Mr. DUNNING: Well, this discussion will ensure that the department concerned will look into the possibility of any hardship as indicated by the hon. member for Kootenay East. It is a matter of regulation with respect to quantities and so forth, and a note will be made of this point.

Mr. DONNELLY: Is the druggist required to apply for a licence?

Mr. DUNNING: Yes.

Mr. DONNELLY: Is there any charge for it?

Mr. DUNNING: Two dollars per annum.

Paragraph agreed to.

4. That paragraphs (d) and (e) of section six of the said schedule, being the duties imposed upon imported leaf tobacco unstemmed and imported leaf tobacco stemmed be repealed.

Mr. BENNETT: May we have a little explanation about this?

Mr. DUNNING: The explanation is that this involves a transfer from the Excise Act to the customs tariff at precisely the same rates, for the reason that it applies entirely to an imported article. From a ministerial point of view it is considered better to have it as a customs item rather than an excise item.

Mr. STEWART: Is provision made in the customs tariff for this?

Mr. DUNNING: Yes. My right hon. friend will remember that there is a provision for preference on certain types of tobacco, such as Rhodesian tobacco of a Turkish type, and that also entails considerations which touch this matter.

Paragraph agreed to.

Paragraph 5 agreed to.

Resolution agreed to.

SPECIAL WAR REVENUE ACT

Resolved, that it is expedient to introduce a measure to amend the Special War Revenue Act, chapter one hundred and seventy-nine of the revised statutes of Canada, 1927, and amendments thereto and to provide:—

1. That part VII of the said act be amended to provide for the taxation of every change of ownership of any participating interest in the operations or profits of any association, company, corporation, fund or trust not divided into shares at the rate of one-tenth of one per cent of the value of every such participating interest so transferred or assigned.

Mr. BENNETT: Does this include devolution by operation of law, that is, either the executor or the administrator?

Mr. DUNNING: It is not desgined for that particular purpose. It is designed to tax participating interests.

Mr. BENNETT: I know what it is.

Mr. DUNNING: It will not apply to devolution of estates.

Mr. BENNETT: It usually does not, as a matter of fact. The minister knows it is not customary to impose that tax on transfers by operation of law. There are two forms of transfer, one by act of the parties and the other by operation of law. This, I take it, was originally intended to tax transfers by acts of the parties, not those by operation of law. It usually has been the practice to make an exception in respect of transmissions. I think in the other provisions of the statute transmissions are free from this tax, because they are brought about not by acts of the parties but by operation of law.

Mr. DUNNING: I am advised that there is no change in that respect.

Mr. BENNETT: Will this resolution not make the change? That is what I am pointing out. You see, "every change of ownership" is covered here.

Mr. DUNNING: That is the same phrase which is used elsewhere.

Mr. BENNETT: Is there a general clause covering it all? Undoubtedly there is a clear distinction between the two, and I think there should be a general clause if there is not. I happened to have this matter brought to my attention not long ago by someone who does not live in this country.

Mr. ILSLEY: The section dealing with the sale or transfer of stock is section 58 of the Special War Revenue Act, and it starts with the words:

There shall be imposed, levied and collected upon every change of ownership consequent upon the sale, transfer or assignment of any share of stock of any association, company or corporation—

And so on. I assume that the wording of the proposed bill will be the same, although the resolution shortens it. This is merely a resolution.

Mr. DUNNING: We will watch that point in drafting the bill.

Mr. BENNETT: "Every change of ownership" is the way it appears in the resolution.

Mr. ILSLEY: It is not intended to make any difference in principle.

Mr. BENNETT: That is why I mentioned the matter.

Mr. ILSLEY: We shall have to watch the drafting of the bill.

Mr. BENNETT: I suppose this covers syndicates and matters of that kind?

Mr. DUNNING: Yes.

Paragraph agreed to.

2. That subsection two of section seventy-seven A of the said act, as amended by section twelve of chapter fifty of the statutes of 1932-33 and amended by section two of chapter forty-two of the statutes of 1934, be further amended by providing that the excise tax on packages of cigarette paper tubes be reduced from three cents to two cents for each one hundred cigarette paper tubes or fraction thereof;

Mr. BENNETT: Why is this done?

Mr. DUNNING: It is just equalizing the papers and the tubes.

Paragraph agreed to.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

---

## Monday, May 18, 1936

The house met at three o'clock.

### CUSTOMS ACT AMENDMENT

Hon. J. L. ILSLEY (Minister of National Revenue) moved for leave to introduce Bill No. 67, to amend the Customs Act (Canadian waters).

Some hon. MEMBERS: Explain.

Mr. ILSLEY: It will be remembered that earlier in the session a bill was introduced to amend the Customs Act and that a number of sections were withdrawn. This bill is designed to serve the same purposes as it was intended those other sections would serve. This bill defines the word "officer" as used in the Customs Act and contains a definition of Canadian waters and Canadian customs waters. It imposes certain obligations on ships and masters in Canadian waters and in Canadian customs waters. It confers upon the preventive officers certain powers and defines other powers of these officers. Generally it is designed to strengthen the preventive arm of the customs service.

Mr. CAHAN: Do the definitions apply exclusively to the administration of the Customs Act, or does the bill define Canadian waters for purposes other than for the purposes of the Customs Act

Mr. ILSLEY: I do not think the terms "Canadian waters" and "Canadian customs waters" are used in any other act than the Customs Act. The terms used in other acts are such terms as these: "the territorial waters of Canada," "the waters of the territory of Canada," "the three mile limit," "the marine league," and so on. But here we are framing definitions for the purpose of use in the Customs Act.

Motion agreed to and bill read the first time.

### CARRIAGE OF GOODS BY WATER

Hon. C. D. HOWE (Minister of Marine) moved for leave to introduce Bill No. 68, respecting the carriage of goods by water.

Some hon. MEMBERS: Explain.

Mr. HOWE: Mr. Speaker, the purpose of this bill is to repeal the Carriage of Goods by Water Act of 1910, and to substitute for it an act modelled on the British Carriage of Goods Act of 1926. The United States has recently adopted the British act instead of its former Carriage of Goods Act, and there seem to be many reasons why Canada should do likewise. I may say that every shipping interest in Canada has applied to the government to take this action. The position has been accentuated by the Sarniadoc case, in which the owner was not able to collect insurance due to the insurance company taking advantage of the "seaworthy" clause in the act, although "seaworthiness" had no relation to the nature of the loss.

Motion agreed to and bill read the first time.

### QUESTIONS

(Questions answered orally are indicated by an asterisk.)

#### FARM LOAN BOARD—REGINA

Mr. PERLEY (Qu'Appelle):

With respect to question answered on April 27 last, regarding the retirement of Mr. Anderson from the farm loan board at Regina:

1. In what detail were his services not satisfactory?
2. Were any loans made through the Regina office from the first of January to the date of Mr. Anderson's dismissal?
3. If so, were they not confirmed by head office?

Mr. DUNNING:

1. The board has nothing further to add to the information previously furnished on this matter.
2. Yes.
3. A number of the loans so made were approved by head office on the recommendation of the Regina office.

VILLEMONTEL, QUE., POSTMASTERSHIP

Mr. WERMENLINGER:

1. Has the postmaster at Villemontel, Chapleau county, been discharged?
2. If so, for what reasons, and on whose recommendation?

Mr. ELLIOTT (Middlesex):

1. Removal authorized but not yet effected.
2. Unsatisfactory management; decision based on findings of district director of postal service.

FIRE WOOD EXPORTS

Mr. LALONDE:

1. How many cords of fire wood (cord wood) were exported from Canada to the United States during the months of January, February, March and April, 1935, and for the corresponding months in 1936?
2. What was the average price per cord paid by the purchasers?

Mr. EULER: 1. and 2. Canada's domestic exports of fire wood, by countries, from January 1 to April 30, 1935, with the average export value, were as under:—

| Countries | Jan. 1—April 30, 1935 Cords | $ | Average Export Value $ |
|---|---|---|---|
| United States... | 18,274 | 84,081 | 4.60 |
| Alaska.. .. .. . | 35 | 279 | 7.97 |
| Bermuda.. .. .. | 7 | 56 | 8.00 |
| Total.. .. .. | 18,316 | 84,416 | 4.61 |

Canada's domestic exports of fire wood, by countries, from January 1 to April 30, 1936, with the average export value, were as under:—

| Countries | Jan. 1—April 30, 1936 Cords | $ | Average Export Value $ |
|---|---|---|---|
| United States... | 16,914 | 72,241 | 4.27 |
| Alaska.. .. .. . | 24 | 192 | 8.00 |
| Total.. .. ... | 16,938 | 72,433 | 4.28 |

HAY EXPORTS

Mr. LALONDE:

1. What was the total number of tons of hay exported from Canada during the months of January, February, March and April, 1936, and to what countries?
2. What was the average price per ton paid by each importing country?

