases, in the municipalities.

Mr. BENNETT: Such as?

Mr. DUNNING: Gasoline tax, the fuel oil tax, the meals' tax. I know my right hon. friend draws a distinction. He says that it is quite competent for the provinces to levy a tax provided they make the man who buys pay the tax in the form of a couple of coppers, but if on the other hand they say to the merchant selling the goods that he must pay them the equivalent of two cents, that is illegal. I understand that is the distinction; and as a consequence of it the people are inconvenienced, the stores are inconvenienced, the provinces are inconvenienced, by a very cumbersome system of tax collection. They all complain about it, and the public complain about it. From my point of view it has only one merit, and that is that the people never have any doubt that they are paying a tax when they pay out the two coppers, or the five coppers, as the case may be, under the various tax laws of the provinces as those laws now exist.

Mr. BENNETT: And there was no trouble in collecting the gasoline tax.

Mr. DUNNING: In that case, I believe I am correct in stating that the gasoline vendor is made by statute a tax collector for the government.

Mr. BENNETT: Quite so.

Mr. CAHAN: And that is what you are also doing by this process.

Mr. DUNNING: Is that direct or indirect?

Mr. BENNETT: That is direct.

Mr. DUNNING: I admit at once that this has been a fruitful subject for litigation, and, as lawyers sometimes say, the privy council has the last guess. The Minister of Justice says what I, of course, could not say without disrespect, that the privy council sometimes changes its guess. Be that as it may, surely it will be admitted that probably section 1 of the resolution now before the house will limit, if not eliminate altogether, lawsuits of the kind to which I have referred.

Mr. CAHAN: Oh, no; it will largely extend the field for guessing.

Mr. DUNNING: Well, I am sure that the legal profession, which has been having a hard time in the last five years, will welcome any extension of the field of litigation.

Mr. CAHAN: I have no doubt, but we are not legislating for them at present.

Mr. DUNNING: With respect to the other matter, I cannot of course discuss whether the amendments contained in sections 2, 3 and 4 of the resolution are constitutional and necessary; I shall leave that to the Minister of Justice. They constitute, however, the expression of a desire on the part of the government of Canada to get away from the drifting policy of the last five years, and have a relationship with our provinces which is not capable of any misunderstanding or any doubt or litigation with respect to the intent and meaning of the arrangement made. That is our desire, and that desire is based upon a very simple principle. Here I come to an observation made by my hon. friend from Lethbridge (Mr. Blackmore). He disagrees with the terms of section 2 with respect particularly to the words in the fifth line. I will read the first part of the section:

> The parliament of Canada may authorize the government of Canada to guarantee the payment of the principal, interest and sinking fund of any securities (hereinafter called "guaranteed securities") which any province of Canada may from time to time make or issue, and, subject to the provisions of this act may prescribe the terms and conditions upon which any guarantee so authorized shall be given.

The last words that I have read are those to which my hon. friend from Lethbridge takes serious exception, namely the fact that the parliament of Canada, extending the guarantee of the whole of the people of Canada to the people of one province, shall have the right to lay down the terms and conditions under which that guarantee shall be given. The hon. member and others associated with him object to that. I rest my case, in that connection, not upon any legal or constitutional ground, but upon grounds of simple right. The people of any province have the right to borrow money, to use their credit. They have the right to tax themselves. By and by they reach the limit of their spending ability; they reach the limit of their immediate taxing power, and they come to this parliament, representing the whole of the people of Canada, and say in effect: We, the people of one province of Canada, desire the people of the whole of Canada to agree to tax themselves to help us. In simple terms that is what the guarantee means: We, the people of one province of Canada, needing assistance from the people of the whole of Canada, ask the people of the whole of Canada to agree to tax themselves on our behalf.

Mr. BENNETT: Oh, no. They pay the money back out of the moneys to which they are entitled.

Mr. DUNNING: The giving of the guarantee implies beyond all question the use, if necessary, of the taxing power of this parliament to raise the money with which to pay the obligation. The fact that there is a margin of security, which my right hon. friend well knows would be inadequate in most cases—

Mr. BENNETT: No.

Mr. DUNNING: One only requires to examine the figures.

Mr. BENNETT: They could pay the interest.

Mr. DUNNING: If my right hon. friend had studied the figures as to the relationship of provincial subsidies to the amounts of interest involved, even at a scaled down rate, I am quite sure he would not regard the provincial subsidies as very adequate security for the guarantees. In some cases the subsidies are already pledged.

Mr. BENNETT: Then, if they are already pledged, that answers the constitutional argument.

Mr. DUNNING: There might be some doubt as to the constitutionality of the pledge, but that they are pledged in some cases is unquestioned, as my right hon. friend, I think, knows. At any rate, on the question of principle I say this, that when the people of

one province—any one province—make such a request of the people of the whole of Canada they have a right to expect that the people of the whole of Canada, through their parliament, will make conditions with respect to the assumption of that liability. I do not think there is any escape from that position, and there is no need to read into it a sinister meaning, as my hon. friend from Lethbridge did, implying that all of us sitting in this parliament were puppets of some indefinite outside influence which he describes as the money power. Well, I doubt whether he would find half a dozen, no, he would not find one, of the 245 members here who would agree for a moment that this parliament was or could be subject to any sinister influence such as he imagines, trying to support his contention by reading anonymous communications.

That sort of thing, Mr. Speaker, does not get us anywhere in wrestling with these problems. The government of Canada is keenly desirous of cooperating with the provinces in effecting some regularized way out of the morass into which some of them have drifted. I do not join with those who blame the people of those provinces for the condition in which they find themselves. I know too well the economic and climatic conditions which have prevailed in some of those provinces, and which were largely responsible for their present plight. Of course, having taken some pride during ten years as treasurer of a province in holding its debt down to $50,000,000, which was as far as I thought it ought to go, I think I may be forgiven the horror which I experienced when I found that four years of another kind of government had trebled the debt. But the people of Saskatchewan maintained that government in power for four years, and as the right hon. leader of the opposition has well said, the people of a province have a right to whatever government they themselves vote for. That was a pretty expensive lesson, but I am quite sure the people of Saskatchewan have learned it. In the main, however, those western provinces, with which of course this resolution will chiefly deal, at least during the early years of the operation of any legislation which may be introduced under it, have had difficulties in an economic sense far greater than those affecting the older and wealthier provinces in central Canada and the maritimes.

I do not think I need go further with respect to the broad principle now under discussion. It is not intended to rob any province of its right of self-government, of its autonomy, but neither is it contemplated to do what my hon. friend from Lethbridge would have us do, that is, abdicate the authority of this parliament with respect to the control of the credit of the whole of the country. If the credit of the whole of Canada is extended to any province or provinces this parliament at all times must retain control of the extent to which and the terms upon which that credit is extended.

[Mr. Dunning.]

Mr. R. A. PELLETIER (Peace River): Mr. Speaker, I rise to speak to this motion with a great deal of uneasiness. I am not a constitutional authority, nor am I even a member of the legal profession. But I recall the words of the hon. member for Kootenay East (Mr. Stevens), in his first speech this session, when he said that this was the House of Commons and, therefore, the house of the common people. It seems to me that any resolution brought before us necessarily must affect the common people, and I like to identify myself with the defence of the common people, using that term in its proper sense.

After listening to the speeches on this resolution it seems to me that its importance cannot be minimized. For example, I have before me the words of the hon. member for St. Lawrence-St. George (Mr. Cahan), when he gave us a picture of the depth of feeling that existed at the time the British North America Act was drawn up. He said:

> The germs of the confederation idea came from the sixty thousand men of the French race and of the Catholic religion who were left practically deserted when the naval and military and civil authorities of France evacuated Quebec and Montreal, and left those people under the guidance of their clergy to work out their own destiny on the banks of the St. Lawrence river. The germs of the confederation idea were in the minds of the tens of thousands of men who left the New England states, and especially the state of New York, and came down and settled in western Nova Scotia, which then comprised the shores of New Brunswick to the Maine border, and there attempted to work out their own destiny as British subjects, enjoying, as they hope to do, the liberties and privileges which appertain to British citizenship.

He then went further and said:

> These men brought with them the ideas which germinated and found expression in the British North America Act, that act representing an expression of the profoundest emotions of these people and of others who had been born and bred in this country, all of whom agreed, irrespective of their political affiliations, to unite to carry the confederation program to success. And entertaining those ideas—because I have lived for a certain time of my life among men who would rather fight and die than see any changes made in the British North America Act which they regarded as contrary to their best traditions and their best aspirations—I look upon that act, I look upon the constitution of Canada as something that should not be amended frivolously or without impartial and anxious investigation and study.

I should like to refer also to the address of the Minister of Justice (Mr. Lapointe), who referred to the words used by Sir Wilfrid Laurier, who said:

—it is the duty of everybody in this house and in this country to take confederation as we find it, with its good points and its blemishes, and carry it to the end of the principle upon which it was established.

Having before me such utterances from such sources, and knowing it is the desire of us all to safeguard the constitution of Canada, I ask myself this question: As a common member of this House of Commons would it not be well first to know exactly what we seek to amend? It seems to me that before we can proceed to make any amendment to our constitution it should be possible for us common members of this house to have before us what we may term a certified copy of the act we are being asked to amend. I have made certain inquiries and have been told by one whose authority cannot be questioned that in his opinion such a certified copy is not to be found in Canada to-day.

Mr. McLEAN (Melfort): Who is the authority?

Mr. PELLETIER: If my hon. friend will look up what I have said he will run across that authority.

Mr. McLEAN (Melfort): Who is the authority?

Mr. PELLETIER: I have no permission from that authority to say who he is.

Mr. LAPOINTE (Quebec East): Monsieur X.

Mr. PELLETIER: No, it is not Mr. X. However, be that as it may, I simply raise this point, because it seems to me that a matter of such grave importance as we have been led to believe it is certainly demands most careful consideration.

There is another important fact which I would like to point out. The first part of my remarks stands for what it is worth; it is not for me to give any legal opinion on that point. I leave it in the hands of the Minister of Justice; to my mind he is quite capable of protecting the interests of all the Canadian people. I simply give it to hon. members for what it is worth; possibly it may deserve some consideration. However I hold in my hand the report of the dominion-provincial conference of 1935, and I notice, under the heading Constitutional Questions, at page 37, the following:

This conference, in the interests of the dominion and of the provinces, is of the opinion:—

(a) That amendments to the British North America Act are now and subsequently may be necessary and imperative.

I agree with that clause. If the time comes that the British North America Act no longer serves the needs of the people of Canada then it should be amended so as to be of service to Canadians at large. That, to my mind, is one of the purposes of government Then the next clause:

(b) That, as in the case of all the other self-governing dominions, Canada should have the power to amend the Canadian constitution provided a method of procedure therefor satisfactory to the dominion parliament and the provincial legislatures be devised.

(c) That the Minister of Justice convene at an early date a meeting of the appropriate officials of the dominion and of the provinces to prepare a draft of such method of procedure, to be submitted to a subsequent conference.

That, I understand, has already been done. But this clause follows:

(d) That a conference be held at an early date after such draft has been prepared to consider such a method of procedure.

This resolution is now brought before the house without the recommendation of the dominion-provincial conference being taken into consideration. There was recently a meeting of, in the opinion of the Minister of Justice, appropriate officials. I do not know what the results of their labours were, but I know they did not result in the calling of a conference, at an early date after such draft had been prepared, to consider such a method of procedure. But in view of the grave concern which has been expressed, not by myself—I do not regard myself as an authority—by the hon. member for St. Lawrence-St. George as well as by the late Sir Wilfrid Laurier, I simply ask myself this question: Is it a good thing to proceed with such an amendment before everything necessary is done and all those interested have been consulted?

We have also been told that as far as the resolution is concerned it is not of material importance at the present time because it does not mean any legislation just now; it is simply to seek power to obtain such legislation as might be necessary later on. The point is, however, that the first part of the resolution is perhaps the result of the demands of various provinces, but I have now the words of the Minister of Finance (Mr. Dunning) when he stated a few moments ago that the last part simply represents the idea of this government at the present time. There are two clauses which certainly do not represent the general opinion of all the provinces of Canada or of the people of Canada, and because they are both embodied in the same resolution it makes it very difficult to know how one should proceed.

When we speak of the last part of this resolution it cannot be said that it is the desire of any great number of people in Canada to-day. I have before me a resolution adopted, not by a social credit group, because I know that would have absolutely no influence on my hon. friends opposite or elsewhere, but a resolution which certainly must be taken into consideration, and which goes a good deal further than I could possibly go myself. It is from the Western Producer of April 30, 1936, a statement made by the United Farmers of Canada, an organization which has been recognized in the past, and which to my mind certainly deserves consideration. This is what they have to say about this proposed loan council:

> At the present time Premier Patterson is in conference with Hon. C. A. Dunning, considering whether Saskatchewan shall place herself under the financial domination of Ottawa, through the proposed loans council scheme. Before this is done, if not already too late, it is essential that we should realize what is involved. Previous warnings of the U.F.C. have gone unheeded, hence the present statement.
>
> If this proposal is agreed to it means that Saskatchewan will surrender her financial autonomy to the Minister of Finance, who will thus be placed in the position of a dictator in regard to any refunding plan and of all future borrowings of the province, and as collateral security Saskatchewan will be required to pledge all amounts payable by the dominion in the form of subsidies and other specific revenues. Once our government has placed itself in this position it cannot withdraw. Call it what we will, this is fascism pure and simple.
>
> In case subsidies are withheld, as may happen at any time under this plan, the immediate sufferers will be the most needy class in the community. Shortage of funds will cause the provincial government to begin to chisel at old age pensions, mothers' allowances, relief and other forms of expenditure, in an endeavour to make up the deficiency, and this would inevitably lower the general standard of living throughout the province. We trust Premier Patterson will have the courage to resist to the limit any effort at dictatorship from Ottawa.

As I said a moment ago, that is not the opinion expressed by some group of social crediters or anyone who might be said to be prejudiced against any plan of this nature, but a statement issued by the United Farmers of Canada.

Mr. EVANS: Cooperative Commonwealth Federation.

Mr. PELLETIER: They are people just like you and me.

Mr. McLEAN (Melfort): How many people issued that statement?

Mr. PELLETIER: I have read it exactly as it is reported in this paper.

Mr. McLEAN (Melfort): At a convention?

Mr. PELLETIER: The point is that they are people just like yourself and myself; they have reason to issue a statement like that and their remarks are entitled to consideration.

Now, to come to the point raised by the Minister of Finance. I remember not long ago the Minister of Labour (Mr. Rogers) said that he wanted to know where he was going to land before he jumped. On the other hand I recall the Minister of Finance saying, when we asked a certain question in this house, that it was such questions which brought fear into the minds of certain people and retarded progress in Canada. I would say this to the minister, that I believe early and provident fear is the mother of safety, and if there is in this resolution something which causes us to be apprehensive for the future the time for us to state those fears is now before this wedge has been introduced.

The second part of this resolution is based upon this fact: It is stated as a matter of principle, and it cannot be gainsaid that the dominion has every right to ask a province to submit to certain conditions if it desires to obtain a loan from the federal government. It is said that that position cannot successfully be attacked. But just reverse that for a moment. By what power, for example, do we go into any province of this dominion and impose taxation upon its people in order to spend it upon a harbour in eastern Canada or in western Canada? They are Canadians like us all, and as such they submit to this taxation. Then, why should it be necessary for the people of any one province, who are also Canadians, to be subjected to conditions such as these?

