OFFICIAL REPORT

## Wednesday, April 22, 1936

The house met at three o'clock.

### CANADA SHIPPING ACT, 1934

Hon. C. D. HOWE (Minister of Marine) moved for leave to introduce Bill No. 53, to amend the Canada Shipping Act, 1934.

Mr. STEVENS: Explain.

Mr. HOWE: As most hon. members are aware, the Canada Shipping Act, a very extensive piece of legislation, although passed in 1934, is not yet in operation, due to the fact that it was considered advisable to allow the shipping interests of Canada reasonable time to become familiar with the changes proposed, and also to enable the Department of Marine to prepare the regulations called for by the act. The amendments now proposed are not very extensive, and are largely for the purpose of clarifying the intent and meaning of the 1934 measure and rendering it more effective in its application to the existing situation.

Motion agreed to and bill read the first time.

### BANK OF CANADA

Mr. THOMAS REID (New Westminster) moved for leave to introduce a bill to amend the Bank of Canada Act.

Hon. CHARLES A. DUNNING (Minister of Finance): Mr. Speaker, I respectfully suggest to your honour an examination of the bill as to whether it is within the competence of a private member to introduce a measure such as that proposed.

Mr. SPEAKER: I shall look into the matter.

Mr. REID: I think I might have been allowed to give the house an opportunity to know what the bill is.

Mr. SPEAKER: The hon. member may proceed to give his information.

Mr. REID: The objects of the proposed bill are, first, to allow the Bank of Canada to hold silver coin and bullion in conjunction with gold as a reserve against the note issue and deposit liabilities, and also to allow for the issue of silver certificates against the silver held in such reserve. Secondly, it is proposed to have the Bank of Canada purchase and hold any quantity or amount of newly mined silver when required by the minister so to do.

It will be remembered that at the London economic conference of 1933 Canada agreed to purchase 1,671,802 ounces of silver during the years 1935, 1936 and 1937. But under the provisions of the Bank of Canada Act, the bank, while called upon to purchase this amount of silver during those years, is prohibited from purchasing any greater amount than the 1,671,802 ounces, by mandatory order which states that the bank shall never be required to purchase more than this amount. The amendment proposed would make this amount the minimum instead of the maximum.

Mr. SPEAKER: I think my decision in this matter should stand until I shall have had an opportunity to look into the bill and determine whether or not it is within the competence of a private member.

Motion stands.

### QUESTIONS

(Questions answered orally are indicated by an asterisk.)

#### IMMIGRATION SOCIETIES

Mr. GAUTHIER:

1. Does the government pay subsidies to any immigration societies?

2. If so, in what cities do such societies carry on their operations?

Mr. CRERAR:

1. No.

2. Answered by No. 1.

## MOTIONS FOR PAPERS

ST. VALLIER STATION, QUE., POST OFFICE

Mr. ROBERGE (for Mr. Boulanger):

For a copy of all documents concerning the official inquiry by the Post Office Department into the charge made by Mr. Gerard Cadrin, mail contractor of St. Vallier Station, against the postmaster of said St. Vallier Station, of illegally opening mail matter.

For a copy of all correspondence passing between the postmaster of St. Vallier Station, on the one hand, and the Post Office Department and the postal superintendent at Quebec, on the other, with reference to the rural mail contractor at La Durantaye, county of Bellechasse, and especially the alleged purchase of postage stamps by the said rural mail contractor, from the St. Vallier Station post office.

HERVAY CHEMICAL COMPANY

Mr. ROBERGE (for Mr. Boulanger):

For a copy of all letters, telegrams, reports and other documents in the possession of the Department of National Revenue with reference to the claim of that department against the Hervay Chemical Company of St. Basile, Portneuf county, Quebec, for arrears of sales taxes.

Hon. J. L. ILSLEY (Minister of National Revenue): Mr. Speaker, if these papers were produced it would divulge the affairs of a private company or individuals, and my information is that it is contrary to the established practice of the Department of National Revenue to give such information. Therefore I would ask that this motion be dropped, or, if the hon. member proposing it (Mr. Boulanger) is not in the house, that it stand until he is.

Mr. SPEAKER: Dropped.

GRAND TRUNK RAILWAY SHAREHOLDERS

Mr. STEVENS:

For a copy of all correspondence passing between the hon. Minister of Railways and the Chairman of Grand Trunk Senior Stocks Company, Limited (representing shareholders of the Grand Trunk Railway), during the past six months, and more particularly a letter dated 18th February, 1936, from the said chairman to the hon. Minister of Railways.

Also for a copy of a petition addressed to the House of Commons and signed by W. A. deVere Forster, R. C. Hawkin, and others, on behalf of the first and second preference stockholders of the Grand Trunk Railway Company of Canada residing within Great Britain, and dated about 1930.

Hon. C. D. HOWE (Minister of Railways): Mr. Speaker, the affairs of the Grand Trunk stockholders in connection with the Canadian National Railways are before the privy council, and as far as I know the decision has not been handed down. I am of the opinion that the matter is sub judice, but I shall be glad to look into it and ascertain the exact position.

Motion agreed to.

## CANADIAN NATIONAL RAILWAYS

PROVISION FOR EXPENDITURE, INDEBTEDNESS AND THE REFUNDING OF MATURING OBLIGATIONS

Hon. CHARLES A. DUNNING (Minister of Finance) moved that the house go into committee at the next sitting to consider the following proposed resolution:

That it is expedient to bring in a measure respecting the Canadian National Railways, to authorize the provision of moneys to meet expenditures made and indebtedness incurred during the calendar year 1936, and to provide for the refunding of certain maturing financial obligations.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the house.

Motion agreed to.

## PACIFIC SHIPPING CONFERENCE

On the orders of the day:

Mr. THOMAS REID (New Westminster): Mr. Speaker, I should like to direct a question to the Minister of Trade and Commerce (Mr. Euler). According to dispatches from Great Britain a conference has been called between the governments of Great Britain, Australia and New Zealand in regard to subsidized shipping on the Pacific ocean running between Australia, New Zealand, the United States and the Pacific ports of British Columbia. The trouble arises out of the keen competition of United States subsidized shipping, particularly that of the Matson line, which it is claimed is putting British steamships out of commission. As Canada is, or should be, vitally interested in what transpires in connection with this matter I should like to know if this country has been invited to participate in the conference, because I believe we should be fully represented.

Hon. W. D. EULER (Minister of Trade and Commerce): Mr. Speaker, an invitation has been received by the government to attend the conference to which the hon. member has made reference. The High Commissioner for Canada in London has been instructed to send a representative to the gathering.

## UNEMPLOYMENT

### ASSISTANCE FOR AGRICULTURAL SETTLEMENT AND REHABILITATION AND DEVELOPMENT OF NATURAL AND OTHER RESOURCES

Hon. NORMAN McL. ROGERS (Minister of Labour) moved the third reading of Bill No. 19, to assist in the relief of unemployment, the promoting of agricultural settlement and rehabilitation, and in the development, conservation and improvement of certain natural and other resources.

Mr. T. L. CHURCH (Broadview): Mr. Speaker, before the bill receives third reading I should like to detain the house for only a very few moments. By standing order 38 the motion for third reading is debatable, and I am thereby permitted to speak.

At the outset may I say that I am greatly disappointed in the bill. In the first place, the title of the bill is not correct but, as I said on Monday, it may be changed in another place. In the second place, the bill does not give the employment commission in making agreements with the provinces, corporations and individuals the powers they should have. The functions of the employment commission which will carry out the terms of this bill and the preceding one are purely advisory. Time and again we find in the bills that they are "to advise and report" or "to report and advise." What are the unemployed going to do while all this advising is going on? The government has admitted that no concrete or definite plan by the commission can be secured for almost a year. In other words, we shall have to wait another year before any concrete developments or definite plans will be proposed. Then, when they are proposed, what will happen? The commission will report and advise the minister who, in turn, may reject their advice, the same as he may reject the advice of the officials of his own department.

I was pleased yesterday to note the showing of independence of three of the one hundred and seventy members of the party in office. There seemed to be an awakening as to what is going on, as to what people are saying, because we know that Ottawa never knows what the rest of the country is thinking. Those who are new members will have a rude awakening from their constituents. I say that they are elected here to function as members of parliament, and not to always sit still and do the bidding of their party or leader, or of the government or any other group. They are free citizens under a free constitution. Look at the way private government members in the old land criticize even government bills dealing with social matters and unemployment, and that sort of thing. Perhaps if in this house we had a measure for the relief of unemployment such as was introduced in England conditions might be different. We know that Great Britain is recovering faster than any other country, and its recovery is being brought about because the British people have attacked this great social disease in the practical and the 1936 way. Instead of a commission cure, a cure which will never amount to anything, they have adopted other means. Commissions have never cured anything in Canada since we have been a country. Hon. members have been elected as a commission of 245 members to deal with the problem, but we sit here day in and day out and do nothing about it.

With all due respect may I say that the government is one of conscientious Canadians, but I must add that the house must not be asked to pass Bill No. 19 without knowing the names of all the members of this sevenfold amen, this last word, so to speak, of the government commission on unemployment. We know who one of them is, Mr. Purvis, already named in advance under the new triumph of the present government of separatism. We used to have the King, the Senate and the House of Commons. Now announcements are made by order in council without reference to the sovereign or his representative in Canada. Before the bill is passed we should know how it will operate, because I believe there will be a conflict of law, and this Bill No. 19, with regard to its industries clauses, will wind up in the law courts. No doubt agreements with industries, individuals and corporations will be taken to court. Application for injunction can be made, because it is my opinion that parliament has no power to pass the bill now before us on account of the interference with property and civil rights in the provinces.

There are at present before the supreme court several bills—ten bills in all—dealing with subjects closely related to this new deal of 1935, and before this measure passes we should know what the Supreme Court of Canada has to say about such matters. No statement has been made about unemployment insurance, or the power of parliament to regulate trade and commerce which has been unregulated since confederation. That field is within the jurisdiction of parliament, and with the exception of some minor laws has been unexplored since confederation.

I for one do not propose to sacrifice my rights as a member of parliament. I know

the conditions of the industrial workers in the three ridings east of the Don river in Toronto. There is a proposal to appoint the president of an industry in my constituency as chairman of this commission, and about that matter I may have a word to say a little later on. In passing I may observe that he is a gentleman of ability, and I take this opportunity to pay tribute to his talents.

I wish particularly, however, to say a few words for the great mass of intelligent electors in Canada. I am speaking for those independent people in this country who are not interested in a solution of this problem along political lines. The great mass of electors who send members to this parliament wish us to reassert the supremacy of national over party interests in Canada, and they should compel us, their elected representatives, to discharge our duties as private members. They should make us function and do our duty in order to help rebuild the structure of our social and economic order.

The country is heartily sick of politics as it is played here. We want a new set of rules for the game. Nothing illustrates that point better than does Bill No. 19. Last night the hon. member for Témiscouata (Mr. Pouliot) asked the government if they were compelled to accept the recommendations of the commission and he received the reply that the government was not committed to that advice. May I point out that there is a rule of anticipation in the House of Commons. I would not have spoken on third reading had it not been for the action of the government on April 6 when, in the presence of about forty per cent of the members, a committee was set up to handle the railway problem, the greatest problem in Canada and one involving a deficit of about $60,000,000. Without notice in votes and proceedings the government shunted consideration of this important matter to another body; it passed the buck to the committee on railways and shipping. If I were to speak at length about this matter I would be ruled out of order, and further reference in the house will be deferred until the presentation of the committee's report.

What will happen if on May 1 there are demonstrations in the larger cities? And there are bound to be demonstrations. Those men will not read Thomas Carlyle; they will not quote Shakespeare as is done by hon. members opposite. They are going to ask this question: What have you been doing about unemployment? I hope the hon. member for Greenwood (Mr. Massey) will hear what I am saying, because he is interested in that part of the city where industrial workers are not getting proper treatment. For the balance of the session, if this bill No. 19 passes, whenever we propose anything constructive to relieve unemployment we will be ruled out of order under the anticipation rule. The preamble of this bill says that it is to foster agricultural settlement, and conserve and develop the natural resources, but in the whole bill from cover to cover, there is not one line about these great problems, and when this bill goes to the house of philology, as I call it, we shall see an awakening. This parliament is to blame.

I was very much interested in some of the remarks that were made by my hon. friend from Rosthern (Mr. Tucker) and my hon. friend from Vancouver-Burrard (Mr. McGeer) in connection with the plight of our municipalities. The municipalities are asking that something be done along these direct grant lines, and they have been looking to parliament for a long time in vain for direct aid for relief works. I agree with what those two hon. gentlemen said in that respect, and on this government, as long as it is the government of the day, lies the responsibility of solving these problems in a practical way. We on this side of the house have made suggestions, but the government will not listen to them. They have millions and millions of dollars to give to the railways and to the provinces for unemployment relief, and the province deducts often ten or fifteen per cent for overhead and other expenses instead of giving the whole grant directly to the municipalities. So, Mr. Speaker, I was very glad to hear those two hon. gentlemen support me in my contention. I believe that instead of Bill No. 19 we should have an up to date, long term policy for providing full time employment, and if the Liberal party—and they are the government of the day—cannot find a solution, what will happen in ten years will be that the socialists will come into power in this country. That is what is going to take place. Sir Oswald Mosley calls the present state of affairs "a slow crumbling into ruin." But England did not wait for "a slow crumbling into ruin" to develop. The government acted promptly. It tackled this problem in the House of Commons. As far back as 1909 the British government introduced unemployment and sickness insurance, and established a system of pensions and of labour exchanges. A census of labour was made. We have never had a census of labour, and it is all guesswork how many unemployed we have in this country, and how many of those on relief are employable or not. England did not wait for this so-called slow crumbling into ruin. The British people

adopted a housing and construction policy; they tried to balance their budget; they adopted a policy of preserving their home markets by tariff concessions as much as possible for their own workmen by protection and by reforestation and a suburban policy, and as a consequence they have tided over the depression and have become to-day one of the most prosperous countries in the world.

In this country in recent years we have been too prone to load federal and provincial burdens upon the municipalities. Our constitution in that respect is well on its way to becoming upside down. The Prime Minister (Mr. Mackenzie King) said that the present government could not make a direct grant to the municipalities. That only shows the necessity of parliamentary and constitutional reform. I had a motion on the order paper dealing with that question, but the resolution was called only once although it had precedence I agree to let five or six other motions have the precedence. It is only begging the question for the government to say that they cannot make direct grants to the municipalities. They have made grants to municipal bodies before. In 1919 they made grants to the municipalities for housing, and ninety-five per cent of that money, millions of dollars, was paid back by the municipalities. So what is the use of the government making that argument? Grants have been made by the federal government to municipal institutions all over this country, for pensions, housing and many other services, and to quasi municipal harbour commissions and other social services. The municipalities themselves have no new sources of taxation. They have increased taxes on property owners so much that property is now taxed to death and nobody wants to own it. This affects real estate; it discourages employment; it discourages housing construction, and it leads to congestion and a lower standard of living. In Ontario the municipalities have found little sympathy from the province, because Ontario is seeking to balance its budget at the expense of the municipalities. The provinces were created for political, not economic, purposes. That was one of the greatest mistakes made at the time of confederation, and that is why we are not able to solve the economic problem in Canada. Four of our provinces would have become bankrupt but for federal assistance. Prior to March 5 of this year the federal government advanced $111,000,000 out of the public treasury to the four provinces west of the great lakes. That is a new constitutional development. If the government, in contravention of the British North America Act, can aid the provinces in this way to the extent of $111,000,000; if they are able to get round the British North America Act and give cash grants for outside services and federal subsidies, why cannot they come to the help of our municipalities? The provinces up to 1930 were able to run their own affairs out of their subsidy and direct taxation, but the municipalities are looking to this parliament for help. As I stated the Minister of the Interior (Mr. Crerar) and the Minister of Labour (Mr. Rogers) the other day gave a heartless reply to the municipalities.

Look at what the United States senate has done to solve the unemployment problem. I referred yesterday to what it did in 1927 under a senate committee there, and the report that was made at that time. Our own senate last year made 555 amendments to our social and unemployment insurance bill, and yet it did nothing to help relieve unemployment in the past 12 years. This Bill No. 19 is fifteen years too late in getting started here. The government ten years ago refused to adopt the policy which we are now asking them to adopt on the third reading of this measure. I can see no object in the present policy of the government in this bill. The unemployment insurance bill that was passed by this house last year is tied up in the courts awaiting a decision while the unemployed are calling for jobs. This unemployment commission can make rules and regulations and make agreements with provinces and corporations outside the control of parliament altogether. That is what Lord Hewart called the new despotism. Where is the liberty of the subject to be if these matters are taken out of the hands of parliament and handed over to a commission which is given powers over the heads of the law courts in this country?

What does this bill say about business? The commission can make agreements with corporations. What corporations? Are they going to make agreements with some of the corporations on which the chairman of the commission is a member of the board, such as the Sun Life, the Bell Telephone and many other companies, including some companies in New York. Are they going to make agreements with these companies? The bill in its present state is an interference with business and with corporate direction of property in this country. It is a most amateur performance and in its present form it will not aid employment because of the restrictions which it is going to place on industry, which should be unfettered if it is going to help give employment. We are giving this commission the right to make agreements with companies

over the head of the province and with business over the head of parliament. Is parliament no longer to be a sovereign power? I contend that this bill is an interference with the liberty of the subject.

This bill permits extensive regulations to be made. Before it passes I should like to ask the government if this measure represents its long term policy for the solution of this problem? Neither doles, nor insurance nor hand-outs will ever take the place of the desire of the free citizens of Canada to work. The whole proposal is only a palliative and it will be a most bitter bill for the unemployed to swallow on May 1 when many of them hope to get off the dole and into remunerative employment. This bill from cover to cover is nothing but a blank cheque. Section 11 states that obligations are to be met, on and after March 31, 1937, but are any plans or surveys not even to be laid before the house as preparation for meeting these obligations?

On April 1 of next year—no, I am wrong; it is on March 31, 1937, Mr. Purvis' birthday, that this bill will expire. Parliament no doubt will then be in session and will get the bills. We can sit here in an $18,000,000 building as members who have certain rights and privileges; then we can look across the Ottawa river and see the slums of Hull which are as bad as anything I have ever seen in New York city. We will get the bills on March 31, not on April 1. The money will be spent and all that will be left for parliament to do will be to conduct a post mortem. It will be a post mortem conducted on a sevenfold coroner system, to be known as an employment commission.

The government may enter into agreements with corporations, partnerships or individuals, but no mention is made of the municipalities. Not one cent is being provided for the municipalities. The only way they can get any money is from the provinces, and then a string is attached to it. Deductions will probably be made from this trust fund. Last night the government admitted that they were not aware that deductions had been made from the trust funds handed out to the provinces. This bill is supposed to assist in the relief of unemployment, but I think the Prime Minister said either too much or too little. A survey should be made as to what has become of these federal funds. Have they been audited by the auditor general? Has he seen that the money reached its proper destination?

I should like to say a word about the chairman of this commission. I have known this gentleman for some years, and I know he is a gentleman. He is the president of the largest industry in my riding, The Dunlop Tire Company, but that is not going to prevent me from speaking my mind as a member of this house. I took part in a by-election in 1934 and at that time the head of this industry was very much interested in the results. Last year he took a great deal of interest in the general elections and efforts were made to defeat the hon. member for Greenwood, a gentleman who has made a great study of this problem and who knows much about the conditions of the people in his district. This Mr. A. B. Purvis of St. James street is to be the chairman of this new hallelujah chorus of government achievements. This is the man who is interested in the Bell Telephone Company and the Sun Life Insurance Company, the insurance company that took millions and millions of dollars out of this country. As I said he is the president of the largest industry in my riding, the Dunlop Tire Company.

The employees of this company have done a great deal to build up the Riverdale section and the over-the-Don district of Toronto. For many years the skilled workmen in this industry had made a most notable contribution to industry. They realized the benefits of protection and they appreciated its relation to employment, but they have been laid off or else are working only part time. During the by-election of 1934, the representative of the party in this section of the house was refused the right to address the workers in this industry because Mr. A. B. Purvis of St. James street was then opposing this party. The other candidates in that by-election were able to get into the plant although I probably had done more for this industry as a municipal worker and officer. It obtained many large contracts in the open market. This company was previously headed by a very able man, a former minister of the crown. He was a popular and lamented citizen who did a great deal for Riverdale district, my predecessor, the late Hon. E. B. Ryckman. However, new officers and heads of departments were brought in recently and the result has been that many of the employees are now working only part time, and some heads, who are Americans, to take the old officials' place. This industry was a credit to Canada under the protectionist system and the men who built it up were some of our best citizens. The present government candidate in the by-election and in the general elections last October had the active support of the Liberal president of this company. Bill boards in the neighbourhood of this plant were covered with the slogans: Vote Liberal and end unemployment; Beat Bennett and bad times; For action, Snelgrove; Curb the trusts; Secure lower bank, mort-

gage and interest rates and, Protection for the home owner. That is what appeared on the bill boards as appeals to the workers of this industry.

The announcement of the proposed appointee to this position is irregular. I think it is unwise to make an announcement of an appointment to a public body, whether it is provincial, municipal or federal, before the appointment is actually made. This is a funny state of affairs. I am sure we could fill these desks three or four times with men who would be willing to act as commissioners. There are many who would be willing to go round advising and readvising the minister. The minister is so fond of getting advice himself he got a copy of Carlyle for the benefit of the unemployed in Canada and fed them on quotations from Carlyle. Now it is to be president Purvis who will advise and report to him.

Not only is this gentleman president of the company I mentioned; he is also connected with the Bank of Montreal, the Bell Telephone Company, the Canadian Investment Fund Limited, the Canadian Lastex Company Limited, the Consolidated Paper Corporation, the Liverpool, London and Globe Insurance Company, the Sun Life Insurance Company and the General Motors Corporation of New York. He is an estimable citizen and one who has done a great deal for his country, but in this instance I think he is attempting to do the impossible. I am surprised that a man of Mr. Purvis' ability would lend his name to something like this. He was born in England and he knows as much as any citizen just what are the conditions over there and in this dominion. All he will be able to do will be to advise and report, report and advise, then take something out of the report and then add something to the report. I am surprised that he would have anything to do with a bill such as this.

I have the figures showing the extent of relief assistance given in the United States. There are 24,000,000 Americans who are living on relief money, about 14,000,000 of them receiving a livelihood from the work relief program, while the other 10,000,000 are getting local relief. The Cleveland News carries an illuminating illustration; it shows a number of smoke stacks of varying sizes indicating the decrease in unemployment since March, 1933. I quote the following statement:

Figures about the decrease in unemployment since March, 1933, show that we are lagging behind Canada, Sweden, Belgium and Great Britain and that we are just a trifle ahead of Japan. These statistics come from official sources in Washington and Geneva. The United States News illustrates with smoke-stacks of varying sizes the percentage of decrease in the number of jobless in each of the six countries. Through the courtesy of this Washington newspaper, we are permitted to reprint the pictogram, which speaks more eloquently than words or statistics.

This illustration shows that the percentage of decrease in unemployment in the United States since March, 1933, has been 19 per cent; Japan, 18 per cent; Great Britain, 24 per cent; Belgium, 27 per cent; Sweden, 36 per cent; Canada, 42 per cent. Yet, in the face of these figures, an hon. member yesterday blamed the party to which I belong for the unemployment that we have in Canada. Unemployment in this country is attributable in the first place to the government preceding the late administration, for that government took no steps to prevent dumping, nor did it make any effort whatever to preserve the home market for Canadian industry and Canadian producers or take any steps to study unemployment as I have said.

I believe in protection for the industrial worker. We have heard a good deal of criticism of the United States, but I would point out that in that country, under the United States government, under the Home Owners Corporation Act, 1,000,000 homes were saved from foreclosure. Look at what the senate of the United States accomplished in 1927 in connection with unemployment. Look at what was done over there in the investigation of Wall street and of racketeering in financial businesses in their relation to the unemployed, sweat-shops and child labour. The Senate of Canada goes on holidays and does nothing in connection with this matter. Why should it not have done something comparable with what was accomplished in the United States ten years ago? Our senate could have brought down a report the size of a bound volume of Hansard, but instead of that it quibbles about dotting an "i" here or crossing a "t" there.

Bill No. 19 refers to conservation but there is not one word about conservation in it. In my opinion the municipalities are being made the goat in this bill, and home owners are unable to retain their homes. England leads the world in unemployment insurance pensions, and we find Italy helping the municipal institutions in that country with a program which will extend over the next forty-five years In particular I would urge action designed to eliminate the suffering resultant from bringing into Canada immigrants who are inadequately informed concerning the conditions they are called upon to face here, and who are the victims of self-seeking immigration agents No one should be left to go cold or hungry in this country; those who

are unable to work and are in need should be provided for adequately. Work should be found or made for all able-bodied workers who, without it, would be in need of the necessities of life, and reasonable means should be adopted to increase the earning power of those who are relatively inefficient.

The Victorian era built up assets for the future, but those assets have been squandered through a mad spending period in the last forty years. The modern politician seems to think it necessary to extend parliamentary interference to every phase of life, business, commerce, imports and exports and everything from Dan to Beersheba, in the form of useless commissions, with the result that we are over-governed. In the early days there were no bankrupt municipalities; to-day there are 247 and they are all crying out for some assistance and receiving none. The solution of the unemployment problem should be found in this house and not in any commission. A committee of this house should be set up to study the whole question, just as we have a committee on so important a subject as railways and shipping. The solution calls for national sacrifice and not for parliamentary repartee. The government of the day must be a constructive force whose object should be the building up of a healthy society; otherwise there is a danger of the people turning to socialism. In sound progressive measures lies the hope of the country. Such a policy may be unpopular in parliament, but if the fight is carried outside we shall find that the rules will be broken, for the man in the street has grown weary. He is of the opinion that the government is dealing with the unemployment question with the object of preserving its own existence and not for the good of the people as a whole, and that its attempts at reform are only half-hearted. The domestic policy has failed, for the stock in trade of the government seems to be summed up in the struggle of the ins and the outs.

Right Hon. Sir GEORGE PERLEY (Argenteuil): I should like to call the Prime Minister's attention again to section 5. It seems to me it would make for better legislation if this section were enacted in a separate bill. The rest of the bill has to do entirely with the Department of Labour, but the administration of section 5 will be carried out through the Department of Finance and the minister of that department will advise the governor in council in regard thereto. Section 5 is for an indefinite time, being more or less permanent, or effective until it is repealed by parliament; whereas the remainder of the act expires on March 31, 1937. In my opinion this bill should cover only the matters which are definitely to expire on March 31, 1937, and as I say it would be better if section 5 were put in a separate bill, which would then be lawfully in force until repealed by parliament. However, that is a matter entirely for the government, and if in their judgment it is all right, if they wish it to stand, I have nothing more to say.

In order to be helpful if I can, may I remind the house that an amendment was proposed to section 2, suggested I think by my leader but accepted by the government, that at the end of clause 2, after the word "labour" there should be added the words, "and whenever used in this act the word 'minister' shall mean the Minister of Labour." I believe that was agreed to by the committee, but it does not appear in the reprint of the bill which I have before me.

Right Hon. W. L. MACKENZIE KING (Prime Minister): May I thank my right hon. friend (Sir George Perley) for his words which, as usual, are intended to be and are helpful. To take the last point first, I think the reprint of the bill which my right hon. friend has is the reprint issued the day before yesterday, and which therefore does not contain the amendments made yesterday. The amendment my right hon. friend has referred to as having had its origin at the instance of the right hon. leader of the opposition was adopted by the committee yesterday and will appear in the bill as it finally passes.

As to the other point I may say to my right hon. friend that while the government naturally hopes that it will not be necessary to renew this legislation, or at least all of its clauses, for another year at the expiration of the present fiscal year, it may be necessary to do so. In that event, of course, we will do as my right hon. friend's friends did when they were in office; we shall ask parliament, before the expiration of this fiscal year, to renew the bill for a further period of time. In those circumstances I think the point raised by the right hon. gentleman, as to the possible effect of other clauses expiring at the end of the fiscal year, will not effect what he has in mind. I may say this, that should it not be necessary to renew the bill undoubtedly section 5 will have to be renewed in the form of a separate bill, and that will be done. This is all part of the law of the land meanwhile, and as the committee considered that point when the bill was before it I think we might allow the bill to receive third reading as it stands.

Mr. H. E. WILTON (Hamilton West): I should like to say just a few words before this bill receives third reading. I am quite in sympathy with what has been said by my hon. friend from Broadview (Mr. Church) with regard to the burden of debt that has been imposed upon the municipalities. I speak from personal knowledge, having had several years of experience in municipal administration; I do know that municipalities have been burdened beyond the point where they can carry on. But I do think at this time there should be no division of opinion in regard to the necessity of solving the problem of unemployment, because the solution of that problem will mean the solution of the problem which confronts every municipality in regard to small home owners, many of whom are being forced out of their homes because of the heavy taxation imposed upon them by the municipalities due to their need of extra revenue.

I am only sorry, Mr. Speaker, that I cannot agree with the proposition to leave the solution of this problem to a commission. To me that seems to be simply putting off the evil day. To my mind it is the direct duty of this government and this parliament to take such action as will lead to an immediate, or as nearly immediate as possible, solution of this problem. If this matter is passed on to a commission no doubt, as commissions usually do, it will take a considerable length of time to bring in its finding, and even after that report has been made probably months will elapse before anything definite is done. Looking at the whole question from the point of view of the people we represent I cannot get away from the thought that the people of Canada look to this parliament itself to settle such questions as that of unemployment. It seems to me that if we have to appoint commissions to carry out everything we want done the people had better elect commissions and do away with parliament. We are sent here to do the business of the country, but we pass that duty on to someone else.

Every speaker has agreed that it is necessary to solve the problem of unemployment and much criticism has been offered, but so far I have heard nothing in the way of a solution. It seems to me that in handling our financial affairs with regard to unemployment we simply go deeper into the mire every time we attempt to do anything, because we follow the vicious system of borrowing money with which to repay borrowed money. No matter what is done our national debt is increased, and we are creating a tremendous burden which will have to be borne by the next generation. Instead of continuing this vicious circle of borrowing and using the same money over and over again in order to carry on, Mr. Speaker, it seems to me the best solution is to find some new source of revenue. By that I do not mean some new source of taxation but some new source of revenue which will bring relief to the overburdened taxpayer and which will help the small home owner to retain his property. I believe this government should adopt some ways and means of developing its own natural resources, thereby creating new wealth which may be used to reduce the national debt and relieve the municipalities of the need for the additional revenue they have had to find. In turn the municipalities would be able to help the home owners who are already overburdened with taxation and debt. It seems to me something along that line would be a very constructive step to take, since it would open up a new source of revenue without any additional taxation.

Let me repeat, Mr. Speaker, that in regard to the solution of the problem of unemployment I do not think there should be any division of opinion in this house except, possibly, as to the means to be adopted. My feeling is that this question should be handled directly and immediately by this parliament instead of being turned over to a commission which will take months to prepare and bring in a report, and in all probability after that report is brought in we will find ourselves back where we are now.

Motion agreed to and bill read the third time and passed.

## CUSTOMS ACT AMENDMENT

Hon. J. L. ILSLEY (Minister of National Revenue) moved the third reading of Bill No. 11, to amend the Customs Act.

Motion agreed to and bill read the third time and passed.

Mr. CAHAN: On division.

## NATIONAL HARBOURS BOARD

### PROVISION FOR ADMINISTRATION AND CONTROL OF PUBLIC HARBOURS

The house resumed from Tuesday, April 21, consideration in committee of Bill No. 17, respecting the national harbours board.—Mr. Howe.—Mr. Johnston (Lake Centre) in the chair.

The CHAIRMAN (Mr. Johnston, Lake Centre): When the committee rose last night it was considering section 3.

Mr. CAHAN: I suggest that for greater clarity in dealing with this clause we discuss it subsection by subsection. The first subsection provides that there shall be, under the minister, a board to be known as the national harbours board. The minister is responsible to parliament for the administration of the harbours by this board, and the word "under" is not clear and definite. We found it necessary in other similar bills to insert the words "under the direction of." It was suggested at one time that it should be "under the supervision of," but there is no doubt that in matters of general policy these boards must be directed by a minister of the crown. Therefore I suggest for the consideration of the minister the insertion of the words "the direction of" in the first line of subsection 1 of section 3, between the words "under" and "the," as making for clarity and definiteness.

Mr. HOWE: I see no objection to the change. I am not just sure what the implication is, but no doubt my hon. friend has looked into it. My thought is that this board will not require a great deal of direction. We hope to have expert management, perhaps more expert than that of any minister at the head of the department could be, and they will act on their own in most particulars. But obviously the minister is responsible for their actions. If the subsection can be allowed to stand I shall be glad to look into it and bring it up latter.

Mr. CAHAN: Then the first subsection will stand.

Subsection 1 stands.

On section 3, subsection 2—Body corporate. Agent of His Majesty.

Mr. CAHAN: With regard to the second, I find something that is, I think, new in parliamentary legislation:

> The board shall be a body corporate and politic and be and be deemed to be, for all the purposes of this act, the agent of His Majesty the King in his right of the Dominion of Canada.

I suggest that that section should properly end with the word "politic"—"The board shall be a body corporate and politic." I understand the phrase about vesting the title in His Majesty the King in his right of the Dominion of Canada to lands and property; we use this expression frequently in legislation and in legal documents. But this board is not only under the supervision and direction of the minister as to general policy, but is subject in many respects to orders in council. I have no objection to its being a body corporate and politic for certain purposes, but I do object, I think it is without precedent in our legislation, to a particular board or bureau or commission or commissioner being declared by act of this parliament to be the agent of His Majesty the King. The only agent for His Majesty the King in Canada, outside of the peculiar functions of His Excellency the Governor General, is the government of Canada or some department of that government. Therefore I suggest that this clause should be reconsidered.

Mr. HOWE: The Department of Justice explained the matter to me in this way: That of course "the agent of His Majesty the King" means the agent of the king purely for the administration of this particular act; that the Halifax harbour commissioners in a case before the supreme court were declared by the court to be the agents of His Majesty the King for the administration of the harbour commissioners' act. In other words we are simply calling them what the supreme court of Canada has declared them to be.

Mr. CAHAN: I entirely dissent from that suggestion. It may have been stated, in an opinion of one justice, of the supreme court or otherwise, that a harbour commission not under the supervision or direction of the minister but operating under a particular statute, was an agent of His Majesty the King. For instance, as we shall see later, in matters of land expropriation, in matters of other property which is in the possession of this commission, such property will be vested in His Majesty the King in the right of the Dominion of Canada. That expression is clear and definite as to the vesting of property. But I suggest it is a most extraordinary thing to say that you are setting up a new government outside of the government of Canada to administer the affairs of what is really a particular department or branch of a department under a minister of the crown.

Mr. HOWE: I have before me the act to amend the Canadian Farm Loan Act, assented to April 17, 1935, which I assume my hon. friend knew something about.

Mr. CAHAN: Perhaps so.

Mr. HOWE: Section 3, subsection 5, reads:

> (5) The board shall be a body corporate and politic and be and be deemed to be for all the purposes of this act, except contractual dealings between the government of Canada and the board relating to the purchase by that government of the capital stock or bonds of the board or the repurchase by the board of those bonds, the agent of His Majesty the King in his right of the Dominion of Canada and to take security, receive, lend, pay, agree, acquire, hold, convey, transfer and otherwise do as this act directs or authorizes as such agent and not otherwise.

Mr. CAHAN: That is a different matter altogether.

Sir GEORGE PERLEY: Is the farm loan board under the minister, as this one will be? The harbours board in effect and in practice will be part and parcel of the minister's department. I do not think the farm loan board is.

Mr. DUNNING: Section 3 of the Canadian Farm Loan Act states:

3. There shall be a board, known as the Canadian Farm Loan Board, which shall be a body politic and corporate and shall consist of four members, one of whom shall be the minister who shall be chairman thereof.

Then, in the interpretation section "minister" is defined as follows:

(i) "Minister" means the Minister of Finance for the time being.

Mr. CAHAN: Yes, but that is entirely different.

Sir GEORGE PERLEY: Quite different. The farm loan board is not part of the Department of Finance, but the harbours board is made a part of the department of transport, when it is formed. In effect and in practice this board will be a part of the department.

Mr. CAHAN: We would save time if we were to reserve section 2 and take further advice upon it, because it opens up a great many questions. If this body is a separate, distinct and independent agent of his majesty it certainly should not be placed under a minister of the crown. A minister may be a member of the board, as in the instance to which the hon. member has referred, namely the farm loan board, but the board cannot be an independent agent of His Majesty in his right of the Dominion of Canada and still be under the direction and supervision of the proposed minister of transport. I suggest that if the board is the agent of His Majesty the King, then His Majesty in his right of the Dominion of Canada is liable as principal for all actions of the board, all questions of liability and damage, and, as I suggested on second reading of the bill, it opens up the way for bringing an action against the government, because His Majesty in his right of the Dominion of Canada is the government. It opens up the way to bringing an action against the government by petition of right and like procedure, and leads to great confusion. I can see no reason why the board should be described as an agent of His Majesty the King, any more than any department or bureau of government or any other government commission should be described in that way. I respectfully suggest that the minister might hold the section for the time being, and seek further advice. If the section is adopted it will lead to very considerable discussion with regard to certain other provisions with respect to which, in my opinion, it is entirely inconsistent.

Mr. HOWE: The hon. member raised this point on second reading, and upon that occasion the matter was discussed with the Department of Justice officials. That department has given the definite ruling that the measure contains the correct drafting, and I do not believe anything would be gained by referring it back to the department. We have consulted it once and laid the views of the hon. member before it. As minister I believe I am bound to take the ruling of the Department of Justice.

Mr. CAHAN: Of course the minister has the majority.

Subsection 2 agreed to.

On section 3 subsection 3—Board may contract, sue and be sued.

Mr. CAHAN: This subsection brings up another matter. As a corporate body the board may sue and be sued, but in my opinion other provisions of the act are inconsistent. Nevertheless I assume that all real and personal property of which the board is in possession and is operating will be vested in his majesty. If so the board will have no property with which to respond to its own liabilities or to any judgment obtained against it. I have no objection to the provision that the board shall have capacity to sue and be sued, but in view of subsequent provisions suit against the board may have very little effect.

Mr. HOWE: This matter has been carefully considered by the Department of Justice. Obviously the board is engaged in a number of businesses, involving a large turnover of money. It has to enter into contractual relations with private parties. This subsection merely contains the declaration that the board may be sued for breach of contract, without obtaining a fiat from the crown. In other words it does away with the necessity of compelling people who wish to take action against it to obtain a fiat from the crown.

Mr. CAHAN: I appreciate that point, but in view of other provisions I think the board will have very limited resources with which to satisfy a judgment.

Mr. HOWE: I do not believe that that is so, because I must point out that the board is dealing in millions of dollars, and has a revenue of about eight million dollars per year, plus such deficiency appropriation as parliament may vote.

Subsection 3 agreed to.

Section 3, subsection 4 agreed to.

On section 3, subsection 5—Salaries.

Mr. CAHAN: If the salaries of the board are to be fixed by the governor in council should they be left indefinite and subject to change by increases or decreases? I am not objecting to the subsection, but certainly I suggest that the salaries should be fixed in the bill.

Sir GEORGE PERLEY: If the government is bound to pass the subsection we cannot prevent it, but I must remind the government that during the five years the previous government held office the present Prime Minister and his followers in opposition offered continuous criticism of action by order in council and without reference to parliament. I admit that there may be occasions when a salary cannot be stated in a bill, in which event the amount would have to be determined by the government, after taking all facts into consideration, but it does not seem to me that this is in that class. I assume the government must know at this time the persons they purpose appointing to the board, and they ought to be able to state the salaries in the bill. I submit that from the government's own point of view regarding orders in council this is something that ought to be determined here. If everything is to be left to be settled by order in council, what becomes of all the arguments hon. gentlemen opposite used during the last few years against the previous government?

Mr. HOWE: The harbour commission is in business in a very big way indeed, and we hope to secure the services of excellent men for the commission. We believe we should be free to pay what may be necessary in order to get the right type of man from time to time. I am advised by the Department of Justice that this is the usual procedure in matters of this kind, and I see no reason why it should be departed from in this case. My hon. friend is quite mistaken in saying that the government knows exactly how this board is going to be made up, because we cannot consider that until we get the legislation through.

Subsection agreed to.

Subsections 6 to 9 inclusive agreed to.

[Mr. Cahan.]

On section 3, subsection 10—In case of vacancy.

Mr. MACKENZIE (Vancouver): I move, Mr. Chairman, that this subsection be amended by striking out the words in the first line thereof, "there should be" and substituting in lieu thereof the word "of."

Amendment agreed to.

Subsection as amended agreed to.

Subsections 11 to 15 inclusive agreed to.

Section agreed to.

On section 4—Officers, clerks and employees.

Mr. MACKENZIE (Vancouver): I move to amend subsection 1 by adding at the end thereof the following proviso:

Provided that in the employment of such officers, clerks and employees under the provisions of this subsection, other qualifications being equal, preference shall be given to persons who have been on active service overseas in the military forces, or being resident or domiciled in Canada at the outbreak of the war served in His Majesty's forces, or who have served on the high seas in a seagoing ship of war in the naval forces of His Majesty during the war, and who have left any of such services with an honourable record or who have been honourably discharged.

Amendment agreed to.

Mr. CAHAN: Before the clause as amended is carried I wish to consider the first four lines of section 4. When this board is organized and vested with the property and works of the seven existing harbour commissions it will be, next to the Canadian National Railways and the Canadian Pacific Railway, the third largest national corporation in the Dominion of Canada. Its employment will at times run into many scores and hundreds of employees who will really be in the service of the government of Canada, just as much in the service of the Dominion of Canada as the five hundred employees of the printing bureau under the Department of the Secretary of State which in itself is a separate and independent bureau or board but is nevertheless a branch of one of the departments of government just as this board inevitably will be one of the branches of a department of government. This bill provides that the three gentlemen who are appointed commissioners shall have complete control of the employment of all other officers, clerks and employees which they may deem necessary for the proper conduct of its business. This board will fix their remuneration and other terms of their employment, and I suggest that if the former system led to patronage and improper admin-

istration for political and partisan purposes, this bill is surcharged three times with the same prospective evils. It is an attempt, and a deliberate attempt, of the government to secure the employment of scores and hundreds of persons who will not be subject to the civil service regime or to examination and appointment by the civil service commission. I know the government have a majority and they may put it through, but I call attention to the fact that this is a flagrant violation of civil service principles to which successive governments have adhered in the past.

Mr. MacNICOL: There are now doubtless large numbers of employees in the service of the different harbour boards throughout the country. Is it the intention to reengage all those who are eligible on the present staffs or is it intended to employ entirely new staffs?

Mr. HOWE: I trust that my hon. friend from St. Lawrence-St. George (Mr. Cahan) is not serious in suggesting that the civil service commission be allowed to select the staffs for all the business that is conducted by the harbour boards from Halifax to Vancouver, fluctuating staffs, and so forth. I do not like to be unpleasant about the thing, but it does seem to me that my hon. friend might have made some such suggestion when his government was in power and the harbour boards were operating exactly the same business. I cannot imagine that he would seriously make the suggestion. I do not think it would have been wise to put the staffs under the civil service commission then any more than it is to-day. I cannot think of a better qualified board to determine the personnel than the three experts whom we shall appoint to have direction over this enterprise. I cannot think of any better way of building up a service that will be a credit to the dominion than to allow the commission to pick its own personnel, place them on a basis of efficiency, and carry on from there.

Mr. CAHAN: I suggest that the hon. member himself last evening made certain declarations with regard to evils which he alleges have grown up under the existing system, and I suggest that by this bill the introduction of patronage which will be under his control will lead to evils far greater and more intense than those to which he called attention last evening. I have no doubt about it. The argument of the hon. gentleman that the previous government should have introduced a reform in respect to the administration of these boards is not altogether relevant because the previous government did undertake to initiate reforms along the line of the report which my hon. friend has adopted.

Mr. HOWE: Would my hon. friend mind detailing the steps which the government took?

Mr. CAHAN: The first step was to have a thorough investigation.

Mr. HOWE: What was the next step?

Mr. CAHAN: That is the step that was taken. The other matter, as explained by the leader of the opposition (Mr. Bennett) was the development work in connection wtih certain of these ports. This work was in progress and it seemed inopportune to introduce a measure of this radical character so near the end of the session. The other phase concerns who would be best qualified to select the employees of these boards and the hon. gentleman suggests that the three men whom he will select will be best qualified. Following out that same argument, I assume that the hon. gentleman thinks if he were made prime minister of Canada he would be best qualified to select all the civil servants in every branch of the government. The argument leads to that. I suggest that this bill provides for the hon. gentleman a system of patronage unprecedented in the administration of any department of the government. The effect of this bill is to place the harbour boards under the administration of his department; his department assumes responsibility. If my life is preserved for three years, I shall be very happy to sit opposite to the hon. gentleman and discuss the pernicious practices which will inevitably grow up and the evils which will undoubtedly ensue from the adoption of the system of patronage which is embodied in this particular clause.

Mr. HOWE: I am glad the Gibb report is referred to, but apparently hon. gentlemen have never read it. Sir Alexander Gibb covered this matter very carefully in paragraph 92 of the report, which reads:

> The central harbour board should act under the Minister of Marine, but not under any department. It should have wide discretionary powers in the matter of rates, salaries, terms of service, the settling and administration of contracts, the engagement of special technical assistance, the sanctioning of emergency capital expenditure, and the control generally of all construction and port operations.

That is what my hon. friend's expert said about this.

Mr. CAHAN: I am not responsible for the report. Experts for every other department are selected by the civil service commission upon the report and advice of departmental officers. The Gibb report suggests that this should be under a minister and not under a department. What the report had in view undoubtedly was the creation of a distinct department or bureau or board which would supervise the administration and which would be under the minister. I shall be prepared to come back at the end of three years and discuss with the hon. gentleman whether this system of patronage which he is introducing advances the best interests of the government and the public.

Mr. HOWE: The board we are creating is exactly the one described by Sir Alexander Gibb in his report. Sir Alexander said that the board should report to the minister and not through a deputy minister. This board, as I say, is exactly the same as the one described by Sir Alexander Gibb and the matter of rates, salaries, terms of service and so on will be the same as Sir Alexander Gibb recommended. As my hon. friend has claimed the Gibb report for his party, it seems to me that that rather closes the issue.

Mr. CAHAN: My hon. friend need not be so personal; I did not claim the Gibb report for my party or any party. We are more interested in the proper administration of these harbour boards.

Mr. HOWE: My hon. friend paid me a compliment by saying that I was aspiring to be prime minister of Canada.

Mr. CAHAN: I did not suggest that the hon. gentleman was aspiring to that position; I suggested that the argument which he was advancing would tend to vest in the prime minister the appointment of all officials and employees in every grade of the service.

Mr. ST-PERE: I do not think we would be the losers by that.

Mr. CAHAN: Possibly not, although there is a widespread difference of opinion. That sort of patronage has led to evil results; it is a pernicious practice.

Mr. POULIOT: Mr. Chairman, I rise to a point of order. This bill refers to the Minister of Transport, but there is no Minister of Transport. Item 24 on the order paper refers to a resolution to provide for the appointment of a Minister of Transport, but that resolution and the following bill should first be passed. It is only after the principle has been agreed to that the accessory can be discussed in committee. At the present time the Minister of Transport does not exist and we are being asked to transfer the whole harbour commission business to a department at present non-existent. I am very much surprised that such an eminent lawyer as the hon. member for St. Lawrence-St. George (Mr. Cahan) has not seen this before.

Mr. CAHAN: I took exception to it last evening.

Mr. MACKENZIE (Vancouver): Exception was taken to this particular point, I believe, by the hon. member for St. Lawrence-St. George, but I do not think the point is well taken. The last section of this bill states that it will come into force only on proclamation of the governor in council and the resolution referred to by the hon. member will be law long before this bill is proclaimed. The definition of "minister" as the Minister of Transport does not affect the validity of this bill.

Mr. CAHAN: My hon. friend should not make such a confident declaration, as this bill cannot be enacted and proclaimed without the confirmation of another branch of this parliament.

Mr. MACKENZIE (Vancouver): This bill will not become law until proclaimed.

Mr. CAHAN: That is true.

Mr. MACKENZIE (Vancouver): There is every possible safeguard.

Mr. POULIOT: I was interrupted just as I was making my point. Has the chair given a ruling on the matter or has the objection been withdrawn? I should like to have a ruling. I do not want to displease anyone, but I want to see good legislation. Our legislation should be one and two and number two should not be number one. It seems to me that everyone will agree with that. I do not want to cause trouble to anyone, but I want to be clear in my mind that the legislation we are discussing is right. This is a serious objection. Perhaps the reason why this resolution has not been passed is because the government have changed their mind. Perhaps the bill we are now studying will never be put into force because the resolution will not be submitted to the committee. We do not know this and I want to be sure. It seems to me that we should first create a department before it is given any power, especially such powers as are granted by this legislation. Mr. Chairman, it seems to me that it will be very difficult for you to elucidate this matter and give a ruling on the whole thing.

Mr. MACKENZIE (Vancouver): This section stood over last night for further consideration, and I submit that the question does not now arise.

Mr. POULIOT: This section is not an independent section of the bill; it is the whole bill. The whole thing will rest upon the shoulders of the minister, for whom I have great respect, and I want him to be empowered with full authority when these powers are conferred upon him. That is the point. You cannot give powers to a dummy; the minister must first receive authority to control the harbours of the country before these harbours are transferred to him. This is elementary; it is common sense, and the legislation should be drafted in that way. There were complaints yesterday about the way in which the legislation was drafted, and those complaints were serious. I submit, Mr. Chairman, that you are here not to please anyone but to see that the rules are observed and that discussion is carried on in accordance with the elementary principles of parliamentary procedure.

Mr. RINFRET: May I point out to the hon. gentleman that there is a precedent for having the legislation in this form. I recollect distinctly that last year the government introduced several bills that were interwoven. There was a bill transferring to the tariff board the activities under the combines act; there was another bill creating a commission on trade and commerce, one of the sections of which bill provided that the commission should be under the tariff board; and then there was an amendment to the Tariff Board Act. These were all considered together on the distinct understanding that none of the bills would be put into force until they had all been passed. I submit to the hon. member that he is raising with some emphasis a point of order which is really not in keeping with the common practice in this chamber. I understand, moreover, that the point was left in abeyance last night, and I see no objection to our proceeding with the bill in the meantime.

Mr. POULIOT: I do not insist upon it, but if I raise a point of order it is because an hon. gentleman the other day said that I was an expert on points of order. One thing more. The rulings of the chair in the last five years, and the legislation passed in the last five years cannot be cited as a precedent; it is all wrong.

Sir GEORGE PERLEY: There is no reason in the world why we should not go on with the bill, but I do not think it should be passed until the department of transport has been set up. I do not see how you can pass a bill referring matters to the minister of transport when there is not a minister of transport. But there is no reason why we should not go on with the bill.

The CHAIRMAN (Mr. Johnston, Lake Centre): The section having to do with the minister of transport was allowed to stand.

Sir GEORGE PERLEY: The minister is making light of the suggestion put forward by the hon. member for St. Lawrence-St. George. The minister said that many evils had grown up in the administration of the harbours; he went into that fully and used some extreme language. I can see in this clause, however, nothing that alters at all the situation in regard to patronage. Personally I am glad that he has brought down the bill if its terms are made satisfactory to everyone. I think something was needed to alter the administration of the harbours and to put them into a more businesslike shape.

But let me submit this to the minister as far as patronage goes, and that is one of the evils to which he referred last night. It is one of the things which, we know, have happened through the years, the difficulties in regard to the employment of persons by the harbour commissions, the manner in which they are to be selected, and the right claimed by members in constituencies in which there are harbours to name the persons to be appointed. There is in the proposal now before us nothing whatever that changes that situation in any way. If, as I assume, the minister is desirous of bettering the administration of the harbours in respect of patronage, there should be a different arrangement from that which is proposed in this section, because as far as I am able to visualize it the position in connection with the appointment of persons in the different harbours will be exactly the same as it has been in the past. I know the difficulties that exist, but I urge the minister to consider the position in which he will place himself. As Minister of Transport administering the canals, if he has to appoint an engineer on one of these canals he must go to the civil service commission. I see no harm in that; it has been working out very well. On the other hand, if he wants an engineer in the harbour of Vancouver or in Saint John he can appoint that man himself; that is to say, the man is appointed by the board which is under his direction and the minister does not have to go to the civil service commission at all. There is a small canal in the constituency of Argenteuil, which I have the honour to represent, and if a

lockmaster or lockman is needed there the civil service commission appoints him. A notice is put up in the post offices and along the canal, intimating that there is a vacancy; applications are made to the civil service commission and they make the appointment. I am not arguing now either for or against the wisdom of this method, but I would ask the minister why he thinks there should be any difference between the method followed in appointing engineers, clerks and so on in connection with these harbours and the method in connection with canals, which he will also be administering.

Mr. HOWE: My hon. friend is an experienced business man. I would ask him to go back over his business experience and ask himself whether he would recommend the civil service commission as the proper agency in appointing men in connection with the various businesses of the ports—the grain elevator business, the cold storage business, the wharf and warehouse business, the terminal railway business, stevedoring and so on—or whether he would not consider it best to leave such appointments to the business heads of enormous undertakings of this kind, allowing them to keep the personnel up to the mark by giving them the power of dismissal for wrong-doing.

Sir GEORGE PERLEY: The minister makes a fair argument, and in a business I might be administering I should certainly wish to control the appointments myself. But if he were administering the business of an elevator he would not have a member of parliament coming to him and saying that he wanted certain people appointed; the minister would have that in his own hands. The point I am making is this: Is there not any way in which he can improve the position as far as patronage is concerned, with respect to the people who will work for the board, because pressure will be there exactly the same as it has been? I understood from what the minister said previously that his purpose in bringing down this legislation was to try to better the condition of affairs in the harbours and to see that patronage was eliminated as much as possible.

Mr. CAHAN: "Change the system" were the words.

Sir GEORGE PERLEY: Yes, change the system in order to eliminate patronage, and try to have this business conducted as the minister would conduct it if it were his own private concern.

Mr. FINN: I am surprised at hon. gentlemen opposite. Every hon. member knows that the Gibb report was in the hands of the previous government—and I regret that the right hon. leader of the opposition is not in his seat at the moment—and that the report was pigeonholed so that it did not see the light of day until the present administration came into office. I desire to say to my hon. friends opposite and particularly to the ex-Secretary of State (Mr. Cahan), who comes from my own province, that the harbour commissions were established in 1928, and in 1930 we had an election. The Liberal party went out of office; the Conservative party came in, and the late government, led by the present right hon. leader of the opposition, dismissed every employee of the Halifax harbour commission, from engineers down to the men who swept the docks, with the exception of three or four employees.

Mr. ST-PERE: The situation was the same in Montreal.

Mr. FINN: The chairman of the Halifax board was a gentleman whom the ex-Secretary of State knows very well, but during the five years hon. gentlemen opposite were in office they did not dare to bring down legislation implementing the Gibb report. Prior to the election of 1935 all employees of the Halifax harbour commission, from the chairman down to the humblest employee, were told what they had to do. They went out and worked for the Conservative party and did all they could to defeat my colleague and myself. Hon. gentlemen opposite speak of patronage. They had it for five years and their party grew rich because of it. If I wished to make some other statements to this committee this afternoon I think some other hon. gentlemen who sit opposite would be out of the house just now, as the right hon. leader of the opposition is.

Mr. WALSH: I rise to a point of order. I do not think the hon. member has any right to refer to any other hon. member in the terms he has used, or to make the suggestions he has made. I would ask the hon. gentleman to withdraw his last statement.

Mr. FINN: I simply said what I meant, Mr. Chairman, and I reiterate it, that when this—

Mr. WALSH: I raised a point of order, Mr. Chairman, and I ask for your ruling.

The CHAIRMAN (Mr. Johnston, Lake Centre): I would ask my hon. friend to state first the point of order.

Mr. WALSH: The hon. member stated that if he cared to make statements which he knew to be true some other hon. members

in this house at present would not be sitting in the house but would be absent, as the right hon. leader of the opposition is at the moment. That is a marked and unpleasant suggestion directed to certain hon. members.

An hon. MEMBER: Face the music.

Mr. WALSH: Face the music nothing; I do not think that is a fair and reasonable statement, and I think it is the duty of any hon. gentleman to withdraw a remark which casts a reflection upon any other hon. member. I ask my hon. friend from Halifax, as an hon. member who is held in general esteem, to withdraw the statement, or at least to make it plain that he is not casting any reflection upon any other hon. member.

Mr. FINN: I desire to say to my hon. friend that my statement stands, unless I am ordered by the chairman to withdraw it. I said nothing in reference to any hon. gentleman opposite, except that if I should make some statements perhaps some other hon. gentlemen would not be here in the house, not because they were directly interested but because my remarks would not be euphonious to their ears.

Mr. WALSH: Then is the ruling that the statements are in order, Mr. Chairman?

Sir GEORGE PERLEY: I am sure, Mr. Chairman, you will rule that the hon. gentleman should not make any insinuations against any hon. member. I think that is all you need to do.

The CHAIRMAN (Mr. Johnston, Lake Centre): My position with regard to what the hon. gentleman said would be that he has not named any hon. member.

Mr. STEWART: Yes, he said, "like the right hon. leader of the opposition."

The CHAIRMAN (Mr. Johnston, Lake Centre): The hon. gentleman did not charge the right hon. leader of the opposition with any wrongdoing, nor has he charged any individual member of this house with any wrongdoing.

Mr. STEWART: I do not think you caught the remarks of the hon. gentleman, Mr. Chairman.

The CHAIRMAN (Mr. Johnston, Lake Centre): I think I did, and my ruling would be that anything the hon. gentleman has said so far is in order.

Mr. CAHAN: I should like to make it clear on Hansard that the right hon. leader of the opposition is engaged this afternoon, performing his proper duties, in attending a meeting of a committee of this house, which necessitates his temporary absence from this chamber. That is the only reason why he is absent.

Mr. MacINNIS: I should like to say a few words in connection with this section, in support of the position taken by the hon. member for St. Lawrence-St. George and those sitting around him. I may say that I am in agreement with the government in bringing down this legislation, because I believe it is an attempt to overcome some of the evils that the minister put on record in moving the second reading of the bill. If any further argument were needed to support what the minister said at that time I think it was furnished by my right hon. friend who has just taken his seat.

Mr. FINN: Not right honourable, just honourable.

Mr. MacINNIS: Not yet but at some other time, I hope. I suppose in expressing my approval of the bill I shall find myself in that category suggested by the hon. member for Vancouver-Burrard, who said in Vancouver recently that hon. members who supported this bill must have something wrong with their heads. However I do not mind that, since I imagine I shall be in fairly good company. I believe the minister is falling short of what he intended to do if he leaves this section as it now stands. In support of his position he points out that the board will make these appointments, but I should like to suggest that if another government comes into power the term of office of this board will be terminated, and then we shall see exactly what my hon. friend from Halifax says happened in 1930. Therefore we are not going to get over the evils by merely appointing a board. I have before me to-day's Routine Proceedings and Orders of the Day and I wish to draw to the attention of the committee two questions which appear thereon. Question No. 3 asks:

1. How many persons have been dismissed from the staff of the Vancouver harbour commission since October 23, 1935?
2. How many of those dismissed during this period were ex-service men?
3. How many persons have been appointed to the staff of the Vancouver harbour commission since October 23, 1935?
4. How many of those appointed during this period were ex-service men?

Question No. 5, which I suppose was put on the order paper to meet the reply to question No. 3, asks for the number of persons

dismissed from the staff of the Vancouver harbour commission during the period from August 7, 1930, to October 23, 1935.

Now, ten years hence, unless we deal with this matter in the proper way and put it under the civil service commission, we shall have similar questions to this on the order paper, and for similar reasons. The minister asked the hon. member who is acting leader of the opposition to-day (Sir George Perley) if he would make appointments through the civil service commission or a similar organization if he were dealing with his own business. But government business is not the same as private business, as has been well pointed out. I suggest to the minister that if he wants to get the credit which is undoubtedly coming to him for introducing this legislation, he go the whole distance and have the appointments under the civil service commission, so that we may get away from the evils of patronage in this matter.

Mr. ST-PERE: All the appointments?

Mr. MacINNIS: Something can be done. There may be minor appointments that would not come under the civil service commission, but I am convinced that most appointments could be made by the commission just as well as by the board which is going to be appointed.

Mr. ST-PERE: Does the hon. member say that the civil service commission is competent to appoint the manager of a car repair plant in Montreal? What competency have they to appoint a master mechanic? The hon. member talks about patronage; in 1930 my opponent was the leader of a committee which looked after the dismissal of Liberals. These are facts. My hon. friend from Vancouver East (Mr. MacInnis) is a motorman. He was appointed there because the manager knew what he could do. Would he tell me that specialists administering a harbour board are not more competent to employ men belonging to special trades than is the civil service commission? The hon. member from his place in the house tries to convince the people of Canada that the civil service commission should have the first word in appointing plumbers, mechanics, and men all belonging to working classes. I say that this is impracticable; it is nonsense. The civil service commission is not omniscient.

Sir GEORGE PERLEY: It seems to me that the hon. member for Hochelaga (Mr. St-Père) is strengthening the argument we are trying to make regarding this matter. I say again, I am not trying to assess the blame. My hon. friend from Hochelaga blames the Conservatives for doing certain things when they came into office; I could reply and blame the Liberals, but is a tu quoque argument of any use in a matter of this kind? This has been an evil and trouble all through the years. I told my hon. friend, the minister, before that personally I am very glad he has brought in this legislation; I think something was required to improve the administration of the ports, but I submit that he should give further consideration to this point. This government is not going to be in power forever; some day there will be another government. Is he going to perpetuate the idea of having the employees of this board change when there is a change of government? I would take exactly the same stand if the argument were the other way; I do not believe in the principle. If you are going to have a good administration of the harbours you have to build up a competent staff, some of whom, at any rate, will have a certain degree of permanency. Perhaps it cannot be managed to have all the staff of the harbour board appointed by the civil service commission; sometimes I think there are some positions being filled by the commission to-day that would be better not dealt with by the commission. I have known cases like that. I referred a little while ago to the canal in the constituency of Argenteuil; I think some other authority might be more competent to appoint lock men than the civil service commission. We took the small post offices away from the civil service commission some years ago, very wisely I think. The member of parliament is better able to suggest the name of a postmaster for a small post office in his constituency than any one else. I am not suggesting that everyone employed by the harbour board should be appointed by the civil service commission, but I say to the minister, who is evidently endeavouring to improve the administration of these harbours, that some way ought to be found to give permanency to at any rate a large part of the employees of the board, so that when there is a change of government they will stay in their positions. I speak my personal views entirely; I am not in favour of giving the commission authority over everyone appointed, but I am sure that on the whole the civil service commission have improved the service and made civil servants feel that they are more permanent, and so have drawn to the service a better class of men and women, who are willing to make it their permanent calling in life. Surely some way can be found to give to at least the greater part of the employees of this board that sense of permanency, so that

a better class of men will be secured and that when there is a change of government or a change of the board, the staff will not change. There may be a change of the board, even under the present government; is the new board to get rid of the old employees and take on new ones? I say to the minister: Surely he can find some way to give to the greater part of the staff of these harbours a sense of permanency which will make for the selection of better men and improve the administration of these harbours.

Mr. HOWE: I agree with the principle of building up a permanent staff. Perhaps my right hon. friend is not aware that there is considerable permanency on our harbour staffs. I suppose the number of new men employed on the harbours since this government came into power is not ten per cent of the strength of the harbour staffs.

Mr. CAHAN: But you have not been in power ten months yet.

Mr. HOWE: But it did not take you three months—

Sir GEORGE PERLEY: The minister should not say it did not take the other government three months. I would like to know what he means by that. He is not suggesting that we dismissed all the men in the harbours administration, is he?

Mr. HOWE: A question has been asked about the numbers; I have the numbers here, if wanted.

Sir GEORGE PERLEY: I think both sides have done a good deal of that sort of thing. I do not think we can get on with this discussion on that basis.

Mr. HOWE: I think there has been improvement from year to year, and considerable improvement is taking place in the present year. The practice is growing up of binding these people into permanent organizations in quite a satisfactory way. For instance, in the port of Montreal, this group insurance which has been in effect some time, binds the people into a more or less permanent organization.

Sir GEORGE PERLEY: Would that bind the board?

Mr. HOWE: It would not bind the board, no. But at the same time it builds up a permanent service, gives the men a status in the books of the commission, which I may say has been respected to a high degree over the years. I believe some method like that, rather than giving the appointment of the entire staff holus-bolus to the civil service commission, is the wise way to work it out. I believe it will work out that way under a permanent board. Remember that this board is being appointed for ten years, and I think the permanency of the heads will build up the permanency of the staffs as far as a business that is seasonal in character, as this business is, will permit. I do not know that I can think of any step at the moment that I can take which will hasten that situation.

Sir GEORGE PERLEY: Does the minister not draw a distinction between the higher class of the staff and the lower? I cannot remember the name of the bill, but I do recall that a bill was passed some years ago in which it was indicated that certain of the staff would be appointed by the civil service commission and the remainder by order in council. I remember the matter was discussed in this chamber for some time. I am not suggesting that the minister should arrange the section so that all appointments should be made by the civil service commission, but I do submit to him that he should make a beginning. Could he not draw some distinction—he is better able to do it than I am—between the different classes of employees? He could make a beginning towards developing a permanent service for the harbours.

Mr. HOWE: It must be obvious to the hon. member, as it is to me, that it cannot be done this afternoon.

Sir GEORGE PERLEY: No.

Mr. HOWE: The matter would require careful study. It seems to me that if we decided to do it to-day it would take a year to put it into effect.

Sir GEORGE PERLEY: No.

Mr. HOWE: We would have to declare all positions vacant and ask for new appointments.

Sir GEORGE PERLEY: No. I cannot remember the name of the bill, but one was passed in which—

Mr. POWER: I think it was the bill setting up the radio commission. But may I point out that on that occasion the employees in the lower brackets were placed under the civil service commission, and those in the upper were exempt. If I may judge from what I read in the public press and elsewhere, the people most criticized are those who are exempt.

Sir GEORGE PERLEY: That may be, but the bill setting up the radio commission is not the one I had in mind.

Mr. POWER: I think the same thing happened in connection with the bill setting up the tariff board.

Sir GEORGE PERLEY: What about the unemployment insurance measure?

Mr. POWER: As I understand it, nearly all the employees are placed under the civil service commission.

Mr. ISNOR: I shall not deal with the question of patronage raised by the hon. member for St. Lawrence-St. George (Mr. Cahan), because that has been answered by the hon. member for Halifax (Mr. Finn), who showed clearly that ninety-five to ninety-nine per cent of the employees of the Halifax harbour commission were dismissed immediately after the change of government in 1930. If I remember correctly, the hon. member for St. Lawrence-St. George stated that they took steps at once to change conditions. They did take steps at once, the steps referred to by my colleague.

Mr. CAHAN: Mr. Chairman, I ask the hon. member to please take that back. I did not make any such statement with regard to conditions in Halifax or in any other port. I had nothing whatever to do with the employment or dismissal of any person in the port of Halifax or the port of Montreal. I stand in this chamber and say that I was a minister of the crown for five years and never interfered to dismiss from his employ any man, no matter what his political or partisan views or how partisan his actions may have been.

Mr. POWER: There is such a thing as trying to wash one's hands of one's colleague.

Mr. CAHAN: I am not trying to do that; I am replying to an insinuation which is entirely unfounded.

Mr. ISNOR: I should not like to misquote or make a misstatement where the hon. member is concerned. If he did not use those words, he did say—and I hope I am correct this time—that steps were taken. In other words steps were taken by his government to bring about certain changes. I simply make the statement that they did make changes. They made changes to a very marked extent in connection with one particular activity, that of the Halifax harbour commission, where they dismissed practically every employee. That was a minor step. The all-important step which they should have taken did not take place until January 15, 1932. At that time a very important step was taken by the late government when it appointed Sir Alexander Gibb to look into harbour matters.

It is surprising the extent to which hon. gentlemen opposite change their tactics when they lose office. When in power they are ready to bring about changes which will provide for their friends, but immediately they are in opposition their tactics change. "Oh no, you must not do this; you must not do that; you must not make changes, because they will have a tendency to bring about a greater degree of patronage!" Such observations are not fitting at a time when the Minister of Marine is endeavouring to bring about conditions which will add to efficiency in the handling and development of ports in Canada.

I do not wish to deal with this matter in a sectional way. If I were to do so I would strongly advocate the recommendation in the Gibb report concerning local advisory committees. Last night mention was made of a local advisory committee to cooperate with the central board. However I do not propose to go into that matter now. The minister has laid down a program, which he believes will be effective, but which does not provide for this type of committee, and his judgment is good enough for me. For that reason I will not press the suggestion.

May I offer to the minister a constructive thought with regard to all Canadian ports. First may I call the attention of the committee to one or two facts brought out by the royal commission on maritime claims headed by Sir Andrew Rae Duncan. I do not wish unnecessarily to take up time, but I should like to point out that the commission was appointed by the present Prime Minister, and the report tabled is of national importance. Among other recommendations the commission stressed the importance of shipment through Canadian ports. When I refer to that part of the report I am certainly not advancing the claims of Halifax, Saint John, or any other single port. I refer to all Canadian ports, and with that thought in mind I address my observations to the Minister of Marine. After examining records and hearing the evidence of witnesses, they say:

> From the records, as we have examined them, we reach the conclusion that Nova Scotia was peculiarly unfortunate in the treatment which was accorded to the claims she pressed forward to the dominion government from time to time, with the result that no consideration—apart from the "better terms" of 1869, which were, in fact, an adjustment made as at 1867—was given her to meet what she regarded as her special wants and interests.

I want those words contained in the Duncan report to be borne in mind. They were made after the royal commission had made their investigation. The report goes on to say:

> At any rate, the result has been to prevent the healing which time and sympathetic understanding might well have achieved, to leave on the mind of Nova Scotia a sense of continuing injustice, and the feeling that, had her numbers and influence been greater, better treatment would have been accorded to her.

It is with that thought in mind, a better treatment for the maritimes and all our Canadian ports, that I am going to offer for consideration an amendment to be included as subsection 2 of section 4. I could make extended remarks upon it but the minister is familiar with all the arguments that have been advanced. I could cite the statement that was made by the late Sir Henry Thornton, when president of the Canadian National Railways, and his proposal to establish an office at Moncton to bring about closer cooperation between the maritimes, or, as he called it, between lower and upper Canada. I could also refer to many recommendations that have been made by other commissions, but without going into further detail I move that the following be inserted as subsection 2 of section 4:

> The board shall so direct, provide and procure that all freight destined for export by sea which is consigned within Canada for carriage to National Railways either at point of origin or between that and the sea shall, unless it has been by its shippers specifically routed otherwise, be exported through Canadian ports.

May I say that in pressing this amendment I am simply advocating what has been placed before the government and parliament of Canada time and again, that our goods should be shipped through our own Canadian ports. I could give the tonnage and so forth, but I do not think it would add to my case as the minister is already familiar with those facts. I would like to compliment the minister upon bringing forward this important bill and on the amendments that are provided in the reprinted bill. I feel that the bill is much more satisfactory now that certain changes have been made. I feel sure that it will have the support of all good Canadians provided that our goods are shipped through the facilities provided by our own ports.

Mr. FINN: Perhaps my hon. friend and colleague (Mr. Isnor) has overlooked the fact that in the Transcontinental railway act, which was a legislative agreement between the Grand Trunk and the then government of Canada, the very provision which he now desires to be placed in this bill was incorporated in that act.

Mr. ISNOR: Quite so.

Mr. FINN: And as the Transcontinental has been taken over and has become a part of the Canadian National railway system that clause applies to all parts of railways which are part and parcel of the Canadian National railway system. It might be advanced from a legal standpoint that there would be a conflict perhaps between a harbour board appointed by the government of Canada to function at Ottawa and the persons who go out to obtain freight for the Canadian National railway system. While the suggested amendment of my hon. colleague from Halifax is one which, I know, is near and dear to his heart, as it is also to mine, I would suggest that before his amendment is dealt with the minister might consult with the justice department or the hon. gentleman who is acting in the absence of the hon. Minister of Justice as to whether the placing of this specific amendment in this bill would in any way conflict with the legislative contract, which is stronger than a provision, that I have mentioned. When the government of Canada took over the Transcontinental there was placed a double responsibility on the government of Canada. First, the government placed it on the Grand Trunk, and then they took it back when they took over the Grand Trunk, so that we are in an even stronger position than before to ask the government of Canada to see to it that these very things are done which my hon. friend and I so much desire. I compliment my colleague from Halifax upon bringing this matter to the attention of the Minister of Marine and the committee, but I think it would be well if he would allow the amendment to stand until the minister has had an opportunity to discuss it with the Justice department to see whether it might in any way lead to a conflict between the government railways of Canada and the board to be appointed under this legislation.

Mr. WOODSWORTH: Speaking to the subsection under consideration I would like to associate myself with those who are urging that the government should not in any way undermine the principle of the Civil Service Act. It has been found necessary because of the incompetence of the various harbour boards that they should be brought under the direct control of this government. The local boards apparently have been very unsatisfactory. The minister himself has said that the waste has been shameful, and so on. It does seem to me that under those circumstances it is highly desirable that we should start off in the right way. If there is any sense whatever in having a large number of government

services come under the Civil Service Act, there is every reason why this new arm of the service should also come under the act. I cannot see that any case at all has been made for exempting this particular branch that will one day be essentially a part of the service. There are professional appointments to be made, technical and other officers, clerks and other employees. Surely we at Ottawa have all these classes of appointments in the various departments of government. It seems to me that no reason has yet been given for exempting this particular service from the Civil Service Act. I regret very much indeed that by this measure, if it is carried through, the government is doing a great deal to undermine the principle of the Civil Service Act. It is doing this in two ways. First of all, it is creating a new department which is being exempted for no good reason. I am afraid that we shall have patronage there as we have had it in other departments again and again. Second, it is exempting this great field from the rightful ambitions, shall I say, of those who might expect to be placed in positions under this service. Further, it has an adverse effect on other civil servants.

I notice that the next clause provides that the Government Employees Compensation Act is to apply to the people appointed under this board. I notice also that the Civil Service Superannuation Act is to apply. The next subsection provides that all the benefits given under this act are to be preserved. A man may be taken out of the ordinary civil service and placed under the jurisdiction of this harbours board at a larger salary than he has been receiving or is likely to receive. He is taken out of the regular line of promotion and suddenly advanced to a good position. Is it possible for the great body of civil servants to observe that kind of treatment with equanimity? They know this man is advanced and if anything happens to him under the harbours board he can return to the civil service; he retains all the rights which he would have had had he remained in the service proper. This is undermining the principles of the Civil Service Act in a very subtle way; it is undermining the morale of those appointed to the customs, the post office and other departments of the government.

I appeal to the minister to reconsider this matter. I think the hon. member for Argenteuil (Sir George Perley) was right when he said that if a case could be made out for the exemption of certain classes of employees, then that should be done, but that the others should come under the Civil Service Act. I cannot see where it would take more than a few hours to make the necessary classification in a matter of this kind. If this clause could stand and certain amendments could be introduced, we would affirm the principles of the civil service so necessary to the welfare of our nation.

Sir GEORGE PERLEY: In order that we might get on, perhaps the minister would let this clause stand and try and provide for the beginning at any rate of permanency in this service. This bill cannot go through until the Department of Transport is set up, and I think the minister might give this matter a little consideration.

Mr. HOWE: We are only at subsection 1 of section 4 and we have had two long sessions of the committee. Section 1 has been allowed to stand and it seems to me that we should try to make some progress. I can assure my hon. friend that this particular phase has been discussed and we believe it is quite impossible. I am sure he would not ask us to place a vast organization like this under the civil service commission. There is a time and place for all things.

Sir GEORGE PERLEY: I am not suggesting that it should all come under the civil service commission; I am suggesting that there are certain classes of the staff that could come under the commission. I think the minister should consider that. As I see it, this bill cannot go through this house until the Department of Transport has been set up and there is a Minister of Transport. We can consider it but it cannot go through under the rules of this house.

Mr. HOWE: I quite appreciate that, but I would point out that we should try to make some progress. This is the third month of parliament and we have debated this one section for nearly two hours. Surely we should try to consolidate the progress we have made.

Mr. McNEVIN (Victoria, Ont.): It seems to me that these employees are somewhat similar to the maintenance of way employees and running trades of the railways. I think you can eventually obtain the same permanency here as was obtained in the case of the railways. A permanent staff can be built up and I think we are only wasting time discussing the matter.

[Mr. Woodsworth.]

Mr. WALSH: I was interested this afternoon when the hon. member for Témiscouata (Mr. Pouliot) asserted his prerogative of dictating the rules of order of this house. I suggest that any hon. member who seeks to wrest that crown from his head should be severely dealt with. Speaking on the second reading of this bill I emphasized this particular point, and I want again to place myself on record. It is all very well for the Minister of Marine (Mr. Howe) to contemplate the pleasant picture I know he has in mind. I believe he is quite sincere when he says that the appointments to be made will be made in a businesslike manner, the same as they would be made in a private enterprise. If that were possible there could be absolutely no criticism of this clause, but it is not possible under present conditions. I think we need only consider the straining at the leash on the part of certain hon. members opposite who seem to be anxious for this clause to go through to realize that they are anticipating something in the way of political profit. With bated breath and whetted appetite they feel that they are approaching a political millennium as far as patronage is concerned. It is that very attitude which makes me feel that the minister should give more mature consideration to this particular clause at this particular time. Although I recognize that he is sincere in his desire to remove all positions from political patronage, the fact remains that he has not made his position secure. During the course of his remarks the hon. member for Winnipeg North Centre (Mr. Woodsworth) suggested that this measure was being introduced because of the incompetence of the various harbour boards. I do not think he meant to use those terms and I know the minister did not introduce this measure for that particular reason. We have had harbour boards in the past which were eminently competent.

Mr. WOODSWORTH: Would the hon. gentleman permit me to interrupt? I had in mind the statement made by the minister himself, who said:

> To me it shows the most shocking betrayal of public trust I have ever read in my life. I feel in one way that it should be put on Hansard so that the people of this country might learn something about harbour commissions; on the other hand I dislike to do this because it would certainly give the people a very unfortunate idea of how public affairs are conducted.

I based my statement upon those words.

Mr. WALSH: Apparently the hon. member has forgotten that the Minister of Marine seemed to have certain mental reservations because he qualified the statement which the hon. member has just quoted.

Mr. WOODSWORTH: I listened to his remarks and I did not hear any qualification whatever.

Mr. WALSH: I am assuming it was qualified for I hardly expect that the Minister of Marine would allow a statement of such severe criticism of previous harbour boards to stand in that particular manner. I just want to emphasize again my opposition to this clause although I am in general agreement with the principle of the bill. Along with the hon. member for Winnipeg North Centre and others who have expressed their opinions, I hope that some way will be found whereby political patronage can be absolutely eliminated from the management of our national harbours. If that can be done much money can be saved and greater efficiency established.

Progress reported.

## SUPPLEMENTARY ESTIMATES, 1936-37

A message from His Excellency the Governor General transmitting supplementary estimates for the financial year ending March 31, 1937, was presented by Hon. Charles A. Dunning (Minister of Finance) and read by Mr. Speaker to the house.

Mr. DUNNING: In moving that the estimates be referred to the committee of supply, perhaps I might be permitted a brief word in summarized explanation. The special supplementary estimates are designed to deal with those expenditures which the government deems necessary because of conditions now prevailing, as distinct from the main estimates which were designed to cover what might be described as the normal expenditures of the country. These estimates contain provision for projects already undertaken to the extent of $30,418,000; they contain provision for other projects to the extent of $28,430,000, or a total of $58,848,000 for projects already undertaken, and other projects. I may say that the division is maintained all through the details of the estimates as between these two classes of items. In addition, there is provision for $26,000,000 for grants in aid to the provinces with respect to direct relief, and provision for an estimated deficit of the Canadian National Railways of $39,900,000, a total in all of $124,748,000.

Sir GEORGE PERLEY: Is there no provision there for relief as such, except what is given through the provinces?

Mr. DUNNING: The other projects contain provision for that.

Mr. POULIOT: Will the estimates be given to members?

Mr. DUNNING: I have just received the estimates from the printer and have given instructions for distribution to be arranged as soon as copies come from the printing bureau, but I am not sure how soon that will be. I move that the estimates be referred to the committee of supply.

Motion agreed to.

At six o'clock the house adjourned, without question put, pursuant to standing order.

---

## Thursday, April 23, 1936

The house met at three o'clock.

### REPORTS OF COMMITTEES

#### MISCELLANEOUS PRIVATE BILLS

Mr. GEORGE W. McPHEE (Yorkton) presented the first report of the standing committee on miscellaneous private bills.

#### RAILWAYS AND SHIPPING

Sir EUGENE FISET (Rimouski) presented the first report of the standing committee on railways and shipping owned, operated and controlled by the government, and moved that the report be concurred in.

Motion agreed to.

#### CANADIAN RADIO COMMISSION

Mr. A. L. BEAUBIEN (Provencher) presented the first report of the special committee appointed to inquire into the operations of the Canadian radio commission and its administration of the Canadian Radio Broadcasting Act of 1932 and amendments, and the regulations made under authority thereof, and moved that the report be concurred in.

Motion agreed to.

### PRIVATE BILLS

#### FIRST READINGS—SENATE BILLS

Bill No. 48, respecting The Pension Fund Society of the Bank of Montreal.—Mr. Jacobs.

Bill No. 49, for the relief of Birdie Louise Coleman Wilson.—Mr. Jacobs.

[Sir George Perley.]

Bill No. 50, for the relief of Solomon Hyman, otherwise known as Saul or Sam Hyman.—Mr. Jacobs.

Bill No. 51, for the relief of Lewis Gould.—Mr. Jacobs.

Bill No. 52, for the relief of Hyman Stotland.—Mr. Reid (for Mr. Hanson).

### QUESTIONS

(Questions answered orally are indicated by an asterisk.)

#### AVIATION

Mr. McNIVEN (Regina City):

1. Will the government give consideration to a definite national civil aviation policy during this session of parliament?

2. If so, will it consider representations that such policy be administered and developed independently of any aeronautical development for military purposes?

3. Has any agreement been made with Imperial Airways for the trans-Canada transportation of transatlantic passengers and mail on all Canadian route?

4. Will it be possible to provide for substantially increased inspection of, and supervision over, all aircraft flying in Canada?

5. Will the government be able to make a substantially increased use of the facilities of the municipal airport in Regina during 1936?

Mr. RINFRET:

1. Under consideration.

2. The development of civil aviation will, as it has in the past, be administered and developed independently of any aeronautical developments for military purposes.

A resolution is now before the house, providing for the civil aviation branch of the Department of National Defence forming a part of the proposed department of transport.

3. No.

4. Yes.

5. No, as it is not expected that the construction of the trans-Canada highway will be far enough advanced to permit of any regular air services being operated during the year 1936.

#### C. N. DORION—DISMISSALS

Mr. LACROIX (Quebec-Montmorency):

1. How many postmasters were dismissed for political partisanship, upon the recommendation of Mr. C. N. Dorion, ex-member for Quebec-Montmorency, from August 1, 1930, to October 14, 1935?

2. What are their names?

Mr. ELLIOTT (Middlesex):

1. Seven postmasters were dismissed on the personal statement of Mr. Dorion, former member for Quebec-Montmorency.

2. Name—Post Office
Mrs. E. T. Hébert, Callières.
Jos. Leclerc, St. Pierre d'Orléans.
Eugène Gariepy, Ange Gardien Est.
Aimé Goudreault, Les Saules.
F. X. Jobin, Charlesbourg Ouest.
R. Gaulin, Boischatel.
Mrs. Martha Hayes, Rivière aux Pins.

HERVAY CHEMICAL COMPANY

Mr. BOULANGER:

1. For what periods, respectively, were audits made by (a) J. S. deBilly and (b) by Albert Allaire, of the books of the Hervay Chemical Company of St. Basile, Portneuf county, Quebec, to ascertain the amount of sales tax owed by that firm?
2. Were the books of the firm accurate?
3. If not, who discovered that some of the entries in the said books were incorrect?
4. Were the books of the company seized and conveyed to the office of the collector of inland revenue at Quebec, and, if so, by whom?
5. Did any employee of the firm admit under oath that entries in the books were false; if so, who was he, and upon what date did he make the statement?
6. Have any proceedings, for violation of the law, been taken against the company, its directors, or employees?
7. Have any politicians endeavoured to stop legal proceedings; if so, who are they?
8. What reasons were advanced for the resignation of Albert Allaire?
9. Who went to see him relative to the signing of his resignation?
10. What is the date of said resignation?

Mr. ILSLEY:

1. (a) May 19, 1920, to February 28, 1927.
(b) August 1, 1923, to May 1, 1933.
2. The books produced by the firm for Mr. deBilly's inspection were accurate. Additional books were produced, on demand by Mr. Allaire, for the period covered by his audit.
3. Answered by No. 2.
4. No record.
5. A declaration was made by E. A. Savery, accountant for the company, on May 18, 1931, before a commissioner of the superior court, which reads in part as follows:

"I declare that 50 per cent of the amount of tax and arrears appearing in the report from Mr. Allaire made in April and May, 1931, was not charged by the Hervay Chemical Company to the purchasing customers.

That 50 per cent of the tax which was charged to the different purchasers was not paid by the latter to the Hervay Chemical Company."

6. Action taken for refusal to produce books, but discontinued owing to defendant producing same before date fixed for return of writ into court.
7. No record.
8. Resignation requested because of neglect of duty.
9. J. S. deBilly, then supervising auditor for the province of Quebec, on instructions from the department at Ottawa.
10. Resignation dated March 5, 1934, to become effective March 16, 1934.

RADIO BROADCASTING—QUEBEC CITY

Mr. BOULANGER:

1. Who represents the Canadian Radio Broadcasting Commission as censor of broadcasts in the city of Quebec?
2. What is his salary or remuneration?
3. What are his duties?
4. Was he appointed by the Civil Service Commission, and if so (a) who were the other candidates, and (b) who determined their qualifications?
5. By whom was the said censor recommended?

Mr. HOWE:

The following information has been supplied by the Canadian Radio Broadcasting commission:

1. Jean Blais.
2. No salary or remuneration yet recommended.
3. To inspect continuities for political broadcasts for observance of article 90, rules and regulations, Canadian Radio Broadcasting commission.
4. No. See No. 2.
5. By the vice-chairman, Canadian Radio Broadcasting Commission.

Mr. BOULANGER:

1. Who is the manager of radio station CRCK in the city of Quebec?
2. What is his salary?
3. Upon what date was he appointed?
4. Was he appointed by the Civil Service Commission, and if so (a) who were the other candidates, and (b) who determined their qualifications?
5. By whom was the said manager recommended?

Mr. HOWE:

The following information has been supplied by the Canadian Radio Broadcasting Commission:

1. Position of manager, Station CRCK, Quebec, has not yet been authorized. The duties are performed by Mr. A. H. Houde, supervisor of studios.
2, 3, 4 and 5. See No. 1.

## HAMILTON RIFLE RANGE

On the orders of the day.

Mr. H. E. WILTON (Hamilton West): Mr. Speaker, before the orders of the day are called I should like to ask a question of the Minister of National Defence (Mr. Mackenzie). To-day I received a copy of the special supplementary estimates, and in looking through them I find no provision for a matter discussed some time ago regarding the establishment of a rifle range for militia units at Hamilton. I should like to ask the minister—

Mr. SPEAKER: I do not think that is a proper question to put on the orders of the day.

Mr. WILTON: I should like to put it in the form of a question.

Mr. SPEAKER: A question of this kind should be placed on the order paper, or asked through communication with the government.

Mr. WILTON: The only question I should like to ask is—

Some hon. MEMBERS: Order.

Mr. WILTON: —whether it would be included in additional supplementary estimates.

Mr. SPEAKER: The question should not be asked on the orders of the day. When the estimates are under consideration the matter may be taken up.

Mr. WILTON: It will be too late then.

## CANADIAN NATIONAL RAILWAYS

PROVISION FOR EXPENDITURE, INDEBTEDNESS AND THE REFUNDING OF MATURING OBLIGATIONS

Hon. CHARLES A. DUNNING (Minister of Finance) moved that the house go into committee to consider the following proposed resolution:

That it is expedient to bring in a measure respecting the Canadian National railways, to authorize the provision of moneys to meet expenditures made and indebtedness incurred during the calendar year 1936, and to provide for the refunding of certain maturing financial obligations.

He said: The object of the resolution is to provide for capital expenditures and the refunding of capital obligations during the current fiscal period. The 1936 budget of the Canadian National Railways calls for a total amount of $49,859,000, made up of the moneys mentioned in the resolution plus $39,900,000 for net income cash deficit. The provision for the net income cash deficit is being made by way of vote in the special supplementary estimates. In regard to the bill founded upon the resolution now under discussion, the intention is to follow past practice and to refer it to the special committee on railways and shipping.

Motion agreed to and the house went into committee, Mr. Johnston (Lake Centre) in the chair.

Mr. BENNETT: This would seem to be the proper time to ask the government as to its policy with respect to the Canadian National Railways. We are now asked to vote a large sum of money for the purpose of providing for the deficit of 1936. It is true that in the supplementary estimates tabled yesterday there is an item dealing with anticipated deficits, but it will be observed that this resolution is to authorize provision of moneys to meet expenditures made and indebtedness incurred during the calendar year 1936, as well as to provide for the refunding of loans. That raises at once the acute question as to the policy of the administration with respect to this publicly owned property. If by this resolution we are to authorize, as we are, the payment of money to provide for the 1936 operations, it does seem to me that at least we should know something about them, what is involved in them and the general principle and practice that is to be pursued by the government in dealing with this problem.

Mr. DUNNING: The question of the right hon. gentleman is a perfectly proper one and will be dealt with fully by the house when it considers Bill No. 21 now standing as item 18 on the order paper. If it is desired to delay proceeding further with this resolution until Bill No. 21 has been dealt with, the government will raise no objection, although it would facilitate the proceedings generally to be able to get this measure before the special committee on railways and shipping in order to enable it to be advanced. Whatever the policy of the government may be as revealed by Bill No. 21, obviously capital expenditures on the railway will require to be made and certainly parliament will desire to make provision for the refunding of maturing obligations. But I shall not insist on pressing the matter if my right hon. friend desires that the question of general policy should be discussed prior to this measure being dealt with and referred to the special committee.

Mr. BENNETT: Mr. Chairman, the minister's answer is a very fair one, but there is a consideration which I think he overlooks. First, the budget of the railway is to be studied by the special committee. Obviously the details of that budget are prepared by the gov-

ernment officials, and upon the acquiescence of this house in the budget requirements of the railway depends the willingness of the house to enact the legislation contemplated by this resolution. Therefore it is not essential that the resolution or the bill founded upon it should be before the committee while they are studying the details of the budget requirements of the railway, because the bill is to give effect to the conclusions of the committee as to the amount of money that must be provided by this country to enable the railway company to meet its requirements. I think the minister will realize that the budget requirements of the railway are considered in detail by the committee, and when that has been done the bill founded upon it will be the logical sequence of such action on the part of the standing committee when its report has in turn been considered by the house. Let us assume the committee recommends that a capital expenditure of ten million dollars should be reduced to seven millions, or that some special expenditure which the budget contemplates should not be provided for this present year; in that event the budget requirements and the measure to be founded upon them would be correspondingly modified. That in my judgment is the sequence of events so far as we are concerned.

It does become important that the policy of the government should become known before this final action is taken, and I cannot see that the ministry would in any sense be prejudiced by this resolution standing until such time as the special committee has had the opportunity to consider the budget requirements of the railway as prepared and submitted to the government by the railway officials. I think the hon. gentleman's desire to expedite his measure will not in any sense be interfered with if he delays it until such time as the special committee has considered and reported upon the budget requirements of the railway.

Mr. DUNNING: Mr. Chairman, I thought as a former member of the standing committee that I was following the procedure which has usually been adopted, that it was customary for the budget of the railway to be considered by the committee concurrently with the legislation necessary to give effect to it. However, I do not desire to take up the time of the house to press the point. No interest will suffer in the immediate future by delaying the introduction of the bill founded on this resolution, and rather than have a long discussion about it I think I had better move that the committee rise, report progress, and ask leave to sit again.

Mr. STEVENS: Before the motion is put will the minister permit me to ask one question? It may be a reflection on myself but I do not quite recall the exact procedure in the past. My impression is that in the past we have dealt only with deficits in the year following the year in which the deficit was incurred. But it would appear by this resolution that this year the ministry is anticipating a deficit for 1936 and proposes now to make provision for it. Am I correct in that?

Mr. DUNNING: The hon. gentleman is correct. He will remember as a former member of the standing committee that the budget of the railways as presented to that committee always contained provision for an estimated deficit. That deficit was dealt with by the house not in the current session but in the succeeding session when the actual deficit became known. Inasmuch as a deficit will actually arise during the current calendar year the government deems it desirable to make provision for it now in the estimates, and to establish the practice of dealing with the estimated provision for it in advance. Then next year what comes before the house with respect to the calendar year 1936 will have to do with the extent to which the officers of the railways were in error in presenting their estimated deficit figure for this year. My own recollection of the procedure in the past is that the Canadian National Railway budget came before the house in rather a peculiar manner. The provision made in the estimates was for the deficit of a previous year, whereas the budget under consideration by the committee on railways and shipping was the estimated deficit of the current year plus provision for capital requirements and refunding such as is contemplated in the measure now under discussion. I really thought I was providing for the committee having before it the complete Canadian National budget when, on the one hand, we had yesterday provision in the supplementary estimates for the estimated deficit and to-day we are introducing a measure providing for the balance of the Canadian National Railway budget, being the amount required on capital account for new construction and other works and for refunding. To my mind the complete budget of the Canadian National Railways is not officially before the committee on railways and shipping until this measure, plus the provision in the estimates for the deficit, is before it.

However, if the committee desires to see it delayed until Bill No. 21 has been discussed, I shall, as I have stated, raise no objection.

Mr. STEVENS: I want to make it clear to the minister that at the moment I am not particularly criticizing the change. Personally I would like a little time to consider it, because it is a distinct departure. It involves, for instance, in this particular year, providing in the estimates for two years' deficits, and in subsequent years, if this method is followed, the deficits would be anticipated and provided for. There is just one point in that connection that occurs to me as worthy of consideration. If parliament, which is always looked upon as a sort of Santa Claus, actually in advance anticipates and provides for a certain estimated deficit, is there not a danger that parliament having provided, say, for a forty million dollar deficit, six months afterwards when the financial authorities controlling the railway find they have a deficit perhaps of only fifteen million dollars, they may say to themselves: "We are doing very well. We have not exhausted the forty million deficit provided for." Would there not be a tendency for the management of the road, good as it may be, to become a little less exacting in its efforts to reduce deficits and build up a sound system? Would there not be a tendency to encourage, shall I say, a little laxity? It is psychological; the point may be rather narrow, but I am inclined to think it should be considered carefully before this change is authorized. That is one reason why I would suggest—I am not objecting at all to the minister going ahead with this measure—that we should very carefully study and have a complete explanation of this departure from the practice that has obtained in the past.

Mr. DUNNING: The point of view expressed by my hon. friend has of course been very carefully considered by the government in the light of past experience on the part of the committee on railways and shipping. My hon. friend will remember, as a former member of that committee, that the committee was always faced with fait accompli—the deficit they were considering was one which they had to vote anyway because it had been incurred. There was only a restricted opportunity for the committee to say to the railway officers: "You are anticipating that you are going to lose so much money; show us why it is necessary, and show us whether it is not possible to reduce the loss." If this method is adopted the committee will always be dealing with an anticipated deficit and will not be hampered as it has been in the past by the statement: "The money is gone; you might as well make provision for it." I appreciate the point made by the hon. member for Kootenay East (Mr. Stevens) when he says that to set up an anticipated deficit in advance might have a psychological effect, but I am inclined to the view that it would be very bad for this country if the Canadian National officers looked at a figure which they themselves had arrived at presumably as the outside figure of their deficit and then figured they could coast along so long as they were close to it. I believe most railway operators would feel a certain pride in being able to improve upon a figure which in their dealings with the committee they had anticipated as the company deficit.

Mr. STEVENS: As a matter of fact, did not the officers of the railway disclose to the committee what was their anticipated deficit? I think that is always done in any case, although we do not actually provide for it. In other words, we do not sanction it. That is the difference between the minister's point of view and my own. As I say, the matter has come before me only at this moment and I am not prepared to dogmatize, but it struck me that this is rather a serious change in principle which ought to be very carefully thought over and studied.

Mr. BENNETT: The minister is entirely in error in his statement. When I asked for a statement as to policy I had in mind the fact that we voted $41,000,000 just before the Easter recess to take care of the Canadian National deficit for 1935. That was a deficit which had been examined into, in part, by the special committee.

Mr. DUNNING: Only in part.

Mr. BENNETT: It dealt with it in part, but it could not deal with the question of interest and so on. The budget was examined in detail for the purpose of ascertaining how they made up their expected deficit, but parliament has never voted money for an expected deficit, the money has never been voted until the deficit has arisen. It will be within the memory of every hon. member that we voted money this year to take care of that deficit. The minister explained that inasmuch as the financial arrangements made by the railway company contemplated their being provided with money to meet their deficit at the end of the year, he wanted this vote to go through in its entirety so that they might be able to meet their financial arrangements.

Mr. DUNNING: My right hon. friend will remember my embarrassment at the lack of opportunity for the standing committee to examine it under the circumstances.

Mr. BENNETT: The standing committee examined the budget for 1936—that budget was prepared last year—and it examined the budget for 1935. The minister brought in the legislation that was essential for the purpose of providing for capital expenditures, refunding and matters of that kind, but the railway company was on its toes, to use the language of the street, to make that deficit as low as possible. As a matter of fact it succeeded in making it much less than was anticipated at one time. To vote money in advance in anticipation of a deficit is something which I do not think is ever done in ordinary business enterprises. I was not going to discuss this matter until after the standing committee had discussed the budget, but I am bound to point out that when this is done one of two things happens. The amount estimated is usually an outside figure which it is not expected will be reached, or the figure is one which it is known is too low. Very often such a figure is put in so as to impress the committee with the fact that it has been pared down to the last sou, and then they find that conditions necessitate its being larger. On the other hand, if you take a figure of $50,000,000 and do not expect that your deficit will be that great, you are inviting, as the hon. member for Kootenay East (Mr. Stevens) has said, an effort to spend it on deferred maintenance and matters of that kind. I do not think this departure is a sound one, but I shall discuss it later when the budget of the railway company has been considered by the standing committee. I think the resolution might stand until the budget has been considered.

Mr. DUNNING: My right hon. friend would prefer that it does not go to the standing committee as yet?

Mr. BENNETT: Let them see the budget first, because the figure may be different from what it now is.

Mr. DUNNING: The railway budget is down.

Mr. BENNETT: It may be reduced by the committee. The budget is only before the committee; it has not been presented to the house.

Mr. DUNNING: It never is.

Mr. BENNETT: It reaches the house indirectly when the committee brings in its report.

Mr. DUNNING: I am content to move that the committee rise, report progress and ask leave to sit again.

Progress reported.

## NATIONAL HARBOURS BOARD

### PROVISION FOR ADMINISTRATION AND CONTROL OF PUBLIC HARBOURS

The house resumed from Wednesday, April 22, consideration in committee of Bill No. 17, respecting the national harbours board—Mr. Howe—Mr. Johnston (Lake Centre) in the chair.

The CHAIRMAN (Mr. Johnston, Lake Centre): When the committee rose last evening we were dealing with section 4, subsection 1.

On section 4, subsection 1—Officers, clerks and employees.

Mr. CAHAN: Before we proceed to the consideration of this section, I would like to ask the Minister of Marine (Mr. Howe) if he will lay on the table the opinion of the Department of Justice to which he referred in the discussion yesterday in connection with the necessity of inserting subsection 2 of section 3 in this bill. I have looked over the farm loan acts of 1927, 1934 and 1935, and I cannot see that the insertion of certain words in the farm loan acts necessitates the insertion of this subsection 2 in this bill; there does not appear to be any proper relationship between the two pieces of legislation.

Hon. C. D. HOWE (Minister of Marine): No specific written opinion was given on that point. The bill was drawn up by the solicitor of the department working with the solicitor of the Department of Justice. The representative of the Department of Justice assured me that there had been an opinion of the department, and I have no doubt the department would be glad to submit a written opinion if the hon. gentleman so wishes.

Mr. CAHAN: I inferred from the statement made by the minister that an opinion had been given, that the minister had referred to the department the suggestions I made on the second reading and that the department had decided against the views which I had then expressed. I do not wish to raise any irrelevant issues, but I have looked at the Farm Loan Acts of 1927, 1934 and 1935 and I

have found that the farm loan board, so far as I could ascertain, was not empowered by any of these acts to sue in its own name; therefore I could understand that for the purposes of suit on behalf of the farm loan board it might be deemed expedient to make a declaration that the farm loan board was the agent of His Majesty the King acting in the right of the dominion. I could understand that in that particular case such an innovation—I think it was an innovation—should be declared by statute; but I can see no analogy or relationship between the two bills which would render it necessary to insert in this bill, in section 3, subsection 2, that:

The board shall be a body corporate and politic—

With that I agree, but it goes on:

—and be and be deemed to be, for all the purposes of this act, the agent of His Majesty the King in his right of the Dominion of Canada.

I cannot think that that novel declaration should now be inserted in a bill of this kind constituting a commission which is empowered to sue and be sued in its own name.

Mr. HOWE: Would it be satisfactory to my hon. friend if there were obtained from the department and laid on the table an opinion with respect to the point he has raised?

Mr. CAHAN: Certainly, that is all I ask; I do not wish to embarrass the hon. gentleman.

Sir GEORGE PERLEY: Has the minister had time to consider the point we discussed a good while yesterday in regard to the best way of appointing the staff of the harbour board? I may say again that the only object we had in mind was to endeavour to have this board, which is really going to be a large new department, started in the best way, so that those who are employed might consider themselves permanent. In that way we should get better service than if they were subject to dismissal whenever there was a change of government. Has the hon. gentleman had time to consider this question further?

Mr. HOWE: I have thought the matter over carefully and I cannot agree with my hon. friend that we are making this board a department of government. There is no change in the administration of the harbour commissions except for the substitution, at the port, for a board of three, of a manager who is an expert in port management, and the creation of a link between the minister and these managers in the shape of a board

[Mr. Cahan.]

of three experts who will supervise the work of the seven commissioners. As I pointed out before, the set-up was indicated in Sir Alexander Gibb's report, which is word for word as we have it here. Sir Alexander was firmly of the opinion that the board should be free to make its own appointments and to control its own staff. I have before me a bill which I found on my desk entitled "An Act respecting the National Harbours Commission," dated March, 1933. This I believe was not presented to parliament in 1933 but it no doubt embodies the views of the government of that day, and there again I find that the provision is exactly the same as the provision in the present bill. I must say I am unable—

Sir GEORGE PERLEY: If the hon. gentleman will allow me to interrupt him, I would point out that, as he will find as he goes through the years, draft bills are brought in for the consideration of the government, and a draft bill does not necessarily embody at all the wishes or the ideas of the government. It is my own opinion that it is unreasonable for the minister to bring draft bills into the house and quote from them; it is a highly improper thing for him to refer to a draft bill which had no official existence and certainly cannot be said to embody the opinions of the government.

Mr. HOWE: I did not intend to make any improper reference to the bill in question; we were simply looking for all the information we could find bearing on the subject and I was hoping that the draft bill might contain some further information. I am unable to improve on the present wording of the bill.

Mr. BENNETT: There is involved in this a question of far-reaching importance.

Mr. FINN: Louder.

Mr. BENNETT: I am going to refer in a moment to the harbour of Halifax and I will speak loud enough for the hon. gentleman to hear me. The question is this: Is the port manager to appoint anybody he is told by the sitting member to appoint? That is the real issue. There have come to me during the last two weeks from various parts of the country reports indicating that members of parliament sitting on the government side have told port managers that they must appoint given people and dismiss given people in connection with the work of the ports, and I will give the names of the ports if it is thought desirable. These communications are supported by a wealth of testimony and are unquestionably sound so far as the facts are concerned. I have no desire to embarrass the minister or to

take up unnecessary time, but I would ask what is going to be the use of this scheme if, for instance, a member of parliament says, "I have seen the minister and Mr. Hawken and it is arranged that the port manager will receive instructions as to whom he shall appoint." That may or may not be true; but if he is to appoint John Smith because a member says, "Dear Ralph: You will appoint so and so to that particular job; you must do it because I have seen the minister and I have seen Mr. Hawken," where is that going to lead us?

I have heard the observation that we did not introduce this bill in pursuance of Sir Alexander Gibb's report. That is perfectly true. I did not introduce it and it is prefectly true also that I could not get it through—I wish to be quite frank with the house. The opposition of that day from Quebec was opposed to the bill as it now is. It was opposed to it then, and added to that the fact that our own friends were not in favour of it, dictator though I was I could not get this bill through—as I say, I want to be frank about it—and that is the reason why on the first occasion that offered I congratulated the Prime Minister in connection with the speech from the throne upon introducing the bill. I did so because I believed that unless it was done at the very first session it could not be done at all and would not be done. Had the fortunes of war been otherwise an effort would have been made to do it. Whether or not that effort would have succeeded I cannot say, but the hon. gentleman has succeeded and when he talks about a draft bill, immediately after the report we began to consider what form of bill might be utilized. But there never was submitted to council a draft bill in the sense of having finality, though there were discussions. I found, however, opposition among our own people as well as opposition from this side, led at that time by the present Minister of Justice (Mr. Lapointe), so that it would be absolutely impossible for us to get the bill through. When I say "impossible" I mean impossible in that sense.

Mr. POWER: I do not want to contradict the right hon. gentleman, and the Minister of Justice is not here, but I have no recollection of his having opposed any proposal to introduce a bill based on the Gibb report. I am speaking subject to correction, but I do not remember it.

Mr. BENNETT: Merely an expression of his disapproval of the report—that is what I am referring to. I am not going into details, because no bill was submitted to parliament. Not only did it come from one particular man on this side of the house, but we knew from expressions of opinion made to the then minister of marine that hon. gentlemen were unalterably opposed to the legislation, and the speech made the other evening by the hon. member for Outremont (Mr. Vien) represented a view taken by many of our own people. Now this bill is before the house. I say it means just one thing: it means the substitution of the port managers for the commissioners for the purpose of recording the views of the member for that particular constituency. Is that sound or not? That is the whole issue.

Mr. FINN: That is not so; R. W. Hendry's appointment was sound as port manager.

Mr. BENNETT: The senior member for Halifax says it is not sound. I am inclined to agree that it is not right. What has been put forward by us here is this, that it is idle to say all the positions should be filled by the civil service commission—no one suggests it for a moment; it would be both unfair and unjust to suggest that that should be so. On the other hand there are positions that should be so filled in order that continuity may be obtained and permanency secured, and in order that the service may be in keeping with what the minister has said is desired by reason of this bill being submitted to the house. If for instance an appointment to the harbour of Vancouver is to be made merely on the say-so of members of parliament directed to the port manager, then the port manager is not managing the port, he is managing patronage; that will be his job, and it will take too much of his time, too much of any man's time, to deal with it. There is nothing new about this condition. I was hoping that the result of this new measure would be to eliminate in part that very unfortunate state of affairs. I have been told of ports where there have been a thousand applications for employment—that has not been unusual during the last five years—and that men would get a chit from a member or a minister and thereby would immediately be given a position. I was hopeful from what the minister said when the bill was introduced that that condition would disappear. Of course I realize that it cannot be removed in its entirety, but it should disappear with respect to positions that are so important that in the public interest they should be filled by men who would enjoy an assurance of permanence and of continuity in the service, in order that we might get the best results. I submit to the minister that if the effect of this bill is merely to substitute the port manager for the commissioners in receiving

chits and instructions and directions, he will find that he has not accomplished what Sir Alexander Gibb in one of the paragraphs of the report refers to in connection with the "political" administration of the board. If the harbour is to be administered as a political unit, this bill has accomplished no purpose. The purpose might be accomplished by an order in council. How, for instance, does the minister function with respect to the engineer of the railway department and the employee of the marine department? What position do they occupy to-day? They have been going around the harbours giving instructions and directions. Under what authority?

Mr. HOWE: They were the commissioners, appointed by order in council.

Mr. BENNETT: Appointed by order in council to succeed the present commissioners. The same commissioners are commissioners for all the harbours, without regard to residence or anything of that sort; they are merely administering each of these harbours. That indicates the reason, I suppose: the question of who shall determine what men work in a harbour is more or less in the hands of these three gentleman who are resident long distances away. Although long distance telephones are very useful, it is difficult to have Vancouver harbour entirely officered at the instance of the three men who are here. Therefore some one locally must determine that matter, and you get back to the same condition that you have had for years.

If the minister will look at the records and see the number of men that have been dismissed in Vancouver since October 23, he will find that the usual practice has prevailed, that whenever there has been a change of government there has been a change of personnel. If it is a new Conservative government that comes in, they insist on certain men losing their positions and those positions being filled by others; and when a Liberal government comes in, vice versa. Now one hoped, and I think the people hoped, that there was going to be a retention in the service of fit men. If it were desirable I could give the names of two or three such, regardless of their political complexion—some had no politics at all, but they were appointed within the last five years, and that in itself was held to be such a deterrent to their continued employment that they were let out of their positions. I put it to the minister that if the effect of this measure is merely that certain members of parliament are to say to the port manager: This man must go to work and the other man must not go to work, depending entirely on their political views, the last state of this harbour is going to be worse than the first. That is a consideration that I do urge upon him; I think the public expects it to be regarded and it must be regarded if this bill is to become effective. The whole burden of one phase of Sir Alexander Gibb's report was the difficulty of making the operation of a port effective under political administration. No one suggests that all these positions should be filled by the civil service commission, but some effort should be made to secure men who have technical knowledge. For instance you have an acting manager at Saint John; you have a manager put in at Halifax. Each of these men may have admirable qualities, but his political associations are not unknown, and in the very nature of things he is supposed to give effect to the recommendations he receives. The same thing is true with respect to other parts of the country.

I can only urge the minister to realize that if we discuss the matter in this way it is not merely for the purpose of making political capital out of it, but with the earnest desire to see this experiment succeed. I am as anxious as the minister is to see it succeed, because it was the late government that asked Sir Alexander Gibb to come here; we discussed the matter with him fully; he went over it carefully and, realizing the difficulties, made his report after very mature consideration. If we are not to make any advance, but merely, as I say, to substitute the port manager for the former commisioners as the recipient of advice and to run the port as a purely political machine, then the very worst will follow instead of the best that we had hoped for.

Mr. HOWE: I find it rather difficult to discover the real position of my right hon. friend. In speaking to this bill the other day I was severely criticized by him for not giving the local managers more authority over hiring. I will read what he said about it:

> The other day there was a snow-storm in Montreal.

I call attention to that line because that is the only line that is correct as far as I can discover.

> The question of the removal of the snow was referred to Ottawa, as I am informed, and certain delays took place before the question was finally dealt with.
>
> An hon. Member: No.
>
> Mr. Bennett: I only know that those who were charged with responsibility in that port so informed me. There is no reason why this should not be known, and there were certain delays.

The question of how much authority the port manager should have is rather difficult. We are trying to set up a new order with reasonable permanence. The authority the port manager should have is something to be decided. Our first view was that he should have none, that he should not be able to hire or to dismiss men. He should be able to suspend men for cause, and notice should be given to the central board. The purpose is obvious; it is to stop the sort of thing my right hon. friend refers to. My right hon. friend criticized us for a situation that he assumed arose in Saint John, which if it had arisen would have been very wrong—

Mr. BENNETT: Montreal.

Mr. HOWE: In Montreal, rather, and there was criticism from other sources. We therefore relaxed the regulations in some cases. A case may have occurred in Halifax. As a matter of fact we did in Halifax and Vancouver give authority to the port managers to employ men on hourly wages. They have free authority in that regard, and the situation my right hon. friend spoke of might have arisen; I do not know whether it did or not. In any event, as I say, we have not the machinery set up, and until this bill is enacted and we get our board organized, we have very little chance of instituting a system that will work. We feel that the main consideration is not to interfere with the business of the ports; that has been the paramount consideration—we must keep the wheels operating. As to permanence, no one wishes permanence more than I do. Sir Alexander Gibb made a thorough study of the matter, and his opinion deserves weight; he is an excellent man and made an excellent report. He stated that the board—

> —should have wide discretionary powers in the matter of rates, salaries, terms of service, the settling and administration of contracts, the engagement of special technical assistance, the sanctioning of emergency capital expenditure, and the control generally of all construction and port operations.

I take the same view. It is a matter that has been under study for a long time, and that is what we hope to work out. We are working towards greater permanence of employment. I believe if the thing is allowed to work out as recommended by Sir Alexander Gibb we shall, over a period of years attain the certainty of service that they have in the Canadian National Railways and other well managed corporations. It is hardly fair to criticize us too severely if at the moment the wheels are not clicking just as they should. We are trying to change from one system to another; as long as we have no permanent legislation we are unable to make a permanent set-up. But I can assure the committee that if my intentions had not been along the lines that the other side are advocating I would not have brought this bill to the point it has now reached. I must say I am getting a bit fed up with it and my resistance is getting at a rather low ebb.

Mr. BENNETT: The last observation of the minister indicates that he has not been long experienced in the position he occupies, because he will learn by and by that he will get very weary of many things he may have to do. Patience is a virtue that far transcends all others in dealing with matters of this kind. He cannot deal with this as he would with a plan or design in a drafting room; one has to remember that there are 245 members of this house and they all have a right to express their views if they so desire.

I believe the hon. gentleman really has a desire to accomplish the purpose he has indicated. It was because we felt as we did about it that we asked Sir Alexander Gibb to come and make a report, and it is because we believe that report is a sound one that we are here to-day. When I spoke the other evening about local authority I was referring to the inadvisability of bureaucracy or centralized authority with respect to trifling matters. The minister now says he agrees with my view that the question of removing snow should not have to be submitted to Ottawa.

Mr. HOWE: It never was.

Mr. BENNETT: I said I was so informed.

Mr. HOWE: You said "by people in authority," and I questioned all the people in authority and all of them assure me that it was not. The decision was exactly the opposite.

Mr. BENNETT: Did they telephone to Ottawa for the purpose of receiving authority for removing snow? Is that true or not? They telephoned to Mr. Hawken, if you must know about it.

Mr. HOWE: Yes, that is true.

Mr. BENNETT: Well, that is my point. Why deny that there is any truth in it, when I know and could give the particulars?

Mr. HOWE: He did not call up for that; he simply asked in the conversation: "Is it all right to take on some men?"

Mr. BENNETT: The minister has a trained mind; surely he does not for a single moment—

Mr. HOWE: I am taking what the officers in charge said.

Mr. BENNETT: I heard the deputy say that the man was carrying on a conversation with Mr. Hawken about something else and asked for authority about removing the snow. I said I was so informed, and I said I did not believe the port manager should have to use the long distance telephone to get authority with respect to a matter such as that.

Mr. HOWE: Does my right hon. friend object to his asking the question when he was talking on the telephone?

Mr. BENNETT: No, but non constat he would not have done it anyway, but he saved two calls by doing it in one. The minister is not an inexperienced man, and I am surprised that he should endeavour to split hairs by making an observation such as that.

Mr. HOWE: I am surprised at the right hon. gentleman bringing up in the committee such a matter as snow shovelling.

Mr. BENNETT: It was to illustrate a point which the minister says is well taken, namely that the port manager should have authority to deal with such matters immediately without reference to Ottawa. I shall put a motion on the order paper asking for information as to the long distance telephone calls from Halifax since the situation came into being. As a matter of fact he did ask authority to remove the snow; that was my information and it turned out to be correct. The minister does not think I believe he rang up and asked if he could remove the snow, because probably the sun would have done it before he made up his mind. The point is simply that I believe the local manager should have reasonable authority, and I use this as an illustration.

Mr. HOWE: How much authority?

Mr. BENNETT: The question of the fixing of an arbitrary line where the authority of the port manager begins and ends is the reason we are pressing now for the civil service commission to exercise its authority to prevent hiring and firing, to use the language of the minister, with respect to all the appointments. It is idle to say that the men who keep the books and accounts should be subjected to the haunting spectre of being removed from their job at the instance of some politician or member of the House of Commons. It is idle to say that a man who is a policeman in Halifax shall be dismissed because a member of parliament says: "I want that job for someone else," and gives his name. That is the position that I say is wrong; that is what we are endeavouring to overcome. I certainly would not suggest that the port manager should be able to commit the port of Vancouver to a large capital expenditure, or that the port manager at Saint John should be able to enter into a contract for the construction of a new dock, nor yet that it should be necessary that men who are engaged from day to day or from hour to hour in the port should be permanently appointed. But when it comes to men employed in the keeping of the accounts and records, men who have to do with the technical administration of the port, there should be a certain permanency in their positions; for continuity of service makes for efficiency of administration. The earnest desire that industrial companies have to prevent change of employees finds sound application here. It seems to me that in all positions that involve continuity of service for longer than six months or a year or two years there should be some security. Mark you, the very definition added as to the power of the board is one reason which makes it essential that we assert this position. We say the board is a corporation capable of being sued and to sue, and that it is an agent of His Majesty the King. During the last fifteen or twenty years in Canada we have generally propounded the position that those who are employed by the crown in the class of service to which I refer shall have permanency and security of employment. It is only that; and because we make suggestions to the minister he must not assume that in any sense we are desirous of embarrassing him in the passing of his bill. Rather we desire to help him, and the suggestions we make are not of a political character. Only a few days ago his colleague sitting beside him placed a measure before the house. We read it and suggested the addition or deletion of a word here or another word there. He leaves the chamber thinking that perhaps the suggestions would improve the bill. We do not ask him to do it at our instance. His colleague then moves the suggested amendment.

We have a duty to discharge in this chamber. I have one for which I am paid, and I am bound to give the best I have to the country which pays me. Part of my duty is to make suggestions as to how I believe we can best attain an end. My suggestions may not be acted upon. I merely make them for what they are worth, and in no capricious or political spirit, but with the hope that they may be accepted for the purpose of improving legislation. Sometimes they are accepted by the government, and sometimes they are not. We urge them as strongly as possible, but the minister must not say he is almost prepared

to abandon his bill because people make suggestions. That stand would be an invitation to those opposed to the bill to keep up the fight a little longer in the hope that his already frayed nerves may become completely destroyed.

Mr. HOWE: We have now found what the right hon. gentleman wishes to know, and I believe I can help him considerably. If he has studied the bill he is aware that the accounting is to be under the Minister of Finance, and that the men doing the accounting are in the civil service. So far as the dismissal of engineers is concerned, I know of no engineer being dismissed for a great many years. Even subsequently to 1930 we find that the engineering staffs at all the harbours were the staffs which had been there for many years.

Mr. BENNETT: Some had contracts.

Mr. HOWE: Yes, but a great many had not. I do not think there has been any great trouble of the type he suggests in connection with technical men occupying responsible positions. I do not think they have been dismissed in the past, and I do not believe there will be a tendency to dismiss them. Whether we could go farther than we have, I doubt very much. We are trying to get the wheels turning, and we believe that without hurting the business of the ports we have gone as far as we can. After all, the one important point of which we are apt to lose track is that ports must operate efficiently, that business must be done through a port and that the wheels must turn with a minimum of friction. I am more afraid of obstructing the wheels of progress in the port than I am of one or two political appointments. My experience with political appointments is that the man you replace is apt to be as good as the man who replaces him. I believe the business of the country is more concerned with efficiency than with matters of that kind.

Mr. BENNETT: So do I.

Mr. FINN: Let me say to the right hon. leader of the opposition, who has singled out Halifax harbour for personal comment, that from his admissions one would think he had joined the Oxford movement, because he has confessed that he was in favour of immediately implementing the report of Sir Alexander Gibb, but that his colleague in the government and his supporters would not permit him to do so. It is a sad state of affairs when we have that statement from my friend, the right hon. the leader of the opposition and the once great Conservative party, who now deserves more than ever to sit in the cold shades of opposition.

Mr. MacNICOL: It will be a greater party after the next election, too.

Mr. FINN: It may be; no one knows. I hope that if the leader of the opposition lives—and I trust he may—he will follow the policy and procedure of the government of the present prime minister.

With reference to the port of Halifax and the harbour commission may I say that there have been but four removals. These removals were made after Mr. Cornell, an appointee under the government of the leader of the opposition, through the chairman of the commission, Colonel Phinney, was handed the four resignations which were accepted by the new port manager at Halifax. Mr. Cornell was an appointee not of the Liberal party or of the present government, but of the government which held office under the present leader of the opposition. No other removals or dismissals have taken place in connection with the harbour commission at Halifax.

I want to say here and now to the leader of the opposition that there was never such a spectacle as that to be seen after the provincial election of 1933, when the Hon. Angus L. Macdonald became Premier of Nova Scotia. It was found that members of the harbour commission, belonging to the party to which the leader of the opposition belongs, had started out to steal the franchise from the people of the province of Nova Scotia.

Mr. BENNETT: Mr. Chairman, I think I shall have to ask the hon. member to withdraw that statement. Men who are not in this house are charged with stealing something.

Mr. FINN: I did not say the leader of the opposition was a party to it.

Mr. BENNETT: It is far worse to say that people who have no chance to be heard are stealing than to make the statement about people who can be heard.

Some hon. MEMBERS: Go on.

Mr. FINN: Furthermore—

The CHAIRMAN (Mr. Johnston, Lake Centre): With regard to the point raised by the leader of the opposition, may I say that the hon. member did not make the charge that any hon. member of this house had done something wrongfully. The statement was made that certain people outside the house did something they should not have done.

Mr. BENNETT: He used the word "steal."

The CHAIRMAN (Mr. Johnston, Lake Centre): That is something he should not have done, but I do not believe the point taken by the leader of the opposition is well taken.

Mr. WALSH: Would the chairman endeavour—

Some hon. MEMBERS: Order.

Mr. WALSH: May I ask the chairman a question?

Some hon. MEMBERS: No.

Mr. WALSH: Would the chairman endeavour to keep the hon. member who has the floor strictly to the question under discussion?

Mr. BENNETT: He is talking provincial politics, and charges theft.

Mr. FINN: The hon. member who has just spoken (Mr. Walsh) must know something about what happened in Halifax, because he wants me to be kept strictly and closely to the line. I propose to do that. May I say that as a consequence of an investigation by a royal commission, at which both sides were represented by eminent counsel, some sixteen or eighteen men who held positions in departments of the government of which the Hon. Mr. Harrington was premier, or what was known as the Rhodes-Harrington government, were dismissed from office. I remember as a boy in the town of Dartmouth seeing a young man perform tricks such as pulling rabbits out of his sleeve, but that was nothing to the tricks that were played in putting members of the harbour commission out of office and replacing them with others, as was done under the leadership of my right hon. friend the present leader of the opposition, for I tell you, Mr. Chairman, that the commissioner of births, deaths and marriages was taken down to the harbour commission and made a timekeeper. Whether he was there to see whether they were born or not, or whether they were going to be born, I do not know. Another gentleman, a Mr. Stainer, who was in charge of the collection of automobile licence fees, was also taken down there and put into a nice position, which he holds at the present time. Then the ex-Minister of Agriculture of Nova Scotia, Mr. Goucher, who represented Annapolis, was also taken care of. Mr. Hetherington, the gentleman who was in charge at Halifax, must have thought they grew potatoes on the wharves, for instead of bringing in goods through our port to be used by our people, he brought the provincial ex-Minister of Agriculture down there to become a member of the commission of which Mr. Hetherington was the chairman. My right hon. friend the leader of the opposition cannot get away from his responsibility by telling this house in all humility that although he was called a dictator he could not possibly put the Gibb report into effect because the government and his party in the house would not permit it. Looking over the great men who have led parties in this country in the past, looking at the right hon. leader of the opposition as I do now, I have always thought him, and still think him, an outstanding man and leader in Canada, but I cannot help thinking that he allowed himself to be cajoled in connection with these particular appointments, and this gave my colleague from Halifax (Mr. Isnor) and myself the largest majority ever given in Halifax or in any constituency in Canada, a majority of over ten thousand.

The right hon. leader of the opposition speaks of the selection of the port manager. Let me tell him and hon. gentlemen opposite that Mr. Hendry has been in the shipping business in Halifax for the past twenty-five years, and is looked upon as an outstanding man by leaders in the city of Montreal and in the city of Halifax who are not Liberal. He is a graduate of Toronto university. He was made chairman of the tourist committee that was appointed by my right hon. friend opposite when he was Prime Minister. He is to-day a member of the city council and an ex-member of the council of the board of trade. He has personality; he has ability. The Halifax Herald, which is owned and controlled by Senator Dennis, said that it was one of the best appointments that could possibly have been made.

I ask my right hon. friend to look in retrospect at the appointments which he made. He appointed a gentleman, and he is a gentleman, but what was his occupation? He was the agent for Nova Scotia and the other maritime provinces for the sale of Tooke's shirts. He was placed on the harbour board to see that the port was developed. On his retirement my right hon. friend appointed Mr. Hetherington, who is a wholesale grocer, of John Tobin and Company, a citizen of whom any city might be proud. The last appointment my right hon. friend made was of the gentleman whom I have already mentioned, the provincial ex-Minister of Agriculture, and those three constituted the commission. When my right hon. friend went out of office those three gentlemen were relieved of their positions; Mr. Cornell, who was a traffic man, took charge of the port of Halifax; it was to him that the resignations of these other gentlemen were submitted, and the minister

through the acting board appointed four others in their places. I say to the leader of the opposition that I was opposed to the immediate removal of men without cause, and to-day my colleague from Halifax and I have the great satisfaction of knowing that of the 140 employees of the Halifax harbour commission only four have gone out of their own volition, their resignations being handed to Mr. Cornell, who was not our appointee but who is still retained and associated with the Department of Marine. So, when my right hon. friend pointed to the port of Halifax somebody must have told him something more than he told us to-day. I said something in the house yesterday; perhaps the right hon. gentleman as he was dropping off to sleep dreamed of it until it reached proportions of greater magnitude than it was, and in so doing he made a mistake. I hope that that was the explanation and that with that manliness which I know he possesses he will be more careful in the future in making statements which cannot be substantiated, at least in reference to the constituency of Halifax which is to-day represented in this house by my colleague (Mr. Isnor) and myself.

Sir GEORGE PERLEY: I should be sorry if this discussion degenerated into a partisan one. That is certainly not our intention at all. I told the committee yesterday that I certainly would not undertake to assess the blame for the state of affairs that existed in the different harbours through the years. Hon. gentlemen opposite might probably say that we dismissed more for political reasons than they did, and we could retort in kind. But that is not the question at all to-day. The minister has brought in a bill which I personally approve, and I congratulate him upon his courage in introducing it. It is for the purpose of bringing about an improvement in the administration of our harbours. We all want that, whether we are Liberals or Conservatives, and I think we can well leave out the question which party dismissed most for partisanship in the years gone by. That is beside the question to-day. The minister has it in mind to improve this service, and for that purpose he has brought down this legislation. All I can say is that the minister to-day has gone a long way towards meeting the views which we on this side of the house have in regard to these appointments. I say again to him, as I said yesterday, that surely there must be some way in which he could alter or amend section 4 to satisfy everybody that political motives will not govern in the dismissal or appointment of the classes of staff which ought to be permanent if efficient administration is to be maintained. I ask him again to consider this a little further to see if there is not some amendment he can suggest to try to meet his own and our views. If that is done, we could go on with the rest of the bill and see if we cannot make some headway.

The CHAIRMAN (Mr. Johnston, Lake Centre): Shall the subsection carry?

Sir GEORGE PERLEY: Does the minister prefer not to consider it?

Mr. HOWE: We might as well settle it now. I may say that this has been considered and Sir Alexander Gibb also considered it. The accounting staff has been put under the civil service and the heads of departments have not been disturbed. I prefer to see how this works out before we take any further steps.

Sir GEORGE PERLEY: In what way has the accounting staff been put under the civil service?

Mr. HOWE: The accounting is to be done by officials of the comptroller of the treasury and that office is under the civil service. These men will be civil servants.

Sir GEORGE PERLEY: What about the technical staff?

Subsection 1 agreed to.

On section 4, subsection 2—Government Employees' Compensation Act to apply.

Mr. CAHAN: This subsection simply provides that should the employees of this board meet with an accident their damages will be assessed as if they were government employees.

Mr. HOWE: That is correct.

Subsection agreed to.

Section agreed to.

Section 5, subsection 1, agreed to.

On section 5, subsection 2—Civil Service Act benefits preserved.

Mr. ILSLEY: I move that subsection 2 of section 5 of the said bill be amended: (a) by striking out the quotation marks where they appear in lines 3 and 4 of the subsection before and after the words "civil service" and "employee," and, (b) by inserting the word "that" after the word "servant" in the sixth line of the said subsection.

Sir GEORGE PERLEY: There are no quotation marks in the bill I have.

Mr. ILSLEY: I believe the hon. gentleman is looking at the reprint. In the bill as introduced there were quotation marks.

Amendment agreed to.

Subsection as amended agreed to.

Section as amended agreed to.

On section 6, subsection 1—Board to have jurisdiction over certain harbours, works and property.

Mr. CAHAN: There are two or three suggestions I should like to make with respect to this subsection. I do not intend to move amendments, but I should like to make some suggestions to the minister. My first suggestion is with regard to the clause "all works and property." I think section 2, which deals with definitions, should contain a clear statement as to what is meant by the word "works." The harbour commissions operate branch railways—in Montreal, they have a line of their own along the harbour front—elevators, elevator systems, wharves, docks, and so on, and I suggest that "works" should be defined so as to comprise all the works which are to be operated by the new harbour board.

My next suggestion is with reference to the phrase "shall likewise have administration, management and control of" in the fourth and fifth lines of the subsection. I suggest that another word should be inserted in order to make clear just what are to be the functions of the board. I think the minister should insert the word "operation" so that it will be clear that the board shall have administration, management, control and operation of all works. I think that is a very significant word and it should be inserted.

Then with regard to paragraph (a), which contains the phrase "all works and property which are now administered, managed and controlled by any of the corporations," I think a change should be made. When this act is proclaimed and goes into full force and effect there will be no corporation other than this board which will be administering, managing and controlling the property. Paragraph (a) might well read:

(a) all works and property which from the date of the coming into force of this act were administered, managed and controlled by any of the corporations.

I think that change is required if we are to avoid difficulty. I shall deal with subsection 2 later, but these suggestions with regard to subsection 1 are intended to be helpful so that the bill may be effective.

[Sir George Perley.]

Mr. HOWE: I think the last suggestion is a decided improvement. Perhaps the subsection can stand for the time being, or would the hon. member prefer to make an amendment now?

Mr. CAHAN: Section 2 dealing with definitions is being held over at my request, and when that section is being considered by the minister a proper definition of "works" can be inserted.

Subsection stands.

On section 6, subsection 2—Boundaries.

Mr. CAHAN: This subsection reads:

The boundaries of the harbours of Halifax, Saint John, Chicoutimi, Quebec, Three Rivers, Montreal and Vancouver shall be as described in schedule "B" to this act, or as may be determined from time to time by order of the governor in council and any such order shall be published in the Canada Gazette.

I am assuming that the boundaries which appear in this schedule, and which will be confirmed when this section passes, have been prepared by some person or persons who have special knowledge. I notice that the definition of the harbour of Vancouver is taken from the first act incorporating that harbour. I did not go through all the acts but I infer that that is so in each case. In connection with Montreal, however, the definition given in this schedule is not the exact phraseology of the definition given in the acts which created the harbour board of Montreal. All I am suggesting is that the minister should take care that in drafting the new definition of the area of the harbour of Montreal, as inserted in schedule B, it should be complete and effective. I am simply speaking from experience, because I have been called upon by private parties from time to time in the course of my legal experience to deal with the question of the boundaries of the harbour of Montreal, and I find that there is a very good description on some of the plans which issue from the engineering department of the harbour commission of Montreal. One that appears on this map is to me very clear. It says:

The eastern and western boundaries are defined by the natural banks of the river St. Lawrence at high water mark. The northern boundary extends from high water mark at the extreme northern end of the island of Montreal at Bout de l'Isle, eight and three-quarter miles below Longue Pointe Church across the river St. Lawrence, bearing due east astronomically to the high water mark on the opposite shore. The southern boundary extends across the river St. Lawrence from high water mark to high water mark 3,760 feet above and parallel to the Victoria bridge.

That is the latest description from the engineering staff of the harbour of Montreal. I do not intend to suggest any amendment to the definition of the area as given in this schedule to this section, but I am simply asking that the minister, who is himself an engineer and experienced in such matters, should be satisfied that the area as at present defined by statute should be included in the schedule with respect to Montreal.

Mr. HOWE: On that point I may say that I expressed some reluctance at putting this schedule in because we were not satisfied with the descriptions we had. The descriptions we have are the legal outlines as determined by the present harbour acts.

Mr. CAHAN: If that is so I am satisfied.

Mr. HOWE: The matter was carefully considered and that is the best we can do.

Mr. CAHAN: If that is so I am satisfied.

Mr. HOWE: It is the statutory description.

Mr. CAHAN: I am satisfied if it conforms, but the language is different from the language employed in the act. It also embodies the language employed in an act defining the harbour antecedent to the date of confederation. However, the minister is expert in such matters and I accept it. I do think however there is very serious objection to the last three lines of subsection 2 of section 6. In every case heretofore the boundaries of harbours have been defined and declared by statute. I do not think that the government should take by order in council the power to change those statutory boundaries either by increasing or by decreasing the area which they cover. In Montreal we have very special conditions. The harbour over which the new board will have jurisdiction extends to the natural banks of the river St. Lawrence at high water mark. Then with respect to the foreshore it will be found that grants have been given beyond the high water mark in a number of cases, and the bed of the stream, that is the bed of the harbour, is vested in fee simple in the crown in the right of the province. The extension of these boundaries by order in council will affect very many interests along the harbour front, if I may say so, or along either one or other of the banks of the river St. Lawrence, and I suggest that the government should not take power by order in council to increase or to reduce the statutory area. It would be a very simple matter to introduce at a later date a statute dealing with this question of boundaries. The extension of boundaries by order in council affects so many private and vested interests as well as interests of the government of the province of Quebec that I suggest to the minister he should go slowly in this matter and come to parliament if he wishes and by statute to redefine these boundaries.

Mr. HOWE: I think section 7 protects private interests against any jurisdiction there:

> ... nothing in section 6 hereof contained shall be deemed to give the board jurisdiction over or control of private property or rights ...

The Canada Shipping Act, which will be in force in August, and also the Government Harbours and Piers Act, give the government the right to determine harbour boundaries by order in council. The only reason this is mentioned here is that these harbours were excluded from the operation of those acts.

Mr. CAHAN: Are those bills which have not yet been introduced?

Mr. HOWE: No, they are both in effect. The Canada Shipping Act was passed last year, and it is in the old act as well and is in effect at the moment; so that we really have power to change harbour boundaries by order in council, unless in this bill we exclude ourselves from that power.

Mr. ILSLEY: In order to make the section comply with the bill as reprinted, I move that subsection 2 of section 6 be amended by striking out the words "the several acts constituting the corporations" in the seventh and eighth lines and substituting therefor the words "schedule B to this act." That is in the reprint now.

Sir GEORGE PERLEY: With respect to the authority by order in council to fix boundaries, I understand there is an act which gives authority in a general way but that these harbours are excluded from that act.

Mr. HOWE: Yes.

Sir GEORGE PERLEY: Is not my colleague correct when he says that heretofore the boundaries of these harbours have always been fixed by statute?

Mr. CAHAN: In every case, as far as I can discover.

Mr. HOWE: That is correct, yes.

Sir GEORGE PERLEY: Why not leave it that way? Parliament meets every year and it is easy to bring in a bill. Most of these harbours are important, and with all

due respect to The Canada Gazette I suggest that there are very few people who read it, and there might very well be passed an order in council changing boundaries, which would escape the notice of the ordinary citizen. I would ask the minister to explain why there is any necessity for altering the procedure that has been followed through the years in regard to these harbours.

Mr. HOWE: It seems rather an anomaly that, for instance, the boundary of Vancouver harbour must be determined by statute, whereas the boundary of Victoria harbour, a very important harbour, may be set by order in council. In the same way, Halifax harbour must be determined by statute, and Sydney harbour can be set by order in council quite legally; so also can Louisburg. I do not know why we should distinguish these seven harbours. I have no great objection, but—

Sir GEORGE PERLEY: I take it the reason is that these harbours are under dominion authority.

Mr. HOWE: So are the others.

Sir GEORGE PERLEY: But dominion authority in an entirely different sense. These harbours are administered by the dominion and their boundaries are fixed by statute. My hon. friend here perhaps feels that some person in one of these big cities would be prejudiced by the fact that an order in council was passed altering the boundaries of the harbour, he knowing nothing of it, although theoretically he is supposed to know, and he would be bound by it. I submit there is really no good reason why the procedure should be altered in this case.

Mr. POULIOT: There is a moving picture entitled Modern Times, by Charlie Chaplin, in which there is a board for television, and the gentleman in charge of that board sees all that is going on in the workshop. I wonder if such a device cannot be used to control the management of all the harbours by one person in Ottawa.

Mr. FINN: Before the amendment is carried I wish to ask the Minister of Marine a question with reference to schedule B, Halifax harbour. I am not a sailor or a navigator, but it says:

> For the purposes of this act, the harbour of Halifax shall include all the waters lying northwest of a line running north 56 degrees east and distant 3,500 feet southeasterly from Pleasant point, and including the waters of Bedford basin and the Northwest arm.

Just what does that include? Or might I put it this way; does it include the Dartmouth side of Halifax harbour?

[Sir George Perley.]

Mr. HOWE: Yes, all the waters of Bedford basin, the harbour of Halifax, the Northwest arm, the Halifax arm out of Chebucto head.

Mr. FINN: As I read this it looks as though for the purposes of this act the harbour of Halifax shall include all the waters lying northwest—that is westerly, the Dartmouth side is easterly—of a line running north 56 degrees east and distant, 3,500 feet southeasterly from Pleasant point, and including the waters of Bedford basin and the Northwest arm. The main harbour of Halifax has Halifax on the one hand and Dartmouth on the other. The district of Woodside contains the Acadian Sugar Refinery. The eastern passage district contains the Imperoil works. In the town of Dartmouth there is the skate and nail factory and the Consumers Cordage Company. I look forward to development on the eastern side of Halifax harbour, which is Dartmouth, and on the western side, which is Halifax, in the same relationship but not in the same degree as Carleton is to Saint John. The hopes and aspirations of the people of Dartmouth, the town in which I was born, have already been gratified by the building of a pier there. There is a Dartmouth branch to Windsor junction, which has now been continued on to Dean settlement, a distance of about seventy-two miles of railway, and this includes the Dartmouth shore, so that developments may take place there. But I wish to be assured that this definition of Halifax harbour is broad and wide enough to include the eastern side of Halifax harbour. I rather doubt that it does.

Mr. HOWE: I can positively assure my hon. friend that the Dartmouth shore of Halifax harbour is in the harbour just as much as the Halifax shore of Halifax harbour.

Mr. FINN: The only point is that according to this definition, for the purposes of this act the harbour of Halifax shall include all waters northwest of a line running north 56 degrees east. You get that point north 56 degrees east and then you go westerly. Now if that is in the centre of the harbour, although it includes specifically the Northwest arm and Bedford basin, it does not include the town of Dartmouth, and I am not able to take a chart and find out whether it does or not.

Mr. CAHAN: Will the hon. member allow me a moment? I looked into it, and it includes everything that was included in Halifax harbour by the earliest statutes down to the present. This schedule includes everything that was in the area of Halifax harbour in the early statutes of the province, and at later dates.

Mr. FINN: I accept the statement of my hon. friend the ex-secretary of state, but unfortunately he sits in opposition and is not responsible, and I would like to hear from the Minister of Marine who, sitting on this side of the house as a member of the government, is responsible.

Mr. HOWE: I thought I gave that before, but I may say that my hon. friend opposite is quite correct, in that this is exactly the description of Halifax harbour that has been in the statutes from the earliest times. It is taken word for word from the Harbour Commission Act of 1927.

Mr. ISNOR: Not quite. I hold in my hand a copy of the 1927 act.

Mr. FINN: I think the gentleman who drafted this particular section should have provided us with a plan or a little chart to show the location of this point north 56 degrees east and distant 3,500 feet southeasterly from Pleasant point. This is the latest statute, and as such will govern, and it seems to me that the description as set out here does not include Dartmouth but takes a point in the centre of the harbour and includes Bedford basin, the Northwest arm and northwesterly from this point, which means the Halifax side; and this could be very well cleared up by saying that it also includes the shore of Dartmouth, Woodside and Imperoil; then there would be no mistake.

Mr. HOWE: May I suggest that at the rate we are going we shall be at the schedule about two weeks from next Thursday. In the meantime perhaps the hon. gentleman could satisfy himself that the description is correct, and if any amendment is necessary he could bring it to our attention when the schedule comes up for approval. Is that satisfactory?

Mr. FINN: Yes. I do not doubt the hon. minister for a moment, but I should like to see a captain lay down the course the same as if he were taking a ship out of the harbour. I am perfectly satisfied with the statement of the minister; I am sure he intends what he says, but I would like it put in the statute if it is not there.

Mr. HOWE: I will undertake that if my hon. friend will check that up, before this bill is out of the committee stage he will have opportunity to suggest an amendment, if necessary.

Sir GEORGE PERLEY: Would the minister be willing that his colleague should move that this clause be amended by striking out the last three lines, if my hon. friend does not think them important?

Mr. HOWE: It becomes a matter of opinion, and I think the opinion of the government should have some weight. We think it would be better to leave the clause as it is. The matter is not one of vital importance.

Mr. CAHAN: Then I move:

That all the words after "this act" in the seventh line of subsection 2 of section 6 be struck out.

In other words, that the last three lines of subsection 2 of section 6 be struck out.

Mr. RINFRET: Substituting what?

Mr. CAHAN: Nothing.

Amendment (Mr. Cahan) negatived.

Mr. WOODSWORTH: Before we pass from this section I should like to have from the minister a fuller explanation of what is involved in taking over these works. The minister made a statement, to which reference was incidentally made yesterday. The statement was as follows; I quoted it yesterday:

To me it shows the most shocking betrayal of public trust I have ever read in my life. I feel in one way that it should be put on Hansard so that the people of this country might learn something about harbour commissions; on the other hand I dislike to do this because it would certainly give the people a very unfortunate idea of how public affairs are conducted.

Now, to a certain extent I think I agree with the leader of the opposition in saying that the minister has said either too much or too little. It is not a matter of making charges of graft or incompetence against any individual who has been on any of these harbour boards. I would be the last one to seek to drag a discussion of that kind on to the floor of this chamber; this house is not suited to be transformed into a court. On the other hand I would say that huge sums of public money have been expended on these harbours in the past, and evidently there have been incompetence and waste. I do not know that we can undo the past; at the same time, now that these properties are to be transferred to another board, I think the public have a right to know the liabilities of these various boards. We do not know that. I think the public have a right to know who is responsible for the huge deficits that have been piled up, which, I understand, have involved the government in paying interest at times, and have led to increased borrowings, while in other cases the boards have not been able to pay the interest due to the government. I think the public have a right to know that kind of thing. There may be a possibility of recovery of some of the moneys that have been misspent in the past.

Reference was made the other day to the Montreal harbour bridge. I recall when that matter was up in the house a few years ago; it is true that we had presented to us auditors' statements, but these statements did not go far enough. They revealed that the money was spent and that there were certain receipts to show for it, but they did not reveal who the responsible parties were. Now it was intimated to us the other day that many of these people are out of the country and we could not do anything about the matter. But that is not quite good enough. It is not merely a question of trying to place blame for the past; it is a question of safeguarding the interests of the country. We are not going far enough if we just let the minister say that there has been a shocking betrayal of public trust. That statement he has not withdrawn notwithstanding the efforts of one hon. member to make him do so, and he says that a revelation of what has taken place would give the people a very unfortunate idea of how public affairs are conducted. Well, I am not anxious to arouse further disgust on the part of the public as to the conduct of public affairs, but if we are going to get things straightened out some efforts must be made to place responsibility and to guard the public treasury in the future against the raids that have been made upon it in the past. I think it is quite proper that I should ask the minister to-day, not perhaps to give a long and detailed account, but at least to indicate a little more precisely than he has done the nature of these betrayals of public trust, and to point out what can be done about the situation, before we transfer the assets to the new board. Are we to forget all about the past and let the new board start, without any effort whatever to straighten out the matters that have been in such a tangle during the last few years?

Some hon. MEMBERS: Carried.

Mr. WOODSWORTH: No; I would like some further explanation from the minister on that point.

Mr. HOWE: I understand my hon. friend wishes to know the financial position of the harbour boards. If he will look at page 1413 of Hansard of March 24 last, when I made my introductory remarks on moving second reading of this bill, he will find the statement set out in full.

Mr. WOODSWORTH: I want to go further than that. Let me repeat the minister's words.

Mr. HOWE: The hon. member has repeated them twice; is that not sufficient?

[Mr. Woodsworth.]

Mr. WOODSWORTH: And I shall repeat them a third time. They are:

> To me it shows the most shocking betrayal of public trust I have ever read in my life.

The minister hesitates to put the details on Hansard, because the revelation would certainly give the people a very unfortunate idea of how public affairs are conducted. In view of these statements it is only fair that the public should have some idea of what the minister had in mind. Then, are we simply going to forget all about the waste of the past, and start from a new base line? Is there any chance of recovering any of these moneys which have been squandered? I think that is a fair question.

The CHAIRMAN (Mr. Johnston, Lake Centre): Shall subsection 2 as amended carry?

Mr. WOODSWORTH: I cannot force the minister to reply, but I must repeat that it would seem to be in the public interest that the minister should give some further explanation as to what lies behind his statement made the other day, and as to whether or not, in the interest of the public at large, it is possible to recover any part of the moneys squandered. Those are the two questions I am asking. Of course the government will have to take the responsibility of refusing to give the information to the public.

Some hon. MEMBERS: Carried.

Mr. CAHAN: I do not wish to interrupt the hon. member, but I should like to have it clearly understood that we are dealing with section 6, and that we have held subsection 1, paragraphs (a) and (b) in abeyance for the time being until the minister has time to consider the suggested amendment.

Mr. HOWE: Quite right.

The CHAIRMAN (Mr. Johnston, Lake Centre): Shall subsection 2 of section 6 carry?

Amendment (Mr. Ilsley) agreed to.

Subsection as amended agreed to.

Section stands.

Sections 7 and 8 agreed to.

On section 9—Harbour headline.

Mr. CAHAN: I confess my experience in dealing with harbours has been the experience of a lawyer who from time to time has been asked to give advice. Section 9, however, is novel in my experience. I do not believe there has been any such section in any harbour legislation that I have seen.

Mr. RYAN: We have a similar section in legislation for the Saint John harbour.

Mr. CAHAN: I am not familiar with Saint John harbour, but I understood that the projection of harbour lines was controlled by the Navigable Waters' Protection Act, chapter 140 of the Revised Statutes, and particularly by section 4 which reads:

4. No work shall be built or placed in, upon, over, under, through or across any navigable water unless the site thereof has been approved by the governor in council, nor unless such work is built, placed and maintained in accordance with plans and regulations approved or made by the governor in council.

Is that not sufficient? It applies to all navigable waters and to all harbours which are navigable waters. Why is the new section 9, which, as I understand it will be new and novel so far as the harbour of Montreal is concerned, now being inserted so as to apply to all harbours?

Mr. HOWE: I think the hon. member is mistaken. The harbours in which I have worked,—and I have worked in many of them,—have harbour headlines determined by order in council. As Montreal is on a navigable stream it may be a little different.

Mr. CAHAN: I am speaking simply from my personal memory and experience.

Mr. HOWE: I know that the ports of Halifax, Saint John, Vancouver, Port Arthur, Fort William and other ports have harbour headlines. That does not interfere with the Navigable Waters' Protection Act. The work inside the harbour headlines has to receive, so far as site is concerned, approval in accordance with the provisions of the Navigable Waters' Protection Act, but it is the usual custom in most harbours to establish the harbour headlines beyond which work cannot go in any event, either with or without consent under the provisions of the Navigable Waters' Protection Act.

Mr. CAHAN: Will the enactment of section 9 be as effective as the minister suggests? If enacted will section 9 override the Navigable Waters' Protection Act?

Mr. HOWE: To this extent, that regardless of the Navigable Waters' Protection Act nothing can be built beyond the harbour headline. That is true to-day. It is only a technical matter, because the department administering the Navigable Waters' Protection Act would not approve any construction extending beyond a harbour headline. It is not our intention in any way to stultify the working out of the Navigable Waters' Protection Act. The hon. member will find that this act is mentioned later on in the bill we are now discussing.

Mr. CAHAN: I shall not discuss the matter at length, because I have not looked up the information, but I am not clear that the enactment of section 9 would not reduce or preclude rights which have already been acquired by riparian owners in the city of Montreal.

Mr. HOWE: I may not be familiar with many features of the act, but I can assure my hon. friend that I am familiar with harbour headlines and with the Navigable Waters' Protection Act. I spent a great part of the last twenty years in building in harbours, and I am sure that nothing in this bill will in the slightest degree interfere with private property in the harbour of Montreal or elsewhere.

Section agreed to.

On section 10—Acquisition of real estate or personal property.

Mr. CAHAN: The minister is reconsidering a definition of "works," to include roads, railways and their equipment, warehouses and their equipment and so on. If a sufficiently broad definition is given to "works," this section would be satisfactory to me. I notice that subsection 2 reads:

2. All property acquired or held by the board shall be acquired and held in the name of His Majesty in his right of the Dominion of Canada.

That would be proper. I should like the minister, however, to reconsider that subsection when it is compared with section 37. I do not see how the two can be deemed compatible. The transfer of the property of the seven harbour boards to the new board will undoubtedly be an acquisition of that property by the new board. But section 37 provides that the new board, namely the board hereby declared as one corporation, shall:

... possess and be vested with all the works and undertakings and all other the powers, rights, privileges, franchises, assets, effects and properties, real, personal and mixed, belonging to, possessed by or vested in each of the corporations at or before the coming into force of this act.

How can section 10 prevail, which vests all these works and other property, real and personal, in his majesty in the right of the Dominion of Canada, if section 37 is to prevail, whereby the same works and the same

property are vested in the new harbour board? I am willing that section 10 be passed now, but I am calling attention to this discrepancy because I shall have considerable to say about section 37 when we come to discuss it.

Mr. HOWE: I think this perhaps looks more formidable than it really is because the property of all the boards except the Quebec board is already vested in the crown and administered by the local boards.

Mr. CAHAN: Then why reinvest it in the board?

Mr. HOWE: It is not reinvested in the board. It is to be held by his majesty in the right of the Dominion of Canada.

Mr. CAHAN: I agree with section 10, but I am simply giving notice now that when we come to discuss section 37 I shall contend that the provisions of section 37 are entirely inconsistent with the section we are now enacting.

Mr. HOWE: I shall be glad to take that into consideration.

Mr. ILSLEY: There is a formal amendment I have to move to bring the section into line with the reprint. I move that subsection 3 of section 10 be amended by striking out the words in the first line "Notwithstanding anything in this act" and by adding at the end of the subsection the following, "and for the purposes of this subsection, notwithstanding section thirty-nine hereof, the corporation concerned shall be deemed to continue to exist." The word "concerned" does not appear in the reprint and should appear.

Mr. CAHAN: I was going to deal with section 10, subsection 3. Subsection 3 is so loosely drawn that one cannot discuss it with patience. This bill should declare that upon the coming into force of this act all the property, works, effects and assets of the seven existing harbour boards should be vested by statute in the new harbour board. That being so, the old harbour boards should go entirely out of existence when this measure is brought into force. I think this section and another section of the bill, section 37, are loosely drawn and ineffective. They simply tend to becloud the issue. Section 37 reads:

> The corporations and the board are hereby declared to be amalgamated and to form one corporation.

In my opinion, and being careful of my language, I never saw a more equivocal suggestion made in a bill. You are not amalgamating or consolidating the old boards with the new board. You are in effect transferring all the properties of the old board, in so far as their operation, management and control are concerned, to a new board which is coming into existence upon the proclamation of this legislation. You are not consolidating or amalgamating the old boards with the new board, and therefore this provision which is contained in section 10, subsection 3, and which is carried to ridiculous extent in section 37, seems to me to be a provision which should not be found in a bill as carefully drafted as this bill should be.

Mr. HOWE: Some things that look ridiculous may not appear so ridiculous when we understand the facts. Several of these properties are mortgaged to the public. The Quebec commission have bonds in the hands of the public; the Montreal commission has Montreal bridge bonds in the hands of the public. We cannot get rid of these obligations of the corporations, which obligations are in the hands of the public at the present moment, although we may get rid of them in time, and so the wording is that we are amalgamating these corporations into one so as to preserve the corporate identity which is the security behind the bonds. This is to ensure that the corporate identity does not disappear immediately. My hon. friend says that the provision is ridiculous, but the Department of Justice says that this is the way to do it. There seems to be quite a gulf between the two.

Mr. CAHAN: With all deference I doubt whether you could get a certificate from the chief officers of the Department of Justice that this is the best way to do it.

Mr. HOWE: I consulted the Justice department, and I do not think they would let me down.

Mr. CAHAN: The suggestion is that certain of these corporations have bonds or charges or liens outstanding. Now the proper way to handle the matter, I would suggest, would be to transfer the property subject to these liens and charges, with a declaration in the bill that the liens and charges outstanding will be assumed and paid for by his majesty in the right of the dominion; that is, assumed and paid for by the dominion government. But when you come to deal with the amalgamation of corporations, I have been at this work for over forty years and I have not yet been able to acquire a clear knowledge of what a general provision for the amalgamation of one corporation with another means. We have endeavoured under companies' acts from time to time to determine

what amalgamation means in particular cases, but there is no definition in this bill, and I suggest that all you desire to accomplish is accomplished by a transfer of all the properties and effects of the seven boards, which are soon to go out of existence, to his majesty in the right of the Dominion of Canada, and a provision that all works and properties so transferred to his majesty shall be operated and controlled by the new harbour board, letting the old harbour boards and the old corporations go out of existence just as rapidly as you can get them out of existence. If you do that, you will be saved a great deal of anxiety in the future. I am making that suggestion which, I think, should be considered.

Mr. HOWE: We are just as anxious as is my hon. friend to put these old liabilities out of existence, but nevertheless the bonds are issued under a trust deed which specifies clearly the corporation that issues the bonds, and I do not think even the government of Canada without the consent of the trustees could wipe out those bonds.

Mr. CAHAN: I am suggesting not that they should be wiped out, but that a simple clause should be inserted stating that the new harbour board assumes all the liabilities, liens and charges outstanding; then you would provide for them as simply as if you were changing the name of the corporation to a new name. There is no difficulty about that. I am suggesting that the old corporations should be wiped out by this statute when it comes into force by proclamation, and that on that day the new board should stand in the shoes of each of the old corporations, assuming their liabilities and proceeding to operate the whole undertakings as contemplated by this bill. I am leaving that as a suggestion merely.

Amendment (Mr. Ilsley) agreed to.

Section 10 as amended agreed to.

On section 11, subsection 1—Acquisition of lands, etc.

Mr. RYAN: I would suggest to the minister that, if possible, instead of lands being acquired exclusively by expropriation under the Expropriation Act, the provision adopted in the Saint John Harbour Commissioners Act be inserted here. Section 13 of the Saint John Harbour Commissioners Act reads:

> Whenever the corporation desires to acquire any lands for any of the purposes of this act; should the corporation be unable to agree with the owner of such lands as to the price to be paid therefor, the corporation shall have the right to acquire such lands without the consent of the owner, and the provisions of the Railway Act, 1919, relating to the taking of land by railway companies shall, mutatis mutandis, be applicable to the acquisition of such lands by the corporation—

In many cases the lands to be expropriated are not of very great value, and if the Railway Act is applied proceedings can be carried on much cheaper, more speedily and much more satisfactorily to the parties concerned. Under the Railway Act it is simply a matter of taking out a summons and going before a county court judge; without any waste of time whatever a decision is arrived at. Hon. members know that the exchequer court, which has jurisdiction under this section, is a court which travels all over Canada. Dates of sittings are set far apart and matters are left in abeyance. Those who come before this court are put to considerable expense. It may be that large transactions should be brought before the exchequer court, but I think it would be in the interests of the small land owners to have the provisions of the Railway Act apply. This would serve a useful purpose and assist in the more expeditious carrying out of expropriation proceedings.

As I read the present bill, it does not give the new board an opportunity of negotiating with an owner to see whether an amicable settlement can be arrived at without court proceedings. Under the provision in the Saint John Harbour Commissioners Act the parties could negotiate and probably come to a friendly settlement without any trouble. If a settlement could not be arrived at, they could go to the county court, or, if necessary, to the supreme court where the judge could deal with the matter in as informal a way as it could be dealt with before a court. The judge would be sitting more or less in a ministerial capacity. From my experience I can say that this procedure would be more satisfactory to the land owner. When the Saint John harbour was taken over, it was necessary to acquire considerable property, and in every case the Railway Act was applied and settlements arrived at through negotiation or without any great trouble or expense.

Mr. ISNOR: Much the same provision is in the Halifax Harbour Commissioners Act.

Mr. HOWE: This matter was considered. It has been suggested that the land in our harbours is not very valuable, but I think experience has shown that the most valuable property we have in Canada is located in these harbours. It was felt that in a matter of this kind the Expropriation Act was a proper act to apply, under which a judge of

the exchequer court sits in judgment on the value of the property. That act was set up to deal with government property, such as this will be. I may say that there is nothing in the bill to prevent purchase by negotiation if that can be done to the satisfaction of both parties.

Sir GEORGE PERLEY: The previous section provides for that.

Mr. MacNICOL: Will the board be permitted to expropriate any land it desires without the approval of the minister?

Mr. CAHAN: It should have the approval of an order in council.

Sir GEORGE PERLEY: The previous section commences with the words "when previously authorized by the governor in council," but those words would not apply to section 11 the way it is drafted. I suggest to the minister that subsection 1 of section 11 should commence with the same words.

Mr. HOWE: Ordinarily an order in council is not required for an expropriation. An expropriation plan can be filed by a land surveyor or by any clerk acting on the instructions of any department of government. The payment would have to be authorized by order in council, but that is not required for the filing of the expropriation plan.

Sir GEORGE PERLEY: I quite understand that. If the board is buying a small piece of land, under section 10 it must get previous authority from the governor in council, but under section 11 it could expropriate a large property without reference at all to the governor in council. Does the minister want it that way? What I am suggesting is that the expropriation section should contain the same words as the previous section. Under section 10 the board cannot buy a small piece of property without going to the governor in council, whereas under section 11 they can expropriate a very large property without any reference to the governor in council.

Mr. CAHAN: And pay for it out of the consolidated fund.

Mr. HOWE: They can file expropriation plans, but they need not pay for the property.

Sir GEORGE PERLEY: If they do that the government will have to pay, whether or not they provide for it.

Mr. HOWE: Oh, no, you can abandon expropriations at any time prior to the time you pay for the property.

[Mr. Howe.]

Sir GEORGE PERLEY: Does the minister not wish to have those words in section 11? I am just trying to be helpful in the matter. Does the minister not wish that expropriation proceedings should first be submitted to the governor in council, as is provided for in the case of ordinary purchases?

Mr. HOWE: I think the reason for that section being in the Expropriation Act and in this bill is because expropriations must often be carried out speedily before they get out of hand. We are just following the ordinary government practice.

Mr. CAHAN: No, that is just what you are not following. Under the Expropriation Act it is the minister who must file the plans and proceed with the expropriation. I never knew of a minister who did that without previous authority from the privy council of which he is a member. As the hon. member for Argenteuil (Sir George Perley) has suggested, under section 11 the board may acquire and take over land and section 10 does not necessarily apply. This may be construed to mean that the board of itself may acquire lands by expropriation and when once it has so acquired lands, then the imperative clause of the section, to be found from line 34 to the end, comes into effect, to wit:

> The amount of any judgment upon each such proceeding shall be payable out of any unappropriated moneys forming part of the consolidated revenue fund of Canada.

If the board on its own initiative is authorized to proceed with expropriation proceedings and a judgment is given, then, ipso facto, the amount of the judgment is payable out of the unappropriated moneys forming part of the consolidated revenue fund of Canada. It thus becomes a charge upon the treasury of Canada without the parliament of Canada having received any notice of it or having made any appropriation therefor, possibly without the government knowing anything about it.

Mr. HOWE: I think my hon. friend is wrong when he suggests that litigation before the exchequer court could be carried on without the knowledge of the government of Canada, as the Department of Justice must represent the government before that court. I have the Expropriation Act before me and I quote from section 9 as follows:

> —a plan and description of such land signed by the minister, the deputy of the minister or the secretary of the department, or by the superintendent of the public work, or by an engineer of the department, or by a land surveyor duly licensed and sworn in—

Mr. CAHAN: Any of them may initiate an expropriation.

Sir GEORGE PERLEY: We are not suggesting that they cannot initiate it. What we are suggesting is that the minister would be protecting himself if he made section 11 begin in the same way as section 10. It does not even say that the minister has to agree to an expropriation or to sanction it before it is done; it does not even say that. We are only suggesting, for the protection of the crown, that the words with which section 10 begins should introduce section 11, and personally I cannot see any reason why the two sections should not begin in the same way.

Mr. CAHAN: The words in section 10, subsection 1, are, "When previously authorized by the governor in council." The right hon. member for Argenteuil suggests that those words should be inserted in section 11, subsection 1.

Mr. HOWE: I do not see that it makes any practical difference. The idea was that the board might need to deal with an emergent situation. I think the danger is more real than apparent, but there is no serious reason why we should not comply with the suggestion.

Mr. CAHAN: Why not do so then?

Mr. ILSLEY: I move that before the word "the" in the first line of section 11 there be inserted the words "When previously authorized by the governor in council."

Amendment agreed to.

Section 11, subsection 1, as amended, agreed to.

Section 11, subsection 2, agreed to.

On section 11, subsection 3—Ascertainment of compensation.

Mr. CAHAN: I can see no reason why the provisions of the Expropriation Act should not apply. The last sentence reads:

> The amount of any judgment upon each such proceeding shall be payable out of any unappropriated moneys forming part of the consolidated revenue fund of Canada.

I can see no reason for the insertion of these words here when section 34 of the Expropriation Act is excluded by the insertion of this clause. Section 34 of the Expropriation Act provides that:

> The Minister of Finance may pay to any person, out of any unappropriated moneys forming part of the consolidated revenue fund of Canada, any sum to which, under the judgment of the court, in virtue of the provisions of this act, he is entitled as compensation money or costs.

Why not make the Expropriation Act apply to the entire proceedings taken under the authority of the order in council authorizing the board to apply it?

Mr. HOWE: I am told that it does not make any difference whether we accept this suggestion or not; the effect is the same. But inasmuch as we have accepted one of the suggestions of my hon. friend he might let our view prevail on the second question.

Mr. CAHAN: I am trying to get this bill into some form which I myself approve, so that another branch of this legislature might not treat our efforts with ridicule, to say the least. Let us make provisions which we can stand by when this bill leaves this house for the consideration of another branch of parliament.

Mr. ILSLEY: The hon. gentleman's point is that the words are unnecessary.

Sir GEORGE PERLEY: That is all.

Mr. ILSLEY: I move that all the words from the word "the," after the word "Act" in line 34, to the end be struck out.

Amendment agreed to.

Mr. CAMERON (Cape Breton): If these words are to be struck out you might as well strike out the whole subsection and allow the matter to go under the Expropriation Act altogether.

Mr. CAHAN: Unless that is done, there should be a change in line 3, of subsection 3 to provide that the compensation payable in respect to the taking of any lands so vested in his majesty, or of any interest therein, shall be "ascertained and paid" in accordance with the provisions of the Expropriation Act.

Mr. ILSLEY: We are going very far to meet the hon. gentleman. It does not make any difference, but we desire to get ahead. I move that the words "and paid" be inserted after the word "ascertained."

Mr. CAHAN: It makes a great deal of difference whether you adhere to the general terms of the Expropriation Act and the provisions for payment under it, or whether you provide a new method in every special act. This parliament should set its face against making any specific changes of that kind and should allow the general acts to apply.

The CHAIRMAN (Mr. Johnston, Lake Centre): It has been moved that after the word "ascertained," in line 28, subsection 3, there be inserted the words "and paid." Shall the amendment carry?

Amendment agreed to.

Section 11, subsection 3 agreed to.

Section as amended agreed to.

Section 12 agreed to.

On section 13—Bylaws:

Mr. ILSLEY: There again I have to move a formal amendment:

That paragraph (h) subsection 1 of section 13 of the said bill be amended by adding after the word "violating" in the second line of the said paragraph the words "or not observing."

It is in the reprint.

The CHAIRMAN (Mr. Johnston, Lake Centre): Is the amendment carried?

Mr. CAHAN: You may carry the amendment but please do not carry the section, for the present. With regard to section 13, I have very strong objections to it. This section provides that the board may make bylaws. This board in my view is in essence and effect a new department of government, and in dealing with any new department of government we have for a long time provided that the rules and regulations for carrying into effect the act constituting that body should be made by the governor in council. We have made that provision with regard to the relief commission; we made it with respect to many government commissions. I know that a great deal of opposition centres upon a government which attempts to legislate by order in council, but my view is that it is necessary and altogether expedient that, with regard to the administration of acts which are new, the government should be vested with authority or power to make rules and regulations which, when published in the Canada Gazette, should have the force of law, and that the usual objections to such rules and regulations when made by the governor in council and published in the Canada Gazette should not be entertained. But here is a board, and a government board, dealing with millions of dollars' worth of property which is vested in the crown in the right of the dominion government. It was regarded as objectionable by many gentlemen who sat on the opposition benches during the past five years if we vested in the governor in council authority to make rules and regulations governing the operations of such a board. Such rules and regulations are necessary, but I say it is altogether inexpedient to vest such legislative power in the three gentlemen who are to be vested with authority as commissioners under this proposed measure. Let the board make its recommendations to the minister; let the minister make those recommendations to the governor in council. But I insist that every rule or regulation, call it bylaw or call it regulation, which is finally put into effect, having the force of law, and which governs all matters of external interest, should be made by an order in council recommended in the ordinary course to council by the minister, and then approved and confirmed by the privy council and published in the Canada Gazette where every person may take cognizance of it. I think there is a clear distinction between such rules and the regulations which the commissioners may make with regard to their own internal management, such as the rules and regulations they may make as to the attendance of their officers and servants, matters of internal management. That is one thing: I have no objection to the commissioners making such regulations, or bylaws, but I certainly object in this day of responsible government to appointing three gentlemen to be in control of the harbour commissions of Canada and then allowing them to sit in the place of parliament and in the place and stead of government and legislate with regard to the carrying into effect and administration of the act. That is such a sorry suggestion that I cannot think the committee, after due consideration, will agree to it.

Mr. HOWE: This also was put in after considerable study. Perhaps my hon. friend has spent a great deal of time in courts of law and has not been out sufficiently in the firing line of business. We must remember that these harbours have emergent conditions to meet. For example, some time ago there was a grave danger of a boat carrying away a pier in Vancouver harbour, and it was necessary immediately to impose a regulation governing the movement of boats near that bridge. Such things happen quickly around harbours. We are not in this matter jumping off the end of the dock, so to speak. The same regulation is in the grain act, and for the same reason. The board of grain commissioners have power to impose regulations and the governor in council has the power of disallowance. This measure is taken from that act, and is taken for what we thought the very good purpose of allowing necessary

action to be taken promptly. As we all know the privy council sometimes does not sit for considerable periods of time, and sometimes action has to be taken immediately. No serious harm can be done, because the council, which may allow in one case, can disallow in another. Its full rights are preserved under this section.

Mr. CAHAN: I do not think so. The hon. gentleman has made some reference to the experience of a lawyer, but I will venture to put my experience with his in the administration of large undertakings, both in regard to their construction and their operation. Although I have not perhaps the technical training which he has. I have had that experience, and in the light of it I say that there are certain regulations which the harbour commission should be authorized to make, dealing with internal management, but there are others which should be made by bylaws, if you will, authorized or confirmed by the government which must take the responsibility with respect to them. These are regulations of a permanent character. Take for instance:

(b) the use of the harbours and their facilities by vessels and aircraft—

And so on. Permanent regulations should be made in that regard.

Mr. HOWE: But temporary regulations may be necessary sometimes.

Amendment (Mr. Ilsley) agreed to.

At six o'clock the committee took recess.

## After Recess

The committee resumed at eight o'clock.

Mr. CAHAN: When the committee rose I was calling attention to the fact that the bylaws which are to be made by the board under section 13 are in effect given the same force of law as if enacted by parliament, and inserted in this bill. The provision is subsection 6:

Any such bylaw upon coming into force and effect shall, unless and until disallowed as in subsection 5 of this section provided for, have the same force and effect as if enacted herein.

That subsection, taken with the other subsections, provides that the commissioners may proceed to legislate as effectively as if the bylaws were considered and enacted by the parliament of Canada.

I also called attention to the fact that in years past, especially during the past five years, strong opposition was made to certain provisions which authorized the governor in council to make rules and regulations—call them bylaws if you will—with regard to the effective administration of the acts then being passed. For my own part and on the part of my colleagues in the late government, we at times suggested that it was impossible, in drafting and enacting a new measure of such comprehensive character as this, to formulate and insert in the original act the bylaws or rules and regulations governing the administration of the act, which bylaws necessarily have to be amended from time to time. But this section and subsection go very much further. This is a case of providing, not that the governor in council may make bylaws, rules and regulations having the force and effect of the statutes, but that three gentlemen appointed by the governor in council shall have authority to enact bylaws which will have the same force and effect as if incorporated in the act passed and enacted by the parliament of Canada. That is going far beyond anything to which my hon. friends opposite have called attention in the past and which was the subject of their very severe criticisms.

I do not intend to draft a provision which will take the place of section 13 in its entirety, but I suggested that with regard to bylaws which cover and control the internal management of the board, dealing with its own employees, their respective duties and times of attendance and the like, it should be quite competent for the three members of the harbour commission to make such bylaws. But when it is a case of making bylaws which affect vast public and private interests and which have the force of legislation, then new conditions arise. Call them bylaws or orders or rules or regulations as you will; the term applied is not important, but they should be recommended in due course by the minister to the governor in council and should be authorized and confirmed by council and published in the Canada Gazette. Then, when the public who are interested have notice by such publication, such bylaws should be as fully effective as if incorporated in the statute. I was suggesting to the minister that section 13 should be amended in accordance with that proposal.

Take, for instance, some of these provisions:

(b) the use of the harbours and their facilities by vessels and aircraft and the agents, owners, masters or consignees of the same; and for the lease or allotment of any of the harbour property, plant or facilities.

If special bylaws are required dealing with those matters, I think they should be confirmed by order of the governor in council. Take the next paragraph:

(c) the regulations of the construction and maintenance of wharves, piers, buildings or any other structures within the limits of the harbours, and anything incidental thereto.

With regard to a great harbour such as Montreal, with its vast population and commercial and mercantile interests, these bylaws will affect very many interests. Therefore they should be confirmed by orders in council and become effective only when they have been published in the Canada Gazette, so that all parties interested may have proper notice of what the law is, since a succeeding section gives them the same force and effect as if incorporated in the statutes.

The making of such bylaws is an act of legislation for which parliament has conferred power upon the governor in council from time to time, but which should be very reluctantly conferred upon the gentlemen appointed by order in council as commissioners of the harbour board. Take paragraph (d), which states:

(d) the imposition and collection of tolls for any use of any bridge under the administration, management and control of the board.

That is an important matter. The governor in council should take the responsibility for such charges, and they should be made known, as the imposition of all such changes is made known, by publication in an official journal. Then, turning to paragraph (e) we find that it deals with the imposition and collection of rates and tolls on vessels or aircraft, and so on. Then paragraph (f) deals with:

(f) the regulations of all plant, machinery or appliances, whether floating or not, for loading or unloading vessels, including the power to prescribe that none shall enter any harbour or remain in it without the permission of the board—

And so on. Those by-laws also are of the nature of legislative enactments which, if they are to have the same force and effect as if incorporated in the statute, should be made by the governor in council, and they should be published in the Canada Gazette so as to give notice to the vast commercial and mercantile interests of a great city such as Montreal of the duties, obligations and penalties thereby imposed upon them.

Then, paragraph (g) deals with:

(g) the granting of pensions and/or the making of contributions to pension or insurance funds and the providing of annuities for employees of the board.

[Mr. Cahan.]

That partakes of a dual character. These matters involve large expenditures of public funds, and I suggest that the rules and regulations governing such expenditures should be authorized and approved by the governor in council, because they are really legislative matters. In effect they are a sort of usurpation of parliamentary power and authority but, as we have found in practice, such usurpation is sometimes necessary. Never before have I noticed in the statutes power given to three gentlemen who may be appointed as a board, to sit in the place of parliament and to enact new laws for the proper administration of a particular act.

In closing may I say that I have not drafted any section in amendment, but I believe the section might well be redrafted. I think the ordinary procedure should be that the minister, as advised by the members of the board or otherwise, should make the usual recommendations to the governor in council, and that the governor in council should enact the bylaws or rules and regulations which are to govern, or at least approve them before they are enforceable. I should like again to impress that suggestion upon the minister.

Mr. HOWE: As my hon. friend knows, I am exceedingly anxious to fall in with his views. I wonder whether this amendment would meet the situation he has in mind:

That subsection 4 of section 13 of the said bill be stricken out and the following substituted therefor: "No such bylaw nor any part thereof which affects any person, other than the board or the officers or employees of the board, shall have force and effect until confirmed by the governor in council and published in The Canada Gazette."

Mr. CAHAN: That is very much better.

Mr. HOWE: Does it suit the hon. member, because after all if we are attempting to please him we might as well be sure that we do.

Mr. BENNETT: It is not a question of pleasing us.

Mr. CAHAN: Not at all. We are trying to put the bill into as good shape as possible, so that it may meet with as little opposition as possible when it is considered in another place.

Mr. BENNETT: Once more I ask the minister to try to disabuse his mind of the thought that it is a question of pleasing us, at all. What we are endeavouring to do is to submit suggestions that, we believe, are in the public interest, and I must say that I do not think anywhere in any legislation you

will find anything analogous to this. Frankly, I know of no such measure anywhere. It confers upon three men, the names of whom have been given from time to time—they may or may not be the men who will be appointed —power to do what this parliament would take days to do, and this parliament is composed of three branches, the commons, the senate and the crown. Surely the hon. gentleman is not serious in asking us to sit here and agree to this section being enacted as it stands. I am quite sure that if he had followed the discussion of the last five years in the House of Commons he would realize that nothing ever approaching this was suggested. The publication of our statutes at least enables people to know when they are violating them. Under this provision the bylaws immediately become effective, and there is no provision for their being published.

Take the question of the granting of pensions, for instance. Here are three men who may give pensions to employees of the board. I may say there is one case, relating to the harbour of Montreal, which promoted a great deal of discussion, and in connection with which there was a grave difference of opinion among lawyers advising the board. That case is well known to everybody.

I am sure the minister has no desire that the revenues of the board should thus be placed in the hands of three men, however eminent they may be, to dispose of by way of pensions, annuities or otherwise. This section confers greater powers than are exercised by legislatures, and especially those which have to deal with complicated questions of navigation. For instance, I suppose the minister realizes that in connection with the harbour of Victoria a question arose as to permitting aircraft or aeroplanes coming from Seattle to land in the harbour. This measure gives power to the board to make a bylaw which would deal with that situation, fraught as it is with most difficult and complex international considerations. The question is bristling with difficulties.

Without again going over the ground my colleague has covered, I suggest that if the board passes bylaws they should become effective only when they have been approved by the governor in council, and should have the force of law from a date fixed by publication in the Gazette.