Mr. EULER: 1. and 2. Canada's domestic exports of hay by countries from January 1 to April 30, 1936, with the average export value, were as under:—

| Countries | Jan. 1—April 30, 1936 Tons | $ | Average Export Value $ |
|---|---|---|---|
| United Kingdom. .. | 784 | 11,670 | 14.89 |
| United States. .. .. | 2,540 | 16,968 | 6.68 |
| China.. .. .. .. .. | 14 | 267 | 19.07 |
| St. Pierre and Miquelon.. .. .. | 76 | 954 | 12.55 |
| Panama.. .. .. .. | 24 | 160 | 6.67 |
| Bermuda.. .. .. | 443 | 5,045 | 11.39 |
| British Straits Settlements.. .. | 16 | 432 | 27.00 |
| British Guiana.. .. | 4 | 78 | 19.50 |
| British Honduras. .. | 2 | 23 | 11.50 |
| Barbados.. .. .. .. | 32 | 350 | 10.94 |
| Jamaica.. .. .. .. | 33 | 311 | 9.42 |
| Other British West Indies.. .. .. .. | 2 | 10 | 5.00 |
| Hong Kong.. .. .. | 35 | 780 | 22.29 |
| Newfoundland... .. | 809 | 8,301 | 10.26 |
| Total Exports. .. | 4,814 | 45,349 | 9.42 |

FARM LOANS

Mr. FERLAND:

1. What is the total amount of the loans made to the farmers of the province of Quebec, under the provisions of the Canadian Farm Loan Act, since its coming into force to March 31, 1936?
2. What is the total amount of the loans effected in the county of Joliette-l'Assomption-Montcalm, under the provisions of the said act, during the same period?

Mr. DUNNING:

1. Loans granted.. .. .. $6,105,725.00
   Loans disbursed.. .. .. 4,617,467.52

2. The records of the Canadian Farm Loan Board are not kept by counties, and the information asked for is not now available.

TRANS-CANADA HIGHWAY

Mr. LALONDE:

1. What is the location of the proposed trans-Canada highway from Lachute, county of Argenteuil, Quebec, to Ottawa?
2. Has the location been decided by the provincial or by the federal authorities?

3. Does the highway pass or will it pass through the villages of Fassett, Montebello, Papineauville, Plaisance and Thurso, in the county of Labelle, Quebec?

Mr. ROGERS: The route of the trans-Canada highway in the province of Quebec is covered by a report of the honourable the executive council of Quebec dated October 1st, 1931, approved by the lieutenant governor on October 2, 1931; subsequently amended by a report of the honourable the executive council of Quebec dated March 24, 1933, and approved by the lieutenant governor on March 25, 1933, and further amended by a report of the honourable the executive council of Quebec dated June 7, 1933, approved by the lieutenant governor on June 8, 1933, copies of which executive orders are as follows:

(Translation)

Copy of the Report of a Committee of the Honourable the Executive Council, dated the 1st of October, 1931, approved by the Lieutenant-Governor on the 2nd of October, 1931.

Respecting the Trans-Canada Highway

The Honourable the Minister of Roads, in a memorandum dated the 1st October (1931), recommends:

That a highway running across the province of Quebec be created and designated under the name of the Trans-Canada Highway.

That such highway be constituted as follows: Highway No. 2, from the New Brunswick limit between Saint-Jacques, New Brunswick, and Sainte-Rose-du-Dégelé, province of Quebec, as far as the city of Lévis, passing through the town of Rivière du Loup, and following the riverside road between the village of Andréville and Sainte-Anne de la Pocatière.

Highway No. 3, starting from the city of Lévis as far as the intersection of Highway No. 1.

Highway No. 1, passing by the Quebec bridge, from the intersection of Highway No. 3, as far as Quebec.

Highway No. 2, starting from Quebec as far as Montreal, following the riverside road between Saint-Sulpice and Charlemagne.

Highway No. 8, from Montreal to Hull.

Certified.

(Signed) A. Morisset,
Clerk Executive Council.

---

Copy of the Report of a Committee of the Honourable the Executive Council, dated March 24, 1933, approved by the Lieutenant-Governor on March 25, 1933.

Respecting the Trans-Canada Highway, in the Province of Quebec

The Honourable the Minister of Roads, in a memorandum dated March 24, (1933), recommends that order in council No. 2510, approved on October 2, 1931, respecting the location of the Trans-Canada Highway, in the province of Quebec, be amended so that the location of that transcontinental highway, between Montreal and Ottawa, follows highway No. 8, as far as Grenville, at which point it would pass over the interprovincial bridge on the Ottawa river, and thence toward the dominion capital, on the Ontario side.

Certified.

(Signed) A. Morisset,
Clerk Executive Council.

---

Copy of the Report of a Committee of the Honourable the Executive Council, dated June 7, 1933, approved by the Lieutenant-Governor, on June 8, 1933.

Respecting the Trans-Canada Highway

The Honourable the Minister of Roads, in a memorandum dated June 7, (1933), recommends:

That the location of the Trans-Canada highway, as determined by order in council No. 2510, dated October 2, 1931, and amended by order in council No. 524, dated March 25, 1933, be further amended so as to follow the section of highway No. 2 now passing through the village of L'Assomption instead of the riverside road between Saint-Sulpice and Charlemagne.

Certified.

(Signed) A. Morisset,
Clerk Executive Council.

## QUESTIONS PASSED AS ORDERS FOR RETURNS

### DOW'S LAKE, OTTAWA, BOATHOUSE

Mr. WARD:

1. Does the federal driveway commission control the boathouse situated at Dow's lake, Ottawa?
2. What is the name of the caretaker; his salary, and when was he appointed?
3. What are the schedules of rates for boats and canoes?
4. Under what authority does the Rideau Aquatic Club, Ottawa, operate the boathouse on the Rideau canal?
5. What rent, if any, is paid?

### MANITOBA PUBLIC BUILDINGS

Mr. MAYBANK:

1. What are the number, nature, location and address of each public building in Manitoba?
2. By whom is electric power for each of such buildings supplied?
3. In how many cases is such supply of electricity under contract for a period?
4. When does such period expire and at what rate is such electricity supplied in each case?

## MOTIONS FOR PAPERS

### NEW BRUNSWICK NATIONAL PARK SITE

Mr. BROOKS:

For a copy of all correspondence, letters, agreements and other documents passing between the present government of the province of New Brunswick, or any department thereof, and the government of Canada, or any department thereof, relative to the selection of site and the establishment of a national park in the province of New Brunswick.

GARIBALDI PARK

Mr. TAYLOR (Norfolk, for Mr. McGeer):

For a copy of all correspondence, letters, telegrams and other documents passing between the government of British Columbia and others and the government of the Dominion of Canada, relating to Garibaldi park, its development and maintenance.

CANADIAN NATIONAL RAILWAYS—
VANCOUVER HOTEL

Mr. TAYLOR (Norfolk, for Mr. McGeer):

For a copy of an agreement entered into between the city of Vancouver and the Canadian National Railway Company referring to the Canadian National Railway hotel in the city of Vancouver and dated the first day of December, 1927, together with a copy of order in council No. 2214 dated the twenty-ninth day of November, 1927, relating to the said agreement.

SASKATCHEWAN FINANCING

Mr. TAYLOR (Norfolk, for Mr. McGeer) moved:

For a copy of all correspondence, letters, telegrams and other documents passing between the government of Saskatchewan, the government of the Dominion of Canada and the Bank of Canada, or any member or representative thereof, relating to the financial position of the province of Saskatchewan and the financing of the liquidation of debts of the said province of Saskatchewan, maturing on or about the first day of May, A.D. 1936.

Mr. DUNNING: Mr. Speaker, I think I should make a reservation in connection with the passing of this resolution, inasmuch as correspondence between the Bank of Canada and other parties is mentioned. I feel quite sure the house will desire to accept the principle that the Bank of Canada must be the judge in all cases whether it is in the public interest or proper for correspondence with the bank to be produced. In the present case I cannot see any objection whatever to producing the correspondence which passed, but I think it rather important to make reference to this as a matter of general principle.

Motion agreed to.

## BUSINESS OF THE HOUSE

ASCENSION DAY AND VICTORIA DAY
ADJOURNMENTS

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That when this house adjourns on Wednesday, 20th May, it stand adjourned until Friday, 22nd May, and when it adjourns on Friday, 22nd May, it stand adjourned until Tuesday, 26th May, instant.

He said: Mr. Speaker, as far as I have been able to ascertain there are a number of hon. members who do not wish the house to sit on Ascension day. There are also a large number who do not wish the house to sit on Victoria day. I have been told that a good many were ready to sit on one day or the other, but practically none ready to sit on both days. Everything considered it would seem to come nearer to meeting the general views of the house if the motion were permitted to stand as it is worded, and I hope the house will find it possible to accept it as it is.