There are certainly a great many things to be said about this resolution, and it would be impossible for me to make such a brilliant plea as has been made by the right hon. leader of the opposition (Mr. Bennett), who, I realize, is one of the greatest legal authorities in this dominion, and who states clearly that he does not see the necessity for the latter part of this resolution. As a layman and, as I said at the beginning, as one of those common people in Canada to-day, I listened to his argument, and I am forced to the conclusion that the resolution lacks the logic which one would expect to find in the persons who drew it up. I am not referring to the Minister of Justice because I believe he was away at the time. Be that as it may, I do not see that we require constitutional authority in the future to do the things that we are seeking to do and that have been done

in the past. I have in my hand sessional paper No. 80, certified to be a copy of order in council P.C. 1135, dated May 12, 1936, and I find it contains this clause:

The minister further states that the said treasury bills of the province of Manitoba have been consolidated into one bill bearing interest at the rate of 4½ per cent per annum and that the total amount less repayments of $20,090.12, namely $5,874,037.37, matured May 1, 1936, respecting which the province has requested a renewal.

The minister recommends that under the authority of the Unemployment Relief and Assistance Act, 1936, the dominion grant a renewal of its guarantee of the foregoing treasury bill amounting to $5,874,037.37 for a period of one year from the first of May, 1936.

Looking at that with the eyes of a layman it seems to me to show definitely that the dominion government has guaranteed—call it what you like, give it any legal definition you like—the debts of one province, and now the government contends that it is necessary to obtain power from Westminster in order to be able to do these very things. That argument appears to lack consistency, and therefore we have every reason for being on our guard. Fear is the mother of safety, and we are compelled to ask why it should be necessary to seek power to extend the powers which the government already has.

As I said before, I cannot make the brilliant plea that was made by the right hon. leader of the opposition, who pointed out that by passing this resolution we would be admitting that we did not possess these powers in the past, or be admitting a sense of inferiority. That is one point I should like hon. gentlemen to consider.

I cannot, of course, go into legal details in connection with this resolution, but I would ask this question: Is it necessary for us in Canada to rush into some agreement without being given adequate reasons for doing so? I admit that at times it might be necessary to amend the constitution of Canada in order that it may better serve the interests of the Canadian people, but I say that such a change should not be made until we have had at least an opportunity of obtaining the opinion of all the people of Canada, who are, after all, deeply concerned in this matter.

Before sitting down I cannot help referring to an incident which occurred yesterday, and to which the Minister of Finance referred to-day, stating that a communication introduced into the debate yesterday was from an anonymous correspondent. I simply want to leave this impression on the house: I know definitely that that letter was in existence. The extract put upon Hansard has been withdrawn, but I do not wish any reflections to be cast upon the leader of this party (Mr. Blackmore) by people who suggest that he was trying to bring before the house something that did not really exist at all. It did exist, and it was brought before the house in good faith. That is all I have to say so far as that matter is concerned.

In conclusion I would ask, if we are going to amend the constitution of Canada to-day for what appears to the Minister of Finance to be good and sufficient reasons, might not the day come when the minorities in this dominion, who have been guaranteed certain rights under the British North America Act, might not find themselves in the same position that certain people find themselves in to-day? That must be left to the patriotism of those who are the government. All I suggest is that we do not know what the future holds. I sound this note of warning against trifling with such an important document as the British North America Act. To my mind there are serious objections—and I am speaking not from the point of view of a partisan but as a Canadian—to proceeding with this legislation, and I trust that the views I have put forward will receive consideration by hon. members of the house.

Hon. H. H. STEVENS (Kootenay East): Mr. Speaker, I would like to say just a few words in regard to this resolution which is of very grave importance, because otherwise my silence might be misinterpreted or misunderstood. Ever since this resolution appeared on the order paper I have been baffled as to the need of at least three of its provisions. I shall deal with the four sections of the resolution in a moment. But first let me say this, and I am induced to say it by some of the observations made by the Minister of Finance (Mr. Dunning): When he was speaking he asked in an impassioned manner: Where are we going? He insisted that we should ask ourselves where this was going to end, referring to loans to provinces and the present day method, or the method of recent times, of dealing with the monetary relations between the provinces and the dominion. Then he added this: The dominion will soon be the majority creditor of the provinces, and he insisted that that condition, which he suggested we were rapidly approaching, was so serious that it called for definite and serious treatment at the hands of parliament. I asked myself this question: Assuming that the Minister of Finance was quite right in his diagnosis of the situation, does this resolution as it now stands before us adequately meet the situation which he so graphically described.

In the first place I would say to the Minister of Justice (Mr. Lapointe) in particular and to the right hon. the Prime

Minister (Mr. Mackenzie King), that what we are doing here is amending the British North America Act. That is the effect of the resolution. That is a tremendously important matter. It is something which has been rarely done. It has been done on occasion, but it is what might be termed a major action on the part of this parliament. That being so—and I do not think it will be disputed—ought not a major action on the part of this parliament in dealing with a constitutional matter achieve a major result, that is, if we are justified in taking action at all? The question which occurs to my mind is whether we are justified in making or asking for an amendment to the British North America Act.

This brings me to the resolution itself, and I shall try to be brief. Like the Minister of Finance, I disclaim any capacity or ability to discuss this matter in a constitutional or legal way. I am not in my observations presuming to do that. Dealing first with section 1 which refers to the question of taxation, in the first place, I do not think it solves the outstanding problems facing the dominion and the provinces. Let me illustrate what I mean. One of the most perplexing difficulties facing the people of Canada to-day—I am talking about the taxpayers—is the dual power to impose income tax. That is not provided for in this resolution. We are not dealing with that. It is something with which we ought to deal in making a major amendment to the British North America Act. I think it is far more important than what is contained in the resolution. That is one problem.

Let me turn to what is being done by the resolution and ask if this parliament really appreciates the extent to which we are going in this proposed subsection 2A to section 92 of the British North America Act. What we are proposing to do is to empower the provinces to impose indirect taxation in the form of a tax on retail sales. That is a turn-over tax on retail sales. I suggest that that places in the hands of the provinces the power to impose a tax which will make it impossible for the dominion to continue the sales tax as we now have it as a source of revenue. If we are going to give the provinces this power, then I think we ought to say to parliament and to the country that when this power is exercised by or made available to the provinces, the parliament of Canada will abandon the sales tax system. I venture the opinion—I claim the right to express an opinion because this is within my own sphere; it is not legal—if this power is taken advantage of by the provinces, such a burden will be placed upon commerce that it will be impossible to carry on.

[Mr. Stevens.]

Supposing the provinces impose a two per cent retail sales tax right across the country. That would be a terrific tax. I question whether the provinces realize the magnitude of such a tax. Another point is this: If you give to the provinces such a power without restriction—it is restricted only as to liquor, tobacco and so forth—the power is unlimited as to the extent to which they can go and they might impose a tax of four, five, six, seven or even ten per cent. In other words, a province in dire distress, under pressure of need, might go to an extent which would be ruinous to business. Rather than give the provinces a power of this kind, I think we should have endeavoured to come to an understanding with them on the question of income taxes. The minister very properly pointed out the advantages of having local authorities impose taxes as they were closer to the people and could supervise expenditures, but so complex has business become that I think he will have to abandon that principle in favour of such a proposition as I am now going to make. Supposing we could come to an understanding with the provinces as regards income tax that they should abandon the field of income tax to the federal authorities?

Mr. DUNNING: We tried that.

Mr. STEVENS: The minister laughs before I make my proposition.

Mr. DUNNING: Not at the hon. member.

Mr. STEVENS: The provinces would abandon the field of income tax provided the dominion would collect the tax and divide with them on a fifty-fifty or some other basis. The dominion then, being the one income tax imposing body, could raise that tax to the level of the tax imposed in Great Britain or in other countries where circumstances prevailing are similar to ours. This could be done when it was known that there was not a second authority which could impose another income tax. In other words, we could gauge what would be the justifiable, equitable and workable level to which we could raise the income tax. As matters are to-day, we are forced to recognize that some of the provinces have an income tax which makes this action impossible.

I submit to the minister that an indirect retail sales tax virtually means a turn-over tax. Ever since we imposed the luxury taxes in 1917 I have been of the opinion that it was incompatible with equity or practical administration to impose both a sales tax and a turn-over tax. It should be one or the other, and it should be under the juris-

diction of this parliament. If we give the authority to the provinces to impose a retail sales tax, we should abandon the principle of a federal sales tax.

I have no desire or intention to discuss sections 2 and 3 from a constitutional standpoint. I was deeply impressed with the argument made by the right hon. leader of the opposition (Mr. Bennett) and, as a layman, I am inclined to agree with his argument. I believe and I have always believed that the federal parliament had absolute power to make agreements with the provinces, and I believe that the provinces have the power to make agreements with this parliament or with the government of Canada. Therefore I agree with the argument of the right hon. leader of the opposition that it is not necessary to make amendments to the British North America Act in order to make loans or advances to the provinces. I am not going to labour that point as it has been dealt with so ably and I shall leave it at that.

I also agree with the point raised by the right hon. gentleman that the language used in this resolution implies that the provincial legislatures, on the one hand, and the dominion parliament on the other, have been acting in an unconstitutional manner. I do not think we should place in any resolution to amend the British North America Act any language that would leave any question whatever as to the constitutionality of our actions in the past. I urge very strongly that the Prime Minister (Mr. Mackenzie King), the Minister of Justice (Mr. Lapointe) and their colleagues should give careful consideration to this point.

May I say this to the leader of the government? In offering these observations, I do not do so as a reflection upon the government. This is an extremely difficult matter with which to deal and I am not criticizing the government personally for any imperfections which may appear. I am sure the Minister of Justice will respond to this advance. Neither he nor his staff should feel there is any reflection upon them because these suggestions are made. I appeal to him carefully to study the suggestions that have been put forward from all sides of the house, and, I imagine, from some of his own supporters, as to redrafting the resolution.

Mr. LAPOINTE (Quebec East): Oh, no.

Mr. STEVENS: The Minister of Justice says, oh, no; well, I will leave it at that.

Mr. LAPOINTE (Quebec East): We have been working on the resolution for three months.

Mr. STEVENS: Let me assure the minister that there is no desire to reflect upon his work or that of those who worked with him, but I cannot agree with the form in which the resolution now appears.

Let me deal with the point raised yesterday by the leader of the social credit group, the hon. member for Lethbridge (Mr. Blackmore). Part of the language in section 2 gives me some concern, and I should particularly like the Minister of Justice to listen to the arguments of a layman on the point. Again I am not arguing it legally, but I am raising what is at present a doubt in my mind. The minister may be able to reassure me, and, if so, I shall be pleased to hear him. The hon. member for Lethbridge raised a question about this language:

> The parliament of Canada may authorize the government of Canada to guarantee the payment of the principal, interest and sinking fund of any securities (hereinafter called "guaranteed securities") which any province of Canada may from time to time make or issue, and, subject to the provisions of this act, may prescribe the terms and conditions upon which any guarantee so authorized shall be given, and the provisions of this act shall, in the event of any such guarantee being given, apply and have full force and effect—

I ask the minister particularly to follow the next few words:

> —notwithstanding anything contained in the British North America Acts, 1867 to 1930, the British North America Act, 1907, the parliament of Canada Act, 1875, the Canada (Ontario Boundary) Act, 1889, the Canadian Speaker (appointment of deputy) Act, 1895, session 2, or any acts, orders, rules and regulations passed or made thereunder or pursuant thereto, establishing a province or admitting a colony or province into the union, or affecting the constitutional relationship between Canada and a province.

That is sweeping language. In other words, my interpretation in the plain ordinary language of a layman is that it authorizes the government of Canada to make loans to a province, but—the minister shakes his head—

Mr. DUNNING: To guarantee payments.

Mr. STEVENS: The correction is justified; it authorizes the government of Canada to guarantee principal and interest, but such action or agreement, no matter what it is—

Mr. DUNNING: Subject to certain provisions.

Mr. STEVENS: —yes, will be subject to the provisions of this act, and all these other acts, powers, authorities and safeguards whatsoever they may be, are not effective. The Minister of Justice laughs; am I wrong?

Mr. LAPOINTE (Quebec East): It is the usual language in all amendments which have

been made to the British North America Act. You must refer not only to the original act, but to amendments which have been made thereto.

Mr. STEVENS: That is not the point. The point I make is that any agreement made with a province will be subject to the new act, but the province may be now enjoying some rights; I do not say what they are, because heaven knows there are so many acts I could not know them; they cover the whole history of confederation. The province may enjoy some rights under some of these acts which may be swept aside.

I ask the Minister of Finance a practical question: Supposing a province approaches him this coming summer or winter and states that it is up against it; that it has maturities which it cannot meet. He knows the Dominion of Canada cannot pay its maturing obligations by actually meeting the payment. Of course the dominion can renew the obligation and use its credit to overcome the difficulty and postpone payment. But we could not meet it. If a province finds it is in the unhappy position where an obligation which it cannot meet is maturing, where can it go? It may go to the minister or to the bank. Now, what happens? It comes to him and the minister prescribes the terms and conditions—

Mr. DUNNING: No; the hon. member is wrong, because the legislation of this parliament pursuant to these constitutional amendments will set out the terms the Minister of Finance may impose.

Mr. STEVENS: Yes, but let me point out that the language of the resolution indicates that there is some doubt about past action, a point which has been ably covered and to which objection has been taken this afternoon. It points out that there is some doubt, but that it will be brought to absolute finality by the passing of this amendment to the British North America Act. Any legislation the minister introduces must be controlled, dominated and limited by the British North America Act.

Mr. DUNNING: That is correct.

Mr. STEVENS: There is no question about it. Now, I proceed with my point: A province may find itself in dire straits. We know what a human being will do when he finds himself in that position. I suggest that provincial ministers are not different from business men who find themselves confronted with a maturing mortgage, because that is what this is. Those ministers come to the federal Minister of Finance asking for a guarantee of $10,000,000, $20,000,000, or whatever the amount may be, and the minister replies: Yes, I will give that guarantee on condition that you go to such and such a bank or such and such an insurance company, or this, that or the other private organization, and give them certain securities. That is a possible course.

Now I come to section 4. Why do we have this clause? In the resolution we find that the government of Canada may withhold any payment to a province, a point which has been dealt with this afternoon. But further, they may "effect payment in whole or in part of any such grant by payment direct to a creditor," and so on. In the first place the minister may impose any conditions he may desire as to the form of the loan or directions in connection therewith. I am not suggesting that this would be done improperly; it may be done in the best of good faith or good judgment. But it may involve a transaction through a bank, an insurance company or some other financial institution.

Time goes on. It may be a short term obligation. It comes due and the provinces are in no better position. Now, under section 4 the minister may "effect payment in whole or in part of any such grants by payment direct to a creditor." There again I point out that by removing from the province the protection, if any, under the long list of acts cited in section 2, the government are placing the province for its whole future under the control of the Minister of Finance.

Mr. DUNNING: In his argument the hon. member persists in regarding this constitutional amendment as if it were the statute of Canada which will later on be introduced, upon which occasion it would be perfectly proper to discuss the authority this parliament will give to the government of Canada. But I can assure the hon. member that I do not intend to become responsible for the introduction of legislation conferring upon me any such powers as those he imagines, and they cannot be exercised without legislation.

Mr. STEVENS: All I can say is that the government has power now to bring in a bill to give them all the rights of control they may wish in making loans to any province. They have that, without this amendment at all.

Mr. DUNNING: That is a matter of opinion.

Mr. STEVENS: I do not think there is the remotest doubt about it.

Mr. DUNNING: I am not a lawyer.

Mr. STEVENS: What I am trying to point out to the minister is that, if there is any

justification for the language which appears here and there through this act, making it retroactive, clearing up doubts about past actions of this parliament, he must accept the position that any legislation he introduces must be in conformity with this act.

Mr. DUNNING: Of course.

Mr. STEVENS: I am quoting the resolution, which will be the act.

Mr. DUNNING: This is a constitutionally limiting act; that is all.