The minister must realize that subsection 4 of section 6 as amended does not touch the principle at all, and is not ample for the purpose we have in mind. It is merely a palliative, not a remedy. I suggest that the best interests of all would be preserved if the section were allowed to stand and were redrafted, because as my colleague has said we do not desire to suggest what bills should contain, but we do desire to suggest what they should not contain. The redrafting may be done by the law officers whose duty this is. I implore the government not to try to put through section 13 as it stands, because if they do they will regret it all the days of their lives. In addition it is so contrary to everything they have contended for during the last five years. I remember my friend the Postmaster General (Mr. Elliott) waxing eloquent one evening in connection with a modest exercise of the powers of the governor in council in connection with legislation then being introduced. I wonder what he thinks of this.

Mr. ELLIOTT (Middlesex): I do not think my protest had much effect as far as I remember.

Mr. BENNETT: Oh, yes, it did, because we provided for publication in the Canada Gazette, and the then Secretary of State made a provision by which no bylaw under the Patent Act could become effective until certain prerequisites had been observed and opportunity afforded to everyone to know what the law was. As this section stands now, it will be admitted that it is a terrible strain on the public to know what the law is. There is no means of knowing for it touches all these numerous and difficult questions. To attempt to modify the section here by amendment is impossible. It requires consideration of the whole problem from the standpoint of whether or not power shall be given to the governor in council and the bylaws shall become effective on a date to be named. This section gives power to three men to do as much as the bill itself does with respect to all the matters therein named. The bill itself requires the assent of the commons, the senate, and the crown, but by this section we are going to give three men, without seats in parliament, without responsibility to anyone, power to pass bylaws with respect to all these matters. The minister will be the first to complain if he finds a situation develop as I think it may. I suggest that the proper thing to do is to have the section redrafted to give effect to what I conceive to be the minister's desire and the true principle which governs in the control of responsible institutions. I concede at once that it may be necessary for the board to make rules and regulations, but such rules and regulations have to do only with administrative matters. Bylaws, on the other hand, deal with matters that are essentially matters of law, that go to the very root of the problems we have to consider. I am

satisfied that the minister on reconsideration—and I am sure that if the Minister of Justice were here he would at once agree—will see that this section should be recast, placing the matter under the control of the government in the manner I have indicated. As the section stands, it is doing what has been done in no other bill.

Mr. HOWE: I think my right hon. friend is perhaps going a little far when he says that this has been done in no other bill because this section was taken from the Canada Grain Act, which has been in force for several years.

Mr. BENNETT: A different thing altogether.

Mr. HOWE: But in order to save time, if the committee will pass subsections 1 and 2 we will allow subsections 3 to 7 inclusive to stand for recasting.

Mr. CAHAN: I think the minister will also find it necessary to recast subsection 1. The provision should be that "the governor in council may make bylaws, not inconsistent with the provisions of this act, on the application of the board"; I would prefer it to be on the application of the minister. Similar provision should be made for amending, repealing and extending such bylaws, and then if by another paragraph you provide, as you have attempted to do here, that "such bylaws shall have the same force and effect as if enacted herein," you will be rid to a certain extent of the difficulties of interpretation. I think the subsection should stand. I think the minister will find that sections 14 and 15, the latter dealing with the levying of tolls, should also stand. So far as I am concerned, if I can be of any assistance I am perfectly willing to place myself at the disposal of the minister or his associates to try to redraft it in a form which I think is proper and effective.

Mr. BENNETT: Without trespassing too much on the time of the committee, let me point out that the Canada Grain Act deals with an entirely different set of things. Here you have to deal with foreign ships, for instance, entering harbours. A catastrophe such as occurred in Halifax harbour would be under the control, so far as the placing of ships is concerned, of a bylaw made by these three men. It is only three years ago, I think, that a problem arose in connection with a ship in Montreal harbour and the right of the harbour board to deal with the movement of that ship in a particular way. The representative of the Marine department will recall the circumstances. The ship came from Buffalo, if my memory serves me aright. Under this section these three men will have power to deal with all these matters. I press this so strongly because it deals with international problems. Our wheat is purely a matter of domestic concern, and even there the section did not go as far as this. I suggest that the section should stand for reconsideration. My colleague, the former Secretary of State, has suggested that he is ready and willing to give of the vast experience he has had in questions of this sort to assist in any way. We have no interest in the matter except that we foresee the difficulties which must arise in dealing with foreign interests. I have given the instance of a seaplane that came up from Seattle, the ship from Buffalo, the explosion in Halifax harbour. Now all these matters are to be under the control of these three men, and what is more they have the power to fix penalties, to provide the punishment, to enact the sanctions that are consequent upon breaches of the bylaws. One of the two succeeding sections deals with tolls, and I believe the minister would say that certainly the governor in council must have something to say when it comes to a question of tolls. Recently in the harbour of New York the question came up of the tolls charged on their piers, the charges being so heavy that six of their piers were idle, and they reduced the tolls. That was done not by one man, but by the body created for that purpose under the control of the governor of the state of New York, the state being represented in the manner that is usual.

I am not going to press my objections any further, but I feel quite satisfied that this section is so much at variance with the whole principle enunciated by the present government from time to time, and so much at variance with the general principle that should govern, in providing that three unprofessional men, unprofessional so far as the drafting of statutes is concerned, should have this power to make bylaws dealing with all these matters without reference to the minister, giving the minister no power of disallowance—

Mr. HOWE: The bill gives the minister and council the power of disallowance.

Mr. BENNETT: That is the general power of disallowance after the bylaws have been transmitted to him, but all these three men have to do is to meet together and pass the bylaws without first submitting them to the minister for his approval. Once the board has passed its bylaws they become

effective against offenders, who are liable to punishment without knowing what the by-laws are, without having seen them, and without their having been published, and penalties are imposed at the discretion of three men without any opportunity of the governor in council, who must ultimately accept the responsibility, being consulted.

Mr. HOWE: I can see that my friends are quite correct when they say that operation will be handicapped by red tape, but that is exactly what they are proposing to do here, to operate the business of our harbours by order in council. I do not think this will work, but I am willing to let clauses 13, 14 and 15 stand, if hon. gentlemen so desire.

Mr. BENNETT: Lest it should be thought that I acquiesce in the view that it is red tape to try to provide for reasonable governmental responsibility, I must protest against the use of the words.

Section stands.

Sections 14 and 15 stand.

On section 16, subsection 1—When vessels may be seized.

Mr. CAHAN: I assume the provision with regard to the territorial waters of Canada is inserted here because of a bill which, I understand, is to be introduced at a later stage of the session and which will define territorial waters. "Territorial waters" must be defined by some other legislation as we have struck out all the provisions of the Customs Act which heretofore defined territorial waters. I assume that before this bill comes into force the bill defining territorial waters will be considered by parliament.

Mr. MARTIN: I understood from the Minister of National Revenue (Mr. Ilsley) that for some reason or another the phrase "territorial waters" was not regarded as being adequate. If another phrase is to be substituted, I think we should know what the contemplated phrase is to be.

Mr. CAHAN: If it is understood that before this bill passes we shall have the other bill before us, there can be no objection to passing this section.

Mr. BENNETT: The hon. member for Cape Breton North (Mr. Cameron) could possibly give expert testimony on this point as he took to the privy council the case which is now considered as the authority for the provision with respect to seizures under our Customs Act extending twelve miles out. When making a treaty with the United States, Great Britain was extremely careful to retain the old three mile clause in its efficiency and force for certain purposes although, in view of world conditions and the increased rate of speed at which vessels travel, the right was extended to twelve miles. The three mile limit was based upon the distance an old cannon shot could be thrown, but the increased rate of speed at which vessels travel has resulted in the change being made in the treaty between Great Britain and the United States in connection with seizures of vessels for violation of the Customs Act in connection with liquors. They were very careful not to concede the point that territorial waters in the narrow international sense extended beyond three miles and we must be extremely careful in dealing with this matter. I take it that that is why the Minister of National Revenue stated the other day that in consequence of representations made by Great Britain they had concluded to withdraw the provisions of the Customs Act.

Mr. CAHAN: More than that, we have repealed every section of the Customs Act which dealt with territorial waters.

Mr. BENNETT: Yes. It is being left to a new statute which will embody the terms of the decision of the privy council in the case to which I have referred, Dunphy versus Croft. That statute will embody the provisions of that decision and at the same time meet the general views of nations with respect to the question of the three mile limit. It is a complex and difficult problem; it is not as simple as it looks. For instance, we have had it up many times with respect to the Northumberland strait. Hon. members will probably remember that we have had it up in connection with the narrow waters that lie between the United States and Vancouver. Of course, in that case the distance is more than twenty-four miles, but there may be instances where the distances would not be more than six miles and when that is the case, there is another set of considerations altogether. We must be certain to place upon the statute books such a bill dealing with territorial waters or we shall find ourselves in great difficulty.

Mr. RYAN: Does not the statute of Westminster settle that question?

Mr. BENNETT: No.

Mr. CAHAN: By the bill which passed this house a few days ago amending the Customs Act, each and every definition of territorial waters was struck out in order that the government might have an opportunity to introduce at a later date in this session a new bill defining territorial waters.

Mr. CAMERON (Cape Breton): I do not think the decision in the case referred to by the leader of the opposition would help in this particular case because the privy council only went so far as to say that the parliament of Canada had the right to define territorial waters as applied to Canadian vessels.

Mr. BENNETT: And for customs purposes.

Mr. CAMERON (Cape Breton): And, as Lord Macmillan said, for the purpose of ensuring that the customs law be effective According to the wording of this section, territorial waters would apply to the ships of all nations, and I am doubtful whether the parliament of Canada has power to enact legislation to govern, beyond the three mile limit, any vessels but those registered in Canada.

Mr. CAHAN: They went just a little further than that; I think the decision suggested if the vessel were owned by a resident of Canada.

Mr. CAMERON (Cape Breton): So far as the treaty with the United States is concerned there is no twelve mile limit; it is one hour's sailing of the offending vessel. That might be eight miles or it might be fourteen miles or even more.

Mr. DUNNING: That is for customs purposes.

Mr. CAMERON (Cape Breton): Just for the purposes of the treaty. In that treaty the high contracting parties reserve expressly the old three mile limit.

Mr. BENNETT: Which so far as we are concerned is still territorial waters.

Mr. CAMERON (Cape Breton): Absolutely.

Mr. ELLIOTT (Middlesex): I should like to move an amendment to paragraph (b) of section 16:

That paragraph (b) of subsection 1 of section 16 be amended by inserting after the word "violated" in the second line of the said paragraph the words "or has failed to observe."

That will make the paragraph read as it reads in the reprint.

Amendment agreed to.

Mr. ELLIOTT (Middlesex): I should like to move:

That paragraph (c) of subsection 1 of section 16 be amended by striking out the word "damage" in the first line of the said paragraph and substituting in lieu thereof the word "injury," and by striking out the word "default" in the second line of the said paragraph and substituting therefor the words "the fault."

[Mr. Cahan.]

Mr. BENNETT: It will be observed also that we deal with the question of the violation of the bylaws by foreign ships and make the master liable. This adds to the argument I was submitting in connection with section 13. So far as possible the contemplated bylaws should appear in the legislation. When foreign consuls are instructing their captains and masters in connection with questions of liability arising under the statutes of ports at which they call, they are always anxious to know exactly what is the law. When they have to have recourse to bylaws there is always great difficulty, and so far as possible we should endeavour in statutes of this kind to include in the legislation everything which a stranger coming into our ports and using our harbours should have to know in order to avoid the possibility of running counter to the provisions of the law.

Amendment agreed to.

Subsection as amended agreed to.

On section 16, subsection 2—Cases coming under paragraphs (c) and (d).

Mr. ELLIOTT (Middlesex): I move:

That subsection 2 of section 16 be amended by striking out the word "damage" in the third line of the said subsection and substituting therefor the word "injury."

That change appears in the reprint. I also move:

That the subsection be amended by inserting the word "injury" before the word "damages" in the fifth line on page 9 of the said bill; and by inserting the words "the amount of" after the word "for" in the ninth line on page 9 and inserting the word "injury" before the word "damages" in the tenth line, and by inserting the word "injury" before the word "damages" in the twelfth line.

Amendments agreed to.

Mr. CAMERON (Cape Breton): It seems to me that in this section the intent of the draftsman would have been better carried out if the word "damage" had been retained throughout as well as the word "injury." Instead of striking out "damage" and substituting "injury," I think it would be better to retain the word "damage" and add the words "or injury."

Mr. CAHAN: The words are not synonymous; they are alternative.

Mr. BENNETT: The admiralty division of the Exchequer Court Act deals in part with subsections 4 and 5, because the court has power, when judgment has been arrived at, under the Admiralty Act to order appropriate proceedings being taken to enforce the judgment. When I read this over I had some

doubt whether there should be some saving clause or some provision having regard to the fact that the Admiralty Act does deal with these very matters. The Postmaster General will recall that the Admiralty Act has a set of provisions for the purpose of giving effect to any judgment that may be awarded in rem as well as the judgments of the courts of record in personam. The enforcing of judgments in rem, with respect to the ship, is provided for—the methods of enforcement—in the Exchequer Court Act itself.

Amendment agreed to.

Section 16, subsections 3 to 5 inclusive, agreed to.

Section, as amended, agreed to.

On section 17—Seizure and detention of goods.

Mr. ELLIOTT (Middlesex): I move:

That paragraph (c) of section 17 be amended by inserting after the word "violated" in the second line of the said subsection the words "or has not been observed."

Mr. BENNETT: Before the section passes I think it is my duty once more to point out to the minister that we are now dealing with cases in which the right of lien or seizure or detention of goods is concerned. For instance, one of the great cases in the courts was with respect to five barrels of beer, and cases against goods of various kinds are well known in the courts of the country. What I would put to the minister is this—it is a matter for his legal department to advise him—is it desirable in a measure of this kind to endeavour to deal with these specifically, or rather to provide, since we have provided that the board may sue and be sued, that they shall have any powers necessary to enable them to enforce their rights under all these circumstances in the admiralty courts, because that is really what it means. In essence we have created a corporation and clothed it with power to sue and be sued, which involves the right of appearance in the admiralty division of the exchequer court; and if we once get into the realm of details here, without making some saving provision as to the existing provisions under the admiralty acts, we may find ourselves in great difficulty. I have not had occasion in many years to do with that sort of thing, but I do not think legislation of this kind should do more than make it clear that the laws of the country are available to the board, because if we are to take it out of the operation of the general laws of the country it will impose upon us the necessity of specifically mentioning those provisions that do not apply or that do apply as the case may be, and that is a matter of great difficulty.

Mr. HOWE: I am advised by our legal adviser that this clause is in the harbour acts at the moment, and it seems to have worked well in the past. I cannot imagine why it should be changed.

Mr. BENNETT: There is a great difference; this board is the agent of the crown.

Amendment agreed to.

Section as amended agreed to.

On section 18—At the risk, cost and charges of owner.

Mr. CAHAN: The same question comes up in section 18. Dealing with seizure and detention—

Mr. ELLIOTT (Middlesex): Perhaps it will assist my hon. friend in making his remarks if I move now the amendment which I propose to submit. I move:

That subsection 1 of section 18 be amended by inserting after the word "violation" in the second line on page 10 of the bill the words "or non-observance."

Mr. CAHAN: Section 18 as a whole deals with seizures and detentions made under the terms of this bill. Subsection 3 reads:

The seizure and detention may be effected upon the order of,—
(a) any judge;
(b) any magistrate having the power of two justices of the peace;
(c) the chief officer of customs at any port in the Dominion of Canada.

Subsection 4:

Such order may be made on the application of the board or any officer thereof ... and may be executed by any constable or bailiff, or officer of the board.

As that clause stands, I suggest that under this paragraph an officer of the board may apply to the court for an order and that an officer of the board may be the officer to carry out the decision of the court. There seems to be a dual capacity there. I do not see why the ordinary servants of the crown might not be authorized to carry these orders into effect.

Amendment agreed to.

Section as amended agreed to.

On section 19—Service of warrant, etcetera.

Mr. BENNETT: Notwithstanding what the law officers advise as to what is contained in the harbour commission acts, I

would point out that the provisions with respect to service of process are contained in the Admiralty Act, and the questions of how a ship shall be arrested and how detained, and the manner of serving the process, and how it shall be posted up, and where, are matters which are dealt with by the Admiralty Act. To deal with them partly in this statute and leave others untouched is to create a confusion which, in my judgment, should not exist. There is nothing new about that, because it has been held time and time again that it is very unwise to endeavour to make the method effective in a statute that deals with a problem which must be solved by a court. The statute creating the court, conferring its jurisdiction and providing for its procedure, itself deals with all of those. All these matters with respect to the arrest of a ship are contained in the Admiralty Act and the Exchequer Court Act.

Mr. HOWE: Here again, may I advise that this particular paragraph is taken from all the acts. It seems to stand the test of time and work well. I do not see why it should be changed now.

Mr. BENNETT: The minister has misunderstood me. Of course these provisions were there. They were there at a time when legislative power with respect to admiralty matters were uncertain and shadowy. We have since had that matter entirely cleared up. If any of those present here representing the departments have before them the Admiralty Act and the Exchequer Court Act dealing with admiralty matters, they will realize that we have now made effective provision for this, and it is a bad exercise of legislative power to include in a statute that deals with the creation of a body provisions with respect to service and arrest that are dealt with by the procedural rules and substantive provisions of the statute which creates the court, because they govern, and this is surplusage which may create confusion if there is any conflict.

Section agreed to.

On section 20—Sale of goods at public auction.

Mr. BENNETT: This section is still worse, because the Admiralty Act makes specific provision for dealing with all those matters. When a judgment has been obtained, the Admiralty Act and the Exchequer Court Act, the admiralty side of it, make provision as to how you shall proceed to enforce the judgment, and to put such a provision into this statute is not only bad draftsmanship but the exercise of discretion in a bad way, and would not be thought of, I submit with deference, in any other legislative body, because you are at once creating confusion. The fact that it has been there is one more reason why it should disappear.

Mr. HOWE: This is against goods. It has nothing to do with ships, as I understand.

Mr. BENNETT: It has to do with goods on ships that are seized.

Mr. HOWE: No, in grain elevators.

Mr. BENNETT: Well, it is the same thing.

Section agreed to.

On section 21—Penalties to be paid over to board.

Mr. ELLIOTT (Middlesex): I move that the section be amended by inserting after the word "violation" at the end of the first line on page 11 of the bill the words "or non-observance."

Amendment agreed to.

Section as amended agreed to.

On section 22—Recovery of penalties.

Mr. BENNETT: I only point out that you do not recover sums of money under the criminal code by summary conviction. This old section which is taken from the revised statutes deals with an entirely different situation, but inasmuch as scissors and paste seem to be the rule of interpretation rather than the law of the country, I suppose we can only point this out and leave it at that.

Section agreed to.

On section 23—Revenues to be paid into chartered banks.

Mr. CAHAN: This section provides that the revenues of the board shall be paid to the credit of the receiver general—that is all right—and they would be paid through such banks as the Minister of Finance from time to time directs. But should they be credited to a national harbours board trust account? They should be credited, in so far as they are derived from a single harbour, possibly to a special account for that harbour, but they are not held by the receiver general subject to a trust. There can be no objection to having separate accounts with respect to the income and disbursements of those harbours, but why designate them as trust accounts when they are not in the nature of trust accounts in any respect?

Mr. HOWE: There is no significance to the word "trusts." I would be quite willing for them to be called "special" accounts.

Mr. BENNETT: I think that is a good deal better.

Mr. CAHAN: And would not the minister also provide that there should be a special account in respect of each of the seven harbours?

Mr. HOWE: Well, I think that only complicates matters. A paragraph will be found later on which states that the funds of one harbour cannot be used for another harbour.

Mr. CAHAN: Yes. That, I think, covers the matter.

Section, as amended, agreed to.

On section 24—Expenditure of moneys.

Mr. CAHAN: This expenditure of money by this board should be made subject to the provisions of the Consolidated Revenue and Audit Act, 1931. I can see no reason why you should except from the provisions of the audit act the payments which are set forth in paragraphs (a), (b), (c) and (d) of this section. That act provides very carefully for the audit of all payments of government funds by the comptroller of the treasury, and these exceptions should not be made. I can conceive of no reason why under paragraph (a) the payment of expenses incurred in the administration and management of the harbour works and properties should not be vouched and verified in the same way as any other public expenditures. Then, if there is a purchase of investments for reserve fund there is no reason why those expenditures should not be audited and verified and vouched the same as any other expenditure. And the same is especially true with regard to capital expenditures. Those, as far as past experience shows, are payments made out of appropriations of public funds by the parliament of Canada or borrowed funds which have to be repaid subsequently from appropriations by the parliament of Canada. These exceptions in section 24 should not be made, but section 33 should apply in respect to all payments.

Mr. HOWE: The difficulty there is an obvious one. If the Consolidated Revenue and Audit Act, 1931, is to apply, appropriations will have to be made by parliament for all the expenditures of the business, independent of the revenue. It is very difficult in the administration of these vast businesses to tell what the expenditures will be; it is much easier to tell what the difference between revenue and expenditure will be, because after all the expenditures are more or less in proportion to the revenues. This provision means that parliament will be called upon to appropriate only the difference between revenue and expenditure, if the difference is on the wrong side. If there is a credit balance no appropriation will be necessary. As a matter of business operation it will be much simpler to follow the plan we have, which is the method followed in ordinary business, except that the money while it is in the hands of the government is in the hands of—

Mr. BENNETT: The receiver general.

Mr. HOWE: Yes.

Mr. CAHAN: Well, there is no reason why the expenditures of these harbour boards, which for ordinary administrative expenses might amount to seven or eight million dollars a year—

Mr. HOWE: The income is about seven or eight million dollars; the expenses last year were about ten million.

Mr. CAHAN: Why should these expenditures not be subject to the 1931 act, the same as these expenditures of some forty or fifty or sixty million dollars which are to be made during the next year by the Department of Public Works? Why should the minister be authorized to expend moneys which are public moneys, received as public moneys, without their expenditure being subject to the same restrictions as every other expenditure of the several hundred million dollars a year made by the Department of Finance under the Minister of Finance?

Mr. HOWE: All these expenditures are subject to the same restrictions as regards audit and handling. The only difference is that these are trading accounts. There is no exception as far as the handling of the money goes; every dollar is handled under the supervision of the treasury and handled by the auditor general. My hon. friend knows that under the provisions he would make it would be necessary, for instance, to appropriate $2,000,000, or possibly more, for the harbour of Vancouver, when as a matter of fact the income from that harbour will be ample to take care of all expenditures. If we can operate it as a trading account no appropriation is necessary. You put a severe task upon the responsible minister if you require him to guess what the expenditure of a port will be. If the business is small the expenditures will be relatively small; if the business is

large the expenditure will be large. I think the hon. member would be making a great complication there, without any extra safeguard for the treasury, by the change he wishes to make.

Mr. CAHAN: I suggest it is not difficult. Take, for instance, the department of public printing which expends several millions of dollars every year. All those accounts pass the comptroller of the treasury; he has his officers in the bureau of public printing in order to pass them; they are all subject to the provisions of the statute of 1931, and no difficulty arises at all. And no special appropriation has to be made for the disbursements of that department, except for the deficiency.

The hon. gentleman is not correct in saying that paragraphs (a), (b), (c) and (d) refer to trading accounts. There may be certain trading accounts of a petty nature, but paragraph (a) is the entire expense of administration, management and control of the harbours, works and properties under the jurisdiction of the board. That is not a trading account in any proper sense of the term—

(b) the purchase of investments for a reserve fund hereinafter referred to.

—that is not a trading account if the term has the ordinary significance that it has in the operation of a mercantile or industrial corporation—

(c) the payment of capital expenditures.

—that is not a trading account in any usual significance of the term. Then there is the payment of interest on bonds, bonds which are really a liability of the government of Canada; that is not a trading account. There is no reason in the world why the payment of that interest and of the principal when it comes due should not be made by the finance minister of Canada in the ordinary administration of the Finance Act and of the Consolidated Revenue and Audit Act, 1931. I cannot see the reason for these special exceptions.

Mr. HOWE: I think I can explain that. These harbours are trading as corporations; they earn the money and take it in and they spend it, and if there is any deficit they borrow it from the dominion government and spend that. They are corporations just the same as any private corporation, with all the flexibility of any private corporation. If my hon. friend or the house insists on wrapping this up in red tape I will not administer it; I would prefer to take the thirty-five acts we have now and continue as we are, because this would make the bill absolutely unworkable, without one additional safeguard to the dominion government. The comptroller of the treasury controls every dollar of the money that is taken in and spent; the auditor general audits every account and transaction involved in the harbour work in any way, shape or manner. But my hon. friend is saying that every dollar that these boards earn must go into the treasury of the country and quite independently of that parliament must vote every dollar—

Mr. CAHAN: No.

Mr. HOWE: Well, that is what he says.

Mr. CAHAN: No, I did not say that; the hon. gentleman does not understand the usual administration of a department of the government if he insists on that.

Some hon. MEMBERS: Order.

Mr. CAHAN: Well, I insist that is so. There is no reflection upon the honour of the hon. gentleman when I make that statement; I simply deal with his inexperience. The hon. gentleman says that if we insist upon proper safeguards with regard to these expenditures he will resign from the government.

Some hon. MEMBERS: No, no.

Mr. CAHAN: He states that he will not administer the act if it is placed under his direction.

Mr. DUNNING: He said that he would rather go back to the thirty-five acts he now has.

Mr. CAHAN: This is a government bill. I do not think we can be intimidated by the suggestion made by the hon. gentleman.

Mr. BENNETT: The loss might be overcome.

Mr. CAHAN: Quite so, even from among his colleagues. I have no doubt they are qualified in personnel to supply any disadvantage which would be caused in those circumstances. But I do insist that where he is purchasing for investment, where he is paying out for capital expenditures and where he is paying out for the interest on the principal of debentures which have been issued by the previous corporation, and assumed, as they must be, by the new board, there is no reason in the world why such appropriations and expenditures thereunder should not be made under the terms of the 1931 act.

Mr. DUNNING: The matter is not quite as serious as my hon. friend would represent it. After all, the intention is to follow, in

general principle, the manner in which parliament now deals with the Canadian National Railways and the Canadian National Steamships, rather than having them operate directly as a government department with all the restrictions upon income and outgo which would be necessary if that were the case. As my hon. friend knows, in connection with the Canadian National Railways a budget of expenses and income is submitted to the house, and the estimates voted by parliament are really the amounts of differences between the income and the outgo of the company.

Mr. BENNETT: Plus capital expenditure.

Mr. DUNNING: Yes; as my right hon. friend points out, plus capital expenditure. The same principle is applied in connection with the Canadian National Steamships. I have not any other instances in mind at present, but it is thought that inasmuch as the major part of the expenditures of this new body, as in the case of the railways and steamships, will come from the revenues of that body, amounts paid in for services performed, it will be much easier to operate if it is organized on substantially the same basis as the Canadian National Railways.

I think every hon. member could see the almost impossible complication which would ensue if every item of expenditure of the Canadian National Railways had to be voted as an appropriation of parliament. Instead of that, for years we have proceeded by the more practicable method of having a budget submitted which contains the differences between income and outgo plus, as my right hon. friend suggests, the necessary capital expenditures. After having made a thorough examination of the budget and the proposals of the institution, parliament votes those differences. In subsequent sections of the bill there is provision for submission of a budget, and for dealing with the matter substantially in the manner in which we now deal with the Canadian National Railways.

Upon reflection I feel sure my hon. friend would not desire to have detailed accounts such as would be involved in connection with revenues from charges of all kinds, if the matter were treated as a government department. I believe that would involve an unnecessary amount of what the minister correctly described as red tape, in connection with the operation of an ordinary business.

Mr. CAHAN: All I can say as to that—

Some hon. MEMBERS: Carried.

Mr. CAHAN: It is not carried, and it will not be carried by making interjections of that kind. Other departments proceed under the audit act of 1931, and pay out large sums of money. I think in some years there were paid out several millions in connection with one department. It was paid out of the receipts and parliament voted simply the surplus. But every one of those expenditures came under the audit act and was audited by officers under the comptroller of the treasury.

Mr. BENNETT: No vote was required for details.

Mr. CAHAN: No, no vote was required for details.

Mr. DUNNING: So does this provide, in just the same manner.

Mr. BENNETT: I do not think so.

Mr. CAHAN: I have taken a cursory view of the audit act of 1931, and I wish to say that the capital expenditures of the Canadian National Railways used to be voted here, first being authorized by the governor in council, then submitted with the authority of his excellency to this house and voted upon. But this bill enables large capital expenditures, in fact all capital expenditures by this board which may amount to millions of dollars—and appropriations of many millions of dollars as time goes on—to be expended without being subject to the audit act of 1931. I have said all I wish to say, but I do not think section 24 should pass.

Mr. BENNETT: I think the Minister of Finance misunderstood the observations of the hon. member for St. Lawrence-St. George. All he said was that the administration should be under that act. He does not for a moment suggest that there should be details of all these expenditures, but merely suggests that that, shall I say, safeguard provided by the act should continue with respect to the withdrawal of money. That is all he has suggested. Nobody has suggested for one moment, least of all the hon. member for St. Lawrence-St. George, that we should deal with all these items any more than we should deal with the items for the Canadian National Railways.

My difficulty is with the last two paragraphs, one of which deals with capital account. Obviously that capital account will come out of appropriations made by parliament and subsequently provided for in this bill. Surely capital expenditures would be subject to the same safeguards as surround any other appropriations made for capital expenditure in the same way. And that enables me to ask this question: Is it intended that the Jacques Cartier bridge shall become part of the Mont-

real harbour, and that, therefore, the harbour revenues shall continue to be liable for five per cent of $19,000,000, less such sum as may be contributed by the province of Quebec and the city of Montreal, or is it proposed to segregate the bridge from the harbour, and not impose that very unfair burden upon the harbour itself?

Mr. HOWE: It is proposed to operate it as it is now—

Mr. BENNETT: As part of the harbour?

Mr. HOWE: No; the accounts are kept separately.

Mr. BENNETT: Yes, but it is the cause of creating a deficit in that harbour.

Mr. HOWE: The harbour runs on a deficit, independently of that.

Mr. BENNETT: It did for some years.

Mr. HOWE: But it is the intention to operate the bridge as a separate work or separate utility.

Mr. CAHAN: But it will be operated by the national harbours board?

Mr. HOWE: Yes.

Mr. CAHAN: And it will continue to be?

Mr. HOWE: Yes.

Mr. BENNETT: Because that last paragraph becomes important. There is an item of five per cent of $19,000,000, less the sums paid by the city of Montreal and the province of Quebec. Every year we have had to place in our estimates in the House of Commons a sum to meet the deficit. I do not know what the accumulated deficit is at this time, but it will be recalled that the supplementary estimates for the fiscal year ending March 31 usually carry an item to deal with that particular deficit. Since I first became familiar with the account I have always felt that it is a bit unfair to the harbour of Montreal to charge the deficit on that bridge against the revenues of the harbour. The minister is perhaps familiar with the situation. The parliament of Canada gave a guarantee without any limitation as to cost, the cost being ultimately about $19,000,000. Bonds were sold in two lots, the last sale being made in 1930. As a matter of fact it was between the date of dissolution and the election. Interest has never been earned, and as a consequence of the erection of the Caughnawaga bridge tolls were reduced. Tolls thus being reduced the real effect is that the deficit is very very heavy, nearly the whole amount. It is a mistake to make that charge against the Montreal harbour. Does not the minister think this might be the appropriate moment to segregate the bridge entirely from the operation of the harbour? Otherwise it is a little unfair to the harbour.

Mr. HOWE: I quite agree that the bridge should not be a toll on shipping in Montreal harbour. We intend to make it stand on its own feet, and I think that is how it has been treated for two or three years past. I think the appropriation for the bridge has been separate. In any event it will be.

Mr. BENNETT: All the fees taken in by the harbour board are available to pay interest on the bridge. If no funds are available, the house has to find the whole of the interest because of the guarantee that has been given. In view of the importance of Montreal harbour to the whole of Canada, especially western Canada, it is unfair that shipping in the harbour should have to bear any part of that burden of the bridge because obviously it is reflected in tolls.

Mr. DUNNING: My hon. friend will agree that it has never been made a burden on shipping. The accounts have always been kept completely separate and provision for the deficit on the bridge, after taking into account the contribution of the province of Quebec, has been made in succeeding years by appropriations of this house, as my right hon. friend knows. So there is no change in that regard. In the setting of the tolls it would be unfair to depart from what has been the recognized practice of treating that deficit as something entirely separate from the ordinary operating charges which an effort should be made to meet by tolls levied for the purpose.

With respect to the other point, about which the leader of the opposition will understand I have some concern, I have examined the proposal made in section 24, and it must be considered, of course, in its relationship to succeeding sections. Section 26 provides for an annual budget, which, I take it, will be similar in its general character to the annual budget submitted on behalf of the Canadian National Railways inasmuch as it must contain provision for interest on outstanding debentures and other indebtedness, capital expenditure, and retirements. That is with respect to the board's whole operations. But provision is later made for the budget to contain a separation as between port and port. It is not intended to lump the whole or anything of that sort. It seems to me perfectly clear that such a budget would bring before parliament full information with respect to the whole matter and would, therefore, render easy the treating of it as a

matter of trade. Then, turning to section 34, I find that all revenues of and all expenditures by the board shall be subject to the audit of the auditor general in the same manner as public revenues and expenditures. The only exception, of course, to section 33 is the provision for the use of revenues by the board to meet expenditures. The provisions of the Consolidated Revenue and Audit Act call for all revenues to be deposited in the consolidated fund, in which event they can be got out only by appropriation of parliament. That, I take it, is the only exception provided for in section 34, and it is a necessary exception in connection with an organization of this kind, most of the expenditures of which will be met naturally out of its own revenues.

Mr. BENNETT: Before the section carries the word "trust" in line 20 should be changed to "special."

Mr. DUNNING: I move, Mr. Chairman, that the word "special" be substituted for the word "trust" in line 20.

Amendment agreed to.

Section as amended agreed to.

On section 25—Allocation of portion of revenues to reserve fund for replacement of fixed assets, etcetera.

Mr. BENNETT: The same change should be made in this section in line 37.

Mr. DUNNING: I move, Mr. Chairman, that the word "special" be substituted for the word "trust" in line 37.

Amendment agreed to.

Mr. ISNOR: I would ask the minister to enlarge upon the principle of this section. I do not wish him to detail just how he is going to charge up the various amounts spent by different harbours, but is it his purpose to set up a separate account for each one of these seven harbours and debit the expenditure in connection with each port? How is he going to arrive at the amount to be debited or credited? There has been a large amount of spending from time to time in connection with these seven ports. Is it the intention to charge up to each port the amount expended and credit each port with its earnings?

Mr. HOWE: The intention of this section is that the earnings shall be allocated as shown; that operating expenses shall be the first charge on revenues, and then it is felt that the next charge should be for a reserve fund to replace assets. For example, if the bonds of a port are carried as a live asset by the dominion government, they should be protected by a fund that might be called a depreciation fund, although here it is called a fund for the replacement of fixed assets. It is the opinion that in a port such as Montreal or Halifax with proper operation such a reserve fund might accumulate as would take care of any replacements required. We hope so, for replacements are quite an item. After operating expenses we believe that interest should be the next charge on the revenues, and we hope that a fund will accumulate fast enough so that appropriations by parliament for capital expenditures will be limited to very special occasions. So far as Halifax is concerned, I believe that the interest charges are carried only in part. I cannot say definitely what will be done as to interest charges there until the board has examined the situation and determined what would be a fair interest burden for that port.

Mr. ISNOR: May I carry that just a little further? I think the basis of the whole thing should be, not so much the expenditures made, but a revaluation of the properties as they exist to-day. I would ask if a revaluation is going to be made of the various developments that have been made, or is it simply intended to charge against the ports the total amount expended?

Mr. HOWE: I do not think the port of Halifax will be unfairly treated. I believe that the amount of thirteen or fourteen million dollars expended directly by the government through the Canadian National Railways was never set up as an expense. As a matter of fact I think considerable of the other work has not been set up as an interest bearing charge, but I doubt whether it would be possible to say offhand just what will be done in any of these harbours until a thorough examination can be made by the board.

Mr. ISNOR: I do not know whether there are other ports conducted in the same way, but there is a question in my mind as to whether there is power to charge up certain developments or expenditures which have been made more or less in a private way and which have since been taken over by the harbour commission. I have in mind the cold storage plant at Halifax. The question in my mind is whether that, when taken over at a later date by the former administration of the harbour, should be chargeable at the original amount expended in connection with it by the private concern.

Mr. DUNNING: Section 31 will probably clarify the consideration of such a matter in future years. In that section provision is made for keeping separate accounts for each harbour and for each work or property trans-

ferred to it for administration, management and control, and the revenues derived therefrom shall be assigned exclusively for the purpose of such harbour work or property. I assume that that does not enable us at the present time to deal effectively with the questions raised by the hon. member for Halifax (Mr. Isnor), but it provides the machinery whereby in future years this house may be able to determine matters of policy much more intelligently. Of course they must relate themselves to the progress of the port as well as to the relative responsibility of the former harbour commissions in connection with past acquisitions of property. I admit at once that there is much in the contention of my hon. friend, but I also submit that we have not sufficient material before us nor have we gained the experience in operating these organizations to permit us at this time to make any separation or adjustment. But the set-up which is now being created will at least provide the groundwork upon which the question can be examined with more chance of solution in the future than would be possible at the present time.

Mr. ISNOR: I think the Minister of Finance will appreciate the fact that this is dealing with something entirely different.

Mr. DUNNING: Quite.

Mr. ISNOR: It is dealing with separate accounts to be operated by each port, as recommended in the Gibb report. Justly and rightly we should have such accounts, but this deals only with the administration, management and control of the revenues derived from each port and states that they shall be assigned exclusively for the purposes of such port. The basic factor entering into section 25 is in connection with the valuation to be set up in the first place and to be chargeable to each port. What I wanted to know was whether the properties and developments of the various ports are going to be revalued or to be taken in at the figure used in the past in connection with the particular development.

Mr. BENNETT: I think the hon. gentleman is probably not wholly familiar with the circumstances to which he refers. Under the bill as it now stands, Halifax harbour would be chargeable with just such sums for interest as it is now chargeable with, no more, no less, although it might become less in the course of time. Under this bill it will be charged with that. The cold storage plant was built under a former Liberal administration. It was subsidized and bonds were issued against it bearing a rather high interest rate. The plant was located in practically the middle of the harbour improvements, and successive boards requested that it be placed under their control as it interfered with their business. The late government took the view that it could not afford to pay the price suggested or the rate of interest. The rate of interest was finally fixed at three per cent, and that is the sum chargeable under this provision against the revenues of the port under the arrangements by which the harbour commissioners acquired these cold storage facilities. I confess that I never was able to understand why the then government gave the piece of land in question for the construction of this cold storage plant by a private enterprise in practically the middle of the facilities of the port, but I explained it to my own satisfaction by assuming that they had not contemplated the developments that were subsequently made in that harbour. As the matter stands now, the rate of interest is reduced to three per cent, and the price is much less than that which the government of that day accepted as the cost of the plant.

Mr. ISNOR: I brought that up just as an example. I do not know as much of the financial details of the operations of the cold storage plant as does the leader of the opposition. No doubt he is familiar with the details of the reorganization and the taking over. I do not think the giving of the piece of land was half as important as was the action of the government in taking over the whole scheme after it had been developed and brought into being by a private company.

Mr. KINLEY: After it became a white elephant.

Mr. BENNETT: It did not; it paid its interest. This section provides that the budget shall be submitted by the minister to the governor in council for approval. I think one hon. gentleman will agree that this should be "for consideration and approval." It was contended by one eminent counsel that the wording as it appears in the section would leave the governor in council no option but to approve the budget. I think that is within the memory of some hon. members of the committee.

Mr. POWER: It seems to me that this is the very term used in the Canadian National-Canadian Pacific Act.

Mr. BENNETT: Some question was raised as to the sufficiency of the words and I believe some were added. That was done in the case of one bill, but I do not recall exactly what one it was. I do not know whether it would be necessary to make an amendment.

Mr. HOWE: We have no objection.

Mr. BENNETT: I do not know; I am just asking if it is necessary.

Mr. CAHAN: Is the amendment to be made?

Mr. DUNNING: I do not see how that would improve it.

Mr. BENNETT: That was the argument that took place in the house.

Mr. DUNNING: Would it help to say "approval in whole or in part"?

Mr. BENNETT: "Approval or disapproval in whole or in part" would make it really complete.

Mr. POWER: Perhaps we could leave out the words "for approval," and simply say that such a budget shall be submitted by the minister to the governor in council.

Mr. BENNETT: That will probably cover it, because any appropriation that is to be made must be included in the estimates.

Mr. HOWE: Strike out the words "for approval."

Mr. CAHAN: Should not the budget be laid upon the table of the house? Why not provide that "Such budget shall be submitted by the minister to the governor in council for approval and when approved shall be laid upon the table of the house when parliament is in session." Parliament should be informed of that budget.

Mr. DUNNING: As in the case of the Canadian National Railways, I am quite sure that the house would not be content to vote any moneys without having the budget before it. I was looking to see whether section 32 had any bearing upon the matter, but it would have only by way of the annual report.

Mr. CAHAN: Which does not necessarily include a financial report.

Mr. DUNNING: Would the auditor general's report contain it?

Mr. BENNETT: No, his report does not contain it.

Mr. DUNNING: I think we may take it that parliament would demand production of the budget.

Section as amended agreed to.

On section 27—Deficiency in revenues from each harbour, work or property to be included in separate items in estimates.

Mr. ELLIOTT (Middlesex): I move that the word "special" be substituted for the word "trust" in lines 9 and 15.

Amendment agreed to.

Section as amended agreed to.

On section 28—Advances for working capital.

Mr. ISNOR: Does this mean the expenditure in connection with a particular port or is it intended to transfer the amount to other ports?

Mr. DUNNING: It is for the board as a whole.

Mr. HOWE: It is a floating amount. The difficulty is that certain harbours have expenses before they have income and we simply have a leeway of $1,000,000 in the estimates at all times for a revolving fund for working capital. We cannot expend in the year more than $1,000,000 for all seven ports.

Mr. BENNETT: It is the same as the printing bureau's advances. I think the word "bonds" had better be placed before the word "debentures" at the top of the page, "for interest on outstanding bonds, debentures and other indebtedness." The words are not synonymous and it might be well to insert the word "bonds."

Mr. DUNNING: I think that would be an improvement.

Mr. ELLIOTT (Middlesex): I move that the word "bonds" be inserted before the word "debentures" in the second line on page 12.

Amendment agreed to.

Section as amended agreed to.

Section 29 agreed to.

On section 30—Governor in council may authorize cancellation of certain debentures and interest.

Mr. BENNETT: I think the word "bonds" ought to be added here also.

Mr. DUNNING: The word is unnecessary in this section. It is indebtedness to the government of Canada.

Mr. BENNETT: Assumed at the date—

Mr. DUNNING: Assumed by the board.

Mr. BENNETT: Assumed by the board at the date this measure comes into force. This new board will assume certain obligations on the day it comes into existence. Some of these obligations arose out of bonds for which the government was guarantor. Every harbour board issued bonds, but they carried with them, under the harbour commission act, the guarantee of the dominion. Some were sold to the public, at Three Rivers for instance, and interest is paid. The reason why the word "bonds" should be put in there is to cover

that very situation. If it were limited to debentures the minister would be right in saying that it represents indebtedness due the government.

Mr. HOWE: This refers only to reduction of indebtedness to the government. There are no bonds involved.

Section agreed to.

On section 31—Separate accounts for each harbour, work or property.

Mr. BENNETT: I do not wish to quarrel about so small a matter, but the bonds of the harbour of Montreal are bonds sold to the public and not debentures, and the guarantee is on bonds and not on debentures. The governor in council here authorizes the cancellation of debentures assumed by the board. However, it seems to be a small matter to waste time about.

Section agreed to.

Sections 31 to 34 inclusive agreed to.

On section 35—Accounting officers, etcetera.

Mr. BENNETT: What does this really mean?

Mr. HOWE: It is the ordinary provision that the comptroller of the treasury shall assume charge of the accounting of each of the harbours and that the accounting staff at each harbour shall be attached to the office of the comptroller.

Section agreed to.

On section 36—Expenses of the board.

Mr. CAHAN: "Trust" should be changed to "special."

Mr. ELLIOTT: I move that the word "trust" in line 27 be struck out and the word "special" be substituted therefor.

Amendment agreed to.

Section as amended agreed to.

On section 37—Amalgamation.

Mr. HOWE: I move that the section stand.

Section stands.

On section 38—Proceedings relative to construction of works in navigable waters under jurisdiction of board.

Mr. BENNETT: Is it desirable that all applications regardless of whether they affect harbours or not should be thus transferred, or should this be limited entirely to those that affect the harbour? I have in mind two such applications, one for a telephone line and the other for a cable passing under navigable waters, but having nothing to do with harbours. Why we should place in the hands of this board jurisdiction with respect to such matters outside the harbours, I know not, because the public works department has all the records and has administered that branch of the service since it came into being and very frequently deals with matters of routine. The minister reports to the governor in council and, under the Navigable Waters Protection Act, approves a cable for a telephone or telegraph wire, and matters of that kind. This board has not the machinery to deal with this in the same sense as the public works department has.

Mr. HOWE: This is the joint report of the public works department and the harbour board. The only purpose of the section is to give the harbour board some knowledge of applications within its own harbour. The point came up in connection with the bridge over the First Narrows in Vancouver. A bridge was built over the entrance to the harbour, and that was a case where the harbour board should have been consulted and as a matter of fact was properly consulted with respect to the dimensions of the bridge. It is an additional safeguard, though I do not know that it has any great significance. It is no great hardship as far as I know.

Mr. BENNETT: The hon. gentleman has not quite caught my point. These words "in any navigable water under the jurisdiction of the board" should be limited, I suggest, not "in respect to any work as defined in the said act in any navigable water under the jurisdiction of the board," but, "in respect to any work in any harbour under the jurisdiction of the board, the application shall be made." Leave it just as it is with respect to anything other than the harbour. I quite agree with the minister that the harbour board should be consulted and should be the proper authority to give the necessary information, but with respect to other simple matters like a telephone line or a telegraph cable the matter should be left as it now is, in the public works department.

Mr. HOWE: I may be a little dense here, but I cannot think of any water under the jurisdiction of the board that is not part of the harbour.

Mr. BENNETT: There are waters that have to be crossed by telephone wires and various kinds of cables that are not under the jurisdiction of any harbour.

Mr. HOWE: In that case they would not be affected.

Mr. BENNETT: I am afraid that, as the section reads, they might be. That is my whole point. If the hon. minister will look at the section, it states:

> Notwithstanding anything to the contrary in the Navigable Waters Protection Act, chapter 140 of the Revised Statutes of Canada, 1927, in respect to any work as defined in the said act in any navigable water under the jurisdiction of the board, the application shall be made to and the plans and descriptions deposited with the Minister of Transport....

If that is sufficient to make it clear that this does not extend beyond the harbour, I am quite content, but I think it should not go beyond the harbour.

Mr. HOWE: I think that is clear. It refers, of course, to the harbour board, and the extent of the harbours is defined in this particular act.

Section agreed to.

On section 39—Acts repealed.

Mr. ELLIOTT (Middlesex): I move:

> That section 39 be amended by striking out the word "the" following the word "in" in the first line of the said section, by inserting after the word "schedule" in the same line the letter "A" between quotation marks, and by inserting after the word "act" in the same line the words "except sections fifteen, sixteen and seventeen of the Saint John Harbour Commissioners Act, 1927."

Mr. CAHAN: Would the minister explain? I have not had time to look up the act of 1927 with reference to Saint John harbour. What are those sections which are excepted?

Mr. HOWE: Certain rights were reserved when lands formerly owned by the city were required by the harbour commission, the right to fish in certain harbour lots, the right of access to the ferry.

Mr. BENNETT: And paying of obligations that have been incurred prior to a certain date. What is the Quebec act? I have not had time to look that up.

Mr. HOWE: It is an old act. I am told that the act is obsolete and therefore does not need to be repealed.

Amendment agreed to.

Section as amended agreed to.

On section 40—Date of coming into force of act.

Mr. CAHAN: I think the hon. gentleman will find it more convenient to word section 40 in this form:

> This act in whole or in part shall come into force on a date or dates to be fixed by proclamation.

He may find it very important to bring certain sections of the act into force on one day and certain other sections into force a week or ten days later. I can conceive of that.

Mr. BENNETT: We learned that by experience. It enables you to proclaim one section, and organize your port, and then proclaim another section. That can stand, because there are two or three sections standing. We could deal with it when the bill comes up again.

Mr. HOWE: Could section 40 be allowed to stand? We can consider that further.

Section stands.

M. CAHAN: Does the minister intend to report progress on this bill now?

Mr. HOWE: Can we pass the schedules?

Mr. CAHAN: There is no objection to the schedules, I think.

On schedule A—Acts repealed.

Mr. ELLIOTT (Middlesex): I move with regard to schedule A, that on page 15 of the bill the schedule be amended by inserting after the word "schedule" at the top thereof the letter "A" between quotation marks, by striking out the words "to be" in the second line of the schedule, by striking out the words "year and chapter" and "acts of the dominion parliament" and substituting in lieu thereof the words "title of act," and by adding after the words "an act relating to the harbour of Saint John in the province of New Brunswick" the following "except sections 15, 16 and 17 thereof," as in the reprinted bill.

Amendment agreed to.

Mr. BENNETT: I will point out that on page 17 is printed "year and chapter" and "acts of the dominion parliament," which are not similar to the subhead in the main schedule, which is "title of act." They should be made uniform. That is all.

Mr. HOWE: Yes. That is a printer's error at the top. It should be stricken out.

Schedule as amended agreed to.

On schedule B—Boundaries of harbours.

Mr. ELLIOTT (Middlesex): I move that schedule "B" as in the reprinted bill be added after schedule A.

Mr. CAHAN: Whether you pass schedule B to-night is not important, but for the purposes of reference hereafter I suggest that when you are dealing with the harbour of Halifax and re-enact the section of the old act defining the harbour, you should put in this act a reference to that former act so that it

can easily be looked up in years to come. So with the harbour of Saint John, and others. This would help very much in future in case of questions arising as to the source of these various descriptions.

Mr. HOWE: I may be wrong, but if we pass this, is not this the law that governs a harbour boundary?

Mr. CAHAN: Quite so, but all I am suggesting to the minister is this: In the courts of Montreal we have various decisions which refer to the statutory definition of the harbour as contained in an old act prior to confederation which is still in force, never having been repealed, and also as defined in 57-58 Victoria, chapter 48. All I am saying is that if we should ever again have any litigation with regard to the area of the harbour it would be helpful if at the foot of each of these descriptions a reference were made to the anterior statutory declaration, the same as in revising a statute we always add a reference to the original statute from which the section is taken.

Mr. HOWE: If this schedule B can be allowed to stand, I will ask our law officers to look into that matter.

Mr. TAYLOR (Nanaimo): I should like to draw the attention of the minister to the description of Vancouver harbour on the last page of the bill as reprinted. In the second line it says, "with the north arm and Port Moody." The province of British Columbia in purging the nomenclature has called the north arm the Indian arm for many years, and I believe that term appears in the official gazetteer for British Columbia. So it might be well to give it its present name of Indian arm.

Mr. HOWE: We took this wording directly from the present harbour act; I doubt whether it would be safe to change the name.

Mr. BENNETT: "Now known as Indian arm" would be all right.

Mr. TAYLOR (Nanaimo): All I am saying is that they are attempting to fix the new name, and every step in that direction will, of course, help the province.

Mr. HOWE: My right hon. friend opposite has suggested that we could add "now known as Indian arm." I will ask that that be looked into by our officers.

Mr. MACKENZIE (Vancouver): No, I must take exception to that. It is known as the north arm by every one that sails the seas.

[Mr. Cahan.]

Mr. TAYLOR (Nanaimo): That is the unfortunate part, and I very much regret that a minister of the crown should make a statement of that kind.

Mr. GREEN: Speaking of the north arm, might I ask the minister what the intention is with regard to the north arm of the Fraser river? I notice it is not included in the port of Vancouver.

Mr. HOWE: There are certain harbours in Canada which are known as national harbours, in which there is a very large investment by the dominion government, and there are other harbours also partly under the control of the dominion government where the investment is largely municipal, and where the municipality has representation in the control. New Westminster harbour is in the latter class; the municipal authorities have always had one representative on the harbour commission, and there is quite a municipal investment in the port. We have decided for the moment that they will not be included with the national harbours.

Mr. GREEN: I am referring to the North Fraser river, the north arm, not the main river.

Mr. HOWE: That again is administered by a local board; there is no dominion government investment in it whatever, and we decided not to include that for the moment. It may be taken in later perhaps.

Progress reported.

## INDIAN ACT AMENDMENT

The house resumed from Friday, March 20, consideration in committee of Bill No. 4, to amend the Indian Act—Mr. Crerar—Mr. Johnston (Lake Centre) in the chair.

On section 13—Celebrating festivities, dances or ceremonies at which presents are made, or bodies mutilated.

Hon. T. A. CRERAR (Superintendent General of Indian Affairs): When this bill was in committee before, on March 20, the sections were all passed with the exception of section 13. That is a section which imposes some additional penalties to discourage the celebration of the potlatch among the Indians on the Pacific coast. Some exception was taken at that time to the nature of the amendments, to the effect that the act as it stands already provides sufficient safeguards and penalties. Since the matter was before the committee last I have looked further into the

question of the proposed amendments to this section and with the consent of the committee I propose that these amendments be dropped and the section remain as it now stands in the act.

Mr. NEILL: I wish to congratulate the minister on his decision. It is a tribute to the thoroughness with which he looks after his department that he took the trouble to investigate this relatively trivial matter, trivial at least in regard to bigger things, and having made his decision, brings it down in the way he has. I am certain that neither he nor those who seek the best interests of the Indians will regret his decision. As he said, it is not as though there were not very stringent provisions in the act at the present time against potlatching. There are, I think, sixteen penalties provided in the Indian Act. Some of them deal with very serious offences, such as bootlegging or running a disorderly house on an Indian reserve, and in none of these matters is there any penalty which does not have the alternative of a fine in the first instance except this one thing of having a potlatch. In that case there is no alternative of a fine, but two months in gaol is the minimum, with a maximum of six months. To us, perhaps, that does not sound so very much, but to an Indian who lives in the open air two months in gaol is as much as six months would be to us; it is a very severe penalty. And as I say we are not doing away with the existing provisions which will still carry that minimum of two months provided the Indians indulge in the holding of a potlatch. We are only seeking, and the minister has agreed, not to go further and penalize them with this heavy penalty when they are only apparently contemplating such an attitude, which is a thing that is antagonistic to our sense of fair play, and would not be tolerated for a moment if applied to white people.

Since the matter was up before I have been in some communication with the chiefs of the Indians in the district concerned, and they have also sent me a letter signed by an archbishop—an archbishop ranks pretty high out in the west—and he expresses his sympathy with their attitude. He says that he was at one of these meetings, and they began by singing God Save the King. He seemed to have had a pleasant evening and enjoyed his experience. I have also before me a letter from the Indians, and I want to read one sentence from it, which epitomizes the whole sentiment in that regard. The chiefs, seven of them, end their letter thus:

> Please bear in mind that we are Indians and you are white people.

That is the difference between our point of view and theirs. Let us in this matter bear in mind that they are Indians and we are white people, and do not let us try to rush them into our point of view and habits too hurriedly. I have some evidence that the Indians are keenly interested in what is being done. They have asked me to express to the minister their appreciation if he will withdraw this section, and state that they will use their influence to minimize to the fullest extent any of the bad features which may still exist in connection with potlatches. All they wish to do is to maintain the harmless elements of it, in accordance with a custom that originates in antiquity as far back as they can remember. They would be greatly hurt if they had to give it up. I can only add that I am sure the government or those who have charge of Indian affairs will not regret this action.

Mr. DUNNING: I move that in order to give effect to what the minister indicated, section 13 be stricken out.

Motion agreed to and section dropped.

Bill reported, read the third time and passed.

## CITY OF OTTAWA AGREEMENT

Hon. P. J. A. CARDIN (Minister of Public Works) moved that the house go into committee to consider the following proposed resolution:

> That it is expedient to authorize the Minister of Public Works, on behalf of His Majesty, to enter into an agreement with the corporation of the city of Ottawa to extend the period of the existing agreement with the corporation for one year from 1st July, 1935.

Mr. BENNETT: What is it all about?

Mr. CARDIN: In the year 1920 an agreement was made between the then Minister of Public Works and the city of Ottawa by which the dominion government was to pay to the city of Ottawa the sum of $75,000 to compensate for all claims of the city in connection with the sprinkling of certain streets, which was to be undertaken by the federal government, and also for fire protection. After a long discussion between representatives of the city and the Minister of Public Works it was agreed that the federal government should pay the sum of $75,000 in settlement of all claims that the city might have against it. The agreement was renewed each year, and in 1925 the amount of $75,000 was increased to $100,000. Since that time the agreement has been renewed every

year. The object of the bill to be introduced is to authorize the Minister of Public Works to extend the agreement for another year.

Motion agreed to and the house went into committee, Mr. Young in the chair.

Mr. HEAPS: Would the minister inform the committee on what basis the $100,000 was arrived at as a fair and equitable amount?

Mr. CARDIN: I cannot give the hon. member exact details as to the claim put in by the city. If I remember correctly, the amount claimed by the city in respect of various items amounted to about $200,000, and it was as a result of a compromise between the Minister of Public Works and the city that the amount was reduced to the sum of $75,000. As a result of that agreement the city of Ottawa agreed to abandon all claims it had made up to that time.

Mr. HEAPS: I understood the minister to say that the amount of $100,000 was for all claims.

Mr. CARDIN: No; in the first instance it was $75,000.

Mr. HEAPS: The amount of $75,000 for all claims against the government. Now I understand it is an annual claim.

Mr. ELLIOTT (Middlesex): It has always been an annual claim.

Mr. HEAPS: Is this $100,000 for fire protection and other services rendered to the federal buildings in Ottawa?

Mr. CARDIN: Yes

Mr. HEAPS: I should like to have some idea as to how the figure is arrived at. It may be too high or it may be too low. I think there ought to be some explanation as to how the amount is made up. Perhaps the minister would be able to inform the committee as to the value of buildings owned by the government in Ottawa, and with that information we might have some idea as to what the service is worth, on the ordinary assessed value.

Mr. CARDIN: I confess that I cannot give in detail what the hon. member is asking. I am not ready to admit that the claim made by the city of Ottawa at the time of the agreement was entirely justified. Numerous items were mentioned by the city, and the amount was strongly objected to by the then minister. It was as a result of a mutual understanding that the agreement was reached, and there is no real or definite basis upon which the amount of $75,000 has been agreed upon. It was a matter of agreement.

[Mr. Cardin.]

Mr. BENNETT: The hon. member wants to know what we get for our money.

Mr. CARDIN: We get fire protection for all our buildings, and it is compensation, too, for the water used for sprinkling certain streets, for which the federal government is responsible. At the same time there is something to take the place of the taxes the federal government is not paying on properties in Ottawa.

Mr. HEAPS: I believe the federal government gets the same concessions in all municipalities; they do not pay taxes on federal properties. I do not think other municipalities are receiving the same treatment as is the city of Ottawa, and if the government is paying to Ottawa something in lieu of taxes, may I say that other cities in Canada might come to the government expecting the same treatment. It is quite true that in 1920 the government may have made an agreement for $75,000. The minister claims that he does not know whether the sum was equitable or otherwise. At any rate it appears that in 1925 another government of which the minister may have been a member increased the grant to $100,000. If the amount was not equitable in 1920 I cannot understand why it was increased by $25,000 or 33⅓ per cent just a few years later. I am not going to press the point just now, but when the bill is in committee I would ask the minister to give the details which we ought to have on a measure of this kind.

Resolution reported, read the second time and concurred in. Mr. Cardin thereupon moved for leave to introduce Bill No. 54, to authorize an agreement between His Majesty the King and the corporation of the city of Ottawa.

Motion agreed to, bill read the first and second time, and the house went into committee thereon, Mr. Young in the chair.

On section 1—Agreement extended.

Mr. HEAPS: Mr. Chairman, I have requested certain information. I do not know whether the minister is in a position to give it now, but I must insist upon having it before agreeing to any of the clauses of this bill.

Mr. CARDIN: I do not know if what I have presently before me will satisfy my hon. friend, but a few months before the agreement was made, in a statement issued by Mr. Harold Fisher, the then mayor of Ottawa, with a view to revision of the agreement expiring on the last day of June, 1919, Mr. Fisher advanced the principle that the

government should subject itself to the ordinary assessments in the same way as a private individual and he compiled a government tax bill, amounting to $886,453.60 made up of the following items—I will give round figures only:

| | |
|---|---|
| Water rates | $ 77,000 |
| Street sprinkling | 2,000 |
| Taxes payable on the income of civil servants (taxable income $2,500,000 after allowing for exemptions) | 57,000 |
| Property tax | 483,000 |
| Business tax— | |
| Government owned property | 226,000 |
| Property leased by dominion government | 46,000 |
| Local improvements assessed against government property or property of Ottawa Improvement Commission not paid by the dominion government | 3,000 |

Mr. BENNETT: What was the date of the agreement?

Mr. CARDIN: The agreement was dated March 13, 1920, and these were the items which were the basis of the claim of the city of Ottawa against the federal government. Claims have been pressed on many occasions by the city and were resisted by the federal government for a long time, but in the end it was decided that it would be advantageous for both parties if an agreement were reached, and after long discussions it was agreed in 1920 that the sum of $75,000 should be paid every year to the city of Ottawa to compensate it for its fire protection of all the public buildings in Ottawa, for street sprinkling, and in lieu of the taxes that would ordinarily be assessed on private property.

My hon. friend from Winnipeg North (Mr. Heaps) said that if we applied this principle in the city of Ottawa we should apply it elsewhere, but Ottawa is in a different position from any other city where we have only one or two public buildings, and all governments in the past have felt that they should be a little more generous to the capital which we are all interested in developing and beautifying so that it will be an attraction to visitors to our country. I admit that a certain amount of sentiment may have entered into the decision which was reached by the government in 1920, but I believe that the contribution we are making to the city of Ottawa is justified. It has been continued by all governments since 1920, and the bill presently before the committee provides for an extension of the agreement for one year, which otherwise would lapse on the first of July next.

Mr. HEAPS: The principle has been established and has been in effect now for sixteen years, and I do not think it is likely that we will go back on it. I do not think that parliament has dealt ungenerously with the city of Ottawa. I think as a rule it has dealt with it pretty fairly. I myself would not like to deal unfairly with the city of Ottawa, but I remember that only a few years ago when parliament appropriated money for a confederation park, running into many millions of dollars, the people of Ottawa did not seem to appreciate the gift which parliament was making to the city, and after the land had been expropriated and millions of dollars spent a demand was made upon the government that it should compensate the city for the taxes which had been lost through the demolishing of the buildings that had been torn down for the park, and the wiping out of that source of city revenue. I want to point out that the principle is exactly the same in other cities where you have public buildings. The municipalities there have to provide fire equipment, police protection, water service and every other service that a municipality gives to public buildings. While we may have only one federal capital we have nine provincial capitals, and in many of them, if not in all, we find quite a large number of buildings which are not paying taxes to their respective municipalities.

While I want to deal fairly with Ottawa, while I am not opposing this grant of $100,000 proposed by the present bill, I still think the information given by the minister is not adequate. I feel that the particulars he gave of the various items submitted in 1920 verged almost on the grotesque. They asked for $57,000 in lieu of the taxes that were not being paid by the federal government. Evidently they tried to put these as high as possible when they expressed the pious hope that they should receive $870,000, but they were willing to settle for less than ten cents on the dollar. Even at that, they must have felt they got a pretty good bargain. I think we should have some idea as to what we receive in return for the $100,000 granted. All I am able to find out from the minister is that this amount is given to the municipal authorities for fire protection. It cannot be for police protection as the government polices its own buildings. It is in lieu of the general taxation which the private citizen is compelled to pay the municipalities. All I can point out in this regard is that in practically every provincial capital there are either federal or

provincial buildings which are exempt from taxation. Ottawa seems to be in a much more favoured position than the other capital cities throughout the dominion. If the Minister of Public Works is asked to give the same treatment to other municipalities that he has given to Ottawa for a number of years, I hope he will give them the same sympathetic consideration.

Section agreed to.

Bill reported, read the third time and passed.

## COPYRIGHT AMENDMENT ACT

AMENDMENT WITH RESPECT TO FEES, CHARGES AND ROYALTIES AND TO CONSTITUTE A COPYRIGHT APPEAL BOARD

Hon. FERNAND RINFRET (Secretary of State) moved that the house go into committee to consider the following proposed resolution:

That it is expedient to bring in a measure to amend the Copyright Amendment Act, 1931, with respect to fees, charges and royalties which may be collected, and to provide for the constitution of a copyright appeal board and for the travelling and living expenses of the members thereof, and for the remuneration and travelling and living expenses of persons appearing before the board in an advisory capacity.

He said: This resolution precedes a bill to which I referred when we were discussing the bill introduced by the hon. member for Kootenay West (Mr. Esling). The bill to be introduced is based upon a report which was filed with the present government on October 29 by His Honour Judge Parker, a commissioner appointed under the Inquiries Act, to inquire into the copyright situation and especially that created by the exacting of fees by the Canadian Performing Right Society Limited. I may say that the inquiry dealt mostly with section 10 of the Copyright Amendment Act, 1931, which stipulates:

Each association, society or company which carries on in Canada the business of acquiring copyrights of dramatico-musical or musical works or of performing rights therein, and which deals with or in the issue or grant of licences for the performance in Canada of dramatico-musical or musical works in which copyright subsists, shall, from time to time, file with the minister at the copyright office—

Then follow particulars of the lists of works to be filed and the statements of fees, charges and royalties. In 1935 this act was still further amended by the then Secretary of State (Mr. Cahan). This amendment stated that when in the opinion of the minister a society was charging excessive fees with respect to copyright such as I have just mentioned, a commissioner might be appointed

to inquire into and report on such matters. On March 22, 1935, His Honour James Parker was appointed by the former government to inquire into a situation created by the exacting of fees by the Canadian Performing Right Society Limited and any other society which had unduly withheld the issue or granting of licences with respect to the performance of musical works in Canada. This report has been referred to before and I mentioned it when discussing the bill introduced by the hon. member for Kootenay West. In his report Judge Parker passes judgment upon a list of fees filed by the Canadian Performing Right Society and has recommended that other fees would represent more fairly what the performing rights were worth. The commissioner also recommended certain amendments to the Copyright Act. His recommendations are contained in three paragraphs at the end of his report. The first recommendation is:

That there be included in the Canadian Copyright Act a clause similar to section 40 of the Patent Act, to prevent vexatious and unwarranted legal proceedings.

This is section 66 of the Consolidated Patent Act. His next recommendation was that section 17 of the Copyright Act be amended. This section defines the performance of a musical work by a church, college or school or by a religious, charitable or fraternal organization, provided such performance is given without private profit. There was some confusion as to what was meant by private profit and Judge Parker has recommended that the act be amended to more clearly define this term. His third recommendation was:

That the Copyright Act as amended so as to provide for the establishment of an appeal tribunal, to determine disputes arising out of performance in public and to approve of the tariffs of the Canadian Performing Right Society Limited from time to time before they become effective.

I may say that at this late hour I do not think it would be advisable to enter into a detailed discussion of these amendments. My suggestion would be rather that if this resolution were passed I could introduce a bill which would afford every hon. member an opportunity to ascertain exactly what is proposed in the legislation.

It is not the intention to establish a permanent tribunal in the sense that it would sit all the year or that it would constitute some kind of new commission added to the long list of commissions we already have. But basing our bill upon legislation introduced in another country, what we propose to do is this: We want such societies as I have

mentioned to file their fees on the first day of November of each year; then, allowing a certain number of days, not less than twenty-one, it would be open to all interested parties to file protests or representations concerning the fees, and in the course of December; thereafter the tribunal would sit, and in my opinion in two or three weeks at most it would pronounce upon these disputes.

The intention is to have the tribunal appointed during pleasure. It will include a member of the judiciary, preferably a judge of the exchequer court. But in order to obviate the necessity of coming back to parliament from time to time to amend the bill, it is simply intended that the chairman of the commission shall be a member of the high judiciary, the other members of the commission being two officers of the public service. There again no special mention is made, but the intention is that one might be from the copyright office and the other from the Department of Justice.

Mr. NEILL: Would this commission have power to fix fees.

Mr. RINFRET: Yes, this commission will pronounce on fees; that is the recommendation and that is the intention. It is not intended to give any remuneration to any of the three commissioners, one being a judge and the others members of the public service, but they may have to travel and would have to be allowed living and travelling expenses. It might also develop that in certain years the department might feel that legal advice should be submitted to the commission and that is why the bill which I shall introduce is preceded by this resolution.

If the house would accept the agreement that the discussion, even on the principle of the bill, might be reserved until the second reading, and does not object to the resolution in its present form, I would ask that the resolution be passed in committee so as to allow me to introduce the bill and so that everyone would know what is in it. It is not the intention of the government to recommend any extensive amendment to the Copyright Act. As I stated the other day, there will be this fall a meeting in Brussels of the International Union on Copyright and the whole matter of copyright will then be considered; but it is not possible to delay this bill any further, because, in the first place, the dealings of the Canadian Performing Right Society and such associations have not so far been foreseen by any preceding international convention on copyright, and because, in the second place, in the amendment of 1935 the then Secretary of State had the house adopt a bill whereby all litigation was suspended during the inquiry by Judge Parker. I have had to extend further the time of suspension of all such litigation, as provided for in the 1935 amendment, until this house shall have taken action. I may point out, however, that not only is it desirable to appoint an appeal tribunal which will sit in December, 1936, but it is also necessary to give the Secretary of State power to apply the rates recommended by Judge Parker not only for the time intervening between the filing of his report and the operation of this new tribunal but also for the transition stage between the time he was appointed and the time he made his report. After consultation with the Department of Justice I have been advised that there is doubt as to whether the Secretary of State would have the right to make that adjustment unless he were authorized by parliament. For all these reasons I commend the resolution to the house and, on the understanding I have just given, perhaps the house will allow the resolution to go through committee so that I may introduce the bill which is to be based upon it.

Mr. WILTON: I should like to know to what extent this resolution affects the piratical demands of the performing right society. I want to have that information so as to be able to vote intelligently on the resolution.

Mr. RINFRET: I am hardly in order in replying, but I take it that this discussion will not be protracted. I have already explained that the idea of the resolution is to permit the introduction of a bill which will cover the time between the filing of fees of the Canadian Performing Right Society, which has been the subject of inquiry, and the time when this tribunal will sit. I shall ask parliament to authorize the Secretary of State to fix the fees, which will be those recommended by Judge Parker, but I do not think that these fees should be extended further than a certain period. After the first of December of this year, if the bill passes, it will be for the appeal tribunal to decide finally whether there is any dispute as to the fees filed by the performing right society.

Right Hon. R. B. BENNETT (Leader of the Opposition): I need only point out that there are two matters which are affected; one is our obligations under the Berne convention to which we became a party during the regime, I believe, of the government of which

the Secretary of State was a member and which is binding upon us, and the second is the extent to which we are warranted in setting up another commission to deal with a matter of this kind. As to the first, ample opportunity will be afforded when the bill is in committee to discuss it if the minister is agreeable to that, because it is a matter in which we have incurred international obligations that are not easily set at nought. On the second point, I had thought that possibly this matter could be referred to the board of railway commissioners. They have not been too busy. They have been accustomed to fixing freight rates and might easily deal with a problem of this kind, because they would approach it without preconceived notions, and the law requires them to have certain qualifications. Moreover, they represent every part of Canada and they would bring to bear upon the matter before them a wealth of experience that could not be expected from officials of departments in matters of this sort, and this would save a lot of cost. However, that matter can possibly be discussed later. I have no desire to impede the hon. gentleman in getting his resolution into committee, but we must reserve our rights to have questions asked and answered when the bill itself is in committee of the whole if the resolution is given effect to to-night.

Mr. DUNNING: Conceded.

Motion agreed to and the house went into committee, Mr. Young in the chair.

Mr. BENNETT: Subject to the reservation that I made a moment ago.

Resolution reported, read the second time and concurred in. Mr. Rinfret thereupon moved for leave to introduce Bill No. 55, to amend The Copyright Amendment Act, 1931.

Motion agreed to and bill read the first time.

Mr. BENNETT: We do not desire to be taken as conceding the principle in its entirety, but reserve our right to discuss the bill in detail and make suggestions we may think reasonable, perhaps involving a departure from certain principles inserted in the bill.

Mr. RINFRET moved the second reading of the bill.

Motion agreed to and bill read the second time.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

[Mr. Bennett.]

## Friday, April 24, 1936

The house met at three o'clock.

### BANK OF CANADA

RULING OF MR. SPEAKER ON MOTION FOR INTRODUCTION OF BILL BY PRIVATE MEMBER

On the order:

Introduction of bills—Mr. Reid—Bill intituled: "An Act to amend the Bank of Canada Act."

Mr. SPEAKER: When the hon. member for New Westminster (Mr. Reid) on Wednesday last moved for leave to introduce a bill to amend the Bank of Canada Act, a point of order was raised by the Minister of Finance (Mr. Dunning), and I deferred my decision until to-day because I wanted to make a complete examination of the proposed bill. I find that the bill is not in order, and shall now give the details of my decision.

The objects of the bill which the hon. member for New Westminster is seeking to introduce in amendment to the Bank of Canada Act are to allow the Bank of Canada to hold silver coin and bullion in conjunction with gold as a reserve against the note issue and deposit liabilities and also to authorize the issue of certificates against the silver held in the reserve.

Under section 31 of the act, the Receiver General of Canada is entitled to share in the profits of the bank. If the reserve required as security against outstanding notes and deposit liabilities is to consist of silver bullion as well as gold, the fluctuations in the price of silver may cause the bank to sustain serious losses and therefore its profits may be substantially curtailed with an accompanying reduction of the receiver general's share therein and therefore a diminution of the public revenue. It is an established principle in British parliaments, which was set down by a standing order passed in the British House of Commons as far back as 1707, that financial business must originate in a committee of the whole house.

Private members cannot introduce a bill of this character, which ought to be preceded by a resolution on motion of a minister with the recommendation of His Excellency the Governor General.

Moreover, there is now on the order paper a resolution in the name of the Minister of Finance antecedent to a bill to amend the Bank of Canada Act so as to increase the capital stock of the bank and to assure ownership of a majority of shares by the government. Full discussion on this measure cannot be anticipated by a private member's bill, and in determining whether a discussion is out of order on the ground of antici-

pation, the authors say that regard shall be had by the Speaker to the probability of the matter anticipated being brought before the house in a reasonable time. I am well aware that a motion for leave to bring in a bill is in order even if another similar motion with regard to a bill dealing with the same subject matter stands on the order paper, but when the latter is a government measure announced in the speech from the throne and bound to be taken up by the house, I doubt if the discussion of some of its provisions can be forestalled by the introduction of a private member's bill. For this reason and also because the bill sought to be introduced deals with a part of the dominion's finances, I rule it out of order.

Mr. THOMAS REID (New Westminster): Speaking to the point of order, Mr. Speaker, I suppose I shall have to abide by your decision, but I would point out that your decision dealt with only one part of the bill. When this bill was before the house last year the same position was taken by the then Speaker, and although I have modified my bill to conform with the ruling then given, it has again been thrown out, and again only the first clause of the bill has been dealt with. Last year when I introduced my bill I was supported by members of the present government who said that the bill was in order.

Mr. MacNICOL: They did many things last year they would not do this year.

Mr. SPEAKER: Order.

## PRICES OF FARM IMPLEMENTS

On the orders of the day:

Mr. T. C. DOUGLAS (Weyburn): I would ask the government if it has drawn to the attention of the agricultural implement industry the motion passed by this house asking that industry to keep the price of farm implements at their former level until the present investigation has been completed; what assurance has been received from the agricultural implement industry, and why has this request not been complied with?

Hon. J. G. GARDINER (Minister of Agriculture): Mr. Speaker, letters were sent to the implement companies calling their attention to the resolution passed by the committee. So far as I know there has not been, down to the present, information received in reply from all the companies. I think a letter was received from one company, but I would prefer when the information is produced to have it brought down as a whole.

Mr. M. J. COLDWELL (Rosetown-Biggar): Does the government contemplate bringing down any legislation or taking other action to bring the implement companies to a reasonable frame of mind regarding these prices?

## MOOSE RIVER MINE RESCUE

On the orders of the day:

Right Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, I hesitate to do more than suggest to the government, particularly to the Prime Minister (Mr. Mackenzie King), the possibility of considering whether parliament might not itself take some steps to mark its appreciation of the heroic efforts of those who restored to society the two gentlemen who were entombed at Moose River. It might be well in view of the subscription that is being taken up by the Canadian Red Cross to do something for them, or for the government to consider whether parliament as such might not take some other means of marking our appreciation of what has been done. I was going to mention it privately to the right hon. gentleman, but I was detained and did not get into the house until this moment.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, may I say to my right hon. friend that had I been in the house yesterday I would have sought to give expression to what I believe to be the feelings of all hon. members with respect to the heroic service rendered by those who participated in effecting the deliverance of Doctor Robertson and Mr. Scadding from their long entombment in the mine at Moose River. Unfortunately I was not in the city. I sent a message by wire, however, from Toronto, to the Premier of Nova Scotia, in which I ventured to express sentiments on behalf of all members of parliament which I believed it would be their wish to have expressed. In the circumstances I did not rise in my place to-day on the orders of the day to make a further reference, but I may say to my right hon. friend that the government has had under consideration the very matter he has suggested.

Now that the leader of the opposition has mentioned the subject, I should like to say that I know it is the wish of hon. members of parliament that some expression should be given in its records to the feelings of relief, joy and thankfulness felt by us all at the saving of the lives of Doctor Robertson and Mr. Scadding, to our feeling of profoundest sympathy with Mrs. Magill and the members of her family in the bereavement which they

have suffered, and to our unbounded admiration of the heroism of those who, altogether regardless of the risks involved, cooperated in the rescue effected.

I imagine at no other time have the thoughts of persons of all classes in all parts of this country been more united in their hopes and wishes and prayers than they have been during the past fortnight. There has been on the part of the people of Canada as a whole a unanimity of feeling alike of the deepest sympathy and of the greatest admiration as respects those who displayed such determination, fortitude and endurance and who so bravely and so efficiently cooperated in effecting the rescue, as also with respect to those who were rescued. We have felt that we have had a manifestation of the human spirit at its highest and best. That spirit has exhibited itself in a manner which has reflected credit not only on all those who participated in the actual rescue, but on our whole country. There has been service, not for the sake of recognition or decoration, but for the love of service itself; a willingness, if need be, to give life with no thought other than to save life. It is wholly appropriate that members of this parliament should express their profound appreciation of what will remain I believe for all time an epic in Canadian annals, revealing at its true worth the character of the men and women of this country.

Mr. DANIEL McIVOR (Fort William): Mr. Speaker, perhaps fools rush in where angels fear to tread. This example of bravery and endurance has thrilled all Canada, but I am concerned, sir, with the value of human life wherever it may be, whether in Canada or in Ethiopia, and I think it is time that the Christian nations of the world woke up to the value of human life anywhere.

## SUPPLY

The house in committee of supply, Mr. Bradette in the chair.

### SUPERANNUATION

To provide for retiring allowances to former employees of the department of public printing and stationery, $6,432.

Mr. BENNETT: I should like to inquire of the government if the work with respect to superannuation has progressed beyond where it was a few months ago. Probably the Minister of Finance (Mr. Dunning) will be able to answer this question. As the minister knows, superannuation payments are paid into the consolidated revenue fund and are utilized for general public purposes. For some time an effort has been made to determine the exact actuarial position of the superannuation fund, that is, whether or not the fund is sufficiently large to meet the charges against it, having regard to the sums that must be paid and the ages of those entitled to payment. So far as I am aware this work was not completed and I do not know to what extent the actuarial investigation has gone forward. This is one of the matters to which we gave some attention and made some reference during the first year we were in office. If the minister has any further information on this matter, I think it should be given to the committee. It is possible there may be an increase in our liability as the fund may or may not be ample for the purpose of meeting the charges which may be made against it. I do not know whether any progress has been made in determining this during the last six months.

Hon. CHARLES A. DUNNING (Minister of Finance): Mr. Chairman, I think the answer is that no progress has been made. I know my right hon. friend and the Minister of Finance of his government, Hon. E. N. Rhodes, both received delegations from civil service associations making representations, among other things, with regard to the superannuation fund. After consultation with my colleagues, I undertook that during this term of parliament a committee of parliament would be appointed to deal with matters of this kind and other matters respecting the Civil Service Act. Having that in mind, we shall endeavour to press along the investigation into the very complex matter to which my hon. friend refers in order that information may be available to the committee.

Mr. NEILL: The minister in making his reply does not seem to have touched upon what is almost a burning question, that is, the need of superannuation by a large body of public servants who are not now eligible.

Mr. DUNNING: That is part of the question.

Mr. NEILL: Many of these people occupy what are known as permanent-temporary positions, whatever they may be. Some of them have served the government thirty-five years, but they are still considered as temporaries and are not qualified for superannuation. They are paid what are known as current rates; they receive their salaries year by year on a fixed basis, and I hope the minister will consider the many discrepancies of this kind. He mentioned appointing a committee during this term of parliament, but I hope that means during the next

session. I believe there was a committee of the civil service which sat for some years and which made certain recommendations to which very little attention was paid. I hope this matter will be gone into because it is a terrible thing that people who have served their country well for twenty or thirty years cannot get any superannuation.

Mr. DUNNING: That would be part of the subject with which I dealt when replying to the leader of the opposition (Mr. Bennett). I would not like to give a definite undertaking that a committee similar to what was known as the Malcolm committee will be appointed at the next session of parliament; the next session of parliament is a long way off, and I merely repeat the undertaking I gave on behalf of the government to the civil service organizations that waited upon me in connection with all these matters.

Mr. BENNETT: It might be desirable to set up a small committee in the service with powers under the Inquries Act, so that when the committee of the house meets the actuarial review will have been completed and the committee of the house will be able to deal with it. A committee of the house can deal only with facts that are made apparent to it, it would not be able to deal with this complex actuarial question. I am speaking subject to correction, but I believe the superintendent of insurance and his department were giving some attention to this phase of the matter.

Mr. DUNNING: That is correct.

Mrs. BLACK (Yukon): When this superannuation question is being considered will the minister consider also the condition of many retired civil servants in the Yukon who were so dishonestly and corruptly treated by the previous government?

Mr. DUNNING: That is a matter which scarcely falls within the scope of amending the law, unless it were decided to change completely the basis of civil service superannuation. I am in some embarrassment in replying to the hon. member, but if she has reference to the matter to which I believe she has, in connection with which some parties desire to take action against the government, I am afraid that is a question of the interpretation of the law as it now exists. From the examination I have been able to make of it, I certainly cannot join her in applying the terms she does to my predecessors in office.

Mr. BENNETT: It applies to the government previous to that, because that is where it originated.

Mr. DUNNING: I can only assure the hon. member that the government is quite prepared to make a thorough examination of the merits of the case. This really does not involve considerations similar to those involved in the other matters to which I referred.

Mr. STIRLING: I notice this item applies only to one department of government. Could the minister explain why it should relate only to the public printing and stationery branch?

Mr. ELLIOTT (Middlesex): When the committee rose the other evening we were considering the post office items on page 93. I do not think this particular item was intended to be considered this afternoon.

Sir GEORGE PERLEY: I see no reason why this item should not be carried.

Item agreed to.

POST OFFICE

Salaries, including amounts required to pay allowances to office appliance operators, grade 2, operating mechanical audit card punching machines in accordance with the terms of order in council P.C. 280/383, dated February 17, 1930; to pay allowances to typists, grade 1, employed cutting stencils in accordance with regulations approved by order in council; and to pay allowances to office appliance operators, grade 2, in the revenue division employed as key punch operators, schedules and rates to be decided upon by the Civil Service Commission and the Post Office Department and approved by the governor in council, $1,248,660; contingencies, $155,920.

Mr. POULIOT: May I ask the minister if there are any more copies left of the very beautiful and very expensive album published last year under the instructions of Mr. Sauvé, the former Postmaster General? If so, is a copy available for every member of the house? If there is not, may I ask whether there will be a copy in the parliamentary library.

Mr. ELLIOTT (Middlesex): I am unable to answer the question offhand but I shall be glad to make inquiries and see that my hon. friend at any rate is furnished with a copy.

Item agreed to.

Salaries and allowances, $16,063,627.50.

Mail services, including mail services by air, $13,874,500.

Miscellaneous, including $5,000 to provide for payment of compassionate allowances to employees injured while in the performance of their duties or to other persons injured while performing duties in any way connected with the postal service or in protecting His Majesty's mails, or to the dependents of such employees or other persons who may be killed while so engaged, payments to be made only on the specific authority of the governor in council, $989,600—Total, $30,927,727.50.

Sir GEORGE PERLEY: Perhaps the minister has some general observations to make regarding the department.

Hon. J. C. ELLIOTT (Postmaster General): This item is made up of salaries of postmasters of post offices on the city or staff basis, of district directors and superintendents of postal services. It is practically all outside service. It includes the salaries of 1,143 railway mail clerks, the mileage allowance paid railway mail clerks and any salaries of the temporary staff in the outside service, totalling 430 employees. Then there are railway mail services amounting to $6,718,474 and steamboat, $272,241. I think those are the general services that are provided for.

Mr. HEAPS: Prior to the Easter recess when some other items of the Post Office Department were under consideration I raised the general question as to why we should not have a sort of concise balance sheet to show exactly how the post office is run and what its annual income and expenditures really are. At present hardly a member of the house knows anything about the operations of the postal service. We skip from one page of the estimates to another, discussing one item and then something else without really getting a complete picture of the operations of the postal service of Canada. When it comes to the buildings we find that they are in some way included as part of the operations of the postal service, though coming I understand under the jurisdiction of the Department of Public Works. It is impossible for any member to know exactly what the net result is. I asked the minister a few weeks ago whether he would prepare a statement along these lines and I should like to have from him now, or at any rate later on in the estimates, a complete statement such as any business organization would give in the discussion of the operations of an ordinary utility. That is to say, I want to know the total amount of income in the last fiscal year, the total expenditures, what buildings come under the jurisdiction of the department and whether the operations of these buildings are charged to the post office account. We should know all that. I wonder if the minister is in a position to give that information.

Mr. ELLIOTT (Middlesex): I thought that I gave that information at the last sitting of the committee but evidently I did not make it sufficiently detailed for the hon. gentleman to get the plan clearly. The total revenue for the fiscal year just ended was $39,122,198. From that is taken first the amount of salaries and allowances paid to postmasters at revenue offices, being $6,171,000. You add to that other things such as discount, stamp vendors and postmasters, compensation to messengers for special delivery of letters, $302,000. Then there are losses by fire, burglary and so on amounting to $4,000; balance of commission paid to other countries on money order business, $7,000; postage on parcels to other countries, $56,764; transit charges on correspondence to other countries; $55,000; indemnity paid owners of lost insured parcels, $18,000. These items make a total of $6,614,000.

I am not surprised that any hon. member should have some difficulty in understanding why the bookkeeping is done in the way it is, but that has been the system since confederation, I am advised. All the revenues are put into one account and that comes to $39,000,000 odd as we figure it at the present time. Then you deduct from that the $6,000,000 for the items I have already mentioned—$6,614,748.40. That leaves what is called a net revenue—it is so described, and has been for as many years as I have been able to find any details of it—amounting to $32,507,449.64. The expenditure for the outside service is made up of salaries and allowances: to postmasters and staffs, $12,260,000; district directors and staffs, $810,000; railway mail clerks, $1,951,179; mileage for those clerks, $634,330; making a total of $15,655,509 for what are called salaries and allowances. Coming to the mail service: for railways we pay out $6,718,474; for steamboats, $272,241; for land services, which includes the rural mail deliveries and the side services, that is from station to office or distributing point, $5,945,150; air service, $281,483; mail bags, $220,000. That makes a total of $13,437,348. The balance of the $29,000,000 is made up of the following items: commissions to postmasters, $2,400; travelling expenses, $60,000; printing and stationery, $250,000; postage stamps, $185,000; hand stamps, $388,000; Magdalen Islands service, $500; compassionate allowance, $1,000. Those items total $886,900. The total of that is $29,979,757.

Mr. HEAPS: That does not give us the real picture of the postal service in this country. We have here a net income of a little over $32,000,000 and an expenditure of close to $30,000,000. That does not take into consideration all the buildings and equipment throughout the country?

Mr. ELLIOTT (Middlesex): No.

Mr. HEAPS: I do not think that is a proper way to do the business of the country.

If the only excuse the government has—and it applies to past governments as well—is that this system has been in effect from the time of confederation, I think it is high time we had a change, and I suggest that the Post Office Department cannot start too quickly to bring about a change by adopting some more modern method of doing its business than, evidently, it practises at the present time. There are throughout this country huge post offices; we do not know their value; we do not know the cost of maintenance of them or any of them, and we cannot have a real picture of the utility, as I call this postal service, until there is placed before us a proper balance sheet, showing the total income, the total expenditure, the cost of the various services that the people receive in respect of matters that come within the jurisdiction of the postal service.

I know that the present Postmaster General is just as anxious as any member of this house to see that we get an efficient and up to date postal service. I believe he wants to conduct the post office, as far as he possibly can, free from some of the evil influences which we know sometimes surround postmasters in their official positions. I want to impress upon him the desirability of instituting from now on a change in the whole administration of the post office. For instance, buildings are erected—by whom, I do not know; possibly by the Department of Public Works.

Mr. ELLIOTT (Middlesex): By the Department of Public Works.

Mr. HEAPS: Some are erected, I believe, by way of unemployment relief. Suddenly the Post Office Department is asked to take over these buildings, whether it requires them or whether it does not. Of course the buildings are maintained by the Department of Public Works and do not appear in any way as part of the postal service. I have come to the conclusion that as in fact they are part of the postal service they should come as far as possible within the jurisdiction of the Post Office Department; at all events they should not be entirely under the Department of Public Works. I favour, of course, the largest possible degree of cooperation between the two departments. But what I am anxious to have from the Postmaster General is some idea whether we cannot escape, from now on, from the tradition which has evidently affected the operation of the Post Office Department since the time of confederation, and launch out into some more up to date method of doing its business.

Mr. ELLIOTT (Middlesex): With regard to part, at any rate, of my hon. friend's statement I must say that he cannot get into any argument with me, because I agree that this is an unusual way of keeping the accounts. But when you come to consider the whole situation you are confronted with the problem of just in what way you can improve upon it. My hon. friend is quite right in saying that the expenditures include nothing for the construction of all the larger buildings that house the large post offices and post office facilities, departmental and other. They are built and to a large extent furnished by the Department of Public Works. They are taken care of by the same department. While perhaps it looks like an anomalous situation to have one department erecting the buildings and another department occupying them and not being charged up with anything for rental, for caretaking, or for a large part of the repairs, at the same time, as one who happens to know something about the Department of Public Works, I believe that that department should construct all the buildings that are used for the various services. I do not think that we should have the Post Office Department erecting buildings—

Mr. HEAPS: I am not suggesting it.

Mr. ELLIOTT (Middlesex): —and various other departments also constructing buildings. I believe it might be possible to keep some account of what it actually costs the country for reasonable rentals or a reasonable interest on the expenditure upon the buildings to which my hon. friend refers. I might add that when he asked the question the other evening I made inquiries of the Department of Public Works, which by the way is always a busy department, particularly so this year and at this time, when they are preparing their estimates, and my hon. friend might think I was exaggerating if I told him the amount of time required by a great many clerks to give us a fairly accurate estimate of what these costs are. Take the Langevin block, which was built by the Department of Public Works; this building is now occupied by various departments. At the present time it seems almost an interminable job to figure out the space occupied by each of these various departments in the various buildings throughout the country.

Mr. WOODSWORTH: But surely any department store has to do that in figuring its costs.

Mr. ELLIOTT (Middlesex): My hon. friend would know as much as I know about the

way in which a department store is run. I do not imagine that a department store, all owned by the same company, would require to figure out the cost of the foot space occupied by each little branch of each department.

Mr. WOODSWORTH: I do not say that, but they actually do figure out how much of the cost should be allocated to each department, and the manager of that department is held responsible for making the department pay. With regard to the production even of locomotives, in the railway shops, or repairs, they have staffs that are able to figure the cost and that is charged up to the various departments, or so I am informed. I do not see why we cannot have in the government a system which would be in conformity with modern business practice.

Mr. ELLIOTT (Middlesex): I have no doubt it could be done; it is a question for parliament to consider. This is not a new matter; it has been considered many times before. It is just a question whether or not the cost of figuring out all these various services in the many buildings that would have to be taken into account can be justified as an expenditure at the present time. It would have to be a very greatly increased expenditure, and now, beyond question, we are facing a heavy deficit when you take into account the rental of the buildings at fair prices.

Mr. WOODSWORTH: Just one other point, as a matter of information. In the statement he gave did the minister include the cost of the inside service, what we would call the overhead, the cost to the department?

Mr. ELLIOTT: No, that $29,975,000, to which I think my hon. friend refers, is just for the outside service.

Mr. HEAPS: I do not want the minister to feel for a moment that I am criticizing him personally or the officers of his department; this is something that has grown up during the years, and I can understand how difficult it would be to launch out immediately on something new after going along in the same old ruts for so many years. At the same time there is no reason in the world why the things I have suggested cannot be done. I think the people have a right to know exactly what the postal service is costing them, and we are not in a position to say what it really does cost.

Mr. VENIOT: Would the hon. member make that apply to all other departments?

Mr. HEAPS: Absolutely, without exception; I do not think we should make any difference between the departments. I should like every department to stand on its own feet. This should apply particularly to the Post Office department because it is a utility, a revenue producing department. It may be that the people are not paying enough for the services that are rendered, but I should like some true idea of the real position of that utility, and under the present method of bookkeeping it is impossible to obtain that idea. To-day I do not know how many post office buildings are owned outright by the government. I do not know how many buildings are leased for postal purposes. I do not know, and I do not suppose the minister is in a position to give it to me at this time, the total cost of the buildings in various parts of this dominion that have been erected purely for postal purposes. We should have all that information; we should have some idea of the annual interest charges on those postal buildings, and we should have some idea of the cost of maintenance. When we get those facts we will have some idea of what the postal service of this country is costing us. As it is now all we receive is a bald statement, in more or less detail, that there is a net revenue of $32,000,000 and an expenditure of approximately $29,000,000. That is not a fair picture to present to the people, because it is not a true picture. All I am attempting to do this afternoon, as I have done previously, is to see whether it is not possible to assist the minister in getting a proper picture of the postal service of this country from a financial standpoint so that perhaps in another session we may be able to review the postal estimates more intelligently than we can at the present time. I cannot say anything more about it now, except that often after we go over these estimates we are no wiser than we were before, and that is unfortunate. Sometimes I cannot help thinking that it is odd that we in this little group, who are sometimes charged with knowing so little about business, should be the ones to insist on business methods being followed in the conduct of government.

Mr. ELLIOTT (Middlesex): I would only say to my hon. friend that it is not a matter of choice. From sheer necessity we are compelled to cut out some expenditures that we might think advisable at the present time, in arranging our estimates it has been necessary to do that. I did ask the public works department for a statement along the lines suggested by my hon. friend. When the hon. gentleman speaks of buildings used for post office purposes only, however, I think he will realize that very few of the public buildings that have been erected in Canada are used for postal purposes only. In nearly every building there is a customs office though unfortunately, in the interests of economy, many of those

customs offices in the smaller places were closed recently. At other points you may have a little armoury in the public building, where the arms of the local militia unit are kept, and of course when you get into the larger buildings the situation becomes much more complicated.

I quite appreciate the fact that my hon. friend is doing this in a desire to be helpful, and I have no quarrel with him at all. I think all these discussions are entirely to the good, because this should be a business institution. The department is a large one; our revenue now amounts to nearly $40,000,000 a year, and comes principally from the sale of postage stamps. That means a lot of business, a great many transactions and a great deal of work in handling mail, newspapers and various other articles. My hon. friend will realize that even in the management of an office, for instance, the situation has changed materially in the last fifteen or twenty years. I recall that when I first occupied an office no one ever thought of estimating the cost of the foot space occupied by each individual in the office. That is done to-day in up to date offices; they know just how much space is used by each man in the office, what share of the time of the office staff he requires, what is involved in the cleaning of his office space, and so on. I suppose the time will come, perhaps sooner than my hon. friend thinks, when some such system will be adopted in the various departments of the government. That is all I can say about it. I am satisfied the business of the department is being conducted with due consideration for economy and an endeavour to serve the public. I do not believe I can add anything to what I have already said.

Mr. MacNICOL: Are there individual accounts for each post office in Canada, indicating the debits, credits and revenues of each?

Mr. ELLIOTT (Middlesex): Yes, and it is on those revenues that the remunerations of postmasters in revenue post offices are based. The annual report shows all post offices in Canada and the revenues of each.

Mr. MacNICOL: Has the minister the net revenue for the Toronto post office?

Mr. ELLIOTT (Middlesex): For the year ended March 31, 1935, the revenue of the Toronto post office, including an amount of $17,169 for non-accounting suboffices, was $6,899,398.08. That is divided, and I can give the figures if the hon. member wishes to have them.

Mr. MacNICOL: No; I should like to have the net profit over and above the expenses.

Mr. ELLIOTT (Middlesex): We have not that information. That revenue goes in as part of the $39,000,000, and there is no net expense account for Toronto.

Mr. MacNICOL: How can you tell whether a post office is a liability or an asset to the country? I am referring now not particularly to the Toronto post office, but to any post office from which revenues are derived.

Mr. ELLIOTT (Middlesex): We can give the salaries and allowances, and can give further information as to costs of all services. We can give a close estimate of a particular office's proportion of the general overhead of the department.

Mr. MacNICOL: Then I take it that the net revenue for Toronto is not kept separately.

Mr. ELLIOTT (Middlesex): No, in the sense that there is a charge for public buildings.

Mr. MacNICOL: In looking over the public accounts I notice that in Toronto the head official is called a district director, whereas in Vancouver he is called a district superintendent. What is the difference between these two officials?

Mr. ELLIOTT (Middlesex): In some cases the offices of district director and postmaster for the main office have been combined, and in that event the official is called a district director, because he not only manages the local post office but also directs the services in the district. In the other instance the official is called a district superintendent. That is the best explanation I can give. I have had prepared a chart showing a list of offices and officials, starting with the office boys right up to superintendents.

Mr. VENIOT: Can the minister tell when the distinction was first made between district superintendent and district director?

Mr. POULIOT: The previous government did it.

Mr. ELLIOTT (Middlesex): I am advised it was about 1933 or 1934.

Mr. POULIOT: It was done by the Bennett government.

Mr. MacNICOL: The public accounts show that the district director of Toronto receives only $4,771 per year. That seems to be a small salary for a man with such great responsibility. The district director in a large city like Toronto would have heavy responsibilities. Is that all he receives?

Mr. POULIOT: He has so little because McNaughton has too much.

Mr. ELLIOTT (Middlesex): The maximum to which he will eventually go will be $6,000, a substantial sum.

Mr. SPENCE: Is the minister referring to the postmaster at Toronto?

Mr. MacNICOL: At this time he receives only $4,771.

Mr. ELLIOTT (Middlesex): Yes.

Mr. MacNICOL: I do not see in the public accounts that any postmaster, either for Montreal or elsewhere, is receiving $6,000. The official in Montreal is receiving the extremely low salary of $3,132. That would seem to be a ridiculous salary for a man in that position.

Mr. ELLIOTT (Middlesex): What is the date of the report from which the hon. member is getting his information?

Mr. MacNICOL: It is the report of the auditor general for 1935.

Mr. ELLIOTT (Middlesex): I think all the postmasters in question are getting more money now. For several years salary increases were stopped, and the salaries in the report from which the hon. member reads are the salaries paid prior to the time the increases began to take effect.

Mr. MacNICOL: That makes it all the worse.

Mr. ELLIOTT (Middlesex): Quite so. Nevertheless we cannot have it both ways. One hon. member complains about losing money in the post office administration.

Mr. MacNICOL: The Toronto office is a large revenue producing office; perhaps it is your chief revenue producer.

Mr. ELLIOTT (Middlesex): There are grade five district directors at Toronto and Montreal, and the salaries run from $5,400 to $6,000.

Mr. MacNICOL: That is what they will be, in due course?

Mr. ELLIOTT (Middlesex): Yes.

Mr. WOODSWORTH: I had intended to follow my colleague in a few words along lines suggested by the minister's answer. He speaks of the difficulties of carrying out the administration in a businesslike way. May I mention one further illustration: There are arrangements between the Canadian Pacific Railway and the Canadian National Railways by which they run pool trains and have pooled services at terminals. Often they run over one another's lines, and in some instances they have joint terminals. Sometimes they utilize one another's rolling stock, and all that kind of thing. I am not prepared to say exactly how they work out their arrangements, but if it is possible for these two great railroads, which are supposed to be rivals in their services at least, to estimate closely the cost that should be charged to each road, I cannot see that it would be anything like as difficult for a department such as the post office to work out some system of allocating costs. To-day, as my friend from Toronto has said, you cannot tell whether any office, even the Toronto office, is really revenue producing. It may have a certain revenue, but the initial expenses may be so great as to offset the revenue.

Mr. GOLDING: Everybody knows the expense is greater.

Mr. WOODSWORTH: We do not know anything about it from the minister's statement, and that is my point. I think we ought to have a statement so that the public would have knowledge with regard to the Toronto office and the Winnipeg office and any other office as well as with regard to the whole system.

Mr. ELLIOTT (Middlesex): In order that there may be no misunderstanding, we can tell the cost of each of these services except the cost to which my hon. friend has referred, that is the cost of the rentals. All the other costs can be estimated fairly closely. We can ascertain the cost of the caretaker, the cost of coal and fuel, the cost of repairs for that particular building, and all that is kept track of by another department.

Mr. WOODSWORTH: The exception is the very thing we are talking about, and we urge that that exception should be included in order to get a proper balance sheet. Surely the minister will admit that. We do not know to-day, and we ought to know, what should fairly be charged up to the Toronto office for rental, interest, overhead and departmental expenses. The balance sheet should be so arranged that we know the costs for the whole system as well as for particular offices. Not merely should we have this information with regard to each office, but parliament is supposed to pass upon the different charges that are made by the Post Office Department. The department charges three cents postage for a letter, one cent for something else, so much for newspapers, and so on, but unless the department knows the cost of particular services we can have very little conception whether or not the newspapers, for example, are carrying their fair share of the load. It may be that indirectly we are subsidizing the newspapers and magazines to the extent of a very large sum. I have a suspicion that we are, but we have no means of knowing that, and we should know it. If

we are to determine intelligently the costs of the different branches of the service we must have a full statement. I am not very well satisfied with the minister's statement that he has inherited the system and hopes that at some indefinite time in the future it may be changed. He says it has existed since confederation and that many times there has been an agitation to bring about a change. Does the minister suggest that we have to wait another sixty or seventy years until we are all dead and gone before some intelligent government can initiate changes? I would like to have from the minister before we get through to-day a definite assurance that he will initiate the change before the next parliament; then we will know where we are at.

There are two points on which I should like information. The minister spoke about subsidies to the steamship lines. Has he at hand the amount paid to the steamship lines, and also the amount of the subsidies paid to the two great railway companies?

Mr. VENIOT: Do you mean transatlantic steamships? The post office pays no subsidies to them.

Mr. WOODSWORTH: The minister mentioned the word subsidies, and I want to know what subsidies are being paid.

Mr. VENIOT: He mentioned delivery of mail by steamer, but that was not transatlantic.

Mr. WOODSWORTH: Is this another expenditure that has not been mentioned?

Mr. ELLIOTT (Middlesex): We paid altogether for mail service by steamboat in the dominion, $272,241. The main subsidies to steamships are paid by the trade and commerce department. The amount I gave is what we pay to various steamships in different parts of this country for bearing in some cases a part of the cost of transferring the mail from one point to another where water has to be crossed.

Mr. WOODSWORTH: Entirely within the bounds of Canada?

Mr. ELLIOTT (Middlesex): Yes.

Mr. WOODSWORTH: Is that a fixed charge, or is it a payment for actual services rendered?

Mr. ELLIOTT (Middlesex): It is for actual services rendered, and the amount is arrived at much in the same way as it is for the rural mail service. Sometimes it is part of a courier contract where the mail is carried in part by land conveyance and in part by steamboat.

Mr. WOODSWORTH: The minister says that subsidies to the transatlantic and transpacific steamships are paid by the Department of Trade and Commerce. Has he any idea of the value of these services to the post office?

Mr. ELLIOTT (Middlesex): My hon. friend will understand that it is hard to figure it out to a cent, but I may say that besides the services arranged for and paid for by the Post Office Department, the Department of Trade and Commerce provides a subsidy covering the use of steamships for both the transatlantic and the transpacific services, and the discontinuance of this arrangement would mean that an additional $300,000 would have to be provided in the post office vote to carry on this service. It is worth that to us.

Mr. WOODSWORTH: You consider it worth that to you?

Mr. ELLIOTT (Middlesex): Yes.

Mr. WOODSWORTH: Does that mean that that is what it costs us now, or what it would cost to provide a substitute service?

Mr. ELLIOTT (Middlesex): If we had to provide it, that is what it would cost us.

Mr. WOODSWORTH: One other point. You pay the railways for carrying the mails. Are you able to determine what that costs?

Mr. ELLIOTT (Middlesex): Yes, we can tell that exactly.

Mr. WOODSWORTH: What is paid to the Canadian Pacific and what to the Canadian National?

Mr. ELLIOTT (Middlesex): We paid to the Canadian Pacific $3,432,249.22 and to the Canadian National $2,779,389.44 for the fiscal year ended March 31, 1935, and to other railways for the same year, $369,645.35.

Mr. WOODSWORTH: May I ask why a larger amount is paid to the private road than to what is ordinarily termed the government road?

Mr. POULIOT: It was done by the Bennett government.

Mr. ELLIOTT (Middlesex): The difference in the payments is explained in this way: First, there are the transcontinental railway post office services on the Canadian Pacific Railway which were organized prior to the Canadian National railway being constructed. The Canadian Pacific railway being the pioneer road across Canada, it follows that the majority of important towns and cities have grown up and developed around that railway and it was only natural that the trans-Canada postal services should be organized thereon. Next, there is the car-

riage of transatlantic and transpacific mail; to China, Japan and Australasia on the Pacific, and to the United Kingdom and Europe on the Atlantic. Mails which arrive on Canadian Pacific steamers are transported, under agreement, on Canadian Pacific railway trains, and vice versa. Mails carried on Cunard and White Star steamers are transported on Canadian National railway trains, and vice versa.

Mr. WOODSWORTH: If I post a letter in Vancouver, why cannot that letter come to Ottawa over the Canadian National railways? Why has it to be sent by the Canadian Pacific railway? This is not a transpacific transaction, it is something happening within the bounds of Canada. I should like to know why it is, when we have our own government railway, constant preference is given to a privately owned road.

Mr. ELLIOTT (Middlesex): We endeavour to get the mail carried on the fastest route available.

Mr. WOODSWORTH: Has the Post Office Department ever made any representations to the board of railway commissioners that the Canadian National Railways be permitted to travel as fast as the Canadian Pacific?

Mr. ELLIOTT (Middlesex): It is not a question of the speed of the respective trains; it is the routes and the timetable. The hon. member has referred to the service from Vancouver to Ottawa. I think he will readily understand that a more direct service can be had over the Canadian Pacific.

Mr. WOODSWORTH: Would the minister give the difference in the running times?

Mr. ELLIOTT (Middlesex): I cannot do that offhand.

Mr. WOODSWORTH: I do not think the minister ought to—I shall not say "bluff," but he ought not to put forward that point of view unless he is prepared to give the running times. I believe the running time between Vancouver and Ottawa is the same on each road. I cannot see why we cannot use our own line rather than a private line.

Mr. POULIOT: I should like to submit one fact to the Postmaster General. Mail leaving Ottawa for Quebec and the maritime provinces is carried on the Ocean Limited which leaves Montreal at eight o'clock; this mail leaves Ottawa on the Canadian Pacific train leaving here at three thirty, the mail closing around two thirty o'clock. It would be much more convenient if the mail going east could be sent to Montreal on the Canadian National Railway train which leaves at four thirty in the afternoon. The mail would reach Montreal in ample time to be transferred to the Ocean Limited and the people in Ottawa would have one more hour in which to attend to their correspondence. The Canadian Pacific Railway would not suffer very much and those people who are writing to eastern Canada would be benefited. Will the minister kindly consider this suggestion?

Mr. ELLIOTT (Middlesex): I shall be glad to look into any suggestion made by hy hon. friend. I do not know the times at which these different trains leave, and I make no pretence of knowing it. I do not think the hon. member for Winnipeg North Centre (Mr. Woodsworth) was serious when he suggested that I was trying to bluff the committee, any more than I would be serious if I suggested that he was trying to do the same thing, which I do not. I appreciate his criticism and I may tell him that I do not consider it as being at all personal.

Mr. WOODSWORTH: It did not seem to me that the minister's argument was relevant to my question. If I understood him, he suggested that the Canadian Pacific was given preference because of its faster services. My first answer is that the railway commission has a great deal to do with determining the rate of travel over the different lines, and I know in one or two cases it has been extremely difficult for the Canadian National to obtain permission to give as fast a transcontinental service as the Canadian Pacific.

Mr. ELLIOTT (Middlesex): I do not think the hon. member will accuse me or any officials of the department of wanting to give preference to a privately owned railway as against a publicly owned railway. I am not pretending to be a railway timetable, but the frequency of service is taken into consideration by the department. The frequency of service is considered quite as much as the speed of the trains; in fact I do not believe there is a great deal of difference in the actual speed per mile.

Mr. VENIOT: I should like to ask the hon. member for Winnipeg North Centre a question. If a Canadian Pacific train left Vancouver for the east at eight in the morning and a Canadian National train left at nine, on which train would he want his mail to come?

Mr. STIRLING: It would depend upon when he wrote it.

Mr. WOODSWORTH: Someone has suggesed it would depend on when I wrote the letter.

Mr. ELLIOTT (Middlesex): That is true.

Mr. VENIOT: My hon. friend is trying to quibble, something which he was accusing us on this side of doing. Let us assume the letter has been written and is ready to mail; if the Canadian Pacific leaves at eight in the morning and the Canadian National at nine, on which train would he want his mail to come?

Mr. WOODSWORTH: One can give instances of that kind. I can give a little incident. Once I was about to board a Canadian National train which was to leave Vancouver. I tried to post a letter on the train and I was told it could not be done, that it would have to be taken over to the general post office, transported from there to the Canadian Pacific station and leave on a Canadian Pacific train which left twenty-four hours later. In that instance I preferred to have it go Canadian National.

Mr. SPENCE: I think we have had this afternoon a demonstration of the fact that the system by which the Post Office Department is conducted is an antiquated one. I am not going to condemn either the present or the preceding Postmaster General, because they have all proceeded along the same line. It is antiquated, no matter how it originated, and it is time for a change. We do not know to-day whether the Post Office Department makes a million or loses ten millions; the only answer we can get from any postmaster general is that the total revenue is so much, because as to expenditures he knows nothing. What we need in Canada is a first class, up to date Public Works department. It is the largest spending department we have and there should be in it an efficient accounting system to keep track of all the work done for the Post Office Department. To begin with, it supplies that department with buildings and charges no rent. It furnishes the buildings, supplies the engineers, caretakers, firemen, cleaning staff and does all that work at the instigation of some postmaster in a particular place such as Toronto. If he wants to spend ten thousand or fifteen thousand dollars tearing down a wall here or there, the Public Works department is charged with that work and the Post Office Department pays nothing. The whole system should be changed so that we might know whether the department was making or losing money. Each department should stand on its own feet; that is the way business is done, and there would be no difficulty at all if such a system were carried out. If the Public Works department builds a post office in Toronto, say, costing $600,000, or a customs house, the Post Office Department or the department for which the work is done should be charged at the rate of three or four per cent, just as I would be charged if I were occupying space in some store. That is the system followed by Eaton's and Simpson's in Toronto, and there is no reason why it could not be followed here. There is no reason in the world why the Postmaster General should not be in a position to answer one intelligent question—and as I say it is not his fault. The sooner we change the system the better it will be for the Post Office Department. That department should get down to a business basis and let us know whether it is making or losing money. Hundreds of thousands of dollars have been spent in Toronto alone for the Post Office Department for which that department does not pay a red cent.

An observation was made about the salary which the director was receiving—they have a new name for the postmaster in Toronto. When Mr. Lemon was there he received seven or eight thousand a year as postmaster, and now we have a distinguished gentleman acting as superintendent. His official position is postmaster, and he has the superintendent's job, and I am told that he gets $4,771; yet the man is capable of making much more than that in a city like Toronto. I am not advocating high salaries because I cannot make any high salary myself—

Some hon. MEMBERS: Oh, oh.

Mr. SPENCE: —but I do think that everyone should be treated fairly. My advice to the government is this: Never mind the past; forget about it altogether and get down to hardpan. Start a new system so that we shall know what we are doing and find out whether we are making or losing money in the Post Office Department. The Post Office Department can pay for aeroplanes without going to the Public Works department; they can subsidize a steamship company themselves and where the Public Works department does work for them they should be charged with it, and that money deducted from their total revenue. If that were done, parliament would know what their net revenue was. I venture to say that they have not had any revenue in the last ten years but are thousands of dollars behind. But you cannot get any information.

Mr. REID: With regard to the remarks of the hon. member for Winnipeg North Centre (Mr. Woodsworth), and in order that no false impression may go out, I might make a few observations as one who has delved into this matter. The information I have regarding the speed of the Canadian

National is that it would clip about ten hours off the running time from Vancouver to Ottawa were it allowed to do so. I myself have left Ottawa on a train ten hours late and arrived on time in New Westminster. I have looked into the question of the carriage of mail, particularly on the Canadian Pacific, and the information I have—I should like the minister to check it up—is that the mail cars are largely in the hands of the Canadian Pacific, the Canadian National not having any mail cars operating from the coast. Like the hon. member for Winnipeg North Centre, I should like to see the Canadian National patronized, and when it comes to speed I do not think that there are any trains that can beat the Canadian National from Ottawa to Vancouver.

Mr. FINN: What has been the situation since Sir Henry Thornton retired from the presidency of the Canadian National and especially since the passing by the late administration of the Canadian National-Canadian Pacific Act placing three trustees in charge, the chairman of which is Mr. Fullerton, whom I know very well, who lived in the city of Halifax and was a graduate of Dalhousie and a partner of the late Sydney Harrington, a queen's counsel of that day, one of the most outstanding members of the legal profession in Canada. The present condition, over which unfortunately this government has absolutely no control, is attributable to the late government, who saw fit to appoint these three trustees for ten years. They are removable only by an address of both houses and on specific charges, and that is why to-day the Canadian National is going behind and therefore protracting the running time of its trains. The Ocean Limited used to make the run from Halifax to Montreal in twenty-four hours and the Maritime Express made the run to Montreal in twenty-seven hours, leaving in the afternoon. I came up on that train the other day and to my amazement I found that the running time was thirty-six hours, as fixed by the special management under Mr. Fullerton and his associates, who do not know anything about the running of trains but can argue a case.

Mr. SPENCE: We are talking about post offices.

Mr. FINN: Hon. gentlemen opposite, now that they are relieved of responsibility, do not hesitate to suggest reforms. I wonder why the hon. member for Parkdale (Mr. Spence), who sat in the house when his party was on this side, did not induce the government of those days to bring about the reforms he is suggesting to-day. My hon. friends opposite are pursuing a different method now from that which they followed when they were on the treasury benches. The Postmaster General referred a moment ago to the Atlantic service. I remember that in the days when Sir Henry Thornton was in control he made a running agreement with the Cunard line and the White Star line, whereby they carried freight which was handed over to the Canadian National system. Trade grew by leaps and bounds, and with it came the development of the port of Halifax, which did not interfere with the great sister port of Saint John, served by the Canadian Pacific railway. To-day what are the conditions? The Canadian Pacific boats, the Duchess boats and the Mont boats, running from Liverpool to Halifax with mail, hand it over to whom? To the Canadian National railway through to Montreal? No. That mail is handed over to the Canadian Pacific railway. These ships land only their passengers and mail, which are taken on the Canadian Pacific line with a Canadian National engine hauling the train. The ships go to Saint John to unload their freight, and then return to Halifax to pick up freight which, as it comes over the Canadian National system to Halifax as the last port of departure, they could not get otherwise. Now these new 10,000 ton freight boats drop into Halifax to land freight for the maritime provinces or for Nova Scotia; they then go round to Saint John and spend a week, and come back to Halifax to pick up freight. It seems to me that since these Canadian Pacific and Canadian National acts, legislation to repeal which has been introduced by the Minister of Railways, have been on the statute books, the Canadian National railway has been put in the lion's jaws and they are crushing it inch by inch. There is no better evidence of that fact than the propaganda which is received every day from Montreal, emanating from get-rich-quick gentlemen on a street that is very well known, St. James street, and from Wall street in the city of New York.

That is the condition that prevails to-day. Not even the Minister of Railways has power

so much as to order a truck, let alone a train, to be moved. It is a condition that is not the responsibility of the present government. Hon. gentlemen sitting opposite saw to it, in so far as they were able, that the hands of this government were tied, and until we can get legislation through to take off these Tory steel handcuffs, the Canadian National Railways will never have an opportunity to show a profit. More than that it may be necessary to ask certain officials to do what hon. gentlemen opposite asked Sir Henry Thornton to do, that is kindly to get out. Sir Henry Thornton was one of the greatest assets this country ever had. He took all the railway systems that belonged to the people of Canada, babies that were bought and paid for at a high price by the party to which hon. gentlemen sitting oposite belong, in the days of Sir Robert Borden and of the Right Hon. Arthur Meighen, now leader of the Tory party in the Senate. It ill becomes hon. gentlemen opposite to criticize the Post Office Department as it is being operated by the present able Postmaster General. The people of Canada understand that the sole object of the Conservative party as led by the present leader of the opposition and the ex-ministers who sit in association with him is to embarrass the government in every move it makes to try to carry into effect the will of the people and to make this parliament truly democratic. The Liberal party stands for democracy. Democracy means individual liberty, and I stand with my party in support of that principle.

Mr. THOMPSON: I should like to have an explanation of the amounts being voted to two towns in the county of Lanark, one item to Perth and the other to Smiths Falls. The town of Perth has a revenue much larger than that of the town of Smiths Falls, yet I see that the amount of money being voted for Perth is only $7,500, while the amount for Smiths Falls is $15,480, or just double.

Mr. ELLIOTT (Middlesex): It is proposed to change the status of the Perth office from revenue to staff basis, grade three. Six positions are required. They amount to $7,020. The authority for the change in the status and the creation of the positions was given under order in council dated September 16, 1935. There are also two statutory increases of $120, making $240, and four statutory increases of $60. This makes up the amount of $7,500.

Mr. DOUGLAS: Is it correct that the post office boxes which are installed are charged to the Department of Public Works? That information has been given to me.

Mr. ELLIOTT (Middlesex): That is the case in all public buildings, or what we call public buildings, where the postmaster is not supplying his own building or his own office.

Mr. DOUGLAS: To whom does the revenue from these post offices go? Does it go to the Public Works department. to which the item is charged, or to the Post Office Department?

Mr. ELLIOTT (Middlesex): It goes to the Post Office Department.

Mr. DOUGLAS: But the post office boxes themselves are charged to the Department of Public Works?

Mr. ELLIOTT (Middlesex): Quite so, just the same as the buildings.

Mr. GREEN: Does this grant provide for a trans-Canada air mail service?

Mr. ELLIOTT (Middlesex): I think a question covering that was asked by the member for Regina, and the answer appears in yesterday's Hansard at page 2078.

Mr. GREEN: Does not this question of an air mail service come under this particular item?

Mr. ELLIOTT (Middlesex): There is no appropriation in this item for a trans-Canada air mail service.

Sir GEORGE PERLEY: It could be discussed on the next part of the item, mail services by air.

Mr. ELLIOTT (Middlesex): Yes. However I do not want to limit discussion. It is a lump sum, and we are not following it definitely unless it is thought that progress would be facilitated by doing so.

Mr. GREEN: Then is it in order for me to go ahead?

The CHAIRMAN (Mr. Bradette): Yes, go ahead.

Mr. ELLIOTT (Middlesex): Go right ahead.

Mr. GREEN: May I ask the Postmaster General what air mail routes are being operated at the present time?

Mr. ELLIOTT (Middlesex): There are twenty-seven routes now being operated as follows:

Montreal-Albany
Winnipeg-Pembina
Moncton-Charlottetown (via) Summerside
Vancouver-Victoria
Vancouver-Seattle
Fort MacMurray-Aklavik
Fort Resolution-Cameron Bay (via) Rae
Cameron Bay-Coppermine
Fort Chipewyan-Fond du Lac
Fort Chipewyan-Goldfields
Prince Albert-Ile a la Crosse-Lac la Ronge
Winnipeg-God's Lake
Norway House-Cross Lake
Winnipeg-Central Manitoba Mining Area
Kenora-Red Lake and McKenzie Island
Kenora-Cole
Sioux Lookout-Red Lake
Sioux Lookout-Casummit Lake
Kenora-Whitefish Bay
Sioux Lookout-Pickle Crow
Rouyn-Kewagama
Amos-Sisco-Val d'Or and Bourlanaque
Montreal-Rimouski
Atlin-Telegraph Creek (winter only)
Leamington-Pelee Island (winter only)
Quebec-Sept Iles (winter only)
Sept Iles-Natashquan (winter only)
Havre St. Pierre-Port Menier (winter only)
Charlottetown-Magdalen Islands (winter only)
Special Flights.

Mr. GREEN: The majority of these routes are in the mining areas of northern Canada?

Mr. ELLIOTT (Middlesex): Yes, to a large extent.

Mr. GREEN: May I ask whether this mail is carried by air at a profit or at a loss to the post office?

Mr. ELLIOTT (Middlesex): My information is that the routes I have named, which are the only ones now in operation, are carried on at a profit.

Mr. GOLDING: How can you tell?

Mr. ELLIOTT (Middlesex): From the revenue and the expenditures.

Mr. GREEN: May I ask when the minister intends to inaugurate a trans-Canada air mail service?

Mr. ELLIOTT (Middlesex): This is a matter that is not only under consideration now but has been under consideration for some time. I cannot give any statement except that it is under consideration.

Mr. GREEN: Could the minister give us any idea as to the year in which it will be put into operation, and has he any idea as to the cost?

Mr. ELLIOTT (Middlesex): I know my hon. friend will not press his question when I tell him that it is a matter of government policy, and the conclusion can be disclosed only after it has been definitely arrived at.

Mr. GREEN: How much mail would have to be carried on the trans-Canada route in order to make the operation profitable to the post office?

Mr. ELLIOTT (Middlesex): It is pretty difficult to answer that; it all depends upon the charge that is made.

Mr. GREEN: At the present rate of six cents for a letter?

Mr. ELLIOTT (Middlesex): Well, that could be estimated only in view of the probable cost of operation.

Mr. GREEN: Has the department no figures at all as to the probable cost of operation? Apparently this matter has been considered for some time, and surely the department has some idea as to what the cost would be.

Mr. ELLIOTT (Middlesex): Estimates have been furnished, but I do not have them here. The services have not been started and of course nothing definite has been done in that connection. If my hon. friend wished me to do so I could obtain for him some idea of the estimates that were given, but I do not have them with me, since we are dealing only with the services actually in operation.

Mr. GREEN: I should be glad if the minister would do that, because I think this development of aviation is vital to the growth of Canada. The department must have some figures as a result of the extensive air mail operations we are carrying on at the present time in northern Canada.

Mr. VENIOT: May I be permitted to say a word in connection with the trans-Canada air mail service? When I had the honour of being Postmaster General in a

former government I do not think I am claiming too much credit when I say I attempted to inaugurate that service. We had a survey made from Halifax to Vancouver, and we did start a tentative trans-Canada air mail service. At that time the Halifax to Montreal section did not pay. It became a question of educating the people, particularly the business men, of the maritime provinces, and I regret to say that the Post Office Department did not get the enthusiastic support it should have received from the business sections of the maritime provinces for the transportation of mail from Halifax to Montreal by way of Moncton, Saint John and Quebec city. We kept it up for a year and a half in the hope that we might receive that encouragement that we felt was due us, but finally that section was abandoned. Then we attempted to organize the section from Montreal to Winnipeg, by way of Sturgeon Falls, by rail at night and by airplane to Winnipeg for distribution the next afternoon about one o'clock. We also had investigations made in order to try to find the most feasible route through the mountains. If I mistake not, in connection with the trans-Canada air service from Halifax to Vancouver, if we could have secured an average load of six hundred pounds from Halifax through to Vancouver at the rate then in existence, five cents per letter—

Mr. GREEN: Was that six hundred pounds per day?

Mr. VENIOT: Yes, six hundred pounds per day each way. At the rate of five cents per letter it was estimated that we could make it pay on that basis. In a pound of mail there are about fifty or fifty-five ordinary letters; in many cases it runs to sixty letters, which at the five cent rate would be $3 per pound for air mail service. Now the rate is six cents per letter, and I feel satisfied that if a proper survey of the trans-Canada air service was made it could be put into operation. I think the people now have been educated to use such a service; they see the benefit of it. In its initial stages they did not anticipate what that benefit would be, but now they appreciate it and I think such a service would be a success. A great deal of air mail was carried up to 1930.

I do not wish to take up too much of the time of the committee, Mr. Chairman, but let me point out the advantages of the air mail service. In 1927 and 1928, in the Mackenzie valley, and as far north inside the arctic circle as Aklavik, it cost the Post Office Department $41,000 for a mail service once each month in the summer time and once every two months in the winter time. When we called for tenders inaugurating the air mail service into the Mackenzie valley from the head of steel we got the service for only $5,000 more than the service which had been given, and rendered it fortnightly.

At that time we inaugurated an air mail service between Montreal and Albany which developed into a paying proposition. In order to give Toronto a footing equal to that of Montreal we attempted to inaugurate an air mail service between Toronto and New York, and there again between 1928 and 1930 the Post Office Department did not get from the business men of the large city of Toronto the encouragement the department deserved for the advances it was making in air mail delivery. That project had to be abandoned after a time; I believe it was abandoned by the late government, and I am not criticizing them for taking that action.

I heard a remark which, I think, should not be allowed to go unchallenged. Whether it referred to the internal administration of the Post Office Department or to the postal service in general, I do not know, but I interpreted it as referring to the Post Office Department in general. The statement was made that we had the most antiquated service known. Let me point out—

An hon. MEMBER: Who made it?

Mr. VENIOT: It was made by the hon. member for Winnipeg North.

Mr. HEAPS: No, I did not refer to an antiquated service.

Mr. VENIOT: No, it was the other representative from Winnipeg.

Mr. WOODSWORTH: I did not say anything about antiquated services.

Mr. VENIOT: You did not?

Mr. WOODSWORTH: No.

Mr. VENIOT: Then, I cannot understand English.

Mr. SPENCE: I am the victim.

Mr. ELLIOTT (Middlesex): He started it.

Mr. VENIOT: All right, I stand corrected. Let me say that I am not claiming credit for the Liberal party when in office or for any steps which may have been taken when I may have been in office as Postmaster General, but I am claiming credit for the men in the service. I want to say here and now that the mail service, and especially the outside service handled and administered from head office—

Mr. SPENCE: Would the hon. member allow me to interject one word? When I referred to antiquated service I made no condemnation of the men working in the service. The service is certainly good; there is no doubt of that. I was speaking about the economy of the department; that is the respect in which I say that the service is antiquated.

Mr. VENIOT: I want to say on behalf of the men carrying on the administrative work—

Mr. SPENCE: I praised the men, and the hon. member cannot do any more than I did.

Mr. VENIOT: I am glad I have driven the hon. member into saying that.

Mr. SPENCE: No.

Mr. VENIOT: Otherwise we would not have heard a word from him.

Mr. SPENCE: Yes, you would.

Mr. VENIOT: He did not say it at the time I was Postmaster General.

Mr. SPENCE: I said nothing at all then.

Mr. VENIOT: He never gave credit even to the employees in the service. Let me say that the postal service carried on in Canada is second to none in the whole world. I am not talking about the financial end, or the economy of the thing—

Mr. SPENCE: That is what I was talking about.

Mr. VENIOT: The postal service in Canada, both air mail and ordinary mail, is second to none in the world. In 1928 we had a request from France to allow one of our officials to go over there and explain to them the system we were carrying on, so that they could amend theirs to meet existing conditions. They accepted our way of doing things. In 1929 the assistant Postmaster General at Washington came here to consult with one of the officials who is now sitting in front of me as to the best method of carrying on air mail delivery in the United States. They changed their system, under which they had suffered enormous deficits every year, and adopted the Canadian system.

May I say a word on behalf of those with whom I worked at the time I held the office of Postmaster General, and may I pay due credit to those men who under all governments in years gone by have given and even at the present time are giving their attention to the perfection of the postal service in Canada, and have brought it to its present state of development. It stands second to none in the world.

Mr. SPENCE: It is only fair to permit me to say a word, because this has been put over me several times in the House of Commons. It was put over me when I was criticizing the experimental farm. I have not criticized the service given by the Postmaster General. I talked about an antiquated system, the way business is done. The service of the men is perfect, and I do not want my hon. friend to think I am criticizing it. We are getting the best service the Post Office Department can give. I have to pay the present Postmaster General a compliment by saying that I believe he has a vision of the future better than some who think they have it, and he will get even a better service. He may adopt the system I have asked him to adopt, and may get a proper accounting system, get down to business and do business as business should be done.

Mr. DUPUIS: You cannot divorce a man from the service.

Sir EUGENE FISET: I have been informed by an official of the Post Office Department that the salary of the postmaster in the town of Mont Joli in Rimouski is over $4,000 a year. If so, I suppose it is a post office which falls under the control of the civil service commission, as the salary comes above the $3,000 mark. Is there a rule of age, so far as this particular postmaster is concerned? Surely, if he comes under the control of the civil service commission, he should be retired at the age of sixty-five years. May I inform the minister that this postmaster is seventy-five years old, and if the minister will take the trouble to inquire in his own department I believe he will find there are special reasons why this office should be reclassified and a new appointment made.

Mr. ELLIOTT (Middlesex): First of all may I say a word to the hon. member for Vancouver South who, I believe did not get the information he wanted in connection with air service. I do not think it advisable while in committee to go into the present condition of affairs. I am not in a position to make an announcement as to what will take place, because that involves a question of government policy, but I would say to the hon. member that if he would care to come and see me I would be pleased to discuss the matter with him and give him or any other member of the committee estimates as to the cost of the service.

To the hon. members for Parkdale and Gloucester may I say that I did not understand the hon. member for Parkdale to cast any reflection upon the people working in the service, or most certainly I would have said something in reply. I believe there has been a misunderstanding between the two hon. gentlemen. It is my understanding that the hon. member for Parkdale was criticizing the methods and not criticizing the employees.

Mr. SPENCE: The minister is right.

Mr. ELLIOTT (Middlesex): As the minister who is trying to administer the department and as one who realizes that he cannot learn all about it in a few months, I wish to pay tribute to the men who have occupied that position in the past. We have had a great many excellent postmasters-general and I know that in most cases they have done their very best and have given to the public a service that has not always been thoroughly understood or thoroughly appreciated.

There is a good deal to be said, I take it, for the view of the hon. member for Parkdale that this should be a paying service; that we should charge enough to make the various branches of the service pay their way. If ever there was a time in the history of this country when that was absolutely necessary this is that time. I assure my hon. friend and other members of the committee that in every branch of the service we are endeavouring to see what can be done that the charges we impose will more nearly meet the expenses which we are forced to incur.

In answer to my hon. friend from Rimouski (Sir Eugène Fiset) with regard to postmasters under the civil service act, sixty-five years is the age limit, I understand.

Sir EUGENE FISET: At which they can stay in?

Mr. ELLIOTT (Middlesex): There is not, I understand, an age limit for retirement for revenue postmasters; each case stands on its own merits.

Sir EUGENE FISET: Does the minister realize what he is saying? I said a moment ago that this post office is under the control of the civil service commission. The minister need not consult his officials because I know as much about the matter as they do. I would like this post office to be classified through the civil service commision, and once this classification has been made I think the postmaster who is above seventy-five years of age should be retired. If the minister wants a precedent I will give him one. In 1930 the post office at Rimouski was classified by the civil service commission and salaries fixed for the postmaster and his assistant, and the postmaster was retired. I want exactly the same precedence to be followed with regard to the Mont Joli post office.

Mr. HEAPS: Is the present postmaster Liberal or Conservative?

Sir EUGENE FISET: I have not the faintest idea. I know he is over age and is no good.

Mr. ELLIOTT (Middlesex): I will look into the matter and will see what can be done.

Mr. WILTON: The Postmaster General made reference some time ago to an expenditure of some $18,000 as an indemnity against loss on postal packages. I am assuming that this refers to packages which are covered by insurance or special postage. If so, would the minister say whether a record is kept of the amount of money which the department receives from insurance or special postage on parcels as against this $18,000 which has been paid out in claims. Is there a census or check-up made in that connection to ascertain the predominating cause of this miscarriage of mail? Is it due to misdirection or postal inefficiency or what?

Mr. ELLIOTT (Middlesex): The regulations provide for indemnity for loss of or damage to or abstraction from parcels that are insured. The amount of the indemnity is governed by the fee paid, with the provision that in no circumstances may the amount be in excess of the actual value of the loss or damage incurred. The claims are paid out of the general funds except where malfeasance or misfeasance is shown, when the employee responsible is required to make good the amount or such portion of it as is deemed advisable under the circumstances, the balance being taken from the guarantee fund. On page 13 of the report of the Postmaster General for the year ended

March 31, 1935, all the figures are given. The approximate number of insured parcels mailed was 14,540,282; number of claims adjusted, 6,673; temporary adjustments, 960; claims paid, 5,713; total disbursements, $23,425.33.

Mr. WILTON: Is a bookkeeping record kept of the amount received by the Post Office Department from this insurance service? What I am trying to get at is this: While you may pay out $18,000 or $20,000 in claims, what amount do you receive from insured and special postage? Is a separate account kept of the revenue received from insurance and special postage letters? Is the matter on an actuarial basis?

Mr. ELLIOTT (Middlesex): I have not the information before me, but if we have it in the department I shall endeavour to supply it.

Mr. WOODSWORTH: There are two criticisms of the service which have been given me by certain business people. One is in regard to delay in delivering letters owing to holidays. In many places now Saturday is a half holiday; there is no delivery on Sunday, of course, and it is becoming the practice on a number of occasions to give a holiday on Monday, which means that the mail is not delivered for two and a half and sometimes three days. In the case of urgent business or sickness or anything of that kind that is a very long delay. Personally I do not want to see the men deprived of their holidays, but I think it might be possible by a slight increase of staff to arrange that there would not be that long delay.

Mr. ELLIOTT (Middlesex): I quite agree with what my hon. friend has said. It is a difficult matter to weigh accurately against the inconvenience that may be caused by delay in delivering the mail the convenience of those who are working at its disposition. But complaints have been very few. Difficulty does arise in cases like armistice day when it falls on a Monday. There is the short day on Saturday, and then Sunday. Or take Good Friday, followed by a short day Saturday, and then Sunday and Easter Monday. We try to keep sufficient staff on during such holidays to give a reasonable service. We do not attempt to provide anything like the ordinary service, but we do provide a reasonable service. The question arises as to whether the ordinary employees should be brought back and paid overtime. At the present time it does not seem to be easy to pay overtime in connection with these matters, but it is possible we shall have to consider a more strict insistence upon employees coming back on holidays such as Good Friday, Easter Monday and so on.

Mr. WOODSWORTH: I had no intention of increasing the work of the employees, but I think in these cases the public is entitled to service. In the larger places it should be possible to have a reserve staff and it should not require a great number of people to give the service. Very frequently reserve teachers are carried on the staffs of our schools in case of sickness among the regular teachers, and possibly the same method could be followed here. Another question: Does the department use the different bus lines for the delivery of mail? I think we have all had some experience with the delivery of newspapers by buses. Very often these newspapers arrive at their destination some hours before the regular mail. Unless the department keeps up with the regularly accepted means of transit, it is going to be left behind.

Mr. ISNOR: What does the hon. member mean by bus lines?

Mr. WOODSWORTH: I am referring to the passenger buses that are running all over the country. If the newspapers can make use of these buses for delivery purposes, I see no reason why the department should not do likewise. I have seen cases where mails have arrived in surburban districts two or three days after newspapers had been delivered by buses.

Mr. ELLIOTT (Middlesex): The only bus lines that can be utilized to advantage are those which run their buses on schedule. Such lines are utilized under contract where an improvement in the service can be brought about.

Mr. WOODSWORTH: For first class mail?

Mr. ELLIOTT (Middlesex): For whatever mail is necessary to be carried between the particular points. It may not all be first class mail.

Mr. GREEN: What time would be necessary to carry mail by air from Montreal to Vancouver?

Mr. ELLIOTT (Middlesex): The only answer I can give is not much of an answer; it all depends upon the speed of the plane carrying the mail. It has been worked out at between eighteen to twenty hours.

Mr. GREEN: What additional time would be required to complete the service from Montreal to Halifax?

Mr. ELLIOTT (Middlesex): Five hours or perhaps a little more.

Mr. GREEN: I understand quite a lot of air mail is sent from Vancouver to eastern Canada through the United States. Has the minister any idea as to the quantity of air mail originating in Vancouver?

Mr. ELLIOTT (Middlesex): We have a service which runs from Vancouver to Seattle to connect with the United States air lines, but I have not the information as to what amount of air mail originates in Vancouver. That information is available and can be provided.

Mr. GREEN: What is the total cost per annum of the present air mail service?

Mr. ELLIOTT (Middlesex): The total cost of the twenty-seven routes is $267,738.

Mr. GREEN: Is that all by contract?

Mr. ELLIOTT (Middlesex): Practically all.

Sir GEORGE PERLEY: May I suggest to the minister that he place on Hansard the statement from which he is now reading? We would then have all the details available.

Mr. ELLIOTT (Middlesex): I shall be glad to.

Mr. GREEN: How many air miles are flown in the postal service?

Mr. ELLIOTT (Middlesex): I could give that for the different services but they do not seem to be totalled. That information appears on the statement which I will place on Hansard.

Mr. GREEN: Does that show the amount carried?

Mr. ELLIOTT (Middlesex): Yes, it gives the volume of mail carried. The total poundage carried is 1,126,321, but I do not seem to have the total number of miles flown. Rates of payment, duration of the agreements and other details appear in the statement which my right hon. friend has asked to be placed on Hansard. The statement follows:

AIR MAIL

| Name of Service | Contractor | Frequency | Distance (Round trips) |
|---|---|---|---|
| | | | Miles |
| 1. Montreal-Albany (southbound only)... | Canadian Colonial Airways, Ltd., Montreal, P.Q. | Daily except Sunday.... | 200 (one way only) |

Mr. GREEN: Has the experience of the department been that passenger and freight traffic by air is promoted by the use of the air mail service?

Mr. ELLIOTT (Middlesex): My information is that it does increase the traffic.

Mr. DOUGLAS: I do not know that I am familiar enough with the terminology of the department to elicit the information I desire, but as I understand the matter, a small post office does not come under the civil service. That is to say, such a postmaster would hire whatever help he might require and operate on a commission basis.

Mr. ELLIOTT (Middlesex): That is correct. The post office with a revenue of $3,000 or under would not come under the civil service commission.

Mr. DOUGLAS: What would be the revenue of the post office at Weyburn, Saskatchewan?

Mr. ELLIOTT (Middlesex): For the year ended March 31, 1935, it was $22,496.50.

Mr. DOUGLAS: Post offices with a revenue of $3,000 do not come under the civil service commission.

Mr. ELLIOTT (Middlesex): No; all those above $3,000 do.

Mr. DOUGLAS: Well, the post office at Weyburn does not. I wonder why. It is in the same position as a small post office; the postmaster merely receives a commission and he hires the help. Why is it not under the commission?

Mr. ELLIOTT (Middlesex): It is under the commission in the matter of appointments. The $3,000 limit applies to the appointment of postmasters.

Mr. DOUGLAS: The postmaster at Weyburn may be appointed by the civil service commission but he hires the members of the staff and fixes their salaries. The office is not subject to the civil service commission. I submit that a post office with a revenue of $22,000 should be directly under the civil service commission.

Mr. ELLIOTT (Middlesex): That is quite arguable, I think. I cannot tell my hon. friend offhand the number of post offices with revenue approximating this amount that come under the commission.

Mr. DOUGLAS: Why is it that this post office is not under the commission?

[Mr. J. C. Elliott.]

Mr. ELLIOTT (Middlesex): Of course these offices are all inspected regularly. The reports are that the service in this particular post office is adequately performed by the present staff, and of course the service costs less than it would the other way.

Mr. BETTS: I am gratified at the statement of the Postmaster General that careful consideration is being given now to the trans-Canada air service. I was very much interested to hear the hon. member for Gloucester speak of the efforts he made to effect that. I know something at first hand of what he did, and I know that since his regime a good deal of water has flowed under the bridge, as I think the figures will show. Taking the air mail, there is an interesting comparison between the poundage carried in 1933 and in 1935. In 1933 there were 539,358 pounds, and in 1935, 1,126,084. The hon. member for Vancouver South spoke of the increase in passenger and other types of flying which very often accompanied the development of the air mail service. The figures I have taken from the report of the department of civil aviation really answer his question. For instance, although the air mail in pounds doubled between those two years, the amount of freight carried increased in a most extraordinary way. In 1933—these figures are for all Canada and of course go outside the mail service proper—there were carried by air 4,205,901 pounds of freight, and by 1935 that quantity had increased to 26,439,224, almost six times as much. The increase in passenger traffic between those two years was from 85,000 odd to 177,000 odd; and if the figures are followed right out one will find extraordinary increases all along the line, all of which goes to show that if you build up the air mail service you will build up the passenger and freight traffic.

As I understand the situation, it goes outside the department of the Postmaster General but it is something in which he is vitally interested, in his efforts to improve the postal service. I understand that there are under consideration plans which will involve the completion by March, 1937, of the ground services, airdromes, lighting and so on, from Winnipeg to Vancouver. Then, as to the prairie air services, which are in fairly good shape now but need reconditioning, parts having been abandoned—that is, the jump from Winnipeg east and west, to the mountains in the west and to the northern Ontario country in the east—that will involve a certain amount of installation of wireless in the mountainous sections and the completion of certain airdromes, and that work

is well under way. I understand—I should like to have corroboration of this—that by the spring of 1938 the scene will be all set for a coast to coast air mail service. I am told that the run can be made in one day with machines in their present state of development, and at the present rate of progress we can expect something much faster by 1938. At any rate, at the present time the run from Halifax to Vancouver, can be made in twenty-four hours, or so I understand.

I would urge on the minister and on the government the extreme desirability of expediting this program if it can possibly be done. The airplane to-day is to the railway train what the railway train was to the ox-cart one hundred years ago, and there never was a country on the face of the earth that needed a properly developed air service from coast to coast as this country does. It will do more to weld the west and the east together than anything else; and although, as the hon. member for Gloucester said, back in his day there was a certain degree of hesitancy in taking advantage of this service, I think that has been very much overcome. I believe the business world is more than ready for a daily service from coast to coast. I am convinced that it will grow from an air mail service to a modern passenger service. Of course air transportation as far as passengers are concerned is not a future possibility but a present actuality. One is far safer in the air on any standard line than on a highway in a motor car, no matter how good your driver on the highway may be; and one is very nearly as safe—I think the figures will show that one is actually as safe —flying with Imperial Airways or Pan-American Airways as one is in a train.

This country, because of its geographical situation, needs an air service as much as it needs anything. Consider also the future of the young people—young men and even young women—who have been learning to fly and who would be employed should the service be adequately developed. I know something about that at first hand because I had the honour to serve for some years on the board of directors of the London Flying Club, and for one year as its president, and I know the sacrifices that are being made by young Canadians in learning this new science. Last year London had the honour to be first in this respect in the dominion; we had ninety-one young pilots under instruction and we qualified seventeen. These young men are not the gilded youth of the town; most of them work for their living. They will come to the club and use the money they earn to take, perhaps, one hour's instruction. You will not see them again for perhaps a month; they will be working and saving; then they will come back, and eventually they will qualify. That is happening right across the dominion, and with very little government assistance. A few years ago the system was that when a flying club acquired a plane the department would provide another plane equally good. That arrangement was done away with, and the present system is that the Department of National Defence will give one new plane every three years to a club which complies with certain conditions. If you have ever tried to teach young men to fly you will soon realize that one plane every three years does not go very far, because planes are fragile, and this means that these clubs have scraped along through the efforts of their members and of public-spirited citizens. That spirit has been displayed by flying clubs right across Canada, and justifies the Post Office, National Defence and every other department in getting behind this work, because the men in the ranks, if I may put it in that way, have done their part and the government can and, I think, should do more. I believe I may say without offence that we had during the war the finest pilots in the world. We still have the same type of young men. They are making sacrifices to be allowed to take their part in this great means of transportation. Anything that the postmaster general can do along these lines will have my most hearty cooperation. I wish him Godspeed with this work.

Mr. THOMPSON: Does the item under consideration contain any appropriation for rural mail deliveries?

Mr. ELLIOTT (Middlesex): If my hon. friend will look at the item under mail service he will notice "mail service by ordinary land conveyance, including rural mail delivery, $6,200,000."

Mr. THOMPSON: I wish to protest against the present method of employing rural mail carriers. It is nothing less than a shame to ask people to tender for these positions and have them competing against each other with the understanding that the lowest tender will be accepted. That is the case at the present time, and it means that the department always has a man drawing the mail who has put the lowest value upon his own services. Why should this be when every other officer or employee of the department is appointed by the civil service commission? Take the caretaker who sweeps the floor and dusts and generally looks after a post office. A

salary is set, applications are invited, and the civil service commission selects from among the applicants one who, they consider, is the best man. But when it comes to choosing a farmer to be employed on the rural mail the department says: Go to it, boys, we will give it to whoever will do the job the cheapest. I maintain that every rural route should be carefully gone over. Some are worth more remuneration than others. Take a rural route along a highway where the snow is ploughed off in the winter time so that you can run a car. The service could be done more cheaply on that route than along a back-country road. A fair estimate of the cost per mile of running the rural routes should be placed upon each individual route, say $30, $40 or $50 a mile, as the case may be, for so many miles. Then let the department apply for contractors to carry the mail and have the civil service commission select a man who, they feel, is the best man to do it. To-day we are not getting the best class of men because we always take the lowest tenderer, the man who places the lowest value upon his own services. Many of these people are carrying mail to-day for less than it takes to feed their horses. That is absolutely wrong. I brought this point to the attention of the Postmaster General and of the Minister of Justice in the late government, and their answer was that at that time the finances of the country were not in a position to carry an extra burden. But I say that it is absolutely unfair to expect the rural people to be employed in this way and to make a discrimination against them in comparison with other employees of the department. I know the minister will realize the position and I ask him to take it into his serious consideration. I believe that the country at large is of the opinion that an injustice is being done under the present system of awarding rural mail contracts.

Mr. DOUGLAS: I should like to revert to my former question; but does the minister wish to answer the previous speaker's question?

Mr. ELLIOTT (Middlesex): A great many people entertain somewhat the same idea as has been expressed by the hon. member for Lanark with regard to rural mail carriers' remuneration. I cannot agree with him that this is something that should be left to the civil service commission, any more than I would agree that contracts for the erection of a building, which are now let by tender, should be placed under that commission. I think exactly the same principle applies to both. Unfortunately conditions in the country to-day are such that the tenders are very low. I regret that they are as low as they are, but that is because they are comparable with what men in the rural parts of Canada are receiving for similar services. I would say to my hon. friend that I know of no rural mail contract to-day which you would not be able to get many farmers in the district to carry on for the amount we are now paying.

Then my hon. friend suggested that we should set a minimum rate. I regret to say that these men obviously feel it is in their own best interests to carry the mail at the amounts of their tenders, and surely no man can complain very much if he gets the work at the price for which he offers to do it. My hon. friend knows what would happen in the rural districts to-day if legislation were enacted providing a rate for rural mail delivery out of all proportion to the amounts paid other people performing similar services in the district. Let me give a case in point. Tenders were called for not long ago in connection with a route for which, in the old days, there were usually six or eight applicants. In this instance forty-two tenders were sent in, many of them from the best farmers of that community. That contract was let for much less than the amount of the previous contract. As a matter of fact the highest tender was well below the amount of the former contract. But let me point out the great difficulty in saying that there should be a minimum amount per mile, and that contracts should not be let for smaller amounts. There may be just as much difference between the value per mile of two different mail routes as between the horses that are used to deliver the mail. There is a great difference in conditions in this country. In some parts we have snow for only a short time while in others we have snow for a much greater length of time. I appreciate my hon. friend's interest in the matter, and it is a question to which a great deal of consideration has been given by the department, but I do not see how we can devise any means that will give the people interested a fairer opportunity than they have at the present time, if the contracts are let fairly.

Mr. THOMPSON: I cannot follow the minister's argument when he compares a rural mail contract with the contract for a public building. There is no comparison whatever. I venture to suggest that if the position occupied by the minister to-day were put up for tender many men would offer to do it for less.

Mr. ELLIOTT (Middlesex): Or my hon. friend's position.

Mr. THOMPSON: Yes, or my own position. I ask the minister if he thinks this system is fair, at present when times are hard and farmers are trying to beat each other for these little jobs, taking them on for much less than they are worth. I know of two rural mail routes, with deliveries three times a week, which were tendered for last winter at the rate of eighty-seven cents a day. I said to the man, "Why, you are foolish. Why do you do it?" He replied, "Well, I am hard up. I have a boy at home and we have a horse there, and he can make that eighty-seven cents a day. It will be that much money coming in." I say it is absolutely wrong that people in this position should be asked to tender for these jobs. I agree with the minister when he says that different routes should command different prices. Some routes are much more difficult; road conditions vary, but an estimate could be made of the fair value per mile for any particular route. Tenders could be invited, and then either the minister or the civil service commission could select the very best man from among the applicants. To-day the lowest tender is accepted, which is the tender of the man who puts the lowest premium on his own services.

Mr. ELLIOTT (Middlesex): There is just one word I should like to say with regard to a previous remark made by my hon. friend, though I am anxious to make some progress with my estimates. If my hon. friend thinks we are not getting at the present time a good service from the rural mail carriers he is under an erroneous impression, because my officials tell me that at this time, as a general rule, these men are rendering excellent service.

Mr. BOULANGER: I want to say that I am in agreement with most of what has been said by the hon. member for Lanark in regard to these rural mail men. It is evident that the system now in existence is illogical and unjust. The government should set an example. We are trying to force those in industry and trade to pay their employees fair wages, and we are trying to stamp out cut-throat competition. The government should set an example by paying a decent remuneration to those who are in the service of the state, and by stamping out cut-throat competition among those who desire jobs or positions with the government. The trouble in regard to mail contracts is that very often people tender when they have no idea whatever of the value of the service. They may not have the remotest idea of what the work is worth, so they put in ridiculously low tenders and under the act the Postmaster General is bound to award the contract to the lowest tenderer, even though it may be absolutely out of proportion to the amount of work involved and the service to be rendered. I have been told that in days gone by it was possible to make some arrangement to avoid, in some measure, giving contracts to men who tendered at ridiculously low rates, but as a general rule I think it can be said that contracts are let to the low tenderers. Very often the low man has no idea of what the service is worth and he cuts the price, if I may so express myself.

At six o'clock the Speaker resumed the chair and the house took recess.

## After Recess

The house resumed at eight o'clock.

## PRIVATE BILLS

CONSIDERED IN COMMITTEE—THIRD READINGS

Bill No. 29, for the relief of Sonya Shenkman, otherwise known as Sadie Shenkman.—Mr. Factor.

Bill No. 30, for the relief of Louisa Markland Molson Blaiklock.—Mr. White.

Bill No. 31, for the relief of Rita Constance Beatrice Gurd Rykert.—Mr. Lennard.

Bill No. 32, for the relief of Helen Elizabeth Ham Lilley.—Mr. Davidson.

Bill No. 33, for the relief of Mary Kaydouh Massabky.—Mr. Hyndman.

Bill No. 34, for the relief of Dora Louise Gustiana York.—Mr. White.

Bill No. 35, for the relief of Violet Charlotte Dyke Duiven.—Mr. Jacobs.

Bill No. 36, for the relief of Irene Louise Penny McKee.—Mr. White.

Bill No. 37, for the relief of Esther Shapiro.—Mr. Lennard.

Bill No. 38, for the relief of Thomas John Howard Fox.—Mr. Lennard.

Bill No. 44, for the relief of Ruth Fitzrandolph McMaster.—Mr. Jacobs.

Bill No. 45, for the relief of Agnes Mercer Daniels.—Mr. Jacobs.

Bill No. 46, for the relief of Gerald Thompson Miltimore.—Mr. McKay.

SECOND READINGS

Bill No. 48, respecting The Pension Fund Society of the Bank of Montreal.—Mr. Jacobs.

Bill No. 49, for the relief of Birdie Louise Coleman Wilson.—Mr. Jacobs.

Bill No. 50, for the relief of Solomon Hyman, otherwise known as Saul or Sam Hyman.—Mr. Jacobs.

Bill No. 51, for the relief of Lewis Gould.—Mr. Jacobs.

Bill No. 52, for the relief of Hyman Stotland.—Mr. Hanson.

## SUPPLY

The house in committee of supply, Mr. Bradette in the chair.

### POST OFFICE DEPARTMENT

The CHAIRMAN (Mr. Bradette): When the committee rose at six o'clock we were considering item No. 263, the outside service of the Post Office Department, $30,927,727.50.

Mr. BOULANGER: Mr. Chairman, when the committee rose at six o'clock I was saying that the government should set an example in fair wages and fair competition, and I hope that the Postmaster General (Mr. Elliott) will take my remarks and those of the hon. member for Lanark (Mr. Thompson) into consideration and, when the financial conditions of the country permit, do something to improve the position of the rural postmen.

The point which was raised before six o'clock by the hon. member for Lanark is not a new one in this chamber. It has been raised, I think, at every session since I have been a member of the house. In 1929 it even formed the subject of a motion of want of confidence in the government, moved by the Hon. Mr. Guthrie, and we had a full dress debate upon it lasting two or three days. At every subsequent session the matter has been discussed and hon. gentlemen on both sides of the house have endeavoured to persuade the Postmaster General that something must be done for the under-dog, the rural postman, but we have not succeeded yet. I shall not take the time of the house to read the opinions which were expressed by hon. members, but as I said a moment ago from both sides of this chamber came expressions of opinion in favour of improving the conditions of the rural postmen. In the debate on the motion that was moved by Mr. Guthrie I might mention by name a few of the members who spoke in favour of the rural postmen: Hon. Mr. Guthrie; Hon. Mr. Stewart, the former Minister of Public Works; Mr. Anderson, representing one of the Toronto divisions; Mr. MacLean, representing Prince, Prince Edward Island; Mr. Jenkins, also representing Prince Edward Island, Mr. Pouliot, representing Témiscouata; Mr. Boyes, and Miss Macphail. With the permission of the house I think I might quote the opinion of one member who was loved by everybody in this chamber and who passed away only a few days ago. I refer to the late Mr. Spotton, who was one of the most genial members of the House of Commons, and I am sure that all of us who knew him regret very much his untimely death.

In the session of 1931 this question again came before the house. It will be remembered that one of the promises which were made by our friends the Conservatives during the 1930 campaign was to improve the lot of the rural postmen. Circulars were sent to postmen and rural mail carriers everywhere in the country, and it was promised that if they voted for the Conservative party, and that party were returned to power, something would be done to improve the conditions under which they worked. In the session which followed the change of government in 1930 the matter was brought up; some member of the house asked the then government if they were going to carry out the promise which they had made during the campaign to improve the lot of the rural postmen, and our friend the late Mr. Spotton on that occasion used words which I make my own. He said:

> It is true, as the ex-Postmaster General has said, that a square deal for the rural mail carriers was advocated by many on this side of the house, and I suppose I really led in that matter. It seems too bad that of all the public servants in the Post Office department, the rural mail carrier is the only man who has, every four years, to tender for his position. The men in the city who to-morrow morning dons a suit of clothes paid for by the Post Office Department, walks around a few hours, goes out in the afternoon and walks around a few hours more, receives $1,400 or $1,500 and two suits of clothes a year and has a retiring allowance; but the fellow who hitches up the old mare and drives over the muddy roads or snowbanks gets the least consideration of all. I have advocated a square deal for these rural mail carriers. The ex-Postmaster General is correct when he says that this party is on record in this respect, and when the finances of the country become more buoyant, when the deficit in the Post Office Department is wiped out, we shall look to the present government to give some relief to the rural mail carrier.

The Postmaster General has stated before in the house that it would take from four to five million dollars to bring the remuneration of the rural postmen up to thirty-five cents a mile, which is not an exorbitant figure.

Mr. ELLIOTT (Middlesex): Ten million dollars.

Mr. BOULANGER: I do not remember the figures exactly; I tried to find them in Hansard but I could not. It will require this amount to bring the remuneration of these rural mail carriers who perform a useful service for the state up to thirty-five cents per mile. I repeat that this is not an exorbitant figure. If that is true, it means that the

government of Canada is doing these men out of $10,000,000. Such a state of affairs cries out to heaven for relief. We should not allow these people who perform such a useful work to be so underpaid. I repeat again that in the matter of fair wages the government should set a good example and do something for these rural mail carriers.

It has been stated that the difficulty is the tender system. Certain people tender for contracts without knowing what they are worth and under the act the minister must award the contract to the lowest tenderer. If the Post Office Act needs amending, it should be amended. The Postmaster General stated that there was a great diversity in climatic and road conditions and geographical locations. That may be true, but I think it would be possible to classify these rural mail services into certain well defined classes. There are thousands of civil servants who vary according to competence, training and so on, and it is possible to grade these people according to their capacities and the work they perform. If that can be done with the tens of thousands of civil servants, I am sure it can be done with the rural mail carriers. It should not be any more difficult to grade and classify these services than it is to grade and classify the general civil service.

I hope the minister will give serious consideration to the plight of these men. As I said at the beginning of my remarks, I agree almost entirely with what the hon. member for Lanark has said, but I do not agree with him when he suggests putting these rural mail contractors under the control of the civil service commission. The civil service commission, the Civil Service Act and the so-called merit system are three of the greatest jokes in this country. The proof of this statement is the fact that whenever a new service is created, such as the national employment commission or the national harbours board, it is placed outside the control of the civil service commission. This shows that the government, whether Liberal or Conservative, have no faith in the so-called merit system, have no faith in the Civil Service Act and have no faith in the civil service commission. If the civil service commission and the Civil Service Act were working according to the intentions of those who framed the system, I would be the first to speak in favour of them. The fact is that more patronage and favouritism are to be found in the civil service now than existed before.

Mr. DOUGLAS: The minister stated that the revenues from the Weyburn, Saskatchewan, post office amounted to about $21,000. What income would the postmaster receive from that post office?

Mr. ELLIOTT (Middlesex): He would receive seventy per cent on the first $1,000, seventy per cent of the stamp revenue, thirty per cent of all revenue over $1,000 to $10,000 and twenty per cent up to $20,000. Since the committee rose at six o'clock I made an estimate of what that would be, based on the total revenue, and I find that it works out to a little over $6,000. This would pay the postmaster and his assistants. Perhaps I could answer another question, which I have no doubt the hon. member has in mind, as to why this is not a civil service post office. The fact that the revenue is over $3,000 would make this a civil service appointment, but it must first be graded in that way at the request of the officials of the the department. As long as that post office can be run as apparently it is being run, according to the reports of the inspector who visits the office from time to time, it is more economical to run it as a revenue post office and that is the reason why it is still being run in that way. It will still continue to be run as a revenue post office until a request is received from the department to have it put into grade 2B.

Mr. DOUGLAS: What revenue would that post office have to return before it would be made a civil service post office?

Mr. ELLIOTT (Middlesex): That is quite an arbitrary figure. As long as it is run as it is now being run, as long as the inspector reports the service as being satisfactory, there is economy in running it as a revenue post office. When it reaches a size which in the opinion of the department makes it advisable to place it in grade 2B, the request will be made to have it graded in that way.

Mr. DOUGLAS: I should like to urge upon the minister the placing of that office under the civil service. What I am about to say is not meant as any reflection upon any person who has occupied the position of postmaster. The present incumbent of the office is retiring and the office is now practically vacant. The present system lends itself to a great deal of abuse. The postmaster need not be a resident of the city for a good part of the year; he can pay very low wages to his assistants with practically no holidays; he sets the hours which the staff

must work and yet may make more out of the post office than the entire staff combined. He may be absent for six or nine months in the year and never handle a single piece of mail. I am not casting any reflection upon any person, but I know this can be done; I know it has been done. I think it would be more satisfactory to the staff from the standpoint of the hours they would have to work, the holidays they would get, the pay they would receive and the service they would give, if the office was brought under the civil service. I submit that for the consideration of the minister, particularly in view of the fact that the office of the postmaster in the Weyburn post office is to be vacant in the near future.

Mr. POULIOT: I support the hon. member for Weyburn, and I would ask the minister kindly to consider his request and do his best for the postmaster at Weyburn, paying him in sound money, because if he is paid in Aberhart money he will get nothing.

Mr. PELLETIER: Does the hon. member for Témiscouata know where Weyburn, Saskatchewan is?

Mr. POULIOT: I know, because it is in the district which is being flooded more than any other part of the country with false promises.

Mr. ROBICHAUD: The statement has been made that with a view to increasing postal revenues there should be an increase in postage rates. I cannot agree with that suggestion. In my opinion the best way to increase the revenues of the post office is to reduce postage rates and give us the penny postage which we had after 1896 and again after 1921. I hope this government will give us that, for it has been proved in the past that the lower rate brought in a greater revenue. The same applies to post office boxes. Some years ago, in my town at any rate, the charge for the smaller box was $1 and for the larger $1.50, and the rates were increased to $2 and $3 respectively, but instead of the revenue increasing it decreased and half the boxes are not used. What is the use of having boxes if the people are not using them? After all, the Post Office department is running a public service and in my opinion we are all wrong in increasing rates if we think this will result in increased revenues. This is true of customs tariffs; whenever you reduce the tariff you get an increased revenue and vice versa. I urge the minister to take this suggestion into serious consideration with his colleagues and give us the penny postage. The people are waiting for it.

[Mr. Douglas.]

Mr. TUSTIN: In the first part of the item, salaries and allowances, I notice a decrease of almost $125,000. Does this mean that salaries of employees have been reduced or that there has been a reduction in the number of employees, or does it mean that the service will be curtailed to that extent?

Mr. ELLIOTT (Middlesex): It does not mean that salaries have been reduced; the only reduction is the five per cent cut.

Mr. TUSTIN: What is the minimum salary paid to male employees in the post office?

Mr. ELLIOTT (Middlesex): It depends of course on the range of employment, starting with the office boy, who gets $420 to $660, increasing $30 semi-annually for the first eighteen months and then $60 annually. It runs from there right up to the salaries of city postmasters which I gave the committee this afternoon. It all depends on the grade.

Mr. HEAPS: Some observations have been made this evening with reference to rural mail carriers. I sometimes wish that something could be done to do away entirely with this competitive system of awarding contracts and if at all possible to have men working on a permanent basis. I do not know whether it is possible to evolve such a scheme, but I hope the minister will take into consideration something of that sort, because I believe that in conjunction with the officials of the department it might be possible to work out a scheme whereby in connection with mail delivery in the rural areas the men would work for something approaching a decent living wage. I understand that in certain parts of the country the Post Office Department has abolished mail collection by the old method of horse and buggy and has adopted the use of automobiles. Has the minister any information with regard to that new method of collecting mail in some of the larger urban centres?

Mr. ELLIOTT (Middlesex): There are only two places where the collection has been made by motor and that is in part of the Ottawa collection, and in Toronto which was done by officials in the service. In other cases it is left to the individual contractor to take mail from one point to another in such conveyance as he sees fit. It is quite apparent, however, that in a city like Montreal, in taking mail from the point of arrival to the point from which it is distributed some trucks should be used. A number of trucks are used to cover the distance. The rural mail carrier however can use, and in fact in a part of the season has to use, on a

great many roads, horse and buggy and, for a part of the time, horse and cutter; frequently he uses a car if he can afford it and the roads lend themselves to the use of a car. There is no regulation.

Mr. HEAPS: I suppose it makes no difference to the Post Office Department whether they collect the mail by automobile or by horse and buggy, but those who can collect by automobile can tender so low as to wipe out all opportunity of the man with horse and buggy. From what the minister has said it appears that in Montreal and Toronto the department itself collects the mail. Am I right in that assumption? Is the collection in Toronto done by contract?

Mr. ELLIOTT (Middlesex): Most of it is by contract but part of it is by motor service.

Mr. HEAPS: A motor service owned by the Post Office Department?

Mr. ELLIOTT (Middlesex): Yes.

Mr. HEAPS: Is there any reason why the department itself should not continue to operate its own collection agencies with its own motor vans which it has in different parts of the country?

Mr. ELLIOTT (Middlesex): There has been a change in recent years. In a number of instances where formerly the department owned its trucks and had the service performed by men hired by the department, it is now letting to contractors who own their trucks carry on the service themselves. The department finds it is cheaper to let the contracts by tender than to buy the trucks and engage the men to service them.

Mr. HEAPS: Do I understand that it is cheaper for the government to let these contracts by tender than to operate its own services?

Mr. ELLIOTT (Middlesex): That has been the experience.

Mr. HEAPS: May I now advert to one other point that I raised in the first part of the afternoon? I do not do so with the intention of reiterating anything I previously said on the question of having a proper balance sheet before us so that we can understand the actual position of the postal service of this country. But the Postmaster General admitted early in the afternoon that the system of accounting in respect of showing a proper balance sheet is antiquated, going back to almost the time of confederation, and I am sure that he must be extremely anxious to bring about a changed condition in that respect. In the past five years, prior to the advent of the present government, I raised that question on one occasion, but my appeal fell on somewhat barren ground. I thought that under the circumstances which prevailed two or three years ago it was hardly worth while repeating the effort. But the former Postmaster General has now gone to his everlasting reward, and I somehow feel that my appeal to his predecessor will fall on more fertile soil.

I have had some little experience of public utilities. I have served as chairman and otherwise on committees which have had charge of these public utilities, and I have always felt that the people have a perfect right to know the exact conditions pertaining to the operation of these utilities. I classify the Post Office Department as a public utility of the first magnitude. That it is so is indicated by the fact, reported by the Postmaster General this evening, that the gross revenue of the department is approximately $39,000,000. I think our present Postmaster General is big and capable enough to cut away a lot of the red tape that surrounds many of the things that are done in our Post Office Department. It differs from practically every other department in that it is a revenue-earner, giving something for what it receives. A person who purchases a three cent stamp and, by putting it upon a letter, sends that letter from Ottawa to Winnipeg or Montreal or Vancouver or Halifax, is getting excellent value for the money he expends. So I think we have a right to know exactly what position the Post Office Department as a public utility, is in from a financial standpoint. I do not think the amount of work involved in preparing such a balance sheet would be extensive. I believe that at a moment's notice the minister or his deputies could tell how many post offices we have in Canada; they could tell us on short notice how many of the buildings in which the department is operating are owned entirely by the government, and they could probably tell us how many post offices are rented.

In common with the Postmaster General and those who preceded him I wish to pay tribute to the officials of the department from the highest to the lowest. They are giving excellent service. But what I am concerned with this evening is something apart from the service which we receive by way of collection and delivery of our mail; it has to do with the financial structure, the financial statements which we should receive each year and have not received, goodness knows for

how long. I think a proper system of accounting could, with very little effort and very little delay, give parliament a full, concise and clear statement of the position of the department. It was shown this afternoon that there is an apparent surplus of $3,000,000. Would it be asking too much to request the minister to promise the committee at this time that he will assign some one in the department to the preparation of a proper financial statement showing the number of buildings which the government has, the actual cost of maintaining those buildings, and the interest charges on them? I think the information would be of value to the Post Office Department, in addition to giving us knowledge which we now lack. The minister stated this afternoon that it might be difficult to obtain this information because other departments occupy space in some of the post office buildings. It is true that in some of those buildings space may be taken by the Department of Public Works and the Department of National Revenue. But I should like to know why the Department of National Revenue should have space given it by the Department of Public Works when the former is a department which collects revenue. Is there any reason why the Department of National Defence, if it occupies space in these post office buildings, should not pay its share of the cost from its own appropriation?

It might take a few minutes to get the information, but, once obtained, it would be available for all time to come and could be supplemented or subtracted from as time and conditions might determine. So I make this appeal to the minister to put together for the benefit of the house and the country a proper statement showing the actual condition under which the Post Office Department is working from year to year.

Mr. MARSHALL: As a new member, I should like to direct to the minister a question which, when answered, will enable me to avoid asking a lot of unnecessary questions. It has reference to the financial statement which has been read, and in which I am interested. In the reports of both the auditor general and the Postmaster General there is a large mass of information. On pages 6 and 7 of the report under discussion I find a general financial statement covering the year ended March, 1935. To my mind, at least, it is as clear as some of the financial statements issued by banks and other financial institutions. I find—to quote from this statement—that the net revenue for the year 1934-35 was $31,248,324.47, and that the expenditures for the same period were $28,974,316.53. In other words there was a profit of $2,274,-007.94. This statement goes on to say that if the Post Office Department had been indemnified for the expenses imposed upon it through the franking privileges enjoyed by the various departments of government the revenue would have been increased by approximately $750,000, thereby increasing the surplus to the same extent. I see no reason why that sum should not be credited to the revenue account and charged up to the Minister of Finance. This report goes on to say that there is also a direct charge against the Post Office Department for carrying on savings bank business. This costs the department over $60,000 yearly, for which it receives no remuneration whatever, but its expenditure is increased by that amount. Again I see no reason why the Post Office Department should not be credited with that amount, which could be debited to the Minister of Finance.

The question I should like to ask at this time is this: Supposing there was added to the expense account an amount equal to the rents of the various buildings throughout the country, would that give a true picture of the financial situation of the Post Office Department? In other words, taking this mass of information which we find in the auditor general's report, plus the information in the Postmaster General's report, if we add to the expense account the amount chargeable to the Post Office Department for buildings, would that, in the opinion of the minister, give us a true picture of the whole situation?

Mr. ELLIOTT (Middlesex): That would be substantially so, I should think. I am not quarrelling greatly with either of the two hon. gentlemen who have spoken in regard to this matter. Of course these expenses and rentals for buildings were small matters in the early years, when this system was commenced, but they have grown to great proportions since that time. The hon. gentlemen said I had stated that this was an antiquated system, but I think he has in mind what someone else said. I say this is a system that has been in force practically since confederation. That may make it a little antiquated. As far as this statement is concerned, I think it is a fairly accurate statement—it is carefully audited—of the finances of the Post Office Department apart from any charge which might be made for the rental of the buildings and the services of the caretakers.

I do not know whether the hon. gentleman who last spoke was in the committee when this question was discussed this afternoon, but we went into the matter at considerable

length at that time. I quite agree that it would be of value to this committee, particularly in times like these, to know as closely as we can get it—and we can get it fairly accurately—what this service costs. There is no question about that. There is, of course, the depreciation, which runs into many millions of dollars. There is the heating of all these buildings—

Mr. DUNNING: The equipment.

Mr. ELLIOTT (Middlesex): Yes, the equipment, some of it very expensive. There is all the belting and all that sort of thing which is put into a building originally, and a great deal more which is put in subsequently. That is all supplied by the Department of Public Works and is not charged against the Post Office Department.

Mr. DUNNING: And tractors.

Mr. ELLIOTT (Middlesex): Yes, there are tractors and a great many other kinds of equipment. I notice the alacrity with which my colleague the Minister of Finance refers to the enormity of that cost, and it is just possible that we have reached the time in the history of the finances of this country when we must take drastic steps to try to balance the departmental budget if this is to be reasonably close to a service at cost. From what I have heard in the chamber this afternoon it is quite apparent that the feeling of this committee is that in a department such as this, producing a revenue of $39,000,000 annually, we should not have too large a deficit as between actual revenue and actual cost.

Mr. DUNNING: There should be no deficit.

Mr. ELLIOTT (Middlesex): The Minister of Finance tells me, as he has told me before very positively, that there should not be any deficit.

Sir GEORGE PERLEY: Has not the minister overlooked the fact that his department does a good deal of work for other departments without getting paid for it?

Mr. ELLIOTT (Middlesex): Oh, yes, there is no doubt about that.

Sir GEORGE PERLEY: Has not the hon. gentleman overlooked that fact?

Mr. ELLIOTT (Middlesex): An hon. member has just referred to the fact that it costs $750,000 a year for the franking privileges enjoyed by the various departments and by the different branches of parliament. There is no question about that. I do not think the request that has been made is unreasonable, and I may say to my hon. friend from Winnipeg North that after the committee met previously I asked the Department of Public Works if they would be able to furnish us with an estimate, as accurate as it could be made, of just what was the cost that has not been taken into account in the figures appearing in this statement. I think it is only fair to members of the committee that we should have that information, and in making that statement I am not criticizing the system which has prevailed in the past. Looking over the history of the Post Office Department for many years, I think it has had a creditable record. From time to time the postal rates have been changed, and in answer to my hon. friend from Kent, N.B., who wished to get back to two cent postage may I say that we can get back to two cent postage when the business of this country gets to the point where we shall be able to secure the revenue which will enable us to reduce the rates to that point. We cannot do that at the present time. It may be that we shall have to make a more strenuous effort to balance our budget than we have ever been required to make in the history of the department. The Minister of Finance tells me that we must do so, and I am satisfied he is right. In connection with the information for which I have asked, however, I am bound to say that I know the Department of Public Works is very, very busy at the present time, and my own department is equally busy. If any of my hon. friends visited any of the branches of the Post Office Department and saw how the employees are working, like bees in a hive, not only during the week but also on Saturday afternoons and very often on Sundays, during the session, I think they would be confirmed in the belief, which I think they hold, and which has been generally expressed this afternoon, that the employees of the department are working very hard.

With regard to having the accounts show exactly what the deficit is, I may say to my hon. friend that I shall endeavour to get an estimate, just as accurate as can be obtained, and shall be glad to show it to him and to discuss the matter with him at any time. If there are many other matters which hon. gentlemen wish to discuss I am afraid that discussion will have to be deferred until another time. I am bound to say that I am now trespassing upon the time that has been allotted to the Minister of National Health. I had hoped that we were about through,

but if that is not so we may have to take another session for this item. However, if it is the feeling of the committee that we have almost exhausted the ground. I should be pleased to give any information which any hon. members desire.

Mr. STIRLING: I have one question apropos of what the minister said this afternoon. He referred to air mail services, the majority of which were under contract. Are those which were not under contract instances where the mail was carried by Royal Canadian Air Force planes in the north? What were the instances of those which were not carried under contract?

Mr. ELLIOTT (Middlesex): If I am correctly informed, we pay for the carriage of all mails carried by aeroplane.

Mr. STIRLING: Yes, but the minister said that the majority of them were under contract. What were those which were not under contract?

Mr. ELLIOTT (Middlesex): I was distinguishing between contracts for a definite period and those which were merely temporary.

Mr. STIRLING: They are all carried at a pound mile rate?

Mr. ELLIOTT (Middlesex): Generally, yes.

Mr. HEAPS: I take it that the minister will do his best to obtain the statement as requested. I have no desire to get it at this session, but I hope that when the estimates come down at another session the information will be available.

Mr. ELLIOTT (Middlesex): I shall endeavour to get it.

Sir GEORGE PERLEY: On what basis are revenue post offices operated?

Mr. ELLIOTT (Middlesex): In the revenue offices the postmaster provides the assistants. The total pay, to cover the postmaster and his assistants, is seventy per cent on the first $1,000, thirty per cent of the stamp revenue up to $10,000, and twenty per cent on all revenue over $10,000. To give the hon. member an idea as to how that works out I shall give him the figures with regard to Weyburn, about which information was asked this afternoon. In that instance the revenue is slightly over $22,000, and the total which goes to pay the postmaster and his assistants is a bit over $6,000.