Right Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, in view of what the right hon. gentleman said on Friday last, that "if it should appear after consultation between the whips that it is the wish of hon. members that the house should sit on either of those days, or on both, so far as the government is concerned we shall be glad to be governed accordingly." I have discussed the matter with those with whom I am associated and we think we should sit on both days rather than adjourn, because to adjourn would break two weeks, and one of them in a most unsatisfactory way. To meet on Tuesday is a very unsatisfactory method of dealing with the situation. So far as Ascension day is concerned, to some members of the house it is a day of religious obligation, but the house does not meet until three o'clock, and if they do not desire to attend on that day there will be no difficulty on that score. In view of the fact that to adjourn over Monday means beginning next week on Tuesday, which will be very inconvenient for a number of our members, we think perhaps the best purpose would be served if we sat on both days. Obviously, however, if the government has decided that the motion shall pass in the form in which it is, that is the end of it.

Mr. MACKENZIE KING: May I say that the view I expressed is the one I ascertained from the government whip, who, I understood, had been in conference with the whips of all other parties in the house. As to sitting on Ascension day, the government took account of the view expressed by the leader of the opposition when the question was before him on May 8, 1934. I quote from Hansard of that day:

Right Hon. R. B. Bennett: In 1912 the house was in recess on Ascension Day. In 1913 and 1914 it did not sit on that day. In 1915 and 1916 it was in recess. My information is that on Ascension Day there was no sitting in 1917, 1918, 1919, 1920, 1921, 1922, 1923, 1924, 1925 or 1926. In 1927 the house was in recess. In 1928 and 1929 there was no sitting. In 1930 the house sat on May 29. In 1931 the house sat on Ascension Day, and it will be recalled that there was some protest against its sitting. In 1932 it did not sit, and last year we sat in order that the business might be concluded so that I might attend the conference in London. Under these circum-

stances my intention is to move to-morrow that when the house adjourns to-morrow, it stand adjourned until Friday at three o'clock.

So that as late as 1934, for the reasons mentioned, the right hon. leader of the opposition thought it was advisable not to sit on Ascension day. In 1935 also, which was last year, the house did not sit on Ascension day. Seeing that such has been the practice, and as apparently we are not immediately near the end of the session, the government has thought it advisable that we should not sit on Ascension day. As to Victoria day, the objection to sitting on that day has usually come from hon. gentlemen opposite; it was made quite vigorously on some previous occasions. The government has also had that in mind in hoping that the house would accept the resolution in the form in which it is expressed.

Mr. BENNETT: I am quite aware of what was said in 1934, but the reason I directed attention to the matter in the terms I did was that the Prime Minister on Friday last mentioned that the government had no views on the matter and were quite willing to sit on either or both of the days in question, and I thought probably it had been discussed before he made that statement. In view of what he has now said, it would appear that it is thought desirable by the government that we should not sit on either day, and that is the end of it.

Mr. MACKENZIE KING: I just wish to say to my right hon. friend that I thought the government whip's word had probably covered his party.

Mr. BENNETT: The whips tell me that what I say is exactly what they say. I consulted the whip, and he tells me the statement I made is exactly the view I was asked to present.

Mr. MACKENZIE KING: Unfortunately it does not cover all the other members of the house.

Mr. BENNETT: No.

Mr. WOODSWORTH: I think that so far as the group in this corner is concerned we should prefer to sit right through.

Motion agreed to.

## CANADIAN NATIONAL RAILWAYS

### APPLICATION OF CANADIAN PACIFIC FOR PROVINCIAL CHARTER FOR ANGLIERS-NORANDA-CHIBOUGAMAU LINE

On the orders of the day:

Mr. RALPH MAYBANK (Winnipeg South Centre): Is the Minister of Railways (Mr. Howe) aware of an attempt being made at the present time by the Canadian Pacific Railway to enter the mineral area of north Quebec at present served only by the Canadian government railways, national transcontinental line, by building a line from Angliers into Noranda, and thence easterly paralleling the national transcontinental and crossing it in a northerly direction, and proceeding to lake Chibougamau, the whole of which territory is at present tributary to the Canadian National Railways transcontinental line? If so, will the minister declare that such action by the Canadian Pacific Railway is in breach of both the terms and the spirit of the Canadian National-Canadian Pacific Railway Act, which enjoins a policy of cooperation between Canada's two main railway systems; and will the minister take steps to prevent, or endeavour to prevent, such action by the Canadian Pacific Railway with a view to continuing to retain the territory for service by the Canadian National lines which have spent many millions of dollars in pioneering and opening up this highly mineralized area?

Hon. C. D. HOWE (Minister of Railways and Canals): The government is aware that the Canadian Pacific Railway Company have made application to the legislature of Quebec for a charter to build a line as described by my hon. friend. The Canadian National Railways inquired as to the views of the department, and we have instructed the railway to represent the position of the Canadian National Railways as to the granting of a charter. Whether this is a violation of the Canadian National-Canadian Pacific Railway Act is a matter of argument. It may be observed that this would bring a third railway into Noranda, which is now served by the Canadian National and Timiskaming and Northern Ontario railways.

Hon. H. H. STEVENS (Kootenay East): Following that question, may I direct a question to the Minister of Justice? This is a matter of law, and I do not pretend to have any right of judgment in my own mind on the subject; I put it as a layman. Is it competent for a corporation whose work has been declared to be for the general advantage of Canada, and which is thus brought within the jurisdiction of parliament, to achieve its wishes by avoiding an application to parliament and seeking the incorporation of its project by means of a provincial charter, although the incorporators are members of the staff of a federal corporation? Does that proceeding violate the principles of law which govern a federal corporation?

Hon. ERNEST LAPOINTE (Minister of Justice): Will my hon. friend allow his question to remain as notice?

Mr. STEVENS: Certainly.

## RELIEF CAMPS

### AGREEMENT BETWEEN GOVERNMENT AND RAILWAY COMPANIES RESPECTING MAINTENANCE WORK

On the orders of the day:

Mr. ANGUS MacINNIS (Vancouver East): I understand that men from the relief camps have begun work on railway maintenance. I should like to know whether the agreement between the railway companies and the government has yet been placed on the table, or is ready to be placed on the table of the house?

Hon. C. D. HOWE (Minister of Railways and Canals): The agreement has not been completed. As soon as it is completed and returned it will be placed on the table.

Mr. PELLETIER: On the same subject, may I ask whether the government has entered into any agreement with the Northern Alberta Railways with the same purpose in view?

Mr. HOWE: No special arrangement has been made with the railway in question, but as it is jointly owned by the Canadian Pacific and the Canadian National, there will be no difficulty about extending the arrangement to that territory if the railways wish to do so.

## WAYS AND MEANS

### SPECIAL WAR REVENUE ACT AMENDMENT

The house in committee of ways and means, Mr. Sanderson in the chair.

3. That the rate of consumption or sales tax imposed by section one of section eighty-six of the said act, as enacted by section eleven of chapter fifty-four of the statutes of 1932, be increased from six per cent to eight per cent.

Mr. DUNNING: I have a proviso dealing with a matter which has been the cause of difficulty in the past. Paragraph 3 is to be amended by adding the following words:

Provided that if any manufacturer or producer has prior to the first day of May, one thousand nine hundred and thirty-six made a bona fide contract for the sale of goods to be delivered after the eight per cent rate comes into force, and if such contract does not permit the adding of the whole of the eight per cent tax to the amount to be paid under such contract, then so much of the tax as may not under such contract be added to the contract price shall be payable by the purchaser to the vendor and by the vendor to His Majesty, but in case the vendor refuses or neglects to collect such tax from the purchaser the vendor shall be liable to His Majesty for the payment of such tax.

I think I am correct in saying that in amending the sales tax in 1931 a similar problem arose which was dealt with in a similar manner. It is in order to provide for bona fide contracts entered into prior to the first of May, the delivery of which was not to be consummated until after the first of May.

Mr. STEVENS: I tried to follow the reading of this technical amendment, but I am not quite clear on it yet. Will it cover a case of this kind: Assume that some large distributing body, anticipating an increase in the sales tax, placed large orders in the month of April with instructions that the invoices should be made out and sent to the purchaser as part of the April sales; the purchaser paid for the goods on April account, but the goods were not delivered until some subsequent date, perhaps in August or September. Would this amendment protect the revenue against such an evasion?

Mr. DUNNING: Yes. The commissioner advises me that the tax is exigible at the time of delivery of the article, and of course my hon. friend will see at once that the amendment is designed to deal with cases which might be based upon foreknowledge of the kind he has indicated. It provides that those attempting to take advantage of such a situation will not be able to do so. That is the intention.

Mr. STEVENS: I have just one more question on the point, or perhaps it is more in the way of a suggestion. This may be covered in the regulations or by the practice of the department at the present time, but I am not quite certain; therefore I will put it in the form of a question. Is it the practice of the department to insist that shipping receipts as well as invoices shall form part of the documents on which the tax is calculated?