Mr. STEVENS: Certainly this is a constitutionally limiting act, and my hon. friend will have to found his legislation upon it. But let me proceed. The resolution goes on to say this:

> The government of Canada may, ... out of any revenue received or collected by the government of Canada or any department or officer thereof for or on behalf of the province, make payment direct to a creditor of the province of any amount owing to such creditor....

The minister may say that he will never do that. I am not saying that he will, but I am pointing out in the first place that the government have removed from the provinces any rights they may have under existing legislation, and in the second place they are giving a right or a power to a federal finance minister or government to effect payment direct to a creditor of a province of any amount owing to such creditor under the guarantees, without consulting the province at all. The minister will say that he would never do that, and I do not think he would.

Mr. DUNNING: This does not contemplate it.

Mr. STEVENS: But it is there. I am not a lawyer, nor am I reflecting in the slightest degree upon lawyers, but I say that if that meaning is not in the clause I do not know the English language. Some of us have been in parliament long enough to know from experience that, after someone has assured us that thus and so is not meant, we take up our newspaper six months, two years or even ten years afterwards, and we find that the courts have interpreted the language entirely differently from what we were led to believe was meant. You cannot read that language and say that a minister of finance in a federal government has not power to effect payment in whole or in part of any such amount by payment direct to a creditor. The federal minister, if he is so minded, can pay direct to the creditor without consulting the province.

Mr. DUNNING: That is the arrangement. The provinces do not have to come into it.

Mr. STEVENS: If men, with both hands tied, and faced with disaster in the provinces, are told that they can accept or reject a ten or twenty million dollar loan or guarantee, will they not take it? Tell me of any bankrupt business man or other private individual, any province or municipal government that would not do so. The hon. member who is mayor of Vancouver (Mr. McGeer) and who has spoken here frequently can tell of the dilemma with which some of these cities are faced. When they come to the federal minister and say, "Here is our position; we need five or ten million dollars," and the minister says, "All right, we will give you five or ten million dollars, but these are the only conditions upon which the loan can be made," I do not care twopence what the minister's will may be; those will be the conditions.

Mr. DUNNING: Is it unfair?

Mr. STEVENS: No; I will say this to the minister—

Mr. DUNNING: Is it unfair?

Mr. STEVENS: I will limit my answer to this, that without knowing what rights the provinces are surrendering under section 2, I cannot say whether it is fair or not. Parliament ought not to pass this resolution until its members are fully aware of what rights the provinces may be surrendering under the "notwithstanding" clause of section 2.

Mr. DUNNING: None.

Mr. STEVENS: None? I should not like to say that. I am under the impression that they have certain rights. I am not prepared to cite them. I am not a constitutional authority, but from arguments I have heard on the matter I know there are certain rights accruing to the provinces—one was cited here this session—which enabled them at least to resist any, shall I say ruthless, action on the part of the dominion government. Do not conclude that I am suggesting that such action will be taken by the present government, because this part of the legislation will probably not be effective for ten or possibly fifteen years, and it is not likely that my hon. friends who are now on the treasury benches will be there at that time. I do not care what government—

Mr. DUNNING: Let us say, any government.

Mr. STEVENS: I submit that until we know what we are surrendering we should not pass this resolution.

Mr. DUNNING: You are surrendering nothing.

Mr. STEVENS: There is another point. In section 4 we make the dominion the sole judge as to the rights or merits of a creditor. It is easy to understand a condition where, a bank or some other great financial institution having made a loan, guaranteed by the dominion, to a province, in the opinion of the people of the province, supporting their government by an overwhelming vote, that institution might be held to be unreasonable in their attitude and unfair in their treatment of that province.

Mr. DUNNING: That is not the point.

Mr. STEVENS: Wait a minute. The minister always jumps ahead of me. My mind is not quick enough for his nimble intelligence. I say that a condition of that kind might arise. But under this legislation the government of Canada is really the sole judge of whether the creditor is right or the province is right.

Mr. DUNNING: No; whether a default has occurred.

Mr. STEVENS: What is default? There is such a thing as technical default. I submit to the minister that such a thing as technical default has very little merit. Let us come face to face with conditions. In 1937, with four or five hundred million dollars due, are you going to pay it? The minister knows perfectly well we are not going to pay it.

Mr. DUNNING: Surely we are.

Mr. STEVENS: The minister should not quibble. He will pay it by using the credit of Canada to renew it, or make another issue.

Mr. DUNNING: We shall borrow it and pay the existing holders.

Mr. STEVENS: Let us get down to individuals. If I have a mortgage coming due to-morrow, and I happen to have credit enough to borrow a similar sum, and so meet the mortgage, I am not paying it.

Mr. DUNNING: Of course.

Mr. STEVENS: It is simply a renewal of the mortgage.

Mr. DUNNING: But it is not a default.

Mr. STEVENS: I say this, that there might be circumstances in connection with a province where they could not pay, or there might perhaps be some term in the arrangements which could be legally interpreted in such a way that a technical default would arise. There is no doubt in my mind that the people of this country want to pay their debts. That impulse is deeply rooted in the hearts and minds of the Canadian people. But they also have a feeling that there is a degree of injustice in the weight of the debt, due to higher rates of interest and other circumstances. I was a little surprised at the refusal of Alberta and British Columbia to accept the proposals of the minister, but as I studied this resolution I began to appreciate their feelings of alarm, and to realize that they had good grounds. It is not that an individual minister or the present government is going to be unfair or unjust, but it is the apprehension which enters their minds as to the future if they place themselves under the terms of this legislation. I do not blame them for this feeling, and I submit in all earnestness that this resolution should be very carefully reconsidered before the government asks parliament to pass it. And when the parliament of Canada ask for an amendment to the British North America Act there should be a reasonable degree of unanimity with regard to it. There should be at least assurance not that some particular minority is safeguarded but that the change carries the judgment of the people of this country, and if two provinces have already indicated their alarm or fear—

Mr. DUNNING: They are both agreeable to this legislation passing, and have so expressed themselves.

Mr. STEVENS: Well, the minister knows, and I have to accept his word in that regard.

Mr. DUNNING: I assure my hon. friend that is so.

Mr. STEVENS: I am not disputing it for one moment; it is news to me; that is all I can say But I would say that if there is any body of opinion expressed in this house; if there is an apparent division of opinion, there should be great hesitancy in asking for an amendment to the British North America Act. I assure the minister and the government that I am not opposing this resolution on any frivolous grounds. I earnestly feel an amendment should not be asked which purports to deal with a major outstanding difficulty between the provinces and the dominion unless it adequately meets that problem, which I do not think the resolution does. In the second place I submit that sections 2 and 3 are not necessary, because I fully accept the argument of the right hon. leader of the opposition (Mr. Bennett) that we already have the power to make these agreements. In the third place I submit that in section 4 we are going too far in placing in the hands of the

federal government the absolute right and power to determine, in advance of the problem arising, whether the creditor or the province is right in any dispute between the two. I think that is tying the hands of the provinces altogether too much, because the only time a province will take advantage of this legislation will be under conditions of distress, when it will be inclined to accept almost any kind of agreement that the minister likes to dictate.

Hon. ERNEST LAPOINTE (Minister of Justice): Mr. Speaker, the proposal embodied in this resolution, as all will agree, has met with strong criticism, but the various angles of that criticism, its diversity and even the contradictory nature of it, show that most, if not all, of the criticism is unwarranted.

First, may I say a word as to the method of securing this amendment. I confess that I was surprised to hear my good friend the hon. member for St. Lawrence-St. George (Mr. Cahan) complain that we are asking to amend the British North America Act according to the old method and the old practice of doing so. But I was still more amazed to hear my hon. friend from Winnipeg North Centre (Mr. Woodsworth) blaming me and the government for not having resolutions of all the provincial legislatures of the dominion before presenting this measure.

Mr. WOODSWORTH: I must correct that impression; that was not my point at all. I congratulated the minister upon having proceeded to do this by a simple resolution, but I said that at the same time there was no reason why we should not do other things in a similar way.

Mr. LAPOINTE (Quebec East): I did not understand my hon. friend in that way, and I was tempted to use the language so brilliantly used by my hon. friend from Nanaimo (Mr. Taylor) the other day, "quantum mutatus ab illo." However my hon. friend explains that that is not what he had in mind. Then my right hon. friend the leader of the opposition (Mr. Bennett) said, "Well, the government is still trying to amend the British North America Act by applying to the imperial parliament for a bill in order to do so."

Mr. BENNETT: I never questioned that. That is the only way to do it. My hon. friend misunderstood me.

Mr. LAPOINTE (Quebec East): My right hon. friend said that if we were in the United States—

Mr. BENNETT: I said—

Mr. LAPOINTE (Quebec East): I am going to say what my right hon. friend said. "If you were in the United States," he said, "an important amendment of this kind would have to be made by first having a bill passed by the congress of the American union, and then this amendment would have to be approved by a certain number of the constituent states. If you were in Australia you would have to do the same thing, and would even have to submit the amendment to the people by way of referendum. If you were in South Africa," he said, "there would be another procedure, but here you content yourself with the introduction of a resolution in this house, asking the imperial parliament to make the change."

I agree with the right hon. gentleman that this is not the best way for a country like Canada to amend its own constitution. For years and years I have been pleading for a change in that method, and I am pleased to see that apparently there are converts to the ideas which I have tried to express frequently inside and outside this house. I think a country like Canada should have the power to amend its own constitution when the necessity arises. I think Canada is the only country of its size and the only federal country in the world which does not possess that power, but we do not possess it. Somebody—and I think it was the right hon. gentleman himself—spoke of subordination because of this resolution, and the inferiority that it implied. I am not responsible for that; at the present time it is the only way for us to effect a change in our constitution. I will help as strongly as I can to change that method, but as long as the situation is as it is to-day we have to resort to this method, namely, to have both houses of parliament adopt an address to His Majesty the King, asking the imperial parliament to agree to an amendment to our constitution.

As you know, Mr. Speaker, a conference has studied this question, and during the last session of parliament a committee of this house also considered it. A subconference was called to study this problem and a committee has been appointed for the purpose of drafting a new statute and doing all that is necessary in order to attain the end which most of us have at heart, but that will come only after the work is completed. Surely, after what has been said in this house since yesterday afternoon as to the extreme importance of anything that changes the constitutional act of Canada we must have the necessary time to do what is essential to be done in the matter. Nothing will be done before it is submitted to every province of the dominion and then to the parlia-

ment of Canada for its approval. But meanwhile we cannot mark time and stand pat when necessity arises to effect some changes, as is the case in the present instance. If we are right—of course every hon. member of the house is entitled to his own opinion about that—in thinking that the provinces are not unfair in their claim, their request, that their field of taxation should be enlarged and broadened, if their demand appeals to the majority of the house as it appeals to the government; if it is right to believe that it is essential for them to have a little more revenue without having to fight to uphold the legality of their taxation in all the courts of the land, this is the only way of coming to their rescue, and we have finally come to the conviction that we should help the provinces in that respect.

Now it is said that the provinces have not been consulted. Well, they have been consulted at least as much as in the case of any other amendment to the British North America Act which has been made since 1867, and a good deal more than in the case of most of them, because, if I am not mistaken the only case in which the provinces were consulted was at the dominion-provincial conference that preceded the increase of the subsidies in 1907. Then the right hon. gentleman called the provinces into a conference in 1931 prior to introducing in this house an address seeking the enactment of the Statute of Westminster, in which the provinces were interested.

Mr. BENNETT: And there is the signature of the representative of every province and a memorandum in the archives of the department.

Mr. LAPOINTE (Quebec East): Yes; the delegates, the premiers or their representatives, came here and they agreed to that, as was done in this case. Not any more in 1931 were the legislatures called upon to enact resolutions of approval. Not in 1907 were there resolutions of the legislatures, and I think these are the only two cases in which the provinces were consulted and their approval asked for. In every other instance the amendments were made at the instigation of the parliament of Canada. In most cases I admit that the provinces may have had only distant interests in the amendments which were made.

Mr. BENNETT: In the Saskatchewan-Alberta amendments that were made in 1930 we passed the same sort of address here as we are passing now.

[Mr. E. Lapointe.]

Mr. LAPOINTE (Quebec East): Yes, the same thing. I admit that this was done while we were at the head of the government as it was done when my right hon. friend was leading the government of Canada.

But there is more. Why talk of the provinces being consulted? They have asked for this thing, at least part of it, the first part of the resolution; they are keen on securing this power of wider taxation. They have been imploring this government and this parliament to give it to them, not only this year but for many years past. And as far as the second part of the resolution is concerned, they have agreed to it. I was a member of the conference and the subconference, and every premier and provincial treasurer there was asked whether he was in favour of parliament securing this power. As I said yesterday, most of them declared that they would be opposed to coming under the scheme themselves, but they were all in favour of the machinery under which the dominion could guarantee the bonds of the provinces by taking securities, and getting remedies, because this is the important part of the resolution. The hon. member for Kootenay East (Mr. Stevens) speaks of sections 2 and 3; those sections are there just to lay the basis, but it is section 4 of the resolution which is the most important, and it is the opinion of the law officers of the country that an amendment to the British North America Act is necessary to enable us to get those remedies.

At six o'clock the house took recess.

## After Recess

The house resumed at eight o'clock.

## PRIVATE BILLS

CONSIDERED IN COMMITTEE—THIRD READINGS

Bill No. 25, to incorporate The Economical Mutual Fire Insurance Company.—Mr. Gray.

Bill No. 39, respecting the Northern Trusts Company.—Mr. Maybank.

Bill No. 43, to incorporate The Equitable Life Insurance Company of Canada.—Mr. Gray.

Bill No. 48, respecting the Pension Fund Society of the Bank of Montreal.—Mr. Jacobs.

## BRITISH NORTH AMERICA ACT

PROPOSED AMENDMENT RELATING TO TAXATION AND GUARANTEE OF PROVINCIAL DEBTS

The house resumed consideration of the motion of the Minister of Justice (Mr. Lapointe) for an address to His Majesty the

King praying that a measure be submitted to the parliament of Great Britain and Ireland to amend the British North America Act with respect to taxation and guarantee of provincial debts.

Hon. ERNEST LAPOINTE (Minister of Justice): Mr. Speaker, I have said that the criticism of the resolution before the chair has been of a contradictory nature. For instance, during the course of the debate the provinces have been alternately represented as being allies who were being ill treated and sacrificed by the central government, and almost immediately afterwards as being aggressive enemies wanting to grab everything. They were alternately lambs and tigers. They have been represented as trespassing upon the rights of others. As the hon. member for Broadview (Mr. Church) said, they were wanting to take away what really belonged to the municipalities, such as the amusement tax. Immediately afterwards he said that the whole resolution was a gross invasion of the rights of the provinces. It has been stated that they already have the power which it is sought to grant them by this resolution, and then in the next sentence the danger of granting that is pointed out.

Mr. BENNETT: Not the danger of granting that, no.

Mr. LAPOINTE (Quebec East): I am not referring just to my right hon. friend although I shall come to him in a minute or two. The hon. member for St. Lawrence-St. George (Mr. Cahan) was quite strong in his denunciation of the provinces and provincial methods of taxation. If I am not mistaken, he used the word "probity" towards the end of his remarks. My right hon. friend said that the whole thing appeared to be lightly done; then he went on to say that it was done in a loose way. I know he did not mean to be offensive, but that is what he said. I think that was a harmful statement to make. I do not think there has ever been a resolution of this kind introduced in this House of Commons which has been surrounded with more precautions than this one. The subject matters of this resolution were discussed at great length at a dominion-provincial conference, they were discussed in a subconference of that conference, and in committees. The drafting of the resolution was carried out by the law officers of the dominion who had the cooperation of the attorneys general and law officers of the various provinces. The drafting of the resolution was changed because of objections which were made from time to time. I do not think it is fair to say that the necessary care was not given to its preparation. I do not resent that statement for my own part—I take full responsibility for this resolution—but I do resent the statement on behalf of the officers who worked so hard in the preparation of this matter and on behalf of those who cooperated in order to make it as complete and as lawful as possible. As I said, I think such a statement on the part of my right hon. friend is harmful. He must have realized this afterwards when other members of the house said that they did not know themselves, but they had heard the right hon. gentleman say that this had been done in a bad and loose way. Of course, this will be repeated elsewhere. I do not think it is a fair statement to make and I think it would be better for a distinguished gentleman like my right hon. friend not to cast reflections of this kind on a piece of legislation that everybody knows has been given all the care justified in its preparation.