Item agreed to.

[Mr. J. C. Elliott.]

DEPARTMENT OF PENSIONS AND NATIONAL HEALTH

European war pensions—Naval, militia and air forces after the war, $41,650,000.

Sir GEORGE PERLEY: I should like to be reasonable about the matter, but only a few moments ago we were discussing the estimates of the Post Office Department, and some hon. members on this side of the house who wished to ask some questions concerning pensions and national health have stepped out for a moment.

Hon. C. G. POWER (Minister of Pensions and National Health): If the right hon. gentleman does not mind my saying so, there will be other items dealing with pensions, and I would have no objection at all to a discussion on those items.

Sir GEORGE PERLEY: Is the minister going on with other items to-night?

Mr. POWER: Could we not reserve item 181, and the hon. members in question could discuss pension matters under that item?

Sir GEORGE PERLEY: I do not understand why the minister could not leave item 182, as well as 181.

Mr. POWER: It does not make the slightest difference to me.

Sir GEORGE PERLEY: What other item will the minister take to-night?

Mr. POWER: As many as I can.

Sir GEORGE PERLEY. Has he taken any of them?

Mr. POWER: Yes, some of the items have been taken up. For the moment I should prefer to deal with the pensions items proper, and come to the general items later. The grant to the Canadian Legion has been passed, and the Last Post Fund grant has been passed. I could take up the vote for pensions payable to men on active service in the Northwest rebellion, if the right hon. gentleman desires, or I could hold any one item with the understanding that anything might be discussed on it.

Sir GEORGE PERLEY: I suggest that we begin at the top of the page and take the items on the understanding that one will be left and that anything relating to pensions or national health may be discussed on that item.

Mr. POWER: I should not like to do that at the moment. I should like to discuss all the items which relate only to pensions.

Sir GEORGE PERLEY: Does the minister refer to item 174?

Mr. POWER: No, that involves both pensions and health. I could take item 181, if the right hon. gentleman desires.

Sir GEORGE PERLEY: That will be all right.

Item stands.

Pensions payable to men on active service, Northwest rebellion 1885, and general pensions, $20,000.

Sir GEORGE PERLEY: It would seem to me that this amount would reduce fairly quickly after so many years. I suppose the men entitled to the pension are long lived.

Mr. POWER: The vote is for $20,000, and is payable to ex-members of the militia who incurred disabilities during the Northwest rebellion of 1885. In the fiscal year 1932-33 there was a vote of $25,000, of which $21,500 was spent, and in the fiscal year 1933-34 there was a vote of $25,000, with an expenditure of $20,000. This is an annual expenditure, and owing to the death of the men who served in the rebellion it is reducing gradually.

Item agreed to.

Employers' liability compensation, $40,000.

Sir GEORGE PERLEY: What does this item cover?

Mr. POWER: This item has been in the estimates for a long time. Shortly after the war it was urged upon the government of that day that it was extremely difficult for soldiers who had suffered injury to obtain employment in civilian life, on account of their disabilities. With that in mind arrangements were made whereby certain premiums were to be paid to insurance companies on workmen's insurance. At the present time nearly all the provinces have workmen's compensation acts, and the arrangement is that if an ex-soldier who suffers from some disability is employed and is injured owing to his disability, in certain cases there is a pension paid to the board or to the insurance company by the government.

There has been some question as to whether this is a very useful item, and at the present time I do not believe it does very much by way of procuring employment for ex-soldiers. Whatever good it may have been immediately after the war, it is not of very much use to-day, although it has been continued. This is set up under order in council, and from year to year since 1921 the orders in council have been continued.

Sir GEORGE PERLEY: How much of it was used last year?

Mr. POWER: Last year the expenditure was $23,000. I understand it is the railway companies who profit, if anybody does, by this. It is not a factor in giving employment to ex-service men.

Sir GEORGE PERLEY: The minister is rather doubtful whether the item should not be dropped.

Mr. POWER: The minister is seriously considering whether or not it should be dropped.

Sir GEORGE PERLEY: I suggest that he go into it further before another year.

Item agreed to.

European war pensions—Naval, militia, and air forces after the war, $41,650,000.

Sir GEORGE PERLEY: Before this finally passes I would like the minister to agree that any member who wishes to speak upon it may do so upon some other item.

Mr. POWER: I have no objection at all, and if the right hon. gentleman wishes we can allow some item to stand when we get to the end of the evening.

Mr. GREEN: Would the minister explain the decrease in this item?

Mr. POWER: I do not know that there is any great reason for the decrease except possibly that we overestimated in other years. The amount is very much the same as it was last year. I can give the votes in other years, in round figures. In 1932-33 the vote was $48,000,000 and the expenditure $43,141,000; in 1933-34 the vote was $45,000,000 and the expenditure $41,839,000; in 1934-35 the vote was $42,000,000 and the expenditure $41,953,000; from April 1, 1935, to January 31, 1936, the expenditure was $34,440,000 and the appropriation for that year was $42,000,000, there being an unexpended balance of $7,559,000. The total number of pensioners from April to December, 1935, increased by 446, and the annual liability increased by over $20,000. The trend of cost is now, I think, fairly stationary. It is estimated that there may possibly be a saving of $350,000 in the 1935-36 appropriation, but this is more or less of a guess, as my hon. friend knows.

Mr. STIRLING: Could the minister, without going into a great deal of detail, give the trend in other allied countries? I think it is the case that in the United Kingdom the figure is gently dropping now.

Mr. POWER: I have not the statistics before me, but I think it can safely be said that in the United Kingdom the figures are dropping very considerably; in Australia they are pretty constant. I believe Australia began proportionately higher than Canada, but at the present time I think that in proportion it is lower than Canada. I am speaking now of the expenditure, let us say, per capita in comparison with the number of men enlisted in the Australian military forces and in our Canadian forces. There were 617,000 men enlisted in the Canadian forces and 410,000 in the Australian forces, if my memory is correct.

Mr. BETTS: How many men are at present drawing pensions under this vote?

Mr. POWER: The number of disability pensioners is 79,000 flat, and there are about 18,000 dependents' pensions. There are all told 97,200 pensions, distributed as my hon. friend knows among approximately 250,000 people.

Mr. BETTS: The minister in the bills which he has introduced, and which are now before the pensions committee, contemplates certain possible reductions in the total pension bill.

Mr. POWER: I do not know that I can say that. On the contrary, if my hopes are realized I imagine that this year, at any rate, and perhaps for some years the pension bill may be increased because I hope to get as many pension cases before the tribunals and before the courts as possible so that we can see some finality to the matter.

Mr. LENNARD: Does the minister think it is wise to make this reduction in view of the more sympathetic attitude that may be adopted toward the ex-service men?

Mr. POWER: The money will be found anyway. It is statutory that pensions have to be paid, but I do not see very much use in inserting in the estimates items that may not be used. As I have indicated, in 1932-33 there was $5,000,000 unexpended. There is really not much use in putting in figures that we may not reach.

Mr. LENNARD: In other words, if additional sums are necessary, the minister implies that ways and means will be found of providing them?

Mr. POWER: Yes.

[Mr. Stirling.]

Mr. BETTS: I am trying to understand the saving of $350,000 which the minister mentioned. If, as the minister says, the pension bill may be higher, why do we not budget accordingly? I am asking simply for information.

Mr. POWER: A large number of pensioners' children are now reaching the age where they go off pension. Children reaching the expiry age are a very important factor in the decrease. During the year 1936 there will be 8,787 children reaching the age when they will be no longer entitled to receive pensions, and naturally the pension bill will be lower on that account.

Mr. COLDWELL: The minister has mentioned children attaining their majority. That reminds me of one particular class which I wish to bring to his attention. I know of one or two returned men who subsequently to the war adopted a child, having no children of their own, and these adopted children, I believe, are not entitled to any consideration under the act or by the board either as veterans' children or for their education as other classes of veterans' children are. I draw this to the minister's attention with a view to getting these cases, few in number, looked into, because I believe in some instances the adoptions that were made were in the public interest because otherwise the children would have become public charges. I have in mind one case particularly which was brought to my attention.

Mr. POWER: It seems to me that there is some such provision in the Pension Act. Section 22, subsection 6, does cover, I think, generally cases of children who have been adopted. It states:

> When a child has been given in adoption or has been removed from the person caring for it, by a competent authority and placed in a suitable foster home, or is not being maintained by and does not form part of the family cared for by the member of the forces or the person who is pensioned as the widow, divorced wife, or parent of the member of the forces, or by the woman awarded a pension under subsection three of section thirty-two of this act, the pension for such child may, in accordance with the circumstances and in the discretion of the commission, be continued or discontinued or retained for such child for such period as the commission may determine or increased up to an amount not exceeding the rate payable for orphan children, and any such award shall be subject to review at any time.

The children are carried on for educational purposes after the age of eighteen provided they have shown certain progress.

Mr. COLDWELL: My understanding is that nothing could be done as the child was adopted subsequently to the discharge of the soldier. I brought this matter to the attention of the board, but I shall do so again.

Mr. POWER: That is a matter for the pension commission to decide. The hon. gentleman realizes that I have no more to do with the awarding of pensions than he has.

Mr. MUTCH: I understand that that would apply only to the children of a returned man.

Mr. POWER: I am speaking subject to correction, but I do not think it is restricted to the children of returned men.

Mr. MUTCH: They do not pay pensions to adopted children.

Mr. POWER: Probably my hon. friend knows.

Mr. MacNEIL: Will the minister permit one item to stand over until the report of the special committee is tabled? Possibly more satisfactory answers could be given at that time to the questions now being asked.

Mr. POWER: I see no real reason why that should be done. My hon. friend will have ample opportunity to discuss the report of the committee or any legislation which might be brought down as a result of the labours of the committee. I am a little perplexed as to why he wants this done.

Mr. PERLEY (Qu'Appelle): How many new applications were received last year?

Mr. POWER: There are about 10,000 outstanding and they seem to stay just about that. About 500 per month are heard every year by the quorums. It is hard to define just what is an application. We know there are a number of cases outstanding; we know at the present time there are over 3,000 cases ready for hearing, but we do not know how many men have made up their minds to apply for a pension and have written to their members of parliament or to the pension commission.

Item agreed to.

Salaries—staff, $3,428,000.

Mr. REID: I should like to bring a very serious matter to the attention of the minister, a matter relating to cancer. I should like to quote from a bulletin issued by the Vancouver Medical Association, dated June, 1935. The importance of this problem is pointed out by Doctor Robb who states that this is the greatest of all public health problems. The bulletin reads:

> Cancer is now second among all causes of death. The mortality is higher than that due to all infectious diseases combined (excluding pulmonary tuberculosis), and has ben rapidly increasing during the past ten years. During that time cancer has increased thirty-three per cent and tuberculosis has decreased twenty-five per cent. In 1926 there were 7,614 deaths from cancer in Canada, and in 1933, 10,646—an increase in the death rate from eighty-one to one hundred per 100,000. In 1933 one in every ten deaths was due to cancer. British Columbia is in an even worse situation as it has the highest cancer death rate of all the Canadian provinces. This has increased from 457 in 1924 to 836 in 1934 and there is almost an identical increase in Vancouver itself. There is a similar rise in mortality rates all over the world. The Metropolitan Life statistician thinks that 1933 may be the peak year but this cannot be accurately confirmed for several years to come.
>
> This rise in mortality constitute the biggest problem facing organized medicine to-day and is the direct result of our failure to face the situation. Measures now available, if properly applied, would reduce the mortality to less than one-half the present figures.
>
> Cancer differs from all other diseases in that there is no natural cure. There is but one opportunity to cure. This opportunity overlooked or ineffectively seized, the patient is doomed.

The point I want to bring to the attention of the government is the high cost of radium. While other cures are being tested, I believe the use of radium is the method most universally used. I have before me a newspaper article stating that the government of British Columbia is guaranteeing the purchase of $105,000 worth of radium, about three or four grams. It has been stated to me by members of the medical profession that at the present time radium is in the hands of an international ring, and I suggest to the government that this should be investigated. The treatment of cancer is a very costly affair to those of moderate means and I bring this matter to the attention of the government in order that a thorough investigation may be made.

Mr. MacNICOL: I cannot allow this item to pass without expressing a few words of appreciation of the staff of the Department of Pensions and National Health. In my riding are a large number of returned soldiers, and for the past six years a considerable portion of my time in Ottawa has been spent in making calls on the department on behalf of returned soldiers and their dependents. One thing that stands out strikingly in this department is the fact that

the staff look upon everything pertaining to returned soldiers in a non-political and non-partisan manner. In my opinion every returned soldier receives fair play from the staff of this department. The appointment of Judge Taylor has been blessed all over the country. I might say the same for the deputies and assistant deputies; I found them in every case most anxious not only to do what they thought was right for the country but to consider in a sympathetic manner every case presented to them. I am more than pleased to take this opportunity to express my commendation of the way in which the Department of Pensions and National Health has measured up to what has been expected of it in treating our returned soldiers with sympathy and consideration.

Mr. POULIOT: Would the minister be kind enough to tell the committee how many men are employed in the patent medicine branch. Who are they?

Mr. POWER: At the present time in the patent medicine branch there is only one man with three assistants, Mr. Teevens, but in the operation of this act the inspectors of the food and drugs branch are used by the patent medicine branch.

Mr. POULIOT: I understand that it is very difficult to discuss matters with Mr. Teevens. I wonder whether he makes special tests of any particular medicine. Does he make tests when the formula is submitted without checking the product afterwards?

Mr. POWER: All tests are made in the departmental laboratories under the charge of Mr. Lancaster in Ottawa.

Mr. POULIOT: I want to know whether several tests are made at different times or whether just one test is made when the patent is obtained.

Mr. POWER: Tests are made any time suspicion warrants this. I assume my hon. friend is referring to some patent medicine which the officers have found requires tests in order to see that the proper formula is followed.

Mr. POULIOT: Let me illustrate. Eno's Fruit Salts is advertised as fruit salts. In the United States the matter has been checked up and it has been proved that Eno's Fruit Salts is made of tar; it is made with citric acid from tar, and there is no fruit at all in it. It is not made with lemon or orange or grape juice or anything of that sort. In fact, in the United States the matter has been looked into and they had to change the libel

—I mean the label. It may not be a libel to use that label in this country, but it is false representation and I wonder whether the matter could be checked. It is a real farce now. A druggist goes to this official and submits the formula of a cure-all of some kind. This is analyzed and then an entirely different product is made. I would ask the minister to get some bottles of Eno's Fruit Salts, so-called, from different druggists, and have the contents analyzed. And I suggest that this be done not only with this particular brand of salts but with all salts that are called fruit salts, in order to ascertain whether the people are being deceived or not. I submit that it is most important to have an analysis made.

Mr. POWER: Although I am not an expert on either fruit or salts, I am informed that the product mentioned by my hon. friend does contain fruit and salts, such as tartaric acid and citric acid, and therefore I imagine that this would be considered enough to give them the right to call it fruit salts. I frankly admit, however, that I am not sufficiently familiar with chemistry to discuss the matter with any degree of exactness, and if the hon. gentleman will make a complaint to the department with respect to any medicine or drug or product which he thinks is wrongly labelled, we shall be glad to have a complete analysis made.

Mr. POULIOT: I thank the minister, but I would point out to him that while there may be some citric acid in the salts, there may be just a drop of lemon to a large quantity of tar, and tar is much better on the roof of a barn than in the human body. I lodge my complaint right now and I suggest that the minister should spend a few dollars to buy a dozen bottles of Eno's Fruit Salts in different drug stores and have it analyzed for the good of the country.

Mr. LENNARD: What in the world has this to do with the item under discussion?

Mr. REID: I regret that the minister had not time to refer to the matter I brought up.

Mr. POWER: The government of Ontario is making some endeavour to bring to the people of that province radium at a lower rate and is encouraging a private company, either by subsidy or in some other way, in order that the so-called monopoly may be broken. On the other hand, the price of radium is coming down because the countries that control that product have now come to the conclusion that it might possibly be found in other places and they are not holding so tightly to the monopoly they had. In any case I shall be glad to look into the matter.

Mr. POULIOT: Another gentleman in whom I am interested is the officer who reviews pensions. I understand he has a good war record, but it is not satisfactory when it comes to reviewing the decisions of the board with respect to the health of veterans. I am told that owing to his war service he was given the privilege of missing a few years in university and he has very little hospital training. I wish the minister would be kind enough to give us some information with regard to Doctor Shields, the reviewing officer. How long has he been in hospitals? I understand he is an office man, and that is a poor qualification for reviewing the decisions of the board with regard to the condition of soldiers and the degree of their incapacity.

Mr. POWER: Doctor Shields, who was appointed in 1933, has had a very good war record. So far as I can ascertain from soldiers generally and from observations made by them, they would appear to be quite well satisfied with the work he has been doing. He has replaced the commission counsel who were in the habit of appealing from the tribunal quorum in a large number of cases. So far as I am aware he does his work in an able manner; and to do his work he need not necessarily be a doctor, though I am informed and have every reason to believe that his record as a medical man is excellent. He had been medical examiner for the pension board for many years and he discharged his duties very well. In the duties he performs, though, he could just as well be a lawyer or a layman. His duty is to review from the standpoint of justice and equity the cases which have been awarded pensions. He carries out the duties imposed on him by statute, in so far as I know and in so far as I have been made aware by any of those particularly interested in these matters, in a proper manner.

Mr. POULIOT: I thank the minister, but I regret I do not share his views about that, because if this official has to review the decisions of the board with regard to disabilities of veterans he must be familiar with the medical art; not only that, he must have had actual practice. It is most important that a man who is a reviewing officer of the board of pensions should know whether a man has been incapacitated by a wound or by gas or by any kind of disease contracted during the war. I was much surprised by the case of a man who was indicated as having been wounded and having suffered the preliminaries of the disease which affects him now, and in respect of whom the decision of the board was far from being satisfactory. I cannot see how a man who has no practical experience in hospital can be a reviewing officer for cases like that. The minister very ably did not answer my question fully. I asked him how long the doctor had been in hospitals for training, and I would appreciate it very much if he would be kind enough to give me that information.

Mr. POWER: I have not that at the moment. I think my hon. friend entirely misconstrues the duties of Doctor Shields. Doctor Shields does not review decisions of the pension board. The pension board have at their disposal a very large number of doctors. The department also has a number of doctors. But when certain cases have been passed by what is now known as the pension board quorum, whereby pensions have been awarded to applicants, Doctor Shields, as representing the crown, reviews them to see whether or not on legal grounds, on medcial grounds, grounds of evidence or any other ground they should be appealed to the pension appeal court. He could do his work just as well were he a lawyer, capable of weighing evidence. In any case I wish to assure my hon. friend that Doctor Shields has a very good war record and a very good medical record, and so far I have never heard of his competence being called into question.

Mr. POULIOT: Again I thank the minister, and after the explanation he has given I regret very much that Doctor Shields is not a doctor of law. Having reference to some doctors of the department, may I bring to the attention of the minister a case that occurred under his predecessor, the present Lieutenant Governor of New Brunswick. A man was sent to Bellevue with a disease of some kind, and there the doctors decided to extract all his teeth. They sent him home without replacing them, and I had to correspond with Doctor MacLaren to show him the stupidity of these doctors in order that he should give instructions to the dentist down home to give the man a plate. There may be some good doctors on the staff, but they are not all alike, surely.

Mr. HOWDEN: Is it agreeable to the minister to discuss the Department of National Health under this item?

Mr. POWER: Surely.

Mr. HOWDEN: There are a few things I should like to bring to the attention of the minister, although he is probably aware of them. The first is that the Department of Pensions and National Health is really a department of pensions, national health practically playing no part. The Department of

National Health was instituted in 1919 and was given a fair start. At that time its chief duties were the administration of the Food and Drugs Act, the Opium and Narcotic Drug Act, the Proprietary or Patent Medicine Act, venereal disease control and child welfare. It is true there were other divisions, but these were by far the most important branches of the National Health department. The department still administers the Food and Drugs Act and the Opium and Narcotic Drug Act—very important, I grant you—also the Proprietary or Patent Medicine Act; but what seems to me, as a medical man of some thirty odd years standing, by far the most important features and functions of the Department of National Health, namely venereal disease control and the maternal and child welfare departments, have been dissolved and are, apparently, no longer factors in connection with the National Health department. Not only from a medical standpoint, but so far as the people of Canada are concerned, the divisions of maternal and child welfare and of venereal disease control were far more important and far-reaching than any others.

When the department was instituted in 1919, largely in response to a luetic condition prevalent among soldiers and inmates of hospitals, the federal health department proceeded with a program in collaboration with the provincial departments and established a fund of $200,000 annually to be divided amongst the provincial governments for the control of venereal disease. In 1925, when it appeared that the government of Canada would withdraw this appropriation, interested parties busied themselves and made representations to the government, with the result that the amount was reduced to only $150,000. In 1926 it was cut to $125,000, and in 1927, to $100,000. During the administration of the last regime it was done away with altogether. Not only were the grants to provincial governments for the control of venereal disease withdrawn, but the departments of child welfare and venereal disease control were entirely abolished. The leader of the opposition, speaking on March 13, stated that the grants to the Canadian National Committee for Mental Hygiene, which is a voluntary medical association for the purpose of informing the public on matters pertaining to mental hygiene, the Canadian Tuberculosis Association, the Canadian Social Hygiene Council, and the Canadian National Committee for Mental Hygiene, should be withdrawn and given to the provinces because the provinces were in need of funds

[Mr. Howden.]

The right hon. gentleman was in power for five years, but during that period no moneys were devoted to the provinces for the control of disease. He was not long in office when the only grant the provinces were getting was withdrawn. This brought about a surge of protest from a number of the most important societies and associations in Canada. The Canadian Medical Association, the National Council of Women, the Canadian Pediatric Association, the Canadian Social Hygiene Council and the Canadian Public Health Aassociation all protested vehemently against the withdrawal of this grant. At their meeting in Toronto the National Council of Women resolved:

> That representation be made to the Prime Minister regretting the discontinuance of the division of child welfare of the Department of Pensions and National Health.

Also:

> That the Prime Minister or federal government be asked for a statement of policy of the Department of Pensions and National Health in relation to national health as a whole and in particular in relation to maternity and child welfare.

The national executive of the Canadian Social Hygiene Council resolved:

> That in the opinion of the Canadian Social Hygiene Council the relinquishment by the dominion government of official leadership and responsibility for child welfare throughout the dominion is most regrettable;
>
> And that as the true function of voluntary associations is to supplement governmental action, the delegation of an important part of the work of dominion department of health to a voluntary association is a retrograde step.

I will speak of that more fully a little later on. The Canadian Society for the Study of Diseases of Children, meeting in Brockville on June 1, 1934, passed the following resolution:

> Be it resolved that in the opinion of the Canadian Society for the Study of Diseases of Children, the relinquishment by the dominion government of official leadership and responsibility for child welfare throughout Canada is most regrettable; and that as the true function of voluntary associations is to supplement governmental action, the delegation of an important part of the work to a voluntary association is a retrograde step.

This reference to a voluntary association, I believe, arises from the fact that when grants were withdrawn from the associations I mentioned in the first place, namely the Mental Hygiene Council, the Dental Hygiene Council, the Canadian Social Hygiene Council, and others, those grants were diverted to the Canadian Council on Child and Family Welfare, which was not a medical association

at all but a purely voluntary association not under the control or supervision of medical authorities.

I am bringing these matters to the attention of the minister because, since our Department of National Health was instituted in 1919, it has been steadily dwindling. That has been true under two regimes; it is still on the dwindle, and unless the matter is given some serious thought and consideration by the present government the department might as well shut up shop and be discontinued entirely. If it is the opinion of this committee and the government that the Dominion of Canada does not need a National Health department, then there is no need to make a farce out of it; we might as well do away with it altogether as pretend to the people of this country that we have a National Health department when as a matter of fact we have not. As a medical man of the Dominion of Canada I am making my protest and bringing these matters to the attention of the minister for his consideration.

Sir GEORGE PERLEY: Could the hon. gentleman, who has given a great deal of thought to this question, explain to us in a few words his idea of the division of work between the provincial and dominion health authorities?

Mr. HOWDEN: Yes. Ever since I have been in this house, for the last ten years, I have maintained that the federal government should lead in medical matters; that it should correlate the efforts of the provinces and lead the way in order to secure uniform services for all the provinces of Canada.

Sir GEORGE PERLEY: Does the hon. gentleman mean in an educational way or to supersede the functions of the provinces?

Mr. HOWDEN: No, not to supersede the provinces but to control the provinces and bring about a uniform administration of health.

Sir GEORGE PERLEY: In what way does the hon. gentleman suggest that the provinces could be controlled?

Mr. HOWDEN: The provinces could be controlled very easily by the establishment of suitable grants. If such grants were made by the federal authority to the provinces, with the understanding that certain standards had to be conformed to and certain measures put into force, there is no question that the grants would be readily accepted by the provinces if this were made worth while by the dominion.

Mr. BLAIR: I hesitate very much to differ with my hon. friend from St. Boniface, but while I share his enthusiasm in behalf of public health I cannot altogether approve of that matter being brought under any department of the federal government. That was about the only thing which was done by the former government and of which I approved, and I have often wondered whether I was wrong. I supported the action of the previous government in abolishing these grants; it seemed an unnecessary duplication of services. Why should we have a tubercular clinic controlled from Ottawa and another tubercular clinic controlled from Toronto? Neither do I approve of Toronto doctors coming to Ottawa and gathering voluntary subscriptions. Thousands of dollars are collected, without the books being audited, all in the name of national health. No doctor in Toronto should claim that name as his own.

I believe these matters should be dealt with in a businesslike way, and I do not approve voluntary organizations in relation to health. We have a right to protect the health of our people, but this should be done in a proper way. It may be every man's duty to see that it is done, but I believe it should be done under the provincial departments. Why, we might as well interfere with the provincial departments of education! Education is a very important question, but it does not come within the sphere of the dominion government. I consider that there is a great deal of unnecessary duplication. Can anyone imagine national health coming under the jurisdiction of a lawyer? That, in itself, is enough to condemn it from a federal standpoint.

Mr. POWER: To condemn the lawyer or the department?

Mr. BLAIR: Well, the minister is all right in his place, but do not ask him to supervise national health. I do not think that is his work. I have no complaint to make in that regard, but I suggest that if we wish to assist in this work we should make grants to the provinces. It is with a good deal of hesitation that I rise to offer a contrary opinion in regard to these matters, but this is the stand I have taken on two other occasions, once in support of the previous government. We seem to have a sort of voluntary division of this work in connection with child welfare. I say that is something of a farce and I believe we should abolish the grant that is given to Miss

Whitton's organization. I should like to see this question of national health dealt with in the proper way, and I should like this government to make grants to the provinces to assist in that work. That would do away with much unnecessary duplication.

Mr. YOUNG: I suppose if we were lawyers we would bring in a judge to settle the matter. There is one thing I want to say to-night, and it is that the present system of national health is entirely and absolutely unsatisfactory. I agree that it should be either improved or discontinued, but I do not believe it can be discontinued. It would take a long time to go into the question fully, and I do not intend to do so to-night. I recognize that the present minister is a lawyer, but of course he is not to be blamed in any way, particularly since he is a new minister, so I am not going to attempt to say anything that will embarrass him. But I want to say to him and to the government that this matter is of such vital importance that it should be given serious consideration, and that not later than a year from now, during the next session, we should decide to make drastic changes towards betterment, or we should decide to discontinue it and I do not think it should be discontinued. When I think of the people who have come into this country during past years, and of how little attention was given to the various physical and mental conditions, and when I look throughout the country and see what is taking place, I say that there was not given to examinations the attention which, in my judgment, should have been given, in connection with immigrants coming into the country.

I could go down a whole list of affairs which really should come under the Department of National Health but I am not going into that to-night. With regard to what the two hon. members have said about child welfare let me say that the usual procedure is that some voluntary organization undertake what they believe to be of interest, and if they can carry on that educational work to the extent where they establish some vital interest in it, then it may be passed over to the Department of National Health, or to some provincial department. But to reverse the process and take an established department out of the Department of National Health of the dominion and leave it to some voluntary organization to carry on the work, not even under medical supervision, is certainly getting the cart before the horse. If there is anything like getting into reverse gear, then we surely have it in that instance. I say these few words merely to express my opinion, without arguing it. The matter is of such vital importance that it must be investigated, and changed one way or the other.

[Mr. Blair.]

Mr. POULIOT: I hope the minister will accept the following suggestion: On the lists of the unemployed there are some doctors, and there are other doctors who do not find their work as profitable as it should be, or as it was before. Why not send some of them to the new settlements where doctors are badly needed.

Mr. POWER: Is one to be the minister?

Mr. POULIOT: No, I am satisfied with the minister in charge of the department. I believe some time ago I congratulated him upon his appointment, and he does very well. May I tell him that the highest quality in a minister is that of common sense, and he seems to have it. I hope he will show us that he has plenty of it. He has technicians to assist him, and if the doctors in his department are as good as he has said they are, then he has plenty of good advice at his disposal.

Sometimes people in the new settlements are living far away from medical assistance to which they are entitled. In some parts of Quebec the provincial government has placed nurses, but in other centres no medical assistance is available, although the promise has been given that some medical men or nurses will be sent. I suggest that the minister give serious consideration to the fact that the settlers need this medical assistance, and should have it. It would be an easy matter to have a doctor in attendance at a reasonable salary to look after all these people who are in need of medical assistance. The settlers should have every consideration, and anything done for them would meet with general approval.

Mr. COLDWELL: I have looked up some correspondence and I find that subsection 4 of section 22 of the act has been interpreted to exclude children of the type to which I have referred. I suggest that if the act is being amended this particular feature of the subsection might be considered.

Mr. POWER: I am sure hon. members of the committee will be glad to hear that if they appear before the committee their suggestions will be heard. If the hon. member will appear before it he could offer his suggestion.

Mr. COLDWELL: I am attending another committee which sits coincidentally.

Mr. YOUNG: I should like to ask one question. The minister of the department has had wide experience, and I agree with the hon. member for Témiscouata that he has given a marvellous display of common sense, and that he has the sympathetic attitude which every minister should have. I understand the reviewing officer takes appeals on behalf of the crown to the court of appeal, after the quorum has decided in favour of the soldier. That seems to me a most peculiar process. When a quorum of the board sits and hears evidence, and after weighing it carefully gives judgment in favour of the soldier by granting a pension, I want to say that so far as I am concerned I do not believe the crown should take an appeal from the decision of that board. I am asking the minister to give that matter serious consideration, to see whether that right should not be removed, provided it now exists. I believe it does the soldiers an injustice. It seems to me that they have to fight hard enough in many instances to have their cases properly presented to the quorum, and if they receive favourable consideration and are granted a pension I say that so far as the crown is concerned the matter should be allowed to rest there.

Mr. POWER: The matter has been brought to the attention of the committee which is now sitting. As the hon. member knows it is not permissible to discuss outside the committee matters which have been discussed in it, but I can assure him that the whole matter is being reviewed.

Mr. HOWDEN: I should like the minister to make a statement with regard to the venereal disease question.

Mr. POWER: I was under the impression that the hon. member was going to make a statement and that he was not particularly anxious to hear from me. I gathered that he did not think I had the qualifications to make a statement on a matter of this kind. As my hon. friend has said, it is true that the venereal disease grant made to the provinces for a number of years was cut off in 1932. As I gathered from him, that matter and the one dealing with the child welfare branch were the two most important questions he had to bring to the attention of the committee, and because in his opinion these have been neglected he has suggested that the whole department should be abolished, but perhaps he was exaggerating.

As such, the department deals to a great extent with national and international obligations. For instance, there is the quarantine division; there is the food and drugs division which covers our obligations under the Geneva convention respecting narcotics. In the past we have had a certain number of doctors attached to the immigration service, and may I point out to the hon. member that when these immigration examinations were being carried on the head of the department was himself a medical man, and if there was any fault to be found it would not be beyond the knowledge of the head of the department. When the branch dealing with child welfare was taken away from the department there was a distinguished member of the medical profession at the head of it. In the same way, when the venereal disease grant to the provinces was discontinued there was another distinguished member of the medical profession at the head of the department. So evidently any sins or crimes which have been committed by the department have behind them some medical knowledge and experience, and some medical reason possibly other than the ground of pure economy. I quote from the remarks which Doctor Béland, then minister in charge of this department, made in this house on July 18, 1924. He said:

> When a grant for this purpose was first voted by parliament it was made clear that the appropriation would be only for five years at the rate of $200,000 per year. The first appropriation was only $100,000. For the second, third and fourth years $200,000 was annually voted. This vote is to complete the $1,000,000 which was intended to be appropriated in order to help the provinces in combatting venereal diseases. We were only called upon to appropriate $100,000 this year but representations were made to the government—to myself in particular—from the different provinces in favour of maintaining the vote as it formerly stood. We have cut the difference in two and are making the appropriation $150,000. The object of the appropriation in the first place was to enable the provinces to establish a service to combat venereal diseases. This was a new work and the provinces were called upon to furnish of their own money an equal amount, as they did. After five years it is now found that the service is well organized throughout the country, and it is felt that the federal exchequer should not be called upon to pay as much money as it did before.

Nevertheless, as has been stated by my hon. friend, the appropriation continued to be made until 1931-32. I have received representations from a number of doctors to the effect that it would be a good thing if we could renew this appropriation or provide another.

Sir EUGENE FISET: Has the minister received any representations from the provinces that the grant be renewed?

Mr. POWER: So far as I am aware, we have not in recent years received any representations from the provinces to that effect.

Mr. HOWDEN: There were representations made by the provinces when the grant was first withdrawn.

Mr. POWER: I said none in recent years. Some of the provinces are highly organized in this respect and there is no necessity of federal assistance; for example, Ontario, Quebec, and some other provinces are looking after their own affairs, although no doubt they would be very glad to receive a grant of fifty or a hundred thousand dollars.

Mr. HOWDEN: Most of them have had to discontinue their efforts in this direction in many cities.

Mr. POWER: I am informed that that is so; that they have had to curtail their expenditure owing to the fact that there has been no appropriation made by the federal government.

With regard to child welfare, the money expended on that branch amounted, I am told, to approximately $13,000 per annum. Those in charge of the department within the last four or five years have in their wisdom decided that this work can be carried on just as well by voluntary organizations, but as my hon. friend informed us to-night—and he seemed to have good authority for what he said—it is perhaps not considered advisable by the great weight of medical opinion that private organizations should carry on this work. Medical men, including the hon. gentleman himself, consider that this work is essentially a government, and not a private function. While the amount of the grant was cut down in 1910, the grant to the Canadian Council on Child Welfare was $10,000, and the expenditure therefore, I take it, was reduced by approximately $3,000; in 1931-32 the expenditure was $10,000; in 1932-33, $9,000; in 1933-34, $9,000; in 1934-35, $12,600; in 1935-36, $12,600, and this year the amount is $13,100, bringing the amount expended for this purpose to approximately the same amount as was expended prior to the time when this branch of the department was done away with. Quite frankly I cannot say from my experience up to the present that it would be preferable to have this money expended by the department itself rather than by this voluntary organization but I have no objection to studying the matter and taking the best advice I can get, and then possibly next year we may be in a position to please my hon. friend.

Sir GEORGE PERLEY: Not being a medical man I do not intend to express any opinions on the best way of handling this matter, but I would say from the experience we have had in the last five years that this is one of the knotty problems of government. It is one of those questions which arise between the dominion and the provinces and which it is not easy to settle.

Last year it will be remembered that the then Minister of Pensions and National Health called a meeting at Ottawa of the representatives of the provincial health departments, and they had a very satisfactory meeting here. I know that Doctor Sutherland told me afterwards he had great hopes that some way would be found to coordinate their efforts to produce the best results possible. The object he had in mind at that time was to find some way in which the dominion and the provinces could cooperate in this very important work. The health of the people is something in which we are all vitally interested, and naturally medical men in this house have always discussed the question from that point of view because we all want to do what we can for the health of the people of this great dominion. There is nothing of greater importance, but it is in the first instance a provincial matter. The provinces are charged with that duty. This government has no power to make any regulations or to carry out any administration in regard to health anywhere in this country. We all know that.

Whether some plan can be found by which the federal Minister of Pensions and National Health can cooperate in a reasonable way with the health ministers and officers of the different provinces I do not know. Naturally the dominion would have to give some money for that purpose; this would be expected. But the efforts at cooperation that we have made from time to time in other fields in which the federal government as well as the provinces have an interest have not been very successful. We have tried to cooperate in a comparatively simple matter like the Companies Act, for instance, which is a much easier question to handle than that of health, but we have never been able to arrive at any conclusion or arrangement with the provincial authorities. I am sure that the present Minister of Pensions and National Health has it at heart to do anything he possibly can in a reasonable way to improve the health of the people of this great dominion, and I sympathize with him in the fact that there is great difficulty in connection with the provisions of the British North America Act, and in the fact that this federal parliament has no real authority to act unless the action is taken with the consent of the provinces. And so I think this question is one which

requires a great deal more consideration before it is possible for anyone to suggest a plan that would be of any particular service in clearing up this rather knotty problem.

Mr. POWER: May I say to my right hon. friend I was informed that it was extremely difficult to arrive at any specific arrangement with the provincial ministers of health because they were not prepared to give up any function or control which they at present exercise. However, possibly because I have no prejudices in the matter, and because I desire to have another try, I have asked the provincial ministers of health to come to Ottawa on June 16 in order that I may discuss this matter with them in the hope that we may be able to find some means of co-ordinating our general efforts.

Item agreed to.

Administration expense — Department and Canadian pension commission, $681,758.

Sir GEORGE PERLEY: Will the minister explain the reason for the increase?

Mr. BETTS: The whole problem of the returned soldier is being discussed very fully in a special pension committee in which opportunities are offered that are not available here for the hearing of evidence. That committee is spending more time on these items pertaining to returned soldiers than can be spent here. While all these items are of vital interest to me and to my constituents, I feel that the proper place to discuss them is in that committee. I do not want to appear uninterested in these items, because I am very much interested, but I think they could be better discussed in the committee. I do not propose to suggest to the minister how he shall conduct his estimates, but I am wondering whether these items could not be submitted to us after the committee has made its report.

Mr. POWER: It is not a standing committee of the house; it is a special committee set up to deal with three pieces of legislation. In most years there is no pension committee and these estimates must be voted every year. This is the normal way of voting estimates. Except in one or two instances, the whole administration of this department has never been submitted to the scrutiny of a committee. The committee now set up is to report specifically on certain legislation. My hon. friend knows that no limitation has been placed upon the discussions in that committee.

Mr. BETTS: That is my point. There have been no limitations and the result is that there is ample opportunity to scrutinize these items. I think the items could be discussed more intelligently after the committee has sat.

Mr. POWER: I have no objection to holding over one item for discussion. After all, there are only a few hon. members who are members of that committee. That committee is dealing with certain legislation and when its report is before the house, hon. members will have ample opportunity to discuss the legislation. If there are any other matters that hon. members desire to bring up before the committee for discussion, I have no doubt the members of the committee will be very glad to have them discuss them. I cannot see any helpful purpose to be served by holding up these estimates until the committee has made its report. That has not been the practice in other years.

Sir GEORGE PERLEY: I may have misunderstood the hon. member for London (Mr. Betts), but as I understood him, he suggested that perhaps hon. members could ask their questions about the estimates more intelligently after the pension committee had reported. In other words, some of the matters which they might want to discuss might be settled by the committee and it would not be necessary to discuss them here. However, if the minister is going to leave one item open for general discussion, hon. members will be able to bring up any question.

Mr. POWER: I have no objection to leaving an item open for discussion. This committee is investigating every phase of returned soldier activities. Witnesses are being brought in from outside and members of that committee, whether they are in order or out of order, carry on conversations for hours about these matters. I cannot see that the matter can be made more clear in the House of Commons than before that committee. I do not think any minister has refused a request to hold open an item, and I am quite willing to do so.

Mr. BETTS: That would meet my point exactly.

Sir EUGENE FISET: After all, we are discussing the estimates of the Department of National Health as well as of the Department of Pensions. Anything brought out before the special committee has no bearing upon the estimates before the committee of the house at the present time. The special committee is dealing with an amendment to a specific act and witnesses have come from all over Canada to give their evidence. When that committee reports there will be ample opportunity to discuss legislation in committee of the whole as well as in the full house.

Mr. BETTS: I cannot make it any clearer than it has been made by the hon. member for Argenteuil (Sir George Perley) Certain

information has come out in the committee and will come out at future sittings which will enable those interested to discuss these very items more intelligently.

Mr. POWER: I would be prepared to leave item 175 open. If the committee has no objection to passing the remaining items, it will be understood that any matter pertaining to pensions or returned soldiers can be discussed under that item.

Sir GEORGE PERLEY: Or national health.

Mr. POWER: Is it intended to continue the discussion on national health? The point raised by the hon. member for London (Mr. Betts) and my right hon. friend does not apply to national health. We are not discussing health matters in the committee.

Mr. MacNICOL: Item 175 is very important and I should think the minister would want to get it through. I am heartily in accord with this item, because I know splendid work is being done under it. I suggest that the minister have this item passed and hold over a smaller item so that discussion may be had later on.

Mr. KINLEY: Considerable difficulty has been encountered in connection with sick mariners landed from ships, but I believe the Canada Shipping Act contains a provision that will settle these difficulties. This act is to come into force on August 1 and amendments are to be submitted to the house in an effort to cure any difficulties that may be encountered in the administration. Can the minister make a statement as to how men landed by an indirect route and brought to Nova Scotia or to any other part of Canada will be treated in the future?

Mr. POWER: I do not know that I can say what is going to happen in the future. After all, the act to which the hon. member refers will be passed and doubtless it will be interpreted in the broadest possible manner by the officers of the department. I cannot undertake to lay down the line of conduct as to just what is going to happen after this legislation is put through.

Mr. KINLEY: Is the minister aware that under the new Canada Shipping Act there is a section 308, subsection 5, which provides that a seaman being a fisherman may enter hospital even if he is taken ill or injured outside of Canada and arriving in any of the said provinces other than in a ship to which he belongs.

[Mr. Betts.]

Mr. POWER: I am inclined to think so, but frankly I must say that I did not read the Canada Shipping Act when it went through the house. As my hon. friend will remember, it was christened the Anthony Adverse of legislation and went through in two or three hours. I did not take the trouble to read it and I do not believe that even the seafaring members of the house did so. I cannot speak from personal knowledge as to what is contained in that act.

Mr. KINLEY: As a matter of fact I know that provision is in the act, and I thought a public statement would be made advising our fishermen as to their rights and privileges at the present time, because they are at sea now and there may be a sick mariner at any time, and they would know that they could land him at Newfoundland or have him transferred to another vessel and so come under the act.

Mr. POWER: I cannot even guarantee that the act will become effective within any given time.

Mr. KINLEY: It is proclaimed.

Sir GEORGE PERLEY: It was stated by the minister who had charge of the matter that it had been proclaimed for a certain day in the future.

Mr. DUNNING: My hon. friend from Queens-Lunenburg will have an opportunity to direct attention to the matter inasmuch as there is on the order paper a bill to amend the Canada Shipping Act. This will enable him to ascertain the exact place in Anthony Adverse where this particular trouble is dealt with.

Mr. POWER: He knows where it is.

Mr. KINLEY: I want the minister to be aware of it so that the officials will remedy the difficulty.

Mr. POWER: They will interpret the act to the best of their ability.

Mr. RYAN: How are these grants made in connection with sick mariners?

Mr. POWER: We administer part 5 of the Canada Shipping Act and give surgical and medical attendance and treatment to the sick and injured. We maintain one departmental hospital and make provision at other ports for care and treatment at contract rates in local hospitals. The revenue is obtained by a compulsory levy on the registered tonnage of ships arriving in the ports of Quebec, Nova Scotia, New Brunswick, Prince Edward Island and British Columbia. Such dues are

paid not oftener than three times during any calendar year. In order to be eligible for sick mariner benefits, dues shall be paid by vessels engaged in the fishing industry prior to the first voyage of each season and on each subsequent voyage not exceeding three in the calendar year. Certain grants are made out of the fund to the Navy League of Canada, the Sailors' Institute, Catholic Sailors' Club, and a number of other institutions. I have the list before me.

Mr. NEILL: Is the minister quoting from the Canada Shipping Act?

Mr. POWER: No; from our regulation with regard to the administration fund. The revenue collected as sick mariners' dues was: In 1931-32 $184,485, and in 1934-35, $181,203. As the committee knows, the expenditure was a little more this year than was anticipated in the estimates, owing largely to the fact that there had been a resumption of activities on the part of fishermen on the eastern coast of Canada.

Mr. RYAN: I understood that these grants were made to hospitals. Speaking on behalf of the medical profession, which at times in this chamber does not take kindly to the legal profession, I do know that there are some complaints. In the hospitals doctors give their time gratuitously in the performance of certain services, and among other things they attend to sick mariners in hospital who are on the sick mariners' relief fund. They are forced to give service to these men gratis, and if this contribution is made for a specific purpose I should like the minister to see to it that the doctors who treat these soldiers in hospitals receiving grants, get some remuneration for their services.

Mr. POWER: The arrangement we make with the hospitals is on a contract basis, and the amount we pay per patient covers medical care in the hospitals and the fees of doctors. I imagine, therefore, that the hospitals decide which doctors they will have, and it would be difficult for us, short of taking the drastic step of cutting off the grant altogther, to insist that a hospital should employ one doctor rather than another.

Mr. RYAN: That is not the point; I am not asking for one particular doctor. But doctors generally in the city give their time gratuitously to the hospital in certain cases and the hospital gets the total grant and keeps it, while the doctors who give their time do not get anything.

Mr. KINLEY: That is not so in Nova Scotia.

Mr. RYAN: It is so in Saint John, I understand.

Mr. POWER: We have an arrangement with the hospitals and they make their own arrangements with the doctors. It would render the administration of the act difficult to make separate arrangements with all the doctors.

Mr. NEILL: I understood the minister to quote from the regulations that where it was not convenient for men to go to the hospital maintained by the department, arrangements were made with local hospitals. Is that correct? How about the case which I brought to his attention? It was suggested that the man ought to be sent to Lunenburg.

Mr. POWER: My hon. friend sometimes has the minister absolutely on the hip. I have not been able to explain the matter to myself, but I have some hopes that if I receive many more enlightening communications from my hon. friend I shall finally begin to understand it. The fault to be found with my hon. friend's friend was that he allowed his vessel to sink under his feet before he reached the shore.

Sir GEORGE PERLEY: I asked the minister to explain the increase this year.

Mr. POWER: There is an increase of $12,968 due to paying more inspectors in the food and drugs branch. In public health engineering there is an increase of $2,764. There is being opened a new office at Vancouver for the district comprising British Columbia and Alberta, and that requires extra provision for equipment and travelling expenses.

Sir GEORGE PERLEY: Is that the Department of Health?

Mr. POWER: Public health engineering. In marine hospitals there is an increase of $23,000 over last year. As I pointed out, the amount required last year for marine hospitals was underestimated by $20,000. In quarantine and leprosy there is this year a decrease of $9,103. During the last few years the demands upon the department in connection with quarantine, leprosy and the fumigation of ships were considerably less than the estimates.

Sir GEORGE PERLEY: Are the number of leprosy cases decreasing?

Mr. POWER: We have at present seven in the east and four in the west; there is a decrease of one in the east, at Tracadie. In immigration, medical inspection, there is a decrease owing to the fact that we have closed three offices in the old country and brought the physicians back here and assigned them to other duties.

Sir GEORGE PERLEY: Could the minister explain what is public health engineering? I am not conversant with the term.

Mr. POWER: It largely deals with international traffic on the great lakes and inland waters of Canada, in checking the water supply for ships and boats and matters of that kind. It is an appropriation for the enforcement of the regulations approved by orders in council of June 19, 1923 and February 25, 1930, concerning water for drinking and culinary purposes on vessels navigating on the great lakes and inland waters, and on common carriers engaged in international and interprovincial traffic. There is a constant supervision of vessels and cooperation with ship owners.

Mr. POULIOT: Before this item is carried may I state that I understand that there is an item for the Food and Drugs Act. It is not only Eno's Fruit Salts that I have to complain of, there is also the J. N. de Kuyper gin. On the label it is stated in big letters that it is distilled in Holland, which is untrue. It is made in Montreal. It is a kind of concoction made of syrup that they mix with alcohol. I wonder whether the minister will not take steps to have the label rectified, so that people will not be under the impression that they are drinking pure Holland gin when they have only that concoction made of syrup by a liquor company in Montreal.

Mr. POWER: I am almost inclined to share my hon. friend's indignation at the thought that J. N. de Kuyper gin, which was a staple in the province of Quebec some years ago, has deteriorated. If such is the case I shall most certainly make such inquiries as I can in order that it may be brought up to the standard which we were led and taught to expect from that great concern.

Mr. POULIOT: Thank you. There is something else. In the United States they have a wonderful publication which indicates the cost of patent medicines to the producers. For instance there is Vapex, which is sold at around $1 a small bottle, and it costs the producer about twelve cents. It is an exploitation of the public, and if the facts were made known to the Canadian people there would be much less of such exploitation by the makers of medicines.

[Sir George Perley.]

Mr. POWER: I had the pleasure of reading the same book as my hon. friend has read. I think it is called a Hundred Million Guinea Pigs, and reference is made in it to the matters to which he has drawn my attention.

An hon. MEMBER: It is almost as bad as the law.

Mr. POWER: According to A Hundred Million Guinea Pigs, the book to which my hon. friend refers, the poor people of the United States of America were being deluded, through heavy advertising, into buying worthless preparations. But I am informed that the regulations of the Department of National Health provide that if a commodity or a product is required to be registered and the price of the product is found away in excess of its real value, registration is refused.

Mr. POULIOT: Hear, hear.

Sir GEORGE PERLEY: Does that mean that when they ask for registration the department demands to be shown the cost? Is that what is done?

Mr. POWER: I understand that an estimate is made from the formula. The application form states the price.

Sir GEORGE PERLEY: And the cost price too?

Mr. POWER: It states the sale price, and the department makes a careful study of the cost price.

Mr. POULIOT: Therefore there will be a great saving in our drug stores?

Mr. POWER: Certainly.

Mr. MacNEIL: There is a matter which lies outside the scope of the inquiry of the special committee, but which I think should receive the attention of the minister. I refer to the circumstances of a large number of imperial service men who are in Canada and who were not domiciled here at the outbreak of the war. Their needs are dealt with, of course, through the Canadian representative and the Canadian office of the British Ministry of Pensions. Nevertheless circumstances are such at the present time that their needs are being referred to various municipalities, and in the constituency which I represent a number of municipalities have had reason to complain, feeling that these men should be dealt with by the Canadian government. It has been difficult to explain the situation, and it has been difficult also, in referring the matter to the Canadian Office, to secure a review of their claims such as we usually secure from the Canadian

pension commission. I should like to ask the minister if he has considered the advisability, in view of the vast array of often disgraceful evidence as to the condition of these men, of making suitable representations to the British Ministry of Pensions that these men may secure redress.

Mr. POWER: The matter to which my hon. friend refers was brought to-day to the attention of the committee on pensions, although it came up indirectly in connection with another matter; the representations covered the point raised by my hon. friend. The request of those representing the imperial veterans is that they be treated on exactly the same basis as Canadian veterans. At the present moment, as my hon. friend knows and as doubtless the committee is aware, soldiers who served in the imperial army but who were domiciled as citizens of Canada prior to the war are treated on the same basis as Canadian citizens, in that the pension which is granted to them by Great Britain, and which is very often below that which is granted by Canada, is augmented to the Canadian level. The point now raised is whether persons who have come to Canada since the war and who did not serve in the Canadian forces, but served in the imperial forces, shall receive the same treatment as those who served in the Canadian forces. The question is a difficult one to settle. As my hon. friend well knows, it is one for negotiation as far as possible with the British Ministry of Pensions. In any case I should be very glad to take the point up again with the British government, though I understand it has been discussed many times, as to whether they are prepared to make an additional allowance to their soldier pensioners now residing in Canada.

Mr. POULIOT: Before this item is carried would it be possible to know how many veterans in armies other than the British army had the preference over Canadian citizens in the civil service. I wonder whether the minister can answer that, or if he cannot, would he be kind enough to tell me from what department I can get that information?

Mr. POWER: I will, with great pleasure, refer my hon. friend to the civil service commission.

Item agreed to.

Mr. POWER: If my right hon. friend (Sir George Perley) is satisfied I will hold open item 173. The hon. member for Davenport suggested that perhaps item 175 could be passed at once. There are two large items, one for $2,600,000, the other for $3,000,000. I am quite willing to leave the $3,000,000 item open and pass the one for $2,600,000.

Sir GEORGE PERLEY: I do not think it makes any difference.

Item agreed to.

Unemployment assistance, $2,600,000.

Mr. GREEN: What imperial veterans are eligible for assistance under this particular item?

Mr. POWER: Those who arrived in Canada prior to 1924 and who are pensioners or who have commuted their pension.

Mr. GREEN: Is there any reason why that date should not be carried forward, for the benefit of men who arrived after 1924?

Mr. POWER: I think it would be rather a big question to discuss at this late hour. I assume that the regulations were made in 1924 and they took the situation as it was found at that time. No government since then have thought that their duty lay in looking after imperial soldiers of another country. They took the situation as they found it at that time, and since then no government have considered it to be their duty to look after soldiers of another country. As a matter of fact, as my hon. friend knows, these men are being looked after by the municipal authorities of the municipalities in which they reside. They are not starving.

Sir GEORGE PERLEY: Unemployment assistance, as I understand it, is assistance given by this government to ex-service men in lieu of the ordinary relief which is given by the municipalities.

Mr. POWER: It is given to small pensioners who are unemployed. Only small pensioners are in receipt of it.

Sir GEORGE PERLEY: To all pensioners who are unemployed?

Mr. POWER: To unemployed small pensioners whose pensions are not sufficient to bring them up to the scale laid down by the department as the scale they should receive.

Mr. GREEN: What would be involved if that date were carried forward to January 1, 1936?

Mr. POWER: I have not the faintest idea and I do not think we could get an estimate of it, because I do not think there are any figures available anywhere to let us know how many British ex-soldiers have migrated to Canada since 1924.

Mr. GREEN: Could that information be obtained from the municipal relief lists?

Mr. POWER: It might be obtained in some way. I am in hopes that if a classification of ex-service unemployed is made by the veterans' assistance commission all these facts and figures will be available, but certainly they are not available now.

Mr. GREEN: I suppose the dominion government is now paying a large share of the cost of relief for these men, in any case?

Mr. POWER: Yes.

Mr. TUSTIN: What amount of assistance do these men get? Is it on a sliding scale?

Mr. POWER: There is a basic rate of $18.75 per month for a single man. The basic rate was laid down in the famous Hyndman report, and it is now in effect. It increases for a married man and for pensioners with children. If their pension is less than the municipal rate of relief we supplement it in order to bring it up to the municipal rate or to this basic rate of $18.75 per month for a single pensioner; $30 per month for a pensioner with one dependent, $34 per month for a pensioner with two dependents; $39 per month for a pensioner with three dependents, and so on. For a pensioner with seven dependents it is $51 per month. As an incentive to the pensioner to endeavour to secure employment casual earnings up to $10 per month are not deducted, and the earnings of any child living with the pensioner are exempted up to $40 per month.

Sir GEORGE PERLEY: Does the rank of the ex-service man make any difference at all in the scale?

Mr. POWER: No, not at all.

Sir GEORGE PERLEY: What amount was expended last year?

Mr. POWER: Last year we expended $2,042,000, and as a result of the findings of the Hyndman commission the amount will be considerably increased this year.

Sir GEORGE PERLEY: Does the minister expect to have to spend $2,600,000?

Mr. POWER: Yes.

Sir GEORGE PERLEY: Because of the increase recommended in the Hyndman report?

Mr. POWER: Yes.

[Mr. Power.]

Mr. TUSTIN: Do I understand the minister to say that returned men get this relief providing they are already receiving a small pension, in order to bring it up to a certain amount, or do they have to be on relief in the municipality in which they reside in order to have their income supplemented in this way?

Mr. POWER: The returned soldier who is a pensioner has no connection with the municipality at all as far as relief is concerned; he is not obliged to apply to the muni ipality. He applies to this department, and if his income is not as high as this basic rate or as the rate of the municipality in which he lives, then we supplement that amount. So far the government of Canada has not considered it to be its duty to look after ex-soldiers who are not pensioners.

Mr. TUSTIN: I have in mind a pensioner who is receiving a small pension; no doubt the minister will recall the case, because I have spoken to him about it. I think this man has a pension of about $30 per month, and he has a family of four children. He strenuously objects to applying for relief, either from the municipality or under this scheme, and I was just trying to get it clear as to whether he should be on municipal relief.

Mr. POWER: If he receives a pension of $30 per month he would probably have that amount brought up to the scale I mentioned a few moments ago.

Item agreed to.

War veterans' allowances, $3,200,000.

Sir GEORGE PERLEY: I would like some explanation of this increase, but it is almost eleven o'clock.

Mr. POWER: It will not take me a moment to explain. The war veterans' allowance was introduced in 1930. At that time a very good estimate was made as to the annual amount that would be expended, and the estimate has been pretty closely followed since then. As the soldiers grow older and reach the age of sixty more of them come under this act. Some of them grow less capable of looking after themselves and also come under the act. That is the reason for the increase.

Sir GEORGE PERLEY: That is a reasonable explanation, but I should think their numbers would be growing less.

Mr. POWER: Not in this particular category. There are more reaching the age of sixty than are dying. In 1930 it was anticipated that by 1959 the expenditure under this item would reach $12,000,000 annually.

Sir GEORGE PERLEY: Is this allowance made only to those over sixty?

Mr. POWER: To those sixty or over or to those holders of small pensions who are permanently incapacitated.

Item agreed to.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

---

## Monday, April 27, 1936

The house met at three o'clock.

### QUESTIONS

(Questions answered orally are indicated by an asterisk.)

#### HOUSING LOANS

Mr. DESLAURIERS:

1. Is it a fact that the Canada Life Assurance Company, investment department, 275 St. James street west, Montreal, has issued a circular stating that by virtue of an agreement with the government this loan company will pay 50 per cent and the government 20 per cent of approved loans in the province of Quebec, that is 70 per cent instead of 80 per cent as the law demands, while in the other provinces of the dominion this company states that an agreement has been made with the government to pay 80 per cent?

2. If so, can the government state how many of these loans were made in the province of Quebec after an agreement between the government and this loan company?

3. What are the reasons given for the inequality of treatment between Quebec and the other provinces of the dominion?

4. What are the other loan companies, if any, who have made similar agreements with the government concerning the province of Quebec?

Mr. DUNNING:

1. No information as to the circular referred to. In the case of all lending institutions, the agreements beween the dominion government and such institutions provide that the share of the lending institutions may be 50, 55 or 60 per cent of the total actual cost of construction or appraised value of the property, whichever is the lesser, as agreed upon between the lending institution and the borrower in each case. Under the agreements there are no provisions limiting the operations of the lending institutions to any one or more provinces or discriminating between various provinces as to amounts loaned or other conditions.

2, 3 and 4. Answered by No. 1.

#### WHEAT EQUALIZATION CHEQUES

Mr. MAYBANK:

1. How many grain growers benefited by equalization cheques respecting wheat in (a) Manitoba; (b) Saskatchewan; (c) Alberta?

2. How many grain growers benefited by equalization cheques respecting coarse grains (a) Manitoba; (b) Saskatchewan; (c) Alberta?

3. What is the amount of each of the three largest cheques paid out as equalization money in respect to wheat, and in favour of whom were such cheques made?

4. What is the amount of each of the three largest cheques paid out as equalization money in respect to coarse grains, and in favour of whom were such cheques made?

5. In what number of cases did primary producers assign such equalization payments respecting wheat (a) Manitoba; (b) Saskatchewan; (c) Alberta?

6. In what number of cases did primary producers assign such equalization payments respecting coarse grains (a) Manitoba; (b) Saskatchewan; (c) Alberta?

Mr. GARDINER: Mr. Speaker, I would point out in reply to this question that the government will not be in possession of the information referred to. It will be in the hands of the wheat pools, and not even in their hands until later in the year. I would therefore ask that the question be dropped.

Mr. SPEAKER: Dropped.

#### CANADIAN NATIONAL RAILWAY SECURITIES

Mr. TUCKER:

1. Have the railway obligations or securities against which $16,000,000 of dominion notes were issued pursuant to authority contained in "An act respecting the issue of dominion notes," statutes of Canada, 1915, chapter 4, been paid?

2. If so, when were they paid?

3. How much interest, if any, has been paid on said securities to date?

4. To whom was such interest paid?

Mr. DUNNING:

1. No.

2. Answered by 1.

3. Interest paid by the Canadian Northern Railway Company and the Grand Trunk Pacific Railway Company on advances secured by the obligations referred to amounted to $2,327,945.23.

4. Receiver General of Canada.

#### FARM LOAN BOARD, REGINA

Mr. PERLEY (Qu'Appelle):

1. Who was the first appointed to take charge of the farm loan board in Regina, Saskatchewan?

2. Was he a returned soldier?
3. How long did he continue in office?
4. Were his services satisfactory?
5. Who is now in charge of said office?
6. Is he a returned soldier?
7. Has any change in salary been made?
8. If so, when was such change in salary made?
9. By whom was the present officer recommended?

Mr. DUNNING:

1. J. F. Anderson, Regina, Saskatchewan.
2. Yes.
3. From May 16, 1935 to March 10, 1936.
4. Not entirely; in reorganizing the work of the board he was retired as in the best interests of the board.
5. R. S. Rideout, Regina, Saskatchewan.
6. No.
7. No.
8. See answer 7.
9. Appointment was made in accordance with the provisions of the Canadian Farm Loan Act following his application for the position.

CREW OF STEAMER GRENVILLE

Mr. CHURCH:

1. What members of the crew of the steamer Grenville at Prescott, engaged in lighthouse work on the St. Lawrence and lake Ontario, and the great lakes, were dismissed since October 14, 1935?
2. By whom were they replaced?
3. What previous experience had the new appointees for this work?
4. (a) What are the home addresses of the present members of the crew; (b) by whom were they recommended?
5. What notices, by telegram, letter or otherwise, were given to the members of last year's crew to report for duty?
6. Were any of said notices cancelled?
7. Has any member of the crew been dismissed since the opening of the navigation season?

Mr. HOWE:

1. First and second engineer.
2. Chief Engineer H. I. Myers replaced by George Jarrell. Second Engineer W. E. Godkin replaced by George Mortlock.
3. The new appointees possess the necessary certificates of competency.
4. (a) Three from Prescott; thirteen from Kingston; one from Spencerville; one from Brockville.

(b) They were appointed on instructions issued by the department.

5. Acting superintendent instructed by letter of the 5th ultimo to recall the first and second engineers, two oilers, three firemen to commence duty on the 10th of March, on the understanding that these appointments were to be of a temporary nature.
6. Yes.
7. Yes.

[Mr. E. E. Perley.]

ROYAL CANADIAN MOUNTED POLICE

Mr. PERLEY (Qu'Appelle):

1. Was there a regulation in force on the first day of October, 1935, fixing a retiring age for surgeons in the Royal Canadian Mounted Police?
2. Has there been any amendment of such regulation? If so, what were the amendments, and when were they enacted?
3. Who was the Royal Canadian Mounted Police surgeon at Regina on the first day of November, 1935?
4. Is the position still occupied by the same person?
5. If a new appointment has been made, what is: (a) the name of the appointee; (b) the date of his appointment; (c) his salary or remuneration; (d) his age?

Mr. CARDIN:

1. Yes, for regular uniformed surgeons, but not for "part-time" surgeons.
2. No.
3. There was no regular uniformed police surgeon at Regina on the first day of November, 1935, and there has been none since the 28th February, 1934—the last uniformed surgeon having been retired on the 27th February, 1934. Since that time, "part-time" surgeons only, or acting assistant surgeons, have been appointed, and these have no status for superannuation or retirement, and are appointed on a month to month basis. The "part-time" surgeon, or acting assistant surgeon at Regina, on the 1st May, 1935, was Dr. S. E. Moore, M.B., M.D., F.R.C.S., (C).
4. Answered in part by No. 3. Dr. Moore is not the "part-time," or acting surgeon, at Regina at present.
5. The "part-time" surgeon, or acting assistant surgeon, at Regina, at the present date is:

(a) Dr. W. A. Thomson.
(b) Date of appointment—6th April, 1936.
(c) Salary—$150 per month.
(d) Age—No information.

AMHERST RURAL ROUTE NO. 4

Mr. BROOKS:

1. Were tenders invited during the year 1935 for performing the service on Amherst, Nova Scotia, rural route No. 4; if so, was a contract entered into, and with what person and upon what terms?
2. What are the names of those who submitted tenders, and the amount of each tender?
3. If tenders were called and no contract entered into, why was no contract awarded?
4. When was the last contract terminated, and is the person who had such contract at present conducting the service; if not, why?
5. Who is at present performing the service and upon what terms?

Mr. ELLIOTT (Middlesex):

1. Tenders were invited but contract not yet awarded.

2. Contract arrangements not having been completed it is not considered in the public interest to give this information until new contract has been executed.

3. On account of doubt as to ability of lowest tenderer to give satisfactory service.

4. December 31, 1935. No. Mr. Ackles, former mail contractor, refused to continue service temporarily for short period beyond that date.

5. Douglas Baxter, temporary, at the rate of $110 per month.

FURNITURE IMPORTATIONS

Mr. EDWARDS:

What was the value of furniture imported into Canada from the United States during each of the months of January, February and March, 1935, and during each of the same months in 1936?

Mr. ILSLEY:

Imports of Furniture from the United States Entered for Consumption in Canada During the Months of January, February and March, 1935 and 1936

| Item | Month | 1935 | 1936 |
|---|---|---|---|
| Furniture, house, office, cabinet or store furniture of wood or other material, n.o.p., in parts or finished | January | $18,673 | $33,809 |
| | February | 19,990 | 56,707 |
| | March | 33,982 | 59,404 |
| Furniture, house, office, cabinet or store, of metal, in parts or finished | January | 10,910 | 17,142 |

## QUESTIONS PASSED AS ORDERS FOR RETURNS

LEAGUE OF NATIONS

Mr. CHURCH:

1. What were the yearly expenditures by Canada on the League of Nations from 1920 to 1936, inclusive?

2. Except by the covenants to the League of Nations, what treaties or undertakings has Canada made to date with foreign powers as a nation which involve supplying armed resistance in certain cases, either separately or as a member of the British empire?

3. Has the government any information to give the house about any proposals made to reorganize the league with a view of making it a more practical agency for peace and security to meet changed conditions so as to adjust the league to modern 1936 conditions and increase its usefulness by the admission of the United States, Japan, Germany and Russia, as members thereof?

4. Will any additional papers or other material about the league or the European situation, since the white paper, of February last, be laid on the table of the house?

5. Is it proposed to send special delegates with no training as ambassadors for 1936 meetings of the league; if so, and if the delegates have been chosen, who are they, and what reports do these outside representatives make and to whom?

PURCHASE OF TURKEYS

Mr. WERMENLINGER:

1. Since the change of government, did the Department of National Defence or the Department of Labour purchase a number of turkeys during the last Christmas season?

2. If so, to whom was the contract given?

3. What was the price?

4. Were tenders called for?

5. If so, what were the names of the tenderers?

## MOTIONS FOR PAPERS

ORDER IN COUNCIL NO. 2238

Mr. MULOCK (for Mr. Maybank:

For a copy of order in council No. 2238.

RAILWAYS—SAND BLASTING OPERATIONS

Mr. BETTS (for Mr. Church):

For a copy of all correspondence, letters, agreements or any other written material between the government of Canada or any officer thereof and the Brotherhood Railway Carmen of America (Canadian division), protesting against the use of sand blasting processes because of the fatal results to operators of these apparatus, during the year 1934 and 1935; to include a copy of any report made by the federal Department of Health regarding this process and as to the great loss of life from a disease known as silicosis, caused by inhaling the dust from the sand blasting operations.

A. GODBOUT

Mr. LAWSON:

For a copy of all letters, correspondence, telegrams and other documents in the possession of the Post Office Department relative to the dismissal of Mr. A. Godbout, former postmaster of La Durantaye, county of Bellechasse, Quebec.

IMMIGRATION

Mr. SYLVESTRE (for Mr. Jean):

For a copy of all orders in council passed since January 1, 1936, authorizing the entry of immigrants to Canada.

PHILIPPE CHALIFOUR

Mr. LENNARD (for Mr. Wermenlinger):

For a copy of all correspondence, telegrams, letters and other documents in the possession of the Department of Marine, with reference to the dismissal of Philippe Chalifour, labourer for the said department at Quebec, dated from October, 1935, to date.

WHEAT CROP EQUALIZATION PAYMENTS ACT

Mr. MUTCH (for Mr. Maybank):

For a return showing: (1) The name, address and calling of every person, firm, corporation, etc., other than a primary producer of grain, receiving any payment of money under the provisions of the 1930 Wheat Crop Equalization Payments Act; (2) the amount of wheat for which each of such payments was made; (3) the reason for such payment being made, whether as a result of an assignment by a primary producer or otherwise; (4) the name and address of each primary producer as a result of whose assignment any such moneys as aforesaid were paid.

Mr. GARDINER: The same thing applies to this motion as was said in connection with the question to which I spoke a few moments ago, and it will apply also to the following motion. It would be impossible for the government to accept these motions in their present form.

Motion dropped.

Mr. MUTCH (for Mr. Maybank):

For a return showing: (1) The name, address and calling of every person, firm, corporation, etc., other than a primary producer of grain, receiving any payment of money under the provisions of the 1930 Wheat Crop Equalization Payments Act; (2) the amount of coarse grains for which each of such payments was made; (3) the reason for such payment being made, whether as a result of an assignment by a primary producer or otherwise; (4) the name and address of each primary producer as a result of whose assignment any such moneys as aforesaid were paid.

Mr. GARDINER: The same applies here.

Motion dropped.

## BUSINESS OF THE HOUSE

FURTHER LEGISLATION—PROBABLE DATE OF BUDGET

On the orders of the day.

Right Hon. R. B. BENNETT (Leader of the Opposition): Is the Prime Minister (Mr. Mackenzie King) in a position to indicate first, what further legislation we may be called upon to consider, and, second, when we may expect the budget?

[Mr. Lawson.]

Right Hon. W. L. MACKENZIE KING (Prime Minister): I may say I expected my right hon. friend to ask this question, and as I am anxious to give as final a list as possible of the measures to be presented to the house, I should like to have another day or two before replying to his question. As to the date of the budget, I understand the Minister of Finance (Mr. Dunning) has been endeavouring to arrange matters so as to bring it down at an early date, and perhaps he can state to the house how soon he thinks that will be.

Hon. CHARLES A. DUNNING (Minister of Finance): I think I shall be in a better position to answer that in a day or two. I also have my troubles.

## CANADIAN NATIONAL RAILWAYS

PROVISION FOR ADMINISTRATION BY BOARD OF DIRECTORS APPOINTED BY GOVERNOR IN COUNCIL

Hon. C. D. HOWE (Minister of Railways and Canals) moved the second reading of Bill No. 21, to amend the Canadian National-Canadian Pacific Act, 1933.

He said: Mr. Speaker, in bringing down this measure I feel I am sponsoring a most important and necessary piece of legislation. It is common knowledge that the three directors to whom the direction of the railways was entrusted as a result of the 1933 act have made no real progress toward the improvement of our railway situation. To date they have failed to achieve any substantial cooperative economies, to secure which was the principal object of their appointment and the outstanding feature of the 1933 legislation. Not only have they failed to secure any substantial results to date, but on their own published statements, the prospect of future results from cooperative measures, plans and arrangements is not bright. Nor have they been able to reduce to any great extent Canadian National operating costs, due to the fact that that avenue had been so thoroughly explored by the previous boards of directors. I shall in a few moments support these statements by citations from the reports of the trustees themselves. That is the external situation.

Internally, as most hon. members are probably aware, there is much unrest among Canadian National employees who everywhere appear to regard the trustee method of direction and control with distrust and suspicion. This is primarily due to the fact that in matters of actual management the chief operating officer with the titular rank of president is subordinated to a trustee

board of three laymen, inexperienced in railway problems and who know nothing of actual railway practice, and, as a result, have shown a complete lack of understanding of the human element which, under prevailing conditions, enters so largely into successful railway operation. In talking over the situation with the trustees themselves I cannot find that any one of them believes that the present system of management is a good one. As things stand the trustee board is responsible to no one, is apparently without a policy, and, so far as public relations are concerned, is without even a voice. In addition, there is, to put it mildly, serious lack of agreement among the trustees themselves, and the fate of any measure with which they must deal depends upon whether one of the other trustees can be brought to agree with the views of the chairman, who is vested with overriding authority in that a majority vote of the trustees is ineffective unless the chairman be included in that majority.

That the trustee arrangement would not work was clearly recognized by the Liberal opposition when the 1933 bill was under debate in this chamber. At that time the present Prime Minister (Mr. Mackenzie King) took the ground that a ministry could not divest itself of responsibility for the direction and control of the Canadian National Railways, as was contemplated by the act, nor could parliament abrogate its duty. However, the 1933 bill became law and the government of the day set up the trustee form of management and direction largely on the basis of the existence of what was described as a "receivership situation" with respect to the national lines, the object of which was to bring about "an equilibrium between income and expenditure" and restore the railway to a position where it could earn its way.

Two years have passed since the trustees were given complete authority to accomplish this most desirable aim, and I doubt whether anyone in this house will assert that what has been accomplished by the trustee form of direction and control could not have been accomplished equally well if not better by the board of directors who were displaced by the trustees.

In 1933 Canadian National revenues touched an all time low. Such increase in operating surplus as has resulted since 1933 has been due to increase in traffic or to economies introduced by the displaced board of directors rather than to improvements in administrative policy or practice inaugurated by the trustees. As a matter of fact, the former boards of directors had done very good work in the curtailment of expenditures and the adoption of measures of economy before the board of trustees appeared on the scene. That they had been efficient in that respect is shown by the following extract from the annual report issued by the board of trustees for the year 1934 at the end of their first year in office:

> During the year studies have been made in numerous directions in the effort to secure the maximum economy in the operation of all departments. The severe decline in gross revenue had made it imperative that all opportunities for economy be closely examined and re-examined, and the drastic curtailment of all expenditures effected prior to 1934 testifies to the vigorous steps taken. Further economies necessarily became difficult to secure if the efficiency of the service was to be maintained.

As to "cooperative measures, plans and arrangements," the board of trustees require 2,000 words to explain why more had not been accomplished. The Canadian Pacific covered the same ground in 250 words of the directors' report, which concluded as follows:

> The total annual joint economy secured by the two companies from the measures put into effect up to the end of 1934 is estimated to be $1,220,510.

That estimate has by the 1935 report of the Canadian Pacific Railway been placed at $1,600,000, one half of which will accrue to each company. That sum includes the economies secured by the former board of directors, as the two railways did not wait for the 1933 bill to become law before taking action in the matter of joint economies. As to this I will quote the following brief extracts from the annual report of the Canadian National Railways for that year, 1933, addressed to the board of trustees by Mr. Hungerford, as acting president, and forwarded by the trustees to the Minister of Railways for presentation to parliament:

> In accordance with the expressed desire of parliament, the managements of the Canadian National and Canadian Pacific railways took action in November 1932 toward effecting cooperative economies before the enactment of the Canadian National-Canadian Pacific Act of 1933. Results so far accomplished are evidenced in the partial pooling of passenger train services between Montreal and Toronto and Ottawa and Toronto. Other economies have resulted from arrangements for joint operations, such as switching, car cleaning and freight shed operation at a number of points where duplication existed, as well as the hauling of traffic by one railway for the other. Many similar projects are under study.

In view of the meagre results it is not surprising that the trustees thought it necessary to include in their 1934 report the following explanation as to why greater results had not been secured:

> Joint examination of many projects which superficially appeared capable of yielding co-

operative economies showed that the economies to be derived are not commensurate with the capital expenditures necessary to bring them about, or that under present conditions no economy would result, a condition fundamentally due to the fact that measures already taken individually by each railroad to meet the conditions imposed by the depression had curtailed services to an irreducible minimum.

Since the present bill was drafted the annual report of Canadian National Railways for the year 1935 has been brought down. This report deals at great length with cooperative measures, plans and arrangements by the Canadian National and Canadian Pacific railways, and once more the trustees are unable to report any substantial progress. They refer to the large amount of "investigational work" by joint committees of the two companies, but "the amount of preliminary detail has proved to be so great that no additional cooperative measures have been made effective." The report states however that the research work "has indicated possibilities of further economies, more particularly in the matter of functionally duplicate line abandonments and joint facility arrangements, and efforts are now being concentrated along these lines." To quote from the 1935 report:

> The question of further extending the area of passenger train pooling has been under study during the past year by the joint technical committee and conclusion has been reached that the economy possible of attainment at this time is not sufficient to warrant the expenditure of capital required to make the principal passenger train terminals suitable for joint use and to offset disruption in traffic which would necessarily be involved.

Similarly the trustees report inability, for reasons which they cite, to reduce the number of city ticket offices maintained by the two companies, and then go on to state that the United States legislation of 1933, the general purpose of which was similar to the Canadian act of that year, had failed to produce any definite coordination measures to date:

> This further evidences the difficulties inherent in bringing such measures into effect. The British railways met with similar difficulties.

The trustees return to the subject towards the conclusion of their report, when they state:

> Some further economy from cooperative measures may be expected but cooperative economy is a most difficult process when maintenance expenditures and train and car mileage have been so drastically reduced. It is becoming increasingly certain that any substantial improvement in net earnings can be secured in no other way than by increased volume of traffic and, in the opinion of the trustees, it is in the public interest that the way out of the present difficulties be found in an expansion of earnings rather than by way of a further curtailment of railway expenditures.

Two annual reports from the Canadian National trustees, but one continuous recitation of apologies for lack of success in applying the cooperative provisions of the 1933 act under which they were appointed. The results have been disappointing, and I venture to say they have been disappointing to the hon. gentlemen opposite who were responsible for the appointment of the trustees whose régime was intended to bring about an equilibrium between income and expenditure. The right hon. leader of the opposition himself evidently was not hopeful of the success of trustee direction and control, because toward the end of the late campaign he announced that it was proposed to undertake still another inquiry into transportation in Canada, including railways—the third in comparatively recent years. That proposal could scarcely be regarded as a vote of confidence in the ability of the trustees to do what was expected of them.

I think it can be shown also that the right hon. leader of the opposition himself had some reason to question the degree of authority which the 1933 act placed in the hands of the trustees, and there is evidence also that his Minister of Railways had reason to feel that his position had been rendered very unsatisfactory by the 1933 measure. I am brought to that conclusion by a perusal of statements made by the chairman of the board of trustees before the standing committee of this house which deals with Canadian National accounts and estimates, the recorded proceedings of which show that in the discussion of the recommendations of Touche and Company concerning the capital structure of the railway, no action had been taken by the trustees because of a certain letter received from the then Prime Minister.

Mr. BENNETT: That was all put on record later in this house.

Mr. HOWE: Quite. I do not want to dwell on that.

The Liberal opposition was not alone in expressing doubts as to the success of the 1933 legislation. The railwaymen of Canada, as represented by eighteen railway organizations, and the trades and labour congress, prepared an extensive memorandum of comments and recommendations which were placed before the senate committee which dealt with the 1933 legislation before it was brought into this chamber. These representations were to the effect that a board of trustees consisting of three persons would not be sufficient

properly to look after the affairs of so vast a property as the Canadian National system, and they recommended a board of at least five trustees. They were particularly concerned about the problems involving the human element, and considered that at least one member of the new board of trustees, regardless of its size, should be specially qualified to counsel in respect to these problems by reason of his experience and the confidence imposed in him by the railway employees. They pointed out that the policy had been recognized in the appointment of the previous directors by both Liberal and Conservative governments, and to that arrangement was attributed much of the loyalty and enthusiasm as well as the good relations between the management and the men on the Canadian National railways, which had been specially referred to in the Duff report. In the setting up of the board of trustees these views of railway labour were not considered.

Railway labour also objected to the veto power proposed to be vested in the chairman, which, it was felt, would in practice subject him to the temptation of dictatorship. It was regarded as too great a concentration of responsibility and authority in one man.

The difficulties foreseen by these railway representatives have been verified by actual experience. The board of trustees clearly is not representative enough, and the powers granted the chairman have endowed him practically with autocratic authority, the result of which is that, while you have a board of three trustees, it is really a one-man affair. In the circumstances the wonder is that others should be willing to accept appointment to the trustee board with their views and opinions discounted and even nullified in advance.

The reading of the recommendation of the Duff commission, with respect to the board of trustees, admits of no doubt as to the calibre of the men the royal commission had in mind for trusteeship:

> All should be persons of proved business skill and capacity;
>
> The chairman in particular should have financial, administrative and executive ability of a high order.

Those were the specifications laid down by the Duff commission. Possibly the recommendation was a counsel of perfection which the then government could not realize. Admittedly it is not easy to enlist the services of executives of that type, and although the 1933 legislation came into force on the first day of July of that year, the appointment of the trustee board was not made until the end of the year, when an order in council was passed appointing Honourable C. P. Fullerton, K.C., to be chairman, and Frederick K. Morrow, of Toronto, and J. Edouard Labelle, K.C., of Montreal, to be trustees—two lawyers, and the third a company director. Both the latter had had a couple of years' experience on the board of directors of Canadian National Railways, but the chairman had had no previous experience in railway management, and while he had no doubt very useful qualifications for the bench or for the board of railway commissioners, his training and experience did not suggest that he possessed the "financial, administrative and executive ability" specified by the royal commission as a prime requisite for chairmanship of the board of trustees. Into the hands of such a board of trustees the act of 1933 delivered the fortunes of the Canadian National Railways—a body of three laymen, only one of whom was permitted an effective voice; not one of the three having any knowledge of actual railway practice, or experience in the handling of the human element, which enters so largely into railway operation.

One of the first acts of this board of trustees was to carry out that provision of the 1933 bill which requires the appointment of a chief operating officer "with titular rank of president," responsible to, and reporting to, the board of trustees and to that board alone, and to pass a by-law setting out his duties. My reading of the legislation, and particularly of the Duff report on which it is based, leads me to believe that the legislation intended that the president should be the operating head of the railway, in fact as well as in name, but this, it seems, was not the view of the trustees. After I assumed office, the chairman himself gave me his interpretation of the legislation, which was that it was intended that the operating head should be president in name only and that his real position was intended to be that of vice-president of the operating department.

The "powers, authorities and duties" of the chief operating officer, with titular rank of president, were defined by by-law of the board of trustees of January 31, 1934, and practical railwaymen will appreciate the fact that in enumerating the duties of the president in the management of the railway's transportation and communication services, the by-law states—"including, for example, the fixing of time schedules and conditions in connection therewith."

Having assigned the fixing of time schedules to the chief operating officer, with the titular rank of president, the by-law further provided that his duties should include:

> The engaging and continuing in and discharging from employment, the personnel

required for such purposes, or any of them, and the fixing of the terms and conditions of such employment, all salaries to be approved by the chairman of the trustees. This authority, however, is not to cover the appointment of vice-presidents, general managers, secretary, treasurer, European agent, European secretary treasurer, or heads of departments.

Such a state of affairs as reserving to the board of trustees or the chairman of it the authority to reward by way of salary and promotion could have no other effect than to weaken the position of the president as chief operating officer. In general, the man holding the title of president—admittedly one of the ablest railway executives in North America, who, in his forty-five years of service with Canadian railways, has risen from the lowest to the highest rung in the railway ladder—has had his position reduced to that of adviser to the chairman, who has made himself the real operating head of the railway property.

The Duff report, paragraph 209, definitely recommended that "the responsibility for the direction and control of the system should be laid upon the chairman and his associate trustees," but it was also explicitly stated that under the chief operating officer with the titular rank of president "should be placed the entire working of the railway in detail." In conformity with this recommendation, section 10 of the 1933 act provided that the trustees should appoint:

> . . . on terms to be fixed by them and with the titular rank of president, a person other than one of themselves to execute and perform, under and in consultation with them, the powers, authorities and duties of chief operating officer of national railways, as such powers, authorities and duties shall be from time to time defined by by-law and resolution of the trustees and committed for execution and performance.

It seems to me that any reasonable man would assume from this that it was the intention that the trustees should confine themselves to matters of policy, particularly in the direction of economies, with respect to which they were specifically enjoined by parts II and III of the Trustee Act, and that the "financial, administrative and executive ability" required of the chairman should be devoted to matters of broad policy. On the other hand it seems obvious that the operation of the railway in all its details was intended to be placed in the hands of an experienced railroad executive.

This intention was obviously not apparent to the chairman of the trustees, who proceeded to divide the offices of the railway into two camps, one responsible to the chairman and the other to the president. In that division of offices the chairman took over for operation by himself the following departments: legal, finance and accounting, publicity, medical, colonization, land and property, secretary's branch, hotels and steamships, and assumed joint direction with the president over the purchasing and stores departments. The fact that the chairman was totally inexperienced in matters affecting any of these departments, except possibly the legal department, did not deter him in the least.

Under the president were placed the departments of traffic, operation and construction economic, personnel, investigation, industrial, express, telegraphs, office services, statistics and pass bureau.

Under this arrangement the chief operating officer of the railway has been deprived of contact with and authority over departments which are an important and essential part of railway operation, such as the law offices and the financial and accounting departments. The fact that he has no control of the publicity department may explain why in recent years Canadian National publicity has failed to place before the people of Canada many of the things that should have been made known with respect to Canadian National Railways.

Having indicated the directions in which the appointment of trustees has failed to realize the expectations associated with the 1933 bill, I will deal briefly with the general provisions of the amendments to the act as contained in the bill now under consideration. I appreciate that consideration of the details of the bill will come in committee of the whole on the bill. However, it is sufficient, perhaps, to say that the present bill does not change the intent and purpose of the 1933 measure other than to the extent necessary to provide for the substitution of a board of seven directors for the present board of three trustees. Some explanation is in order as to why the number is fixed at seven. To limit the directors to three, as in the case of the trustees, would be to invite a repetition of some of the present difficulties, as even were each of the three to be accorded equal voice and vote there would be too great a centralization of authority in the direction of so vast an organization. The Drayton-Acworth recommendation of 1917 was for five trustees, including three railway members, one member to be selected on the ground of business and financial experience, and one as specially possessing the confidence of railway employees.

The Canadian National Railway Act of 1919 provided for a board of not less than five and not more than fifteen directors. That act was amended in 1931 to provide for two additional directors, making seventeen in all. The contact of such a widely scattered directorate, meeting monthly, was found to

be not sufficiently direct and continuous. To improve matters, an executive committee of six directors within easy reach of Montreal was set up in 1927; increased to seven in 1930, and to eight in 1931, when a finance committee of three directors (members of the executive committee) was also established. I mention these matters to show that the former directorate was found in practice to be unwieldy and cumbersome, and that an effort had been made to improve matters by centralizing the executive direction and control in the hands of a committee approximating in numbers those provided for by the present bill. The number is small enough to permit selection of men of proven worth and outstanding ability, and large enough to bring a variety of experience to bear upon important railway problems.

The present bill provides that the governor in council shall appoint the directors and also appoint one of their number to be chairman. A majority of the directors will govern, instead of the present trustee provision that the vote of the chairman is required before a decision can pass. This government will make a strong effort to secure men of "proven business skill and capacity," and it is intended to return to the practice, departed from in the case of the trustees, of placing on the board an outstanding representative of organized labour. It is the intention of the government to appoint as chairman a trained and experienced railway man, one not only thoroughly conversant with the Canadian National railway system and its problems but one who understands the human element, which enters so largely into successful railway operation.

It is not the intention to reappoint the deputy minister of railways to the board of directors. If it were considered desirable to do so, the present deputy minister of railways has very excellent qualifications for the post, by training and experience not only with the Canadian National, but with other railways, and as a professor of transportation at McGill for some years. The decision of the government, therefore, involves no reflection upon the present deputy minister of railways, but merely indicates that the government intends to appoint a board of directors and then permit it to function without necessity to have regard to the presence at the directors' table of one who may be assumed to represent the view of the government upon such matters as may be under discussion, as to which the government is properly concerned with policy only. The government intends to see to it that the directors are in a position to discuss freely and among themselves any and all matters coming before them.

The government believe, however, that it is very necessary for the Minister of Railways to work in harmony and in close contact with the chairman of the board of directors because of the problems that constantly arise as affecting government and railway policy, which matters cannot be dealt with adequately by the directors unless they know authoritatively the policy and intention of the government with respect to the matter at issue. The government will not again be satisfied to be wise after the event. If it is obliged to carry responsibility for the national railways, as it must, it is necessary that it should be in close touch with railway policy and have a voice in the shaping of that policy, as it is the government which must find the money for railway purposes. Whatever contact with the board may be necessary to keep the government in touch with railway policy and the railway property will, therefore, be as between the chairman of the board of directors and the Minister of Railways direct.

The government have given careful thought to the question of tenure of the board of directors. As to that there are a number of considerations involved. For the board of trustees the Duff commission recommended a tenure of seven years, with provision for a measure of continuity by staggering the terms of the initial appointees. The 1933 act restricted the tenure to five years, and for purposes of continuity the chairman was appointed for five, Mr. Morrow for four, and Mr. Labelle for three years. It is the intention of the present bill to establish a tenure of three years, and three of the original directors will be appointed for that term, two for two years, and two for one year terms; subsequent appointments of all to be for three year periods. In this way provision is made for necessary continuity by annual rotation of a portion of the board, which is the practice followed by many large corporations, notably the Canadian Pacific Railway. All appointments to the board will of course be by the governor in council, but it is hoped that reasonable permanency will be assured by the modified tenure proposed, and by the process of rotation, but most of all through the outstanding merit of the appointments to be made.

As to executive direction, I may say quite frankly that the government can see a certain merit in having the office of chairman held by one man and the office of president held by another, provided the president is made

the real operating head of the railway, and provided the president and chairman can work in complete harmony, with the president attending to all matters of operation and the chairman confining himself to matters of policy and public relations. Therefore provision is being made in this legislation for combining the offices of chairman and president, and for the separating of the two offices as the directors may decide and as personnel available for these two important offices will permit. It is felt that best results can be obtained if the chairman himself could be allowed to train and develop the man who will occupy the office of president, and it is therefore intended that the two offices shall be combined until such time as it is reasonably certain that they can be divided without endangering the operating efficiency of the railway.

I am aware that the Duff commission did not recommend the appointment of a present officer of the Canadian National Railways to the post of chairman, or as trustee; also that the commission recommended that any senator, member of parliament or former office holder be disqualified for appointment as trustee. Appointment of senators or members would scarcely be urged, but in other respects it seems to me that the action of the royal commission was contrary to well established precedent and the rules of common sense. Most of the successful industries in Canada or elsewhere are headed by a chief executive who grew up with the business. It sometimes happens that a business does not produce an executive who is competent to direct its policies, and that an outsider has to be brought in, but almost invariably this outsider is one trained in the same line of business. Fortunately Canadian National Railways have a man who is not only outstanding as a railway executive but has the respect of the Canadian people and of railway labour, and the confidence of this government. The 1933 legislation eliminated that part of the Duff report which specifically debarred holders or former holders of public office; the present bill removes the disability which would operate against employees of Canadian National Railways in the selection of chief executive.

The present bill provides for the approval of the governor in council, when by law approval of the shareholders of a company is required, instead of dispensing with any such approval by either the governor in council or shareholders, as was done in the 1933 bill. This is but right and proper, as the government are the elected representatives of the owners of the national railways, and there can be no question as to the mandate.

[Mr. Howe.]

The act of 1933 was in four parts. Part I dealt with the trustees, and hon. gentlemen will note that the amendments contained in the proposed bill have to do almost entirely with this part of the 1933 measure, and are intended to effect a substitution of a board of seven directors for the board of three trustees.

Part II of the 1933 act enjoins upon the two railways the duty of attempting "forthwith to agree and continuously to endeavour to agree" upon "cooperative measures, plans and arrangements." I have already dealt at length with the failure of the trustees, on their own admission, to achieve any great result under this section. They are not very hopeful of further economies, but tell us that the field of cooperative effort is still being explored, and if there still remain possibilities of worth while savings through cooperative efforts it is the desire of the government that they be secured. Before passing judgment on the practicability of Part II, it would, I think, be well to have the situation reviewed by the board of directors which will succeed the trustees. The substitution of the word "directors" for the word "trustees" is therefore the only change made in Part II of the 1933 act.

Part III of the act provides for compulsory arbitration by the chief commissioner of the board of railway commissioners. While Part III has never been invoked, and it is rather unlikely that it will be, we are leaving that in the act.

Part IV of the 1933 act definitely provides against amalgamation of the two railways, or unified management and control, and that feature is also being reenacted without change.

I have dealt somewhat fully with the difference between the board of directors as now proposed and the board of trustees. In case it may be suggested that the present bill returns the Canadian National Railways to the same form of direction that obtained under the late Sir Henry Thornton, I would point out that the situation is materially different. Sir Henry Thornton as managing head had a direct contract with the government, the last one covering a five year period. He therefore spoke with the voice of the government. The Department of Railways maintained a connection with the Thornton board in the person of the deputy minister, and was thus in a position to influence the board and the managing head—who was also chairman and president, by election—whether on matters of high government policy, or on matters of operation, with which the government properly was not concerned.

The present bill is intended to afford a much greater measure of autonomy to the chairman and board of directors. There will be no one at the directors' table other than the seven directors themselves. Such contact between the government and the board as may be necessary in the public interest will be provided by conference between the chairman and the Minister of Railways as and when questions arise where the intentions of the railway should be made known to the government and the views of the government should be declared to the directors. There will be no question about that contact or the medium of it. It is in effect the essence of the present legislation, for reasons already adduced, which it is not necessary to repeat.

The new board will differ from previous boards also in other important respects. The contact of the former boards of directors was casual rather than continuous, and it is proposed that the coming board shall take a much more active and effective part in the administration of the affairs of the railway.

Benefiting from past experience, the government will avoid the mistake of appointing too elaborate a board, with its invitation to political and public pressure, which the Duff commission reprehended. It will in the first instance appoint the chairman and president in one person. As and when a president, other than one of the directors, is chosen chief executive officer, he will be appointed by the board, subject to the approval of the governor in council. The directors and salaried officers will be each paid but a single remuneration, no matter how many subsidiary boards of the Canadian National system they may find themselves on. The present bill is thus not intended to reestablish the old order.

May I add that in my opinion the provisions of this proposed bill are of great importance. There can be no doubt that this government has a mandate to do its utmost to improve the operating position of Canadian National Railways so that there may be an end to the deficits that are so harmful to the credit of Canada. In this it must have the assistance and cooperation of an executive possessed of all the ability and experience that can be brought to bear upon the problem. Unfortunately the trustees have not been able to bring to bear either the ability or the experience contemplated by the Duff commission. No doubt they have done their best, but that best falls far short of the Duff commission concept of the administrative requirements of the national lines, and in the making of the appointments the late government either lost sight of the commission's recommendations or were unable to secure men of the calibre the Duff commission had in mind when it advised that all three trustees should be persons of proved business skill and capacity, and that the chairman in particular should have financial, administrative and executive ability of a high order. The chairmanship was the key post, and failure at that point has been fatal to the success of the trustee plan as a whole. That failure has been aggravated by the inability of the chairman properly to interpret his own duties and responsibilities in the light of either the 1933 act or the Duff report. The act called for the appointment of a chief operating officer other than one of the trustees, but in practice we find the chairman of the board of trustees usurping powers appertaining to the chief operating officer, in whose hands the Duff report recommended should be placed the entire working of the railway. There has thus been a progressive departure all down the line from the high ideals of direction and management contemplated by the Duff commission, and it has been amply demonstrated that the board of trustees, regardless of intentions, is incapable of meeting the situation, and that their lack of knowledge of railway administration acts as a wet blanket and dampens the ardour and enthusiasm of a railway staff which in former days distinguished itself, and which, properly led, will be able to go on to still greater achievements. To be effective, reorganization of the railway management must start from the top, but without the legislation now proposed this government will be helpless to effect the reforms so obviously needed

I have attempted to deal with the situation fairly and to present this measure in such a manner as to command consideration on its merits, divorced from any considerations of party advantage. Such criticism as I have directed to the working out of the 1933 measure has, I hope, been reasonably void of offence to hon. gentlemen who, three years ago, attempted in good faith to give effect to the recommendations of the royal commission. That those plans and arrangements have failed to effect the purpose intended is not a matter of gratification on the part of anybody. As already expressed, it is my personal belief, after close study and investigation, that the trustee plan is unworkable, and that it has shown itself to be so. I believe that the proposals contained in the present bill, in which, as it should be, account is taken of past mistakes, we have a much better plan, one much more in keeping with the principles of responsible government, and for which, in conclusion, I would request the careful consideration of hon. members on both sides of the house, having

regard to the fact that the railway problem is not a party question, nor ought it to be, but a matter of business of vital concern to every Canadian citizen.

Right Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, the temptation to follow the political address of the hon. gentleman who has just taken his seat (Mr. Howe) is very great. The first few minutes of his speech was of such an acrimonious and political character that I find it difficult to recall myself to the duty which I owe to myself and the country, which far transcends in importance the answering of the speech to which we have just listened. To indict a man upon his removal from office in his absence and without opportunity to be heard, has not been the usual practice in parliament. The statute that placed the chairman in office provides for his removal. It provides that he can be removed only by joint address of both houses of parliament, which, of course, involves an opportunity for him to give his defence against any charges which might be preferred against him.

The minister has seen fit this afternoon to make a series of charges against the chairman, some of which, if warranted by facts, would entirely support a charge being laid against the chairman under the provisions of the section providing for his removal. There is, however, a committee appointed by this house which will have to consider the Canadian National Railway accounts for the past year, and I suggest to the minister that if he expects to get far with this bill the first thing he must do is to call that committee together at the earliest possible moment to afford the chairman an opportunity of presenting his defence in respect of the charges that have been made against him.

So far as the other phase of this matter is concerned, ample reasons were given why, if I were so minded, I should bring to the attention of this house and the country conditions that I think would place the responsibility for the operating situation and the financial position to which the hon. gentleman referred, upon those who were responsible for the creation of the systems of railways in addition to the Canadian Pacific Railway which have brought ruin to this country at the moment. But I content myself with the realization that at the moment I have a responsibility far greater than that. I shall endeavour to discuss this matter as best I can without suggesting responsibility on the part of those now in office or dealing at all with the question of responsibility. I shall endeavour to discuss this terrible situation so far as the railways are concerned as a condition and not a theory, a condition that must be grappled with and must be met if the solvency of this country is to be maintained.

During the five long and weary years of world depression, when the trade of the world had fallen to only thirty per cent of what it was before the depression began—not simply a thirty per cent diminution in trade but a drop in world trade to only thirty per cent of what it was before the depression, and at the darkest moment the figure was 33⅓ per cent—the one great problem that the government of this country had to consider, in addition to the general financial situation and the internal situation of its people, had to do with railway conditions.

I am going to do what is perhaps an unusual thing. In view of the correspondence and the articles that are appearing in the newspapers it is quite clear to me that the people have not had an opportunity to read the report of the so-called Duff commission or to appreciate the facts to which it directs attention. I shall therefore place upon Hansard extracts from that report in order that those who now read at least short résumés of what takes place in parliament will have a clear appreciation and understanding of the facts as found by that commission. But before doing so, instead of reviewing the circumstances that brought about the three transcontinental railway systems, now merged into two, I point out that a commission was appointed, the Drayton-Acworth commission, to consider the railway situation and to make a report to the minister. But in 1931 it became apparent that the railway situation was one of extreme gravity. It became more apparent, shall I say, than ever before because of the reports made by the then chairman, Sir Henry Thornton, to which I shall direct attention presently, as his remarks were recorded and made part of the report, and because of the observations made by the president of the Canadian Pacific Railway Company. Both were of the opinion that the government should set up a commission to investigate and study the situation. The reasons they gave were not identical, but they at least reached the same conclusion, namely, that a commission should be appointed to investigate the whole situation for the purpose of seeing what might be done, but not for the purpose of bringing about an equilibrium between income and expenditure within a few months; because no one in those days, any more than does the government of to-day, contemplated the possibility of bringing about that desired end. The very fact that the government the other day desired

to make provision for deficits on the Canadian National Railways for the year 1936 indicates that in accordance with the opinion of those responsible for administration the Minister of Finance anticipates there will be a deficit in the Canadian National railway undertaking during the current year. No one in 1931 had any opinion other than that. I concluded, after discusisng the matter with my colleagues at some length on many occasions that it would be desirable to appoint a commission.

The personnel of the commission gave us much difficulty. It is not an easy thing to secure a commission of men who have a clear insight into and understanding of the problems to be dealt with by any commission studying the transportation problem in Canada. We realized that practically the whole of the Canadian Pacific four per cent perpetual debenture stock, and its preference stock, as well as a large share of its common stock, was held in Great Britain. We realized that a very large volume of the securities issued by the Canadian National system when it consisted of the Canadian Northern and the Grand Trunk were held in Great Britain and that there should be on that commission some person whose domicile or home was in Great Britain and who had a clear and, shall I say, comprehensive understanding of the problems connected with transportation and with finance as related to transportation. We were fortunate in securing the services of Lord Ashfield, who was born in the United States and trained in transportation at Detroit, Michigan, and elsewhere in the United States. Finally he had been entrusted with the enormous responsibility of consolidating the transportation services of the city of London and district, comprising the underground, the above ground and the on-the-ground lines, the street railway, the tube, and the bus. About that time he was concluding his efforts, as was indicated by a measure passed by the parliament of the united kingdom a short time afterwards. He decided to come, not because he desired to come but because he believed it was a public duty, having regard to the conditions that existed in this country and which were apparently fairly well known to everybody.

The chairmanship of the commission was very important, and we were fortunate in securing the services of the Chief Justice of Canada. The chief justice has been on the bench for many years, and so far as I know he has no political views, although at one time he was actively associated with the fortunes of the Liberal party in British Columbia. He has held high judicial office in that province and has made for himself an outstanding name among the great jurists of the world, of which I believe every Canadian is truly proud. Because of the lifelong experience he has had in sifting facts and applying legal principles, he has attained for himself a position equal to but not excelled by the great jurists of the British empire. I have heard this statement made by two gentlemen who were lord chancellors and by others who occupied positions of great responsibility as jurists in the United Kingdom. He undertook the chairmanship of this commission, thereby ensuring, I think, such complete impartiality of inquiry as can come only from one who understands the relationship of testimony and evidence and who is able to sift it and consider it in relation to the facts with which he has to deal.

It was important also that there should be upon the commission a representative of business in the large sense to which the minister has referred. We secured for that purpose the services of Sir Joseph Flavelle and Mr. Beaudry Leman, the latter general manager of the Banque Canadienne Nationale. In their realms of business activities both these gentlemen are held in the highest regard and esteem. Mr. Leman, who had the advantage of training as an engineer, brought to bear upon the problems presented to him the mind and skill not only of a trained engineer but of one who had had much experience in business and was able to appreciate the relation of the solution of the problem to the whole financial structure. Sir Joseph Flavelle has many enemies and many friends, but whatever may be the views of those who oppose or support him, I have never yet met a person who was not prepared to admit the power of his intellect and the strength of his mental equipment in dealing with problems and matters of business. He had had some experience, for he had been chairman of the Grand Trunk Canadian board.

It was felt that we should have a railway man not a Canadian and it was a difficult problem to secure the services of a railway man on the American continent. It is well known that an effort was made to secure the services of the presidents of two of the largest transcontinental systems. They were not available, and we were recommended to apply to the president of the Delaware and Hudson railway. This is not a large railway system, but it is one which has been successful during these dark days. Mr. Loree had made for himself amongst the captains of industry in the neighbouring republic and the great railway executives of the transcontinental systems a reputation that warranted our relying

upon him in dealing with problems of this kind. He was good enough to undertake that responsibility.

We felt that it was desirable to have on the commission someone from the maritime provinces who was not actively engaged in political warfare but who knew something of the history and development of the maritimes and their relation to the general picture so far as railways were concerned. We asked Doctor Webster to accept, and he expressed a willingness to do so. In his youth he was a distinguished student, a graduate of one of the smaller universities in the maritimes. In his work in the medical department of the great university of Edinburgh he attained a position of prominence which enabled him a little later to become one of the foremost in his branch of medical science in the city of Chicago. When fortune had smiled upon him and he had reached the age at which it is said a great physician intimated a man should retire, instead of retiring to easier circumstances, as some men might do, he came back to his native province where he has rendered distinguished service to his country through his public activities and public service.

Doctor Murray has been the president of Saskatchewan university since its inception and has a knowledge of Canada not excelled by anyone. He was a Gilchrist scholar and a professor of repute. To these gentlemen we entrusted the inquiry as outlined by order in council dated November 20, 1931. May I for a moment direct attention to what they did? I am going to read extensively from their report—although such a practice is sometimes burdensome—in an effort to bring it to the attention of the Canadian people. They reported:

> In the course of our investigations we have held eighteen sittings, occupying fifty days altogether, and have travelled over most of the main line mileage of the two chief railway systems. Throughout our journeys we were accompanied by the responsible officials of both railways, thus enjoying the advantage of almost constant discussion with them of matters relating to the inquiry, and of transportation problems more particularly affecting the territories traversed. Our itinerary included the principal centres of the various provinces, with the exception of Prince Edward Island, the only province of Canada in which railway competition may be said to be non-existant. In the case of Prince Edward Island the provincial government kindly indicated their willingness to transmit in writing any representations on the general question of transportation they might desire to make. With this exception we have had the benefit of direct conference with the government of each province, which has included, in most instances, a full statement by the provincial prime minister of any considerations of a special or local character affecting the subject of our inquiry. The expositions we have received in this way of provincial policy regarding highway construction and motor traffic have been comprehensive and valuable.
>
> At all of the provincial capitals visited, and also at Vancouver, Calgary, Montreal and Saint John, we have conducted, in addition, public hearings, duly advertised, at which representations from public bodies, labour and transport organizations and private individuals were invited and received. A list of witnesses appearing, and of persons or organizations who have filed submissions, is included as an appendix to our report.

I shall content myself with laying this foundation, before I proceed to make reference to the findings of the commission, by saying to this house that I believe no commission more competent has ever been appointed in this country to make such an investigation. I do not believe the language of that statement is extravagant, nor is the fact important that they were appointed by the previous government. That statement is based upon the personnel of the commission, upon their industry and their desire in and concern for all that affected the welfare of this country as related to the problem of transportation.

I know that when the report was published there was a great deal of misapprehension on the part of many people, because I think I should say frankly to this house that an effort has been made to have it appear that from the day the late government took office until the last day it held office it was opposed to the Canadian National Railways. But those who will take the trouble to read the reports on the subject and the statutes of this country will realize that the Canadian National Railways came into being by virtue of the efforts made by the Union government under Sir Robert Borden, through the bill then submitted; and under and by virtue of the powers conferred by that bill upon the governor in council the final proclamation was made that merged into one system the Canadian Northern, in its various ramifications and interests, the Grand Trunk Pacific, the National Transcontinental and other lines. That proclamation was made by virtue of a statute which was piloted through the house of that day largely by Mr. Meighen. When it is said that this party or the late government was opposed to the Canadian National Railways I should like the country to understand that during a long period of five years, over sixty months of untiring effort to maintain its integrity, to provide money to pay its deficits and to enable it to function, during those long years the constant endeavour of the then government was, not to destroy but to maintain the system, not to lessen but to

improve its efficiency. But unfortunately—and I say unfortunately with very great deliberation—there was a school of thought in this country that believed that when you have to deal with a problem that vitally affects the very life of the country, if you can play politics with it, so much the better. In the west the Free Press constantly made the people believe that the approach of the government was an approach to destroy and not to support the system. The opposition of that day, now the government of the day, constantly tried to make it appear that the then government was endeavouring to destroy the road. Well, I can only say that, earnest and anxious as I am that the road should succeed to-day, under the control and direction if you will, as the minister says, of his government, even greater was the desire in those days that it should succeed. Why? Because unless it can succeed this country cannot maintain its solvency as a nation. Every thoughtful man in Canada knows that that is so, and this commission that dealt with it and found the facts upon which it predicated its recommendations realized as business men, as railway men, as security holders, as men interested in the maintenance of the credit of the country and of the railways, that unless some action were taken danger of a most grievous kind confronted us and might indeed lead to disaster. That is the reason I desire, with great effort, to refrain from making a political address this afternoon and to place on Hansard extracts from the report of that commission, in order that those who take the trouble to read what the minister has said or what is said by others in this house may realize that in the minds of the members of this commission the situation was dangerous, if not fraught with immediately possible disaster, and that action of the most drastic sort should be taken if we were to preserve the railway system as such and the credit and integrity of the country.

There was one thing the minister did not do this afternoon, and I shall anticipate it before I deal with the matter as it is referred to in this report. He did not deal with the fact that the difficulties to which reference had been made could be solved by taking up the rails and abandoning thousands of miles of railway. That is where politics comes in. Leaving out, if you will responsibility for the construction of the rails, there was the recommendation of the removal of rails and the abandonment of lines; and every time there was the slightest suggestion that anything of the kind was contemplated my friends opposite cried to high heaven that the people must be protected and that these lines must not be abandoned. That is but natural. The minister has not nor have I the power to lift the discussion entirely out of politics; it has been too closely connected with politics for twenty-five years. What was once the proud boast of a party has now become a dragging legacy that threatens the very life of the country; and when suggestions are made that there should be an abandonment of mileage, the party in opposition during the last five years expressed of course, upon the hustings and elsewhere, strong views on the problem; and I suppose that if the government of to-day undertakes to abandon lines it is expected that the opposition shall oppose that view.

Is it any wonder that we have a railway problem of this magnitude or that it will increase and finally end in disaster if we approach it as the minister did this afternoon in the early part of his address? I am going to refer to some of these paragraphs, because after perusing them the other day I realized that the people of this country had not any clear appreciation of the problem. If the hon. gentleman opposite speaks a little louder I shall be able to hear him; if he desires audibly to interrupt he might speak more moderately. I desire to point out that the early part of the report is but a résumé of the history of transportation in Canada in the early days. It requires nothing to be said except to indicate the vast sums expended on canals. I quote from paragraph 9:

> 9. The promise of railway construction formed an integral part not only of the confederation of 1867, but also of the terms upon which Prince Edward Island and British Columbia later entered the dominion. The obligation to the maritime provinces was discharged by building entirely at public cost, the Intercolonial Railway from Halifax, N.S. to the St. Lawrence at Rivière du Loup, by the construction of the Prince Edward Island Railway, and the provision of a train ferry between that island and the mainland.
>
> 10. The agreement to connect British Columbia with eastern Canada by a railway from the Pacific ocean was fulfilled by the building of the Canadian Pacific Railway. Failing to interest private capital in this project the government undertook the work as a public enterprise. Later a syndicate, which afterwards developed into the Canadian Pacific Railway Company, entered into an arrangement with the government to construct this transcontinental line in ten years, from 1880 to 1890. The agreement provided that the country subsidize the company by a gift of twenty-five million dollars, twenty-five millions acres of land, and of the railway lines already constructed with public moneys at a cost exceeding thirty-seven million dollars.
>
> 11. The company carried through its undertaking in five years in place of ten, during which time the government paid the Canadian

Pacific $10,189,521 for 6,793,000 acres of land relinquished by the company, and guaranteed securities of the company to an amount of $15,000,000 to assist its finances over a difficult period. The company paid the guaranteed bonds upon maturity, and the country was relieved from the responsibility of the guarantee.

12. Eighteen years after the completion of the Canadian Pacific, parliament (in 1903) authorized the building of the National Transcontinental Railway from Winnipeg, Manitoba, to Moncton, New Brunswick, as a part of the Grand Trunk Pacific project. In 1911, the construction of the Hudson Bay Railway was undertaken, also as a government enterprise.

The three railways, the Intercolonial (including the Prince Edward Island line), the National Transcontinental, and the Hudson Bay, embodying 4,650 miles, constructed exclusively with public moneys, have been operated by or on behalf of the government of Canada. While prior to 1917 the Intercolonial in certain years paid operating expenses, the three railways have earned nothing by way of interest upon the total investment, which, together with certain deficits on operation, now total $512,000,000.

Then comes the beginning of western railway construction.

Some years after completion of the Canadian Pacific Railway, construction was commenced as a private enterprise, upon a line of railway running from Winnipeg in a northwesterly direction, with Edmonton as its objective, and easterly to Port Arthur, Ontario. This line came to be known as the Canadian Northern Railway. It secured substantial cash subsidies, guarantees and land grants from the dominion parliament, provincial legislatures and from municipalities. By 1901, the line had been completed easterly to Port Arthur; and by 1905, westerly to Edmonton, Alberta.

This was the first of the lines extended ultimately to the coast. Parliament did not authorize the extension of the Canadian Northern to Vancouver; that was done through legislation enacted by the province of British Columbia. But parliament did subsidize the construction of the Canadian Northern railway to the summit of Alberta, where it connected with the Canadian Northern in British Columbia.

Proceeding with paragraph 14:

In 1903, the Grand Trunk Railway, which had been operating for over fifty years in Ontario and Quebec, and owned direct lines from Ontario through the states of Michigan and Illinois to Chicago, determined to extend its lines to the Pacific coast of Canada. They made application to the federal government for a charter to construct the Grand Trunk Pacific from Winnipeg to the Pacific coast, and to make connection from eastern Canada to Winnipeg through the United States by way of the company's Chicago lines, and by securing running rights over United States railways to the border of Manitoba.

The application was refused, but an alternative arrangement was proposed by the government which contemplated the construction of the Grand Trunk Pacific from Winnipeg to the Pacific coast, with an eastern connection to be provided through a publicly-owned (National Transcontinental) line from Winnipeg to Moncton, N.B., via the city of Quebec.

If, in 1903, the Grand Trunk Railway Company in the east, and the Canadian Northern Railway Company in the west, had been told they must come together and constitute a second transcontinental line, the country would not have been called upon to face the present gravely alarming situation, while a powerful corporation, with a serviceable railway from ocean to ocean, owned and operated by private capital, would, with the Canadian Pacific and Intercolonial, have given the needed transportation facilities for the present and reasonable future requirements of Canada.

The ultimate decision of parliament led to two transcontinental railways being constructed in addition to the already established Canadian Pacific Railway.

That is the record of the commission. We must take it as we find it: it cannot possibly, I think, be controverted. Then we had, of course, these lines uncompleted when the war began in 1914. You will recall the efforts made to rehabilitate them by loans and by guarantees, and possibly to save them from receivership. In my place in the house I supported a receivership and opposed the government of the day. I believed that the proper course to pursue was to place those lines in the hands of a receiver. The leaders of the government I supported at that time thought otherwise, but that did not deter me from placing on record my views of the situation, and I voted on that matter against the government.

Having taken the action that was taken to preserve those companies and save them from receivership, the next step was to appoint a commission to make an investigation as to what should be done with the properties. Without going into it at length, it is sufficient to say that in the end all those properties were merged into what is known as the Canadian National system: the Canadian Northern Railway, with all its subsidiary companies and branch lines and affiliates; the Grand Trunk, with its properties in the United States; the Grand Trunk Western, with the Central Vermont, the line running to Portland, the new National Transcontinental from Winnipeg to Moncton, the Grand Trunk Pacific, the Grand Trunk Pacific branch lines, the branch lines in Alberta and in Saskatchewan—both of which provinces, together with Manitoba, have made commitments by way of guarantee or otherwise which, of course, it is impossible for them to pay, and at the present time such guarantees are paid out of the federal treasury. That was the position with respect to them when the order in council was passed

under the authority of the legislation passed by the government of that day. We thus have a single system of railways that did not come into being as a system, but came into being because of economic and financial conditions that necessitated, in the opinion of the government of the day, their being united as one system. That of course makes it impossible to compare this system with the Canadian Pacific. The Canadian Pacific developed as a considered whole. The Canadian Pacific was developed as a railway; its branch line system was considered as such with relation to the whole. It deliberated over every action that it took and every extension that it made was in the light of its general plan. But that is not so in the system with which we are now dealing. The system which came into being under this order in council was a combination of many systems, many companies and several roads, in two countries at least, some und r provincial and some under federal control, and not devised or developed as a unified system, but developed along three lines and ultimately merged into one. That is the reason it has been so difficult to deal with, and that is the reason why, notwithstanding the speech made by the minister at Toronto and at Three Rivers, I think that before he achieves the end he has in mind, unless he is prepared to adopt some of the drastic provisions of this report, he will indeed be as old as Methuselah.

I wish to deal here with one observation made by the minister. He referred to the fact that the chairman, in his evidence last year before the standing committee, alluded to a letter which he had received from me, and that was given as some reason why steps had not been taken to deal with the capital structure of the national railways. I trust that the hon. gentleman, before making that statement, took the trouble to look at the record, because the other day he himself referred to the fact that the whole case of the Canadian National Railways was sub judice because of a case now before the privy council. Therefore he must have known when he dragged that into the debate that it was being done for no useful purpose but rather to indicate that there had been an interference with the authority of the members of the commission by the government of the day. Such of course is not the case. The truth is this, that Mr. Lovibond, one of the shareholders of the Grand Trunk Railway, owning a small number of shares of each type, has taken steps in the courts to have it declared that the legislation that resulted in the removal of the names of the Grand Trunk shareholders from their registers in Dashwood House and the substitution of the name of the Minister of Finance as the holder of the shares was beyond the competence of this parliament to enact. That matter was argued a few weeks ago before the privy council, and the argument took many days. I understand that Mr. Lovibond has now said that he is prepared to accept damages rather than a return of the status quo, and that the whole question may involve the launching of a new action, or whatever it may be; but the final determination of the question as to whether or not we are validly in possession of the property has not yet been made by the courts. I did say then, and I said to the chairman, as I say to every member of this house, that I did not believe that any government with a sense of responsibility would permit any changes to be made in the capital structure of a railway when it was not yet determined whether they legally owned it or not. That was the reason steps were not taken to deal with the capital structure of the Canadian National Railways. It is sufficient now merely to refer to that, because I proceed to direct attention to what the findings of this commission were. At paragraph 28 you have a summary:

> Government ownership of railways on a large scale as a national policy was not contemplated or planned by any government and was not submitted for adoption to the people of Canada. But when in 1917, the government refused to permit the Canadian Pacific Railway Company to negotiate for the majority shares of the Canadian Northern, there was practically no escape from government ownership of all the railways now comprised within the Canadian National Railway system. The consequent completion and operation of the hitherto privately owned and operated lines with the publicly owned railways followed as a matter of course. Thus by a combination of contractual obligations and parliamentary measures, the country was projected into the railway business on a large scale.

That, in a single paragraph, summarizes the situation. The Canadian people were not called upon to make, by plebiscite or otherwise, a declaration as to their views with respect to this matter; the administration and ownership of these properties by government came about in the manner indicated by the report.

I think I can shortly summarize the findings of the commission with regard to the period from 1923 to 1931 by stating that after the arbitration had been completed as to the value of a certain class of Grand Trunk shares, resulting in the arbitrators declaring, with a dissenting judgment, that they had no value, the case subsequently was appealed to the privy council which sustained the opinion of the majority. While awaiting that final

determination the properties at times were administered jointly, when it became apparent that they were no longer able to provide for their necessities by their own resources. Perhaps in order that those who read may have this shortly before them, I should refer to two of the paragraphs:

Following upon the consolidation of many lines into the Canadian National system, in 1923, the railway has been energetically administered, and has deservedly won approval by its success in welding together the various forces of the separate companies in the consolidated system.

Running through its administrative practices, however, has been the red thread of extravagance. The disciplinary check upon undue expenditure, inherent in private corporations because of their limited financial resources, has not been in evidence. Requisitions of the management have been endorsed by governments, and successive parliaments have voted money freely, if not lavishly.

Within the railway organization there has been freedom in expenditure and encouragement in plans for expansion and extension of services which were inconsistent with prudent administrative practice. The administration failed to realize that this country, with the greatest railway mileage in the world in relation to population, could not afford further capital and maintenance expenditures for unwarranted branch lines, for de luxe services, for unrequired hotels, for the building of ships in competitive service to be shortly abandoned; and, generally, for costly adventures in competitive railways out of proportion to the needs of the country.

There is a statement that has aroused the animosity of some of those who supported the present government when it was in opposition. But, sir, if any man in this chamber will be fair and merely take the figures as to expenditures, as they were produced and shown, he cannot but agree that this is a correct and sound conclusion on the part of these commissioners. In private conversation I have heard no one dispute that, but naturally in this house one hears entirely different views. Then section 35 of the report expresses a thought that I believe must be in the minds of many:

There has been in the country a general sense of expectancy that the publicly owned enterprise should give all and sundry the railway service desired, and there is no evidence that the representatives of the people in parliament exercised any appreciable restraint upon railway estimates placed before them.

Well, Mr. Speaker, how could you expect it? After all, members of parliament are human; they are thinking of their constituencies and of their party fortunes, and their desire to project a branch line here and a branch line there, to extend further this line or that line, and this attitude reflects the inevitable disaster that overtakes parliamentary effort to deal with a property owned by the people themselves. This is beginning again now, as I am going to point out presently. The minister, who has not been here during all these years, understands it only from having read it. Alas, many of us know it from another angle altogether; we have seen it. When I say that a few months ago money was standing in a bank representing the sale of guaranteed securities to construct a line from Calgary to Edmonton, part of the grade of which had been constructed, the minister will understand just what I mean. That line probably never will be built; I do not think it will, but there you have an illustration of what is meant by this report, in dealing with this problem. How are we to get out of it? How are we to get beyond it? How is this country to save itself if we continue to play politics with the Canadian National railway system? I ask you that, Mr. Speaker, and presently I am going to point out what has happened since October 23, to show that we are just going back to the thin red thread of extravagance and worse, to complete subjugation of this great property to political considerations and control.

This is not a matter of party. I wish I could speak as with the tongues of angels and convince my fellow members here that we are trustees of a situation so grave, so difficult and so far-reaching, the consequences of which must be carried by those yet unborn. I wish I could convince hon. members that we must approach this problem not from the angle indicated by the minister in the first part of his speech but from an angle that far transcends any mere miserable party consideration, in the earnest hope and desire of lifting it out of the morass in which it now finds itself by reason, as I shall say, of a lack of support being given the earnest effort that was made to lift the matter out of politics. That is the real reason.

I do not propose to-day to deal with the financial side of the question; I am not going to further harrass an already harrassed people by pointing out to them how great are their responsibilities financially and how large is the measure of their obligation. That can be done by others in this chamber; I merely wish to point out that they are so vast that the mere contemplation of them is calculated to fill any reasonable man with at least alarm, shall I say.

The reason I took some little time to refer to the personnel of the commission was because in his speech the minister said that anyone who would make one of the recommendations made by the commission was lacking in common sense. I cannot think he meant it in that way, but that was what

he said. I am prepared to compare the minister and his common sense with that of the commission, and I think the Canadian people would be prepared to do so also. Why he should indulge in such an extravagant statement I do not know, but he thought it necessary to do so for some purpose, and I desire to make my observation in that regard quickly as I proceed because, as I say, I am not going to deal with the enormous financial obligations involved, except in the broadest and most general way. But if hon. gentlemen will take the trouble to ascertain just how much per minute it has cost this country since we became the owner of these railways, and what has been the inevitable result, they will then have a clearer appreciation and understanding of the problem. I do not say so much per day, so much per month or so much per year, but just so much per minute, so much per sixty seconds. That, I think, should afford hon. gentlemen a clearer appreciation of what is involved.

The question of what has been put into these properties is dealt with in paragraph 37 of the report:

It will be observed that the dominion treasury has expended on or furnished to these publicly owned railway properties cash amounting to one billion two hundred and one millions of dollars ($1,201,000,000) exclusive of the Hudson Bay railway.

That was in 1931. It will be remembered that when the report was presented it indicated that we should no longer issue and guarantee railway securities to capitalize deficits but that the nation itself should bear the deficit incurred. It will be remembered also that in the statute this provision was included. If hon. gentlemen are interested in that provision it will be found in section 12, which provides that—

Income deficits shall not be funded. Amounts provided by parliament to meet capital expenditures shall not be diverted to cover deficits in operation unless with the express authority of parliament.

But the important words are "income deficits shall not be funded." So that under the law as it now stands we have since 1933, that is during the years 1934 and 1935, been providing for the capital expenditures of the system and for its deficits as a part of the debt of the Dominion of Canada, recalling that in 1931, exclusive of the Hudson Bay railway, to which reference will presently be made, we had $1,201,000,000 invested in cash in these three properties, and the deficits that have been incurred since have been added to the nation's debt, because they may not be funded as they were during part of the previous period. For instance, if the railway required $100,000,000 the dominion guaranteed securities and they were sold, part of the proceeds being used to pay deficits and part used for additions to rolling stock and equipment, roadbed and so on. I will not do more than take a few words of summary from the Duff report, section 42:

Net income available for interest and dividends is the significant factor in the economic life of a railway system. In the case of the two Canadian railways there has been a marked fall in net income in the years since 1928. That the true picture may appear, figures are appended for the nine year period, 1923 to 1931 inclusice. These show in separate columns the net earnings from railway operations after taxes have been met, the net income receivable after charges for hire of equipment, joint agreements, et cetera, have been met, and, finally, the interest demands.

Now, there is a misunderstanding that I find on the part of many with whom I discuss these matters as to the relation of gross to net earnings. When my friends pick up a newspaper and find that the gross earnings of the Canadian Pacific or Canadian National have been so many dollars for the week and the net earnings so much, they think that the difference is left with which to pay interest. The average man on the street thinks that. But it is not. Before a dollar of it may be utilized for that purpose the railways have to pay rent of leased lines, wheelage rights, rent of other properties, rent to car equipment trusts if chargeable to revenue, and all the hundred and one things that enable a system to function. If hon. gentlemen are interested they may turn to the report of the Canadian National Railways for the year ended December 31, 1935, at page 19 of which they will find the following figures:

| | |
|---|---|
| 1934 | |
| Railway operating revenue.. .. | $164,902,501 66 |
| Railway operating expense.. .. | 151,936,078 56 |
| 1935 | |
| Railway operating revenue.. .. | $173,184,501 82 |
| Railway operating expense.. .. | 158,926,248 66 |
| 1934 | |
| Leaving net revenue from railway operations.. .. .. .. .. | $ 12,966,423 10 |
| 1935 | |
| Leaving net revenue from railway operations.. .. .. .. .. | $ 14,258,253 16 |

But let us see what the first charge against that is. It is railway tax accruals. The average man, I repeat, reading these reports in the newspapers, thinks the "net earnings" are available to pay interest, and I have suggested, although I believe it is the custom of the Interstate Commerce Commission of the United States in the preliminary reports to treat it just as we do, that it would be well

so to make the report that the Canadian people from week to week would realize whether or not the railway had any money left to pay interest or had gone behind after paying what must be paid before there is any money available for interest. The railway tax accruals for 1935 were $5,209,133.04. a little less than in 1934 when they were $5,241,857.95.

Then uncollectable railway revenues. These were in the traffic receipts because they expected to collect the money, but last year the Canadian National was unable to collect $94,037.61, and the year before $46,813.24. The effect of those and other items was to reduce the net railway operating income of the Canadian National last year to $7,424,121.25 as against $6,324,680.25 in 1934.

But you are not done yet. You add your revenue from hotel operations, and expenses of hotel operation including taxes on hotel properties, and these result in net hotel operating income of $101,770.76. That is a highly commendable result; after paying operating costs, which in the case of a hotel include maintenance of furniture and equipment "in their integrity," I think are the words used by auditors, as well as payment of taxes, the hotels earned last year $101,000. Then we come to such items as separately operated properties, showing a loss, and we reach the figure showing income available for fixed charges as $8,014,635.82 in 1935, which is less than the amount in the year before—$8,616,760.98. But from that there is to be deducted the following items: rent for leased roads, $1,372,712 in 1935 and an almost identical sum in 1934. Then you add amortization of discount on funded debt, that is the charge made each year because securities were sold at a discount. That took over a million dollars. Thus you had a situation develop where you had between five and six million dollars left to pay interest. The interest that had to be paid last year on long term debt was $53,468,792 as against $55,811,745 the year before. But there was also the interest on unfunded debt, which means interest payable to the banks for temporary borrowings, which amounted to $182,125 last year, and $211,058 the year before. So that the net income deficit, before interest on dominion government loans, transferred to profit and loss, amounted last year to the sum of $48,878,181 as against $49,605,719 the year before.

I have taken the trouble to go into that in a little detail because I have friends who are unable to understand why there was a deficit of $48,000,000 on the Canadian National Railways last year, when they pick up reports in the newspapers from week to week and see that the gross earnings so far exceeded the net earnings. I have given these facts in order to remove any misunderstanding there may be in the minds of those who may take the trouble to read what is being said.

There we have the situation brought down to date, indicating the amount of deficit on the system last year. That is the amount of money, apart from capital expenditures—the income statement only—that had to be found by the Canadian people to pay the interest due to the public, not to the government. I am told by many people that it would be manifestly unfair to deal with the moneys due the government, because that represents capital invested by the Canadian people in the road, and unless a dividend is paid on it they must be prepared to accept the loss as part of the incidence of public ownership. The argument is not unfair. But leaving that entirely out of the question, there remains the interest that has accrued on securities held in Great Britain, in the United States, in Canada, in almost every country in the world; held by insurance companies, by trustees, by private investors, by banks, by almost every type of investor in the world. Last year to pay the interest on these securities $48,000,000 was required of the Canadian people. Obviously they could not bear that burden of taxation, and so we went on the markets of the world and borrowed the money with which to pay it. The Minister of Finance the other day referred to what he had to do because on the thirty-first of December last it was necessary to make adjustments in dealing with this matter. There is the situation that has accrued to the Canadian people by reason of the venture in which they embarked.

The amount due in connection with maritime freight rates I have left out of this discussion, because I have left out entirely what are called the eastern lines.

I shall not take time this afternoon to analyze the capital expenditures made, but I recall that many years ago, when I voted against the government of which I was a supporter and said that to make the Canadian Northern of any value would require an expenditure of one hundred million dollars, I was jeered at for putting at so high a figure what was required to rehabilitate that road and make it part of our transportation system. I shall not do more this afternoon than to direct the attention of the people to what is said in the report as to expenditures on capital and how large these capital expenditures have been made both for the construction of branch

lines and for the improvement of the main lines.

So far as branch line construction is concerned any man living in western Canada knows how strongly the people urged that immediate action should be taken to provide them with facilities for sending their grain to market, and we have all endeavoured to do something along that line. The government in 1929 brought out a great plan of branch line construction to which reference is made in the Duff commission report, and the Canadian Pacific followed that comprehensive plan of branch line construction, involving, as is pointed out in paragraph 50 of the report, the construction of 4,161 miles of road and the buying of 857 miles, the major portion of which, according to paragraph 53, was in the western provinces, and at a cost per mile, according to the same paragraph, much larger than it had been believed would be necessary for the purpose. I am not going to do more than read paragraphs 58 and 59:

58. To sum up, it is clear that there was intense rivalry between the two systems in new territory, particularly in the provinces of Saskatchewan and Alberta. The construction program of one company was responded to by an equal or greater program of construction of the other. The development of this territory did not meet expectations, and the railways now find themselves with additional traffic mileage and an increased burden of capital charge.

59. It would be fruitless at this stage to apportion the blame for the competition in branch line construction, but there is no doubt as to the disastrous effects of this competition, and it is imperative that conditions be imposed that will make impossible a repetition of the rivalry in the extension of railway mileage that marked the period from 1923 to 1931.

In the bill before us there is no provision of that kind. In the first days of this first session of a new parliament there has been nothing suggested of that kind in the declared policy of the administration. I take it that inasmuch as the authorization of branch lines will not be given, therefore the necessity for it is not so great.

Then I come to the acquisition of branch lines by purchase. I am not going to indict, as I readily might, the former Liberal administration, now the government, for the cost of those lines. There is not a member of this house who does not believe they cost more than they should, and who does not know that some of them are not worth anything like the amount that was paid for them. I leave that entirely out of the question and point out that the railways taken over by the government prior to 1918 cost $9,559,686, and from 1918 to 1920, $6,641,659. Those are the particulars given on page 22 of the cost and rehabilitation of the railways taken over by the government.

The report proceeds to give the purchases by the Canadian Pacific Railway and the Canadian National Railways of other lines, divided into separate classes. Then it deals with the cost of hotels. It says:

63. The Canadian National and the Canadian Pacific railways own twenty hotels and twelve summer resorts, and are financially interested in a number of other hotels and pleasure resorts. In the case of the Canadian National the hotels and resorts are operated as part of the railway organization; in the case of the Canadian Pacific they are separate organizations.

64. The Canadian National hotel investment, at December 31, 1931, amounted to $31,828,234, and the Canadian Pacific, $71,148,772, a total of $102,977,006.

65. The following statements show the total investment in hotels at December 31, 1922, and also the investment at December 31, 1931. It will be seen from this statement that the Canadian National increased its investment in hotels during that period by 229 per cent and that the Canadian Pacific increased its investment by 193 per cent.

I shall only say with respect to hotels that they never have themselves been profitable adjuncts to railroads. In a broad and general way they are supposed to assist in the adjustment and maintenance of traffic, and railways have accordingly engaged in their construction and in their purchase and operation, but in some countries the view has been held that that should no longer prevail and that railways should not be permitted to operate and maintain hotels. At the moment I express no opinion on the subject, except to point out the enormous sum that has been expended in railway hotels, which is referred to in paragraph 67:

67. An analysis of investments in hotels reflects similar results from competitive conditions to those which prevailed between the two railways in the larger sphere of operations, with practically similar results—the Canadian National steadily increasing its investment despite increasing losses, and the Canadian Pacific adding to its investment to an even greater extent than its competitor, without commensurate return on the investment.

One point as to competition which I think the people of this country should keep before them is this, which is stated in paragraph 69 of the report:

69. The Canadian Pacific has stated that in no case has that company built an hotel in any city where an hotel had already been erected by its competitor. This cannot be said of the Canadian National, but, in fairness to that company, it should be mentioned that their hotel at Winnipeg was constructed in connection with the Grand Trunk Pacific venture, and taken over with that property.

70. There are two modern hotels at Halifax where one would have been ample for the requirements of the public. The Canadian Pacific is interested to the extent of $350,000 in the Lord Nelson hotel, and the Canadian National has invested $2,440,928 of public money in a terminal hotel originally estimated to cost one-half of that amount.

I will pass by the Vancouver venture. The Conservative government of Mr. Meighen was in office a few months and considered a plan for the construction of that hotel involving an expenditure of $4,000,000. The report finds:

Duplication of hotel facilities on a large scale is also under way at Vancouver. There this commission held its sessions in the shadow of an immense hotel structure in course of erection for Canadian National Railways, on which $5,958,812 has been expended to December 31, last, and $4,750,000 additional will be required to complete. The Canadian Pacific has a first-class hotel almost directly opposite this new hotel, on which they have expended $6,337,412.

I am sorry my old friend the Minister of Finance (Mr. Dunning), who was then Minister of Railways, is not in his place at the moment. However, there is no reason why he should be as he is familiar with these matters. Last year I went down to the opening of the docks at Halifax and as I drove round the harbour I saw a magnificent ship, covered on the outside with rust, tied to a dock. She was one of the Prince boats which had been built by the Canadian National Railways for coastal service between Vancouver, Seattle and Victoria. Three boats were originally constructed and some hon. members may have read in the New York papers of yesterday an advertisement to the effect that two of them are being used during the summer by a tourist organization. They cost between six and seven millions each to build. I must not talk politics, but when the government put through the appropriations for those steamships I must confess that I was unable to understand what was meant. Those boats were capable of a speed of twenty-three knots an hour and they were not the type to be used in inland waters. Everyone knows that at the highest speeds the vibration was so great that it was necessary to put fiddles on the tables to prevent the dishes from rattling off. I believe the hon. member for Vancouver Centre (Mr. Mackenzie) will confirm what I say in this regard, if he has to give evidence upon the point, which I trust he has not. This was done because of the atmosphere of competition which then prevailed. I shall not touch upon the question of assets and liabilities at the moment, but I should like to refer to paragraph 88 of the report, which reads:

The demands of the Canadian National Railways upon the federal treasury have served to create a financial problem which, together with other demands, have led to large increases in borrowings by the dominion government and increased taxation.

When Canada entered the great war there existed a federal debt of $336,000,000, entailing an annual charge of approximately $20,000,000. War expenditures added about $1,700,000,000 to the debt of the dominion. In the post-war period, while there were years when the debt was reduced, the result on the whole has been an increase in the net debt. In the year 1930-31 there was added the sum of $83,847,977, and, in the year 1931-32, $119,500,000.

Colossal figures, you say! Yes, and they cover the period of the previous administration. That is quite true and the particulars will be found in the public accounts. When you take into account what was involved for railways alone and incidentals connected with the railway and its subsidiaries, you will realize just what burden passed to the government of that day and how difficult was the problem of maintaining the integrity of the system. But no one for a moment suggests that the government of the day should have any appreciation or realization of what their predecessors in office had to do to maintain the position of the country during a depression, the like of which we have never known. We have the habit of attempting to compare good times with bad; we compare the days of depression with the buoyant days of the great boom, and say: Behold the result, and these figures indicate what had to be done for the purpose of understanding the entire structure of our economy. Look at paragraph 90, which reads:

The additional carrying charges for the entire debt appear in the official estimates for the present fiscal year 1932-33, in which the interest upon the federal debt, and interest upon post office savings, with $3,500,000 for sinking fund, calls for a payment of $137,400,000. To this must be added a war charge for pensions and special disability claims of $5,000,000 per month, or $60,000,000 for the year. These two items of fixed charges for the year 1932-33, totalling $197,400,000, should be contrasted with the $20,000,000 for the year 1913.

It is necessary, therefore, in considering the railway problem, which since 1917 has established claims for such immense sums upon the federal treasury, to ask how the country is to meet these capital and annual charges if continued.

It is to be remembered that, coincident with this great increase in federal treasury liability, there has been a vast enlargement in the liabilities of provincial and municipal governments throughout Canada. They have borrowed and spent, and spent and borrowed, and in

consequence have increased their debt charges to such an extent that the burden of taxation is deeply resented.

Meantime international credits have become disastrously impaired and there is difficulty in securing immediate relief in an actute situation through fresh borrowings from Great Britain and the United States.

The report then proceeds to deal with density of traffic and matters of that sort. I am not going to do more with respect to that than to point out that we cannot possibly justify the number of miles of railroad in this country by any economic theory that can be evolved. I shall be content, however, with placing upon this record the words of the report beginning with paragraph 142. These show where we are going back to. They are:

The conduct of the affairs of the National railway has been subjected in the past to political and public pressure. It is, however, necessary to make a distinction between unwarranted political interference and the influence of broad public policy. To the latter category belong several of Canada's major transportation schemes, such as the Intercolonial and Canadian Pacific projects, which were the outcome of definite political arrangements based upon broad national considerations. Others, such as the original Grand Trunk, in a lesser sense, and the Canadian Northern and Grand Trunk Pacific in more marked degree, represented a compromise between the aims of private promoters and the endeavour of the state to turn those ambitions to national advantage. While certain of these projects became warmly contested political issues, they were endorsed by the Canadian electorate at successive general elections, and were accepted as approved national policy.

The majority recommendations of the royal commission on railways and transportation in 1917 were designed to provide safeguards against political interference which is instinctively to be feared in the conduct of a public enterprise of the magnitude and character of the Canadian National Railways. But the government of the day declined to follow the plan of organization recommended by the commission, which was in substance to place control in a permanent and self-perpetuating board of trustees.

There was adopted, instead, the plan which is contained in the Canadian National Railway Act. This act provides for a board of directors to a maximum number of seventeen, appointed by order in council, holding office from year to year. Appointment to the office of chairman of the board and president of the company is made by the government, and concured in by the board.

Under the circumstances, the directors' functions have been in practice nothing more than advisory. It would seem that they generally gave formal approval to programs of expenditures which they appeared to regard as the main concern of the president and the government. This left the railway open to political influence and to public pressure extered by communities and by associations of business and labour interests.

Of direct political interference by ministers and members of parliament in the detail operations of the railway, we were assured by the officials there was little or none. It was in the larger sphere of policy that political considerations led to unwise and unnecessary capital expenditures, the result of which was to create an atmosphere in which the ordinary principles of commercial operation of the railway were lost sight of.

The president of the Canadian National Railways, in a considered statement made to this commission in the course of its inquiry, expressed the following views:

"One of the inherent disadvantages of any state-owned enterprise such as the Canadian National Railway, is the problem of political interference—and one might also add, public pressure. In making this statement I wish it distinctly understood that I imply no criticism of any party or any government, present or past. I merely state a fundamental and universally admitted condition.

The leaders of all political parties and the people of Canada as a whole are a unit in their desire to prevent political invasion of the Canadian National Railway. But the plain fact is that, irrespective of such wishes and desires, the problem presents difficulties beyond the control of our leaders, be they ever so patriotic or high minded. After all in any form of popular government it must be accepted as axiomatic that the business of government is politics and, irrespective of whether one likes it or not, politics is something with which a government must reckon in all its activities."

The president of the Canadian Pacific appeared to be more concerned over the activities of what he termed "politically-minded" executives of the publicly-owned railway than he was over straight political pressure for definite ends. He said:

"We talk a great deal about political interference being damaging to railway operations, and we know that that is true, generally speaking. But when we say it we seem to think the only political influence is that exercised by a government, or a member of government, or a member of parliament. To my mind the worst kind comes from the political attitude of men in publicly-owned institutions. Possibly they are not conscious of it, but they become politically-minded; their policies and actions have a political tinge, and that, from my standpoint, is more serious as representing the attitude of the corporation than the isolated act of a member of parliament who tries to get a man employed.

"Years ago the ability of privately-owned railway companies to withstand political pressure was somewhat limited. To-day it is nothing like it was, because we can say 'no' to that kind of pressure. But the politics that develop inside an organization because it is publicly-owned, and not privately-owned, is a serious thing.

"We spoke of not being able to anticipate what government policies would be towards any railway, and I believe we cannot tell from year to year what the policy of any government would be in respect of its railway property. Providing it owns it, and has a measure of control of its policies, and so long as they are putting up the money, we cannot avoid that possibility."

Then the commission proceeds to take the year 1929 as an illustration:

149. Possibly the year 1929 affords a striking example of what political and public pressure, presumably, were able to accomplish.

150. The Canadian National Railway requirements authorized by parliament during the fiscal year 1929-30 were as follows:

| | |
|---|---|
| Canadian National Railway Budget for 1929 | $ 53,750,000 |
| Canadian National eastern lines deficit (1929) and 20 per cent reduction in tolls | 6,808,172 |
| Prince Edward Island car ferry construction | 2,500,000 |
| Branch line construction (1929-1932) | 30,136,325 |
| Montreal terminals (construction) | 50,000,000 |
| Acquisition of railways | 31,247,500 |
| New equipment issue | 18,000,000 |
| | $192,441,997 |

In addition, construction programs were proceeding under prior legislation, the unused authorities being for:

| | |
|---|---|
| Branch lines construction | $ 9,482,021 |
| Toronto terminals construction | 3,583,863 |
| | $ 13,065,884 |
| Total expenditures authorized | $205,507,881 |

151. The actual cash expenditures during the same year covered by these authorizations amounted to $113,859,777, the balance, $91,748,104 being chargeable to subsequent years as construction work proceeded or obligations on account of roads purchased matured.

The foregoing does not take into account other legislation which provided for the refunding of $18,000,000 of maturing securities, nor $6,396,000 voted for the Hudson Bay railway and terminal development, in the same year.

152. The net increase in funded debt of the Canadian National due the public for the year 1929 amounted to $144,670,459; whereas the annual increase for the previous six years had averaged $28,897,648.

153. Annual interest on the funded debt in the hands of the public, which, at the end of the year 1928, was $41,810,880, increased to $55,587,145 at the end of the year 1931, due largely to the expansion policies of 1929.

I was going to put the figures on for last year but they are now well known to the house.

Under those circumstances I think every hon. member will agree that the government was warranted in taking some steps to endeavour at least to give effect to the report of a commission of that calibre, which investigated the matter as thoroughly as I have indicated.

Mr. FINN: In what year and what month was that statement made by Sir Henry Thornton and Sir Edward Beatty which the hon. gentleman has quoted?

Mr. BENNETT: Those two statements were made to the commission itself in 1931

[Mr. Bennett.]

during the progress of the investigation. The commission then dealt with the contributory causes of the railway problem, dealing with excess mileage, which I think must give every member of the house pause—why? Because we all find it difficult to bring our minds to the conclusion that we can agree to the lessening of railway mileages in the communities we represent. Shortly put, that is the position. This is the way in which it is dealt with:

156. In the earlier part of this report emphasis has been laid on the excess mileage of Canadian railways. The policy of branch line expansion in the period 1924 to 1930 has also been dealt with. It has been pointed out that the population per mile of steam railways in the United States is more than double that in the dominion, and competent railway authorities in the United States concede that there is a great excess of mileage in their country. Reference has been made to the low traffic densities prevailing upon the greater part of the Canadian mileage. The traffic density maps, which accompany this report, tell the story in graphic form. In the interests of sound railway practice, a careful examination of all light traffic lines should be undertaken forthwith by both railways to determine what should be retained and what should be abandoned. Where the decision is for abandonment, operations should be promptly suspended, and the salvaged material recovered then or later. Thought should be given to the operation of a considerable mileage during a portion of the year only. Radical reductions, not only in the service on these light traffic lines, but also in the mileage of this group is essential if economic security is to be restored to the railways.

Various estimates have been made as to the number of miles involved. Some have gone so far as to say that to carry out that report in terms of the recommendation would involve the abandonment of 4,000 miles. Has any member contemplated what that means? Can it be accomplished by hon. gentlemen opposite? Does the minister say for a single moment that he can accomplish that? That is the question. Just look at that in the light of the figures which were given as to the number of miles of road we have in this country as compared with other countries. Some hon. members will recall the figures. I passed them by, but perhaps I should read them now:

95. Of all the countries of the world Canada has the smallest population per mile of railway. In the United States the population per mile of railway is more than double that of the dominion.

96. At December 31, 1930, the total railway mileage of Canada was as follows:

| | |
|---|---|
| First main track | 42,075 |
| Additional main tracks | 2,690 |
| Industrial tracks yard tracks and sidings | 11,877 |
| | 56,642 |

The increase over the preceding year was 774 miles. In addition, there was under construction 713 miles, chiefly in the prairie provinces.

At present it may be said that the mileage is nearer 57,500. These are the figures. Let us think of it and ask ourselves whether we can effectively deal with this problem in the manner which the minister has indicated. Having regard to the speech made by the minister in Toronto, I was awaiting with great interest the enunciation of the government's program with respect to railways. After his highly inspiring observations at Three Rivers I waited with greater interest and anxiety. It all gets down to this, however: We will substitute directors for trustees and having done that we will provide for a nearer approach to parliament and all will be well. I have no desire to discourage the optimism of any new statesman; on the contrary I desire to do everything in my power to encourage him in his laudable ambitions. But although some recommendations of this commission may be lacking in common sense, as he suggests, I believe he will find that their review of the facts is warranted not only by observation but by experience of at least two of them in dealing with colossal problems in countries other than our own.

May I go further now, leaving that for a moment, to look at the remedies suggested. It was not a popular thing to introduce the legislation of 1931. It was realized that our political opponents would seize upon it for the purpose of arousing the animosities of the employees of the railways. And how successfully they did so. No wonder my hon. friend laughs! I have no quarrel with those who were appealed to in the way in which the railway employees were. Their response was certainly effective, and it was immediate. I daresay the hon. member for Saskatoon (Mr. Young) recalls the observations made by the steward in the dining car on which he was travelling west. I mention this just to let him know that I knew about it.

Mr. YOUNG: My right hon. friend must have a secret service that is the best in this country.

Mr. BENNETT: It is a fairly good one.

Mr. YOUNG: I may tell my right hon. friend that his information can come from only one source, and I think he does not do himself full justice in mentioning that gentleman's name to me.

Mr. BENNETT: I did not mention the name. I do not know who he is.

Mr. YOUNG: Well, I do, and he will know that I do.

Mr. BENNETT: And I do not.

Mr. YOUNG: I may say, Mr. Speaker, just in that regard that I quite agree with him that railway men perhaps should be a little more discreet than he was; and I so said.

Mr. BENNETT: Yes. It was not his indiscretion that gave me any concern. I was merely pointing out how effective had been the appeal. Human nature being as it is, I am not here to blame the hon. gentlemen who now sit on the treasury benches for having succeeded in their appeal, but I do say that you have to get beyond that or you will not solve this problem. You cannot solve it in that way. When I point out to the minister the net result of this measure of his, I do so in the most kindly spirit and with the most earnest desire to better conditions. Look at what happened in the house the other day. On April 20, as reported at page 1964 of Hansard, a question was asked by the hon. member for St. Boniface (Mr. Howden) about employment in the shops at Transcona. The Prime Minister (Mr. Mackenzie King) answered:

The hon. member used an expression which I do not think is justified. He spoke about the government laying off men from the railways. I am sure he did so inadvertently.

Mr. Stewart: We used to hear that every day.

Mr. Mackenzie King: Well, it is unfortunately true that the government gets the blame for pretty nearly everything, but in this particular case the government is wholly innocent. The government had nothing to do with laying off men.

Mr. Howden: The government is getting the blame for it just the same. The Canadian National is a government road and it is felt by these men that the government could use its influence to see that the work is carried on.

The people of this country will read with alarm what appears in the next paragraph, from the Prime Minister of Canada:

Mr. Mackenzie King: There is on the order paper notice of a bill which it is believed will give the government a little more authority as well as responsibility in these matters. I hope the house will be responsive in its support of the measure.

Some hon. MEMBERS: Hear, hear.

Mr. BENNETT: I can understand the cheers. I certainly understand them, because hon. members are going to get a little more power to deal with the question of unemployment. That was the point to which the question was directed. Let me show what has happened since this government came into office. I hold in my hand a copy of a newspaper which is published in, I think, Rivière

du Loup or St. Laurent. In it appears a notice. The hon. member for the constituency is leaving to go to parliament. He writes:

Ottawa, 5th February, 1936.

Monsieur H. Coté,
Roadmaster, C.N.R.,
Rivière-du-Loup Station, P.Q.

I beg to include a list of members of a committee which in future must transmit to you the recommendations for those who will desire to work in shovelling the snow along the Canadian National route.

The work that I have to do during the session does not permit me to look after the details. I am very much obliged to my friends that are willing to render me this service.

I desire them to pay special attention to the ones who are mostly in need.

Yours very truly,
Jean-François Pouliot.

Some hon. MEMBERS: Oh, oh.

Mr. BENNETT: I regret that that should be considered a subject matter for laughter. One can only say this, that the hon. member for Témiscouata (Mr. Pouliot) was open about it; he did what he did publicly. That cannot be said of everybody. I happen to know of efforts that are being made right at this moment by men connected with collieries and coal, who, when they are told that there are existing contracts, and that to start a new coal mine would be undesirable in view of the present supply, say: Wait till this bill gets through; then we will be able to bring pressure to bear and get a new mine developed and the coal taken out of it for the Canadian National roads. I happen to know of a case where a man, employed in a position, was about to be transferred from one point to another. A member who sits on the government side of this house said, "No, that must not happen. He is one of my most valuable supporters. He has to stay here." I could multiply such instances.

Not for a moment am I trying to say that the Liberal party is any worse than any other party with respect to that practice. That is not my point. But I do say this, that under the control of this system by a board of trustees it was not possible effectively to do that.

Some hon. MEMBERS: Oh, oh.

An hon. MEMBER: Page Manion.

Mr. BENNETT: I say that with respect to employment. I know the story about the ties; I am entirely familiar with it, and the minister was of opinion that people along the line should, regardless of their political views, have some opportunity to supply ties. But leave that out of consideration for the moment.

There is abroad in this country on the part of those who support the Liberal party the view, the very strong view, that to substitute for this board of trustees a board of directors is to go back to the good old days of 1929. There is no doubt about that. If men were under oath and speaking their honest opinion I could call, one after another, practically all Liberals who are interested in patronage and matters of that sort to say that this is going to restore those good old days.

The minister has referred to the president of the Canadian National system. I have a high regard for him. He was in Calgary, working with the Canadian Pacific Railway, when he was taken by Mackenzie and Mann as master mechanic, and he has risen to a position of importance. But it is my duty to say this, that, temperamentally, he cannot resist pressure. He cannot, in that sense, say no. The pressure of politicians, members of this house, members of the government, is such that he cannot resist it; that is the pressure, not of the opposition, but of the powers that be. I say that with the best intentions in the world, and I say it because I know whereof I speak.

I will not discuss the chairman. Before the committee he will have an opportunity of speaking for himself. But this bill certainly should not be given second reading, should not be allowed to leave the committee stage, without affording the trustees an opportunity to be heard, because the provisions and the terms of the statute are that the chairman was appointed for a period of seven years, and that he should not be removed without an address. By section 7 of the act:

No trustee shall be removed from office, nor suffer any reduction in salary, during the term for which he is appointed, unless for assigned cause and on address of the Senate and House of Commons of Canada.

It must be taken, of course, that this measure is practically removing the chairman from office, and the reasons assigned are such that he has not yet had an opportunity to answer them.

We come to the question of the selection of the personnel of the board of trustees. The act came into force on July 1, 1933. It was regarded as impossible to split the year, so to speak, and during the succeeding six months an effort was made to secure three trustees. It may be that three trustees are too few. It may be that they have all the weaknesses to which the minister has referred. But if they have, his harbour commission has just the same weakness. That commission touches the life of the people

more intimately and under less control than does the railway, because the railway is governed by the Railway Act, the decisions of the railway commission and the many provisions that have now become part of the public law of the country. But for the harbours board he was content to have three members; he thought three were sufficient, but that number was wholly inadequate, he says, when applied to the railways. The investment in the latter is more than in the former, but the matter of harbours touches the public—Halifax on the one hand, Vancouver on the other. Of course it does not touch the inland part of the country at all. Although he talks about the necessity for a certain type of man to administer this vast railway system, he is content to take three civil servants for the purpose of administering the harbours board.

Mr. HOWE: May I interrupt my right hon. friend to state that I took three civil servants to bridge over a gap. That was necessary.

Mr. BENNETT: The minister very properly points out that it does not follow that they will be permanent appointees, and I quite agree with what he says. But I point out that he was quite content to give them the powers of all the harbour boards throughout Canada, and three is the number provided for in that bill, so three cannot be such a bad number after all.

Now let us go further. We had that period of time in which to endeavour to secure these men. The commission recommended that we should secure a certain type of men, and we endeavoured to do so. If we are to have full time men the minister will find it very difficult to get men of this type to leave their present businesses and devote themselves to the interests of the railway for any compensation that we may be ready to offer, and now you have taught them this lesson, that an act of parliament does not mean anything; that a man who has a position may be removed at the caprice of any government with sufficient majority to do so. There is no certainty of tenure whatever; yet you expect the best men of this country to devote themselves to this job. I may say that from the Atlantic to the Pacific we canvassed every section; we endeavoured to induce men, possibly through a sense of public duty, to undertake this responsibility, but they all had businesses of their own. Take a man who is general manager of a great enterprise; what time has he to give to the railway? We did secure what the minister describes as a company director, but I think if the minister will look at the traffic that the company in which that man is interested supplies to the railway, my hon. friend will realize how disinterested that man has been, serving without compensation, how willing he has been and how earnest have been his efforts to seek some solution for the problems before us. Starting at the Atlantic and going to the Pacific we asked this business man and that, pointing out the public duty and responsibility, but they were not prepared to undertake the work, and this bill was one of the reasons they gave.

Finally Judge Fullerton was asked to undertake this duty. First of all he had a good legal training and had been on the bench for fifteen years. He had acquired a considerable business experience while he was at the bar and, beyond all that, as chairman of the railway commission he had an intimate knowledge of the operations of the railways. I am not dealing at the present time with the human factor, because from the moment he was appointed he was subjected to attacks by the then opposition; from the moment he was appointed he was being held up as being unfit for his job; from the moment he was appointed those who now ask for the support of the Canadian public were loudest in denouncing him as being unfit for the position which he assumed. In such circumstances how could you expect to get results? How can you expect to get results under the bill which is now before the house, if as soon as the names of these men are announced we begin to point out that this man has a drag here and the other has a drag there; that this man has a pull here and he desires this for this or that purpose? You cannot appoint men to positions of great responsibility and say: Behold, they hold great wealth or administer great properties, as one reason why they should be fit for the job. The position of chairman of this board of directors is one of the greatest difficulty, involving the possession of qualities which very few men have, and knowledge which is possessed by still fewer men. These men now are, mark you, not trustees with a certainty of tenure but directors appointed by the governor in council, which is by the government of the day, politically, if you like, knowing that those who hold allegiance to the government and those who support the government must come to them demanding this, that and the other thing. Are these men going to be able to administer this system

so fearlessly, impartially and effectively as to ensure an equilibrium between income and expenditure? Does the minister really think that is possible? Does he think for a moment, with the experience he has had, that it can possibly be so? All you have to do is to realize what is meant by the letter I have read or the other matters to which I have referred and you will have no difficulty in appreciating the situation as it exists.

I am sorry to say that, in the light of the minister's speeches at Toronto and Three Rivers, I do not think he realizes what those forces are to which the commission referred. I do not mean that a member of parliament is going to take the minister by the throat. That is not the point. I have in mind what the report said as to the terrible effect of what is described as the pressure of communities, the pressure of circumstances, if you like. Let me put this to the minister: Does he believe, for instance, that a board of directors will be as able to withstand pressure for the construction of the Montreal terminal—I use that as an illustration because it is not likely to be done—as would a board of trustees? I saw what took place in this house, you see. Does the minister think a board of trustees would have yielded to pressure with regard to the Halifax hotel? Does he think a board of trustees would have done what was done by a board of directors with respect to the Vancouver hotel? Does the house recall the appointment of Mr. Fife-Smith of Vancouver as a director of the Canadian National Railways, and the reasons given by the minister from that province for that appointment? These are some of the factors which are influencing my mind in trying to arrive at a sound conclusion, for I am as interested in this problem as any man in this community, even as much as the minister himself, and in trying to see that what we do shall not bring disaster upon us. What Sir Henry Thornton said about political pressure cannot be denied by any observing man. What Sir Edward Beatty said is equally true, and who of us, reading the history of hydro in Ontario during recent months, can overlook the fact that "politically minded" is a proper description of those responsible for administration?

What I fear, I say to the minister frankly, and what I think everyone fears is, on the part of those entrusted with responsibility at head office, a state of mind, unconscious if you like, that expresses itself in a desire to please those who are in office. How many executives have sufficient strength of character and of decision to take an opposite attitude to that taken by the government? I recall what took place in connection with the Montreal terminal. If I had time to tell this house the whole story in that regard I am sure the minister would understand just what I mean. Consider the National Transcontinental; how did that come into being, and why? No one suggests for a moment that it was ever built to meet a national necessity.

Mr. FINN: To shorten the distance.

Mr. BENNETT: I am sorry that it does not shorten the path of the hon. gentleman to an understanding of the situation, but that had nothing to do with the undertaking. We all know the story in that connection; everyone knows it. Then there was the construction of the Grand Trunk Pacific to Prince Rupert, paralleling the existing facilities between Edmonton and Winnipeg, and we know how that came about. There was the projection of the Canadian Pacific, throwing its line in before the Grand Trunk Pacific could be built, by the extension of the old Canadian Northern Edmonton line from Wetaskiwin down to Winnipeg. Knowing all these things one cannot but realize that today we are being asked to make possible the exercise of that unconscious influence, if you like to call it that, upon the executives controlling the situation at head office which will result in politically minded action. Does anyone, for instance, say that the purchase of the Southern Counties railway was that high type of business that commends itself to the experienced and trained executive? Does anyone suggest that the Gaspé and Oriental was of such transcendent use to this country as a supplier of traffic that it was necessary in a business way to acquire it on the terms we did? Hon. members know the reports as to values. Some of those old branch lines served little communities in the east, we understand, but when you get into the other field you cannot for a moment say that it was other than considerations, not necessarily party, but political in their character, which brought about the result.

What we are asked to do now is to perpetuate that sort of thing. I think the hon. gentleman at one time would have been quite well satisfied, unless rumour does him a great injustice, if the present chairman would have resigned, to appoint another chairman and another board, and been content with the board of trustees. But the chairman felt that he could not resign, so we are to have seven directors.

I go a step further. On capital expenditure can you have any greater safeguard than we have now? Is it realized that this house has to vote every dollar of capital which is spent? Will it do anything more under this

bill? This house has a discretion to exercise now; it will have none greater under the new bill. If it is intended that the government shall project itself more intimately into the administration then that is the very thing which the commission said should not be done. If not, the control of parliament is complete at the moment, because nothing can be paid for deficits or capital expenditure or anything that this parliament does not approve; this must be done by appropriation. The board as it stands to-day has not a dollar to spend for capital purposes unless we give it to it; it has not any money to meet deficits except as we provide it. We must provide capital, whether it be for locomotives or cars or rails or roadbed, and under the new bill that will still be so.

You are going to have seven men meeting together, and the will of the majority prevails. The reason the chairman has a casting vote, was such would sometimes be necessary in order to carry any measure. The assumption was that the chairman would have such a sense of responsibility that political considerations would in no way govern. I can speak feelingly; I have been accustomed all my life to write to railway executives, whether of the Canadian Pacific or the Calgary and Eastern or other roads, when I was interested in some man who had met with a hardship. I have done this all my life; I never thought of it in any political sense; I did it both when I was in the house and when I was out, perhaps more when I was out than in. But if I wrote to the chairman of the Canadian National with respect to any matter Judge Fullerton would not for a moment consider it; in fact he charged it as political interference because I suggested it.

And when the minister talks about the two railways coordinating their efforts before the trustee board came into being, I can only say that this is true. In 1931, before the board was appointed at all, I sent a letter to both the president of the Canadian Pacific and the then president of the Canadian National asking them to cooperate in view of the serious conditions in which we lived and the financial obligations we were under. That is no new thing, successive governments have done it. But where in this bill have we any assurance that the evils which this commission fearlessly pointed out are not going to recur? If a board of directors under the conditions to which this commission refers dealt with this property in the manner indicated and brought about the results that have been expressed, then we know if we know anything that the appointment of another board of directors will bring about the same results. The minister says that the question is one of personnel. So it is, but no personnel that you can get in this country, unless you pay them more than we are prepared to offer them, will leave their present positions for the purpose of serving this railroad. Take the United States; take the history of their railroads; take the salaries they pay. Hon. members know perfectly well we cannot get these men. You cannot get the president of a bank or of a great organization to leave his organization and come and serve the railway. And we know if he gives it part time he gives just such time as he can afford having regard to his other duties. A day and an hour are fixed when they shall meet together. They meet together. They carry out—what? The will more or less of the president, just as this commission pointed out. That is all. Look at their expenditures: The hotel in Jamaica, these three steamships I have mentioned. Take the Montreal terminals, the hotel at Vancouver, the hotel at Saskatoon, the hotel at Halifax, every one of them; you can just put your finger on it and say: That is the reason. That is the report of the commission; that is what they found. There is their decision. I think no one would question that these men had no personal object to serve; in fact, if anything, they were more friendly disposed than otherwise with respect to the matters with which they had to deal.

I say to the minister that he has not made out a case. The only case he has made this afternoon is that in his opinion the chairman has not done his duty and is unfit for his position. But instead of taking action under section 7 and indicting him so that he would have a chance to be heard, he removes him, although the statute requires that he remain for a period of time. He gives him no opportunity to be heard, except before the special committee, and substitutes directors for trustees although the report of the commission is that under the service of directors, whether under a Conservative or a Liberal government, there was faulty administration and the red thread of extravagance running through the whole of the operations. And, more, there is the effect of politics, exercised not individually with respect to individual persons, but by the pressure of circumstances, of communities, of members of parliament en masse for the purpose of promoting their own political fortunes, and human nature being

what it is that must be so. We cannot lift this tremendous problem out of the morass of politics unless we endeavour to see that those charged with responsibility are free from pressure because they know their tenure of office is such that with their responsibility they cannot be treated as this bill treats the retiring board. This very bill is going to make it more difficult to get the right type of person, because the government has set an example that all one has to do is to change the government and then pass a bill. What is the sense of saying that they are appointed for five years or three or any other term? Why not simply say that they are to remain in office until such time as another government puts someone else in their place? It is all right to say that this leaves the responsibility with us, but the responsibility once politically exercised will be thus exercised again. A precedent is created. That is one of the difficulties of parliamentary government; you create that situation. The Prime Minister may say: I said that if we came into office we would remove them; that is not incorrect. Now the government is doing this, but it is doing it in the face of a report which indicates that directors have to a large extent brought about the disaster that we have to meet, because they themselves were not appointed to serve full time, and had no responsibility as far as money was concerned. And that is what the commission makes a particular point of; you see a private company always knows there is the question: Can we get the money? A private company always asks: Can we get the money? Can we borrow the money? Can we secure it by any means? But as this report points out, the president of the road made recommendations and that became the voting unit to secure it Just look at that report and read what happened in 1929! These are not my words. Mr. Speaker.

I had intended to deal at a little more length with some of these matters, but I have read lengthily and tediously, I am afraid, extracts from this report, not because the members of this house have not read it but because I find that my fellow citizens have apparently little or no understanding of just what the facts are in connection with our railroad position. This report dealt with the situation, from its genesis to its end, and it recommended a board of trustees, giving the reasons for so doing. I intended to take a little time on that. The commission say that in no other way could the end we all desired be reached than by bringing about cooperation between the two railroads. They say: That can be brought about, not by force in the first instance, but by mutual understanding and goodwill, by men meeting together in council and consultation. They say that it is necessary to have certainty, decisiveness, yes or no, not trying to put off decisions from week to week and month to month, doing a little now, a little next day or next week, and a little more thereafter, and an effort made by a minister of the crown to depreciate any work done or any savings made. We must have this cooperation unless we are prepared to scrap thousands of miles of railway. But the limits of cooperation are apparent to any casual observer; they must be, in the very nature of things. How can you escape it? Well, these men met together and they asked; What can we do? It was decided to pool trains. They decided to pool trains from Quebec to Montreal. Somebody is hurt and complains. Then it was decided to pool trains between Ottawa and Toronto, and the employees of one road are told that the other road is getting too much traffic and too much work for its employees. Then it is decided to pool trains between Winnipeg, Toronto and Montreal, and violent opposition develops because the men say this means that they will lose their jobs and they are not going to stand for it. Then they talk about taking up the rails, and that very minute every member of parliament says, at this effort to lessen competition and expenditure: I will vote against it.

At six o'clock the house took recess.

---

## After Recess

The house resumed at eight o'clock

Mr. BENNETT: Mr. Speaker, when the house rose at six o'clock—I had intended to conclude before that hour—I was asking the minister what he hoped to do by this legislation that could not be accomplished under the existing statute. I thought it well to point out in that regard what the commission had to say in their proposals and remedies, commencing at paragraph 195 of the report. They referred to the necessity for disregarding such amalgamation, long lease of the property as well as short leases of fifteen years and over. Paragraph 203 reads:

> Three trustees should be appointed by the governor in council, in whom should be vested all the powers of the present board of directors of the Canadian National Railways, both in respect of the parent and all subsidiary corporations of the system; and any and every power and authority necessary to enable them to administer the property and operate the system and every part thereof.

I put this to the house: In the face of a finding such as that to which I have referred, can it be said that this house as it is now constituted is better able to recommend an adequate remedy than were those commissioners? Does the minister with his limited experience in dealing with this problem suggest that at this very short date he is so well qualified himself as to be able to speak with more authority than are those men who gave so much time and trouble to dealing with the problem? In regard to the appointment of the trustees, I mentioned this afternoon that the government of the day had full appreciation of the value of the report in connection with the type of men who should be appointed. The report recommends that all should be persons of proved business skill and capacity. I think most will admit that Mr. Morrow is a man of proven business ability and capacity. Mr. Labelle had had considerable experience, not so much in the practise of his profession as in dealing with business transactions for one very important client whom he represented in Montreal. He brought to bear upon the problems that he had to consider a trained mind not unaccustomed to dealing with business problems of the greatest magnitude. In the case of Mr. Morrow, as I say, I think his capacity is known to all those who have any knowledge of the business of this country.

I have mentioned already the considerations that brought about the appointment of Judge Fullerton. I should mention that it was regarded as absolutely essential that there should be some measure of continuity in management between the outgoing board and the new trustees. Both Mr. Morrow and Mr. Labelle had been on the board and they were continued so that continuity might be maintained. For the life of me I cannot understand just what difference there is between the suggested proposals and those embodied in the statute itself. Paragraphs 205 and 206 of the report provide that the budget requirements of the system are to be made known. These paragraphs read:

> The annual budget of the railway should be under the control of the trustees. Amounts required for income deficits, including interest on railway obligations, for capital and for refunding, should first be submitted to the treasury board for its approval and presentation to parliament by the Minister of Finance.
>
> Since the debt of the system in the hands of the public is now very large and more than the railway can carry from its earnings even under improved conditions, sums which are required to meet deficits should be voted by parliament annually and not raised by the issue of railway securities as has been done in recent years. This recommendation does not apply to capital for improvements and betterments nor to amounts required for refunding.

These recommendations are embodied in the report and it is somewhat difficult to understand what will be the difference between the new board of directors considering the situation and making recommendations as to what is required for capital, for other purposes and for the deficit, and the present board of directors, which now considers these very problems, making recommendations as provided for by the statute. According to the provisions of the statute parliament deals with the matter and provides the money and the week before last we voted substantial sums to the railway for that purpose. There is now standing on the order paper a bill which contemplates the voting of a potential deficit before it is known. All of this is a negation of the principles that governed in connection with this matter, under either the report of the commissioners or the provisions of the statute itself.

With relation to the chief operating officer, I confess I was unable to follow the minister. The statute distinctly and positively states that the operating officer shall have to do with the operation of the road, the administration in the broad sense being entrusted to the chairman and the trustees. If, as has been said, the chairman segregated certain activities; for instance, if he said that he would undertake to be the executive officer with respect to hotels or with respect to the law department, the fact remains that the president was responsible for the operating. I cannot see that that division of duties could in any sense lessen or limit the field. For example, it is well known that the vice-president in charge of traffic may have certain obligations. It is well known that the vice-president in charge of accounting may have certain obligations and the chairman of the law department may have to do with certain other phases. If, as chief officer of the road, the chief executive or the chairman says, "I am willing to undertake responsibilities that link executive action to administrative action in connection with several activities," to which reference was made this afternoon, I can only point out that as a result of his efforts, he brought about surpluses where there had been deficits. I think the minister mentioned this afternoon a surplus in connection with hotels, and in connection with the steamship lines the same condition prevailed. Of course, the law department is not a revenue producing department, but one would expect that a former justice of the Supreme Court of Manitoba would be well qualified to assist in the administration of problems which had to do with law. Therefore I find it difficult to understand why the

attack was made in the form in which it was, unless the minister understood the chairman to indicate that he regarded himself as the chief operating officer of the railway. The statute says that he is not and the recommendation of the commissioners in that regard has been followed. As I say, I find it difficult to understand what is meant by that attack.

With respect to cooperation, I stated this afternoon that the commissioners recommended the closest cooperation. In paragraphs 210 and 211 of the report they embodied this recommendation in terms which have found expression in the statute itself. I say once more to the minister that there can be no useful cooperation if there are two considerations always before one or both of the parties cooperating. There can be no such thing as real cooperation if each is waiting for the other one to suggest that there shall be the taking up of lines on his road or on the other man's road. These considerations must be overcome by mutual understanding that there may be lines taken up on both roads.

Lastly, and more important, is the second consideration. Last fall I heard appeals being made to the railway employees that amalgamation or unification might involve a possible loss to some of them. This afternoon the minister talked about human relations between the president of the road, who had worked up to that position from the mechanical department, and the employees. Is it proposed that because someone suggests that some proposal may have a temporary effect upon someone, the Canadian taxpayer is to be taxed forever? Is that what the minister means? The facts would certainly indicate that that is so.

Someone pointed out that the roundhouse in Ottawa was in a disreputable condition, was no longer capable of serving the purpose for which it was constructed. It was pointed out also that across the bridge there could be found in Hull a recently completed roundhouse owned by the other road and quite capable of meeting the requirements of both. If meaning is to be given to the words of the minister, it will be extremely doubtful, because of attention having been directed to what might result with respect to the employment of some people, whether an effort will be made to bring about the ultimate use of the Hull roundhouse when the Ottawa roundhouse falls into obsolescence. I want to make it perfectly clear that I think it would be far better for the people who are employed to be employed by a solvent system, by a system not in the hands of a receiver, than by one no longer able to maintain its services efficiently and effectively. In other words, more people will ultimately be engaged in more stable and certain employment if there is a realization that there should be cooperation between the two railways. I think it is axiomatic that this must be done to secure efficiency on the part of both. If, in the approach to cooperation, there is a combination of the two qualities or factors which I have mentioned, the inevitable result will follow that there will be no cooperation under this board, for the simple and obvious reason that if there is the haunting spectre of a political result following at the end of administrative action, the inevitable consequence will be a continuance of the very conditions which we have in this country. How could Judge Fullerton function, with the conditions prevailing which have been made apparent to this house, neither road willing to move its tracks, each waiting for the other to suggest that the other man's tracks should be moved, and with the realization that there is more trackage than this country can possibly support, as is admitted by every one? In that condition of things, how is the change from trustees to directors going to effect an improvement in the situation? For the responsibility of the government, of the country and of the taxpayer has not been changed one tittle from the recommendations of the commission as embodied in the act. They were stated in somewhat different terms, and that is all that can be said.

A point to which the minister did not direct attention and which I had thought would be in his mind is this: This system of railways has been made up out of not one but many systems. May I read paragraph 84 of the report:

> Representations have been made with respect to the capital structure of the Canadian National Railways. This problem presents several aspects. One is the very large number of companies whose corporate existence must be maintained. Another is the large number of different bond issues and mortgages with different rates of interest, expiring at different periods and with all sorts of different clauses in them. It has been stated that included in the National Railway system there are 251 different bond issues and mortgages; that there are 80 different issues of certificates in the hands of the public; that there are 139 companies whose corporate existence must be maintained; and that 42 separate income accounts and 90 separate balance sheets have to be prepared each year.

Obviously the suggested changes are not going to improve that situation, and so far as capital structure is concerned, no change except by parliamentary action can in any sense deal with that condition. Therefore, so far as that outstanding point is concerned—and we have met it by the appointment of trustees—much will have to be undone that has been done and in the end there will be no progress in that direction. I point this out, because it has its effect upon the situation as a whole.

Then there is a third point, the last one which I desire to discuss in this connection. It must be within the knowledge of the house that when parliament declared that there should be no more funding of deficits it meant that the Canadian taxpayer had to find the money and that thereafter there would be no charge for interest appearing in the Canadian National report. So that the report for 1934 and the report for 1935 do not disclose the real condition, because the interest upon the deficit for 1934 and 1935 is being paid by the country as part of the national debt. Those who are interested will find, at page 19, that in 1935 the interest due the public on long-term debt was $53,468,792.22, whereas in the preceding year it was $55,811,745.85. There has been an economy effected by refunding operations carried on by the government. The interest upon the deficit of 1934 is now part of the national debt of Canada, and the interest on the deficit for 1935 is also a part of that debt. The appointment of directors cannot improve or change that condition unless the government is prepared to capitalize against the railways the deficits from year to year. I would point out further that last year we had to find over $48,000,000, which, added to the income available for interest of over $8,000,000, made the payment on interest account the sum of $56,000,000. That is a very large sum of money.

I wonder whether the members of this house realize that it represents over $1.75 a second. Do they realize that when I speak of something over a million a week it is a large sum of money? Few men have taken the trouble to reduce it to the smallest unit of time. But when I point out that while we sit here, as every second goes by, there has to be provided from some source, either from traffic or from the Canadian people by taxation or by means of an addition to their debt, about $1.75 a second, the house will appreciate the astonishing sum of money which is charged against the people.