Mr. DUNNING: The auditors of the department examine the shipping documents, which are necessary to prove delivery.

Mr. STEVENS: Therefore the goods must be shipped before May 1?

Mr. DUNNING: Yes. The opinion of the department is that this amendment places it beyond doubt.

Mr. ISNOR: I should like to ask the minister a question in regard to contractors who have entered into contracts—

Mr. DUNNING: This is intended to cover that situation also.

Mr. ISNOR: Even subcontracts, which have not yet gone into effect? The general contract, I assume, will cover all subcontracts that might be entered into in connection with the building?

Mr. DUNNING: If the contract is a bona fide one, entered into before the first of May, for completion or delivery after the first of May, the amendment covers it.

Mr. ISNOR: The general contract would have been entered into before May first, but the subcontracts have not been let in all cases.

Mr. DUNNING: I am not sure of that.

Mr. CAHAN: Am I right in construing this amendment to mean that the additional two per cent must be paid in any event, either by the vendor if he is liable under his contract, or, if not, then by the vendee?

Mr. DUNNING: Yes.

Mr. CAHAN: That is the idea?

Mr. DUNNING: Yes.

Mr. CAHAN: It assumes that any contract of sale will be made in view at the least of the present six per cent sales tax, and the only doubt that might remain is with regard to the additional two per cent. In certain cases, under this resolution, that additional tax must be paid by the vendor, but in all other cases it must be paid by the vendee. It is to safeguard the collection of that additional two per cent, in any event?

Mr. DUNNING: That is it. There is just a point in connection with the question of the hon. member for Halifax (Mr. Isnor), who mentioned the case of a subcontract which was not entered into prior to the first of May. I am told that if the subcontract was entered into after the first of May, obviously the contracting parties would take cognizance of the fact that the eight per cent sales tax applied at that time. I cannot make any answer other than that.

Mr. BENNETT: There is another set of circumstances that I think must be considered, such as the class of case that was dealt with by the government of which the hon. gentleman was a member in connection with Mr. Dixon and the merchants, which my hon. friend may recall. A number of purchasers of automobiles in Calgary and other western cities made contracts for delivery as soon as possible. The automobiles were loaded on cars and were actually in transit on their way west at the time the act came into force. The contracts were made on the basis of the payment of six per cent. Are they to be liable for six per cent or eight per cent? It would seem to me that the general principle acted upon by governments heretofore has been to hold them liable for six per cent only. Hon. members will recall that on a former occasion we voted a large sum of money, on what I conceived to be very doubtful grounds, for the purpose of reimbursing those who had been dealt with harshly by a sudden and unexpected change in the sales tax. What I have in mind is goods that had left the factories and were moving towards destination. I understand that under its terms the contract was complete; delivery was made when the goods were put on the cars; they are then at the risk of the purchaser, no longer at the risk of the vendor, and in the contract the sales tax to be paid was at the rate of six per cent. That is the whole basis of the contract. Is the rate now to be eight per cent in respect of these particular goods? It is a matter of much importance to many people who have to depend upon the movement of traffic taking eight or ten days. I know the minister has received a considerable number of communications with respect to matters of this kind; copies of them have been sent to me.

Mr. DUNNING: I hope not all of them.

Mr. BENNETT: No, I should think not all of them; it would be an entire misconception of my duties if they were. At any rate I think they have a fairly sound case, in view of what was done on a previous occasion by the government of which the hon. gentleman was minister of finance, when we voted a very large amount, I forget how much, to reimburse those who had paid a sum in excess of that mentioned in the contract that they had made with their vendor.

Mr. DUNNING: It was the luxury tax—a slightly different matter.

Mr. BENNETT: Well, a tax that was changed suddenly. The two have this feature in common, that they involve consideration of a contract made between a vendor and a purchaser under which a given tax was to be paid. It does appear to be rather difficult to say that because certain purchasers live at some little distance and cannot get their goods for ten days or so from time of shipment, those who live nearer to the point of shipment and got their goods the night before May 1 will be protected, whereas those who are in Vancouver, Calgary, Edmonton, Saskatoon, Regina, or west of the lakes, Winnipeg, will have to pay an additional two per cent, although the contract was executed and the liability for the purchase price complete. They are bound to accept the draft with bill of lading attached, because the goods are at their risk from the time they are put on the cars.

Mr. DUNNING: My right hon. friend touches on what he knows is one of the most difficult matters in the administration of this tax. I hope he will not mind my stating that the precedent of the old luxury tax to which he refers is scarcely a parallel, for this reason; that the removal of the luxury tax immediately lowered the value of every car on every dealer's floor in Canada. Also I have rather a good precedent for the course we are following now in that it was taken previously by my right hon. friend's government. On the basis of the information which I have from the department, delivery is made in law the point of imposition of the tax, and it is the department's view that cars in transit, draft against bill of lading, when the sales tax increase came into effect had not been "delivered to the purchaser" within the meaning of the terms of the statute. Where delivery to a common carrier was made without lien, c.o.d. or draft against bill of lading, the department has regarded delivery as having been made. In former years when the sales tax rate was decreased the automobile companies claimed that the ownership in the cars in transit, draft against bill of lading, had not passed to the customer, and that the lower rates applied. The department acquiesced in that view and accepted the reduced taxes on succeeding reductions, and it is not thought that when the tax rates are going up a different view should be taken of cars in transit under substantially similar conditions. Progressively as the sales tax came down the view accepted here was that taken by the automobile companies and acquiesced in by the department. Surely the rule should work both ways, and that is the principle on which we are proceeding in the proposal now before the committee.

Mr. KINLEY: In this country those who are on the coasts are in this position, that goods take quite a time in transit from central Canada. All cars are shipped draft against bill of lading. The automobile companies sent out telegrams to the banks to refuse the documents unless the buyers paid the extra sales tax. Evidently, therefore, they had interpreted it as the minister says.

Mr. DUNNING: That at least proves that the cars were still in the control of the vendors.

Mr. KINLEY: The question is, what constitutes delivery. Is it delivery to the transportation company, or delivery to a retailer in Nova Scotia?

Mr. DUNNING: It is purely a legal question. I am only asking on the part of the department that the same rule apply when the sales tax goes up as applied when it was coming down.

Mr. BENNETT: That is not quite accurate. The question whether delivery has been made is a mixed question of fact and of law. The first thing is to ascertain the fact, and that depends on the terms of the contract. In law, delivery may be made to a common carrier and can be complete. The Sale of Goods Act in any province covers that, and it is uniform now in practically every province. There are cases where although delivery has passed to the purchaser the vendor's lien attaches until the draft has been paid. But usually in cases where delivery to a common carrier constitutes delivery to purchaser, the bill of lading and draft are sent through the bank, and the right to secure the bill of lading depends upon the payment of the draft. But there is of course always the vendor's lien which attaches, and that vendor's lien is available for the unpaid purchase price in case of insolvency or matters of that kind. The test, however, is a test of mixed fact and law, depending in the first instance, as I say, upon the terms of the contract. The rules as to testing delivery are laid down in the sale of goods acts. They are somewhat complicated and I shall not refer to them now, because it would be a waste of time to discuss here a question of law of that kind. But all the great cases over which difficulties have arisen have been cases in which the question was raised whether or not delivery had been complete, and I say to the minister, notwithstanding what he has read, that in many cases provision has not been made for the exceptions. I think the Department of Justice or any of the legal men connected with the department will tell him that delivery may be made by the vendor to the purchaser by delivering to a common carrier if the terms of the contract contemplate that being done. That is the question of fact which is not determined; it can be determined only by the auditors. I know of cases frequently in my own experience in which draft was made with bill of lading attached; then when the car reached the particular point the purchaser went to the bank, and he was not given the right of inspection by the bank, although as a matter of law he has the right to inspect the goods for the purpose of seeing whether or not they are conformable to contract. If they are not, he has the right of rejection, despite the fact that delivery as between himself and the vendor has been made to the common carrier. But usually the draft is accepted and paid upon the bill of lading being taken up by the purchaser. That is the case I have in mind, about which telegrams have been sent. The purchasers have incurred the liability and must pay the draft when they take the bill of lading. Their

contract was for cash on delivery, with the six per cent sales tax, and that is the reason the price of automobiles in some places has increased to some extent—the sales tax has been increased from six to eight per cent, involving an additional two per cent on the purchase price of the commodity.

That is the case with which I am trying to deal. I was not sure how it had been covered by the late government, but I think in some cases, where the facts reported by the auditors conformed to what I have said, rebates were made. However, I am not sure about that; the commissioner of excise will be able to tell us. The minister will see that if the contract is complete, and the risk is no longer that of the vendors, even if the insurable interest in the property has passed to the purchaser, then it is quite clear on that set of facts that we are putting an intolerable burden on the purchaser when we compel him to pay an additional two per cent. In a country the size of this it is extremely difficult, and I believe—I speak subject to correction—that in some instances, where the facts have been as I have indicated, adjustments have been made. Obviously there would be no necessity to make an adjustment where the facts are that the risk is that of the vendors, and that in point of law there has been no delivery. But I do say to the minister that under the Sale of Goods Act the question of delivery is complicated, depending primarily upon the set of facts which, of course, we have not before us at this time. But I desire to deal with the set of facts which must necessarily arise, where the vendor has no further interest in the property except in the payment of the bill of exchange which he has drawn upon the purchaser. That bill of exchange must be paid before the bill of lading can be taken away and the goods possessed by the purchaser.