My right hon. friend says that there is no necessity to widen the field of taxation for the provinces because they already have the right to tax commodities by way of a retail sales tax. They have had this right since the decision of the privy council in the British Columbia and Kingcome Navigation Company in 1934. At that time the privy council upheld the legislation of British Columbia after having declared void and invalid the legislation passed for the same purpose a few years ago but in another way. The privy council stated that the last piece of legislation was direct because it was taxing not the article, fuel oil in this case, but the consumer. Everybody in British Columbia who consumed fuel oil would be taxed. The provinces claim, and I think rightly, that it would be very difficult to apply the same sort of tax to other commodities which they might want to tax; that the method used by British Columbia would make it a very expensive tax to collect. They thought it would be much better if the same purpose could be achieved in another way, and I do not see why this right should be refused to them.

I must say that I was surprised when I heard my right hon. friend make a certain statement yesterday. When he saw the utter surprise on this side he admitted later on that it was not his strongest argument, but at the time he advanced it as a very serious one. He said that by giving to the provinces this right of an indirect retail sales tax we were taking it away from the Dominion of Canada.

Section 92 states:

> In each province the legislature may exclusively make laws in relation to matters coming within the classes of subjects next hereinafter enumerated.

This would come among those subjects, and consequently it would give the exclusive power of retail sales taxation to the provinces.

But section 91 is the section which gives the powers to the federal parliament, and in that section we find this statement:

It shall be lawful for the queen, by and with the advice and consent of the Senate and House of Commons, to make laws for the peace, order and good government of Canada, in relation to all matters not coming within the classes of subjects by this act assigned exclusively to the legislatures of the provinces; and for greater certainty, but not so as to restrict the generality of the foregoing terms of this section, it is hereby declared that (notwithstanding anything in this act) the exclusive legislative authority of the parliament of Canada extends to all matters coming within the classes of subjects next hereinafter enumerated, that is to say,—

3. The raising of money by any mode or system of taxation.

This power is given exclusively to the parliament of Canada by section 91. Then at the end of the section appear these words:

And any matter coming within any of the classes of subjects enumerated in this section shall not be deemed to come within the class of matters of a local or private nature comprised in the enumeration of the classes of subjects by this act assigned exclusively to the legislatures of the provinces.

Surely the parliament of Canada has the right to raise money by any mode or system of taxation, and whatever is stated in section 92 is specifically mentioned not to affect what is stated in section 91. I am sure that any hon. member, whether a lawyer or a layman, may read the British North America Act, either separately or as it is found in the book of rules, and come to the conclusion that at least on this point my right hon. friend opposite was certainly wrong in the statement he made last night. Indeed, if he were right, even now we would have no right to direct taxation. No person claims that we have not that right.

As has been stated, this tax may be delegated to the municipalities, and of this my right hon. friend, and more particularly the hon member for St. Lawrence-St. George are very much afraid. They are afraid that the provinces may empower the municipalities to impose retail sales taxes, and they have fears as to the consequences. Well, the right to use a power does not necessarily mean an abuse of that power. I hope in the future, as at present, legislatures may be composed of men of common sense, and we must assume that they will act as men of that kind would act. The same argument has always been raised against any new move or reform. When self-government was first sought there were always some who were afraid of the use which would be made of it by those who did not have it before. Even after the conference of 1926 I listened in this house to debates in which some hon. members expressed their fears that the new powers claimed by the dominion parliament might be abused. I think the hon. member for St. Lawrence-St. George was one of them. In connection with the shipping act, dealt with in the report of the imperial conference of 1926, he asked me this question: "If you eliminate Canada from the control of the provisions of the shipping act, by what will you replace them?" I answered, "We will replace them by Canadian laws made by Canadian legislatures and a Canadian parliament." I believe the same applies to-day. Why be afraid that the provinces will not use their powers of taxation in a straightforward, honest, correct and useful way?

I now come to the second part of the resolution, a part which my right hon. friend says is not necessary because we already have the powers it seeks. Of course this does not harmonize with the fears of the hon. member for Lethbridge (Mr. Blackmore), or those which the hon. member for Kootenay East (Mr. Stevens) expressed this afternoon. If we already have the powers indicated in the resolution there can be nothing so dreadful about adopting its terms. May I repeat that the main part of the second division of the resolution is found in section 4. Sections 2 and 3 appear only to lay the foundation for section 4, and are included in order that the whole structure may be clear and that everybody may understand clearly the amendments being made. Notwithstanding any views to the contrary, we needed the amendments more particularly to effect the remedies mentioned in the resolution which would protect the Dominion of Canada on guarantees given to the provinces.

Mr. BENNETT: But they are by contract with the provinces.

Mr. LAPOINTE (Quebec East): Yes, by contract with the provinces. Let us consider subsidies. The principal of these is payable to the provinces by virtue of the section in the constitution which states that the subsidies will be payable yearly to the provinces for the support of governments and legislatures. No doubt local purposes mean provincial purposes, and the provincial legislatures might appropriate every year some of the subsidies for the payment of interest or even the principal of bonds. At the same time the constitution contemplates that the governments of the provinces should each year receive the revenues so provided, and I think it doubtful—the law officers of the crown think it cannot be done—that with the act

as it is a legislature could validly appropriate future payments so as to deprive a government of the future of this revenue.

That is where the situation is complicated, and it applies equally to taxation. No doubt the government of any province may apply to-day the revenue of a special tax for the purpose of paying interest on bonds or even the principal of bonds. But I fail to see in the act any authority to bind future legislatures, and if there is not the amendment which is being sought through the present resolution, the law which appropriates the revenue of that tax for the payment of that bond may be repealed at any time by any legislature of a province. Those, I repeat, are the views of the law officers. I have a great respect for the opinions of my hon. friend from St. Lawrence-St. George. I have great respect and admiration for those of my hon. friend the leader of the opposition. But when it comes to entering into a project which may involve millions, nay, hundreds of millions of dollars to the treasury of the dominion of Canada, surely it is the part of wisdom and of prudence to do what is being done to-day, when the law officers of the dominion are of this opinion.

My right hon. friend quoted this afternoon section 118 of the British North America Act, and upon that based his contention that the provinces had the power at the present time to apply, or to let the dominion apply, part of the grant or subsidy for the payment of those bonds.

Mr. BENNETT: Payment of interest.

Mr. LAPOINTE (Quebec East): Payment of interest. I am going to present certain quotations to show that the dominion has the right to deduct a certain specified sum for a special purpose mentioned therein, and that strengthens my contention that they have no right to do that for other things. By section 111 of the British North America Act, Canada became liable for the debts and liabilities of each province existent at the time of the union. Section 112 reads:

> Ontario and Quebec conjointly shall be liable to Canada for the amount (if any) by which the debt of the province of Canada exceeds at the union sixty-two million five hundred thousand dollars, and shall be charged with interest at the rate of five per centum per annum thereon.

The same provision applies to Nova Scotia:

> 114. Nova Scotia shall be liable to Canada for the amount (if any) by which its public debt exceeds at the union eight million dollars, and shall be charged with interest at the rate of five per centum per annum thereon.

There is a similar provision for the debt of New Brunswick. But what does section 118 say? It enumerates the grants that Canada will make to various provinces, the fixed grants, then the grant per capita, and it says:

> Such grants shall be in full settlement of all future demands on Canada, and shall be paid half-yearly in advance to each province; but—

Mark these words:

> —the government of Canada shall deduct from such grants, as against any province, all sums chargeable as interest on the public debt of that province in excess of the several amounts stipulated in this act.

Only these sums mentioned in sections 111, 112, 114 and 115, by section 118 may be retained in deduction of the grant that is payable yearly to the provinces.

Mr. BENNETT: But section 118 has been amended.

Mr. LAPOINTE (Quebec East): I am coming to that. My right hon. friend, in answer to my hon. friend from Selkirk (Mr. Thorson) says: Yes, as far as the original provision is concerned, but it has been amended. In 1907 this was amended for the purpose of increasing the grants to the provinces to be paid by the Dominion of Canada. Subsection 6 of section 1 of this amendment to the British North America Act reads as follows:

> The government of Canada shall have the same power of deducting sums charged against a province on account of the interest on public debt in the case of the grant payable under this act to the province as they have in the case of the existing grant.

Mr. BENNETT: That is the section which took the place of the repealed section 118.

Mr. LAPOINTE (Quebec East): Yes, except that it is the same provision which is being continued. I read in the address which was adopted by parliament for the purpose of getting this amendment to the British North America Act, and which is a schedule of the imperial act, these words showing that parliament took the trouble to limit to this interest on the public debt the deduction that could be made by the government of Canada. It said:

> Such grants shall be paid half-yearly in advance to each province, but the government of Canada shall deduct from such grants as against any province all sums chargeable as interest on the public debt of that province in excess of the several amounts stipulated in the said act.

I submit that the fact that this was mentioned, not only in the original British North America Act of 1867 but in the amendments

thereto which have been made since, specifically mentioning that those grants must be paid yearly but that the dominion has the right to deduct the amounts for the interest on the public debt in excess of the amount mentioned in the act, debars absolutely any right to deduct any other sum than the one mentioned specifically in the constitution and the amendments thereto.

To show that special provision must be made for the future in cases of arrangements of this kind, I refer to an imperial act of 1892, chapter 52 of 55-56 Victoria, authorizing an advance to the government of British Columbia. An arrangement had been made between the imperial parliament and British Columbia with regard to the settlement in that province of families from parishes in Scotland. I do not know whether my hon. friend the Minister of National Defence (Mr. Mackenzie) came out at that time.

Mr. DUNNING: When was this?

Mr. LAPOINTE (Quebec East): In 1892. However, an advance of £150,000 was made in virtue of this act by the treasury to the government of British Columbia. The debentures of the province were given to the treasury as security, and this amount was to be repaid by instalments. Section 4 of this act provides against the possible action of the legislature of British Columbia in the future. It reads:

> Every act hereafter passed by the legislature of the province of British Columbia which in any way impairs the validity or priority of the charge upon the revenues of the province of the principal or interest of any advance made or debenture deposited in pursuance of this act shall, so far as it impairs such validity or priority, be void unless the previous consent of the treasury has been obtained.

There British Columbia had all the rights possessed by the provinces of to-day, but the imperial parliament did not trust that arrangement with the provinces as binding in the future, and protected itself against possible repeal of the legislation which provided this guarantee.

Mr. BENNETT: Mr. Fielding did the same thing with respect to our trust securities.

Mr. LAPOINTE (Quebec East): Yes, I think he did. Does anyone think—do you think, Mr. Speaker—that we introduced this resolution simply for the purpose of enjoying ourselves, or to hurt or do harm to anybody? If we had all the powers which my hon. friends claim we have already, it would have been so easy to exercise them and not be subjected to the criticism we have been meeting yesterday and to-day. We thought, and we are sure, that this is the proper way to protect ourselves. I make bold to say that if my hon. friend the Minister of Finance (Mr. Dunning) had brought into the house legislation such as he will be able to bring in after this amendment is made, without having first had the British North America Act amended, in my imagination I can hear the voices of my hon. friends strongly criticizing us and declaring that we were assuming powers which did not belong to us. This resolution is merely for the purpose of doing the right thing in the right way, and I do not see that we deserve all that has been said yesterday and to-day with regard to this matter.

Of course it may be a question of a different state of mind, a different mentality. We want to be sure that we have a right before we make use of it. I remember well, a year ago, the government of that day introducing in the house many pieces of legislation which a good many hon. members thought the parliament of Canada had no authority to enact. My right hon. friend—and I admired his courage in those matters—said, "I have the right and I am going to use it." Of course he did so, but I am not sure that my hon. friend from St. Lawrence-St. George was so sure of the constitutionality of some of those statutes. However, at the present time there are eight references before the Supreme Court of Canada. The other day in his speech on the address my hon. friend said that it was a mistake to make such references even if we were not sure. He said that lawyers generally held the conviction for years that the Lemieux act with regard to industrial disputes was ultra vires of the Dominion of Canada, but we left it on the statute books until someone challenged its validity and the privy council declared it void. My hon. friends thought that was the proper way to act. I do not think it is the proper way. I believe that before taking a step involving the expenditure of millions of dollars belonging to the Dominion of Canada we must be sure of our law, and it is not after the thing is on the statute books that the ratepayers should be compelled to apply to the courts in order to ascertain whether or not the legislation is valid.

Then my hon. friend from St. Lawrence-St. George, supported to some extent by my right hon. friend the leader of the opposition, criticized the drafting of the resolution. My hon. friend said that he did not know where section 2A would come in the section as amended. Well, I suggest that there is no

other place for 2A than right after 2. It cannot be before 2 or immediately before 4, and I do not think anyone, any court of law or any parliament, would find fault with section 2A being mentioned as it is in the resolution. My right hon. friend said that it was bad drafting to put a number like this in a constitutional act.

Mr. BENNETT: Having regard to the provisions of section 2.

Mr. LAPOINTE (Quebec East): Yes. While my right hon. friend was saying that I had before me the British North America Act with amendments up to 1927, on the very page facing me was the British North America Act of May 19, 1915, by which I saw that the British North America Act, 1867, was amended by adding thereto the following section, immediately after section 51 of the said act: 51A.

Mr. CAHAN: If you had inserted that there would have been no objection, but you have not inserted that. That is all. You have not followed the precedent.

Mr. LAPOINTE (Quebec East): My hon. friend from St. Lawrence-St. George also strongly criticized the words "the patronage of hotels, restaurants and places of amusement." He did not know what that meant. Of course in hotels and restaurants there are not only the rooms and the meals. I am sure my dignified friend from St. Lawrence-St. George does not go to night clubs and restaurants where they dance as well as dine, but people going there have to pay what they call a cover charge, whether or not they eat. They pay a cover charge for being there and watching the performance. It is to cover the cover charge, and other matters of that kind, that the word "patronage" has been selected. I may tell my hon. friend that this word has given a good deal of worry and trouble to the draftsmen, and it was after discussion and cooperation with the provincial law officers that this word was finally selected. I really believe it is a good word and will cover what they want—including the cover charge.

I thank the house for having allowed me to exceed the time at my disposal. My hon. friend the member for Parkdale (Mr. Spence) whom I see in his seat, threatened us that he would prevent the adoption of this resolution in the senate, and would even go to England or see that someone goes to block it there. I may tell my hon. friend that if he attempts that I believe his attempt will end in inglorious failure, and he would do better to come to another view. The whole object is to allow cooperation in financial matters between the Dominion of Canada and the provinces, cooperation which is badly needed at the present time on the part of some provinces. As I have said already, we had no interest in it except to see that the credit of the country and the credit of the provinces were securely protected. In bringing in this resolution we want to make sure that it will withstand any attempt to declare it void, and it is better to ensure that by the passing of this resolution to-day than to fight the matter before the courts later on.

Motion agreed to on division.

Hon. ERNEST LAPOINTE (Minister of Justice) moved:

That a message be sent to the senate informing their honours that this house has passed an address to His Most Excellent Majesty the King, praying that he may graciously be pleased to give his consent to submitting a measure to the parliament of the United Kingdom of Great Britain and Northern Ireland to amend the British North America Acts, 1867 to 1930, and the British North America Act, 1907, and requesting their honours to unite with this house in the said address hereto attached.