During the last few years, especially since 1931, my friends opposite were content to endeavour to throw discredit upon the administration of the railways, to assert that the party in power at that time was anxious to bring about the destruction of the system, whereas in point of fact, day and night, we were labouring to provide the wherewithal to maintain its integrity and solvency from the standpoint of those who held its securities. And in that we succeeded. Hereafter fair minds, those who are able to take a less prejudicial view, will realize that the task we undertook and discharged successfully was a great and difficult one. During the election, it is quite true, as the minister has stated, that the government said they proposed to change this condition. They did undoubtedly so state to the Canadian people; they did state to them that the government of that day was responsible for the condition which had been brought about and that it was intent upon the destruction of the Canadian National system. I can only reiterate that, as the records in that regard indicate, such was not the case; they speak for themselves. It will be found that the appeal which was successfully made to the railway men of the country, the appeal which secured their support in overwhelming numbers for the government now in power, was based upon a wholly inaccurate appreciation of the difficulties of the problem and an unreal understanding of just what was involved. There is no government in any country at any time that is not concerned about employment being made possible for every man within the borders of that country. Every government desires that. But when one is faced with a situation such as we have here; when the statute itself declares that neither amalgamation nor unification was intended or proposed or possible until parliament should speak; when one finds further that the mere suggestion that there should be a lessening of expenditure in connection with express and telegraph systems raised in this house such a cry against the administration of the day, such an upheaval of prejudice and an appeal to the public against the taking of any action, does the minister say that he does not intend now to take action; that he does not propose in any sense to give effect to at least three of the suggestions of these coordinating committees of the two roads? Is there to be some unification of action with respect to express and telegraph services? Are rents to be paid every year for two places where one might suffice? Does this mean to say that while provision is made for these things they shall not be carried into effect lest, peradventure, some

man will find his interest temporarily affected? It must not be forgotten that when the very suggestion was made with respect to these two matters that had been dealt with by the two systems carefully, with much detail and over long periods of time, the result was as I have indicated.

There is still another point to which attention might be directed. So far as my memory serves me, wherever there was a suggestion that certain roadbed be abandoned there went up the cry that this was an effort on the part of the government of the day to destroy the system. One piece of road a few miles in length has been successfully abandoned. The rest of them have not been so treated, although the two roads were of the opinion that some action of that kind might be taken. I do not know to what extent they arrived at conclusions as to total mileage that might be dealt with, but this I do say, that unless the Canadian people are told frankly that there can be no carrying into effect of the recommendations made by the commission; that that cannot be done, they must continue to pay and pay and pay. If it were a question only of paying one would not be so vitally concerned, but there is a limit to the powers of the Canadian people to pay. There is a limit to the power of taxation against our people, and that limit has been reached. If one is not familiar with the history of taxation in other countries; if one does not realize what eleven million people scattered over half the continent are able to bear, one may continue to say: Pay, pay, pay. But the obligation is a direct one. It is imposed upon the people; it must be paid by the taxpayer in the form of interest upon increased securities issued by the country itself and not by the railroad. Unless this commission is entirely mistaken; unless we are so remarkable a people that rules which govern other countries have no application to us; unless it be true that one Canadian can produce as much traffic as two people in the country to the south of us; unless it be true that we are able to operate our railroads more cheaply than any other country, unless it be true—and we have a climate which makes this impossible—that we can operate the railway on a ratio of gross income to operating costs more easily and better than any other country, then of course this legislation can have no purpose and can effect no good. All it means is that you have drawn nearer and nearer politics and business, business administration and political action; that you are that much closer to the demand that clean, frank, honest administration shall be the creature of political considerations and not of business rules and principles. These things are brought nearer and nearer by the legislation which is before us.

I do not know to what extent the members of this house can respond to what they conceive to be a national crisis. I do not believe for a single moment that this country has reached the limit of its powers of expansion or development. But I know that we have provided in this country facilities for a population nearly if not fully twice as great as the present one, much larger, in fact, than that. And our transportation system is threatened by the bus on the one hand and the aeroplane on the other. The number of passengers being carried by air from some of the great western cities to the south of us to the Pacific coast shows a very large increase. I know that the other day four extra planes, carrying twelve passengers apiece, went from one city to the Pacific coast. On the other hand we have the bus system and all these are the products of the internal combustion engine. Yet to-day, notwithstanding the condition that confronts us, one may hear men demand air-cooled trains, stream-lined trains, increased facilities of various kinds, regardless of cost. I wonder whether the minister thinks for a single moment that to put these powers into the hands of these seven men is going to change these conditions for the better. I think not.

I can only say this, that having induced the Canadian people to believe that the late government was the enemy of the Canadian National system, although through the stress and strain of the greatest depression the world has known that government, with great difficulty, maintained the system in its integrity; having succeeded in creating a public opinion hostile to the government of the day on the part of the employees of the roads because they feared that if certain action was taken they would find themselves for the moment with less employment; having succeeded in doing these things, the government now finds that the responsibility rests with it to promulgate a policy. That policy, after all this careful consideration on the part of the minister, consists in the substitution of seven directors for three trustees, and no real change in any other feature, so far as governmental action or control is concerned, except that implied in the statement made the other day by the Prime Minister as to what the effect of this bill was in providing an opportunity to exert power and pressure upon the administration of the road to secure the ends of particular individuals. Apart from that, this bill does not contemplate any change that I can see, anything that makes for the benefit of the road or

for lessening the burden upon the taxpayer. That policy will not solve our railway problems. That suggestion will not in the end help the employees. It will still leave fixed charges to be met. It will still leave the Minister of Finance to worry, as did his predecessors in office, amid stress and strain to find the money with which to meet the continuing deficits of a system which now has fixed charges of upwards of twenty million dollars greater than they were in the glorious days of what was assumed to be prosperity.

It is all right for Mr. Fairweather, at Moncton, to enlarge upon what he says can be accomplished with a gross income of so many dollars and a net income of so much. All I can say is that until there is a clear realization of the obligation of parliament to deal with this problem as one of business and not of politics, there can be no clear-cut solution. It has not come to-day. After listening to the speech of the minister I say that it has not come by this legislation. It will not come until Canadians of all classes, in every walk of life, and of all political faiths, have a clear understanding of what is involved, for with the people themselves rests ultimately the remedy. As long as they are content, without a clear appreciation and understanding of this matter, to keep on making new and fresh demands upon governments for new money, for fresh capital, for better facilities, for improved trains, and for better pay, there will be no solution of this problem. Those who sit to the left of the Speaker and know something of this matter, having been through it, who know the anxiety which attends the maintenance of the system, who understand all too well that man is but a fallible creature and that as long as he desires to promote his own interests in the political sphere he is not very likely, whether he be Liberal or Conservative, to devote too much of his time to a consideration of the fundamental questions themselves, realize that there will come a time, as in every country there has come a time, when the problem will become so acute, the danger so imminent, the risk so great that men will bestir themselves, forget their personal animosities and political difficulties, and rally to a common cause to save from disaster that which they cherish and love. I believe, judging from the resolution which has been produced here to-day, that that day has not come, but some day it will come, and when it does, those who now sit to the left of the Speaker will be found ready and prepared to make such sacrifices as may be demanded for the salvation of the country and the saving of the taxpayer from ultimate ruin.

Mr. R. S. WHITE (St. Antoine-Westmount): I will trespass upon the patience of the house for but a few minutes while I express my regret at the character of the bill, now under consideration, purporting to be a solution of the railway problem of Canada. I do not intend to indulge in recriminations or to stir up the mess that was made some twenty years ago in connection with this railway question, a mess so odorous that it stinks to high heaven. Both parties have to bear a share of the blame; if one overbuilt, the other overbought, and the regret is that in recent years no serious attempt has been made by any party to solve what is to-day the most perplexing and most important subject before the Canadian people, a question upon the solution of which depends the credit and, I venture to say, the solvency of this country.

Now let me cite a few figures to show the serious depths to which we have fallen in the mismanagement of this problem. In 1935 the total cash deficit of the Canadian National Railways exceeded $47,000,000 and the net loss on the system, as set forth in the report, amounted to more than $115,000,000. The debt of the road is $2,809,000,000. If a proper business policy, one that commended itself to men of sense, had been adopted in 1921 when the Canadian Northern and the Grand Trunk Pacific got into difficulties; if these roads had been put upon the auction block and had been taken over by their creditors, more than one billion dollars of the debt of this dominion would have been avoided and no impairment of railway service would have occurred, because wherever roads were necessary they would have been continued in operation by the new proprietors. When the railways were formed into the Canadian National system the total debt was $1,336,000,000. In 1933 the total debt was $2,745,000,000, an increase of $1,409,000,000 in the short period of thirteen years. Since then, that is to say in 1934 and 1935, a further sum of a little more than $200,000,000 has been added to the capital debt. The cumulative deficits of the Canadian National railways between 1923 and 1933 amount to $663,000,000 including interest on loans from the government, or to $303,000,000 exclusive of that interest.

I ask hon. gentlemen: How long can this country continue to meet these deficits without imposing a taxation repressive of trade, and thereby hampering the rehabilitation that we all hope is in the not too distant future? The bill before the house is not even skin deep. You, sir, may remember the story of

Mrs. Partington, as related by that eminent wit, scholar and essayist, the Reverend Sydney Smith. Mrs. Partington was an elderly lady who occupied a humble cottage on the seashore. One day a violent storm came up, causing a tidal wave. The tide approached closer and closer to Mrs. Partington's house whereupon the old lady, who was of a resolute, determined character, rushed to her kitchen, seized a broom and came out and fought the incoming tide. The battle went on, but needless to say poor Mrs. Partington was vanquished and had to give up the contest. The bill before the house will be no more effective in meeting the rising tide of debt and taxation occasioned by Canadian National railway deficits than was Mrs. Partington's broom against that tidal wave.

We sometimes hear of a reconstruction of the capital account of the railway. I have heard in this house and I have read in the newspapers proposals that the capital structure should be written down. What nonsense! You could write it down to one dollar and you would not save a penny of taxation for the people of Canada. Why? Because that is a debt of the dominion government, represented either by bonds issued directly by the government or by bonds guaranteed by the government. To transfer that debt to dominion account from railway account would not lessen the burden upon the people by one iota, but this is what it would do: It would make the position of the railways very much more precarious, because without any interest charges our western friends, and our eastern friends too, for that matter, would sing out for a reduction in rates because of the apparent surplus, and even the employees of the company would begin an agitation for higher wages.

I have always thought that only by some process of unification or amalgamation shall we ever escape from the dilemma which faces us. But I realize that this house, and apparently the electors of Canada, are set against a course of that kind. What then remains? Cooperation with a view to economy. It is true, as the right hon. leader of the opposition (Mr. Bennett) has said, that the railway men of this country did not show confidence in the Conservative candidates in the last election. I think it fair to say that perhaps ninety per cent of the railway employees of Canada are supporters of the present government. Why? Because of their fear that the Conservative party is inclined to a policy of amalgamation. My contention is that by cooperation, if you will, the cost of operation can be gradually and in increasing ratio every year reduced without a single employee in any department of either railway suffering. That economy will be brought about in two ways, by old mortality—Death—and by the pension bill. There will be an increasing number of present employees who every year will disappear by one or other of these means. In that way, with reduced mileage one can in the course of a very few years bring the numerical strength of the railway staff to a parity with the operating needs of the railway.

I was glad to hear the minister intimate that Mr. Hungerford of the Canadian National Railways will probably be chairman of the new board of directors. The leader of the opposition had a complimentary word to say for Mr. Hungerford, though he feared that he lacked back-bone, the ability to say no, a weakness with which I most cordially sympathize, which I attribute to the kindness of his heart. Of his ability as a railway executive there can be no manner of doubt. The late Sir Donald Mann a few years ago told me that in his opinion—and he had some knowledge of railways—Mr. Hungerford is the equal of any executive operating manager on the continent of America. Knowing him as I do, having the high opinion of him that I have, I am extremely glad to learn that he is to be chairman of the board of directors.

Mr. BENNETT: And president.

Mr. WHITE: But I regret that I cannot pay the same compliment to the Minister of Transport (Mr. Howe) who entered public life with a very high reputation for business ability, and with wide experience, and was elevated to one of the most important positions in the government, when he comes to this house with so feeble a measure as the bill before us to cope with so great and momentous a question. He does not do himself justice. He lacks the courage that I expected from him, and allows "I dare not" to wait upon "I would." None the less we shall never get anywhere in the solution of this question by skirting round the circumference of it. We have to get to the core, to apply drastic remedies. In no other way is it possible to avoid what I think it no exaggeration to say is almost impending disaster.

I have spoken on the point that the railway employees have nothing to fear. I have referred to the absurdity of the suggestion that by cutting down the capital account of the railway a surplus can be made to appear. I would say this to the minister: Is there not some lack of consistency in his policy by

land and his policy by sea? He found when he came into office a number of harbour boards upon which were local businessmen, familiar with the needs of the particular ports in which they were residing. He wiped them out and named three gentlemen who are to reside in Ottawa to manage these ports. But when it comes to the railway it is somewhat different; he wants more or less local, certainly sectional direction, and not a commission. I think there is some element of inconsistency there.

But, after all, that is a small matter. What I would plead for is this—and I wish I had more force with which to do it—that this house should apprise itself of, should realize, as the Minister of Finance well does, the seriousness of the situation with which this country is faced in connection with the Canadian National Railways, and that we should shed our party politics. Now, in this first session of a new parliament, is the time in which we should have drastic legislation. Wait a year or two and it will be too late. At least let the government insist—it is going to take the power through this board of directors—upon serious and drastic cooperative steps with a view of reducing these dreadful deficits with which we are faced. Something can be done. And remember this, that to-day if you deprive a community of a non-profitable railway line, the situation is not as it would have been fifteen or twenty years ago when there were no motor cars or motor buses or motor trucks. These are competitive forces that are playing the very mischief with the earnings of the railways to-day, and they are here to remain. So it should be borne in mind, when this question of closing down non-profitable branch lines is under consideration, that communities will not suffer by their closing. Remember, too, that the whole is still greater than the part, and if it becomes necessary for the treasury of Canada to hold out a helping hand to a larger number of people or to continue the present assistance for a yet longer time, its ability to do so will be materially increased by measures of drastic economy in connection with the Canadian National Railways.

Mr. JEAN FRANÇOIS POULIOT (Témiscouata): Mr. Speaker, you are familiar with the French saying, "Ne reveillez pas le chat qui dort," or as we say in English "Let sleeping dogs lie." I have not taken much part in the debates of this house or occupied much of its time since the beginning of this session, and now I have just a word to say in reply to what was said by the right hon. leader of the opposition (Mr. Bennett) this afternoon. He mentioned me by name and praised me for being frank in acknowledging that I recommended some men for shovelling snow along the track of the Canadian National railway. Well, sir, I do not know if that is an offence mentioned in the criminal code of Canada, but here are the facts.

Last winter snow fell in more abundance than in previous years, and a great many men were to be hired on extra gangs by the Canadian National Railways to shovel snow. A great many of them wrote to me here, asking me to give them recommendations. I started to do so, but the number was so large that finally I aked some friends of mine to form a committee for the purpose of giving the work to those who most needed it, as the right hon. gentleman has been fair enough to say. It was not a pork barrel matter at all. It was simply a question of giving help to those who most needed it. This committee, which was composed of prominent citizens in my home town, has done excellent work in classifying according to their needs those who wanted work at shovelling snow. They were classified as, first, supporters of families; second, married men without families; third, boys who were supporting families; and fourth, unmarried boys. That was a fair classification, and in fact the town has been most satisfied with the arrangement because less money has been paid out in unemployment relief while these men have been shovelling snow along the track of the railway. I mention this not by way of excuse or justification but simply in explanation of what happened. My political correspondence is an open book, a big book possibly, but I have nothing to hide in it, and I am very much surprised that the right hon. leader of the opposition did not enjoy the same clear conscience when I asked him to produce papers. He refused and said that it was a confidential matter. But I say to him that he can come and look through my files, provided nothing disappears, from A to Z. I have nothing to hide. What I say to him I say to my people, and what I say to them I say here in this house.

I can tell the right hon. leader of the opposition that if my home town of Rivière du Loup has suffered so much for lack of employment in the Canadian National railway shops it is because of the dirty patronage of the Tories when Sir Robert Borden came into power. As the right hon. gentleman has spoken, let me speak in my turn. There was a man now dead who was Postmaster General in Sir Robert Borden's government. I shall not identify him any more plainly than that. He was a Conservative. There was another gentleman here, a Liberal, a lieutenant-governor of the province of Quebec, and in

order that there may be no mistake he was not of the privy council at Ottawa. These two gentlemen met together in the early nineties in Quebec and invested a small capital of $5,000 in a company called La Compagnie des Terrains sans Bruit, or The Noiseless Land Company. That important company, with a capital of $5,000, and comprising some of the big men of both parties but who should be disowned and denied by all respectable men of all parties, bought a swamp on the outskirts of Quebec at St. Malo as land for railway shops. There were other prominent Tories with them, and they bought this swamp for $5,000 and tried to sell it to the Liberal government when the Liberals were in power. Sir Wilfrid Laurier refused to agree to this, but as soon as the greedy Tories came into power one of their first deeds was to buy that swamp, for which $5,000 had been paid, for the huge sum, comparatively speaking, of $160,000. Some profit, eh, for a swamp! And then what was done? The Tories built a railway shop on that swamp and called it the St. Malo shops.

After the shop had been built they had to bring down men and machinery, and they brought good men from Témiscouata to work in that shop. They brought machinery from the shops at Rivière du Loup. If any member of the house wants to have more information about the matter he has only to look at the Hansard of the session of 1925, my first session, and he will see enumerated there the number of pieces of machinery, important and expensive machinery, which were transferred under Tory rule from Rivière du Loup to St. Malo, and the number of men who were deported from that beautiful city of Rivière du Loup to that swamp on the outskirts of Quebec at St. Malo. That was done by the Tories. Let them rest in peace—but I wonder about that! That is what was done. It was just for graft, and Tory graft, that these good workingmen of the Canadian government railways were deported from Rivière du Loup to Quebec in order to justify that graft of $150,000. It was done at the expense of my home town of Rivière du Loup. That is what the Tories have done, and I am not surprised that the right hon. leader of the opposition turns crimson. He must be ashamed of what his party has done to my dear home town of Rivière du Loup. That is one thing the Tories have done, one thing which they cannot justify, and those who have wrought damage must make reparation. It seems to me that the government of the day was responsible for that wrong done to my home town of Rivière du Loup. It is up to the government of Canada to repair that wrong. I feel quite at home when I complain about the way in which my home town has been treated, and this is the place where I should complain.

There is a lot of hyprocrisy in connection with this matter. We hear it said: Leave the Canadian National Railways alone; do not touch it. I hear some so-called important business men say: Do not touch the Canadian National Railways. Does the right hon. gentleman suggest that the people of Canada, who have an interest in this system valued at more than two billion dollars, should not be interested in its operation? If I have an interest in a two million dollar concern and am walking down the road and this concern is on the right, am I to keep my eyes left? Am I to do that when by looking through the windows I can see what is going on? We are 245 members who represent the people of this country, and to whom the people have said: You are to look after the future of this country for the next five years; you are to support a government that will express the views of the people for the better management of this country. You are to be just rubber stamps; you are to give powers of attorney to a certain number of men who will do the business, who will look after the railways and the other business of the country and you will not have a word to say about it. A business worth over two billion is worthy of consideration. Are we to give a blank cheque in connection with this? Are the members of parliament to be criticized because they want fair play in connection with the management of the Canadian National Railways, because they want fair play for the men, for the passengers and for the management, even when they do not realize it themselves?

The hon. member for St. Antoine-Westmount (Mr. White), one of the two deans of the house, a gentleman much respected, has said that Mr. Hungerford was weak. One has to communicate with the management of the railways. If I write to the Minister of Railways and Canals (Mr. Howe), asking for information about expenditures in connection with which the railways come here for assistance, I am told I cannot have it. This is the same information as I received last year. There must be a nigger in the woodpile. How is it that I cannot have the information asked for? It is because of the legislation brought down last year and the year before. It would be better if the leader of the opposition did not smile at that because he will remember that the suggestion was made in the house that the Canadian National-Canadian Pacific bill should be submitted to the committee on railways in order that the mem-

bers of that committee might have an opportunity to examine Mr. Hungerford and Sir Edward Beatty and obtain the information necessary properly to discuss the bill. This request was denied me by the previous Minister of Railways and Canals, Mr. Manion, on the plea that it would be too expensive. After plenty of trouble on the part of an hon. gentleman in the senate, I was able to obtain the information that the cost of summoning witnesses before the senate committee in connection with this bill was the enormous sum of not a single cent. Yet the previous Minister of Railways and Canals was bold enough to say that because of economy he must refuse the members of this house the privilege of asking questions of these witnesses.

When the hon. member for Bellechasse (Mr. Belanger) was asking questions about the tremendous expenditures on strawberry jam, he received no answer. It was absolutely impossible to get an answer to a query about this man Laforce who has done more than anyone else to place settlers upon the rocks in impossible places. We are told that these things are not in the interests of the country. How is it they are not in the interests of the country? We are here to discuss Canadian National business and when we ask for information we should receive it. This information was refused in the past, but we must have it if we are going to correct these things.

We hear a lot about the so-called business men of this country, but I think it is time the truth was told about the millionaires of Canada. Most of them are short-sighted. If the country is in trouble, it is because of the silly experiences of these people. If it has survived, it is not because of the millionaires; it is because of the small traders who have more business acumen than most of these other fellows who have become rich at the expense of the people through watered stock.

These are the facts. From the way in which discussion is being carried on in this house, in the senate and in the press, one would think we are making a political joke of the Canadian National Railway and the Canadian Pacific Railway. This is most absurd. If they come here for money, we must know for what that money is intended. If we are to investigate the business of the Canadian National Railways, we must do the same in connection with the Canadian Pacific Railway. It is only fair that this be done. The number of men unemployed has been increased enormously because of the increase in unemployment brought about in the ranks of the employees of the railways by the policies of the last government. When the bill was discussed in 1932 and 1933 the Liberal members stated very clearly that the best way to bring about a revival of business and prosperity in the country was to bring about a revival of trade. Two years later the then Minister of Railways and Canals and the right hon gentleman who is now leader of the opposition repeated the same thing. They did not realize that it was because of their stupid tariff policies that trade had decreased bringing about a decrease in the income of the railways.

I do not intend to speak at great length about this matter and I rise in order to prevent the house from forgetting about these things. The right hon. gentleman's policy was a complete failure and fiasco, but he is ready to give advice to all—take it or leave it; I am the only one who is right. He takes himself quite seriously. This is most extraordinary as what he should do is to hide himself under his desk. He has not the least sense of responsibility for what has happened during the last five years. No one in this country has forgotten it, but he comes to this House of Commons just as though he had received a mandate from the people in the last elections. Oh, stupendous! Has he no calendar? On the calendar for last year there is one word in particular, and there are two numbers, in flaming letters. There is the month of October and there are the two figures "1," "4"—October 14, the day on which the people of this country passed judgment on the last administration, which was making an effort to survive its period of five years from July 28, 1930, to July 28, 1935. August passed; September passed and two-thirds of October passed before the right hon. gentleman handed over the reins of power to another administration. Think, sir, of the misery, the anxiety and the worries that have been experienced in every house during the last five years. The country was getting weaker and weaker though the voice of the right hon. gentleman was still strong, assuring the people that there was no depression. Most incredible! I do not want to be hard on any one and this speech is most lenient, but we must think of the responsibilities we have here. The right hon. gentleman has his own responsibilities, and they are great, but they are not greater nor are they less than those of any of his colleagues in this house; they are the same. He must therefore face the facts as they are and must not build skyscrapers on the head of a pin, nor can he build skyscrapers on nothingness.

Here are the railways. The Canadian Pacific Railway was favoured, in spite of the fact that it was a private company. Let us

remember the letter signed by the right hon. gentleman in his own hand and under his own seal before the matter was submitted to his colleagues, pledging the responsibility of this country for $60,000,000 for the Canadian Pacific Railway.

Mr. BENNETT: I am sorry to interrupt, but that must be withdrawn; it is inaccurate.

Mr. POULIOT: Well, sir—

Mr. BENNETT: I ask that the statement be withdrawn; it is not true.

Mr. SPEAKER: I ask the hon. gentleman to withdraw the statement.

Mr. POULIOT: Withdraw what? The thing has been published in the reports of the banking committee. You, sir, were a member of the banking committee and you remember very well—

Mr. BENNETT: Is the power of this parliament and of this house entirely gone? Is the Speaker to be entirely disregarded?

Mr. POULIOT: Sir, I will call for a copy of the reports of the banking committee and I will see the whole thing. If I am wrong I will withdraw; if I am not wrong I will not withdraw, because I remember distinctly that at the time the right hon. gentleman gave a guarantee to the railway for $60,000,000 before an order in council was passed. I wonder whether the right hon. gentleman can deny this now.

Mr. BENNETT: I have already indicated that the statement made by the hon. gentleman is inaccurate. The facts are, of course, well known and there was never anything about the matter that was unknown. The facts were published, as he says; they were made known to the house. I in my place made them known to the house. There is no doubt about a letter having been written, but it was not a letter of which my colleagues had no knowledge; on the contrary it was discussed with them. I do not think this house should permit itself to be entirely deprived of its authority at the instance of one man.

Mr. SPEAKER: The hon. gentleman should take the word of the leader of the opposition.

Mr. POULIOT: I accept the word of the right hon. gentleman inasmuch as it is in conformity with the report of the banking committee. But, sir—

Mr. BENNETT: That is not good enough; that cannot possibly be good enough in this house.

[Mr. Pouliot.]

Mr. POULIOT: I surely will not do more than that.

Mr. SPEAKER: I think the hon. gentleman should withdraw the remarks he has made.

Mr. POULIOT: Well, without prejudice. Now, to sum up—

Mr. BENNETT: I must say that I have no greater interest in this house than has every other of its two hundred and forty-five members in seeing that order is maintained. But can this house maintain its position with that sort of conduct?

Mr. SPEAKER: I ask the hon. member for Témiscouata to withdraw the remark.

Mr. POULIOT: Mr. Speaker, I want to tell you that I have heard very little of what has been said either by the right hon. gentleman or by yourself, and I regret it very much, but I am not going to give a blank cheque either to the right hon. gentleman or to yourself, with all the respect that I have for you. When I cannot catch what is said by the Chair and by the right hon. gentleman it is very difficult for me to give my own views of what has occurred. In fact, sir, you know very well that I always stand by the rules, although at times they are wrongly interpreted.

Mr. DUNNING: I am sure my hon. friend is correct in what he has just said; he does desire to abide by the rules of the house, I know. One of those rules is that upon a member denying something within his own knowledge and relating to himself that denial must be accepted in an unqualified manner by any member of the house who is speaking. The right hon. leader of the opposition has denied in unqualified terms a certain allegation made by the member for Témiscouata. The Speaker has requested my hon. friend to withdraw, and I suggest, in the interests of maintaining the dignity of the house, which I know he desires to do as much as any of us, that that withdrawal should be entirely unqualified.

Mr. POULIOT: Well, sir, I will tell you how I understand it.

Mr. SPEAKER: Order. I have rendered my decision and asked the hon. member for Témiscouata to withdraw.

Mr. POULIOT: I will see the book before withdrawing. Au revoir, sir. If I am right I will not withdraw and if I am wrong I will withdraw.

Mr. A. A. HEAPS (Winnipeg North): Mr. Speaker, I have listened most attentively this afternoon and evening to the speeches made in connection with this very important measure, and I realize, with those who have already spoken on the question, the magnitude of the problem that confronts parliament. This is one of the most important matters that parliament has to deal with. May I for a moment or two deal with some of the statements made by the Minister of Railways (Mr. Howe) in this chamber in introducing the measure. I was sorry in a way to note what the minister had to say with respect to the board of trustees; I felt as he was speaking that he was not doing justice either to himself or to this house. Here we have a board of three trustees who, being appointed by parliament, are in a sense employees of this house. Their lips are sealed; they are not in a position to answer the criticism that has been made of them by the minister in charge of the transportation system of this country.

I notice that he pointed out that two of the trustees are members of the legal profession. He inferred that for that reason they were not qualified to deal with matters pertaining to railways. There may be something in the minister's contention; in fact I think that, as a general criticism of lawyers, he may be entirely correct. But I suggest that before he levelled that criticism against the board of trustees he should have looked immediately round him and seen what position he was in. For what do I find? The Minister of Public Works (Mr. Cardin), whose function is to look after buildings and to erect buildings, is not an architect, an engineer or a builder; he is merely a lawyer. The Postmaster General (Mr. Elliott, Middlesex), is also a lawyer. I wonder what lawyer knows about the work of a post office. Another lawyer, the Minister of National Defence (Mr. Mackenzie), is in charge of the defence of this country. According to the same maxim of course he should not be occuying that position; we should have some one who really knows something about military affairs. Then take the Minister of National Health (Mr. Power); I wonder what lawyer knows about health. In the past it has been customary for successive governments to appoint a doctor to the ministry of health, but now we have a lawyer. This all makes me wonder how the Minister of Railways can manage to sit in with all these lawyers and still believe that they are capable of fulfilling functions for which they are not trained. Further, we have another lawyer, as Minister of National Revenue (Mr. Ilsley), in charge of a department of the government which deals with customs and matters of that kind.

Mr. DUNNING: Are not lawyers good collectors?

Mr. HEAPS: Sometimes. Then the Minister of Fisheries (Mr. Michaud); what does a lawyer know about fishing? Somebody says that he knows how to look for suckers. May I say in conclusion that the Minister of Agriculture (Mr. Gardiner) is also a lawyer.

Some hon. MEMBERS: Order.

Mr. POWER: Take that back.

Mr. HEAPS: I withdraw it. But I notice that the one farmer in the cabinet is the Minister of Mines.

Mr. DUNNING: The Minister of Agriculture is a farmer.

Mr. HEAPS: Is he not a lawyer too?

Mr. DUNNING: No.

Mr. HEAPS: So much to his credit. I was merely suggesting that before the Minister of Railways criticized the board of trustees because it contains a couple of lawyers, he might look round in his own cabinet and see how well lawyers are represented in the present government.

It has been claimed that this problem is probably the greatest that the present parliament has to face. My personal feeling is that the railways are suffering from the same economic depression as is the whole of the rest of the dominion. I do not think there can be a prosperous railway structure while the country as a whole is in a depressed condition. When this government has solved the economic problems of the time; when it has brought about a condition of prosperity in the country, we shall probably not hear so much about railway deficits as we are hearing at the present time. I do not believe that any economies we may effect can entirely solve the railway problem. The minister, speaking this afternoon, appeared to chide the existing board of trustees because in the eighteen months or two years that they have had charge of the railway transportation systems of this country they have not brought about sufficient economies. He and those who succeeded him this afternoon were unable to tell this house how savings were to be effected excepting in one direction, namely through a process of amalgamation or co-operation or pooling of the services of the two main transportation systems. That would involve laying off vast numbers of men who are to-day employed by the railways. I contend that the government will not solve this or any other of our national problems by aggravating the unemployment situation. If it is the avowed intention of the government to force upon a new board of directors a method

by which there will be greater cooperation between the two railways, the first thing the government should do is to protect the men who will be affected by such a process. It was claimed, I think by an hon. member who spoke a few moments ago, that there would be no further unemployment of railwaymen if we had a greater measure of amalgamation of the two railway systems. He said that the normal mortality among railway employees and the pensioning of older employees would be sufficient to take care of the situation. I do not accept that as being a correct analysis. It might hold good if there were no births in this country, but as the older generation passes away there is always a younger generation looking for employment, and if employment in the railway shops is reduced this will prevent the younger people from being absorbed into what are, after all, useful occupations.

The minister also stated that the trades unions of Canada were strongly opposed to the act of 1933. That is perfectly true. Those who represent the railway trades of this dominion object to the continuous tampering with the management of the Canadian National railway system. It is less than two years since we put in the present board of trustees, and now, for no apparent reason, a new board is to be appointed in their place. How in the name of common sense can we expect anything in the way of confidence on the part of the railway men or any one else in the management of the railways if we are going to have these continual changes, without any apparent reason? It has been suggested by the leader of the opposition that if the board of three trustees had retired there might have been no necessity for the introduction of a bill of this kind. I cannot speak as to that, of course, but I do think that if it is the intention of the government to appoint a new board, consisting of seven men, it should be selected in such a manner that there shall be something in the way of permanency for the men who are to be given that new and very responsible position. I suggest to the minister and to the government that, if it be at all possible, the leaders of the various parties in this house should get together and see whether they could not agree among themselves on seven names to be submitted to parliament as the board to take charge of the Canadian National railway system.

It was suggested that the railway employees were opposed to the changes made under the act of 1933. Well, I can speak for some of the railway organizations and I want to say that they are just as much opposed to the changes being made by the government now. I want to say further that if the government had been as frank in expressing its intentions last October as it is at the present time a good many votes that were cast in favour of the government probably would have been cast against it, because I have personal knowledge of large numbers of men who voted for the Liberal party because they believed that by doing so they were safeguarding to the utmost the entity and integrity of the Canadian National railway system, just as in 1930 vast numbers of employees of the Canadian National system voted for the slogan, "Competition Ever, Amalgamation Never." We are asked to keep this question out of politics. Well, some of us are very anxious indeed to keep the matter out of politics in order to give the Canadian National system a fair opportunity to make good and to give the people of this country the service they have a right to expect from a nationally owned public utility.

In addressing the house this afternoon the minister also spoke of the human element. In 1933, we in this corner moved amendments asking that the employees on the two railways who might suffer as a result of closer cooperation between them should be given that measure of protection which they have a right to expect. If we bring in a similar amendment this year I wonder whether the government will be prepared to afford that protection. In 1933, when we made that proposal, we were glad to receive a large measure of support from members of the Liberal party. I hope we will receive the same measure of support when we propose a similar amendment in connection with this bill.

So far this question of the deficits of the Canadian National seems to have baffled the best brains we have been able to gather together in the Dominion of Canada. Let me refer for a moment to the commission that was appointed in 1932, the Duff commission. On that commission there were gathered together some of the best railway experts it was possible to secure; yet when the report was summarized and analyzed and presented to the house we found that they really had no solution for the problem of transportation in this country, except the solution of economies and cooperation between the two railways. I do not believe that is sufficient to give this dominion what might be called a sound financial structure for the national railway system. It may be said that I am indulging in negative criticism, and I may be asked what we are going to do about the

matter. The fact is that the railway problem is not one of our own making; it is something that was created by people of generations gone by, but it is something with which we must presently deal as best we know how. On this railway commission, as was pointed out this afternoon, we had the chief justice of the Supreme Court of Canada; one of the most experienced railway men of the United States; one of the most experienced railway men of Great Britain, and, among others, Sir Joseph Flavelle, who is one of the best known business men in this country. As a matter of fact we had on this commission some of the most hard-boiled business men in Canada, but after they investigated this problem from all angles they were unable to find a real solution. They brought in a report to which I believe the existing board of trustees has been doing its best to give effect, but without avail. It appears to me that, even though economies may be effected here and there, there is at the present time no solution, with the possible exception of the one to which the government is pledged, which is to increase the trade of this country both internally and externally in order that greater revenues may accrue to one or both of our railways.

There is one point which I should like to drive home with all force possible, and that is the question of the men who are employed on these railways. I will protest as forcibly as I can if efforts are made to amalgamate the services of the two railways unless at the same time provision is made for the men who will be affected. Large numbers of men were affected by the cooperation between the two railways in the Montreal, Toronto and Ottawa services; those men were laid off with very little consideration, though in many cases they had seniority amounting to ten, fifteen or twenty years. I remember when the matter was raised on the floor of this house at that time; the then Minister of Railways said that if it could be shown that any injustice was being done in the way men were being laid off, with no provision being made for them, the government would consider what action should be taken, and the government would be sympathetic to a proposal which would provide compensation to the men thus laid off.

I should like to point out to the minister that men who are laid off as a result of an act of this kind are in a completely different position from those who might be laid off as a result of slackness of work or for similar reasons. Men employed by the railways will lose their jobs because of an act of parliament; they will lose their livelihood because of something done by parliament, and in that case parliament has a responsibility to the men so affected. Because of that fact we of this group in the last parliament moved certain resolutions which at that time were defeated, but which we hope will receive a more sympathetic reception when the proper time comes.

There is very little more that I wish to say in connection with this bill, though I may have something to add when we are in committee. I hope, however, that when the bill is in the committee stage we shall have a more detailed statement from the minister as to his intentions and those of the government in regard to this matter. He has not told us very much thus far. He said, of course, that the government desired to change the provision concerning the board of trustees because it had not gone far enough in the direction of economies on the Canadian National system and in bringing about a greater measure of cooperation between the two railways. When we are in committee I want that part of the minister's statement amplified to a much greater extent, and I trust that we shall receive a great deal more information than the minister vouchsafed to the house this afternoon.

Mr. T. L. CHURCH (Broadview): Mr. Speaker, if there is one thing for which you can give the late government credit it is the way in which they handled this railway problem. On the second reading of this bill, no doubt, under the rule of anticipation members will be forbidden to deal with the whole railway problem as it should be dealt with in this house; we can deal only with the amendments proposed to the act of 1933, and I have particular reference to the establishment of a tribunal as between the two railways by the 1933 act as it has been amended by the government of the day.

Notwithstanding the pronouncement made by the government and members of the cabinet in the last election and the one hundred and seventy members elected, the action of the government on the railway problem as found in this bill is very unsatisfactory. The government so far refuse to state their policy. As I see it they are going back to the "big I" days of 1921 to 1930, when this tremendously extravagant expenditure such as was never before known in the British empire went on: Hotels, golf courses, useless duplications, needless branch lines and waste. This bill is a going back to the old days of the lack of control of parliament over these expenditures. On April 6 last, without any notice from the government, without any mention of the matter even in votes and

proceedings, with sixty per cent of the members not present in this chamber, the most important motion of the session was passed, handing, over the head of parliament, to a select committee known as the committee on railways and shipping owned and operated by the government the whole budget of the Canadian National Railways. This railway never was under public ownership. Two railway systems are dealt with in this bill, the Canadian National and the Canadian Pacific; one is supposed to be publicly owned and the other privately owned, although the privately owned one received grants, bonuses, subventions and subsidies by cash and land grants and guarantees. The Canadian National was never under public ownership; it was a number of privately owned roads that were not able to succeed and were amalgamated under the Canadian National system. The mistakes of that system were almost entirely due to private ownership. Throughout its whole history the Canadian National was never under public ownership. After it was taken over by the government the first board under Mr. Hanna made a real effort to take the road out of politics and succeeded. Since then two commissions have been appointed and both commissions have recommended something in the way of a tribunal to hold the balance between the two railways.

In 1917 in the days of the Union government parliament had the Drayton-Acworth report. When the Liberal party took office in 1921 they entirely ignored that report. In the first place the railway commission were supposed to be the arbitrators, but they had no control at all. Then the government of that day decided to appoint a sort of star chamber committee known as the committee on railways and shipping, and that committee was substituted for the commission. The minister would rise in the house and nominate the committee and that would be the last heard of the railway problem for the session; parliament handed the problem over to this star chamber committee, whitewash committee I call it, and I attended it many times. I was summoned before the committee once to give some evidence about a national coal policy, and the head of the railway told me that I was proposing an unscientific system of freight rates or lunch counter system of freight rates for coal, and the railway officers opposed that policy for three or four years and then swallowed it. Both these reports recommended some kind of tribunal to co-ordinate the railways. The management of the Canadian National Railways in 1922 moved the head office from Toronto to Montreal, starting off badly, because the old Grand Trunk which formed the best part of the system was a good, solvent railway, and made its money in Ontario. It went into bankruptcy owing to the "big I's" of the Liberal party. I assess the blame for the railway situation for fifty years about eighty per cent to the Liberals with their Grand Trunk Pacific and Canadian Northern, and twenty per cent to the Conservatives.

The government and the Minister of Railways from 1922 to 1930 were never in favour of public ownership. They launched out on a policy of extravagance in the building of branch lines and useless duplications, spending over the head of parliament, more than $500,000,000; with interest added it would go away over that amount, parliament having no control whatever of this expenditure. In that connection they violated almost every line of the Drayton-Acworth report which recommended that there should be no building of branch lines or extensions, and no renewal of charter should be granted by parliament until a report had been made to the Minister of Railways by the railway committee and the board of railway commissioners as to whether these branch lines were in the public interest. That policy was ignored and the result was that a great many expenditures were made which should not have been. Matters got into such a bad state that in 1931 the government appointed a royal commission of which the present chief justice of the Supreme Court of Canada was the chairman. That Duff commission made a very fine report. I do not know where this country would have been to-day if the late government had not passed in 1933 the Canadian National-Canadian Pacific Act to implement the Duff report. That proposed some measures of coordination. The commission recommended that the identity of the two systems should be maintained; that the management of the Canadian National should be emanicipated from political interference and community pressure. But we had this body of fifteen men called directors before; it was a little larger in number; one would almost think they were selected as a campaign committee of the Liberal party, a board of directors who did not direct, who knew nothing at all about railways. They were brought here and would meet round the table of this celebrated committee on railways and shipping, where everyone was smoking. They passed the first item and the last and parliament knew nothing about the matter; it was whitewashed in this committee and we could not ask a question about the railways.

As to the second recommendation, that the management should be emancipated from political interference and community pressure, under this bill the government is going right back to where things were seven years ago. The third recommendation was that machinery should be provided for co-operation between the two systems for the elimination of duplicate services and facilities and the avoidance of extravagance. One of the best equipped and most honest men appointed on any commission in Canada was F. K. Morrow of Toronto, a brilliant and most popular and gifted young business man who served without salary, and spent almost his entire time in an attempt to carry out that recommendation with great success for the entire system and the taxpayer. The fourth recommendation was the attainment of a scale of economies which would bring the burdens of the national system within reasonable dimensions, and effectively check extravagant and costly operation; and, lastly, there was recommended reasonable protection for the privately owned undertaking against arbitrary action on the part of the publicly owned undertaking, a very wise recommendation. They recommended strongly against amalgamation, and the jurisdiction of this proposed arbitral tribunal and what its powers should be, were set forth very fully, but by the proposed amendments in this Bill No. 21, the powers are going to be vetoed. The old board from 1931 to 1936, tried to run this railway on a commercial basis, but now this board of seven is to be set up to undo the good work. The government should announce who the board are before we pass the bill. We had one "sevenfold amen" commission announced the other day, on unemployment; now we have a second commission, and probably men associated with the big St. James Street interests will make up this tribunal.

I have very little faith in the amendments which this bill proposes. The Duff report goes into the question of the jurisdiction of the arbitral tribunal. It recommended that it should have jurisdiction in relation to the following matters:

(a) Joint use of terminals.
(b) Running rights and joint use of tracks where there are actual or functional duplications, or where such may be avoided.
(c) Control and prohibition in respect of the construction of new lines and provision of facilities and additional services where no essential need of the public is involved.
(d) The joint use of facilities where this would promote economy or permit the elimination of duplicating or unremunerative services or facilities.
(e) Abandonment of lines, services or facilities.
(f) Pooling of any part or parts of freight traffic or of passenger traffic.
(g) Things necessarily incidental to the above enumerated matters.

There is a wise provision for a tribunal that is to sit and decide on questions of coordination between two railway systems, one privately owned and the other publicly owned. The three gentlemen who composed the board of trustees for four or five years did their utmost and effected a great many economies along the lines of the Duff recommendations.

I fail to see how this new board can act efficiently if we are to go back to the old order and have politics enter into the administration of the railway. On page 67, in paragraph 226, the Duff commission makes this recommendation:

> We feel compelled, as a matter of public duty, to strike a serious note of warning to the people of Canada. Unless the country is prepared to adopt the plan we have proposed, or some other equally effective measures, to secure the efficient and economical working of both railway systems and thereby not only reduce the burden on the federal treasury but improve the financial position of the privately-owned railway, then the only courses that would be left would be either to effect savings in national expenditure in other directions, or to add still further to the burdens under which the industries of the country are suffering by the imposition of yet further taxation. Failing the adoption of one or other of these courses, and there are obvious limits to their application, the very stability of the nation's finances and the financial credit of the Canadian Pacific Railway will be threatened, with serious consequences to the people of Canada and to those who have invested their savings in that railway.

But by this bill we ignore the recommendations of the Drayton-Acworth commission of 1917, and the Duff commission of 1931-32, and are going back to the administration we had in the old days, because in my humble opinion you will not be able to keep politics out of the railway. If we are going to elect directors by sections and from classes, the sectional aspect is bound to be looked at instead of the commercial aspect, and you are going to have politics back in the administration of the railway. I was confronted with the same kind of situation when Toronto took over the city's street railway in 1921. We had clamours and agitations from all classes of citizens, from labour and capital, wanting to be represented on the board that was to administer Toronto's transportation system. But we selected a board of three men; by statute their powers were limited, and they were able to administer the city's street railway from the commercial aspect and to effect economies. That is the kind of board we

should have to administer our publicly owned road and the privately owned road in this country. If politics had been kept out of the administration of the railway, hundreds of millions of dollars would not have been wasted. The time has come when the Canadian National Railway must be given a chance. It has not had a chance so far. The offices should have remained in the city of Toronto, in Ontario, a public ownership province, instead of being moved to Montreal, because the effect of that was that when the Canadian Pacific Railway wanted to do something the Canadian National from the years 1922 to 1930 used to say: Me too. The failure of the national railway to act in its own interest and in the interest of the public is one of the reasons for the present railway situation.

As I say, Mr. Speaker, in some respects Bill No. 21 ignores the Duff report and the Drayton-Acworth report and puts the administration of the railway back where it was for ten years, when politics entered in. Questions that might well have been taken up by the board were such matters as suburban services, commutation tickets, cheaper fares for week-ends and holidays, the problem of the inroads made by bus and motor car competition, but the political directors of the national railway simply stood still and did nothing to meet this competition.

I would like to know what is going to happen to parliamentary institutions in this country when almost every day the government is appointing some commission or another, taking away the powers, prerogatives and privileges of members of this House of Commons and turning them over to a commission. Parliament should be safeguarded against the star chamber secret methods of the committee on railways and shipping. The people have a right to know what is going on in the publicly owned road; they have a right to know how it is being run. Are we again going to allow the management to run up bills of four or five hundred million dollars, as the management did from 1925 to 1930, before parliament can find out anything about the expenditure, and then have us hold a post mortem on it? We have full publicity in some things. The newspapers give great publicity to murder trials, sport and many other things, but most of them at the present time seem to have forgotten that parliament is even sitting. Some of the largest newspapers do not give half a column daily to the proceedings of parliament. I do not know whether we deserve more space or not, but I find page after page of the newspapers devoted to murder trials, sport, and many other things, while, with the exception of four or five newspapers, hardly a line is devoted to a debate on the deficit of forty or fifty million dollars on the nationally owned road. Few newspapers pay any attention to the sittings here.

I have been very much disappointed with the committee on railways and shipping. Attend one of their meetings and you will see the directors and officials sitting round a table. The committee takes up one item, asks a few questions and then goes on to the next. They might just as well not meet at all. It is nothing but a whitewash. I have attended meetings of the committee for five or six years, and I have never seen the committee conduct its affairs. They let the officials and directors of the road run the whole committee over the head of parliament. We have no control over them whatever. I am absolutely opposed to secret discussions and that sort of committee meetings. It is not Liberalism as I see it. They pass the buck to a committee without any notice of motion. Nobody knows what the policy of the government is on this particular problem or if they favour a merger or not, and the final result will be that the committee on railways and shipping will bring in a report and we shall not be able to ask any questions. What right have the public and members of parliament? Why should the members be ignored in this way? The whole problem will be sent to a committee of this house, and the last state of the Canadian National Railways will be worse than the first.

The heads of the Canadian National Railways in 1924 and 1926 told the railway commission that they had nothing to do with the administration of the railway. They ignored the railway commission and started on a spending bee, the like of which has never been seen in any other country, building golf courses, hotels and branch lines all over Canada under the direction of the "big I," and building hotels extra-territorially. They sold for $50,000 some ships which had cost one or two million dollars and which could have been converted for use in carrying coal from the maritime provinces to the head of the lakes. With a slight change in construction they could have been utilized to carry coal from the head of the lakes to central Canada and from the maritimes to the head of the lakes. Last year 2,800,000 tons of maritime coal were carried to the head of the lakes. Why did they sell these particular boats for such a trifle? The government may have 170 members but the rank and file seem to have no chance at all in this house. Just the other day three private members asserted the rights and privileges

of a member of parliament. If these rights and privileges of private members had been asserted twenty or thirty years ago we would not have had the Grand Trunk Pacific or a third transcontinental known as the Canadian Northern foisted upon the people of this country. This would not have happened if the private members had asserted their rights and privileges and fulfilled the functions which they were sent here to perform. We have got to the same state of affairs where last week three government members rose to criticize a bill to appoint another commission. As I say, if we had had a little more independence in the house, if private members had asserted themselves as being opposed to this secrecy in connection with railway administration, we would not have the spectacle which we have to-day.

There is one thing for which the previous government and the leader of the Conservative party deserve credit. When the present leader of the opposition (Mr. Bennett) came into office in 1930 he decided to have a survey made of this problem. For years he had sat in parliament and had seen hundreds of millions of dollars being voted for these railways by the government of the day, from 1921 to 1930, some of which money was being spent without the authority of parliament and without parliament being aware of the expenditure. The result was the Duff report which was presented to parliament in 1932 and which was implemented in 1933 by chapter 33 of the statutes of that year.

The old board of directors in 1926 consisted of fifteen members and the government is now suggesting a board of seven. If the board consisted of only three members it would be closer to the mark. This board proceeded immediately to run the railway in a manner similar to the way in which some of the railways in the United States were being run. A group of the Van Sweringen railways in the United States consisting of the Nickel Plate, the Big Four and the Chesapeake and Ohio recently went into bankruptcy and were bought back for a sum less than $3,000,000. When the head of this Canadian National Railways took office he carried out policies similar to those which had been carried out by these roads by the Van Sweringen brothers. Sir Henry wanted to place 1,000,000 more grain growers into the Peace river district. Parliament knew very little about this, but it objected. Where would we be in these days of depression and reduced traffic on the railways if this had been carried out?

The more I see of this thing, the more I realize that we have no opportunity to deal properly with it. Only the other day this whole problem was shunted off to a select committee without one word being said or without any notice being given in the votes and proceedings. I have very little faith in the proposed board of directors of seven to be appointed. They are going to have this railroad back to where it was ten years ago—in politics. This board of seven will be merely figureheads because they will know no more about railroads than they do about shipping. We must not blame public ownership for what will happen, as public ownership will have nothing to do with it. That type of ownership has shown what it can do in the municipalities and the provinces and it could show it here if given a chance. But public ownership will have no chance in Ottawa as long as we conduct our affairs the way we do.

Mr. F. C. BETTS (London): Mr. Speaker, I should like to add a few brief remarks to this debate. First of all, I should like to direct the attention of the minister and the house to what I consider to be a somewhat important omission in the present bill. It will be recalled that in our Canadian National-Canadian Pacific Act, 1933, there was a clause inserted to provide for the protection of the employees. Despite the fact that the constitution of the board of management was being changed through the substitution of three trustees for seventeen directors, this was to have no effect upon those who were employed by the road. I shall read the section to make it abundantly clear. Subsection 5 of section 9 of the act of 1933 reads:

> Subject to the terms of this act, and until otherwise provided or directed under its authority, every operation and service of national railways shall continue and be continued by all persons now concerned therewith as if this act had not been passed.

The main function of the present bill is in a sense to bring back matters to the status quo, that is, to substitute a board of seven directors for the three trustees. I cannot help feeling that if the subsection I have just read was proper in the act of 1933, it is eminently proper in the bill we are now considering and I cannot understand why it should have been omitted. If it has been omitted through inadvertence, I suggest respectfully to the minister its utility. On the other hand, if it has been omitted in order to remove what would be a restriction upon wholesale political dismissals, then in the interests of the employees of the road I want to deplore this omission and put myself on record to that effect.

I cannot help being struck by the action of the government in increasing the board of management from three to seven. If there

ever was a party that manifested the need of economy in its election campaign, it was the Liberal party. Frankly, I do not see any justification for increasing the board of management to two and a half times its former size. I do not know where the minister of Railways and Canals (Mr. Howe) got the idea of doing this, but I am sure that there is one of his colleagues whom he did not consult. I refer to the Minister of Trade and Commerce (Mr. Euler). When reading over the debates leading up to the passage of the act of 1933, I was very much struck with the manner in which the Minister of Trade and Commerce led off for the Liberal party. At that time he used these noble words:

> I support the bill for the second reason that the establishment of a small body of trustees of three or four, as the case may be, will promote efficiency in the conduct of the Canadian National Railways.

Later on, referring to the parliamentary committee on national railways and shipping, of which he was a member, he said:

> —we are in favour of a reduction in the number of those who are to form the board of management of the Canadian National Railways.

I would hate to think that the Minister of Trade and Commerce was in favour of a small board when we were in power and doing the appointing, but is in favour of a large board when he and his friends are in that position. I hate to think that, but I do not know what else to think. I have to try to get what comfort I can get out of the statement that the effect of this legislation will be to bring the operations of the railway more closely under the administration of the government of the day. I take it that is one of the functions of the bill, and if it achieves that function I would ask the Minister of Railways to pay some attention to the conditions under which some of the men are now forced to work. I will give a concrete example to show what I mean. In the car shops in my riding—and I fancy this applies to other ridings as well—before cars are repainted they are subjected to a sand blasting process. The old paint is removed by means of sand forced under pressure through a hose. That raises a most dense and suffocating cloud of very fine dust which in the opinion of medical authority tends to bring about the disease known as silicosis. I visited the shops in London to see the process in operation and made careful inquiries, and I must say that it seems to me these men are working under conditions to which they should not be compelled to submit. I found that they were equipped with masks, and I was told that the masks were the best that science provides at the present time. The main criticism, to my way of thinking, is that although this operation is performed in an enclosed space and not on the outside of a building where all dust is blown away, is done in an enclosed shed, there seems to be no proper draft system. This is something which is of great importance and something which I would direct to the attention of the minister. It is a matter that should be carefully considered before any more refinements and luxuries are introduced into passenger trains. For example, I read in the Mail and Empire of April 13 last this news item:

> Air-Conditioning Making Progress
> Canadian National Railways Announce Plans to Extend Service
> Dust Is Eliminated
>
> Montreal, April 12.—Good progress is being made with the air-conditioning of equipment for use on the lines of the Canadian National Railways, according to C. W. Johnston, general passenger traffic manager. A number of air-conditioned pullman sleeping cars are now in service between Montreal, Toronto, Windsor, Detroit and Chicago, Mr. Johnston said to-day, and it is expected that the International Limited, and other Canadian National trains on this route will be air-conditioned by June 1st, before the hot summer weather starts. Air-conditioned cars are also in use on several of the other international trains of the company.

I doubt whether there is any class of men —at any rate there are very few classes— who make more use of the sleeping cars on the Canadian National Railways than do the members of this house, and I doubt whether there is any class that likes to sleep in comfort more than do we. But I venture to say that if hon. members could see the conditions which prevail where that sand blasting process is in operation they would say with emphasis that no more money should be spent on luxuries such as air conditioning on pullman cars until that situation is corrected.

I trust—and I should like to put myself on record in this regard—that although the initial act of the government has been to multiply by two and a half the expenses of the board of management of this railway, a real policy of economy will be instituted. It is not pleasant work economizing; it is not popular work, but it is very necessary work. I heard to my amazement on Friday last a statement made in this chamber by a supporter of the government to the effect that the late Sir Henry Thornton was one of the greatest national assets that Canada ever had.

An hon. MEMBER: Hear, hear.

Mr. BETTS: I hear that statement applauded. I do not wish to make any personal attack on a man who is gone, but I will say this—and I shall continue to say it whenever I rise to my feet to discuss railway matters—that if the railways are so deep in the red as to raise a doubt in the mind of every thinking man and woman as to whether they will ever get out; if the taxpayers are groaning under a burden which is doubling them up as a result of extravagant railway expenditures, it is because for the eight years during which the present Prime Minister (Mr. Mackenzie King) and many of those who sit with him on the treasury benches were in office, they spent money on the railways, during the regime of the late Sir Henry Thornton, on a scale which has never been equalled in any civilized country in the world.

Mr. CHURCH: He was the greatest asset the Canadian Pacific ever had.

Mr. BETTS: I express the hope, therefore, that we shall see a real regime of economy now, and that when the board of directors is being appointed there will not be imported into it any free-spending American friends of the government.

Mr. W. A. WALSH (Mount Royal): Mr. Speaker, it was not my intention to precipitate myself into this debate at this late hour. I had assumed there might be, from the other side, a defence of the bill introduced by the Minister of Railways (Mr. Howe), apart from the belated attempt made earlier in the evening with such disastrous effects. The railway problem, as has already been pointed out, is of national importance. The solution that has been suggested by the Minister of Railways in the measure which he introduced this afternoon hardly meets a situation of such gigantic importance. A few years ago there was appointed at the behest of the government then in power a select commission to study the railway problem of Canada and to bring in a series of recommendations on which the government of the day could formulate a policy and proceed to action. I think every member of this house will agree with me when I suggest that the members of that commission were able men who understood their duty and discharged it as commissioners on that occasion. They brought before the government, and ultimately before this house, a report which is worthy of every consideration by every hon. member, and one which should be given very careful study by any hon. gentleman who is at all interested in a solution of this national problem. I do not think there is a member of this house who does not recognize the magnitude of the problem we are facing. I have before me many articles from which I could quote figures to show the tremendous debt that is being piled up by the Canadian National Railways. The measure that was introduced this afternoon contains in my estimation nothing that will in any way stem the tide towards a greater deficit.

The recommendations brought forward by the present government do not in any way fit in with the recommendations of the commission that was appointed and brought in its report, 1931-32. I cannot see why any government should appoint a commission of able men who go throughout the length and breadth of this country accumulating information, hearing witnesses, getting expert testimony, and filing a report, and then, having received this report, should put it into the archives merely for reference of future generations of Canadian citizens who may be interested in developing material for debate on some railway problem that may exist only in their own minds. The compilation of this report must have cost the country a tremendous sum of money. It is printed, and no doubt has been in the hands of members since 1932. Yet we find that the present government, having such a report before them, having facts and figures compiled since that report was issued, despite all this wealth of information and experience, come down today with a measure which merely reestablished conditions as they were prior to the inauguration of this special commission to inquire into this national problem.

The government that has just gone out of office did their duty as they saw it. They acted on the report of this commission. I am not going to say that those who were appointed and have acted as the three trustees for the Canadian National Railways during the past four years are the best men who could have been secured for their particular positions. No doubt they are men who have faults. But there is no doubt in my mind that the government of the day thoroughly canvassed the situation and did their utmost to secure the best men available at that time.

The only criticism I have to offer of the government of the day in appointing such a trusteeship is that, in my estimation, it was appointed according to a wrong practice. To appoint trustees for a period of years does not commend itself to me, because when there is a change of government, or if those who are appointed are not acceptable even to the government that appoints them, there they

are, saddled with positions and salaries for a stated length of time, and any government which tries to make those men give up those salaries and appointments has its work cut out; the task is almost if not altogether an impossibility. If any mistake was made by the past government in carrying out the recommendations of the report of the commission, it was that of appointing the trustees for a definite period of time instead of during pleasure.

I read a few days ago a speech delivered in this house by the right hon. the Prime Minister (Mr. Mackenzie King) in which he commented rather vigorously upon such appointments, characterizing them as a restoration of the feudal system as it existed in Europe in days gone by. I quite agree with him in that respect, and I was going to criticize a similar proposal of the minister in another bill he brought in; in fact I handed him an amendment that I was prepared to move, if I had been in the house, in connection with the harbours board, which is to be appointed for a period of years. I do not believe in that kind of appointment, and I believe that in that respect the government of former years made a mistake in connection with the appointment of these trustees. I believe that if they had been appointed during pleasure we should not now have before us a bill asking for a directorate of seven members. I assume that the government would have taken advantage of the existing legislation and changed the personnel slightly in order to harmonize it with their own line of policy, rather than maintain the present personnel intact. Apparently they are not giving satisfaction either to the government or to the people of this country. In making that statement I do not wish to be misconstrued. I am not criticizing any one individual. But possibly at the present time there are certain members on the board of trustees who can be replaced to advantage, who have not worked in the spirit of the recommendations of this report, a spirit that suggests cooperation between these two great national railways, the Canadian Pacific and the Canadian National. If such a person is on the board and is not giving effect to that suggestion of cooperation, he has, I think, been negligent in his duty, and for that reason that person should be removed from that important office. I am not passing judgment; I merely make the suggestion as a possible reason why the government must introduce legislation such as we have under discussion.

It seems to me that the minister must agree that the measure he has introduced is a retrograde step. I do not believe that to appoint a directorate of seven members will assist in any way in solving the railway problem of Canada. I have not heard him say or any member from the government side suggest exactly in what way this new directorate is going to bring order out of chaos, to stop the piling up of deficits, to do anything that will affect to the advantage of the Canadian people the conditions which exist at the present time in connection with our railways. I wish to read from the report before me the items which suggest the principal contributory causes of Canada's railway situation. Those causes are summed up in seven statements. I desire to read them and to ask the Minister of Railways in what respect his solution meets those suggestions. Is any one of the conditions outlined under those items likely to be eliminated as a result of the measure introduced by the minister? I leave it to the judgment of the house; personally I do not think so.

The principal contributory causes are:

1. The overdevelopment of railways beyond the immediate needs of the country.

Is the appointment of seven directors to the Canadian National railway system going to eliminate that fault?

2. Aggressive and uncontrolled competition between two nation-wide railway enterprises, and competition the more disastrous in that one of the competitors was publicly-owned and supported by the full resources of the dominion.

Is the minister's measure going to overcome in any degree that unfortunate condition?

3. The reactions of the world trade repression which began in 1929 and has progressively increased in its severity with each succeeding year.

The seven members of the board of directors will not improve that condition

4. Competition from other forms of transport, notably road transport.

In order to bring the report down to date we might also include air transport.

5. Inelasticity of freight rates and railway practice generally which prevents prompt action in the meeting of falling revenues and dealing effectively with competition from other forms of transport.

6. Contractual arrangements with labour organizations which set up a rigid wage scale and inflexible labour practices generally.

7. The special disabilities of the Canadian National railways due to:—

(a) assumption, through government action, of liabilities of insolvent railway systems for reasons of national credit.

(b) large capital expenditures for improvement of the physical condition of the absorbed systems.

(c) political and community pressure on the management arising out of direct government control.

None of those seven contributory causes is going to be satisfactorily handled by the measure which has been introduced; in fact I fear that at least one of the causes suggested here is going to be severely aggravated by appointments such as these. I fear that the Minister of Railways (Mr. Howe) has erred. He is bringing the Canadian National system back to the realm of political control. I know he has not that in mind; I think possibly that is the thought furthest from his mind. I am sure it is his hope and desire to administer the railways as he would administer a business of his own. Because of his lack of political experience, with which lack I can associate myself, no doubt that is his outlook, as it would be mine under similar conditions. But I want to assure the minister of this fact, that he is surrounded by a large number of men who are looking to the Canadian National Railways as a source of political influence. Through the Minister of Railways, who is to become the minister of transportation, and these seven directors who are to be appointed, these men hope to gain that political ascendancy that will help re-elect them from election to election and maintain the present government in power. I know the minister has not that in mind; I know he feels that I am exaggerating a possible condition, but I want to assure him that after having studied the measure he has introduced I can see on the horizon no other possibility than political control of our national railways, and the result is going to be worse chaos than we have at the present time. If the minister hopes and expects that the injection of a bit of business experience into the management of the Canadian National system will carry him through to a successful administration of these lines, I am afraid that he is labouring under a misapprehension; that within a reasonable length of time he will find that the criticism from this side of the house was well justified, and that he should have acted more in conformity with the recommendations contained in the Duff report than is the case with this bill.

This report urges cooperation. That cooperation has not so far been forthcoming. It also urges the elimination of competition, but competition has not been eliminated. It is a disgrace to this country to have two railway systems piling up deficits, unable to meet their current expenses and at the same time carrying on competition to the death, at the ultimate expense of the Canadian people. Many solutions have been suggested for our railway problem, but there is one point I want to make absolutely clear; other hon. members have emphasized this feeling and I want to stress it on my own behalf as well as on behalf of hon. members on this side of the house. There is absolutely no thought in my mind of the amalgamation of our two great national systems. Of course I feel, as many other hon. members do, that we have in this dominion many, many miles of railway that we actually do not need. We are overdeveloped in that respect. The twentieth century was to be Canada's, and we built for Canada's century. But Canada's century, through no fault of our own, was stunted in its growth, and as a result we find ourselves with railway facilities adequate to meet the requirements of forty to fifty million people while we have a population of only eleven million to meet the cost. It is no wonder that we are piling up deficits, and I want to say to the minister that I do not think this bill is going to help in any way to solve this great problem now on our hands.

The government have suggested increased export and import trade as one means of overcoming this problem. That will help to a certain extent, but there is not enough import and export trade carried on by eleven million people to support the mileage that we have built and are operating at the present time. The only solution is to break down this competition by means of which the railways are gradually exterminating each other. Some of the great railway men of Canada have suggested solutions. I have emphasized the fact that I am unalterably opposed to amalgamation, and I think I speak for every member of the official opposition. I do not think there is anything on record to suggest that the Conservative party at any time stood for the amalgamation of these two great systems.

May I say, Mr. Speaker, that knowing the Minister of Railways as I do, knowing his past experience in the business world and his immense capabilities as an executive, I expected that he would introduce into this assembly not a measure such as we have before us but a measure that would give leadership in the solution of this railway problem. I expected him to introduce a measure that would be commented upon for its boldness, but instead we have merely a return to the situation as it existed previously, a situation that was condemned not only by the Duff commission but by others interested in the solution of this great problem. I think what I hoped for was expected also by the people of this country, knowing the railway problem as they do. It has been suggested by some that the people of this country do not understand the railway problem, but that is not so; they do understand it. They are beginning to realize the seriousness of

that problem, and I believe the Canadian people are ready for bold leadership looking to its solution. We are not going to return to prosperity unless we find a solution to this problem. We cannot continue to pile up debts at this rate, $85,000,000 in a single year. We cannot continue to have these millions of debt mounting up and survive. The government should give the leadership. The people of Canada did not expect such a measure to be introduced by this government. The Liberal party got the confidence of the people at the election last October; they were given the powers of government, the power to regulate and to legislate, but they have not used those powers to advantage. The Canadian people are disappointed; they were looking for courageous leadership and instead they are handed a dry bone, one sucked dry many years ago.

I expected the Minister of Railways to suggest to the house and to the country some great measure that would lead to the amelioration of the distress which we suffer in connection with our railways. I expected him to analyze carefully the recommendations made by our great railway men. I expected him to make some reference at least to the solution suggested by one of his colleagues, the Minister of Trade and Commerce (Mr. Euler), but I heard no reference to that solution. To my mind the Minister of Trade and Commerce offered a reasonable solution, one that would at least lead somewhere, not back to where we were in 1930. I think it was the Minister of Trade and Commerce who suggested the possibility of unification of these two great railways. Do not confuse unification with amalgamation; no one in his proper senses is suggesting amalgamation, but unification has its merits, and I expected that the Minister of Railways would at least discuss that phase of the subject so that the country at large and this house in particular would understand the government's position in regard to that possible solution. The people of this country are disappointed; they wanted to know what the government proposed to do and how they were going to solve this railway problem. If unification would solve it, why do the government not take the lead in that respect, particularly when they have at least one member in the cabinet who is definitely committed to such a solution?

Mr. YOUNG: Would the hon. member be good enough to explain the difference between unification and amalgamation?

Mr. WALSH: Yes, it is very simple. The hon. member could have asked that question of the Minister of Labour (Mr. Rogers) who was professor of economics at Queens; he could have given a more satisfactory answer than I. Amalgamation means the disappearance of both into a new unit; unification means the continuance of both units under one management until such time as this country grows and develops so that it can support the two separate railways. No great reasoning power is required to see through a plan of that kind. Of course there are difficulties in the way; I grant that. Any solution of any great problem has difficulties. I could name scores of difficulties in the way of unification of these railway systems, but I emphasize the seriousness of this railway problem; this country cannot continue to pile up deficits of $85,000,000 a year and survive. We have to find a solution, and that solution has to be found by the members of this government. They cannot allow this country to drift and drift into despair. Some people will suggest that unification of these railways would mean the possible elimination of a large number of men from their positions. If I thought for one moment that one man would lose his job on either railway through a process of unification I would be absolutely opposed to it. But I believe that a scheme can be worked out whereby under unification not one man would lose his job, whereby every man now employed with the Canadian National or the Canadian Pacific would be retained in his position. It is on that account that I advocate a careful and close study on the part of the government of that suggested solution.

I could advance many statements in support of that idea, but as I do not want to take up the time of the house in doing so, I shall resist that temptation. I think I have made my position quite clear. The Minister of Railways has introduced a measure which is a reactionary and retrograde step. He would reestablish the board of directors in place of the board of trustees; that is running contrary to the recommendations of the Duff report. He is introducing again into the administration of the national railways the possibility, yes, the probability, of political patronage, and if there is anything that will continue to make our railway deficits higher and higher it is the meddling of politicians in appointments and in the way in which the railway is run.

Before this measure finally goes through I ask the minister to see if he cannot develop something that will give this house and this country more courageous leadership than we find in the measure at present before us. I know exactly his criticism of the present

personnel of the trustee boards; I know he has objections to certain individuals on it. But this is no solution for the trouble; he is only preparing for himself two and one-third times the trouble that he is probably experiencing at the present time. This is not a solution that the people of Canada expected from this government or from the present minister; it is a proposal that is most unacceptable to anyone who has made a careful and minute study of our railway problem. It is a stupendous problem. We should divorce politics from railways entirely, look at it as a national problem, get together and find a solution. I do not see any reason why the government cannot invite the assistance of people on this side of the house to assist in solving the problem. The more I study it the more I realize its gigantic importance. Unless we can find a solution it is going to carry us down, so I hope the minister will realize the possibility that is before him at the present time to be hailed as a great liberator, not as the man who merely introduced a slight change in the management of our national railways in order to get rid of certain persons on the board of trustees. The people of Canada will be grateful to the minister if he can at least blaze a new trail that will lead us out of our present chaotic condition in connection with our railway and transportation system.

Hon. C. D. HOWE (Minister of Railways and Canals): Mr. Speaker, I want to thank hon. members in all parts of the house for the very fair discussion which this measure has received. I think everyone here is impressed by the gravity of the situation with which we are dealing. I can assure hon. members that there is nothing with which I have ever had to do that has impressed me as being a more difficult and more serious problem than the one now before us. If anyone has the thought that the measure we have now before the house is the first step towards a program of extravagance, I ask him to dismiss it from his mind because that surely is not going to be the outcome.

Hon. members have expressed surprise that in bringing down this bill I have not offered a solution of the Canadian National Railway problem. Surely that is a little too much to expect from any man who is a layman, and in addition facing this problem at first hand and for the first time. There is no royal road, as I see it, to the solution of the Canadian National Railway problem. The trustee act was founded upon confidence in cooperation. Cooperation has been tested now for over two years, and it has not produced the results which were expected from it. I am sure that everyone in this house regrets very much that more progress has not been made. But let us face the situation fairly. We have had the trustee system for the years 1934, 1935 and a small portion of 1936. In 1934 the cash requirements from the dominion government to keep the railway in operation, that is for deficits and capital expenditures—I make very little distinction between the two—was $56,000,000. In 1935, in spite of an increase of $8,000,000 of gross revenue, the requirements were $55,000,000. The budget first submitted for 1936 called for a further appropriation of $55,000,000 for this purpose. I am told that I set a precedent when I called the trustees to Ottawa and told them that as Minister of Railways I must ask them to take a more optimistic view of the year 1936. We discussed the matter at some length, and as a result the requirements were cut down slightly below $50,000,000. Viewing the situation, it seems to me that 1935 was surely a good deal better than 1934 from every aspect, traffic as well as others, and surely 1936 will be a better year than 1935. Are we prepared to accept the view that the Canadian National Railway must draw in cash from the government of Canada some $50,000,000 or $55,000,000 every year? I think not. I think we must at least attack the problem in a different way.

The trusteeship, as hon. gentlemen know, was described as a bankruptcy situation. Well, the bankruptcy situation does not seem to be a solution, and in that respect it is not much different from most bankruptcy situations. What happens in a bankruptcy situation is that a concern demonstrates that it cannot pay its way and is dissolved, or it demonstrates that it can pay its way and it is reorganized and is allowed to go back into normal business procedure. What we are doing by this bill—and I believe it is a very important step—is bringing the road back out of bankruptcy and into business vitality. In doing so we are going to establish the ordinary business set-up of successful concerns in this country and elsewhere. We are going to restore management by experts in the railway business, with experience and qualifications that, we believe, will give the road expert technical direction. We are going to surround that expert direction with a board of directors which in business experience and in national respect, we believe will be the equal of the board of any other corporation in this country. In other words we are going to give the Canadian National Railways a chance as a business to go out and build. I say that we are going to give it a chance. We are going to give it the same chance that any business firm in Canada has.

The leader of the opposition (Mr. Bennett) said that we can solve this problem by tearing up four or five thousand miles of track.

Mr. BENNETT: I said that is what the commission said.

Mr. HOWE: Yes, pardon me. I was speaking merely for the purpose of reference. But if that is the solution, it must involve tearing up not only the track but also the mortgage that built the track. I think the saving is lacking if only the rails come up without the mortgage that built them. I agree fully that if there are any further savings to be made in the way of economies that are practical—and after all tearing up four or five thousand miles of track is not practical—these savings should be made. I believe that the direction in which to look for the solution of the Canadian National Railway problem is on the constructive side, the building up of traffic and the pumping of vitality into the railway. That is the purpose of this legislation.

It has been said that the purpose of this legislation is to dismiss the present personnel of the board. That is not true. It is true that I do not think the personnel directing the road to-day has the proper business experience which was intended by the Duff report. However I may say that I tried to avoid the very thing I am facing to-day, this discussion of personnel. I saw each of the trustees soon after I came into office and explained to them the position as I see it to-day. I suggested that this unpleasantness could be avoided if they cared to resign. I have great respect for Judge Fullerton, who is a westerner like myself; at least we have often worked together in the same field. Mr. Morrow is a former client of mine, and in justice to him I must say that when I put the situation to him he was quite willing to resign. However I saw no purpose in accepting one resignation unless all were prepared to do the same thing. The change in set-up would have gone on just the same, but this personal reference I have had to make would have been avoided.

Motion (Mr. Howe) agreed to, on division, and bill read the second time.

Mr. HOWE moved that the house go into committee on the bill.

Mr. BENNETT: I object to going into committee now. I want to make some observations on the motion for going into committee. In view of what was said this afternoon I do not think the bill should go into committee unless the chairman of the board is afforded an opportunity to present his position before the special committee. Further, this bill refers to the Minister of Transport, and as there is no Minister of Transport the bill would prematurely be in committee.

Motion stands.

## ADJOURNMENT—BUSINESS OF THE HOUSE

Mr. BENNETT: What will be the business to-morrow?

Mr. CRERAR: Special supplementary estimates, the committee stage of the bill we have been considering, and if we finish with that, the ordinary estimates of Immigration and Defence, though possibly not in the order named.

Mr. BENNETT: If this bill could not properly go into committee in view of the fact that it refers to a Minister of Transport and there is none, then do I understand that the estimates will be proceeded with?

Mr. CRERAR: That clause of the bill might be dealt with in the same way as a similar clause in the harbours board bill.

Mr. BENNETT: This is to some extent different from that.

Mr. CRERAR: Not in respect to the point my right hon. friend raises.

Mr. BENNETT: But there is a special committee outstanding.

Mr. CRERAR: I think we shall probably proceed with the committee stage of this bill —I do not know the wish of the Prime Minister; we might consider the matter to-morrow—leaving the sections that refer to the Minister of Transport standing for the time being.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

---

# Tuesday, April 28, 1936

The house met at three o'clock.

## NATIONAL HARBOURS BOARD

### OPINION OF JUSTICE DEPARTMENT AS TO PROVISION THAT BOARD SHALL BE BODY CORPORATE AND AGENT OF HIS MAJESTY

On the order for motions:

Hon. C. D. HOWE (Minister of Railways and Canals): Mr. Speaker, during the debate on the national harbours board bill I was

asked by the hon. member for St. Lawrence-St. George (Mr. Cahan) to lay on the table the opinion of the Department of Justice with reference to subsection 2 of section 3 of the bill. I now lay on the table a report signed by Mr. W. Stuart Edwards, Deputy Minister of Justice.

## BUSINESS OF THE HOUSE

### ANNOUNCEMENT AS TO PRESENTATION OF BUDGET ON FRIDAY, MAY 1

On the orders of the day:

Hon. CHARLES A. DUNNING (Minister of Finance): In reply to the question asked yesterday by the right hon. leader of the opposition (Mr. Bennett), I hope to be able to present the budget on Friday of this week.

## BEAUHARNOIS POWER CORPORATION

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, I should like to ask the Prime Minister (Mr. Mackenzie King) if his attention has been drawn to a circular letter signed by J. S. Norris, president of the Beauharnois corporation, and dated at Montreal, March 20, 1936, in which appears this statement:

> The project became the subject of entirely unwarranted and purely political attacks in the federal parliament of Canada early in 1931.

In view of the verdict of parliament given at that time, what steps will the government take to see that parliament is protected from unwarranted statements and attacks of this description which will mislead the bondholders who are meeting to consider the matter?

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, the House of Commons is master of its own house. I prefer to leave it to the House of Commons to say what shall be done.

Right Hon. R. B. BENNETT (Leader of the Opposition): I wonder if the hon. gentleman (Mr. Coldwell) would let me see that circular? If I understood him aright I think the matter is more serious than one which could be left merely to the House of Commons. This statement challenges this house in a very peculiar way. I quote from the letter as follows:

> The project became the subject of entirely unwarranted and purely political attacks in the federal parliament of Canada early in 1931.

The effects of these political attacks upon the enterprise were extremely serious and far-reaching. They resulted:

In the cancellation of the approval previously obtained under the Navigable Waters Protection Act;

In the reestablishment by special act of the federal parliament of a basis of federal approval subject to new and undisclosed conditions;

In Beauharnois Light, Heat and Power Company being forced to convey to the crown over 9,000 arpents of land (representing a cash outlay of over $1,800,000) upon which works had already been constructed by the company costing upwards of $15,000,000. The company received no compensation whatever for these works other than an easement to use the property, so conveyed, for power purposes;

In the federal government being forced to assist in the temporary financing of the enterprise by guaranteeing, against ultimate loss, bank advances aggregating nearly $16,000,000 made to prevent the collapse of the enterprise;

And finally, in the reorganization of Beauharnois Power Corporation Limited and Beauharnois Light, Heat and Power Company, in June, 1933.

I have not had any previous conversation with the hon. gentleman who has brought this matter to the attention of the house, but on listening to him it struck me that this is a serious reflection upon the privileges of parliament. I think perhaps this house has been rather careless in the assertion of its privileges, though in one or two instances it has done so. As soon as the hon. gentleman began to speak I sent for Sir Austen Chamberlain's book, Down the Years, and I would direct the attention of the house to this one reminiscence as given, beginning at page 70, because Sir Austen Chamberlain refers to a matter of this kind with a good deal of care:

> Parliament was dissolved only four months later and my first House of Commons has left only one abiding impression on my mind. It is of the greatness of Mr. Speaker Peel. The house has had many great Speakers, but I doubt whether in its long history it has ever had a greater than Arthur Wellesley Peel. Others have served it faithfully and many of them with great distinction, but Speaker Peel dominated it. In the opinion not only of one like myself who was still a young member when he retired, but of older men who had been present at his first election, he stood in a class by himself, over-topping his predecessors, never equalled even by the most successful and respected of his successors. He had a natural dignity and a formal but genuine courtesy which well became the occupant of the chair, and, besides, a dramatic gift which in great moments raised him far above his fellow members that the whole house trembled at his rebuke. At such times his stature seemed to grow before our eyes, his deep resonant voice dominated the tumult and he appeared as the living embodiment of centuries of parliamentary tradition.
>
> One such moment occurred in the closing days of the parliament of 1892. A select committee of the house had been inquiring into

the hours of work of railway servants, and among the witnesses who had given evidence before it was the stationmaster of some small station on the Cambrian railway. He had subsequently been called before three of the directors and the general manager of the company and dismissed, nominally for some irregularities in his accounts but really, as was obvious from the questions put to him by the directors, on account of the evidence which he had given before the select committee. The committee, of which Sir Michael Hicks Beach was chairman, took evidence as to what had passed and made a special report to the house on the case as a breach of privilege. Of the three directors involved one, Sir John Maclure, was an old and much-liked member of the house. A day was fixed for the discussion and an order was made by the house that the honourable member for Stratford should attend in his place and that his co-directors and the general manager should appear at the bar. They were asked if they had anything to say and Sir John Maclure offered an apology with which the others associated themselves. They were then ordered to withdraw while their case was considered, and Hicks Beach moved: "That this house while recognizing that they had expressed their unqualified regret for having unintentionally infringed any of its rules and privileges is of opinion that they have committed a breach of privilege ... and that they be called in and admonished by Mr. Speaker."

This seemed a rather lame conclusion and there was a good deal of sympathy with the proposal made by T. P. O'Connor to add that the house would not consider that they had purged their contempt till they had reinstated the discharged man. Efforts were made privately to get them to do this, or at least to compensate him, but they remained obdurate. Hicks Beach's resolution was supported by Mr. Gladstone, but his advice was rejected by the great majority of his followers whose zeal for the injured man was perhaps stimulated by the value of the railway vote at the general election which was known to be imminent. A long, wrangling discussion followed and it was not till midnight that a division was taken and Hicks Beach's resolution carried.

Then the directors were once more called in. Sir John Maclure evidently felt his position acutely, but the other three appeared at the bar defiantly and almost jauntily. They had successfully resisted the desire of many members, not confined to one side of the house, that they should compensate the man, and now they were to have what schoolboys call a "pi-jaw" from the Speaker—that was all the House of Commons could do to them.

Mr. Speaker Peel spoke for less than ten minutes. "I would have you to know—each and all of you gentlemen—that though the privileges of this house are not be put into operation on any light or trivial occasion ... yet a privilege of this house is no unreal, shadowy or unsubstantial thing; it is what the house clings to and what it is determined to maintain." And then after expatiating on the enormity of their particular offence, he declared "The house in its judgment and, I should add, in its mercy has decided that I should admonish you," and he proceeded to administer the admonition.

The bald words of what he said, recorded in Hansard, convey no idea of the devastating effect of that short allocution. The men who had come to the bar so defiantly a few minutes earlier wilted under his admonition; beads of perspiration stood out on their foreheads and, when he dismissed them, they crept away like whipped hounds, while the rest of us shook ourselves like dogs coming out of the water and thanked heaven we had not been in the position of poor Maclure.

I do say that the statement sent broadcast to the shareholders of this enterprise over the signature of Mr. J. S. Norris, president, is a distinct breach of the privileges of this house; and thus to reflect upon the action that was taken not only by the committee but by the House of Commons itself, ultimately by unanimous action, is something that should not be tolerated or permitted. Moreover, one at least of the statements is not correct, I refer to the paragraph indicating that all they had received was an easement to use the property, so conveyed, for power purposes. That is entirely beside the question and is not in any sense an adequate expression of what was received in compensation for the title being vested in the crown, and I cannot but think that it is the duty of the government to take cognizance of this matter, for the maintenance of the traditions and the honour of the house is in the keeping primarily of the government of the day; and possibly a committee should be set up for the purpose of investigating the matter, so that if there is found to have been a violation of the privileges of this house appropriate action may be taken.

These things seem trifling and perhaps they are; they seem to be matters that should be treated as a joke, of little importance; and yet the maintenance of the privileges of this house is fundamental if we are to maintain the supremacy of parliament itself. Parliament cannot retain the respect and esteem of the people if it permits itself to be attacked in the way in which it has been and men feel that because they occupy the position of members of the House of Commons they must be subject to this sort of criticism and attack upon their actions. The parliament at Westminster, even in the most turbulent days, has been very careful to preserve untarnished its honour and undiminished the assertion of its rights, to maintain the privileges of parliament as such.

I think the hon. gentleman is to be thanked for bringing the matter to the attention of the house. I had seen reference to it in the newspapers but I had not seen this document in its entirety, although I had heard what the general contents of it were. I suggest it warrants careful consideration on the part

of the government and in particular of the Prime Minister. It might be that, inasmuch as there is little time now to consider it, in view of the record—and I think I have given the whole of the statement, as will appear in Hansard—the right hon. gentleman should take time to look into the matter and determine what should be the appropriate action in the circumstances with a view to maintaining the ancient privileges of parliament and its position in the country itself.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I must confess I have been at a loss to know just what we have been discussing. We are on the orders of the day, and the leader of the opposition (Mr. Bennett) having been for a long time in parliament and having for some years held the position of first minister, I did not think it proper to interrupt him or to call him to order. Certainly, however, I think he was decidedly out of order. If the subject under consideration is a question which affects the privileges of the house I suggest that in its consideration there ought at least to be an observance of the rules of the house on the part of all who are present.

First of all, speaking of the privileges and the rules of the house, may I say that it is customary, when an important question is going to be asked of the government on the orders of the day, for at least some intimation to be given in advance to the leader of the government or some member of it. The hon. member for Rosetown-Biggar (Mr. Coldwell) asked the question which he did without having given previous intimation to me or, as far as I can gather, to any of my colleagues, with respect to the matter to which he was referring. He brought a document into the house, made some reference to it and asked me what the government was going to do about it. I am not the government—I differ in that respect perhaps from some others—and I like to have at least an opportunity of conferring with my colleagues before answering a question addressed to the government as such. I would have told the hon. member very frankly that such was my position if I had not thought that the answer which I gave was all-sufficient. To my amazement, I next find the leader of the opposition taking possession of the document, reading the whole of it for the purpose, as he says, of placing its contents on Hansard, giving his views with reference to the same, and then reading from some authority in alleged support of what he is saying. I have not, like the leader of the opposition, come here armed with authorities purporting to support what I wish to say and of the point which I am making. I think, however, there should be very little difficulty for any hon. member of the house to know where ample authorities may be found for what I have already expressed, namely that if the privileges of this house have been violated in any way it is open to any member of the house to bring the matter up and it is for the house itself to take such action as it may deem necessary and advisable. The House of Commons is the custodian of its own privileges; the government is not the custodian of the privileges of the House of Commons. Every hon. member has the same right as the Prime Minister in a matter of privilege, and no one knows it better than the leader of the opposition.

May I say one thing further with regard to the question which has been asked. Is it to be assumed that a citizen of this country is not to have the right to criticize the action of a government? What is to become of freedom of expression in this country if every citizen is to be told that if he ventures to criticize anything which has been done by the parliament of Canada he is immediately to be brought to the bar of parliament to answer for it? That is not my view, at any rate, of the rights either of government or of citizenship.

I repeat that I had not seen the document to which reference has been made by the hon. member. It had not been brought to my attention. I knew nothing of its contents. He was careful, I suppose because it had some reference to Beauharnois, to seek to make a play with it, just as the leader of the opposition has sought to do.

Mr. BENNETT: That is unfair.

Mr. MACKENZIE KING: But such things are easily understood by anybody. As far as the question asked is concerned I return to what I said at the beginning, that if any privilege of this house has been violated, hon. members may take the matter into their own hands and deal with it as they see fit. So far as the government is concerned it is going to sustain the right of free expression of opinion by the citizens of Canada.

Mr. COLDWELL: Mr. Speaker, on a point of order—

Mr. BENNETT: Mr. Speaker—

Mr. MACKENZIE KING: There are two members opposite on their feet. I think, Mr. Speaker, that both are out of order.

Mr. BENNETT: Mr. Speaker, I am now rising to a question of privilege.

Mr. DUNNING: The other man had the floor first.

Mr. BENNETT: You may as well make up your minds that I am not going to be, in any sense, intimidated. Hon. members suggest that there shall be freedom outside the House of Commons, and deny it within.

Mr. MACKENZIE KING: Another hon. member was on his feet before the leader of the opposition rose.

Mr. BENNETT: The right hon. gentleman is raising another question. The rules of this house provide that a question of privilege must be taken into consideration immediately when raised, and it has been done ever since I have been in the House of Commons.

Mr. DUNNING: There was no question raised.

Mr. BENNETT: I was raising it as a question of privilege from the start.

Mr. MACKENZIE KING: The right hon. gentleman never so mentioned it.

Mr. BENNETT: This raises a question of veracity. Why did I send for Sir Austen Chamberlain's Down the Years but to point out to the hon. gentleman that he had referred to privilege, and I was dealing with the question of the privileges of this parliament. I happened the other night to be reading that book, and I remember that it dealt with the question of privilege, so I sent to my room for the book when the hon. gentleman raised the question that he did raise; the book was brought down to me in the presence of the members of this house and was handed to me and I read from it for the reason that I was raising a question of the privileges of parliament. When the right hon. gentleman suggests I was out of order in raising the question of privilege—

Mr. MACKENZIE KING: I say that my right hon. friend never mentioned to the house that he was raising a question of privilege at all. He undertook to carry on a discussion of a subject which the other speaker had begun.

Mr. BENNETT: I said it raised an issue of the first importance with regard to the privileges of this house, and I was raising the question of privilege; that is all.

Mr. COLDWELL: Rising to a point of order, I wish to say that an inference may be taken from the remarks of the right hon. Prime Minister that I have had some communication with the leader of the opposition regarding this matter. I just want to say that I have never discussed this matter or any other matter of that nature with the right hon. leader of the opposition or his colleagues.

Mr. MACKENZIE KING: May I say that I do not think my remarks are capable of that interpretation, but I am not surprised that my hon. friend supposed that some hon. members might well have thought so after listening to the leader of the opposition.

## SUPPLY

The house in committee of supply, Mr. Sanderson in the chair.

### DEPARTMENT OF AGRICULTURE

Projects already undertaken — Prairie Farm Rehabilitation Act—
Experimental projects and large scale demonstrations therefrom, $214,000.
Water development projects, $234,000.

Mr. MACKENZIE KING: Before we begin the discussion of this item, Mr. Chairman, I should like just to say to you how pleased hon. members of this house are to see you again in the chair, restored, we trust, to your former health and strength.

Mr. BENNETT: I should like on behalf of those with whom I am associated to join with the right hon. Prime Minister in what he has just said.

Hon. J. G. GARDINER (Minister of Agriculture): This item, which proposes to provide $448,000 for expenditure upon projects already undertaken, covers expenditures that were provided for last year in connection with the Prairie Farm Rehabilitation Act. These expenditures cover, under the first item, experimental projects and large scale demonstrations therefrom in the amount of $214,000. This amount has to do with experiments that are being carried on at experimental stations throughout the southern part of Saskatchewan, the southern part of Alberta and the southwestern part of Manitoba, and provision for the distribution of grass seeds and other methods of demonstrating the use of some of the products that have been developed through experimentation. It also has to do with the promotion of strip farming and everything of that nature tending toward the better use of lands in the area of the provinces where we have had drought during the last five or six years.

Mr. MacNICOL: I should like to ask the minister for a little further explanation of

his reference to the distribution of seeds. Does the government supply the seeds free? Are the seeds grown on government land or on the lands of experimental farms, or are they grown on private farms, taken over by the government, and then distributed?

Mr. GARDINER: The experiments are carried on upon a number of demonstration farms that were selected last year.

Mr. MacNICOL: Private farms?

Mr. GARDINER: Private farms, yes, the lands of which are rented under the same terms as ordinary demonstration farms, and rentals are paid for the use of these lands for demonstration purposes. Some of the grass seed, of course, will be used on those lands. Then there are associations composed of farmers who form themselves into an organization with a president, secretary and executive, who meet together from time to time and discuss ways and means of making use of grasses for different purposes. The government has purchased seed which it supplies through those associations to individual farmers to be used on plots of their own land in order to demonstrate the use of grasses in reestablishing these areas.

Mr. MacNICOL: Is the seed supplied free?

Mr. GARDINER: Yes, it is free.

Mr. STIRLING: The second part of this item has to do with water development projects. I find it very difficult to get any conception of what that implies. There is a very large area that has suffered from drought and on which the distribution of water would be of inestimable benefit. There are large irrigation projects around Medicine Hat, for instance, but they involve very large structures and a tremendous amount of digging of ditches for distribution. I wonder if the minister would give a short explanation of what is being attempted under this item. Is this only demonstration work which will assist the individual farmer to carry on similar work on his own land, or does it affect whole districts which will benefit by the water dammed up?

Mr. GARDINER: A number of different methods are being followed in order to assist in this way. If the hon. member will look further down the page I think the works to which he is referring come under item 308, but this vote covers largely what are known as small dams and dugouts. Some two or three thousand of these have been proposed by persons residing in that part of the country extending from Crystal City in Manitoba over a triangular area running right up to the foothills in Alberta. A number of those proposals were examined into by engineers last season; I think some six or seven hundred have been accepted as projects that should be carried through, and some two or three hundred others are under consideration at the moment. The money may be spent in two ways. Dams are placed across ravines in different parts of the territory, where it is feasible to do so, in order to provide a water supply, usually for three or more farmers. Sometimes it is done for a larger section of the community and in some instances it may be done on ranges operated for ranching purposes perhaps by individuals, but the work is spread over that whole area, some of which is wheat growing country, some mixed farming country and some purely ranching country. The dugouts are constructed largely throughout the wheat growing area, where it is impossible to have dams because of the nature of the country, and where it has not been possible to get water by the digging of wells. Dugouts are used particularly in the heavy soil country, assistance is given to the extent of three cents per yard for the earth that is moved, in connection with small dams. This money is to be spent to promote that sort of thing.

Mr. STIRLING: Then does the snow water fill these dugouts, and is that water ditched out extensively?

Mr. GARDINER: Under the plan that was set up last year engineers are sent out to advise the farmers whether they might obtain a water supply by digging a dugout. Of course that usually involves drainage from certain directions into the dugout. Sometimes there is the possibility of providing a run-off, but at other times it is just like a slough, where the water collects and serves for the season.

Mr. CHURCH: I should like to ask the minister on what principle this vote is brought before this committee. In the first place agriculture is under concurrent jurisdiction between the dominion and the provinces. In the other provinces of Canada this question of rehabilitation is very largely a provincial matter. Why do not the prairie provinces themselves come forward with a scheme such as has been proposed by the minister? On the other hand, if it is proposed to carry on this work this year, why was not this item included in the main estimates? In the second place, Mr. Chairman, why is there not equality of treatment as between the prairie provinces and the maritime provinces, as between the farmers of the west and the

farmers of central Canada? Who is going to pay for all this? The cost will have to come out of the pockets of the workers in the central provinces, who have provincial legislatures looking after the question of agriculture.

Since this government came into power I have seen most radical departures from the principles laid down by the British North America Act. There has been the five-year census for the prairies and other things of that kind, and now we have agriculture. I admit that the farmers of the prairies are suffering, but their situation is no worse than that of the farmers of Ontario. I could show the minister farms in Ontario just as badly off as the farms of the other provinces. Since I have been in this house we have had royal commissions appointed to ascertain the situation with regard to various provinces of confederation. We have had royal commissions on maritime rights, prairie rights and Pacific rights, and the time is coming when the farmers of Ontario and Quebec, and the industrial workers who cannot get a dollar with which to save their homes from foreclosure, who have to pay the cost of all this sort of thing, will demand an investigation or survey too. The time is coming when Ontario and Quebec will have to ascertain what is their place under confederation as expressed by the British North America Act. The two central provinces must pay the cost of all this sort of thing, since they contribute eighty per cent of the cash taxes that are raised, and they are not going to remain forever hewers of wood and drawers of water for the rest of confederation. The principle of confederation in which I believe is expressed by the old Cornish battle cry, each for all and all for each. This item has also reference to farm rehabilitation. The question of rehabilitation was referred to the other day in Bill No. 14 and again in Bill No. 19, and I thought that matter had been handed over to a commission. We are a long way behind the times in rehabilitation in Canada when we consider what has been done for the farmers in Denmark and the United States, but are we going to have this matter handled by the minister, and another branch of the work under Bill 19 handled by Mr. Purvis?

The CHAIRMAN: I would ask the hon. member to confine himself to the item under discussion.

Mr. CHURCH: I accept your ruling, Mr. Chairman, but with all due deference I would point out that I am speaking of item 307 about the word in this item, "rehabilitation,"

[Mr. Church.]

which also appeared in Bill No. 19 the other day, in reference not only to industrial workers but also to agriculture. If we are to have farm rehabilitation for one province let us have it for all provinces; let us have equality of treatment so that not only the prairie provinces but the other provinces as well will get votes of money in the supplementary estimates.

Then this item 307 goes on to refer to experimental projects and large scale demonstrations. Only the other day we handed out six or seven million dollars for large scale demonstrations and now under this item we are asked to vote a further sum of $448,000. I am going to ask the minister to extend these handouts to the province of Ontario too, since this question of agriculture comes under the concurrent jurisdiction of the provinces and the dominion. If there is to be rehabilitation by Mr. Hepburn's administration in Ontario, the prairie provinches should pay as Ontario does for rehabilitation as well, and the construction of power projects. Look at the hydro water power project in Ontario; it was built at the expense of the province, and the dominion government did not contribute a nickel towards the cost. I admit that these other provinces have rights too, but there are provinces whose rights are forgotten. I refer to the two central provinces. If the Ontario and Quebec members would assert their rights they would have a royal commission to find the place of the two central provinces in confederation, besides that of merely paying the debts.

Mr. GARDINER: All I would say in reply is that the caption which appears on the item, Prairie Farm Rehabilitation Act, pretty well indicates why the vote is here. That act was passed in 1935, the bill having been introduced by the then minister of agriculture. It provided for $750,000 last year, a million dollars this year and a million each year for the next three years following this; in other words it was a five year program. All that I have done as minister so far as this act and the amount of money provided by it is concerned is to cut it by a quarter of a million dollars. The provision made by the act is for a million dollars; I am providing only for the expenditure of $736,885.55 for these purposes in the first three votes under the heading of projects already undertaken, and under other projects in succeeding votes there is provided an amount of $559,556.69. These two amounts make a little more than one and a quarter million dollars. Two bills were passed last year, one providing a million dollars for

1936, and the other, I believe it was the Public Works Construction Act, which provided half a million for this and other purposes for the Department of Agriculture. Part of that half million dollars was spent last year; some of it still remains to be spent. I am asking the house to vote this year three quarters of a million under the Prairie Farm Rehabilitation Act, and to provide for the expenditure of the remainder under the Public Works Construction Act of last session in connection with agriculture in the drought area of western Canada. These expenditures are being made only in the section where we have had drought during the last five or six years. I make that explanation not for the purpose of shirking any responsibility in connection with the vote, but simply in order to draw the attention of the hon. member to the fact that the amount was provided for by legislation of last year, and we are simply carrying out the purpose of that act.

Mr. LEADER: In support of this proposed expenditure I believe the hon. member for Broadview (Mr. Church) is labouring under a misapprehension. This is not a general policy for all the prairie provinces; as the minister has stated it just takes care of that part which has suffered so much from drought. I am sure the hon. member for Broadview, had he gone through that district, as I have done, and seen the ravages of the last five or six years of dry weather, would be one of the first to come to their relief. The fact that the previous government, of which he was a supporter, undertook this relief first, goes to prove what I say.

In regard to the dugouts to which reference has been made, I live in a district where we have to have them, and I may say to the hon. member for Broadview, whom I regard as a very good friend, that we have not asked the governments, either provincial or dominion, to reimburse the farmers making these dugouts; they pay for it themselves. We are able to do that, but the people in the dried out areas are not, and unless we want to abandon them altogether we ought to be and I believe we are glad to offer any help we can to assist them through this period of stress.

Mr. BENNETT: I think the hon. gentleman was in error in making the statement about the million dollars. Section 8 of the act provides that:

> For the purposes of this act the sum of $750,000 shall be appropriated and paid ... during the fiscal year 1935-36 and for each fiscal year for a further period of four years a sum not exceeding one million dollars per annum as may be necessary to continue and extend the work undertaken under this act.

Do I understand that the first two items amounting to $448,000 are voted to discharge obligations already created?

Mr. GARDINER: Yes.

Mr. BENNETT: Then the $750,000 of last year was spent in its entirety?

Mr. GARDINER: No.

Mr. BENNETT: Because the question of the $448,000 being part of the $750,000 or in addition to the $750,000 becomes important.

Mr. GARDINER: The amount which is being provided this year in the estimates, of the million dollars which the act provides we might have spent this year, is only $750,000; and that amount, together with a sum unexpended under the provision for $1,000,000 out of the Public Works Construction Act of last year, makes a total under these estimates of $1,296,442.24.

Sir GEORGE PERLEY: How much was spent last year out of the $750,000?

Mr. GARDINER: I have not that information here at the moment. I could get it. It was about half of it.

Mr. PERLEY (Qu'Appelle): Could the minister give some information in respect to the $214,000 for experimental projects and large scale demonstrations? Does that include the establishment of demonstration farms?

Mr. GARDINER: Yes, it includes not only the establishment of demonstration farms in the area but investigational work in connection with strip farming over considerable parts of the area. In southern Alberta, for example, strip farming has been carried on with considerable success for quite a number of years. There has been very little strip farming in the southwestern part of Saskatchewan, although there has been some. Under this expenditure there has been encouragement of strip farming in the southwestern part of Saskatchewan and the extension of it in Alberta and the use of it in part of Manitoba. The money spent in connection with it is for the sending out of men from the experimental farms to promote the spread of such projects; the actual work of distributing seed in connection with the sowing of grasses and everything of that kind comes out of this particular part of the vote.

Mr. PERLEY (Qu'Appelle): It is not intended to purchase these farms, is it? They will be under lease?

Mr. GARDINER: No, there has been no purchasing of farms. The first project pre-

sented to the house or to the country, I am not sure which, had in view the taking over of a number of townships—I think the project was five townships, one in Manitoba, three in Saskatchewan and one in Alberta—and operating them as large demonstration farms. But in practice the minister of the day and the officials of the department did not find that to be feasible, and adopted the idea of encouraging the formation of agricultural associations that might take in two or three municipalities. These associations meet from time to time and discuss matters and encourage the use of these different methods on the farms within that area.

Mr. DONNELLY: When one of these farms is taken over for strip farming demonstration purposes, what agreement is made with the man who owns the property? How much is paid to him, or on what terms does he work?

Mr. GARDINER: It is on exactly the terms that I presented to the house. I am sorry Doctor Archibald has not yet arrived, but he will be here soon and I can get detailed information from him in regard to these matters. The arrangement is the same as is made in connection with demonstration farms that are carried on from one end of Canada to the other; the rentals and everything are exactly the same.

Mr. MacINNIS: I was going to ask the minister how much of the $750,000 had been spent, but that question has already been asked. Has the department prepared any report on the work that has been done under the vote of last year, which would indicate what progress has been made and what the results if any have been?

Mr. GARDINER: May I point out that the point raised by the hon. member for Broadview (Mr. Church), namely that under ordinary circumstances most of the work to be undertaken was considered to be provincial work, was fairly well recognized in western Canada. The provincial departments are usually provided with ways and means of carrying on in a limited way much of the work that was to be undertaken, particularly the provision of a water supply. But in the light of the experience they have had in the last five or six years, and the fact that very little in the way of revenue can be collected by muncipalities or by anybody else for the carrying on of the work, apparently it was thought wise to give some special assistance from the federal treasury, and the act to which I referred a few moments ago was passed. At Swift Current an organization was established to take care of the expenditure of the money. That organization consisted partly of engineering equipment and men to conduct surveys in different sections of the southern part of the three provinces, and to make records with regard to the possibility of providing water supply and everything else essential to a development of this kind. Work and demonstrations in connection with the larger experiments mentioned were carried on by the experimental farms, part from Swift Current, part from Indian Head and part from Brandon. That work was done in the different experimental farms throughout the section. Some of the expenditure having to do with these particular activities was used in paying officials who had been previously engaged in the work of these experimental farms, and some of it was used in paying for the services of individuals connected with the engineering organization.

Since taking over the department I have discussed the matter with the provincial governments and we have arrived at the conclusion that probably we would get better results with less expenditure on overhead by working in close cooperation with the provincial government, so that we are associating the engineering organization with the three different departments. The arrangements are fully made in the province of Saskatchewan, where about sixty per cent of the area is found. In Alberta, where a greater part of the remaining area is situated, arrangements are fairly well on their way to completion, and at this time arrangements are being considered in Manitoba, where the smaller part of the area is found.

The reason for the comparatively small expenditure last year is that the work was not begun until after the close of the last session, which was about the beginning of July. The engineering work in connection with all these projects had to be carried on after that. At the end of the season, other than getting records with regard to dugouts, the applications for which have gone into thousands, the number of small dams for which applications had been made and the number of larger projects which had been proposed, very little had been accomplished. As to these works to which we are now referring, only a few thousand dollars was paid out for actual works last year. All work which had been paid for in addition to that was preparatory to work which would be done this year and in the succeeding three years under the plan which had been laid down. The government considers it worth while to go on with these projects and to carry them

through to completion, in so far as individuals and communities which made application last year may desire, and in so far as engineering staffs have reported that such works may be feasible and would give satisfactory service. So that on actual works very little was spent last year; the greater part of expenditures were made preparatory to doing work this year and in the succeeding three years. The same observations apply with regard to other works which we will be discussing later.

Mr. MacINNIS: Is it the intention of the department to publish reports with regard to the work as it proceeds?

Mr. BENNETT: Section 9 of the act provides for an annual report being laid on the table of the house.

Mr. GARDINER: Yes, that provision is made.

Mr. DOUGLAS: With reference to the $448,000 to be spent in connection with the Prairie Farm Rehabilitation Act, how will this money be apportioned?

Mr. GARDINER: It will be apportioned according to the areas of the different provinces. Sixty per cent of the area is in Saskatchewan, and about 40 per cent in the other two provinces. Of that 40 per cent I think the division would be about 25 per cent and 15 per cent, or 30 per cent and 10 per cent, with the larger area in Alberta.

Mr. BENNETT: Mr. Chairman, I offer no apology for discussing this matter at some length. The communications I have received from the various parts of western Canada are numerous, especially those from the area in which they have had no moisture for a very considerable period of time.

It will be recalled that a year ago we passed a statute known as the Prairie Farm Rehabilitation Act, made an appropriation of three-quarters of a million dollars for last year, and authorized parliament to appropriate an amount not exceeding one million dollars in the succeeding four years. That statute provided for the setting up of a committee, and I judge from what the minister has said that no such committee is now functioning. I am not quite sure whether that is correct. Is a committee now functioning?

Mr. GARDINER: It has been functioning, yes.

Mr. BENNETT: And it still is?

Mr. GARDINER: Yes.

Mr. BENNETT: It will be remembered that the committee was a most representative one. It had a chairman who was to be appointed by governor in council. I do not know whether the present chairman is the one who held office before October 23.

Mr. GARDINER: No change has been made in the committee, and the last meeting was held last fall.

Mr. BENNETT: I thank the minister for that information. It will be recalled that the committee consisted of a chairman, representatives of the grain growers of Manitoba Saskatchewan and Alberta, the live stock farmers in Saskatchewan, the range farmers in Alberta, the mortgage companies of Canada, the Canadian Bankers' Association, the Canadian Pacific Railway, the Canadian National Railways, two representatives from the Dominion Department of Agriculture, and one representative from each of the governments of Manitoba, Saskatchewan and Alberta. The minister is quite right in saying that the meeting together of these representatives involved a considerable expenditure in overhead. Nevertheless if I am correctly informed they did meet and made certain plans which, as the minister has pointed out, contemplated the work being continued along certain lines during the succeeding year. That is, it would be continued during the year which is now upon us, or during the present spring and the succeeding summer and fall.

Engineers went over the matter rather carefully, and from what the minister has said I take it that the $448,000 is really a revote of part of the $750,000 which is unexpended, with a little more added to it. I should like to ascertain what has been spent, and what the commitments were with respect to the schemes. Perhaps the minister has before him information which will enable us to understand what the plans were. Consideration was given to the construction of dams, covered in the next item, with respect to which I take it the minister will give us the necessary information. But if I am correctly informed those living in the drought areas have been in touch with the committee and with their provincial governments. I was not quite able to ascertain to what extent the minister contemplated taking the matter out of the hands of the committee and placing it in the hands of the provincial governments, because in item 310 there is provision for payment of a substantial sum of money to the provinces. Like others who have been writing I desire to ascertain whether or not the sums mentioned in items 307 and 308 will be expended under the direct

supervision of the federal government, or are they too to be partly under the supervision of the provincial governments? I should like to know also whether the engineers engaged in this work prior to last year are to be continued in the work this year.

Mr. GARDINER: Replying to the last question, no new engineers have been put on. However, the engineering staff at the present time is not as large as it was last year. In connection with engineering work in general, the three men appointed on the committee, the committee having to do with water conservation, are the three engineers in charge of the work for the provincial governments. There is Mr. Charlesworth of Alberta, the provincial man in Saskatchewan and the provincial man in Manitoba. These men will still have an interest in the work, as they had previously on the committee, perhaps in an even more direct way. As I said a moment ago, we have approached the provincial governments to have them take a more lively and more direct interest in this work. Our reason for doing this is that many of these works are really provincial works. The only reason the provinces have not been carrying them on is the reason which is so prevalent throughout Canada to-day, the lack of funds. I assume that that is mainly why the dominion government came into the picture last year. The main reason for their undertaking to spend money in that area was the difficulty which had been faced during the last five or six years. We hope that at the end of the four year period, if it is necessary to continue the work for that long, these sections of western Canada will have overcome these difficulties and that the work will then be taken over and continued by the provincial governments. Believing that, we thought it wise at this period to encourage the taking over of the work. Therefore, we have asked that the same engineers, who were in charge last year from the office at Swift Current, be taken over by the different provincial departments. They will in turn be advised by the same three men who were on the committee appointed last year. Saskatchewan has consented to do this; I think Alberta has consented, although the matter may be still under consideration, and while there will be very little work carried on in Manitoba, I have their assurance that they will cooperate in that regard. As I said a few moments ago, our main reason is to cut down overhead expense and to encourage the taking on of this work by the provinces in such a way as to ensure its maintenance and continuation after the federal government drops out of the field.

[Mr. Bennett.]

If we were to proceed along the line that we followed last fall and up until about a month ago, I am afraid that we would build up a large staff in connection with the federal Department of Agriculture which we would either have to find places for elsewhere at the end of the three or four year period or ask the provinces to take them over in order to continue this work. If I were assured that these items could be placed in the ordinary estimates, as suggested by the hon. member for Broadview (Mr. Church), and carried on in that way, it might be a different proposition. However, I do not feel inclined to ask the house to adopt this as the permanent policy to be followed by Canada in connection with the areas now under consideration. I think it wise to direct the activities toward the taking over of this work by the provinces at the end of our activities in connection therewith.

So far as the control of the committee is concerned, I may say that we look upon the committee as being one composed of men competent to deal with questions of this kind. They have held two or three meetings, one of which was held just before this house met. They have presented their views in connection with the whole general policy and with the matter of water supply and rehabilitation. These views are now before the experimental farms branch of the department under Doctor Archibald and we are not sure that anything is to be gained by calling these men together in the future at some expense. If we can get along without calling them together, we will. It must be remembered that many of them are in the service either of the provincial governments or of the federal government or the railways, and we do not anticipate any difficulty in getting this committee together if it is found necessary to do so in the future for further discussion of this whole matter. I may say that so far no action has been taken to discontinue the committee.

Sir GEORGE PERLEY: This matter was discussed for some time last year before the bill was brought into the house by the predecessor of my hon. friend. I do not think he understands exactly why it was done in the way it was. The hon. member for Broadview (Mr. Church) has raised a question with regard to the provinces which is certainly worthy of careful consideration. As I remember it, this bill was brought in because the drought areas in the southern parts of the prairie provinces were considered as a national emergency. That is why this parliament voted money for that particular purpose. We voted money to the different

provinces to help them out of their difficulties during the five years the previous government was in office, but this arrangement was made in order that this work might be kept in the hands of the dominion government as a national emergency. If the matter had been considered from the point of view of the provincial authorities, there would have been no reason for parliament voting money for the prairie provinces any more than it would vote money for Ontario and Quebec, as suggested by the hon. member for Broadview. I think by the action he has taken the minister is departing from the intention of this act. I remember quite distinctly that this work was to be carried on under the dominion government as a national emergency. The money voted by parliament for this purpose was to be expended under federal authority, and I think the minister is departing from the intention of the act when he considers it advisable to hand it over to the provincial governments.

Mr. GARDINER: I probably did not make myself clear on that point. I am reminded by the remarks which have just been made of the fact that I did not really answer the question asked by the leader of the opposition (Mr. Bennett). The work is being carried on entirely under the supervision of the federal department. While the three men of whom I spoke have been asked to cooperate, the work is being supervised, before the expenditures are made and during the time the work is being done, by the Department of Agriculture at Ottawa.

Mr. BENNETT: There is a provision in the act which reads:

> The minister shall annually lay before parliament a report of all proceedings under this act for the preceding fiscal year.

I suppose the report for the year ended March 31 last has not yet been prepared. It is hardly to be expected that it would be prepared, but it may be ready before parliament prorogues.

Mr. GARDINER: It would not be possible to have a report yet because the claims are not all in.

Mr. FINN: Have the legislatures of the prairie provinces taken over the rivers and streams and vested them in the provinces, in contradistinction to the rights of riparian owners and the general rights of the public in connection therewith?

Mr. GARDINER: That is a rather moot question. It has never been decided exactly what the relationship of the provinces to the streams is since the taking over of the natural resources. The whole matter with regard to streams is under the same control in these provinces, or pretty much so, as elsewhere. Through that southern section of the three provinces, and more particularly in Saskatchewan and Manitoba, arrangements have to be entered into between this country and the United States with respect to the use made of streams for these purposes. That is all properly taken care of.

Mr. BENNETT: It is not quite correct to say that the rivers and streams in western Canada are in the same position as in other provinces.

Mr. GARDINER: Not exactly.

Mr. BENNETT: The Irrigation Act vested all waters in the crown in the right of the dominion, and whether they have been adequately transferred to the provinces has not yet been finally determined. In crown grants made by the crown in the right of the dominion there was a reservation to the crown of all waters, lakes, and areas covered by water, so that the property in the water is vested in the crown the same as precious minerals or metals, and the question of riparian owners is not one that arises at all.

Mr. FINN: What I have to say with respect to the answer given me by the Minister of Agriculture applies to the answer made by the leader of the opposition. He speaks of the crown, but the crown has a relationship to both the provinces and the dominion. In Nova Scotia, by the act of 1908, the legislature took over all rivers and streams, and this is within its rights. That is the very question that has been raised to-day in connection with Beauharnois. The premier of Quebec is reported to have said that so far as streams are concerned they are all within the province, and the leader of the opposition gave this opinion in this house at the last session in answer to a question asked by the hon. member for Winnipeg North Centre (Mr. Woodsworth). That hon. gentleman asked him whether or not Beauharnois should come under public ownership and the answer he gave was that the rivers and streams were in the province and therefore the only thing the government had to do with when he was prime minister was the issuing of licences for the export of power. The right hon. gentleman also volunteered the statement that while there could not be public ownership so far as rivers and streams were concerned, he regretted very much that Sir Herbert Holt, the president of the Royal Bank of Canada, was to-day in control of Beauharnois.

Sir GEORGE PERLEY: How much of this $750,000 was spent last year?

Mr. GARDINER: I cannot say exactly because the claims are not yet all in and the payments have not all been made, but the amount is approximately half a million.

Mr. BENNETT: And this $448,000 will complete payment for the projects undertaken last year?

Mr. GARDINER: This is continuous work; the projects are in 308, the next item.

Item agreed to.

Western conservation works—
Southern Alberta storage dam, Wild Horse, Alberta, $6,953.63.
Middle Creek reservoir, Govenlock, Saskatchewan, $11,368.69.
Dam construction at Adams lake, Govenlock, Saskatchewan, $7,500.
Construction of dams in the municipality of Edwards, Manitoba, $6,000.
Waskana reclamation project, municipality of Lajord, Saskatchewan, $7,300.
Val Marie irrigation project, Val Marie, Saskatchewan, $121,187.28.
Eastend irrigation project, Eastend, Saskatchewan, $63,080.
Payment to the Canada Land and Irrigation Company, Vauxhall, Alberta, $65,000.

Mr. BENNETT: In view of the great interest in this matter in the western provinces it would expedite business if the minister would explain each one of these projects and indicate what has been done, whether or not there are contracts outstanding and what these sums represent. I am particularly interested in the Canada land irrigation project and the one at Val Marie.

Mr. GARDINER: Very few of the projects started last year were completed. There were one or two in Manitoba, I believe, but I do not think there were any actually completed in Saskatchewan. Those in Saskatchewan are here on this list. The completed ones are largely in Manitoba, and there were very few of them.

Sir GEORGE PERLEY: These amounts are for completion.

Mr. GARDINER: They cover pretty well the actual cost in most cases. The southern Alberta storage dam, at Wild Horse, Alberta, is down in the southern part of the province in the ranching section and the purpose is to assist in supplying water for stock in that area. The Middle Creek reservoir at Govenlock, Saskatchewan, is a similar construction, just across the Alberta boundary line in the Cypress hills. The Adams lake dam is a similar construction in the ranching area. The construction of dams in the municipality of Edwards, Manitoba, is across the boundary line of the province of Saskatchewan and is intended to supply water to farmers in that vicinity. The Wascana reclamation project is southeast of the city of Regina, in the area where the waters divide as between those going north and those going south. There has been considerable difficulty there for quite a number of years in connection with drainage and the retaining of a water supply for farmers during a part of the year. The water supply presents difficulties at one time and drainage is a problem during another period. The work is in that connection. The Val Marie irrigation project goes down through the south of Swift Current near the United States boundary line; it is perhaps twelve miles or so from the boundary.

Mr. BENNETT: What river or stream does it affect?

Mr. GARDINER: The Frenchman.

Mr. MacNICOL: How many square miles would the Val Marie project cover?

Mr. GARDINER: The object of this project is to provide by irrigation for the production of a dependable supply of feed for the large surrounding ranching district supporting over 100,000 head of cattle alone. It is proposed to construct a dam across the Frenchman river and the reservoir would extend over some 1,200 acres of land and contain about 6,000 acre feet of water. This amount of water would be sufficient to irrigate 5,580 acres of land below the dam and possibly 600 acres which are partly flooded in the spring. The sum of $3,812.72 has already been spent on this project, and $83,730.78 committed in the form of contracts, with $37,456.50 estimated as the requirements to complete construction. This is the detailed information that has been compiled as a result of reports that have been received.

Mr. BENNETT: Was it a new reclamation under this scheme?

Mr. GARDINER: This is a new project. The next one, Eastend is an old project being resurrected. The Eastend project is somewhat similar to Val Marie, the only difference being that the former was at one time built and operated by an individual. It is now being enlarged upon and rebuilt. The object of both these, and more particularly the Val Marie one, is to have the lands that are irrigated divided up into plots of about forty acres. These plots will be taken as hay meadows by farmers and ranchers living in the surrounding area. Some of them contemplate driving their stock to these feeding lots during the winter months, and others intend to haul the feed from these locations

to wherever the stock is, depending upon the distance they are away. In this way it is hoped that some provision will be made for stock in an area to which, during the drought period, feed has had to be hauled.

Mr. PERLEY (Qu'Appelle): Could the minister give us a little more information with respect to the Wascana project, as to the amount of land that will be flooded and what arrangements are to be made with the owners of the lands that are affected?

Mr. GARDINER: I will read the note I have. The main purpose of this work is to reclaim lands which are now subject to periodical flooding by the spring floods. Five channels are being constructed and these will allow the flooded lands to be dyked and drained so that early cultural operations will be feasible. The sum of $7,500 has already been expended and the dominion government are committed to a further payment to the municipality of $7,300 to aid in completing the work. The payment that is being voted this year is to go largely to the municipality.

Mr. PERLEY (Qu'Appelle): I understand that the committee is considering a new project at Estevan. Could the minister give us some information with respect to that, the area to be covered, when the project is to be completed, and the estimated cost?

Mr. GARDINER: It is in the survey stage at the moment, but the project that is being surveyed is not at Estevan. A request was made last year for a dam across the ravine that extends northwest from Estevan, being a part of the Souris valley; and after the engineers went over the proposed project of last year they reported that they did not consider it feasible, largely because of the fact that the intention was to build a dam near the Canadian Pacific Railway bridge just west of Estevan and dam back the water for some twenty miles. The valley, as I know it, is about a mile to probably a mile and a half wide. The basin or floor of the valley is almost level. To build a dam at the bottom of it and flood it back for some miles would create a considerable area of water, but it is considered that, with the inflow that no doubt the valley would have, in all probability the evaporation over an area so large and flat as this would be so great that the project would not be a feasible one. So that the engineers have given consideration to an alternative project. It is one somewhat similar to the Eastend and Val Marie projects. They propose to put a dam at the end of a small lake somewhere between sixteen and twenty miles up the valley and raise the waters in this small lake, which will not necessitate the taking in of any considerable amount of new land round about. Then they have it in mind to put two smaller dams further down the valley with a view of retaining water in each of them. From there on down the project will be to a considerable extent an irrigation project, to produce a hay supply, in the same way that a hay supply is to be produced by means of the Val Marie project.

Mr. BENNETT: Is that the Souris river?

Mr. GARDINER: I am not certain whether it is the Souris river itself or a long run from it, but it is part of that valley.

Mr. PERLEY (Qu'Appelle): Has any estimate been made of the cost of that project?

Mr. GARDINER: The estimated cost, as far as investigations have gone, is about $50,000. It is a little less than half of the cost of the Val Marie project.

Mr. DONNELLY: Has the government under consideration any project either in the Pinto creek or Wood river or any district which is the centre of the dried out area in southern Saskatchewan?

Mr. GARDINER: In item 311, under proposed constructions, there is a proposal in connection with the Wood river at Coderre, which I think the hon. member for Wood Mountain (Mr. Donnelly) will know very well. Then, further south, it has been suggested that something should be undertaken at Willows, which is just west of Assiniboia. That is under consideration; no reports on it have been received from engineers. There is another project that has been proposed, near Wood Mountain; that too is in the same stage. There has been an application for it, and it is under consideration.

Mr. BENNETT: Would the minister give some explanation with respect to the Canada Land and Irrigation Company, Vauxhall? This company has an enormous investment in an enterprise which was originally a private project, an exploitation by those who were then exploiting western Canada; and the situation is acute, because no money has been returned to the shareholders, who are Englishmen, who bought the securities many years ago, about 1911 or 1912. Perhaps the minister will give us some explanation as to how that now stands, in view of the fact that it was a private enterprise; the federal government provided money for it, and the

province provided something. This item, I see, provides for an expenditure of $65,000; under what circumstances?

Mr. GARDINER: I will just read the note with regard to that. It covers what has taken place up to very recently. The Canada Land and Irrigation Company, at Vauxhall, Alberta, is operating in receivership. It is a company devoted to irrigating in all some thirty thousand acres of land in Alberta, but will have to cease operations unless financial aid is forthcoming both for repairs and to wipe out some of their indebtedness. The main canal of the project supplies water to a large number of ranchers and farmers representing an area of 300,000 acres of non-irrigated land and approximately 250 farms in the Vauxhall district representing 40,000 acres. The irrigable lands are entirely dependent on the continued operation of this project for stock and irrigation water.

Mr. BENNETT: Is that the water that comes from lake McGregor?

Mr. GARDINER: Yes, it comes through lake McGregor from a river farther north; it has about 110 miles of channel in order to bring it down there. Some of the $65,000 is required for replacement and maintenance of the existing system, and the balance, $20,000, for municipal taxes and repayments on a loan due for past repairs. If the company ceases operations it will leave the ranchers on 110 miles of canal and 250 irrigation farms without water. The works of this company represent an investment of approximately $15,000,000. The cost for the relief of some five hundred farmers thus affected, to say nothing of the cost of assisting to move them to other lands where irrigation water might be available, or to dry farming lands, would amount to very many times the $80,000 that is the estimated cost of this project.

That is the representation that has been made. The first request that was made last year on behalf of these people I think was for $150,000, including something like $30,000 to cover provincial taxes and charges and in the neighbourhood of $20,000 for municipal taxes. I understand that an order was prepared and brought in last year for the expenditure of the full amount, but that was reduced by the amount of the provincial taxes. Then another order in council was prepared which I think was under consideration at the time the government changed, which included the municipal taxes. When the present government gave consideration to the matter we did not consider it advisable to undertake payment of the municipal taxes. That amount was deleted, bringing the total to about $104,000. Then I had the manager of the company come to Ottawa and I went into the whole matter with him. I pointed out that there were some complaints from that area with regard to the overhead and the cost of managing the company, and that we noted that a considerable part of the money that was being requested was for the purpose of paying for that management. At first I insisted upon the whole cost of management being deleted, but after going into the matter more fully I came to the conclusion that there would be very little use in providing money to repair the work and thus assure the water supply of the farmers in the area that is being irrigated unless at the same time some provision was made for operating expenses, at least during a part of the season. So we estimated the cost of the works at somewhere in the neighbourhood of $60,000 and the cost of operation and repairs to local works at approximately $20,000, which would carry the works until the end of this season when we hope there will be a crop on which the farmers can realize. We have not provided for any operating expenses beyond that time. We have said to Mr. Hayes that we are providing the water largely because of the 360 farmers located along the waterway from the Bow river down to the actual works themselves and then, because of the necessity of the 250 farmers who are on the irrigated land being maintained somewhere, if not in the area where they now are, the government are prepared this year to put that amount of money into the project in order to maintain the water supply of these people not only for this year but for many years to come, provided sufficient money is obtained through the operation of these farms to pay the maintenance and management costs after the amount provided by the government has been expended. We are hopeful that this will be the result.

Mr. DOUGLAS: What is the difference between those two items, water development projects and western conservation works?

Mr. GARDINER: It would be hardly correct to say that all the money spent under item 308 will be under the Public Works Construction Act, but the greater part of it will be. I think the legislation is broad enough to make it possible to use some of the funds provided under the rehabilitation act for some of the work that is to be done under this second item.

Mr. DOUGLAS: I notice that most of the expenditures under item 308 are to be made through the municipalities, with the exception of the payment to this irrigation company. How will the money be spent under item 307?

Mr. GARDINER: It is hardly correct to say that these sums are being expended through the municipalities. I think there is only the municipality of Edwards and the municipalitiy where the Wascana work is being undertaken.

Mr. HEAPS: A few moments ago the minister referred to the fact that the cost of providing water for these farms would be a charge against the farms. Has the minister any idea that he could give the committee as to what would be the cost to those farmers who would be beneficiaries under this work?

Mr. GARDINER: The only cost that will be a charge against the farms is the cost of maintenance. That is a matter which perhaps I should have explained in the beginning. It is really the difference between doing this work from here and the way it would have to be done if it were carried on provincially. The provincial governments have irrigation acts which provide that the whole cost, including the cost of construction as well as the cost of maintenance, shall be a charge against the lands that benefit. Payments are made over a term of years, during which the capital cost is paid off. Last year in its wisdom the government apparently decided that those areas would not be in a position to undertake works of this kind on that basis, and the government of Canada undertook to pay the initial cost of construction. But there has been no undertaking to pay, and no provision made for, the cost of maintenance after the work is done. That is one reason why we considered it essential that we should have a working plan with the provinces in connection with these works. During their recent sessions the provinces have amended their acts in order to make them conform to the intention of the government and to make it possible for us to carry out some of these works. That is true of the province of Saskatchewan at least, and to a certain extent I think it is the case in the other provinces. So under their various acts the provinces will then arrange for the cost of maintenance to be made a charge against the lands themselves.

Mr. HEAPS: What is included in the cost of maintenance?

Mr. GARDINER: The maintenance of the ditches for irrigation purposes and the dam iteself. That is practically all.

Mr. HEAPS: I am thinking now of the capital cost, and the interest thereon.

Mr. GARDINER: That is being paid out of this amount.

Mr. HEAPS: There will be no charge against the farmers, then?

Mr. GARDINER: No, it will be a charge against the capital debt of the Dominion of Canada.

Mr. DONNELLY: Under item 307 I take it small dams for individual farms, as well as community dams, will be constructed. Can the minister give us any idea of what sum was spent in this way last year and how many of these dams have been built throughout the west?

Mr. GARDINER: I should like to pass this item before going on to anything else. That comes under item 307, which we have already passed.

Mr. DOUGLAS: That is the information I was asking for. Have these water development projects to do with small dams on individual farms and the western conservation works, No. 308, to do with large farms?

Mr. GARDINER: Yes, as I explained at the beginning, that has to do with small dams and dugouts.

Mr. DOUGLAS: On that basis how would the money be spent? Will it be spent by provincial or municipal authorities or by contract?

Mr. GARDINER: That work will be largely done by the farmer himself, or the farmer and his neighbours. The only payment the government makes in connection with it is three cents a yard for the earth moved in the case of dams in addition to the engineers' costs that we incur in giving them advice as to how to go about it. This is to cover the engineering services and three cents a yard for work of that kind.

Mr. DOUGLAS: I have come in contact with some of that work, and the parts I have seen have been very fine and the farmers are much pleased. But what about these other dams, say at Estevan; would that work be done by the municipal authorities or by a contractor?

Mr. GARDINER: As to the work at Estevan and Val Marie and Eastend,—that is if the Estevan work is ever undertaken; the Val Marie and Eastend work was let by contract to the lowest tenderer.

Mr. LEADER: I am not clear in regard to the last item in item 308:

Payment to the Canada Land and Irrigation Company, Vauxhall, Alberta, $65,000.

Do I understand this is a payment to a private concern?

Mr. GARDINER: Perhaps I should go a little more into detail in regard to what was mentioned by the leader of the opposition.

Mr. LEADER: If the minister will permit me a moment, it might save some time. My idea in bringing this up is that it seems a new departure. This work is undertaken by a private concern to furnish water for a great many farmers living outside that area. What assurance has the government that the private concern will not shut off this private supply of water at some future time?

Mr. GARDINER: To go over the whole story regarding this land and irrigation company would be rather a long matter. The fact is that it is not a new departure to give them money; the government of Canada on a number of occasions previously has paid money to this company, and the provincial government as well. The fact is that a group of British investors spent a large sum of money, estimated at some $15,000,000, in developing that particular area. They have come to the point where I think they are about ready to abandon the project and leave it where it is. The governments of Alberta and of Canada find themselves in this position: somewhere in the neighbourhood of six hundred farmers and their families are located along this waterway who depend absolutely on that stream for water. From time to time difficulty has arisen because of the likelihood of the company withdrawing. Representations have been made on each occasion and action has been taken by the government of the day, not to the extent that has been asked for but in a considerable way. On this occasion they asked for $150,000 to begin with, and it has been worked down to $80,000. We are paying that, not because we consider there is anything due to the company but because the government would have to do something to take care of these people, and probably this is as cheap a way as it could be done for the moment. What we think with regard to paying the money over to the company is simply this, that we are really paying it to Mr. Hayes who has been placed in charge of the works.

Mr. BENNETT: The receiver, isn't he?

Mr. GARDINER: Yes, as receiver, I think, with the consent of both provincial and federal governments, for a term of years. As a result of that arrangement we are paying the money to him and depending upon Mr. Hayes, from the experience we have had with him, to see that the money is properly expended and that the people get proper service as a result of the expenditure.

Mr. COLDWELL: I think I understand the point made by the hon. member for Portage la Prairie (Mr. Leader). There is considerable difficulty in carrying these private companies along; it involves expenditure every year. I was wondering if the minister had knowledge of the settlement that was made in Alberta by the Canadian Pacific Railway Company with the farmers of what I believe is known as the eastern development district. In that instance an investment of something like $17,000,000 was involved. The farmers in the area were obligated to the extent of some $5,000,000; a capital amount of $4,000,000 was in arrears and with accumulated interest it amounted to about $5,000,000. The farmers themselves got together and made a proposition to the Canadian Pacific, and the net result I believe is that the farmers have been relieved of their debt to the extent of about four and a half million dollars by the cash payment of one dollar, and the company is relieved of the obligation and necessity of applying to the provincial government—in fact I believe one of the last acts passed on the statute book by the late government of Alberta was one validating this particular agreement. The point I make is that here we have a large group of farmers in Alberta and a very large company which undertook a great development work which has proven more or less abortive financially, and they found it worth while to make a settlement with the people who were in their debt. Here we have the suggestion of paying an amount this year and probably an amount another year. If something like this has to be liquidated it seems to me the sooner it is liquidated the better, for the farmers as well as the company and the government of Canada. I bring that to the attention of the minister with a view to seeing whether something could not be learned from that particular agreement.

Mr. BENNETT: I am obliged to the minister for the explanation he has given with respect to this proposed expenditure. The real truth of the matter is that this company has made enormous expenditures and is insolvent. My recollection is that the receiver is in charge of the undertaking. The resident representative has had a very difficult time, and last year the government of Alberta

brought the matter to the attention of the federal government. The only concern we had in the matter is the concern that the minister has now expressed, concern for some six hundred people residing on irrigable and non-irrigable areas contiguous to this water. If the water is not maintained by someone the irrigable farms will become non-productive and the non-irrigable farmers will be deprived of the opportunity to provide water for their stock and for their farms. The water agreement under which they operated and the whole scheme of irrigation was a federal matter when it was launched. If the hon. member for Rosetown-Biggar (Mr. Coldwell) wants to read an interesting page of Canadian history and will review the exploitation of that area, the flotation of securities made in England and the representations as to what was to result from the efforts made, he will at least realize that all prejudiced people do not reside in one area, and that human nature in those days was not much different from what it is now. But during the war the federal government had to make a substantial contribution to that undertaking. Doctor Roche was minister at the time an appropriation was made, and it was found to be a very difficult matter. Every time the issue is the simple one, just as the minister pointed out: shall we save the people on these lands from complete disaster, or shall we make small expenditures to enable them to exist—because that is all it means, unless they can get some crop. They must have water in order even to exist, and the only way they can get water is through lake McGregor and a long canal, the main part of which is I believe about one hundred miles long.

Mr. GARDINER: One hundred and ten miles.

Mr. BENNETT: Yes. Whatever sum is necessary to save us from responsibility in connection with really providing for life for those on the area will be money that is well spent. The only reason I asked the question was to ascertain to what extent safeguards had been provided to ensure that the money would be used to accomplish the laudable purpose the minister has in mind, first, that of putting the ditches in such a state of repair as would enable the laying of water through laterals to the workable lands which are settled by some 250 irrigation settlers and, second, to make water available for stock. At times I am afraid in far off areas the water must be used by humans as well, but in such case it is first boiled. I am only asking that the minister make it clear that the excellent purpose he desires to effect shall be made certain by such safeguards as may be necessary to ensure that there shall be no failure to accomplish the purpose he has in mind.

I certainly believe there is no doubt that this had to be done. One does it reluctantly, but I see no way by which we can escape it, having regard to the whole story connected with the undertaking. It is a long story, and at the inception of it our position is not entirely free from blame. Those who are familiar with it must know that. At least three of the gentlemen connected with the initial exploitation and promotion have passed to the great beyond, and in view of that fact I shall content myself with not discussing the matter beyond saying that I do commend the minister for taking the steps which we would have had to take had we been in office. In any event the only question which gave us worry was as to how we might so safeguard the expenditures as to ensure beyond reasonable doubt that those affected should secure the water they desired to obtain.

Mr. FINN: The leader of the opposition made reference to a flotation of securities, and I should like to know where particulars of it may be found. Could he give that information?

Mr. BENNETT: The prospectus appeared in the London Times, but I am not quite sure whether it was in 1911 or prior to that. I am told it was before 1911, but the information may be looked up in the library. Securities were placed upon the market by the Grenfell firm in London, and the local interested parties were largely from western Canada. The unfortunate investor has not received anything for what my hon. friend calls the wages of money, and the unfortunate settler is now in the position where he must appeal to the government or find himself inhabiting an area which would be perfectly useless from the standpoint of agricultural value. I shall try to find the citation.

Mr. STEWART: One point has been troubling me, and it is this: The minister has said that a number of these works are ordinarily within the sphere of provincial activity. The dominion government is now stepping into the area and constructing works. Is there any definite agreement with the provinces that once the works are constructed they will be taken over and maintained in future by the provinces? If not, I fear we

shall find that the chickens will come home to roost. The contention will be that they are federal works and for all time must be maintained by the federal government. The other point is with reference to a possible liability for damages in connection with the diversion, the impounding or the retaining of water. What protection has the dominion against such liability?

Mr. GARDINER: Both those matters are dealt with by provincial legislation. Perhaps I did not make myself clear when I spoke a few moments ago. Taking conditions in Saskatchewan, with which I am more familiar —I administered the act at one time—may I say that under the irrigation act in Saskatchewan all safeguards are taken as a project proceeds.

Mr. BENNETT: The province followed the federal irrigation legislation.

Mr. GARDINER: Yes; it followed the original federal irrigation measure. The present provisions provide for taking in and marking out areas to be affected by irrigation or drainage schemes. All people owning the lands are consulted, and either by way of petition or otherwise a vote is taken to indicate the willingness or unwillingness of the people to enter upon a scheme. The general practice is to try to secure unanimous support of any scheme, although it is not essential to obtain unanimity. A provincial minister may make a final decision to the effect that there has been support sufficient to warrant proceeding. Expropriation and everything of that kind can then be carried out. So far as responsibility is concerned, the whole organization in connection with these small irrigation schemes is carried on under provincial legislation, and the responsibility for maintenance is placed on the individuals who enter into the scheme under the provincial act.

Mr. STEWART: That may be so in connection with any project undertaken by the province, but is the minister sure it applies to anything undertaken by the dominion?

Mr. GARDINER: Yes, when I was west two weeks ago I took special care to make sure of that. All the dominion does is this: We step into the picture to pay the original cost of the project, so that it does not become a levy against the lands. But all costs of maintenance remain. They are set up in the scheme and are charged against the lands so long as the irrigation exists. We are out of the picture after we have paid the cost of construction and our engineers turn it over to these organizations.

[Mr. Stewart.]

Mr. DOUGLAS: I have been marking on the map of Saskatchewan the places where the work is to be done, and I find that in the southwest corner, in Maple Creek constituency, there are four projects, all of which are needed. There is one near Moose Jaw and one near Regina. Unless the others mentioned by the minister are proceeded with it will mean that there will be a stretch of territory more than three hundred miles long and almost one hundred miles wide in which a condition of drought has existed and in which unless something is done to conserve the water, the possibility of raising sufficient crops to maintain a decent standard of living is remote. I should like to impress upon the minister the need of some work being done in districts such as that south of Radville, and in Bengough, Buffalo Gap and Willow Bunch.

Mr. BLACKMORE: I should like to express commendation of the government which held office last year for entering upon this work and passing the legislation. Also I should like to express commendation of the present minister and the attention he has given the matter. This kind of work is very worth while. The people in the area are a fine industrious type and I am sure that we shall be repaid for any efforts made in rehabilitating these farm lands.

Item agreed to.

Experimental Farms—

Buildings and improvements—honey extraction house, central experimental farm, $495.95.

Mr. MacNICOL: Is this item for the province of Ontario?

Mr. GARDINER: This is for a building in the central experimental farm at Ottawa.

Mr. STEWART: This is a small item and one would think that it would appear in the regular estimates. Why should this small item be in these special supplementary estimates?

Mr. GARDINER: It will be noticed that further along in the supplementaries is a program of work to be done mostly at the experimental farm. These are principally works provided in the proposals of last year. We are not carrying out all the proposals of last year; we are not carrying out the proposal for the erection of a very large building, but others are being constructed.

Mr. BENNETT: Did the whole building cost only this amount?

Mr. STEWART: This is a new building.

Mr. GARDINER: It is just a very small honey extraction building costing $495.

Mr. STEWART: I am just commenting on putting an item like this into a schedule of estimates said to be special supplementary estimates.

Mr. GARDINER: I am told that the building is incomplete. I was under the impression it was not yet started, but they tell me that it is under way.

Mr. STEWART: It could have been paid for out of the general vote.

Item agreed to.

Other projects—Prairie Farm Rehabilitation Act—rehabilitation assistance to provinces, $170,000; miscellaneous and contingencies, $132,000.

Sir GEORGE PERLEY: Will the minister give us a short explanation of this item?

Mr. GARDINER: This item has to do with the works already discussed, the projects already undertaken. The expenditures on the works previously discussed were much smaller than those to be undertaken under this item with the cooperation of the provinces. The first estimates that were brought down to me this year, having to do with these particular expenditures, showed what I considered to be too large a proportion for overhead. The reason for this was that we were attempting to set up a new organization for all these projects, which, as I said a few moments ago, would probably have to be discontinued at the end of four years. We have tried to devise some means of having these works administered under the supervision of the department in a manner that would be less costly in so far as overhead is concerned. I do not make that statement by way of criticism because I think any minister or any government which might be here for the time being would consider the exceedingly high cost of administration and try to remove some of it. In this connection what we are doing is to ask the provincial governments, which already have staffs set up in the provinces or are in the midst of having this done, to assist us in the distribution of grasses for seeding purposes, in the establishment of agricultural associations, in moving settlers from what might be called light land into areas of better land in order to avoid excessive relief costs in the future, and in having some of these lands seeded down in community pastures into which a water supply will be put so that the people round about will be able to get their feed and water supply without having to go long distances in the dry seasons. We are asking the provincial governments to give us a greater degree of assistance in carrying out this work. The greater part of this money will be spent on the work, only a comparatively small part being spent for assistance obtained from the provincial governments.

Mr. BENNETT: Under whose supervision will the money be spent?

Mr. GARDINER: Under the supervision of the dominion government.

Mr. COLDWELL: Will this include anything for soil surveys and so on? The minister stated that this vote would include something for the removal of people from light lands. During the last few years a number of people have settled on lands which are deficient in nitrates and phosphates and which in the future will present a problem to the western provinces. Is the federal government cooperating with the provincial governments in this connection? Does this appropriation contain anything for that purpose? Is there enough appropriated?

Mr. GARDINER: Soil research work is being carried on at the experimental farm at Swift Current. Last year a building was erected there in which this work is carried on. This would be carried on under the second part of the item, miscellaneous and contingencies.

Mr. STEWART: This item would seem to be similar to item 307 and I was just wondering why the two have been separated. They both are under the Prairie Farm Rehabilitation Act and it looks to me as though there might be something in the nature of overlapping or conflict.

Mr. GARDINER: The first group covers projects undertaken last year and carried on more or less to completion. The other projects are those that we are going on with under the continuing policy.

Mr. STEWART: I was wondering why they were not listed in the same manner as those undertaken last year and why they are being carried out through the provinces.

Mr. QUELCH: Would the assistance to be furnished to settlers to move out of light land areas consist only in the payment of part of the freight rates or would it include financial assistance?

Mr. GARDINER: This work is being carried on under provincial acts. Most of the provincial acts provide for taking people out of areas that have been found from experience to be too light to be properly inhabited by people carrying on farming operations. Through tax sales and otherwise, certain municipalities have come into possession of the greater part of such lands. There

might be one or two farmers who have been able to maintain themselves, perhaps in the centre of a particular area and the idea is to clear the area entirely of settlers and turn it into a community pasture into which a water supply would be put. Grass would be grown instead of grain. We believe that under the provincial legislation arrangements can be made to move these people from the lighter lands to better lands which may also be owned by the municipality and which are outside the particular area. We intend to ask the co-operation of the municipalities and the provinces in this work. There will be a certain expense in sending men to these areas to try to bring about this cooperation. In the case of mortgage companies holding mortgages on lands in such areas and perhaps owning lands outside the areas, we hope to bring about similar cooperation in order to get these people moved to other lands where they can start to make successful homes. This cooperation will be encouraged by the expenditure of this money and, in cooperation with the provinces and the municipalities, there will be an encouragement of the development of lands for community purposes.

Item agreed to.

Western conservation works—
Development of a gas well at Red Deer river, Atlee, Alberta, $8,000.
Wood river stock watering dams, Coderre, Saskatchewan, $7,500.
Berry Creek water storage project, Berry Creek, Alberta, $25,000.
Sundry projects, $105,531.09.

Sir GEORGE PERLEY: Could the minister give us a short explanation of these items, just as he did in connection with the others?

Mr. GARDINER: The gas well at Red Deer river is an experimental project. I understand that in certain sections of Alberta comparatively shallow wells, as gas wells go, can be dug to supply sufficient gas to carry on pumping operations for the furnishing of sufficient water for the stock in the surrounding area. An endeavour is being made at Atlee, on Red Deer river, to sink a well some 800 feet where they are convinced, from experience along the stream, that they can obtain a large supply of gas which they will use for the purpose of providing a water supply for the surrounding country. It is an experimental project.

Mr. BENNETT: I was curious to know to what extent this assistance would be given in connection with gas wells. The minister knows better than I that once you get it started in a certain way every man will want some assistance in the sinking of a gas well, and the selection of those to receive assistance would be very difficult. That is my point.

Mr. GARDINER: That was my own reaction when I first ran across the project. It is one of the projects under consideration last year but not actually started. I raised the same objection that the leader of the opposition has now stated, but I was convinced by argument, particularly of the committee of which the right hon. gentleman has spoken.

Mr. BENNETT: Did they recommend it?

Mr. GARDINER: Yes. I discussed it with them at the time and they were strongly of opinion that it was worth while spending the amount of money necessary for this one experiment. So far as I am concerned I intend to draw the line at this as an experiment. I do not think we should assist generally in the digging of gas wells for particular purposes.

Mr. BENNETT: Not that it might not at one time have been highly desirable, the dominion then owning the whole of the natural resources, to assert the rights of the crown and carry on development. That is another matter altogether. Is it a company or a private individual, or is the government doing the work itself?

Mr. GARDINER: The government is doing it itself.

Mr. BENNETT: Sinking a well at an expenditure of $8,000?

Mr. GARDINER: No, 800 feet, whatever the expenditure will be.

Mr. STEWART: What about the second item, $7,500?

Mr. GARDINER: That is a watering dam. I know the Coderre district fairly well and I have asked for a special investigation of this project before going on with the expenditure. The work had proceeded sufficiently far last year to warrant our asking for the money. Last year was probably an exceptional year. We had had four or five very dry years, and while it is possible that we may be able to get along during the greater part of the time without the expenditure of this money, I thought it wise to ask for the grant in view of the work already done.

Mr. STEWART: What about the next item, the water storage project?

Mr. GARDINER: Berry Creek is in the dry area outside the irrigated section. This

is another storage scheme to hold back water in order to assist the irrigation system and to supply water during midsummer. It would be of inestimable value to the live stock industry in the district and would eliminate the necessity of bringing in hundreds of thousands of tons of feed for relief purposes and moving thousands of head of cattle out of the district.

Mr. BENNETT: Where is Berry Creek?

Mr. GARDINER: It is on the edge of some of the irrigation districts.

Mr. QUELCH: It is in Acadia, in my district. Is it intended to subdivide any of these lands into smaller areas for feed purposes?

Mr. GARDINER: This is more a straight irrigation project, just on the edge to the north and east of the Brooks area. There is an existing irrigation system and this is to give a complete water supply over the season. I do not think this would lend itself to the same divisions as are anticipated in the other.

Mr. STIRLING: It is not a part of the Canadian Pacific eastern district?

Mr. GARDINER: No.

Mr. MacNICOL: By whom are the plans prepared and the surveys made?

Mr. GARDINER: By engineers, under the control of the department.

Mr. MacNICOL: Of the federal government?

Mr. GARDINER: Yes.

Sir GEORGE PERLEY: There is an item, "sundry projects." I take it that these two items, 310 and 311, are put in to cover everything that the minister has in mind to do under the Prairie Farm Rehabilitation Act during this season. Has he sufficient money to cover everything that he intends doing under that act during the current year?

Mr. GARDINER: The projects that are detailed here cover everything we contemplate doing under the act.

Sir GEORGE PERLEY: Items 310 and 311 taken together cover everything the minister intends to do during the current year?

Mr. GARDINER: All the items, from 307 to 311, except buildings at Ottawa.

Item agreed to.

Experimental Farms—Buildings and improvements—

Extension of botanical greenhouses for arboretum and botanical garden at central experimental farm, $4,528.60.

Replacement of director's residence, central experimental farm, $12,000.

Addition to fibre mill and plant, central experimental farm, $2,300.

Farm machinery building, including general work-room, laboratory space, etc., in connection with field husbandry central experimental farm, $60,697.

Erection of field laboratory, necessary repairs to existing buildings on property, erection of fencing, installation of telephones, repairs to road, and certain equipment at Kamloops, British Columbia, $7,000.

Sir GEORGE PERLEY: The minister might explain the item of $60,000 for farm machinery building, including general work-room and so on.

Mr. GARDINER: This building is not what is generally understood on a farm as merely an implement shed. It is intended not only to house the machinery but as a building in which to carry on experiments in connection with machinery and to facilitate work in regard to any changes that may be made, repairs and so on.

Sir GEORGE PERLEY: Is it a new building?

Mr. GARDINER: Yes.

Sir GEORGE PERLEY: Not yet started?

Mr. GARDINER: No.

Mr. CHURCH: This is an item with respect to the central experimental farm. I do not see the Minister of Finance in the chamber. I would ask him whether in his opinion this particular item might not stand over until next year, if we are to have any economy. The item includes an amount for replacement of the director's residence at the central experimental farm. The budget is not down yet and these items are all charged to income. The minister has his main estimates in which provision is made for the farm, and here he is asking us to pass an elaborate item for buildings and improvements, extension of botanical greenhouses, replacement of director's residence, farm machinery building and all the rest of it. Where is all this going to end in this economy year when the government is sure to have a huge deficit? When aid for the industrial provinces was under consideration the Minister of Finance wanted to know where the money was to come from. Money does not come like the dew from heaven. These items are chargeable to income, we are told, and in view of the deficit for which provision will have to be made we are sure to have an increase in income tax. I hope not, as the two central provinces cannot stand such an increase.

I objected a moment or two ago to this grant to Saskatchewan. I object now on behalf of the province of Ontario to an appropriation for these experimental farm expenditures. The business man to-day is taxed to death, and if any more burdens are to be put upon him I do not know what will happen. The minister is only a new minister, and if he would say "no" to some of his officials the effect might be beneficial. There are many public buildings and residences more urgently needed; a residence and other improvements on this farm could well wait until next year. The committee is asked to provide $12,000 to replace a director's residence, while the supreme court is located in a storehouse or stable and not a cent is available for housing. Surely this item could be reduced or held over for twelve months to give the country a chance to balance its budget. It is just such comparatively small items as this $86,000 which will help with others to make up a deficit for the year. I do not know the views of other members from Ontario; but wait until they see the income tax boosted to take care of all these extravagant items.

Item agreed to.

Brandon winter fair and live stock association building—repairs and alterations, $25,000.

Sir GEORGE PERLEY: This item, it seems to me, requires explanation. What is the necessity for this building?

Mr. GARDINER: All across Canada we have carried out, by different governments of Canada, a policy under which fair boards have received assistance for the erection of their buildings. It has been a three-way program: the dominion government has paid one-third, the provincial government one-third, and the municipality the other third. The Brandon people have never had any assistance in connection with the erection of these buildings.

Sir GEORGE PERLEY: They have never had any assistance before?

Mr. GARDINER: No. They have spent $200,000 in putting up buildings at Brandon. The roof of this building is in very bad shape, and we are putting in this item this year to provide for a roof.

Item agreed to.

DEPARTMENT OF FISHERIES

Other projects—to aid, in cooperation with provincial governments concerned, in reestablishment of needy fishermen, $300,000.

Mr. NEILL: Would the minister give some explanation of this item?

[Mr. Church.]

Hon. J. E. MICHAUD (Minister of Fisheries): The item provides for an amount of $300,000 to aid, in cooperation with provincial governments concerned, in the reestablishment of needy fishermen. The intention of the government is to use the money in cooperation with provincial governments, supplementing whatever amounts the provinces may think necessary, to reestablish fishermen who, we understand, in the present year or during the last few years have been unable to gain from their occupation the revenue necessary for their subsistence and the support of their families.

Mr. VENIOT: Under this item may I ask the Minister of Fisheries (Mr. Michaud), in the absence of the Minister of Finance (Mr. Dunning), to draw to the attention of the latter the remarks I am about to make. I wish to refer to the act passed in 1935 placing fishermen in the same category as farmers in respect to borrowing money, for the purpose of constructing new vessels and repairing old ones, and to some extent, I think, obtaining fishing gear. Last year I drew the attention of the then government to the necessity of something being done along these lines. When the act came before the house in the last days of the session I was unavoidably absent. Had I been present I should have been able, I believe, to point out to the then government that the act in the form submitted to the house would not be effective in bringing about the result which was intended. The intentions were good, but the act could not be carried out. For instance, under it you cannot borrow money for, say the construction of new vessels except by giving a mortgage upon the real estate of the borrower. That does not help the general run of fishermen; ninety per cent of them cannot avail themselves of the act. Having a little real estate, and while they are engaged in fishing, their relatives at home being at some period of the year working on their farm properties, these fishermen feel that if they give a mortgage on their real estate, and their vessel is lost, the real estate would have to go and they would lose everything.

If the act were amended to provide for taking a bill of sale or a chattel mortgage upon the vessel, and the vessel itself, being new, were insured in a marine insurance company, in case of loss the government would receive the insurance and thus have money to loan back again to the fisherman who met with this disaster, and the money would go on being used from year to year in that way. My suggestion is that the act be amended so as to permit or oblige the fisherman to

give a chattel mortgage or bill of sale to the federal government on a vessel to be constructed under this act or under aid from the government. If it were found difficult to insure these vessels under marine insurance, the government would be in a position to require the companies to adopt some plan by which this insurance could be effected. Some difficulty arose two years ago in connection with insuring farm property. When a farmer borrowed money under the old act he had to insure the property up to at least the amount of the sum borrowed. Some of the insurance companies, the moment that he was in a position to borrow money from the government, concelled the insurance they had. I brought that matter two years ago to the attention of the finance department, and the then minister, Mr. Rhodes, undertook to make arrangements with the various insurance companies whereby, if that practice prevailed, it should cease. If the government can take means to see that the farmer is properly protected, the same thing can be done by way of aid to the fisherman, if it should be found difficult to obtain marine insurance. I would therefore request that the Minister of Fisheries draw the attention of the Minister of Finance to this matter and see whether some amendment cannot be adopted by which the act of 1935 will be made more workable.

The reason I stress that point is this: Outside one county in Nova Scotia, I represent the county in which there is the largest fishing fleet in the maritime provinces. To-day from 275 to 325 of a fleet leave our coasts on a Monday morning and return on the following Saturday night after spending the whole week fishing. Owing to the depressed condition of the codfish market during the last four or five years, particularly during the last two years and more especially since the imposition of sanctions against Italy completely shut off our market in that country for salt dried cod, the owners and crews of these vessels have not earned enough to keep the boats in repair. This year quite a number of these vessels will remain at the docks and will not be put to sea. It may be that during the last four or five years they have not been kept in repair and have become unseaworthy, while others need to be replaced by new vessels. Under this act that cannot be done, for the reasons I have already mentioned.

I believe the government should come to the assistance of these fishermen just as assistance has been given to farmers generally throughout the country. I heartily approve and support the giving of assistance to farmers; I think this will work out fairly well, with a few slight changes, but if the government do not come to the aid of the fishermen then what is perhaps the most important industry in the maritime provinces will gradually disappear and many of our fishermen will have to give up their calling and look to the government for direct relief. It would pay the government to spend money in this way instead of giving direct relief to the fishermen. They do not want relief; they want an opportunity to earn a living, as they have done in the past. They risk their lives on the deep sea in pursuit of their calling. Their industry, in common with other industries, has been hit by the depression, and they are not able to carry on as they have done in the past. This afternoon I listened with a great deal of interest to all that was said in support of the relief which is to be given in the stricken areas of the prairie provinces. I hold up both hands in support of what has been done in the past and what is intended for the future. At the same time, however, we have misery and distress in the maritimes. What wheat is to our western farmers the fishing industry is to us in the maritimes, and we have a perfect right to expect from governments, both provincial and federal, that aid to which we are entitled in order to enable our people to carry on until this depression passes by. I am glad that by means of this vote a step has been taken in the direction of doing something for our fishermen. I consider the amount fairly small, but I approve the principle of doing something, through a vote of parliament, to come to the aid of our men.

Let me say to the Minister of Fisheries, however, that in whatever arrangements are made with the provincial government he and his department should not lose any of the supervision which should be retained over the expenditure of the money. I contend that if we give money to the provincial governments in order to aid the fishermen the federal Department of Fisheries should have supervision over the expenditure of the money. I think some officials, either from Ottawa or from outside, should be appointed to see that all arrangements for the distribution and expenditure of this money in each of the maritime provinces, and in fact in any province where this money may be expended, are carried out properly. I hope the suggestions I have made to the minister concerning loans to fishermen for the construction and rehabilitation of vessels will be taken under serious consideration.

Mr. CHURCH: I have no objection to this particular amount of $300,000 which is to be

spent, in cooperation with the provinces, for the assistance of needy fishermen. Last session there was introduced by the late government a fisherman's protection bill which was a step in the direction of giving protection to these needy men so that they would not lose their homes, nets, boats and other property; it was an extension of the farm loan principle to the fisheries of this country. I contended then, as I contend now, however, that this protection should be extended to fishermen in all the provinces to the head of the lakes instead of just to those in the maritime provinces. I say that it should extend to the fishermen on the great lakes.

To-day we are giving protection to both farmers and fishermen, and quite rightly so. I agree with everything that has been said by the former Postmaster General (Mr. Veniot) as to the situation of these poor people, both in the maritime provinces and on the great lakes. They are suffering many hardships to-day, but since the government have given protection to farmers and fishermen I want to ask them this question: Are you or are you not going to extend this same principle of protection to the industrial workers of this country, who are losing their homes through foreclosure and who are being put out on the street? These are skilled mechanics, artisans, carpenters, bricklayers and that class of people, who make up fifty-three per cent of the workers of the dominion. Are you going to extend this principle of protection to all the people all the time and not some of the people some of the time? The Minister of Labour said he would study that question.

The CHAIRMAN: I regret to have to inform the hon. member that he is not speaking to the item under discussion. He is entirely out of order and must confine his remarks to the item before the committee.

Mr. CHURCH: I accept your ruling, Mr. Chairman, but I could quote precedents from Redlich, May and all the authorities to show that it is quite in order to make protection comparisons and contrasts in connection with a vote. But although I am quite in order I will not argue the point with you, Mr. Chairman, because I have found you a pretty fair chairman. I simply ask this government under this vote to do its duty towards all those in need, whether they be fishermen, farmers or industrial workers. Why make a football of the needy industrial workers while you give relief to fishermen and farmers? When will some vote appear in the supplementary estimates making a grant in behalf of the industrial workers? There is nothing at all in the main estimates; not one dollar is voted for the needy industrial worker. I have no objection to this vote. I hope it will pass, but I think we should have some statement of policy on behalf of the government as to whether or not they are going to extend this vote or to do anything for these industrial workers.

The CHAIRMAN: I do not like to interrupt the hon. member, but he must discuss the item under consideration. At present he is entirely out of order, as I think he well knows, so I would ask him to confine himself to the subject under discussion.

Mr. CHURCH: With all due respect, Mr. Chairman, item 314 says "to aid." What does "to aid" mean?

To aid, in cooperation with provincial governments concerned, in reestablishment of needy fishermen.

That is a protectionist statement and vote. I know the rules. The discussion is relevant. You must believe in protection yourself, sometimes, Mr. Chairman. This is advanced protection, something never done before by this parliament. These matters come under property and civil rights and are in the jurisdiction of the provinces. This relief is going beyond that; this goes much further than the relief measures; this is going to give these people something in addition. No doubt needy fishermen need some new equipment, boats and that kind of thing, as set out in the bill before parliament last session. I did not object to that measure, but I think the government should now come along with relief for the needy industrialists who have been knocking at the door of parliament. They are on relief; all they can get is a hand-out of a few loaves of bread. They are entitled to the very same protection as are other workers. I have expressed that opinion before and I am going to express it at every opportunity I get because I believe that fifty per cent of the workers of this country are entitled to some form of protection the same as are those engaged in fisheries and agriculture. We have protection for some and not for others; if you are going to protect some people who are needy let us have this protection for all the people of Canada all the time who are in need and losing their houses, their businesses and all that kind of thing.

Mr. HANSON: I want to associate myself with the hon. member for Gloucester (Mr. Veniot) when he describes the fishermen's griefs and also the inequity of the bill passed last year in connection with assistance to

fishermen in building their boats. Especially I should like to call the attention of the minister to the recommendation which he has received from the Pacific coast, from the deep sea fishermen there. The act passed last year allowed each fisherman only $1,000. In order to get that they had to mortgage their boats and real estate. But for the deep sea fishermen on the Pacific coast it is impossible to do anything with $1,000. Their boats in the first place cost all the way from $5,000 to $20,000, some up to $40,000 and $50,000. The fishing industry out there is the back-bone of business on the British Columbia coast. For instance, the port I represent, Prince Rupert, brings in each year five or six or seven million pounds of halibut. This fishing is all done in deep waters outside the coastal areas. A loan of $1,000 to build boats of that kind is no assistance at all. Representation has been made to the government and to the minister that this amount should be raised, and there is no doubt in my mind that this could be done for the fishermen the same as it has been done in this housing scheme. The fisherman is required to give security on his boat or his real estate, and I do not see why the department should not extend to the fishermen the same privileges as they are doing under the housing scheme which in my opinion is a good idea and should be extended to everybody. We hear this plea not only this afternoon but year after year. I say, give the fishermen all the assistance that is coming to them. These men are the back-bone of the country and must be given the assistance they need. The farmers are provided for; it is not right to forget the other primary industries. I urge the minister to give his best consideration to the representation he has received from the deep sea fishermen. I know some consideration is required by the shore fishermen, but they have been getting help, while the deep sea fleet on the Pacific coast has had very little, if any consideration.

Mr. FINN: At an earlier stage of this session I complimented the Minister of Fisheries upon having come to the province of Nova Scotia to look into the needs and the distress of our people there in connection with the fishing industry. I also complimented the Minister of Railways and Marine upon his visit to us, and to him we look for future results. But to-day, when I look at the estimates brought down by the Minister of Fisheries I confess that I am absolutely disappointed. I thought of the fishing industry along the coast of Nova Scotia and along the shores of the great province of New Brunswick, to which the former Postmaster General (Mr. Veniot) has referred, an industry which is so hazardous in contradistinction to the fishing industry on the Pacific ocean, for on the Pacific they have the lovely sunshine and the smooth waters as against the terrific gales, the heavy seas and the awful chances taken by our fishermen on the Atlantic. If hon. members of this committee will look through the newspapers during the last month they will find that some thirty-five fishermen along the coast of Nova Scotia lost their lives in trying to pursue their industry in order that they might have a bite to eat in their homes for their children and themselves.

To-day the fisherman sets his nets or his traps on that coast, and what becomes of them? He looks out from his doorway on a rock-ribbed coast, and finds that these things with which he has to earn his livelihood are absolutely gone. We have had here this afternoon the estimates in reference to our middle west, the provinces of Manitoba, Saskatchewan and Alberta. To these votes I take no exception. When provision is made by the minister for agricultural development and the removal of people from one set of lands to another in order that they may make a livelihood, no objection is raised by us. But, Mr. Chairman, there is only one of two places on which the fisherman can plant his foot; he can plant it either on the granite rock or in the Atlantic ocean. I would ask the Minister of Fisheries if he is at liberty to say what agreement he has entered into with the government of the province of Nova Scotia from which I come. As to the other provinces, hon. gentlemen here can ask that question for themselves. I come from the county of Halifax which extends along the coast from Ecum Secum to Hubbard's cove, 200 miles, and the people along that shore depend absolutely for their living, the maintenance of their families and the education of their children—and I was going to say some amusement, but I am afraid they get little of that—upon the fisheries. Along that coast, and particularly on the westerly side of Halifax harbour to Shad bay and the various districts as far as Hubbard's cove, the children have had to remain in bed to keep warm because their parents had not money to buy coal—and there are only granite rocks; there are no trees to cut down to give them warmth—let alone shoes for their children to wear to school. I support the government of the present Prime Minister (Mr. Mackenzie King), and in that

government I support the Minister of Fisheries, but when I see the miniature estimate brought down to help the fisheries I am not pleased. Undoubtedly the vote in the estimates is to cover expenditures in all provinces where fishing is an industry. I speak my mind because I thought that after the visit of the Minister of Fisheries to the maritime provinces there would have been an opportunity to discuss with him, this great problem and the attitude of the government thereon. I should have thought the opportunity would be given before the estimate was placed before the committee.

Already I have pointed out, in a communication addressed to the government, that I believe this year a bonus should be given to fishermen, not only to those in Nova Scotia but to those in all provinces affected. Other provinces, however, except in a sympathetic way, do not come within my purview. I must repeat that the vote of $300,000 for needy fishermen in all the provinces where fisheries are established is a useless sum, and cannot be effective. I was going to use a word which, though perhaps not unparliamentary, would have been harsh, and I have no desire to use harsh language, even when replying to the leader of the opposition, for whom I have great respect.

Without any desire to embarrass the Minister of Fisheries but rather to help him I should like to know whether this is the final vote for needy fishermen throughout Canada. If the amount is divided it will be found that the needy fishermen in Nova Scotia cannot exist upon the amount which would go to them. I may be wrong, but it is my impression that in the Canadian west we have the wheat board and the wheat exchange. The price of wheat is fixed, and the government pays the difference between the market price and the price which is fixed. On the other hand the fisherman must go his weary way upon the seas. He receives nothing from anybody, and he must sell for two cents per pound fish which is sold in stores for fifteen or sixteen cents per pound. Who receives the profit? The fishermen and the farmers are the backbone of Canada, and although the fish in the sea cannot be seen, as is the wheat grown on the western prairies, that is no reason why the fish should be forgotten. I can see no sound reason why a supplementary vote, one which would meet the requirements of fishermen, should not be brought down. The minister could stand behind it. These are days when general relief measures are necessary, but only the fishermen who go to sea, many of whom are going out for the last time, know the hardships of working night and day in cold weather, away from their families and their home districts.

These are the conditions which have caused me to speak forcefully this afternoon. I have no desire to embarrass the Minister of Fisheries, because this is the first year he has held office as minister of that department, but I believe it my duty to draw to his attention the needs and requirements of fishermen. Before the vote is passed I suggest some person or persons should be sent to find out the needs of the fishermen, how they live and what agreements have been entered into with the provincial governments. So far as my province is concerned I say that they should find out what agreement has been entered into with the government of the Hon. Angus L. Macdonald, Premier of Nova Scotia. Until that information is forthcoming I suggest that the minister should allow the item to stand to permit personal conferences with him, and he should be assured that before the item appears in the estimates careful study has been given to the whole matter, and that there is an understanding of conditions existing.

The hon. member for Gloucester spoke of legislation passed in 1935, and although I have tried to find out, I must say that I do not know to which particular act he refers. There is one which has reference to fisheries, another referring to relief and a third respecting people receiving titles, but I cannot see anything applying to fishermen.

At six o'clock the Speaker resumed the chair and the house took recess.

## After Recess

The house resumed at eight o'clock.

### COPYRIGHT ACT

On the order:

Resuming the adjourned debate on the motion of Mr. Esling for the second reading of Bill No. 7, an act to amend the Copyright Amendment Act, 1931.

Hon. FERNAND RINFRET (Secretary of State): Mr. Speaker, I notice the sponsor of this bill is in his place and perhaps he would consent to drop the bill due to the fact that a government bill covers all these points.

Mr. W. K. ESLING (Kootenay West): I am quite willing.

Bill withdrawn.

### FISHERIES ACT AMENDMENT

Mr. THOMAS REID (New Westminster) moved the second reading of Bill No. 20, to amend the Fisheries Act, 1932.

Mr. BENNETT: Explain.

Mr. REID: Mr. Speaker, at the outset, may I say that the bill which I am introducing to the house is practically the same bill as was introduced last year. As this is almost a new house as far as members are concerned, perhaps it might be well if I stated briefly the objects of this bill. I shall endeavour to be as brief as possible, realizing, however, that some explanation is necessary. The proposed bill deals particularly with the salmon industry as related to the Fraser river. The Fraser river flows into the gulf of Georgia and its fresh waters carry out quite a few miles into the gulf. From confederation to 1933 the gulf of Georgia, the estuary of the Fraser river, has been fished entirely by those using gill nets.

So that hon. members may have a better idea as to what the dispute is about, I should explain that two methods are used principally in fishing for salmon in British Columbia. One method is the gill net operated by a fisherman, sometimes assisted by a helper but mostly working alone from his boat. The gill net is some 1,200 feet long by thirty feet deep. I am using the measurement of feet to describe these nets although the term "fathom" is used in the Fisheries Act.. I believe the expression "feet" will be more easily understood by the members. From confederation to 1933 only gill netters were permitted to catch fish in this area.

The other method of fishing is by seine nets. The seine boats carry a crew of from seven to nine men who go out into the open waters or clear salt waters when a school of fish is sighted, and may I say that a school of salmon is very easily located by the numerous sea-gulls and other birds hovering round. When a school of fish is sighted these seine boats drop their nets which measure 1,200 feet by some seventy-three feet, as against the thirty foot depth of the gill nets. They circle the school of salmon and then pull the net tightly together at the bottom with cords when it comes up like a purse. That is why they are called purse seines. The catch of fish made at one set by these nets is almost unbelievable. They have been known to pick up as many as 10,000 salmon at one lift. In fishing for herring they have been known to bring up as many as twenty-six tons at one time. Hon. members will readily understand the havoc wrought in a school of salmon by this type of fishing.

For the information of hon. members, may I point out that the salmon head through the straits of Juan de Fuca coming up from the southern Pacific ocean. They head also into the rivers of the Pacific coast, but principally into the Fraser river. As I pointed out, seine fishing has been permitted in other areas, but this area was exclusive to gill netters from confederation to 1933. In 1922 a commission, consisting of many hon. members of parliament, some of whom are still in the house, was appointed to go to British Columbia to investigate the whole industry. This commission reported that in all areas where gill net fishermen could operate, seine boats should be prohibited entirely. It was felt that if seine fishing were allowed in certain areas the fishing industry would be depleted, due to the scooping up in large numbers of all varieties of fish, including immature fish. The mesh of the seine net is only three and one-quarter inches and when it is pulled tight, everything encircled within it is brought up.

Mr. BENNETT: They put some back into the sea.

Mr. REID: No, sir. I shall deal with that in a little while. As interjected by the leader of the opposition (Mr. Bennett), it is claimed that some fish are put back into the sea. This is the claim of the cannery men, the principal owners of the seine boats, and the seiners themselves. I have letters stating that immature fish and fish out of season have been sold in various Pacific coast cities after having been caught in these seine nets.

In 1933, when the house was in session, an order in council was passed permitting seine boats to go into this special area. This was done even though there was a standing fisheries committee. These seine netters had been besieging every government for many years to allow them to enter this area to fish. Contrary to the statement of the deputy minister of fisheries and others, seine boats are ninety per cent owned and controlled by the canning interests. They are really mobile traps because they can fish one area and then move on into another, and this is what has been taking place. The very day this order in council was passed I received from the acting Minister of Fisheries a letter, a copy of which I have in my hand, stating that this matter would be considered. This statement was made in that letter even though he or some one had signed the order in council that very day allowing seine boats to enter this area.

Mr. Speaker, at this point may I say I am particularly pleased at the appointment of a Minister of Fisheries. In 1930 there was a minister of fisheries and at that time I expressed my thanks. I was sorry to see the then Minister of Fisheries transferred, but from then until the elections we have had only an acting Minister of Fisheries. As

the first acting Minister of Fisheries, (Mr. Duranleau), pointed out to me, there was no use in his interesting himself in the fishing industry as he was only the acting minister. He left everything to the officials of the department. I am glad that a Minister of Fisheries has been appointed now because the fishing industry is one of the important industries of Canada.

I should like to direct attention to the fact that the value of the production of this industry has been going down from year to year. I shall not weary the house with figures, but in 1929 the value of the production of this industry was $53,518,521, the value of the British Columbia production being $23,930,602. In 1934-35 the production dropped to a total value of $34,121,941, the production in British Columbia having dropped to $15,334,335.

Mr. BENNETT: Was the first year 1929?

Mr. REID: Yes.

Mr. BENNETT: Why not take a year comparable with 1935?

Mr. REID: What year does the right hon. gentleman suggest?

Mr. BENNETT: Either 1932 or 1931.

Mr. REID: In 1930 the total value was $47,804,216; in 1933-34 it was $27,558,053. If one takes the figures for successive years, it will be found that the total valuation drops from year to year. The increase in 1933 is due to the fact that there was an extraordinary run of certain variety of fish in that year. If I had the time to go into the figures, I could show a drop in quantity and in value from year to year. Salmon fishing is the most important fishing industry in British Columbia. Out of a total of production last year amounting to $15,334,335, the value of the salmon industry was $12,351,641. It is practically the greatest industry we have in British Columbia.

Mr. BENNETT: Except lumbering and mining.

Mr. REID: I was speaking particularly of this variety of fish as against others. In 1933 there was invested in vessels practically $25,000,000 and in canneries $16,000,000, or a total of $41,000,000, and in 1934-35 that total was over $43,000,000. In 1933 there were employed 65,391 persons and in 1934-35 that number had increased to 68,634. The total number of those employed in the industry including those on shore was last year 82,372. The number of those engaged in fishing had increased, for the reason no doubt that many who had prior to that time been unemployed went into the fishing business in an effort to obtain a livelihood. This, I believe, shows the importance of the industry.

The dispute in question affects the livelihood of some 2,000 fishermen, and I have already pointed out that this area had been fished exclusively by gill nets. With reference to orders in council, the 1922 commission recommended that adequate notice should be given before the passing of any orders in council, and in this connection I would direct the attention of the house to a matter which I consider serious. We seem to be drifting into this position: We pass the nucleus of a law and then allow the minister or his department to issue large booklets of regulations which practically change the whole act. I hold in my hand the latest orders in council passed this year and together they are almost as copious as the act itself. They were passed without any information having been previously given out, although the statement is made that the matter had been discussed with the industry. Here we have orders in council passed almost as bulky as the act itself, and this done practically without the sanction of parliament. I wish to call the minister's attention to a particular clause, and I would ask the house whether it is not something unprecedented as far as orders in council are concerned. I am referring to the regulations having to do with the inspection of canned salmon.

Mr. MICHAUD: The documents to which the hon. gentleman is referring include regulations as well as orders in council.

Mr. REID: Perhaps they do, but wait until you hear this one.

Mr. BENNETT: The order in council is passed to validate the regulations.

Mr. REID: The documents I have before me include orders in council and regulations; I say that so that the minister and I shall be in agreement. Regulations have been passed in connection with canned salmon, for both export and import. In connection with canned salmon coming into Canada, this is what section 32 (b) says:

> All shipments of canned salmon imported for sale in Canada shall enter through a British Columbia port only.

Can the house imagine a provision that all potatoes entering Canada shall come in through Prince Edward Island or Nova Scotia, or that all strawberries shall enter through Ontario? I do not know whether the minister has seen this provision, but it seems to me—

Mr. BENNETT: Will the hon. gentleman be good enough to read that again.

Mr. REID:

32(b). All shipments of canned salmon imported for sale in Canada shall enter through a British Columbia port only.

Mr. BENNETT: It is not worth the paper it is written on.

Mr. REID: As a layman, I say the same, and I doubt whether it was called to the attention of the minister. But it shows what is happening to-day. Regulations are drawn up and if they are passed while the house is sitting no minister has time to look at them; naturally the minister takes the word of the deputy or of the departmental officials. And this is just a sample of what we have been getting. It is preposterous and I hope the minister will look carefully into it. I hold that it had been the policy of the Liberal government that no purse seine fishing should be allowed in the area conserved. The commission that sat in 1922 went into the matter thoroughly and submitted its findings, which were adopted by the house. I could put on the record statements to show that an assurance was practically given the fishermen by the present Prime Minister last year that something would be done to conform with the recommendations of the report of the commission that investigated the matter in 1922. I think I could say there was almost a promise that this would be done. The seines were first allowed in on the argument that the question was one of quality. It was said that as United States fishermen were fishing with seine boats and were also using traps, the fish, which the acting minister had been told were out in this area, deteriorated, when they crossed into Canadian waters. Well, I could read affidavit after affidavit from men who have fished there for twenty-five or thirty years, to the effect that in all their experience over the past thirty years there was a greater catch of salmon from the area by gill nets. As to the question of quality, the waters of the Fraser river flow out many miles, and any one crossing either by boat or by aeroplane can see the line of demarcation where the salt water meets the fresh water of the Fraser river. The argument in regard to quality is an erroneous one. For instance, in 1934 the area was closed for two weeks and the supervisor informed the public and the fishermen that the fish at that time were not in a fit state to be canned; that they had so deteriorated. But then he allowed the area to be opened up again and fishing took place by both seine and gill nets and the fish caught were canned.