There is a clear distinction between delivery in law and delivery as an expression indicating a change of possession. The old statement about possession being nine points of the law arises because possession is always regarded as one of the greatest possible factors in determining whether or not delivery has been completed. But there may be delivery—that is, in which there has been no change of possession—if possession has been given to a common carrier. That is dealt with in our Sale of Goods Act. If delivery is referable to a contract, and the facts are as I have indicated, then the vendor has no longer any interest in the subject matter of the contract, beyond payment of the draft, which must be paid before the bill of lading, the document of title, can be delivered to the purchaser.

[Mr. Bennett.]

When the bill of lading has been handed over to the purchaser on payment of the draft, then that factor in delivery known as possession is complete, and he has possession as well as the right to possession which he has under his contract. This constitutes delivery in point of law. That is the case I am trying to make clear to the minister.

Mr. ILSLEY: I do not know whether I can add much to the discussion, but my recollection of the principles applicable is somewhat different from that indicated by the leader of the opposition. My understanding of delivery is that it means a change of possession. Ordinarily a change of possession from vendor to purchaser takes place when the vendor delivers the goods to the carrier, who, in the absence of any special or extraordinary circumstances, is presumed to be the agent of the purchaser.

Mr. BENNETT: That is constructive possession.

Mr. ILSLEY: Yes, that is constructive possession. But when the vendor sells to a purchaser and retains control over the goods by attaching to the bill of lading the draft for the purchase price, then he retains a lien upon the goods. In that instance the carrier is not the agent of the purchaser but is the agent of the vendor, and the goods are still in the vendor's possession. It would be inconsistent with a vendor's lien if the goods were out of the vendor's possession, because the vendor's lien is a possessory lien and depends upon possession before it can be exercised. The point at which the tax attaches is the point of delivery. In the case we have in mind, where the draft is attached to the bill of lading, change of possession does not take place until the draft is paid and the documents are delivered to the consignee. Therefore the rate of tax applicable at that time is the proper rate of tax, and the rate we have to collect. It may be that the question as to who has the risk is somewhat different; that is to say, the goods may nevertheless be at the risk of the purchaser, even though they are in the possession of the vendor or the vendor's agent. That is a matter of agreement between the vendor and the purchaser. I must admit I have not looked at the cases, nor have I read carefully the Sale of Goods Act—

Mr. BENNETT: Neither have I.

Mr. ILSLEY: But I believe that that must have been the view accepted by the department when some years ago it was put forward, as it must have been, by car manufacturers and dealers.

Mr. BENNETT: Of course it applies to more than automobiles.

Mr. ILSLEY: Yes, it applies to other commodities.

Mr. CAHAN: Does the minister assert that a vendor's lien cannot be retained and asserted after the commodity has passed into the real or constructive posesssion of the vendee?

Mr. ILSLEY: Yes; in that case it would not be a vendor's lien; it would be a lien by agreement, because a vendor's lien is always a possessory lien.

Mr. CAHAN: I differ from the minister. I have asserted vendors' liens where the vendor held constructive possession as agent for the vendee.

Mr. ILSLEY: It must have been by agreement.

Mr. CLARK (York-Sunbury): Does the retailer who has to pay the additional two per cent lose that amount, or could the minister say who would lose it—the customer or the retailer? Can the customer be charged the two per cent?

Mr. DUNNING: Of course that is a matter of agreement, but the principle is that it is collected from the purchaser.

Mr. CLARK (York-Sunbury): Can it be collected from him?

Mr. DUNNING: It would depend upon the nature of the agreement between the vendor and the purchaser.

Mr. BENNETT: But it is passed on to the customer. The hon. member is asking whether the consumer will ultimately pay the extra amount. It is ultimately paid by the consumer, because it is passed on to him by the retailer, who in law has a right to do so.

Mr. KINLEY: Cars are sold on signed orders to deliver at certain prices. Is it clear that notwithstanding the contract, the vendor has the privilege to collect the extra two per cent from the person who buys the automobile?

Mr. BETTS: I should like to remind the minister of a principle with which he is no doubt familiar. It is that in construing any taxing measure or a measure imposing a tax, generally speaking the construction most favourable to the person taxed should be adopted. It seems to me that the fact that when the shoe was on the other foot, namely when the tax was going down, the department adopted a method of dealing with the situation which I must frankly say seems to me to have been a wrong one, cannot be a strong argument for the procedure they propose to adopt at this time, because it simply means that because one set of people were in the past relieved of a tax, now a new and entirely different set will have to suffer one.

Mr. DUNNING: It is not a matter of construction; it is a matter of the claim made at that time by the automobile industry as to what constitutes delivery within the meaning of the law. Surely that which constitutes delivery within the meaning of the law does not change as a tax goes up or down. It is a question of fact. I do not speak as a lawyer, and I must confess I cannot follow all the arguments of hon. members, but surely there can be no change in what constitutes delivery. That was the argument at the time, and my hon. friend will recognize the distinction between that and the construction of the law contracts. There is no question of construction at all; it is a question of what constitutes delivery.

Mr. ISNOR: Did both buyer and seller expect that there was going to be some change in the sales tax?

Mr. MacNICOL: Has the minister any figures to give the committee indicating that the revenue lost as a result of lower duties under the trade agreement and under the budget will be recovered by the increase in the sales tax?

Mr. DUNNING: I do not think my hon. friend is serious in asking that question. If it is any comfort to him I may tell him that there has been no lessening in revenue due to the causes he indicates.

Mr. BENNETT: There has been a decrease in customs duties but an increase in the value of imports. The rule laid down in the Sale of Goods Act of Ontario is as follows:

17. Where there is a contract for the sale of unascertained goods, no property in the goods is transferred to the buyer unless and until the goods are ascertained.

18.—(1) Where there is a contract for the sale of specific and ascertained goods, the property in them is transferred to the buyer at such time as the parties to the contract intend it to be transferred.

(2) For the purpose of ascertaining the intention of the parties regard shall be had to the terms of the contract, the conduct of the parties and the circumstances of the case.

19. Unless a different intention appears, the following are rules for ascertaining the intention of the parties as to the time at which the property in the goods is to pass to the buyer:—

(a) Rule 1.—Where there is an unconditional contract for the sale of specific goods in a deliverable state, the property in the goods passes to the buyer when the contract is made and it is immaterial whether the time of payment or the time of delivery or both be postponed.

(b) Rule 2.—Where there is a contract for the sale of specific goods and the seller is bounds to do something to the goods for the purpose of putting them into a deliverable state, the property does not pass until such thing be done, and the buyer has notice thereof.

(c) Rule 3.—Where there is a contract for the sale of specific goods in a deliverable state, but the seller is bound to weigh, measure, test or do some other act or thing with reference to the goods for the purpose of ascertaining the price, the property does not pass until such act or thing be done and the buyer has notice thereof.

(d) Rule 4.—When goods are delivered to the buyer on approval or "on sale or return" or other similar terms, the property therein passes to the buyer:

(i) When he signifies his approval or acceptance to the seller or does any other act adopting the transaction;

(ii) If he does not signify his approval or acceptance to the seller but retains the goods without giving notice of rejection, then if a time has been fixed for the return of the goods, on the expiration of such time, and, if no time has been fixed, on the expiration of a reasonable time. What is a reasonable time is a question of fact.

(e) Rule 5.—(i) Where there is a contract for the sale of unascertained or future goods by description, and goods of that description and in a deliverable state are unconditionally appropriated to the contract, either by the seller with the assent of the buyer, or by the buyer with the assent of the seller, the property in the goods thereupon passes to the buyer. Such assent may be expressed or implied, and may be given either before or after the appropriation is made.

(ii) Where, in pursuance of the contract, the seller delivers the goods to the buyer or to a carrier or other bailee (whether named by the buyer or not), for the purpose of transmission to the buyer, and does not reserve the right of disposal, he is deemed to have unconditionally appropriated the goods to the contract.

That is step number one. There is a section dealing with goods deliverable to order of seller, and then comes the section dealing with the performance of the contract. Section 26 reads:

26. It is the duty of the seller to deliver the goods and of the buyer to accept and pay for them in accordance with the terms of the contract of sale.

27. Unless otherwise agreed, delivery of the goods and payment of the price are concurrent conditions, that is to say, the seller must be ready and willing to give possession of the goods to the buyer in exchange for the price, and the buyer must be ready and willing to pay the price in exchange for possession of the goods.