And that the clerk of the house do carry the said message to the senate.

Motion agreed to.

## WAYS AND MEANS

### CUSTOMS TARIFF AMENDMENT

The house in committee of ways and means, Mr. Sanderson in the chair.

1. Resolved, that the customs tariff, being chapter forty-four of the revised statutes of Canada, 1927, as amended by chapter thirty-nine of the acts of 1929, chapter thirteen of the acts of 1930 (first session), chapter three of the acts of 1930 (second session), chapter thirty of the acts of 1931, chapters six and thirty-seven of the acts of 1932-33, chapters thirty-two and forty-nine of the acts of 1934 and chapter twenty-eight of the acts of 1935, be further amended by striking thereout subsection one of section six thereof and substituting therefor the following:—

(1) In the case of articles exported to Canada of a class or kind made or produced in Canada, if the export or actual selling price to an importer in Canada is less than the fair market value of the same article when sold for home consumption in the usual and ordinary course in the country whence exported to Canada at the time of its exportation to Canada, or is less than the fair market value or value for duty thereof as determined under the provisions of section thirty-six of the Customs Act, or is less than the value for duty thereof as determined by the minister under the provisions of paragraphs (a) and (e) of section forty-one of the Customs Act, or is less than the fair market value thereof as fixed under the provisions of section forty-three of the Customs Act, there shall, in addition to the duties otherwise established, be

levied, collected and paid on such article, on its importation into Canada, a special or dumping duty, equal to the difference between the said selling price of the article for export and the said fair market value thereof or value for duty thereof; and such special or dumping duty shall be levied, collected and paid on such article although it is not otherwise dutiable.

Provided that when it is established that any articles though of a class or kind made or produced in Canada are not offered for sale to the ordinary agencies of wholesale or retail distribution or are not offered to all purchasers on equal terms under like conditions, having regard to the custom and usage of trade, such articles may be exempted from special or dumping duty.

Provided that the said special duty shall not exceed fifty per centum ad valorem in any case, and the following goods shall be exempt from such special duty, viz:—

Goods of a class subject to duty under the Excise Act.

Provided, notwithstanding, that on importations from Australia under The Australian Trade Agreement Act, 1925, the said special duty shall not exceed fifteen per centum ad valorem in any case.

Hon. J. L. ILSLEY (Minister of National Revenue): Before this resolution passes in that form I would point out that the last proviso referring to the Australian Trade Agreement Act, 1925, is now obsolete and I move that it be struck out.

Mr. BENNETT: It is unnecessary to substitute anything for it? It is covered by the agreement itself?

Mr. ILSLEY: That is correct. It is all dealt with by the agreement with Australia. I move:

That resolution No. 1 be amended by deleting the following paragraph:—

"Provided, notwithstanding, that on importations from Australia under The Australian Trade Agreement Act, 1925, the said special duty shall not exceed fifteen per centum ad valorem in any case."

Amendment agreed to.

Mr. BENNETT: Might I ask the minister who settles these two questions? If he will look at the bottom of page 4 he will see that the resolution provides, first, that "such articles may be exempted from special or dumping duty," and, second, "that the special duty shall not exceed 50 per centum," I should like to know who settles these two questions. Who decides what articles may be exempted and who fixes what the special duty shall be.

Mr. ILSLEY: The Minister of National Revenue. There is at present in clause six a provision which we propose to retain, stating that the minister "may make such regulations as are deemed necessary for carrying out the provisions of this section and for its enforcement," and "minister" is defined as meaning in the Customs Act the Minister of National Revenue. That provision taken with the rest of the section makes it clear I think that it is the minister who makes the decision.

Mr. BENNETT: I quite agree with the minister. I asked him only because I desired to have placed on record that this arbitrary power about which we used to hear so much is still to continue and to be exercised by the same minister in the same way. It is pleasant to recollect that the hon. gentleman who is now sitting on the treasury benches was once sitting over here, and it makes all the difference in the world where you sit as to what your attitude towards these questions will be. If the Minister of National Revenue could only come over here for a few minutes and forget that he is minister, I should like to hear him repeat once more those denunciations of the arbitrary powers exercised by one man in dealing with these matters, fixing the duty and determining where it shall be applied. But now he is sitting over there and sounder counsels prevail. He and his colleagues realize that, after all, laws must be administered; that to administer them there must be someone to do it, and that the someone in this instance happens to be the competent minister. The special duty must be within the maximum fixed of fifty per cent, and I notice that the minister was very careful to use the words "within the provisions of the statute." The dumping duties will now be administered with the same zeal, the same enthusiasm, I trust, and the same care for Canadian interests as characterized the administration of his predecessors in office, whoever they might be.

Mr. ILSLEY: I do not know that any reply is required to that. I do not recollect that any criticism was ever made of this provision of section 6 of the customs tariff that the minister may make such regulations as are deemed necessary. That provision has been in the customs tariff ever since the dumping clause was enacted. Our criticisms were directed against something else entirely.

Mr. BENNETT: I would not for a single moment deprive the minister of any satisfaction he may derive from that observation. I asked him a question, who decided these two questions, and he was good enough to explain that it was the minister himself, not the Minister of Finance but the Minister of National Revenue, the same minister who in times past was exercising arbitrary powers in determining by regulation just what the duty should be, in which determination, of course, he exercised his best judgment. The regula-

tion makes it clear that the special duty shall not exceed fifty per cent ad valorem in any case, and "the following goods" shall be exempt from such special duty. The question I asked in order to lay the foundation for my observations was which minister was meant, and I was glad to receive the answer I did. Therefore, under the regulations the minister exercises this most unwholesome and un-British arbitrary power which has caused such pathetic concern to the people of this country as expressed by the minister himself in times past. I think I see now his high intellectual brow being wrinkled as he waved his arms in days gone by in denunciation of such arbitrary powers being exercised by the minister.

Mr. STIRLING: As you read the wording of the amendment, Mr. Chairman, I was not in a position to follow it in the office consolidation copy. Would the minister indicate any changes made in the first long paragraph before you get to the proviso. I think there were some changes made in the sixth and seventh lines.

Mr. ILSLEY: There is only one change in the first paragraph, and that is that the reference to section 37 of the Customs Act is omitted because section 37 has been repealed.

Mr. STEWART: Would the minister be good enough to explain to the committee the effect of any changes that have been embodied in this section as compared with the old section? In what respect does this change the law as it existed before the section was repealed?

Mr. ILSLEY: One important addition to this clause is the first proviso:

> Provided that when it is established that any articles though of a class or kind made or produced in Canada are not offered for sale to the ordinary agencies of wholesale or retail distribution or are not offered to all purchasers on equal terms under like conditions, having regard to the custom and usage of trade, such articles may be exempted from special or dumping duty.

That is the part which refers to the offering for sale of goods offered on equal terms under like conditions, having regard to the customs and usage of trade. It was part of section 6 of the customs tariff for a long time, for twenty or thirty years, I believe, and then it was stricken out. That is being restored, and the other part has been added, namely, that part which relates to the sale through ordinary agencies of wholesale or retail distribution. The class of cases that it is intended to cover is this: There is, I think, an admitted tendency towards large scale production and distribution in the Dominion of Canada. The price spreads commission which sat two years ago and a year ago discovered that that was the case. There are what some people call monopolies and what others call quasi-monopolies doing quite a large part of the business of Canada, and some cases where combines or monopolies control particular articles or a particular class of goods manufactured and offered for sale; there is no real competition there at all. There are instances of that which I have in mind.

Mr. BENNETT: Can the minister without violating any secrecy give us an illustration, using fictitious names, just to make this clear?

Mr. ILSLEY: It is questionable whether I should, but I think I will.

Mr. BENNETT: I do not want the names, just the facts.

Mr. ILSLEY: But the moment you mention the commodity the name suggests itself to anybody. There is in use in nearly every household in the country, particularly in the poorer households, an article which is manufactured in Canada by one company alone. That company has in Canada a complete monopoly of the manufacture and sale of that article. It does not offer that article to any wholesale or retail agencies of distribution at all, but sells it directly to the public.

Mr. BENNETT: Directly to the retail trade?

Mr. ILSLEY: No; it sets up its own retail agencies. There is only one seller of that article in Canada. That article can be imported, and under conditions which technically at least, perhaps, call for the imposition of a dumping duty. It is considered that under circumstances of that kind there should be discretion in the minister to enable him to exempt the article from dumping duty if advantage is being taken of monopolistic conditions. That is what we have in mind there.

Mr. STIRLING: Is it an article produced in Canada?

Mr. ILSLEY: Yes, it is produced in Canada. If it were not of a class or kind produced in Canada the dumping clause would not apply. It is just a matter of opinion as to whether some freedom of importation should be permitted in cases of that kind, but apparently it was considered for many years. I assume that it must have been considered by Mr. Fielding when he introduced this legislation, although I have not read his speeches on the subject. Where there are not conditions of

competition in the country, as, for instance, in the cases covered by the latter part of this section, and where the goods are not offered to purchasers on equal terms under like conditions, having regard to the custom and usage of trade, there should be some discretion in the minister to permit some importation in order to bring about a reasonable level of prices in the industry. This section does not quite cover the particular article to which I had reference. There may be a certain type of machinery in connection with which there may be a monopoly in the country. A person purchasing machinery should be enabled to buy it as cheaply as he can obtain it, instead of being thrown into the hands of one producer or a combine of producers in Canada. To a certain extent this, shall I say, liberalizes the section or permits the waiving of the dumping duty under certain conditions when the consumer is likely to be exploited by a monopoly or a monopolistic combine.

Mr. STEWART: Would an order in council be required to do that, or would the minister make the decision on his own responsibility?

Mr. ILSLEY: The minister can do this.

Mr. BENNETT: I should think a power as great as that should at least have behind it the sanction of an order in council. I desire to congratulate the hon. gentleman again upon his manifestation of that fine spirit of example or, shall I say, of learning by responsibility that, after all, some things have to be done if business is to be carried on. I think it would be better if the power were exercised by the governor in council rather than by the minister. I shall give the benefit of my observations with respect to these matters. This will sound a little like hon. gentlemen listening to their own voices, not so melodious, and if I only had the proper record I could turn it on. That would express the views with respect to the matter, and undoubtedly it would enable someone on the other side to say "gramaphone record." This is my observation. Where the minister has to make a decision, sometimes the bulletins which are sent out to the various customs houses do not reach there as quickly as they might and certain difficulties might arise, to which reference has been made in this house. If this were made by governor in council, perhaps it would carry more authority.

I was going to point out another matter. I could name a substance which is produced in this country by one producer, and which is undoubtedly highly protected or, shall I say, fairly highly protected. The previous government provided the tariff and that is sufficient to indicate that it is a fairly high tariff. I am speaking now as though my hon. friend were here and I were over there. From what the minister has said, I assume that under those circumstances, notwithstanding the provisions of this resolution, the minister would in no sense interfere with the tariff except that he might put the article on the free list or he might reduce the tariff. That is, the governor in council might do that, but the minister does not contemplate by this section the doing of anything with respect to tariffs. That will be dealt with in an entirely different way. All he does is to say that if I import goods into this country and show him that I must go to a monopoly for them if I desire to purchase them in Canada, and must pay a price which is out of all reasonable proportion to that at which I could import them, he has the power to dispense with the dumping duty. That is all that is meant by that. There is another class of case in connection with which I have received communications. The minister can only recommend to the governor in council that action be taken to reduce the duties, and they can reduce them to the extent of making them free if they so desire. That is as the law now stands.

Mr. ILSLEY: Goods may be put on the free list by the governor in council and the governor in council may reduce or remove duties as compensation to another country which gives corresponding advantages to us. I am not aware of any power in the governor in council to reduce duties or place goods on the free list, unless they come within one or the other of those categories.

Mr. BENNETT: Is there not another one?

Mr. ILSLEY: I cannot think of it at the moment. As the right hon. gentleman well knows, an order in council may always be passed to remit or refund duties, but that is a different matter.

Mr. BENNETT: I do not mean that.

Mr. ILSLEY: The right hon. gentleman may have been referring to section 17 which reads:

> In the event of producers of goods taking advantage of any duty imposed under this act to increase the price of such goods to the consumer, or using any such duty to maintain prices at levels deemed by the governor in council to be higher than should prevail, having regard to general economic conditions in the country, the governor in council may reduce or remove such duty.

Mr. BENNETT: That still remains?

Mr. ILSLEY: Yes.

Resolution 1 agreed to.

2. Resolved, that the aforesaid section six of the customs tariff be further amended by striking thereout subsection eight thereof and substituting in lieu thereof the following:—

(8) The minister may make such regulations as are deemed necessary for carrying out the provisions of this section and for its enforcement, and such regulations may also provide for the exemption from special or dumping duty of any imported article when the minister is satisfied that the article or class of articles is not available at fair competitive prices in any consuming market in Canada owing to the remoteness of such market from the Canadian source of supply.

Mr. BENNETT: I think the real reason why action was taken to modify the provisions mentioned by the minister was that under the combines act power was given which previously existed in respect to that, and I believe the government of the day thought that was sufficient. Was it repealed? I think it was modified, not by the previous government but by its predecessor in office after the combines act in its present form was held to be valid by the privy council.

Mr. ILSLEY: I should like to withdraw this resolution. We have considered it and it certainly will not cover the case in its present form. I should like to ask unanimous consent that it be withdrawn. The effect will be to leave the subsection in these words:

The minister may make such regulations as are deemed necessary for carrying out the provisions of this section and for its enforcement.

It would stop there. It is just as though I am asking that all the words after "enforcement" be deleted. Those words open up a very difficult and important question.

Mr. BENNETT: The government is still protected by the general provisions with respect to the regulations?

Mr. ILSLEY: Yes.

Mr. BENNETT: That is, the general power to make regulations has not been impinged upon. As I read it I realized that it might be open to some difficulty, but after all this government regards difficulties as one of the main reasons for its existence.

Mr. DUNNING: It does.

Mr. BENNETT: It did, I think is better.

Resolution 2 withdrawn.

3. Resolved, that the aforesaid section six of the customs tariff be further amended by adding thereto the following subsection:—

(10) For the purposes of this act articles shall not be deemed to be of a class or kind made or produced in Canada unless so made or produced in substantial quantities; and the governor in council may by order in council provide that such quantities, to be substantial, shall be sufficient to supply a certain percentage of the normal Canadian consumption and may in such order fix such percentage.

Mr. MacNICOL: What definition does the minister give to the term "substantial quantities"?

Mr. BENNETT: Is the whole of section 8 withdrawn?

Mr. ILSLEY: The whole of resolution No. 2 is withdrawn.

Mr. BENNETT: The new subsection 8?

Mr. ILSLEY: Yes.

Mr. BENNETT: Because as the law now stands it reads:

The minister may make such regulations as are deemed necessary for carrying out the provisions of this section and for its enforcement.

Mr. ILSLEY: Yes.

Mr. BENNETT: It is to be left as it was, without change.

Mr. ILSLEY: Yes. Then, with regard to resolution No. 3, the hon. member has asked my definition of the term "substantial quantities." Am I correct?

Mr. MacNICOL: Yes.

Mr. ILSLEY: The resolution provides that:

The governor in council may by order in council provide that such quantities, to be substantial, shall be sufficient to supply a certain percentage of the normal Canadian consumption and may in such order fix such percentage.

The hon. member may recollect that there was an interchange of notes with Japan whereby this government undertook that "substantial quantities" would not be regarded as substantial quantities unless the amount produced in Canada was sufficient to supply at least ten per cent of normal Canadian consumption. I anticipate that the order in council which is passed will fix that percentage as the percentage which constitutes a substantial quantity.

Mr. NEILL: Why not put it in the subsection?

Mr. BENNETT: I protest against government by order in council. The idea of any government endeavouring to deal with a matter so important as this, by order in council!