Mr. MICHAUD: Did he intimate that the closing for twelve days was on account of quality?

Mr. REID: If the closing of the area had anything to do with the question of quality he would not have allowed fishing two weeks after the fish had had time to deteriorate still more. I suggest to the minister that it is not always a question of locality; it is very often a question of time. I do not know whether the deputy minister has ever had the fish timed to see how long it takes them to come from the international boundary to the Fraser river. At any rate, the argument was that the seine boats should be allowed to catch the fish in this area, because, if the fish were allowed to come up they would be in such bad condition as to ruin the good name of our sockeye. And here I might point out the late run of sockeye is not exactly the same as the early, and the inspection act, in my opinion at any rate, was introduced primarily with the idea of allowing the seine boats to get into this area, because the canners argued that it was a question of quality and they wanted to take the fish early so as to get a first-class product; at least so they stated. When the canners in the United States can the same variety, the late run of sockeye, they market the fish not as sockeye salmon but as "reds," because the late run of sockeye has a red skin and the belly is white, being different from the early run of sockeye which made the name of Fraser river, British Columbia, famous. I say this in all seriousness to the minister: If notice is not taken of this the canners, by canning this late run of sockeye and labelling it and selling it in the markets of the world as No. 1 sockeye, will do more damage to the good name of sockeye than anything else I know of. I ask that he take particular note of this and investigate to see whether what I say is not correct, and also that the United States, in putting up the same fish, label it as "reds," not as sockeye.

Mr. BENNETT: Would section 98 apply?

Mr. REID: I do not know, of course, but I think section 98 would apply to some of the arguments put up by certain of the canners. They catch immature fish and destroy it, and I can support my assertions with numerous letters. I also have before me the argument advanced by the United States. In a letter which I received last year from the department of fisheries, Seattle, Washington, it is stated, "We have ruled purse seines out of the latter district and off the

coast of Washington within our jurisdiction to prevent the catching of immature fish." I cite that to show that United States interests have at last recognized that the seines are destructive in that they catch immature fish as well as all other varieties. As I pointed out, the size of the mesh is only three and one-quarter inches to begin with, and when pulled tight it is not over one and a half inches and becomes virtually a trap. I wonder whether any members of the house have seen the fish being taken from the seines. At one period last year they had so many fish, caught by seines, lying on the wharves, that when the canneryman got to the bottom of the seine, the flesh of the fish on the bottom fell away from the bones; they were as bad as that. Some say that fish caught by seines are of better quality than those caught by gill nets, but they are not. I am sorry that I have not an opportunity to develop that angle of the matter further, much as I would like to.

Mr. BENNETT: Is the purse seine used on the American side?

Mr. REID: Purse seines are used on the American side but not at the mouths of rivers. They have ruled them off the Columbia and other rivers. There is a conflict of opinion in the United States the same as we have in Canada, perhaps to a greater extent, in that there are state regulations and federal regulations which often come into conflict. But the state has ruled out seines from the mouths of rivers.

Mr. MICHAUD: From the mouth of the Fraser river?

Mr. REID: They do not fish at the mouth of the Fraser river. The minister means the Canadian seines? The American seines are barred by the boundary line, but Canadian seiners, when they had the chance, have seined right up into the Fraser river. As I mentioned in committee last year, three or four of them were caught right up in the river in shallow water.

When I introduced this to the committee last year I lost by one vote; eight voted against me while seven voted for the bill, and the chairman of that fisheries committee told me that had the vote been eight to eight he would have given his casting vote in my favour. I accept that in good faith; he told me that without my having to ask him about it. But I would point out that I lost out in the committee by only one vote. I stated when the matter came into the house, and I am going to state again, that the officials of the fisheries department gave misleading information, and have done right along, in regard to the salmon fisheries. I know that it is considered quite a crime to mention any official in this house, because the official is not here, but I mentioned the matter in front of him, and I contend that when there is anything wrong it is the right of the member to rise in his place and complain, so long as he is not vindictive in doing so. When he finds that wrong information has been supplied to the minister it is the member's duty, as I see it, to say so in this house. I repeat that departmental officials have certainly given misleading information right along.

I have not time to go into all the arguments used by the deputy minister last year, but I say that about twenty-five per cent of the statements which were made were open to disputation and at least fifteen per cent of them were entirely wrong, could not be proved. He said that fifty per cent of the seines were owned by the canneries. He did not say that ninety per cent were owned and controlled; he said that fifty per cent were owned. The information given me in British Columbia is that at least ninety per cent of the seines are controlled and owned by the canneries. He stated that the United States got most of the fish. Well, they may do so in some years, but, as I showed at that time, not in all years. He said that there were no purse seines permitted for sockeye. It is true that there were no purse seines for sockeye, but the canneries wish to have them, and in their briefs last year to the minister and to the committee they advocated the opening up of the area for them to fish when and how they liked. He stated that the dealers were reserving their best label for Canadian goods. I pointed out the racket that was played off last year, and I think is being played off this year: That canned fish had been inspected and classified as second quality; that, as our regulations required, another lid was put on the fish, and that fish was sold to customers who flicked off the first lid after the shipment left the shores of this country and sold the fish in their own markets as No. 1. Some firms had also the temerity to ask for a rebate for taking off those lids. Now they are compelled to put on a lid that is soldered in four points, and what do you think has happened? There are firms offering to take off the soldered lids at so much per case, without leaving any mark; they do it by heating, and the second lid drops off and leaves the can intact. That fish is going to Great Britain and entering into competition with what we believe is No. 1 fish. Then the deputy minister said that the United States could pay more because of their home market.

The United States pays far more to the fisherman for catching the fish then we do in British Columbia; yet they sell the product for one-half the price to the United States consumer. I produced in this house cans of fish bought here and also bought across the line at just half the price. When the canneries were paying the fishermen one cent for late-run sockeye the United States paid ten cents and took the fish across the line and canned them, and those fish, which were not acceptable to our canners, were canned across the line and, I suppose, will meet our fish in competition in world markets.

I say without fear of successful contradiction that the present fisheries set-up is opposed absolutely to the gill net fisherman. The slant it has on life is all for the canner and for the vested interests. I say that after at least six years' investigation. In the arguments presented before the committee not one good word was said by the deputy in favour of the gill net fishermen. Every word that was spoken was in favour of the canner and, as I say, of the vested interests. I realize that once the department takes a stand it has to adhere to it. It cannot very well back down. I am pleased that we have now a full-time minister. I ask him not to take too seriously all the statements made by his departmental officials until he has had time personally to go out to British Columbia and investigate for himself. When he does investigate, for heaven's sake let him leave some of his officials behind and go out with some of the fishermen, and he will get an entirely different picture, whereas if he goes out with his officials they will show him the things which they want to show him and which, of course, will bolster up the stand they have long adopted, against the gill net fisherman.

I have pointed out that the fisheries will be depleted by the seine going in. I have figures to show that the catch has decreased since they went in. White springs, red springs and other varieties have been dropping off since these mobile traps have gone in. If the mobile traps could catch the fish more cheaply or of better quality I would say that there might be something to it, but in these days when we are looking for work for men and when we are talking about machinery displacing men, why should we allow these mobile traps, controlled by the vested interests, to put two thousand fishermen out of business? It is no wonder that I feel very wrathy about this matter.

Now, Mr. Speaker, before I close, I have three, if not four very important matters to bring to the attention of hon. members, and particularly to the attention of the minister. I would like to have had my resolution in connection with the sockeye salmon treaty come before the house so that I could have dealt with this question more fully. I cannot go into this extensively to-night because I have not the time, but I would ask the minister to examine the map in connection with that sockeye treaty and see if he thinks his officials were right in laying out the boundaries. It is well known that south of the line the Columbia river contains all kinds of fish, and also that United States fishermen have caught fish out in the open sea in and out of season. But if the minister looks at the map he will see what poor information his officials must have had to O.K. a plan of that kind. We signed the treaty in 1930; it has not been signed by the United States yet. If they do sign it I hope the minister will not have departmental officials act as commissioners; I hope he will look after the fishermen and put on that commission someone who really knows and understands the fishing industry and who is really representative of the fishermen.

In connection with the late sockeye I have pointed out what I claim is the difference between the late and the early run. These sockeye are permitted to be canned and put on the market in competition with the No. 1 sockeye, and if this continues it will certainly ruin the valuable market we have built up for No. 1 sockeye.

Now I come to another matter. Last year I placed on the order paper a question which the then Prime Minister (Mr. Bennett) stated was a matter of first rate international concern. I refer to something that has taken place in connection with the Columbia river, which at one time was a great salmon river. In that connection may I point out that away back in 1846 there was signed between Great Britain and the United States, a treaty, one clause of which reads as follows:

> From the point at which the 49th parallel of north latitude shall be found to intersect the great northern branch of the Columbia river, the navigation of the said branch shall be free and open to the Hudson's Bay Company, and to all British subjects trading with the same, to the point where the said branch meets the main stream of the Columbia, and thence down the said main stream to the ocean, with free access into and through the said river or rivers; it being understood, that all the usual portages along the line thus described, shall in like manner be free and open.

In other words, Mr. Speaker, after 1846 the Columbia river, by treaty, was to be kept open for Canadian and British subjects, but during the past number of years the

United States have ignored that treaty entirely and have built large dams and other obstructions. One dam, I think, is some 370 feet in height, so that to-day there can be no portages. In addition this has affected the runs of fish in that river. I have in my hand the annual bulletin of the Department of Fisheries of the state of Washington, which says:

Practically all of the Columbia river watershed in eastern Washington has been drained of its fish life almost to the point of extermination because no support was given by the public to enforcing legislation already on the statute books.

We have the same situation on this side of the line; we have complacently stood by while the United States have openly violated this treaty. That clause in that treaty was of untold value to Canada; I do not know that I could state the amount in money that it was worth to the people of this country. Now that river is blocked. I appeal to the Minister of Fisheries and to the Prime Minister to take up this matter very seriously with the United States government. I do not know what can be done about it now, or what compensation we should demand, but I do know that if conditions had been reversed and we had done this, the United States would have made us pay heavily for blocking that river. A part of that treaty has been ignored, and no notice has been taken of it. As a quid pro quo I would suggest that we be given a small piece of land adjacent to Vancouver, a small neck of the woods called Point Roberts, which is United States territory at the present time. At times this has been more or less of a bootlegging centre, though in the summer time it is a great summer resort, and customs officials are maintained there. We who are acquainted with the district know exactly what is going on there. I say it would not be too much to ask that the United States transfer this small piece of territory to Canada in compensation for the violation of the treaty of 1846. No one can say just when that portage might have been of benefit to this country; no one can say when in future it might be desirable to use it, but now it is blocked, and I say it is too bad that no action has been taken by the Canadian government. As I said, I took up the matter last year and it was pointed out by the then Prime Minister that this was an international question.

In closing, Mr. Speaker, let me say that I am not asking for the total elimination of seines. I am asking that they be eliminated from the mouth of the Fraser river, where they were allowed to be placed in 1933 for the first time. They have other areas available, and when those areas are closed they can move to other areas such as Nos. 18, 19 and 20. The gill nets cannot go there because it is clear salt water and those of us who know anything at all about the fishing industry know that gill nets do not do so well where the water is clear, because the fish can see the nets and so avoid them. It is strange that in the regulations there should be indicated a maximum length and depth for gill nets, though when it comes to the seiner he can use a net of any length or depth he desires.

There is one more matter to which I should like to direct the attention of the minister, and that is with regard to the policy of his department in regard to propagating sport fish. I know that we want tourists to come to this country; I know they like our streams, but we have spent many thousands of dollars in the propagation of sport fish which, on investigation, have been found to prey upon the small salmon fry. In other words we have been spending money to develop a salmon fishing industry and at the same time we have been spending money to cultivate the enemies of the salmon fishing industry. Dolly Varden and other trout, from the mouths of rivers where the salmon fry were found, have been opened up, and some of them have been found to have as many as sixty-five small salmon fry inside them. That is not bad for one meal, I would say. If you multiply that by the number of sport fish in our salmon streams you will see that this means a great loss to our fisheries, and I would ask the minister to take note of this situation. Sport fish may be all very well in many rivers, but I claim that in the salmon river the government should take note of what these sport fish are doing in the way of eating up the small salmon fry.

Then, Mr. Speaker, I understand that out of the money appropriated this year the minister is going to spend a certain amount in an attempt to encourage, by way of advertising, the consumption of fish. It appears to me that the greatest obstacle to the consumption of fish in this country, especially throughout the prairies and in the eastern provinces, is the price due to cost of transportation, et cetera. Remember that fishermen get about a cent and a half for a whole fish and then look what one must pay for fish in the stores. If the minister would approach the railway companies or have some regulation by which fish would be hauled across the country at cheaper rates so as to allow the public to get it cheaper he would

do more to popularize fish than by simply having some woman stand in a store and show the housewife, who perhaps knows more about cooking than she does herself, how to fry fish. That to my mind will never popularize to any extent fish as a food. Advertising is all very well, but it seems to me that the most effective way to popularize fish would be to have railway rates and postal rates reduced so that there would be a ready market for cheaper fish both on the prairies and in the interior of British Columbia. It is scandalous that a fishermen can get only one and one-half cents for a fish weighing ten or fifteen pounds. I know that idea will not meet the views of the canners; no, they want everyone to eat canned fish. But we can ship our good canned salmon abroad, and I say again: If they want the people to eat the canned salmon they should at least sell it as cheap as the people across the line can purchase it. That they can well afford to do.

Now the seines will not be on this year; 1936 is the off year, but notice should be given now that they will not be allowed in 1937. The livelihood of two thousand fishermen is affected. Not only that, but the seines, just mobile traps, are the most destructive form of fishing, and if they are allowed to continue, their large catches, coupled with the fact that they take everything in the net, immature fish and all, will certainly deplete our great salmon fisheries. In support of that I can point to other areas off the British Columbia coast which have been depleted by the use of seines and have had to be closed down to allow the fish a chance to propagate again.

I say in all seriousness that the department is against the fishermen. I want the minister to investigate why in 1934 they allowed the seine boats in twelve hours before the gill net fishermen. Thirty-five mobile traps went into that school of fish; some of them ten thousand fish at a clip, and there were dumped on the cannery wharves so many fish that they could not be canned. And yet the department talk about quality.

I wonder if hon. members know the kind of letter sent out by the department. This is a paragraph from a letter that was sent to every canner; I leave it to hon. members if this is fair:

> I have been further requested to obtain from each cannery manager a communication setting out his opinion as to whether the seine caught fish were superior for canning purposes as compared to fish caught by means of gill nets—

A very leading question.

An hon. MEMBER: Who signed it?

Mr. REID: Mr. McLeod, supervisor acting under the chief supervisor at Vancouver acting under the deputy minister at Ottawa. A leading question, meaning: Yes, we want you to say the seine caught fish are the best. How could they say otherwise when ninety per cent of these mobile traps are owned and controlled by the canners? Then they send out this letter to bolster up the order in council passed in 1933 which allowed these traps into that area.

I hope the minister will take these remarks seriously; this is a very serious matter; I introduced the bill last year and lost by one vote, so this year I am looking for results.

Hon. J. E. MICHAUD (Minister of Fisheries): Mr. Speaker, the hon. member must at least be congratulated upon having been able to tack on to his remarks about four different subjects which have no relation to the bill itself. However I have very little time at my disposal, so let me state briefly the position of the department and the government in relation to the matter. I shall proceed by way of elimination.

To take the last statement first, that in his opinion the Department of Fisheries is antagonistic to the fishermen; this statement is not warranted by the facts and by the policy of the department for years past. I cannot and do not pretend to speak for my predecessors in office or to excuse whatever attitude or policy they may have adopted in reference to the matter of salmon fishing in British Columbia. However I may say in fairness to my predecessors, whom I have had the pleasure of knowing personally, that no sinister or ulterior motive actuated them in adopting the regulations of which my hon. friend complains. Since this bill was first introduced by the hon. member for New Westminster (Mr. Reid) I have made it my duty to look into the matter and to try to find out whether his attitude is justified.

As to his complaints relating to matters of international concern, such as the attitude this government or this country should take towards the United States of America regarding the Columbia river, and the line which was adopted by the contracting parties to the treaty of Washington, or the sockeye salmon treaty, which by the way I may say is in process of being revised or studied by both parties, these matters have no reference to the bill which is now under consideration, so for the present I shall eliminate any answer to these questions, which are intricate matters the reply to which might be far-reaching if I attempted at the present time to state the attitude of the government.

My hon. friend also tried to confuse the idea of quality or the policy of inspection with the regulations respecting seining at the mouth of the Fraser river. I find that the licensing of seiners in those waters came about as a consequence of the rules for inspection which were established in 1932 by the Department of Fisheries, and sanctioned by order in council of the government of the day. One matter which I want to explain, lest I should forget, is the complaint of my hon. friend about certain regulations of the department, especially one which he read, which has reference to the inspection of canned salmon when entering Canada. It is true that this regulation stands as it was read. But it is no new regulation, and it was adopted for a purpose. Practically all canned salmon that enters Canada comes through the Pacific coast, where in the United States practically all the salmon is canned. The regulation insists that salmon entering Canada from the United States should enter through entry ports in British Columbia, because it is only in that province that we have canned salmon inspection and inspectors. Inasmuch as most of the salmon enters Canada through the Pacific coast it is natural we should insist that it be inspected where we have inspectors.

As to the bill itself, it is in the nature of an injunction or prohibition. The hon. member seeks to have parliament prohibit the governor in council or the department exercising the function or prerogative which they have the duty to exercise under the existing law. The Fisheries Act provides that the governor in council on the recommendation of the minister may licence or sanction the mode of fishing, and these types of fishing have been accurately described by the hon. member.

Before 1933 the Department of Fisheries did not see fit to recommend to the government the approval of seine fishing in the waters lying at the mouth of the Fraser river in the gulf of Georgia, and in that year a regulation was adopted. Before stating the reasons which prompted the government to adopt the regulation I should like to take time to lay before the house certain facts and conditions which led the government of the day to determine upon the procedure of licensing that mode of fishing. It is true that prior to that year fishing with purse seines for salmon in those waters was not permitted. Hon. members coming from British Columbia know better than I do the conditions existing in the waters adjoining the province. For the information of hon. members who may not be familiar with the situation may I say that there are two kinds or two runs

[Mr. Michaud.]

of sockeye salmon in the waters in question. Although the fact may be well known to all members, I should like to repeat that the Fraser river sockeye salmon is admitted by all the world to be the best obtainable for canning. When I make this statement I refer to the early run of fish. The early run is of grade A quality, and is found in those waters in the early season of the year and until about August 20 or 25. May I add that there is no regulation permitting the catch of that first-class fish by the use of seines. No purse seine fishing is permitted before the late run of fish appears in those waters, and through some freak of nature the late run fish appear only in odd years.

The first run of fish of the late variety is what is known as pink salmon. It is a good quality fish, but is not equal in quality to the genuine, early Fraser river sockeye. Then there is the late run sockeye which the hon. member claims is not a true sockeye. On that point I will not argue, as I am not familiar enough with conditions either to dispute the fact or to prove the contrary. However it is recognized by the trade as being an inferior grade of sockeye. It is permissible at certain times of the year to catch the late run of sockeye by seine fishing. Generally, from August 25 until the middle or latter part of September this kind of fishing is permitted due to the fact that since 1933 inspection has been in force in British Columbia. Before that time it could not be permitted, because the salmon was packed and when packed was put on the market as Fraser river sockeye. This procedure tended to depreciate the value, quality and good name of our good quality fish on the world market. However, after the rules for inspection were adopted in British Columbia, the government said to the canners: It will be up to you; we have a means of deciding whether the fish you put on the market is good quality, second quality or an inferior grade, and if you choose to buy and can fish which will not grade properly it will be your misfortune, and you must suffer the consequences.

Purse seining was permitted because it was claimed—and the hon. member has not disputed the claim—that the fish caught in the cold waters immediately beyond the entrance to the mouth of the Fraser river, and just over the American border or boundary, is a good fish, of such quality that it can be put in cans, and when canned will appear as a good grade of fish to be placed on the market. That is the reason purse seining is allowed in those waters. The claim is made that gill net fishing cannot be done

as effectively as purse seining. Only a very small territory is in dispute, namely in the waters close to the imaginary line which forms the boundary between the United States and Canada, and the clear waters at the mouth of the Fraser river to which gill netters cannot resort.

We claim that if our fishermen can continue to catch late in August or early September fish of such quality or in such state that it can be packed satisfactorily, it would be in the interests of the fishermen to make the catch. By such permission they would be obtaining money which otherwise they would not receive. That is the reason why in 1933 purse seining was permitted. Had the department thought this method of fishing would injuriously affect the trade in fish, I am sure my predecessors in office, no matter to which party they may have belonged, would not have allowed that mode of fishing. After all it would be bound to reflect upon all fishermen or other people engaged in the trade. The regulation is not made for the benefit of the canners, directly, although it is true that they benefit by it. However, if they do benefit it is because the fishermen can catch the fish; the canner does not catch it.

The hon. member has tried to impute motives to officials of the department because they did not agree with him as to the ownership of seine boats. My reply is that departmental officials can only state facts. We know who own the seining boats by the number of people who are registered as owners. Perhaps the hon. member is in a better position than departmental officials to know who the controlling interests may be. I submit, however, that it is only a matter of surmise, and that it is not a certainty. Officials of the department may have found it impossible to establish exactly whether or not canners have controlling interests in boats registered under the names of other persons. When departmental officials state that only fifty per cent of the boats engaged in seine net fishing are owned by the fishermen themselves, the statement is made because the registrations have so indicated.

## SUPPLY

The house in committee of supply, Mr. Johnston (Lake Centre) in the chair.

### DEPARTMENT OF FISHERIES

The CHAIRMAN (Mr. Johnston, Lake Centre): When the committee rose at six o'clock we were discussing vote No. 314.

Other projects—to aid, in cooperation with provincial governments concerned, in reestablishment of needy fishermen, $300,000.

Mr. FINN: Mr. Chairman, when the committee rose at six o'clock I was speaking on the item to which you have just referred. During the dinner recess I had hoped to have an opportunity of discussing one or two matters with the Minister of Fisheries (Mr. Michaud), to which I made reference this afternoon, but unfortunately I had an engagement of an impelling nature, although not absolutely necessary, which prevented my interviewing the minister. This item has to do with the reestablishment of needy fishermen and in order that hon. members may deal intelligently with this matter, I think they should know what arrangements have been entered into with the provincial governments in connection with the item. Another important piece of information which we should have is how much the provincial governments are contributing towards the fund for the needy fishermen referred to in this item. If the Minister of Fisheries is desirous of replying to these questions, I am prepared to take my seat so that the committee may have this information.

Mr. MICHAUD: Go ahead.

Mr. FINN: The Minister of Fisheries tells me to go ahead, but sometimes it is pretty hard to go ahead when you have no fuel with which to travel. In this case the fuel is the information. I have absolutely no desire to embarrass the minister, but this information is necessary in order to discuss intelligently this item from the standpoint of the needy fishermen. I do not even know what provinces are included in these arrangements; I do not know whether they cover the fisheries of the great lakes or whether they apply only to the Atlantic coast, the St. Lawrence river and the far-away Pacific coast. If I had this information, with what I have here in connection with my own province I could make a sort of race track estimate of what the needy fishermen of Nova Scotia might expect to receive. Therefore I ask the minister to give this committee some information as an index of his policy, and, I assume, that of the government. Until I receive that it is impossible for me intelligently and adequately to discuss matters which concern the needy fishermen in my constituency and in the province of Nova Scotia.

Mr. MICHAUD: Mr. Chairman, in reply to the hon. member for Halifax (Mr. Finn) may I say that the agreements with the provinces concerned are not yet concluded although they are in process of negotiation. Naturally, the provinces concerned will be those over which the dominion government has jurisdiction in connection with fisheries

These will be Nova Scotia, New Brunswick, Prince Edward Island, British Columbia and those sections of Quebec over which we still have some jurisdiction. The $300,000 has not been finally apportioned because the distribution will depend upon the schemes and proposals to be submitted by the respective provinces. As this is a measure of emergency, it is intended to ask the provinces to contribute a share towards taking care of these people. After all, these people are citizens of the provinces and the provinces should contribute. They will be asked to contribute at least fifty per cent of the cost of administering such schemes or proposals for relief as they may submit to this department. If the proposals submitted are considered to be for the reestablishment of needy fishermen, we will contribute fifty per cent of what the provinces may deem it advisable to expend for such purposes.

Mr. FINN: As I understand the minister, he has no undertaking from any province that they are prepared to pay fifty per cent of the amount contributed by the federal government. Am I right?

Mr. MICHAUD: In some respects, yes. As yet there are no undertakings, but some of the provinces have signified their willingness to adopt certain schemes for the relief of needy fishermen, to which schemes the government will contribute. I understand that four of the provinces have signified their intention of going ahead and that within the next few days they will submit projects or schemes which are now in the course of preparation. The premier of British Columbia has signified his desire to avail himself of the privilege of sharing in the amount, and so have the premiers of New Brunswick and Nova Scotia. But the details of the proposal have not yet been submitted.

Mr. NEILL: I am not a bit surprised to hear from the minister that British Columbia, like the proverbial Scotchman, will take any given sum. But what are they going to do with it? I am entirely opposed to the idea of handing over to the provinces our control in this matter. Rightly or wrongly under confederation we are given the fisheries to run. We maintain what some people call an expensive, but at any rate an extensive, department from which we can obtain information and we ought to be in a position to know what is needed towards reestablishing fishermen. Instead of that we are going to hand this money over to people who have no official knowledge of the fishing business and who are to be asked, apparently in the space of a few days, to devise a scheme whereby this money is to be distributed—I might almost say dissipated. We have control of the fisheries; why not let us exercise that control? If we do not know how to do this, then certainly neither British Columbia nor Nova Scotia nor any other province can give us the necessary information. I certainly protest against that first part of the scheme.

I accept the minister's statement that several of the provinces are willing to take advantage of this. Who would refuse $50,000 to play with? But it is within my knowledge, as I think the leader of the opposition will remember, that some years ago in a certain province, which I will not mention, his agent made a distinct bargain with the authorities that they were to begin within a period of a few days to carry out certain relief work which would afford men employment for wages, and they were to undertake this on receipt of a loan amounting, if I remember rightly, to $100,000. There was an investigation and the evidence showed that the man who was acting in all good faith for the dominion government said, "I recommended this loan to the dominion government, and the money is now in the bank; when will you start work?" He was told that they had taken the money and used it to pay other debts. Is that liable to happen again?

Apart altogether from that, I would point out that this is a fisheries matter. We are dealing with fishermen and when it comes to the method of distribution, the question of deciding what shall be done, surely that should be under the control of the department. We have a department that can function, whereas the provincial government has at best only a superficial fisheries department. I wonder where the provincial government will get their information from. Let us look further into this matter. It is all left in the clouds. I am sorry the minister has been unable to indicate—he cannot indicate, because he is waiting for the province to take action—the form which will be adopted. Will this distribution take the form of handouts as was the case in Nova Scotia where they squandered the interest on $3,000,000 at the rate of so much per man in the fishing business, one man getting $8 and another $2.75? Surely it will not be along that line. I know it is a sore point with the hon. member for Gloucester, because they have been squandering that money in the maritimes for years. The records say so. The Cockfield-Brown report indicates that. And the predecessor of the hon. member for Cape Breton South said in the house last year

that there was no question the money was being dissipated in little dabs here and there. This is a subject in which the Nova Scotians take great interest and I bring it up every year. Are we going to approach the subject in that petty spirit, giving a little dab here and a little dab there to a man who owns a boat? Are we going to do what was suggested on a previous occasion—encourage more people to enter the fishing business? I do not think anyone wants that.

The minister used the right word when he spoke of reestablishing fishermen, because that would be confined to men who are already in the fishing business. We have now, as it is, a good many men in the business who cannot make an adequate living. What are we going to do? If we are not going to give small amounts here and there, presumably this is to be a gift; I should judge that from the language used. Well, if we are going to give them anything, are we going to give this man or that man an engine, and if so to whom will we give engines? To the unthrifty, those who have not been careful, those who have dissipated their money in ways they should not have done and who will now come and get engines from the government? If we are to do that we shall have to give every fisherman an engine and that will tend to pauperise the fishing industry—and they are not the class of people who lend themselves to being pauperised. But if you give an engine, or perhaps a boat, to the less provident ones, it is only natural for the other man to say: Well, I can do with an engine myself, or a net. If the alternative is that we are going to lend them the money, then all we have to do is to proceed along the line of an improved form of the fishermen's loan act passed last year.

In this regard I entirely agree with what was said this afternoon by the hon. member for Gloucester and the hon. member for Skeena in criticism of last year's act. The hon. member for Gloucester said that had he been here in the closing days of the session he would have criticized the measure along the lines he did this afternoon. But there were other members who were here, notably the then hon. member for Antigonish-Guysborough, the hon. member for Skeena and myself, and we all pointed out that $1,000 to equip a halibut boat was ridiculous; and more especially was there emphasis on the point made this afternoon that it was ridiculous to confine this to people owning real estate, because the average fisherman did not have any real estate or, if he did, it did not amount to anything. We pointed out that to confine this to men owning real estate was practically to make it prohibitive. The minister has the whole record under his hand, but so far as my neighbourhood is concerned I do not know of any fisherman who did qualify under the act. To make things worse, in case there should be a chance of his getting a loan, there is this application form to which I would refer the minister. I do not know whether it was issued by the late government or by this one. I suspect it was done by the present government, so that they can share the blame with the late government. One passed a bad act and the other made it worse. As regards property security, this is what the regulation says:

> The applicant must give the board a first mortgage on his real property for the amount of the loan obtained. The land which is offered as security for the loan must be owned and occupied by the applicant and consequently must possess adequate buildings for the purpose for which it is used, which must be covered by insurance....

And so forth. That was not in the act, but it was put into this regulation, and it is something that considerably restricts an already restrictive measure. Under the act he had to own the land; now he has to own it and occupy it, and to occupy it he must have a house on it. He may own in the city of Vancouver a lot worth a couple of hundred thousand dollars but he must occupy it. It must be insured and he must live on it. A fisherman live on a lot? Well, it says that he must occupy it. Who is to do the occupying when he is away in his boat? It means, I suppose, that he has to have a wife. Surely we have not come to making it compulsory for somebody to get married who does not want to. I do not know whether he could get away with his wife occupying the land, because the regulation says that the land which is offered must be owned and occupied by the applicant. You might as well tear the whole thing up if that is going to be the regulation. If the act were changed so that more than $1,000 could be borrowed, and that it could be borrowed on the security of a boat, and with a suitably short period if nets are being purchased, you would get somewhere.

Mr. VENIOT: On a policy of insurance.

Mr. NEILL: Yes, insured; you cannot insure the land. As the member for Gloucester says, they could come and seize the land.

The adoption of such a proposal would do a great deal to aid the bona fide fisherman. We would not be pauperizing him; we would be doing something for people who are will-

ing and able to help themselves; and I think it would assist in doing away with this idea that we have to give hand-outs to people, an idea which is abhorrent to the average decent fisherman of British Columbia and, I have no doubt, of the Atlantic coast also.

There are methods, which I would term of a general nature, by which we could help the men engaged in the industry to help themselves. I have before me a resolution which was passed by the Kyuquot Trollers Cooperative Association, a very useful, aggressive and thrifty organization that has built itself up, even in bad times, to a measure of success. The resolution, which is addressed to the Prime Minister (Mr. Mackenzie King), states that the salmon trollers are all independent fishermen owning and operating their own boats, ninety per cent of which are propelled by gasoline engines, and fifty per cent of the fish is marketed in the United States, a duty of a cent and a half a pound being paid thereon. American fishermen trolling on the same ground three miles from the Canadian shore enter their fish free and pay only half as much for their gasoline. I think I have heard it calculated that gasoline costs amounts to forty per cent or more of the expenses of a man trolling, because the boat has to be run at a slow rate of speed, and the fisherman has to go out ten, twenty, or thirty miles, and back again at night. It is calculated that the cost of gas and oil amounts to nearly fifty per cent of his running cost, so that his costs are double those of his competitor. The fishermen are asking the Prime Minister if he cannot do something towards reducing the high price of gasoline. A reduction would help them substantially, and help them all. The other point they touched upon was the duty of a cent and a half which they had to pay for entry to the United States, which is the market for that great class of their fish which they call springs. We know that the government in the reciprocity treaty with the United States obtained a reduction from two cents to one and a half cents a pound, but I notice a cut was made in the eastern provinces on some fish from two cents to one cent, and we in the west are disappointed, wondering why the reduction of fifty per cent was not made for our benefit at the same time. If that could be done it would help our fishing materially, because the United States is our market for that class of fish.

After all, what is the greatest aid we can give to the fisherman? Is it not a bountiful supply of fish and a good market? Grant him those things, and he does not need a hand-out. Grant him a plentiful supply of fish, and help to get a good market; he will do all the rest himself, and the government will not have to spend $300,000 on it, either.

There are a number of ways in which the fishermen can be helped. I am going to mention two or three. One is by the abolition of traps in the neighbourhood of south-eastern Vancouver island. I hold in my hand a letter from the department stating, as plain as language can be, that these licences would not be issued next year, and yet in Hansard on March 9 an answer was given by the same department to the hon. member for Victoria City (Mr. Plunkett), in which reply the very opposite was stated. We have been keeping these traps on, and the only excuse for years and years was that on the American side they had traps. Two years ago the Americans took their traps off—it was a gesture, and a big one—and they invited us to do the same. We have not done it. We have said: There is yet one year to go, and perhaps they will change. Now another year has gone by; we have this division between the departmental deputy on one hand and the Hansard report on the other, and we do not know whether the traps will be taken off and not permitted again. That is one measure which would be of practical benefit, because all who are familiar with the subject know that the traps are the most disastrous way to take fish. They are, as the word indicates, practically a trap for everything that comes along; big and small fish of all kind go in there and are destroyed. In destructive capacity they are next to the seines, which are also a very destructive method of fishing, and much for the same reason, because they take in big and little fish as well.

Then we have the question of cutting down the hair seals. Here again I have a petition that was got up by a meeting of trollers on the Pacific coast last December. They made some comment upon the increasing number of hair seals. I took the matter up with the department, and I was advised on December 10 that the hair seal bounty was discontinued in June, 1933, owing to the need of strict economy in public expenditures. That was three years ago. Times now are a little better, and it is to be hoped that we can do a little something towards replacing that bounty. There is no more idiotic method of handling a bounty on any predatory animal or fish than doing it intermittently. If you take it off for two or three years the predatory animal or fish has time to recover. We tried that in British Columbia with cougars and wolves, and as a

result there has been an enormous increase in the number of both those animals, because nobody is paid to hunt them. Indeed, instead of cutting down the bounty it should be increased, because it is more difficult to get them. I took the matter up with the department and the answer I got is this:

The department, however, is not in a position at the present time to say whether or not funds will be available for payment of the bounty next year.

That is entirely and thoroughly typical of the correspondence I have with the department. "A little sleep, a little slumber, a little folding of the hands to sleep." Do not do anything but write a nice polite letter. Why do they not write me, if they are not in a position to speak definitely: We will try to see if we cannot get the bounty; we will look into the matter; we will take it up with the minister. But no, the department is not in a position to say, nor have they yet been able to say, whether funds will be available for payment of the bounty next year.

Take the allied subject of sea-lions. I have before me a resolution passed by a meeting of fishermen. I will not read the preamble. They say that fifty per cent of the fishermen's catches are at times second grade owing to the fish being mutilated by sea-lions. Apparently they play with the fish. They will catch a salmon, toss it in the air and catch it as it comes down. While watching sea-lions playing among themselves I have seen them doing this. The resolution asks if something cannot be done towards cutting down the numbers of these sea-lions. It has been the custom for a number of years to send one of the official patrol boats to the rookeries and destroy the sea-lions once a year. The patrol boats make the trip up to the Virgin islands, I think they are called. These fishermen ask if that practice cannot be extended, as the good effect of the sea-lions being caught is confined to one locality. These fishermen asked if that practice, which at present only affects one place, could not be extended lower down on the Pacific coast, to a place called Solander island near Cape Cook. These islands have been seen swarming with these sea-lions, which have proved detrimental to fishing operations. I took up that question also, and after a good deal of correspondence the answer I received was that there was only enough money available to carry on the work at the Virgin rocks. I know that this work is done by one of the fishery patrol boats, the crew of which are paid all year. At that season they are simply cruising up and down the coast, and it would make hardly half a dollar's worth of difference whether they were cruising up and down under steam or whether they went to this particular island, landed a crew and killed a number of these sea-lions at their breeding grounds. But this is the answer I received:

Some time ago arrangements were made to have the situation fully canvassed in view of the increasing complaints as to the depredations of the sea-lions upon the catches and gear of fishermen.

As you are aware, the funds available to the department for measures to control sea-lions in recent years are confined to the expenditure involved in the annual expedition to the Virgin and Pearl rocks off the entrances to Rivers and Smith inlets by means of the Givenchy.

The Givenchy is going up and down the coast all the time on patrol work. How much would it cost to land on these other rocks, right on the route, and put in a day hunting these sea-lions? I would be willing to pay for the ammunition myself, if that was all that was standing in the way. But that was—what was the word used last year?—the laissez faire attitude of the department. Putting it into English, it means "let be," and no two words could better describe the policy of the department: Let be; leave eyerything alone; whatever is, is best; wait and see.

Then I took up another matter, not as an agitator wanting to make trouble for the department, but as a result of meetings of fishermen or as a result of petitions received from fishermen who found their means of livelihood materially interfered with. In this case it was a board of trade that brought up the matter, complaining of the number of blackfish in certain districts. They said that when the blackfish went up the gulf of Georgia it was impossible to catch salmon for two or three days afterwards; the tourists were disappointed and the tourist resorts lost customers, while the commercial fishermen lost trade also. I took up that matter with the department, from which I received a longish letter putting all sorts of obstacles in the way. In this case there was not one lion; there was a whole menagerie of lions in the way of having anything done. The department said:

Even to secure the carcasses of a few for the purpose of having an examination of the stomach contents made by bioligical officers would present some difficulty.... In the light of all the circumstances—

This is the summing up; this is the action for which a group of fishermen were waiting:

In the light of all the circumstances, it is proposed to see what arrangements are feasible for securing a few specimens, preferably from the Discovery Passage area in the vicinity of Campbell river, with a view to having the stomachs analyzed to definitely determine, if possible, the food they eat.

That letter is dated December 30, but do not think progress has not been made. I received another letter dated February 26 in which I was told:

As previously advised, consideration is being given—

Do not be faint hearted!

—to arrangements for securing a few specimens of blackfish with a view to having their stomach contents analyzed to definitely determine, if possible, the food they eat.

They will get about half a dozen of these blackfish and look into their stomachs. If they happen to find seaweed they will say that the fish live on seaweed. I remember that on one occasion a man examined the stomach of a sea-lion on the Pacific coast. He found seaweed in the stomach and reported that the sea-lions lived on seaweed. Rubber tires are widely used on the fishing boats for fenders. If he had found a piece of rubber tire in the stomach of the sea-lion I suppose he would have reported that they lived on rubber. Supposing they took one of us at an odd moment and examined his stomach, what would be found? It would be that particular food we had last eaten. Supposing they get a blackfish and find no salmon in the stomach. That will not prove anything except that for a short time previously that blackfish had not been eating salmon. Maybe he was on a diet or something like that. But the best that I have been able to obtain, after all the correspondence which appears on this file, is that consideration is being given the matter. I am told not that something is going to be done, simply that consideration is being given to arrangements. Well, that will not help the fishermen much. Take some of your $300,000 under this vote and use it to drive these blackfish out of the gulf of Georgia. This can be done; it was done before in connection with whales, and it will be of tremendous benefit to commercial fishermen and to those interested in the tourist business as well.

I made a reference to whales, and perhaps I might be allowed to explain what I meant. Some years ago it was thought that there was a large number of whales in what is called the gulf of Georgia, which is simply the water between Vancouver island and the mainland, and a group of men became interested. Without taking the trouble to investigate very deeply they built a whalery. Anyone passing from Vancouver island to the mainland would see a number of whales, and naturally they thought whales were present in large numbers. So they built the whalery and went to catch whales in the gulf of Georgia. They caught just nineteen whales, and they have not caught another one since. It just happened that the whales were there to that extent, and when they were killed no more came in, at least not for many years. Possibly if the blackfish were destroyed or hunted down in the same way the same result would be achieved.

Then there is another point. I have been saying that the department should take care of the fish, should attempt to produce greater numbers of fish for the fishermen. Perhaps this is out of order, but it is pertinent to the situation. The government have decided practically to abandon the use of hatcheries, on which we have spent something like $4,000,000 in the last few years. They have decided that this is not the best way to propagate fish. What is the alternative? It is to adopt the natural way, to stimulate, encourage and protect natural propagation. Does that not sound sensible? We should see that the fish get up the rivers or the creeks at the right time, and then we should protect them. We can help also by clearing out log jams and such things which prevent the fish from going up at the right time to spawn. There are certain areas where, under certain conditions, the fish go up in large numbers at what is called high water. They go up and spawn on the banks of the rivers or creeks above the height of normal water. The result is that when the water subsides they are left high and dry; the frost comes along and enormous quantities of the spawn are destroyed. That could be prevented by netting those areas—they are principally government properties, rough bush—in such a way that the fish could not get beyond the ordinary water limit, compelling them to spawn within the area where they would be covered by water. Sometimes enormous damage is occasioned by a condition of that kind. So I say that if we are going to do away with the hatcheries we should do everything possible to stimulate natural propagation. Are we doing this? We are not. If you look at the estimates you will find that we are cutting down on it.

There is another method of protecting the fish, and that is by preventing poaching. That is perhaps the best way of all. Human nature is human nature the world over; if I were a fisherman and the guardian was away and I knew he was away, I am afraid I would be tempted to go inside the limit, where with great ease I could make a haul that might run to forty thousand fish. My object in mentioning this is to plead for the expenditure of more rather than less money. The main estimates provide a cut of $183,000, but more money should be spent. Take it

out of this $300,000 if you will and protect the mouths of the creeks and rivers, where a limit is set. In some cases it is one-half mile; in other cases it is more, and there is a fisheries patrol man or guardian who is supposed to see that no fishing is done within those limits. Whether a man is called a fisheries patrol officer or a fisheries guardian depends on whether or not he has a boat. It is his business to be there and to see that no man poaches, gets inside that limit. If you do not head them off of course they will go in and take the fish. A man can go in and in three days take forty thousand fish, and then if he is caught, of which there is not much chance, because the guardians are not there owing to these economies, he will be fined $25, which as he has taken $200 worth of fish he can well afford. Have your guardians there and keep them there. If a man goes out killing deer out of season he may catch one deer, but with these huge seines at the mouth of a good sized creek or bigger stream, by making a couple of casts he will take ninety per cent of the whole school. And that means not the school for that year alone but the school that has been built up by perhaps five to ten years of guardianship. The guardian has been there year after year to see that the fish are not molested within this half mile area, because the fish hang around, ready to go up when the high water comes, and that is when the seiner comes along. The guardian has protected that water for five or ten years, and then from motives of economy, because it is easier to take guardians off the pay-roll than to reduce some of the overhead in the Vancouver office, the water is left open; the fishermen being human like the rest of us go in and make a kill, and it will take another five or ten years to build up the run again. A man going in with a gill net or troll will take only a few fish; it is like poaching a deer, but with these powerful seines and improved machinery that they have now, that can take 100 tons at a lick, the seiners can go in and clean up that run.

These are matters for which we might well use some of this money, if we cannot take it out of the ordinary fund. Let me quote a letter I received the other day. I will not give the name of the writer, and I will suppress the names he gives, or he might be a marked man:

> The greatest menace to the fishing industry from the fisherman's (troller's) point of view is the seemingly open and unchecked way the seine boats operate inside the boundaries. During the past twelve years all those streams from ..... to ..... have been cleaned out by seines. I think I am well within the mark when I say that for every thousand fish that went up these streams ten or twelve years ago to spawn there are only ten at present.
>
> From the seine boats' point of view it is good business to go inside the limits and take a chance. If he catches from $50 to $200 worth of fish the chances are he will get away, but he knows that if caught and taken to ..... he will only be fined $25.
>
> I took this up with....

He names two prominent fishery officials in British Columbia:

> ... only to be told that they could do nothing about it.
>
> Last year there were some 3,300 trollers' licences issued, and if the spawning beds are not protected there will not be any fish for them to catch in another ten years.
>
> As things are now, if the seine boats were forced to stay outside the limits from one-third to one-half of them would have to give up as they could not make it pay.

I remember hearing a seine boat operator saying once: If it were not for poaching we could not make a living.

Now I have under my hand a note of the proceedings of the British Columbia legislature of March 27. Apparently they have a standing committee on fisheries and they passed the following resolution:

> That in the interests of the propagation of salmon we recommend that the provincial department of fisheries—
>
> Which consists of two people.
>
> —ask the Department of Fisheries at Ottawa to have various small streams on spawning grounds cleared of fallen timber which now impedes the passage of salmon to same for the purpose of natural spawning.

So these men, gathered from all over British Columbia, are endorsing, without any solicitation on my behalf, the stand I am now taking. I suggest that this $300,000, or whatever portion of it may be allotted to us—and it should be a big half because we produce, I think, fifty-one per cent of the fish produced in Canada, so I suppose we shall be having $150,000 allotted to British Columbia—could be used and I hope it will be used, not in a senseless handing out of little dabs here and there, practically relief or worse, or even giving the fishermen presents of things they might appreciate, but in these practical methods which will build up a fishing industry so that they will have fish to catch and a market in which to sell it.

The next item on which I should like to say a few words when it comes up is No. 315, in connection with expanding the sale of fishery products. I shall have something to say on that. I may be putting myself in the position of attacking the department, but I am not attacking the minister, because he has not been in his present position long

enough to be responsible. I have this much confidence in him, that I would rather trust him than the British Columbia people to run the department, because he has the machinery, the experts to inform him what is needed. I hope he will keep the control in his own hands.

Mr. MICHAUD: I do not want to let the remarks of my hon. friend pass without giving some explanation and correcting possibly a false impression which he might have given to the committee and which might go out to the public. In the first place the department is not unmindful of its duty to administer and regulate the fisheries. That is a duty which has been imposed upon the department by the British North America Act and which has been confirmed by several decisions of the privy council. That duty the department, as far back as I have been able to trace its activities, has fairly well discharged, providing, as my hon. friend has suggested, the means of conserving the fisheries and thereby assuring to the fishermen an abundant source of supply. The department has also done its duty in trying to find markets for the products of those who avail themselves of the privilege of fishing in waters under the control of the dominion government.

As to the criticisms he made of the activities of the fisheries department, I regard most of them as being constructive, and shall certainly give them my best attention and consideration.

I must give some explanation that is due to my hon. friend regarding a letter, and the statement afterwards made in reply to an hon. member of this house, which my hon. friend claimed were contradictory. They are in some degree. Last fall the department had practically come to the conclusion that we should meet the request of the United States and stop trap fishing in certain waters off Vancouver island, near Victoria, I believe. It was a gentleman's agreement, arranged at the instance of the fishermen on both sides of the border. I believe the state of Washington, as a result of a plebiscite had already passed a regulation prohibiting trap fishing, and they were demanding that we prohibit it on our side. But later it was brought to my attention through our officials that there was a movement in the state of Washington to repeal that regulation, and the possibility that at the end of this year it would be repealed in response to public sentiment. There was such a protest from the hon. member for Victoria City (Mr. Plunkett) as well as the fishermen of that district that I thought that I would satisfy myself as to the conditions and circumstances before coming to any final conclusion and before making a binding rule which could not be readily repealed. That is the reason for the apparent contradiction. If I had been given a chance to meet these people and to hear their grievances, and then afterwards had found out that in the state in question the law was about to be repealed, I would have felt there would have been no use to penalize any people by enforcing a regulation for the short time pending that at which our neighbours in the United States reverted to another mode of fishing.

Mr. NEILL: The very fact that traps are not prohibited on this side is the strongest argument to enable those who want traps restored on the Washington side to put this over.

Mr. MICHAUD: There are many features to the proposition, and the intention of the department is to protect the best interests of Canadian fishermen in that part of the country. That is my reason for delaying the date at which the decision will become final.

The policy of killing hair seals was dispensed with a few years ago because it was costly, and it was felt that the benefit derived from the expenditure was not sufficient. Then whaling was not a government venture, but was that of a private enterprise. The government had nothing to do with the venture, so far as I am informed.

Unfortunately this year we have to dispense with some of the sockeye hatcheries. The biological board, which is the scientific branch of the department, carried on investigations from 1925 on to find out whether this undertaking was really worth the money we were spending, and the report which I have before me recommends that such hatcheries are not profitable, and that natural propagation is just as profitable and advantageous to the industry as is artificial propagation. We had to dispense with that expenditure; our expenditures had to be cut down in some way.

There are many angles to the subject of sport fishing. By the terms under which British Columbia entered confederation obligation was imposed upon the dominion with respect to fisheries, an obligation to some extent different from that in connection with the other provinces. I understand that for years past British Columbia has insisted upon the discharge of that obligation by the federal department. We have encouraged the hatching of sport fish, or trout, for dissemination in the waters. I am informed that these fish do not come into conflict with the salmon,

and that they are not distributed in salmon rivers. Special streams are selected for fly angling or sport fishing, and the trout are distributed there.

Mr. NEILL: The minister is quite wrong. I did not make any complaint about sport fishing. I was saying that certain bodies which make a practice of angling for salmon, as a sport, object to the presence of these blackfish. We want them curtailed, in order to increase the number of fish sought by tourists.

Mr. BENNETT: Steelheads.

Mr. NEILL: Tyhees and cohoes.

Mr. MICHAUD: However, this has been done with a view to discharging the obligation which it is claimed the dominion owes to the province of British Columbia.

There is another angle to my hon. friend's argument with which I cannot agree. I claim it is fallacious reasoning and argument.

My hon. friend began his dissertation with the proposition that the government is under the obligation of administering the fisheries, and that therefore it must discharge that obligation towards the fishermen. I submit that that contention is far-reaching. If we accept that as a proposition, then the Department of Fisheries has a right to look after all those who avail themselves of the privilege of fishing, and if we did that we would be going a long distance indeed. I contend that our jurisdiction over individuals comes into play only when they choose to exercise their right of availing themselves of the privilege of fishing. We have a right to regulate them in the use of a river.

It must not be forgotten that this special appropriation is not voted for the purpose of coming to the rescue or relief of fishermen, as such. It is to aid the provincial governments concerned in the reestablishment of needy fishermen, or fishermen who can no longer exercise their right to fish. I submit that the dominion government, as a federal government, has no obligation towards individuals in the provinces who are not exercising their right to fish. They become citizens, and the fact of their being fishermen is only incidental to their citizenship. They are subjects or wards, and the obligation to care for them when they are in need rests with the provinces or municipalities. This vote is an emergency one, or one to help the provinces to discharge their obligation towards individuals who no longer find it profitable to exercise their right to use the fisheries. That is why we have to cooperate with the provinces. We cannot dictate to provincial authorities as to what modes they shall adopt in the reestablishment measures they may take. It is up to the provinces to discharge their duty towards their people. It is felt, however, that in this time of crisis and as a matter of emergency and grace we should help the provinces to discharge the financial obligations which they claim they cannot discharge by themselves.

The problem is complex, and does not present itself in the same form in all parts of the province. For example, in the county of Gloucester last year there were over five hundred boat fishermen and over two hundred vessels fishermen, or those who take out licences. These are deep sea fishermen. Through the results of the depression the markets for certain types of fish have been lost with the result that while for generations these men have been fishing they can no longer exercise that occupation. They have to be transferred to some other calling in order to earn their living and maintain their dependents.

Mr. BENNETT: Did the hon. member refer to Charlotte?

Mr. MICHAUD: No, I referred to Gloucester county, but my observations apply to part of Charlotte. Some people at the mouth of the Miramichi find it profitable to do lobster fishing. This occupies only part of their time, and those engaged in lobster fishing work in the lumber camps in the winter time, to make up the amount necessary to support themselves and their dependents. The fishermen in Gloucester county and in Westmorland county could not be treated alike. The problem in the western part of Nova Scotia is different from the problem in the eastern part. These are matters of local concern. These people must be readjusted in life in order to be given some gainful occupation. I claim that this problem rests upon the provinces or the municipalities, but they claim they are not financially able to discharge this obligation. This is the reason why an appropriation of $300,000 is being made under the Department of Fisheries. It could have been placed just as well under the jurisdiction of any other department. I submit that we cannot assume jurisdiction over those individuals who give only part of their time to fishing.

There is another class of men who are all-time fishermen. That is the class entitled to relief under this vote. We submit that these people cannot be taken away from the industry; that some means must be adopted of keeping them in the industry and enabling them to make a profit therein. I accept the

suggestion made in the latter part of the hon. member's remarks as constructive criticism. By implementing what he has suggested we shall go a long way towards helping the permanent fishermen who must remain in the industry, who cannot be readjusted or re-established in other means of livelihood.

It was suggested that we should keep control, but I think it would be impossible for the Department of Fisheries at Ottawa to look after all these people. They are spread all the way from British Columbia to Nova Scotia and New Brunswick. As I said a few moments ago, even the people in different parts of the same province require different treatment. As is well known, during the past five years the provinces have set up machinery to take care of these people in some way or another. We contend that this is a matter of provincial or municipal concern and we are ready to vote this amount of money to assist the provinces to take care of these people.

Mr. FINN: Mr. Chairman, it seems to me that we have gone far afield to-night in discussing this particular vote when reference is made to whales on the Pacific coast. We are dealing with a vote of $300,000 for the needy fishermen in Canada. This vote is to apply to the fishermen in Nova Scotia, New Brunswick, Prince Edward Island, on the St Lawrence river and in British Columbia. This afternoon I was unable to obtain certain information. The Minister of Fisheries (Mr. Michaud) tells the committee to-night that this $300,000 is not for fishermen at all; that it is for those who cannot fish any more, who cannot go out in their boats to set their nets. I was under the impression that this vote was for the fishermen who could not make a living because of low prices, who found it impossible to keep their gear because of a hard winter. I thought this vote was to assist them in the way of extra relief, but the minister says that this money is to be used for those fishermen who cannot fish any longer. These people should be looked after under the pension schemes in the various provinces, towards which schemes the parliament of Canada votes seventy-five per cent of the cost.

Under section 91 of the British North America Act the sea-coast and inland fisheries are under the control of the federal government. Someone said this afternoon that this would be administered under the Relief Act of 1935, but that cannot be as the last section of that act states that it shall expire on March 31, 1936. It has expired already. Surely hon. members who represent fishing constituencies have a right to certain information in order that they may intelligently express their opinions on this vote. They should be told how it is to be administered and whether the money is to be handed over to the provinces. I contend that the administration of this $300,000 could be undertaken by the dominion department much better than it could be by the provinces. In my province we have an inspector of fisheries, Mr. Sutherland, who is fair and honourable. This gentleman does not belong to the same political party to which I belong, but he has proven to be a competent inspector and he knows more about these matters than anyone in the provincial government of Nova Scotia from the Premier, the Hon. Angus L. Macdonald, down to the Minister of Health, the Hon. F. R. Davis.

I conceive it to be my duty to try to find out where this money is to go, to try to see that no one is helped who should not be helped. I want to find out whether it is to go to those who cannot go out to fish or to those who cannot make a profit from fishing. The item reads:

To aid, in cooperation with provincial governments concerned, in reestablishment of needy fishermen.

Reestablishment means to go back into the industry; it does not refer to fishermen who are too old to fish. I contend that when this vote is distributed it should not be distributed to those who have retired, who are in the sere and yellow of life and who can fish no more. The minister may smile, but I want to say that the very wording of this vote shows that it is to aid in the reestablishment of fishermen who are unable to fish to-day because they have lost their gear. In many cases they have lost their boats and some have lost even their lives.

This afternoon I referred to losses suffered by the fishermen. I have under my hand now certain newspaper reports which I had not then, and I think it is only right to read them:

Fishermen's Nets Swept Out To Sea
Lunenburg county lad, of family of 13, loses life

Storms and gales which have been lashing Nova Scotia bringing the loss of six lives, have claimed still another. Robert Cleversey, 18, son of Mr. and Mrs. Moore Cleversey, Conquerall Bank, one of a family of 13, set out in a leaking dory Tuesday morning. He has not been seen since.

Added to the cost of lives was the mounting toll of property damage. Lobster fishermen of River John yesterday saw their traps, 1,500, swept into the seas and lost as the highest tides in twenty years whipped up by a raging gale robbed them to the extent of more than $2,500.

Fishing gear followed the traps into the water as the tide washed over the tops of the wharves in the tiny Pictou county village on

the shores of Northumberland strait. Crib work around the steel bridge and along the bank of the river which runs through the village was smashed and carried along by the pent up flood tides. The water flowed over the main highway for a half-mile.

That is one statement. This is another—they are both in the present month of April. This dispatch is from the Magdalen islands:

Six Are Taken By Sea
Drown in sight of safety in Magdalens harbour; one of group saved

Grindstone, Magdalen islands, April 17.—Six Magdalen island fishermen were swept to their death to-day in mountainous seas at the mouth of Grand Entry harbour, just as they were in sight of safety after a herculean effort to reach shore following a treacheous eight-mile journey from Old Harry head.

Five little children, five wives, and six families were in deep sorrow to-night as the news came that six were drowned. A seventh, found clinging to the boat and in a semi-conscious condition was saved.

I say this to the Minister of Fisheries in all sincerity: A man leaves his home in an open boat, plying his trade, namely, fishing; he cannot get his traps insured; he cannot get his life insured, and for the fish which he does catch he receives only a couple of cents a pound, whereas the retailer in the store sells that same fish at fifteen or sixteen cents a pound. Has the Department of Fisheries no obligation, no duty, to such fishermen? Is there no recourse left to those engaged in that great industry? In the little province of Nova Scotia the following numbers are engaged in industry: In coal there are 12,000, and nothing is being asked for them; in steel there are 3,000; in lumbering, 800; and in fishing, 16,000 people. I ask to-night in all seriousness: Is the government not going to deal with this question on the recommendation of the Minister of Fisheries and the experts in his department? Is it going to allow these men to starve in their homes, their children compelled to stay in bed to keep warm, having no boots to wear to go to school? That is the condition in the western part of Halifax county from Sambro down to Hubbard and from Thrum Cap down to Ecum Secum a distance of 115 miles east and forty-five miles west. The minister laughs. Does he laugh at death? I ask that question and I mean it. The whole of Canada, the whole of America, practically the whole world stood aghast because three gentlemen who were seeking gold at Moose river in Halifax county in my own constituency were caught in a mine, and everything was done that could possibly be done to save them. I am not complaining; I am glad that it was done, and prior to to-night some $32,000 has been raised to give to the miners concerned who to-morrow can go back to work. But there is nothing for the children of those who have lost their lives in plying their trade, not in seeking gold but only in seeking a living.

We have reached a stage in Canada where we must recognize facts. We must forget some things while other things we must remember. The Minister of Agriculture (Mr. Gardiner) this afternoon put through estimates amounting to $1,250,000, to take people off land that was not profitable and to transplant them somewhere else, to give them seed and to provide for them. The Minister of Fisheries may laugh again, but is that all he will have to say to the fishermen of New Brunswick, the province he has the honour to represent, and to the people of Nova Scotia? I have represented a constituency for twenty years, and I have held the confidence of the people because I have never betrayed my trust but have always tried to be true to the people and to my party and to be fair to my political opponents.

Let me say this further to the Minister of Fisheries. I appreciate the fact that it is only a short time ago since he took over the department, and he has displayed skill and a desire, by hard work and keen intelligence, to become acquainted with every subdepartment over which he presides. But I say that when we have certain votes put through this committee it is only fair that we should express our opinion, and I hope the minister will not regard what I am saying as criticism; I am saying it only because I wish to see a deserving class of people helped.

I may tell the minister that 90,000,000 pounds of fish are caught along the coast of Nova Scotia annually. Of that, forty million pounds is caught by trawlers, fifty million pounds by the shore fishermen; but seventy-six million pounds of that ninety million pounds are sold, not by the fishermen but by the large wholesaler who receives the difference, or a large percentage of it, between two cents a pound for fresh fish and the fourteen, fifteen and sixteen cents that the retailer pays for it. As I think I said in the committee this afternoon—and if I did not I intended to say it, and if I said it I will say it over again—in the west, in Winnipeg, you have your grain board—and I have no objections to that—you have your grain exchange which deal in futures, which are the same as a brokerage establishment in Wall street or St. James street, and if they do not pay for what they buy there are clauses in the criminal code to deal with the situation. Whether they pay at the time they purchase or buy on margin is not for me to say. But the grain board of which, under the govern-

ment of my right hon. friend the leader of the opposition, Mr. McFarland was chairman, and which to-day is under the chairmanship of Mr. Murray, I understand fixes the price of wheat. To-day that wheat is fixed at 87½ cents, but it is bringing only eighty-one cents, and the federal treasury pays the difference between the two amounts. If that is so—and it is not suggested that my statement is incorrect—why cannot the government, upon recommendation of the Minister of Fisheries, adopt some means whereby the fisherman who catches the fish, and risks his life in so doing, shall get a fair price, while the middleman is pulled out, or if he stays in, gets his honest price, and the people who purchase the fish pay a reasonable price for it?

I do not care which horn of the dilemma the Minister of Fisheries decides to select and recommend to the government. But I do say that if in this, the first session of the Liberal administration, when the high hopes of the people of Canada were raised to a pinnacle almost above the stars that scintillate in the heavens, those who are charged with the administration of these matters have nothing concrete to offer to the fisherman, there is something lacking. Thank God I am big enough and broad enough, although I may be censured for expressing the opinion, to say that if some things continue as they are I shall not restrain myself as much as I have done to-night, but I shall say some things that are wholesome and true and will make some hon. gentlemen think of their responsibility to the class of people of whom I have spoken. I say that this government, including the Minister of Fisheries, should not hand over this $300,000 to the provincial governments, because fisheries is a federal matter. If the provincial governments are going to contribute; if they wish to distribute that money themselves, that is their business, not the business of this committee. I sat in the legislature of Nova Scotia for seventeen years. In those days we were not looking for subventions or assistance except what was our right.

But now the scene is changed, and conditions in Canada in many respects are appalling. This is due, not to any government nor to the situation created by any government, but solely to the fact that the world has lost its head. Napoleon thought he could rule Europe because he had armies and military genius, but when, having arrived at the lonely isle of St. Helena, he wrote his memoirs, what did he say? "There is only one thing that can rule the world, and that is sentiment." In this house we cannot deal too largely in that great attribute, which means so much in the country, because we are dealing with public money. But surely there should be a proper measure of sentiment in a government. I am sure there is, and it is only necessary to awaken that fine conscience which I believe they have, and of which I believe the hon. leader of the opposition and those sitting about him are also not bereft. I think there is a fine possibility in that regard, due to the tide of change which affects people who sit in opposition. When Sir Wilfrid Laurier went into opposition in 1911 and Sir Robert Borden took his place as Prime Minister of Canada, Sir Wilfrid said, in that lovely way of his, "Mr. Speaker, my right hon. friend the Prime Minister sits where I used to sit and I sit where he used to sit. Let him feel when he engages himself in these great public questions of the future that he may remain there longer than he thinks." Although the right hon. leader of the opposition is not saying so, he may be thinking of that. Perhaps it is because I am a bit of a mind-reader that I am making that particular reference.

Mr. STIRLING: To come down to earth for a moment. When I first read this wording, "To aid, in cooperation with provincial governments concerned, in reestablishment of needy fishermen," two practical questions occurred to me. How will the needy fishermen be selected, and how will they be assisted? But particularly, how will they be selected?

Mr. MICHAUD: By provincial governments.

Mr. STIRLING: And how assisted?

Mr. MICHAUD: To the extent of whatever assistance the provincial governments will decide to give them. And when they make that decision, we contribute fifty per cent.

Mr. ROSS (St. Paul's): There are many needy fishermen in Ontario. Ontario catches a great deal of fish. I was wondering whether it was proposed that some of this money should be allocated to Ontario to help needy fishermen in this province.

Mr. MICHAUD: I am afraid not on this vote. We realize that there are fishermen in need in Ontario as well as in other inland provinces, but we have no jurisdiction over the fisheries of those provinces, and no information as to the need of those who occasionally avail themselves of the privilege of fishing. We feel that this is a matter of provincial concern. We simply try to help

those who have been reported to the federal Department of Fisheries as being in need of assistance.

Mr MacINNIS: This is not a very large sum of money, and we know there are many needy fishermen in all the provinces in which there are fisheries. As far as I am concerned I would have no objection to the expenditure of this and perhaps a much greater amount, provided of course that I knew the way in which it was to be expended. Unfortunately, however, the minister is not able to give us anything definite to-night as to who will receive this money, what is to determine the question of need, how the money is going to be paid out and what provisions are to be made for its productive or helpful expenditure. We have nothing definite in the matter at all; in fact I think the only definite point that came out during the discussion this evening was that the hon. member for Comox-Alberni and the hon. member for Halifax now do not believe in one of the slogans so prominently displayed during the election. I refer to that slogan which so many of us saw on the billboards: Vote King and Get Action.

Some hon. MEMBERS: Hear, hear.

Mr. MacINNIS: We are hardly getting action in connection with this item. I notice that quite a number of my friends agree with me. They will agree still more as time goes on.

I should like to make a constructive suggestion to the minister with regard to the expenditure of this money. I believe that no matter what governments may be in office both here and in the provinces during the years to come they will find themselves more and more driven into the position of having to give a helping hand to those engaged in the industrial life of the country. For that reason I believe that before moneys are voted some constructive plan over a period of years should be worked out. I do not believe that you can work out a plan by dealing with individuals. I am going to suggest to the minister that he might assist needy fishermen by helping them cooperate in the fishing industry. I have a good deal of information on the considerable progress that has been made in the province of Nova Scotia in organizing the fishermen into co-operative organizations. Before the minister pays out this money I would suggest that he get into touch with these organizations and try to secure some advice from them as to how this money should be expended. I say that it is going to be only a waste of money if this sum is to be given out in a dribble here and a dribble there, without any constructive program in mind. I am not criticizing the minister as regards the amount, but I should like to see him come forward with a plan. So I make this suggestion in the hope that it may help him in expending this money to the best advantage.

Mr. BENNETT: I only want to make this observation, Mr. Chairman: In days gone by a great deal of complaint was made with regard to the neglect of fishermen who were in need of relief. There are fisheries in New Brunswick, Nova Scotia, Quebec, Ontario on the inland lakes, in Manitoba on lake Winnipeg and other inland waters. I am not sure about Saskatchewan, but certainly there are fisheries in Alberta and British Columbia. As this item now stands needy fishermen in every part of Canada are covered by it, and as it appears in this special estimate it constitutes a cheque for $300,000, not a blank cheque for an unnamed amount but a cheque for a named amount the distribution and division of which are left entirely to the caprice or the discretion, whichever word may be preferred, of the government of the day or those advising them.

I cannot but think that if you leave the administration to the provinces you will introduce an element of great difficulty. On the other hand I can readily understand the minister taking the view that he is not in a position to handle the entire administration of this amount. Nevertheless, as he answered the questions of my hon. friend from Yale I gathered that he said there was at present an arrangement by which the provinces contribute fifty per cent and the dominion fifty per cent in cases that come within the provisions of the item. Is my understanding correct?

Mr. MICHAUD: There is going to be an agreement whereby the money will be allocated to the provinces.

Mr. BENNETT: That creates a really difficult situation, as we have found by experience. I dare say the Minister of Labour (Mr. Rogers) might give my hon. friend some information on that point, having regard to what the experience has been. When you select a given number of people in a community as being the persons entitled to relief and then provide that the province shall pay fifty per cent of the cost and the dominion the other fifty per cent, who is going to administer the matter? The provinces? To the extent of fifty per cent of the cost they have no interest in the matter beyond

spending the money. They are not concerned in any way about the fitness or otherwise of the recipient or as to whether he comes within the qualifications. One of the difficulties we experienced in more than one province arose out of that very fact. They were always devising ways and means whereby their fifty per cent never amounted to fifty per cent of the whole and our fifty per cent always amounted to something more than fifty per cent of the whole. The conclusion at which I arrived was that when you begin to deal with a needy individual, because you must bring this down to the unit, and when somebody recommends to the department that we make a payment of fifty per cent because the province is going to pay fifty per cent, to relieve that condition, you find that you have undertaken an almost impossible task and one which, in my judgment, is almost impossible of being effectively discharged.

The last report made by the director of unemployment relief contains striking illustrations of the difficutlies experienced by the auditor general in tracing up some of the amounts. If you merely make a flat vote then the objection made by the Prime Minister (Mr. Mackenzie King) to the action which we took in 1930 becomes apparent at once. I said then that if we give a province a certain sum of money—for the sake of example we will say $1,000—and they give us a receipt for it, we are not concerned about the audit of the expenditure. The provincial legislators must call their government to task for the method by which that amount has been expended. But if on the other hand we undertake to pay a certain proportion of a given expenditure we are vitally interested in knowing that the expenditure has been correctly stated. The difficulty which is now quite apparent from the report of Mr. Hereford is that the auditor general is not able to satisfy himself that in paying a given sum of money we are paying our share of a proper and legitimate expenditure.

That difficulty, I think, becomes reasonably apparent in this case. When the designated and defined fund has been expended, are we to have any supervision or control with respect to it or are we, willynilly, to accept the ipse dixit of the provinces and be done with the matter? That is the real problem which confronts us, and I can only say that it is my duty to point out to the minister that our experience, whatever it may be worth, would not induce us to believe that this is a proper course to pursue. The reasons are those which I am sure those who have taken the trouble to read the last report of the director will realize have really become the origin of the complaints which have been made by one of the provinces that they are not getting their share of what they are entitled to receive because the auditor general can neither satisfy himself as to the expenditures nor obtain the necessary vouchers. Now $300,000 divided among the needy fishermen of this country would not go very far, if you include all of them. I do not know whether the chamber realized the point, but I was amazed when the hon. member for New Westminster pointed out to-night that there are 82,000 people directly and indirectly engaged in the fishing industry in British Columbia, which really means that one-ninth of the population of that province is thus concerned.

Mr. MICHAUD: That is the total in Canada.

Mr. BENNETT: I thought he must be wrong. He put it, I thought, at 82,000 in British Columbia, which struck me as being extraordinary. But if it is the whole of Canada the situation is different. There are 16,000 in Nova Scotia. I know more than half of 82,000 are in the maritime provinces, but I could not think there were as many as that in British Columbia. However, say we have, roughly 85,000. We have had evidence that on the Lunenburg coast in Nova Scotia, and on the north shore of New Brunswick, owing to inability to sell fish to Italy and in the West Indies during recent years, there has been a steady diminution of employment of deep sea fishermen, and it is those I understand that the minister has in mind to reestablish. If we are going to talk about reestablishment with federal money, that must be done under the control of this parliament, not under the control of someone else, because if we are going to pay the piper we should call the tune. If we mean reestablishment in that sense I think the minister himself must accept responsibility for carrying on that work. If it is merely a question of relief then I understand the attitude which he has taken with respect to the expenditure, but I can only point out that I think he will find that he will have to make more definite provisions than those he has yet suggested if he is going to avoid the pitfalls pointed out by the director of relief in dealing with that problem. I only hope that in his distribution of the largesse of which he has now been made the custodian he will use that measure of discretion which should characterize a minister seized with a sense of

his responsibility, notwithstanding what the hon. junior member for Halifax (Mr. Finn) has said.

It is highly edifying and interesting to hear the expressions of opinion made by a supporter of the administration regarding a new minister who has discharged his duties for only a few months. We can only wonder what the harvest will be for a longer period of time, as illustrated by the views taken by that independent member who sits to my right, but who always manages somehow to have the goodwill, shall I say, of the government at particular times when this is very useful. It appeared that the letters asked about were dated not December, 1934, as some had hoped they would be, but December, 1935, and February of the present year, which was somewhat of a shock to some of our friends who had expected that out of a sense of deep and abiding gratitude the hon. member for Comox-Alberni (Mr. Neill), to say nothing of the junior member for Halifax, would join together and make this attack upon the minister. This is at least interesting to us all and affords an opportunity to understand that, after all, there is beginning to be a realization on the part of the government that the administration in the days of stress and difficulty was not just as easy as it seemed to be when they were sitting on this side of the house. Responsibility has brought home to them a realization that it is much easier to sit to the left of the Speaker and to criticize than, sitting to his right, to provide the sinews of war on the one hand and the administration on the other.

Mr. FINN: I would like to correct a statement made by the right hon. leader of the opposition. He seems to be doing what I thought he would not do, that is grasping at a political straw. I made no criticism whatever of the hon. minister or of officials. I pointed out to the minister that I thought it was the duty of the department, himself and his officials, to look into this matter from every angle. I am not going to permit the leader of the opposition to put into my mouth his political words; I used my own, and Hansard will show them, and I would ask the right hon. gentleman to take that statement back.

Mr. BENNETT: Far be it from me to endeavour in my poor way to improve upon the elegant diction of the hon. gentleman. If I misconceived his observations as being criticism instead of commendation, then it may be that my understanding of the words "criticism" and "commendation" is not quite that of the hon. gentleman. If I have done violence to his feelings or in any sense misunderstood him I can only say that it arises from the fact that I would have concluded that his observations constituted criticism and not commendation. Apparently I should have said that when I contemplate the commendation of the hon. junior member for Halifax of the activities of the Minister of Fisheries I am at a loss to understand what he would regard as criticism.

Mr. KINLEY: From the observations of the minister I take it that it is his intention to contribute on a fifty-fifty basis with the provinces; that if a province would contribute fifty per cent he would give fifty per cent of this fund to that province where needy fishermen are concerned. May I ask the minister what he is going to do in case a province does not provide anything as its part of the contribution?

Mr. MICHAUD: It cannot share in the fund.

Mr. KINLEY: Therefore so far as this vote is concerned a province that does not cooperate and contribute cannot share in this fund.

The next item of course is not up for discussion. Something will depend upon that. The minister said a moment ago that this fund was intended to help fishermen who fish only part of the year; that there are fishermen who fish all the year round who would not share in this fund. That is a serious statement as far as I am concerned, because my fishermen fish all the year round, but nevertheless they find it difficult to make a living. If the fishermen who fish all the year round cannot share in this fund it is a serious matter for the fishermen in my constituency. Has the minister any observations to make in that regard? Will they come under the next item?

Mr. MICHAUD: Indirectly they will, certainly.

Mr. KINLEY: In his genial way the hon. member for Comox-Alberni (Mr. Neill) severely criticized the officials of the Department of Fisheries. Although I have been connected with public affairs for many years, this is my first adventure in the House of Commons and so far as my constituency is concerned the fisheries officers are the officers who came to me when I was elected. By and large I consider them good officials. They are alert and I believe they are faithful in trying to do their work. I believe the same is true of the officers at Ottawa. I believe I can pick out a drone when I see one, and

I must say that while I have been round these offices quite a bit it is my belief that the officers of the department are trying to do their best. We must remember, however, that the Department of Fisheries is one dealing with prohibitions and regulations. How can we expect a department dealing with such matters to be popular with members of the House of Commons or with the people of Canada? The only money the Department of Fisheries ever had under its control was to be used for purposes of prohibiting something. There was nothing to sustain or develop fisheries. The Department of Fisheries is the Cinderella of the government, and it has been the Cinderella for many years. I think it is unfair to criticize unduly the officers of the department, and the only criticism I would make is that they should have been more aggressive with the treasury board, and should have seen to it that more money was voted for the development of fisheries in Canada.

In my province two kinds of fisheries are affected. My difficulty is not the same as that of the hon. members from British Columbia, because we have both fresh and salt fishing. The fresh fishing industry depends to a great degree upon the home market, while salt fishing depends upon the foreign market. In connection with our fresh fishing we are practically free of competition with the exception of that offered by Newfoundland at some periods of the year. We at least have the Canadian market for our fresh fish, and may I add at this point that the amount of fresh fish marketed in Canada has increased in the last five years.

According to the report of the price spreads commission 1929 was a big year in the fish industry, whereas 1932 and 1933 were small years. Since that time the fresh fish industry has been growing in Nova Scotia and in the maritime provinces generally. Notwithstanding that fact, however, the fishermen cannot make a living. From the price spreads commission report we find that our fishermen earn from $75 to $300 per year. When I come to this House of Commons and hear hon. members talk about sustaining people on relief at $40 per month I have to smile, because our fishermen would live in comfort on $600 a year.

Why is it that our fishermen are not earning enough to keep body and soul together? The report of the price spreads commission tells the story. The reason is that the fisherman has lost his bargaining power. He must take what is offered him for his fish, and he is not able to have any say in what price the product of his toil shall bring. Why is that so? One reason—and the minister knows it—is the steam trawler. We know that the steam trawler makes the corporation a primary producer. The trawler operator is put into the position where he can dictate prices to the fishermen of Canada. With his steam trawler he says in effect to the fishermen: "You will take what I want to give. If not, I have a steam trawler coming in to-morrow which will supply my requirements." To-night I am not going to discuss at length questions in connection with the steam trawler, but at some future time I shall do so.

If hon. members from other parts of Canada think we are against progress, then let them be at once undeceived, because the steam trawler people by their own figures admit that it costs them from one and a half cents to one and three-quarter cents to land a pound of fish. I have in my hand invoices from the National Fish Company at Halifax indicating that they paid one cent a pound on the average to a Nova Scotia fishing vessel for a trip before Christmas of this year. These men are working seventy hours at a stretch, are earning less than $8 a week and have families to support.

Parliament has spoken on the steam trawler question. The Maclean commission spoke on it and recommended against it. You may say, "Kinley, you are parochial in your viewpoint." That has been thrown in my face on many occasions. I say that my people are living in Canada, too, and it is not a criticism to say that something is done for them. If it is in favour of my people, then that should commend it especially when it is for the general good.

Doctor Cyrus Macmillan was not parochial. He was a member of the Duncan commission and was afterwards a member of the Maclean commission. Doctor Cyrus Macmillan in dramatic language and in no uncertain terms said that conditions were such that steam trawlers must be abolished, if fishermen were going to live. Then, in Nova Scotia there was set-up the Jones commission, presided over by Professor Jones of England. Connected with the commission were Mr. Alexander Johnston, the late deputy Minister of Marine and Fisheries, and Doctor Innis of Toronto university. Were these men parochial? Alexander Johnston and Doctor Innis said that the steam trawler must be abolished if the fishermen of Canada are to be sustained or preserved.

Then we come to the price spreads commission of last year. Hon. members of this chamber served on the commission, and in their considered report what do they say?

They say that the fisherman has lost his bargaining power, and in order that he may get along the steam trawler must be gradually abolished in this country.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

---

## Wednesday, April 29, 1936

The house met at three o'clock.

### PRIVILEGE—MR. CHURCH

Mr. T. L. CHURCH (Broadview): Mr. Speaker, I regret to rise to a question of privilege. I wish to refer to a few short words in a long editorial reflecting on me, on this subject, in the Ottawa Journal of Saturday, April 25, in which it says, referring to my remarks in this house on Wednesday, April 22, "The member for Broadview goes places when he gets on his feet." It says I saw New York slums from the Grand Central station, Times square, the Waldorf-Astoria and Fifth avenue. I did not—nor those here from an Ottawa golf club. There was no "if" about it. I saw them in New York with the late Doctor Hastings, the great medical health officer. I only referred to those across the Ottawa river as one concrete case in Canada. I saw these in detail the day before I introduced the housing motion of last year, and again on July 3 and 4, 1935. According to citation 157 of Beauchesne I deem these errors an interference with and reflection upon a private member. The editor says I spoke without that "profound preliminary thought that is supposed to be an attribute of statesmanship." I did not. I devoted fifteen years of thought with the late Doctor Hastings to secure slum clearance and housing, and a modern health department in all its forms. He wishes I had come closer to the facts and had a little more sympathy and understanding. When I need these I will not go to this editor for such aid. I know the facts. While I will always respect and admire the proprietor of this paper, its editor "understands everything and knows nothing" of slum conditions as I have seen them.

### DAIRY INDUSTRY ACT

Hon. J. G. GARDINER (Minister of Agriculture) moved for leave to introduce Bill No. 56, to amend the Dairy Industry Act.

Some hon. MEMBERS: Explain.

Mr. GARDINER: This is a short amendment having to do with the different sizes of prints in which butter can be made up for sale. I understand that in British Columbia they are in the habit of using a three pound print, while in other provinces they usually use one or two. The law now confines us to a maximum of two, and the intention is to extend it to permit the use of any multiple of one.

Motion agreed to and bill read the first time.

### QUESTIONS

(Questions answered orally are indicated by an asterisk.)

#### VANCOUVER HARBOUR COMMISSION

Mr. MacNEIL:

1. How many persons have been dismissed from the staff of the Vancouver harbour commission since October 23, 1935?
2. How many of those dismissed during this period were ex-service men?
3. How many persons have been appointed to the staff of the Vancouver harbour commission since October 23, 1935?
4. How many of those appointed during this period were ex-service men?

Mr. HOWE:

The following information supplied by the Vancouver harbour commissioners:

1. Twenty-seven.
2. Six.
3. Fifteen.
4. Three.

Mr. McLARTY:

1. How many persons have been dismissed from the staff of the Vancouver harbour commission during the period commencing August 7, 1930, and ending October 23, 1935?
2. How many of those dismissed during that period were ex-service men?
3. How many persons were appointed to the staff of the Vancouver harbour commission during the said period?
4. How many of those appointed during the said period were ex-service men?

Mr. HOWE:

The following information supplied by the Vancouver harbour commissioners:

1. Seventy-six.
2. Twenty-two.
3. One hundred and thirty-two.
4. Forty-six.

(Note: During this period mentioned the commissioners assumed operation of Lapointe pier, including staff of that pier; also Second Narrows bridge and also operated elevator No. 2 for one year).

#### DELORIMIER POSTAL STATION, MONTREAL

Mr. DESLAURIERS:

1. What is the name and address of the owner of the building situate at 4574 Papineau

street, Montreal, occupied by the Delorimier postal station?

2. What is the municipal valuation of this building?

3. What is the monthly and yearly rental for that portion of the building occupied for postal purposes?

4. What amount has the government expended on said building, for improvements, repairs and maintenance from 1930 inclusive to 1936?

5. What is the floor space occupied by the post office?

6. When does the lease of the building expire?

7. During the depression was any reduction made in the rental?

Mr. ELLIOTT (Middlesex):

1. J. O. Malo, 1856 De LaSalle ave., Montreal, P.Q.

2. Land, $4,000; building, $16,000; total, $20,000.

3. (a) $300; (b) $3,600.

4. From date building rented May, 1, 1931, to January 31, 1936. Minor repairs and improvements, $602.03 for four years and nine months. (Large improvements and repairs made by owner). Caretaking, heating, lighting, power and water, $4,976.70 for four years and nine months.

5. 4,650 square feet.

6. May 1, 1937.

7. On expiration of lease May 1, 1936, the rental reduced to $3,000 per annum.

ALLEGED SHORTAGE OF POTATOES

Mr. STEVENS:

1. Has the attention of the government been drawn to a widely circulated press dispatch stating that there was a shortage of potatoes in Canada?

2. Is the government aware that such a statement was unwarranted by the facts?

3. What steps, if any, have been taken to correct the false impression made by this dispatch?

4. Is the government aware that retail prices of potatoes have been advanced to an unwarranted extent in many instances as a result of the dispatch referred to in question No. 1?

5. Has any inquiry been instituted to ascertain who was responsible for the dispatch, and as to whether or not holders of storage supplies of potatoes were implicated in circulating the information for the purpose of increasing prices?

Mr. GARDINER:

1. Yes.

2. No. On the contrary, reliable information shows that the crop and marketing position warranted a sharp price advance in potatoes. Commercial storage holdings in Canada at April 1st totalled only 48,152 tons against 246,673 tons in 1935. New York and Boston wholesale prices had taken a sharp rise and attracted shipments from the maritime provinces which otherwise would have been available to demand in central Canada. The following are extracts from the New York Packer, a prominent trade journal:—

"New York, April 10—Maine growers still fortunate enough to own potatoes were this week feeling that they, for the first time in recent years, were in control of the market situation, and started naming their own prices. Varying factors entered into this bullish outlook, the foremost being that practically all remaining supplies were in their hands, the second being the comparatively small amount of potatoes which still remain to be shipped, and the third and not the least important being the continued heavy demand from widely scattered regions which in former years at this period would be drawing stock from producing districts closer to home. . ."

"New York, April 17—The potato market ruled firm to slightly stronger here this week with supplies clearing readily at prices higher than last week's. The present bullish tone continued in the shipping sections, particularly in Maine, and even many conservative distributors were gradually losing their bearish attitude.

In the Maine sections growers were reluctant to haul their stocks even at the $3 per barrel figure and remained firm in their conviction that the peak price had not been reached. . .

One cargo arriving by boat, totalling around 90 cars, reached the market during mid-week and this stock cleaned up rapidly, opening prices of $2.15 being speedily advanced to $2.25 per 100-lb bag, all sales f.o.b. Port Newark. . .

Another boat arrived carrying approximately 80 cars of Prince Edward Island potatoes and these also cleaned up speedily at attractive prices ranging from $2.50 to $2.60 per 90-pound bag, depending on size. . . .

Taking the entire potato market as a whole the present tone is one of extreme strength, and while there continues to be an undercurrent of uneasiness over the sudden rise in prices, the willingness displayed by buyers at all important marketing centres to absorb receipts at the higher levels seemed to indicate that values at the moment were fairly sound."

"New York, April 24—The potato market continued firm to slightly stronger this week both locally and in the shipping sections of the country. While price advances have been spotty there has been no instance of weaknesses since the recent upward surge began a few weeks ago, and the steadiness of the

advance both at country points and in the consuming centres appeared to sustain the bullish attitude taken by the majority of growers in Maine. . . .

While the main portion of the 200 cars which have been moving daily from Maine were destined for eastern markets, some middle western buyers were still taking on more than their customary purchases from that area for this late period of the season. This condition was partly brought about by high prices of Idaho offerings, as well as the disappointing quality and size shown by the early new stock from Florida in the opinion of many in trade circles. . . ."

3, 4, and 5—Answered by No. 2.

VIMY RIDGE MEMORIAL

Mr. CHURCH:

1. When is the Vimy Ridge memorial in France to be unveiled?
2. When will an announcement be made of Canada's representatives there, and who is to be invited to attend?
3. Will soldier members of parliament who served at the front be included and sent?
4. Will the representatives of the various soldier organizations, the Canadian Legion and others, be included and to what extent?
5. What will the memorial cost when completed?

Mr. MACKENZIE (Vancouver):

1. July 26, 1936.
2. It is expected that it will be possible to make an announcement shortly.
3. Under consideration.
4. Has not been considered. This has not been requested by these organizations; and it is understood that a large pilgrimage is proceeding to France under the auspices of the Canadian Legion of the British Empire Service League, to attend the unveiling of the Vimy Ridge memorial.
5. It is estimated that the cost of the construction of the memorial, together with the building of roads, the preparation and laying out of the grounds and incidental expenses, will be about $1,290,000.

EXPORTS OF BUTTER

Mr. BERTRAND (Prescott):

1. Did the government help to take some butter off the Canadian market during the calendar year 1935?
2. If so, was it done under a scheme under the Natural Products Marketing Act
3. How many pounds of butter were then exported under such scheme, and on what dates?
4. How much money did this cost the government (a) as allowance on butter; (b) as cost of administration of scheme?
5. To whom were these amounts paid?

Mr. GARDINER:

1. Yes.
2. Yes.

PHILIPPE CHALIFOUR

Mr. WERMENLINGER:

1. Is Philippe Chalifour of Beauport county, Quebec, employed as labourer by the marine department at Quebec?
2. If so, on what date did he commence his work?
3. Has he been dismissed; if so, when?
4. Upon whose recommendation?
5. For what reason was he dismissed?

Mr. HOWE:

1 and 2. He was employed as labourer from March 8, 1917.
3. He was dismissed April 1, 1936.
4. Wilfrid Lacroix, M.P.
5. Political partisanship.

HAVRE ST. PIERRE, QUE., WHARF

Mr. WERMENLINGER:

1. To whom was the contract given for the construction of a wharf at Havre St. Pierre, county of Charlevoix-Saguenay?
2. Who were the tenderers?
3. At what figure was the contract awarded?
4. How many toises of stone will be required in the construction of said wharf?
5. What is the agreed price per toise?

Mr. CARDIN:

1. Victor E. A. Bélanger and James Bertrand.
2. Bélanger & Bertrand Cie de Construction de la Côte du Nord Ltée; The Foundation Company of Canada Ltd.; Collet Frères Ltée.
3. $60,043.60.
4 and 5. Approximate quantity of stone required and price as per tender: Stone riprap walls, 150 cubic yards at $2 per cubic yard; flat stone coping, 150 lineal feet at 60 cents per lineal foot; rock fill, 4,800 cubic yards at $1.50 per cubic yard.

WEIGHTS AND MEASURES ACT

Mr. STEVENS:

1. What was the number of prosecutions conducted during the calendar year 1934 and the calendar year 1935, under the Weights and Measures Act, in Ottawa and Toronto?
2. How many of these prosecutions were based on information laid against individual branches of chain stores, and how many were based on information laid against independent merchants?
3. How many convictions were secured against individual branches of chain stores in Ottawa and in Toronto?

Mr. EULER:

1.

| | |
|---|---|
| 1934, Ottawa | 58 |

VANTAGE, SASK., MAIL SERVICE

Mr. PERLEY (Qu'Appelle):

1. Who held the contract for carrying the mail from the post office at Vantage, Saskatchewan, to the railway station, prior to December 1, 1935?
2. Was he dismissed; if so, for what reason?
3. Who is the present holder of the contract for carrying the mail from Vantage post office to the railway station?
4. Were tenders called for the contract; if not, why?
5. Who recommended the present holder of the contract and what is the remuneration for said services?

Mr. ELLIOTT (Middlesex):

1. Thomas Wiseman.
2. No. His contract expired March 31, 1936.
3. M. D. Rowe.
4. No—contract rate not in excess of $200 per annum.
5. Dr. T. F. Donnelly, M.P. $200 per annum.

CANADIAN NATIONAL RAILWAYS

Mr. BROOKS:

1. What was the total tonnage of each grade or size of coal used at each point of consumption on the Atlantic division of the Canadian National Railways from January 1, to December 31, 1935?
2. From what persons or companies was coal purchased for said railways during said period, what tonnage from each and what price was paid to each for the different sizes f.o.b. cars Canadian National Railways tracks?
3. What quantity of coal produced in Nova Scotia was used by the Canadian National Railways in New Brunswick during the calendar year 1935?
4. What quantity of coal produced in New Brunswick was used by the Canadian National Railways in Nova Scotia during the calendar year 1935?
5. With what persons or companies have contracts been entered into for the supplying of coal to Canadian National Railways, Atlantic division, for the year 1936?

Mr. HOWE: This refers to a matter of the internal operations of the Canadian National Railways, having to do with the purchase of supplies. It has not been the custom to answer questions of this kind in parliament, and I must ask that the question be dropped.

Mr. SPEAKER: Dropped.

Mr. LAPOINTE (Matapedia):

Have the Canadian National Railways during the past year engaged new engineers or firemen on the Campbellton-Mont Joli division? If so (a) what are their names and addresses, and (b) what were the dates of their engagement?

Mr. HOWE: This also has to do with the internal management of the Canadian National Railways. I must ask, for the same reason, that this question also be dropped.

Mr. SPEAKER: Dropped.

## QUESTIONS PASSED AS ORDERS FOR RETURNS

### MOTOR VEHICLE LICENCES

Mr. MacINNIS:

1. How many motor vehicle licences were paid for by the dominion Department of Public Works in (a) the city of Victoria; (b) the city of Vancouver, for the year 1935?
2. Are all cars for which the government paid a motor licence the property of the government?
3. What is the make of the cars used by officials of the Department of Public Works in the cities mentioned?
4. What was the purchase price of each car owned by the government in the cities mentioned?
5. What is the name and occupation of the government employees operating these cars?
6. Are there departmental regulations which require that all government cars must be marked with the name of the department or other distinguishing marks or letters?
7. What are the regulations, if any, pertaining to the use of government owned cars for other than government business?

### PUBLIC BUILDINGS—COAL

Mr. BROOKS:

1. What persons or companies were awarded contracts for the supplying of coal for the dominion public buildings in the maritime provinces for the coal year 1935-36?
2. What tonnage was given to each contractor, and what buildings was each to supply, also what was the grade of coal and price per ton?

### FARM LOAN BOARD STAFF, REGINA

Mr. PERLEY (Qu'Appelle):

1. Who were the members of the farm loan board staff at Regina prior to October 14, 1935?
2. What was the salary of each?
3. Who are the present members of the farm loan board staff at Regina?
4. What is the salary of each?
5. How many loans have been paid out by the farm loan board at Regina, between October 13, 1935, and the present date?

## MOTIONS FOR PAPERS

### WEIGHTS AND MEASURES ACT

Mr. STEVENS:

For a return showing: (1) A list of the names of those convicted of infractions of sections 63 or 64 of the Weights and Measures Act during the calendar year 1934 and the calendar year 1935; (2) the date of the signing by the minister of the authority to prosecute; (3) the date of the conviction; (4) the name and address of the premises where the offence occured in each separate instance, for both chain stores and independent stores.

### CENTRAL FINANCE CORPORATION

Mr. POULIOT (for Mr. Bouchard):

For a copy of the application for incorporation of the Central Finance Corporation and all correspondence supporting the application and petition for incorporation. Also a copy of the returns made by the Central Finance Corporation after incorporation to the date of the passing of this order of the house.

## GOVERNMENT MERCHANT MARINE

On the orders of the day.

Mr. R. E. FINN (Halifax): Before the orders of the day are called I should like to direct a question to the Minister of Railways (Mr. Howe) concerning a matter of great importance to the people of Nova Scotia, and particularly to the port of Halifax: whether or not the report is true that the Canadian merchant marine, now plying between the port of Halifax through the Panama canal to Australia and New Zealand and back through the Panama canal to New York and Boston, thence to Saint John and to Halifax in winter, and up the St. Lawrence, has been sold to the Elder Dempster line, and for what amount?

Hon. C. D. HOWE (Minister of Railways and Canals): Mr. Speaker, it is true that the line operating direct between Halifax and Saint John and Australian and New Zealand ports has been sold. I think the hon. member who asked the question is confusing this with another service, the Halifax-West Indies service, which, as he suggests, does call at Boston. This latter service has not been sold, and there is no intention of selling it. I may say that the sale of the Australian service has been under consideration by the government for several years. The boats had reached the end of their usefulness; they were very slow and unsuitable for the service, and the matter had reached the point where their replacement would have to be reconsidered. The government was faced with the alternatives of scrapping the boats, replacing them, or selling them. It was felt that this disastrous experiment in ocean shipping did not warrant further expenditures in the same direction. It was

found possible to sell the boats under conditions that guarantee the service for at least five years, without subsidy and with boats faster and more suitable to the trade. Arrangements were made whereby the new owners would take over the staffs, both ashore and afloat, of this company, and conditions were imposed which, I think will protect every interest that could possibly be in jeopardy through the sale. We regard the price obtained for the boats as a very fair price under present conditions.

Mr. FINN: May I ask the minister another question? I was not speaking of the Canadian National Railway boats, because those are the five Lady boats and the freight boats that go to the West Indies.

Some hon. MEMBERS: Order.

Mr. FINN: This is in explanation of a statement made by the Minister of Railways. I wish to ask this further question: whether the service which is guaranteed without subsidy for five years protects the captains and officers and crew, who are Canadian, as to continuance in the service of the steamship company to which these boats have been sold.

An hon. MEMBER: The minister said so.

Mr. SPEAKER: Order. I think that is enough.

Mr. HOWE: I intended to cover in my first statement the answer to the last question. The terms of the sale provide that the staff and crews both afloat and ashore will be taken over by the purchasers.

Mr. BENNETT: In view of the précis of the arrangement that has been given verbally by the minister, I assume that at a convenient moment he will lay the papers on the table of the house.

Mr. HOWE: I shall be very glad to do that. The papers are not quite completed at the moment.

## CANADIAN NATIONAL RAILWAYS

### REPORTED LEASE TO CANADIAN PACIFIC OF WINDSOR-WINDSOR JUNCTION LINE

On the orders of the day:

Mr. R. E. FINN (Halifax): I have another question of importance to address to the Minister of Railways. Has he or have the government knowledge that a contract is about to be entered into with the Canadian Pacific Railway for a long period of years, leasing the road from Windsor to Windsor Junction, which is owned by the Canadian National Railways?

[Mr. Howe.]

Hon. C. D. HOWE (Minister of Railways and Canals): Mr. Speaker, I think if the hon. member would make this a notice of his question I should prefer to answer it tomorrow.

Mr. SPEAKER: This will stand as notice of the question.

## BUSINESS OF THE HOUSE

### PROCEDURE WITH REGARD TO PRESENTATION OF BUDGET ON FRIDAY

On the orders of the day:

Right Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, in making his statement yesterday as to the date of delivery of the budget I assume that the Minister of Finance was aware of the fact that standing order 28 provides:

> On Thursdays and Fridays when the order of the day is called for the house to go into committee of supply, or of ways and means, Mr. Speaker shall leave the chair without putting any question, provided that, except by the unanimous consent of the house, the estimates of each department shall be first taken up on a day other than Thursday or Friday.

As the situation stands at present no motion could be made for the purpose of delivering the budget.

Hon. CHARLES A. DUNNING (Minister of Finance): I recognize the correctness of my hon. friend's quotation from the rules of the house, but in other years a way has been found to overcome this difficulty. Last year, if I remember correctly, the budget was delivered on Thursday, and whatever method was followed then I hope the house will permit me to follow on this occasion.

Mr. BENNETT: I am only offering the suggestion that the minister should make the appropriate motion so that the matter will be regularized before Friday, because if I raised the point on Friday the minister could say very properly that he had been taken unawares and without having been given an opportunity to deal with the situation.

Mr. DUNNING: If it is necessary to do something in advance I will do it.

## GERMAN CRUISER EMDEN

On the orders of the day:

Mr. S. W. JACOBS (Cartier): I should like to direct a question to the Prime Minister. Is the proposed visit of the German cruiser Emden to Montreal being made with the approval and consent of this government?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I may say to my hon.

friend that the visit of the Emden to Montreal has no political significance. The visit is not at the invitation or on the initiative of the government of Canada but is part of a routine visit which the Emden is making to various countries in South America, Central America and North America, which visit includes Montreal. The visit was concurred in by the Canadian government as long ago as September of last year. To cancel the visit at this stage would be to take a course that is unprecedented among nations at peace.

Mr. JACOBS: Then I should like to ask the Prime Minister the further question as to whether the city of Montreal has not in some way protested against this visit and communicated with the government with respect to it, inasmuch as riots are feared on the arrival of the boat.

Mr. MACKENZIE KING: I may say to my hon. friend that the mayor of Montreal has communicated with the government. I would not say protesting against the visit but drawing attention to the possibility of the visit not being as pleasant as those on the Emden might expect, but the government hopes that the good sense of the people of Montreal will govern the situation.

Mr. T. C. DOUGLAS (Weyburn): May I ask the Prime Minister if any money is being expended by the federal government to extend a welcome to the Emden?

Mr. MACKENZIE KING: I am not aware of any money having been specially appropriated for the purpose, but I assume that the ordinary courtesies will be extended which are customary when vessels of foreign countries visit Canadian shores.

## SUPPLY

The house in committee of supply, Mr. Sanderson in the chair.

### DEPARTMENT OF FISHERIES

To aid, in cooperation with provincial governments concerned, in reestablishment of needy fishermen, $300,000.

The CHAIRMAN: Shall the item carry?

Some hon. MEMBERS: Carried.

The CHAIRMAN: Carried.

Mr. KINLEY: At eleven o'clock last night I was speaking in connection with this item—

The CHAIRMAN: I would direct the attention of the hon. member to the fact that the item is carried.

Some hon. MEMBERS: No.

The CHAIRMAN: I am entirely in the judgment of the committee; if it is the wish of the committee the discussion may proceed.

Mr. KINLEY: At eleven o'clock last evening I was speaking on this estimate, dealing with the subject of beam trawlers. At that time I said I would speak of the matter again at some future time, and I prefer to do so on the ordinary estimates.

Mr. POULIOT: Before this item is carried may I ask the minister if any representations have been made in regard to this matter by Hon. John Hall Kelly, minister without portfolio, of Quebec?

Hon. J. E. MICHAUD (Minister of Fisheries): The answer is no.

Mr. POULIOT: Thank you; very good.

Mr. SENN: May I ask the minister if any of this money is to be used for inland fishermen?

Mr. MICHAUD: It is not the intention so to use it.

Mr. FINN: I would like the minister to give us some idea as to how this $200,000 is to be expended.

Mr. MICHAUD: I thought I gave the information last evening. If the hon. gentleman wishes to know what amount will be apportioned to each province I may tell him that it is not possible to give that information at the present time. Each province has to furnish a sum equal to that supplied by the federal government, so we must ascertain how much the province is going to put into the fund.

Mr. FINN: That was not the question I asked the Minister of Fisheries. I did not ask who was going to expend the money if the provinces do come into the scheme; I asked as to the policy of the department with regard to the expenditure of the money. For what specific purpose is it going to be used?

The CHAIRMAN: Is the hon. member for Halifax speaking on item 314?

Mr. FINN: I am speaking on item 315.

The CHAIRMAN: The committee is still on item 314. Shall the item carry?

Item agreed to.

To aid in expanding the sale of the products of Canadian fishermen in foreign and domestic markets, $200,000.

Mr. STIRLING: Would the minister be good enough to explain to whom this money is to be paid?

Mr. MICHAUD: This appropriation is to be expended exclusively under the control of the dominion government. It is for the purpose of helping the fishing industry in respect to its relations with the dominion government, that is so far as the dominion has jurisdiction over the fisheries. Those interested in this industry complain that their greatest handicap is the limitation of markets. It is well known by hon. members who represent fishing constituencies or who have any relation to the fishing industry that within the last several years foreign markets for our fish have dwindled to such an extent that to-day in some parts of the country some classes of fishermen think it is not worth while any longer to pursue that vocation.

At to the causes of this situation I will not undertake to speak in detail; they are numerous and far reaching. But we have to face the fact that the situation exists, that our foreign markets for cured or salt or dried fish have practically been taken from us by European countries within the last ten years. It is represented by those interested in the industry that something should be done to try to regain these markets and convince the people of these countries that they should again purchase Canadian fish. In order to do all that is possible to satisfy these people it is intended to spend a little money this year in an endeavour to get back some of those markets.

As to how we intend to proceed, we shall call in conference those vitally interested in the export of dried and cured and salt fish, who suffer most, and on the Pacific coast the canned salmon industry, which is the largest and most important on that coast, and try to find out from them the best means that they have to suggest of going about it. With that cooperation, as far as money can help, we shall try for this year to comply with their views and experiment in methods of regaining our markets.

We shall also try to develop our domestic market. It is useless to ask foreign countries to favour our fishing industry if we do not set a good example. It is well known that Canada is the country in which per capita there is the least fish consumed. So that we have to try to develop our local market from coast to coast by educating our people to the advantages of using more fish and less meat. This will be done by a system of demonstration, and advertising and propaganda through the press.

As to the United States market there is also room for development. We expect to use part of this money to persuade our neighbours to the south to give a preference to Canadian fish because it is better than foreign fish. One of the reasons why we have lost some of our good customers in the American market for cured and salt and dried fish is that these classes of fish were consumed mostly by people in the United States of foreign descent, and with the cessation of immigration into the United States and the fact that those who went there some years ago have been educated away from fish to the extent that it was part of their diet in their country of origin, the use of fish has been gradually abandoned. So that we are going to try to educate them; it is to be a campaign of education both in our home market and in the foreign markets, in order to induce the people to revert to their old love, good Canadian fish.

Mr. STIRLING: The minister said at the beginning of his remarks that this was to apply to that portion of the fishing industry which is under dominion control, did he not?

Mr. MICHAUD: Well, no; my statement might have been open to that understanding, but we are not going to discriminate against any class of fish or any province. It is to be Canadian fish, whether from the inland provinces or the Pacific or the Atlantic coast.

Mr. REID: I wonder if the minister would take into consideration the matter that I discussed last night in connection with the selling of more fish in the home market, namely the cost of fish in the interior provinces. While fishermen on the Pacific coast receive from one and a half to ten cents for a whole fish weighing from ten to fifteen pounds, the price becomes almost prohibitive once it reaches the interior provinces. Many fishermen, especially in the last few years, have gone in for smoking their own catch, but with the high cost of transportation when those fish reach the prairies or the interior province markets they become too expensive for most people. Price, and of course freshness and quality, have a great deal to do with the consumption of fish, but particularly price. Will the minister take into consideration that aspect of the matter?

Mr. MICHAUD: I shall be glad to do so.

Mr. FINN: In the past we had markets for our smoked and dried fish in the West Indies, in Cuba and at times in the United States, as well as the domestic market. The West Indies market is being lost, for two reasons. The first and main reason is that through mechanical refrigeration the fish caught by people of the West Indies them-

selves can be preserved and therefore there is not the necessity of obtaining fresh fish from the Canadian Atlantic coast fisheries. The Cuban market has been lost because of the fact that there was an agreement that the intermediate tariff should apply if we bought from them twenty-five per cent of what we sold them. We did not do so and they raised the tariff, with the result that to-day our fish can enter Cuba only under the highest possible tariff and therefore are practically excluded. The United States market was lost in 1922 as a result of the Fordney-McCumber tariff. It has continued to be lost, and the Prime Minister stated in connection with his reciprocity pact entered into with the United States that they would not consider reducing the duty on fish because the New England fishermen in Gloucester would not permit it, therefore the American market is practically closed to us. I believe there is an opportunity to recover the Brazilian market, because the producers of Finland, who had been supplying that market, are not sending fish equal to ours, and for that reason there is a possibility of development.

I now come to the question of our own domestic market. I do not speak in criticism of the Minister of Fisheries, nor has a word of mine been offered in that sense—unless it was constructive criticism—but I do say that if we are to branch out and are to obtain the Montreal and Toronto markets for fresh fish from the maritimes some arrangement must be made under which the government will pay part of the freight. Fish could then come through by express at a rate equal to the present freight charges. If the rates are not adjusted we shall not be able to capture this market.

I well remember that when the Prince Robert, of which the leader of the opposition spoke the other day, went to the West Indies and to South America on a good will tour she was supposed to show the goods and wares of Canada, and to induce the people in those places to buy in Canadian markets. But when the boat arrived at ports in Bermuda and British Guiana and on the South American coast those who were in charge of the exposition desired to see things ashore, and went ashore for that purpose. The people who wanted to see goods coming from Canada came aboard the ship, but there was practically no person to talk to them.

For these reasons I am glad that this vote has been placed in the estimates, and I am further pleased to note that the Prime Minister is now in the house to hear my observations. I repeat what I said last night, that every protection is given to the wheat growers of the west. To-day we have the marketing board, and the wheat board over which Mr. Murray presides. In addition we have the wheat exchange in which futures are purchased, a procedure which so far as I know is to a great extent a system of gambling and is contrary to the provisions of certain sections of the criminal code. The wheat marketing board fixes the price of wheat at 87½ cents, but it will bring only 81 cents on the market. The government makes up the difference between 81 cents and 87½ cents. Why not have a fish marketing board, under which the government would fix the price, and pay the difference between the fixed price and the market price? Let the government treat the fishermen in the east as it treats the farmers in the west. I throw this out as a suggestion and a constructive thought that may be considered, as I believe it will be, by the Prime Minister and members of his cabinet when they sit in the east block and consider a better way of bringing relief to those sorely stricken people living along the coast of my own province, along the coast and the north shore of New Brunswick, and along the shore of the St. Lawrence river and the bay of Fundy.

I am not parochial. I would have spoken for British Columbia, but the interests of that province were well represented last night by the hon. member for—

Mr. POULIOT: Comox-Alberni.

Mr. FINN: My hon. friend is trying to help me out, but his pronunciation does not help me because he speaks the language of the great province of Quebec, although he speaks English well, too. However, I do not speak both languages. I thank him for his suggestion. Last night the hon. member for Comox-Alberni (Mr. Neill) spoke about lions which had to be destroyed on the Pacific coast, and he referred to some other species which at the present time I cannot remember. I am afraid of lions, and that is the reason I remember his reference to them; I am sure he did not speak about tigers.

With the aid of these suggestions to the Minister of Fisheries and the Prime Minister I hope a solution may be found through which the fishermen, who take the greatest risks and suffer the greatest losses, and who are without protection for their boats or their lives, may reap the benefit of legislation which will permit them in future to carry on an industry under fair conditions and not such as exist to-day where fish sold by them at two cents per pound are sold in the stores at 15 or 16 cents per pound. Who is getting the difference?

I believe the establishment of a fish marketing board operating under government assistance would help to put the fishermen on their feet and would make them happy in their homes, and their children would not have to stay in bed to keep warm. They would be able to buy shoes for their families, and their children would be able to go to school, which they cannot do to-day. These are conditions existing in Nova Scotia, and in my own constituency of Halifax. I am sure my colleague from that constituency, who has travelled from one end of the county to the other, will agree with me that unless something is done along the lines I have suggested the fishermen will not receive their just rights. There are only two things left to them, starvation and finally the grave.

Mr. NEILL: If I may be permitted to say so, the minister's definition of his policy was a little vague, perhaps necessarily so. I noticed that in speaking of British Columbia he said he would apply to the canned salmon association, and I gathered he would be guided almost wholly—

Mr. MICHAUD: No, I do not think he used that term at all.

Mr. NEILL: What is it?

Mr. MICHAUD: "To the industry."

Mr. NEILL: Does the minister say he did not use the word "association"?

Mr. MICHAUD: "The industry."

Mr. NEILL: The canned salmon industry?

Mr. MICHAUD: The salmon industry.

Mr. NEILL: "Canned salmon," I thought, were the words used.

Mr. BENNETT: Yes, he mentioned that.

Mr. NEILL: Did the minister not use the word "canned"?

Mr. MICHAUD: Not in the sense my hon. friend wishes to imply.

Mr. NEILL: There is only one sense in which the word "canned" can be used. Hansard will show which is correct, but if the minister says that he said he was going to apply it only to the industry, then that is quite satisfactory.

Mr. MICHAUD: That was my intention.

Mr. NEILL: Yes; that is satisfactory, then. May I project myself into the realm of the future and uncertainty and say I hope that when he does make the application, on the advice of his deputies, he will not apply himself wholly to the association of canned salmon manufacturers, because they represent only one phase of the industry. There are other large bodies of people interested in other phases of it. For instance there is now an increasing sale of salmon in the fresh state. Facilities for freezing salmon in an attractive and more or less permanent form are so much improved to-day that the sale of salmon in that condition is increasing. There is an organization called the Kyuquot Trollers Co-operative Association which is worthy of assistance. I believe the whole of their output is handled in the fresh fish market, and I would hope that the minister would make an effort to address himself to that association in order to get advice as to how any sum to be spent in or on behalf of British Columbia might best be distributed.

More than once the minister stated that he would seek to educate the people of Canada and the United States, and those in foreign countries, in the use of our fish. Would he care to say that he was referring to advertising?

Mr. MICHAUD: Yes, in some form.

Mr. NEILL: In some form.

Mr. MICHAUD: Yes, some form of advertising.

Mr. NEILL: The education of the domestic population, I assume, would be along the lines already inaugurated of having an educator, I think in this case a lady, going round and giving instructions how to prepare fish in tasty form. I join with the hon. member for New Westminster (Mr. Reid) in saying that I doubt very much the further efficiency of that method. Canada has been pretty well covered already in that way. The educator, so-called, has gone into quite small places and instructed the women how to prepare tasty dishes made of fish, and I think the average Canadian woman is now fairly competent, if she was not before, in preparing fish for the family's use. What is really needed is to bring the price of fish down to a point where the housewives can afford to buy it. You do not need a political economist or a university graduate to tell women which is the cheapest form of food and on which form she can spend her husband's money to the best advantage in providing sufficient nourishing food for her husband, who is perhaps doing manual labour, and her family.

The fact of the matter is that the trouble caused by the small demand for fish in Canada is that the price is too high in proportion to the price of beef or pork. A man or woman can get more satisfying food at a cheaper price by buying the cheaper cuts of meat than by buying any form of

fish. That is the trouble, and until you eliminate that, your education as to how tasty salads can be prepared and the like of that will be of no benefit except to the wealthy people, who generally can afford to keep an experienced chef who knows all about that anyhow, and so you will not increase the sale of fish much in that way. What you want to do is to bring the price of fish to the domestic housewife down to a point where it will compare with beef or the domestic pork raised on the farm. I suggest—and I think the hon. member for New Westminster hinted at this last night—that the way to do it is to continue the policy which was inaugurated during the war whereby a direct payment was made by the government towards the freight charges on fish shipped from either the Atlantic or the Pacific ocean to the domestic market in central Canada. In that way, without giving fishermen hand-outs, and without bringing the provincial governments into the matter at all, you will provide a ready market for our fish, and particularly for the cheaper forms of fish for which a market is most lacking. We have on the Pacific coast an abundant supply of the cheaper forms of fish, such as chum, salmon, herring and pilchard, which we could sell if we could only obtain a market. If a bonus could be paid to help pay the freight charges on fish from both east and west to the central market it would enormously stimulate the demand for fish because the fish would sell itself, and you would not need an educator to come along and tell people that they ought to buy it. No amount of educating will make a woman buy an article of food which is too costly for her emaciated purse under present conditions.

The same thing might apply by way of subsidy on fish for export, but probably it would not apply to fish exported to the United States, because I understand they have some kind of countervailing arrangement by which any bonus of that kind—and it would be regarded as a bonus—would be immediately added by way of dumping duty, I suppose, to the duty on the fish entering the United States. But there are many parts of the world where I think such a condition does not obtain, and where we could probably pay a portion of the shipping charges to the foreign market without causing the duty against the fish to be increased on its arrival.

Investigation might well be made into the so-called Latin markets in South America as well as in Italy, but in South America particularly, because I think it is a newer and a less saturated market, and nearer at hand. There should be an opening down there for canned pilchards, which are a very oily fish and not cared for by the northern people, but which might be palatable to those who have been accustomed to that class of fish in Italy. There is an enormous opportunity there for canned pilchards. We now use them for fertilizer and feed for stock, and so on. I think one cannery firm alone on one occasion put up twenty thousand cases of canned pilchards as an experiment. If that market could be developed along the lines I suggest, by sending a man down to those countries to form connections there, it might be a very good thing.

I do not know whether I would be out of place in dealing further with the question of advertising, but I should like to say this: There is nothing, I think, beyond keeping a private yacht, in which money can be more easily wasted without any results at all than in ill-considered advertising. You can spend enormous sums of money in advertising, and if it is not properly applied; if you do not print the right sort of advertisement, or if it does not appear in the right papers, the money is utterly wasted, and I would urge the minister, if he is going into the advertising end of it as he indicated, to employ experts just as he would employ a lawyer to advise him in legal matters or a doctor in medical matters. I just want to give a few examples of the kind of advertising that has been done, three articles which I have under my hand, illustrating the way not to advertise. I suppose these advertisements originated, or they ought to have, with the director of publicity about whose duties and responsibilities I was inquiring when the main estimates were up.

Mr. MICHAUD: What is the paper?

Mr. NEILL: I have three, and I will name them as I come to them. This advertisement is printed in the Western Fisheries. Hon. members can see the size of it.

Mr. MICHAUD: Is that the paper in which the hon. member recommended to the department we should print an advertisement?

Mr. NEILL: No. I here and now recommend that you cut out advertising in this publication. It reads as follows:

> There's no mistake about this. In the long run it's the dealer with the best fish who does the best business. It's a rule of life that quality wins.

That is absolutely true. Who could reject that statement?

Mr. MICHAUD: We could not publish anything that was not true.

Mr. NEILL: No, but you could print an awful lot of things that are true but are no use printing. "Be good and you will be happy"; "early to bed and early to rise"—these are truisms—

Mr. MICHAUD: It is good to remind people of them sometimes.

Mr. NEILL: —"honesty is the best policy," and so forth. All these are truisms, but are they worth spending hundreds of dollars to print? I think I might call the statement in this advertisement a platitude. It does not help at all to sell fish, which is the chief object sought in this advertising. It is printed in a fish paper. When a doctor or a lawyer is starting out in business, does he put his card in a medical or legal journal? I think they would advertise in papers in which they would be likely to reach patients or clients, and a fish advertisement should appear where it is likely to reach consumers.

Mr. POULIOT: If a platitude is autographed by a great man it becomes valuable.

Mr. NEILL: The next advertisement is in the Pacific Coast News. This is the paper the minister thought he had me on, when he interrupted a moment ago to ask if I recommended that an advertisement be put in it. I did recommend advertising in this paper because it is a good, sound fishermen's paper, run by that cooperative association to which I have alluded, but I did not recommend that stuff like this should be put in. I am criticizing not the fact that the advertisement is in this paper, but the stuff that is printed. Let me quote from it:

A strong pull and a pull all together.

I will not read the whole of it. It goes on to say:

It is the constant purpose of the Department of Fisheries to do its full part in this essential effort.... Its supervisors and inspectors and its headquarters staff may be counted on at all times to work wholeheartedly with the men in the fisheries to serve the industry and the nation.

I am afraid if that were read out to a meeting of fishermen, this reference to cooperating with the men in the fisheries would be received with laughter, with ribald laughter perhaps not unaccompanied by profanity. The illusion is that the department is cooperating wholeheartedly with the men in the fisheries. That is not my experience, nor does it appear to be the experience of the hon. member for New Westminster (Mr. Reid), who said last night that the whole set-up of the fisheries department was against the men.

This is another one. It begins in large red headlines: "He will never go there any more." I will not read it all but it is to this effect: A man goes into a restaurant to get a meal. The advertisement describes the day—it is a nice day. The restaurant is clean and the waitress is pleasant. That is the only nice thing about it, that the waitress was pleasant. Well, he got a fruit cocktail which was all right and the soup was O.K. Then he ordered fish. He ran his eye down the menu and saw fish tastily described and he ordered it and got it. It looked very good and apparently it was well cooked; he was going to enjoy it. He took a bite and the fish was so stale that he could not eat it. The advertisement then goes on to describe his reaction, how he called first of all for the waitress, then the head waiter and then the manager and told them what he thought. By the way, this is stated at the bottom to be a true story. There is a certain magazine called True Stories and it seems to me it would have been better to take an article out of that magazine; it would have been attractive at any rate, something which this is not. It says:

The remainder of the meal was satisfactory but the thought of the bad fish remained with him. "I'll never go there any more." He told a friend and he has probably told other friends about the stale fish. It may be, too, he hesitates now about ordering fish at other restaurants.

I think that is highly probable. After reading this advertisement—and it has been published for months and months to make people fish conscious, to make them rush out and buy fish—I went to a cafe, looked at the menu and saw "fish," and I was about to order fish when I stopped and said to myself, "Let me see; what did I read about fish the other day"? And then the thought of stale fish and ptomaine poisoning crossed my mind and I decided I had better leave fish alone. That was the reaction which I as an ordinary person had to this advertisement. The fish was liable to be stale and might cause ptomaine poisoning.

I do not think that is a good way to promote the sale of fish. No one reading such an advertisement would run violently down a steep place to order fish; I do not think so. It seems to me that an altogether different method should be followed in advertising. Let us cover up these things; let us keep quiet about them. If the man did happen to get stale fish on some occasion, advise him to forget it and assure him that

you will make it right with him. But don't keep suggesting that fish is liable to be stale and to produce very unpleasant consequences to those who eat it.

That was what I had in mind when I said that a good deal of money could be wasted in the wrong sort of advertising. If you want to make a success of advertising you need to keep two things in mind. First of all, you must have a sound article, not an inferior one, because you cannot advertise a bad article into sale. Experience has proved that. Then you have to put the article up in an attractive form and advertise it well. Don't stint in advertising it; advertise it in the right places and in the right way. I have done a little advertising of my own and I know that while you can spend money and get returns you can also spend money and get nothing. Those of us born in the old country and of about my age will remember the publicity given a certain soap many years ago. The success of that soap was due largely to the fact that it was a good article, but a good deal depended upon the manner in which it was advertised. The company bought a picture, or at any rate a copy of a picture by a famous painter—

Mr. BENNETT: The original, by Sir John Millais.

Mr. NEILL: Was it the original? At any rate, it showed a child in the bath and you could hardly see the soap at all. The child was reaching over the side of the bath for a cake of soap and underneath were the words, "He won't be happy till he gets it." Nothing was said about the soap; it did not give the name of the soap, unless the name appeared on the piece of soap. That became a household phrase and men quoted it in parliament—"He won't be happy till he gets it." That sold more soap than would have been sold if the picture had shown the child slipping on a cake of soap and breaking its neck.

Let me try to give the minister a picture, because this is the only chance I shall have to do so. And he must not despise it because it comes from a back-bencher of no importance, because after all Scripture speaks of wisdom coming from the mouths of babes and sucklings. I want to suggest a picture that might help to sell our salmon, and it is our salmon I am talking about, the best in the world, British Columbia sockeye. Have something after the fashion of Sir John Millais' picture: A beautiful river, a fine sunny day, a Peterborough canoe tied up to a grassy bank, in the background a farm scene or an orchard in bloom, a young man and his girl at lunch on the bank. The young man says, "These are swell sandwiches; did you make them yourself?" The girl says, "Yes, I made them myself. I used British Columbia sockeye, the best in the world." Or she might be saying, "Take another." The slogan could be any of these: "Take another," or "The best in the world," or something of that sort. There you would have all that is desirable, as the manufacturer of that soap found. The picture must present first of all something that will catch the eye as one turns over the leaves of a magazine, and in the second place it must be something that will stick in the mind after you have read it. Above all it is most essential that the article advertised should not be too definitely indicated. If such an advertisement met with half the success, or one-tenth of the success of the soap advertisement I have mentioned, then certainly the money would be well spent. Let us forget all about the fish being stale. British Columbia sockeye is the best salmon in the world and we should so advertise it and emphasize the fact that it is put up under ideal conditions. Advertising along these lines would produce results and the money spent on it would be well spent.

Mr. MacLEAN (Prince): I think the minister is to be congratulated upon this vote which he has placed in the estimates. I believe the idea of trying to help our fishermen by providing markets is one which will commend itself and bring better results than anything else. We have various kinds of the finest fresh fish in the maritimes but our difficulty is in finding a market. While my hon. friend (Mr. Neill) was speaking he referred to the cost of getting our fish on the markets of the world. I have on my desk a bill sent me a few days ago by one of our fishermen in the maritimes. He sent 125 pounds of fresh smelts to the New York market. They sold at eighteen cents a pound, or a total of $22.50, but the charges amounted to $13.39, or over forty-three per cent of the total value of the fish.

Mr. BENNETT: He shipped them by express.

Mr. MacLEAN (Prince): Yes, they were shipped by express. There is the difficulty. For a long time we have been endeavouring to get lower express rates, and possibly this line could be taken into consideration, under this vote, by the minister. It is true that shipping to the United States is subject to international express rates, and that we have no control over United States rates. But I

believe that if the departmental officials would take this matter up officially with the Canadian express companies and also try to get some cooperation from the United States companies, a great saving could be made to the benefit of our shippers in the east. When forty-three per cent of the value of a small shipment of fish goes in commissions and express rates, it is pretty discouraging to the man who is endeavouring to catch fish and carry on. I feel, however, that in respect of this item the minister is moving in the right direction. We need to expand our markets, and I believe there is a greater field in respect to fisheries than in anything else. Not only have we to find markets but we must also instruct our fishermen in putting up fish in such a way that it will reach the markets of the world in the best possible condition. I wish the minister the best of success. I bring these points to his attention to indicate a line of activity which I think could usefully be pursued.

Mr. MARCIL: I wish to say a word for Quebec in connection with this vote. The minister represents a constituency which is across from my own, so that he is familiar with the conditions existing in the locality. Matters in Gaspé peninsula are complicated by the fact that the maritime fisheries were transferred, some ten years ago, to the Quebec government, and the people, rightly or wrongly, feel that the federal government has not given the assistance which these fisheries have a right to obtain and which is given in New Brunswick and other maritime provinces of Canada. Anything that is done for needy fishermen should be extended to them, because the neediest fishermen I know of in this dominion are those of the Gaspé peninsula. They have lost their Italian market for cod; they have been handicapped in South America, and they are in a worse condition than they have ever been within my knowledge, which extends over more than half a century.

As the minister is aware, His Excellency Monseigneur Ross, Bishop of Gaspé has been advocating that something be done to prevent the Gaspé fishermen from disappearing entirely. For many years, unfortunately, we neglected the farmer in this country. As a result the farmer left his farm and went into the cities; and now close to two-thirds of our population is in the cities and only a little more than one-third in the country districts. We have ceased to be an agricultural nation—although agriculture, after all, is and will always remain the mainstay of Canada—in order to attempt to become an industrial nation. Colonization has been neglected. Canada was built up, not only in Quebec but in Ontario, by pioneers who were settlers on the land. During the last few years their descendants have given up farming and have been lured to the cities. The same thing will happen with regard to the fisheries. If the fisherman cannot make a living out of his occupation and is deprived of the assistance he should receive he cannot be blamed if he gives up the fisheries.

Ever since this country was discovered by Jacques Cartier, when, four hundred years ago, he landed first in the basin of Gaspé, the Gaspé fisheries have been noted as the best on the north American continent. I am sure that the minister, with the authority he possesses, with the youth that is his and that I hope will remain with him, with the intention to make good in his new department, will give the Gaspé and the north shore of the St. Lawrence fisheries the attention they deserve. I am glad that he is trying to cooperate with the local government so that an understanding will be brought about, because in the last ten years the Taschereau government has spent very large sums of money, in the counties of Gaspé and Bonaventure and on the north shore of the St. Lawrence, in establishing warehouses and refrigerators, giving assistance to fishermen to build their boats, and so on. The dominion government likewise has spent very large amounts on breakwaters, wharves and undertakings of that kind. Unfortunately we in the Gaspé peninsula have not the technical knowledge which is required. That knowledge can be supplied only by the dominion goverment. A request has been made for many years that a biological station be established in the peninsula of Gaspé. The late administration promised that this would be done. An investigation had been made, the report had been favourable, and the province of Quebec was prepared to send some of its young men to Europe to become better acquainted with the questions to be dealt with in that community. I hope the minister will see that from this amount provision is made for the establishment of that biological station. That will meet one complaint which I hear every day. The other one relates to the allocation of officials to educate the fishermen where fish can be found.

I come back to my main argument, that the four main needs of Canada, if the country is to continue the progress it has made in the past, are farming, stock raising, fishing, and mining. Industry comes after all that. If the others are not prosperous there can be no future for industry. We are not, per se, an industrial people. We are alongside an industrial nation, probably the most advanced in

the world, and it is out of the question for us to compete with that nation industrially. But we have in the northern part of this continent a land which is fertile, which providence has blessed with all that a country can produce. We can raise the finest grain and the finest cattle, and there are no better fisheries. I hear our friends from British Columbia complaining about the state of the fisheries in that province. When I spend my summers on the Gaspé coast I am often compelled, owing to the absence of local fish, to eat fish that comes all the way from British Columbia.

Mr. REID: Pretty good.

Mr. MARCIL: Very good fish of its kind. But you are far ahead in the fish market as compared with the people of eastern Canada. I do not know whether the seasons have favoured you more. They say that more fish is caught in one day in British Columbia than we can catch on the Gaspé coast in a month.

Mr. REID: That is true.

Mr. MARCIL: Although improvements may be due in British Columbia they are also badly needed on the Gaspé coast. I am sure that the minister will give this matter the attention it deserves.

Mr. MICHAUD: I cannot resist the pleasure of answering the remarks of my genial friend and neighbour, the hon. member for Bonaventure (Mr. Marcil). I know he is very much interested in the situation as it affects his constituents, because they are subject practically to two jurisdictions. In 1922, as is well known, an arrangement was made with the government of Quebec as a result of a decision of the privy council. Part of the supervision of the fisheries was allowed to be administered by Quebec, some reservations being made to the dominion government in respect of supervision, inspection and scientific development. Since then at different periods the people from the Gaspé peninsula have complained that the dominion government did not fully discharge its obligations under this agreement. Be that as it may, I wish to assure my hon. friend that the Department of Fisheries will try to discharge its obligations towards the people of that part of Quebec as fully as its duties towards fishermen in all other parts of the country over which we have jurisdiction.

I hope that during the coming season it may be possible to implement the promise which was made by my hon. friend and start on that biological station which has been mentioned for the lower St. Lawrence. The vote now under consideration naturally will help these fishermen, because there will be no discrimination against any class of fishermen, any producers of fish, whether in Quebec, Ontario, or the maritime provinces. All the fishermen of Canada will be treated alike; there will be a drive to open up markets for them, and I assure my hon. friend that there will be no discrimination against the fishermen of the Gaspé peninsula. I may say that since taking office I have been corresponding with the Minister of Fisheries of Quebec in an endeavour to avoid duplication in the expenditure of money by the province and the dominion and to see that this money is directed into the proper and most profitable channels. I think by close cooperation we shall succeed in helping the fishermen of the Gaspé peninsula, who are so well represented by my hon. friend.

Mr. KINLEY: To return to the matter of advertising, I agree with much of what has been said by the hon. member for Comox-Alberni. The hon. gentleman has a fine sense of what will appeal, and I have no doubt he would make a great writer of advertisements. However I think it only fair to point out that these advertisements appear in trade papers. They are read by the people interested in the fish business, and that appeal is to have them sell good fish, because if they do not sell good fish they cannot expect success in their business. To that extent such advertisements are good. I agree, further, that advertising is a highly specialized business, and I believe that many firms in the fresh fish business are in good condition financially and able to do some advertising of their own.

Subject to these reservations, Mr. Chairman, I think some advertising should be included in any fisheries program. We must not forget that because of an advertising campaign which made the people believe that oranges in the morning were good for the health, there are oranges on the breakfast table of almost every man in Canada who can afford them. The same was true of raisins a few years ago; a much greater market was created because it was pointed out that in some way raisins were good for the health of the person who ate them. In an advertising campaign in connection with fish we should stress the value of fish as a food, because it has splendid and special food value. You will get people to eat things if they think that by so doing they will improve their health; no greater appeal can be made. The fisheries association, I think, had as a slogan, "Every Day a Fish Day." I do not think they can put that over. On the other hand I think "Any Day

a Fish Day" is a good slogan. If in an advertisement you overstate your case or say something which is questionable, in order to produce the result you desire, your advertisement is faulty and is not worth the money you pay for it. A great deal of money is spent in advertising to-day. Sometimes we think it is wasted, but it is only preparing the ground, as it were, for what is to come later. I think the minister should be most careful in order to see to it that the advertisements of his department are intelligent; that they have the necessary appeal, and that they form only a part of the program which he has in mind for the sales development of our fisheries.

Mr. BENNETT: I regret that there is no Minister of Fisheries of the late government now in the house; perhaps, therefore, I am compelled to make some observations in respect to this matter. In the first place this expenditure is not new. Those who have some knowledge of the fishing situation suggested that we should spend a reasonable sum of money in advertising, and that it was also desirable to do what was discussed here this afternoon, that is, have demonstrations of the value of fish as a food and the manner in which it might be utilized in the homes of the people. I am told that these demonstrations had a good effect and that as a result there was an improvement in the sale of fish, though I only know what I have been told by the officials of the department.

The other question, that of advertising, I think might be dealt with in this way: First, what section of the community do you desire to reach, and second, are you prepared to maintain your advertising? Success in advertising may be summarized, according to my observation, in two words: More advertising. In other words, if it is done spasmodically it fails; if it is continuous and persistent it will succeed. Apart altogether from the mechanical attractions of the advertisement, and matters of that sort, I am directing my remarks only to the question of how you can make advertising succeed, and so far as I know the only method by which it can succeed is by more advertising. When the hon. member for Comox-Alberni was referring to the advertising of Pears soap I think probably he realized that the expenditure for that advertising ran into hundreds of thousands of dollars per annum. Take some well known proprietary articles that are sold all over the world; probably it will amaze hon. members to realize that in many instances these advertising expenditures run not to hundreds of thousands of dollars but to millions of dollars per annum. The appropriations made for that purpose are now based upon recognition of the fact that successful advertising means more advertising; that it means continuity; that it means permanency, and that you cannot possibly succeed by a spasmodic effort.

We did not feel that we were in a position to carry on that continuous advertising which we knew was necessary for success. In the first place, I am sorry to say, the idea did not make a very great appeal to those who produced the fish. They felt that the money available should be utilized for another purpose, that mentioned by the hon. member for New Westminster the other day. In connection with the expenditure of this relatively large sum of $200,000, having regard to our usual votes for matters of this kind, I think the minister will learn by experience that if he could assist in creating a continuous movement of fish by express to the cities of the central part of Canada, so that shortly after they leave the sea they are available for consumption, he would be performing the greatest possible service for both the fishermen and the consumers of fish in Canada, because there is nothing worse than bad fish. I do not want to say anything that would in any sense discourage people who buy and sell fish, but the truth is that those of us who were born by the sea and go to the far west find it almost impossible to use fish, other than the local product, namely whitefish or goldeye, except dried fish, or halibut which is a wonderful fish coming from the Pacific ocean. I am leaving out canned fish altogether. We are now able to take a fish and coat it with a thin glazing of ice, and in that form it is shipped to the United States and to Ontario markets. This ensures its being received in almost as fresh a condition as the moment it left the sea.

I am satisfied that if the minister will during the next few months utilize a portion of the money at his disposal for the purpose of bringing fish from the maritimes into the great cities of Montreal and Toronto and even this city of Ottawa he will find that the result will be worth the effort, because I am sorry to say that we do not get in this part of the country the best fish that is available. I put it just in that way. We get excellent cured fish. The old Digby chicken of my boyhood days is no longer available in that sense, but we still get smoked fish of first-class quality, and the fillets that are cured in Nova Scotia and on the New Brunswick coast as well and that come to us here are excellent. The findon-haddie or finnan-haddie

as it is sometimes called, although it comes into this part of the country in excellent condition, is not fresh fish. How you are going to get fresh fish into this part of the country except by giving some assistance in transportation, I do not know. On the prairies the demand for Pacific coast fresh fish at some times of the year is very great, because our eastern fish, owing to freight rates and other conditions, does not go to the west at all except in a cured state. Fresh fish from Vancouver goes to all the prairie markets in first-class condition for a limited time. Of course if the fish stays long in the ice-box the quality begins to deteriorate and there is a point at which the fish cannot usefully be kept longer, unless it comes encased in a film of ice as I have indicated. The salmon from the Pacific coast comes to Winnipeg, Calgary and Edmonton, and excellent whitefish is received from the lakes. The halibut upon which western Canada entirely relies is mostly from the Pacific; very little comes from any other source because it is too far to ship it from the Atlantic. It is of excellent quality, and by the use of ice it keeps longer than most fish. To some extent we are better off in the prairie sections than they are in the communities here with respect to getting fresh fish.

When the hon. gentleman speaks of educating the people of European countries to the use of fish I should like to point out that this is a little like taking coals to Newcastle. They know more about the use of fish than we do; they are Catholics who practise their religion and in Lent and Advent there are two days in the week when they use fish entirely; they have been brought up to that for centuries. They know its dietetic value and food value and are familiar with it in every way. The difficulty has been that they are not in a position to send their money abroad to buy fish. They have imposed restrictions by tariff and otherwise to prevent importations, not only of fish but of other commodities, except on payment of duties on a scale that is almost prohibitive. For the fish they used to buy from us, the dried codfish and other forms of dried and salted fish which they used to get in large quantities, they have substituted other fish, not, according to my judgment from observation of reports of the department and otherwise, because they do not wish to utilize our fish if they could, not because in Cuba they have not a clear appreciation of the value of our salted and dried codfish and other varieties, our hake if you will, but because they have been in recent years practising an economy—shall I say an economic theory; perhaps that will suit some better than others—that results in their keeping as far as possible the money they have in their country from going abroad to purchase fish or other goods.

A few years ago when we appropriated a couple of hundred thousand dollars for advertising in Great Britain and continental European countries it was thought that it was a very large sum; comment was made on the amount. May I point out that we have trade commissioners in all these countries, and if the minister desires to use that money to the best advantage he will confer with his colleague the Minister of Trade and Commerce (Mr. Euler) and arrange with him that certain sums of money may be made available for advertising in the sections in which these trade commissioners are carrying on their activities. In South America, for instance, the trade commissioners could use a little more money, because the trade and commerce department has a limited fund available for that purpose. But the moment the two unite their forces and the Minister of Fisheries is able to supplement such moneys as the trade commissioner in one of these south American countries has, telling him that this money must be devoted entirely to propaganda for the sale of fish, I think the minister will find that the results will be commensurate with his efforts. But if he starts on his own, if I may use the expression, with the theory that he can carry on this propaganda and get results, I tell him that he is foredoomed to failure. Our trade commissioners have very effectively—true, very slowly—made for themselves excellent positions in the countries in which they carry on their activities. They are not consuls; they suffer to some extent from that fact; they have no governmental position in the diplomatic sense of the term. But they have become known in every part of the world; in the orient, in India, South America, South Africa, the West Indies, you will find our trade commissioners doing most excellent work.

I suggest to the minister that he should confer with his colleague and supplement his meagre funds from this appropriation with the distinct understanding that the money thus provided by the Department of Fisheries is to be used for fish sale propaganda only and for no other purpose. I think he will find the results worth while, because may I say that even in departments of government there is not wholly lacking that desire to be responsible for expenditures of parliamen-

tary appropriations to the exclusion of anyone else. Human nature does not cease to manifest itself in the same old way merely because hon. gentlemen happen to be ministers of the crown. The tenacity with which you will find ministers clinging to the prerogatives of their office when it comes to the expenditure of public moneys is one of the memories that those who have been responsible for government will always carry with them. Human nature is not the least bit different because it happens to sit to the right of the Speaker to-day, and next year to his left. If I suggest to the minister that by cooperation with the Department of Trade and Commerce he will accomplish his objective, I think at the end of his term—and the end always comes, whether the time be short or long—he will look back with some satisfaction to an achievement which at the moment he might not have thought gave him the glory —I am using the word in no offensive sense—that should accrue to his patriotic zeal to increase the sale of fish; he will look back to an accomplishment and an achievement that will give him satisfaction although it has been brought about by cooperation with another member of the administration with which he is connected. I think all of us know something about that. And if cooperation and teamwork are applied in this case in connection with this substantial item, the results will be satisfactory. I think I can almost hear the language that was used in days gone by when a like sum was made available for propaganda work in Great Britain, and my very busy and very earnestly engaged friend from Vancouver Centre, in the multitude of his reminiscences and recollections may be able to recall some of the observations of days not long since past.

I wholly agree with what has been said by the two hon. members who preceded me, and I assure the committee that this money, large though the amount may seem to be, is not too large to carry on the propaganda work throughout the country, especially if we are going to do something to assist in the domestic consumption of our fish and to make it easier to move fresh fish from the seaboard of the Pacific to the prairies and from the Atlantic coast to the central cities of Ontario and Quebec.

Mr. McIVOR: When the Minister of Fisheries is advertising I hope he will not forget to advertise the best fish in Canada, namely the lake Superior trout. The hon. member for Comox-Alberni was right when he said that if you have a good article it will advertise itself, if it gets a start. I would suggest some advertising for lake Superior trout. First, get a picture of a trout, because it is always a clean-looking fish, and then place under it the words, "If you get one bite even though it may be a little high"—and I do not mean price—"it always has a flavour which calls for a little more." I hope my suggestion will be considered.

Mr. MacINNIS: I do not wish to prolong the discussion, but I should like to give a word of advice to the minister in connection with advertising. I hope he will not spend too much in advertising fish. I offer that advice because I believe that money spent in advertising in any case is that much money wasted, and is also a waste of effort. Advertising arises out of competition, and if the person who advertises is able to sell his product this means, in a limited market, that the person who sells a similar product is not able to make as many sales. In my opinion, the best way to promote the consumption of fish in Canada is to lower its price and to make it available to people with only a limited amount of money to spend on foodstuffs. If hon. members have analyzed family budgets according to incomes they will have found that families with low incomes spend a greater proportion of them in the purchase of food than do families with large incomes. This fact indicates that expenditures on foodsuffs are limited, and consequently cannot be greatly increased by advertising.

Like the hon. member for Fort William I should like to put in a good word for British Columbia sockeye, and some other good fish we have in British Columbia. I know, however that if people eat British Columbia sockeye they will not eat the trout which my hon. friend would like to have advertised. If they eat trout they cannot eat the various kinds of fish caught along the Atlantic coast. If the government embarks on advertising schemes we may find a condition where the Minister of Fisheries may have an appropriation for advertising fish and the Minister of Agriculture may have an appropriation for advertising beef. The Minister of Agriculture may want to advertise his product to encourage us to eat more beef for the benefit of the farmers in western Canada.

The fact remains that what the people of Canada need is not to know that certain foodstuffs are available but rather the means to buy them. A few years ago I read, in a monthly publication of the Department of Fisheries, the name of which I have forgotten but which the minister may remember an article which described the value of the lobster as an article of food. The article

went on to state that after many experiments it had been learned that after one had eaten lobster the flow of gastric juices in the stomach was accelerated and that as a result digestion took place more easily than if lobster had not been eaten. That is all very fine; most of us like to eat lobster, but, again, most of us never have any of it.

An hon. MEMBER: Why?

Mr. MacINNIS: Because we have not the price.

Mr. POULIOT: Do not eat the claws; they are bad for the stomach.

Mr. MacINNIS: I know. I saw lobsters long before I saw the hon. member who has just spoken. I appreciate the fact that lobsters are good to eat, and it may or may not be true that the eating of them accelerates the flow of gastric juices. I suggest, however, that along with the acceleration of the flow of gastric juices we need something to accelerate the flow of money into the pockets of our people, and if both these objects could be accomplished we could help the lobster industry immensely. But until we have that condition there is no need to advertise, because the amount of money being spent on advertising to a great extent will be wasted and will not get us anywhere.

I had one other word to say, and that was to express my appreciation of the few observations of the hon. member for Comox-Alberni with reference to cooperatives, and his suggestion that the minister should get in touch with the cooperative fishermen in British Columbia to ascertain their ideas as to the best ways in which these moneys could be expended. I had in mind the cooperatives in British Columbia, but, I think, more particularly had I in mind the cooperatives in Nova Scotia. I hope the minister will take that matter into consideration.

Mr. BENNETT: Before passing to the next item may I say that before I sat down I should have said that probably hon. members of the committee had observed that as a result of a visit to Nova Scotia made by the Moderator of the United Church, and a close examination of the cooperative scheme or cooperative efforts as applied to fishermen he gave an interview in the press. He is a keen student, and believes that the St. Francis Xavier scheme as it has presently been launched may be the economic salvation of the fishermen of Nova Scotia, and in his statement, which I commend to hon. members, he is not unwilling to suggest that the possibility of the application of the scheme in a larger way to other parts of Canada and to other industries might be most beneficial. I had intended to mention it, because I believe the minister will find it worth while to look into the matter. The Rector of St. Francis Xavier university is a very diligent student, and those associated with him have given a tremendous amount of effort to this matter. I believe that it must be of extraordinary merit to warrant the high commendation expressed by the Moderator of the United Church.

Mr. MICHAUD: First, I must thank the leader of the opposition for the valuable and constructive advice and suggestions he has given the committee and me this afternoon. On this point may I say that ever since I have taken charge of the department I have considered it my duty to look at and to study cooperatives as carried out under the scheme inaugurated a few years ago by the extension department of the St. Francis Xavier university of Antigonish county. Personally I am thoroughly convinced that it is the best method that has so far been suggested to raise the social standard of these people, and the movement has received every encouragement that the government was able to give it through the department. It is intended to spread its activities all over the maritime provinces during the present year.

Mr. CAMERON (Cape Breton): Mr. Chairman, I have no desire to prolong the discussion on this item but I desire to make this statement with regard to the reference of the leader of the opposition to the cooperative movement sponsored by the St. Francis Xavier faculty. In the riding which I represent I have before me a picture of two communities where the fishermen who for some time were on relief have been taken off relief entirely through the splendid work of those in charge of the cooperative enterprise in those two small districts, and last summer, besides taking the men off relief, they were able to declare a small profit at the end of the season. I believe the minister cannot find a better outlet for the application of a portion of this vote than by getting in close touch with those responsible for the cooperative movement in the fishing villages in the different communities where that cooperative movement began. Although I did not read the interview referred to by the leader of the opposition, I can give first-hand testimony to the efficacy of the movement in the riding I represent.

Item agreed to.

DEPARTMENT OF LABOUR

Projects already undertaken—
Amount required to provide for agricultural settlement and resettlement, $500,000.

Hon. NORMAN McL. ROGERS (Minister of Labour): Mr. Chairman, this item covers the amount required for agricultural settlement and resettlement. Certain commitments have already been made under existing relief settlement agreements with the provinces. This vote is designed to meet those commitments and also the anticipated amount required for further settlement under the existing relief agreements.

Mr. HEAPS: Would the minister explain why a vote of this kind comes under the Department of Labour and not under the Department of Agriculture?

Mr. ROGERS: The answer is that in the experience of the late administration with the relief problem this was found to be a satisfactory and economical means of affording relief to those who had agricultural experience and were unemployed. It is a tripartite arrangement through which contributions are made by the dominion, the provinces, and the municipality through which the settler is located.

Mr. HEAPS: It seems incongruous that a matter of this sort, which after all has to do with agriculture—putting men back on the land—should be in charge of the Department of Labour. I assume the work of the department would simply be to take men from the cities and put them on farms, but then what? What happens to the individual? Is there no department of the government that takes care of the people after they are put back on the land? Would it not seem logical that they should come under the Department of Agriculture, which through its experts and technicians could take an interest in and assist those who are settled on the land?

Mr. ROGERS: I think I should bring to the attention of the hon. member and the committee that in working out the details of the relief settlement schemes the Department of Labour has had from the beginning the assistance of officials of the department of colonization of the dominion government and also of the colonization branches of the Canadian National Railway and the Canadian Pacific Railway. That is to say, there is a general advisory committee composed of representatives of the departments concerned and of the colonization branches of the railways. In each province there is also an advisory committee. I quite agree with my hon. friend that supervision is a very important feature in the success of any scheme of this kind, and we propose to see to it that supervision is made as effective as possible. I think I have given my hon. friend an adequate explanation of how this particular form of settlement came under the Department of Labour. It is associated with the relief problem.

Mr. HEAPS: How many have been settled under this particular scheme, and what has the cost been?

Mr. ROGERS: I might place on Hansard a table which will give by provinces the number of those settled. The actual cost of settlement in each case will be found in the report of the commissioner of unemployment relief tabled in the house a few days ago The table is as follows:

Relief Settlement Plan

The numbers of settler families and the total numbers approved under the relief settlement plan reported by the provinces as at March 31, 1936, are shown in the following tabulation, which also shows the numbers who have left the land subsequent to approval, and the numbers who are still on the land.

| | Approvals | | Abandonments and cancellations | | On the Land | |
|---|---|---|---|---|---|---|
| Province: | Settler families | Total individuals | Settler families | Total individuals | Settler families | Total individuals |
| Nova Scotia | 341 | 2,140 | 61 | 370 | 280 | 1,770 |
| Quebec | 976 | 6,005 | 179 | 1,060 | 797 | 4,945 |
| Ontario | 606 | 2,990 | 142 | 707 | 464 | 2,283 |
| Manitoba | 793 | 3,786 | 109 | 488 | 684 | 3,298 |
| Saskatchewan | 939 | 4,604 | 179 | 871 | 760 | 3,733 |
| Alberta | 651 | 3,060 | 170 | 747 | 481 | 2,313 |
| British Columbia | 52 | 285 | 9 | 50 | 43 | 235 |
| Totals | 4,358 | 22,870 | 849 | 4,293 | 3,509 | 18,577 |

Mr. MacNICOL: Do the figures in the first line under the heading Abandonments and Cancellations mean that 61 of the 341 settler families have abandoned their farms or cancelled the arrangement?

Mr. ROGERS: Yes.

Mr. BENNETT: The figures in the table have nothing to do with farm placements?

Mr. ROGERS: No, that is quite distinct from this. Perhaps I might give the totals for the entire dominion. The dominion disbursements in Nova Scotia to date is $42,-276.09, and Quebec, $173,699.34. In Ontario it is $102,636.76; Manitoba, $124,135.94; Saskatchewan, $141,963.07; Alberta, $111,544.79; and British Columbia, $9,824.05. New Brunswick has not entered into the relief settlement scheme.

Sir GEORGE PERLEY: How does the minister arrive at half a million dollars for this work?

Mr. ROGERS: It is for commitments under agreements entered into under the 1932 and 1934 legislation, $250,000, and an estimate of what will be contributed to the settlers under the 1936 agreement, $250,000.

Sir GEORGE PERLEY: I take it that this amount is really a guess or an estimate, that the minister has made it large enough so as to be sure to have sufficient, but that he hardly expects to spend all that is here. I want to get at the idea behind it, because many of these items are blank cheques and we have been accused of giving blank cheques through the years for the whole amount. I take it that the minister puts in this half a million so as to be sure to have sufficient to carry on the work through the year but that he really does not expect to spend it all.

Mr. ROGERS: It does represent as careful an estimate of requirements as we can arrive at.

Sir GEORGE PERLEY: With a margin.

Mr. ROGERS: I think it is good practice to allow a margin. There is another item to deal with other projects that may be undertaken later.

Mr. POULIOT: This is a very important item. With regard to colonization three things should be considered: first, the selection of lands; second, the selection of settlers; and third, good roads leading to the settlement. The trouble with colonization up to now is that there has been no definite plan, and in the province of Quebec some settlers have been sent to suitable places and others to the rocks. I have had to complain very often of the way in which the matter has been arranged. One of my complaints is that the gentleman in charge, who apparently is doing a lot for colonization, does not know the first word about it. I refer to Mr. Laforce of the Canadian National Railways. I wonder what his training is. I have mentioned his name often. His idea is to put all the unemployed in Montreal in a bucket and scatter them over the country; that is his understanding of farming and of resettlement. It is an obvious absurdity. If we take the classification of the unemployed, as given by Mayor Houde after a careful study made under General Panet, by fifteen men working for three weeks in Montreal—I will show the minister the actual list—not more than 53 out of a total of 44,500 heads of families who are unemployed in that city designated themselves either as farm hands or as gardeners. Think of that—53 out of a total of 44,500. Every member of parliament is receiving stencilled copies of stupid lectures which are given throughout the province. This expenditure should be curtailed right away. That gentleman has succeeded in getting himself elected president of St. Jean Baptiste Society of Montreal. I do not understand it; it puzzles me. And here he is telling people to go back to the land, mother land. In principle the idea is very good, but first of all there must be a concrete and definite plan. Moreover, though I have the highest regard and respect for the minister—and I have said on many occasions and repeat now, he is doing very well—this work should be done by the provinces themselves through a general federal subsidy. It is always bad to have two masters in any undertaking, and now there are more. There is the Quebec Department of Agriculture, there is the federal Department of Labour, there is another department under another minister, looking after soldier reestablishment to a certain extent, and there are also the colonization departments of both railways. These people all meet together and while some of them have sound views, others know nothing about it—and they are the people who speak most. I have no personal grudge against the gentleman referred to, but in my humble opinion so many settlers have been put on the land under false pretences that it is time to put a stop to it. There are good lands which are abandoned. I wonder whether the policy which will be put into force will be to purchase the good lands that are abandoned or about to be abandoned and to put new settlers there. That is the first question I ask the minister. I shall have something to say afterwards.

Mr. ROGERS: We are dealing here with existing relief settlement schemes; it is perhaps not colonization in the strict sense. As for the suggestion that abandoned lands should be purchased for the purpose of colonization, it is one which I think merits consideration. Not all the provinces have come in under the relief settlement scheme. Certain provinces have placed before the dominion government proposals respecting colonization and have requested financial assistance for carrying out such schemes. I may say that, so far as the selection of those who go on the land under these relief settlement schemes is concerned, the province shall be responsible for the administration of relief settlement, including the location and inspection of suitable farms and the selection of suitable farmers who will be physically fit, and qualified in other respects. The province shall be responsible for the disbursement of funds to the families assisted; the expense of such administration shall be paid by the province, and no part of the cost of administration and supervision shall be deducted from the maximum amount of $600 set aside for the subsistence and settlement of each family. In other words, the dominion has cooperated with the provinces and with municipalities in placing on agricultural land those families who would otherwise be on relief. Of course the hope behind it all is that those who are so placed on the land will ultimately become self-supporting. It is too soon as yet to pass a final verdict upon the success of the plan. I may say, however, that the percentage of those who are remaining on the land is encouragingly high. In the province of Quebec, for example, eighty-two per cent of those who were settled under these schemes are still on the land, and the total for the dominion is over eighty per cent.

Miss MACPHAIL: Over how many years?

Mr. ROGERS: This was begun in 1932.

Miss MACPHAIL: It is not long enough.

Mr. ROGERS: No, it is not long enough.

Mr. POULIOT: I will try to be as brief as possible in what I have to say. All that matter of cooperation and understanding is pretty hard to comprehend. I believe in one head to direct the whole thing. I have already said so to the previous Minister of Colonization in Quebec, that there should be a boss of this colonization scheme; he should be in either Ottawa or Quebec, and there should be a definite understanding about the matter. In referring to Quebec I speak at the same time of all other provinces. One boss should be responsible for the whole thing, in order that when we speak of it in Ottawa we shall not be told that it comes from the provinces, and when it is spoken of in the provinces the people there cannot be told that it comes from Ottawa. It takes one leader to organize such a great movement.

The matter of the selection of lands has been largely overlooked. For instance, some men have been taken from cities where they were unemployed and were receiving relief, and transferred to the middle of a forest, where they are still receiving relief, and the day is not in sight when these men will be self-supporting.

When the government is submitting to the committee an item of $500,000 for this purpose, it will surely agree with me that this is done with a view that sooner or later the men who take advantage of it will be self-supporting. In Quebec—and I do not speak of the other provinces because I do not know what is going on there—only a small fraction of the settlers who have been put on the land in the last year expect to be self-supporting within a short period of time; all the others have to live on what they receive from the government, and they lean on the government. I do not blame the government for supporting them. The governments have a responsibility to these people. They told them that they were bringing them to the garden of Eden; that they were leaving those dirty cities to move into the clean country where they could breathe fresh air and could bring up their children under much better conditions than were possible in the towns. This was said everywhere; and these men and these good women and their children left the cities, where at least they were living in civilization, and were sent away into the middle of the forest, at times on lands which were absolutely unfitted for cultivation.

In my own constituency timber limits have been granted on lands which were not classified before. The lumber companies have been granted the right to cut timber in very good farming districts, although the land was not divided before into lands for cultivation and forest reserves, and therefore some farmers, having been put in forest reserves, on lands unsuitable for cultivation, after all the trees had been cut, found it impossible to get a living. They did not have sufficient timber to build their houses and barns; certainly they had not enough to trade with; they had just enough to heat their stoves. This was a great mistake. Every one who is familiar with colonization knows very well that the old-time settlers used to live for a long time

on the little money they were able to make from the sale of wood. In the winter they were busy cutting trees, which they sold later on, and with the proceeds they were able to help themselves. But now things are different.

Of three main points in the organization of new farm settlements, the first is to have thoroughly suitable land, in order that the new settlers are not placed, a little like St. Simeon Stylites, on a kind of column where it is impossible for them to reach fertile soil. One must visit some of the new settlements to know the hardships these people are suffering because of bad soil. They were brought there by those great geniuses who now lead the movement and tell the people of Montreal and other cities of Quebec: Go back to the land, to the mother land which will feed you so well. Well, sir, it is time to stop. It is time to remove those who are responsible for the mistakes of the past. If what they have done hitherto is all wrong, do you expect them to do anything good in the future? The future must be judged by the past, and I speak now as a French-Canadian from Quebec, because I love these people and I do not want them to starve on the soil, when that soil is supposed not only to feed them but to help them to feed the country at large. This is the first point, and one must be very cautious about it, because at this time there are very few farmers who can say that they make both ends meet. Many farmers living on fertile lands cannot make a living; therefore how can new settlers do so when they live on rocks? They are not birds.

Miss MACPHAIL: They do not know how to farm.

Mr. POULIOT: This is the first point. Let us have good lands for farms. For instance, in my constituency—I refer to it because the same thing occurs anywhere else where colonization is brought about—there is a very rich part, that which surrounds lake Témiscouata. It is an old seigneury two leagues wide on both sides of the river Madawaska and lake Témiscouata. There are some settlers there. The other lands have not been sold by the owners of that property. They are the best lands; they are easy of access, and instead of farmers' sons being given an opportunity to live there, they are required to migrate far away where they have been reduced to eating root soup and maple leaves. The maple leaf is all right as an emblem to wear in one's lapel, but not to eat as a food. That is what has occurred. Very often this matter has been brought before the people, and they ask why these farmers' sons are not settled as far as possible on or near the old homestead, in order that the father may give good advice to his children and look after them. We are in a civilized country. Moreover I believe the rules of nature should be followed in colonization. Take the tide; only in the bay of Fundy does it come up suddenly. A normal tide comes up little by little, and colonization should be carried on in the same way. Colonization should start with the first range of a township, and only after all the lots on that range are conceded should the second range be opened. That would be much better, because the community would be much larger and the people would be grouped together for the upkeep of roads, for school purposes, for all the needs of the community, and it would be much easier to make progress under such conditions. Therefore I hope the matter of the choice of the lots will be considered very carefully. Mistakes have been made by farmers who had lots patented which they sold to lumbermen. This created a hole in the middle of the community, and after the lumber was cut off it was impossible to have anything done with that land. It was sold for municipal taxes and was of no value to anyone. These matters should be considered very carefully, and those who are responsible for the mistakes of the past should be severely punished; certainly their advice should not be asked in future.

Then, sir, there is another point which is very interesting. A selection should be made of the farmers. You cannot expect a man who has been in a machine shop all his life to go on the land and be a good farmer from the first. That is impossible. First there is the natural inclination for farming which should be considered. A man should have the disposition to settle on the land for good and not to live there just as a matter of expediency while receiving a grant from either the provincial or the federal government. The men who go on the land must have the spirit of the old pioneers; they must understand the sort of life they will have to lead and the sacrifices they will have to make before they can become as prosperous as the farmers in the older communities. When we hear from some people that this work of settlement is doing well we must not overlook the fact that those who make such statements are the people who were responsible for putting men in the wrong places. They justify their jobs by saying everything is going well. That is not the truth. Hon. members would be surprised to learn the number of people on farms, as well as fishermen, in every part of the country, who are in receipt of relief of one kind or another.

There is a real procession of these men coming to the government for assistance because they are in need, and it is very sad.

In some cases politics have been played in the giving of relief, and that is a shame. I understand that it is very hard for the country to give any more in the way of relief than it is giving now, but at present the relief given is just sufficient to enable a man and his dependents to survive until better times come. Surely it is only a matter of humanity that every man who is in need, whether he is a gentile or a Jew, an old man or a young man, a Liberal or a Conservative or a C.C.F. man or a member of the social credit group, should have enough to live on, enough food for himself and his family and enough clothes. But, sir, when you go through those settlement districts you see people who are underfed; you see tall children who are like the stems of leaves, just skin and bones. They look miserable; they are miserable, because they are not fed. Infantile mortality has not decreased during the last few years because in some settlements the children of some of these settlers are not fed milk or the substitutes for milk; they are fed the sauce from pork and beans. That is almost incredible, but I have it on very good and reliable authority that this is the case. That being so I think it is time for us to see to it that the condition of these people is improved. On that soil they cannot even cultivate what is necessary for their own maintenance, and that is also almost incredible in a country such as this with so much fertile land. Those who are responsible for this situation try to keep their jobs by saying these men have been put in the right places, but that is not true. Those who make such statements should be fired right away; they should be put upon relief under the same conditions. That would be the law of retaliation; let them earn their livelihood just as the settlers do now. They would be the very first to write letters to this minister and that throughout the country complaining about their situation.

Then there is another matter which is most important. I refer to the question of roads. Some settlers have been placed in the middle of a forest, with no roads leading to their lots, and right now there are some roads that are so badly kept that it is impossible to pass over them in a car. During the campaign last year I went to visit a parish in my constituency back in the mountains, and it was impossible to get in with a car. All the cars had to stop half way up a hill, and I had to wire the Minister of Colonization in order to have that road repaired at once. It had been in that condition for four or five years. Those people are isolated. We need good avenues of communication between these settlers and the nearest progressive centres, and it is most important that this matter should not be overlooked. I say the roads should be built before the men are settled on the land. As it is now they have to hike through the forest carrying packs of food on their backs; they have to go far away by themselves and cut the trees and live a wild life until they can bring in their families. It is a shame, sir; it is no policy at all. I do not place all the blame on the federal Department of Labour, but there is a nigger in the woodpile somewhere, and that nigger should be found and executed. What has been said now is something that everyone who has eyes to see and ears to hear can observe while travelling through these districts. The men who are willing to go there are admirable Canadian citizens; they are of the same kind and class as the first pioneers who came to this country. They deserve every consideration; they should be helped, inasmuch as they can do something for the future, and because this government or any government has a responsibility towards them.

That being said, may I ask the minister what will be done with those who are to be settlers, or resettlers, next winter? I also take the opportunity to ask, although it is not under the same item but relates to the same thing, what will be done for the young men who will be employed as farm hands next fall after the work on the farm is finished?

Mr. ROGERS: As to the first question, what will happen to those who have come under this relief and settlement plan during the coming winter, as I pointed out previously the dominion government has entered into agreements with certain provinces by which subsistence is provided for those who have been settled on the land under these several agreements. In so far as the provinces have indicated their desire to go on with this relief settlement scheme the dominion government has signified its willingness to continue with its proportionate financial assistance towards that end.

I am bound to say that as I listened to my hon. friend I gathered the impression that he was referring not wholly to the relief settlement schemes as provided under this vote, but also to certain provincial schemes of colonization. Much that he said would be applicable to any scheme of settlement at this time. I think we all appreciate the difficulties in the way. I would like to impress on the committee however that those who are

settled on the land under these agreements go voluntarily. An effort is made to select them carefully—

Mr. HEAPS: How are they selected?

Mr. ROGERS: They are selected by an advisory committee which is set up in each province. On that advisory committee you will have representatives of the province and of the city and of the two railway companies.

Mr. MacNICOL: Are all the settlements made along the right of way of the railways?

Mr. ROGERS: They are made on crown lands for the most part.

Mr. MacNICOL: Why are the railways brought in as one of the three parties of the tripartite agreement.

Mr. ROGERS: Because of their experience in colonization. It was thought that the advice they might give to the Department of Labour in carrying out these schemes would be useful, and I am bound to say our experience has been that their advice has been most helpful.

Miss MACPHAIL: Are any practical farmers advising the department on land settlement?

Mr. ROGERS: Of course as far as the dominion Department of Labour is concerned, as I pointed out we do not deal with the actual administration of the settlement scheme; that is done by the province.

Miss MACPHAIL: With the selection of the farm and its location?

Mr. ROGERS: That is done by the province assisted by the advisory committees set up within the province.

Mr. TAYLOR (Nanaimo): Do I understand from the minister that all schemes are initiated by the provincial governments?

Mr. ROGERS: No. I think it would be more correct to say that this relief settlement scheme was worked out cooperatively between the dominion government and the provincial governments. It was looked upon as one means of reestablishing those who were on relief and who had had previous farm experience.

Mr. TAYLOR (Nanaimo): Then in the event that any man on relief wishes to go on farm land and develop a farm for himself, to whom should he apply?

Mr. ROGERS: It is done through the municipality.

Mr. TAYLOR (Nanaimo): The municipality in which he finds himself?

Mr. ROGERS: Yes.

Mr. POOLE: I understand the advisory committees also include members of the municipal council?

Mr. ROGERS: You have a series of committees, first what might be termed the national advisory committee, which meets from time to time in Ottawa; then a provincial advisory committee, and then the municipal.

Mr. POOLE: Is the minister aware that when the scheme was brought into effect two or three years ago, even while the scheme was in operation there were farmers returning from the land to the cities because they could not make a living on the land? The feeling was that the money contributed for this purpose would be better spent if it went in some way to encourage those already on the land to make a living there, some who had as much as a quarter century experience. It is true that many of those who went on the farms returned, not having had farm experience. It is equally true that the type of land on which they settled was such that they could not make a living on it. Has the minister considered whether it would not be better and more economical to find some means of reducing interest on the farmers' debts? It would be far more scientific than this, would it not?

Miss MACPHAIL: I enjoyed the speech of the hon. member for Témiscouata (Mr. Pouliot)—I cannot always say that but I say it in this case. I think the Minister of Labour must be aware that there are as many people being driven off the land as he can possibly be replacing on the land. It seems ridiculous that men and women who are familiar with agriculture and who love the land—and I think anyone must love the land, have a feeling for it, before he can enjoy country life or make a success of it at all—are being driven off through no fault of their own. That is happening in my constituency, and I suppose in every agricultural constituency represented in this house. All these people who are coming off the land are being piled on relief at one end while the minister is taking a few off the other end of the pile and putting them back on the land. The settlers put on the land in Ontario, I take it, have mostly been placed in northern Ontario. These people go into some new territory and try this thing that is called subsistence farming. That is a myth; there is no such thing as subsistence farming. In the days of the pioneers when they made what they wore, used tallow candles and

grew most of what they ate, and taxes were either non-existent or very small, subsistence farming was a reality. But now it just exists in the minds of people who colonize for the railroads, ministers and experts in the departments, it does not exist in reality. It is nonsense to go on spending money trying to achieve it. I venture to say that in ten years there will be none of these people on the land. Four years is no test. It may be that it costs less than to keep them in the cities, but it is a terrible ordeal for people who have been raised in the city.

Mr. ROGERS: But they make their own choice.

Miss MACPHAIL: Yes, but they are between the devil and the deep sea. They are choosing what seems to them the lesser of two evils. I have tried several times to have opportunity given to farmers' sons who cannot live at home because the farm will not support any more of them. They are trained farmers. They want to go and would even be able to pay a little to go on the land. There does not seem to be provision for that kind of person, yet we are making these collections from the cities. Just over the weekend I was talking to a man who knows a good deal about the conditions of these people in northern Ontario. He said it was appalling; that finally almost every one of the settlers placed in northern Ontario—possibly not under this scheme, but under some scheme—is coming under the Farmers' Creditors Arrangement Act, and that if it is going to do anything to save them it will have to be stretched a great deal. I should like to know from the minister where settlements in Ontario have been made, whether or not it is in northern Ontario. Is there to be any attempt to coordinate all the activities in land settlement?

Mr. ROGERS: First of all may I say that the bulk of those settled in Ontario under the relief settlement scheme were established in northern Ontario, but I am by no means certain whether these were the ones described a minute ago by the hon. member. We have not now before us a statement of the actual settlements established in northern Ontario, but that information can be obtained and I should be very pleased indeed to send it to the hon. member. May I point out that under this vote we are not embarking upon a new venture, but are simply meeting commitments under existing relief settlement agreements arranged with the provinces two years ago. They have been maintained up to the present time with the cordial cooperation of provinces and municipalities which have had experience under them. It may be true that at this time farming does not offer very attractive prospects to those on relief. At the same time I take it we are all familiar with what is involved in the term "real wages," and there are features of life in rural communities which I am sure are far more attractive than conditions surrounding families living on relief in some of our larger cities. Then, after all, there is the matter of inclination. My hon. friend has mentioned that some people moved from city to country and others from country to city.

Miss MACPHAIL: I was not talking about inclination. They were being driven off the farms in the country.

Mr. ROGERS: I am referring to those on the relief settlement scheme. There has been no coercion. They have entered these schemes as a result of their own inclinations, and as I said some time ago all we can do to-day is to conclude from these figures that the vast majority, some eighty per cent, of those who have gone out on farms under the relief settlement scheme have remained. I agree that may not be a final verdict, but I believe I made that point clear at the beginning of the discussion.

Miss MACPHAIL: I am not sure what the scheme is. Would the minister please tell us how long help is given after they settle on the farms?

Mr. ROGERS: Help has been given to them up to the present time.

Miss MACPHAIL: Any farmer could remain if he got help.

Mr. ROGERS: It is a form of relief.

Miss MACPHAIL: How much per year?

Mr. ROGERS: The figures before me show that it is $500 the first year and $100 the second year.

Miss MACPHAIL: Each year until the present?

Mr. ROGERS: Yes, until now. One province has made a request for assistance during the coming year as well.

Mr. POOLE: Does it not depend upon the size of the family?

Miss MACPHAIL: I have one more question. Does the minister know anything about the feelings of the municipalities into which these people move? May I say further that if they get $500 to begin with and $100 a year afterwards that certainly is not

subsistence farming. If the government would do as well for the people on the land who are working desperately to save their homes, if it would give $500 as an initial payment and $100 in following years, those people would be able to save their farms and would not have to go on relief. That is not subsistence farming; it is relief on the land, which is another matter altogether.

Mr. ROGERS: I have never suggested that this was subsistence farming. It is relief settlement. Naturally it is our hope that these people in time may become self-sustaining, but we have not had sufficient experience as yet by any means to suggest that that would be true of even the majority of families. They are still on relief.

Mr. POOLE: Would the amount given depend on the number in the family?

Mr. ROGERS: It is left to the provinces to determine how much shall be assigned. As I mentioned some time ago, the dominion government makes a pro rata contribution. The main provision of the agreement is that the dominion must make a non-recoverable expenditure of one-third of an amount not to exceed $600 per family, for the purpose of providing equipment and subsistence for a two-year period.

Mr. POOLE: That would mean that if at the end of two years the settlers cannot succeed on the farms the relief would be cut off, and they would have to go back to the cities?

Mr. ROGERS: Not necessarily. Where the provinces have brought to the attention of the dominion government the fact that those operating under the scheme are not self-supporting, and where requests have been made for further federal assistance, consideration has been given.

Miss MACPHAIL: Who buys the land, and who decides what land is to be bought? Who makes the payments on the land?

Mr. ROGERS: The land is not purchased under the settlement agreements. The selection is made by the provincial advisory committee.

Mr. MacNICOL: Perhaps I can give a little information in regard to this matter, if we are dealing with the same plan in operation along the North Bay-Cochrane road in northern Ontario.

Mr. ROGERS: I have not information as to the localities in Ontario in which the settlements are located, but I believe it is altogether likely that the district mentioned by the hon. member is the one in question.

Mr. MacNICOL: Just to satisfy my own mind in this matter, two years ago I motored up to northern Ontario and while there called on eighteen farmers. These farmers were located along the North Bay-Cochrane road, and the majority of them were not far south of Cochrane. They were located within ten to one hundred miles south of that place. I talked to the women and men, and my memory is that from the Ontario government they were to receive $200 per year for a period of three years, totalling $600. Those I visited had small gardens from one to five acres in size around their houses. I can say that every family I talked to seemed more or less pleased. I came back from northern Ontario satisfied that at least for the present they appeared to be content. My real reason for going to northern Ontario was that I had read in the newspapers an account which indicated that certain families had come back and had made complaints about the way they were treated. Perhaps there were some who acted in that way, but I did not come in contact with any of them. I am anxious to know whether the families I visited are still up there, and some time during the summer months I propose to go north again to call on the same families. The information I received was that the Ontario government selected the families and made an effort to ascertain whether they had had a training in or had some knowledge of farming. My impression was that they certainly did not send out the ordinary city man who was unfamiliar with country life.

I quite agree that it takes a lot of courage to go up into northern Ontario and start farming on these lines. One of the difficulties was that there did not seem to be any place near where they could sell what they raised. It is quite a distance to Cochrane, and a long way to the mining camps south. Of course it is different with those who are situated near Kirkland Lake, Porquois Junction, and camps like that. One or two families that I called on not far from these mines told me that they could sell to the mining camps everything they raised. The members of one family in particular, living quite alone, were very well pleased. They seemed to be the only family in that section. There happened to be a golf course nearby for officials of the mining camps, and doubtless that particular farmer made a living.

It struck me that one of the handicaps in that kind of settlement was the lack of contact with the outside world after the sun went down. During the daytime they could at least see a lot and they were kept occupied, but at night in the sections I visited the people did not have radios, and when I came back to Toronto I asked the department what they could do to improve conditions along that line. Of course unless an electric wire was strung along the road they could not have electric radios. They might have been able to use battery radios, but the families that went north took little furniture with them, and whether or not they had radios before I do not know. But certain of these settlers were backed up by the different communities from which they left to go north. I think that East York, for instance, and some of the municipalities around there undertook to try to make conditions better for those who went from their community. Quite a number of people in the south could perhaps spare a radio for some family in the north. Certainly any family that goes to northern Ontario should be assisted in every possible way, and if after three years they still need further assistance I should be glad to support a vote which the minister might ask for to assist until these people really get on their feet. They all had small houses and were clearing small farms, and an occasional one, but not all of them, had a cow. In one community I visited there was only one horse for seven families. There was not such a lot to do, of course, because at the outset they had only from one to five acres cleared, and perhaps one horse could take care of seven families.

Those who have to do with this kind of settlement should keep in close touch with the settlers, because they are worthy people, and even after the three years have expired every effort should be made to keep them going. Many of them will make good. I found some of them working on the roads. They would clear what land they could, and then the Ontario government would give them work to do on the main roads. If they got paid for that, it would be of some assistance in providing income. Certainly I believe that both governments and all those connected with such settlement should make every effort to provide some kind of work by which the settlers can get a little ready money, besides having the opportunity to raise vegetables and whatever else they may require. I can say for northern Ontario that I never saw better patches of potatoes than I saw up there, and the same with other vegetables. I was surprised at the tremendous growth, because my impression before going north had been that the season was so short that vegetables that grow so prolifically in southern Ontario would not mature up there, but the settlers told me that while their season was shorter the growing season was hotter, and they did not anticipate any trouble in that regard. I know what trouble the minister and the department must have in doing justice to a scheme of this kind, but certainly anything that the department feels it is necessary to do to help out these settlers should be done.

[Mr. MacNicol.]

Mr. McIVOR: I would just like to say that in Fort William several rooms in the schools had to be closed because of this movement towards the land. I know of only one family that had to come back. I could give you a picture of a home that I did not have afternoon tea in but something better, and not home brew. This family had been on relief in the city of Fort William, but they went on the land. The father was delicate. Now they would not move back because they say they have what firewood they need, and all the milk they need; they grow their own vegetables, keep their own fowl and have all the eggs they need. They get an odd job that brings them in a little cash to buy what they call luxuries. These people would not go back to the city. Of course, it depends not so much upon the man as upon the wife who goes out into these settlements, and I pay this tribute to some of them who went out and slaved and self-sacrificed in order to make good. That is the kind of spirit that made Canada great in its early days.

Progress reported.

At six o'clock the house adjourned without question put, pursuant to standing order.

---

## Thursday, April 30, 1936

The house met at three o'clock.

### RAILWAYS AND SHIPPING

#### CONCURRENCE IN SECOND REPORT OF STANDING COMMITTEE

Sir EUGENE FISET (Rimouski) presented the second report of the standing committee on railways and shipping owned, operated and controlled by the government, as follows:

The standing committee on railways and shipping, owned, operated and controlled by the government, begs leave to present the following as its second report:

Your committee has had under consideration items Nos. 426, 427 and 428 of the special supplementary estimates for the fiscal year ending March 31, 1937, and item No. 286 of the supplementary estimates for the fiscal year ending March 31, 1936, and approves of said items of the estimates.

Your committee has also considered provision for capital expenditures and debt retirements involving $9,959,000 which is to be provided by way of loan to the Canadian National Railway Company, and is covered by a resolution standing on the order paper of the house in the name of the Minister of Finance, and approves of same.