There are then five rules laid down as to what constitutes delivery in the absence of a contract, where no time for delivery is fixed, where the goods are in possession of a third person, and where there is a demand for or tender of delivery. It gets down to the simple, single point, as the minister has said, that the contract determines the principles of law to be applied. Section 31 reads:

31. (1) Where, in pursuance of a contract of sale, the seller is authorized or required to send the goods to the buyer, the delivery of the goods to a carrier whether named by the buyer or not, for the purpose of transmission to the buyer, is prima facie deemed to be a delivery of the goods to the buyer.

(2) Unless otherwise authorized by the buyer, the seller must make such contract with the carrier on behalf of the buyer as may be reasonable, having regard to the nature of the goods and the other circumstances of the case. If the seller omits so to do, and the goods are lost or damaged in course of transit, the buyer may decline to treat the delivery to the carrier as a delivery to himself or may hold the seller responsible in damages.

Rules are then laid down as to examination. I mentioned a moment ago that I was a little uncertain in this regard. Section 33 reads:

33. (1) Where goods are delivered to the buyer which he has not previously examined, he is not deemed to have accepted them unless and until he has had a reasonable opportunity of examining them for the purpose of ascertaining whether they are in conformity with the contract.

(2) Unless otherwise agreed, when the seller tenders delivery of goods to the buyer, he is bound, on request, to afford the buyer a reasonable opportunity of examining the goods for the purpose of ascertaining whether they are in conformity with the contract.

Vendors' liens are covered by the statute. Section 37 reads:

37. (1) The seller of goods is deemed to be an "unpaid seller" within the meaning of this act—

(a) when the whole of the price has not been paid or tendered;

(b) when a bill of exchange or negotiable instrument has been received as conditional payment, and the condition on which it was received has not been fulfilled by reason of the dishonour of the instrument or otherwise.

(2) In this part of this act the term "seller" includes any person who is in the position of a seller, as for instance, an agent of the seller to whom the bill of lading has been endorsed, or a consignor or agent who has himself paid or is directly responsible for the price.

I do not like to take up the time of the committee, but the next section deals with the rights of unpaid seller. It reads:

38. (1) Subject to the provisions of this act and any statute in that behalf, notwithstanding that the property in the goods may have passed to the buyer, the unpaid seller of goods, as such, has by implication of law—

(a) A lien on the goods or right to retain them for the price while he is in possession of them;

(b) In case of the insolvency of the buyer, a right of stopping the goods in transitu after he has parted with the possession of them;

(c) A right of resale as limited by this act.

(2) Where the property in goods has not passed to the buyer the unpaid seller has, in addition to his other remedies, a right of withholding delivery similar to and coextensive with the rights of lien and stoppage in transitu where the property has passed to the buyer.

The next section deals with unpaid seller's lien: I speak subject to correction, but I recall that in connection with certain types of goods this difficulty arose and adjustments were made, which it seems to me was but reasonable. The terms of the contract govern and there is no analogy between the scaling down or the lifting up of the sales tax. That does not affect the terms of the contract. If a person in Calgary bought a carload of sugar at the refinery in Vancouver and it was paid for on the basis of the six per cent sales tax, that is, entered in the books and settled on that basis, a certain set of conditions would arise. The carload of sugar might leave Vancouver and reach Calgary with the bill of lading and draft, including the six per cent tax, drawn upon the purchaser. The purchaser might accept and pay the draft on May 5, and it is a little difficult to see why he should be liable for another two per cent even though his goods had not been delivered. They were in the possession of the carrier which was his agent for the purpose of delivery, delivery being complete when the refinery loaded the goods on to the car for Calgary. I have been pressed to bring this point to the attention of the minister as strongly as I could, because it is felt that this would be unfair. For instance, the same condition of affairs would not arise in connection with the delivery of a carload of sugar from Montreal to Toronto.

Mr. DUNNING: I have complaints in regard to that class of transaction.

Mr. BENNETT: If a carload of sugar was ordered from Montreal by a merchant in Toronto on the 29th day of April, and paid for, the goods would actually be in Toronto and the bill paid on the first of May, and that would be the end of it; but because of the long distance hauls in western Canada the purchaser would find himself in a different position. I am asking whether they have ever dealt with these matters in that way. I thought they had, but I may be entirely in error as to that. If they have, I think these are cases in which there would have to be an analysis of the auditors of the facts in each case, but I do recall one case in connection with sugar. The purchase had been completed and the goods appropriated to the contract and put away in a particular warehouse and paid for, including the sales tax, and I remember that the officers were clear that there was no further tax payable with respect to these goods that had been appropriated to that contract before the tax on sugar became effective.

Mr. KINLEY: Mr. Chairman, I take it that the minister or the department has decided that goods in transit are liable to the tax, and that that would apply to automobiles. It takes seven to fourteen days for an automobile to be carried to Nova Scotia by rail, and for the sake of clarity I would like an answer to the question I asked a moment ago. This is the selling season for automobiles; many have been sold, and dealers have made contracts with people in Nova Scotia to deliver automobiles at a certain price. In the meantime the sales tax has been increased to eight per cent. Does the imposition of that additional tax confer, independent of anything else, upon the vendor the right to collect the extra sales tax from the purchaser, notwithstanding anything contained in the contract?

Mr. ILSLEY: If the dealer has agreed to sell the automobile at a certain price he cannot go back later and charge the purchaser a higher price.

Mr. BENNETT: He takes a chance.

Mr. ILSLEY: Yes.

Mr. KINLEY: Then it is clear that the automobile dealer must pay this tax, and not the person who buys the automobile?

Mr. ILSLEY: It is a matter between him and the manufacturer as to who bears the burden of the tax. The government looks to the manufacturer, not to the dealer, for the tax.

Mr. KINLEY: He has protected himself by sending out telegrams advising the bank not to deliver the bills of lading until he gets the extra two per cent.

Mr. DUFFUS: I am inclined to agree with the views expressed by the hon. member for York-Sunbury (Mr. Clark) and the hon. member for Queens-Lunenburg (Mr. Kinley). I have had twenty-five years' experience selling automobiles, and I know that once a dealer takes a signed order from a customer it is absolutely impossible to get any further sum of money from him, no matter whether it is sales tax or anything else. I think this is going to be a decided hardship on the dealers who had made many bona fide sales before the extra two per cent sales tax went into effect. It will mean just the difference between success and failure for some of them this year. I think some arrangement should be made whereby such dealers will be pro-

tected. Perhaps the dealer might make an affidavit that these cars have been actually sold, and that as a result of the new tax he has sustained a loss, and he could be given a rebate. May I say that in all my experience, I have never known a dealer to collect an extra amount after the order had been signed.

Mr. MacLENNAN: I know cases in Sydney, Nova Scotia, where the dealer sent in an order to the manufacturers for a certain number of cars, and at that time the sales tax was six per cent. After he signed the order he went out on the highways and byways of Nova Scotia to sell those cars, by description, of course, naming a certain price. He sold them, but before they actually arrived in Sydney there was an increase in the sales tax. It is an easy matter for a dealer who has not sold a car to add the two per cent tax, but many cars have been sold at a fixed price and delivered after the sales tax was increased, and as it is now if the dealer does not pay that extra two per cent he cannot make a sale. I think some arrangement should be made for compensating the dealer. I know the difficulties of the minister, but at the same time it is very hard on some of the dealers in Sydney. They have taken orders for cars and made their bargains in the spring. I was told that one dealer in Sydney would go to the wall in consequence. Possibly that is an exaggeration, but at all events it does work a hardship, and I hope the minister will see his way clear to making some arrangement to avoid it.

Mr. DONNELLY: Nine out of ten sales of automobiles are just an exchange with an additional $100, $200 or $300 paid over. Does the department collect the sales tax on the old automobile?

Mr. DUNNING: No.

Mr. DONNELLY: Then the old automobile is increased in value by the amount of the sales tax. The man who sells his old automobile gets an increased price for it.

Amendment agreed to.

Paragraph as amended agreed to.

Mr. BENNETT: Will the minister between now and the time the bill comes up in committee look into this matter? Everything that has been said by other members of the committee I should like also to have said in connection with the difficulties that are going to arise for the dealer. There must be a bill founded on this resolution, and between now and the committee stage of that bill the minister will have an opportunity to look into it and see whether it is desirable, by any appropriate words, to provide against a situation which undoubtedly will work a very great hardship on a large number of people.

Mr. ILSLEY: Yes, I will agree to look into it.

Mr. BENNETT: That is all one can ask at the moment.

4. That schedule I to the said act, as amended by section twenty-six of chapter fifty of the statutes of 1932-33, and by section six of chapter thirty-three of the statutes of 1935, **be further amended** by repealing section one thereof and substituting the following:—

1. Automobiles adapted or adaptable for passenger use:—

(a) valued at not more than six hundred and fifty dollars, free.