Mr. MACKENZIE (Vancouver): Hear, hear.

Mr. BENNETT: I am glad to hear that conscience has had the effect of inducing the Minister of National Revenue to recollect an echo of the past. But this should be in statute. Let there be no question about that. A note has been exchanged with the empire of Japan, and so far as we are concerned that note settles for all countries doing business with Canada what shall constitute goods made in Canada. In dealing with this country Japan cannot be placed in a more favoured position than other parts of the world. All countries must thereafter be upon a parity, and as it has been declared in the note, unless an industry in this country produces ten per cent of the consumptive requirements of Canada it is not an industry concerning which we may say that the goods produced by it are of a class or kind made in Canada. Why should this not be in the statute?

Mr. ILSLEY: Because it might be varied by agreement from time to time.

Mr. BENNETT: Yes, but it is quite clear that so far as Japan is concerned it will not be varied within the next year, because the arrangements cover a period of time.

Mr. ILSLEY: Yes.

Mr. BENNETT: Therefore this statute should cover until the next time parliament meets, so that there may be no misapprehension and so that every man who does business with the customs house and every man who starts up an industry knows where he is. And every person who does not produce ten per cent of the consumptive requirements of the country will know that until such time as parliament acts he is not within the terms and conditions of the law as we have declared it.

I said, and I repeat, that it was a great mistake to endeavour to fix that percentage in the Japanese note. However it has been done, and it having been done, this is an effort to cover it up, an effort which should not be winked at by this committee. I say that this is an effort to cover it up, to cover up something which should see the light of day. It should be clear as crystal; it should be in the statute, and not somewhere else. Since we have taken these steps, steps which, I believe, were improperly taken, the government must accept the responsibility for their action. They have the majority and must bear the consequences. They know; I do not know. But certainly they should not endeavour to cover up by this section what is now a matter of record between Japan and Canada. This is a declared policy. It was rushed out so that it would be finished before Christmas, or thereabouts; I think it was the day after Christmas. The action called for was taken, and the cries to high heaven of my hon. friend from Vancouver Centre were rewarded in due course. Now he sits in the seats of the mighty. I do not know whether he saw the records of it, but far pastures looked very green, when he was far away. However, when you get close, you are not so sure. The hon. member for Comox-Alberni says that they are still green.

The point I wish to make, and one which I think the government cannot evade, is that in view of their own protestation we must put into this statute, or into this section, the conditions of the Japanese note. It is clear that under the terms of that note those conditions will continue at least until after this parliament will have met again, and at that time if new arrangements are made they can be met. There is nothing more hurtful than insecurity and instability. Now that we have taken this step there is no doubt that we should not endeavour to cover it up, or to frame it in general terms. Rather, we should make clear beyond doubt just what is meant. Subsection 10 should read:

> For the purposes of this act articles shall not be deemed to be of a class or kind made or produced in Canada unless so made or produced to the extent of ten per cent of the consumptive requirements of Canada; and the governor in council may by order in council—

And that is all that need be done. This is going to give to the governor in council power to modify declarations made with Japan, and to treat with discrimination other countries and special industries—

Mr. DUNNING: No.

Mr. BENNETT: Read what it says. It states:

> The governor in council may by order in council provide that such quantities, to be substantial, shall be sufficient to supply a certain percentage of the normal Canadian consumption and may in such order fix such percentage.

Mr DUNNING: But it could not possibly discriminate between countries.

Mr. BENNETT: It could not possibly, but in view of this section it could, probably. That is the difficulty, and the point I am trying to make is that, having made a declaration, the Minister of National Revenue states it is probable that ten per cent will be the figure mentioned in the order in council.

Mr. ILSLEY: I will say it will be ten per cent.

Mr. BENNETT: That makes it clear, then, and partly covers the point I make. If the hon. member will say that the order in council will contain a statement that ten per cent of the consumptive requirements of Canadians must be produced so as to meet the "made in Canada" provision, then of course that covers one of my points. But it does not cover the second point, namely, the desirability of placing provisions in a statute so that he who runs may read, and so that what was declared as a policy may be crystallized into legislation. I have not yet heard any reasons why it should not be. Perhaps the minister will enlighten me in that regard.

Mr. ILSLEY: I wish to make my position quite clear, and to do so perhaps I ought to read that part of the note to Japan which was the occasion for making this change in the act. It reads:

> The classification "goods of a class or kind made or produced in Canada," as it appears in the customs tariff, will be restricted to goods which are of a class or kind made or produced in Canada in quantities sufficient to supply at least ten per cent of the normal Canadian consumption. Adequate notice will be given of the transfer for customs purposes of a product from the category "not of a class or kind made or produced in Canada" to the category "of a class or kind made or produced in Canada."

The government of Canada will of course carry out this undertaking in the note to Japan. That means that, the government having the power after this resolution is carried into an act and becomes legislation, an order in council must and will be passed fixing at least ten per cent as the figure. I said that it probably would be ten per cent. I had not intended that it would be more than that, and I will say here and now for the purpose of definiteness that the figure in the order in council will be ten per cent. The reason for doing this by order in council instead of by statute is, as I said a few moments ago, that the percentage may be subject to change by agreement in the future, and if there should be an alteration in the agreement so as to substitute some other figure, it would be desirable for the power to exist to change by order in council to the new figure so fixed. It gives the degree of elasticity which is necessary to meet the agreements which are made with other countries.

As regards the suggestion of the right hon. gentleman that there may be some discrimination, that is impossible. Under our most favoured nation agreements we can have no discrimination. This provision must apply not only to Japan but to all other most favoured nation countries in the world. The order in council will not relate to Japan; it will relate to the percentage which will constitute a substantial quantity before goods will qualify as goods of a class or kind made or produced in Canada. It will be a very simple and short order in council, and it will be perfectly definite; everyone will know what it is, particularly if they read Hansard. This statement is quite open and public, that ten per cent has been agreed upon with Japan and will be carried into our order in council.

Mr. STEVENS: May I ask the minister a question? I admit it may seem a little improper, but if the minister so considers it, it need not embarrass him. Would such order in council be of a general nature or would it specify certain classes or types of goods?

Mr. ILSLEY: It will be of a general nature. All and any goods, in order to be considered goods of a class or kind made or produced in Canada for the purposes of section 6 or for any other purpose, must be produced in Canada in sufficient quantities to meet this ten per cent of normal Canadian consumption.

Mr. STEVENS: Has the minister considered that the figure of ten per cent might be low in respect of some goods, but very high in respect of other classes of goods?

Mr. ILSLEY: I do not know of any with regard to which it is too high.

Mr. STEVENS: Oh, I think so.

Mr. MacNICOL: I desire to ask the minister one or two questions, based upon the assumption that the ten per cent applies to importations from the United States too.

Mr. ILSLEY: Yes.

Mr. MacNICOL: Or only from Japan?

Mr. ILSLEY: The ten per cent does not apply to importations from any country. It applies to the amounts produced in Canada, but it is general in its application. We cannot apply the dumping clause, so-called, against the United States or any other most favoured nation country, on goods unless those goods are produced in Canada in sufficient quantities to supply at least ten per cent of the normal Canadian consumption.

Mr. MacNICOL: I read lately that the Japanese have got out a very special machine for the manufacture of textile articles. It is high class and very speedy. This kind of machine, of course, is not made in Canada, although we do manufacture textile machines. Naturally, Canadian manufacturers would like

to make the machine here if it were possible, but as I understand it, under this regulation, as none of these machines is made in Canada, that is, no percentage at present is being made here, the manufacturers would not be able to undertake to make this new machine as they would be up against Japanese competition which they could not meet because of wages and other conditions. It follows that that line of products is not likely to be made in this country. I could mention a score of lines of material with which I am familiar, that never would have been made in this country had the manufacturers been up against the regulation that they must have a market of ten per cent in Canada before they received any protection, for obviously they could not have any market until they began to produce. I may not be correctly interpreting the regulation. All I have in mind is that nothing should be permitted that will unnecessarily interfere with the incentive to produce in Canada.

Mr. ILSLEY: It is not correct to say that ten per cent must be produced in Canada before the industry receives any protection, because this has no relation whatever to the tariff protection that the goods receive. For instance, they may have a hundred per cent, or fifty per cent, protection under the tariff schedule even though they are not made in Canada at all, or although only one per cent of the normal Canadian consumption is supplied. The only effect this provision has is that they do not receive the additional protection of the dumping clause unless they are made in Canada in sufficient quantities to supply ten per cent of Canadian consumption.

Mr. NEILL: The dumping clause is the only protection we can get in respect of anthracite coal coming from Britain. It comes in free, of ordinary duty, and the dumping duty is the only protection our coal industry has. I had a case before the tariff board, and it was ruled that anthracite was not produced in Canada; the production being, I think, 900 tons, they simply said that it was not produced in Canada at all. They admitted that the words "a substantial quantity" used to be in the act, but had been taken out. I would point out to the minister that a quantity which might not be ten per cent all over Canada might be quite a large percentage in some particular part of Canada.

Mr. ILSLEY: The case of anthracite coal is one of the best illustrations of the need of this provision. To all intents and purposes anthracite coal is not produced in Canada. As the hon. gentleman says, 900 tons are produced, but that is a drop in the bucket; it is so small as to be almost negligible. There is a lawyers' phrase, de minimis non curat lex, meaning that the law takes no account of trifles, or has no regard for trifles. This is one of the best illustrations which could be given of the need of some provision like this, so that the department will not have to apply a dumping clause against something which to all intents and purposes is 100 per cent an imported article.

Mr. NEILL: Will the minister explain how this native industry can be built up if it has no protection whatever? It has no protection under the tariff and none under the dumping clause. How is it to be built up?

Mr. ILSLEY: There are in the country some industries that should not be built up. The hon. member will understand what I mean. That has been impressed upon me more and more in my work of the last few months, that there are some industries the cost of which to the dominion is so tremendous that they should never have received, to begin with, government assistance or encouragement.

Mr. NEILL: Does the minister suggest that that would apply to the bituminous coal mining industry of British Columbia?

Mr. ILSLEY: The bituminous mines? No.

Mr. NEILL: It is to compete with that industry that anthracite coal is brought in from Britain free of duty and free of dumping duty.

Mr. ILSLEY: The hon. gentleman is talking about anthracite coal.

Mr. NEILL: Which is competing.

Mr. ILSLEY: But only to a very slight extent.

Mr. NEILL: No; it is not necessarily to a slight extent. It can be brought in free of dumping duty, free of duty, and practically as ballast from Great Britain. Why is it not competitive? Bituminous mines in British Columbia are expensive to operate.

An hon. MEMBER: Give the British people a chance in the world.

Mr. MacNICOL: Would the minister mind giving us the names of some of the industries which should never have been built up in this country?

Mr. ILSLEY: I would not care to be drawn into a discussion of that kind.

Mr. MacNICOL: I have heard so often in this house, not from every quarter but mostly from eastern or western free traders, that certain industries should never have been built up in this country. I should like one, and if possible half a dozen of them to be named. Then we shall be able to tabulate how many men would be thrown out of work if these industries were further crucified.

Mr. BENNETT: I still think the minister should not leave that subsection as it now stands. I do not think the government should leave it in that form. The minister has made a perfectly clear statement. He proposes to pass an order in council in the terms of the Japanese agreement, and he has very properly pointed out that under our agreement with Japan we are now bound to declare, qua Japan, that any goods which are manufactured or produced in Canada and which do not fill ten per cent of our consumptive requirements are not subject to dumping duty. That is the story, because they are not of a class or kind made in Canada.

In other words we have defined those phrases, "a class or kind not made in Canada," and "a class or kind made in Canada." For the first time we have defined those phrases in exact terms. Heretofore we have never defined them, or attempted to do so. The words "substantial quantities" were used at one time, and owing to differences of opinion as to what "substantial" meant, those words were removed and the words "made in the country" replaced them. Then, when the tariff board, in the particular case to which the hon. member for Comox-Alberni had reference, determined that anthracite coal as produced in the old mine at Bankhead, Alberta, did not constitute commercial production and was so trifling that no attention should be paid to it, that definition was changed again. Now, we having made an agreement with Japan which, as the minister very properly says, will be carried out; we having committed ourselves to that, it follows that the phrase as defined in that note is now so defined with respect to all the countries of the world with which we trade and to which the phrase may apply. In other words, by reason of our having included it in the agreement with Japan every country that enjoys favoured nation treatment from us has a right to set up that provision. That means practically all the trading nations of the world, though I dare say it does not apply to Germany.

Mr. DUNNING: Would that be the practical effect? I would ask my right hon. friend to consider if the practical effect of such an order would be against any particular country.

Mr. BENNETT: I am coming to whether or not it is not necessary that it should be. That is the point I am making. In the exchange of notes with Japan we said that we would pass an order in council. What were the words?

Mr. DUNNING: Not with respect to Japanese goods.

Mr. BENNETT: In our note to Japan we made a declaration that we would pass an order in council.

Mr. DUNNING: If my right hon. friend will permit me I will read the note:

> The classification "goods of a class or kind made or produced in Canada," as it appears in the customs tariff, will be restricted to goods which are of a class or kind made or produced in Canada in quantities sufficient to supply at least ten per cent of the normal Canadian consumption. Adequate notice will be given of the transfer for customs purposes—

And so on. It is general; it does not apply to Japan only.

Mr. BENNETT: The note was addressed to Japan and, of course, in its direction to Japan, covered only Japanese imports, because that paragraph was part of the note sent to that country. Are we not bound to include that in the statute itself? Shall we have discharged our duty under that undertaking if we do less? We have said that we will do that. There is only one way in which we can do it beyond the power of repeal, except by termination of the agreement, and that is by parliamentary act. When I read the letter which the Prime Minister dispatched to the Japanese minister I certainly had no doubt that it meant parliamentary action, statutory action. I do not think anyone had any doubt as to that. Now we are told, not that but this:

> For the purposes of this act articles shall not be deemed to be of a class or kind made or produced in Canada unless so made or produced in substantial quantities—

Once more that is the test, not the ten per cent but the substantial quantity, which is exactly what we did not say in the letter to the Japanese minister. Then this follows:

> —and the governor in council may by order in council provide that such quantities, to be substantial, shall be sufficient to supply a certain percentage of the normal Canadian consumption and may in such order fix such percentage.

That is not carrying out that agreement.

Mr. ILSLEY: If we pass the order in council it is.

Mr. BENNETT: No, because the statute says:

> For the purposes of this act articles shall not be deemed to be of a class or kind made or produced in Canada unless so made or produced in substantial quantities—

That is not what we undertook to do. We should say, "For the purposes of this act articles shall not be deemed to be of a class or kind made in Canada unless ten per cent of the normal Canadian consumption is produced in Canada."

Mr. ILSLEY: We do exactly that when we pass the order in council.

Mr. BENNETT: But that was not what we undertook and promised.

Mr. ILSLEY: We said that we would do it.

Mr. BENNETT: But we must do it by statute.

Mr. ILSLEY: We did not say that.

Mr. BENNETT: That is the sense of that note, and I will tell the minister why. When you promise that you will do something, it is assumed, as between nations, that you do it at least in the form which gives permanency to it during the life of the agreement, but an order in council may be rescinded the day after it is passed, or the next day. That is not so with regard to a statute, which requires the three branches of government to cooperate to bring about that end.

I want to make this clear, that in the letter we wrote to Japan we undertook to define what is of a class or kind made in Canada. Having thus defined it—and I submit this as a matter of good faith—we should follow exactly the terms of that letter and say that for the purposes of this act articles shall not be deemed to be of a class or kind made or produced in Canada unless produced in sufficient quantities to supply ten per cent of the normal Canadian consumption. That was what we said in the note, and I think it is not unreasonable to expect the statute to embody the terms of the agreement. To do otherwise is not what we promised, at any rate; to do otherwise is to leave to the executive action that, clearly, the terms of the agreement contemplated should be taken in another way. I cannot see that this is doing what we said we would do.