All of which is respectfully submitted.

Sir EUGENE FISET: Mr. Speaker, by leave of the house I move that the report be concurred in. May I explain that the reason I am moving concurrence is that the committee has been informed by the Department of Finance that certain commitments will have to be dealt with either to-morrow or the beginning of next week.

Hon. H. A. STEWART (Leeds): Mr. Speaker, the items referred to in this report were before the standing committee on railways and shipping to-day. If the resolution before the house is now adopted, I assume that closes the matter as regards discussion in committee of the whole house, although these items referred to in the report appear in the special supplementary estimates. The understanding in the committee was, I think, that that should not be the case, but that we should have the right here to discuss these items.

Sir EUGENE FISET: I think my hon. friend is mistaken. The supplementary estimates as far as railways are concerned were submitted to the standing committee at the special request of the right hon. the leader of the opposition (Mr. Bennett), who did not want the resolution on which the bill will be based to be considered in the house before the committee had considered these supplementary estimates. The fact that these estimates are being reported to the house does not in any way prevent their discussion in committee of the whole. This is simply a compliance with the request of the leader of the opposition.

Mr. STEWART: The request of the leader of the opposition was, as the chairman of the committee (Sir Eugene Fiset) has said, that these items stand over for consideration by the standing committee, but it was understood that that should not close off discussion in committee of the whole of the merits of these items.

Sir EUGENE FISET: It does not.

Mr. STEWART: That is what I wanted made clear.

Right Hon. Sir GEORGE PERLEY (Argenteuil): I think we should have the assurance that the adoption of this resolution and the report of the committee, which seems to be quite in order, will not preclude discussion of the matters referred to when the estimates are under consideration in committee of the whole.

Sir EUGENE FISET: May I again say that assurance was given by the Minister of Finance (Mr. Dunning), when the resolution was introduced, that the fact that these estimates were being submitted to the standing committee would not preclude discussion in the house in committee of the whole.

Mr. STEWART: That is all that I have been asking for.

Motion agreed to.

## BUSINESS OF THE HOUSE

### THE BUDGET—SUSPENSION OF STANDING ORDER 28 FOR SITTING OF FRIDAY, MAY 1

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, in order to ensure your honour being in the chair to-morrow when the Minister of Finance introduces his budget, I would ask the house kindly to give consent to the adoption of the following resolution:

That the provisions of standing order No. 28 respecting the committee of ways and means be suspended for the sitting of Friday, 1st May, 1936.

Motion agreed to.

## CRIMINAL CODE

Mr. T. L. CHURCH (Broadview) moved for leave to introduce Bill No. 57, to amend the criminal code.

He said: The object of this bill is to direct the attention of the house to one of Canada's most serious scandals, the great loss of life at level crossings and on highways. I hope hon. members will read the provisions of the bill as set out in the various sections. The first section deals with stopping at level crossings other than tramway crossings or those which are protected. The second section deals with driving while under the influence of alcohol or narcotics, and I propose to substitute the law of England for the present statute. Section 3 deals with racing and cutting in, two of the main causes of deaths on the highways. The bill provides that a person who causes death by culpable negligence shall not drive a car for two years, and there is an additional penalty provided. Under section 4, on the trial of any female person by a jury one-third of the jurors shall be female persons duly qualified on the same basis as male jurors. Then the last clause provides that on the trial by jury of any person for an accident causing death or injury, in every case where a

true bill has been found after there has been a committal by a magistrate the judge shall leave the case to the jury.

Motion agreed to and bill read the first time.

## QUESTIONS

(Questions answered orally are indicated by an asterisk.)

### *CHATEAU LAURIER HOTEL EMPLOYEES

Mr. HEAPS:

1. How many persons are employed at the Chateau Laurier hotel in Ottawa?
2. How many males and how many females?
3. How many are receiving less than one hundred dollars per month?
4. How many are receiving less than sixty-five dollars per month?
5. How many are receiving less than forty dollars per month?
6. Of those receiving less than sixty-five dollars per month, how many are married?
7. Have any of the employees of the hotel during the past six months been the recipients of public relief; if so, how many?
8. If such employees were in receipt of public relief, what were the salaries or wages of same?

Mr. HOWE: Mr. Speaker, I may say that this question has been referred to the management of the Canadian National Railways, who have replied that it is against the policy of the railways to answer such questions. They point out that an answer to the specific questions asked would not give a true picture of the situation, as a great part of all wages in hotels is made up of gratuities. However, I did ascertain from them definitely that the wages paid at the Chateau Laurier are equal to if not better than the wages paid at any other hotel on the Canadian National system or any competing hotel of which they have knowledge. I also ascertained that the provisions of the Ontario fair wage law are being fully complied with.

Mr. SPEAKER: Answered.

### PRACTICES OF CANNING COMPANIES

Mr. STEVENS:

1. Is it a fact that it is customary for canning company corporations to make contracts with growers in the spring of the year for the delivery of their products to the cannery at a contract price?
2. If so, what was the prevailing price paid to the growers for tomatoes for the season of 1934, and for the season of 1935?
3. What is the figure being offered by the canners for the season 1936?
4. Has the agriculture department, or any other department of the government, been keeping in touch with and advised of the activities of the canners this year in their preparation of contracts with growers for the delivery of vegetable and fruit products?
5. Did the bureau of statistics request the filing by the canning companies of the "carry over" of canned goods stocks from one season to another?
6. What was the "carry over" of canned tomatoes for the year 1934, and for the year 1935?
7. Did the canning corporations request the withdrawal of this demand by the bureau of statistics; if so, who made the request?
8. Has the government authorized the discontinuance of the filing of statistics regarding "carry over" in the canning industry?
9. Have representations been made by growers' organizations or individuals requesting that "carry over" or "stocks in store" should be published from time to time?

[Mr. Church.]

Mr. RINFRET:

1. Yes.
2. 1934, 29 cents per bushel in Ontario, $10.25 per ton in British Columbia; 1935, 50 to 30 cents for No. 1's and 35 to 22½ cents for No. 2's in Ontario; $13.33 per ton for No. 1's and $8.33 for No. 2's in British Columbia.
3. Ontario, approximately same as 1935. British Columbia, some contracts at $15 per ton for No. 1's, $9 for No. 2's, and $12 for combination 1's and 2's, others same as 1935.
4. Yes.
5. Yes.
6.

| December 1, 1934 | October 1, 1935 |
|---|---|
| 2,148,661 cases | 1,785,661 cases |

7. Yes; the Canned Foods Association of Ontario.
8. Yes.
9. Yes.

### LABELLE BUILDING, MONTREAL

Mr. DESLAURIERS:

1. What is the name and address of the owner of the Labelle building in Montreal?
2. What is the municipal assessment of this building?
3. What is the monthly and yearly rental paid by the government for the use of said building?
4. What amount has the government expended upon this building in improvements, repairs or maintenance from 1930 to 1936, inclusive?
5. What floor space does the government occupy?
6. When does the lease of this building terminate?
7. Was any reduction in the rental made during the depression?

Mr. CARDIN:

1. Labelle Building Limited c/o Sun Trust Company, Limited, 10 St. James West, Montreal, P.Q.
2. Land $125,600; Building $154,400; Total $280,000.
3. (a) $3,497.32.
   (b) $41,967.95.

4. From January 1, 1930, to January 31, 1936. Minor repairs and improvements $2,-451.80 for six years and one month. (Large repairs and improvements made by owner). Caretaking, lighting, power and water $49,-796.54 for six years and one month.

5. 25,613 square feet.

6. May 1, 1937.

7. No.

HAMILTON, ONT., FEDERAL BUILDING

Mr. LENNARD:

1. In connection with the erection of the new federal building at Hamilton, Ontario, was the general contractor supposed to provide a watchman during the day and another at night while this building was under construction?

2. If so, has this regulation been complied with and at what hourly wage were these men employed?

Mr. CARDIN:

1. Yes.

2. (a) Yes; (b) night and day watchman at $15 per week each, and two gate watchmen at 45 cents per hour.

VALCARTIER CAMP

Mr. WERMENLINGER:

1. Since the change of government, has the Department of National Defence or the Department of Labour purchased any wood for Valcartier camp?

2. If so, what quantity?

3. What was the price?

4. To whom was the contract given?

5. Who were the tenderers?

Mr. MACKENZIE (Vancouver):

1. Yes.

2. Forty-five cords of hardwood.

3. $6.50 per 72 cubic feet.

4. Mr. Maurice E. Bastien, Loretteville, P.Q.

5. Mr. Maurice E. Bastien, Loretteville, P.Q.; Mr. Cléophas Turcotte, Quebec, P.Q.

Mr. WERMENLINGER:

1. Since the change of government, have tenders been invited by the Department of National Defence or the Department of Labour for supplying hay to Valcartier camp?

2. If so, to whom was the contract awarded?

3. What was the price?

4. Who were the tenderers?

Mr. MACKENZIE (Vancouver):

1. Yes.

2, 3 and 4:

(Period December 20, 1935, to April 18, 1936)

2. Mr. Alphonse Lépine, R.R. No. 1, Ancienne Lorette, P.Q.

3. No. 2 timothy hay, $16 per ton of 2,000 pounds; No. 1 clover, $15.50 per ton of 2,000 pounds.

4. Mr. Alphonse Lépine, Ancienne Lorette, P.Q.; Mr. Joseph Couture, Loretteville, P.Q. (Mr. Couture's tender was received 5 days after tenders were closed).

(Period April 18, 1936, to approximately June 30, 1936)

2. Mr. Nestor Lachance, Charlesbourg, P.Q.

3. No. 2 timothy hay, $10.50 per ton of 2,000 pounds; No. 1 clover, $10 per ton of 2,000 pounds.

4. Mr. Nestor Lachance, Charlesbourg, P.Q.; Mr. J. Elzéar Bégin, Beauport, P.Q.; Mr. John Byrne, Charlesbourg, P.Q.; Messrs. Bégin & Frère, Quebec; Mr. Gérard Côté, St. Grégoire, P.Q.; Mr. J. Omer Daigle, St. Gérard Atalante, P.Q.; Mr. Alphonse Drolet, Ancienne Lorette, P.Q.; Mr. Arthur Drolet, Quebec; Mr. Alphonse Lépine, Ancienne Lorette, P.Q.; Mr. Arthur Martineau, St. François, P.Q.; Mr. N. Lachance, Charlesbourg, P.Q.; Mr. J. H. Bureau, Ancienne Lorette, P.Q.

## QUESTIONS PASSED AS ORDERS FOR RETURNS

CIVIL SERVANTS—ADDITIONAL REMUNERATION

Mr. BOULANGER:

1. From August 7, 1930, to October 23, 1935, who are the civil servants in administrative or executive positions who have received additional remuneration for work done outside of prescribed hours and what amount has been received by each of them?

2. From August 7, 1930, to October 23, 1935, who are the civil servants who have received additional remuneration for work performed outside of prescribed working hours, in conformity with article 85 of the civil service regulations, and what is the amount received by each of them?

NAVAL REDUCTIONS ARMAMENT CONFERENCE

Mr. CHURCH:

1. Has any white paper or other document been received by the government showing the proceedings of the recent naval reductions armament conference in London, which agreement was signed in London last month on behalf of Canada, by the high commissioner?

2. Will a copy of it be laid on the table to include the text of an address at the execution of the treaty by the Canadian high commissioner?

3. Is Canada committed in view of this treaty to reduce armaments in so far as Canada's navy is concerned; if so, to what extent are we obligated by it?

4. What does Canada's navy consist of and where is it now located, and is any of it now in Mediterranean waters?

5. What are the total expenditures for the last year of record on Canada's fleet (a) capital; (b) maintenance?

DISMISSAL OF MARINE AND PUBLIC WORKS EMPLOYEES

Mr. WERMENLINGER:

1. What are the names of the employees of the Department of Marine at Richelieu who were dismissed between the months of November 1, 1935, to April 1, 1936, in (a) shipyard; (b) the fleet; (c) buoy service?
2. What are the names of the employees of the Department of Public Works at Richelieu who were dismissed from November 1, 1935, to April 1, 1936?

Mr. WERMENLINGER:

1. How many employees of the Department of Marine at the (a) Sorel shipyard; (b) Sorel buoy service; (c) Sorel fleet department, were dismissed during the months of November and December, 1935?
2. What are their names?
3. What were the dates of their respective appointments?

VALCARTIER CAMP ARSENAL

Mr. WERMENLINGER:

1. Since November 1st last to the present time, what persons from outside Valcartier camp have been employed in the erection of the arsenal and cartridge factory?
2. When did each of said persons commence work?
3. When did they finish such work?
4. What salary or wages did they receive?
5. By whom were they recommended for appointment?
6. What was the particular trade of each of these employees?

## CANADIAN NATIONAL RAILWAYS

REPORTED LEASE TO CANADIAN PACIFIC OF WINDSOR-WINDSOR JUNCTION LINE

On the orders of the day:

Hon. C. D. HOWE (Minister of Railways and Canals): Mr. Speaker, yesterday the senior member for Halifax (Mr. Finn) gave notice of a question as to whether I or the government had knowledge that a contract was about to be entered into with the Canadian Pacific Railway Company for a long period of years, leasing the line from Windsor to Windsor Junction which is owned by the Canadian National Railways.

I may say that no such agreement has been entered into. The agreement in question refers to an arrangement permitting the Dominion Atlantic railway to use the tracks of the Canadian National Railways, as well as the terminal facilities, from Windsor Junction to Halifax. That arrangement has been in existence since 1914, but when the Dominion Atlantic railway acquired the property in 1928 the agreement continued without formal sanction. On recommendation of the Canadian National Railways a formal agreement has been entered into covering the old arrangement.

[Mr. Church.]

## LOAN COMPANIES

On the orders of the day:

Mr. T. L. CHURCH (Broadview): I should like to direct a question to the Postmaster General (Mr. Elliott) following a number of complaints from the Toronto district with regard to what are called in this house shark loan companies. I understand that they are sending through the mails a large amount of literature, and that they charge fabulous rates of interest. I found some of this literature in the mail the other day, but it had no post office stamp on it, and I have been wondering how it gets in the mail in the residential districts, particularly in the poorer districts of Toronto. In view of the large number of complaints that have been made about the methods used by these companies I would ask the Postmaster General to look into the matter and see if the regulations of the Post Office Department are being complied with.

Hon. J. C. ELLIOTT (Postmaster General): Mr. Speaker, I had no intimation that my hon. friend was going to ask this question or I would have had the matter looked into, but I shall be very glad to make inquiries. The matter had not come to my notice previously.

Mr. CHURCH: Some of the mail is going through station K, No. 12, North Toronto.

## SUPPLY

The house in committee of supply, Mr. Sanderson in the chair.

DEPARTMENT OF LABOUR

**Projects already undertaken—amount required to provide for agricultural settlement and resettlement, $500,000.**

Mr. POULIOT: This is a very concise form of legislation, but due to the questions that were asked yesterday the committee was enlightened on its purpose. Some people attach much importance to jobs. I understand that a great many of our fellow citizens are inclined to lean on the government since the leader of the last government told the country: Let everybody come unto me and I will serve them. This time I intend to discuss the matter not subjectively but purely objectively, by way of showing the importance of legislation to every man, woman and child in Canada. Let us suppose for a moment that there is a certain definite number of jobs available, 25,000, or even 100,000; it will not satisfy the country at large. But when a piece of legislation is enacted by parliament it affects everyone from coast to coast; therefore legislation should be drafted with the

utmost care. It is not a matter of pleasing or displeasing anyone; the thing must be discussed without fear or favour. It is either right and good, or wrong and bad, and one has to decide whether it is right and good or wrong and bad.

Sir, this piece of legislation is a consequence of the policy put into force in 1932, as the minister stated yesterday. I wonder whether according to section 7 of the act respecting the establishment of a national employment commission the commission will in fact and in law be empowered to check the expenditures made by the provinces. There is a strange doctrine which has many supporters in this house and in the senate—I have heard it supported by prominent legal minds in this house—that even if under the constitution the federal power or the provincial power have no authority on a certain matter, if there is common agreement they can proceed. Let me illustrate this. Under the British North America Act exclusive powers are conferred upon the provinces on the one hand and the dominion government on the other. "Exclusive"—the word is clear and definite. Therefore suppose that in one instance the provinces have jurisdiction; if that jurisdiction is exclusive it means that on that matter the dominion government has no jurisdiction at all. On the other hand where the dominion government has exclusive jurisdiction the provinces have no jurisdiction at all Therefore if the dominion government is endowed with jurisdiction in a certain matter the provinces have none, and if the provinces have jurisdiction the dominion government has none. How then can we say that the party which has no jurisdiction can by common agreement be a party to the thing proposed? This argument is not only theoretical; it comes to a practical point, namely, the checking of expenditure. The money will be advanced to the provinces, we were told yesterday. Legislation recently enacted, section 7 of the act which was formerly Bill No. 14, respecting the establishment of a national employment commission, provides:

> The commission shall, under the direction of the minister supervise the expenditure of funds voted by parliament for purposes of relief and providing employment, and perform such administrative duties with respect to relief and employment as may be assigned to it from time to time by the governor in council.

Having in mind a logical interpretation of the most important sections of the constitution, those that divide the powers between the federal government and the provinces, do you not think, sir, that the provinces will take advantage of the constitution to refuse to permit inspection of their books by the employment commission? And if the matter is brought to court it is doubtful whether such a contention on the part of the provinces will be rejected. Therefore on the one hand the money will be granted to the provinces, and on the other hand it will be impossible to check the expenditure made by those provinces of the dominion's money. This is a very serious objection. I submit it now in order that we may have an explanation from the minister as to how the federal Department of Labour will proceed with regard to the checking of expenditures. One method that could be adopted would be to allot a certain amount to the provinces to meet the expenditures themselves, provided that afterwards they may come to the dominion government for refund, with vouchers; then the federal government would be able to check the whole thing. But if the money is advanced to the provinces they can refuse afterwards to have an audit of their expenditures. May I ask the minister what he thinks of the suggestion of making first an allotment to each province according to its population or needs, the province to spend the allotted amount and afterwards come to his department for refund with complete and satisfactory vouchers?

Mr. ROGERS: The point made by the hon. member for Témiscouata (Mr. Pouliot) relates to the efficacy of supervision over relief expenditures which might be exercised by the dominion government. May I point out to him that section 7 of the act setting up the national employment commission refers specifically to the supervision of the expenditure of funds voted by parliament for purposes of relief and providing employment. Obviously it does not apply to expenditures voted by provincial legislatures for such purposes. Of course at all times we have the power of following through our own expenditures. So far as the expenditures made under specific agreements are concerned, may I say that the whole question of supervision is covered in the agreements, and where for example an expenditure is made ostensibly under the terms of such agreement, and it is afterwards discovered that the agreement has been violated, the auditor general may refuse to pass the account and refunds may be requested from the province in question.

Section 7 of a typical agreement may place the situation clearly before the hon. member. It is as follows:

> The province agrees that it will maintain adequate records of all expenditures, supported by proper documents and vouchers, and that such records, documents and vouchers shall be segregated from, although reconciled with the usual records of the province.
>
> The province further undertakes to make all or any of the said records, documents and

vouchers available to the dominion for audit or examination upon request, and to furnish information in relation thereto.

I agree with the hon. member that the question of supervision is a very important one, and I assure him that in connection with the negotiation of further agreements with the provinces we shall be glad to keep his suggestion in mind.

Mr. POULIOT: Thank you, sir. But the time will soon come when the policy of the previous government will have to be repealed. On October 14 the people of Canada said clearly that they did not desire a continuation of the same policies, that they wanted a change. Everyone regrets the careless drafting of legislation passed in the last five years. Every bit of it should be repealed and replaced by good, Liberal policies. Not one piece of legislation will stand the test of public opinion. It was always a matter of having a peg to fill the hole. During the past five years the policy of the then government was one of expediency, and in many cases when the government had its back to the wall it decided anything. But, sir, it is not "anything" that we need; we need something, and something constructive, something which will bring nearer the dawn of normalcy.

First of all we have to make an inventory of conditions in Canada. We must make a survey of mortgages on farms. Here we are asking that money be voted for the relief of farmers, and I believe the vote would refer to relief in the broad sense of the term. Specifically it is to provide "for agricultural settlement and resettlement." Many farmers have had to leave their land because they were not successful in securing adjustments from the farm loan board. Sometimes there was a difference of $200 or $300, and because on occasions the board refused to lend the farmers two or three hundred dollars more, those farmers had to quit their lands.

The vote under discussion is for $500,000, a large sum, but only a drop in the bucket when we consider the needs of the farmers. It is impossible for the government to pay all the debts of the farmers, because those debts are too great. In order to know what the farmer needs it is essential first of all that the government be made acquainted with the total amount of farm mortgages in each province. We must have that information if we are to find out how money can be lent to farmers, either by governments or by other organizations, to permit their survival. If we are to lend money the amount must be defined according to the needs of the farmers, and that information can be secured only by first having the amount of the mortgages. This information is not available at the present time. The figures supplied in the last census are incomplete and far from satisfactory. If we are to take into account the best way of reestablishing farmers we must also consider the farm loan policy. Not only that, but there must be a careful consideration of the tariff, because we know the tariff plays an important part in the sale of farm products. Further, the Department of Trade and Commerce should play the game hand in hand with the Department of National Revenue, in order to find new markets for the farmer. Therefore I say that under item 329 the whole policy of several departments with regard to farmers might be considered.

As was stated yesterday, there must be one head or one leader in every field of activity. That is my humble understanding. The Prime Minister should be the leader of all the leaders in the cabinet, by directing the policy which will bring about the desired change. We cannot expect a change of any kind if we continue to follow the policies of the previous administration. We need a drastic change of policy. Moreover, every minister should be careful in the acceptance of advice given to him by some deputy heads. I know one of them who is most dangerous, because he is a crank. I am not now speaking about the Department of Labour but about another department with which all other departments have to deal. When a man tries to make experiments on too large a scale at the expense of the country, it is most dangerous. A check should also be made of the few men who composed the outside brain trust of the last Prime Minister, and those men should be superannuated right away. They were behind the curtains, but there they played their role by giving wrong advice. I hope this government will not accept any more of the advice given by those people, and will see to it that they are made inoffensive. The government cannot be expected to settle the question of unemployment even within five years if the policies of the Tory government are continued. There must be an end to that. Of course, I appreciate the fact that farmers must be helped, but in order to help them and relieve unemployment all the former Tory policies must be repealed and thrown into the wastepaper basket, and new and progressive legislation must be brought forward for the benefit of the farmers and other citizens as well. I am ready to give this a chance, but the policies of the previous government have proved a failure, and how can we expect anything by continuing them? The few men who are responsible for the disaster that has taken place in the settlement of farmers should be made innocuous, and I hope, Mr.

Chairman, that within a very short time I shall be in a position to receive more information about these fellows.

Mr. DOUGLAS: Can the minister give us some idea as to how this amount of $500,000 will be divided among the provinces?

Mr. ROGERS: I sought to make it clear yesterday afternoon that this sum of $500,000 includes $250,000 to which we are committed under existing agreements, and $250,000 which will be required to meet the anticipated demands from provinces with which the dominion government has relief settlement agreements. As to the precise provincial distribution of this amount, my hon. friend will understand that this must depend upon the number of relief settlers in each province. I am not able to give him in dollars and cents at the moment the exact distribution. It depends upon the number who have availed themselves or will avail themselves of the opportunity to take advantage of the relief settlement schemes. I put on record yesterday the numbers who had been assisted in the various provinces.

Mr. DOUGLAS: I wanted to make a suggestion to the minister with reference to the problem of agricultural settlement, and particularly as it refers to the province of Saskatchewan. When the drought was at its worst in Saskatchewan, farmers who had been forced off their farms by reason of indebtedness and climatic conditions volunteered to go into the northern part of the province. I know many of them. A utopian picture was painted for them. They were told they would be able to shoot enough and fish enough to keep themselves in food, they would be able to get enough fuel from the forest, and all they would need would be a little money for clothing. It was painted as a paradise compared with the country they were leaving. I am not blaming anybody at all. The government was faced with a drastic situation and applied what seemed to them to be the best remedy. But what do we find at the present time? Many of these families are now in the northern part of Saskatchewan where the land is so densely overgrown that it will take a number of years to clear even enough land to feed stock. These people are away from roads, railways and telephone communication. Whole communities of them are on relief, and dependent on some type of government assistance, while in the south, the very country which they left, conditions are improving and that country is coming back, climatically speaking. In the part of the province from which I come you can travel mile after mile and see farm after farm that has been abandoned, with good buildings, telephone communication, good roads, close to the station; with elevators, and yet you will find whole stretches of country uninhabited. Instead of taking people up into the north to settle them there or continuing to assist the settlers who are now up north, it would seem better to enter into some agreement by which the government could take over for settlement purposes farms which have been taken over by the municipalities for non-payment of taxes. A great many mortgage and loan companies own large tracts of land in Saskatchewan and would be very glad to get rid of some of it for the taxes and indebtedness against it. Many of these settlers could be brought back into what is really a grain growing country. They are grain farmers and are not qualified for settlement in the northern part of the province, where they find themselves in a type of country to which they are not suited and for which they have no inclination. I suggest that some such agreement might be worked out. The time has certainly come for a new orientation on this problem by which much of this desirable land in southern Saskatchewan could be taken over by the government and these settlers brought back into their own community, with some of the comforts of life. They would be back in association with their fellow creatures, and a scheme could be set up under which the families brought back could repay at a very low rate of interest some of the debt against this abandoned country. I submit that for the minister's consideration.

Mr. QUELCH: Mr. Chairman, under item 310 assistance can be given to settlers to transfer them from a drought area into a more productive area. Item 329 deals to some extent with the same subject, and there may be some overlapping between the two. When the dollar for dollar bonus legislation was before the house I referred to the fact that the soldier settlement board had been formed in 1919 and supervisors appointed for the purpose of reestablishing and settling soldiers on the land. I think a considerable number of them were settled in the drought area in spite of the fact that the government knew then that these areas were not suitable for settlement. The Minister of the Interior (Mr. Crerar) has asked me for my authority, and I should like to quote from a letter which I have received on this subject from the Department of Immigration. It says in part:

The area from townships 27 to 32 was subdivided in 1905 in a very dry season. Of the eighty-four townships fifty per cent was rated as too dry and unproductive; thirty-

seven per cent was rated for grazing, and, given sufficient moisture, about thirty per cent was conceded for farming.

Although thirty per cent was cenceded for farming, a far less proportion than that is really suitable for farming. It is not a question of dry cycles at all, because that district has been dry ever since 1905. A number of farmers have moved out of the district but there is still a large number who desire to be moved out, who are on relief and are unable to make a living there. Would they be eligible under this item to be moved into other districts?

Mr. ROGERS: The vote under consideration applies to agricultural settlement and rehabilitation. I have already pointed out that this is a commitment under existing agreements for relief settlement, and the purpose of these relief agreements is to take from municipalities families with previous agricultural experience and place them on the land. Obviously in order to qualify for that opportunity they must previously have been on relief. It is not, properly speaking, a scheme of colonization such as my hon. friend perhaps has in mind. The situation to which he has referred and which has been referred to by the hon. member for Weyburn (Mr. Douglas) has been brought to my attention. Unquestionably in the settlement of western Canada there has been at times an unfortunate selection of land. That raises a very large question for consideration. I would point out that a discussion of colonization in its wider aspects does not come strictly within the terms of this vote. I have no desire to curtail the discussion or to withhold information, but I should like to direct the attention of the committee to the fact that this item and those that follow immediately relate to projects already undertaken, in other words, to which we are already committed. We are simply meeting our obligations. Any general discussion on any of these subjects would come more properly under the items which follow immediately under the heading "other projects." As I have said, I have no desire to curtail discussion or to withhold information; I am simply suggesting that it would expedite the progress of these estimates if we passed the items to which we are committed already and then dealt with the items under "other projects," most of these duplicate in some manner or relate to methods of dealing with the relief situation which have been already undertaken and tested by experience.

Mr. COLDWELL: If the minister could spare the time this summer, I suggest that he personally look into some of these projects already undertaken.

Mr. ROGERS: I intend to.

Mr. COLDWELL: I have in mind particularly the settlement in the Loon Lake district of Saskatchewan undertaken by the cities of Saskatoon and Moose Jaw. People have been encouraged by the municipalities to settle on land in this district, and a tremendous problem is likely to be created due to the fact that some of this land is believed to be deficient in certain essential chemicals. North of this district other people settled on rather good land, but they went in there believing that they were going to get a railway. Incidentally I may tell the minister that if he goes there he will find that these people expect the federal government to build that railway. I suggest that before much more of this kind of settlement is undertaken, it might be well for the minister personally to look into some of these projects. Reference has been made to the use of single men in connection with the railways, and I would suggest that labour of this type could be used in clearing bush from land which would be suitable for settlement. People could then be settled in communities where they could have schools and other facilities, and in that way we would be actually reestablishing these people.

Mr. BRADETTE: I understand from the minister that the back to the land movement would not come under this vote.

Mr. ROGERS: It would be confined to those who are on relief in the municipalities.

Mr. BRADETTE: It has nothing to do with the back to the land movement inaugurated four years ago?

Mr. ROGERS: Yes, but it is confined to those who are relief recipients.

Mr. BRADETTE: I believe I have more of this type of settler in my constituency than will be found in any other section of the country. I agree entirely with what certain aldermen of the city of Ottawa said the other day when they advised the recipients of relief to stay in the city and not go on the land. I do not want the government to enlarge this scheme, although it should look after the people who went back to the land three or four years ago. The present leader of the opposition (Mr. Bennett) told me two years ago that after the $600 given to these people had been expended, it might be found necessary to give further aid. I am glad help has been given to some of these settlers, but I do not want to see any more people coming from the industrial centres of Ontario to settle on the land when we have many sons of farmers,

men who are experienced, who cannot get settled on the land. The government should be very careful before going further with these schemes.

Next session I should like to see this back to the land and settlement question brought before the agriculture committee in order that it may be thoroughly discussed. I believe I have about 600 of these settlers in my constituency, and before and during the last election campaign I visited nearly every one of them. I found them to be splendid men and women, industrious and courageous, but in most cases they had come from the industrial sections of southern Ontario. They were ready and willing to take up their new life, but the odds against them were very heavy and in many cases insurmountable. Many of them have found their way back to their previous homes, some of them even walking back. Many of the women to whom I spoke told me that they were dreaming of the day when they would be back again in Toronto, Ottawa, Windsor or some other urban centre of population, although they were willing to make all necessary sacrifices to succeed.

I do not want to enlarge upon this matter, as I realize the minister is eager to have the item passed. But I do not want the government to bring one more man from the older centres of population into the newer sections until it has been found possible to give the necessary aid to farmers sons, who want to settle on the land and those under the $600 scheme. These young men are thoroughly experienced and would be following their natural lives. The minister is a student of human nature, and if he looks into this question I know he will realize the impossibility of placing craftsmen from the cities on farms in the newer sections of the country. These men are used to life in the urban centres and the odds against them are too great when they are suddenly transplanted to newer sections. Perhaps next session the government may find it possible to set up a special committee to consider this question. If we can make things more comfortabe for the rural population we will be making a long stride towards bringing prosperity and comfort to Canada.

Mr. MacINNIS: Answering a question yesterday the minister stated that some eighty to eighty-two per cent of those who had been settled on the land in this manner had remained there. Has the minister any information as to how many settlers left their farms during the same period?

Mr. ROGERS: I am quite sure my hon. friend would not expect me to supply that information without having had some previous notice of his question. I am not sure that we have the information, but if it can be obtained from the bureau of statistics, I shall be glad to get it. I agree that it would be very interesting. I should like to point out—this applies to the remarks of the hon. member for Vancouver East (Mr. MacInnis) as well as to those of the hon. member for Cochrane (Mr. Bradette)—that the dominion government does not place these families upon the land. In the first place, a choice is made by those who take advantage of this relief settlement scheme. Then the approval of the municipality must be obtained, and, lastly, the actual selection of the land and the administration is carried out by the province which is concerned in the colonization activities. In making a selection both of the land and of the settler the province has the advice of an advisory committee, and, speaking generally, the municipality also has the advantage of that advice. I am far from saying that the condition of those who have been settled under these agreements has always been satisfactory. I can quite understand that in many cases it is far from satisfactory, and I shall be glad indeed to keep in mind the suggestions which have been made both this afternoon and yesterday regarding the importance of continued supervision. I am free to confess that I have not yet had an opportunity to see some of these schemes in active operation, and I think that my time would be spent more profitably there even than in this house. But that opportunity has not yet occurred; I shall take advantage of it as soon as it does occur. In the meanwhile I have had consultations with the general advisory committee, with representatives of the railway colonization departments present, and we have sought to go into the whole matter as carefully as possible. I assure the committee that before there is any extension of the existing schemes we shall see our way very clearly.

Mr. MacINNIS: One hesitates to criticize in this matter the minister, or the department, or even the government, because in these last five or six years we have been thrown into a condition for which the country, both in respect of organization and, if I may say so, psychologically, has been totally unprepared. I have great pleasure in associating myself with the hon. member for Cochrane (Mr. Bradette) in the sentiments he expressed a little while ago. I think that the money now being spent could be used to better advantage in creating a good community life for the people who are already on the land and who,

unless conditions get much worse than they are, are going to stay there. The minister points out that his department is not selecting the people who go on the land, neither has it selected the farms or the districts in which they are settled. I am pleased to hear him say it is intended to look into this matter before the next session of parliament, because if the dominion government is to give financial assistance in this way it must provide the organization that is necessary to put these people back on the land. It is useless to place people on the land when many of those who have been living there have been compelled to leave because of the conditions under which they had to live. If the minister will try to formulate some organized plan for putting people back on the land and making conditions there fit for human beings to live under, as far as I am concerned he will not only be immune from criticism but will have my assistance as far as it can be given.

Mr. STEWART: I rise not for the purpose of opposing the vote but rather to commend the minister and the government for continuing this scheme. To students of social conditions no subject has been more thought-provoking than the drift of people from the land to the cities. Perhaps that is a factor contributing to the difficulties that are experienced in the larger cities in the matter of relief. There are men in the cities and larger towns who came from the farms, young men who thought that their prospects in life would thereby be improved. They must have found out by this time that they made a mistake; many of them would be glad to return to the farms of their fathers, which they never should have left, and which would have been in much better condition to-day if they had remained there, because many of the older people were left without that loyal interest and cooperation which in past days have contributed to the upkeep and the improvement of the farms. This scheme is for the purpose of assisting those in the cities who are on relief to return and resume a vocation for which they are qualified and which they wish again to take up. There is nothing compulsory about it. An individual decides that he wants to go back to the farm, to return to work that he is familiar with. He is now on relief, a charge upon the city and community in which he lives. Under this scheme, with the approval of the municipality and the province and the dominion, the desire of that individual is promoted and a joint contribution is made which establishes him to a certain extent upon the land and provides for assistance in the future. By this means he is not confronted with the payment of rent and the purchase of fuel, vegetables, and supplies, with which he can now provide himself in large measure. It may not be an ideal condition; the scheme may not be a one hundred per cent success, but the fact that between eighty and ninety per cent of those who have gone back to the land have remained, that the large number referred to by the minister yesterday—I think it is 18,500 individuals and about 3,500 families—are being cared for in this way, indicates in a measure the success of this undertaking. I recall very well how severely this policy was criticized in the house by those who are now on the other side. But after all time is merciless in its vindication or its condemnation, and time has vindicated and justified in large measure the policy of the former minister of labour and the former government in this respect. We ourselves had some doubts about it, but it succeeded beyond our most cherished expectations. I believe that a large number of the people who are on the farms will remain there, that they will be better off there than they were in the cities, and that the cost of relief in this connection will be materially reduced. I am glad the minister is continuing this scheme and making provision for an extension of it. I think he is on the right line, and that the scheme is capable of further development.

Mr. BRADETTE: The hon. member who has just spoken (Mr. Stewart) says he still remembers how those who were then in opposition, now supporting the present government never criticized the principles of the back to the land scheme. I happened to be a neighbour of the then minister of labour, and I know he put all his heart into that scheme. I criticized the scheme in 1931, because the minister at that time made the statement in the House of Commons that the back to the land movement had been a success without any expenditures of public money. I rose on the opposition side at that time and said it could never be a success unless both the provincial and the federal government found it possible to spend large sums of money out of the public treasury. That is the only criticism of the scheme I ever offered. When, later on, the so-called $600 movement was inaugurated, I do not recall that there was any criticism from any member of the then House of Commons. But I repeat that I do not believe we can enlarge that scheme at the present time without consolidating the condition of those who are now on the land and assisting farmers' sons and others who are working their holdings to stay on the farm, because you will not get a majority of these fine people to remain in their present oc-

cupation if ever the industrial situation rectifies itself; you may be positive of that. I have been told by some of these people that in a year or two they are going to walk back to Toronto if they are unable to get a lift on the way. Apparently many of them are not satisfied with their present occupation; I think that is the case with the majority. I know some good came from that scheme, and to that extent credit must be given the previous government, but the responsibility rests with the present government to maintain those who were placed on the land a few years ago so that at least they will be comfortable, and substantial help should be continued in the majority of these cases.

Mr. ROWE (Dufferin): I do not want to hold up this item because, as the minister said a few moments ago, there are other estimates under which the discussion can be carried on with better effect, but I should like to know what has been the average cost per family that is still on the land. Some of these families must have been on the land for a couple of years now.

Mr. ROGERS: For more than that, some of them. Perhaps it might be useful if I made a brief statement as to the financial obligations that have been assumed by the dominion government under this scheme.

Mr. ROWE (Dufferin): No doubt that will cover it. What I was chiefly interested in was the average cost of the scheme so far per family.

Mr. ROGERS: It would be $600 for the two years, and then in some cases there have been renewals for a further two years at $100. Does that answer the question of my hon. friend?

Mr. ROWE (Dufferin): Yes, that is it.

Mr. PELLETIER: Since this item refers particularly to a resettlement scheme, under which it was possible to take people from the cities and put them back on the land, I think this is the time to express our ideas in this connection. Yesterday the minister said there had been no coercion practised, as far as those people were concerned, when they went on the land. Even though that was the case actually, we find that in many cases there was indirect coercion. The minister also said some of the members of these advisory committees were people representing the railways. I have before me a mass of reports, some seventeen in all, written since last January by one of the persons in the province of Quebec who was most active in regard to this back to the land movement. There is one point that strikes me. We give these people something like $600 when they go on the land. In my own constituency we have had many people come from the eastern part of Canada, particularly from the province of Quebec. They came of their own accord; some of them brought as much as $2,000 with which to begin farming operations in the locations of their choice, but what is the situation to-day? Even though they had $2,000 instead of $600, the only food they have at times is moose meat in the winter, if they can possibly get it, and if it were possible they would be very glad to get back to the cities. The figures do not show the people returning to the cities simply because when we put them on the land we see to it that they stay there. I believe if we were to give them the same encouragement to come back to the cities we would find that the movement back would be very rapid. We put these people on the land; we want them to produce and become self-supporting to the greatest extent possible. On the other hand we dread the day when they will begin to produce, because then they will add to the so-called surplus of products we have to-day. First we say we have too much grain, and then we shove these people back on the land to produce more. I understand, of course, that the idea is to have these people become self-supporting, but, as has been said so frequently during the discussion of this question, if the people who are experts in farming cannot make a go of it how can you expect industrial workers to do any better?

Mr. ROGERS: I should like to ask my hon. friend a question. Does he think it is better for a man to consume without producing or to consume while producing?

Mr. PELLETIER: This is the point I am coming to: if the government finds it good policy to put people back on the land I have a constructive thought to offer the minister, even though it may not be taken into consideration at present. Perhaps when the remarks of the hon. member for Cochrane (Mr. Bradette) are considered further it may be possible to give consideration also to the suggestion I am going to make. In connection with the Ford industries in the United States, it is well known that for quite a time Mr. Ford has been considering what he calls the decentralization of industry. I quote from the Encyclopaedia Britannica:

> The industry does not use a single warehouse—everything is in transit. The centre of the industry is at Detroit, Michigan, and at River Rouge, Michigan, on the outskirts of Detroit; but with the method of assembling cars at the point of use, a decentralization of

manufacturing is taking place and comparatively small plants are being located out in the country wherever proper water power sites are available. Each of these plants makes only a single part; the thought behind their establishment is to strike a balance between industry and agriculture. None of these plants employs more than five hundred men, and in most cases the men divide their time between agriculture and industry. This is one of the most important developments.

I think it might be worth while looking into that idea. If we desire to take our workers out of the cities I believe it might be done by the decentralization of industry in this way.

Miss MACPHAIL: I should like to answer the question asked by the Minister of Labour by asking another question. We say the unemployed should produce. Why should we think in terms of agricultural production only? Why not think in terms of the production of automobiles, we will say, which are admittedly much more expensive than they should be?

Mr. ROGERS: I should be very glad to answer that question, though I am not sure that I can do so to the satisfaction of my hon. friend. It so happens that our industrial life has become so highly complicated through division of labour that it is practically impossible for more than a few general craftsmen really to produce the things they consume, but in agriculture it is much easier to do that.

Miss MACPHAIL: Is it?

Mr. ROGERS: Most certainly; I do not think there is any doubt about it. The question I put to the hon. member for Peace River (Mr. Pelletier) was this: Does he think it is better for a man to consume without producing than to produce and consume at the same time? I think that was a relevant question, because that is the choice that is presented to the people who come under these relief schemes. It is a test of their moral fibre and, of their courage as well, that they should be willing and anxious to produce as much as possible of what they consume instead of remaining on relief with very few opportunities for work. We all recognize that we are dealing with an entirely abnormal situation, but as between the choices proposed by my hon. friend, at least by implication, I should think there would be very little doubt as to the answer.

Mr. MacINNIS: The minister asked whether it was better to consume while producing or to receive our consumptive needs in idleness. I should like to point out that most of our best people consume without producing, and no one thinks it is in any way derogatory to them. And the more they can consume without producing the higher they are in the social scale.

Mr. ROGERS: My point would apply right along the line.

Mr. MacINNIS: All right; apply it along the line and we will go along the line with you. Why not put people back to simple production with the spinning wheel and hand loom? Why not have them make their own pants and shirts and all that sort of thing? That is just as reasonable as putting them on the land to-day to produce their own food. Let us take a realistic view of the production process as it is in this country. Whether it be industrial production or agricultural production, it is to-day a social process in which industrial workers in the city and agricultural workers in the country take part. To-day the farmer does not produce without machinery, and that machinery is not made on the farm. It is made from materials obtained in the mines and forests, which then go through various processes in the industrial centres and out over the transportation systems to the farmer. Then he begins his production. When he carries on production with machinery of that kind he is not producing his own needs. It was never intended that he should produce his own needs by the use of machinery of that kind. He is producing for those who take part in the building of the machinery; he produces the food and they produce the machines. It is specialization of labour. So that if you take people out of the cities and put them on the farms a first consequence is that you are lessening the market for the farmer's products, which he produces with complex and high power machinery. The farmer cannot sell to his neighbour the things he produces; if he is to sell them at all he must sell to the people in industrial centres, so that you are not improving his position in any way or the position of those you are putting on the farms from the cities. On the contrary you are making the farmer's position worse by lessening his market to that extent. These people can be self-supporting on the land only on a subsistence basis unless they have access to machinery and to markets. The question cannot possibly be solved in this way. If you wish to ameliorate conditions and help towards the cooperative production that the world must come to if humanity is to survive, use this money to promote that, but to use it in the way proposed here is useless; you might as well throw it in the lake.

Miss MACPHAIL: Hear, hear; that is my opinion too.

Mr. HOWDEN: I have heard a lot of argument like that in reference to matters such as we are discussing, and it appeals to me as being just so much bunk. The city of Winnipeg, in conjunction with the province of Manitoba, has put three hundred of these families on the land, and to the best of my knowledge and memory, which I think is fairly good in this matter, they are all doing well and making a living for themselves. Certainly no one can grow food on the city pavements, but if people are sent to the country they have an opportunity to provide a livelihood for themselves and to that extent relieve the finances of the federal treasury. I cannot see any sense in criticism of this kind. I think this is one of the best measures that the house has adopted, and I am glad to think that before it was adopted I was one of those who urged it most strongly.

Miss MACPHAIL: May I ask the hon. member for St. Boniface (Mr. Howden) why he did not think of training 100,000 of these people for doctors?

Mr. HOWDEN: We have all the doctors we need at the present time and probably more. These people could make a living for themselves off ordinary land, but the doctor cannot make a living off a dead body.

Miss MACPHAIL: My understanding is that doctors are doing fully as well as farmers. We have a lot of farmers who are not making a living for themselves. What always irritates me about our philanthropists is that they are anxious to put people on the land in order to produce food, but they are very careful that they do not set up a model textile factory or sugar refinery or train them for doctors and lawyers. Why not?

Mr. HOWDEN: I would advocate a good many doctors going to the land, because a lot of them are having a pretty difficult time. They might get a living from the land which they cannot get in the city.

Mr. BRADETTE: Do I gather from the hon. member that all the men living on the land now are prosperous? Is that the impression he wishes to give?

Mr. HOWDEN: The impression I want to leave with the committee is that ninety-nine per cent of the settlers established on the land in Manitoba have succeeded in remaining there and are in a much better position to-day than when they were sent there.

Mr. FAIR: I would remind the hon. member that ninety-nine per cent of those on the land have not the wherewithal to get off or they would be off.

Item agreed to.

PROJECTS ALREADY UNDERTAKEN

Amount required to provide for commitments arising out of agreements with the provinces—
Trans-Canada highway, $3,527,125.
Provincial highways and roads, $1,534,197.
Municipal works, $634,252.
Greater Winnipeg sewage disposal scheme, $900,000.
Direct relief, $190,541.
Other commitments, including farm placement, $259,000.

Mr. ROGERS: This item, as stated, covers the amounts required to provide for commitments arising out of the agreements with the provinces. As hon. members know, the dominion government through the Department of Labour enters into agreements with the various provinces for the execution of relief works of various kinds. Inasmuch as the term of the agreements is limited by the term of the relief act there usually has been an unexpended balance due to the various provinces in respect of various projects. This item is designed to meet our commitments in that regard.

Mr. STIRLING: To what extent have the provinces made use of the second item provincial highways and roads? The trans-Canada highway of course stands by itself. To what extent have the provinces cooperated with the dominion, or indicated their desire to do so, and particularly has the question of maintenance of the roads so constructed been gone into by the government?

Mr. ROGERS: With regard to the contributions made by the dominion government for provincial highways and roads, these will be found in the report of the dominion commissioner of unemployment relief of the present year, table No. 1, which sets out in detail a recapitulation of dominion commitments and disbursements as at March 31, 1936. If it will suit the convenience of my hon. friend he will find that information there. As to maintenance, he will understand that the dominion government has not in the past assumed any responsibility for the maintenance of these highways.

Mr. GLEN: What is included in this vote as far as Manitoba is concerned? What are the different highways that it is proposed to build, and the amounts to be expended?

Mr. ROGERS: Does my hon. friend wish me to place upon Hansard precisely the projects which are to be undertaken in Manitoba under this item?

Mr. GLEN: Yes, I would like to know what the highways are on which operations were started in 1935 and how much money is being expended on these projects under this vote. There are not many in Manitoba, I understand, but I should like to have a list of them.

Mr. ROGERS: I can assure the hon. member that the information is available and I can place it before him. Several agreements were concluded with the province of Manitoba, and they are all summarized in the information before me. Perhaps at this time I might indicate the highways under provincial works. There was the highway, including bridges from the town of Boissevain to the International Peace Garden, under the agreement of July 15, 1935; the highway from Dauphin to Riding Mountain national park; the highway, including bridges and culverts, from the town of Russell to a point on the Brandon-Clear Lake highway, under the agreement of September 20; the highway, including bridges over the Red river from Morden to the junction of the Winnipeg-Piney highway; the highway, including bridges and culverts, from the city of St. Boniface to the international boundary under agreement of September 20; the highway, including bridges and culverts, from the village of Roblin to the village of Benito, under the agreement of September 20; the highway, including bridges and culverts, from Dauphin to Fork River and thence to the village of Winnipegosis, under the agreement of September 20; on highway 17 from the village of Crystal City to the international boundary line, under the agreement of September 20. Those complete the projects, so far as expenditures on the trans-Canada highway are concerned.

Mr. GLEN: Could the minister give the amount to be expended on these different works?

Mr. ROGERS: The amount in the estimate covers the balance that has not already been paid under the agreements respecting the construction of these roads in Manitoba and other provinces.

Mr. LAWSON: Would the minister repeat that?

Mr. ROGERS: The vote of $1,534,197 for provincial highways and roads covers the amount due from the dominion government for works undertaken under the agreements which were concluded under the relief act of last year.

Mr. LAWSON: Due now or contemplated to become due during the fiscal year ending March 31, 1937?

[Mr. Rogers.]

Mr. ROGERS: Yes.

Mr. LAWSON: For the completion of works already agreed to?

Mr. ROGERS: Yes.

Mr. GLEN: The vote now before us will be for the completion of undertakings entered into with the provinces in 1935.

Mr. ROGERS: Yes. that is the purpose of this vote.

Mr. GLEN: And the money will be expended during this year.

Mr. ROGERS: Yes, that is the intention.

Mr. GLEN: Has the minister the figures showing the amounts to be expended on the different highways?

Mr. ROGERS: No; we have the estimates from the provinces.

Mr. GLEN: Are all the provinces satisfied to go on with the work in the same way?

Mr. ROGERS: That is a matter which we take up with the provincial governments, when we are negotiating agreements with them. In respect of some of the provinces there has been a diversion of certain amounts from one project to another, but within the amount provided for under the agreement.

Mr. MacNICOL: The two items for the trans-Canada highway and provincial highways and roads call for the expenditure of over $5,000,000. Is the minister in a position to give the committee figures showing the amounts allocated for expenditure in each of the provinces?

Mr. ROGERS: I shall first give the information with respect to the trans-Canada highway. These figures are in respect of the payment of accounts under this item—

Mr. MacNICOL: I should like to see the amounts allocated to each province under the first item, namely the trans-Canada highway. Then I should like to have broken up the figures for the provincial highways and roads.

Mr. ROGERS: As the hon. member is no doubt aware, this amount is to cover unexpended balances which were due under the previous agreements. I have a breakdown of that information, by provinces, with regard to both the trans-Canada highway and the provincial highways and roads. I shall place on Hansard information with respect to the trans-Canada highway:

Breakdown of Unexpended Balances Under Commitments in 1935 Agreements

| | |
|---|---|
| Prince Edward Island | Nil |
| Nova Scotia | $ 59,875 |
| New Brunswick | 17,155 |
| Ontario | 1,740,000 |
| Manitoba | 24,318 |
| Saskatchewan | 226,000 |
| Alberta | 119,177 |

Mr. LAWSON: There is no agreement with Quebec?

Mr. ROGERS: In addition to that there is included in the item an amount required to provide for the completion of works, that is, an amount apart from the accounts still to be paid, and to be expended for work already done. The figures are as follows:

Amounts Required for Completion of Commitments Under 1935 Agreements not Completed by March 31, 1936

| | |
|---|---|
| Prince Edward Island | $ 4,950 |
| Ontario | 1,147,750 |
| Manitoba | 171,400 |
| Saskatchewan | 16,500 |

Mr. LAWSON: What about Quebec?

Sir GEORGE PERLEY: Are both those tables included in the vote of $3,527,125?

Mr. ROGERS: Yes.

Sir GEORGE PERLEY: The purpose of that vote, then, is to take care of commitments made last year, and to provide for the completion of those undertakings?

Mr. ROGERS: That is true.

Mr. LAWSON: Is there any agreement with Quebec?

Sir GEORGE PERLEY: Yes, is there any amount for Quebec?

Mr. STIRLING: Or for British Columbia?

Mr. ROGERS: I have covered only the trans-Canada highway.

Sir GEORGE PERLEY: Part of that highway is in Quebec.

Mr. ROGERS: There was no agreement covering trans-Canada highway construction in Quebec last year.

Mr. STIRLING: Or British Columbia?

Mr. ROGERS: No.

Mr. ROWE (Dufferin): Would the minister tell us if these commitments were made up to January 1, 1936, or up to March 31? I understand they are made right up to the end of the fiscal year.

Mr. ROGERS: Yes, during the terms of the agreements. As I said a minute ago, the vote of $3,527,125 includes the amount required to meet accounts for work already done—that is one item, and it runs up to March 31. Then, it is also to complete works to which we are already committed under existing agreements.

Mr. NEILL: Would the minister give the committee some information with respect to the trans-Canada highway in British Columbia? First of all, in the past year did he have an agreement with British Columbia and if so what was the nature of that agreement? Secondly, does the vote provide for further expenditures in British Columbia during the present year? I have heard it alleged that in British Columbia we did not get a cent for the trans-Canada highway, having regard to the true meaning of the word, and that all the dominion government did was to provide inlets or outlets to some of its national parks. It is alleged that that work was described as national highway construction. It is stated further that on that part of the national highway on which we wanted money spent, namely the part in the lower and western sections of the province, no money was spent. Is any of this sum in the vote to be spent in the future, and if so for what purpose? If any has been spent in British Columbia, would the minister state roughly the nature of the agreement, if any?

Mr. ROGERS: There was no agreement last year with British Columbia covering the construction of the trans-Canada highway

Mr. NEILL: Did you spend any?

Mr. ROGERS: I am informed a certain amount of work was done on certain sections of the trans-Canada highway, through relief camps which were operated by the Department of National Defence, and also through work done in the national parks. For instance, work in the section known as Big Bend was undertaken entirely by the federal government.

Mr. NEILL: Does "agreement with the province" indicate that the province was to put up fifty-fifty?

Mr. ROGERS: That was the understanding.

Mr. NEILL: And British Columbia made no such agreement—had not the money to do it, I suppose.

Mr. ROGERS: There was no agreement last year. As to the second question, there is provision in the estimates for works to be undertaken with the provinces, and the dominion government will deal with British Columbia or any other province upon the basis of what is possible under that item.

Mr. NEILL: But not under this item?

Mr. ROGERS: That is not covered by this item at all.

Mr. GLEN: There is one point on which I should like to be clear. So far as Manitoba is concerned, has there yet to be an agreement made with the province for the completion of any highways in the province that were already started in 1935, or is it a fact that the agreements having been made in 1935 the projects will be continued now as then contemplated and that the appropriation now being made will be for the completion of all these projects?

Mr. ROGERS: The agreement with the provinces, as my hon. friend has himself suggested, cannot continue in existence after the life of the relief act, and that act expired on March 31, but we have put in the estimates an amount sufficient to meet what will be required to complete the works covered by the agreement. We shall negotiate a new agreement with Manitoba, and in the negotiation of that agreement we shall take up the completion of the works already started under the previous agreement. An amount is made available here for that purpose.

Mr. GLEN: Is there any danger of any moneys under this appropriation being diverted to other projects within the province of Manitoba by way of relief?

Mr. ROGERS: That really is a matter of negotiation between the province and the dominion. I would point out that in the past we have acted on the basis of programs submitted by the provinces themselves.

Mr. LAWSON: What is the number of the item in the estimates covering the amount which the minister says would be for new agreements with the provinces?

Mr. ROGERS: Item number 335.

Sir GEORGE PERLEY: Will the minister be good enough to let us know what progress has been made with the Winnipeg sewage disposal project? It is a matter in which we were all much interested last year.

Mr. ROGERS: One of the subjects under this item covers the appropriation required for the Greater Winnipeg sewage disposal scheme. It will be noted that the amount here is $900,000. That means that we are making an appropriation of $800,000 to cover the commitment for the work to be done this year, and $100,000 is the unexpended balance of the amount to which we were committed during the past year. We are informed that the work has been proceeding satisfactorily.

Sir GEORGE PERLEY: Will this complete it?

Mr. ROGERS: Yes, it will complete the work as originally planned and to which the dominion government was committed.

Mr. STIRLING: May I take it that amount of $354,000 odd which is given in the table on page 6 of the report of the dominion commissioner of unemployment relief is the amount that has been expended on the Winnipeg sewage scheme up to March 31 last?

Mr. ROGERS: The dominion commitment is $800,000 and dominion disbursements $354,612.16. My hon. friend will understand these were disbursements on the basis of the accounts submitted and there are accounts now on hand for further expenditures.

Mr. STIRLING: More than the amount of work indicated by $354,000 has been done?

Mr. ROGERS: Yes.

Mr. BRADETTE: Has a definite understanding been reached with regard to the routing of the trans-Canada highway through northern Ontario? The acting leader of the opposition smiles, but I recall that the minister of labour in the former administration during the 1930 campaign made the definite statement in my section that the routing of the trans-Canada highway would be through the northern section of northern Ontario. I must confess that after five years of waiting we do not yet know how the road will be routed. We have tried to get information from Toronto but have never succeeded. The answer has always been evasive. If I understand the situation aright it is this: that until the province has decided on the proper routing of the trans-Canada highway within its borders, no money will be contributed out of the federal treasury. We have been told in our section, in the riding of Temiskaming and Cochrane that the routing will be through our section. There is an alternative route. One route is via Sudbury and Fort William, and an alternative route would branch off from North Bay to Haileybury, Cochrane, Hearst, and go away down to Hornepayne. Very little work has been done in my section although we had the promises of the late government and of the then minister of labour in the closing days of the 1930 campaign, and subsequent to that campaign, that the routing would be through the northern

section of northern Ontario, but we have been left entirely in the dark as to where the road will be routed. I am going to protest against depriving nearly 300,000 people of direct communication with the trans-Canada highway if the routing is not through northern Ontario. I have no quarrel with tens of millions of dollars being spent in the southern section of northern Ontario, but I do not want to see my fine section of the country in the north left out of the picture by being cut off from the trans-Canada highway. The province of Quebec has been certainly left out in the cold so far as this is concerned, but the onus must rest on that province. The most direct route would have been from Montreal to Mont Laurier, Amos, Cochrane and Hearst and on to Winnipeg, but that is now out of the question because Quebec is going to build its own part of the road. Is the minister in a position to state whether the government of Ontario has decided on the exact routing of the trans-Canada highway so far as northern Ontario is concerned, and if so, where will the road be located?

Mr. ROGERS: It has been the practice in the past for a province to make its own designation of the route to be followed by the trans-Canada highway. The dominion government merely exercises a discretion as to approval, which in the past I think has been in the main wholly formal. Ontario has designated the route of the trans-Canada highway as from Sault Ste. Marie to White River, and from White River to Schreiber. There have been suggestions of an alternate route, but of course it is not for me to suggest anything as to the feasibility of alternate routes. I do know that there have been proposals of alternate routes which would serve other sections of northern Ontario, but the provincial government by order in council has made the designation I have indicated.

Mr. BRADETTE: I thank the minister for the information. Apparently we are out of the picture, although we had the promises of Premier Ferguson and of the Hon. Mr. Gordon and several others of the Conservative faith, and also members of the Liberal faith, as to the routing of the trans-Canada highway through the northern part of northern Ontario.

Mr. ROWE (Dufferin): Page Mr. Heenan.

Mr. BRADETTE: But I am not losing faith, because I gathered from what the minister said that the alternate route would likely receive some contribution from the federal treasury. Is my understanding correct?

Mr. MacINNIS: You will find out about 1940.

Mr. ROGERS: Frankly I am not in a position to answer that question at the present time.

Mr. BRADETTE: Would it be within the federal regulations to grant moneys for the alternate route?

Mr. ROGERS: We are not bound in any way so far as our contributions for highway construction are concerned, to confine them to the trans-Canada highway.

Mr. ROWE (Dufferin): Is the minister implying that we are going to build two trans-Canada highways in that district?

Mr. ROGERS: I assume my hon. friend's question is whether or not assistance from the dominion government might be expected for some alternate route. I pointed out to him that so far as contributions from the dominion government were concerned, we were not limited to the trans-Canada highway. In the past contributions have been made in certain areas solely in connection with the trans-Canada highway, but in other areas contributions have been made in connection with subsidiary highways.

Mr. GREEN: Will this be sufficient to complete the trans-Canada highway?

Mr. ROGERS: Oh, by no means.

Mr. GREEN: What portion will still remain to be completed?

Mr. ROGERS: The vote before the committee is simply to deal with commitments already undertaken.

Mr. GREEN: What portion of the highway will remain to be completed?

Mr. ROGERS: Perhaps I might place before the committee an extract from a report of the dominion engineers who reviewed the situation. They reported to me some little time ago as to what had been accomplished up to the present time and what still remained to be done. Their report reads:

> The trans-Canada highway could be completed as a through route by the fall of 1938.
>
> The estimated cost to the dominion government on a fifty-fifty basis of completing the Montreal-White River gap in Ontario, and improving the balance of the Ontario trans-Canada route to the standard of construction now being used by that province, would be $8,390,650 plus the unexpended balance of the current fiscal year estimated as $555,250.
>
> The estimated cost to the dominion government of completing the Big Bend gap in British Columbia entirely at dominion expense would be $1,950,000 exclusive of the cost of maintenance during construction.
>
> The entire route through Ontario would be built to a high standard of grades and alignments.

The poorest section of the highway would probably be just south of Donald, British Columbia, but this short section (seven miles) will likely be improved by the parks branch this season as a part of the Golden-Revelstoke road.

So far as the province of Quebec is concerned, there has been only a small contribution from the dominion government for this purpose. This is due to the fact that in order to bring the existing highways in that province up to trans-Canada highway standards, it would be necessary to make expropriations on a very large scale.

Mr. GREEN: The government has only to complete the highway in Ontario and British Columbia?

Mr. ROGERS: That is to complete existing gaps. It would still be necessary to straighten out the highway and generally bring it up to the contemplated standard of construction.

Mr. GREEN: Then we would have a passable highway from Halifax to Vancouver.

Mr. ROGERS: I take it that that is the conclusion reached in the report which I have just quoted.

Mr. GREEN: Does the government propose to pay the cost of completing the Big Bend gap in British Columbia?

Mr. ROGERS: I am sorry, but I am not in a position to answer that question at the present time. That would not come under the Department of Labour; it would be constructed wholly under the parks branch of the Department of the Interior.

Mr. BRADETTE: I was surprised at the question asked by the hon. member for Dufferin-Simcoe (Mr. Rowe), who aspires to the leadership of the Conservative party in Ontario.

Mr. ROWE (Dufferin): Who told you that?

Mr. BRADETTE: I heard that and I say quite sincerely that I hope the hon. member will get it. We do not want the construction of a new road to connect with the trans-Canada highway. The hon. member is familiar with the Ferguson highway which is almost completed from North Bay to Cochrane. There is a continuation westward of that highway from Cochrane to Hearst, a distance of nearly 150 miles, and what we want is a connecting link south from Hearst on the Algoma Central about eighty miles in length to give us access to the other sections of southern and northern Ontario. We do not want the construction of an entirely new trans-Canada highway; but the fulfilment of promises made to our section.

[Mr. Rogers.]

Mr. ROWE (Dufferin): That is why I suggested the hon. member should page Peter Heenan.

Mr. BOULANGER: The minister stated that very little had been contributed by the dominion government to the province of Quebec to bring the roads of that province up to the standard of the trans-Canada highway and he said that to do this would mean considerable expropriation in order to straighten and widen the existing roads. I hope the minister will consider the special situation of this province. Quebec is an old province, having been settled for more than three hundred years, and the roads were not built in contemplation of motor cars, motor trucks or other motor vehicles. The situation here is not the same as that prevailing in the constituency of the hon. member for Cochrane (Mr. Bradette). The district represented by my hon. friend is a wilderness; it is uninhabited, and in order to construct a highway it would not be necessary to make costly expropriations. In Quebec the highway traverses many old villages where the houses are built right up to the edge of the road. I hope the minister will take into consideration this special situation and contribute something to Quebec towards the costly expropriations which will be necessary to complete the Quebec section of the trans-Canada highway.

Mr. LAWSON: I should like to direct the attention of the minister to the fifth item in this vote, which provides $190,541 for direct relief. I direct his attention also to item 337, amount required to provide for monthly grants in aid to the provinces, $26,000,000. Am I right in understanding that item 330 is to meet outstanding commitments?

Mr. ROGERS: Accounts.

Mr. LAWSON: To meet commitments made by the former government when it was paying to the provinces a pro rata share of the amounts involved?

Mr. ROGERS: That is correct.

Mr. LAWSON: Then item 337 would be anticipated payments for the current fiscal year under the fixed monthly payment agreements made by this government with the provinces after it came into power?

Mr. ROGERS: My hon. friend has stated it correctly.

Mr. LAWSON: I was wondering at the small amount of the first item.

Mr. ROGERS: That is to meet accounts which have come in belatedly.

Mr. HOWDEN: Will the federal authorities have any check on the moneys to be spent on the greater Winnipeg sewage disposal scheme?

Mr. ROGERS: In our agreement in connection with this sewage disposal project we have arranged for dominion representation to be assisted by a technical adviser, who is an engineer by profession. All accounts are to be approved by the dominion representative, who will have close and continued association with the progress of the work.

Mr. HOWDEN: I assume that the giving of contracts in connection with this work will be done by the city of Winnipeg and possibly the province. During the Easter recess I was made acquainted with certain information with regard to expenditures on this work which seemed to me to be rather startling. The endeavour of this federal authority is to expend these moneys for the benefit of people who are on relief; that is the idea of the enterprise. While I was in Winnipeg I learned, with regard to the building of the fifteen foot section of this sewer, that the cost of material was $50, the cost of labour was about $62, and the contractors received $570 for the section. To me that seems a ridiculous piece of business. This enterprise was for the purpose of extending relief to families in distress, and those families actually got $62 out of $570. I do not know how true this is; I learned it on pretty fair authority, but it seems to me that an incident of that kind, at a period such as the present, certainly requires investigation.

Mr. ROGERS: If my hon. friend will bring this particular case to my attention by letter in a way which will permit us to investigate it, I shall be very glad indeed to look into it further. I agree wholly with him that in respect of all these expenditures for relief works we should see to it that they reduce relief rolls. That is the essence of the scheme, and I am not sure that it is carried out as completely as is possible. We must profit by the experience we have had in past years. It may be that we can insert in our agreements provisions which will require that those working on these contracts shall have been employed through employment bureaux and that a quota of them, at any rate are taken from relief rolls.

Sir GEORGE PERLEY: I think in the agreement we made with the province, and through the province perhaps with the city, there was a provision that that should be done. That was the object and the only one of our giving assistance in connection with this work.

Mr. STEWART: Just for the information of the minister, and in harmony with what he has said, if he will look at the Public Works Construction Act, 1935, in which provision is made for this item, he will find a section providing definitely for the employment of those in need of relief or on relief and the order in which they shall be taken, first, married men, and so on. It is a most comprehensive provision.

The CHAIRMAN: The hon. member for Davenport (Mr. MacNicol) asked me a question a few moments ago to which I did not reply. I think it is rather important. This item is for $7,045,115, and it comprises six different items. I asked if the item had carried, and I meant all the items. The committee has dealt pretty well with every item there. I think probably we should have an understanding if the committee is ready to pass the whole item.

Mr. MacNICOL: Thank you, Mr. Chairman. I have no further objection.

Mr. BOULANGER: Could the minister state whether any agreement has been arrived at between the federal government and the government of Quebec regarding work next summer on the trans-Canada highway? I should also like to know if any arrangement has been reached between Quebec and Ottawa in connection with the expropriations. I wish to make myself very clear. In a new country expropriations do not amount to anything; they form a very small part of the cost of building a highway; whereas in the oldest parts of Quebec, where you have to expropriate property in an old village, or farm land in a district which has been settled for a long time, the land is valuable and the cost of expropriation represents a great part of the cost of building the highway. I hope the minister will take that particular point into consideration and will see his way clear to give special consideration to the case of Quebec. First, I should like to know if an arrangement has been made for work in the coming summer, and also in regard to expropriations.

Mr. ROGERS: No arrangements as yet have been made with the province of Quebec. As a matter of fact the statute under which we would enter into agreement with the provinces has not yet received royal assent, but we propose as soon as possible to enter into negotiations with the various provinces respecting the work to be done jointly during the coming year, and we shall be pleased, of course, to receive representations from the Quebec government as to the particular direc-

tion in which they feel that our contributions can be used most satisfactorily for relief purposes.

Mr. BRADETTE: I wish to say just another word, in order to suggest a policy which possibly would take all settlers on farms, at any rate those in the wooded areas of Canada, off relief this summer. My suggestion is that the federal government inaugurate a land bonus scheme and also a bonus for ploughing. It should seem to be only natural for a man who comes from a partly rural community to ask for a bonus for ploughing and a land bonus, but I believe that if the minister will do that he will take at least eighty per cent of the present settlers and farmers of this country off relief. I remember a few years ago, when the late Hon. J. E. Perron was Minister of Agriculture of Quebec, I asked him in the second year of that policy how much he had spent for land bonusing and land ploughing. He said that he had spent, in round figures, $350,000, and that he thought it was the best investment the province of Quebec ever made. It may astonish the committee to learn that in my own constituency, which has the finest soil in the northern clay belt, nearly eighty per cent of our settlers and farmers are on relief. Direct relief to our settlers has been a curse. They do not want it; they want a certain amount of occupation on their own farms, and work, and I believe that it is within the capacity of the federal government to inaugurate a land bonusing scheme in the wooded areas of this dominion. I have no time to enlarge on this, and it is not my intention to do so. There should also be a bonus on ploughing. If these measures are taken, the eighty per cent of the farmers who are looking for relief at the present time will find fruitful occupation on their present holdings and clearings. I say that sincerely, as one who knows the situation. I have spoken to hundreds, if not thousands of our own settlers, and they have told me that they do not want to have money handed to them without doing work for it. I do not believe in governments inaugurating big public works schemes in rural sections, but an extensive road policy should be established. The farmers have all the work they can accomplish on their own holdings; that is particularly true of those in the wooded sections. I hope the minister will find it possible to give a little study to these suggestions, and if he adopts them I am positive that in a year's time he will be astonished at what will have happened as far as direct relief is concerned among the settlers and farmers of our country, and that will certainly make them more self-reliant.

[Mr. Rogers.]

Mr. MacINNIS: Could the minister tell the committee the rate of wages paid to labourers on these various projects?

Mr. ROGERS: The works are actually done, as probably my hon. friend knows, by the provincial governments themselves. Tenders are called for by the provincial governments, and they actually let the contracts, the dominion government making a contribution for this purpose and also exercising continuous supervision of the work as it progresses. In our agreements with the provinces whereby we make a financial contribution for these relief works we have had inserted clauses providing for the payment of current or prevailing wages and also for the recognition of the eight hour day. I think I might take this typical agreement and quote from it the provisions touching the matter raised by my hon. friend:

All workmen shall be hired through government bureaux wherein the dominion may instal a representative, and a proportion of said workmen to be agreed upon by the parties to this agreement shall be taken from relief lists.

This is the agreement between the Dominion of Canada and the province of Manitoba of July 10, 1935.

(b) No person other than residents of Canada shall be employed.

(c) No resident of Canada shall, with relation to his employment, be discriminated against by reason of his religious views or political affiliations.

(d) Political favouritism and political intimidation shall alike be avoided.

(e) The maximum number of hours of work per day per employee shall be eight.

(f) The rates of wages paid shall be fair and reasonable and shall be fixed by the municipalities with the concurrence of the province.

(g) Only goods and materials of Canadian manufacture or production shall be used if available.

Mr. McIVOR: I should like to support the remarks of the hon. member for St. Boniface. I think a thorough investigation should be made in connection with that contractor in greater Winnipeg who is taking money in the worst possible way. To me it is the worst kind of graft that a contractor should take for himself the money of the taxpayers that has been voted by parliament for the relief of the needy.

Mr. STEWART: I have secured the statutes of 1935 containing the Supplementary Public Works Construction Act, which is chapter 34 of the statutes of that year. Section 2 of that statute, I think, meets the point raised by the hon. member for Fort William. That section reads:

The governor in council may authorize the execution and completion of the several works

and undertakings mentioned in schedule A to this act, and for such purposes may authorize the performance of such acts and the execution of such contracts as may be deemed necessary and expedient: Provided, however, that in the execution of such works, as far as practicable and consistent with reasonable efficiency and economy, first consideration shall be given to the employment of those who if available and competent are most in need in the locality in which the works are to be performed, without any discrimination whatsoever; preference being shown to unemployed ex-service men and unemployed married and single men with dependents; and that the minister of the department responsible for the execution of such works may take such action as he may deem necessary and proper to enforce compliance with the foregoing provisions.

Exactly the same provision has been embodied in Bill No. 19, which was brought down by the minister this session, and if I remember correctly the contract for this work also contained a similar clause, so that where the work is done by contract the contractor is under obligation to follow these specifications.

Mr. HOWDEN: I am not finding fault with these works, but this rumour came to me through a former contractor who is now working as an inspector on this job. If his statement to me is true a fifteen foot section of that sewer cost $570, and that amount of money was paid to the contractors. Of that amount $50 went for material and $62 for wages. If that is true it is a queer state of affairs to find during this depression, when we are trying to relieve distressed people by the expenditure of government money.

Mr. STEWART: All I have to say is that we received similar complaints, and almost invariably on investigation we found that they were not well founded. I cannot understand how any such condition could exist.

Mr. DOUGLAS: Might I also suggest to the minister that in checking up on these fair wage agreements the matter of the charge for bed and board should be looked into. I have in mind a project which I drew to the attention of the minister last December, in connection with which the prevailing rate of wages I thought was too low, namely twenty-five cents an hour, and the charge per day for board seemed quite excessive. I remember that several years ago the provincial government of Saskatchawan tried to work out something in connection with the lumber camps in the north country. When the men came out of those camps the charge for board and bed during the winter, and the deductions for the days when they could not work, left them very little indeed after they paid their railway fares back to their homes. That is a point which I think the department should watch very carefully.

Mr. BROOKS: In connection with the employment of the needy I think that section in the act is splendid, but my experience is that it has not been carried out. I know the returned soldier or the needy man is not always the one who is given consideration, and I am sorry to say that in many cases political expediency seems to be the consideration rather than the need of the individual. I know in some sections very little of the money goes to the men who really need it, so I think there should be some contract between the federal and provincial departments providing that abuses of this kind shall not enter into this work. I know of a great many cases in my own constituency, especially during last fall, where men were given work on these projects simply because they were supporters of a certain party and not because they were particularly in need of the money. I am very much afraid that in many projects of this kind more money goes to those who are not altogether needy but who have expressed their willingness to support a certain party for election purposes, than goes to those who are really in need. This was brought to my attention very forcibly last fall; it was quite a scandal in certain sections of my constituency.

I should think that where so much money is being expended for practically the sole purpose of helping the needy, the federal government should try in some way to curb the provincial government which has control of these expenditures. I should like to ask the minister if it is his intention to try to see that some control is exercised by his department over the expenditure of this money, which should go to the men who need it and not to the friends of some political heeler. In that connection I might say also that it was not always men with families who received this money. Very often it was young boys with no great responsibilities, who were given jobs because their parents had influential friends, or for some other reason. I am not saying this by way of making a charge at all; I am simply stating a fact, and I am sure the minister would be the last to tolerate such a condition if he knew about it. So I think the federal department should try to exercise some control over the provincial departments in order that the money which is intended for the needy people should go to those who deserve it.

Mr. ROGERS: I am wholly in agreement with my hon. friend as to the purpose of these expenditures for relief, and I can assure

him that we will do everything possible to see that the objects he stated are carried out. We have sought to effect that purpose in the past by the appointment, in the various provinces, of dominion representatives whose duty it was to see that the terms of the agreements were carried out effectively. I can understand that in the past there might have been some departure from either the letter or the spirit of the agreements, but obviously it is our duty to see that these expenditures are made in such a way as to have the best possible effect in reducing unemployment. After all, that is the object of the expenditures.

A moment ago my hon. friend from Leeds mentioned the clause that appears in the Supplementary Public Works Construction Act. If I remember correctly that clause was preceded by the phrase "as far as practicable." You always have these qualifications, and obviously there must be some restrictions. But that shows the need of effective supervision of the manner in which contractors, for example, procure their employees.

Mr. BROOKS: May I suggest that this might be done through the municipalities. In the small towns they always have a list of their unemployed, and are unprejudiced. Also in the parishes and counties it would be easy to get a list. As the situation is now there seems to be no system of that kind, and the money is not going to the people who deserve and need it.

Mr. BOULANGER: I notice that the vote is divided under headings which are fairly general. I wonder whether one of them is general enough to include the draining of bogs or marshes or savanes.

Mr. ROWE (Dufferin): That would come under "new projects."

Mr. ROGERS: Yes, the next item.

Mr. ESLING: Have any projects from British Columbia been suggested under this item?

Mr. ROGERS: Not under this item; this deals with projects already undertaken, but certain proposals have been made from a number of the provinces for new projects to be carried on during the coming year.

Mr. CAMERON (Cape Breton): I am in thorough accord with the suggestions made that moneys voted for relief purposes should be employed as far as practicable for that purpose. I am glad to see that even at this late date such suggestions are coming from different parts of the house. I am confining my remarks entirely to circumstances which came under my own personal observation. Relief money has been voted for four or five years now, but during 1931, 1932 and 1934 perhaps the last thing that one would surmise was that any relief work was being carried on. Men could not get work on any project unless they had a card from the chairman of the Conservative executive in the district. I protested against this then and I am equally ready to protest against it now. I do not think any discrimination should be made; selection should be on the basis of need only. I know one fairly substantial proprietor of a garage who had three trucks on a relief project, and I know of one man who was too proud to go on relief, and who had to borrow money but he could not have his truck put on the highway because he happened to be a supporter of the Liberal party. I know it is a characteristic of human nature to be virtuous when in opposition, and I welcome the signs of repentance which are now evident in certain parts of this chamber. I hope we have seen the beginning of a better day.

Mr. BROOKS: The shoe does not fit at all.

Mr. CAMERON (Cape Breton): I was not referring to the hon. member.

Mr. BROOKS: No, you could not. As a matter of fact I had considerable to do with local politics in New Brunswick—

Mr. CAMERON (Cape Breton): Never in New Brunswick.

Mr. BROOKS: —and I had a lot to do with unemployment when the former Conservative government was in office in Ottawa and there was a Conservative government in New Brunswick. I say that as far as those two governments are concerned the money that was expended was expended for the needy, but unfortunately since that provincial government went out of power on June 27 last, the money has not been expended in that way.

Mr. HILL: Coming from New Brunswick I may be pardoned if I do not allow those remarks to pass without comment. When the hon. member's friends were in power in New Brunswick the handling of relief money was notorious. I know of one case in which relief road work was carried on in my hon. friend's own constituency—

Mr. BROOKS: I could give a dozen.

Mr. HILL: —under the Conservative government in New Brunswick and in which twenty-five or thirty men were employed, supposed to be on relief and they came to the work in their own motor cars.

Mr. ROWE (Dufferin): I do not like to discredit the good name of Ontario but I think we could qualify in the same role. One newspaper advertisement said everybody was welcome to the Liberal association meeting and applications would be considered for jobs on a certain highway.

Mr. ROGERS: Apart from whatever feelings we may have as to what happened in the past, I take it we are all agreed as to the importance of inserting clauses which will ensure that this money shall go for relief purposes. That is the matter in which we are really interested at present. I do not feel that any useful object would be served by going into what happened in the past.

Mr. McCANN: If I understood the minister correctly he said that the purpose of spending relief money for these projects was to take from the relief rolls those who were employed on such works. Let me suggest to him that this is exactly what has not been done.

Mr. ROGERS: I agree with my hon. friend that we have a great deal to do in that direction.

Mr. McCANN: I say that is exactly what has not been done. It is a question in my mind whether the enormous expenditure on the trans-Canada highway is in the best interests of the country at the present time, or affords most help to the relief situation. Is it a good policy to transport people who are on relief to an unpopulated part of the country, and not give relief in those parts where it is most urgent? Even if people who are on the relief rolls were given preference with regard to employment, this does not to my mind entirely meet the situation, because a great number of people in counties in central and eastern Ontario, although not exactly on relief, are very much in need of work. I suggest to the minister that as the federal parliament is voting huge sums for the trans-Canada highway and other projects it should have something to say as to where and how that money shall be spent. I suggest to him that perhaps at this time a better policy with reference to road building would be to build feeders to the trans-Canada highway through eastern and central Ontario. At least one hundred miles of that highway go through the county which I have the honour to represent. Last year work was carried on in that county prior to the election. I do not propose to make reference now to how this work was carried on, but the hon. member for Dufferin-Simcoe (Mr. Rowe) knows all about the patronage element at that time.

Mr. ROWE (Dufferin): I know nothing about the hon. member's district.

Mr. McCANN: I want to urge the necessity of the federal government keeping supervision over that part of the money which they contribute to these public works. I say to the minister that we, the government and its supporters, are held equally responsible with the provincial authorities for the efficient and economical carrying on of this work. I must say that, in some instances, it was not well done. There is at the present time in Renfrew county a strip of road which was built just last fall, and part of which has already gone to pieces. I do not know whether the federal authorities had inspectors there last year, whether the contractors carried out the terms of their contract, but I know that at the present time the federal authorities are held equally responsible with the provincial government for the manner in which this work was done.

Relief is a very important problem in the county of Renfrew at present. There is an unfinished part of the trans-Canada highway in that county. I have been urging upon the provincial government for the last three years the necessity for starting that work immediately in order to furnish relief, especially to the town of Arnprior, which with a population of four thousand people has over one thousand on relief. It is hard to get the province to take immediate action. My submission is that when a contribution of fifty per cent is being made to that work it is the duty of the federal authorities to urge that it be started immediately, and that they have equal supervision with the provincial authorities. I would further suggest that through the counties of Hastings, Peterborough and Renfrew feeders be built to the transcontinental hiwhway, and that federal expenditures be made in that connection to afford some relief of the distressful conditions existing in those counties at the present time.

Item agreed to.

Amount required to provide for administration expenses generally, including salaries and travelling expenses, $175,000.

Mr. ROGERS: As hon. members are aware, the unemployment relief branch of the Department of Labour has a temporary status, and in the past provision for administration expenses has been made through the provisions of relief legislation. We are now seeking to make provision in the estimates, and the amount of $175,000 is the sum which we anticipate will be required for this purpose in the coming year.

Item agreed to.

Other projects—amount required to provide for expenses of the national employment commission, including salaries and travelling expenses, $125,000.

Mr. ROGERS: The same applies to this item.

Mr. STEWART: What progress is the minister making in the appointment of the commission which, I am sure we all agree, should be working now? Legislation has been passed and announcement has been made as to the chairman of the commission, and I believe hon. members and the people of Canada generally would be interested in having the minister announce the complete personnel and when it will begin to work. If he is not in a position to make a statement just now, could he say when the commission will be appointed?

Mr. ROGERS: I can understand the interest taken by the hon. member in the announcement with respect to the personnel of the national employment commission. As the committee is aware, some progress, I think I may say notable progress, has been made towards completing the personnel. I am not in a position to-day to announce the complete personnel, and I believe there are obvious reasons why, before further announcement is made, the complete personnel should be within our knowledge. I believe, however, that it will shortly be possible to make an announcement respecting the personnel of the national employment commission.

Mr. STEWART: Has anything else been done by way of drafting a plan or scheme for the commission, or is that to be left to the commission?

Mr. ROGERS: That work will be given immediate consideration by the national employment commission, but I may say that there have been preliminary conferences with Mr. Purvis who, as the committee is aware, has indicated his willingness to accept the chairmanship.

Miss MACPHAIL: Does the $125,000 cover employees who will work for the commission, or is it just for salaries of the commission and additional travelling expenses?

Mr. ROGERS: It is intended to cover all expenditures connected with the national employment commission, with such fees or travelling expenses as may be required by the members of the commission, and to cover such administrative staff as may be necessary.

[Mr. Rogers.]

Mr. ROWE (Dufferin): This is about the only new feature in addition to what was done by the former government. While the personnel of the commission has not been named, I believe the Prime Minister announced that Mr. Purvis of Montreal would be the head of it.

Mr. ROGERS: As chairman designate, shall I say?

Mr. ROWE (Dufferin): Chairman designate, the minister says. It would not cost him anything, so long as he is just chairman designate. I believe at this time the committee should be advised as to how much salary these men are to be paid. We are asked to vote $125,000, to include salaries and travelling expenses. If Mr. Purvis were going to ask for a salary, I should not think he would ask for a small one. He is not one of the unemployed, but has been very busy. He is one of the largest industrialists from St. James street, Montreal.

Miss MACPHAIL: Maybe he does not need the money.

Mr. ROWE (Dufferin): As the hon. member has said, perhaps he does not need the money. So that if it is an honorarium we would be glad to express our gratitude to Mr. Purvis for his effort, and if it is a salary we may expect it will be a substantial one.

Mr. ROGERS: As the hon. member will understand, the actual appointment of the national employment commission has not been made. I believe it was fully understood by hon. members that Mr. Purvis had indicated his willingness to accept the position. May I say, however, in answer to remarks by the hon. member which, I believe, were received with approval by some other hon. members, that from all I know about Mr. Purvis, from all I learned through conversations with him, the house and country at large will have reason to be grateful for his offer to assume this most difficult and responsible post. I believe I may also say that when we understand the conditions under which he has accepted the chairmanship of the national employment commission we shall have reason for further confidence in the high sense of public duty held by some industrial and commercial leaders in Canada.

Mr. ROWE (Dufferin): Of course that is true, and we would not expect the government to select as the head of a commission a man who had not those peculiarly fine qualities. I have no doubt that even the announcement of the appointment of Mr. Purvis enlists a substantial amount of con-

fidence. Undoubtedly he has been a successful man and one whose integrity is above reproach. However I think that is all the more reason why we should know what his salary will be, and what those of the other commissioners will be. If we are expected to pass a vote of $125,000 we should have information enumerating salaries, travelling expenses and so on. If Mr. Purvis is head of the commission, or is chairman designate as we were told, no doubt he has considered working for either no pay or small pay, or a rate of pay commensurate with his merits.

Mr. ROGERS: I have no desire to withhold information from the committee, but I can only say that I am unable at present to give the information. I believe my reasons will be obvious to hon. members.

Mr. MacNICOL: Does the vote of $125,000 cover the salaries of the commission and secretaries?

Mr. ROGERS: Yes, it covers all expenditures which we anticipate.

Mr. MacNICOL: That is, the expenditures of the several commissioners.

Mr. ROGERS: Yes.

Mr. MacNICOL: For how long?

Mr. ROGERS: During the coming year.

Mr. MacNICOL: That would be at the rate of approximately $18,000 per commissioner?

Mr. ROGERS: This covers such administrative posts, secretarial and otherwise, as may be set up.

Mr. MacNICOL: Office expenses?

Mr. ROGERS: Yes; it is designed to cover all the expenses connected with the administration of the national employment commission and their various investigations.

Mr. MacNICOL: And office equipment? Will there be motor cars for the commissioners?

Mr. POULIOT: I should say that $125,000 is a large amount of money. It is equal to the salaries for a period of four years of three ministers who, owing to the merging of departments, will not be appointed. That is, the national employment commission will receive in one year the salaries that three ministers would receive during four years, so that the merging of departments will really mean no economy in the end. I would like to make a suggestion to the minister. A member of this House of Commons has done part of the work which is to be assigned to the national employment commission. He is still ready to do that work for nothing, and if the government is ready to accept him it will save $125,000 because he will do the job for nothing provided he can pick up a staff of people to assist him in the work. It seems a fair offer, to save the country $125,000.

We do not know the names of the gentlemen who will be appointed with Mr. Purvis, but I know that one who will be recommended is a man who has been idle since July of last year. Although he has been receiving a salary at the rate of $8,000 a year he has done nothing except draw his cheque. He has done nothing all his life, and yet he is going to teach the unemployed how to work. I find it inconceivable that there should be in the department a person who has done absolutely nothing all his life except submit reports to the government once a year. He is well known; I shall not identify him more closely than that. Since July last he has been receiving a very large salary. He is still doing nothing and he is being recommended to teach the unemployed how to work. Everybody knows him. It is no secret. I find this most extraordinary, and I hope that the minister will take into consideration the suggestion I have made when the names of the commissioners come formally before the government.

Mr. LAWSON: Is there anywhere else, either in the main or in these special supplementary estimates, provision made for the administration of the Employment and Social Insurance Act which has been referred to the supreme court?

Mr. ROGERS: The administration of that act does not come under the Department of Labour.

Mr. LAWSON: I beg pardon; I thought it did.

Mr. ROGERS: In any event there would be no provision for that here. The place would be in the general estimates.

Mr. LAWSON: I was just wondering whether there was such provision made.

Mr. MacINNIS: The minister in reply to a question in regard to the salaries of the national employment commissioners referred to four commissioners.

Mr. ROGERS: Not to my knowledge. I must have been misunderstood.

Mr. MacINNIS: Do I understand then that seven commissioners will be appointed?

Mr. ROGERS: The act provides that not more than seven will be appointed.

Mr. MacINNIS: Has the government come to any decision as to the number that will be appointed?

Mr. ROGERS: The decision of the government will be apparent when the announcement is made respecting the personnel of the commission.

Mr. MacINNIS: I am quite aware of that because you cannot very well keep it under cover, but I would like a little information now, particularly in view of the fact that this government, when in opposition, was very loud in condemning the former government, which action I did not mind at the time, for its blank cheques. This, in my opinion, is another species of blank cheque. If my memory serves me aright the salaries of the various commissions that were established by the former government were mentioned in the act itself, at least in some cases, and the house knew when it was dealing with the bill what the salaries of the commissioners would be. The present government now wants a blank cheque for a certain number of commissioners not exceeding seven, and we are not to be given any information as to their salaries until such time as the appointments are made and the salaries fixed by order in council. I think before we pass this item we ought to know how many commissioners are going to be appointed and then we would have some idea of what their remuneration would be.

Mr. ROGERS: I sought to explain to the committee, when this item was first brought before it for consideration, that this amount was intended to cover not merely the fees or living allowances or expenses of the commission but also such secretarial or other administrative staff as might be established to assist the commission in its investigations and in carrying out its duties as laid down in the act. This is only an estimate. We are obliged to work on the basis of an estimate. We are entering a new field which has not hitherto been explored. We believe that this amount will be adequate for the purpose, but in advance of an announcement of the personnel of the commission, which, after all, is the decision of the government and not merely the decision of the Minister of Labour, I am not able to give my hon. friend the information he requires as to the precise fee or living allowance that will be given to each commissioner. This commission differs somewhat from others in that it is a continuing body over a period of a year at least, and possibly longer. So far as royal commissions which are set up under the Inquiries Act are concerned, there is in it no limitation upon the amount which shall be paid to the commissioners, and in the past there has been a wide variation in the amounts paid to royal commissioners, either in the fees allowed or in their living expenses. So far as other commissions are concerned, my hon. friend has in mind perhaps the tariff board and the railway commission. They are continuing bodies, really a part of the civil service, and it is simpler, therefore, to provide for them by means of the regular estimates.

Item agreed to.

Amount required to provide for farm placement scheme, $1,000,000.

Mr. ROWE (Dufferin): Would the minister explain the difference between this farm placement scheme and the farm settlement and rehabilitation scheme? I notice that $1,000,000 is appropriated for each.

Mr. ROGERS: The farm placement scheme is a plan that has been in operation for some years and has been found on the whole a satisfactory method of affording food and shelter, and ultimately an opportunity for employment, to single homeless men who otherwise would be on relief in our cities. The farm placement scheme was commenced under the provisions of the 1931 Relief Act, at which time the dominion government contributed fifty per cent of the cost. This plan was put into effect by Manitoba and Saskatchewan. In Manitoba a total of $10 per month per placement was paid out, $5 for the worker and $5 for the farmer. In Saskatchewan the provision was $5 to the worker and $10 to the farmer. Under the 1932, 1933, 1934 and 1935 legislation the dominion has paid $5 per month in respect of each placement, this being given to the worker. The dominion has made different contributions to Alberta and it is understood that to some extent the federal contribution of $5 per month has been supplemented by the province. I have before me the number of those who have been placed in this way. I received a very encouraging letter from the Minister of Public Works and Labour of Manitoba, which perhaps I might quote. He said:

I wrote to you some time ago about the results of the Manitoba farm placement plan for single men. You will recall that we received post cards indicating whether the boys were staying or not.

Up to date we have received 2,950 replies, out of which 1,937 are either staying or still negotiating terms.

On the whole I think that is very encouraging.

Sir GEORGE PERLEY: How much was spent in this way last year?

Mr. ROGERS: In Manitoba the figure is $28,021.20; in Saskatchewan, $18,951, and in Alberta, $4,383.72. Those are the only provinces that have taken advantage of the farm placement scheme.

Sir GEORGE PERLEY: When the minister expended only something like $50,000 last year, will he tell us why he puts in an item of $1,000,000 for this particular scheme?

Mr. ROGERS: I shall be very glad to deal with that question, which I believe is a natural one.

Sir GEORGE PERLEY: I think it will be pretty hard to explain.

Mr. ROGERS: The reason will be found in the strong support given to farm placements by hon. members from the western provinces during the previous debate. My hon. friend will doubtless remember the remarks of the hon. member for Portage la Prairie (Mr. Leader). There is another factor to be considered. We have determined, we believe on good grounds, to close the relief camps and it is possible that we shall be obliged to make greater use of this farm placement scheme. We may have to offer greater inducements to the farmers in order to relieve the large centres of population of the single homeless men who otherwise would congregate there during the winter months. Obviously this is only an estimate of what may be required, but we wish to arm ourselves with the means of dealing with this situation should it arise. It may be possible that this scheme will be extended to the other provinces.

Sir GEORGE PERLEY: I am very much in favour of this plan and I always have been. I have always been sorry that more use has not been made of it. I heartily sympathize with the minister who has given his department a great deal of attention. He is very much interested in these matters, but so far as I have been able to ascertain, he is following the same plan that we followed during the years we were in office. He has stated that this farm placement plan has worked out very well and that he has come to the conclusion to make more use of it if he can. Without introducing any politics into the matter, I think that what the minister has said would indicate that the previous government had done the best it could under difficult circumstances. The minister is inclined to follow along the same lines followed by the previous government. It is true he has said he proposes to close the relief camps and I hope he will succeed in doing so.

Mr. ROGERS: With the assistance of the national employment commission.

Sir GEORGE PERLEY: I shall come to that. I hope he will be able to close the relief camps, but he must not forget that he will have to provide for these men in some other way. There will be unemployed single men to be taken care of and many of them will not want to go to work on farms. If the minister closes the camps he will have to find some substitute for them. I think all this shows that the previous government took care of these single unemployed men in the right way. It has been stated in reports, as well as by the minister, that conditions in these camps were quite good. I should like to refer to the many references made to the so-called blank cheques. Apparently the minister has adopted the same line of reasoning. He wants perhaps $100,000, but he puts in $1,000,000 in order to have enough to spend.

Mr. ROGERS: It is not a blank cheque as the amount is stipulated.

Sir GEORGE PERLEY: Technically it may not be a blank cheque, but I think it is the equivalent of one when the minister puts in an item of $1,000,000 when he may need only $100,000. He finds himself unable to make anything like a close estimate of what the cost is going to be, the very reason why the previous government passed the legislation they did. They were unable to make a close estimate of what would be required and the minister finds himself in exactly the same position. He was unable to make a close estimate of what was required, so he decided to provide for an ample amount in order that he might not be short of funds for this purpose.

At six o'clock the committee took recess.

## After Recess

The committee resumed at eight o'clock.

Mr. POULIOT: In view of the evidence of the right hon. leader of the opposition (Mr. Bennett) at page 194 of the report of the committee on banking and commerce—

Some hon. MEMBERS: Order.

Mr. BENNETT: This is not the place for that; the House of Commons is the place.

The CHAIRMAN: Is the hon. member speaking on a question of privilege?

Mr. POULIOT: Yes.

The CHAIRMAN: I am sorry: it cannot be brought up before the committee.

Mr. POULIOT: I think it can be brought up anywhere, that I am willing to withdraw the six first lines of the first column of page 2214 of Hansard.

The CHAIRMAN: With all due respect to my hon. friend, he cannot bring it before this committee. He has to bring it up when the Speaker is in the chair.

Mr. POULIOT: Well, I have shown my willingness, anyway. I will not do any more. I think that is enough.

Mr. BENNETT: Well, we will see as to that.

The CHAIRMAN: We are still on item 333, which was before the committee when it rose at six o'clock.

Mr. DOUGLAS: Could the minister give us any idea of what plan the government intends to follow with reference to this farm placement scheme? I am very interested in it.

Mr. ROGERS: As I think I pointed out this afternoon, the farm placement scheme as now operated has been adopted only in the three prairie provinces. We have placed in the estimates this large amount in the expectation that other provinces will wish to avail themselves of the opportunities afforded under this scheme to place single homeless men on farms during the winter months. There is also this other possibility, that the scheme may be extended beyond the winter months. At the present moment I am not able to give my hon. friend a precise plan. Obviously it is the type of project which ought to be considered very carefully with the provinces, and when we meet the provincial authorities. as we shall do within the next few weeks, we shall discuss this question with them.

Mr. DOUGLAS: What I had in mind in asking the question was whether the federal government had some precise plan in mind. It is true that some sort of plan has been operating in the prairie provinces during a winter or two, but during this last year no such scheme has been operating in Saskatchewan.

Mr. ROGERS: Oh yes, it has, if my hon. friend will permit me to correct him. It has operated in Saskatchewan, Alberta and Manitoba. As a matter of fact I have before me the figures for Saskatchewan during the last year. Under the 1935 act 6,700 single homeless men were placed on farms in that province.

[The Chairman.]

Mr. DOUGLAS: Was that under the old scheme whereby the farmer received $5 and the man received $5?

Mr. ROGERS: That is under the scheme which has been in operation during the last two years, under which the dominion government has paid $5 a month to each man who has been so placed.

Mr. DOUGLAS: But nothing to the farmer?

Mr. ROGERS: Not to the farmer.

Mr. DOUGLAS: That scheme must have been discontinued, because I have received a number of communications from farmers who have applied to get under the scheme and who were told that it had been discontinued. Apparently the $5 to the man is being continued but the $5 to the farmer has been discontinued.

Mr. ROGERS: I might point out that under the farm placement scheme $5 was paid by the province, and the province has discontinued paying $5 a month to the farmer. The dominion government under this scheme in the last two years has continued to pay $5 a month to the man who was placed on the farm.

Mr. DOUGLAS: I think the minister realizes the need under this item for some type of scheme. I do not intend to go over what was dealt with again and again in the house while the question of unemployment was being discussed, namely the need for some means of providing work for the large number of unemployed farm labourers. Just before recess the question of the blank cheque was under discussion. The minister said that it was not a blank cheque because the amount of money was specified. It seems to me that in a cheque you fill in not only the amount of money but the payee. Yet here is a million dollars to be spent, with no concise or precise details or even information of a general nature as to how the money is to be spent. I think the committee is entitled to some outline of the procedure the government intends to follow in the placement of agricultural labour.

Mr. ROGERS: I am sure my hon. friend does not suggest that we should include in this item the names of those who will receive this $5 a month from the dominion government. Obviously that would not be a reasonable suggestion. In ordinary estimates, although an accurate description is given of the project for which the money is to be appropriated, that is as far as one can go with respect to appropriations. In this particular matter we have set forth in the estimates a certain sum for farm placement. That leaves us some latitude to discuss with the provinces the

precise terms under which we shall proceed in this farm placement scheme. The acting leader of the opposition, the right hon. member for Argenteuil (Sir George Perley), referred before six o'clock to the fact that we were continuing a number of schemes which had been inaugurated by the preceding administration. I make no apology for that. We shall cleave to that which is good and reject that which we find evil; as far as I am concerned I should like to have it understood distinctly, in regard to this whole question of unemployment, that I am prepared to share the credit with anybody as long as we can get on with the job, and that, I take it, is the view of all hon. members on this side of the house.

Mr. BENNETT: It will be recalled that the late government appointed an official of the Department of Finance to ascertain whether the moneys which were being advanced for the purpose were being paid to those who were validly entitled to them under the farm placement scheme. Is such an official being continued now in this work, or have his services been dispensed with? That is the first question. The second is: Has the minister seen the report or was a report made by the representative of the Department of Finance with respect to farm placement payments in Saskatchewan? My third question is: How many persons are receiving farm placement payments in Saskatchewan at the present time; of the number, are any of them farmers' sons; and as a result of the investigation by the representative of the Department of Finance, how many of the whole number could be considered as persons entitled to receive the payments?

Mr. ROGERS: I have not before me the report from the Department of Finance.

Mr. BENNETT: There has been a report, has there?

Mr. ROGERS: I am not aware—

Mr. BENNETT: That is what I am assuming.

Mr. ROGERS: I am not aware of any such report. I know in the past, there was some criticism of this scheme upon the ground that it lent itself to an exchange, so to speak, of farmers' sons whereby this $5 a month could thus be made payable to each of the farmers taking part in that transaction; that is, it could be made payable to them through their sons. I believe that as a result of charges of that kind great care has been exercised in the selection of men to be sent to farms under this scheme. Under any arrangement of this sort I suppose there is an opportunity for fraud. I can only assure the committee that in our discussions with the provinces we shall bring this point to their attention and try to arrange matters in such a way as to eliminate this possibility of fraud as far as that can be done. I say to the committee that on the basis of the information which has been placed before me this would appear to be a promising method of providing relief to single homeless men. I am not suggesting that all single homeless men are willing to come under the scheme, but those who do have some urge to take up a rural life, and our information is that a considerable number of the men remain on the farms on a wage basis during the summer months, during the seeding season and the harvest season, following the completion of the period during which, under the farm placement scheme, they receive $5 a month from the dominion government.

Mr. BENNETT: I am afraid that the minister's statement does not go quite far enough. When the scheme was launched by the Minister of Labour of the late government it was intended to meet what was regarded as a situation of some difficulty. All of the single homeless men were not put in camps, and wherever there was an opportunity of providing them with employment on farms it was believed that this might create a sentiment, perhaps not as strong as an urge, but at least a liking for rural life that would ensure their remaining on the farms and ultimately going into agricultural pursuits. It must be remembered that the scheme is not entirely new; it has been going on for a considerable period of time.

Mr. ROGERS: Four years.

Mr. BENNETT: Yes, four years. Mr. Gordon, the previous Minister of Labour, was satisfied with the results which were being obtained, when information was conveyed to the government that there were abuses under the scheme, and in the public interest it was felt desirable to protect the exchequer from, shall I say, improper payments. Those who read the last report of the commissioner of unemployment relief will realize the difficulties that the auditor general has had and that we have had, too, in consequence of complaints which were received in respect to the broader question. With regard to these farm placements we did send a man to the west; I am trying to think of his name.

Mr. ROGERS: Mr. Burgess?

Mr. BENNETT: Yes, Mr. Burgess. He was sent to Saskatchewan with instructions to cooperate with the provincial government and see that there was no improper use of the moneys provided for the purposes indicated. My memory is that he is no longer employed; that he was removed from his position. I have this recollection, however, that before we left office there was on the farm placement list a number totalling something like five thousand said to be entitled to these payments, and the check by Mr. Burgess indicated that no such number were legally entitled to receive payment. The matter was being still further investigated when the election took place.

I do not want to be insistent about this matter, in view of the situation, but I am curious to know just how the matter stands now, because at the time the reports were made they indicated that some immediate and drastic action should be taken to prevent the improper use of public moneys under the circumstances to which the minister himself has referred. It was an opportunity for, shall I say, an easy diversion of public funds from one purpose to another. I should like to have that information, as far as it is possible to obtain it, with regard to the period since last October, because during the winter the payments were made more extensively than at other times of the year; in fact it was originally intended to confine the operation of this scheme to the winter. I am not sure whether it was extended beyond the winter this year.

Mr. ROGERS: No.

Mr. BENNETT: That being so, I think the records of the Department of Finance and of the minister's department will indicate just what has been done since attention has been directed to the situation to which I have referred. How are the payments made now, as a matter of fact? How were the last payments made to those entitled to receive them? Perhaps the minister could tell me that?

Mr. ROGERS: In the first place I may say that no report dealing with this matter, sent in by any official, has been placed before me, but I did have some knowledge of certain criticism which had been directed against the scheme in its actual operation. Perhaps I should add also that Mr. Burgess, whose name I mentioned a moment ago as having had some connection with this matter, was sent to Saskatchewan, I think, to deal rather with the distribution of the accountable advance to that province in connection with the drought area.

[Mr. Rogers.]

Mr. BENNETT: I think his instructions were to deal generally with all the moneys which were being paid by the dominion, to satisfy the Minister of Finance that the payments reached the persons who, under the agreement made with the Department of Labour, were entitled to receive them. I think that is the fair way to put it.

Mr. ROGERS: If any report of that kind is in existence I shall certainly avail myself of it.

Mr. BENNETT: I think there is; I was told there was.

Mr. ROGERS: As to the payments made to the provinces under the farm placement scheme, we are presented with certificates from the provincial governments as to the number of men placed under this scheme when it is in operation during the winter months, and on the basis of these certificates we make our payments to the provinces. I might give the numbers of men concerned in the various provinces during last winter, because this will indicate that the scheme has had a considerable measure of success. The figures are as follows:

| | |
|---|---|
| Manitoba | 5,200 |
| Saskatchewan | 6,700 |
| Alberta | 2,269 |
| | 14,169 |

In other words during the winter months you have a larger number coming under this farm placement scheme than the average number, let us say, who have been in the relief camps. The scheme does not operate in the summer time.

Mr. DOUGLAS: Would it be possible to know just what money has been paid to the western provinces under this scheme?

Mr. ROGERS: My hon. friend will find that information in the report of the commissioner of unemployment relief which was tabled in the house a few days ago, and which I understand has been distributed to members of the house. I trust that it has been so distributed; instructions were given to have that done.

Mr. DOUGLAS: Has the minister at hand the figures for last year?

Mr. ROGERS: The total amount is in the neighbourhood of $50,000. Some accounts, of course, have not been received as yet, so the total will be considerably in excess of that figure.

Mr. LEADER: It has been suggested that some abuses may have, and I believe have, prevailed under this scheme. So far as Manitoba is concerned, I was informed by a member of the government that there had been no widespread abuses. I just want to make that statement to the committee, because I have more or less advocated this scheme in the past, though I realize that it is not an entirely satisfactory way of taking care of our single homeless unemployed men. But I would prefer to have them go out among the farmers rather than have them maintained in the relief camps.

Mr. COLDWELL: The difficulty in connection with this problem is lack of information regarding it by people on the prairies. For example, I have before me a resolution from a farmers' organization, urging that the same bonus be given to the farmers as to the railways, because of the probable effect upon the wages of farm help, which the farmers will be unable under the circumstances to meet. I have under my hand a copy of a letter received by a farm organization in Saskatchewan from Mr. Mitchell, director of labour transfers, in which he makes this statement:

> I regret very much that I was not sufficiently clear in my letter to yours of April 16. As you no doubt are aware, the government's policy evolves from day to day, and I endeavoured to intimate to you the position as it was of that date.

That is dated April 24. I can understand that people interested in this problem, receiving a statement of that sort that the government policy evolves from day to day, would not quite know where they stood.

Mr. ROGERS: If my hon. friend will allow me to correct him, he would understand from that letter that the reference to policy related to the finding of alternative employment for men in relief camps.

Mr. COLDWELL: No, I did not gather that from the letter. There is no explanation of that sort in it. It goes on to speak of the railways after that.

Mr. ROGERS: Well, that has to do with the same problem.

Mr. BENNETT: I think the information I mentioned should be available to the committee before this item finally passes. I am not going to ask that the item stand over in order to secure that information, but if on some item in the main estimates—I think the minister's main estimates are not all passed, are they?

Mr. ROGERS: No.

Mr. BENNETT: If he will secure the information and permit me to discuss it on one of those items, this will serve my purpose and not delay the passing of this item. Otherwise, having regard to the criticisms which were made against the late administration as to lack of careful attention regarding the expenditures of public money, and the appointment of Mr. Burgess to go to Regina, I think it is of the utmost importance that we should see what his investigations disclosed, if he carried on investigations in regard to farm placements. I have only had a hearsay statement about the matter, and therefore I shall not mention what that was, but in fairness to the late administration and the efforts they put forth to ensure that expenditures should be made in accordance with the will of parliament, I think we should know to what extent the investigations indicated that the certificates given by the province were wholly warranted as being within the terms of the agreement in that regard. And following that, of course, would be the matter of what has been done since October to continue those investigations and to secure accuracy with respect to payments during the winter months in the western provinces. If the minister will permit that discussion to be carried on in connection with one of the items in his main estimates dealing with this agricultural relief matter, that will be quite satisfactory for my purposes, and the item can pass. Otherwise I think, following the usual practice, it would be reasonable to ask that it stand until the information which is not now in the hands of the minister may be available. Whichever better suits the convenience of the minister is satisfactory to me.

Mr. ROGERS: Naturally I am anxious to expedite the passing of the estimates, and I express my sense of obligation to the right hon. leader of the opposition for his willingness to help, by leaving discussion of this point until the main estimates are before the committee. I ought to say, however, that I cannot at the moment recall any item in the main estimates which pertains to relief. As far as it is within my power I shall be very glad indeed to afford such an opportunity when the main estimates are before the committee.

Mr. ROWE (Dufferin): How much is this increased over the amount spent last year?

Mr. ROGERS: I think it is roughly indicated by the numbers. Under the 1934 act the numbers were 12,219, and the numbers under the 1935 act are 14,169. We pay $5 a

month. Of course these numbers do not necessarily represent those who have taken advantage of the scheme during the entire period.

Mr. ROWE (Dufferin): It depends how many months they worked.

Mr. ROGERS: Yes, quite. And these figures before me do not afford that information.

Mr. ROWE (Dufferin): Did not the minister give the amount before recess?

Mr. ROGERS: I gave the amount we have paid to date, but we make our payments on the basis of accounts rendered, and all the accounts have not come in. I am informed that they are about two months in arrears.

Mr. DOUGLAS: I notice under the Relief Act, 1935, the amounts paid to the different provincial governments on the prairies for farm placement are as follows:

| | |
|---|---|
| Manitoba | $28,021 20 |
| Saskatchewan | 18,951 86 |
| Alberta | 4,283 72 |

Totalling, roughly, $50,000.

Mr. ROGERS: Yes, those are the amounts paid prior to March 31.

Mr. DOUGLAS: Could the minister give an idea how much farm placement cost altogether last year?

Mr. ROGERS: Not until the accounts are all in, I am told that they are about two months in arrears. I think it would be in excess of $100,000.

Mr. DOUGLAS: The amount of $1,000,000 seems to be an increase over last year. If it means that we are to have an increase in this scheme I think the minister should be congratulated.

Mr. ROWE (Dufferin): The letter the minister read before recess is an interesting vindication of the former government, showing the number placed, evidently with satisfaction, and continuing their jobs. Now we find that the amount is increased for this year. I am sure that it is very interesting for you, Mr. Chairman, and those who sat in the last parliament, to recall the vigorous condemnation of this vote a year ago, when one follows the projects already undertaken and other projects to be undertaken. Not only are the same blank cheque system and the same projects, you might say, that were most vigorously condemned when the former government was in power being proceeded with, but the vote is being increased. I was glad to hear that letter of satisfaction from the people who have been dealt with, and it is striking to observe that the minister now brings in an increased vote, further illustrating the practice of the government from the beginning of the session of adopting policies which last session they vigorously condemned.

Mr. BENNETT: Looking roughly through the estimates I do not find in the minister's department an item that would enable us to discuss this matter further. Unless I have overlooked something I think the minister was right in what he was good enough to say.

Mr. MACKENZIE (Vancouver): The minister and my right hon. friend can agree to discuss the matter on any specific item.

Mr. BENNETT: But as the minister pointed out, possibly the chairman is bound by the rules to confine the discussion to the items themselves; therefore it might be held that I was no longer within my rights in endeavouring to discuss what I regard as very important, this whole question of farm placement, in view of the fact that the public exchequer is concerned solely with the certificates given by the province. If a certificate came in for $5,000, the dominion, until we appointed a special officer, did not make any investigation of it and paid the money out. But in consequence of information received it was thought desirable, yes, necessary, that this action should be taken. I am curious to know where we stand with respect to that matter since October last. While the winter is now past, from the standpoint of operation of the statute it will be of importance to the minister for future guidance, because he, like the rest of us, is particularly anxious that the exchequer should be charged only with money that he proposes it should be charged with for this purpose, and not for anything else.

I am in this position, therefore, that unless the report to the Department of Finance is available and we know exactly what the numbers are, I cannot discuss the matter. I should like to make it clear that if the item stands there is no doubt about our right to discuss it. But I cannot see any item upon which such a discussion might arise, and I thank the minister for thus frankly directing my attention to the point. I thought there was such an item, but I must say that I do not see it at this time. Unless we can have the discussion under some general item, which I do not see at the moment—

Mr. ROGERS: If there is anything I can do by consent I should be pleased to arrange to do it.

Mr. BENNETT: We can discuss it under an item respecting advances to provinces. Obviously that would be an item comprehensive enough for the purpose. Later in the estimates there is an item dealing with advances, and therefore it is understood that in not asking that this item stand there may be a discussion on a future item.

Mr. ROGERS: That is satisfactory.

Item agreed to.

Amount required to provide for agricultural settlement and resettlement, $1,000,000.

Miss MACPHAIL: I should like to ask the meaning of the word "resettlement." Does it mean settlement in another year? What is the difference between settlement and resettlement? After one settler has gone does another settler come in?

Mr. ROGERS: I agree that there is some redundancy. I take it that the reference is to original settlement, and a continuation of the provisions for settlement. I do not know that we are particularly restricted by the wording of the item. I agree with the hon. member that there is a possibility of a certain amount of confusion.

Mr. QUELCH: What is the difference between this item and item 310, which was piloted through the committee by the Minister of Agriculture? They appear to be about the same.

Mr. ROGERS: The explanation is that the item piloted through the committee by the Minister of Agriculture applied only to the drought area, where there is special provision for rehabilitation. This item is not so confined. Under it we are permitted to discuss with the provinces, and on agreement with the provinces to enter into schemes whereby those now on relief may be placed on the land. I believe I have mentioned before that existing relief settlement schemes are now in operation in only four of the nine provinces. Two other provinces have placed before the Department of Labour alternative schemes for land settlement, but we have not yet reached a decision regarding them. The present item is in the estimates so that if it should appear desirable we may be in a position to cooperate with the provinces which as yet have not entered into relief settlement schemes.

Mr. MacNICOL: Would this relief settlement include a scheme which was tried out in Ontario a few years ago, under which farmers living in remote districts in Haliburton county, and may be some from the remote districts of Muskoka—I am not certain as to Muskoka, but there were a number from Haliburton and from parts of Renfrew who resided on what was generally known to be poor land, but land which in former years was fairly well timbered. When the timber was taken off only rocks and gravel remained. The Ontario government moved quite a number of the descendants of the pioneer settlers from these districts to northern Ontario, and gave them land in the clay belt of that section, where crops grow well and prolifically. Does this vote cover such a scheme as the one I have described?

Mr. ROGERS: This vote is broad enough to cover any scheme of resettlement which might be negotiated with any of the provinces. I am not sure whether any of the localities mentioned by the hon. member fall within the relief settlement scheme, or within some settlement scheme inaugurated separately by the province. A number of provinces have carried on their own settlement schemes, or back-to-the-land movements, without support from the dominion treasury.

Mr. MacNICOL: Would the minister endorse a scheme such as I have outlined? Personally I am strong for it. There are many districts in Ontario and perhaps in other provinces where the original pioneers had to cut the standing timber. The land was covered with excellent pine, or other timber, and in due course as the years went by the timber was all taken off. The sons and daughters of the pioneers did not like to leave their native districts. Their relatives had been buried thereabouts; they had been raised there, but in time it became impossible for them to earn their livings. It was on that account that the Ontario government moved a number of them to northern Ontario. If the vote now under discussion covers a scheme such as I have described I would say it is a most worthy cause and one which should receive support. In the circumstances I have related, families raised on the soil, who apparently loved it, if we may judge from the length of time they stayed on it, were taken from where they could not make a living to a place where they could make one. If the vote includes a movement of that kind I maintain it is a worthy one.

Mr. STIRLING: I cannot find any reference to this item in the report of the dominion commissioner of unemployment relief. Is it a new undertaking?

Mr. ROGERS: The hon. member will observe that item 329 in the special supplementary estimates deals with commitments under existing projects.

Mr. STIRLING: I understand.

Mr. ROGERS: This is designed to permit the negotiation of new projects.

Mr. ROWE (Dufferin): Is this an increased vote?

Mr. ROGERS: Yes.

Mr. ROWE (Dufferin): I would say that the government is well justified in increasing the vote, if only as a further vindication of the former government's policy in this regard. I suggest that the government would have been well advised to make a much greater increase. From the information given to the committee this afternoon by the minister it was quite evident that those who were assisted on the settlement and resettlement basis secured much less, and that it took much less from the treasury of Canada to re-establish them on the land than it did to pay a man on relief to do nothing. The minister pointed out in answer to a question from this side of the house that he preferred to subsidize men doing something than to subsidize men doing nothing and thereby sacrificing their morale and initiative. At a time like this I believe the government might have been well justified in increasing the grant substantially. They could have worked out, in cooperation with the provinces from coast to coast, different schemes that would have cost the dominion treasury less than the cost of direct relief. The average cost of assistance under this scheme, as the minister pointed out, was considerably less per family —personally I think it would have been more than a hundred dollars less—than the cost of direct relief. I do not think we need any commission to satisfy this house and the country that if we can keep the head of a family working at some remunerative employment and producing for less than it costs us to keep him doing nothing, it is surely sound economics to keep him at work, and it also has the advantage of preserving his morale. But we have established an employment commission and provided this afternoon for their salaries and expenses, $125,000, although the minister told us this afternoon that he did not know how much each of the commissioners would receive, and they are to investigate and find some means of handling this gigantic problem which faces this government as it did its predecessor.

Before the commission reports to parliament at its next session we all hope that the major portion of this crisis will have passed, and it is quite possible that the government trusts that before the commission has found a solution the problem will have solved itself. I think the government, therefore, would be well advised to consider increasing this grant rather than providing $9,200,000 for new public works to be undertaken in cooperation with the provinces, building public works here and there, thereby constituting a steady drain on the treasury of the dominion. An expenditure of that kind simply means that millions will be spent to employ men in work that is only temporary after all, a few months' work in the summer before the snow comes next winter. It costs more than it would to settle them on the land; there is no permanency about it unless the government is going to ask parliament again next year for more millions for the same purpose, to build harbours here and there and highways in the byways and side roads of this province, and, as one hon. member said, in districts not densely settled the government could easily expropriate land and lay down pavement here, there and everywhere to provide what would be only short term employment after all.

I believe sincerely, and independently of politics altogether, that it is high time the government considered this problem with a view to finality and applied some policy which might have at least some semblance of permanency. The government might well have made provision for a larger vote than is provided here for this purpose. If under this vote you can place the head of a family on a farm, where he can take his wife and children and maintain himself and keep his self-respect in accomplishing something and making his own living, it is worth the price to restore the initiative and morale necessary to enable a man to carry on. I think two dollars spent in that way is a much wiser expenditure from a national standpoint than one dollar spent to give a man something for nothing. I think the former government as well as this government probably failed in that respect, and I would urge upon the government, and ask them to urge upon their advisers in this new and highly paid commission which is going to report perhaps after the major difficulties are over, that they should consider during this year an extension of this type of policy rather than expenditures which, after all, amount to only extravagant expedients to meet the needs of the moment and have no permanency about them.

Miss MACPHAIL: I think, Mr. Chairman, that we cannot tell if the scheme is a wise one or not until we know the number of people who have been forced off the farm through economic conditions over a given period of time, and until we know the cost to the municipality, in the first place possibly, to the province, and to Canada of forc-

ing these people off the land. I was astonished to hear the hon. member for Dufferin-Simcoe (Mr. Rowe) make the speech he did. I could not have believed until he spoke that he was a joy farmer, but the indications were strong in his speech.

Mr. ROWE (Dufferin): A what?

Miss MACPHAIL: A joy farmer.

Mr. ROWE (Dufferin): I have certainly had a lot of joy in it.

Miss MACPHAIL: And you must certainly have done very well to be willing to have everybody else go back on the land. One would almost think, to listen to this debate, that we could handle any number of people on the land, but the difficulty with agriculture in Canada to-day is that we do not know what to do with the products we produce on the farm. Members who are on the wheat committee are bothered about the wheat situation, and people who have to do with live stock are troubled about the live stock situation. Our problem is not underproduction. We do not need to go out and spend millions to bring in settlers from other countries or to get our own people to go back to the land. Our problem is how to get for our products a price which will enable the farmer to get a living from the commodities he produces. To put more people back on the land is simply to continue going round in a circle. You are on the land; you go broke, and no matter how much you might want to become reestablished on your own farm, it is absolutely impossible. You go broke. Innumerable farmers have high blood pressure and heart disease through worrying, and they have finally had to leave the farm and go on relief. After having forced them on relief, to propose to put them back on the land—why, it is a sort of merry-go-round. You are starting to work at the wrong end. I certainly want to disagree with the hon. member for Dufferin-Simcoe as strongly as I can for I do not think he was speaking as an agriculturist. May I ask the minister how many people have been put back on farms under this scheme, both in Ontario and in Canada?

Mr. BAKER: I do not take up much of the time of the house, but I would like to put myself on record that I sincerely regret this vote is not fifty million instead of one million dollars. I am absolutely convinced that the trouble to-day is that we have an unbalanced population, too many people in the cities and too few people on the land. Let us try to bring about a better balance. I would more willingly vote for this appropriation if it were fifty million dollars than the one million it is.

Mr. BLACKMORE: Following up what the hon. member for Grey-Bruce (Miss Macphail) has said, I draw the attention of the minister to something that might possibly be overlooked. We simply cannot overlook the fact which is being forced upon us, that farming as a business does not pay any longer. It was altogether different twenty-five or thirty years ago, but to-day we are faced with a new set of conditions. I should like to read an excerpt from a recent book by Stuart Chase. This book Government in Business was published in 1935 and although it deals with the United States, conditions in Canada are similar. I find the following on page 39:

> Even in such a prosperous year as 1927, Recent Economic Changes shows a net loss of $1,717,000,000 to farmers as a class, a loss enormously accelerated by the depression. Agriculture has failed as a self-sustaining sector of private business.

While I agree in the main that it is wise to get men out on the land, I think we should be careful not to make our country agriculturally top-heavy. If we do that we will regret it in sackcloth and ashes. We will have an agriculturally bankrupt community for the very reason pointed out by the hon. member for Grey-Bruce (Miss Maphail). If we can add to this idea of establishing men on the land the idea of establishing in the midst of a little community a factory, something like the sugar factory in the town of Raymond, where I have lived for some time, the farmers will have some means of adding to what they can make on their farms. If a proper combination can be arrived at, we shall be working on a sound basis.

I have lived on a farm all my life. My father was one of the pioneers in Alberta. I know of the good times years ago, and I know what bad times are like. I have brothers who are closely connected with the farming business and I know exactly the problems they are facing. I contend that any industry carried on in farming, such as pork production, dairying of various kinds and other industries, takes the most skilful man and the one who is ready to sacrifice himself, as far as clothing and amusements and that sort of thing are concerned, to make it go at all. If that is so, what is going to happen to the great majority of others? I contend that hon. members would be astounded if they could see a cross-section of the agricultural communities of this coun-

try. They would then see upon what a narrow thread people on the farms are holding out. Any hon. member who is acquainted with farming will bear out what I say. If we place great numbers of men on the land and do not provide other means for their earning a livelihood we shall be faced with disaster.

There are other industries than the sugar industry which might be established. For instance, potato processing factories could be set up. I have been in factories where potatoes could be processed into thirty different commodities, every one of which was saleable. These ranged from potato flour to alcohol, mucilage, paints and varnish, and such things as that. Such an establishment can be set up without a great deal of cost and it could be carried on by a small group of farmers located close by so long as it was in charge of a capable man. There are wood processing plants which could be set up in the wooded regions and which would enable the farmers close by to make a living. If we are to place great numbers of men on the land and have them permanently established, we must provide some additional means of livelihood. Many skilled farmers are just able to make it go; they are fighting to their utmost to retain the savings of a lifetime. I want to commend the minister for providing this item as it is a move in the right direction. Expenditures of this kind are wise, but unless some other means are provided to enable farmers to make a living, we shall meet with great disappointment.

Mr. THOMPSON: I had not intended saying anything on this item, but I hear so many arguments pro and con and see so many statements made about agriculture that I thought perhaps I should say a word before this item passes. I have farmed all my life, and I have on a farm to-day a son who is the fourth generation on it. If I had to live my life over again I should go back on a farm. I am surprised to hear hon. members talking about smoke stacks, tariffs and that sort of thing. If we want to build up agriculture in Canada we must build up industry in order to provide markets for our agricultural products. The urban and rural people in this dominion cannot fly at each other's throats; they must either prosper together or go down together. The people in the urban centres provide the markets for the agriculturist. Wherever you find an industrial town or city you will find the farmers prosperous in the surrounding territory. The reason is that they have markets for their products.

[Mr. Blackmore.]

I believe that this item is worthy of commendation and perhaps it should be increased. During the last four or five years we paid out about $700,000,000 for relief and what have we for it? We are not one bit further ahead to-day than we were when we started. I contend that the most sensible proposition which has been brought up in this house to deal with the unemployment situation is the proposal to place men back upon the land. Our forefathers came to this country and they settled in the primeval forest. They fought that forest and they conquered. The reason why the farmers are not making a success to-day is because they, like the municipalities, the governments and everybody else, have refused to live within their means. Everything we require, everything we eat and wear, must come from the dark brown earth; it must be taken from the farms and from the land of this dominion. Everyone is familiar with the old story that when Adam was turned out of the garden of Eden he was told that he must till the land and earn his bread in the sweat of his brow. That is what we lack in this country. We have thousands and thousands of acres of land which are fit for agricultural purposes, where men could make a living, but they want the white lights of the city; they do not want to go out and rough it a bit as their fathers had to do.

On several occasions I travelled through northern Ontario and saw there thousands of acres of land off which the pulpwood had been cut, and the people had deserted it. Yet that land was producing, wherever it had been sown, immense crops; they might not mature but they would provide an abundance of feed for stock. I know that any man who is willing to work and has average intelligence could go in there and make a living. I will say further that it takes more intelligence, more hardihood, more of the qualities that go to build up a real man, to make a success of farming than to prosper in any other business in Canada. We shall never be relieved of our unemployment until our people are willing to go on the land and earn their own living. This dole system that we have to-day is breaking down the morale of our people. I am in favour of any scheme that will assist men to go out upon the land and become independent citizens of this country.

Mr. QUELCH: I desire to say only a few words. If the government would take the necessary action to guarantee to the farmers of Canada the cost of production for their products, they would not need to in-

troduce any bill or any scheme to persuade the farmers to return to the land; there would be a general movement back to the land. The only reason farmers are able to stay on their farms now is because of the existing debt legislation. If that protection were removed the farmers would be forced off their land wholesale. Those who are carrying on at the present time can do so only by going progressively more into debt, and are we advocating that more farmers shall go into debt? The first step is to guarantee farmers their costs of production: if that is done, nothing more will be necessary to get back on the land those farmers who have left it.

Miss MACPHAIL: I asked some questions on the item which have not been answered.

Mr. ROGERS: I have not forgotten the question.

Miss MACPHAIL: I asked how many people have been reestablished on the land in Ontario, and how many in all Canada.

Mr. ROGERS: I remembered the question of the hon. member for Grey-Bruce, and was going to tell her that yesterday the question was brought up, and that she will find the complete table on page 2298 of Hansard of yesterday.

Mr. STEWART: Did the minister place on Hansard the amount expended last year under this same heading?

Mr. ROGERS: Yes. That was done, I believe, this afternoon.

Item agreed to.

Amount required for new works to be undertaken in cooperation with the provinces, $9,200,000.

Mr. HEAPS: Before this item is carried, the first question I should like to ask is what is meant by the words, "in cooperation with the provinces."

Mr. ROGERS: In the past, when the dominion government has assisted in the construction of works which ordinarily would fall within the jurisdiction of the provinces, it has done so upon the basis of a fixed contribution, either a fifty per cent contribution or a forty per cent contribution or less, as the case might be. This item is so worded as to permit of reaching agreements with the provinces upon the basis of a fixed contribution by the dominion for specified works, which will be set out in schedules attached to agreements with such provinces.

Mr. NEILL: Does that cover work on the trans-Canada highway?

Mr. ROGERS: That would cover any work undertaken by the dominion jointly with the provinces upon the trans-Canada highway. It is for existing commitments.

Mr. ROWE (Dufferin): Would that cover assistance to provincial highways and roads?

Mr. ROGERS: It would be wide enough to cover assistance to subsidiary highways, as well as highways which have been designated as part of the trans-Canada. It is wide enough to cover that.

Mr. STEWART: Could the minister give the amounts spent last year on undertakings similar to those embraced in this item?

Mr. ROGERS: I have before me the total amount expended in the last five and a half years, and I think it will explain to the committee how we have arrived at this figure of $10,000,000. The total amount spent by the dominion government in conjunction with the provinces on road work is $53,855,527.90, approximately an average of $10,000,000 a year. The $9,200,000 in this item would be $10,000,000, were it not that we have placed $800,000 under another item; it is allocated to the Winnipeg sewage disposal project.

Mr. STIRLING: Do I understand the minister to say that we are being asked to vote a little over $9,000,000 and that a description of what it will be used for will be given at a later date? Can he not tell us now what the expenditure is for?

Mr. ROGERS: It is not possible at this time. It was not possible, I believe, at this stage in any previous year—

Mr. STIRLING: But we worked under a blank cheque.

Mr. ROGERS: —for the government to announce precisely the projects to which the dominion government would contribute. But we have indicated that this amount will be used for works to be undertaken in conjunction with the provinces. That does not confine us to the trans-Canada highway; it does not confine us to a subsidiary highway. It permits us to enter into agreements with the provinces whereby projects shall be undertaken which will assist in reducing the relief rolls. When we are able to enter into these negotiations with the provinces we shall naturally inquire into those projects which will of themselves afford the maximum immediate employment, and which will as far as possible

supply additional collateral or ultimate employment. In other words, we hope to expend the greater portion of this money upon what may be termed developmental projects. It is not possible to be more precise than that at the present time.

Mr. WOODSWORTH: Could the minister give us some idea as to the allocation of this amount as between the provinces?

Mr. ROGERS: I am not able to give that allocation at the present moment. As I have examined the accounts for relief as between the dominion and the provinces during the last few years I have been impressed more and more with the fact that these accounts were, so to speak, running accounts. I know of no principle of distributive justice under which one could bring about a distribution of these amounts which would commend itself to everyone. We shall take into account the moneys that will be expended, for example, on public works in the various provinces, the amounts that will be expended under farm placement schemes, relief settlement, and so forth, and try to arrive at a distribution which will be fair and equitable. But we shall have to make that division in the manner which appears to be just and equitable in the light of expenditures in the past and in the light of other expenditures which are contemplated during the coming fiscal year.

Mr. WOODSWORTH: The minister says that the division should be fair and equitable, but surely he must have in mind some principle which would suggest what would be fair and equitable. Is it to be according to population? Is it to be according to the unemployment that exists in each province? Surely the minister must have some principle in mind.

Mr. ROGERS: Perhaps it would be more proper to say that we shall seek to obtain a distribution upon the basis of a combination of principles. If we were to put it on the basis of population it would work out unfairly to those provinces, for example, which have maintained very low relief scales as compared with other provinces. The same would be true if we worked it out on the basis of the number unemployed in relation to the total population. It is a matter of great difficulty to work out a principle of distribution that would be entirely beyond criticism. All I can do is to assure my hon. friend and other members of the committee that we shall seek to make that allocation among the provinces on the basis of need as we are able to determine it.

[Mr. Rogers.]

Mr. WOODSWORTH: If the minister has no principle in mind as to how this amount is to be distributed among the provinces; if he has no principle in mind as to what classes of work are to be undertaken, I should like to know how he has arrived at this figure of $9,200,000. Surely it must have some very definite basis.

Mr. ROGERS: I think I have already given the committee the statement that during the past five and a half years some $53,000,000 has been expended for relief works. That works out at an average of about $10,000,000 a year. The item under consideration provides for an expenditure of $9,200,000. There should be added to that an amount of $800,000 which has been allocated to the Winnipeg sewage disposal project, under another item

Mr. WOODSWORTH: All I can say is that we have waited for some weeks now for this moment to arrive. When we were discussing the earlier part of the government's relief program we were told that it was quite impossible at that stage for the government to disclose just what it had in mind. We had to pass at that time some general legislation which would empower the government to go ahead with matters of this kind. It will be recalled that we tried then to get the government to give us a full picture of the situation. Further, when another bill came up under which a commission was to be appointed to investigate and survey the situation, we asked what the government had in view. At that time we were told that there was still a third part of the scheme, consisting of the estimates, and that then we would know exactly the general scheme of the government with regard to unemployment relief. Now we have come to that third part of the program, and again we are told that we must go it blind; that we are not to be given any clear-cut idea as to the policy of the government.

I do not think that is fair to this committee. During the past two or three years I have not been among those who have been overcritical with regard to the blank cheque proposals, as they were called. It seemed to me that the government had to be left with considerable discretionary powers in dealing with an important matter of this kind. However I recall distinctly that many of those who now sit on the government side at that time sat to my right and day after day after day they were insistent that the government of that time should not be given any blanket authority. They said, "We are quite willing to vote particular items for particular matters, but we do not believe in the blank cheque

method." I would simply point out—and perhaps I can do so with better grace than my Conservative friends—that the government is adopting precisely the same policy to-day, because they are refusing to give us even a general idea as to how this money is to be expended. I would not care so much about that, but what I should like to get is some sort of clear-cut statement as to the program of the government with regard to this great unemployment problem which faces us. Personally I get so weary of reiterating—

An hon. MEMBER: So do we.

Mr. WOODSWORTH: Then why don't you do something about it, now that you are in a position to do so? We all have become weary of this. Ever since I came to this house, as far back as 1921, I have had to stand in my place and try to plead for the unemployed.

Mr. McLEAN (Melfort): There were no unemployed then, and there was none half the other times you said there were.

Mr. WOODSWORTH: There were vast numbers of unemployed at that time. I have known unemployment in this country for twenty or thirty years. I do not think anyone in this chamber knows western Canada better than I do; I do not think anyone has been more closely in touch with unemployment in my own city of Winnipeg for the last thirty years, and anyone who says that there were no unemployed in the earlier days simply does not know what he is talking about. What I was about to say is this, that as unemployment has increased during the years some of us have tried to point out that some more fundamental method should be adopted of coping with this great problem. We have been said to be idealists; we have been said to be impractical. Well then, we said: Let the government in power undertake some definite scheme. And I would say that whether the Conservatives or the Liberals have been in power we have supported to the extent of our ability any scheme that seemed to look in the right direction.

Mr. ROGERS: Will my hon. friend permit a question?

Mr. WOODSWORTH: Certainly.

Mr. ROGERS: If my hon. friend were in power, are we to assume that he would follow the policies which were pursued by the Labour party in Great Britain when they were in power some years ago? Is that a reasonable expectation?

Mr. WOODSWORTH: Would the minister tell me precisely what he has in mind with regard to those policies? What policies?

Mr. ROGERS: I think we are justified in assuming that my hon. friend is in sympathy with the program of the Labour party in Great Britain, and he is continually reproaching us for lack of action in relation to this question of unemployment.

Mr. WOODSWORTH: I have not mentioned the Labour party in Great Britain.

An hon. MEMBER: What is your proposal?

Mr. WOODSWORTH: Just a moment, please. If the minister will indicate to me what particular part of the Labour program he has in mind I might give him some idea of the way in which it appeals to me.

Mr. ROGERS: In relation to unemployment.

Mr. WOODSWORTH: I should like to know what part of the policy in regard to unemployment the minister has in mind. Does he mean the unemployment insurance scheme of Great Britain? If he does, then I say distinctly yes.

Mr. ROGERS: That was not what I had in mind.

Mr. WOODSWORTH: That was part of their policy.

Mr. ROGERS: I assume that my hon. friend must be aware of the policy of the Labour party in Great Britain with relation to unemployment.

Mr. WOODSWORTH: That is too general a proposition. I have indicated that one of the most important parts of the policy of the Labour party in Great Britain during the short time they were in office, though not in power, and one of the policies upon which they relied and upon which all governments in England in recent years have relied, was that of unemployment insurance. My friends the Conservatives did attempt to put an unemployment insurance scheme on the statute books. I did not think it was at all adequate. Now it is before the courts and we do not know what will be the outcome.

Mr. ROGERS: Will my hon. friend permit me to interrupt once more? He has said in effect that he would support the policy of the Labour party in Great Britain in relation to unemployment generally.

Mr. WOODSWORTH: Oh, no, pardon me; I did not say that. I say that I want to know precisely what that policy is. I refer for the moment to the general scheme that has been adopted in Great Britain for a number of years, unemployment insurance.

Mr. ROGERS: If I might complete this now, I would point out that when the Labour party came into office in Great Britain in 1929 the percentage of unemployed among insured work people was 9·6.

Mr. HEAPS: What year?

Mr. ROGERS: In June, 1929. When the Labour party left office in August, 1931, the percentage had risen to 22 per cent.

Mr. HEAPS: That is not a fair comparison; the minister knows it.

Mr. ROGERS: No, I do not. I asked for these figures because I wanted to know. My hon. friends are continually reproaching us for lack of action. I would remind them that there is a very material distinction between activity and progress.

Mr. ROWE (Dufferin): You are not showing either.

Mr. WOODSWORTH: I am not quite sure what the minister means by activity and progress. I do not think we have had in this country either activity or progress.

Mr. MacNICOL: We had from 1930 to 1935.

Mr. WOODSWORTH: I do not think we get very far by taking certain limited periods during which an administration has been in power in the old country or in this country and trying to draw conclusions, quite disregarding general economic conditions.

If we speak of general policies in the old country, at all periods there they have had as one part of their way of dealing with this problem a system of unemployment insurance. We have urged such a system for this country. The late government did attempt that; the present government apparently are not attempting anything of the kind. A decent sort of unemployment insurance scheme would be far more satisfactory than the present haphazard dole scheme, for it has been practically a dole for many years, a dole on a totally inadequate scale, which condemns people to live below any standard which we should accept for decent Canadians. There is no doubt about that, and if the scheme of the previous Conservative government with regard to unemployment insurance was not constitutional, there is no real reason why this government should not adopt some scheme that would be constitutional.

There is another scheme that has been adopted to a large extent in Great Britain—since the minister wants to refer to Great Britain—that is the housing scheme. We have had fantastic schemes of public buildings; I hope the present government will not resort to some of the schemes that the late government resorted to. We seem to be incapable of thinking in any other terms than the recognized channels of public expenditure, huge federal buildings, harbours, wharves, highways. From this corner we have urged again and again housing schemes, but not schemes which are dependent upon the loan companies, and which may to a large extent play into the hands of the loan companies. In any case the poor are not aided by such schemes because they cannot possibly obtain the funds to take advantage of them. We have urged a thoroughgoing housing scheme such as they have in Great Britain. Why cannot the government undertake that kind of thing? In nearly all our cities, as committees of this house have definitely reported, there is a great lack of proper housing accommodation, and we have never had a survey of the housing needs in rural districts, where conditions are even worse than they are in the cities. What is the government doing about that? If we adopted some such scheme as that we might get somewhere.

I hope I am mistaken, but I have been waiting here for three months, and as I see the situation to-day, the government are going on the general principle that if they have slightly lower tariffs, in some way or another foreign markets will open up; foreign trade will increase, and that will solve the problem. To go back to Great Britain, we find that a country which for generations had free trade was forced by economic conditions to abandon that policy and adopt another. Is it likely then that a lower tariff policy is going to solve worldwide problems such as that of unemployment? I cannot think so. It may be that the government—I will not say it wants this; I do not for a moment think it does—is banking on some sort of upheaval in Europe, thinking that if we could keep out of the struggle it might possibly benefit us economically. That might be a way out for Canada for the moment, though of course it would be temporary in character.

But failing some such catastrophe, how can we hope that this vast number of almost one

and a third million people now on relief are going to be provided for in the near future? And not only these people, but as anyone who moves about this country must know, there are tens of thousands of people who to-day are living in the homes of their fathers and mothers or being carried along by their relatives. Everywhere you go across the country you hear stories of that kind; every social worker will tell you the same thing. What is going to be done about this host of people who so far have not come on relief but who one of these days will inevitably be forced to do so? What are we going to do about the young people who are being turned out of our schools and universities? I do not for a moment suggest that the government are not interested in these matters. I hope the minister does not think I am accusing him of lack of interest, but I do accuse the government of not bringing forward a well defined plan that gives any indication whatever of being adequate to meet this situation which has so long faced us in this dominion and which is becoming more and more acute.

I say that it is becoming more and more acute, because while it may be all very well to talk of grants to the provinces and for the minister to base his estimates upon what has been given to the provinces in the past, we all know that the provinces are not in as good a position as they were a few years ago. We have the case of Alberta; we know the situation more or less in British Columbia, Saskatchewan, and even Manitoba, where many necessary services are being starved in order that their government may by almost desperate means come somewhere near to balancing their budgets. And not only that, but in the past the provinces have been able to devolve a great deal of this relief burden on the municipalities, and we know that the municipalities cannot much longer carry the load. It may be that car loadings show a little increase; it may be that a few more automobiles are being sold this year than other years; it may be that some companies are beginning to pay a little higher dividend; it may be that there is a little upward swing. But I submit that neither in the United States where we see to some extent similar conditions to what we have in Canada, nor in Canada itself is there any indication that within the next few years this upward swing is going to be big enough to lessen in any material degree this problem of unemployment.

For this reason I say that it is the responsibility of any government which is in power to bring some definite scheme before parliament. This should be not a mere scheme of doles such as we have had, not merely a scheme of public works such as we have had, but some much more comprehensive plan. Some of us have suggested the kind of work that has been undertaken in other countries; a number of speakers referred to measures undertaken in New Zealand, Australia, Sweden and elsewhere, that have shown at least a certain degree of success. Apparently the government has not considered any of these, but has simply fallen back on the old time emergency methods which we have had for a number of years past. When we finally come to this last part of the government's plan we find the whole thing is still hazy and indefinite. I do not know what more we can say. I should hope that my remarks might possibly lead the minister to divulge to this committee to a greater extent than he has done his own ideas as to what can be done in the next six months. I would urge that he give us some indication of what is to be done in October or November when the men come in from maintenance of way work, and when they are dismissed from the farms. I asked him a few days ago and I again ask him to-night what is to be done with those 5,000 single unemployed men in my own city who are not in camps but who are being fed daily out of the public purse. What is to be done with them? The minister has not indicated in the slightest that he has any plan for dealing with them.

What is to be done with the two or three thousand young people who are unemployed but who for the last few months have received special training in the technical schools of my own city? When the schools are closed these young people will be out on the streets. What is to be done with them? What is true of Winnipeg is true of Vancouver, Montreal, Toronto, and in fact any of our larger cities. What are we to do about this? I do not wish to delay the passing of the estimates; I do not wish to talk simply to be heard or for the sake of talking, not in the slightest. But I would say that the government, having assumed office, must accept responsibility for doing very much more than is indicated in any of the three measures under which they have given to the country their unemployment relief policy.

Mr. HAMILTON: A few remarks of the hon. member for South Renfrew (Mr. McCann) with regard to the trans-Canada highway leads me to think that I should make some observations. His point was that he felt expenditures of large sums of money on the trans-Canada highway were probably in-

advisable at this time, and that it would be better to deal with the feeders and sideroads running into that highway.

Coming from Sault Ste. Marie I am very much interested in the trans-Canada highway, and so that the minister and the government may have no misunderstanding I rise at this time to speak. The highway westerly from North Bay to the north shore of lake Superior until recently had not been finally designated as the trans-Canada highway. As a result of that situation, during the past several years when fairly large sums of money have been expended on construction of the trans-Canada highway no trans-Canada highway money, with the possible exception of a few dollars spent last winter, was spent on that portion of the road west of North Bay up to the White river terminus coming east from Port Arthur. May I point out that that portion of the road now known as the trans-Canada highway running from North Bay to Sault Ste. Marie, a distance of three hundred miles, runs through a fairly well settled territory and through the three cities of North Bay, Sudbury and Sault Ste. Marie.

The CHAIRMAN: I must draw the hon. member's attention to the fact that item 330 was carried this afternoon. Of course I am in the hands of the committee. The vote of $3,527,125 for the trans-Canada highway was passed, and in my opinion the remarks of the hon. member are out of order.

Mr. HAMILTON: May I point out that at that time the hon. member for South Renfrew was dealing with money already allocated and under agreement. I believe the minister suggested that with reference to new expenditures, with which I am now dealing, discussion might more properly be had on a vote having to do with other projects such as we are now discussing.

Mr. ROGERS: That is right.

Mr. HAMILTON: I shall be brief. I wish only to point out some facts so that the minister and government may not be under a misapprehension. In substance I agree with what the hon. member for South Renfrew said as to the inadvisability of spending large sums of money along the north shore of lake Superior at the present time. May I point out, however, that there are older portions of the highway on which that money could be expended, portions which pass through several constituencies where relief work is needed as urgently as in other sections of the dominion. I hope the government will not be steered off its course by the use of the term "trans-Canada highway." May I in passing observe that that section of the road from North Bay to Sault Ste. Marie will be a wonderful asset to the older part of not only Ontario but Quebec. Three first-class highways of the United States come to Sault Ste. Marie, tapping a large population to the south, and act as feeders for an extensive tourist traffic into Ontario and easterly into Quebec.

We know that to-day thousands of people will not enter Ontario and travel east into that province and also into Quebec because of the condition of the trunk road between North Bay and Sault Ste. Marie, a road which to-day is part of the trans-Canada highway. There are people in that section who need work as badly as any other people, and I merely urge the government not to be scared away simply because the road is named the trans-Canada highway. It also runs north of Sault Ste. Marie some sixty or seventy miles to an important mining area.

Mr. STIRLING: If I understand the minister correctly, this sum of nearly $10,000,000 is more or less an estimate, and is apparently—

Mr. ROGERS: We are restricted definitely to it.

Mr. STIRLING: —but an estimate with regard to the method in which it will be expended. It will have to be divided up under arrangements yet to be arrived at with the provinces, and expenditures will be so governed. I do not consider that explanation is satisfactory, in view of the fact that for nearly four weeks we have been waiting for these supplementary estimates. Speaking at the time the employment commission bill was under consideration, the Prime Minister said that a special bill which would give itemized explanations of expenditures to be made would be brought down. It seems to me that the estimate upon which the minister is basing his views is an expenditure which has been made by the late administration under a policy which was strongly condemned, namely that of the blank cheque. Because of expenditures made by the previous government in the last four or five years the minister is now of opinion that under the arrangement which will be arrived at with the provinces probably about $10,000,000 will be required to carry out undertakings with them. It seems to me reasonable to ask the minister to explain in what way the money will be expended and in what way he anticipates meeting the provincial governments for the purpose of discussing expenditures under this vote.

Mr. ROGERS: That is a reasonable request, and when it was put to me before I recognized it as reasonable. I sought to give

an answer which would satisfy hon. members. It will be noticed that this amount of money is to be expended in conjunction with another spending authority. In other words, it is impossible for us precisely to indicate the projects upon which it will be spent in any province, until we have reached an agreement with that province respecting joint relief expenditures, to which there would be attached a schedule of works to be constructed. Obviously until this estimate has been passed by the committee we cannot enter into agreements with the provinces. We do not know what amount of money will be available for the purpose.

I might point out, further, that during the past few weeks most of the provincial legislatures have been in session and it would have been difficult, if not impossible, for all the provincial governments to send their ministers of highways or public works to Ottawa in order to arrange such a schedule of works as is contemplated under this item.

Where the expenditures are to be made by the dominion government there is, I think, a careful and scrupulous regard for the established practice with respect to appropriations, but I think it is only fair to point out to the committee that under this vote we are dealing with joint expenditures, and it is impossible to give the details until we have arranged the agreements with the provinces. As a matter of fact, it will be within the memory of the committee that when the relief bill was introduced it contained a clause under which the government proposed to bring these agreements before the house, and we suggested that they should not become binding upon the dominion until they were approved by the house. In other words, we sought so far as it was within our power to bring the entire transaction into the full light of day, which, I think, is a desirable principle of public policy, but it was the view of hon. members not only on the opposite side but in all parts of the house that such a course would impose a grave handicap upon the government in dealing with this situation, and at the instance of members from various quarters of the house that particular clause was deleted.

My hon. friend has also asked as to the method of allocation among the various provinces. That question was put to me before and I sought to answer it as best I could. Looking back over the expenditures of the past five years I do not find any unvarying principle of distribution of the amount available for unemployment purposes. It is a matter of extreme difficulty to make any distribution upon the basis of need. One might say, for example, that fiscal need brings into your problem the necessity of examining the income of particular provinces and their taxable capacity, which in itself is a most complicated factor to determine. I know that from my own experience in trying to find some sort of composite index which would measure fiscal need in the various provinces. Therefore we are faced with the necessity of trying to bring about as fair and equitable a distribution of this amount as possible, being responsible at all times for any mistakes we may make in such a distribution.

May I direct attention to this further consideration? There are here, for example, items for agricultural settlement and resettlement. If one province, for instance, whose need with respect to relief is similar to that of another province, wished to adopt some method of land settlement as one way of meeting the situation, obviously that would have to be taken into account when we were apportioning some of this expenditure for works among the provinces, and yet in advance of our meeting with the provinces we are not in a position to know how far they will wish to deal with the situation upon a basis of land settlement, and how far they will wish to deal with it upon a basis of relief works so far as that might be facilitated by dominion contributions.

I hope I have made clear to hon. members that we have not put the item under this heading with any intention of concealing details from the committee. On the contrary we originally contemplated that the agreements with schedules attached would be submitted to the house. We are dealing here with a situation, let me remind the committee, which to my knowledge has not occurred before outside of special legislation, in constructing public works in conjunction with the province. It has been a simple matter to do this during the last few years under blank cheque legislation because you were concerned only with agreements and you were not obliged to make any estimate to the house of the amount to be expended. To the best of my knowledge this is the first case in which the dominion government proposes to enter into agreements of this kind with provinces for public works, outside the special legislation of 1919 by which the dominion contributed for highways and so forth.

Mr. BENNETT: I think the hon. gentleman is in error as to that. Under the provisions of the various relief acts that have been passed by this parliament, if he will be good enough to look at the reports of the commissioner of unemployment relief, he will find set out in detail the number of the agree-

ments, the sums paid by the provinces, by the municipalities, and by the dominion, and the sum total paid.

Mr. ROGERS: After the expenditure was made.

Mr. BENNETT: Yes.

Mr. ROGERS: But this is different.

Mr. BENNETT: I will come to the difference in a minute. In the act of 1930 the limit of expenditure was $20,000,000. The sum now before this committee in the last three items is substantially $20,000,000. The uses to which the money is to be put are exactly what they were in 1930. In 1931 no sum was stated. But now we have an item which approximates $10,000,000 and, as has been pointed out, we do not know to what purpose it is to be put. It is a $10,000,000 blank cheque so far as the payee is concerned as completely a blank cheque as were the appropriations made in times past, for the minister has stated that this represents the average sum expended, or thereabouts, during the last five years. Therefore without any appreciation of what the public interest demands, he has inserted in this item the average expended during the last five years, namely, substantially $10,000,000, and when he is asked how that sum is made up he is as unable to indicate how it is made up as was a former government that was charged with dealing with blank cheques to the detriment of the public treasury and the injury of the body politic. There is not the slightest difference in the world, and if there ever was a vindication by a succeeding government of the attitude taken by a former administration it is found in these estimates, whether it be for farm placement assistance or whether it be, as in this case, the sum of nearly $10,000,000 for public works. The minister has been unable to indicate to the committee how it is to be expended, on what particular projects, how much in any particular province, or whether it is to be for any particular purpose whatsoever. That is the situation. What is the difference between the statement of policy contained in an appropriation that the government may spend such sums as the governor in council may appropriate for entering into arrangements with provinces or otherwise, and the statement that we are going to spend $10,000,000, that being the average that was spent by the governor in council under what was called the blank cheque legislation. So whatever there may have been lacking of vindication in the past, the policy of the former government is clearly vindicated now when an expenditure that averaged $10,000,000 in the past is made the basis for appropriating nearly that sum for the current year. In other words, the minister has assumed that the discretion by the governor in council was so properly exercised during the long period of five years that he now adopts it as the standard for expenditure during the present year. That is the situation, and we might as well face it frankly. There is no getting away from it. There it is, and I am delighted that the minister has paid that tribute to the skill, the industry and the soundness of discretion exercised by his predecessor in making recommendations to council with respect to the expenditures in question. Nothing could more clearly indicate the soundness of the views then taken than that the expenditures made in the past should become the basis for the expenditures to be made during the present year.

I do not wholly agree with what the hon. gentleman has said as to the impossibility of being able to give some information, because a large number of projects, to use the word in the broad sense, are known to the department for months in advance. It is now nearly the month of May and obviously the government should be in a position to indicate what useful undertakings must be proceeded with during the next few months. Unless the provinces have changed—and it is possible they have; I recall having heard that with Liberal administrations in power in the provinces there is an entirely different attitude towards the federal administration from that which had previously prevailed, and, e converso, the attitude of the federal administration towards the provinces is entirely different; the provinces are presenting almost every week matters in respect of which they seek the assistance of the federal government. Unless the Ethiopian has changed his colour due to recent events in Abyssinia, or the leopard his spots, it would seem to me to be reasonably clear that the department must have on record large numbers of applications for assistance to the provinces in completing undertakings named and indicated.

It is true that the agreements have not been completed and, until they are, the minister is quite sound in saying that he cannot speak with authority; there is a possibility that there may never be an agreement. I agree to this at once, but I think some indication should be possible of the general intentions of the government with respect to the projects. There should be available some information in the general

terms that were afforded in days gone by, such as was indicated in the reports of the commissioner of unemployment relief during the last five years.

Mr. ROGERS: Applying always to the preceding year?

Mr. BENNETT: The hon. gentleman is entirely right; the report is a report of actual achievements and accomplishments, not a prospectus indicating what might be done. To use the language of a well known mercantile agency, it is a record and not a prospectus. That is quite true and I agree with the minister. What I am indicating is that in former years the minister was able to outline the general undertakings to which it was felt that the federal government might usefully give its assistance. For instance, the hon. member for Algoma West (Mr. Hamilton) raised the question to-night of the trans-Canada highway. As the chairman has said, this item has been passed, but still it arises incidentally and inferentially through the payment in aid given by the federal power to the provinces. This item was discussed in detail this afternoon and I shall not waste the time of the committee in discussing it further It will be recalled that we assisted in the construction of bridges, in the construction of main highways that were part of the trans-Canada and also in the construction of highways across the provinces, but I shall not weary the committee by referring to these in detail.

As the matter stands now, the minister has submitted to the committee an item amounting to nearly $10,000,000 and he has asked us to give him authority to fill in the names of the payees without indicating to parliament who the beneficiaries are to be and how the money is to be spent, except that it is to be spent in aid of undertakings agreed upon by arrangement between the provinces and the dominion. That opens dangerous avenues of escape and approach. The government may say: This is what the provinces want and we have agreed to give them some money. We meet with two difficulties. One arises out of the fact that the matter becomes political. Men in one province who are of one political faith have been denied the right to go to work. Furthermore, they have been told that the work would be apportioned in the ratio of the known voting proclivities of the men in the community. That is a matter of written record.

There is a second difficulty, one of which the minister is so fully aware that I shall not do more than merely mention it—the matter of accounting. It will be recalled that the government of the day being seized of the seriousness of the situation through representations made by interested parties, passed an order in council directing the auditor general to take complete control of the whole question. I have pointed out in this house time after time—and I do it again to-night—that when the matter was dealt with by the government in 1934, in consequence of what we had learned in 1933, we insisted that before a single dollar of federal money would be paid there should be a certificate by the municipality or the otherwise organized authority that the expenditure was correct; second, that the province should place its certificate upon the expenditure indicating its correctness, and, third, that a pre-audit certificate of at least one, and in some instances two of the officials in the auditor general's department should be upon the document before it went to the comptroller of the treasury. When the comptroller of the treasury issued his cheque he had behind him the certificates of, first, the auditor general's department; second, the province, and, third, the municipality or other organization responsible for the detailed expenditures.

I notice in the report made by the commissioner that we now have succeeded in making certain adjustments. Arrangements have been made to get back substantial sums of money; there is one case, amounting to some $700,000, which has not been disposed of. In connection with some expenditures the dominion has declined absolutely to pay them because the certificates were not forthcoming. We have deducted from one grant overpayments made in another so that the matter could be adjusted. The hon. gentleman will remember that in the report he tabled the other day there appears a reference to what is being done to adjust this difficulty. I do not point out these difficulties in any captious sense of criticism as the minister has adopted in connection with the provinces the course that we adopted, but he has not surrounded it as yet with the safeguards which, in my judgment in the light of our experience, are essential to prevent a recurrence of the conditions to which I have directed attention. The minister may very properly contend that this could not appear in the estimates; he may say that it is proposed to safeguard the position of the government in the agreements to be made, but a substantial sum of money is still claimed by those who are entitled to grants in aid. As the minister knows, we dealt only

with the provinces, but there are provincially created municipalities and organized entities by which the general investigation has shown that repayments should be made. In this regard I think the minister should explain to us just what has been done and is being done to overcome the difficulties to which I refer.

Mr. ROGERS: Perhaps at the outset I ought to refer to the charge which has been repeated several times this evening that we are having to resort to blank cheque legislation. I suppose one is justified in using that phrase "blank cheque legislation" in a qualified sense. I think, however, that my memory of the Hansard debates of other sessions is correct, and that on several occasions, when relief bills were before the house, speakers then on the opposition side asked the government to insert a sum, any sum, but a definite sum in order to avoid the blank cheque.

Mr. BENNETT: Yes, but that was the bill generally, the aggregate.

Mr. ROGERS: Quite so, and I am sure my right hon. friend will recall the statement of de Tocqueville that unlimited power is a bad and dangerous thing, and from the standpoint of the then opposition it was that lack of any limit whatever upon the spending power of the government which was the chief ground for criticism of the blank cheque legislation. Obviously it is at least doing violence to precision of language to suggest that these are blank cheques. They are definite appropriations for specified objects. My right hon. friend is entitled to complain that the object is not sufficiently specified, but he is not entitled to say that it is a blank cheque.

Mr. BENNETT: I say that it is blank as far as the payees are concerned.

Mr. ROGERS: So far as the payees are concerned? Well, certainly in some of these items it is quite beyond our power to indicate who the payees shall be.

Mr. BENNETT: So it was with us.

Mr. ROGERS: For instance, under relief settlement, or under any farm placement plan. My right hon. friend also referred to the fact that under the preceding legislation, in the report of the commissioner of unemployment relief there were set out the objects for which money had been expended. He was fair enough to recognize that this procedure was to some extent different from the course he is suggesting we should follow today. I well recall the debate upon the relief bill. It will be remembered that we had inserted in that bill a clause which provided that we should bring before the house for its approval the agreements with the provinces touching these very expenditures, with a schedule of works attached, and it was my right hon. friend and other hon. members who pointed out the extreme difficulty of that procedure and asked us to delete that clause. I remember that my right hon. friend in times past has quoted a principle of equity that one cannot approbate and reprobate at the same time, and it does seem that if, in the debate on the relief bill, he said it would be better from the standpoint of administration for us to drop this clause, he ought not to raise it to-night as an objection to this particular item. I think he will acknowledge the reasonableness of this contention, that never before has there been a situation in which we have been obliged to set out estimates providing for joint expenditures with the provinces. This is, I think I might acknowledge very frankly, one of the difficulties attached to a transition from blank cheque legislation to parliamentary control of expenditure.

Some hon. MEMBERS: Hear, hear.

Mr. BENNETT: I am pleased to hear the applause with which hon. gentlemen greet my rising, because it seems to me—

Mr. ELLIOTT (Middlesex): A coincidence.

Mr. BENNETT: —reasonably apparent that the minister has forgotten that the plea for the deletion of the provision in the statute came from his own side. He seems to forget that the hon. member for Vancouver-Burrard (Mr. McGeer) presented so strong a case that there was no answer, and the Prime Minister said, turning to his, shall I say, discontented supporters at the moment, that the provision should be dropped. I pointed out on the second reading of the bill how impossible it would be in practice to give effect to such a provision. I did so at some length, and I also referred to the matter later, but the speeches made by an opposition no more numerous than this have never been taken as having any effect upon a government that is so contemptuous of such an opposition.

Mr. ROGERS: They are very helpful sometimes.

Mr. BENNETT: But it must be that when those within their own ranks cry aloud, the government must give some little attention to their contentions.

Mr. MACKENZIE (Vancouver): That is the difference between us.

Mr. BENNETT: My hon. friend the Minister of National Defence and member for Vancouver Centre (Mr. Mackenzie) is a living example of the difference between being in office and being out of office. I am glad that he so willingly admits it, because, with a sense of humour that will not be denied, when he hears the hon. member for Rosthern (Mr. Tucker) and the hon. member for Vancouver-Burrard (Mr. McGeer) indicating to the house how easily money can be provided, it reminds him of the echo of an ancient past, the days when the Macmillan report was first published, and the creation of money but an incident of a well-spent day in the House of Commons. But at the moment I will only deny the soft impeachment that it was because of our representations that the Prime Minister moved that the section be dropped. Now that we have it on the word of the minister that it was, we may congratulate ourselves that we have been able to exercise that moral suasion upon the mind of the government which has not hitherto been apparent. May I however point out to the minister that I do not at all disagree with the observations he has made as to the desirability of the removal of that clause. I think it was apparent from the start that it could not have been made effective in a practical sense. But I think he has not followed me with quite his usual astuteness, for what I suggested was that this blank cheque which was complained of so bitterly resulted in an average expenditure of something like $10,000,000 per annum, and, according to the language used by the hon. gentleman, that is the basis of the $10,000,000 item in the appropriation bill. Therefore we have a complete vindication of the soundness of the discretion exercised, that it was not abused, but rather that it was exercised in such a way as to constitute so splendid an example that it is followed by the minister himself. I am glad to see that the humour of the situation has appealed even to his colleagues. I expected it would, because it is a humorous situation and one which, I think, the minister will be the first to realize.

Mr. HANSON: The blank cheque would not be of use this time, either.

Mr. BENNETT: The hon. member for Skeena (Mr. Hanson) suggests that a blank cheque would not be useful at this time. There are at least a hundred members I could name, on the other side, who would find it exceedingly useful at this time in their own constituencies and who would not be unwilling that it be used in those same constituencies. Those who are behind me do not desire that the blank cheque should be used in their constituencies at all; they have ample appropriations without it.

Mr. HANSON: That never was used in my constituency in the last five years.

Mr. BENNETT: So high was the regard of the late government for the exalted moral principles of the hon. gentleman against the use of a blank cheque that they would not think of its being so utilized. It would be such an offence to his sense of decency and morality in public life that no one would think of issuing a blank cheque for any expenditures in that particular section of the country. I am sure he thanks the late government for having thus respected his strong views on the matter. I am glad he realizes the humour of the situation. I am only pointing out that I agree that the minister could not, any more than we could, set out details of contemplated expenditures. But he could, as we did through the minister in the house, as the records will show, indicate in a general way what was intended. For instance, it has been asked whether it is proposed to utilize these moneys for what are called secondary roads or feeders. That question came up and was discussed in the house, and certain answers were given. I do not know whether it is the intention of the government to use any part of the money for the purpose of surfacing the roads with asphalt or concrete, but at any rate those questions were asked. I do not say that at that time the minister was able to do more than answer yes or no, but he did indicate that that would be so. When questions are asked, as they have been here, as to what might be done, possibly the minister might give a little further information as to what he contemplates, because he cannot be without some knowledge of what the provinces are endeavouring to secure from him. I can assure him that the demands will increase with the length of time which elapses before the agreements are made, and the sooner that $9,200,000 is exhausted in agreements the happier will be the face of the minister, because as long as there is a single dollar unappropriated by agreement, so long will there be an effort made to secure it. It may well be that by a limitation being thus placed upon the amount available it will be made easier for those charged with the responsibility for administration, but the sooner the names of the payees are filled in, with the limitation that the minister has suggested as to the amount that may be available, the sooner his troubles in that regard will cease and the happier will be his administration. I am only pointing out—and I return to it—that the minister admits that

his estimate of what he will require is based upon the average expenditure which has been made without limitation, thereby vindicating the soundness of the discretion exercised by his predecessor and the government of that day. The excellence of that discretion is indicated by the willingness of the minister to take it as the standard of his own expenditure.

Mr. TAYLOR (Nanaimo): At the outset I wish to express disappointment that the minister should have brought forward those labour figures for Great Britain. It was a specious argument, and if the minister recalls his economic history he will realize that the labour figures had nothing whatever to do with the Labour government but that they reflected the deflationary conditions accepted by Great Britain as a result of the recommendations of the federal reserve bank of the United States.

In the constituency of Nanaimo there are at least two major problems, and I propose to refer to both of them. We have several ghost towns in that constituency, small places that grew up around operating coal mines. Not forty miles away, in Vancouver, we have an infinite number of relief recipients. Would it not be possible for this government to make arrangements with the provincial government to reopen some of those mines, give employment to the one hundred per cent relief recipients in the ghost towns, and turn over the coal to relief recipients in Vancouver? If that is done, and done without encouraging profits to those who insert themselves into all the business of the government, it may be possible to establish the fact that relief recipients can be assisted to help themselves in some sort of cooperative fashion. The coal miners will dig the coal and the householders in another part of the country will receive that coal at the lowest possible figure for which it can be produced.

The other problem is the condition of the water supply of the city of Nanaimo. I want to direct attention to that, because Nanaimo is in a precarious situation at the present time. The water supply is brought to the city through wooden pipes, and that system is now out of date. The pipes have outlived their usefulness and may burst at any time. If they do burst a major catastrophe will strike the whole of Nanaimo. That city is asking for dominion and provincial assistance in rebuilding that water system, and the sum of $200,000, if set aside for the purpose, would provide work for a large number of relief recipients. I respectfully draw this suggestion to the attention of the minister.

Some hon. MEMBERS: Carried.

[Mr. Bennett.]

Mr. HEAPS: I do not see why there should be all this anxiety on the part of my Liberal friends to shout "carried" in connection with this item. Are they afraid to have the question of unemployment discussed on the floor of the house? I remember a time not so many years ago when they discussed unemployment for days and days. Then they never tired of discussing it, but all of a sudden there is this great anxiety to hush up discussion under this item and not to allow hon. members to say a word about the question of unemployment. After all, we must bear in mind that the present government have been in complete control now for a period of six months. They have had complete charge of the destinies of this nation; they have had an overwhelming majority in this house, amounting to almost three-quarters of the entire representation. The government can do almost as they wish, so it is up to them to devise ways and means of doing something about this perplexing problem of unemployment. For my Liberal friends to shout "carried" does nothing to help solve this problem. I do not think there is a Liberal member who did not discuss unemployment and the economic situation during the election campaign; I do not think there is a Liberal member who did not say that if his party came into office they would do something to deal with the crisis facing the country, but that is all changed now.

The minister was good enough to remind my colleague from Winnipeg North Centre about the situation in Great Britain between 1929 and 1931, pointing out that in 1929 unemployment amounted to approximately nine per cent, and that by 1931, when the Labour party went out of office, the situation had been aggravated to the extent that unemployment amounted to twenty-two per cent. Do I take that from the minister as an indication of his condemnation of the Labour party in Great Britain during those years?

Mr. ROGERS: My hon. friend has asked me a question. First of all, may I say that the figures I gave were percentages of unemployment among the insured work people in Great Britain by months from January 1929, to January, 1936.

Mr. HEAPS: January, 1931.

Mr. ROGERS: Those were the specific figures I gave, but my statement covered the whole period. Now, as to the question asked by my hon. friend. I gave those figures simply because I wished to bring home to hon. members sitting behind my hon. friend from Winnipeg North Centre the fact that

this problem of unemployment, in the experience of countries with Labour governments, has not been susceptible of immediate and successful solution. In the very nature of things it defies that type of solution; yet my hon. friends are continually asking us for action, never telling us what they mean by action apart from the spending of public money. If I may continue—

Miss MACPHAIL: Why not? the slogan was, "Vote King and get action."

Mr. ROGERS: We will take action, but it will be ordered action. I have no objection whatever to marching forward but I want to know where I am going. I want to know whether my next step is to be on firm ground or in quicksand, and I am not so sure that some hon. members are so anxious as to the direction in which they are going. I think there are two things of vital importance—

Miss MACPHAIL: Would the minister care to name the members to whom he refers, who are not anxious?

Mr. ROGERS: I said that they apparently are not anxious to find the direction before they move. We all know there are people who are willing to move swiftly without having a clear idea of their objective.

Mr. BENNETT: The United States trade agreement is an instance.

Mr. ROGERS: It seems to me that there are cases in which in the very nature of things we must see our way carefully before we proceed. In respect to this whole unemployment question may I remind hon. members opposite that we came into office during a fiscal year for which provision had already been made to March 31 as far as public works were concerned. The preceding administration made arrangements with respect to works designed to cover the entire period to March 31. Not only that, but some agreements were made with the provinces in July and September of last summer supplementary to the agreements originally made, and the arrangements with respect to direct relief were designed to continue during the entire year. We held a dominion-provincial conference and as a result we increased the direct grants in aid to the provinces by seventy-five per cent during the winter months. We went into the entire situation as carefully as we could with the provinces, and from that time to this I can assure hon. members that the whole problem has received our anxious consideration, as it would receive the anxious consideration of members in any part of the house were they in our place to-day.

Mr. TAYLOR (Nanaimo): Exactly.

Mr. ROGERS: And I do not feel that my hon. friends should suggest that because we have not done something spectacular we are not making progress. For my part I have much more faith in orderly progress than in swift and spasmodic action, particularly in regard to a matter fraught with serious danger in terms of human values, and I use that term in the same sense in which my hon. friends use it.

Some hon. MEMBERS: Hear, hear.

Mr. HEAPS: It is quite evident that what the Minister of Labour has just said meets with the approbation of his supporters, that is, that he stands for progress, orderly progress, moving in a certain direction. I am reminded of a little story of a wag who once went through a graveyard and saw on a tombstone, "Here lies Matilda—Follow me." And the wag wrote underneath:

To follow you I'm quite content,
But damned if I know which way you went.

That idea of following the minister may be all right, but some of us would like to know in what direction the government are going.

Mr. ROGERS: Going forward.

Mr. HEAPS: The minister says, "Going forward." The minister brought into the discussion the Labour party in Great Britain, and perhaps I might for a moment deal with what he said in that connection. The figures certainly did show an increase, from nine to twenty-two per cent I think he said, in about two years. But suppose I took the Liberal party in Canada between 1926 and 1930 as a criterion; the percentage of unemployed in 1926 and in 1930 would show a much greater increase.

Some hon. MEMBERS: No, no.

Mr. HEAPS: I wish some of the Liberal members would be patient. It is true that in 1930 the Liberal party could not see any unemployment in this country. Nevertheless it was there. By 1930 he had a serious unemployment situation, and it was on account of that serious situation that we had a change of government.

Mr. McLEAN (Melfort): How much was there?

Mr. HEAPS: Sufficient to cause a change of government.

Mr. McLEAN (Melfort): No.

Mr. HEAPS: Again in 1935 we still had sufficient unemployment in this country to cause another change of government.

Mr. MacNICOL: And there will be another change next election.

Mr. HEAPS: As the minister talks in terms of politics, perhaps I might remind him and other members of the Liberal party of what we saw throughout this country during the last election: "Vote for King and action."

Mr. MACKENZIE (Vancouver): And they got action.

Mr. HEAPS: And "King or chaos." Such were the slogans. I have before me a little card, of which hundreds of thousands were distributed, which says, "Vote Liberal for work with wages, security and progress."

Some hon. MEMBERS: Hear, hear.

Mr. HEAPS: If that is the amount of enthusiasm which the Liberal party can engender when $9,200,000 is provided to take care of about half a million unemployed in this country—

Mr. ROGERS: Oh, no; let me correct my hon. friend. He must be aware that this statement is not correct. There is in these supplementary estimates, roughly $80,000,000 —I think I am understating it—wholly for construction works or for relief purposes. That is not $9,200,000.

Mr. HEAPS: No, that is one item in the total amount. But this is for relief work, and parts of these appropriations are unspent parts of last year's estimates.

Mr. ROGERS: Not of this.

Mr. HEAPS: Is this all new?

Mr. ROGERS: Yes, $9,200,000.

Mr. HEAPS: But I mean all the $80,000,000. Part of that was voted by parliament last year, I think?

Mr. ROGERS: Some small part of it, yes.

Mr. BENNETT: A large portion.

Mr. HEAPS: I think it is recognized by the government and even by the Minister of Labour that no amount of public works which the government may undertake is in itself a solution of the problem of unemployment. But he accuses some of us of wanting to go along too rapidly and not seeing where we are going.

[Mr. M. McLean.]

Mr. ROGERS: No, wanting us to go too rapidly.

Mr. HEAPS: They could not do such a thing. I would like them to go a little more rapidly than they are going. We have had this vote of $9,000,000 before the committee for about one hour, and some Liberal members think there has been too much talk on the item. I think my hon. friends of the Liberal party might show a little more patience, for those of the group to which I belong do not indulge in these interruptions very often. But, after all, if we differ from the Minister of Labour in our attitude towards this problem it is because we have a different understanding of the situation. I do not for a moment claim that the minister and other members of the Liberal party are individually not sympathetic towards the unemployed, as I am. It is not a question of sympathy; we are sent here because we have these different viewpoints, and this evening I am expressing the viewpoint of those who sent me here. Those whom I represent think the government are not moving quickly enough in dealing with this problem. During the past six months there has been no diminution worth talking about in the number of unemployed in this country, and I venture to assert that when the House of Commons meets again a year hence we shall still be faced with just as great an unemployment problem as exists at the present time, for the simple reason that no amount of money spent in temporary public works is anything more than a mere palliative. We are asking the government to give something more than a palliative for unemployment.

Mr. VIEN: What, in particular?

Mr. HEAPS: We have made all kinds of suggestions, and they have fallen on barren ground. I moved a motion to pension people who had reached sixty years of age, and to take them out of industry. The Liberal party was told by its Minister of Finance to vote the motion down. Of course he said, "Where is the money to come from?" I am asking the same question: Where will this $80,000,000 come from?

Mr. McLEAN (Melfort): That is less than $500,000,000.

Mr. HEAPS: My hon. friend knows better than that. He knows he is misleading the committee and misleading his own constituents, as I happen to know.

Mr. McLEAN (Melfort): Order. I would ask that the hon. member be asked to take

that back. He knows he is not within the rules of the house when he states that I know I am misleading the committee.

Mr. BENNETT: He did not say you knew.

Mr. HEAPS: I do not wish to say anything that might hurt the feelings of the hon. member.

Mr. McLEAN (Melfort): It is not a question of feelings, at all.

Mr. HEAPS: I wonder that some of these hon. members so unruly to-night would not be patient.

Mr. McLEAN (Melfort): Order.

Mr. HEAPS: I am just—

Mr. McLEAN (Melfort): Order.

The CHAIRMAN: I think the hon. member for Winnipeg North had better withdraw his remarks. I know he wishes to conduct this debate on a high plane, and I think he will do so.

Mr. HEAPS: Of course I do not wish to do anything that transgresses the rules of the house.

Mr. McLEAN (Melfort): Withdraw.

An hon. MEMBER: Withdraw.

Mr. HEAPS: Oh, can you be quiet a minute! If I have said anything that transgresses the rules of the house, I certainly withdraw it. At the same time if the hon. member does not know better, he ought to know better than to make the statement he did.

Mr. McLEAN (Melfort): I do not think that is a proper withdrawal, under the rules of the house.

Mr. BENNETT: Of course it is.

Mr. McLEAN (Melfort): The withdrawal should be made unreservedly by the hon. member, who knows better than to say the things he has just said.

Mr. BENNETT: On the point of order may I say that the hon. member for Melfort has just charged the hon. member for Winnipeg North with knowing better.