(b) valued at more than six hundred and fifty dollars, on the amount in excess of six hundred and fifty dollars, 5 per cent.

Provided that the tax collected under paragraph (b) above shall in no case exceed two hundred and fifty dollars per automobile.

Provided further that the tax shall not apply to automobiles imported:—

(a) under customs tariff items 702, 706, 707 and 708;

(b) by a bona fide settler on a first arrival;

(c) by a beneficiary resident in Canada, under the terms of a will of a person dying in a foreign country.

Mr. DONNELLY: As regards the phrase "valued at not more than six hundred and fifty dollars," is that the wholesale value at the factory or the wholesale value out in the country plus the freight?

Mr. DUNNING: The manufacturer's value.

Mr. DONNELLY: The manufacturer's value where?

Mr. DUNNING: At the factory.

Mr. DONNELLY: That is the wholesale price?

Mr. DUNNING: Yes.

Mr. NEILL: Should not subsection (c) read, "under the terms of a will or intestacy of a person dying in a foreign country"? If a man succeeds to an automobile by intestacy he is entitled to it the same as though he succeeded to it under a will, is he not?

Mr. DUNNING: If there is any necessity of providing for that, we will check it up before the bill is introduced.

Mr. YOUNG: If a car is shipped in knocked-down condition to Winnipeg, or even to Vancouver, and completed there, is the tax computed inclusive of freight to the point at which it is finally completed?

Mr. DUNNING: It depends upon the selling point. Wherever the sale takes place, that is the place where the tax is levied on the manufacturer.

Mr. YOUNG: The point I am trying to get at is this: if the car is actually shipped in knocked-down condition to Winnipeg, and is completed there, is the freight from Windsor to Winnipeg added to the cost of the car in determining the amount of the tax?

Mr. DUNNING: I should have to answer the question from the standpoint of theory, because it is not a practical transaction, but obviously the manufacturer of an automobile or of anything else does not desire to add to the amount of the tax levied on that particular article; I assume therefore that the original sale in all cases would apply; that is to say, the so-called assembly plant at Winnipeg or at any other point would be in that case in the position of being the purchaser. It is a matter of practice, and I am answering a theoretical question. I do not think it has any real parallel in fact.

Mr. YOUNG: If it were theory I would not be asking it. It is a matter of actual practice. A Ford car manufactured in Windsor is shipped to Winnipeg in knocked-down condition, and there assembled. I am told that the freight is actually added in determining this tax. I am trying to find out why in the world we should be collecting an extra duty on freight paid in this country.

Mr. STEWART: Because you need the money.

Mr. DONNELLY: If the price of a Ford car at Windsor is $700, when it gets to Regina it is around $875. Are you collecting the sales tax on $875 or on $700? The merchant, when he goes to buy, may not pay $700, but only $550. Do you collect on the $550 that the agent pays for it? Do you collect it on a wholesale price or on a retail price?

Mr. DUNNING: It is a manufacturer's tax. The sales tax is levied, according to its terms, on the manufacturer's price at the place at which the manufacturer makes the sale.

Mr. MacNICOL: Will this new regulation increase employment in the motor car industry in Canada, or decrease it?

Mr. DUNNING: How can one say that the imposition of a direct tax either increases or decreases employment? I suppose in theory it can be argued that direct taxation is an employment reducing agent. But inasmuch as this is an adjustment of existing taxation, and is part of a general scheme for the reorganization of taxation in connection with the automobile industry generally, including the tariff, including in some particulars the excise tax, and also the sales tax, I believe the general effect of the whole plan as evolved by the tariff board and shown in their report will be to increase employment, not to decrease it.

Mr. NEILL: May I ask what was the former regulation?

Mr. YOUNG: I should like to know from the Minister of National Revenue whether in practice his department does put on this particular charge between the two points I mentioned, that is, whether it is figured in the price of the car.

Mr. ILSLEY: The Minister of Finance answered the question. If I understand the question correctly it is whether the manufacturer is allowed to add freight to cost—is that it?—before an excise or sales tax is imposed.

Mr. YOUNG: As I understand it, cars are shipped in a knocked-down condition to Winnipeg. At Winnipeg, the point where the car is finally completed, the cost of the car is its cost at Windsor plus the additional work done in Winnipeg, plus the freight. At that particular point, then, the freight does figure, whether the car is valued at more than $650 or whether it is not; consequently freight does to an extent govern what in actual practice is done in that regard by the Department of National Revenue.

Mr. ILSLEY: Clearly in that case the manufacturing operation would be completed at Winnipeg, and all costs entering into the article up to that point would be considered the cost of the article.

Mr. YOUNG: Even freight?

Mr. ILSLEY: Yes. It is like any other raw material.

Mr. STEVENS: Is that not manifestly unfair?

Mr. ILSLEY: Why?

Mr. STEVENS: There are huge manufacturing plants in Oshawa, Windsor and Toronto. There are no cars manufactured in the west. Surely in principle a sales tax is essentially a tax that is applied when the car leaves the door of the factory. For instance, the department does not include the cost of delivery of the car to Ottawa or Montreal or Owen Sound. If it goes to Winnipeg, and the manufacturer has a depot there from which he distributes to the dealers, then according to the minister the sales tax would apply on the freight between Oshawa and Winnipeg. I cannot believe that that is correct.

Mr. ILSLEY: There is a misunderstanding. I was not covering a case such as that just put by the hon. member. I was speaking about a case where a car is not completely manufactured at Oshawa or Windsor, as the case may be, but is manufactured in Winnipeg.

Mr. STEWART: Assembled.

Mr. ILSLEY: Assembled, put together, where the parts are taken to, and the manufacture of the car is completed in, Winnipeg, the cost which has entered into the manufacture of that car at that point when it is completed is the cost on which the tax is levied.

Mr. STEVENS: May I point out to the minister that there is a vast difference between manufacturing and merely assembling a knocked-down car. For instance, that car is made in Oshawa and is tested there. Then for the purposes of shipping they may take the wheels or the top off, putting the top in a case, and then it is shipped. I do not think that is done now to any great extent, but it used to be. Automobiles used to arrive at Vancouver in cases in freight cars. As soon as a car was unloaded they would put the wheels on, fasten on the top, and do a few other operations. But that is not manufacturing. That certainly could not be considered the point where the manufactured article is completed, and if there is any possibility that that is being done—

Mr. YOUNG: It is being done.

Mr. STEVENS: —I think it should be challenged and definitely changed. The cost of delivery of a car will run about $200; roughly speaking I think that is about the freight on various weights.

Mr. ROSS (Moose Jaw): A hundred and some dollars.

Mr. STEVENS: It will run, I think, as high as $200 on some of the heavier cars; it is between $100 and $200. Well, eight per cent on say $150 gives you $12 additional, merely on freight. Let me ask the minister this question: Assume that it is an imported car bought in Detroit, we will say, and shipped to Vancouver, to take an extreme case. Does the department impose the sales tax, when customs entry is made, on the price of that car in Detroit plus the freight?

Mr. MOORE: Why speak of a car having been wholly made in Oshawa? I happen to know that the Oshawa plant buys parts and materials from two hundred factories, principally in other cities than Oshawa, and the question arises as to where a car is really manufactured.

[Mr. Stevens.]

Mr. STEVENS: That has been covered by the law for many years. We call these cars manufactured in Oshawa, but they are really assembled there. Certain portions of them are actually made there from raw material but a substantial percentage of each car consists of imported parts which are there attached to the locally manufactured parts. That is all covered in the law.

Mr. DUNNING: No.

Mr. STEVENS: The minister shakes his head. It has been covered in the law for fifteen years. I remember that around 1920, 1921 or 1922 we went to a great deal of trouble to determine how we could declare what was made in Canada and what was not, and then there were certain rebates and all that sort of thing. I think you deal with it to a certain extent in the resolutions now before us. In any case we have dealt with that matter in parliament over and over again, but what I mean is this: to all intents and purposes when the car leaves the factory in Oshawa it is a delivery by the manufacturer of the car.

Mr. BENNETT: It is completely fabricated.

Mr. STEVENS: Yes, whether it is assembled or manufactured. But if that car is delivered in Ontario, and the sales tax is imposed on the factory price at Oshawa, it is vastly different from a car delivered at Regina, Moose Jaw, Calgary or Vancouver with freight added, and in equity at least it would impose upon western purchasers a gross injustice, in forcing them to pay sales tax on the freight. The object of the sales tax is that it should be a manufacturer's tax. That is the basis and the whole theory of a sales tax. When the car leaves that factory it should go into the hands of any Canadian purchaser from Aklavik to Halifax and from Victoria to Montreal—

Mr. DUNNING: The commissioner says it does.

Mr. STEVENS: That is the essence of the whole business.