Mr. ILSLEY: The Japanese are interested in having their goods treated in a certain way when they enter this country, and it is a matter of complete indifference to them as whether that is done by act of parliament or by order in council so long as it is done. That is the important matter from the standpoint of Japan. Certainly it is not to be thought that a government which enters into an undertaking will violate it. This authorizes the government to carry out the undertaking; that is the intention of the government, and that is all we agreed to do.

Mr. BENNETT: I do not want to prolong the discussion, but I am sorry to hear my hon. friend adopt that view, for even during the worst moments of the depression, when we had to rely so much on the governor in council to take such action as might be necessitated from day to day, the argument which was then made was treated with contempt by the opposition of that day. Now we have the hon. gentleman saying, "We are not interested in the way in which the matter is to be accomplished. What we are interested in is whether it is being done."

Mr. ILSLEY: I said that was what Japan was interested in.

Mr. BENNETT: I am talking about Japan. For the moment I was think of Canadians; I was thinking of other people affected besides the Japanese. If this concerned only Japan I might be in a different position, but it is because I believe this will prejudicially affect a great many industries in this country, that it is desirable that this should be known at once, and that their death should not be prolonged any more than necessary, because there is no order in council at the moment. There is a letter outstanding; Japan is receiving the treatment that accords with the application of the ten per cent, but there are industries in Canada.

I now put this case to the committee: The consumptive power of this country with respect to some articles is very great in the east and very small in the west, and in some instances very small in the east and great in the west. This is a very large country. The demands of eleven million people scattered over a wide area are not easy to ascertain. A small concern in the east may be able to supply the requirements for specialized articles in the east, and on the prairie and in the west the demand may be great, so that the result is that the factories do not produce ten per cent of the entire consumptive power of Canada, although they supply sufficient to meet the requirements of that particular area. In many instances we have brought goods in from other countries sometimes free and sometimes at low duties; then the dumping

duty has been the all important thing to preserve these small industries scattered all over the country. That is to be done away with; that is done away with. The government of the day have seen fit to define the matter. I say the results are such that we cannot contemplate them; I think I can say we should not contemplate them with equanimity. But they are there. Now, is the government keeping faith with this House of Commons or with the people of Canada who are engaged in these productions unless it inserts in this section as a part of the law of Canada, not a discretionary power to a minister or the governor in council at all, but that which they have promised, namely a definition of the words "of a class or kind made or produced in Canada" and says frankly in the statute that unless ten per cent of the normal consumptive requirements of the Canadian people are produced in Canada the dumping duty does not apply? That is the real issue. It is no good to say: We are doing this by order in council. That is not as good as by statute, because with respect to the question of doing it by order in council there is always uncertainty as to when, and in the other case it is a part of the law of the country.

The language I find in the note is this:

I have the honour to inform you that the Canadian government, in accordance with its general policy respecting trade and tariff matters, has decided to make the following modification in its customs—

Mr. DUNNING: Regulations; that is what we promised.

Mr. BENNETT: That has been done only by statute heretofore, not by regulation. What the hon. minister is talking about was done by statute, and the old words "substantial quantities" were in the statute, not in an order in council; they were taken out of the statute, and it was under the statute the case was presented to the tariff board.

Now let us look at these words:

The classification "goods of a class or kind made or produced in Canada" as it appears in the customs tariff—

Not in the regulations, but, "as it appears in the customs tariff." That is what we are now amending. "As it appears in the customs tariff will be restricted"—that is a promise of legislation, not of regulation, a promise that the tariff act would be amended. The letter says "as it appears in the customs tariff" it will be changed.

Mr. DUNNING: It has been read a half a dozen times.

Mr. BENNETT: The promise of the Prime Minister of this country was that a classification "of a class or kind, as it appears in the customs tariff" would be amended.

Mr. DUNNING: Yes.

Mr. BENNETT:

—will be restricted to goods which are of a class or kind made or produced in Canada in quantities sufficient to supply at least ten per cent of the normal Canadian consumption. Adequate notice will be given of the transfer for customs purposes of a product from the category "not of a class or kind made or produced in Canada" to the category "of a class or kind made or produced in Canada."

I am prepared to leave it to any judge in the world whether that does not contemplate the amendment of a statute, and not a regulation, the action of parliament, not of the executive.

The other questions are those of production and valuation of their money, and appeal to the tariff board, and then look at the top of page 4, paragraph 3:

In computing the value for ordinary duty and for special duty under section 6 of the customs tariff—

Mr. DUNNING: But we are not amending the statute to carry that out.

Mr. BENNETT: Then all I can say is you do not have to do that because you have the power to enter into an agreement with respect to it, which has been done. That part is not difficult to understand. But when you turn to paragraph 2, leave it to any judge you like or to the tariff board or to any other tribunal; can any other meaning be derived from that than the one simple meaning, that this contemplates an amendment by parliament of a statute, namely the customs tariff? How otherwise can you take those words than as they appear in the customs tariff and restrict them to the meaning given to them? I had no doubt as to how that was to be done until I read this section. I think I am doing only what is my bounden duty in saying that as far as it is possible we call upon the government to carry into effect the plain meaning of paragraph 2 of that letter, and to amend the tariff act in accordance with the proposals of the Prime Minister.

Some hon. MEMBERS: Carried.

Mr. BENNETT: No. It is of course impossible in the face of the majority which exists to do more than say that that is not implementing the terms of a letter which says in its very terms that it is dealing with the customs tariff—"as it appears in the customs tariff." Is there any method by which that can be done other than in the

way I have mentioned, namely by a statute in accordance with the act that now exists, as modified and amended. That is, the old one disappears and the new one takes its place, but the new one that takes its place is one which provides in terms not for someone else but for parliament to do it. What is more, if that is not in accordance with the principles of Liberalism as declared from this side of the house, I am unable to appreciate what they were. If a Conservative government had made proposals such as are contained in this statute, how the welkin would have rung! I direct attention to the plain undertaking of the Prime Minister of Canada, that certain words contained in the customs tariff will be restricted to one meaning and one only, and that parliament is going to do this; it is not to be left to the executive, or to the governor in council, or to someone else, but parliament itself is going to give effect to those words.

Mr. DUNNING: Well, in case there should be on the part of any country a belief that because of the opinion expressed by the right hon. leader of the opposition Canada is not carrying out the express terms of an undertaking solemnly given, I must on behalf of the government repudiate any such suggestion, and in doing so I need only quote from the letter itself:

> Sir, I have the honour to inform you that the Canadian government, in accordance with its general policy respecting trade and tariff matters, has decided to make the following modifications in its customs regulations—

The Canadian government proposes "to make the following modifications in its customs regulations." Certainly the country receiving that message did not expect an act of parliament. It relied upon the good faith of the government of Canada to give effect, in the manner appropriate to Canadian conditions to the undertaking which the government of Canada had given.

Now, with respect to the other point, as to the power which is being extended to the executive by this amendment, and which is calling forth such condemnation by my right hon. friend, might I point out that it is a power to do what? To reduce the burden of the tariff. That is what it is; it is a power to reduce. It is a power which can be used to ensure that the dumping provisions of the law shall not be applied in cases where the quantity of the goods specified produced in Canada is so small as to have no real place in our commerce and industry. The case of anthracite coal cited by my hon. friend is an excellent illustration. I am sure he would not argue that because it was found that 900 tons of anthracite coal were produced somewhere in Canada, therefore all users of British anthracite coal should be compelled to pay a dump duty in addition to the price.

The argument in respect to duty is a different argument altogether, as I am sure my hon. friend from Comox-Alberni realizes. If he cares to argue that because we desire to encourage coal mining in Canada, therefore British anthracite coal should not be imported, that at least is arguable, but I am reasonably sure he would not argue that because someone somewhere in Canada produces 900 tons of anthracite coal, therefore all users of imported anthracite should be compelled to pay a higher price for the article they are importing. What is true in the case of anthracite coal has been true in connection with other commodities. That is the complaint, and the proposal is simply this, as a practical matter to carry into the law the principle stated in the note to Japan, but leaving liberty to the governor in council to determine the percentage. That liberty will be indicated in the manner indicated by the Minister of National Revenue. In the first instance, the percentage specified will be ten per cent because we have so agreed with Japan.

Mr. BENNETT: Not less than ten per cent.

Mr. DUNNING: Quantities sufficient to supply at least ten per cent, yes; that is the phraseology. Let us consider it as a practical question. We are here endeavouring for the first time to define the quantity. The Minister of National Revenue and his officers have used the best judgment of which they are capable in setting it at ten per cent, without, remember, having had experience in trying to set a percentage basis, and we have said to Japan, in order to get on a friendly trading basis with her once more, that we will set it at ten per cent. But does that mean that if, as a result of experience with ten per cent as the limit, we find that it is injurious to Canadian industry, on the one hand, or to Canadian consumers, on the other we are not to be at liberty to approach Japan and point out in connection with this single undertaking that embarrassing conditions are being created in Canada and that, therefore, we would like to be released from the obligation or to change it in some particular? That is the reason for the proposal of the government that the actual percentage should be determined by order in council, without in any way at all intending to go back in the slightest degree on our undertaking with Japan, but it leaves us at liberty to negotiate with

the country to which we gave the undertaking if during the course of weeks or months that undertaking should prove to be one which ought not to be expressed in these precise terms but in some other. Experience, in other words, will be the guide, and I suggest to the committee that inasmuch as the power conferred is a power to reduce the burden of taxation, it is not a dangerous power to place within the hands of the executive.

Mr. STEVENS: May I ask the minister this question? Is it proposed that this new subsection 10 shall apply in the tariff to other than section 6 of the tariff act, namely, the dumping clause?

Mr. ILSLEY: Yes; the words are:

For the purposes of this act articles shall not be deemed to be of a class or kind made or produced in Canada unless so made or produced in substantial quantities; and the governor in council may by order in council provide—

And so forth. This act includes not only section 6 of the customs tariff but also all the schedules of the customs tariff.

Mr. STEVENS: May I suggest to the minister that if this new subsection 10 is intended to apply to the whole act it should be a separate section instead of a subsection of section 6? Section 6 is limited; it is the well known dumping clause of the tariff act, and it would appear to me that if you make this a subsection of section 6 you will limit its application to section 6. To put the matter in another way, it would be more proper, I think, if it were made a separate section of the tariff act.

Mr. ILSLEY: That is a problem of draftsmanship more than anything else, but wherever the words appear they can mean only one thing. Subsection 10 reads:

For the purposes of this act articles shall not be deemed to be of a class or kind made or produced in Canada unless made or produced in substantial quantities—

And so on.

Mr. STEVENS: The reason I asked the question was this: The argument regarding the application of the duty is based upon section 6, namely the dumping clause. It will be found, if examination is made of the schedules of the tariff act, that many items are specifically referred to as of a class or kind made in Canada.

Mr. DUNNING: Not a great many.

Mr. STEVENS: But there are some where that is stated in the item itself, and if this is passed as a subsection I question whether it will be applicable to such items. The letter from Japan intimates that it will, but I doubt whether by this method the government are making it applicable.

Mr. ILSLEY: The letter to Japan covered not only section 6 of the customs tariff but everything.

Mr. STEVENS: That is what I say.

Mr. BENNETT: Section 43, for instance.

Mr. ILSLEY: The letter to Japan referred to the classification as it appears in the customs tariff; that is the whole of the customs tariff, and this provision, I feel sure, carries out that undertaking. The fact that this appears as a subsection of one section does not take away from the force or the power of the words because the words used are "for the purposes of this act," and that carries through the whole act, schedules and all.

Mr. STEVENS: I do not want unduly to press the point but certainly I should like to have seen that point submitted to the law officers of the crown. If the committee will read section 6 they will see that each of its subsections deals with matters pertaining to section 6. It is very lengthy and I am not going to read it, but it is quite clear on reading them that they apply to section 6. For instance, subsection 9 of section 6 reads:

(b) Any order in council made hereunder may be varied, extended or revoked at any time by the governor in council.

(c) This subsection shall be deemed to have had effect from and after the first day of September, 1931.

That applies only to subsection 9 of section 6. Now we come along and insert subsection 10 following these other subsections, which completes the section undoubtedly so far as draftsmanship is concerned. But, by its very wording, "for the purposes of this act," it means the whole act and should be a separate section instead of simply a subsection of section 6. I would suggest to the minister that, before we pass this, it might be once more submitted to the law officers of the crown in the light of what I have said.

Mr. ILSLEY: I thank the hon. gentleman for bringing the point to our attention, but the proper course I suggest is to pass the resolution. Regarding the point raised I will undertake to submit it to the law officers before the bill is brought into the house. There will have to be a bill based upon the resolution.

Mr. NEILL: The minister said that the question which was raised about 900 tons of anthracite was a very good illustration of the

need for this subsection. There is another aspect of it which I would bring to the attention of the committee. We have bituminous coal mines on Vancouver Island which are deep and expensive to work. Their market is principally in the cities on the coast. The government of the day made an agreement with Great Britain whereby anthracite coal could be brought in free of duty. It also made an agreement under which it was, if not profitable, at least convenient to take wheat out from Vancouver in ships. The result was that some ships found it necessary to come out in ballast, and they would bring out British anthracite coal at very low rates in lieu of ballast. The production of British anthracite coal is subsidized by the government to a considerable extent. The coal was allowed to come in free of duty; it was subsidized by the government in its production; it was carried for little more than ballast rates and was landed in Vancouver to compete with the local coal which was expensive to mine. We thought we still had a dumping duty to fall back on. When I took the case before the tariff board this clause was not in the act, but they threw out the case although the words "in substantial quantities" were not there. They simply ruled that this coal was not produced in Canada. I offered evidence that 900 tons had been produced last year, but that did not avail. I produced evidence that in years gone by the production had been much larger. I am speaking from a somewhat treacherous memory, but some years before I believe it ran to something like 126,000 tons annually. That was the production a matter of some ten or twelve years before.

What happened is not for me to say. Possibly times got bad or there may have been a lack of capital. Possibly there was competition from other mines which were able to obtain better rail rates. At any rate the production went down. But this is a Canadian institution. The present production is only 900 tons, but how are we going to build it up to its former level of 126,000 tons? Are we going to allow this British coal, subsidized in its production and brought out at little more than the cost of ballast, to come in free of duty and free of dumping duty? The Minister of Finance says quite truly that this is an argument to place a duty on anthracite coal, but we are prevented from doing that by the British agreement. Our only protection is to fall back on the dumping duty. I considered that we got a raw deal from the tariff board when they practically said that no coal was being produced. They could not use the words "in substantial quantity," because they had been taken out of the act. Notwithstanding the objection made by the leader of the opposition, I contend that this ten per cent is too high.

I just want to place the situation before the Minister of National Revenue and the Minister of Finance. I need not go into the evidence. To some extent shipments of coal from Great Britain fell off, but there is nothing in the world to prevent their being increased. In that case it will be disastrous for our local coal mines. The Minister of National Revenue said our coal and the British anthracite served different purposes, but I do not think so. Our main mine serves a purely domestic market, although some of our mines produce coal for bunkering purposes. A great deal of the coal mined at Nanaimo has to go to Vancouver. If every housewife in Vancouver realized the superior qualities of anthracite coal, they would adapt their furnaces to its use. That has been the main obstacle in the use of this coal; the furnaces are not adapted. In the meantime sales have fallen off, but with the assurance in this act that they will never be troubled with a dumping duty, there will be considerable encouragement to go ahead. That is the situation, viewing it from a local angle. I think it is a different picture when I put it in that way.