Mr. McLEAN (Melfort): Knowing what the leader of the opposition has neglected to point out, namely that I am charging the hon. member with not being within the rules of the house, and with knowing that he is not within the rules of the house when he does not withdraw the charge unreservedly.

Mr. HEAPS: I would not like to hurt the feelings of the hon. member for Melfort.

Mr. McLEAN (Melfort): It is not a case of feelings.

Mr. HEAPS: I withdraw the remark unreservedly and unqualifiedly. As regards the $500,000,000 which the hon. member mentioned. may I say that the figure is entirely erroneous, and if at some time the hon. member for Melfort will take a moment's time to go over the figure he will find how absolutely wrong he really is.

Mr. McLEAN (Melfort): $522,000,000 is the correct figure.

Mr. HEAPS: I will not argue the matter. The hon. member is beyond me.

I wish to point out the viewpoints held by some hon. members, which differ from those held by hon. members in this corner of the house. May I point out also that when asked for concrete proposals some of us have suggested the pensioning of people at sixty years of age, and a much shorter working day. I know that to some hon. members the proposal for a six hour work day may seem peculiar, and I can see some who hold up their hands in holy horror when they think of people working for only six hours each day. I observe, however, that in the United States people as respectable as the president are advocating a six hour day for men engaged in industry, so that in some way the country would be in a position to absorb the unemployed into useful occupations. Whether or not this government likes it, or whether or not future governments like it, the shorter work day, increased purchasing power and pensioning at sixty years of age will come about, in spite of governments. There is in the ranks of the Liberal party and in the ranks of other parties in this chamber a growing conviction that the pensionable age of seventy will have to be reduced before long. More than one Liberal member has come to me and told me that he would like to support a proposal of that kind. A shorter work day is something which will have to be made effective before very long.

It is true that the government attempted to put on the statute books legislation dealing with the eight hour day, believing that that shorter day would absorb a great many people into industry. Even the eight hour day is obsolete, although many people engaged in certain occupations are compelled to work much longer hours. When hon. members point their fingers at our group and ask us what we are going to do under the circumstances, I say to them that I have enumerated just two or three items in our policy. May I say, further, that although there may be

difficulties in bringing about the changes I have suggested, it is also extremely difficult to continue in the same way as we are going at the present time. Because when we have, as at present, approximately one half million people in the ranks of the unemployed, and when we have no hope of their being absorbed into industry, what is the future of the country going to be? What are the youth of Canada going to do, hundreds of thousands of whom have never done a day's work in their lives, many of whom are unable to find useful employment and to become useful citizens? Is there in the program offered by the government up to the present time anything which will bring about more or less of a permanent solution of the unemployment problem? I do not think so.

The government has enunciated three items or three policies in its program for the relief of unemployment. One is the employment commission; the second is the expansion of trade and the third is a relief program. I do not think the first solution, namely the employment commission, will solve the problem of unemployment. In discussing the work of the commission I believe the minister has said that it would be temporary and that it would attempt to liquidate the problem in so far as it affected the provinces. Then, public works are only a temporary remedy; they bring about only a measure of temporary relief. As has been pointed out by the leader of the opposition, the money provided for public works in the present year is no more than was provided in years gone by, yet in those cities or districts where the money was spent only a very small proportion of the men out of work were absorbed.

So far as the next item, namely expansion of trade, is concerned, I am afraid that it is one thing to be in favour of a policy and another thing to carry it out. So, while I would do all within my power to assist a government in providing or finding markets abroad, I must contend that the first people who ought to be supplied with the necessities of life are not those who live in other parts of the world but those living right here in Canada. There is no greater potential market for the goods we produce than the one here at home. Why talk about sending our wheat or other surplus commodities to the people of other nations, when there is such a great demand among our own unemployed for the things we have in Canada which should be made available to them. One of the first actions of the government should be to attempt to bridge the gap between consumption and production, and until a government attacks the problem of bringing about a reasonable equality between consumption and production, meanwhile maintaining production at a high level, I claim there can be no solution for the problem of unemployment. For until such time as we have reasonable equality, maintaining a high level of production and a high level of consumption, I say that the government is travelling in the wrong direction in its efforts to meet the unemployment problem.

The problem as we have it to-day is by no means a temporary one, and we should not as a parliament attempt to deal with it as such, for it is a problem which has persisted in maintaining itself for a period now of approximately six years, after the methods of relief and public works have been applied and it has not yielded to any form of treatment. The government, I say, should therefore learn from past experience and turn their efforts in a completely different direction. But they are not doing that. If the government were opening new avenues of dealing with the unemployment problem we might look on the measures which they are now adopting with a good deal more sympathy than we do now, even though I do say that it is essential in the circumstances to have these appropriations passed in order to meet the unemployment situation which to-day exists. But the unemployment problem instead of being temporary in nature is, I believe, now a permanent feature of the economic situation as it has now developed in this and other countries. In the United States they have spent billions upon billions of dollars in attempting to deal with the unemployment problem, and it is quite true that the billions and billions of dollars they have pumped into their economic life might have had the effect of giving renewed life to the industries of that country, but in spite of that fact the moment they stopped pumping money into the economic life of the country there was a recession in trade. Even in Canada the increase in the volume of trade that has manifested itself has been due to the amount of public expenditures which the previous government had undertaken.

As I said a moment ago, if the government are anxious to deal with the unemployment problem in a way that is fundamental they have to depart from the old ways of dealing with it and to try something different and apart from public works and apart from relief. They have to get away from the idea that markets are open for the expansion of trade. I am quite sure that the previous govern-

ment were just as anxious as the present one, even though they may have adopted an entirely different policy, for an expansion of our trade. Their intention was just as honest and just as sincere as that of the present government. I had hoped that the minister would have adopted something new or at least departed from the old line policy and, as was promised so frequently during the past election, given the people of this country some hope of future economic security. But in all that the government have attempted in the past six months since they have been in office there is nothing very much different from what the previous government attempted.

Mr. ROGERS: Does not my hon. friend think in dealing with this question either here or elsewhere it is of some value to profit from experience? He has suggested a departure into some new way. I have no objection to some new way provided I can see where it leads.

Mr. HEAPS: One is bound sometimes to undertake experiments and blaze a new trail. If we had always followed the policy which the minister now commends no progress whatever would have been made. It is only by people taking chances, by scientists taking chances, by medical science and every other form of science taking chances, that any progress is made, and the same principle holds in economics. If we are going to make progress we shall be compelled to blaze a new trail and travel in a new direction even in the sphere of economics because the old order has completely failed. It has not found a way out; it has not offered a solution, and what is more it has not given and does not give to-day a ray of hope to the hundreds of thousands of people in this dominion who are out of work.

I know the minister is just as anxious as I am or as any other hon. member is to do something for the unemployed in this country. No one for a moment doubts his motives. I never have doubted for a moment the motives and good intentions of the minister, but I feel that his methods and the methods of the government are entirely inadequate to cope with the serious situation which has developed and which faces us in Canada to-day. Possibly my plea to the minister may not fall at this time on fertile ground. I know that his friends in his own city have a high regard for the Minister of Labour and even they are expecting a great deal of him. I also have a high personal regard for the Minister of Labour, as I think the members of the house in general have, and I have a great deal of sympathy for him because he has been put into a position in the government where he has the most difficult problem to deal with of any minister bar none. We all realize that, and if to-day we offer criticism it is not criticism of the minister personally; it is criticism of the action of the government for not attempting to blaze a new trail, because in my opinion only by blazing new trails shall we arrive at some measure of solution of this unemployment problem.

The minister dealt with the position of Great Britain from 1929 to 1931. I assume he must be cognizant of what the government of New Zealand is doing at the present time. They have an unemployment situation to face, but have they said: We are going to maintain and follow the trails of the old parties? No, they have decided to blaze a new trail, to travel in an entirely new direction. Do they know where they are going? I assume they do, and even if they do make mistakes I would far rather the government make mistakes in attempting to do something than do very little and make no mistakes at all.

Mr. BENNETT: The minister in the course of his observations made a statement that impels me to rise for the purpose of directing the attention of some of the new members of the house to the fact that for five years we sat on the treasury benches and we listened to attacks, not for hours but for days, against measures just such as those which are now being recommended to this committee. The minister suggested that there were some who did not desire to see ordered progress. He was not in the house in those days, but he must recall the dark days of 1932 and 1933, when we were confronted with conditions which this country had to face, and did we have a word of sympathy, a word of appreciation, a word of understanding? Not one word of helpful criticism or constructive assistance. We were attacked not only for hours but for days and days and days, just because we were doing what the minister is doing now, introducing identical measures.

Mr. ROGERS: Oh, no.

Mr. BENNETT: So far as the measures are concerned, yes, but as to limitation on the amount to be spent, no. I will name the measures one after another. Farm placement has been in force since 1932, and before. It was introduced by the former government and carried into effect. Take the question of grants in aid to provinces; take the question

of public works; take the 1930 appropriation of $20,000,000; take assistance for direct relief—all this we were carrying out.

Mr. ROGERS: But under a blank cheque.

Mr. BENNETT: Certainly, because conditions in the country were such that we did not desire to place a limitation upon what we might be able to do. We will not go into that ground, but the fact is that the measures were the same as those to which the hon. member for Winnipeg North has just referred. When I recall the bitterness of the attacks and the personal abuse that took place of members of the government; when I recall what my colleagues had to meet, I think the minister is ill-advised when he states that there are members of this house who do not desire to see progress made in an ordered way. We will yield neither to him nor to anyone else in our desire to see this country get out of the difficulties it is now in. None of us will yield for a single moment to him in that desire, and when he suggests that there are members of this house who, because of political or other reasons, are not anxious to see his efforts succeed—

Mr. ROGERS: When was that statement made, and where, if I may ask?

Mr. BENNETT: Just a few moments ago.

Mr. ROGERS: I am quite willing to leave it to my right hon. friend to read Hansard to-morrow.

Mr. BENNETT: It was made this evening.

Mr. ROGERS: I think he will find that no statement of that kind came from me.

Mr. BENNETT: The statement was that he was not so sure there were not those in the house who did not share that view.

Mr. ROGERS: That is not the statement just made by my right hon. friend.

Mr. BENNETT: I certainly do not want to misrepresent the hon. gentleman. I listened with great interest to what he was saying, as I always do, and I understood him to say that we were going forward in an ordered way; that if we did not go forward we could not make the progress we desired. As he said before, activity is not progress. He said he was not quite sure that there were not members of this house who did not share his view and who did not desire to see his efforts towards ordered progress succeed.

Mr. ROGERS: I am sure that is not the suggestion made by my right hon. friend a moment ago.

Mr. BENNETT: That is what I was endeavouring to say. I do not desire in any sense to misrepresent the hon. gentleman, far from it. I heard the burst of applause which followed what was said by the minister because in the discussion of this item he was assuming an attitude of to some extent resenting criticism. I could not help thinking that these were the same men——not all of them, but the same party—who sat here hour after hour and day after day, condemning the putting into effect, except as to the blank cheque, of the very same policies this committee is now asked to adopt. The minister suggests that there should be a sympathetic attitude—that is really the sense of his remarks—on the part of all members of this committee to men who are confronted for the first time with a new problem. Permit me to remind him that in August, 1930, the government was confronted with a new problem. Men who were inexperienced, who had not been prime minister of the country for eight or nine years, were faced with this problem. The statement is made as to cooperation not existing in this chamber, but I can remember a statement made just prior to the time the last Liberal budget was delivered; I can remember how the budget itself was framed and based upon the assumption that this country was going forward with continuous surpluses. The minister now suggests that we should take a reasonable and proper attitude towards the matter, and he is quite right. It was for that we pleaded; that was what we did not receive.

There was a change of government, and that change of government was predicated upon immediate action being taken to remedy what was represented as being an improper attitude of the then government towards this problem. Some of us have pointed out that you are following the same course as that of your predecessors, except that you have placed a limitation upon your bounty and upon your expenditures. It does not come with good grace when you complain that those who sit opposite point out that there has been no change except as to the extent to which you have limited your measures of relief. In other words, you have said to parliament, restrict and restrain, and the Prime Minister (Mr. Mackenzie King) has given the reason why. I am not going to discuss this. There were moments of great peril and great emergency in 1932 and we did not place a limitation upon anything except direct relief.

This government in its wisdom has placed a limitation upon the amounts that may be expended. Is that going to be a solution of the relief problem? Is that a measure of relief? Is that a new policy in connection with relief? Will that provide employment? Will that assist even one man to supply his

family with food and clothing? Will that give any of these men decent jobs? Will any of these things be done by placing a limitation upon it? I think not. I rose to-night merely to point out these matters and to direct attention to the continued criticism and almost merciless attacks which were made upon those charged with responsibility. We cannot be blamed for asking questions, for trying to obtain information as to the government's new policy. I agree with the minister when he says that he should not be blamed for profiting by the experience of the past. It is a matter of great gratification to us to realize that he has placed the imprimatur of his high approval upon our experience.

Mr. ROGERS: I would not for one moment seek to deprive the right hon. gentleman of any solace of vindication which he is able to discover in the policies we have adopted However I think it should be brought to the attention of the committee that when the previous opposition took exception to the policies followed by the right hon. gentleman and his followers, it was because of the unlimited powers which were not only given, but exercised in a large measure under the relief acts of that period. I hold in my hand a statement consisting of three pages outlining the various undertakings which were entered into under the blank cheque provisions of the relief legislation. I think my right hon. friend will recognize that in my whole handling of this unemployment question, I have sought to avoid recriminations.

Mr. BENNETT: I agree with that.

Mr. ROGERS: I still intend to do so because it seems to me that the problem is too grave for partisan controversy. I should like also to correct any idea that I resent criticism. I do not resent criticism. As a matter of fact I think anyone entering the Department of Labour at the present time should expect criticism. He should be grateful for it when it is constructive. Even when it is not, he should realize that his reasoning is by no means infallible, and I can assure hon. members that the various suggestions which have been brought forward in these discussions will receive such consideration as we are able to give them. This problem is one which deserves the earnest attention, not only of this government but of this parliament.

Mr. BENNETT: And of the people of Canada.

Mr. ROGERS: And of the people of Canada, and I hope that we may continue to treat it in that way.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

---

## Friday, May 1, 1936

The house met at three o'clock.

### RULING OF MR. SPEAKER

ON POINT RESPECTING STATEMENT MADE BY THE HONOURABLE MEMBER FOR TÉMISCOUATA

Mr. SPEAKER: On Monday last the hon. member for Témiscouata (Mr. Pouliot) was asked by me, as Speaker of this house, to withdraw a statement which he made concerning the leader of the opposition (Mr. Bennett) and which the right hon. gentleman denied. The hon. member utterly refused to conform to my ruling and went as far as to defy the chair by saying:

> If I am wrong, I will withdraw; if I am not wrong, I will not withdraw.... I will see the book before withdrawing.

He walked out of the house while repeating this statement. In doing so he offended not only against parliamentary practice but also against the proprieties of the House of Commons.

It is my duty as Speaker to keep intact the rules of debate and to safeguard the dignity of the Chair. I have waited a few days before taking action because I felt the hon. member for Témiscouata would realize the gravity of his conduct and take the first opportunity to make the withdrawal asked by the chair.

I note in the official debates that he was willing to withdraw his statement in committee of the whole yesterday but was prevented from doing so by the chairman who rightly decided that, the offence having been committed in the house, retraction must be made when the Speaker is in the chair.

As a refusal to yield to the Speaker's authority is a serious matter which cannot be overlooked, I must insist on the hon. member for Témiscouata withdrawing the statement he made regarding the right hon. leader of the opposition, and I trust that in his desire to ensure the true observance of parliamentary practice he will do so in good grace. Unfortunately I do not see the hon. member in his seat, but I hope the next occasion he is in the house he will abide by my ruling and make a retraction accordingly.

## THE BUDGET

### ANNUAL FINANCIAL STATEMENT OF THE MINISTER OF FINANCE

Hon. CHARLES A. DUNNING (Minister of Finance) moved:

That Mr. Speaker do now leave the chair for the house to go into committee of ways and means.

He said: Mr. Speaker, I rise to address you to-day, sir, not only with a due sense of the high privilege which is mine, but also with a deeper sense of grave responsibility than I have ever felt before. In times such as these through which we are passing, the responsibility of endeavouring to place before the house and the people of this country a clear and complete statement of the economic position of Canada, the facts regarding our governmental finances, and proposals for meeting the situation thus revealed for the present fiscal year, is unusually great. I know I shall not ask in vain for the sympathetic attention of all my fellow members, although the presentation of figures will inevitably be rather trying to the patience of the house.

Before dealing with the government accounts I propose to survey briefly the recent trends of business and trade in Canada.

The most welcome feature in the fiscal year which has just closed has been what it indicates of a movement toward recovery. I do not wish to exaggerate the extent of that recovery, for to those who are charged with responsibilities of government in these hard days the distance yet to go and the problems still to be solved are the features of our economic record which are most impressive—and at the same time most distressing. Nevertheless, one cannot view the picture broadly without realizing that improvement—however gradual—is real and steady, and that the general undertone is one of definite strength. In spite of prevailing uncertainties in the international political outlook and the persistence of extreme nationalistic policies, the pressure of the economic forces making for recovery continues. These forces may be retarded but they appear now to be sufficiently powerful to make continuing progress, unless war, the great destroyer, should again intervene.

Analysis of the Canadian figures indicates that our past gains are being consolidated and that the upward swing of the business cycle is currently establishing higher levels of activity generally throughout the industrial and commercial field. The index of the physical volume of business compiled by the Dominion Bureau of Statistics to indicate the broad movements of economic activity, stood at 103·3 in March of this year as compared with 94·2 for March of last year. This is an improvement of approximately 10 per cent. However, to appreciate fully the significance of this improvement, one should compare the present level of 103·3 with the figure 67·0 which was the level recorded at the low point of the depression in February, 1933. In other words, the increase during this period has been over 54 per cent. The average level of this index in each of the past three calendar years was 79·7, 94·2 and 102·4. These increases are impressive, particularly when one recalls that this index measures the physical volume of output in nearly all our leading industries as well as freight traffic on our railways, building activity and domestic trade.

While I desire to avoid complicated statistics as far as possible, it is necessary to refer to the progress made by a few of the more important Canadian industrial groups.

For the first three months of this calendar year, 1936, manufacturing of all kinds showed an average expansion of 8·5 per cent over the first quarter of 1935. Within this broad field, the substantial improvement in the output of the primary iron and steel industry is particularly heartening. In the latter half of 1935, this industry showed striking advances, steel output increasing 23 per cent and pig iron 48 per cent over 1934, and the improvement was continued during the first quarter of 1936, notably in January. This, in itself, is important, but it is especially significant as indicating a broadening out of the recovery movement into the heavy or durable goods industries. The construction industry, while still operating on abnormally low levels, enjoyed substantial percentage gains in 1935 over 1934, and the present outlook for building appears to be the best in several years.

The forestry group of industries showed marked expansion in 1935. Lumber production on the Pacific coast was about 20 per cent greater than in 1934 and reached the highest point since 1929. Shingles found better markets abroad and exports increased 96 per cent. The newsprint industry, although still beset with abnormally low prices and financial difficulties, increased production to new record levels. Perhaps the most satisfactory evidence of improvement in this whole group of industries is found in the increase of employment afforded by the industry—8 per cent in lumbering and 4 per cent in pulp and paper plants.

The mineral industry continues to establish new records of output. Canada's mineral output, valued at over 308 million dollars in 1935, recorded a gain of 11 per cent over the previous year and was only 1 per cent below the record year 1929 when prices for most metals were higher. Production of gold,

copper, nickel, zinc and several of the minor metals made new high records. Total output of gold amounted to 3,283,000 fine ounces with a total value at current market prices of nearly $115,000,000. Increase in mineral output continued unabated during the first quarter of this year. In February, for instance, the export of copper was greater than in any other February, and exports of nickel exceeded any other month in history, the bureau's index standing at 490·2 as compared with 317·9 in February, 1935.

Unfortunately, our most important primary industry cannot boast such results. Agriculture has again suffered from climatic hazards, restricted markets and low prices. According to the bureau's estimates, total farm revenue in 1935 amounted to $943,081,000, an increase of less than one per cent as compared with the previous year. Most disappointing was an 8 per cent decline in the value of the principal field crops, chiefly as a result of the price factor. Wheat prices were generally higher than in 1934, but the low grading resulting from rust and frost reduced the value of the crop to about that of the previous year. Increases in yield of oats and barley were more than offset by reduced prices. On the other hand, the contribution of animal products to farm purchasing power more than made up for the loss in field crops. The live stock industry showed considerable improvement. Higher marketings of cattle and better prices increased the value of live stock sales in 1935 by 22 per cent. Milk prices improved somewhat and exports of hog products to Great Britain expanded. The prairie provinces shared in the better returns from cattle and milk and a more uniform distribution of farm income prevailed than in 1934. In this connection I may point out that the advantages of access to wider markets to the south are already being realized. Three months' operation of the recent trade treaty offers evidence of its value to the farmers of this country. Every step which helps to provide markets for agriculture brings nearer that day when the Canadian farmer, receiving more for his products than it costs to produce them, will once more provide, through the stimulus of his purchasing power, a sound basis for national prosperity.

My colleague, the Minister of Labour (Mr. Rogers), has recently placed on Hansard comprehensive statistics in regard to the numbers of unemployed in various classifications. One of the most disappointing features of the business improvement so far is that the numbers of those on relief do not decline at the same pace as business activity recovers. The causes of this are chiefly to be found in the continuing growth of population bringing annually a new supply of workers into the industrial field, the customary initial effects of invention of new machines and processes, the gradual decline in the number of those unemployed or dependent who are taken care of by charity or by relatives, and the surplus labour power employed by many corporations which preferred to retain redundant staff or to work short time rather than to dismiss employees during the years of depression.

While for these reasons, expanding employment makes only slow progress in reducing the numbers on the relief rolls, nevertheless the increase in employment appears to be real and substantial. The bureau of statistics tabulates monthly statements on employment from over 9,000 of the larger firms engaged in manufacturing, logging, mining, transportation, communications, construction and maintenance, services and trade, and employing some 45 per cent of the total persons at work in all industries. From 93·4 on April 1, 1935, the index for all industries rose to a peak of 107·7 on November 1, an increase of 15·3 per cent, and with the usual seasonal decline during the winter months the index stood at 97·4 on April 1 this year, an increase of 4·3 per cent over April 1 a year ago. The index for manufacturing industries rose 10·2 per cent from April to November and on April 1 this year was still about 8 per cent above the level of the same date in 1935.

Supplementing this information it is encouraging to note from data published by the Department of Labour that remuneration to wage earners in 1935 was greater than in 1934 as a result of increases in various industries and localities. Part time and short time work were less prevalent. In logging, wages advanced generally throughout the maritime provinces and Quebec, while in Ontario and British Columbia rates had risen considerably in 1934. In coal mining, wages increased appreciably in Nova Scotia and Alberta, and there were some increases in metal mining wages. Improvement was also witnessed in manufacturing, particularly in clothing and furniture factories. Rates were raised in the construction trades in Quebec and Ontario, and railway wage rates also increased. Longshoremen's wages rose in most of the ocean ports and in some of the lake ports. Common factory labour was up 2·4 per cent, miscellaneous factory trades 2·3 per cent, and logging and sawmilling 5 per cent.

One of the most important signs of a more healthy business condition is that industrial and commercial earnings are continuing to show improvement. An analysis of the record of earnings of 241 leading Canadian corporations discloses that net earnings are about 8 per cent greater for the latest fiscal year

than for the previous fiscal period. When business is showing an increasing scale of earnings there are excellent grounds for anticipating further industrial and commercial improvement with increased volume of employment.

A very interesting feature of our Canadian economy is the remarkable degree of stability in the price level during the last two years. For March the bureau's index was 72·4 as compared with 71·9 a year ago, and since February, 1935, the range of variation from the line of 72 per cent of the average level of prices during 1926 has been extremely small. Further progress, however, was made during the year in correcting some of the disparities between various types of prices created by the drastic fall in the price level during the early years of the depression. One important feature of this corrective process was that farm product prices, particularly the prices of animal products, improved more rapidly than the general level. It is of vital importance that this corrective process should continue.

One price whose falling tendency is watched with considerable enthusiasm in many quarters is the cost of money; in other words, the rate of interest. In this case, of course, the decline is a favourable factor. This factor is usually measured by the yield on long term bonds. The bureau computes an index of the yield on long term Dominion of Canada bonds, using the average monthly yield for 1926 as the base or 100. The course of this index during the past year provides an interesting record of the investor's reaction to enactments or threatened enactments by provincial legislatures, to administrative decisions, to official pronouncements by radio or in the press or on the public platform, and to the manifold other hazards that may affect the capital markets. It bears eloquent testimony to the oft-repeated saying that capital is timid. Beginning at 70·9 in January the index of interest rates rose to 73·2 in February, dropped to 71·4 in March, rose to 72·2 in April, declined to 71·4 in May, rose to 73·4 in June, declined to 71·6 in August, then rose sharply to 79·8 in September, and thereafter with a slight interruption in December dropped steadily to 69·9 in March, the latest month for which the index is available. The March index is the lowest rate of interest figure recorded since the bureau began compiling this series in 1919 and probably represents the lowest yield on long term funds in the history of our country. Considering also the steady decline in the yield on our three-months treasury bills—our latest issue of these bills was sold on April 15th on a yield basis of approximately seven-eighths of one per cent—and I should interject here that another issue was sold yesterday at the slightly higher rate, if my memory serves me correctly, of just over nine-tenths of one per cent per annum—we have ample evidence of the progress which the dominion has made in securing that stimulus to economic recovery through low interest rates which has been so important a factor in the United Kingdom.

Unfortunately, these low rates are not available to all borrowers, particularly the most needy ones who are not usually considered the most credit-worthy. Nevertheless the low rates are beginning to permeate the interest rate structure as a whole. One evidence of this is the increasing volume of security flotations, not only by governments but also by private corporations, both for refunding and for new capital purposes. In 1935 the total volume of new issues offered has been estimated at 571 million dollars, an increase of 83 million dollars over 1934. Of this total, 325 million dollars were for refunding and the balance for new capital purposes. During the first quarter of this year, activity was greatly accelerated. In this period total new Canadian bond financing amounted to 241 million dollars, an increase of 180 million dollars over the first quarter of 1934. Of this total 70 million dollars were for refunding purposes. It is also significant that financing by corporations accounted for 105 million dollars or over 43 per cent of the financing of the first quarter of 1936 compared with 9 million dollars or less than 15 per cent for the first quarter of last year.

One factor retarding the full revival of confidence and the healthy functioning of the capital markets has been the cloud of uncertainty which has been overhanging the financial position of several of the provinces. It is revealing no secret to say that the credit of the four western provinces has been maintained during the last few years only by the financial support of the dominion. Despite the efforts—in some cases, the heroic efforts—of these provinces to cut expenditures and increase revenues, the burden of unemployment relief added to heavy interest charges on outstanding debt has been so heavy and the taxpaying ability of the people reduced so drastically by the economic conditions which prevailed that it has been impossible to provide out of taxes for the cost of unemployment relief, and even in some cases for a portion of ordinary governmental expenditures. In view, in part, of their own financial position and in part of conditions in the investment market, particularly in the early

years of the depression, these provinces have not been able to borrow economically, in the public markets. Whether wisely or not, the dominion government of the day faced with what it regarded as an emergency problem, initiated the policy of making loans to these provinces in order to enable them to meet their share of relief costs, maturing obligations, and in some cases even ordinary governmental expenditures. As I shall show later, such loans now amount to $116,500,000.

It has long been clear to everyone, I believe, that this process can not go on indefinitely. We are rapidly reaching—if we have not already reached—the impossible position where the dominion government will be the largest single creditor of these provincial governments. Moreover, if we continue this process of handing out funds without security and without control of any sort, we shall be in danger of undermining dominion credit, which, in my opinion, must be protected at all costs.

Recognizing the importance of this problem, the government has for the past six months been devoting a great deal of time and attention to working out a solution with the cooperation of the provinces. It was one of the major questions placed on the agenda of the dominion-provincial conference in December last, and initial discussions at this conference led to the appointment of a continuing committee on financial questions which held sessions in January and again in March. During these discussions, agreement was reached on a general method of procedure. The dominion undertook to initiate an amendment to the British North America Act which would (1) validate certain taxes now imposed by one or more of the provinces and give the provinces power to levy a tax on retail sales, thus providing an enlarged and more elastic provincial tax structure; and (2) enable the dominion to guarantee existing or future debts of a province as well as enable a province to give the dominion adequate security for such guarantee by the pledge of dominion subsidies and, if necessary, other specific revenues. If and when these enabling powers should be secured, the dominion undertook to sponsor legislation providing for the setting of up (1) a national finance council, which would consist of the dominion Minister of Finance and the provincial treasurer of each province, with the governor of the Bank of Canada as technical adviser, and which would provide a permanent mechanism for mutual discussion of taxation, investment and other financial problems, with advisory powers only; and (2) individual loan councils which would consist in each case of the dominion Minister of Finance and the treasurer of the province desiring to participate, with the governor of the Bank of Canada as technical adviser, and which would have power both to approve any program providing for refunding of the debt of a province under dominion guarantee and also to supervise future borrowing by such province. Dominion guarantee would be available to the province only when loan council approval to the proposed issue of securities had been obtained. Moreover, no compulsion was involved; the legislation contemplated would merely provide machinery which any province might take advantage of if it considered it to be in accordance with its own interests.

Since March 31 the government has not had any statutory authority to make loans or give guarantees to any province and even in the relief bill which is now before parliament such authority as is being asked for relates only to loans, advances or guarantees in connection with relief measures or undertakings. It is not proposed, except through loan council legislation, to ask parliament for authority to grant financial assistance to enable a province to meet a maturing obligation or to provide for other ordinary governmental expenditures.

Provincial obligations that have matured in recent weeks or are about to mature have led to extended discussion with the interested provinces. The correspondence exchanged with the province of Alberta has been tabled. That record speaks for itself. In brief, the federal government has taken the position that not only must it have adequate security for the financial assistance which it is called upon to give but also that the dominion government must be in a position to determine the extent to which and the conditions under which dominion credit is made use of now and in the future. It was a matter of great regret to us that the government of Alberta did not see its way clear to accept the conditions under which alone our assistance could have been made available. The province of Saskatchewan, which has an issue maturing to-day, May 1, has expressed a willingness to participate in the loan council arrangement and with the understanding that the dominion will proceed with its legislation, the province, I am advised, has made arrangements with the Bank of Canada to enable it to meet this maturity. I am also advised that the province of British Columbia will be able to redeem its obligation falling due on May 15 without recourse to outside assistance.

The government believes it essential to provide the necessary machinery for any province that may deem it desirable to take advantage of the facilities I have outlined. The government will therefore proceed with the resolution now on the order paper

designed to initiate the proposed constitutional amendment, and thereafter with the legislation providing for the establishment of loan councils and a national finance council. I may add that after the most careful consideration we are prepared to recommend certain modifications to the loan council arrangement originally suggested. These modifications would make it possible for a province which had submitted a borrowing proposal to the loan council, and which had not obtained the council's approval, to make such offering on its own credit in the domestic market. Approval of the loan council, however, would be mandatory for all external issues and also for domestic issues in those cases where the outstanding debt of the province is refunded under dominion guarantee. These changes, it is believed, will make the arrangement more acceptable to some of the provinces and still make it possible to secure the primary objectives which the dominion has in mind.

I might advise the house that the modification to which I have just referred is being communicated to all the provinces, particularly those primarily concerned, and of course will have their consideration, and we shall hear from them with respect to it before very long.

I trust that the position which the government has taken in these matters and the action which it proposes to take will commend themselves generally to the good judgment of members of this house. The record of Canadian securities in the investment markets of the world has been a most enviable one. It would be unfortunate if that record were seriously marred at this late stage when the outlook appears to be for continuing recovery and a probable rise in the world price level which will ease the burdens of debtor classes and debtor communities. The arrangement which we contemplate should provide a method for reducing interest burdens in a way acceptable to creditors. It should provide a means whereby provinces, fully cooperating, may restore their credit and place themselves in a position gradually to secure necessary funds for justifiable capital purposes. It should provide a regular and permanent mechanism for the mutual study, with expert assistance, of the difficult, technical financial problems with which all governments are faced. It should make for an avoidance in future of some at least of the costly mistakes made by dominion and provincial governments alike in the past, the continuing burden of which has made it so difficult to assume the new burdens of the present prolonged depression.

[Mr. Dunning.]

It is our hope that the arrangement which is now offered will appeal to all provinces which find it impossible economically to finance their own requirements. We are convinced that it will remove a factor which is now retarding economic recovery. As long as we have an economy based on private enterprise—based on the willingness of thousands of individuals to make commitments for the future in the hope that profits will accrue—so long will the factor of confidence play an important part. As long as fear of the safety of investments or uncertainty in any form persists, private enterprise will not go forward vigorously. We in Canada are powerless to remove the uncertainties in the world political outlook which unfortunately have been aggravated in recent months. We are in duty bound, however, to endeavour to remove all those factors in our domestic situation which tend to retard economic recovery.

TRADE OF CANADA

I turn now to a brief outline of the trends in our external trade. It is not putting it too strongly to say that foreign trade is the very life-blood of Canada. We have seen only too clearly in recent years the appalling effects on our internal economy of the decline of international commerce to about two-thirds of its former physical volume. The fruits of economic nationalism in reduced business activity, shrinking governmental revenues and widespread unemployment are such as to justify in abundant measure the efforts which the present government has made, and will continue to make, to free the channels of international trade and expand the markets for our primary and other industries which must otherwise suffer stagnation and drastic readjustment.

A start in this direction has already been made with the negotiation of a trade agreement with the United States. The conclusion of this agreement is probably the most significant step taken by two leading trading nations to reverse the trend of economic nationalism. Not only does the agreement open up wider markets for the products of each country, but it is also hoped that it will serve as a lead to other countries and thereby promote progressive lowering of the barriers which have been damming up the trade of the world. Such a movement would be of the greatest value to Canada, the prosperity of the whole dominion being so largely dependent on export outlets for the disposal of our surplus production.

An adjustment was also made of the difficulties which had arisen in relation to our trade with Japan. Without foregoing the safeguards necessary to legitimate Canadian enterprise, we succeeded in securing the cancellation of the duty surtaxes on a number of important products for which Japan has been a valuable customer.

Other steps taken to promote our export trade have been the extension of the trade agreement with New Zealand, which was due to expire on November 24, 1935, for a further period until July 31, 1936; an exchange of notes with France providing for certain adjustments in duties and quotas to supplement the agreements which had been concluded with that country; and the extension of the modus vivendi with Haiti whereby Canada is guaranteed the minimum tariff of that country for a further period of one year from April 15, 1936, or until the entry into force of a trade agreement, proposals for which have been submitted to the Haitian government.

Canada has long enjoyed profitable and pleasant trading relations with Belgium, and is anxious to strengthen our traditional friendship with that country. Representations having been made by the Belgian government that the specific duties imposed in 1935 on dressed and dyed rabbit skins have had the effect of very seriously curtailing exports of these to Canada, the government has decided to remove the duties in question, and to revert to the ad valorem rate formerly effective. In consideration of this treatment, I may say to hon. gentlemen who are smiling, the Belgian government has agreed to remove the turnover tax which for some time has been imposed on Canadian goods imported into that country and, also, to classify as cheddar the cheese received from this dominion. These concessions, the removal of the heavy turnover tax in particular, should stimulate our exports to Belgium in many lines of goods.

The government continues to give careful study to our trade relations with other countries having in view a steady increase in opportunities for the sale of Canadian exportable products. It may be expected that steps will be taken in the near future to enter into active negotiations for the conclusion of trade agreements with several important countries, in accordance with the policy of the government to bring about by the negotiation of bilateral agreements the progressive removal of the hindrances now hampering our international trade.

Serious attention is now being given to our trade relations with the most important of our customers, the United Kingdom. I am happy to be able to state that discussions will shortly take place between representatives of the two governments. I shall make more extended reference to this matter when discussing tariff changes.

I am pleased to be able to report, for the fiscal year just ended, an important gain in our total trade with other countries, amounting in round figures to 152 million dollars. This is an increase of 12·8 per cent over the previous year. It is true that world trade generally has improved during the past year, but it should be noted that while the average increase in trade of 24 leading countries in the calendar year 1935 was 4·1 per cent our own trade increase was 11·3 per cent. As a result of this marked expansion in our foreign commerce Canada has moved up from eighth to sixth place among the nations in total world trade.

A statement of total trade for the twelve months ended March 31, 1936, with comparative figures for 1935, follows:

Trade of Canada
(excluding gold coin and bullion)

| | Fiscal year ended March 31, 1935 | March 31, 1936 | Increase |
|---|---|---|---|
| Imports | $ 522,416,844 | $ 562,803,001 | $ 40,386,157 |
| Exports: | | | |
| Canadian produce | 659,899,994 | 765,615,563 | 105,715,569 |
| Foreign produce | 7,658,963 | 13,441,659 | 5,782,696 |
| | $1,189,975,801 | $1,341,860,223 | $151,884,422 |

Both imports and exports shared in the increase, but while imports rose by 40·4 million dollars, a gain of 7·7 per cent, exports were 111·5 million dollars higher, having increased by 16·7 per cent. This expansion of our exports gave us, for the year, a favourable balance of trade of 216 million dollars. This is the fifth successive yearly balance in our favour and is the largest since 1927. The importance to be attached to a favourable balance of trade must, of course, be considered in relation to total trade.

The figure for the balance of trade just mentioned does not include our exports of gold—the usual practice among nations being to show this item separately because of its

monetary use. With us, however, gold is a commodity and a very important part of our regular export trade. In the fiscal year just ended the adjusted estimate of our gold sold abroad was about 119 million dollars. By adding this to the merchandise balance of 216 million dollars already referred to it is seen that the total balance of commodity trade for the fiscal year just ended was 335 million dollars in our favour. Our tourist trade is also an extremely important credit item in Canada's international account. Preliminary estimates for 1935 show tourist expenditures in Canada of about 201 million dollars against Canadian expenditure in other countries of about 91 million dollars giving us a net credit balance in tourist traffic of about 110 million dollars.

The house will see, therefore, that if to our credit balance of 335 million dollars on merchandise and gold we add the net figure of 110 million dollars from tourists, the total balance in our favour from these items is 445 million dollars without taking into account the movement of securities, Canada is thus in a strong position with respect to payments which must be made abroad on account of our foreign financial obligations. Obviously there is here a solid foundation supporting our dollar in the foreign exchange market.

Upon analyzing our export trade, it is found that the United Kingdom is still our largest market having taken 293 million dollars or 41½ per cent in value of our goods exported in the eleven months ended February 29, 1936, which is approximately the same proportion of the total as in the previous similar period. The British empire as a whole purchased 362 million dollars worth, which was 15½ per cent more than for the same eleven months a year ago. Within the empire the increased purchases from us were distributed as follows; the United Kingdom 15·6 per cent, Australia 35·1 per cent, New Zealand 28·7 per cent, and South Africa 7·1 per cent. Exports to British India decreased by 17·2 per cent.

Not only do our increased exports bear witness to the steady growth of our trade with empire countries, but the same trend is also revealed in the figures of our purchases from these countries. While our exports to empire countries gained by 48·5 million dollars, our imports increased 19·4 million dollars or 13½ per cent in the eleven months period. This increase in imports from British countries was shared as follows: the United Kingdom 5·4 per cent, Australia 16 per cent, British India 13·4 per cent, New Zealand 21·7 per cent, and South Africa 41·3 per cent.

Figures showing trade with the United Kingdom and with other empire countries in the eleven months ended February 29, 1936, and in the previous year are as follows:

Trade of Canada with Empire Countries
(excluding gold coin and bullion)

| — | Eleven months ended | |
|---|---|---|
| | Feb. 28, 1935 | Feb. 29, 1936 |
| Imports from the United Kingdom | $102,602,618 | 293,002,334 |
| Exports to the United Kingdom | 253,488,637 | 163,429,300 |
| Imports from the British Empire | 143,989,314 | 362,178,462 |
| Exports to the British Empire | 313,665,822 | $108,177,173 |

Turning now to foreign countries, our trade with the United States is of particular interest following the recent agreement. Exports to the United States for the full year ended March 31, 1936, amounted to 291·3 million dollars as compared with 230·8 million dollars for the previous year. This is a gain of 60·5 million dollars or 26·2 per cent in our exports to the United States. Thus out of a total increase in exports for the year of 111·5 million dollars over 54 per cent of the gain was accounted for by additional sales to the United States. While it is too soon to expect to have realized the full expansion of trade which is expected to follow from the agreement, the latest monthly figures clearly indicate a growing volume of goods moving in both directions across the border.

[Mr. Dunning.]

Exports to the United States for the three months January, February and March of this year totalled $70,868,053 as compared with $57,061,713 for the same three months of 1935. This is a gain of 24·2 per cent for the period.

Imports from the United States for the full year just ended were $319,610,706 which is an increase of 16 million dollars over the preceding year. 7·2 million dollars of this increase were recorded in the first three months of this year under the operation of the trade agreement.

Over 56 per cent of our imports come from the United States. At the same time they take only 37 per cent of our exports. From empire countries we purchase about one-third of our imports and sell to them just over one-

half our goods exported. Approximately 89 per cent of our total trade is with the British empire and the United States.

There is in this brief survey of our foreign commerce much to cheer us, and I believe this steadily expanding trade with other countries testifies strongly to the fundamental soundness of the movement toward recovery in Canada.

Turning now to the government accounts, may I state that, while the fiscal year ended on March 31, the final accounting has not yet been completed. Consequently, minor changes, and minor changes only, may later be made in the figures now given.

I trust the house will allow for my difficulties in dealing with a fiscal year seven months of which had elapsed before the present government came into office. We were faced with the commitments of our predecessors, which, in large measure, prevented important changes in financial policy during a year more than half of which had already passed.

In order to simplify the presentation of the accounts, I shall, with the permission of the house, now place on Hansard a number of tables showing the usual five-year comparisons of revenues and various classes of expenditure. This will enable me to present a clearer explanation of a technical and complicated series of accounting and statistical facts. The tables follow:

Statement of Revenues for the last Five Fiscal Years
(000 omitted)

| Tax Revenues | 1931-32 | 1932-33 | 1933-34 | 1934-35 | Estimated 1935-36 |
|---|---|---|---|---|---|
| | $ | $ | $ | $ | $ |
| Customs import duties | 104,133 | 70,073 | 66,305 | 76,562 | 74,000 |
| Excise duties | 48,655 | 37,834 | 35,494 | 43,190 | 44,410 |
| War tax revenues— | | | | | |
| Banks | 1,390 | 1,328 | 1,336 | 1,368 | 1,305 |
| Insurance companies | 12 | 826 | 742 | 750 | 760 |
| Delayed business profits | 3 | ..... | ..... | ..... | ..... |
| Income tax | 61,255 | 62,067 | 61,399 | 66,808 | 82,700 |
| Sales tax | 41,734 | 56,814 | 61,392 | 72,447 | 77,000 |
| Manufacturers' importation, stamp, transportation taxes, etc | 17,872 | 25,377 | 45,184 | 39,745 | 35,700 |
| Tax on gold | ..... | ..... | ..... | 3,573 | 1,413 |
| Total revenues from taxes | 275,054 | 254,319 | 271,852 | 304,443 | 317,288 |
| Non-Tax Revenues | | | | | |
| Canada Grain Act | 1,485 | 1,445 | 1,236 | 1,205 | 1,219 |
| Canada Gazette | 74 | 74 | 56 | 47 | 49 |
| Canals | 977 | 831 | 878 | 838 | 883 |
| Casual | 3,758 | 3,192 | 3,613 | 4,337 | 4,372 |
| Chinese revenue | 10 | 9 | 6 | 6 | 6 |
| Dominion lands | 485 | 459 | 419 | 516 | 455 |
| Electricity | 402 | 298 | 440 | 485 | 530 |
| Fines and forfeitures | 234 | 212 | 178 | 90 | 199 |
| Fisheries | 40 | 5 | 39 | 43 | 41 |
| Gas inspection | 81 | 84 | 76 | 96 | 91 |
| Insurance inspection | 150 | 160 | 149 | 139 | 147 |

| Deficit on ordinary account | −45,334 | −48,007 | −27,710 | −1,226 | −2,207 |
| Special expenditures | 49,204 | 39,979 | 38,664 | 61,130 | 102,770 |
| Less special receipts | 7,028 | 4,493 | 418 | 3,397 | 320 |
| Balance | 42,176 | 35,486 | 38,246 | 57,733 | 102,450 |
| Add capital expenditures | 16,980 | 8,548 | 6,490 | 7,027 | 6,576 |
| Add government owned enterprises | 9,744 | 128,593 | 61,051 | 50,148 | 50,958 |
| Total | 68,900 | 172,627 | 105,787 | 114,908 | 159,984 |
| Add deficit on ordinary account | 45,334 | 48,007 | 27,710 | 1,226 | 2,207 |
| Total deficit or increase of net debt | 114,234 | 220,634 | 133,497 | 116,134 | 162,191 |

It is also proposed to depart from what I have sometimes called the "bridge score" method of accounting—so much above the line and so much below the line—and to present clearly the over-all deficit in the government's accounts. In the past we have too frequently misled ourselves by the form in which our government accounts were presented. We have pointed with pride to a small surplus on ordinary account and we have tended somewhat to minimize the importance of large deficits resulting from capital and special expenditures. It is time to look the facts squarely in the face. If the people of Canada are fully aware of all the facts, I am confident they will support us in taking the steps necessary to achieve that balance of government revenues and expenditures which in my opinion cannot safely be postponed much longer.

REVENUES 1935-36

Our total revenue from taxation and other sources during the past year aggregated $372,100,000. This total is $10,229,000 in excess of the total revenue for the preceding fiscal year.

The revenue from taxes alone amounted to $317,288,000, an increase of $12,845,000 over the preceding year.

The increase in tax revenue is more than fully accounted for by the income tax which yielded $82,700,000 as compared with $66,808,000 in 1934-35. This is the highest yield ever recorded from the income tax, the largest figure for any previous year being that of $78,684,000 in 1921-22. The increase during the past year arises in part from the improvement in individual and corporate incomes, but in part also from the surtax on investment income which was imposed for the first time last year.

The sales tax which was the second largest contributor to government revenue last year was responsible for a total collection of $77,000,000, an increase of $4,553,000 over the previous year.

Excise duties, imposed chiefly on liquors and tobacco, yielded $44,410,000, exceeding the collections of 1934-35 by $1,220,000, notwithstanding the substantial reduction made last year in the duty on liquors.

The yields from our other major types of taxation were lower last year than in the preceding fiscal year. The total revenue from customs import duties amounted to $74,000,000 as compared with $76,562,000 collected in 1934-35. A substantial increase in customs revenue had been budgeted for by my predecessor, because of an expected increase in the volume of imports. While the anticipated rise in imports, materialized, the increase was almost wholly in the non-dutiable items. The volume of dutiable imports increased only three per cent and the duties collected actually decreased, largely because of a decline in raw sugar imports and a shift of such imports from foreign countries to countries enjoying the British preferential tariff rates, and because of the reductions made in the duties on liquor last year.

Special excise taxes produced a total revenue of $35,700,000. This represents a decrease of $4,045,000, which is accounted for chiefly by the changes made last year under which the excise tax on beer was reimposed in the form of an excise duty on malt and by the elimination last year of the remaining half of the special three per cent tax on imports entitled to entry under the British preferential tariff or under trade agreements between Canada and other British countries.

Non-tax revenues, that is, the revenues derived from various departmental services of government, aggregated $54,492,000, an increase of $461,000 over the previous year. The main items under this heading are interest on investments which amounted to $10,600,000, and Post Office revenues which totalled $32,507,000, or nearly $1,260,000 in excess of the previous year. The so-called surplus on Post Office operations approximated $900,000. It must be remembered, of course, that the Post Office accounts do not include the rental value and other costs of premises occupied and equipment used, nor, on the other hand, do they include any credit to the Post Office for services rendered to other departments through the free use of the mails.

Special receipts during the last fiscal year amounted to only $320,000. This compares with $3,397,000 received in 1934-35 when the custodian of enemy property made a special transfer of $3,000,000 to the consolidated revenue fund.

### EXPENDITURES 1935-36

While, as already indicated, I wish to draw special attention to the aggregate expenditure for which the government is responsible both on its own and on railway account, it will facilitate comparison with previous years if comment is first made on the various classes of expenditures which have traditionally been shown in the public accounts.

### ORDINARY EXPENDITURES

The ordinary expenditures for the year have aggregated $373,987,000. This is $14,287,000 in excess of the expenditures for 1934-35. Nevertheless it is $16,000,000 lower than the total of the amounts authorized by vote and statute. This substantial reduction below the appropriations is accounted for, in part at least, by the measures taken by the present government when it came into office last October. One of its first acts was to initiate a careful examination of the trend of revenues and expenditures and an analysis of the financial commitments which had been made. The results of such examination were such as to lead to an immediate direction to all departments to effect every possible economy in ordinary and special expenditures and to defer any undertakings which could not be clearly justified on grounds of necessity or of substantial assistance in providing employment. Had such action not been taken, expenditures for the year would have been much higher than they actually were.

Some of the increase in ordinary expenditures last year was due to special causes, for instance the expenses involved in holding a national election. I suppose some of us think that expense was justified. Others may quarrel with it. The cost of old age pensions increased $1,818,000 and there were additional special grants to provinces amounting to $2,375,000.

Of special interest was the decrease of $3,983,000 in interest on the public debt, reflecting the economies resulting from conversion of outstanding securities into obligations bearing a lower interest rate, and the lower cost of treasury bills. Our interest burden last year was $134,550,000, which was lower than in any years since 1931-32. Nevertheless, it used up 36·2 per cent of our total revenue.

### CAPITAL EXPENDITURES

Total expenditures charged to capital account amounted to $6,576,000, a decrease of $451,000 from the previous year. The chief item was $5,361,000 for dredging the river St. Lawrence ship channel.

### SPECIAL EXPENDITURES

We come now to that important group of items which are classified as special expenditures. Some of the items so classified in previous budgets cannot be regarded as special in any real sense of the term and they are now included in ordinary expenditures. These items include $3,575,000 cost of loan flotations, representing flotation costs of new loans and annual charges for amortisation of bond discount; $1,875,000 government contribution to superannuation fund; $272,000 payment to maintain reserve in government annuities fund; and $128,000 representing expenditure made under the Railway Grade Crossing Act. In the tables showing expenditures for the past five years the necessary adjustments have been made in order to place the group totals for the various years on a comparable basis.

The importance of this category of special expenditures is indicated by the total expenditure of $102,777,000 which is $41,640,000 in excess of the preceding year and much higher than in any previous year.

Of this total $49,469,000 represents payments for unemployment relief purposes. This includes not only the cost of direct relief and provincial grants in aid, but also the maintenance of the relief camps, the care of single homeless unemployed persons, land settlement relief, special assistance to the Saskatchewan drought area and public works and undertakings carried out under authority of relief legislation. The following table

compares the expenditures made for these various purposes during 1935-36 with the similar expenditures in the preceding fiscal year:

Unemployment Relief Expenditures

| — | 1934-35 | Estimated 1935-36 |
|---|---|---|
| Direct relief | $19,211,557 | $ 262,388 |
| Grants in aid (from August 1, 1934) | 14,024,000 | 26,274,875 |
| Public works and other projects | 4,493,432 | 9,831,375 |
| Land settlement relief | 277,973 | 176,000 |
| Relief camps—Department of National Defence | 7,648,371 | 8,212,000 |
| Care of single homeless unemployed persons | 629,611 | 219,000 |
| Department of the Interior, relief including works in national parks | 515,911 | 180,000 |
| Saskatchewan drought area relief | 5,000,000 | 4,000,000 |
| Miscellaneous, including administration | 186,452 | 313,362 |
| | $51,987,307 | $49,469,000 |

It will be noted that as in the previous year, special assistance was given to the province of Saskatchewan for relief in the drought area of the province. This form of relief was by way of accountable advances totalling $4,000,000. During the fiscal year 1934-35, the sum of $5,000,000 was advanced for the same purpose and the total of $9,000,000 was intended to cover the dominion's obligation for the provincial relief year extending from September 1, 1934, to August 31, 1935. It is estimated that when all the accounts are received from the province the total of $9,000,000 will not be sufficient to take care of the dominion's obligation. Any excess will be applied in reduction of a loan made to Saskatchewan for that specific purpose. This excess, not yet determined, has not been included in the statement of expenditures.

When the present government took office on October 23 last, we found that through agreements with provincial governments certain commitments had been made for the year ending March 31, 1936. These commitments have of course been met and, in addition, as an emergency measure, the monthly grants in aid to provinces for direct relief were increased by seventy-five per cent for the four winter months of December, January, February and March for the purpose of enabling the provinces to grant greater assistance to their municipalities.

Another item under special expenditures which might well have been included in the cost of unemployment relief relates to expenditures made pursuant to the Public Works Construction Act, 1934, and the Supplementary Public Works Construction Act, 1935. Expenditures under these two acts during the last fiscal year aggregated $30,232,000 as compared with $8,673,000 in 1934-35. As at March 31, 1936, there remained unexpended $18,726,000 of the amounts authorized by these acts. Uncompleted projects and other projects authorized by these enactments which the government believes it advisable to proceed with have been provided for in the new fiscal year by the special supplementary estimates recently brought down in this house.

Included in the special expenditure for last year are three items representing losses incurred as a result of the wheat policy in effect during the past five years. The payment of $6,600,000 to primary producers of wheat who delivered wheat during the crop year 1930 has been amply debated in this house. The item of $15,856,645 represents the debit balance in the bank account of Canadian Cooperative Wheat Producers Limited as of December 2, 1935, which was assumed by the Canadian Wheat Board as a result of the transfer to it as of that date of the wheat and wheat contracts held by Canadian Cooperative Wheat Producers Limited in connection with the 1930 wheat pool account and stabilization account. As advances by the chartered banks to Canadian Cooperative Wheat Producers Limited were guaranteed by the dominion government, further supplementary estimates for 1935-36 will authorize payment to the Canadian Wheat Board of the amount of this liability assumed by it.

The operations of the Canadian Cooperative Wheat Producers Limited, in connection with oats of the 1930 crop resulted in a loss of $170,130 as at December 2, 1935, and under the terms of the government guarantee this amount with accrued interest to the date of payment will be paid to liquidate the bank liability.

Unfortunately, these three items totalling $22,630,000 may not represent the total cost of governmental wheat marketing operations. To them will have to be added any further losses that may result before the wheat and wheat contracts resulting from the 1930 pool and stabilization operations have been finally disposed of, and also any losses which the

Canadian Wheat Board may incur in marketing wheat of the 1935 crop for which a minimum price to primary producers of eighty-seven and one-half cents per bushel, basis No. 1 northern, Fort William, was fixed last September. Whether such losses will accrue and what their magnitude will be will depend on the prospective harvests in wheat producing countries of the world, on the demand of importing countries, and on the trend of wheat prices. These factors it is of course impossible to forecast. It may be emphasized, however, that the government does not believe itself warranted in assuming responsibility for holding such colossal quantities of wheat as have been held during the last few years. Without resort to dumping, its policy will be to market surplus wheat in an orderly manner as rapidly as world conditions will permit, with due regard to the progress of the next Canadian crop, and at the same time endeavouring to restore and expand in every possible way the demand for Canadian wheat and wheat products in world markets.

The remaining items under the caption of Special Expenditures are of minor importance.

Another important class of expenditures for which the government is responsible may be considered under the caption, "Government-owned Enterprises." This new category appears to be a convenient one in which to group together any losses of, or non-active advances to, government-owned enterprises which are operated as separate corporations. It will include the net income deficit of the Canadian National Railways, and any operating deficits of the Canadian National Steamships or of any harbours previously operated by harbour commissions but in future to be administered by the National Harbours Board, as well as any non-active advances to such enterprises. Non-active advances do not earn interest and are treated in the government accounts as expenditures.

### CANADIAN NATIONAL RAILWAY COMPANY

Further improvement in operating revenues of the Canadian National Railway Company took place in 1935. The gain amounted to $8,200,000, or 5 per cent. Operating expenses were higher than in 1934, one of the important factors being the increase in wages brought about by the removal of a part of the payroll deduction. After providing for operating expenses and other charges such as taxes, rentals, etc., the company's accounts showed a net amount of $6,800,000 available for interest on debt. This result was not as satisfactory as in the previous year, when the amount available for this purpose was $7,400,000. After applying the sum of $6,800,000 available from earnings against interest charges of $54,200,000, there resulted a cash deficit of $47,400,000. This amount has been paid by the dominion and charged in our accounts as an expenditure for the year and compares with $48,400,000 in 1934, the improvement of nearly one million dollars being entirely accounted for by savings made in interest charges through refunding of securities.

It should be borne in mind that there are certain charges in the accounts of the railways not involving cash which should be taken into account in reconciling the above-mentioned figure of cash deficit with the net loss for the year as shown by the annual report of the railway company.

In addition to the provision for deficits, the government advanced $7,574,000 to the Canadian National Railways in the fiscal year period for capital expenditures and retirement of debt. This amount is shown in the public accounts under Loans and Investments. The figure is made up as follows: capital expenditures under the 1935 budget, $687,000; purchase of and repairs to equipment under the Supplementary Public Works Construction Act, $5,068,000; retirement of debt (net), $1,819,000.

Important refunding operations in connection with the long-term funded debt of the railway company took place during the year. Four issues of bonds aggregating $108,519,000 were called for redemption prior to their maturity dates and were replaced by securities bearing lower rates of interest. These issues were:

$35,000,000 4½% bonds due December 1, 1968;

$26,000,000 4½% bonds due September 15, 1954;

$23,740,000 7% bonds due October 1, 1940;

$23,779,000 7% bonds due December 1, 1940.

In addition, temporary loans obtained in connection with the maturity of $17,000,000 4½ per cent bonds on February 15, 1935, were funded. This made a total of securities included in the refunding operations of $125,519,000. Provision for this amount, together with premiums payable upon call of the bonds and discounts on the new issues, was made by the sale of railway company securities guaranteed by the dominion to the principal amount of $128,400,000 and a temporary loan of $2,043,000 from the dominion treasury. The details of the new issues and the interest cost to the company, are shown in the following statement:

Canadian National Railway Company
Guaranteed Bonds issued for Refunding, 1935-36

| Issue date | Maturity date | Interest rate | Cost to company | Amount |
|---|---|---|---|---|
| May 1, 1935 | May 1, 1938 | 2% | 2.35% | $13,400,000 |
| | May 1, 1944 | 3% | 3.29% | 35,000,000 |
| February 15, 1936 | February 15, 1943 | 2% | 2.31% | 55,000,000 |
| | February 15, 1953 | 3% | 3.25% | 25,000,000 |

The annual saving to the company, after providing for the amortization of the premiums paid upon the called bonds, will be approximately $3,000,000 a year as a result of this refunding. All of the redeemed bonds were payable, either optionally or solely outside of Canada, and the new issues are payable in Canada only. In connection with the redemption of the three issues in September, October and December last, the necessary funds were first obtained by the sale in New York of direct obligations of the dominion and later the company recouped the dominion from the proceeds of the sale of its securities in Canada.

On March 31, 1936, the amount of the debt of the Canadian National railway system outstanding in the hands of the public was $1,217,000,000, having been reduced by $21,000,000 in the past year. Of the amount outstanding, $964,000,000 are obligations guaranteed by the dominion.

CANADIAN NATIONAL STEAMSHIPS

Proceeding further to deal with the provision which it has been necessary to make for government-owned enterprises, it is satisfactory to report that the operations of the Canadian National Steamships showed a considerable improvement over the previous year. The cash loss on the West Indies service was $270,000, as compared with $567,000 in 1934. The Canadian Government Merchant Marine had operating earnings of $312,000, as compared with a deficit of $127,000 in 1934. An amount of $179,000 was advanced for capital expenditures on the West Indies fleet, but this expenditure was more than offset by the return to the government of a further $200,000 advanced in previous years to the merchant marine for working capital. Taking into consideration all these transactions, there was a credit of $63,000 on account of steamship services.

HARBOUR COMMISSIONS

Assistance to harbour commissions appearing in our expenditure accounts amounted to $3,600,000. This amount is made up of $1,139,000 paid to liquidate bank loans obtained for operating deficits in Quebec, Chicoutimi and Halifax, and represents losses incurred not only in 1935 but also in previous years. The balance is comprised of advances (non-active) of $482,000 for deficit on the Jacques Cartier bridge, Montreal, and $1,979,000 for expenditures in the harbours of Saint John, Halifax, Three Rivers and Quebec.

To sum up, the total amount treated as expenditures in our accounts in connection with the operation of the railways and other government owned interprises, was $50,958,000, as compared with $50,148,000 in the previous year. This is exclusive of the amounts carried as investments to which reference will be made later.

SUMMARY OF EXPENDITURES

Adding together ordinary, capital and special expenditures, as well as losses of and non-active advances to government owned enterprises we find that the grand total of expenditures for which the government was responsible was $534,291,000. This is an increase of $56,286,000 during the last fiscal year as compared with 1934-35 and of $2,527,000 as compared with 1932-33, the worst year of the depression. The increase over the previous year, it will be remembered, is more than fully accounted for by the rise of $14,287,000 in ordinary expenditures, the $21,559,000 increase in expenditure under the Public Works Construction Acts and the $22,630,000 payments made and losses taken in respect of wheat and oats.

I direct attention to the fact that in the last fiscal year nearly 62 per cent of the dominion's revenues were required to meet fixed and uncontrollable expenditures, such as interest; war and old age pensions and superannuation; care of returned soldiers; subsidies to provinces and certain other outlay of this nature. In the year 1913-14, the last fiscal year prior to the war, only 19 per cent of the revenues were allotted to items generally regarded as uncontrollable, and even in 1929-30, when the effect of the war cost had been shown in our expenditures, the proportion was but 44 per cent, as compared with 62 per cent last year. Although it is not possible at this date, except by certain arbitrary assumptions, to make exact calcula-

tions, nevertheless it is obvious from an examination of the expenditure statements that the burden of the war cost, both direct and indirect, is even to-day a major factor in our budgetary situation.

A statement showing the proportion of the revenues required for fixed and uncontrollable expenditures in the years 1913-14, 1929-30 and 1935-36, follows:

Proportion of Dominion Revenues Required for Certain Uncontrollable Expenditures

| — | 1913–14 | 1929–30 | 1935–36 |
|---|---|---|---|
| | % | % | % |
| Interest on debt | 8.61 | 27.54 | 36.19 |
| European war pensions | .... | 8.86 | 11.19 |
| Old age pensions | .... | .35 | 4.51 |
| Other pensions and superannuation | .51 | 1.01 | 1.22 |
| Care of returned soldiers | .... | 1.93 | 2.90 |
| Subsidies to provinces | 7.53 | 2.83 | 3.70 |
| Other items | 2.07 | 1.22 | 2.25 |
| | 18.72 | 43.74 | 61.96 |

### DEFICIT 1935-36

Taking the total revenues for the year at $372,100,000 and the total expenditures at $534,291,000, there is an over-all deficit for the last fiscal year of no less than $162,191,000.

This, of course, takes into account the railway deficit as well as all direct governmental expenditures and makes allowance for special receipts. It compares with a total deficit in the previous year of $116,134,000. It represents the gap between total income and total outgo which must be bridged. I shall have some comments to make on this deficit at a later stage.

### LOANS AND INVESTMENTS

In addition to provision for the expenditures of the year as already outlined, loans and investments to the amount of $60,400,000 were made.

### LOANS TO PROVINCES

The most important of these were loans to the four western provinces aggregating $42,300,000, under authority of the relief acts. The net amount loaned was very much greater than in any previous year due chiefly to large loans to the provinces of Alberta and British Columbia to meet maturing obligations. For this purpose $5,400,000 was advanced to Alberta and $5,900,000 to British Columbia. Loans were also granted for the financing of relief expenditures including public works and agricultural relief and for seed grain and seeding operations. The amount of loans to each province, classified as to purpose, are shown on the following statement:

Loans to Provinces under Relief Acts, Fiscal Year 1935-36

| Purpose | Manitoba | Saskatchewan | Alberta | British Columbia | Total |
|---|---|---|---|---|---|
| | $ | $ | $ | $ | $ |
| For provincial purposes including public works, direct relief and agricultural relief | 4,183,655[1] | 8,146,044 | 7,232,000[2] | 6,195,000 | 25,756,699 |
| To meet maturing obligations | ..... | ..... | 5,435,000 | 5,971,000 | 11,406,000 |
| For re-loan to municipalities | 537,000 | 145,000 | 450,000 | 400,000 | 1,532,000 |
| For seed grain and seeding operations | ..... | 6,000,000 | ..... | ..... | 6,000,000 |
| | 4,720,655 | 14,291,044 | 13,117,000 | 12,566,000 | 44,694,699 |
| Less cash re-payments and credits applied | 2,324,429 | 45,565 | 13,000 | 7,555 | 2,390,549 |
| Net loans during 1935-36 | 2,396,226 | 14,245,479 | 13,104,000 | 12,558,445 | 42,304,150 |

[1]Includes $408,155 for drought area relief including seed grain.
[2]Includes $1,050,000 for agricultural relief including seed grain.

The amount due by the provinces at the beginning of the fiscal year was $74,200,000. With the addition of the loans made during the year, the total of dominion assistance by way of loan to the four western provinces under the relief acts, now stands at $116,500,000. The dominion holds one-year treasury bills of the provinces bearing interest at the rate of 4½ per cent to July 1, 1935, and 4 per cent thereafter, in respect of these loans. The provinces of Manitoba, Alberta and British Columbia have paid

the interest in cash as it became due, but the province of Saskatchewan, being unable to meet all of such payments, has covered the interest accruals on the major portion of its outstanding loans by tendering treasury bills to the dominion. A statement of the loans to date by provinces, showing generally the purpose for which they were granted, follows:

Loans to Provinces under Relief Acts

Net Amount outstanding at March 31, 1936

| — | Loans specifically to meet maturing obligations and interest | Loans specifically for agricultural relief including purchase of seed grain | Loans for provincial purposes generally including public works and direct relief | Total |
|---|---|---|---|---|
| | $ | $ | $ | $ |
| Manitoba | 1,139,455 | 244,400 | 14,121,000 | 15,504,855 |
| Saskatchewan | 3,934,341 | 13,892,633 | 30,541,655 | 48,368,629 |
| Alberta | 8,577,000 | 3,322,000 | 13,182,000 | 25,081,000 |
| British Columbia | 11,262,109 | ..... | 16,310,571 | 27,572,680 |
| | 24,912,905 | 17,459,033 | 74,155,226 | 116,527,164 |

OTHER LOANS AND INVESTMENTS

Loans to the Canadian National Railway Company for capital expenditures and retirement of debt, as already referred to, amounted to $7,574,000. Purchases of equipment for the Canadian Pacific Railway Company and loans to that company for equipment repairs —all as provided under the Supplementary Public Works Construction Act—amounted to $4,629,000. Agreements between the government and the company provide for the payment of interest and repayment of the principal by instalments over a period of years.

The government's investment in the Canadian Farm Loan Board was increased in the year by $7,933,000. Of this amount, $175,000 was for the purchase of capital stock of the board, $7,550,000 for purchase of bonds, and $208,000 for the purchase from various provinces of capital stock subscribed by them during the period in which the provinces participated in the farm loan scheme. The total investment of the government in the board now amounts to $16,790,000. While the board operated at a loss during the fiscal year, provision therefor will be made from the reserves set aside in previous years. Bonds of the board are now being purchased on a 3½ per cent basis.

Under investments there are also included $1,439,000 advanced during the year to the harbour commissions at Montreal and Vancouver. These loans are carried as active assets as both these commissions have paid a substantial proportion of the interest charged on their indebtedness.

During the year, repayments totalling three and a half millions were received in reduction of soldier settlement loans and loans to provinces for housing.

The following statement shows the amount of loans and investments (active assets) during the last fiscal year, with comparisons for the four previous years:

Loans and Investments Active

(000 omitted)

| — | 1931-32 | 1932-33 | 1933-34 | 1934-35 | Estimated 1935-36 |

| Other | 115 Cr. | 469 | ..... | ..... | 82 |
| | 76,753 | 32,001 | 15,131 | 39,266 | 60,403 |

LOAN FLOTATIONS

New issues of dominion obligations during the year totalled $500,000,000, exclusive of temporary financing in connection with which repayment was made before the close of the fiscal period. These issues, to the extent of $297,000,000, were for the purpose of refunding maturing obligations. The balance of $203,000,000, representing the net increase in funded debt and treasury bills during the year, was issued for deficit and other current purposes. This large amount of financing was successfully carried out at lower rates of interest both for short and long term issues than ever before. At the close of the fiscal year the average rate of interest on the outstanding funded debt and treasury bills, was 3·9 per cent as compared with a corresponding figure of 4·15 per cent a year ago.

Three issues amounting in the aggregate to $164,000,000 were made in the United States for refunding purposes, including redemption of Canadian National Railway bonds already referred to. These were the first public flotations by the dominion government in that market for several years and necessitated registration under the United States Securities Act. The interest cost to the government was 2·09 per cent for three-year notes, 2·96 per cent for ten-year and 3·63 per cent for twenty-five year bonds.

The issues in Canada, exclusive of treasury bills, totalled $303,000,000. The sale of $135,000,000 of one-year and three-year notes was made to Canadian chartered banks in September last, mainly to meet maturing short term obligations held in large part by those institutions. Two public offerings were made, one dated June 1 for $60,000,000 and one dated November 15 for $75,000,000. The interest cost to the government ranged from 1·90 per cent for one-year notes to 3·10 per cent on twenty-year bonds.

The $33,293,000 of 5 per cent school lands debenture stock held by the prairie provinces were again renewed for one year at the same rate of interest.

The policy of selling three-months treasury bills in the Canadian market was continued during the year, and the amount of issues outstanding was increased by $33,300,000. The rate of discount on these bills dropped from 1·698 per cent on April 15, 1935, to ·999 on March 16, 1936. Since that date, further issues have been made, the record low cost of ·879 per cent being obtained on April 15.

I now place on Hansard a statement giving the essential details of the new issues made during the year:

Loan flotations 1935-1936

| Issue date | Maturity date | Interest rate | Where payable | Price | Cost to Govt. | Amount Issued |
|---|---|---|---|---|---|---|
| | | per cent | | | per cent | |
| 1935— | | | | | | |
| June 1 | June 1/43 | 2½ | Canada | 99·50 | 2·57 | 20,000,000 |
| June 1 | June 1/55 | 3 | Canada | 98·50 | 3·10 | 40,000,000 |
| July 1 | July 1/36 | 5 | Canada (School Lands) | 100·00 | 5·00 | 33,293,471 |
| Aug. 15 | Aug. 15/45 | 2½ | New York | 96·00 | 2·96 | 76,000,000 |
| Sept. 15 | Sept. 15/36 | 1½ | Canada | 99·61 | 1·90 | 45,000,000 |
| Oct. 15 | Oct. 15/38 | 2 | Canada | 99·2175 | 2·275 | 90,000,000 |
| Nov. 15 | Nov. 15/39 | 2 | Canada | 99·43 | 2·15 | 20,000,000 |
| Nov. 15 | June 1/55 | 3 | Canada | 98·75 | 3·08 | 55,000,000 |
| 1936— | | | | | | |
| Jan. 1 | Jan. 1/39 | 2 | New York | 99·75 | 2·09 | 40,000,000 |
| Jan. 15 | Jan. 15/61 | 3¼ | New York | 93·86 | 3·63 | 48,000,000 |
| | | | | | | 467,293,471 |
| Increase in short term treasury bills outstanding March 31, 1936, over March 31, 1935 | | | | | | 33,300,000 |
| | | | | | | $500,593,471 |

The following is a statement of the unmatured funded debt and treasury bills of the dominion outstanding at March 31, 1936, showing also the annual interest charges thereon:

Unmatured Funded Debt and Treasury Bills, as at March 31, 1936, and Annual Interest Charges

| Date of Maturity | Rate per cent | Where Payable | Amount of Loan | Annual Interest Charges |
|---|---|---|---|---|
| | | | $ cts. | $ cts |
| 1936 July 1 | 5 | Canada | 33,293,470 85 | 1,664,673 54 |

(a) Tax free in Canada.

Now with regard to our old friend the national debt.

THE NATIONAL DEBT

At March 31, 1936, the unmatured funded debt and treasury bills of the dominion outstanding, less sinking funds, amounted to $3,207,000,000. To this amount are to be added other liabilities, mainly composed of insurance and superannuation funds, post office savings deposits and certain trust and contingent accounts, amounting to $225,000,000, to arrive at the gross liabilities of $3,432,000,000. Active assets, including cash on hand and investments, amounted to $424,000,000. After deducting the latter figure from the gross liabilities, the net debt at the close of the fiscal year amounted to $3,008,000,000. When we left office in August, 1930, the net debt of the dominion stood at $2,141,000,000, the increase in the interval being $867,000,000. The total funded debt increased almost one billion dollars in the period.

I now place on Hansard a statement showing the assets and liabilities as at March 31, 1936:

Liabilities, March 31, 1936 (estimated)

| | | |
|---|---|---|
| Bank Circulation Redemption Fund | | $ 6,858,000 |
| Insurance and superannuation funds— | | |
| Government annuities | $ 66,835,000 | |
| Insurance fund, civil service | 9,990,000 | |
| Insurance fund, returned soldiers | 14,777,000 | |
| Retirement fund | 8,361,000 | |
| Superannuation funds | 51,140,000 | |
| | | 151,103,000 |
| Trusts funds— | | |
| Indian funds | 13,929,000 | |
| Common school funds | 2,676,000 | |
| Contractors' securities deposits | 1,551,000 | |
| Other trust funds | 2,870,000 | |
| | | 21,026,000 |
| Contingent and special funds | | 5,877,000 |
| Post Office money orders, postal notes, etc. outstanding | | 2,736,000 |
| Province accounts | | 9,624,000 |
| Post Office savings bank deposits | | 22,050,000 |
| Funded debt— | | |
| Unmatured | 3,207,119,000 | |
| Matured but not presented for payment | 4,228,000 | |
| | | 3,211,347,000 |
| Interest coupons matured but not presented for payment | | 2,050,000 |
| | | $3,432,671,000 |

Assets, March 31, 1936 (estimated)

| | | |
|---|---|---|
| Active assets— | | |
| Cash, working capital advances and other current assets | | $ 24,043,000 |
| Gold bullion account | | 2,287,000 |
| Loans to provinces— | | |
| Housing | $ 6,768,000 | |
| Relief Acts | 116,996,000 | |
| | | 123,764,000 |
| Loans to foreign governments— | | |
| Greece | 6,525,000 | |
| Roumania | 23,969,000 | |
| | | 30,494,000 |
| Loans to harbour commissioners— | | |
| Montreal | 59,134,000 | |
| Vancouver | 23,744,000 | |
| New Westminster | 275,000 | |
| | | 83,153,000 |
| Loans under Dominion Housing Act | | 82,000 |
| Bond holding account | | 659,000 |
| Canadian National Railways | | 41,458,000 |
| Canadian Pacific Railway | | 4,629,000 |
| Canadian Farm Loan Board | | 16,790,000 |
| Soldier and general land settlement | | 43,630,000 |
| Seed grain and relief advances | | 2,358,000 |
| Canadian government railways open and stores accounts | | 15,749,000 |
| Deferred debits— | | |
| Unamortized discount and commission on loans | | 35,284,000 |
| | | $ 424,380,000 |
| Net debt March 31, 1936 (estimated) | | 3,008,291,000 |
| Represented by— | | |

| Consolidated fund— | | |
| Balance, consolidated fund, brought forward from March 31, 1935 | 1,042,806,000 | |
| Excess of expenditure over revenue, fiscal year ended March 31, 1936 (estimated) | 153,514,000 | |
| | | 1,196,320,000 |
| | | $3,008,291,000 |

INDIRECT LIABILITIES

Bonds and debenture stocks bearing the guarantee of the dominion outstanding in the hands of the public at the close of the fiscal year amounted to $994,600,000. The increase during the year was $7,300,000, accounted for by changes in Canadian National Railway issues, including the funding of a temporary loan from the government outstanding a year ago.

Other contingent liabilities are those arising out of guarantees given pursuant to the relief and other acts. During the year the government gave guarantees under authority of the Canadian Wheat Board Act. The amount of these guarantees at March 31, 1936, was about $58,000,000.

The guarantee of bank loans to the Canadian Pacific Railway Company, the original amount of which was $60,000,000, was further reduced during the fiscal year by $12,000,000, the indebtedness at March 31 being $36,000,000. The government is advised that the company has made arrangements to liquidate the balance of the loans on May 1 and the dominion will be relieved of its liability without loss.

The guarantee arising out of the assumption by the chartered banks of the liability of the Province of Manitoba Savings Office was further reduced during the year by $1,500,000.

The amounts of the bonds and debenture stocks and other indebtedness guaranteed by the dominion are shown in the following statement:

Bonds and Debenture Stocks Guaranteed by Dominion Government

BUDGET FORECAST 1936-37

I have already announced that the overall deficit for the last fiscal year is estimated at $162,191,000. The size of that deficit cannot fail to have impressed the house. Its seriousness is enhanced by the fact that it is but the latest in a series of deficits which have averaged over $138,000,000 per year during the past six depression years. The magnitude of these deficits, and particularly of the latest one, is such that in my opinion few honourable members will be disposed to question the declared purpose of the government to end in the shortest practicable time the era of recurring deficits. That purpose the government intends to pursue steadily as an

essential condition of the restoration of business confidence and the free functioning of private enterprise. This, it is believed, will contribute more effectively to the solution of the problems of unemployment and depression than any other single thing which governments can do.

I am not an alarmist. On the contrary, I am confident that common sense and sound economic policies can solve our immediate problems. Moreover I am convinced that this country can bear all the burdens which the war and the depression and past mistakes have saddled upon it, great as they have been. Nevertheless I believe that no country can go on indefinitely with heavily unbalanced budgets and continue to maintain either the confidence of investors or the basis upon which her economy can function healthily and vigorously. We have now reached the stage where delay should no longer be tolerated. We must make an immediate approach to a balanced budget and we must be able to show that complete equilibrium can be reached within a reasonable time.

I am well aware that this will be called a doctrine of deflation. Indeed, I have heard it said recently that Canada has been following a policy of "heroic deflation" and that she should take a leaf out of the book of the mother country. It is not easy for me to understand how departure from the gold standard, recurring deficits, financing by borrowing, of the magnitude of those which I have outlined, and a monetary policy which has allowed the Canadian dollar to fluctuate approximately at par with the managed sterling standard and with the devalued United States dollar and which has made possible an expansion of the country's cash base just as rapidly as that of Great Britain, can be described as deflation. More careful analysis would rather appear to indicate that in these financial matters about the only point in the British program which we have not already adopted is her policy of keeping the budget balanced. That, as everyone knows, was regarded by Great Britain as the very cornerstone of the recovery program. So much so that the latest British budget imposes substantial increases in a tax structure of already harassing proportions in order to provide funds for increased expenditures considered necessary for purposes of national defence.

In my opinion it is not feasible for us to achieve a complete balancing of our budget immediately. That I am bound to admit would involve deflation and to a degree that would probably prove intolerable. What we can and must do is to make an immediate, appreciable approach to a balanced budget as the first step in a definite, positive program which will assure the attaining of our final objective within a limited period. I shall now outline the measures which we propose to take and indicate the considerations which have influenced us in each case.

On the expenditure side our first step has been to put an end to the era of "blank cheques" and to reestablish the control of parliament over both the character and the amount of government expenditures. Before the house rises a complete presentation will have been made of the amounts which the executive branch of government believes it will be necessary to spend during the year and these amounts will have been duly authorized by parliament. The main estimates for 1936-37 which were brought down some time ago were designed to cover the ordinary operations of government. Unquestionably they should be, and they will be, more than amply provided for by ordinary revenues. The special supplementary estimates, recently tabled, were intended to make provision for those special or emergency needs, chiefly the costs of unemployment relief and the deficits of government owned enterprises, which arise out of the abnormal conditions now prevailing. Later, the usual provision may be necessary by way of further supplementary estimates for a moderate amount of additional expenditures not taken care of in the main estimates. With this procedure the public will be assured that the aggregate of those authorizations will represent at least the maximum to be expended during the present fiscal year. I am convinced that this traditional procedure will make far sounder and more economical administration.

Such savings as can be made in ordinary expenditures by more effective control on the part of spending departments and by a painstaking search for economies, elimination of waste and duplication of effort, will be effected to the maximum possible extent. It is apparent, however, that the opportunity for reductions, except by elimination of essential services is limited.

The two major obstacles to a balanced budget are the cost of unemployment relief including relief undertakings and the Canadian National Railways deficit. Canada's success in reducing these two classes of expenditure will be the measure of her progress both in achieving a balanced budget and also in furthering the march of recovery.

In so far as the Canadian National is concerned, the house is now familiar with the progress already made. As shown by the special supplementary estimates, the railway

is asking us this year for $39,900,000 on account of its net income deficit for the present calendar year. This compares with $47,400,000 in 1935 and with the depression peak of $62,100,000 in 1932. In view of the railway measures now before the house, this is not the appropriate time at which to discuss the government's railway policy. I may say, however, that we are confident that this cash deficit can be further substantially reduced as a result of the measures which will be taken to place the management of the road on a more responsible basis.

In regard to the other major cause of our deficits, the outlines of a well-knit and comprehensive program designed to meet the unemployment problem have already been presented to the house. For the first time since the depression began, a serious effort has been made to compile the statistics necessary to give us the essential factual basis for analyzing the range and specific character of the problem with which we are faced. If diagnosis should precede remedy, that step should commend itself. In the second place, we have provided for the appointment of a representative national commission which will be charged with the functions of investigating relief methods and policies now in effect of enlisting the cooperation of the provinces, the municipalities, employers and employees' organizations and other public and private agencies throughout the dominion, and of making recommendations as to the best methods of handling relief and providing remunerative employment. In other words, we are seeking to mobilize all our resources in a nation wide cooperative attack on this, the most urgent of our immediate national problems. Finally, we are providing in the special supplementary estimates for the money necessary to meet direct relief costs and to carry on a program to provide employment through constructive undertakings on a scale commensurate with our financial resources.

Knowing what our total expenditures are likely to be, we are now in a position to consider what taxation and other revenues we should budget for. On the basis of the tax and tariff rates now in effect, it is estimated that the revenues for the present fiscal year will aggregate $387,850,000 derived from the usual sources as follows:

| | |
|---|---|
| Taxation revenue: | |
| Customs duties | $ 75,000,000 |
| Excise duties | 46,000,000 |
| Income tax | 87,000,000 |
| Sales tax | 80,000,000 |
| Manufacturers', stamp, importation and other special taxes | 42,000,000 |
| Total taxation revenue | $330,000,000 |
| Non-tax revenue: | |
| Post Office | $ 33,500,000 |
| Interest on investments | 11,350,000 |
| Other sources | 13,000,000 |
| Total non-tax revenue | $ 57,850,000 |
| Grand total revenue | $387,850,000 |

As the main estimates and the special supplementary estimates call for expenditures of over $509,000,000 to which will have to be added any further supplementary estimates, it is apparent that the deficit for the year would probably total over $125,000,000 without taking into account possible losses on wheat, unless provision is made for additional revenue by way of new or increased taxes. For the reasons already given, vitally affecting, as I believe, our national welfare, I feel it necessary to budget for a deficit this fiscal year of less than $100,000,000, not taking into account any further losses resulting from wheat marketing operations which of course are unpredictable. If this can be accomplished, it will represent a definite improvement compared with the deficit of $162,000,000 for the last fiscal year.

It therefore becomes necessary to provide for additional taxation revenue in the amount of approximately twenty-eight to thirty million dollars. In imposing new tax levies, one must bear in mind the desirability of avoiding any undue retarding effect on business recovery. The information which I have given in the early part of this address indicates that the national income is surely and steadily rising. I am confident, therefore, that the amount of new taxation which we feel it necessary to impose will not have a deterrent effect on the business trend which is now definitely upward. Rather do I believe that business men and the public generally will gain new confidence from our endeavour to grapple vigorously with our problems of national finance and will be willing to cooper-

ate wholeheartedly in sharing the new burdens which are believed necessary.

It is now my task to outline the changes in our taxation and tariff structure which are proposed.

INCOME TAX

The most important change to be made under the Income Tax Act and the first proposal for raising additional revenue is an increase in the ordinary rate of tax on corporations from 13½ per cent to 15 per cent. At the same time, where returns are consolidated, the rate will be raised from 15 per cent to 17 per cent. In view of the extent to which provincial governments are now levying personal income taxes, and in view also of the surtax on investment income imposed by the dominion last year, it is not proposed to alter the existing schedule of rates on individual incomes.

My next proposal relates to the metal mining industry. The contribution which this industry has made to the economic well-being and indeed to the financial integrity of the dominion during the depression years is well known. Great as its development has already been, a much greater future appears to lie in store. In the opinion of many, we have little more than begun to tap the varied mineral wealth of this country. Moreover, the most important branch of the industry, namely, gold mining, is in the fortunate position of producing a commodity for which the demand appears to be unlimited. In other industries production cannot be speeded up without creating oversupply and breaking the market. In the case of gold, however, overproduction seems under present conditions to be impossible and the price remains fixed at least for long periods of time. On the other hand, the industry is one in which the risks are great, especially in the initial stages. Exploration and development require expenditure of large amounts of capital over a considerable period of time. Private enterprise, therefore, can only be induced to enter the field if the prizes to be gained for the relatively few successes are attractive.

Because of these special characteristics, the industry appears to offer a unique opportunity for a constructive governmental policy designed to stimulate an expansion of mining activity with its resultant effects on employment and purchases of supplies and materials. The government therefore proposes to grant exemption from corporate income tax to any metalliferous mine coming into production between May 1, 1936, and January 1, 1940, such exemption to apply to its income for the first three years following the commencement of production. This definite step to encourage the development of the mining industry combined with the additional provision for geological surveys and investigations and for transportation facilities into new mining areas made in the main and special supplementary estimates should do much to accelerate new exploration and development work during the present year and the following two or three years. I desire to add that as uncertainty of taxation is a definite deterrent to the making of new commitments in a hazardous industry, the mining industry may rely upon it that this government will not impose discriminatory taxation with respect to mines. While the present government is in power, mining enterprises can depend upon treatment at least as favourable as that accorded to other industries under the corporation income tax.

In view of the decline in interest rates, it is intended to reduce the rate of interest on unpaid instalments of income tax from 6 per cent to 5 per cent, and to lower the penalty rate of interest with respect to overdue tax from 4 per cent to 3 per cent.

The gift tax is to be altered by requiring that payment of the tax shall be made annually rather than at the time each gift is made. Furthermore, gifts up to $1,000 annually to any one person will be exempt from the provisions of the gift tax in future.

Finally, important changes are being made in the treatment of companies which have technically come to be known as "4 (k) companies"—in other words, incorporated companies "whose business is not only carried on but whose assets, also, are situate entirely outside of Canada." This category will be reserved exclusively for the type of industrial or commercial operating company for which it was originally created. A new category will be provided for investment holding companies wholly owned by non-residents, which will be required to pay a tax on their income at a rate equal to half the ordinary rate on corporate incomes. Credit on this tax will be given in respect of the 5 per cent tax paid on last year's income distributed to non-resident shareholders, but such companies will be required to pay the 5 per cent non-resident tax on income accumulated but not distributed during the period after the 5 per cent tax first went into effect and up to the coming into effect of this new tax. In future these companies will, of course, not have to pay the 5 per cent tax on dividends paid to their non-

resident shareholders but will be taxed at the higher rate on their income.

These changes in income tax, it is anticipated, will provide for an increase in revenue of approximately $6,000,000.

SALES TAX

As a means of raising a substantial amount of the additional revenue which must be obtained in the ensuing year it is proposed to increase the rate of sales tax from 6 per cent to 8 per cent. It was our view that a moderate increase in the existing sales tax which covers the broad field of merchandise transactions and for which efficient and economical machinery for collection is already in operation would be clearly preferable to singling out a few particular items to bear an unjustly heavy burden. I do not intend to impose "nuisance" taxes in an effort to raise more revenue but rather to utilize our existing taxation structure.

A few changes are to be made in the schedule of exemptions from the sales tax. With a view to simplifying administration and eliminating double taxation certain materials consumed in the process of manufacture commonly known as "consumable materials" but not including lubricating or fuel oils or plant equipment will be placed on the exempt list. Paper and ink used in magazines and periodicals will also be given exemption. The only other items to be granted relief from sales tax are crushed stone and crushed gravel used in the building or maintenance of provincial, county and township roads; liver extract for use in the treatment of anaemia; educational films; and handmade drawings, or designs for use in a number of manufacturing industries.

It is estimated that as a result of the above changes in the sales tax the revenue therefrom will be increased by approximately $23,000,000.

EXCISE TAXES

The most important changes in excise taxes arise through the recent report of the Tariff Board regarding the automobile industry. At present there is a 5 per cent and 10 per cent tax on automobiles imported or produced in Canada with exemptions given in terms of price and extent of cost of production, incurred in Canada or in British countries. Following the recommendations of the Tariff Board in connection with this item, it is proposed to replace the existing rates with a flat rate tax of 5 per cent on all automobiles, regardless of Canadian or empire content, on the value in excess of $650. At the same time, it is provided that in no case shall the tax per automobile exceed $250.

A further recommendation which is being accepted is that tires and tubes shall not be subject to excise tax when purchased by manufacturers producing less than 10,000 automobiles or chassis each year if at least 50 per cent of factory cost is incurred in the British empire. However, a manufacturer producing more than 10,000 automobiles must have incurred at least 60 per cent of factory cost in the British empire in order to qualify for this exemption.

Other changes in excise taxes levied under the Special War Revenue Act are of minor importance. It is proposed to reduce the tax on cigarette paper tubes from three cents to two cents per hundred in order to equalize the rates on flat papers and tubes. With regard to the 3 per cent special excise tax on imports, the changes contemplated are confined to a few additions to the schedule of exemptions, including materials used in the manufacture of binder twine and fishing rope, paintings under tariff item 695a; educational films; and handmade drawings or designs for use in a number of manufacturing industries.

EXCISE DUTIES

Proposed changes in the Excise Act are limited to a few relatively unimportant adjustments. The first of these equalizes the excise duty on Canadian brandy with the customs duty on brandy imported from South Africa and Australia by lowering the excise duty rate from four dollars per gallon to three dollars. The second proposed adjustment is a reduction of one dollar per gallon in the rate of excise duty on spirits used in medicines, extracts and pharmaceutical preparations in order to bring it into line with the rate applying to spirits used in the manufacture of perfumes. Finally the excise duties on imports of leaf tobacco are to be removed from the Excise Act and transferred at the same rates to the customs tariff.

CUSTOMS TARIFF

To-day's customs tariff proposals relate to both the Tariff Act and the various schedules thereto. Having in mind that they follow closely upon the tariff revision effected by the Canada-United States trade agreement and immediately precede negotiations with the United Kingdom, it will, I think, be generally admitted that they are extensive and important. For purposes of record, the proposed amendments may be classified as follows:

| | |
|---|---|
| Reductions under all tariffs | 37 |
| Reductions under British preferential tariff only | 30 |
| Reductions under British preferential and intermediate only | 20 |
| Reductions under intermediate only | 11 |
| Reductions under intermediate and general only | 6 |
| | 104 |

| | |
|---|---|
| Increases under intermediate and general only.. .. .. .. .. .. .. .. | 7 |
| Increase under intermediate only.. | 3 |
| Increases under general tariff only.. | 2 |
| | 12 |

Changes in the act itself include provisions for a clearer definition of the heretofore indefinite phrase "of a class or kind made in Canada" and for a more just and equitable administration of the so-called "dumping clauses."

Amendments proposed in the tariff schedules, while not unusually great in number, affect many commodities of extreme importance in our national economy. Obviously it is impossible for me to touch upon all of these in the course of my remarks: I trust that hon. members will read the resolutions of which I shall give notice at the conclusion of this address, and which will form part of it in Hansard in the morning, for details with respect to many items. I shall, however, make brief reference to some items, or groups of items, in respect of which changes in duties are contemplated.

By direction of my immediate predecessor in office, the Tariff Board has been reviewing duties applying to motor vehicles, cotton products, gasoline, and yarns and fabrics of artificial silk; and, at my request, has conducted an investigation into the present state of the furniture industry. I am to-day able to lay on the table—in fact I have presumed upon the goodness of the house to have them placed on the table in advance of my address, because of their bulk—reports from the board relating to these subjects. After careful consideration, the government has decided to accept in each instance the rates of duty recommended by the board.

Broadly speaking, the policy proposed in respect of automobiles is, I believe, one that will maintain the industry in Canada and, at the same time, guarantee fair prices to consumers. The relation—a vitally inter-dependent one—of the so-called "parts" industry to that of the huge manufacturing and assembling plants has been closely studied, and a feature of the new schedule is the manner in which the attainment of a high degree of Canadian content in the completed vehicle is encouraged. It will be remembered that under the Canada-United States agreement recently approved by parliament, the duties on automobiles were reduced from 20, 30 and 40 per cent, respectively, on the three price ranges, to 17½, 22½, and 30 per cent, respectively. It has been decided to make the existing intermediate tariff of 17½ per cent

apply to all automobiles and trucks—all of which, (including parts for original equipment, replacement or repair) will be free of duty under the British preferential tariff.

The reference to the Tariff Board on yarns and fabrics of cotton arose from a request by His Majesty's Government in the United Kingdom, under the provisions of the agreements of 1932, for a review of the duties on these goods under the British preferential tariff. The board was obliged, therefore, in its appraisal of the situation—domestic and British—to use the yardstick stipulated by those agreements, namely: the equation of the relative costs of production in the two countries. The board has kept within the terms of its reference and within the letter and spirit of the agreement; and the government, in tabling its report and accepting its recommendations, desires to do the same. It is proposed, therefore, to remove entirely the specific duties on yarns and fabrics of cotton, under the British preferential tariff. It is proposed, further, as properly following the reduction on yarns and fabrics, to revise the specific duties applying to cotton clothing, wearing apparel and manufactured articles of cotton, by removing these duties entirely on imports under the British preferential tariff and by reducing them by one-half on imports under the intermediate tariff.

The vital feature of the changes in the petroleum schedule is the reduction of the intermediate rate on gasoline to one cent per gallon as compared with a rate, until recently effective, of 2½ cents. This reduction should be of great importance to users of gasoline throughout Canada and it is confidently believed that it can be effected without injury to the Canadian refining industry.

In accordance with the results of the board's inquiry into the tariff situation surrounding artificial silk, it is proposed, under the British preferential tariff, to remove entirely the specific duties on both yarns and fabrics, to reduce also the ad valorem rate on acetate yarns, and to adjust the ad valorem rate on the fabrics. As a corollary to this reduction, the government proposes to reduce both the British preferential and intermediate duties on clothing, wearing apparel and manufactured articles of artificial silk, this reduction on the completely-finished articles being designed to pass on to the consumer the advantage in reduction of raw material duties given to those who cut up the materials and manufacture the garments.

The report on furniture is an interim one and recommends no change in the existing intermediate tariff rate of 30 per cent.

In the case of many commodities covered by to-day's resolutions, downward revision of duty has been confined to the British preferential tariff. These—additional to cotton and artificial silk products already dealt with—include many of outstanding importance to United Kingdom producers and Canadian consumers. I may illustrate by stating that scheduled reductions which are confined to the British preferential tariff—and entailing in several instances the removal of all duty—include such goods as chemical earthenware, steel machinery of a class or kind not made in Canada, tea waste, malt extracts and powders, dental forgings, fire engines, iron and steel machinery not separately enumerated, desiccated cocoanut, and all non-enumerated articles of iron or steel. Closely related to these are those items on which reductions, while operative under both British preferential and intermediate tariffs, will, in most instances, give the United Kingdom producer a better trading position in this market; in this connection I might refer to glass articles for mounting, heat-resisting glassware, nickelled and other plated ware and polished steel tubing.

May I at this point say a few words regarding changes at this time in the British preferential tariff. In negotiating recently with the United States, this government took scrupulous care to respect in letter and spirit every syllable of the agreements effected in 1932 with various countries of the British empire. Although the Liberal opposition of that day had registered disapproval of the conference agreements on the ground that in too many instances they established preferences by raising duties against other countries, nevertheless that opposition, now become the government of the day, has seen to it that every commitment was respected. No guaranteed British margin was impaired. Indeed, many preferences that might with warrant have been deemed not to be in that class were deliberately set aside as not open to negotiation, sometimes at considerable cost to Canada in the matter of bargaining.

And yet it is obvious that, although the agreements have been respected, the trading advantage here of British countries—notably, of course, the United Kingdom—is not so great as it was prior to the Canada-United States agreement. The very fact of admitting the United States to the benefits of our intermediate tariff produced that result. In the near future Canada must again sit at a table with the United Kingdom to consider a new agreement. It is obvious that, in such negotiations, Great Britain will seek such concessions as will, in her opinion, enable her to increase her trade with Canada. In such negotiations, needless to say, the Canadian government will take equally scrupulous care to observe the letter and the spirit of the Canada-United States trade agreement.

Canada cannot give everything to-day and bargain to-morrow, but Canada can, and this government does, give to-day to empire countries such concessions as will, I am sure, be accepted in the spirit in which the British preference was conceived. In this spirit this government, since coming into office, has seen to it that unnecessary impediments to inter-empire trade have been removed, that vexatious restrictions have been lessened and that arbitrary regulations have been altered or abolished. It has interested itself in the increase of inter-empire trade both by imports from the empire as well as exports to the empire; and under to-day's resolutions it proposes easier access to this country for certain empire commodities. The proposed reductions in the British preferential tariff are in no sense elements in a bargain. Concessions they are, both to Canadian consumers and to British producers, but concessions made in the firm belief that only from mutually advantageous exchange of commodities can come that common benefit in which should lie both the origin and the objective of intra-empire trade arrangements. Canada knows full well that Great Britain, when the day of conference comes, will not be unmindful or forgetful of Canada's past record in the matter of preferential treatment in this market for British products—a record crystallized to-day in the fact that close upon seven hundred items in Canada's tariff schedules, practically half the items in the entire list, have against them the word "free" in the British preferential column.

Reductions under all tariffs are proposed on a wide range of varied commodities, including biologicals for the diagnosis or treatment of diseases, materials used in the production of periodical publications, numerous petroleum products other than gasoline, ditchers and tractors of all kinds, safety equipment of all kinds, printing and press-room equipment, precision tools, draughtsmen's and surveyors' instruments, various articles for use in hospitals, certain soya bean products, all articles used by the blind, rolling mill and paper mill rolls and feeds for fur-bearing animals.

The effective tariff on agricultural implements, now the intermediate, is reduced to 7½ per cent, being further to the reduction from 25 per cent to 12½ per cent effected under the Canada-United States agreement.

As a gesture of good will and an earnest of intention to widen Canadian trade with the Irish Free State, reductions in duty, to be applicable under the British preferential tariff only, are proposed on certain products peculiarly identified with the Irish Free State and requested by that country, namely: stout, prune wine and Irish poplin.

Preferential treatment for empire-grown tobaccos is provided, in the belief that Southern Rhodesia may be able thereby to cater effectively to Canada's requirements in tobaccos of the oriental type, hitherto imported entirely from non-empire countries.

The preference in favour of Australia on raisins and dried currants, which lapsed on March 31, last, is renewed, at four cents per pound.

An interesting and much anticipated item is that giving statutory recognition to the undertaking in connection with the United States under the recent agreement, relative to the privilege to be accorded to Canadians returning from abroad of bringing into Canada, free of duty, personal purchases to a value of $100.

Solely on the grounds of public health, the importation of textile waste derived from used mattresses is prohibited, unless such mattress waste be certificated as to proper fumigation, cleaning, etcetera.

In introducing the budget of May 1, 1930, I made the following statement regarding countervailing duties:

> There are certain commodities which are or will become of double significance in Canada's trade with the world, both as imports and exports. On such commodities our policy has been, and is, to avoid extreme rates of duty, and we propose, regarding these products, to maintain in general the existing rates of duty.
>
> It has been decided, however, to embody within the wording of a limited number of items of this class provision for a "countervailing duty" whereby Canada, while not generally raising its schedule rates, imposes upon such products from another country rates equivalent to those imposed by that country upon the identical Canadian product, where these are higher than the rates enumerated in the Canadian tariff schedule. This means that other countries who both buy from and sell to us these commodities, have it in their own power, by reciprocal action on their part, to enable us to reduce duties to the level of the rates stated in our tariff.

I have quoted my remarks of that date for the reason that they still serve perfectly to express my opinions regarding countervailing provisions which to-day's resolutions apply to three natural products: cut flowers, potatoes and eggs.

Mr. ROWE (Dufferin): What about cast iron pipe?

[Mr. Dunning.]

Mr. DUNNING: These three commodities were included in the list of May 1, 1930, and that they are again singled out for such treatment is due to the fact that the late administration in wiping out in September, 1930, the countervailing provisions of the May budget, did not provide, under the intermediate tariff, a duty more in line with the general tariff on eggs and, what is more important, failed to provide any duty whatsoever on potatoes or cut flowers. The weakness of Canada's bargaining position in respect of these commodities became speedily apparent in the Washington negotiations, so much so that this government declined to bind these items at the existing intermediate rate, thus giving clear indication that it might, at the first opportunity, see fit to recommend to parliament a revision of these ratings. In so recommending to-day, may I make clear that our attitude continues to be that of 1930; we do not desire or intend to raise tariffs; we do by the countervailing duties invite other countries to bring their tariffs down to the level of ours.

In 1935 there was inserted in the tariff item relating to steel plate a proviso to the effect that, regardless of any other law to the contrary, the anti-dumping provisions should not apply to plate more than 66 inches in width. Thus to select a solitary commodity for such treatment was, to say the least, to make an invidious distinction and it is proposed to allow the anti-dumping provision to apply to all products to which the law says it should, under given conditions, apply. In the interests of justice and equity, therefore, and without any regard whatsoever to the effect upon the quantum of tariff protection afforded, it is proposed to delete from this item the proviso in question.

There will be tabled to-day, in addition to those to which I have made specific reference, reports by the tariff board resulting from inquiries regarding the following commodities: Thrown yarns of artificial silk, buttons and button moulds, forged steel rolls, rice for processing, rhinestones and metal beads, containers of paperboard or fibreboard and photographic apparatus. Not all of these suggest or recommend tariff changes but, in accordance with the provisions of the Tariff Board Act, they will be made available to this house.

Regarding to-day's tariff proposals, may I say that these are formulated on the principle that the most enduring kind of progress is orderly progress—and that applies equally whether one's intended direction in the im-

position of taxes be downward or upward. Extremes defeat their own purpose; violent fluctuations one way or the other are mere leaps in the dark. Intelligent and unprejudiced appraisal of to-day's tariff situation in Canada will reveal sound reasons, apart altogether from the general principles I have just enunciated, why the best results are to be secured by deliberate, considered and related stages. There is, for example, our position with respect to British countries, to which I have referred. And, in the purely domestic sphere, there is the fact so readily overlooked: that this government, in extending to the United States the benefits of the intermediate tariff, effected at one stroke the most thorough-going downward revision of the customs tariff of Canada since the inception of that tariff—as a consequence of which act, together with the changes now proposed, commodities imported from the United States under at least 200 of the most important items in the tariff will pay lower rates of duty than they would have paid had they been so imported after the adoption of the May 1st budget of 1930.

In concluding this address, it is natural that my thoughts should go back to the last occasion on which I had the honour of presenting the budget six years ago to-day. The great change both in world conditions and conditions in Canada during that interval constitutes a challenge without precedent to the ability, the judgment and the broad patriotism of those charged with public responsibilities.

The government of Canada is making earnest and sustained efforts to meet this challenge and to grapple with the manifold problems of the country. I would ask the house and the country to accept the proposals I have made to-day as part of a conscientious effort to promote the best interests of the people of Canada.

## Resolutions

Mr. Speaker, I beg to give notice that when we are in committee of ways and means I shall move the following resolutions:

### INCOME WAR TAX ACT

Resolved, That it is expedient to amend the Income War Tax Act and to provide:

1. That the corporation rate of tax shall be increased from thirteen and one-half per centum to fifteen per centum;

2. That where a consolidation is permitted the corporation rate of tax shall be increased from fifteen per centum to seventeen per centum;

3. That payment of the gift tax be made annually;

4. That gifts to any one person which in the aggregate do not exceed one thousand dollars in the calendar year be exempt from the provisions of the gift tax;

5. That the rate of interest on unpaid instalments of tax be reduced from six per centum to five per centum;

6. That the penalty rate of interest in addition to the interest provided for in the foregoing resolution in respect of unpaid overdue tax be reduced from four per centum to three per centum;

7. That a tax of five per centum be imposed at the source on payments by Canadian debtors to non-residents in respect of films whether copyrighted or not;

8. That any metalliferous mine that comes into production after the first day of May nineteen hundred and thirty-six and prior to the first day of January nineteen hundred and forty shall be exempt from income tax for the first three fiscal periods following the commencement of production;

The minister, under appropriate regulations, shall determine the date of commencement of production and the properties, new or old, that shall be determined as having come into production, having regard to the production of ore in reasonable commercial quantities, and shall issue a certificate accordingly.

9. That (a) an Investment Holding Company all of whose shares (qualifying shares excepted) are held by non-resident persons shall not be afforded the exemption provided by paragraph (k) of section four of the act, but shall be subject to a tax equal to one-half of the prevailing corporate rate of tax imposed upon Canadian companies;

(b) the five per cent tax on dividends paid to such non-resident shareholders by such Investment Holding Company shall not apply, except as hereinafter provided;

(c) in determining the taxable income of such Investment Holding Company a deduction shall not be allowed in respect of any interest payments or of taxes paid abroad;

(d) any five per cent tax paid by such companies in nineteen hundred and thirty-five shall be allowed as a deduction from the tax otherwise payable in respect of the said year;

(e) to the extent that five per cent tax has not been incurred in respect of the earnings of nineteen hundred and thirty-three, nineteen hundred and thirty-four and nineteen hundred and thirty-five, the five per cent tax shall continue to be imposed until the undistributed accumulated earnings of the said years have been made subject to the said tax;

(f) paragraph (k) of section four of the act shall be amended to apply to industrial and commercial operating companies only;

10. That any enactment founded on the provisions of these resolutions shall be deemed to have come into force at the commencement of the calendar year nineteen hundred and thirty-five and to be applicable thereto and to fiscal periods ending therein and to all subsequent periods, except as otherwise provided.

### SPECIAL WAR REVENUE ACT

Resolved, That it is expedient to introduce a measure to amend the Special War Revenue Act, chapter one hundred and seventy-nine of the Revised Statutes of Canada, 1927, and amendments thereto and to provide:

1. That part VII of the said act be amended to provide for the taxation of every change

of ownership of any participating interest in the operations or profits of any association, company, corporation, fund or trust not divided into shares at the rate of one-tenth of one per cent of the value of every such participating interest so transferred or assigned;

2. That subsection two of section seventy-seven A of the said act, as enacted by section twelve of chapter fifty of the statutes of 1932-33 and amended by section two of chapter forty-two of the statutes of 1934, be further amended by providing that the excise tax on packages of cigarette paper tubes be reduced from three cents to two cents for each one hundred cigarette paper tubes or fraction thereof;

3. That the rate of consumption or sales tax imposed by subsection one of section eighty-six of the said act, as enacted by section eleven of chapter fifty-four of the statutes of 1932, be increased from six per cent to eight per cent;

4. That Schedule I to the said act, as amended by section twenty-six of chapter fifty of the statutes of 1932-33, and by section six of chapter thirty-three of the statutes of 1935, be further amended by repealing section one thereof and substituting the following:

1. Automobiles adapted or adaptable for passenger use:

| | |
|---|---|
| (a) valued at not more than six hundred and fifty dollars.. .. | free |
| (b) valued at more than six hundred and fifty dollars, on the amount in excess of six hundred and fifty dollars.. .. .. .. .. | 5 per cent |

Provided that the tax collected under paragraph (b) above shall in no case exceed two hundred and fifty dollars per automobile.

Provided further that the tax shall not apply to automobiles imported:

(a) under Customs Tariff items 702, 706, 707 and 708;

(b) by a bona fide settler on a first arrival;

(c) by a beneficiary resident in Canada, under the terms of a will of a person dying in a foreign country.

5. That schedule II to the said act, as enacted by section seventeen of chapter forty-two of the statutes of 1934, be amended by adding to paragraph (iii) thereof the following:

Provided, also, that the tax imposed under paragraph (iii) shall not apply to the goods mentioned therein, when sold to or imported by manufacturers of automobiles or chassis under the following conditions:

(a) If less than ten thousand automobiles or chassis are manufactured or produced per annum and at least fifty per centum of the factory cost of manufacturing or producing them, exclusive of duties and other taxes, is incurred in the British empire;

(b) If ten thousand automobiles or chassis or more are manufactured or produced per annum and at least sixty per centum of the factory cost of manufacturing or producing them, exclusive of duties and other taxes, is incurred in the British empire:

Provided, however, that effective April 1, 1938, the words "sixty-five" shall be substituted for the word "sixty" in this paragraph.

6. That schedule III to the said act, being the list of articles exempted from the consumption or sales tax, as enacted by section eighteen of chapter forty-two of the statutes of 1934, and amended by section seven of chapter thirty-three of the statutes of 1935, be further amended by adding to the said schedule the following:

Materials, not to include lubricating or fuel oils or plant equipment, consumed in the process of the manufacture or production of taxable goods;

Crushed stone or crushed gravel to be used exclusively in the building or maintenance of provincial, county or township roads;

Printing paper and printing ink for use exclusively in producing quarterly, bi-monthly, monthly and semi-monthly magazines and weekly literary papers unbound;

Liver extract for use exclusively in the treatment of anaemia;

Goods enumerated in Customs Tariff items 695b and 696a.

7. That schedule V to the said act, as enacted by section nineteen of chapter forty-two of the statutes of 1934 and amended by section nine of chapter thirty-three of the statutes of 1935, be further amended as follows:

i. By inserting therein after the words "not to include" in the second line thereof the words "automobiles adapted or adaptable to passenger use";

ii. By adding thereto the following:

Goods enumerated in customs tariff items 695a, 695b and 696a;

Materials for use in the manufacture of binder twine and fishing rope.

8. That any enactment founded on paragraphs one to seven inclusive of this resolution shall be deemed to have come into force on the second day of May, one thousand nine hundred and thirty-six, and to have applied to all goods imported or taken out of warehouse for consumption on and after that day and to have applied to goods previouly imported for which no entry for consumption was made before that date.

EXCISE ACT

Resolved, That it is expedient to introduce a measure to amend the schedule to The Excise Act, 1934, as amended by chapter twenty-nine of the statutes of 1935 and to provide:

1. That the duty of excise on Canadian brandy be reduced from four dollars to three dollars per proof gallon;

2. That the duty of excise imposed upon spirits used in the manufacture of patent and proprietary medicines, extracts, essences and pharmaceutical preparations be reduced from two dollars and fifty cents to one dollar and fifty cents per proof gallon;

3. That the duty of excise imposed upon spirits, sold to licensed druggists and used exclusively in the preparation of prescriptions for medicines and pharmaceutical preparations be reduced from two dollars and fifty cents to one dollar and fifty cents per proof gallon;

4. That paragraphs (d) and (e) of section six of the said schedule, being the duties imposed upon imported leaf tobacco unstemmed and imported leaf tobacco stemmed be repealed;

5. That any enactment founded on paragraphs one, two, three and four of this resolution shall be deemed to have come into force on the second day of May, one thousand nine hundred and thirty-six.

CUSTOMS TARIFF

1. Resolved, That the Customs Tariff, being chapter forty-four of the Revised Statutes of Canada, 1927, as amended by chapter thirty-nine of the acts of 1929, chapter thirteen of the acts of 1930 (first session), chapter three of the acts of 1930 (second session), chapter thirty of the acts of 1931, chapter six and thirty-seven of the acts of 1932-33, chapters thirty-two and forty-nine of the acts of 1934

and chapter twenty-eight of the acts of 1935, be further amended by striking thereout subsection one of section six thereof and substituting therefor the following:

(1) In the case of articles exported to Canada of a class or kind made or produced in Canada, if the export or actual selling price to an importer in Canada is less than the fair market value of the same article when sold for home consumption in the usual and ordinary course in the country whence exported to Canada at the time of its exportation to Canada, or is less than the fair market value or value for duty thereof as determined under the provisions of section thirty-six of the Customs Act, or is less than the value for duty thereof as determined by the minister under the provisions of paragraphs (a) and (e) of section forty-one of the Customs Act, or is less than the fair market value thereof as fixed under the provisions of section forty-three of the Customs Act, there shall, in addition to the duties otherwise established, be levied, collected and paid on such article, on its importation into Canada, a special or dumping duty, equal to the difference between the said selling price of the article for export and the said fair market value thereof or value for duty thereof; and such special or dumping duty shall be levied, collected and paid on such article although it is not otherwise dutiable.

Provided that when it is established that any articles though of a class or kind made or produced in Canada are not offered for sale to the ordinary agencies of wholesale or retail distribution or are not offered to all purchasers on equal terms under like conditions, having regard to the custom and usage of trade, such articles may be exempted from special or dumping duty.

Provided that the said special duty shall not exceed fifty per centum ad valorem in any case, and the following goods shall be exempt from such special duty, viz.:—

Goods of a class subject to duty under the Excise Act.

Provided, notwithstanding, that on importations from Australia under the Australian Trade Agreement Act, 1925, the said special duty shall not exceed fifteen per centum ad valorem in any case.

2. Resolved, That the aforesaid section six of the Customs Tariff be further amended by striking thereout subsection eight thereof and substituting in lieu thereof the following:

(8) The minister may make such regulations as are deemed necessary for carrying out the provisions of this section and for its enforcement, and such regulations may also provide for the exemption from special or dumping duty of any imported article when the minister is satisfied that the article or class of articles is not available at fair competitive prices in any consuming market in Canada owing to the remoteness of such market from the Canadian source of supply.

3. Resolved, That the aforesaid section six of the Customs Tariff be further amended by adding thereto the following subsection:

(10) For the purposes of this act articles shall not be deemed to be of a class or kind made or produced in Canada unless so made or produced in substantial quantities; and the governor-in-council may by order-in-council provide that such quantities, to be substantial, shall be sufficient to supply a certain percentage of the normal Canadian consumption and may in such order fix such percentage.

4. Resolved, That the French version of tariff item 691 of schedule A to the Customs Tariff, being chapter forty-four of the Revised Statutes of Canada, 1927, as enacted by section five of chapter twenty-eight of the statutes of 1935, be amended by striking out the word "croix" in the second line of the said item and substituting therefor the word "crosses."

5. Resolved, That schedule A to the Customs Tariff being chapter forty-four of the Revised Statutes of Canada, 1927, as amended by chapter seventeen of the acts of 1928, chapter thirty-nine of the acts of 1929, chapter thirteen of the acts of 1930 (first session), chapter three of the acts of 1930 (second session), chapter thirty of the acts of 1931, chapter forty-one of the acts of 1932, chapters six and thirty-seven of the acts of 1932-33, chapters thirty-two and forty-nine of the acts of 1934, and chapter twenty-eight of the acts of 1935, be further amended by striking thereout tariff items 16, 28, 28a, 35, 79b, 83(a), 99c, 113, 142, 147, 168, 173, 178, 180a, 183, 199b, 200a, 206, 206a, 208h, 208i, 219d, 219e, 224, 259, 267, 267a, 267b, 268, 269, 270, 271, 272, 273, 274, 275, 284, 286, 288, 312a, 323, 326a, 362, proviso to 380(b), 404b, 409b to 409k inclusive, 409l, 409m, 409n, 409q, 410d, 411b, 412, 412a, 422a, 424, 427, 427a, 428a, 428b, 429(a), 429(g), 430, 430a, 431b, 431c, 435, 438a, 438b, 438c, 438d, 438e, 438f, 438h, 438i, 445a, 445f, 445g, 445k, 445m, 446a, 455, 462, 463, 473, 476a, 494b, 505, 513, 522, 522c, 523, 523a, 523b, 529, 529a, 532, 558b, 558d, 561, 564b, 567a, 569c, 569e, 584a, 584b, 587a, 603, 607 (Part 2), 657a, 663c, 672a, 695, 695b, 698, 698a, 703, 718, 783, 802, 811, 813, 818, 821, the several enumerations of goods respectively and the several rates of duties of customs, if any, set opposite each of the said items, and by inserting the following items, enumerations and rates of duty in said schedule A:

| Tariff Item | — | British Preferential Tariff | Intermediate Tariff | General Tariff | Present Rates | | |

6. Resolved, that schedule B to the Customs Tariff, being chapter forty-four of the Revised Statutes of Canada, 1927, be amended by striking thereout tariff items 1030 and 1055, the enumerations of goods and the rates of drawback of customs duties set opposite to each of the said items, and by inserting the following items, enumerations and rates of drawback of customs duties in said schedule B:—

| Item No. | Goods | When Subject to Drawback | Portion of Duty (not including Special Duty or Dumping Duty) Payable as Drawback |
|---|---|---|---|
| 1011 | Rhinestones, settings for rhinestones, metal spots and beads. | When imported by manufacturers of dress trimmings and used exclusively in their own factories in the manufacture of dresses and dress trimmings... | 99 p.c. |
| 1025 | Hot rolled hexagon bars of Bessemer steel not being of greater value than 4 cents per pound. | When used in the manufacture of cold drawn bars..... | 99 p.c. |
| 1030 | (a) Materials, n.o.p..... | When used exclusively in the manufacture of articles enumerated in Tariff Item 236..... | 50 p.c. |
| | (b) Woven fabrics, wholly of cotton, not bleached, mercerized nor coloured, weighing not more than seven and one-half pounds per one hundred square yards..... | When imported under the British Preferential Tariff and used exclusively in the manufacture of articles enumerated in Tariff item 236..... | 99 p.c. |
| 1052 | Machinery, new or used, of a class or kind not made in Canada. | When imported by manufacturers of automobiles and motor vehicles or of automobile and motor vehicle parts to be used in the production of such automobiles and motor vehicles or automobile and motor vehicle parts..... | 99 p.c. |
| 1060 | Paper of all kinds..... | When used by the publisher or printer in Canada in the production of periodical publications enjoying second-class mailing privileges..... | 50 p.c. |

7. Resolved, that schedule C to the Customs Tariff, being chapter forty-four of the Revised Statutes of Canada, 1927, be amended by adding thereto the following items:—

| | |
|---|---|
| 1218 | Used or second-hand periodical publications:<br>Provided, that this item does not affect in any manner periodical publications:—<br>*(a)* Sent, gratis, to Canada for charitable purposes;<br>*(b)* Sent to persons in Canada as casual donations by friends abroad;<br>*(c)* Imported for personal or for institutional use, and not for resale;<br>*(d)* Imported by or for paper mills for use as stock in the manufacture of paper. |
| 1219 | Used or second-hand mattresses or materials therefrom:<br>Provided, that this item does not affect in any manner:<br>*(a)* Mattresses imported under Tariff Items 704, 705, 706, 707, 708, or under tourists' or travellers' vehicle permits;<br>*(b)* Materials from used or second-hand mattresses, when imported after having been cleaned and fumigated, under such regulations as the Minister may prescribe, accompanied by such certificates as he may designate. |

8. Resolved, That any enactment founded upon the foregoing resolutions to amend the Customs Tariff or schedules thereto shall be deemed to have come into force on the 2nd day of May, one thousand nine hundred and thirty six, and to have applied to all goods mentioned in the foregoing resolutions imported or taken out of warehouse for consumption on and after that date, and to have applied to goods previously imported for which no entry for consumption was made before that date.

Right Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, there has grown up in this country a custom of not proceeding with the budget debate promptly on the conclusion of the address by the Finance minister. In the early days of the history of the dominion the debate was immediately proceeded with, but in view of the fact that a large portion of the budget speech, notably that comprising all the tariff changes, has not been read but has been placed on Hansard, where we shall have to read it in order to become familiar with the material contained in the tables and the details of the resolutions, it is obvious that the debate could not usefully be proceeded with now. I had intended, had the changes not been so extensive, to proceed at once, but from the very nature of the circumstances I shall be compelled to move now the adjournment of the debate. I do not know when it would be most convenient to resume it, but whatever suits the convenience of the government will be satisfactory to me.

Motion agreed to and debate adjourned.

Mr. MACKENZIE KING: As to proceeding with the debate on the budget, the government thought of proceeding on Monday, but if it would better suit the convenience of my right hon. friend we will make it Tuesday.

Mr. BENNETT: I greatly appreciate the courtesy of the right hon. gentleman. I think the budget speech last year was delivered on a Thursday and we continued the debate on the following Tuesday, but it is quite immaterial whether this debate is resumed on Tuesday or Monday. If Tuesday is quite as satisfactory to the government we can make it Tuesday, but if the government prefers to go on with it on Monday we can proceed with it on Monday.

Mr. MACKENZIE KING: I think, Mr. Speaker, it would meet with the general approval of the house if you would now call it six o'clock.

At six o'clock the house took recess.

---

## After Recess

The house resumed at eight o'clock.

### FISHERIES ACT AMENDMENT

On the order:

Resuming debate on the motion of Mr. Reid for the second reading of Bill No. 20, to amend the Fisheries Act, 1932.

[Mr. Dunning.]

Mr. REID: When the house was last considering this bill the Minister of Fisheries (Mr. Michaud) had not completed his remarks and I believe it was his desire that it should stand over until he had an opportunity to make a further reply.

Motion stands.

### SUPPLY

The house in committee of supply, Mr. Sanderson in the chair.

DEPARTMENT OF MARINE

Other projects—to provide for the construction, repair and replacement of aids to navigation and buildings and structures used in connection therewith, $379,875.

Mr. STEWART: Could the minister give us some details of this vote?

Hon. C. D. HOWE (Minister of Marine): This refers to a large number of items, chiefly repairs to lighthouses and work of that sort, which have been deferred for a number of years due to measures of economy. They do not appear in the main estimates of this year for the same reason, but in view of the fact that the work would be about seventy-five per cent labour, which would be distributed among a class of people who are very badly in need of help, namely the fishermen and those people living along our seacoasts and inland waters, it was thought that this would be an opportune time to do this necessary work.

Mr. STEWART: There is some provision for new construction; has the minister any information with regard to that?

Mr. CLARKE (Rosedale): Will any of this money be spent on inland waters?

Mr. HOWE: Yes.

Mr. CLARKE (Rosedale): How much?

Mr. HOWE: I will give the figures for the different provinces. In Nova Scotia the amount to be expended totals $99,000; the total for the Charlottetown, Prince Edward Island agency is $11,800; for the New Brunswick agency, $31,625. The amount for the Quebec agency totals $17,500, which will cover work along the lower St. Lawrence river, while the $24,000 allotted to the Montreal agency will cover work on the upper St. Lawrence. The amount allotted to the Ontario agency is $53,500, which will cover work on lake Ontario and lake Erie.

Mr. CLARKE Rosedale): Will it go no further than lake Erie?

Mr. HOWE: It will extend up to lake Superior. All the lakes are under the Ontario agency. The amount allotted to the British Columbia agency is $32,450.

Mr. LENNARD: Are any repairs being done this year to the piers at Hamilton beach? The minister may not be able to furnish this information immediately and perhaps he can give it to me later on.

Mr. HOWE: This vote does not cover canals, which would come under the Department of Railways and Canals. This is a Department of Marine vote.

Mr. WOODSWORTH: Is any provision being made to furnish greater protection to boats between the mouth of the Red river and the pleasure resorts at the south of lake Winnipeg? The lake at that point is treacherous and a number of lives have been lost. Representations have been made to me by the board of trade of Winnipeg and others asking that the small expenditure necessary be made by the department to make this end of the lake a great deal safer.

Mr. HOWE: Two or three lights are to be built at Winnipeg Beach under this vote. My officials believe that these will give the required aids to navigation on lake Winnipeg.

Mr. WOODSWORTH: Would it be possible to have some sort of telephone service or signals to give warning of approaching storms?

Mr. HOWE: The matter of signals has been considered by the lighthouse board, but that board has not recommended them and they are not included. I may say that this lighthouse board is made up of the senior officials of the Department of Marine and others. It passes on all applications for lights, signals or anything in the way of aids to navigation, and ordinarily unless the application passes the board no appropriation is made.

Mr. MacNEIL: Does this item provide for the maintenance of navigation signals? I have reference to the difficulties that arose recently in connection with needed repairs to navigation signals in the port of Vancouver. These signals went out of operation recently and one of the West Vancouver ferries ran aground. It took several days to secure the services of an expert from Victoria. I should like to know if provisions are being made whereby these signals may be quickly repaired should they go out of order, particularly during the foggy season.

Mr. HOWE: I may say that the repairs mentioned by my hon. friend have been made already. This vote includes $15,000 for rebuilding Burnaby shoals beacon.

Mr. MacNEIL: Will there also be available expert repair men for immediate repairs of any breakdowns in the signals?

Mr. HOWE: Arrangements have been made with the Vancouver harbour commissioners that any repairs required to the lights, even though they are not within the jurisdiction of the harbour, will in future be attended to by the mechanics of the Vancouver harbour commission. We think that will be quite an improvement.

Mr. CLARKE (Rosedale): Will any proportion of this amount be spent in Toronto harbour?

Mr. HOWE: There is no amount in this item for Toronto harbour.

Mr. NEILL: The amount allowed to British Columbia, I understood, was $32,000.

Mr. HOWE: $32,450.

Mr. NEILL: One item alone has $15,000 earmarked for it. That does not leave very much for the numerous aids required in the district I represent and that of Skeena. It is evident that the minister has not allowed —at least I ask him if he has considered— the removal of Ripple rock in Seymour narrows? That would cost a lot of money, I admit, but it is a necessary undertaking. Some day, if the matter is not attended to, it is going to cost an enormous loss of life. The rock is submerged about ten feet at low tide. A heavy current runs through there; there is a side current which comes in from a side channel and which tends to drift boats over on to this rock; and all boats of any size, unless they are very powerful, have to wait perhaps five or six hours in order to fit the tide, because they can go in only on slack water, which is a very short time. Some years ago an American boat went up there, struck a rock and pierced her bottom. Luckily they happened to be able to beach her without loss of life. But traffic there is increasing all the time; there are more boats, and the pressure of keeping up schedules compels them to take a greater chance. Some day a most disastrous marine accident is going to occur there. I have not taken this up with the present minister, but in years gone by I have repeatedly put it up to past governments, and they have all promised consideration. I admit that a large sum would be required. I believe that at one time shipping interests were so much

concerned that the United States government made a suggestion that they share part of the expense of the work, because their traffic used the Seymour narrows so much and the danger was so great. But the Canadian government of that time did not think it would be dignified to accept such an offer, or there was some other reason. But if the department is spending money now in a large way for work of that kind I suggest that, if it is not too late, the minister might at least consider that project. I am sure that he will have records with full information on file in his office.

Mr. HOWE: The item in question was carefully considered but it was left out for two reasons. One is because it would cost somewhere between $300,000 and $500,000, and the second is that it is work which requires very little labour. In this particular schedule we have taken only items where not less than fifty per cent of the expenditure is labour. The purpose of this estimate is to furnish some help to the people along the shore who have been having a bad time. But I shall be glad to look into the matter further and perhaps at some future time under another program we shall be able to do the work. My officers realize that it is quite necessary.

Mr. NEILL: I thank the minister for his promise. I admit that a great deal of labour would not be involved, but I think his information regarding the cost is inaccurate. I believe it could be done for $150,000. We had, I think estimates of that cost. I know there are engineers' estimates in the department; whatever their amount is would no doubt be correct. I am speaking only from memory of some years ago, but I thought it did not exceed $150,000.

Mr. MacNEIL: Has provision been made n this item for the repair of floats at the smaller settlements along the coast to enable steamships to call?

Mr. HOWE: The Department of Public Works has charge of all the floats on this island.

Item agreed to.

To provide for the reconditioning and conversion of government steamers, $175,000.

Mr. NEILL: Does this cover any provision for replacing the boat called the Newington, on the Pacific coast? It is a lighthouse tender.

Mr. HOWE: Yes, it does. This is a constructive item, and it is one that I have sponsored personally. We find that we have in the Department of Marine a great number of boats, many of which are over twenty years old and in bad condition. The objection that I found to this work of the department was that all these boats were for special purposes, and after they had performed their little service they were through for the season. The purpose of this item is to revamp several boats and allow them to serve a double purpose. Each boat that is revamped will serve its present purpose and one other. We have now at Sorel a suitable boat which we are going to recondition to replace the Newington. We intend to put in a double bottom, make it into a first-class boat and send it to Prince Rupert. It has ample power and cruising range, and with a few alterations will be very suitable to take the place of the Newington.

Mr. NEILL: That is gratifying, because this has been a long-felt want; the service is requiring more boats all the time. When may we expect to have that boat on the Pacific?

Mr. HOWE: We hope to finish the alterations this summer. I should think it will be round there this fall, in September or October.

Mr. BENNETT: Which boat is that?

Mr. HOWE: It is coal barge No. 7.

Mr. NEILL: I suggest that it be given a proper name, appropriate to the west coast where it is going to operate. It might be called the Alberni instead of being designated by a number.

Mr. HOWE: I shall be glad to consider that.

Mr. BENNETT: Beyond that, what are the particulars of the $175,000? Has the minister the particulars?

Mr. HOWE: Yes. It is intended to take the ice-breaker Saurel, do away with its palatial passenger accommodation and make it into a buoy boat as well as an ice-breaker. As we know, it has tremendous power. With a few alterations and some additional equipment it will be able to handle buoys and it will take the place of the Druid, which is a very old boat, and expensive to operate.

Mr. BENNETT: What is it estimated that it will cost?

Mr. HOWE: That cost is $50,000. Then there is provision for the refitting of the Dollard. The Dollard is a buoy boat operating out of Saint John. By revamping the boilers and giving it greater cruising range it will do its own work and also the work now handled by the Laurentian, a second buoy boat. We have mentioned coal barge No. 7,

which will replace the Newington. We have in Quebec a tug called the Citadelle, which is fitted up as a fire tug. It has never thrown a stream of water. It is a very powerful tug. One of its purposes was to turn the Empress of Britain, but private tugs have come into Quebec to do the work to the satisfaction of the Canadian Pacific; they say that they have no further use for the Citadelle. We will have a separate fire tug which will do the work as well as the Citadelle. We propose to refit the accommodation so that it can replace the Jalobert, now used as the pilot boat at Father Point. It is adequate for that service, and in winter months after its bow has been strengthened, it can be used on the Nova Scotia coast for ice-breaking in the harbours there. It is a lighter boat than the one now in use; I am told that it will be quite adequate for this work, and that a considerable saving will be made.

Mr. HARTIGAN: What was the amount again?

Mr. HOWE: It was $50,000.

Mr. HARTIGAN: Is it the intention of the minister to abandon the Laurentian?

Mr. HOWE: Yes, after we have been satisfied that the Dollard can do the service adequately we intend to lay up the Laurentian.

Mr. BENNETT: The changes mentioned by the minister are changes that we considered many months ago, I do not say in detail, but in the broad principle. While I am not an expert, from the evidence that was presented to me I was of opinion in connection with these old steamers, anywhere from ten to twenty or twenty-five years old—I think that is the oldest—that to undertake to rebuild a boat constructed for a special purpose, and to reboiler her, having regard to changed conditions in regard to the production of steam and the utilization of other mechanical devices for the production of motive power, was a doubtful venture. For instance, modern science has made great improvements in even the last ten years. In connection with boats for the purpose of taking up and putting down buoys, for example, we have had tremendous changes since the first boat was built for that purpose. I noticed that the last boat I saw, built for that class of work, was of entirely different construction from the one I saw many years before. The question of marine equipment, such as cranes, and the rapidity with which power can be applied to windlasses and capstans for the purpose of moving a boat, and that sort of thing, made me doubt whether it was sound economy, apart from anything else, to attempt to recondition these boats. The minister says that he has satisfied himself on the point, and obviously his training has been more closely allied to matters of this kind than mine, but I certainly doubt whether it is sound economy to undertake what he says is being done. Certainly these boats cannot work in the winter if they are equipped only for lifting and putting down the buoys in the St. Lawrence, because the buoys are taken up in the fall and put down in the spring, and a special boat for that purpose cannot be utilized in the winter time for general purposes in Nova Scotia or anywhere else. In other places, where there are continuously sounding buoys, spar buoys and matters of that kind constantly in place, it is the duty of these boats to see that such buoys do not move out of place so that they become faulty aids to navigation. If the minister has satisfied himself, obviously I can only point out to him that the effort we made to see how some of these steamers might be repaired at not too great a cost induced me to believe that for the purposes the minister has suggested it would be sound economy to build new boats. That is all I desire to say in that regard.

Mr. HOWE: We are fortunate, I think, in having in the Department of Marine, in charge at Sorel, Mr. David Carswell, who was appointed by the late government. He is an able shipbuilder; I know him very well and I have great confidence in him. I might point out to my right hon. friend that the boats we are proposing to remodel are our newest boats. For instance, the Saurel is a splendid ice-breaker, but once it is through breaking ice we have no use for it unless, perhaps, it may be used to carry the governor general.

Mr. BENNETT: It took him to the Magdalen islands.

Mr. HOWE: Yes. It is a splendid boat, and it is a pity that it can work only for a month in the spring, breaking ice, and for a month in the fall, keeping the channel open.

Mr. BENNETT: The N. B. McLean is in the same class, except that it is sent to Hudson bay.

Mr. HOWE: Yes. The Saurel is our second best ice-breaker and we feel that if we can keep it in service during the summer, if it will do the work of another boat, it is good economy to spend $50,000 on it for equip-

ment. I may say that the Citadelle is practically the newest boat we have; it is almost a brand new tug, and its earnings last year were $600. As far as a fire tug goes, a much smaller boat with less power is equally useful, because it must have steam up twenty-four hours a day. Otherwise its only duty is to pump water in case of fire, so in replacing that boat we are releasing a splendid ship which we can use pretty well the year round as a combination pilot boat and ice-breaker, for the small amount of ice-breaking required along the Nova Scotia coast. We feel that in this way we can keep that boat occupied twelve months a year.

Mr. BENNETT: I think I should say to the minister that I do not believe it is sound economy to eliminate entirely the maintenance of a boat for fire protection in Quebec, as long as we have the present type of ships coming there and tying up to the docks and the number of passengers who are landed there. My inquiries, both on this and on the other side of the water, satisfied me that although it might look expensive, nevertheless the maintenance of a fire boat seemed almost essential. The minister knows the great discussion that has taken place over the question of a fire boat at Quebec. The Citadelle, as he says, was not intended originally as a fire boat, but she was provided with equipment which enables her to throw a stream of water well over the sheds at Wolfe's cove, according to my memory, though I speak subject to correction. Only a few months ago I was discussing the matter of fire boat protection in these harbours, and it appears to be the universal opinion that you must have it. In New York, as the minister probably knows better than I do a great deal of money has been thus used; this is one of the matters to which they have paid great attention, and I think it has a profound effect, if I might use that word, upon the whole question of insurance as dealt with by Lloyd's and other world underwriters. I merely mention this because, when we came into office and during succeeding years, discussions regarding a fire boat at Quebec were numerous. Ultimately this boat was equipped for that purpose.

Mr. HOWE: I should like to make it quite clear that we are not taking away from Quebec anything in the way of fire protection. We are sending there a boat not nearly as heavily engined as the Citadelle but we are transferring all the fine pumps and monitors from the Citadelle to this smaller boat.

Mr. BENNETT: Will she carry them?

[Mr. Howe.]

Mr. HOWE: Yes, she is quite capable of carrying them, and this will have the effect of releasing the Citadelle for other work.

Mr. KINLEY: With regard to the suggestion of the leader of the opposition concerning the advisability of continuing steam power on these boats, I think it is a fair statement to say that older engineers in this country are partial to steam, from long acquaintance, and that the advent of Diesel power perhaps is not received as favourably as it would be by younger men. Whether these boats should be refitted with steam power is a matter for the technical department. I am glad of one thing, however, that we shall have more ice-breaking facilities on the coast of Nova Scotia, because many times during last winter we found that neither the Marine department nor the Fisheries department had a boat available to do the work along our coast.

There is another suggestion that I might make. The coast of Nova Scotia extends for quite a distance, and Halifax is sixteen miles in from the sea. One or more of these boats could very well make their headquarters in some other port and so be closer to the scene of operations when called on. The fact that the Marine department has headquarters in Halifax is no reason why the boats should all be quartered there, and when a boat is called for at Yarmouth or Sydney it should not have to go all that distance. If the boats were stationed along the coast one would always be closer and more available when needed.

Mr. RYAN: Would Saint John satisfy you?

Mr. HOWE: The Montcalm which is stationed in Nova Scotia waters makes her headquarters at Sydney. This year we found it impossible to do with the Montcalm all the work we were called upon to do. Our idea in having the Citadelle available was that it could work in the southern part of the province and so avoid the necessity of the Montcalm cruising such great distances. We were unable to give satisfaction, and it probably has been a very expensive year for operations.

Mr. BENNETT: You will have to change the bows of the Citadelle.

Mr. HOWE: Yes, we are remodelling and strengthening it as part of the repairs.

Item agreed to.

To provide for the removal of derelicts in the harbours of Canada, particularly Port Arthur, Fort William, Sarnia, South Bay and Richelieu river, $70,000.

Mr. BENNETT: Before the minister speaks on this item, perhaps I should point out that all these three items properly belong to the main estimates, and ordinarily would be found there. He has anticipated placing them in the main or general estimates, and is placing them in these special supplementaries for the reason he has given. These harbours are—I was going to say periodically—raked for derelicts and I thought were fairly clear at the present time, in view of the efforts made in that direction during the last few years. I mean not the last two, but the last few years, because in connection with operations at Port Arthur and Fort William, for instance, the firm which had in hand the placing of that new breakwater and the performance of certain dredging operations cleared out from the harbour—I would not describe them so much as derelicts but impediments to uniform depth of water in both harbours. The minister knows that dredging operations were carried on there in more recent years for the purpose of providing uniform depth of water in both harbours, and of ensuring safety of navigation. My information was that the harbour was swept fairly clear of these derelicts.

Mr. HOWE: Ordinarily we have in the main estimates an item for the removal of obstructions. This year the item was cut down to take care only of the work under way. We had one or two wrecks on which work was progressing and provided simply for it, the removal of obstructions being a thing we could defer, and we were pruning these estimates as much as we could. However, the removal of derelicts provides a large percentage of labour—

Mr. BENNETT: Does it? I thought not; I thought machines and a very small amount of labour were used.

Mr. HOWE: We had a report made on these particular derelicts and we found the work of removal was about sixty per cent direct and indirect labour, which brought it into the class of work we were looking for. We are constantly having applications for this work. We have recently made stricter the regulations preventing the beaching of derelicts; it is the duty of every harbour master and other officials to report immediately such beaching to Ottawa when legal action is considered. We hope to prevent these practices in the future. But we have a great number of these. In Port Arthur I think there were some fifteen.

Mr. BENNETT: Are they beached or under water?

Mr. HOWE: Partly beached and partly under water. The underwater ones are cleaned out in the main channels. In Sarnia—

Mr. BENNETT: There were two in the channel there at one time.

Mr. HOWE: Yes; it seems to have been the practice in the past, if you got tired of your boat, simply to take it to Port Arthur or Fort William or Sarnia and leave it.

Mr. BENNETT: I thought it "left" the crew.

Mr. HOWE: Yes, possibly. In any event we have this great number of derelicts. Pressure has been brought to bear upon the department for many years to take care of them, and we felt that this was a proper time.

Mr. BENNETT: The minister says that pressure has been brought to bear upon the department for many years. I may say that ever since I have known anything of the government there has never been a time when there were not some derelicts removed. All the derelicts were not in sea channels, either.

The particular matter I desired to draw attention to is the Richelieu river. I observe that the minister has had his attention directed to it. It has been suggested that an effort is to be made to open a channel to the United States by utilizing the Richelieu river and certain canals. Has this work anything to do with that possibility? That is the only other question I desired to ask about this item.

Mr. HOWE: The item at first covered Fort William, Port Arthur, Sarnia and South Bay. It was enlarged at the last minute to take care of the Richelieu river.

Mr. BENNETT: I can readily understand its being enlarged.

Mr. HOWE: I have not the exact details but we have a small item here for work in the Richelieu river.

Mr. BENNETT: But has it to do with that transcendently important matter of reaching the Atlantic through the Richelieu river and canals down into the state of New York? Recently there has been considerable discussion in United States papers, less in Canadian papers, looking to that ultimate design behind such a work, and I wanted to know from the minister whether or not the suggestion of clearing the channel of the Richelieu river had anything to do with the projected work. The minister knows to what I refer?

Mr. HOWE: Yes, quite.

Mr. BENNETT: It has in view using the river and canals for the purpose of reaching the Atlantic ocean without going out past Quebec at all, by a certain type of small tonnage vessel and by barges. I think there was a time when this route was quite extensively used for barges of small size, but that was long ago. This suggestion I think was in part put forward by certain engineers in New York and apparently certain Canadian engineers thought well of it. I was interested to know whether or not this item contemplates any expenditure for that purpose?

Mr. HOWE: This will do useful and, I think, necessary work preliminary to that, in cleaning out the channel. The international waterways commission are studying the particular question to which my right hon. friend refers, and we were asked to delegate an engineer to work with them on the project. This is merely cleaning up the river; however, the work will be useful if anything develops the other way.

Mr. HARTIGAN: I call the attention of the minister to the fact that this item refers mostly to western harbours. In Sydney harbour we have a derelict which the former government tried unsuccessfully to raise and which is still left with us. I think about $2,600 was expended on the raising of that derelict, but still she lies there, a menace to navigation and an eyesore to the people as well as to incoming passengers. I should like to hear from the minister that action will be taken to remove that old derelict.

Mr. HOWE: I should like to say that there is a contract for the removal of the Pelican, and there is an item in the other estimates to pay for the cost of that work. We are having some difficulty, but we are hopeful that sufficient funds will be made available to complete the removal of that wreck.

Mr. STEWART: At the time these items were decided upon did the minister have before him an application for the removal of a number of derelicts from the harbour of Kingston? I know that in the past representations were made to the Department of Public Works for the removal of those boats, and some information was obtained about them. Over a period of years representations have been made, quite a number of those derelicts would be standing in the Rideau river; they are just inside the causeway. Have those derelicts been considered by the minister?

Mr. HOWE: I was not aware of any applications, but my deputy advises me that some time ago representations were made. No fresh representations have been made since I took over the department. So far as I recall, the removal of those derelicts is not included in the item.

Item agreed to.

National Harbours Board—Projects already undertaken—Halifax harbour improvements—to provide for payment of amounts retained in connection with certain contracts, four at $500 each, $2,000.

Mr. BENNETT: What does this item refer to, and why should it be in the estimates?

Mr. HOWE: It is to provide for amounts retained on certain contracts.

Mr. BENNETT: Why should we have to come to parliament to get power to return the money? I realize the amount is small.

Mr. HOWE: It is the intention in connection with harbours that for this fiscal year all amounts expended will be voted by parliament. We are doing away with blanket amounts.

Mr. BENNETT: Oh, yes, but the power to return money put up in connection with contracts has never required a vote of parliament, so far as I am aware. I was just asking why the minister comes to parliament to get power to return a man his own money that had been put up in connection with a contract. Either he is entitled to it, in which case no legislation is required, or if he is not entitled to it obviously we should not give it to him without knowing why it is being given.

Mr. HOWE: Nevertheless we must provide for it, and we have no fund for the purpose, other than what is voted by parliament.

Mr. BENNETT: This is money that has been put up.

Mr. HOWE: No.

Mr. BENNETT: The item refers to "amounts retained in connection with certain contracts."

Mr. HOWE: Yes.

Mr. BENNETT: It is the contractor's money, not ours.

Mr. HOWE: As my right hon. friend knows, progress estimates are voted less ten per cent. Ninety per cent is paid and ten per cent is held back. The work has been practically completed, and the hold backs have been reduced to $2,000. Nevertheless

we have no funds available to pay that $2,000. We are not holding contractors' money; it is money deducted from progress estimates.

Mr. BENNETT: I follow the minister. The explanation is that inasmuch as the harbour had no funds, this sum is merely to pay the balance of a contract price, and is not to return any drawback?

Mr. HOWE: That is correct.

Mr. BENNETT: It is the balance of a contract price.

Mr. HOWE: Yes.

Item agreed to.

Saint John harbour improvements—reconstruction of berths, 1, 2, 3 and 4, $1,817,500.

Mr. BENNETT: Would the minister give us an explanation of how this matter now stands. The contract was let in our time. What is the position to-day?

Mr. HOWE: We are continuing the contract, but at the present time we are having considerable difficulty. I do not know that the points at issue are public property, but there has been a considerable slide of material on the face of that property.

Mr. BENNETT: And always will be.

Mr. HOWE: So much so that the contractor has stopped work and has demanded a readjustment of his contract.

Mr. BENNETT: Is that quite the fair way to put it? Was it not that the department instructed certain things to be done and in consequence of their being done the ultimate result was that he declined to continue. They would not let him do it the way the specifications provided.

Mr. HOWE: No, I think my right hon. friend is mistaken. I have followed the matter closely, because it is a condition which has given us a great deal of alarm. It is true that some instructions were given that cylinders were to be sunk ahead of the piles, but it is a purely local matter which affects only some ten per cent of the length of the work. The contractor is at liberty to construct the rest of it any way he wishes to do so, but he does not care to proceed with the work unless a readjustment is made.

Mr. BENNETT: Was he not interfered with?

Mr. HOWE: No, that is not my information. I may say that I made a special trip to Saint John. The contractor claimed that he had been interfered with. I made it clear at the time that the order in which work would be done would be left definitely to the contractor, and it has been since that time.

Mr. BENNETT: But prior to that time a definite order was given as to the way in which work was to be done, was there not?

Mr. HOWE: I think it is open to question as to whether the instructions given could be construed as an order. I think if the contractor had not cared to make an issue of it the matter would have been straightened out. However I think we have made the situation clear. As I see it there is no reflection upon the contractor; it is a situation which has arisen, but which was not expected by our officers. It is giving us a great deal of concern, and we hope to straighten it out over a period of time. I am simply reporting at this time that the matter is very much in a state of flux.

Mr. BENNETT: This is a matter in which I have something more than ordinary personal interest. I was born not far from there, and when these berths were burned the question as to how they should be replaced became a matter of great interest. We sought the opinion of our departmental engineers, and they wanted cribwork berths. After the soundings were taken it seemed to be clear that to reach hard pan they would have to go down as far as seventy or eighty, and in one case over eighty feet, which is a tremendous distance. The bank is of mud, bay of Fundy mud, and it slopes sharply into the harbour. I remember that when we came into office we had on our hands the construction of west Saint John works; the coffer dam went out twice, and it cost us for extras something like one and a half times the original contractors' bid for the construction of the work, which made me very, very anxious about this particular undertaking. Without being an expert I favoured, personally, a cylindrical concrete pile for the purpose of preventing what I regarded as lateral pressure on the structure forcing it into the harbour. The lack of stability that would come about from the construction of a wooden pile berth would not have been satisfactory; the mooring of a heavy ship would undoubtedly have had a bad effect. I have been around the berths at which heavy ships have been moored, and could almost feel the berths moving. Some of our engineers, probably all of them, did not think it was desirable to put in pile work. The matter was referred to two consulting engineers, one of whom was the chief engineer of the Canadian Pacific railway, who gave us his advice,

and the other was the most eminent consulting engineer available in the city of Montreal. I believe his name was Mr. James; that is my recollection. He concurred in the view that the cylindrical concrete pile would be advisable.

The contract was let on the basis of concrete cylindrical piles. My information from inquiry the other day as to how the work was progressing indicated that there had been, shall I say interference from the department with the work as being carried on by the contractors. My inquiry was not from the contractors but from another source. The information was that the contractors had been told that they were to do the work in a certain way which, having regard to the terms of the plans and specifications they thought was undesirable, because it is a tremendous task first of all to prepare the hole, and, second, to build up the cylindrical foundations at a depth of seventy-five or eighty feet in the mud of the bay of Fundy, where it is sharply slipping into the river. It is a tremendous task, and the plans and specifications contemplated some of the difficulties as to the manner in which the work should be carried on. I was informed—and this is the reason I asked the question—that there was some interference from the department here with the contractors, the net result being that they said: This is not the way in which we contracted to do this work, and if we are to be subjected to these directions we must have a clear understanding before we go further. It must be remembered that some of the cylinders are being cast; some have been cast. The cylinders, as the minister knows as an engineer—and I need hardly mention it—are not cast in place but are cast on the ground and put into their place on the sinking of the holes—you might really call them shafts because they are from seventy-five to eighty feet in depth—and that is a matter of some difficulty, though, I understand, not of any great difficulty from an engineering standpoint. But they are always subjected to pressure. The lateral pressure that Sir Alexander Gibb referred to in connection with the dock at Wolfe's Cove was so apparent that this great property was really moving towards the river. At first the movement was not very great, but he recommended that we should take immediate action to prevent that lateral pressure from moving the great structure further into the river, and it has cost substantial sums of money to take the necessary steps to prevent that lateral pressure making itself effective. I am more interested in these new berths at Saint John than in many of these matters because of its location and my desire to see berths built there in keeping with the work at west Saint John which was finished only a few short months ago, and in keeping with pier B in Halifax harbour. The conditions at Saint John are very difficult. The people of Saint John themselves carried on the necessary undertakings for a number of years, and now that the harbour is in the hands of the commission it is of the utmost importance that this work should be finished as contemplated.

The minister says that there was no suggestion that resulted in action being delayed. But finally the contractors said that if somebody else was to determine how they should do their work they would leave it to that somebody else rather than undertake it themselves. That is a short way of putting the situation, and I wanted information on that point.

Mr. HOWE: First of all, I do not like to say at this time whether the design adopted was the best or not, because I never had much use for engineers who would come in after trouble developed and say that they would have done the work in some other way; so we will leave that out of the question.

Mr. BENNETT: Quite so.

Mr. HOWE: My attention was first brought to the situation at Saint John in January when I had a call from the contractor. He said that he was somewhat in doubt about the work there, and he referred to certain instructions. They were issued not from Ottawa but from the harbour commission; it was before there was any attempt at centralization. He asked me to go down and look at the work personally, and I did so. I went down with the general manager for the contractor and I made it clear at that time, and have done so since, because I have had a great deal of experience in handling contracts, that it is the contractor's privilege to handle his work in any way he likes provided the work in the end is done according to the plans and specifications. I made it clear that that was his privilege, and he was quite satisfied at the time that he had a free hand to do his work in his own way so long as he produced the proper results. The developments were as much a surprise to the contractor as they were to us, perhaps not exactly a surprise because when you look back at what happened you might reason that it might have been expected. However, trouble has developed and we are doing our best to overcome it. I do not want to repeat the experience of the past and let the cost run

away so that eventually it is twice the sum contemplated. We are working very hard in the department to permit the work to be done as originally planned without increasing the cost to the government, and in the course of another week I have the hope that we shall see daylight.

Mr. BENNETT: How much has been spent already?

Mr. HOWE: To the end of March, $823,539.

Mr. BENNETT: Is this the balance of the contract or the whole sum?

Mr. HOWE: The whole sum required.

Mr. BENNETT: So it should be something like $800,000 less than we are really voting because $800,000 has already been spent.

Mr. HOWE: These are requirements in addition to the $823,539. The sum of $2,000,000 was voted under the Public Works Contract Act, 1934, and the contract price was $2,641,039.

Mr. RYAN: The leader of the opposition has asked a question I was going to ask. Is this additional for the amount of the contract, and for unforeseen expenses?

Mr. HOWE: It is the balance required to finish the contract that has been placed. The amount appropriated under the Public Works Construction Act, 1934, was less than the contract price, and this is the amount required to complete the contract.

Mr. BENNETT: Which added to the sum already paid, will complete the contract?

Mr. HOWE: Correct.

Mr. RYAN: As this item comes under the supplementary estimates dealing more or less with relief, I would ask the minister to see that the contractors engage local labour as much as possible. I was pleased to hear the leader of the opposition state that he was anxious to have this work completed, but we in the city of Saint John would have been much better satisfied if he had expressed the same anxiety two or three years ago, because the delay in starting this work has been a great handicap to the port of Saint John. Some years ago the house voted unanimously for the carrying out of this work, but for a reason which could probably be explained by the leader of the opposition himself this undertaking was delayed for two or three years.

Mr. BENNETT: Not for two or three years.

Mr. RYAN: A couple of years anyway.

Mr. BENNETT: Not a couple.

Mr. RYAN: And pressure was brought to bear upon the then government to go on with that work.

Mr. BENNETT: That is not so, but it does not make any difference.

Mr. RYAN: Living in Saint John I am familiar with what has taken place there.

Mr. BENNETT: But not here.

Mr. RYAN: And had the leader of the opposition expressed the same anxiety a couple of years ago that he does to-day we would now be much better off in the port of Saint John.

Mr. BENNETT: That is about the thanks one would expect from the hon. member for Saint John-Albert (Mr. Ryan) for the interest that one has in the harbour there. After the fire there would not have been a berth there at all of the class now being built but for the interest we took in it. Great difficulties were experienced in west Saint John, and the cost of those facilities was tremendous, beyond all reason. The contract had been let before the late government came into office, and the works were not finished there until the end of 1934. Two coffer dams went out in the meantime, and the extras that we had to pay under a contract that never should have been made were 150 per cent more than the original contract itself. We paid $600,000 in settlement for extras on a contract for $400,000 because coffer dams went out on two occasions.

When this matter came up we realized that it was not local but national. It is a national port and it affects the whole of Canada. The west is as deeply interested in it as is Saint John, and we determined to try and get berths there that at least would not slip into the harbour and that would not bring about the difficulties which had been experienced with the other west Saint John works. Four engineers from the departments of Railways and Canals, Marine, Public Works and National Defence went down there at my personal insistence and investigated the matter. They took the greatest possible care in preparing their recommendations. I have said that they were of the opinion that cribwork would be better, first, because it was less expensive in times of economic difficulty and, second, because they believed that having regard to the situation and the conditions prevailing, it would be desirable to have that

type of berth. Perhaps it was a case where fools rush in where angels fear to tread. I had a strong personal opinion that it was desirable that these berths should be built upon concrete cylindrical piers and I arrived at that conclusion because of certain investigations I had made on one occasion into a harbour in Great Britain. It later developed that the borers had made their appearance in that harbour, but that was after the contract had been let. I am not quite sure as to the time, but I think it was after the contract had been let. At any rate, we referred the matter to a consulting engineer; we referred it to the Canadian Pacific engineer and finally with the aid of Mr. Gray, the resident engineer, who was in favour of concrete cylindrical piers, we had plans and specifications prepared and asked for tenders. We were told that there were very few contractors in this country who could do this work.

We are now told that if we had been as much interested in this two years ago the situation would have been a good deal better than it is now. It is because we were so much interested in it that we succeeded in having the contract let for the construction of these berths with concrete cylinders. This was in accordance with the views held by the resident engineer and in keeping with one of the best berth facilities provided in the old country in one of its harbours. I have the interest which a native son is always permitted to have in the development of the harbour of Saint John, not only because it happens to be in New Brunswick but because it is one of the national harbours on the Atlantic coast upon which the west and other parts of Canada must rely to reach the sea and the markets of the world during the winter season. The effort that has been made has been continuous. It involved a lot of money and I want to say that the efforts to get that money were at times very great. At the expense of other works which were delayed we went forward with this although the very limited number of men who were prepared to tender on the work made it more difficult than it otherwise would have been. We are now told that if we had been a little more anxious about it, it would have been a little better for Saint John. This is a very good illustration of the ingratitude which follows public life.

Item agreed to.

Chicoutimi harbour improvements—road to make connection between dock and new bridge and connecting dock sidings with Roberval and Saguenay terminal, $13,663.52.

Mr. HOWE: This item is to complete item 28 of the Public Works Construction Act, 1934. It is a small amount to finish up a contract already let.

Mr. BENNETT: Has the minister visited this harbour?

Mr. HOWE: Unfortunately I have not.

Mr. BENNETT: I was hoping he had as I should like to have his frank opinion as to whether or not the works at this place can ever be justified in their present location. We found them there as part of the, shall I say legacy that we had to take over. I am not complaining about that, but large commitments were made involving the expenditure of vast sums of money. Has the minister before him a statement of what has been spent there? I do not want to put him to any great trouble, but I should like to know what has been spent up to the present time.

Mr. HOWE: If the right hon. gentleman will allow me to give that when we are discussing the harbour estimates, I shall be prepared with the full information.

Mr. BENNETT: That is quite satisfactory.

Mr. STEWART: This brings up a point in connection with several of these items. The minister, I understand, has said that provision was made for this work in the Public Works Construction Act, 1935. I have always been of the opinion that it was not necessary to revote items which appeared in that act in the same manner as we revote items in the regular estimates. The items in the Public Works Construction Act, 1934, were carried on without being revoted, and I am of opinion that it is not necessary to revote in this instance. Statutory appropriations are made available until the work is completed. I do not know just why these items appear in these estimates when provision has already been made. It may be the government's policy, but it seems to me that this is not necessary at all.

Mr. HOWE: As a matter of government policy we believe that it is better to budget for the items and have them show in the expenditures for this year, but I may say that some of the public works items have been curtailed and we believe that as of April 1 we should note the money we are spending this year.

Mr. BENNETT: Although it has once been voted?

Mr. HOWE: That is quite true, but I understand it is intended to repeal these acts.

Mr. STEWART: The effect of this is really to pad the estimates; you are making it

appear that you are providing for works that have already been provided for. At the end of the estimates is an analysis of the expenditures and the total for projects already undertaken is $30,418,341.66. I take it that funds for these items have already been provided for under the public works construction acts. As I say, the effect of this method is to create the impression that a large amount of money is being provided this year for works whereas the money was provided in years gone by.

Mr. HOWE: I do not know that the money was provided, but the expenditures were authorized. I think the people who are spending the money this year will have to find it. We prefer to wipe out the former appropriations and appropriate the money again and we shall have to find the money to be expended on these works during this fiscal year.

Mr. STEWART: Putting them into these estimates is not finding the money any more than it would be finding the money by putting them into the regular estimates. Did the minister say that it was the intention of the government to repeal the public works construction acts of 1934 and 1935?

Mr. HOWE: I cannot announce that definitely, as that would be the privilege of the Minister of Finance (Mr. Dunning), but that is my understanding as we were asked to provide for work for the current year, whether or not it appeared in the public works construction acts of 1934 and 1935.

Mr. BENNETT: In any event, this Chicoutimi item would require an appropriation?

Mr. HOWE: Yes; I understand it is an addition.

Mr. STEWART: That is different if it is in addition to what has been provided already.

Mr. MacINNIS: Could the minister tell us if any part of the projects mentioned here are already completed and, if so, what is the total amount of those completed?

Mr. HOWE: I may say that the Halifax project is all completed. That $2,000 is purely for hold back that is required until certain terms of the contracts have been complied with. In the case of Chicoutimi the expenditure last year was $153,500, and this $13,500 completes the work there.

Item agreed to.

Quebec harbour improvements—
To provide for payment of amounts retained in connection with certain contracts, $6,866.71.

New quay wall—To widen west side, pier No. 1, Princess Louise docks, $808,202.73.

Bituminous macadam road, Gilmour hill—provision for payment of claim for additional work done under contract, $7,177.92.

Dredging at Wolfe's Cove terminal, $179,906.70.

Dredging St. Charles river and Louise basin, $203,355.81.

Resurfacing Wolfe's Cove yard, $18,159.53.

Repairs to wharves and sheds, Princess Louise docks, $17,000.

Mr. BENNETT: I should like to ask two or three questions about that. First, how much of the total $1,240,000 has been spent? Second, are contracts outstanding for all the work there mentioned? Third, why is it necessary to revote money that was the subject matter of much discussion in this house and with respect to which there was no lapsing of the estimate? The point I desire to make to the minister is that the old estimate did not lapse at the end of the fiscal year. Why are we voting this a second time? I was on the other side when we were putting it through a year ago, endeavouring to explain why it had come about that we had to make the expenditure. Now I should like to know whether the contracts are let, how much has been expended, and why it is necessary to vote this a second time.

Mr. HOWE: The first item under this is a sum of $6,866 to provide for the clearing up of certain contracts. I think that is similar to the item for Halifax, that is retained percentages that will be released. Then there is the new quay wall for the Princess Louise docks, $808,202. That is a contract which was let some months ago to the Ogilvie Construction Company. There was some difficulty about engineering, and when we came into office we found it in a very unsatisfactory state, and decided, not to cancel the contract but to suspend the work until we could review the engineering. We have now reviewed the engineering and revised it. We are voting the amount of that contract here so that we can go on with the work this summer.

Mr. BENNETT: Is it a new contract, or do the old contractors carry it on?

Mr. HOWE: We have made no rearrangement of the contract. They still have the contract although they have not done any work, and I assume we can readjust the matter with them so that they can carry it on.

Mr. ROWE (Dufferin): When was the original contract drawn?

Mr. HOWE: July 24, 1935.

Mr. STIRLING: In what way does the minister mean that he did not agree with the

engineering? Were the plans submitted not satisfactory to the department and to the minister?

Mr. HOWE: We found that the plans had been changed, I think, three times from the time the contract was let until the time that I reviewed the matter.

Mr. BENNETT: It was a question of the condition of the existing works, which had not been looked after for a long time, plus the question of widening the berth.

Mr. HOWE: I think they were working on the third plan. The contract had been let on a plan that was not suitable for the location. When the nature of the bottom was found, changes were necessary, and changes were made. For some reason or another the second plan was not satisfactory, and at the time I was there the third plan was under consideration.

Mr. STIRLING: And yet the contract had been let.

Mr. HOWE: The contract was let, yes. These changes were made after the contract was let.

Mr. STEWART: That was a contract by the harbour commission, was it?

Mr. HOWE: No, it was under the Public Works Construction Act.

Mr. MacINNIS: I wonder whether the minister could let us know if the amount in the present estimate was the original amount of the contract.

Mr. HOWE: The amount of the contract is $734,000. The amount of $808,000 includes supervision. It is the same vote for that project as is in the Public Works Construction Act. We have revoted it as it was.

Mr. BENNETT: Is this not a correct way to put it: The plans and specifications were prepared by a consulting engineer, who loked after Three Rivers and two or three other harbours.

Mr. HOWE: Mr. Gohier.

Mr. BENNETT: Yes. He has had considerable experience, according to my information, and he was regarded very highly in his profession, but I understand his politics were not quite satisfactory after the change of government.

An hon. MEMBER: Order.

Mr. BENNETT: Order! Yes, it was in order that they were unsatisfactory. But what happened in consequence of that was that difficulties were raised about the plans and specifications. The contract had actually been let, as I recollect, before the change of government took place.

Mr. HOWE: Three months before. But the contract had been changed twice before this government came into power. The plans had been changed twice.

Mr. BENNETT: I was going to continue: The plans and specifications contemplated changes and alterations of the existing contract; on investigation it was found that the conditions of that existing work were much worse than were apparent at the time the contract was made, and the contractor immediately pointed that out. Is that not the fact? I think that will be found to be the fact.

Mr. HOWE: Yes.

Mr. BENNETT: I am not quite sure about this, because I am carrying all these particulars in my head, and they cover every part of Canada. The minister knows perfectly well that with regard to the old harbour one of two things has to be done: Either we have to spend some money, or all the outcome of that vast expenditure there will ultimately crumble and fall away. I refer to the work on the King's wharf and to the Louise basin and the work at what is called the Old harbour. We had reports from time to time about that Old harbour, and it will be recalled that when the last appropriation was made to the harbour commissioners it was stated in this house, when that resolution was before it, that that would be the last money which would be asked for Quebec, because the sum spent there has been very large; my memory is that it is something like $50,000,000 for that harbour. When Wolfe's Cove was finally chosen as the site for this new wharf a shed was put there which would do credit to New York; it is a magnificent double-decked shed. The berth itself was inspected by Sir Alexander Gibb. He found that lateral pressure was gradually pushing it towards the river, and we took steps to remedy that. There remained one other question with respect to that. On the up river side there was a deposit of gravel and earth which navigators found dangerous in the stern movement of a large ship like the Empress of Britain, and the engineers recommended that we should dredge that out. That item is here, $179,000. At that time we felt that we did not have the money, but finally, after a conference between those responsible for the berthing of this large ship and the

engineers, it was realized that that deposit of earth and gravel on the up river side of the berth, which necessarily would interfere with the stern movement of the ship, should be removed, and I thought we let the contract for the dredging, but I see it is here. My view was that the contract was let and the work commenced last fall so that when spring opened this year that public danger would be so minimized that there would be no difficulty about the movement of this large ship. In fact two of them are more or less affected by that deposit, but not the Duchesses, because it was at a sufficient distance from the point where they lay at the berth not to be important. The other items mentioned are those connected with the Old harbour, and more again at Wolfe's Cove in connection with the resurfacing of the yard. It will be remembered that when the yard sank into place and was finally settled it was contemplated that it had to be resurfaced at a later date. This is to complete that work. Perhaps the minister can tell me whether or not contracts are outstanding with respect to all those, and to what extent money has been expended.

Mr. HOWE: I must congratulate my right hon. friend on his excellent memory; I think it is amazing, and it is certainly accurate. Perhaps, however, I should correct his impression about Mr. Gohier. I had some trouble getting into touch with Mr. Gohier, but when he came in he first laid his resignation on the table and started his discussion from that point.

Mr. BENNETT: Perhaps he was wiser than some; he knew that if he did not do so a statute might be passed to remove him.

Mr. HOWE: Possibly. I may say that Mr. Gohier has a very good reputation as a drainage engineer, but he admitted that his experience in this line was limited. Perhaps he was put into a false position at Three Rivers, but I wish to make it clear that he was not dismissed. Our relations were very friendly; as a matter of fact I like him. I may say, however, in discussing these contracts, that this $6,800 item is only a clean-up. Under the $808,000 item there has been practically no work done. A few piles were driven, enough to discover the difficulties, and the matter was reserved for further investigation. There it was a question of whether or not concrete piles could be driven, and we found they could not. We expect to get on with that after a bit.

Mr. BENNETT: What is the position in regard to the dredging of the St. Charles river and Louise basin?

Mr. HOWE: That contract is continuing. It was at so much a yard, and the yardage is quite considerable. This makes provision for both contracts.

Mr. BENNETT: Part of the work was done years ago, as a matter of fact, and this was for the purpose of endeavouring to clean it up.

Mr. HOWE: Yes, that is right.

Mr. STEWART: In the Supplementary Public Works Construction Act of 1935 there was an item of $1,250,000 for Quebec harbour improvements and maintenance. I suppose that is the item from which these contracts sprung?

Mr. HOWE: Yes.

Mr. STEWART: Were all these contracts let before the change of government? When was the work in the basin undertaken?

Mr. HOWE: They were all let before the change of government.

Mr. STEWART: The same remark I made about these other items would apply to this one, of course.

Mr. HOWE: Both these dredging contracts were let September 31, 1935, dangerously close to the date of the election.

Mr. GREEN: May I ask the minister whether the business through the port of Quebec has been increasing or decreasing in the past few years.

Mr. HOWE: I may say that we are voting the operating expenses of Quebec harbour in the regular estimates. This is really a revote concerning contracts under construction. If my hon friend would not mind holding his question until we have the operating figures before us, I shall be glad to answer it in detail at that time.

Mr. BENNETT: I think the minister might well say that there is no operating revenue.

Mr. HOWE: We get some revenue, but the expenses are much greater.

Mr. BENNETT: Quite; I should have said no net operating revenue.

Mr. GREEN: Can the minister say now as to whether the business of the port is increasing or decreasing?

Mr. HOWE: I do not think that can be said in a word. On balance, perhaps, it is decreasing a little, although some parts may be

picking up. For instance, the coal business is improving, while certain other businesses are falling away.

Mr. GREEN: Over what period has there been a decrease?

Mr. HOWE: As I say, this is rather embarrassing; I am quite new to this task, and I have not the operating figures before me. This matter will come before parliament later, and if my hon. friend does not mind waiting until the operating estimates are up I shall be glad to answer those questions.

Item agreed to.

Three Rivers harbour improvements—
New transit shed on new wharves, $145,000.
Reconstruction of old wooden wharves, roads, railway tracks and lighting system, $137,600.

Mr. BENNETT: How much of the money voted for that purpose has been spent? The transit shed is finished, is it not?

Mr. HOWE: No, it is not started as yet. It is under contract, but as my right hon. friend will remember there was some delay in regard to a difficulty about the site. Two small sheds were built, but we were unable to start the main transit shed; we could not tear down the old building because of some contracts outstanding.

Mr. BENNETT: The difficulty was that the International Paper Company's paper had to be cared for pending construction of the new shed, and until that was arranged the old shed could not be torn down.

Mr. HOWE: Yes.

Mr. BENNETT: The contract is still outstanding?

Mr. HOWE: Yes.

Mr. BENNETT: Is that so also with regard to the item for $137,600?

Mr. HOWE: Yes, they are both quarter contracts.

Mr. BENNETT: Does the minister know how much money has been paid out on the contract so far?

Mr. HOWE: I may say that this is to some extent a painful item. I think the complete cost will be about twice the cost of the original contract.

Mr. BENNETT: For what reason?

Mr. HOWE: The design had to be radically changed after the work was in progress. In connection with the retaining walls it was found impossible to drive in the original location, and it was moved out in the river a considerable distance, increasing the cost. I should be able to explain this very well, because I had several painful experiences in trying to come to a settlement.

Mr. BENNETT: There was an old and a new pier at Three Rivers, was there not? My memory is that there were two, an old one and a new one.

Mr. HOWE: I understand there was an old wharf at that point, but this new wharf is being constructed in front of the old wharf, to replace it. There was great difficulty in getting the piles down, as my hon. friend remembers; it was a concrete sheet pile, and the piles had to be increased in dimension because it was found impossible to drive the piles originally specified.

Mr. BENNETT: Perhaps we can discuss the details when we come to the Three Rivers harbour item in the regular estimates.

Mr. HOWE: I shall be very glad to do so.

Item agreed to.

Montreal harbour improvements—
Raising wharf, sections 38 to 40, $20,971.31.
Reconstruction of raceways in Windmill Point area, $180,990.95.
Laurier Pier, reconstruction, $85,375.30.
Sutherland Pier, reconstruction and extension, $655,904.24.
Alexandra Pier, reconstruction, $847,000.
Raising wharf and railroad tracks, sections 35-40, $47,290.74.
Extension of marine tower jetty, elevator 3, $35,557.42.
Reconstruction of Windmill Point wharf—upstream section, $1,000,000.

Mr. BENNETT: Perhaps the minister would take up these items one by one and say with respect to which ones there are contracts outstanding and to what extent payments have been made on account. I must say to the minister that I do challenge the passing of this item a second time. Let me put it to the minister in this way: When the contracts were made, payments were required. The auditor general had to have some authority for the payments, and his authority was the appropriation by parliament of specific sums to pay those contracts. Now we are revoting the same amount of money as we voted originally, for the same contracts, although contracts are outstanding and partly paid for by the appropriation we made last year. I cannot understand just why that should be done, and I am not quite sure as to the regularity of it. At the moment, however, perhaps the minister would be good enough to say in a general way whether the contracts are outstanding and, if he has them available, to give the figures as to what has been paid.

Mr. HOWE: The first item has to do with raising the wharf, sections 38 to 40. That is Public Works Construction Act 1934 item No. 108, and the contract amounted to $242,000. This is the clean-up item. I understand the work has been practically finished and this is the contractor's drawback.

Mr. BENNETT: This is the item in connection with which the diminution in the volume of water in the harbour necessitated work being done so that ships might get to the docks?

Mr. HOWE: Yes. The next item has to do with the reconstruction of raceways in the Windmill Point area. My right hon. friend will recall that in this connection we had to rebuild certain raceways.

Mr. BENNETT: Yes, and it was an expensive process, too. Contracts for certain of those raceways have been let?

Mr. HOWE: This item has not been awarded, it was at loose ends as between the pier and—

Mr. BENNETT: They did some work by day work clearing it up?

Mr. HOWE: Yes, and certain raceways were built. But this is necessary work as between the two different contracts, Dufresne and Atlas.

Mr. BENNETT: The Laurier pier is down towards the basin?

Mr. HOWE: Yes, that is an existing contract, the original contract, $288,439.

Mr. STIRLING: This is the most easterly one?

Mr. HOWE: Yes, this is the furthest down the river, in front of No. 3 elevator.

Mr. BENNETT: Is this to pay the balance of the contract?

Mr. HOWE: Yes.

Mr. BENNETT: The Sutherland pier is in the same locality?

Mr. HOWE: No, I was wrong, this is even further below Laurier.

Mr. STIRLING: Is Laurier the southeasterly one?

Mr. HOWE: Yes. This is a contract for $710,910 and this amount is to complete. At the close of the season $137,326 was spent.

Mr. BENNETT: The next item is the Alexandra pier.

Mr. HOWE: Yes. There was a vote for rebuilding the Alexandra pier, and one contract had been awarded, and tenders called for the second contract. On looking into the matter we found that while the work could have been completed last season there was no possible way of using it last season on account of the dredging program in the harbour, and we felt that we could very well hold the work over until the current fiscal year without any loss to shipping interests. We have revised the work to some extent and cut down the cost. We are not doing the full amount of work that was included in the other contracts.

Mr. BENNETT: Was the contract let?

Mr. HOWE: The contract for one section, the inner one, was awarded to Angus Robertson, Limited, $774,700.

Mr. BENNETT: How much has been spent on that?

Mr. HOWE: Nothing; the work was not completed; the contract is still outstanding and we believe it may be possible to make a revision of the contract to include the work now proposed.

Mr. BENNETT: The sum proposed to be spent is the difference between that and $800,000?

Mr. HOWE: No; the whole amount of $847,000 will be spent to do that work.

Mr. BENNETT: Then $700,000 of it is referable to the contract?

Mr. HOWE: Yes, the contract outstanding for that amount.

Mr. FINN: When it says Sutherland pier or Alexandra pier reconstruction, does that mean a pier that had fallen down or disappeared, or is it a new pier?

Mr. HOWE: No. The Alexandra pier is one of the important piers in Montreal harbour, but due to the lowering of the water levels in the harbour it was necessary to dredge alongside of it. The construction of the pier did not permit dredging of the required depth rock alongside without some alterations to the pier. This puts a new face on the pier, carried down to a point that permits the slip to be deepened.

Mr. BENNETT: The pier would fall down—

Mr. HOWE: Yes, if we dredge it without this other work.

Mr. STIRLING: Has the minister committed the government to further dredging within the area of Montreal harbour? Last year, if I remember correctly, the thirty-five

foot channel was up to within four thousand feet of the bridge, and there was controversy as to whether it was desirable to carry that extra depth into the harbour area. Has the minister come to any decision on that?

Mr. HOWE: A contract was let for it last year, a little over $1,500,000 for dredging in the harbour itself. I think there can be no real controversy about the desirability of extending that channel to the head of the harbour. The condition was that the thirty-five foot channel was carried to the harbour limits, that being four thousand feet below the harbour bridge. At that point there was a jump in the bottom of seven feet, up to the twenty-eight foot level. I think there can be no difference of opinion as to the desirability of carrying that thirty-five foot level on the 1897 datum to the foot of the Lachine canal and into the principal slips in Montreal harbour.

Mr. STIRLING: The minister considers that it will not lower the level in Montreal harbour in a way which will do harm to the level of the river?

Mr. HOWE: No. The difficulty there is in making a better outlet to Montreal harbour. I do not think that dredging in the harbour will change the position, but as we improve the St. Lawrence river below there is no question that when we take twelve inches off the bottom we take about five inches off the top. That goes on continuously. I think engineers will agree that is the result.

Mr. STIRLING: But this is a question of taking seven feet off the bottom.

Mr. HOWE: But only in the harbour.

Mr. BENNETT: At the time we had to deal with this matter, I understood the condition was that the thirty-five foot channel from Montreal to the sea had been practically completed. The profile shows that some rock and earth have to be removed between the harbour and the bridge, further out towards the sea, and between the bridge and Montreal harbour; there were I think three places where there had to be some removal of earth and rock to clean it up and then the work was complete. Coming from the lakes we have thirty-five feet down at the basin; then the harbour itself carried only twenty-eight feet of water, and as a result it was contended —and I put this to the minister—that the swiftness of the flow out of the harbour into the river, by reason of the depth of the channel being thirty-five feet, had a direct effect upon the depth of water in the harbour itself; and, as my hon. friend the engineer to my left suggests, multiplied by the extra area. That is the position put to us. On the other hand engineers said that the thing to do was to carry the thirty-five foot channel right through the harbour so as to make it a complete thirty-five foot channel from the basin to the river. That is how the proposition was put to us as I remember; I speak subject to correction. Then, owing to the diminution of water in the harbour last year and the year before, these wharves were left without sufficient depth of water to enable the ships to get in beside them, and if dredging were carried on to deepen the berths the piers would be standing on insecure foundations that might fall out. The work that has been described was along the edge of the piers to keep the pier in place and make it serviceable when the dredging was completed. Two or three ships of one line had to leave partly loaded because of insufficient depth of water, for instance, at the piers which the Cunard and the Canadian Pacific lines used. In order to take a part cargo they went to these piers, but could not load a full cargo.

To complete this work to thirty-five feet through the harbour will cost considerable money. In the meantime we deflected our operations to the basin and made good these piers and deepened the basin; that is my recollection. Now, does this contemplate the deepening of the channel through the harbour, the floor of which at the moment is some six or seven feet higher than the bottom of the thirty-five foot channel that leads into the river?

Mr. HOWE: Perhaps my right hon. friend will recall that when the main estimates were passed we had a vote of $2,000,000 for dredging the St. Lawrence. At least $1,500,000 of that was to be spent in Montreal harbour.

Mr. BENNETT: For what purpose?

Mr. HOWE: For deepening the channel through the harbour and the approaches to these docks. And about $500,000 was to take out the bar below. That was not done. It is true that we have thirty-five feet of water, but that is to the 1897 datum, and the effect of the dredging—I think that is what my engineer friend refers to—is to lower the datum. So that while we have thirty-five feet at the 1897 datum we no longer have the 1897 datum. The datum is about two feet lower.

Mr. BENNETT: The volume of water going into the harbour is two feet less than it was in 1897.

Mr. HOWE: The flow out is quicker.

Mr. BENNETT: Certain weirs were built to impede the flow?

Mr. HOWE: Yes.

Mr. BENNETT: And certain engineers said that they thought those weirs did not serve a useful purpose. Has the minister seen the profile from the point going out to sea, up to the harbour?

Mr. HOWE: I have examined it closely. I was quite concerned about how the money should be spent there.

Mr. BENNETT: That was the finest bit of profile work I have seen.

Mr. HOWE: Excellent.

Mr. BENNETT: I thought it was the best I had seen. I put it up on the wall in the railway committee room, so that the members might see it. I have not seen any profile I thought was as complete as that of that harbour. It was so clear I could understand it myself.

Mr. HOWE: It is excellent work.

Mr. STIRLING: If the minister says that we are now committed to carrying this deep channel right through Montreal harbour, it follows also that it must be carried into each of the existing piers.

Mr. HOWE: That is correct.

Mr. STIRLING: As a consequence of that does it not also mean that each of those piers will now have to be rebuilt to the extra depth?

Mr. HOWE: The work of rebuilding those piers is pretty well completed. The Alexandra pier is the last one to be carried down to the depth, and of course the newer piers were carried down to the new datum when they were built. The King Edward pier was carried down two or three years ago. When we have completed the Alexandra pier we shall have finished them.

Mr. STEWART: In what position is the work involved in the million dollar item?

Mr. HOWE: The contract was for $1,478,-147, and the amount that has been spent prior to March 31, amounted to almost $400,000.

Mr. STEWART: This provides for the balance?

Mr. HOWE: Yes; it provides for the completion of the work.

Mr. STEWART: This item appears in the Public Works Construction Act, 1935.

Mr. HOWE: No, it is not under the Public Works Construction Act.

Mr. STEWART: In the Public Works Construction Act, 1935, there is a general item of $3,500,000 for Montreal harbour improvements and deepening, and I just wondered whether the money had been provided out of that amount.

Mr. HOWE: No; about $1,500,000 out of the $3,000,000 was spent on dredging Montreal harbour, and the other work was in connection with the Alexandra pier, the Laurier pier and the Sutherland pier. This particular work was authorized as a loan to the Montreal harbour commissioners.

Mr. BENNETT: In order that the money might be made available for them, we put it in that estimate; that is all. They are to get the money from the dominion government, but in accordance with the provisions of the harbour act the harbour itself issued their debentures, and the government advanced the money. That is the position.

Mr. HOWE: Yes.

Mr. STIRLING: Are the corrective works being constructed or designed down stream being continued? There was to be a breakwater or weir connecting several islands, and the purpose was to tend to raise the level in the harbour. I do not think that is covered in any of these items, but is the work continuing?

Mr. HOWE: The only weir of any importance was the one near Sorel connecting the mainland with an island.

Mr. BENNETT: Was there not a small one outside the harbour, before that, which the engineers thought was of no particular value?

Mr. HOWE: I believe I was responsible for the suggestion.

Mr. BENNETT: No, that was said before the hon. member took office.

Mr. HOWE: There was work continuing for a number of years in maintaining this particular weir about which I speak. It is below Montreal harbour and above Sorel.

Mr. STIRLING: The purpose was to correct the diminution in the level of the water in Montreal harbour.

Mr. HOWE: Yes.

Mr. STIRLING: If the government is committed to a thirty-five foot channel right up to the harbour we must look for a lowering of the water in Montreal harbour, which has been giving serious trouble in past years. That being one of the factors, what

corrective work does the government contemplate to hold the water up in Montreal harbour?

Mr. HOWE: In the main estimates we have an appropriation for a board of engineers to study the entire water levels of the St. Lawrence. We expect a second interim report from them shortly. They are very much engaged with a plan which we hope will supersede the dredging, in an attempt to check the water and raise the level back to the 1897 datum. But we are doing nothing at this time. There is nothing provided this year, and we can do nothing until we receive a conclusive report from the board of engineers.

Item agreed to.

Halifax harbour improvements—new sheds, pier "B," provision of cargo handling and fire prevention equipment, $6,400.

Mr. BENNETT: What was the final cost of this pier? I believe it was between $5,000,000 and $6,000,000. I know the moneys were outstanding when we came into office, and the pier was not finished until 1934 or 1935. Is this a vote for further completion of the work?

Mr. HOWE: This is just a matter of fire prevention equipment. The shed was finished.

Mr. BENNETT: A sprinkler system was put in there.

Mr. HOWE: Yes. This is for two tractors and sixteen trailers.

Mr. BENNETT: The harbour commission would have paid this, had it not been for taking over the harbour.

Mr. HOWE: Yes.

Mr. KINLEY: On April 23, as reported on page 2116 of Hansard, when the national harbours board was under discussion, the junior member for Halifax made a reference to the taking over of the Halifax cold storage plant. At that time I made this interjection:

Mr. Kinley: After it became a white elephant.

My statement indicated that the cold storage had been a financial loss. I have some financial and commercial interests in Halifax, and of course I was interested in the port and thought I was justified in making the statement. After I made that remark the leader of the opposition said this:

Mr. Bennett: It did not; it paid its interest.

Mr. BENNETT: Yes.

Mr. KINLEY: I did not take issue at that time with the leader of the opposition, because I wanted to be sure of my facts. I now have before me a return indicating that it made an operating loss each and every year, before taking into consideration depreciation on plant and equipment. The figures show that during the time it operated it made a gross loss of $503,132.37. Under the circumstances I shall have to put this part of the return on Hansard.

Mr. BENNETT: No, you cannot do it in that way.

Mr. KINLEY: Shall I have to read it?

Mr. BENNETT: Yes.

Mr. KINLEY: Very well; it is as follows:

| — | April 30/30 1929–30 9 months | April 30/31 1930–31 | April 30/32 1931–32 | April 30/33 1932–33 | August 31/33 1933–34 4 months | Total |

I thought I might be doing an injustice to business people with whom I am acquainted if I made a statement that was not well founded, and I therefore looked up the facts and this was the result of my examination.

Mr. BENNETT: The hon. member for Queens-Lunenburg (Mr. Kinley) has directed attention to my statement, which he seems to think was erroneous. I want to point out, first, that the site was let by the former government to the people who constructed the cold storage enterprise in the centre of the harbour facilities; second, that the work was constructed under the provisions of the Cold Storage Act, whereby a certain subsidy was available on the completion of the work; that subsidy was mortgaged for the purpose of paying the interest on the securities that were issued, and the securities issued were in accordance with the terms of the statute. That is what I was endeavouring to make clear to the hon. gentleman. That is, this work was not a private enterprise in the sense in which that term is used. It was an enterprise carried forward under the provisions of a special statute that provides for subsidies being given out of the public exchequer for cold storage facilities. Those facilities were erected in that harbour and my complaint was, if I might put it in that way, that I could not understand why any person would permit the centre of a harbour to be alienated by a long term lease to a private enterprise for the purpose of constructing facilities that were of the very essence to the successful marketing of perishable products such as fish. But the subsidy was a subsidy earned under the act, and that subsidy was mortgaged to pay the interest. That is what I had in mind with respect to the question of interest.

I will look further into the matter because, if I have misunderstood the situation, I shall certainly be glad to make a correction. But the revenue does not include the subsidy; that is my point. The revenue for the first nine months of 1929-30 was $72,000 odd. The next year it went to $129,000; 1931-32, $78,000; 1932-33, $73,000; 1933-34, four months, $27,000. The total revenue prior to 1934 was $381,000. But that has nothing to do with the subsidy, which under the trust deed was mortgaged for the purpose of paying the people who bought the securities, and the securities were put on the market on the basis of the subsidy thus being paid, as my hon. friend may recall. This was before the late government was in office. The expenditures do not deal with that phase at all but merely show the operating loss, being the difference between the revenue and the sum that was expended, exclusive of interest. After the first year the interest was a steady amount of $102,000, and for the four months of 1933-34, $27,000. The subsidy bore such close relation to the charges that they were able substantially to pay them, although not in full. When I say that the interest was paid, when they sold the plant to the harbour board they reduced the interest rate to three per cent, if my memory serves me correctly.

The order in council is P.C. 2195 and I am indebted to my hon. friend from Queens-Lunenburg for handing it to me from among his papers. The order in council is dated October 21, 1933, and after referring to what had taken place, that the cold storage plant had been offered for the price of $1,700,000, said purchase price to be satisfied by Halifax harbour commission debentures bearing interest at the rate of three per cent and to be for a term of five years, it says:

1. Whereas our study convinces us that private enterprise now has and will continue to have under present and anticipated near future general business conditions great difficulty in maintaining to the required extent the operation of all departments of the plant of the Nova Scotia Public Cold Storage Terminals, Limited,

2. And whereas the continued operation without interruption of all departments of said plant is essential to the adequate conduct of the business of the port of Halifax for the purpose of providing regulated temperature storage for all classes of perishable commodities which pass through the port, both export and import, and also for storage which the said plant provides,

3. And whereas the report of the Royal Commission on Maritime Claims in Par. 17, page 30, states:

"We must not underestimate the rapidity with which development of traffic can be expedited through the development of facilities for handling the traffic (including requisite cold storage) and through making known, by all the sources that are open to the energetic administration of harbour commissions in the shipping exchanges of the world, and to shippers, the facilities that are offered at any given port,"

4. And whereas the authority of the port of Halifax is in a position to eliminate duplications of cost if the operation of said plant is under its jurisdiction and at the same time is in a position to more adequately utilize the said plant in connection with harbour operations than is now the case.

5. And whereas there is a responsibility placed upon the authority of the port of Halifax to use its best efforts to encourage the fish industry through the port in so far as the provision of port transportation facilities is concerned,

6. And whereas the great desirability of recovering the site located in the centre of the ocean terminals which was leased in 1927 to the said company for 99 years at a nominal rental is a factor which very materially enters into the situation,

7. And whereas a joint appraisal has just been completed of the present day value of the plant and equipment of the said company all as located at the ocean terminals as aforesaid, which joint appraisal has been made and

certified to by J. J. Macdonald, chief engineer of the Halifax harbour commission, and by C. H. Pringle, appointed for such purpose by the hon. the Minister of Marine, and which joint report states that the physical valuation of said plant and equipment as of the present time is $1,683,441, and having in mind further that clause 7 of the lease from the crown (Department of Railways and Canals) made the 6th day of April, 1927, under which the Nova Scotia Public Cold Storage Terminals, Limited, are in possession of the property provides:

7. That should the lessee at any time during the term of this lease, except for the purposes of repairs to or renewals of the said buildings, and cold and dry storage plant or for causes beyond the control of the lessee, discontinue the operations of his cold and dry storage plant upon the said land for the full period of one year, this lease may, in any such case, at the option of the lessor, upon writen notice from the Minister of Railways and Canals to the lessee to that effect, be forthwith cancelled.

Then they can take over the property within thirty days at a value based upon the actual cost of construction and acquisition thereof to the lessee, less the amount of depreciation therein, as may be determined by three arbitrators who shall be appointed within the next succeeding thirty days. The order in council continues:

The minister, therefore, recommends that the Halifax harbour commissioners be authorized and empowered under section 10 of the Halifax Harbour Commissioners Act, being chapter 58 of the statutes of 1927, to acquire the property, assets and undertaking of the Nova Scotia Public Cold Storage Terminals, Limited, under the terms and conditions hereinbefore recited and subject to the further condition that the necessary resolutions of the shareholders and bondholders of the said Nova Scotia Public Cold Storage Terminals Limited, are duly passed at properly convened meetings of the said shareholders and bondholders approving of and accepting the terms of sale of the property, assets and undertaking as aforesaid, and the acceptance of the purchase price therefor in manner and form hereinbefore recited.

The minister further recommends that approval be given under section 18 of the aforesaid act, of the issue of $1,700,000 debentures of the Halifax harbour commissioners, dated 1st November, 1933, due 1st November, 1938, with interest at the rate of 3 per cent per annum payable half-yearly, principal and interest payable in lawful money of Canada, in full discharge of the purchase price of the property, assets and undertaking of the Nova Scotia Public Cold Storage Terminals, Limited.

The subsidy no longer became necessary as it was taken over in the public interest. Unfortunately—and I say this not in any fault-finding sense—it was discontinued and the minister gave them notice that the property was to be taken over at the cost to them, which was largely in excess of $1,700,000, less depreciation. If the amount could not be arrived at amicably, it was to be settled by arbitration.

[Mr. Bennett.]

Mr. KINLEY: The cost appeared in the order in council.

Mr. BENNETT: The amount arrived at by arbitration was $1,683,441, and they made it $1,700,000. Mr. Macdonald, the engineer who was taken over to England by Sir Alexander Gibb, was one of those who determined the value. I well recall that we asked the minister to get someone who had no relation to the martime provinces for the purpose of fixing the value, and he secured Mr. Pringle, a cold storage expert, who I believe had something to do with Canada Packers in Toronto. I was not, I think, in council the day the order was passed, but I am thoroughly familiar with the transaction. I was extremely anxious that someone outside the maritime provinces should estimate the value of this plant. That is how I say it was able to pay three per cent on $1,700,000, but the subsidy is in excess of that sum. I am not at the moment able to indicate whether it paid the interest on the original bond issue at five per cent, but the subsidy was marked for that purpose. I will look up to find out how much the subsidy was.

Mr. KINLEY: I have it here, $620,284.61.

Mr. BENNETT: Not for one year?

Mr. KINLEY: It was paid as the work was being constructed.

Mr. BENNETT: There was an annual subsidy that was to be continued.

Mr. KINLEY: They received $537,580.61 prior to August, 1931, and there was still $82,704 to come. I think they got thirty per cent, and I believe my statement is warranted, that the government took the property over after it became unprofitable to the private interests.

Mr. BENNETT: The lease which the government of the day made provided that if they abandoned the works, then the Minister of Railways could take it over at the price fixed in the lease, namely, the cost of the plant, less depreciation. If the amount could not be arrived at between the parties, it was to be settled by arbitration. As a matter of fact, the minister anticipated this action, first, because the private enterprise said they were losing money; second, because the harbour commission said they wanted the cold storage property and, third, because the bondholders threatened to foreclose. The lease contemplated that there should not be a foreclosure of that valuable property in the centre of the harbour. If the hon. member will look at the order in council again he will see that it

provides that should the private enterprise not operate the property he was to take it over, not as a party to a foreclosure but at a price. That price was to be the cost, less depreciation.

Mr. KINLEY: The cost to the lessee.

Mr. BENNETT: Yes, whatever it cost them to put the property there, less depreciation. That was a principal factor in determining the attitude of mind of those responsible for it. The private interests were desirous of discharging their obligations to the security holders who said they would take three per cent if the matter could be closed up. It was closed up, practically in accordance with the terms of the lease made by the government in 1927, namely, the taking over of the enterprise at the cost to the private company, less depreciation. When they could not agree, it was settled by arbitration, one arbitrator being Mr. Macdonald, who, I believe, represented the private interests, and the other being a gentleman who was more or less an authority on cold storage and who made a very detailed report. The arbitrators set the amount at $1,683,000, and we paid $1,700,000.

Mr. KINLEY: I find the following in the report dated March 22, 1932:

Re: Acquisition Halifax Cold Storage Plant by the Halifax Harbour Commissioners

This matter was the subject of some considerable investigation by Sir Alexander Gibb and his commission and the Halifax harbour commissioners made definite representations to the Gibb commission regarding the situation surrounding the cold storage plant and its acquisition by this commission.

Nova Scotia Public Cold Storage Terminals Limited was incorporated on December 28, 1926, under the Nova Scotia Companies' Act, for the purpose of constructing and operating at the port of Halifax a cold storage plant suitable to care for the requirements peculiar to the community.

The following securities were issued to finance this project:

Bonds—$1,700,000 (par value) 6 per cent dated Nov. 1/28.

7 per cent Cumulative preference shares $220,000 (par value).

$50,000 No par value common shares at $1 per share paid for in cash.

The cost figures as furnished us by the company are as follows:

| | |
|---|---|
| Payments to contractors as per evidence furnished to and accepted by Department of Agriculture under subsidy agreement | $2,067,617 76 |
| Cost of small subsequent additions | 3,185 16 |
| Discount and commission on securities sold to raise funds | 220,900 00 |
| Interest paid on bonds to November 1, 1931 | 306,000 00 |
| Total | $2,597,702 92 |

Deduct

| | |
|---|---|
| Received on account of subsidy to August, 1931 | $ 537,580 61 |
| Balance | $2,060,122 31 |

Add

| | |
|---|---|
| Premium on funds or cost of bond interest, approximately | 8,000 00 |
| Total | $2,068,122 31 |

Notes

Subsidy yet to come—still payable to company, $82,704.71—half of which is payable in August, 1932, and half payable in August, 1933.

Lease of property—The premises were leased to the company for a long period by the Department of Railways at a nominal rental of $100 per year. For the purpose of this statement, no value is placed on this lease.

Mr. FINN: What year was that subsidy in?

Mr. KINLEY: 1932 and 1933. It appeared that this company was unable to continue and the bondholders were getting anxious and held several meetings. There are letters on the file to show that they decided they would have to sell the property either to the government or to other private interests if the government would not take it over. Perhaps I should say harbour board instead of the government.

Mr. BENNETT: They are the same thing in this regard.

Mr. KINLEY: Mr. Pringle, the engineer, made an estimate of the cost and the depreciation some time before the final estimate was made. His first estimate was that the plant was worth $1,328,897. Another joint appraisal was made afterwards and the value was raised to $1,683,441.

Mr. BENNETT: He left out the value of the lease the first time.

Mr. KINLEY: The value of the lease was only $100 per year. I agree that it was left out, but it was not worth $300,000. Paragraph 7 of the order in council was invoked which reads:

That should the lessee at any time during the term of this lease, except for the purposes of repairs to or renewals of the said buildings, and cold and dry storage plant or for causes beyond the control of the lessee, discontinue the operations of his cold and dry storage plant upon the said land for the full period of one year, this lease may, in any such case, at the option of the lessor upon written notice from the Minister of Railways and Canals to the lessee to that effect, be forthwith cancelled, and the lessor shall thereupon take over and become owner of the said buildings and cold and dry storage plant, and shall pay to the lessee therefor the amount—

Now mark this:

—of the value of the said buildings and cold and dry storage plant as may then be agreed upon between the lessor and the lessee or—

This is the part that was invoked:

—failing such agreement within thirty days from the date of such cancellation the amount of the value of the said buildings and cold and dry storage plant, based upon the actual cost of construction and acquisition thereof to the lessee,—

Now what was the cost of this to the lessee?

Mr. BENNETT: $2,067,617.

Mr. KINLEY: Less depreciation, which brings it down to $1,683,000. And in that you washed out the government subsidy of over $600,000. Now, if I undertake to build a building, and you say that if it does not pay you will take it over from me at what it cost me, and you put in $50,000 and I put in $100,000, it did not cost me $150,000, it cost me only $100,000. It seems to me that the provisions of this order in council meant that these people should get back the actual money they put into the building, but the government bought back their own subsidy. It finaly cost the government $1,700,000 in bonds, plus the subsidy of $537,580.61; in addition it cost them another $82,704.71 in subsidy; and it appears from the records that there was another $60,000 as between the Halifax harbour board and the cold storage company, because there is an extra estimate of $60,000. It appears that these people originally put $50,000 into this plant; the government of Canada lost over $600,000, and it looks as though the promoters came out with a profit.

Mr. BENNETT: No, they lost $50,000.

Mr. KINLEY: I think they got an extra $60,000 in the settlement.

Mr. BENNETT: No.

Mr. KINLEY: I would not be sure about it, but it appears that way.

Mr. BENNETT: No. The order in council provides what they got.

Mr. KINLEY: There was a contract between the harbour board and the cold storage plant—

Mr. BENNETT: That may have been some cash they had.

Mr. KINLEY: The return indicates $60,000 extra estimates, as between the harbour board and the Cold Storage Company. I said it became a white elephant and all I want to do is to justify myself and the friends whom I know in many business ways in the city of Halifax, when I said the commission took this over when it was a white elephant. The statement of the leader of the opposition rather hit me cold, as I thought I knew what I was talking about, and I could not let his statement go. I knew that the minute I went there I would be told: Why did you go up there and say those irresponsible things? I wanted to be sure of what I said, and I think it is even worse than what I said. This is the order in council to which I have referred:

P.C. 2195

The committee of the privy council have had before them a report dated 16th October, 1933, from the Minister of Marine, submitting that he has had under consideration resolutions of the Halifax harbour commissioners recommending, for the reasons set out therein, that the said commissioners be authorized and empowered to acquire the property, assets and undertaking of the Nova Scotia Public Cold Storage Terminals, Limited, located at Halifax, N.S., free from all liens and encumbrances at the date of the taking over of such property, assets and undertaking by the said commissioners for the price or sum of $1,700,000, said purchase price to be satisfied by Halifax harbour commissioners' debentures to bear interest at the rate of 3 per cent per annum and to be for a term of five years from 1st November, 1933.

Having in mind reasons, inter alia, stated by the Halifax harbour commissioners in the aforesaid resolutions as follows:

1. Whereas our study convinces us that private enterprise now has and will continue to have under present and anticipated near future general business conditions great difficulty in maintaining to the required extent the operation of all departments of the plant of the Nova Scotia Public Cold Storage Terminals, Limited:

2. And whereas the continued operation without interruption of all departments of said plant is essential to the adequate conduct of the business of the port of Halifax for the purpose of providing regulated temperature storage for all classes of perishable commodities which pass through the port, both export and import, and also for storage which the said plant provides:

3. And whereas the report of the Royal Commission on Maritime Claims in Par. 17, page 30, states:

We must not underestimate the rapidity with which development of traffic can be expedited through the development of facilities for handling the traffic (including requisite cold storage) and through making known, by all the sources that are open to the energetic administration of harbour commissions in the shipping exchanges of the world, and to shippers, the facilities that are offered at any given port.

4. And whereas the authority of the port of Halifax is in a position to eliminate duplications of cost if the operation of said plant is under its jurisdiction and at the same time is in a position to more adequately utilize the said plant in connection with harbour operations than is now the case;

5. And whereas there is a responsibility placed upon the authority of the port of Halifax to use its best efforts to encourage the fish industry through the port insofar as the provision of port transportation facilities is concerned, and the operation of said plant by the port authority will permit of great assistance being given to the fishing industry;

6. And whereas the great desirability of recovering the site located in the centre of the ocean terminals which was leased in 1927 to the said company for 99 years at a nominal rental, is a factor which very materially enters into the situation;

7. And whereas a joint appraisal has just been completed of the present day value of the plant and equipment of the said company all as located at the ocean terminals as aforesaid, which joint appraisal has been made and certified to by J. J. Macdonald, chief engineer of the Halifax harbour commission, and by C. H. Pringle, appointed for such purpose by the honourable the Minister of Marine, and which joint report states that the physical valuation of said plant and equipment as of the present time is $1,683,441;

and having in mind further that clause 7 of the lease from the crown (Department of Railways and Canals) made the 6th day of April, 1927, under which the Nova Scotia Public Cold Storage Terminals, Limited are in possession of the property provides:

7. That should the lessee at any time during the term of this lease, except for the purposes of repairs to or renewals of the said buildings, and cold and dry storage plant or for causes beyond the control of the lessee, discontinue the operations of his cold and dry storage plant upon the said land for the full period of one year, this lease may, in any such case, at the option of the lessor upon written notice from the Minister of Railways and Canals to the lessee to that effect, be forthwith cancelled, and the lessor shall thereupon take over and become owner of the said buildings and cold and dry storage plant, and shall pay to the lessee therefor the amount of the value of the said buildings and cold and dry storage plant as may then be agreed upon between the lessor and the lessee or, failing such agreement within thirty days from the date of such cancellation the amount of the value of the said buildings and cold and dry storage plant, based upon the actual cost of construction and acquisition thereof to the lessee, less the amount of depreciation therein, as may be determined by three arbitrators who shall be appointed within the next succeeding thirty days, one arbitrator by the lessor, one of the lessee and the third by the two arbitrators so appointed:

The minister, therefore, recommends that the Halifax harbour commissioners be authorized and empowered under section 10 of the Halifax Harbour Commissioners' Act, being chapter 58 of the statutes of 1927, to acquire the property, assets and undertaking of the Nova Scotia Public Cold Storage Terminals, Limited, under the terms and conditions hereinbefore recited and subject to the further condition that the necessary resolution of the shareholders and bondholders of the said Nova Scotia Public Cold Storage Terminals Limited, are duly passed at properly convened meetings of the said shareholders and bondholders approving of and accepting the terms of sale of the property, assets and undertakings as aforesaid, and the acceptance of the purchase price therefore in manner and form hereinbefore recited.

The minister further recommends that approval be given under section 18 of the aforesaid act, of the issue of $1,700,000 debentures of the Halifax harbour commissioners, dated 1st November, 1933, due 1st November, 1938, with interest at the rate of 3 per cent per annum payable half-yearly, principal and interest payable in lawful money of Canada, in full discharge of the purchase price of the property, assets and undertaking of the Nova Scotia Public Cold Storage Terminals, Limited.

Mr. HOWE: Mr. Chairman, possibly I am late in raising this point of order, but may I remark that these items before us are for capital expenditure and have nothing to do with the cold storage plant.

Mr. KINLEY: That is capital too.

Mr. HOWE: Later we shall be passing the operating statement of the cold storage plant, and it seems to me that this discussion would be more appropriate at that time.

Mr. KINLEY: It might be more appropriate then, but it is in order now, I submit.

Mr. FINN: It has been said that "between craft and credulity the voice of reason is stifled." Fortunately I was not a representative of Halifax when the cold storage plant was constructed. I think in fairness to the hon. member for Queens-Lunenburg (Mr. Kinley) and also in fairness to the right hon. the leader of the opposition I should state my recollection as to this plant. I agree with one statement made by the leader of the opposition, and I saw a sound reason to-night for thinking that if he had remained on this side of the house he would have become a member of the profession represented by my hon. friend the Minister of Railways, and would have been lost to the legal profession, because he has shown to-night a very fine grasp of the engineering difficulties in connection with many public works the ramifications of which extend practically from one end of Canada to the other.

With reference to this particular work, as I remember it was started under a Liberal administration; then there was a subsidy given to it; the cold storage plant was carried on, and finally it got into financial difficulties. I think it went into liquidation, or there was an attempt to reorganize it and carry it on as a going concern independently of the harbour commission, who have it at the present time. As to the amounts of money that were placed in it, if I remember aright there was a subsidy of $500,000. The plant was built, and I think the right hon. leader of the opposition is correct when he says that perhaps a fine part of that great seafront was alienated from shipping when it was used as the location of the cold storage plant, and that there were other places where that

plant could have been put with greater advantage to the broader shipping interests of the port of Halifax. But the plant continued to be in a see-saw position, and finally it was taken over. I do not know who constituted the Nova Scotia Cold Storage Company, Limited. I do not know whether there was a reorganization after there had been talk of liquidation. All I know is this, that in so far as that plant was concerned there could not be a very great depreciation because it is a structure that has not been built very long, and if the development of the port of Halifax is what we hope it will be, I believe that plant can be operated under the Minister of Transport and his board and made a success. I have no doubt that there were certain moneys involved in its construction, both under the company and through the subsidy which was given by the government. I had no opportunity of looking into this question, but as it is a matter relating to the city of Halifax, of which I have the honour to be one of the members, and my own colleague not being in the chamber at the moment, I make this explanation.

Mr. ISNOR: He is here.

Mr. YOUNG: He is always here.

Mr. FINN: I am very glad my hon. friend is here. I did not think he was very far away, because we find that he turns up at the right moment, and while we may have some disagreements over matters that concern only ourselves, I hope we are not going to be at sword's point on the particular issue that is involved in the matter which has been brought up to-night by the hon. member for Queens-Lunenburg and answered by the right hon. the leader of the opposition. I was tired; I had an appointment with my couch, and if I had known my hon. friend and colleague was here I would have retired. But when I looked about me I did not see that fine personality, and I did not think I should allow an opportunity to pass to say something in regard to the port of Halifax, in connection with construction that was carried on there, not in my time but in the latter days of the Liberal administration, continued under the right hon. leader of the opposition and finally taken over by the harbour commission under his jurisdiction when he had the honour of being Prime Minister of Canada.

Mr. BENNETT: I want to correct one misapprehension, even though it may delay the committee for a moment. Shortly, the position is this: 1. The government of the day leased a property for ninety-nine years at $100 a year for the construction of a cold storage plant. 2. The Department of Agriculture was satisfied and gave certificates that the cost was $2,067,617. 3. There were outstanding against the property securities to the extent of $1,700,000, carrying interest at the rate of six per cent per annum. 4. Having regard to the terms of the lease, which provided that if taken over the property should be valued at cost less depreciation, a decision was arrived at that the value was $1,683,000, or, in round figures, $1,700,000, being the amount of the bonds. The net result was that the proprietors or promoters, if you call them such, lost every dollar they had put into the enterprise, and the bondholders got three per cent harbour commission securities instead of the six per cent securities they formerly held upon the property. If my hon. friend from Queens-Lunenburg, from the remarks I made the other evening, concluded that I endeavoured to convey the thought that five per cent interest had been paid, then it was perfectly proper for him to direct attention to the fact that such was not the case. I spoke very rapidly, making an interjection in the midst of what was said, but what I endeavoured to make clear to him was that the interest of the three per cent securities had been paid since.

Mr. KINLEY: By the government?

Mr. BENNETT: By the harbour commission, and that was all I desired to say. It was not, therefore, taken over as a white elephant; it was taken over at the instance of the harbour board for reasons that I think should be apparent to anyone. To have that property, under those circumstances, in the middle of the harbour facilities at Halifax was not in keeping with what they conceived to be the best interests of the port. They were clamouring for it, but it was not delivered over to them in such a way that those who had put their money into it saved anything. The property passed to the harbour board for the amount of the outstanding bonds, at the new rate of three per cent instead of six per cent. The bondholders now have bonds of the harbour board instead of the long term six per cent securities they had, which were based upon a trust deed securing the property and the lease. The lease itself, at $100 per annum for ninety-nine years, was valued by some person at a very high figure, having regard to the location of the property.

Mr. KINLEY: I do not desire to enter into any further discussion with the right hon. gentleman; the return is on Hansard, and the return can speak for itself. I want to say to my hon. friend from Halifax that they took very little off for depreciation. There was a

refrigerating plant that cost about $90,000, that had to be washed out, and the allowance for depreciation under the circumstances was very small.

Item agreed to.

Chicoutimi harbour improvements—improvement of roadways, $17,000.

Mr. BENNETT: We will discuss this when the other items are under consideration.

Item agreed to.

Montreal harbour improvements—
Dredging by harbour plant, $90,820.07.
Strengthening of sections 30-31 and 39-40, $225,000.
Strengthening and repairing Imperial Oil wharf, $50,000.

Mr. HOWE: I may say that this is new capital expenditure in the port of Montreal. We have a dredging fleet of our own there, and it is customary to do a certain amount of work adjacent to wharves. That has been done for some years. The other item is for work in connection with deepening; it is minor work and is intended to be done by the harbour's own staff. There is also the strengthening of sections 30-31 and 39-40, and the repairing of the Imperial Oil wharf.

Mr. STIRLING: What sort of strengthening?

Mr. HOWE: The difficulty there is that the wharf is pushing out due to the loads. This is to drive piles in and put up platforms to relieve the pressure, so that the wharf can be used for heavy storage.

Mr. STEWART: The Public Works Construction Act, to which I return from time to time, contained a provision that in the carrying out of contracts of this kind tenders should be invited and the contracts should be awarded under the direction of the governor in council. I should like to ask the minister what is the intention of the government in that respect.

Mr. HOWE: I may say that it is the intention to call for tenders for this work.

Mr. STEWART: I do not mean the work that is to be done by the harbour plant.

Mr. HOWE: The harbour act provides that all work costing over $10,000 must be let by public tender, and we intend to follow that provision.

Mr. BENNETT: May I direct the attention of the right hon. Prime Minister to a matter we have been discussing this evening, namely the passing for the second time of estimates with respect to public expenditures. In these supplementary estimates we are dealing with about $30,000,000 that this house passed last year, item by item. There was no limitation as to time placed upon these items; in other words the appropriations thus made by parliament, item by item, were not appropriations that lapsed on the 31st day of March, 1936. We are now engaged in passing these same items in their entirety, although part of the expenditures have been made and apparently the auditor general has found them satisfactory. I cannot understand just why we should ask parliament to pass a second time items that have been considered and passed by parliament in detail. This is not a question of a blank cheque; these are items that were considered and passed in detail; the numbers of the items of last year could be given and were given this evening. In these circumstances it would seem that these estimates have been padded by something like $30,000,000. That is, instead of providing for new expenditures these items are for expenditures on works that are partly under contract and partly in process of completion. In one instance new plans were necessary because of certain developments that took place after the original contract was made, but in any event all these expenditures have been passed by parliament. They formed part of the act assented to by his excellency last year. I do think it is improper, shall I say, to ask parliament to pass for the second time and for the full amount, the same items when a part of the expenditures thus authorized by parliament last year has been made and the auditor general has approved of payments made under the authority of those items.

Mr. MACKENZIE KING: May I say to my right hon. friend that the government is simply carrying out what its members contended, when they were in opposition, should have been done by the then government, namely voting the supply necessary for the fiscal year, and in that way giving parliament complete control and complete knowledge of all expenditures for the year. We take the position which was always taken until my right hon. friend came into office, that parliament's power in voting supplies should be restricted to voting supplies only for a year at a time. When expenditure on public works have extended over more than one year, amounts unnecessary to complete the works were revoted. Take the public works estimates. As the ex-Minister of Public Works (Mr. Stewart) well knows, where the public works might take three or four years to construct certain sums would be voted each year, and what was not

spent in one year of the amounts so voted was revoted in a subsequent year. That is the only way in which it is possible to distinguish what is properly chargeable to one year and to another. It is equally important that there should be a distinction between what is properly chargeable to one administration and what is properly chargeable to another. That is an additional reason why this year we are asking parliament to vote what is essential to carry on work being done in the present fiscal year. It is simply keeping the control of the House of Commons over expenditure in a manner that makes the contemplated expenditure intelligible to this house and intelligible to the public, and on record in a form which will be of service to those who have to do with the finances of the country in years to come.

Mr. BENNETT: The right hon. gentleman apparently forgets that the statement he makes is exactly at variance with what the practice has been. I wonder whether he forgets the appropriation of a given sum we made for the federal district commission for many years. I wonder whether he forgets the appropriation made by statute for technical education. When an appropriation is made by statute it becomes payable out of the consolidated revenue fund. For instance, old age pensions are not in the appropriation bill this year. Why not? Because the statute provides that whatever sum is necessary shall be taken out of the consolidated revenue fund. The Public Works Construction Act was exactly of that nature. Every item was considered and dealt with by the House of Commons, and to the extent that the House of Commons approved, the appropriation bill which is now a chapter of the statutes of Canada for last year and the year before indicates the maximum expenditure that can be made. And it is unnecessary to vote an amount from year to year, in the same way that it is unnecessary to vote judges' salaries, or to vote any charge against the consolidated revenue fund where a given sum is to be paid for a given number of years—the federal district commission is an illustration—or where you have it during a term, such as the natural life of judges or other officials. Another class is where a given sum is appropriated, such as $10,000,000 or some other such sum. Technical education is an illustration; another would be the Public Highways Act. Those are appropriations made by parliament of lump sums, and each year in the public accounts there appears a statement as to what has been expended, so that the balance is then available within the period of time indicated for the purpose for which parliament appropriated the money.

This act comes clearly within that category. We voted for public works and undertakings the sums of money set opposite each particular item; when they were crystallized into a statute, as they were, and the only interest that governments have each succeeding year is to determine how much still remains available for that purpose. When it is found that an extra amount is required the minister comes in, just as he has done here in one case, and says that a further sum is required and that sum appears in the estimates.

As the matter stands now these estimates are deceptive, because if they are going to be voted, the house must vote only the balance and not the whole, and now the vote is being asked for the whole. When the right hon. gentleman says "so that one administration may know where it is with respect to the preceding administration," that can be determined only if the balance is voted, not the whole. But he is voting the whole.

I raised the point only because I thought there was an oversight. I did not think for a moment that the right hon. gentleman thought the whole amount should be voted when only part remains to be expended. I thought it was put in without realizing that there had been a substantial payment made. That having been paid, the only amount parliament should vote would be the balance, and it is unnecessary to do this unless there is a limitation of time within which the first appropriation would lapse. As there is no provision for the lapsing of the appropriation it still continues in full force and validity, the same as the Technical Education Act or the Judges' Act or old age pensions, or any act that authorizes a charge against the consolidated revenue fund, as did the public works construction acts of 1934 and 1935.

Mr. MACKENZIE KING: When my right hon. friend uses the word "deceptive," it makes it necessary for me to say that the deception, if there was any, was a deception practised by himself when he was on this side of the house.

Mr. BENNETT: All right, we will deal with that; do not make any mistake.

Mr. MACKENZIE KING: My right hon. friend used the word "deceptive."

Mr. BENNETT: I did, and it is true.

Mr. MACKENZIE KING: And I give back to him his own words. I say, that is

what he did when he was on this side of the house.

Mr. BENNETT: If someone will hand me the statute—

Mr. MACKENZIE KING: Yes, he enacted a statute, and for what purpose? Let me give an example. He enacted a statute making provision for a barracks in his own city of Calgary which was to cost more than a million dollars. He knew that if he put the item in the regular supply bill, all that this parliament could be asked to vote would be enough to cover the work for one year. When supply came up in subsequent years parliament would be asked to vote what further amounts might be necessary for each succeeding year in turn. But in order, I assume, that there should be only one consideration of this subject, my right hon. friend put the total amount required in a special act of parliament and asked parliament to vote this amount, in the name of relief for the unemployed, where the real purpose was to build a barracks for the mounted police in Calgary.

Mr. BENNETT: It was not the mounted police; it was the permanent militia.

Mr. MACKENZIE KING: The permanent militia, I should say. And having arranged for the appropriation by a special statute, he says the work should be carried on possibly for the next two or three years, chargeable to the incoming administration, but that the new government has no right to draw the attention of parliament or the country to that fact or to that method of dealing with public moneys. That is wherein, at the time, we said there was deception in the manner in which these appropriations were being made. There was deception in yet another way. The house and the country were told that this money was necessary to help the unemployed. It was not intended for the unemployed at all; much of it was meant to build barracks or armouries or other undertakings of that kind which my right hon. friend knew very well this house would not have been prepared to vote in the regular way. It was for that reason these buildings were charged up to unemployment relief account instead of to National Defence or Public Works of the character mentioned.

In regard to moneys being voted by a statute, may I draw the attention of the house to the fact that where a statute does provide sums for such purposes as mentioned, attention is drawn to that very fact in the estimates. I have in my hand the estimates for this year for the administration of justice. Here are the amounts required for the fiscal year, at the bottom of the page in connection with the summary; amount to be voted, so much, authorized by statute, so much.

Mr. BENNETT: The house does not vote it.

Mr. MACKENZIE KING: No, but attention is drawn to the fact that there has been a special statute making the appropriation. All amounts required for the fiscal year are shown in that way. But as my right hon. friend knows there is a great difference between a statute which makes provision for some service that in the natural order of things is to run over a course of years, as for example property to be maintained by the federal improvement commission, and the regular supply bill. It is well known that the commission will carry on its work for a number of years, and provision is made up to a certain point by statute on maintenance account, so that the commission may plan ahead with an assurance that the necessary amount will be forthcoming every year. However, we come to a quite different category when we deal with public buildings and works. May I draw attention to the fact that all that is contained in these estimates is in the nature of special estimates, the greater part of which are in connection with making provision for employment and relief. It is essential that there should be a very clear line of demarcation between what is being expended in any one year and what is being expended in the following years. The estimates have been prepared in this way just to avoid any deception and to bring to the attention of hon. members and the country that which is properly chargeable to one fiscal year and that which is properly chargeable to another.

Also, may I add, there are in these estimates a number of undertakings which the present administration would never have thought of entering into, if they had not been commenced by the previous administration. My right hon. friend now says, "Do not mention these things; you have no right to bring them to the attention of parliament. You ought to have left them alone. The sums necessary to complete them were voted by statute which binds you for years to come." The position we take is just the opposite. We believe the public and this House of Commons ought to have their attention drawn to all outlays, and we have done so in part by separately indicating projects which are already undertaken and which have to be continued or left as waste. We have distinguished those projects from other projects which we feel are justified

from the point of view of helping to afford employment, but which in addition may be justified on grounds of being necessary at some time, either at present or of necessity later on.

I do not think there is any ground for taking exception to parliament discussing twice a matter which ought perhaps to be discussed ten times.

Mr. BENNETT: Mr. Chairman, if the right hon. gentleman's memory was as accurate as it should be he would remember that we gave effect to the very contention which he has made, in the statute in question. By section 4 we find that:

> The governor in council may pay out of moneys provided for that purpose in the consolidated revenue fund such sums of money as may be necessary for all or any of the purposes of this act, not exceeding in the aggregate the sum of forty million dollars.

That is found in chapter 59 of the statutes for 1934, assented to on July 3 of that year. Then, in a schedule is found a detail of every item, there being 182 in all. Having regard to what was said by the right hon. gentleman and his friends, we provided by section 10 that:

> The Minister of Finance shall make a report to parliament within the first thirty days of each session during the currency of this act, containing a statement of all moneys expended under the provisions thereof and the purposes to which they were applied.

The act as framed and passed met the very contentions of the right hon. gentleman. I recall his making them. In our desire to try to meet his, shall I say critical views, possibly exacting views, we provided first of all that the details of the 182 items should be given. We provided, second that the entire cost should not exceed the sum total of the estimated cost, namely $40,000,000, and provided, third, that in each year while these works were incomplete the Minister of Finance should lay before parliament a statement showing what sums had been expended, and for what purposes. That is, there was complete parliamentary control of the situation.

Let us deal with the second argument. The second argument is that these were not relief measures in any sense, and that although the preamble adopted by parliament declared that the measure was "to accelerate recovery to more normal economic conditions" and to place money in circulation for the purpose of tending to increase employment and reduce expenditures for relief purposes, the right hon. gentleman says that is not accurate and that "Bennett desired to build a barracks at Calgary, and he chose this method to do it." I have explained the matter often; it seems unnecessary to do it again, but I shall do it because the constant reiteration of a statement which is unwarranted very often induces people to believe that it has some substance in fact.

The truth is that for many years the Department of Militia have been endeavouring to secure adequate accommodation for their permanent unit, and it will perhaps please the right hon. gentleman to know that owing to the physical configuration of the land upon which these facilities are being provided, a distinguished British officer passing through this country within the last month expressed the view that this was the finest lay-out he had seen in the British empire, because it lent itself to this particular type of development.

If we have a permanent militia—and we have—either we will provide for it or we will not. As a matter of fact when this item was first brought up I had not any idea that an expenditure at Calgary was contemplated. It was not done for the purpose of endeavouring to have it dealt with in any way other than the regular manner. Discussions had taken place from time to time, and on more than one occasion—once in the public press—the right hon. gentleman referred to it as being for the mounted police. The very appropriation asked for by the Minister of National Defence with respect to air facilities involves the utilization of these premises for that purpose.

But let us look at the matter in another way. The other answer is this: If these works and undertakings are not for relief purposes, then the government has stultified itself, because times without number the Minister of Labour has declared that when this bill was brought down it would contain provisions which would indicate what was intended to be done, and the very class of expenditures provided for in the Public Works Construction Act of 1934 are continued in these appropriations. So that if these appropriations are for relief purposes, then the appropriations of 1934 and 1935 must be. And if the appropriations for 1934 and 1935 are not valid appropriations for relief, then all this story we have listened to for weeks, as to what was to happen when the bill was brought down showing the broad intention of the government with respect to providing relief measures, is wholly unsound and unwarranted. Surely the right hon. gentleman must take either one horn of the dilemma or the other, because he cannot allege on the one hand that the provision we made to deal with the situation was deceptive

when, on the other, with an exactly similar project upon which not a cent has been expended he takes a similar course. He cannot say that one is deceptive, unless the other is also.

But I go further. I will take one item, a very simple one. In part of item 373 we are asked to vote $20,971. We know that $242,000 has already been expended there. As I said it is an illustration of a proper item to be in this estimate. But when you come down to an item in connection with the city of Quebec, for instance, and dredging at Wolfe's Cove, an item of $179,906.70, we find that part of the money has been spent. The minister was good enough to say it was true that the contract had been let, and part of the work had been done. It was let months ago, because it was desirable to do it in the fall, if possible, so that the berthing of ships would not be interfered with in the spring.

Therefore we get down to this, that if these projects are sound to-night they were sound in 1934, and if they were sound in 1934 or 1935 they are sound to-night, because they are similar. Secondly, if it was deception to ask parliament to vote these items giving in detail the estimated expenditures, it is equally deceptive, if not more so, to assert that an entire sum, part of which has been expended, shall be available when it is not available. In fact, if the Prime Minister will be good enough to look at his own estimates he will find that he has already given some notice to the public that they are not a correct statement of what can be spent. The summary given at page 18 shows that the projects already undertaken involve $30,418,341.66 of the total. I was pointing out that of that sum part had been spent. The minister who has been dealing with his estimates was good enough to indicate to us how much still remained to be expended out of these sums.

There is no necessity to make unwarranted observations with respect to the matter. I was pointing out what I still think is unsound constitutional practice, for the auditor general in making his examination of estimates has before him the statutory authority. That statutory authority was chapter 59, the Public Works Construction Act, 1934, with 182 items, and he checks against that. Now, when this appropriation bill is before him, containing a repetition of the same figures, he is going to be in the difficulty of finding substantial portions of that already spent and noted in his books, while the appropriation is for the whole sum. The minister assures us that it is intended not to increase the amount available but to leave it at what it originally was. Therefore the auditor general will have before him two statutes, one of them chapter 59. Take one item, for example, for $25,000. The other statute would be the chapter that this appropriation bill happens to be, containing the same item of $25,000, which makes a total of $50,000. Now, under the Public Works Construction Act, 1934, chapter 59, the limitation on the total expenditure was $40,000,000, and the ministry is required by law to present within thirty days a statement showing the expenditures made, so that the incoming administration may know what sum has not been spent and what has been.

I only suggest in the best of good faith that if the Prime Minister would look into this he would observe that a parliamentary practice is being established which is novel in character, without precedent, and which involves the making available so far as the auditor general is concerned of, in some instances twice the amount that parliament intended to make available for the particular purpose indicated either by chapter 59 of 1934 or by the appropriation act that may be based upon these estimates.

Mr. MACKENZIE KING: I do not want to take up the time of the committee, there is not much time left, but may I just link up what I have to say with the remarks made by the leader of the opposition with respect to the Calgary building. He says that building was needed for the permanent force, that there was there an excellent site and that it was needed for military purposes. If that was the case I say that my right hon. friend, when he was in office, should have had the amount necessary placed in the regular estimates of either the Department of Public Works or the Department of National Defence. Then parliament would have been voting, without any possibility of deception, money intended for military purposes. Had those estimates been brought down in that form parliament might have voted any sum, but all that could have been spent without an additional appropriation, thus bringing the question before parliament again, would have been the amount provided for in the fiscal year to which the appropriation applied. That would have been the regular and proper way to proceed, but according to what the leader of the opposition says his government did not proceed in that way. Though the building was wanted for military purposes; though it was properly an appropriation for the Department of National

Defence or for the Department of Public Works, constructing a building for the Department of National Defence, it was placed in a statute which purported to be a measure for the relief of the unemployed. Parliament was asked to vote these large sums for unemployment relief purposes. My right hon. friend and his friends were thereafter in a position to go out to the country and say: Here are the total sums we have voted for unemployment relief, while presumably from what we are now being told there was no thought of spending the greater part of these sums for the next couple of years.

What we have done is to take projects, such as this which were on the list for purposes of relief and examine them and find out if work upon them has already been undertaken. If such were the case and to cease work would have meant throwing away the money already expended, we have continued the projects and are now asking parliament to vote the necessary amounts to complete them. What has been already spent was spent in the last fiscal year. What we are asking parliament now to do is to vote enough money to complete these works which, if they are not completed, will simply mean just so much money has been completely thrown away, and the works left totally unfinished. But where there are works which are specially needed and which are required for, say the Department of Public Works or the Department of National Defence, they will appear in the regular estimates for those departments. They will not appear in these special estimates which are primarily for the purpose of relief.

There are some new projects which are added here. Take the public works shown n the estimates. These works would not have been gone on with, at this time, if it were not that there is need for furnishing employment in these different communities. For that reason the government has decided to ask parliament to vote these moneys now. But it will be noted that in the regular estimates there are various items which relate to the regular work of these departments, and parliament in voting these amounts will be voting just what it would be called upon to vote if there had not been any period of depression at all. I think that keeping the items distinct, distinguishing between what is regular expenditure and expenditure arising out of the depression, is entirely the correct way of bringing before the country the state of the finances and what the depression is costing. Certainly voting moneys for a period of one year at a time is the traditional and correct method where parliament is being asked to vote money for public expenditure.

[Mr. Mackenzie King.]

Mr. BENNETT: I am so sorry that the right hon. gentleman should have made the next to the last statement that he did. He said that these estimates covered works which were not such as would be dealt with by the main estimates.

Mr. MACKENZIE KING: At this time.

Mr. BENNETT: All right. Take item 357:

Extension of existing facilities—
Trenton, Ontario—Royal Canadian Air Force station—single officers' building—married airmen's quarters—married officers' quarters.

The total of the item is $430,000. Take the next one:

Ottawa, Ontario—Rockcliffe air station, Royal Canadian Air Force—men's barrack building, $160,000.

Take the next item, number 359:

St. Johns, P.Q.—Garage at permanent force barracks, $22,000; administration building, $100,000.

Take the next one:

London, Ontario—Garage for Royal Canadian Army Service Corps vehicles at Wolseley barracks, $20,000.

Take item 364:

Esquimalt, B.C.—Joint service magazine, $125,000.

All these items are in exactly the same category as Calgary barracks. They never had any place in the estimates of 1935 or in the Public Works Construction Act of 1934. They are new. We never heard of them at all until they came down in these estimates. That is a complete refutation of the argument which the right hon. gentleman just now advanced.

Mr. MACKENZIE KING: No. Take the item my right hon. friend quoted covering the extension of existing facilities at Trenton, Ontario, Royal Canadian Air Force station. My right hon. friend started these works at Trenton.

Mr. BENNETT: No, no.

Mr. MACKENZIE KING: These are National Defence projects already undertaken.

Mr. BENNETT: These are not undertaken; these are new.

Mr. MACKENZIE KING: These are extensions of existing facilities.

Mr. BENNETT: But we did not undertake them.

Mr. MACKENZIE KING: If these facilities were not existing and did not require an extension these items would not appear here at this time. These are in the nature of extensions to works already in existence. It might be said that this is in a way killing two birds with one stone, making necessary extensions and giving employment to those who need it.

Item agreed to.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

---

## Monday, May 4, 1936

The house met at three o'clock.

### THE LATE D'ARCY B. PLUNKETT

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, it is seldom we advance very far in any parliament before we are reminded that, one by one, our ranks are certain to be thinned by the hand of death. Mr. D'Arcy Britton Plunkett, representative for Victoria, is the first member of the new parliament to have been taken from our midst. His death occurred only yesterday after an exceedingly brief illness, so brief in fact that many hon. members of the house were not aware of his indisposition until they read that he had passed away.

Mr. Plunkett was in his sixty-fifth year, and was unmarried. The circumstance that his death should have occurred in this city while he was attending to his parliamentary duties, that for this reason he should have been away from the many friends and associations of the constituency he represented, and that because of the seriousness of his illness it was impossible for any of his fellow members and associates in this city to have much in the way of contact with him in his last days, adds not a little to the feeling of sadness which we all experience at this time.

Mr. Plunkett entered parliament in a by-election in December, 1928. He was reelected at the general elections of 1930 and 1935. I shall leave it to my right hon. friend the leader of the opposition (Mr. Bennett) to speak of his public services. To my right hon. friend Mr. Plunkett was not only a very loyal supporter but a very true personal friend. I hasten at once to express to him on behalf of the government and of all hon. members on this side, and also to hon. members of his party our feelings of very sincere sympathy with them in the loss they and their party have sustained. May I say that the sense of personal loss which they experience will I am sure be shared in large measure by all who sat in previous parliaments with Mr. Plunkett, and also by others whose privilege it was to come to know him since the opening of the present parliament.

I should like on behalf of all hon. members to add a brief expression of sympathy with Mr. Plunkett's brothers and his nephews, who I understand, are his only immediate surviving relations and also a word of sympathy with the city of Victoria, which has lost its representative in this parliament.

Right Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, the generous terms in which the right hon. the Prime Minister (Mr. Mackenzie King) has spoken will not soon be forgotten by those of us who knew Mr. Plunkett as friend and colleague. I should like on my own behalf as well as on behalf of those with whom I am associated to express to the right hon. gentleman, not as leader of a party but as leader of this house, our very sincere and grateful appreciation of his kind words on this occasion.

We are once more reminded that death is ever with us. The sickle of the grim reaper has appeared very early in the life of this new parliament. Out of two hundred and forty-five members one has been taken from us, although it is now but May and we first met in February.

Mr. Plunkett came into the House of Commons in a by election in 1928. He was reelected in 1930, and in 1935 he was again reelected after a very strenuous contest. If one were to ask what qualities ensured his election in the city of Victoria I would say that essentially the first was that he was a man of integrity and of the highest character. He was not a man who wore his heart upon his sleeve, and many who did not know him little appreciated the kindly heart that beat under a somewhat, shall I say, rugged exterior. But those of us who came to know him realized not only that he was a man of character and integrity and of great simplicity and directness in speech and action, but that he was possessed of a sense of loyalty that nothing could destroy. He was proud of his city and proud to be the member for Victoria—prouder than most men who represent constituencies, because he had been absent in the great war for a very considerable time, and came back only to find confusion in his own business. When he was elected he felt it was indeed the proudest moment of his life. His pride in Victoria he expressed in many ways.

As a public man he took but little part in the debates of the house, but he was most regular in his attendance both in the chamber and in committee, and made himself singularly well informed with respect to all matters which engaged the attention of parliament. Over and above all that he was a man of great industry, although that fact may not have been apparent to those who sat in the chamber with him. He attended to his correspondence in a manner which I believe commended him to his constituents; he was always busy looking after the interests of his friends and constituents, whether they were his political supporters or otherwise.

He was a great Canadian in the sense that he believed in his country, its destiny and its future. Although he represented the city of Victoria, in the far west, he never forgot that in Ontario he had first seen the light. Obviously his loss to all of us is great, but even greater to those of us who knew him better than to others who knew him only casually. While in the first loss of a member of this parliament the house as a whole has suffered a bereavement that is not easily understood, we, small in numbers, who sit to your left, Mr. Speaker, have lost a well beloved comrade and colleague and one who by his loyalty and devotion to those with whom he was associated and to his party had greatly endeared himself to all of us.

I never think of the passing of one who is active in public life and who has to endure all that public men must endure,—the vicissitudes of life, the vicissitudes of position, criticism, sometimes unreasoning, and commendation sometimes equally unreasoning —without recalling those beautiful words of Shelley. I believe upon this occasion I might well repeat them as indicating what must be the position of those who, in the midst of their public duties, are struck down and go to their reward:

> He hath outsoared the shadow of the night;
> Envy and calumny and hate and pain,
> And that unrest which men miscall delight,
> Can touch him not, and torture not again;
> From the contagion of the world's slow stain,
> He is secure, and now can never mourn
> A heart grown cold, a head grown grey in vain.

Mr. J. S. WOODSWORTH (Winnipeg North Centre): Mr. Speaker, may I simply say that we in this corner of the house join with other hon. members in expressing our regret at the passing of our late colleague.

[Mr. Bennett.]

## CANADIAN RADIO COMMISSION

### CONCURRENCE IN SECOND REPORT OF SPECIAL COMMITTEE

Mr. A. L. BEAUBIEN (Provencher) presented the second report of the special committee appointed to inquire into the operations of the Canadian radio commission and its administration of the Canadian Radio Broadcasting Act of 1932 and amendments, and the regulations made under authority thereof, and moved that the report be concurred in.

Motion agreed to.

## QUESTIONS

(Questions answered orally are indicated by an asterisk.)

### ROYAL CANADIAN MOUNTED POLICE BARRACKS

Miss MACPHAIL:

What was the total sum of money spent in the last three years on Royal Canadian Mounted Police barracks, officers' residences and furnishing of same?

Mr. LAPOINTE (Quebec East):

| | |
|---|---|
| Barracks— | |
| (a) Direct payments from R.C.M. police appropriation | $ 423,855 99 |
| (b) Disbursed by Department of Public Works for R.C.M. police | 145,984 37 |
| (c) Paid direct from Department of Public Works appropriation | 312,180 66 |
| Officers' residences— | |
| Rentals, etc., from R.C.M. police appropriation | $ 134,628 32 |
| Furnishings— | |
| From R.C.M. police appropriation | $ 855 64 |
| Total | $1,017,504 98 |

### GRAND TRUNK RAILWAY STOCKHOLDERS

Mr. STEVENS:

1. Was a petition, signed by the first and second preference stockholders of the Grand Trunk Railway Company of Canada residing within Great Britain, submitted to parliament in the year 1930?

2. If so, was any action taken by parliament or by the government in connection with the claims indicated in the said petition between the date of its presentation to parliament to date?

3. Will the government consider the advisability of submitting this petition to a committee of the house, and to permit the petitioners or their representatives to be heard before such committee?

Mr. MACKENZIE KING:

1. Yes.

2. No.

3. Proceedings have been undertaken on behalf of all of the stockholders of the Grand Trunk Railway Company of Canada, seeking an adjudication by the Canadian courts of the rights of the stockholders. The government does not consider it advisable to submit the petition to a committee of the house.

SMALL LOAN COMPANIES

Mr. CHURCH:

1. What are the names of the small loan companies incorporated by federal authority, the past ten years, whose head office is located in the city of Toronto?

2. Have any complaints been received in reference to the high rates charged by these money lenders on small loans?

3. Who are the directors of these companies?

4. What rates are they allowed to charge by law?

5. Will any steps be taken by the government to cancel the charters of money lending companies charging exorbitant rates of interest, or to further regulate such matters?

Mr. DUNNING:

1. Central Finance Corporation; Personal Finance Corporation and The Small Loan Company of Canada.

2. Yes.

3. Central Finance Corporation, directors: B. E. Henderson, F. B. Hubachek, A. P. Reid, D. D. Macleod, and W. H. Despard. Incorporated June 11, 1928.

Personal Finance Corporation, provisional directors as at date of incorporation July 3, 1934 (not yet organized): Albert Burton Rose, Morris Jacob Weiss, and Sidney Druckman.

The Small Loan Company of Canada, provisional directors as at date of incorporation July 3, 1934 (not yet organized): R. J. Cutten, E. L. Chudleigh, A. D. H. Cutten, C. L. Dunbar, and A. C. Dunbar.

4. (a) Under the acts of incorporation of the companies: interest, 7 per cent per annum in advance; expense charge, 2 per cent of the amount of the loan; chattel mortgage fee, actual disbursements not exceeding $10. (b) Under the act, chapter 56 of the statutes of 1934, the foregoing charges must not exceed 2½ per cent per month of the monthly balance owing by the borrower.

5. The government has no power to cancel the acts of incorporation of companies restricting their charges to those mentioned in No. 4.

CARRIAGE OF SECOND AND THIRD CLASS MAIL

Mr. CHURCH:

1. What loss does the Post Office Department sustain per annum in carrying newspapers and other similar periodicals at a cut rate for this class of mail?

2. What is the difference between the actual cost to the department, per annum, and that received for transmitting second and third class mail accordingly?

Mr. ELLIOTT (Middlesex):

1. Second class matter:—

| | |
|---|---|
| Cost | $5,958,754 |
| Revenue | 1,680,500 |
| Loss | $4,278,254 |

2. (a) Second class matter: difference $4,278,254. (b) Third class matter: exact figures from year to year as to the revenue derived from third class matter not available. Postage stamps are used to prepay postage on third class as well as first class mail, and it is not economically practicable to separate the revenue derived from these two classes.

Note:—Postage on newspaper mailings is paid in cash and can be readily kept separate from postage on other classes of mail paid by postage stamps.

POST OFFICE RENTALS FOR PUBLIC BUILDINGS

Mr. CHURCH:

1. Does the Post Office Department pay rent for the use of public buildings under the Public Works Department, and are any fixed charges on the capital involved as a rent?

2. If not, what other departments besides the post office pay no rent for the use of federal property given them for federal services?

3. Will the government consider a new policy to have each department bear a share of the cost on a unit system for the use of federal public buildings for departmental work?

Mr. CARDIN:

1. (a) No; (b) no.

2. No department pays rent for use of federal property.

3. Matter will have consideration.

PAYMENTS UNDER MARKETING ACT

Mr. BOTHWELL:

1. How much has been paid to the Alberta Live Stock Marketing Board, or to anyone on its behalf, under the provisions of the Natural Products Marketing Act, 1934, and amendments thereto?

2. To whom and for what services were such payments made?

Mr. GARDINER:

1. $9,000.

2.

| | |
|---|---|
| Office Expenses— | |
| Calgary Water Power Co. Ltd.—light | $ 11 08 |
| W. R. Hall, Ltd.—office rent | 287 50 |
| Garbutt Business College—typewriter rent | 25 70 |
| Office Specialty Company—rent of furniture | 118 75 |
| Stenographers' wages | 814 75 |
| Postmaster, Calgary—post office lists | 17 50 |
| Toole, Peet & Co., Ltd.—bonding secretary | 5 00 |
| Hotel Palliser—rent of board room | 19 20 |
| Bank interest | 50 |
| A. C. MacKay—publications | 1 00 |
| Postage | 86 25 |
| Sundries | 22 05 |
| Stationery and Printing— | |
| The Willson Stationery Co., Ltd. | 127 26 |
| Albertan Publishing Co. | 7 98 |
| Office Specialty Manufacturing Co. | 2 32 |
| McLeod Letter Service | 7 30 |
| Examiner Press | 12 72 |
| Public stenographer—mimeographing | 3 00 |
| Organization Expenses— | |
| McLeod Letter Service—printing proposed schemes | 31 10 |
| Hotel Pallister—rent board room. | 12 70 |
| Al Azhar Temple—rent | 32 50 |
| John Kovsher—registering names. | 1 50 |
| Peter Kovsher—registering names. | 1 50 |
| George Grafton—registering names | 1 50 |
| E. H. Morgan—registering names. | 2 50 |
| Fred Johnston—registering names. | 2 50 |
| E. S. Brunsden—secretary office expenses | 44 56 |
| A. Speakman—expenses Calgary | 11 00 |
| Telephone and Telegraphs— | |
| Alberta Government Telephones. | 243 37 |
| C.P.R. Telegraphs | 107 60 |
| C.N.R. Telegraphs | 57 14 |
| Expenses of Delegates to Ottawa— | |
| A. Speakman—part share | 79 86 |
| W. C. McKenzie—two trips, December, 1934 and March, 1935 | 600 77 |
| R. P. Gilchrist—two trips, December, 1934 and March, 1935 | 633 83 |
| E. W. Brunsden | 296 40 |
| G. H. Rose | 234 35 |
| A. Speakman—30,000 copies of speech on Natural Products Marketing Act, at cost from King's Printer, plus exchange on cheque | 100 15 |

[Mr. Bothwell.]

| | |
|---|---|
| Expenses of Provisional Local Board Attending Interprovincial and other Meetings— | |
| W. C. McKenzie | 471 47 |
| R. P. Gilchrist | 594 95 |
| T. R. Murray | 371 40 |
| L. McKinnon | 108 05 |
| E. W. Brunsden | 231 01 |
| Stephen Lunn | 262 72 |
| H. R. Boutillier | 323 99 |
| Alex Craig | 320 60 |
| E. Fulton Thomson | 170 10 |
| George C. Millar | 172 85 |
| George G. Ross | 303 40 |
| Charles H. McKinnon | 164 70 |
| Howard P. Wright | 180 15 |
| H. L. Taggart | 251 60 |
| Fred McDonald | 253 20 |
| C. R. Abbott | 437 40 |
| George R. Ball | 237 32 |
| J. M. Williams | 116 55 |
| Alberta provincial government—Department of Agriculture advanced for R.R. fares | 382 70 |
| Legal— | |
| G. H. Barr | 1,000 00 |

Note.—Above payments include $1,418.85 spent by the Provisional Alberta Live Stock Marketing Board in addition to the amount of the grants received from the Dominion Marketing Board.

WEIGHTS AND MEASURES ACT

Mr. JACOBS:

1. What was the number of prosecutions under the Weights and Measures Act (a) during the first three months of the calendar year 1935 and (b) during the first three months of the calendar year 1936?

2. What was the number of convictions (a) during the first three months of the calendar year 1935 and (b) during the three months of the calendar year 1936?

Mr. EULER:

1. (a) 44; (b) 143.

2. (a) 39*; (b) 111**.

*Four other cases were withdrawn or dismissed and one carried over.

**An additional fifteen cases for which information was laid in March, 1936 resulted in convictions in April. Sixteen cases are still pending and one case was dismissed.

ALLEGED COAL COMBINE

Mr. CHURCH:

1. What action has been taken regarding prosecution or giving effect to the 1936 findings of a royal commission into the alleged combine in the importation and distribution of coal in Canada?

2. What steps are being taken to protect the consumer from extortion and from these high prices in view of this report, during the next winter?

Mr. ROGERS:

1. Several coal companies were prosecuted and fined following investigation made under the Combines Investigation Act in 1933. No findings have been made by a royal commission in 1936 (but an inquiry into the anthracite coal trade will shortly be instituted).

2. See answer to No. 1.

DECISIONS ON SUPPREME COURT REFERENCES

Mr. CHURCH:

Has the government any information to give the house as to when decisions may be expected on the references to the Supreme Court of Canada on whether several acts of the session of 1935 referred to the court are intra vires?

Mr. LAPOINTE (Quebec East): The government is not in possession of any information as to when decisions may be expected.

## QUESTIONS PASSED AS ORDERS FOR RETURNS

VALCARTIER CAMP—PURCHASES OF CANNED GOODS

Mr. WERMENLINGER:

1. Since the change of government, has the Department of National Defence or the Department of Labour purchased canned goods for Valcartier camp?
2. If so, what quantities of each kind?
3. What were the prices?
4. Were tenders called?
5. If so, what are the names of the tenderers?
6. To whom were the contracts awarded and at what prices?

SOLDIER SETTLEMENT LOANS

Mr. FAIR:

1. What is the total amount of loans granted under the soldier settlement board?
2. What is the total amount of interest accrued on these loans?
3. What amount of principal has been repaid?
4. What amount of interest has been paid?
5. What amount of (a) principal, and (b) interest, are now in arrears?
6. What is the estimate of bad or doubtful accounts to date?
7. What is the cost of administration of the soldier settlement board to date?

Mr. CRERAR: Return tabled herewith.

## MOTIONS FOR PAPERS

A. POIRIER

Mr. BRASSET (for Mr. Gauthier):

For a copy of all correspondence, letters, telegrams and other documents in the possession of the Department of Public Works, relating to Mr. A. Poirier, carpenter, 5892 Hutchison street, Montreal, dated from October 1, 1935, to April 28, 1936.

D. BROWN

Mr. BRASSET (for Mr. Gauthier):

For a copy of all correspondence, letters, telegrams and other documents in the possession of the Department of Public Works, dated from October 1, 1935, to April 28, 1936, relating to Mr. D. Brown, stationary engineer, and the extension of time that was granted to him.

MAHONE BAY DREDGING

Mr. BROOKS:

For a copy of all correspondence and documents in connection with the cancellation of the contract of the Southern Salvage Company of Liverpool, with the Department of Public Works, for the dredging at Mahone Bay during the year 1935.

GOVERNMENT DREDGES—MECHANICAL ENGINEERS

Mr. STEVENS:

For a list showing the names and places of residence of mechanical engineers on government dredges or barges operated by the Public Works department or Marine department, who have received half-pay during the winter months, of the past winter of 1935-36; such list to show the amount paid in each instance.

## BUSINESS OF THE HOUSE

STATEMENT OF PRIME MINISTER WITH RESPECT TO PROPOSED FURTHER LEGISLATION

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, the right hon. leader of the opposition (Mr. Bennett) has asked on one or two occasions if I would inform him and the house what legislation remains to be introduced.

Mr. BENNETT: He was about to do so again.

Mr. MACKENZIE KING: I thought so, it may be just as well to anticipate.

In addition to the bills and resolutions which appear under government orders and the budget resolutions which are to be found in the votes and proceedings of Friday last, there will be legislation based on the reports and recommendations of the several special committees—the committee on the Elections and Franchise Acts, the committee on pensions and returned soldier problems, the committee on the Canadian radio commission, the committee on the marketing of wheat and other grains, and possibly also of the committee on railways and shipping. How extensive this legislation may be it is of course, not possible to say until the committees themselves have reported.

The proposed additional legislation will include (a) bills respecting a national finance council, loan councils, based upon the amendment to the British North America Act, notice of which appears on the order paper in the name of the Minister of Justice; (b) amendments to the criminal code, including reference to section 98; (c) a bill respecting the national parks; (d) an amendment to the Customs Act; there may also be amendments to the Combines Act, the Post Office Act, the Relief Act, the Proprietary or Patent Medicines Act, the Dry Docks Subsidies Act, the Carriage of Goods By Water Act, and a bill respecting marketing. These will be for the most part minor amendments. Then possibly there may be supplementary estimates of limited amounts.

I wish to add this further reservation. I am giving to the house at the moment all that the government see as a possibility, but I should like to have the right reserved to introduce one or two other measures should this be found necessary between now and the time that parliament prorogues.

## HUDSON BAY ROUTE

### MODIFICATION OF RATES AND CONDITIONS GOVERNING INSURANCE ON SHIPS

On the orders of the day:

Hon. C. D. HOWE (Minister of Railways and Canals): Mr. Speaker, I wish to make a statement on the matter of insurance rates in and out of Churchill on Hudson bay. Representations have been made from time to time for a reduction in the rates of insurance on vessels plying to and from that port. We have now received advice that changes in the regulations have been made which have the effect of lengthening by eight days the period of navigation during which the minimum rate applies, and of bringing about a reduction of about twenty-five per cent in prevailing rates of insurance on ships. Perhaps I had better read the dispatch:

A cabled dispatch from the High Commissioner for Canada in Great Britain, dated at London, May 1, 1936, advises that, as a result of discussions between the Imperial Shipping Committee and the Joint Hull Committee, the rates and conditions governing insurance of hull and machinery of ships on the Hudson bay route will be modified for the coming season as follows:

(a) Opening date of season to be altered from August 10, to August 5, subject to provision that no vessel to pass cape Chidley between August 5, and August 10, until advised by patrol ship N. B. McLean that it is safe to do so.

(b) Closing date without surcharge extended from October 7, to October 10, but surcharge maintained between October 11, and October 15.

[Mr. Mackenzie King.]

(c) Rates of additional premiums for suspending warranty to be same as in 1935, except that percentage on insured total loss value of £1.2.6 for vessels equipped with gyro compasses is reduced to 17s. 6d.

To show the effect of that I have had my departmental officers work out the insurance on a ship of five thousand tons gross, valued at £50,000, insured against all risks, and equipped with a gyro compass. That boat would have paid insurance as follows: in 1932-33, £1,500; in 1934, £1,250; in 1935, £937. For the season of 1936 the rate will be £625. If not equipped with a gyro compass the same ship would have paid: in 1932-33, £1,750; in 1934, £1,500; in 1935, £1,125. For the season of 1936 the rate will be £843.15.

## COPYRIGHT AGREEMENT

On the orders of the day:

Hon. C. H. CAHAN (St. Lawrence-St. George): I would ask the Prime Minister (Mr. Mackenzie King) if he will be so kind as to lay on the table of the house a copy of an agreement with respect to copyright which, to the best of my memory, was made between Canada and the United States in or about December, 1923. I think it may become important in the discussion of the copyright bill. I have looked carefully and I cannot find that it is published in the statutes or elsewhere, but I am quite clear in my mind that such an agreement was made.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, my hon. friend has a good memory and I assure him that if he is right as to the date I will do my utmost to get the agreement and have it tabled.

## BUSINESS OF THE HOUSE

### INTERIM SUPPLY

Hon. CHARLES A. DUNNING (Minister of Finance): Mr. Speaker, I would ask the permission of the house to proceed with a bill for interim supply with respect to the supplementary estimates which are now before the house. The bill provides for one-sixth of all the items in the special supplementary estimates, and an additional proportion, not exceeding one-half, of certain items. All of these calling for an additional amount are to cover payments falling due before the first of June on contracts which were made prior to April 1 or for payment of wages if the work was undertaken by day labour. There are a few exceptions to that statement to which I must refer.

Relief for single, homeless men. The amount in the estimates covers the operation for three months only. Topographical and air surveys: A larger proportion is required in this case to equip and send out field parties as soon as possible. Of course provision is needed with respect to the general vote for grants in aid to the provinces to keep up with the monthly necessities in that regard. Another exception is with regard to the continuance of unemployment relief projects now organized which were covered by the special supplementaries for three months and which require to be spent regularly every month, and also to continue geological surveys.

If the house will be good enough to give unanimous consent, I should like to proceed. If that is impossible, this can stand as a notice of motion for to-morrow, but it would be more convenient to proceed with it to-day.

Right Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, the Minister of Finance (Mr. Dunning) spoke to me with reference to this matter before the house met and I intimated to him that so far as we were concerned there was no reason why he should not proceed at once. On the other hand, I should like to point out that by giving our consent to these appropriations we reserve our rights as though we had not given it, so far as the items are concerned.

Mr. DUNNING: Quite.

Mr. BENNETT: It also raises a question of some seriousness, to which I directed attention the other day. We are giving our approval to the passing for the second time by this parliament of estimates dealing with items contained in the supplementary estimates as well as in the Public Works Construction Act, 1934, and the supplementary act of 1935. In this regard I would direct the attention of the minister to the fact that the statute requires that the Minister of Finance should file within thirty days of the opening of the house a report showing what expenditures have been made under the appropriations of 1934-35. I do not know for certain, but my memory is that such a report has not yet been filed. In the multiplicity of duties that fall upon the minister, I can quite understand why that has not been done. Subject to our right to discuss the items as though this consent were not given and without prejudice to our position with respect to the other point I mentioned the other evening and speaking only for those with whom I am associated, I see no reason why the minister should not proceed at once with his interim supply bill.

Mr. DUNNING: I wish to thank my right hon. friend and to say by way of explanation that from the accounting point of view the expenditures which are now made and have been made under the authority of the Public Works Construction Act are being transferred to these appropriations as fast as possible. Naturally when that is completed and the authority for these estimates has been given by the house, it will be possible to repeal entirely the Public Works Construction Act. This is just a transition procedure but it does produce the situation to which my right hon. friend referred. In dealing with these estimates we are dealing with amounts which have been authorized by parliament in a different way and in a different form but which are now to be authorized by direct appropriations, following which measures will have to be taken to repeal the former authority. I can assure the house that there certainly will not be double expenditures by virtue of proceeding in this manner.

## INTERIM SUPPLY BILL

Hon. CHARLES A. DUNNING (Minister of Finance) moved:

That Mr. Speaker do now leave the chair for the house to resolve itself into committee of supply.

Motion agreed to and the house went into committee, Mr. Sanderson in the chair.

1. Resolved, that a sum not exceeding $21,860,190.57, being one-sixth of the amount of each of the several items to be voted, as set forth in the special estimates for the fiscal year ending 31st March, 1937, laid before the House of Commons at the present session of parliament, be granted to His Majesty, on account, for the fiscal year ending 31st March, 1937.

Resolution agreed to.

2. Resolved, that a sum not exceeding $2,418,809.33, being one-twelfth of the amount of each of the several following items to be voted, as set forth in the special supplementary estimates for the fiscal year ending 31st March, 1937, laid before the House of Commons at the present session of parliament, be granted to His Majesty, on account, for the fiscal year ending 31st March, 1937, namely:—

Vote No. 326, Interior.
Vote No. 337, Labour.
Vote No. 342, Mines.
Vote No. 344 (1st and 13th items), National Defence.
Vote No. 379 (5th item), Public Works.
Vote No. 380 (9th item), Public Works.
Vote No. 382, Public Works.
Vote No. 383 (3rd item), Public Works.

Mr. BENNETT: The effect of making an appropriation against the fiscal year ending March, 1937, is to repeat a picture that might

not be in accordance with what was intended by parliament when the Public Works Construction Act was passed. When we were considering the supplementary estimates we were told that they were the same amounts as had been contained in the Public Works Construction Act, that some of them had been expended and that the balance would be available for finishing the work, although not necessarily this year. Many of the works could not be finished this year. The result of this procedure is that the fiscal year 1937 will be charged for the whole sum, notwithstanding the fact that $30,000,000 was authorized previously, not by a blank cheque but by item after item passed through this committee. Every separate item was the subject matter of a separate discussion. I think it is a very dangerous precedent for an incoming government to repeal an act under which appropriations were made in detail and under which expenditures were made. However, that matter can be discussed later.

Mr. DUNNING: I shall not enter into a debate with my right hon. friend as to provisions for future years. I may tell him that the plan of the special supplementary estimates, to which my colleagues were requested to adhere, was to make provision for such portions as would be spent during this fiscal year.

Mr. BENNETT: In many instances the whole sum has been appropriated.

Mr. DUNNING: In cases where it is expected to finish the work this year, so I am advised. I may tell my right hon. friend that I shall be very pleased if the aggregate stated to be required is not required. From the point of view of a minister of finance that will be an advantage rather than otherwise.

Resolution agreed to.

3. Resolved, that a sum not exceeding $315,683.33, being one-sixth of the amount of each of the several following items to be voted, as set forth in the special supplementary estimates for the fiscal year ending 31st March, 1937, laid before the House of Commons at the present session of parliament, be granted to His Majesty, on account, for the fiscal year ending the 31st March, 1937, namely:—

Vote No. 379 (6th item), Public Works.
Vote No. 380 (10th, 15th and 17th items), Public Works.
Vote No. 418, Railways and Canals.

Resolution agreed to.

4. Resolved, that a sum not exceeding $28,868.33, being one-third of the amount of each of the several following items to be voted, as set forth in the special supplementary estimates for the fiscal year ending 31st March, 1937, laid before the House of Commons at the present session of parliament, be granted to His Majesty, on account, for the fiscal year ending 31st March, 1937, namely:—

Vote No. 344 (7th item), National Defence.
Vote No. 345 (2nd item), National Defence.

Resolution agreed to.

5. Resolved, that a sum not exceeding $4,801,637.44, being one-half of the amount of each of the several following items to be voted, as set forth in the special supplementary estimates for the fiscal year ending 31st March, 1937, laid before the House of Commons at the present session of parliament, be granted to His Majesty, on account, for the fiscal year ending 31st March, 1937, namely:—

Vote No. 316, Indian Affairs.
Vote No. 320 (10th item), Interior.
Vote No. 344 (6th, 8th, 9th, 10th, 11th and 12th items), National Defence.
Vote Nos. 346, 348, 354 and 356, National Defence.
Vote No. 371 (7th item), National Harbours Board.
Vote No. 377 (1st and 3rd items), Public Works.
Vote No. 378 (3rd item), Public Works.
Vote No. 379 (1st, 8th and 9th items), Public Works.
Vote No. 380 (2nd, 4th, 5th, 6th, 7th, 11th, 13th, 18th, 19th, 20th, 21st, 22nd, and 23rd items), Public Works.
Vote No. 381, Public Works.
Vote No. 383 (1st, 2nd and 4th items), Public Works.
Vote No. 384 (items: 1 to 4, 6 to 9, 11, 15 to 20, 22, 23, 25, 26, 28, 29, 33 to 38, inclusive), Public Works.
Vote No. 385 (1st, 2nd, 3rd, 6th and 7th items), Public Works.
Vote No. 386 (3rd and 4th items), Public Works.
Vote No. 387 (items: 1, 3, 4, 9, 12, 13, 26, 28, 31), Public Works.
Vote No. 388 (items: 2, 4, 5, 6, 7, 10, 11 and 14), Public Works.
Vote No. 389 (the first three items), Public Works.
Vote No. 390 (2nd item), Public Works.
Vote No. 391 (1st item), Public Works.
Vote No. 393 (items: 1, 2, 3, 5, 6, 7, 8, 12, 13, 14, 18, 19), Public Works.
Vote No. 428, Loans and Investments.

Resolution agreed to.

Resolutions reported, read the second time and concurred in.

## WAYS AND MEANS

### INTERIM SUPPLY

The house in committee of ways and means, Mr. Sanderson in the chair.

Hon. CHARLES A. DUNNING (Minister of Finance) moved:

Resolved, that towards making good the supply granted to His Majesty on account of certain expenses of the public service for the fiscal year ending March 31, 1937, the sum of $29,425,189 be granted out of the consolidated revenue fund of Canada.

Motion agreed to.

Resolution reported, read the second time and concurred in. Mr. Dunning thereupon moved for leave to introduce Bill No. 58, for granting to His Majesty certain sums of money for the public service for the financial year ending March 31, 1937.

Motion agreed to, bill read the first and second times, considered in committee, reported, read the third time and passed.

## SUPPLY

The house in committee of supply, Mr. Sanderson in the chair.

### DEPARTMENT OF LABOUR

Other projects—amount required for new works to be undertaken in cooperation with the provinces, $9,200,000.

Mr. MacNICOL: Would the minister give a list of the projects by provinces?

Hon. NORMAN McL. ROGERS (Minister of Labour): I believe I pointed out previously that it was quite impossible to give a list of the projects to be undertaken under this vote. The reason lies in the fact that these projects are to be undertaken cooperatively with the provinces, and it is therefore necessary that we should negotiate with the provinces an agreement covering the work to be undertaken. Particular works to be covered by this vote will appear as a schedule to the agreement.

Mr. MacNICOL: Are these amounts to cover expenditures made by the previous government?

Mr. ROGERS: No, these are new works to be undertaken in conjunction with the provinces.

Sir GEORGE PERLEY: How did the minister arrive at the amount?

Mr. ROGERS: It was difficult to arrive at an amount which would suffice for this purpose. Obviously it was impossible to provide public works in cooperation with the provinces sufficient to meet their respective employment requirements. We looked back over what had been done in recent years and tried to strike, on the basis of what we felt was fair and reasonable in the circumstances, an estimate of what would be an adequate amount for such works during the forthcoming year.

Sir GEORGE PERLEY: Does the minister mean that he took the figures of the last few years and averaged them and decided on the amount on that basis?

Mr. ROGERS: This question was raised when the matter was before the house some days ago, and I suggested that this did appear to be at least one method of approaching a sum which might meet the situation during the forthcoming year. Obviously it would be very difficult to get an exact estimate of what would be required or of what would be a reasonable amount to meet all the requirements of the coming fiscal year.

Sir GEORGE PERLEY: In other words, Mr. Chairman, I judge from what the minister says that he is putting in this blanket sum without having any particular idea of how much he will require. We come again to the same thing we discussed last sitting in connection with another item, that this is a sum which is more than he expects to require, but he has put in sufficient to cover all possibilities; in other words, he has put in as large an amount for this purpose as the previous government spent for these same objects under the so-called blank cheque. It amounts to this, that this is another way of avoiding what has been styled a blank cheque, at the same time keeping it entirely within the hands of the government as to how much they will spend for these purposes.

Mr. ROGERS: I think there is this material difference between the two methods. Under the blank cheque legislation it might have been quite true that a sum of approximately ten million dollars was assigned during each succeeding year or upon an average during the last five years, but, as my right hon. friend understands, that was only a fraction of the total amount expended under the relief acts. Here we are restricting ourselves to a definite amount for public works to be undertaken in conjunction with the provinces, and elsewhere throughout these supplementary estimates we are setting definite amounts against specified items. My right hon. friend may object that the items are not sufficiently precise, but as I suggested some days ago, it is surely a misuse of language to say that this is a blank cheque in the sense in which that expression has been used during the last few years.

Sir GEORGE PERLEY: I think in fact this may have very much worse results than the blank cheque. The previous government under the authority given them spent somethink like this amount on an average—

Mr. ROGERS: Just on these works.

Sir GEORGE PERLEY: On these works. My opinion is that the minister is in a worse position with a fixed amount for these purposes than he would be under the legislation passed by the previous government. The reason I say that is that my experience taught me that when an amount is put in the

estimates for a particular thing, pressure is more effectively brought on the government to spend every dollar of that amount than it is under the so-called blank cheque legislation. If the minister will consult some of his colleagues I think he will find that when an estimate of $50,000 is put in for one department, the pressure is very great on the minister in charge of that department to spend the whole $50,000. Possibly when the estimate is made they think perhaps $30,000 or $35,000 may be sufficient, but they find it very difficult to keep the expenditure below the amount fixed in the estimate. The minister will find it almost impossible to resist the pressure to spend every dollar of this money. So long as there is any part of the estimate left how can he refuse an application from the provinces, and particularly from his friends in the different parts of Canada, to go on and spend money until it is all gone? In 1930 the previous government obtained from parliament a specific vote, I think it was $20,000,000, and I assure you that we found it easier under the legislation of the subsequent years, which has been called the blank cheque legislation, to resist applications for money for various purposes under the relief act than we did in 1930 when we had a specific sum appropriated for that purpose.

I do not propose to discuss the matter any further. I have already explained my view to the minister, and I know it was discussed the other evening when I was not present. I do not want to traverse the same ground over and over, but I do feel that the present government are not putting themselves in any better position to resist unreasonable demands by this form of estimate than we were in under our legislation for the last four years.

Mr. MacINNIS: Will a statement of the items be brought down before parliament prorogues?

Mr. ROGERS: To the extent that agreements with the provinces are completed before parliament prorogues, we shall, I think, be in a position to place the agreements before the house. In the relief bill as originally drafted there was a specific provision for the approval of the agreements by resolution of the House of Commons, but exception was taken to the inclusion of that clause in the relief bill and it was deleted.

Mr. MacINNIS: If no agreements are reached with the provinces then we shall not know any more about these items than we know now. That is one objection we have; we do not know that anything is to be done; we do not know whether this amount will be spent. In regard to the blank cheque feature, for which the previous government were so much criticized, I always felt that the reason the blank cheque was asked for at the time was not to give the government unlimited scope but in order that they might restrict their expenditure. If we do not have the general items specified, is there any reason why this government should spend even the amount of the estimate? They may say that they did not come to agreements, and then nothing will be done. Again, we find the minister stating that the figures they have in the estimate now are arrived at from what the previous government did. Their criticism of the previous government was that it was not doing enough, was not dealing with the unemployment problem in a proper way. I have before me a newspaper report of one of the radio talks by the present Prime Minister during the general election, and one statement is, that "Bennett started too late to solve problem." If the present government are going to follow along the same line as the past government, what difference is the change of government going to make to the country?

I should like the minister to feel that we are not criticizing him just for the sake of criticism or in order to hear ourselves talk. He was rather annoyed on Thursday evening when there was some criticism from this corner of the house, but I should like him to feel that in no part of the house is he thought of more kindly than he is in this section. Not only in the house itself but in our group outside the house that is true. I have before me one of the papers that supports our movement, and in the notes from Saskatchewan I find this paragraph:

> The Rosetown-Biggar M.P. had a few nice words to say of the Minister of Labour, Hon. Norman Rogers. The minister, said Mr. Coldwell, was a man of vision and great ability, but was finding it very difficult to accomplish anything under the present order.

I also believe the minister has great ability, and it is because I want to continue in that belief that I suggest he try to get something done. On Thursday evening, looking at this section, he made this statement, as reported at page 2355 of Hansard:

> I have no objection whatever to marching forward but I want to know where I am going. I want to know whether my next step is to be on firm ground or in quicksand, and I am not so sure that some hon. members are so anxious as to the direction in which they are going.

It is because we are anxious as to the direction in which we are going that we are criticizing. We are drifting; the minister cannot say where the next step is going to

be. No government can say where we are going so long as they leave the economic life of the country in the control of private individuals who exploit it for their own gain. It is to that we object. There is no reason why the government could not have a more specific program to place before parliament than that now before us. There has been plenty of time to produce it, although I have no doubt there are many things to do. Until we have some indication that something specific and ordered is going to be done we shall have occasion to complain, and I am afraid that under such circumstances the unemployed are not going to fare any better than they have fared in the past six years.

Mr. HEAPS: I think the minister might give a little more information than we have had up to now. This item and others connected with it represent a program of works which the government offer for the alleviation of unemployment. Speaking in this chamber on Thursday evening last the Minister of Labour said the government were undertaking an expenditure of about $80,000,000 on a program for the relief of the unemployed. Is that statement correct?

Mr. ROGERS: I believe that covered all expenditures in the various departments of government mentioned in the special supplementary estimates.

Mr. HEAPS: That is correct. I should like to have some break-down of these items, to know exactly what is being spent, not so much on public relief as on works to be undertaken to provide employment. In the expenditure of $80,000,000 works must be included which were started last year and are being completed this year. In it will be an amount the federal government will be giving to the provinces for relief purposes. At page 18 of the special supplementary estimates is found a summary, in which it is indicated that $30,418,341.66 is credited to projects already undertaken, and $28,430,401.76 to other projects. It is difficult for me, and I suppose for other hon. members, to ascertain how much of the first item remains to be spent in the present year. We may get an idea from the second item as to how much will be spent. I do feel that the minister is or ought to be in a position to inform the committee as to the amount of new works to be undertaken for the remainder of this year, and also the number of men the government expects will be able to find work as a result of expenditures undertaken in the supplementary estimates. I do not know whether the minister is in a position to give the committee that information, but if he is I certainly should like to have it.

Mr. ROGERS: I regret that I am not in a position to give greater detail respecting expenditures than is set forth in the special supplementary estimates. The sum of $80,000,000, in round figures, to which I referred some days ago, was the sum which the hon. member has just described as being made up of sums set aside for projects already undertaken but incompleted, and for other projects. Naturally I am under obligation in the supplementary estimates to deal with such items as come under the Department of Labour, but other ministers will deal with the estimates affecting their respective departments. That has been the procedure followed thus far, and it would be presumptuous on my part, for example, to deal with particular expenditures of the Department of Public Works, the Department of Marine or the Department of National Defence, except in so far as there may be some established connection between any of those departments and the Department of Labour. Relief camps would furnish an example of the kind I have indicated.

The item before the committee is that which deals with the amount to be voted for works to be carried on in cooperation with the provinces. With no desire to withhold any information I must say we are not in a position to place details of these expenditures before the committee, owing to the fact that as yet we have not been authorized to negotiate agreements with the provinces for the construction of these joint works.

On former occasions we have emphasized that we were going to see that the dominion contribution to relief works so far as possible should be directed towards developmental activities. In other words we should have constantly in view some collateral employment or ultimate employment which might result through, let us say, the development of a mining area to which more satisfactory access has been afforded.

I regret to say I am not in a position to tell my hon. friend the amount of employment to be provided by these expenditures. I wish I had that information. I am bound to tell him and the committee that on the whole the results of employment under these relief works expenditures have been disappointing, in so far as their effect on relief rolls is concerned. I think we ought to understand that clearly, in order that we may not expect too great results from expenditures on relief works. I have no doubt the hon. member will have had information indicating the effect upon unemployment of large expenditures upon relief works in his own city of Winnipeg. I believe he will agree with me that the results of large expenditures on such works have been dis-

appointing, from the point of view of affording employment. All I can say is that we are giving very careful consideration to the feasibility of introducing into our agreements with the provinces clauses which will ensure that these relief works will have their due effect upon relief rolls. After all, we are approving the expenditures for that purpose, and I believe we are under obligation to see to it that in so far as the situation can be met in advance by means of explicit undertakings, we must arrange that these relief works shall provide at least a substantial quota of employment for those now in receipt of relief.

Mr. HEAPS: I am pleased to have received an answer from the minister. I expected something along the same lines. My reason for putting the question in a certain way was to ascertain what works were to be undertaken. When I put my question I had in mind the fact that during the past two years, when equivalent amounts were spent by previous governments to take care of unemployment in Canada, such expenditures provided for only a small fraction of the men who were out of work. I have in mind the Winnipeg situation. In that city two public buildings were erected. In addition a sewage scheme was undertaken, through cooperation of federal, provincial and municipal bodies. The expenditure of about $1,500,000 in the federal project did not touch the fringe of the problem. It is true that we have a couple of new buildings. They are ornate and possibly a first-class addition to the city of Winnipeg, but despite this great expenditure of money we have reverted to the situation which existed prior to the erection of the buildings. If this government is going to spend an average of the amounts spent by the previous government in the last five years, as the minister himself admitted, we will not bring about anything in the way of improvement in the unemployment situation. That is why many of us have suggested that the government adopt a broader and more fundamental policy in dealing with this problem. When this government took office it believed that what the previous government had done was totally inadequate, and hon. members in this part of the chamber were in complete agreement with that view.

Mr. ROGERS: Will the hon. member permit a question? A few nights ago did he not acknowledge that the provisions of public works was in itself no solution for the problem of unemployment? Certainly I understood him to say that he did not favour large expenditures on public works.

Mr. HEAPS: No; I said that public works are not a solution for the unemployment problem, and by that statement I stand. They are not a solution. They are a palliative, and sometimes not even that. In many instances they tend to aggravate the situation because many public works which are undertaken become a burden to those who have control over them. I have in mind, for instance, the erection of barracks which are not needed. Some years ago in Winnipeg as a relief project a huge barracks was erected on the outskirts of the city at a cost of hundreds of thousands of dollars. I do not think a hundred people use it to-day. It is a huge building on the outskirts of the city, and although it cost a great deal it is of very little practical value, and is used by very few people. There are many such projects. I know public buildings that have been erected that are not in use to-day, such as a certain post office I have in mind. The Post Office Department did not know anything about it; that is the information I have received. These buildings were put up and there they are to-day, almost unoccupied except for the caretaker. Projects of that kind cannot possibly help to solve the unemployment problem, and that is what I mean when I say that public works in themselves are no solution of the unemployment problem. They may give temporary help to men who have been out of work, and there is one thing we should bear in mind when dealing with people who have been out of work for months and months, some of them year in and year out: that there is nothing more demoralizing to the individual than that he should become continuously in receipt of relief. That is why it is desirable to have work made available as soon as possible, particularly for those who have been recipients of public relief for a number of years. Nine million dollars is totally inadequate for that purpose, because it can take care of only a very small fraction of the number of people who have been out of work in our large industrial areas in the past few years. The two projects in Winnipeg that I have named, the barracks and the post office building, did not take care of five or at the most ten per cent of the building trades mechanics who were out of work in the city, men who had been out of work for years and with very little hope of obtaining employment.

I would much rather see this amount of money spent on a class of work which will not only give useful employment but provide the community with something which is much needed and has been needed in this country for a number of years. I refer to a large scale federal housing scheme. I would

rather see this amount and all these estimates used on a project of that kind than for the erection of barracks and other buildings which have very little community value. The expenditure of twenty or thirty million dollars on a housing scheme in this dominion would give far more work than would be provided by certain types of public buildings that are to be erected under these estimates. Not only would it provide something that is immediately needed, but it would be a self-liquidating project, whereas the buildings to be erected under this vote are not. The people of this country need homes. It is one of the few things in the construction line that is needed, and that is why I am disappointed in the attitude of the government. I would much rather see them spend far more than the amount of all these estimates upon a comprehensive housing scheme for the dominion somewhat along the lines that have been followed in England and many other countries. That would set the wheels of industry turning again much faster than will the projects to be undertaken under these estimates. In Great Britain they have been building houses for the last fifteen years, and still they are not through building. In this country, from reports I have received, there is an acute shortage of houses in many of the larger industrial centres, and that acute shortage is having two effects. It is making the poor people double up in homes; it is resulting in an increase of rents. When people are unable to pay these rents it leads to overcrowding and to the many other problems that go with overcrowding. Public buildings do not provide even a partial solution of the unemployment problem, and that is why I urge the government so strongly to try new remedies which would be of more value under present economic conditions.

Mr. CAMERON (Cape Breton): While I appreciate the impossibility of the minister specifying the exact projects to be undertaken, I would ask on what basis will agreements be made with the provinces. Will the cost be on a fifty-fifty basis?

Mr. ROGERS: The practice has varied somewhat in past years as to the distribution of the financial responsibility. For works undertaken jointly by the dominion and the province the division of cost has usually been on a fifty-fifty basis, but in some cases the dominion has contributed forty per cent and the province sixty per cent. Where projects have been undertaken to which the municipality within the province has contributed, the dominion contribution has been proportionately less. All I can say at the moment is that in working out these agreements with the provinces, where the proposed expenditures relate to highways, we shall be governed by what has been the well established practice under which the dominion contribution to a provincial highway shall not be in excess of fifty per cent of the total cost.

Mr. CAMERON (Cape Breton): My real object in asking the question was that I had information that similar projects carried out in different provinces received a different percentage of contribution from the federal government, one province receiving a greater percentage than another. Speaking for the province from which I come, I want to guard against any unfairness in that regard.

Mr. ROGERS: In dealing with the provinces we shall seek to avoid any reasonable ground for complaint in that regard.

Mr. CAMERON (Cape Breton): Roughly speaking, the result will be, assuming that the expenditure is on a fifty-fifty basis or thereabouts, that this item will represent an expenditure of $18,000,000, provided the whole amount is spent.

Mr. ROGERS: Exactly.

Mr. TAYLOR (Nanaimo): In the development of these expenditure schemes does the minister anticipate that in each case the initiative will be undertaken by the province?

Mr. ROGERS: Yes.

Mr. TAYLOR (Nanaimo): Then following up what the hon. member for Winnipeg North (Mr. Heaps) has said, I suggest that something be done to guarantee the interest on housing schemes undertaken by municipalities and co-operatively. If the capital is found for the purpose and the government is prepared to guarantee the interest, it seems to me that the revolving nature of the loan would enable these cooperatives to borrow at a very much lower rate than they can now when they have to pay both interest and capital. I think interest is the most distressing part of any business undertaking and sooner or later we will have to get away from it entirely and follow the teachings of Ruskin.

Mr. MacNICOL: Mr. Chairman, I saw a May day parade in Toronto last Friday and if the minister had been there I am sure he would have been impressed with the magnitude of the task in front of him in providing employment for the unemployed of Canada. I do not wish to minimize the task he has before him; it really is colossal. In fact, I saw three different parades in Toronto, and if they are an indication of what this country is up against, this $9,000,000 is going to be

a mere bagatelle in taking care of the people. As far as I can figure it out, this expenditure of $9,200,000, plus the expenditures by the provinces—I understand the provinces are to spend an equal amount?

Mr. ROGERS: Probably an equal amount; it is on a fifty-fifty basis.

Mr. MacNICOL: That will make a total of $18,400,000. That should give direct employment to approximately 9,000 persons and indirect employment to an approximately equal number. This makes a total of about 18,000 to whom employment may be given, provided that materials do not use up too much of the vote. I quite agree that this is a substantial contribution, but it is nothing like what should be done to reduce the ranks of the unemployed.

I was just wondering where the provinces are going to get the money. Ontario, Quebec and some of the other provinces may be able to obtain money on their bonds, but what about the provinces of which we have been hearing during this session? The hon. member for Vancouver-Burrard (Mr. McGeer) has said that the province of British Columbia may be bankrupt, but that does not fit in with the statement in the paper this morning that that province is going to pay the interest on its bonds as well as the bonds which are due very shortly. The province of Alberta would appear to be bankrupt, and Saskatchewan does not seem to be very far behind. If the dominion must put up $9,000,000, plus another $9,000,000 in loans to the provinces, it is going to make it rather difficult for this government to carry on.

I want to support the minister in every possible way. I come from an industrial city with, including suburbs, about 800,000 inhabitants in which very many men and women have been unemployed for years. I wish the minister would come out boldly and announce some great big measures to provide more work. It seems to me that we are more or less playing with this problem. Ottawa is so far from the cushion, to use ordinary language, that it cannot get an accurate impression of conditions outside. After I am here a week I go away with a smile similar to those seen around Ottawa, but when I get back home I lose that smile very rapidly. There I am right up against the cushion and I know what the conditions are. The minister would have the support of this country if he grappled with this question in the largest possible way. This is not a question of politics; it is not a question over which this house should quibble about spending a few million dollars. During the election it was said that this question would be grappled with in a big way, and I am sure the country will support any measure the minister thinks necessary to provide work for the people.

Men and women must be given work. They are willing to work but they cannot get it. I can remember when I was a lad there were two or three jobs for every boy who wanted one. To-day we have a great multitude of the finest young men and women in the world, young Canadians, who are anxious to work. They are healthy, and the majority of them are very well educated. It is necessary to have a matriculation certificate to get any kind of job to-day.

An hon. MEMBER: Even a pick and shovel job.

Mr. MacNICOL: Even a pick and shovel job, as someone suggests. I am sure these young people and their parents will support any measure which the minister or the government of which he is a member may suggest in order to provide employment. I appeal to the minister to go the whole way. Let us get on with something in this country. We have been fooling with this matter altogether too long. It will be said: Where is the money going to come from? I have said that sometimes, but if war broke out to-morrow and Canada had to take a part, this government would soon get all the money required.

Mr. ROGERS: And the next generation would pay for it.

Mr. MacNICOL: It will have to pay for it anyway.

Mr. ROGERS: Perhaps the hon. member was impressed with the amount stated the other day as being necessary for interest on outstanding debt. As I recall it, $136,000,000 was necessary to pay the interest on loans, most of which were incurred during the war years.

Mr. MacNICOL: I was not here when the budget speech was delivered, but I have since read it. In spite of what was said, my statement is not altered. If this country became involved in a war, which I hope it will not—I always contend that those who want war should be put in the front lines where they would be the first to suffer—the government would find the money. We are in a war, a colossal war against unemployment. Many people are suffering the pangs of war; they are suffering starvation and from depressed minds through inability to get work. This is particularly so of the young

folks. If war broke out to-morrow, the government would call them at once, so why not call them to work?

There is a great deal of necessary work to be done in this country. When the estimates of the minister in charge of lake levels and so forth were up the other day I stated that a tremendous amount of work was needed to be done in this country in that regard. Only yesterday I made a brief trip and I noticed that many of the rivers east of Toronto had overflowed their banks during the spring freshets. In the town of Port Hope alone over $100,000 worth of damage was done by the small river that flows through that municipality. Something ought to be done about it. The Ontario government does not seem to be big enough to grapple with it and it is up to this government in the last analysis to take steps to cope with this problem. The minister has a chance to live up to the reputation which the newspapers have given him and the nice things that have been said about him by members on all sides of the house. We all want to encourage him, for this is a time when any man who tries to do something should be encouraged. Anything I say is not by way of criticism because I want to help the minister if I can. I say this to him however: Grapple with the subject in a big way. It is not for me to tell him how to do it; he can devise ways and means himself, and the government is strong enough and I believe big enough to grapple with it. I say, get after this problem in a big way. The sum of $9,000,000 is a very small one if the government is going to deal with this tremendous problem.

Mr. ROGERS: That is one of the many items in the estimates.

Mr. MacNICOL: I know, but this is the item that has to do with new works in conjunction with the provinces. There is little leadership in the provinces; they are so overwhelmed with financial troubles that they are afraid to tackle anything big. I say therefore that this government should get in touch with the provinces and with those bodies throughout the country who are willing and anxious to suggest ways of providing real employment so that our idle men may be put to work. My hon. friend from Winnipeg referred to public buildings. That is one way, but personally I should like to see some works undertaken that would provide greater employment, and I should like to see more of the money voted paid out directly in wages. If we can save the country for another year or two I believe it would get on top again; but we must do everything we possibly can in the present trying period which we are passing through. I am not one of those who think that the depression is over. The parade in Toronto the other day —perhaps the same thing occurred in Montreal and Winnipeg—indicates clearly that there are still thousands out of work. The minister has behind him the best country in the world and the strongest government numerically this country ever had. He has only to ascertain what is to be done to be effective, and the house, irrespective of party, will support any measure whatever that has for its object the employment of Canadians.

Sir GEORGE PERLEY: What will be the function of the national employment commission in regard to this item?

Mr. ROGERS: This question was put in a somewhat different form when the bill creating that commission was before the house. If I remember rightly I said then that if the commission were in a position to assist us in indicating the direction in which money should be expended, we should be very glad indeed to have their advice, but that with regard to expenditures for this year we should have to make provision ourselves and profit by the experience not only of the late administration but also of those provincial governments that have had to deal with relief works during the depression period. I think it is quite obvious that with respect to these particular expenditures they will be devoted in the main to highways, as has been done in past years. That is to say, under this item the works will be carried out in conjunction with the provinces, and the national employment commission will not be particularly concerned.

Mr. LENNARD: I suggest that when the agreements are being entered into with the provinces consideration be given to spending a portion of the amount in the elimination of railway level crossings.

Mr. ROGERS: Under the Department of Railways there is a special vote in connection with level crossings.

Mr. NEEDHAM: I have listened for several days to a discussion of unemployment and have not said much, but there have been going through my mind certain ideas which I wish to place before the committee. It seems to me that the whole question is, how can we get our people back to work? Have we asked ourselves the question why there are so many unemployed in the coun-

try? What is the cause of this unemployment? If we could analyse the whole situation and find the cause we might decide on a remedy. It appears from the statement of the Minister of Finance that our hope of recovery lies in increased export markets. Is the loss of export markets the cause of unemployment? If so, why did we lose those markets? There is a reason. I think the committee will agree with me that the reason is that other countries began producing more of the goods which they needed and therefore there is not now the demand there used to be for imports from Canada. Not long ago I was reading a report from England which impressed me with the progress which the Minister of Agriculture there has made in the production of foodstuffs in England. There has been a vast increase. I was startled however to learn that during 1934, which showed very considerable progress as compared with 1933, there were 288,011 fewer people employed in agriculture in England than in the previous year. That report indicates that England at the present time can provide food for her own use for a considerable time—I forget how many days, but almost two hundred in the year. Compare that with production in 1913, when she could provide food for about thirty days only. That gives some idea of the progress that has been made there, and that with fewer people employed. I suggest that we should analyze the unemployment situation from that angle.

We have heard a good deal this session about the trade agreement with the United States and the great benefits that we shall derive from it. There may be more exports, but when there are more exports there must be more imports. We have found that already in the last returns. In the Easter recess I was out west where I talked to farmers who had fed cattle during the winter. They had stall-fed cattle and they told me that if instead of shipping them they had taken them out and shot them last fall they would be further ahead, for they did not receive the price of the feed. And since coming back I have heard the same story from several members. So that if a larger export market is to be the solution, things do not look very hopeful from that point of view.

I believe that the chief cause of unemployment in Canada is the advent of machinery, which has taken the place of workers. It is being done day by day in increasing measures all over the world, and if prosperity returns you will find machines coming in faster than ever they did in the past, with more employment as the result. The best brains in the world to-day are trying to create unemployment by the improving of existing machines and the creating of new ones, and here we are, trying to solve the problem. It follows that there would be no unemployment if there were no machines. You must recognize that if the machine is here to stay we have to grapple with its products, and the first product of the machine is unemployment.

Mr. ROGERS: Has my hon. friend ever looked into the history of the poor law in Great Britain before the industrial revolution?

Mr. REID: And the days of Caesar, when they had no machinery?

Mr. NEEDHAM: I am thinking of our own times. The hon. member who sat down a few moments ago referred to the time of his youth, and those of us who are threescore years old are in a position to compare the condition of youth then with its lot to-day. Forty years ago anyone who was honest and industrious could look forward to a measure of success. The youth of to-day has no such outlook.

How many members noticed in the press an account of the discharge by the Bank of England of one thousand of its clerks? The fact was reported in the Winnipeg paper two days before his late majesty King George gave his jubilee address. The bank laid off at one time a thousand clerks between the ages of twenty-six and thirty-four. The management had installed machines to take the place of those employees, and they said to them: We are laying you off, but we will give to each of you either ten thousand dollars or ten dollars a week as long as you live. Seven hundred of them took the ten thousand dollars; three hundred took the ten dollars a week for life. According to British insurance rates the life expectancy of those three hundred would be thirty-seven years, so at the rate of ten dollars a week the Bank of England will have to pay to them $5,500,000, and we know they will have to pay to the seven hundred $7,000,000. So they will pay in all $12,500,000 as retirement alowances because they have put in something to take the place of those men. It is a very generous offer, and indicates, I think, something that will have to be recognized by every country in the world, that if a machine takes the place of a worker, the machine must contribute in some way to his livelihood. That is something for the government to find ways and means of doing. The article went on to say that in the thirty-seven years that the

bank would pay out $12,500,000 it would make a gross saving in clerical wages of $55,000,000, the amount being based on what they would otherwise have to pay to their staff.

The purpose of putting in a machine anywhere must be to save money. If money is saved by laying off workers, surely the replacing agency has a responsibility to the state. If someone robs a man coming from his work he is put in prison, but if a man puts in a machine and prevents someone from getting wages, he is banqueted and called a success. Therefore I say that the first product of the machine is unemployment. Whether or not the government can solve it by putting a production levy or something of the kind on the product of machinery to take care of men deprived of work, there is some ground, surely, for investigation, because the government has to take the first product of the machine—unemployment—and care for it, while the man who has caused that unemployment through the use of the machine is allowed to make what he can. The effect is very serious. We have heard a lot about it already during the session. The first object of a discharge worker is to try to find another job. His chances are remote, and even though he is successful in securing another position it is almost always at a reduced wage. The effects of this wage cutting are also very serious.

Consider, too, the youth problem, which has already been referred to. The effect upon the health of the people has been tremendous. I have just put in six years as superintendent of a hospital, and I tell you that if you want to find some of the results of unemployment you will find them in our hospitals, including those which deal with mental patients. And what effect is unemployment having on crime? I think it will be admitted that the consequences in this direction are very grave. If we find the cause of unemployment we should be able to arrive at some form of cure. The member for North Winnipeg (Mr. Heaps), in a speech the other evening, urged that production and consumption should be brought into equation the one with the other. There is the only solution that I know of—the monetizing of the productive wealth of this country and its distribution to the people according to their need. I do not want to go any further into that at the present time, except to say that the government should find a way to do it. A solution is possible; there is no doubt about that. Our late King George said "Surely the people of this country can solve problems like this." It is no use drifting; it is no use going on with palliatives, which are only temporary; some solution must be found, but whether by way of the machine, as I have suggested, or otherwise, the government should get right after it.

Mr. STEWART: Consideration of this item brings to mind the total of the items specified for the Department of Labour, and also brings into view the aggregate amount provided for in these special supplementary estimates. In round figures the total amount assigned to the labour department is $19,500,000. Of that amount, nine million dollars odd, the item under consideration, which is a very substantial part of the whole, is to be expended in cooperation with the provinces. That brings me to the total of the estimates as shown on page 18, and we find that it is made up of three columns, "projects already undertaken," "other projects," and "total." The grand total of all these is $131,161,143.42. I wish to point out to the committee that included in that grand total are two items, one, an amount of about $29,000,000 which it has been pointed out has already been voted by this committee, so that as far as making provision for this year is concerned it may be disregarded. It is not new money, provided this year. Another item is the deficit of the Canadian National Railways, $39,000,000. Those two added together make about $69,000,000. That deficit of the Canadian National Railways has never before been considered as part of any scheme for the relief of unemployment. Therefore that $69,000,000 is to be taken off this total of $131,000,000. Then there is a further amount of $26,000,000, grants in aid of the provinces which may be for the relief of unemployment, but which in the past has been treated as a contribution for direct relief. With these sums subtracted the balance remaining is very small. The minister has said that he desires to be on firm ground, and that the amount provided in this item is based roughly upon an average of the expenditure of the last five years.

The minister wrote a biography of the Prime Minister, which I have read with a great deal of interest; it is an excellent work. In that book he pictures the right hon. gentleman as an expert in labour legislation and social questions, matters of this kind. His entry into the public service was as Deputy Minister of Labour, and the Minister of Labour tells during the many years which have intervened that the Prime Minister has given special study to these questions. The Minister of Labour himself has also given special study to social and economic questions. During these five years this problem has been with us, and has received critical study. Yet

the minister, desiring to be on firm ground, has nothing better to offer to this committee and this country than adopting for this item the average expenditure by his predecessors during the past five years, and if hon. members look back they will find that the expenditures follow along the same lines, farm placements and matters of much the same sort.

Mr. ROGERS: Has my hon. friend any other suggestions to offer?

Mr. STEWART: I am not offering any suggestions, but I say that what was done in the past must have been fairly sound; we must have been proceeding along pretty sane lines—

Mr. ROGERS: Some were; some were not.

Mr. STEWART: —otherwise the minister, desiring to be on firm ground, would not be adopting the same measures as those adopted by the previous government and basing his expenditures this year upon the average expended by that administration during the past five years. He is not breaking any new ground whatever. And instead of a contribution, as at first appearances this estimate would appear to indicate, of $131,000,000 for the relief of unemployment along these lines, the sum is very much smaller, in fact approximately the same as was expended last year. I find in the report of the commissioner under the unemployment relief act that in 1935 there was expended the sum of $41,829,000. If the items I have mentioned are deducted, it will be found that no greater amount is being provided this year. The minister is proceeding along practically the same line. That is a great vindication of the late government. Neither the Prime Minister, who has studied these questions for all these years, nor the Minister of Labour who has made a special study of them, has anything new to offer, any new contribution to make, but the minister is adopting holus-bolus the policies of his predecessors and making no substantial additional contribution. However, I do not want to oppose the passing of this estimate; I say it is sound, probably the best he can do this year.

Has any agreement been concluded with any of the provinces under which items such as this will be expended during this year?

Mr. ROGERS: I do not wish to deal at all with the general observations of my hon. friend. I may be permitted, however, to say this, without any complaint of unfairness, that this government in its general approach to the unemployment problem does not believe it can be dealt with immediately by any single solution that might be devised. We did not come into office with any undertaking that we would end unemployment by such and such a date, or within any fixed period. We made it perfectly clear that we were going to try to deal with the problem upon the basis of reaching long range solutions by careful study of the entire situation. As a result of such examination of the situation as I have been able to give during the past few months I am convinced that long range study is absolutely essential. But is it not reasonable that in the meantime we should take such measures as we can to consolidate the existing situation, having due regard to all that may be required to meet emergent conditions, which we trust will not occur, during the coming year? We are doing that. With reference to these particular expenditures, we are proceeding, not in a way which the late administration discovered for itself, but along paths which have been approved by the experience of, I might say, all countries confronted with the unemployment situation during the past five years. The late administration did not originate such policies as land settlement and resettlement, expenditures on highways, contributions to farm placement. There is little value in a controversy between this government and the late administration as to the credit for discovering this or that method for dealing with the unemployment situation, and I have tried to avoid a discussion on that basis. If my hon. friend wishes to discuss this whole problem on another plane I suppose I must meet him there, but I am not anxious to do so.

Mr. STEWART: I would think not.

Mr. ROGERS: But if I were required to do so I could, for example, take the blank cheque legislation, to which some references were made this afternoon, and I could suggest to him that under the present legislation it would not be possible in the course of six months to enter into with one province three separate agreements, one of which by order in council was dated October 22 of last year.

Mr. STEWART: What is to prevent the minister under this item from entering into more than one agreement with any one province during the coming year?

Mr. ROGERS: Because we are limited to a definite sum set down in the estimates, whereas under the relief legislation of last year there was absolutely no limit of any kind.

Mr. STEWART: Does the minister think that because he keeps within the total of a limited sum he is prevented from entering into more than one agreement with a province, throughout the year?

Mr. ROGERS: For the expenditure of money, yes.

Mr. STEWART: I do not understand so.

Mr. ROGERS: But under previous legislation, as the hon. member knows, the government might have reached an agreement with a province on July 10, as a result of pressure might have entered into another on September 20 and, as a result of further pressure, into another on October 22. That would not be possible under this legislation.

Mr. STEWART: Why not? Will the minister explain where in the statute or in any other provision there is anything to prevent him from making one, two or three agreements with a province? I think he ought to be able to do this, if conditions develop which render it desirable in order to accomplish the object he has in view.

Mr. ROGERS: I think the limitation lies clearly in the appropriation. The appropriation is to be allocated to the different provinces. When we have entered into an agreement with a certain province, such agreement will exhaust the amount of the appropriation available for that province. But under previous legislation the amount available for any province was never exhausted, because there was no limit whatsoever upon what might be paid under the terms of the relief legislation.

Mr. MacNEIL: I have taken little part in the discussion because I am not disposed to be critical simply for the sake of being critical. I have endeavoured to follow the statements of the minister to piece together the complete plan of the government with regard to unemployment relief, and to translate that plan into terms of immediate and actual benefit for those now suffering the miseries of unemployment. I have in mind a statement made by the minister on a previous occasion to the effect that past methods have failed, and that unemployment in Canada has now developed persistent characteristics. I am at a loss to discover, and I should like some assurance from him in what respect the plan he has outlined represents definite progress.

I am exceedingly anxious that the expenditure of large sums such as that now before the committee should represent more clearly than before an investment in employment rather than one in unemployment. For a moment I should like to consider not only the economic losses represented by unemployment, but the social losses, a phase of the situation which has not been given sufficient emphasis in our debates. The social loss is represented in the deterioration of the skill of our labour, the lowering of health standards and the general demoralization of our youth. Such losses demand immediate action and a definite mobilization of national resources.

I believe we should have some assurance from the minister that in the general policy now fully before the committee at least a substantial number of those now on relief in Canada will, before next winter, have an opportunity to secure that which they desire more than anything else, namely employment under proper working conditions and at a living wage. We should not be so reluctant to learn from the experience of other countries, and when I make that statement I have Sweden in mind. That nation has demonstrated its ability to maintain its living standards throughout the entire period of the depression. It has reduced unemployment to a point at which those unemployed represent less than one per cent of the population, and it has effected a revival of trade. I understand that part of its success is due to careful planning and coordination, and the central direction of expenditures such as those now under discussion. In the past the chief criticism of our policy has been lack of planning and lack of central direction and control.

The minister has suggested that there has been a lack of constructive criticism, and with that in mind may I remind him that on previous occasions we have suggested that the government should assume a more definite measure of responsibility in connection with the direction of expenditures of this type, having in mind the objective of a national plan. I have not yet discovered how these expenditures will be dealt with under the plan which, we hope, will be developed by the national employment commission. When I return to my constituency I shall have to meet the unemployed. Groups of them are organized at different points, and they will be anxious to know exactly what benefits will accrue to them and what opportunities they will be given to return to employment. I suggest that the minister should not complain if we ask of him a more definite assurance that in connection with the expenditures contemplated steps will be taken to work out a national plan to deal with a subject of

grave national importance, so that those now in distressed circumstances may receive promptly a measure of relief greater than that which has been given in the past.

Mr. FINN: I am going to speak frankly this afternoon, as did the Minister of Labour. As I read item 330—

Mr. ROGERS: We have passed 330.

The CHAIRMAN: We are considering item 335.

Mr. FINN: I stand corrected. I was not in the house for the first hour this afternoon, and I sought information from some hon. members sitting round me. It was on that information I proceeded to speak. What is the number, sir?

The CHAIRMAN: Item 335.

Mr. McIVOR: Carried.

Mr. FINN: Apparently the hon. member does not come from the maritime provinces.

The CHAIRMAN: Is the item carried?

Mr. FINN: No.

Mr. McIVOR: I do not come from the maritimes; I come from a place that does not like to ride a merry-go-round, and if this debate is going to go round and round and round I should like to see it stopped.

Mr. FINN: All I would say to the hon. member who makes reference to a merry-go-round is that if he comes from the west he must know that amounts voted in this house for the prairie provinces would enable nearly everybody out west to get on the merry-go-round every day while we in the maritime provinces would have to walk.

Mr. McIVOR: I would inform the hon. member that I do not come from the west, just now.

Mr. FINN: Well, he may not come from the west "just now," because he is here. The question is: Where did he come from? I do not know what constituency the hon. member represents.

Mr. DUNNING: From Ontario.

Mr. FINN: Well, that may be a little better, but I would have to take it into consideration. Under item 335 I would say—

An hon. MEMBER: Carried.

[Mr. MacNeil.]

Mr. FINN: "Carried" again, eh! Well, one thing they cannot do, they cannot carry me out. Mr. Chairman, would you mind having the assistant clerk read the item? I cannot find it.

The CHAIRMAN: It is item 335.

Mr. FINN: I have it under my thumb now.

Mr. STEWART: Do not let it get away.

Mr. FINN: There isn't a possible chance.

The CHAIRMAN: Will the hon. member be good enough to proceed with his observations.

Mr. FINN: I believe any member of the committee has a perfect right to discuss any item of these or other estimates, or to discuss any matter involving the government and the people of Canada. I do not propose by such utterances as "hear, hear," or "carried," or by any other articulate sound to be prevented from expressing my views concerning any matter. As was stated by the Prime Minister, our great party stands for democracy; democracy is liberty, and liberty is the right to speak. If I did not come here to speak I should have been tongue-tied, and under those circumstances I would not be here because I would not have been able to talk to my constituents.

Although I do not speak in criticism of the Minister of Labour, it seems to me that we cannot get information concerning agreements entered into with the provinces. I am interested in all the provinces, in their progress and development and in their relief problems. I am not narrow, nor do I come from a province that is, nor do I think any province is particularly narrow. But the point is this: Surely I am within my rights in asking the Minister of Labour what agreement has been entered into with the government of Nova Scotia, either through the premier or the attorney general of the province or the gentlemen who came here two or three times to sit down and discuss the basis on which these moneys were to be spent. I would like to know in a general way what agreements have been made with the government of Nova Scotia. The premier of the province is the Hon. Angus L. Macdonald. I would be slower to speak if his was a Conservative government, because it might be thought by some hon. gentlemen opposite that I was doing so for the purpose of embarrassing the government, but the government of Nova Scotia is friendly to the government here, which is friendly to them, and therefore

any question I ask, if it carries with it a criticism, applies to one of two Liberal governments. So, as a Liberal myself I think I am fairly broad-minded. I should like to have that information from the minister so that I may be able to send an intelligent answer to the many letters I have received from my constituents, to whom I have been able to reply up to date in acknowledging their letters, only; "The information will later be forthcoming. Yours truly, R. E. Finn."

Mr. ROGERS: In answer to the question put by my hon. friend I may say that no agreement has been entered into as yet between the dominion government and the province of Nova Scotia. The preliminary conversations have not yet been concluded. The negotiation of these agreements, as hon. members will understand, occupies some time, but we are proceeding as rapidly as possible with the preliminary discussion.

Mr. FINN: In reply to the hon. Minister of Labour I would use the words of the emperor of Ethiopia, Haile Selassie, "I will wait. I will fight on. I expect my tardy allies will soon arrive," for, he said, "I am fighting for a principle, and that principle is collective unity."

An hon. MEMBER: Collective security.

Mr. FINN: Collective security or unity, because you cannot have security unless you have unity. It seems to me, so far as the unity between the provincial governments and the federal government is concerned—

An hon. MEMBER: Ethiopia.

Mr. FINN: I heard someone interject, "Ethiopia." What happened there? The best that England could do was to send a British destroyer to Djibouti in French Somaliland the ocean terminus of the Addis Ababa-Djibouti Railway after the emperor had left his capital seeing it in flames through the aggression of Mussolini, and his temporary success made of him a Caesar.

The CHAIRMAN: Order.

Mr. FINN: That was just an interjection, Mr. Chairman, and if it is not in order I shall be pleased—

Mr. STEWART: Strike it out.

Mr. FINN: I will strike it out so far as the report goes, if it is the order of the chairman, but it is not struck out of my mind. I would ask the Minister of Labour when these agreements are going to be entered into, and whether the votes of money can be utilized and expended before the agreements are entered into.

Mr. ROGERS: The agreements will be concluded under the terms of the relief bill which has not yet received royal assent. As a matter of fact I am informed that it has not yet received its final reading in the senate, but we anticipate that the legislation under which the agreements are to be concluded will be passed within a very short time. We shall then be in a position legally to enter into agreements with the provincial governments. I am unable to give my hon. friend an assurance as to the precise date when it will be possible to conclude an agreement with Nova Scotia. We are meeting with the provinces in the order of their requests, and we are hastening the negotiations in order to have this work undertaken at as early a date as possible.

Mr. FINN: If, as the minister says, the expenditure of this money is contingent upon the authority given in the relief bill, and agreements can be entered into only when that bill is passed—

Mr. ROGERS: It is only the preliminary conversations we are having now.

Mr. FINN: There cannot be finality until the relief bill is passed by the senate and receives the signature of the governor general; is that correct?

Mr. ROGERS: Yes.

Mr. FINN: Then I would ask the minister this question with regard to my own province, and I speak of my own province because there are hon. gentlemen here to look after their own provinces. I speak more particularly for my own county, because I do not represent the province. The province is represented, and well, I believe, by my hon. friend the Minister of National Revenue (Mr. Ilsley). He can speak for Nova Scotia as Nova Scotia. If the government of Nova Scotia says that it will not contribute fifty per cent, can the minister under the relief bill now in the senate go on with the federal expenditure regardless of the decision of any province not to contribute under this vote? Can the federal government go on and spend its own allotment?

Mr. ROGERS: The item itself states that the vote is for new works to be undertaken in cooperation with the provinces, and I take it that the dominion government is restricted by that phrasing to works to be carried on

in cooperation with the provinces. It is open for us, however, to determine the amount of the dominion contribution to a joint work. I have indicated earlier this afternoon that it has usually been on a fifty-fifty basis, but that is a matter for negotiation as between the dominion government and the provincial authorities.

Mr. FINN: I would ask the minister another question. Are these votes in the special supplementary estimates for agriculture in the western provinces on a fifty-fifty basis, or are they a straight vote?

Mr. ROGERS: They are a straight vote, I think.

Mr. FINN: Are not these votes to be used in connection with relief?

Mr. ROGERS: Many of these items are straight votes but are designated for relief purposes.

Mr. FINN: Very large sums, amounting to one and a half million dollars, have been voted in these estimates for agriculture. Then, under Labour, we find direct votes of large sums of money to be used for relief purposes in connection with agriculture in the west, but if I took a microscope I could not find what is going to be spent in the east. I should like to know whether representations have been made to the Minister of Labour by the governments of Nova Scotia and the other maritime provinces with reference to this particular matter? There is a great deal of suffering in Halifax and along our shores where the fishermen reside, we have dealt with this only half-heartedly already. I do not desire to take up the time of the committee in discussing this matter; perhaps I could take it up by correspondence with the Minister of Labour, but the principle has been established of voting vast sums to the prairie provinces without any strings attached whereas definite restrictions are placed upon the votes to the eastern provinces. I believe that the government is serious; that it wants to help the people who are on relief and that it wants to let them do something constructive. That was the understanding upon which I was elected and if this is not done, then I should not be here. The condition precedent in the case of Nova Scotia is that that province must make an equal contribution before any work is started; if it does not, then no money is to be spent. The Minister of Labour says, "It may be possible," but "may be" is not good enough. If you say, "may" in a statute, what is provided for is very seldom done, but if you say "shall," it must be done. We should know what we can expect for the people who need assistance in Halifax county and that is why I ask the Minister of Labour these questions. I appreciate his difficulty because of his newness in the position, but he is a master of the subject of economics. I do not think hon. members are taking up the time of the committee when they endeavour to find out upon what basis these contributions are being made. They want to be able to tell the people who are suffering that there will be an opportunity for them to go to work and earn an honest dollar for an honest day's work. If that were possible much of the dissatisfaction in my constituency and throughout Nova Scotia would be cured.

Item agreed to.

Mr. MacNEIL: May I remind the minister of my question?

The CHAIRMAN: I am in the judgment of the committee, but I believe the item has been carried.

Mr. ROGERS: I shall be glad to revive the discussion on another item.

Mr. FINN: Will you pick mine up on the next item?

Mr. ROGERS: Certainly.

Amount required to provide for unforeseen contingencies, $500,000.

Mr. MacNEIL: May I repeat my question addressed to the minister?

Mr. ROGERS: As I understand the question of the hon. member for Vancouver North (Mr. MacNeil), he wishes to know whether these estimates represent the total amount to be available for public works during the fiscal year. I may say that these expenditures will represent all that will be available for public works during the coming year. I quite appreciate the fact that this total will seem inadequate to provide employment for all those who are now without work. We understand fully that such an expenditure will not meet all the requirements of employment and that the expenditure would have to be multiplied in order to provide public employment for all who are out of work at wages which would be regarded as fair and reasonable. I can assure my hon. friend that during the coming year the entire situation will receive a more careful and concentrated study than it has so far received. When the house meets again the government will be in a better position to advise the directions in which

public expenditures may be made to assure the most satisfactory results. I quite realize that my answer will be disappointing to my hon. friend, but I could not make a different reply without misleading him.

Mr. MacNEIL: Will the total to be expended this year be greater than the total expended last year? Will it be designed to work some improvement in the situation directly affecting those now on relief?

Mr. ROGERS: I am informed that the total expenditure will be considerably in excess of that of last year. If we are able to reach agreements with the provinces, as we hope to, upon a fifty-fifty basis of contribution, this item of $9,200,000 will be increased to an expenditure of some $18,400,000. In answer to the question put by the hon. member for Halifax (Mr. Finn), I may say that most of the items in the special supplementary estimates provide amounts directly for certain projects and it is not contemplated that there will be any joint contribution by the dominion and provincial governments. I would remind him also that under other votes an amount in the neighbourhood of $2,000,000 is made available for the construction of public works of various kinds in Nova Scotia. He can add up the totals under the various departments to get the exact amount. Of course we shall deal with Nova Scotia under the item just passed, but that will be upon the basis of joint participation. In the case of the construction of public highways, the dominion is contributing to what has always been regarded as a provincial responsibility, but this would not apply to the construction of public buildings to maintain dominion services.

Mr. BOTHWELL: That means that work undertaken under the last vote, No. 335, and possibly under this vote, will be in connection with projects recommended by the various provinces?

Mr. ROGERS: Yes.

Mr. FINN: I do not want to prolong the discussion on this matter, but I should like the minister to explain his reference to the $2,000,000.

Mr. ROGERS: I was referring to all special supplementary estimates, not merely to those pertaining to the Department of Labour. As a matter of fact I have excluded items under the Department of Labour. I was referring to expenses under Public Works and under Marine.

Mr. FINN: A moment ago the minister said that these were the only relief estimates.

The CHAIRMAN: Is the hon. member discussing item 336?

Mr. FINN: I am discussing item 336 in the light of the answer given by the Minister of Labour. He said that under general votes other than public works there was $2,000,000 for Nova Scotia. That does not come within the item, and therefore I do not see why I should be singled out when I ask a question in reference to the statement just made by the minister. If he went outside the estimate why should I be ruled out of order? I wish to have certain information and I am sure I shall receive it from the Minister of Labour.

The CHAIRMAN: I would point out to the hon. member that we are discussing item 336, which is a vote for $500,000, an amount required to provide for unforeseen contingencies. I would ask him to confine his remarks to the item under discussion.

Mr. FINN: With all due deference, sir, to your ruling, which I accept, I wonder why it is that when the Minister of Labour himself went outside the item the fact was not drawn to his attention but is pointed out to me.

Mr. ROGERS: My hon. friend will agree, I think, that I had given an undertaking to answer his question in connection with another item, and if I went beyond the subject matter of item 336 it was simply because I was seeking to give him the information he desired. If the information I have given is not adequate and there is any further information I can give him, either in my office or here, I shall be only too glad to let him have it in so far as it is available.

Mr. FINN: I am perfectly satisfied. What I am particularly interested in comes under any one of these votes; it comes under this very vote which is now being discussed, an amount required to provide for unforeseen contingencies. I think that description could be correctly applied to all the items that have passed, for they are all unforeseen or perhaps to be correct unseen, inasmuch as there are no agreements and no understandings on conversations between federal and local governments. What I want to find out is this: Under this vote, which will apply to my own province and perhaps to my own constituency, if the provincial government should fail to contribute fifty per cent of the cost, can the Minister of Labour

assure the committee that, so far as the federal vote is concerned, the money voted will be expended where it was intended to be expended, and will be expended absolutely under the control of the minister who is in charge of the department concerned with that particular vote? Am I to understand that, or am I to understand that, if the legislature or government of Nova Scotia decides to contribute only $100,000 where $200,000 is called for, the federal government being prepared to put up $200,000 as voted the vote will lapse and the money will not be expended? If that happens, owing to the fact that the province either will not join or has not the money, the people who are in need will stand, when parliament prorogues, precisely where they are to-day. Perhaps the minister is not in a position to answer the question until he has had an opportunity of discussing it with the government. I am content to wait, but it is only in the interests of people who, I know, are suffering and are ready to work but cannot get work, that I am now asking the minister this question. I do not for a moment wish to hold up the estimate, but I should like to get an answer in order to find out the policy of the government in reference to moneys which we vote, which this parliament votes. If the provinces for any reason fail to give fifty per cent, is it the government's intention to have the money expended notwithstanding that contingency, provided the relief act will permit of this being done? If that act does not allow this, then it seems to me there will be a stalemate and the act will have to be amended at the present session. I do not press the minister for an immediate reply, but I submit that there should be a reply within a reasonable time after he has had an opportunity of discussing the matter with the Prime Minister and his colleagues with respect to general policy.

Mr. HEAPS: Will any restrictions be placed upon the provinces with regard to the kind of projects which they can undertake?

Mr. ROGERS: We do not place any restrictions in advance upon the kind of projects that may be submitted. We rather deal with a program submitted by the province, the expenditure on which program in most cases would exceed the amount that would be available as a contribution of the dominion government. In other words, that would give the dominion government some opportunity to express a preference for one project rather than for another, because obviously we must see to it that the projects which are adopted will be those that will contribute as far as possible to employment.

Mr. HEAPS: Do I understand that in the final analysis it will be the federal government that will determine the projects to be proceeded with?

Mr. ROGERS: To this extent, that the federal government obviously determines the projects to which it will contribute, and in the nature of things if the provinces wish to secure the federal contribution they will try to reach an agreement. In fact, that will be the desire on both sides.

Mr. HEAPS: Suppose that in some of the provinces it is thought that as a relief project nothing will produce better results than, say a housing scheme; would such a scheme meet with the approval of the Department of Labour?

Mr. ROGERS: I am unable to give an assurance on that point in advance of its being submitted to the federal government by a province, but I do not think there has been any anticipatory restriction upon the programs that might be submitted by the provincial government. It is for the dominion government to seek to work out, in cooperation with the provincial governments, a program of projects best adapted to improve the relief situation in the particular province.

Mr. HEAPS: Are the municipalities being asked to share any part of the burden?

Mr. ROGERS: As my hon. friend is aware, the dominion government has not dealt direct with the municipalities. It may be that in some provinces certain projects will be put forward which will involve the construction of municipal works, but when it has been proposed that the dominion government should contribute to municipal works the proposal has always come through the province, and the dominion contribution has always been upon a lower percentage basis.

Mr. HEAPS: May I ask if the amount being contributed by the federal government in regard to these undertakings will be by way of a loan or a gift from the federal authorities?

Mr. ROGERS: Under this particular item the contribution is an outright one. It may be that it will be desirable to loan amounts to some of the provinces in order to assist them in meeting their share of what will be required for particular projects. Possibly that is not the point my hon. friend had in mind?

Mr. HEAPS: I quite understand that the amount which the federal authorities may be compelled to give to governments in order to finance projects would be a loan, but the fifty per cent contribution by the federal authorities to these relief projects will be an absolute contribution from the federal government?

Mr. ROGERS: Yes.

Mr. MacINNIS: Could the minister tell the committee if any of the projects authorized under these items will be carried out with what is sometimes referred to as relief labour, that is where the basis of wages is the amount of the relief plus a certain percentage?

Mr. ROGERS: So far as I am aware, no projects covered by the preceding items have been dealt with in such a manner. In fact the agreements with the provinces under which these works are constructed require that there shall be paid to workmen upon those projects the current or prevailing rates of wages.

Item agreed to.

Grants in aid—amount required to provide for monthly grants in aid to the provinces, $26,000,000.

Sir GEORGE PERLEY: I should like the minister to place on Hansard some figures relating to the monthly grants that were made by the previous government—the total will do, I do not want them in detail—then the amount that this government paid from December to the end of March, and also the amount per month that they propose to pay when this legislation passes.

Mr. ROGERS: I take it that my right hon. friend asks for the total monthly payments of grants in aid in each case?

Sir GEORGE PERLEY: Yes.

Mr. ROGERS: The total monthly grant in aid prior to December, 1935, was $1,751,250. Under the increases authorized for the winter months, December to March inclusive, the total monthly grant in aid was $3,066,218.75. Under the revision following the reduction of fifteen per cent as announced on April 1 of this year, the total monthly grant in aid for the month of April is $2,606,285.94. That comprises the total monthly payments.

Sir GEORGE PERLEY: What is $26,000,000 divided by twelve? I make it $2,166,666. How is the minister going to pay $2,606,285 per month out of $26,000,000 voted?

Mr. ROGERS: I am not sure that it is possible to give a definite answer to the question which is at least implied in what my right hon. friend has said. We are making here an estimate of what will be required for direct relief as a contribution from the dominion government during the coming year. There has been, as he is aware, a reduction of fifteen per cent announced for the month of April. We assume that some other adjustment may be desirable as the relief situation is studied during the ensuing months. We are resolved at all events to meet the situation as it develops. This sum of $26,000,000 is an estimate of what we hope and trust will not be exceeded as a contribution from the dominion government during the present fiscal year. I may say that it is considerably in excess of the amount that was paid under grants in aid which prevailed prior to December of last year.

Sir GEORGE PERLEY: That is undoubtedly so. But the minister must have a lot of faith if he thinks he is going to pay $2,606,285 a month for a year out of $26,000,000. He has started on a scale that he cannot possibly keep up. It is quite true that the amount is larger than the previous government gave as a grant in aid. I am not criticising the increase. A large increase was immediately made by this government, and then, when March 31 came, they reduced it by fifteen per cent, but of course that still leaves the monthly sum a great deal higher than the previous government gave as a grant in aid. I think it is most extraordinary for the minister to put in $26,000,000 for the year and then pay out over $2,600,000 the first month.

Mr. ROGERS: I can only remind the committee that the monthly contributions by the dominion to the provinces have not been fixed for the entire fiscal year. The reduction announced for April 1 was one which applied to that month and has been continued to date, but there was no assurance or undertaking that there would not be further adjustments of the dominion grant in aid to the provinces. I believe that in the past it was on a month to month basis; that is to say, there was no agreement that the grant in aid would be continued through the year.

Mr. BENNETT: Yes, we did make an agreement.

Mr. ROGERS: With some provinces, I believe, that was the case.

At six o'clock the committee took recess.

## After Recess

The committee resumed at eight o'clock.

Sir GEORGE PERLEY: To complete the discussion of the point we were at when six o'clock came, even though the grant in aid for April is to be more than one-twelfth of the sum included in these estimates, will the minister give the committee an assurance that the grants in aid will not be more than $26,000,000 during this fiscal year?

Mr. ROGERS: I doubt whether I can give such an assurance, and if I could I doubt whether it would be wise to do so. We must deal with a situation which, as my right hon. friend is aware, is not static but subject to changes from time to time. We have attempted to make an estimate of the amount which we believe will be required during the coming year as a dominion contribution to the provinces for direct relief. I should like to repeat this further statement, which I made before six o'clock, that we are at the same time resolved to meet the situation as we believe the people of Canada would wish us to meet it, as it may alter from time to time.

Mr. MacINNIS: Under the unemployment relief act as it now stands, can a grant in aid be made without having to come to parliament?

Mr. ROGERS: The relief bill of the present fiscal year, section 4, states:

> The governor in council may enter into agreements with any of the provinces respecting relief measures therein and providing for any payments on account of such relief measures to be made out of moneys appropriated for relief purposes by parliament for the fiscal year 1936-37.

Mr. MacINNIS: But under the policy of the present government of having all appropriations passed by parliament, does not the relief bill as it now stands prevent the government from making any further advances in aid without coming to parliament?

Mr. ROGERS: Under the special supplementary estimates our grants for relief purposes are limited to the $26,000,000 therein stated.

Sir GEORGE PERLEY: I think the hon. gentleman is trying to find out how it would be possible for the government under the bill to give a larger amount than $26,000,000 for grants in aid.

[Mr. Rogers.]

Mr. ROGERS: If that is the question, I can only say that parliament will be in session again before the close of the present fiscal year. I had that in view when I said that in any event the government is resolved to meet the situation as it develops.

Mr. MacINNIS: I am not objecting to this amount. As a matter of fact I think the government would be unwise to tie its hands so that in a very uncertain situation it could not deal with any conditions which might arise. Regardless of what the policy of the government may be I do not think it is so tied.

How does this amount compare with the amount of grants in aid during the past fiscal year?

Mr. ROGERS: As they stood prior to December, 1935, the total annual contribution by the dominion government for direct relief was $21,000,000 in round figures. In December, as my hon. friend is aware, an increase was made amounting to seventy-five per cent of the existing grants in aid for the winter months. Then, from April 1 of this year there has been a reduction of the total grants in aid in each case by fifteen per cent. So that upon the basis of the grants in aid as they stand since April 1 the amount for the twelve months would be twelve times $2,606,285, or something in excess of $31,000,000.

Mr. STEWART: Could the minister give the total amount spent for grants in aid during the fiscal year ended March 31, 1935?

Mr. DUNNING: I gave the figure in the budget speech; it will be found at page 2374 of Hansard:

> Direct relief, 1934-35, $19,211,557.

Mr. STEWART: That is not quite the same as grants in aid.

Mr. DUNNING: The system evidently was changed during the fiscal year 1934, because I have here an item, grants in aid, in addition to the sum formerly mentioned. It is shown as from August 1, 1934, which I believe was the date of a change in system. That amount is $14,024,000.

Mr. STEWART: Grants in aid from August until the end of March?

Mr. DUNNING: Apparently that would be the situation.

Mr. STEWART: Has the minister any figure from the preceding March to the month of August?

Mr. DUNNING: Only in so far as it comes within the classification of direct relief then prevailing, the total of which is

$19,211,000. But it is not all in the form of grants in aid. There is some confusion in view of the change of system which took place in that year.

Mr. MacINNIS: Does the minister know if any of this money, granted in aid, will be spent on work in the municipalities, or will it all go in direct relief?

Mr. ROGERS: This amount is designated for direct relief. That is to say, it is not available for relief works.

Mr. PURDY: A few moments ago the minister gave the figure of $2,606,285 for grants in aid. Can he break it down showing the amount for each province?

Mr. ROGERS: The total amount of $2,606,285 was broken down as follows: Prince Edward Island, $3,160.94; Nova Scotia, $59,500; New Brunswick, $37,187; Quebec, $743,750; Ontario, $892,500; Manitoba, $200,812.50; Saskatchewan, $297,500; Alberta, $148,750; and British Columbia, $223.125.

Mr. PURDY: On what basis are those moneys distributed?

Mr. ROGERS: When the policy of joint contribution by the dominion, the provinces and municipalities was abandoned the late administration determined upon the basis of study of the relief needs of the various provinces the grants in aid paid from August, 1934, to December, 1935. When the present administration determined to increase the grants in aid for the winter months it applied the seventy-five per cent as against those formerly existing grants in aid paid to the several provinces.

Mr. MacINNIS: I suppose the grants in aid paid have some relation to the number of persons on relief in each province.

Mr. ROGERS: Yes.

Mr. MacINNIS: Has the minister the numbers on relief in the different provinces for the month of April?

Mr. ROGERS: I am sorry we have not the figures for that month.

Mr. MacINNIS: It is too early?

Mr. ROGERS: Yes. Usually the returns are about a month late; I speak of returns, other than estimates. The February figures were printed in the report of the commissioner of unemployment relief and have been distributed to hon. members.

Mr. MacINNIS: Has the minister the figure for the month of March?

Mr. ROGERS: We have the preliminary figure, but if possible it would be preferable if the hon. member would consult me in my own office as to those figures. It would be unwise to place inaccurate figures on Hansard. We find that sometimes they are subject to wide correction. I believe the figures as given in the report of the commissioner would indicate, numerically, the proportion of relief recipients in the various provinces.

Item agreed to.

DEPARTMENT OF RAILWAYS AND CANALS

Projects already undertaken—to provide for commitments incurred under the authority of item 1, schedule "A" of the Supplementary Public Works Construction Act, 1935 (railway grade crossings), $958,416.51.

Mr. STEWART: May we have particulars of expenditures that have been under these commitments?

Hon. C. D. HOWE (Minister of Railways and Canals): This item covers all the uncompleted work authorized in the year 1935-36. As the hon. member is aware, this fund is administered by the board of railway commissioners.

Mr. STEWART: I was interested in the total, rather than in the details.

Mr. HOWE: I can give the complete information, if the hon. member wishes it. The amount expended out of last year's appropriation was $26,974.49. That was the amount out of an appropriation of $1,000,000. It is simply a sort of hang-over of projects started last year.

Mr. STEWART: So that again this is really a revote of an item which appeared in the Public Works Construction Act of 1935.

Mr. HOWE: Yes, entirely so.

Mr. STEWART: Entirely so, yes. It is a balance of the commitments. Can the minister say what the commitments amount to? Are they for the whole of this sum?

Mr. HOWE: Yes, for the whole amount.

Mr. STEWART: They cover all of it?

Mr. HOWE: The entire amount is the exact total of the commitments from previous items in the Supplementary Public Works Construction Act, 1935.

Mr. MacINNIS: Could the minister say how much of this work is completed?

Mr. HOWE: Some of the work has been completed on which an expenditure of $26,974.49 was made during 1935-36.

Mr. LENNARD: Is this all for the elimination of level crossings?

Mr. HOWE: Further on there is a vote of $1,000,000 to cover such additional appropriations as the board of railway commissioners may make for the same purpose.

Item agreed to.

To provide for commitments incurred under the authority of item 5, schedule "A" of the Supplementary Public Works Construction Act, 1935 (canals—repairs and improvements), $84,100.

Mr. STEWART: Is this of the same type as item 417?

Mr. HOWE: Yes, exactly the same. It is a clean-up of item 5, schedule "A", of the Supplementary Public Works Construction Act, 1935.

Mr. STEWART: What was the amount of that item? I have not the act before me.

Mr. HOWE: It was $750,000.

Mr. STEWART: And with the exception of $84,100 has it all been spent?

Mr. HOWE: That is correct.

Mr. STEWART: It has all been actually paid up.

Mr. HOWE: Yes.

Mr. STEWART: This is just a revote of the balance of that vote?

Mr. HOWE: Yes.

Mr. STEWART: It is just a repetition of the performance we have had here day after day, namely that of voting money twice, and then creating the impression that this government is providing an enormous sum of money for unemployment relief.

Item agreed to.

Other projects—to provide for reimbursement to the Canadian Pacific Railway Company and to the Canadian National Railway Company, upon such terms and conditions as the governor in council may determine, of expenditures to be made by each of the said companies for:

(a) Labour in the employment of certain unemployment relief forces on special work in extension of the said companies' programs of maintenance of way and betterment works during the year 1936;

(b) Workmen's compensation liability relative to such labour;

(c) Certain allowances for transportation of such labour;

[Mr. MacInnis.]

(d) Certain other expenditures for labour, material and overhead incurred by the railway companies if such expenditures are made during 1936 in preparation for or in completion of work expected to be performed by the unemployment relief forces but not performed because of shortage of unemployment relief forces, not exceeding in the aggregate, $3,100,000.

Sir GEORGE PERLEY: The minister might explain this item at some length so that we may understand what is proposed.

Mr. HOWE: It was decided as a matter of government policy that an attempt should be made to provide work for those single unemployed men who have been, some of them for some years, in the relief camps, and it was considered that at least one item of useful work would be to assist the railways in picking up their deferred maintenance work, such work to be in addition to the usual maintenance program of the railways. The government consulted the railways, and the respective railway managements stated that they could usefully employ about 5,000 men during the present season.

Mr. MacNICOL: That is 5,000 apiece?

Mr. HOWE: Yes, 10,000 in all. A good deal of discussion took place as to how this would work out from the standpoint of both the railways and the government, and it was found that each would have to spend about an equal amount of money. That is, if the government paid the wages of these 10,000 men, the railways would be called upon to spend another $3,100,000 for supervision, supplies, materials, and other details having to do with work. So agreements have been entered into between the government and the Canadian Pacific and between the government and the Canadian National Railways providing that the government will furnish up to 5,000 men for each railway. It is understood of course that the 5,000 may not be available for each railway because the men might prefer other employment. The men will be employed by the railway at the standard rates of wages for the class of work they are called upon to do. The government will pay in full the wages of the men while thus employed by the railway on this particular class of work.

Mr. SENN: For what length of time.

Mr. HOWE: From the time that it is possible to start the maintenance of way work and for as long as the weather will permit it to be carried on in the fall.

Mr. DONNELLY: Where track has been laid, for instance, but no ballasting done, will the men be available for that class of work or only for the maintenance of old work already completed?

Mr. HOWE: I do not know that there is any specific prohibition against using the men on new track, but this is chiefly for maintenance of way work on road already constructed and in use, such as ditching, track laying, and work of that sort.

Mr. MacNICOL: As a matter of economy the railways reduced their maintenance staffs to skeleton crews some years ago, and the impression I have had is that during the last three or four years a large number of men who were formerly employed by the railways on maintenance and repair work have been unemployed. Are we now to understand that all these men who have been laid off by the railways themselves are to be reemployed and that in addition each railway requires 5,000 men?

Mr. HOWE: There is a distinct understanding with the railways that they will engage their usual summer maintenance crews before any of these men are taken on.

Mr. HEAPS: I understood the minister to say that there were no restrictions on how the railways were to expend this money. If that is correct, it leaves a very wide opening for the railways to use the money for purposes other than that intended. I feel that the money should be used for the purpose for which the minister told the house on a previous occasion it was intended, and that it should be spent in such a way as to provide the greatest amount of labour. I wonder whether I am correct in my interpretation of the minister's remarks a few moments ago.

Mr. HOWE: I do not think I made that statement. The government is not giving money to the railways to spend as they like, but is giving them the services of these men to be employed at standard rates of wages for the class of work on which they are employed. These men are to be used for maintenance of way work. I said a moment ago that I did not know there was any specific prohibition against using the men on new work, the extension of a line, for instance, but I see that the agreement says definitely that it is for maintenance of way and betterment work.

Mr. HEAPS: What are the conditions under which this money is to be given to the railways? Is it a grant outright or a conditional loan?

Mr. HOWE: We pay the wages of the men while they are employed by the railways. You might call it a gift from the government, if you like.

Mr. HEAPS: I understand that these men who are employed by the railways on maintenance work will have their wages paid entirely by the government as part of its policy of relief. If that is the case, would the minister inform the committee how much of this vote will be for labour and how much for materials?

Mr. HOWE: The entire amount will be for labour. We are voting $3,100,000, and in addition to that the railways will spend another $3,100,000 for supervision and materials.

Sir GEORGE PERLEY: The item itself does not say that the money will all be spent for labour. If the minister will read it himself he will find provision in the last clause for other payments.

Mr. HOWE: In spite of the wording the only exception is allowances for the transportation of the men to the point of employment. Under the terms of the agreement there is nothing permitted for material.

Sir GEORGE PERLEY: If that is the case, the item should be worded differently, because it says distinctly under paragraph (b) for instance that the money may be used for other purposes, and paragraph (d) says that the money may be used for "expenditures for labour, material and overhead incurred by the railway companies if such expenditures are made during 1936 in preparation for or in completion of work expected to be performed by the unemployment relief forces but not performed because of shortage of unemployment relief forces." If the minister is correct in the statement he has just made this item should be amended. I for one think it should not pass as it now reads.

Mr. HOWE: I have now the explanation. Assuming that the government can furnish 10,000 men the money is all spent for labour, but naturally the government cannot guarantee to furnish 10,000 men from this source, and provision is therefore made that if we furnish a lesser number, say 5,000, the railways shall be reimbursed for the expenditures they have made in preparing work for 10,000. Paragraph (d) is to cover that contingency because the railways in preparing a program of this kind must go to some expense.

Sir GEORGE PERLEY: The minister uses the word "furnish." I do not understand that the government is going to furnish la-

bour. As I understand it, each of the railways is going to engage this extra 5,000 men, and I was going to ask the minister if he has any guarantee from the railways that they will take as many as 5,000 each from the camps. The railways are going to engage these men and the government is going to pay their wages. That is the agreement in a few words. With all the unemployed there are in Canada, the minister suggests that the government may not be able to furnish more than 500 men, at least may not be able to furnish the 5,000 men. I say to the hon. minister that with all the unemployed we have in the country, surely 5,000 men can be supplied for each of the railroads and proper wages paid. I do not understand the suggestion put forward by the minister that the government might not be able to furnish the 5,000 men to each of the railways.

Mr. HOWE: This item refers only to single unemployed men who were in the relief camps. The last figure I had showed that the number of men in these camps was something less than 15,000. This is an indication that, as usual, a number of men have left the camps and have found employment on the road. If another 5,000 men were to find employment without recourse to government assistance—we would be very glad to have that happen—obviously the government would not be able to furnish 10,000 men from these relief camps. This vote does not cover any men whom the government might care to send to the railways; it refers only to men from the relief camps.

Mr. HEAPS: Supposing 10,000 men cannot be furnished from the relief camps and the railways have made their preparations to take on that number for the class of work specified in this item, what objection would there be to taking single unemployed men who are not in the camps but who would be glad to have work of this kind during the summer months? Do I understand the government is going to tie its own hands and the hands of this house by refusing to accept men not from the relief camps?

Mr. ROGERS: As this item is closely related to a policy announced by the Department of Labour, perhaps I might be permitted to say a few words in answer to my hon. friend. When it was announced that the government proposed to close the relief camps conducted by the Department of National Defence, it was stated to be a definite part of that proposal that these men would not be turned out of these camps without some provision being made for their future. I think that was fully understood by the house and I am quite sure my hon. friend would be the first to accept such a view.

Mr. HEAPS: Absolutely.

Mr. ROGERS: There were two methods by which we could proceed. We could continue necessary work on existing projects until July 1 and pay the men an increased allowance during that period. At the time we made our plans there were some 20,000 men in the relief camps and we realized that it would be essential to make some large provision for additional employment after July 1, the date set for the closing of the camps. After careful investigation we concluded that work on maintenance of way upon the railways was a direction in which employment could be afforded to provide assistance to the men as well as greatly to improve the railroads which improvement in turn would add to the travelling comfort of our people. We have every reason to believe that the relief camps will be able to supply these 10,000 men. My hon. friend brings up the question of other men without employment not having the same opportunity for this employment—

Mr. HEAPS: Not exactly. What I said was: Assuming that there were not 10,000 men available from the relief camps, would persons not in the camps be debarred from making up that total of 10,000?

Mr. ROGERS: As I recall it, the understanding is that the railway companies will take up to 10,000 men from the relief camps. If for any reason we should not be able to supply 10,000 men, I have no doubt that arrangements can be made to supply from the relief hostels in various parts of the country an additional number of other single homeless men to make up that total. I state that, subject to correction as to the precise terms of the agreements to be made with the railway companies. What I wanted to bring out was that this is simply part of a general plan to bring the relief camps to a close.

Sir GEORGE PERLEY: Have the agreements not been made?

Mr. ROGERS: These agreements will have to come under the terms of the relief bill of the present fiscal year and in a legal sense they cannot be completed until the relief bill has been passed.

Mr. MacNICOL: Would the other unemployed men to be supplied to the railways, provided the camps cannot supply the required number, be selected by the government's own employment bureaux in the different cities?

Mr. HOWE: Yes. This project is definitely for the purpose of finding large scale employment for single unemployed men who are now more or less wards of the government.

Mr. MacNICOL: That would be the proper way to deal with the matter.

Mr. HOWE: Yes.

Mr. STIRLING: Do I gather from the Minister of Labour that the railways are interested in the source from which these men come and wish them to come from the relief camps? I think the men to be chosen should come under the much wider category in subsection 2 of section 3 of Bill No. 19 which reads:

—for the employment of persons who being available and competent are necessarily and properly in receipt of relief in the province in which such work or undertaking is to be performed.

There now seems to be some limit in connection with the 5,000 men to be supplied to each railway. Is it the understanding that they are to come from the relief camps lately under the direction of the Department of National Defence?

Mr. HOWE: Yes, that is definitely the understanding. Of course we are contributing this labour to the railways. That is, we are paying the cost of it because we feel that this is a measure to supplant these relief camps.

Mr. STIRLING: Is the government paying the whole cost of the wages to these men?

Mr. HOWE: Yes, all the wages to the men.

Mr. McCANN: How much will be spent by both railways and the government?

Mr. HOWE: About $6,000,000.

Mr. McCANN: Everyone who knows anything about maintenance of way work on the railways knows that labour constitutes at least four-fifths of the cost of this work. I assume that if the railway companies are going to spend dollar for dollar with the government, they will employ considerably more than the 10,000 men to come from the relief camps, or they will be charging against their account exorbitant rates for haulage, shovels and the like in connection with the gravel pits. As I say, over four-fifths of the cost of work done on maintenance of way on the established lines is for labour, so in order to spend dollar for dollar the railway companies will have to employ at least double the number of the men that are to be provided by the government. If they propose to keep on the same number of men this year as they have had in other years on maintenance work, this will necessitate their having at least 20,000 men. That would take up the 10,000 men from the camps, plus another 10,000 men. I should like to know if the government, through its employment agencies, is to have any say in connection with the extra men to be employed?

Mr. HOWE: My hon. friend says "everyone knows," but I shall have to make some exceptions to that. The Minister of Railways does not know; his deputy does not know and his chief engineer does not know. We checked very carefully the figures that we put before us and we found that if the supervision—

Mr. McCANN: The supervision will be high.

Mr. HOWE: There will be the men required to supervise the work; there will be the materials required for the work as there is a considerable amount of ballasting to be done, and there will be the cost of equipment. The figures I have given appear to present the true picture.

Mr. COLDWELL: Is any provision being made with regard to unemployed railway men in the various towns? If the railways are being subsidized to this extent—and I was not aware that the government was to bear the whole cost of the wages—I should think something ought to be done to try to get the railways to take on unemployed railway men. There are hundreds of them in the cities and in some of the smaller centres. Even in the little town of Biggar in my constituency there is a number of railway men who have been almost altogther out of work for several years. Cannot something be done in their behalf when the railways are being subsidized? If we are to embark upon the subsidizing of institutions for the purpose of employing men, the railways are not the only ones that should be considered. We have a bill for the rehabilitation of agriculture and I believe a great deal of unemployed labour could be used advantageously in assisting to clear land which has already been settled in order that the settlers may become self-supporting. That would be a valuable form of the utilization of such subsidized labour. However the specific question I am asking at the moment is: What is to become of unemployed railway men in these towns? Is anything going to be done to give these men employment in view of the subsidy given the railways?

Mr. HOWE: There is a distinct understanding with both the railways that the ordinary maintenance crews will be employed before

this type of labour is utilized by the railways. I think my hon. friend will agree that the railway man who has seniority should be given the first opportunity of seeking employment on extra crews. I doubt very much whether the hundreds of men he speaks of will not be offered work on extra gangs during the summer months. That includes any man with seniority.

Mr. HEAPS: Will a copy of the agreement between the two railways and the government be tabled?

Mr. HOWE: The agreement has not yet been executed. It has been signed by the railway companies but the government has not signed it because it has not the authorization.

Mr. GREEN: Is each railway to get the same number of men?

Mr. HOWE: Yes, that is the provision.

Mr. MacLENNAN: In many of the towns there is a great number of young single men, now out of employment who were employed by the railways some years ago. They were laid off and they have been waiting year after year for brighter times in the hope of being reemployed on the railways. I understand that in Nova Scotia at a certain point, the terminal at Point Tupper, there are many unemployed men who worked on the railways in years gone by, and under this scheme it is the intention to send men from God knows where, from the relief camps, to work at this point, while these men who have been waiting for years with their mouths open will get no employment at all. I do not desire to criticize any scheme which the government is strenuously putting forward to alleviate the unemployment situation, but I really do not think it is fair that men who are now out of employment should be handicapped because they refused to become a public charge, to go into the camps or to take relief. It seems to me to be rather unfair that because of this refusal, because of their independence and possibly because of a little pride—and I wish there were a little more pride left in many people—these men are now to be penalized. They did not choose to go into detention camps, though if they had gone there they would now be eligible for employment, whereas under this scheme it would appear that they are to be penalized for not having become a public charge.

Mr. McIVOR: On the Canadian National at Fort William there are men working who have not worked so early in the season in years. I know these men personally and I can say that usually they do not get work until well on in the summer. Now they are engaged in regular work with wages.

Mr. MacINNIS: I do not know whether it is wise to ask more questions on this item; the more questions I ask the more confused I am. Whether it is because I am dense or because the answers are not clear I do not know. Do I understand the minister to say that the whole of the item of $3,100,000 is to be paid in wages to the men who are to do the work?

Mr. HOWE: That is correct.

Mr. MacINNIS: What is meant by paragraph (d) which has been read by the acting leader of the opposition? Where is the appropriation for that item?

Mr. HOWE: Under certain conditions, to pay for materials?

Mr. MacINNIS: Yes. I am referring to paragraph (d), which mentions materials and certain other expenditures. If the whole of this money is to go in wages there will be nothing left for materials and there is nothing further on in the list.

Mr. HOWE: What I attempted to say was that that was a saving clause for the government. In the event of our falling lamentably short of the supply of 10,000 men whom we have asked the railways to be prepared to use, we have provided for recouping the railways for such loss as they may incur in consequence of our failure to supply the number of men.

Mr. MacINNIS: Why should there be any loss even if the government could not find a sufficient number of men in the unemployment relief camps? Could not either the government or the railways advertise for men to do the work? Is there any reason in the present state of the labour market why they should not find the men? I assume that this work is necessary; that the railway companies must perform it if they are to keep their tracks in proper repair; if they are going to this expense it must be because the work must be done. Either that is the situation, or the government is making them a free gift of a certain amount of work, not necessary, in order to keep men employed. That seems to be the only construction to which this item is open as it stands. There is no reason in the world why the government should have to pay for materials. As

this item stands, the government furnishes the money to pay the men; the men do the work, and the railways are going to receive all the relief given.

Mr. STIRLING: I think the reason I am under the misapprehension that the railways as well as the government were contributing to the wages to be paid is my misunderstanding of the statement of the Minister of Labour on February 26, in which he said in part:

> This work will be in addition to the usual maintenance work of the railways. It will be undertaken on a cooperative basis, provision for which will be proposed in the emergency supplementary estimates. Men taken from the relief camps by the railroads will be in private employment and on a basis of work and wages.

I certainly took that to mean that under the cooperative effort the railway companies and the government were going to contribute to the wages. That apparently is not what the minister meant.

Mr. HOWE: I think it is a cooperative basis. My hon. friend, as an engineer, will know that to do work of any kind requires both men and material. In this case the railways furnish the material, the supervision and the equipment of all kinds and stand the costs in connection therewith. The government pays the costs of direct labour of the men it furnishes to the railways. Therefore I think the statement of the Minister of Labour was accurate.

Sir GEORGE PERLEY: I should like the Minister of Railways to enlighten us on this point. I know that the agreement cannot legally be put through until authority is given by parliament. But the draft is ready and has been signed by the railways. Does it provide that only men from the relief camps can be used for this purpose, or, as my hon. friend from Winnipeg North suggested, if there are not enough men from the relief camps, who are to work there? Is there any provision by which other unemployed men can be used for this purpose?

Mr. HOWE: The railways agree to utilize men furnished them by the government. We propose to take those men from the relief camps.

Sir GEORGE PERLEY: Only?

Mr. HOWE: But if we wish to extend that further, there is nothing in the agreement to prevent our doing so.

Mr. STIRLING: Still, the government will pay the wages.

Mr. HOWE: Quite; if we furnish the men to the railways we pay their wages.

Sir GEORGE PERLEY: What is the purpose of the government with regard to this particular point? Do they intend to pay the wages only of men who have come from the relief camps, or, if there are not sufficient of those, do they intend to pay the wages of other unemployed?

Mr. ROGERS: I think it has been made sufficiently clear that under the work as contemplated we propose to supply these men from the relief camps up to a maximum of 10,000 men. If there should not be 10,000 men available from the relief camps, it is within the terms of the agreement as I understand it that they can be supplied from other sources, and I need not remind the right hon. gentleman that there are relief hostels in our larger cities from which the additional number could be supplied without any difficulty whatsoever. As a matter of fact, upon the basis of progress made thus far, we do not anticipate that there will be difficulty in supplying the 10,000 men from the relief camps. That was the original object of the plan. It is bound up in an integral way with our whole plan of closing the relief camps as from July 1.

Mr. COLDWELL: Looking at this amount and all the items, including compensation, transportation, overhead, material and so on, the cost of the 10,000 men will run to about $300 a head. The question I am asking is this: Are these men paid wages and then will they pay the company board? Or will the company board them and the government simply pay an amount of wages? In other words, is the company making a contribution by way of board and lodging and the government paying the wages, or will the government also pay the board of these men? Or will the board be deducted from the men's wages? If so, has a basis of such deduction been arrived at between the government and the railway companies?

Mr. HOWE: The men will be furnished in exactly the same way as any other people who are employed by the railway on the same class of work. There will be no special privileges or exemptions or anything else; they are just men returning to the ordinary occupations of life, employed in the ordinary way, paid wages in the ordinary way, exactly as any other men who are employed on extra gang work for railways.

Mr. PERLEY (Qu'Appelle): Could the minister inform us whether under this item the railway companies could undertake such work as reconditioning freight and passenger cars, locomotives and equipment?

Mr. HOWE: The work is restricted entirely to maintenance of way work, extra gang work. In railway circles extra gang work is very clearly defined as work on tracks.

Mr. THOMPSON: Is it the policy of the government to utilize all the men in the unemployment camps before any unemployed railway men will be taken care of?

Mr. HOWE: We seem to be working in circles. I explained some time ago that all normal railway employment will be utilized before we recruit any men from the relief camps. That is just the opposite of what my hon. friend suggests.

Mr. SENN: May I ask the minister if under the terms of this agreement the railways will have the authority to dismiss men who are not found satisfactory? In addition to that, will they be replaced by the government?

Mr. HOWE: Of course the railways must be permitted to dismiss men who are not satisfactory. Whether they are replaced or not will, I suppose, be optional with the government. In other words, if they are not replaced we shall not be held responsible for the wages.

Mr. GREEN: What is the connection between this particular vote and item 427, which provides for a loan of about $1,100,000 to the railways, presumably for this same work? Is that $1,100,000 a part of the $3,100,000 which we are putting up under item 419, or what is the explanation?

Mr. HOWE: I do not know whether it is in order to explain a vote that we have yet to come to, but I should be very glad to do so. The difficulty of making this agreement with the railroads was that when we first approached them they both had had their budgets for 1936 approved, and no provision had been made for the railroads' portion of this item, amounting to about $3,000,000 for the two railways. In order to facilitate the making of the agreements, we undertook to finance the railways for a short period for the portion of the railroads' part of the expenditure that will be for labour, that is the labour of supervision and the skilled labour used in operating the equipment necessary to put these men at work. It is purely in the nature of a loan with interest to the railways for a short period to permit them to take advantage of this situation.

Mr. THOMPSON: Another matter is not clear to my mind. I understood the Minister of Labour to say a moment ago that all the men in the relief camps would first be absorbed. Now I understand the Minister of Railways to say that the unemployed railway men will be taken care of first. I represent a large railway town, Smith's Falls, in which there is a large number of unemployed railway men. It would seem only right and proper that if work is to be done on the railways these unemployed railway men should be taken care of before outsiders are taken on. If I am not mistaken, the Minister of Labour said a moment ago that the unemployed men in the camps would be taken care of first.

Mr. ROGERS: Out of the 10,000.

Mr. HOWE: Perhaps I can make this clear. This vote has nothing whatever to do with the ordinary maintenance work on the railways. In other words the railways continue with ordinary maintenance work with their usual forces, and I think my hon. friend will agree that, as I explained before, any man with seniority on the railway has been employed during the last summer or two on maintenance of way or extra gang work. This procedure will be followed first; and it is entirely aside from this problem. This work is entirely apart and in addition to any ordinary maintenance of way work of the railways. The first men to be employed for this additional gang work, which is to be separately organized in every way, will be the men from the relief camps, as my colleague the Minister of Labour has said.

Mr. LANDERYOU: Is it going to be the policy of the government to take men from the relief camps, place them in employment with private companies and pay their wages with government funds? If so, and if there is any surplus of men left in the relief camps, have the government any idea what they are going to do with those men? Would they consider putting them at work like farming and in that way subsidizing the farmers of western Canada? This looks like a gift to the railways as far as I can see.

Mr. ROGERS: I believe that same question arose during the discussion on the estimates of the Department of Labour. In addition to providing this extra gang work for 10,000 of

those formerly in relief camps, we are also making every effort to secure employment for the remaining men in the relief camps, and from the decrease in the strength in the relief camps during the past few months we have reason to believe that these efforts have been quite successful. Apart from that, my hon. friend will perhaps recall that the wage allowance for those who will be engaged in relief camp projects until July 1 has been increased, so that when the men leave the relief camps on July 1, they will at least have some stake for industrial reestablishment.

Mr. LANDERYOU: But what I want to know is whether the government's efforts will include the subsidizing of these men in employment, or is it intended just to let them shift for themselves?

Mr. ROGERS: I am not sure that I understand the distinction. We are maintaining employment for these men in relief camps until July 1, so far as they do not find employment with the railway companies under the plan now before the committee.

Mr. LANDERYOU: But the minister said that efforts would be made to place these men in employment. Does the effort include subsidizing some classes of society to pay their wages?

Mr. ROGERS: The answer is no.

Mr. STEVENS: I do not think we should let this item pass without frankly admitting that we are subsidizing the two railways to the amount of $3,100,000.

Mr. FINN: Hear, hear.

Mr. STEVENS: Namely, $1,550,000 to the Canadian Pacific and $1,550,000 to the Canadian National. It is a straight cash subsidy to the two railways in the form of wages of labour on maintenance of way work. We may as well frankly face the situation; this committee and the country ought to note that the Canadian Pacific Railway Company is benefitting to the extent of $1,550,000. It is about time also that the Canadian people realized that the Canadian National has been vilified up and down the country for the last six years, until it is to me amazing that the officers of that railway have been able to carry on at all. Furthermore we are subsidizing them to the extent of another million dollars by another item. That makes $4,209,400 that the government is giving as a subsidy to the railways.

The hon. member asks what I think is a very proper question. The government is going to subsidize the Canadian Pacific for its maintenance of way work, which is two years overdue. Ride from here to Winnipeg on that railway and you get thrown out of your seat, whereas that road used to be in excellent shape. The Canadian Pacific is two years behind its normal track work program. To talk about this being extra, above all that is necessary, is sheer nonsense. The Canadian Pacific is being given a subsidy of $2,000,000 for maintenance of way work of which it is in dire need. It is time that the people of Canada know we are playing the part of a pretty good friend to the Canadian Pacific, and there is no reason why we should not subsidize some other industries, or the farmers of this country, to take care of 5,000 men from the camps.

Mr. FINN: And the fishermen.

Mr. STEVENS: And the fishermen, too. I deplore the suggestion that we are not giving a special favour to these railways, because we are. Of course to the Canadian National we hand out money pretty generously, in any case; we supply the capital, but we ought to make it abundantly clear that in this vote we are subsidizing the Canadian Pacific for ordinary maintenance of way work, long past due, to keep their trains from rocking off the tracks; that is what it amounts to. Furthermore, it will take a whole lot more than $2,000,000 to put their tracks into normal condition. I say that without fear of successful contradiction. I am not objecting to this vote at all; I would not object to doubling it; I commend the Minister of Labour for the scheme of getting the camps closed and the men into useful work. But I would enlarge that tremendously; I would subsidize the putting of men to work in this country, as my hon. friend from Davenport (Mr. MacNicol) said this afternoon. I would subsidize putting them to work on reforestation. Look at the pitiful little vote for grade separation, $1,000,000. Make it $5,000,000 and do a real job; save a few lives as well as increase employment. Before this session is ended I am going to have something to say about where the money would come from; I am not at all afraid of that. This talk about where the money is to come from, when human lives are going to the devil every day for want of a bit of employment, does not frighten me. It is about time, as the Minister of Finance said the other day, to look facts in the face. There are some other facts to look in the face; this fact that we are subsidizing the Canadian Pacific as well as the Canadian National ought to be noted and well noted in this country.

By the way, the Minister of Finance made the statement the other day that we have done everything the British authorities have done except balance the budget.

Mr. DUNNING: Oh, no, no.

Mr. STEVENS: Well, I am not very far wrong. Read the words.

Mr. DUNNING: I know very well what I said.

Mr. STEVENS: All right, we will pause for a moment and find it. I am not far out, and I am quite willing to be checked, because I think it will sound quite as well in the minister's language as in mine.

Mr. DUNNING: I am quite sure of that.

Mr. STEVENS: Will the minister tell me what he did say?

Mr. FINN: The hon. member had better read it.

Mr. STEVENS: If I have time to find it, I will read it. In any case the minister said that we had done virtually all the British had done, with the exception of balancing the budget. While he is looking his statement up—

Mr. DUNNING: Let me read what I did say.

Mr. STEVENS: Yes.

Mr. DUNNING: I refer to page 2384 of Hansard. Although this is not the budget debate, I believe I should be given an opportunity to make this quotation. I suppose these and other words of mine will be duly and extensively criticized within the next few days.

Mr. STEVENS: I am not criticizing them. I am citing them as an authority.

Mr. DUNNING: The words are these:

> I am well aware that this will be called a doctrine of deflation. Indeed, I have heard it said recently that Canada has been following a policy of "heroic deflation" and that she should take a leaf out of the book of the mother country. It is not easy for me to understand how departure from the gold standard, recurring deficits, financing by borrowing, of the magnitude of these which I have outlined, and a monetary policy which has allowed the Canadian dollar to fluctuate approximately at par with the managed Sterling standard and with the devalued United States dollar and which has made possible an expansion of the country's cash base just as rapidly as that of Great Britain, can be described as deflation. More careful analysis would rather appear to indicate that in those financial matters about the only point in the British program which we have not already adopted is her policy of keeping the budget balanced.

[Mr. Stevens.]

Mr. STEVENS: That is practically what I said.

Mr. DUNNING: Oh!