Mr. STEWART: Does the minister think the provisions of paragraph 5 in the note to Japan can be carried out by regulation? This paragraph reads:

> Opportunity will be afforded for appeal to the tariff board of Canada respecting any value for duty which may in future be established under section 43 of the Customs Act. In the event of such an appeal the value for duty in force will, upon the expiration of three months after the date of appeal, cease to have any force or effect unless the tariff board, following a public inquiry, finds that such value or some lower value is required to prevent the importation of the goods into Canada from prejudiciously or injuriously affecting the interests of Canadian producers or manufacturers. If a lower value is found by the tariff board to be appropriate such lower value will promptly be made effective.

Mr. ILSLEY: That undertaking has been carried out by regulation, by amending the Customs Act. It could have been done by order in council under the Tariff Board Act.

Mr. STEWART: We regulate our customs by an act of parliament, which is the proper way, and we regulate administration by orders in council and by regulations passed under the provisions of the act. To show that this is not simply an amendment of customs regu-

lations, the government has amended the act of parliament providing for proceedings before the tariff board. I do not think the contention of the Minister of Finance that this amounts simply to a change or an amendment of the regulation is well founded. I submit that the government should put in the act an amendment about this ten per cent. All along we have heard that the tariff ought to be made certain; that there should be no uncertainty about it; that if there was a change of government all this possibility of change in the tariff by order in council would disappear, and that he who ran might possibly read the provisions. As the minister of Finance has pointed out, the effect of this is to make the tariff subject to change. In order to carry out the meaning of the law, this ten per cent should be embodied in the act.

Mr. BENNETT: There was one thing the minister did and that was to answer himself. The cuttlefish when pursued is always careful so to obscure the waters that he cannot be followed. We can pass by the hon. gentleman's appeal about the reduction in price, the aid to the consumer and all that sort of thing. Let us look at what was done and find the answer to his whole argument. He said that all they were going to do was to take action by regulation, but we are now considering an amendment to an act of parliament.

Mr. DUNNING: To make the regulation possible.

Mr. BENNETT: Not at all, excuse me. The minister as usual has made an impassioned speech. He called upon high heaven to witness his concern for the poor, suffering consumer and at the same time he pointed out that all they promised to do was to deal with the regulations. That is all the minister did promise; he merely suggested that we should amend the regulations. We are now considering an amendment to an act of parliament. That is not dealing with regulations.

Mr. DUNNING: Oh, yes.

Mr. BENNETT: Not at all. It deals with an order in council and not with regulations. It deals with a statute; it deals with subsection 10 of section 6 of the act. That subsection constitutes my complaint. The Prime Minister promised that he would make the necessary changes, and now his government introduces a statute providing what? There is no reference to ten per cent? No. There is no reference to that being the quantity? No. But that is what he promised. Now we have a statute introduced, and what does it say? It says:

> For the purposes of this act articles shall not be deemed to be of a class or kind made or produced in Canada unless so made or produced in substantial quantities.

And then the minister states, "We will determine what the substantial quantities will be." That is what was said to Japan. He said to Japan, "I promise that we will reduce that to at least ten per cent." But this resolution does not make that declaration, either by regulation, by order or by statute. As I say, the minister has promptly proceeded—

Mr. DUNNING: The promise is being carried out.

Mr. BENNETT: The minister says that the promise is being carried out. What has that to do with the matter? The answer is that the terms are contained in a letter written by the Dominion of Canada to the empire of Japan, and the promise was that the government would make these changes. The fact that they carried this into effect by executive direction until parliament met is one point to be considered, but now parliament has endeavoured to deal with the matter by statute. What was said by the hon. member for Kootenay East is perfectly true, namely, that this applies to the whole act. All that is necessary to do is to make it so that it would no longer be subsection 10; it could be a new section; probably paragraph (a) of some other section would do.

Mr. DUNNING: I think so.

Mr. BENNETT: I should think so; that would be all that would be necessary. Possibly it could be made section 2A or section 3A, and that would cover the situation. But so far as possible I must insist upon placing ourselves on record to the effect that we have endeavoured to meet the conditions which we must impose upon ourselves because of our letter to Japan. In the amendment to the statute we have made no reference to ten per cent. Instead of ten per cent we have mentioned "substantial quantities"; for ten per cent we have substituted a provision enabling the governor in council to provide that that expression may mean something more, and we have covered it up, cuttlefish-like, with the statement that if we find it works out badly we may be able to induce the Japanese to change their minds and help us out.

Mr. DUNNING: I did not say that.

Mr. BENNETT: That is the sense of the minister's observations.

Mr. DUNNING: The cuttlefish is now at work.

Mr. BENNETT: All the minister has to do is look at what he said, and he will find that I am correct.

One word more. I have to answer a point raised by the hon. member for Comox-Alberni. The colliery to which he referred has been abandoned. It was abandoned not for lack of capital. May I observe that it belonged to the Canadian Pacific Railway. It was abandoned because measures had petered out, and houses had been moved. The mine had been abandoned, and there are pickings taken from the dump and some excavations not far from the surface from which this 900 tons of coal was taken. That is the story about Bankhead. Therefore, so far as that case is concerned, I do not think there is much in it. But that has nothing to do with the essential fact that we have come to the parliament of Canada with a statute, and that statute does not contain what we promised, namely, that ten per cent would be the determining factor. Unless it does, all I can say is that while your majority may say no, we are bound to protest against a promise that has been made and is not being kept. The minister may call out to high heaven that that is a reflection upon the honour of his country, and all that sort of thing, if he wishes. But the ink is not any good; it does not darken the view; one can see straight through. The government are alarmed at what they have said, and want to get out of it, if it is possible to do so.

Mr. DUNNING: No.

Mr. BENNETT: And they look for a loophole. Finding it will not work satisfactorily, they say, "We will go to Japan and say, 'It has not worked out very well; let this go.'" And, of course, having been inspired by high heaven with this high impulse, they, as good neighbours, will at once yield to the view suggested and, if desirable, make it two per cent or three per cent. But remember always that the keynote of all the discussions is this: Just think what we are doing for the consumer.

Mr. DUNNING: Yes.

Mr. BENNETT: Yes? Well, a few more idle people and a few more on relief will probably induce the consumer to believe that it is perhaps more desirable to supply employment than to supply relief.

[Mr. Dunning.]

The CHAIRMAN: Is the resolution carried?

Mr. BENNETT: No; we can only say no.

Mr. DUNNING: Is it carried?

Mr. BENNETT: On division.

Mr. NEILL: The leader of the opposition spoiled my perfectly good argument.

Mr. BENNETT: No, I do not think so.

Mr. NEILL: I would point out that we have heard of mines that could be rehabilitated. We have heard of mines that have been scratched on the surface and, if encouraged by suitable provisions in the tariff, it meant that those mines could be brought back again, and that new areas could be developed. It is quite possible that in the case of the mine to which the right hon. gentleman refers they had taken only the immediate portion which was readily available and that had the demand in the market justified it, a further extension could have been made and a greater demand would have been produced. However, the argument I advanced was not so much on behalf of the Bankhead mine—and there are others in the vicinity I will not mention—as it was with regard to our coal mines on the Pacific coast. It was our hope that there would be a dumping duty imposed on British anthracite for the protection of our bituminous coal mines, which were running up against the competition of subsidized British coal, to which I have referred. Is that fair competition? It is brought out at less than the regular freight rate, and it is entering our competitive market free of duty. That is the situation.

Resolution 3 agreed to on division.

Resolved, that the French version of tariff item 691 of schedule A to the customs tariff, being chapter forty-four of the revised statutes of Canada, 1927, as enacted by section five of chapter twenty-eight of the statutes of 1935, be amended by striking out the word "croix" in the second line of the said item and substituting therefor the word "crosses."

Resolution agreed to.

Mr. DUNNING: Probably we should consider the Excise Act.

Mr. STEVENS: While the minister is preparing to discuss the Excise Act, may I ask him to bring to the house certain information which will be available when we come to resolution 5 of the group of resolutions we have been considering, that is, the resolution repealing a large number of items. A number of these items will undoubtedly be consoli-

dated and will appear in composite form in the amended schedule to the tariff. Already I have noticed one or two. Where such occurs would the minister be prepared to inform the committee just what items have been so consolidated, and the reasons therefor?

Mr. DUNNING: I think that is carried out already, if my hon. friend will go through the items. If it is not, I shall be in a position to deal with it.

Mr. STEVENS: No, it is not carried out there. It is merely given in the form of figures, and no explanation.

Mr. BENNETT: The number of the tariff item does not appear.

Mr. DUNNING: Is it the numbers that my hon. friend from Kootenay East would like to get?

Mr. STEVENS: Yes, and in addition to that, the reason for the consolidation. I will not go into the matter now, but there are definite reasons why that should be done.

EXCISE ACT

Resolved, that it is expedient to introduce a measure to amend the schedule to The Excise Act, 1934, as amended by chapter twenty-nine of the statutes of 1935 and to provide:—

1. That the duty of excise on Canadian brandy be reduced from four dollars to three dollars per proof gallon;

2. That the duty of excise imposed upon spirits used in the manufacture of patent and proprietary medicines, extracts, essences and pharmaceutical preparations be reduced from two dollars and fifty cents to one dollar and fifty cents per proof gallon;

3. That the duty of excise imposed upon spirits, sold to licensed druggists and used exclusively in the preparation of prescriptions for medicines and pharmaceutical preparations be reduced from two dollars and fifty cents to one dollar and fifty cents per proof gallon;

4. That paragraphs (d) and (e) of section six of the said schedule, being the duties imposed upon imported leaf tobacco unstemmed and imported leaf tobacco stemmed be repealed;

5. That any enactment founded on paragraphs one, two, three and four of this resolution shall be deemed to have come into force on the second day of May, 1936.

Mr. BENNETT: Perhaps it would be well to deal with the resolution paragraph by paragraph.

Mr. DUNNING: The right hon. gentleman prefers to take each paragraph separately?

Mr. BENNETT: Yes.

12739—184½

1. Resolved, that it is expedient to introduce a measure to amend the schedule to the Excise Act, 1934, as amended by chapter twenty-nine of the statutes of 1935 and to provide:—

1. That the duty of excise on Canadian brandy be reduced from four dollars to three dollars per proof gallon.

Mr. DUNNING: With regard to the change in the excise duty on spirits, it will be remembered that in last year's budget the domestic excise duty on spirits was reduced from $7 a gallon to $4 a gallon. At the same time the customs duty on spirits under the British preference was reduced from $8 to $5. Under the previously existing rate, brandy from Australia and New Zealand enjoyed a $6 rate on imports. This differential of $2 as compared with the British preferential rate of $8 is fixed by the terms of the agreement. It is provided in the agreement that the $2 spread as compared with the British preference shall be coincident. Accordingly, under the customs tariff as it now stands, brandy from these two countries may be imported under the $3 a gallon duty, while domestic producers of brandy are still required to pay $4 a gallon domestic excise duty, and the reduction here is for the purpose of equalizing the rate of excise upon Canadian domestic brandy with brandy imported under the customs tariff from these two countries.

Mr. BENNETT: What do we produce in this country in the way of brandy?

Mr. DUNNING: The production is not large. I understand three firms are making it, but no separate statistics are kept to date of its production in Canada.

Mr. BENNETT: Of course, so far as the excise payable of $3 against the $4, the reducing of it to $3 is concerned, the import charges from Australia and New Zealand have to be reckoned with. There was not a difference of a dollar; there was only the difference between a dollar and that portion of it which covered freight and insurance and the cost of transporting the brandy from Australia and New Zealand.

Mr. DUNNING: Rather a wide spread for that purpose, is it not?

Mr. BENNETT: Oh, a dollar a gallon would be large, but not very large.

Paragraph agreed to.

2. That the duty of excise imposed upon spirits used in the manufacture of patent and proprietary medicines, extracts, essences and pharmaceutical preparations be reduced from two dollars and fifty cents to one dollar and fifty cents per proof gallon.

Mr. DUNNING: This change is to establish a uniform rate for spirits used for pharmaceutical purposes with the rate at present existing for spirits used in the manufacture of perfumes.

Mr. STEVENS: I understand that this is limited to manufacturers, and the word "manufacturers," I understand, is defined—my definition may not be exact—as bona fide or large manufacturing concerns, as distinct from the chemist who from time immemorial in his own dispensary formerly was in the habit of manufacturing many medicinal concoctions in which spirits were involved. I am informed that ordinary chemists or chemist's shops or drug stores, if you like to call them so, where they put up prescriptions and so forth, cannot now manufacture for sale in their own shops many of these articles that formerly were so manufactured or so prepared, because they have to pay the high retail price for the spirits so used. I ask the minister if it is not possible to extend the definition of "manufacturers" to bona fide chemists putting up medicines for their own sales.

Mr. BENNETT: Is that not covered by the next section, which reduces it down to the same rate, a dollar and a half?

Mr. STEVENS: I was told this past week that most of the druggists—I am speaking of bona fide chemists who have little dispensaries attached to their drug stores—have been forced to give up the preparation of cough medicines. Many of them, particularly in the smaller towns, who put up their own little cough medicines, have been forced to buy these preparations from large manufacturing concerns. Unless this paragraph 3 is entirely new—

Mr. DUNNING: The next paragraph is the one.

Mr. STEVENS: Is this entirely new?

Mr. DUNNING: It is a reduction on the very thing my hon. friend is speaking of.

Mr. STEVENS: I am told that they cannot get it; that this is limited to the manufacturer.

Mr. DUNNING: Perhaps my hon. friend will allow me to pass paragraph 2 and deal with his point on paragraph 3, where it belongs, the paragraph which specifically mentions druggists.

Paragraph agreed to.

[Mr. Bennett.]

3. That the duty of excise imposed upon spirits, sold to licensed druggists and used exclusively in the preparation of prescriptions for medicines and pharmaceutical preparations be reduced from two dollars and fifty cents to one dollar and fifty cents per proof gallon.

Mr. DUNNING: I am advised that any druggist—any chemist, I think was the term my hon. friend used—can get a licence which will enable him to take advantage of the provisions of this section.

Mr. STEVENS: Limited, of course, to prescriptions and pharmaceutical preparations.

Mr. DUNNING: That is pretty broad, is it not?

Mr. BARBER: I think the trouble is that a druggist or chemist necessarily must purchase a certain quantity, five or ten gallons. I think that is where the objection arises.

Mr. DUNNING: The commissioner advises me that five gallons is the minimum purchase.

Mr. BARBER: I think that is the trouble.

Mr. DUNNING: I suppose it is difficult to administer smaller quantities.

Mr. BENNETT: Under existing conditions in the provinces the druggist buys the spirits largely from the licensed vendors, from the government liquor shops in many cases—I think, in all cases now in the western provinces—and it seems to me that he should be allowed to buy as small a quantity as a gallon. There is no difficulty in respect of administration, is there?

Mr. HOWDEN: With all due deference to the hon. member opposite (Mr. Barber), who is a druggist, I think I can say without fear of contradiction that it is very many years since ordinary chemists have used alcohol in the preparation of tinctures or anything of the kind in retail trade. They buy these preparations from the wholesalers, and the only use that I know of for spirits in the retail drug trade is to supply occasional prescriptions from medical men.

Mr. BARBER: With all due deference to the medical man on the other side (Mr. Howden), I have been in the business for thirty years or more, and have practised in his province as well as my own. I know that to-day in many sections the druggists are manufacturing all their tinctures and many of their pharmaceutical preparations. They have been forced to do that. In the past the drawback has been that they had to purchase alcohol in large quantities at a very high

price, and it did not pay them to make the tinctures. Perhaps five gallons would be a satisfactory quantity, and that would permit the druggists to continue to manufacture their tinctures and pharmaceutical preparations. I can assure the last speaker that leading druggists throughout all the provinces do a considerable amount of manufacturing at the present time.

Mr. DUNNING: Do I understand my hon. friend to say that he regards a five gallon limitation as satisfactory?

Mr. BARBER: I think that would be all right, at the present price.