Mr. MOORE: The object of assembling cars in Winnipeg, I assume, is to reduce western costs. When I was speaking of assembling in Oshawa I was speaking of the first stage of assembling, because you have different stages. There are cars also that are completed there, but in the matter under discussion now apparently the car is not completed in Windsor. For the purpose of reducing costs in the west the car is shipped to

Winnipeg in a certain form, and is then completely assembled. That is my understanding of the situation, and I think the hon. gentleman will find that by this argument he is arguing against having industries in western Canada and against a reduction in the cost of motor cars in the west.

Mr. STEVENS: The hon. gentleman has not grasped the point at all.

Mr. KINLEY: The freight cost on automobiles depends on how many automobiles are in the shipment. If you have a full carload you get a lower freight rate. They are shipped knocked down for the purpose of saving freight, and disregarding everything else it will give the big man an advantage over the little man if you do not include the sales tax, because he has the advantage of a lower freight rate through his ability to take cars in big shipments in knocked down condition.

Mr. McGEER: The point is this: When a manufacturer in Windsor ships a completed car to Ottawa, we will say, there is no part of the freight involved in the sales tax because your sales tax is charged on the manufacturer's price at the factory. But if the present development of industry continues and you have plants established at points like Winnipeg, Regina or possibly Vancouver, when there is a shipment of parts to those western points the freight on those parts is included in the manufacturer's costs. So when the manufacturer's costs go out with those freights included, the westerner pays a tax upon a freight rate which the man in eastern Canada does not have to pay. The result of that sort of discriminatory taxation of course would be very favourable to eastern manufacturers.

Some hon. MEMBERS: Why?

Mr. McGEER: Let me put it this way. I can quite understand you fellows down east all being in favour of these things which concentrate—

Mr. MOORE: I cannot understand the hon. gentleman's objection to manufacturing in western Canada.

Mr. McGEER: No, we are not objecting to that, but what we do say is that when you ship parts from your main headquarters here to the west and assemble the car there, the cost of transportation to the point in the west should not be included in the calculation for the sales tax. You handicap your western manufacturer by the imposition of an extra tax on the freight which is not included in the east.

Mr. McLARTY: How can the increase of a sales tax or excise tax, the proceeds of which naturally go to the government, possibly help the manufacturer? He is simply a collection agent for the government.

Mr. McGEER: That is quite another thing, but what we are trying to do, of course, is have a manufacturing plant for automobiles in the west as well as in the east, and I think the general trend of manufacturing activity is to recognize a distribution of manufacturing centres throughout the consuming area. I think I catch the drift of the suggestion of my hon. friend from Kootenay East. It is that when you levy your sales tax on the freight on parts moving from the main factory to western points and do not levy the sales tax on the freight on a completed car going to other points, you discriminate against the western fabricator or the assembly man, and against the development of a plant in the west that is compelled to depend, for the time being at least, on the movement of the bulk of the parts from headquarters factories in Windsor. It is simply a question of whether or not you are going to equalize it by making your sales price at your factory the sales price plus the freight to the point of delivery. If that is done in the east there can be no complaint from the west over having to pay freight on parts moving from the headquarters plant to the point of assembly or manufacture, but if you are not going to levy any tax on the freight charged on the automobile moving from the factory to the point of consumption the suggestion is that you should not levy sales tax on the freight on parts moving from your headquarters here to the western point of assembly.

Mr. DUNNING: What about the movement of parts into what you describe as headquarters?

Mr. McGEER: Well, they will pay the tax in any event. For instance, there are no taxable parts coming into the factory at Windsor that have not paid that tax before they are moved to Winnipeg or Regina or Vancouver. As long as the taxes are paid at headquarters there is no question as to their being evenly distributed over all. I do not think there is any point of importation from outside of headquarters.

Mr. DUNNING: There is no tax on raw materials.

Mr. McGEER: Well then, nobody pays any tax. The only thing that it seems to me might appeal to the minister is whether the tax should be charged on freight on a western

movement which is not charged on the eastern movement. For instance, take the man fabricating in Vancouver, where the freight is say $150 on the total volume of material going into the car; if he has to pay that tax, the amount paid may be sufficient to bring the car in in complete form from the factory at Windsor without the sales tax on the freight. Suppose I buy in Vancouver a complete car at Windsor and it is shipped to me; it is clear I do not pay any sales tax on the freight. But if I buy one assembled in Vancouver from parts made in Windsor, I pay tax on the freight on those parts. Why should I pay sales tax on freight on the material to assemble a car, and not pay sales tax on freight on the car assembled at the point of origin of those parts and delivered at the same destination?

Mr. BENNETT: But you do.

Mr. McGEER: The minister says we do not pay the sales tax on the freight.

Mr. BENNETT: My hon. friend is seldom wrong, but I am amazed at him this time. There are perhaps two hundred communities producing materials that go into the production of a car. The car leaves Windsor for Vancouver knocked down. That means that there is a great deal to be done to make it a completed car. The minister has just said that on that car as shipped out there is no freight added to the price for the purpose of ascertaining the sales tax.

Mr. McGEER: I understood the contrary. I think it is my right hon. friend who is wrong.

Mr. BENNETT: No, wait a moment. In order to complete the car a number of parts must be used. The cost of those parts is their initial cost at some Ontario town plus the freight, and upon that the sales tax is paid.

Mr. DUNNING: That is the point.

Mr. McGEER: My point is that we pay freight on those parts, and that constitutes part of the manufacturer's price.

Mr. BENNETT: I was just going to finish. The car is made at Oshawa and the sales tax is paid there on the completed car. Entering into the production of that car were a number of parts. One part came from Chatham, Ontario, upon which freight was paid by General Motors at Oshawa, and upon which sales tax was paid in the completed automobile.

Mr. DUNNING: That is right.

Mr. BENNETT: That is the whole story. The same thing applies in Vancouver. In answer to the question asked a moment ago, the minister says there is no charge upon the car that goes out knocked down in the way of freight for the purpose of sales tax. That is settled. But on the parts that enter into the production of that car, their cost is the initial cost in Ontario, whether it be at Windsor, at Oshawa, or at Chatham, plus the freight, which is at a lower rate than it would be if it were incorporated in the car as shipped. The reason they are shipped knocked down is that from various factories parts are shipped out by carloads and so get a very low freight rate, as the hon. member for Queens-Lunenburg says. Also the knocked down cars can be loaded in larger numbers in a railway car and thereby they receive a low freight rate which reduces the freight on every unit, and the parts which went into another car altogether. The original price paid for them in the Ontario town, plus the freight, make the complete cost of the part that enters into the car, upon which the sales tax is paid.

Mr. McGEER: I quite agree. Where the right hon. gentleman has missed the point is this: two cars are shipped out, one of them a completed car. The manufacturer finds that by establishing an assembly base in Vancouver or Winnipeg he can knock that car down and ship it at a lower cost and put it together at destination and make money by the saving on freight. If he ships the completed car he does not pay any sales tax on the freight, but if he knocks his car down and reassembles it in Winnipeg he has to pay the sales tax on the freight.

Mr. BENNETT: No, not unless he adds parts to it upon which freight is paid.

Mr. ILSLEY: Not if it is a mere assembly. The question is whether it is a manufacturing operation that takes place at destination.

Mr. McGEER: I understood it was stated that whatever the freight charges on the assembly are, they are part of the manufacturer's cost.

Mr. ILSLEY: It depends on whether it is a mere assembly or a manufacturing operation. If a manufacturing operation takes place at destination, then the sales tax is imposed upon the sale price at destination. It does not apply only to motor cars; it applies to everything. For instance, I am advised that wood is shipped from British Columbia to mills in Quebec which make what are called shuttles. When the shuttle is sold the sales tax is reckoned upon the sale price, which includes as a component part not only the cost of the wood in British Columbia but the freight on the wood from

British Columbia to the Quebec factory. There would be no way of administering the Special War Revenue Act otherwise, because the tax is a tax placed upon the article when manufactured, at the factory door, as one hon. member expressed it. No sales tax is imposed upon freight as such or raw material as such; the sales tax is imposed upon the finished product when delivered, into which these elements go as components.

Mr. McGEER: I quite agree, but here you have an important variation from the common or general illustration you have given, in that the main automobile manufacturing is carried on in eastern Canadian centres. It is true there are certain assembly points in the west, which are developing. The question is: when no charge is made on the freight on a completed automobile, should there be any charge made on the freight on articles which are sent out from headquarters for assembly in the west? That is a very different thing from shipping raw material in the form of lumber for manufacturing in the east.

Mr. ILSLEY: I do not think it would be administratively possible to make the distinction. The only rule that can be applied is the rule I have tried to state several times, that you take the sale price of the article when it is manufactured. If that price has been enhanced by reason of the fact that certain of its parts or certain raw materials have moved long distances, that is something we cannot help; we look at the sale price where the manufacturing operation is complete.

Mr. STEVENS: It does however leave this fact clear, that a plant for the assembling of automobiles in western Canada would be an impossibility in competition with one in eastern Canada. If the minister is correct in his diagnosis of the case—and I am not disputing what he has said—it means this: Wheels are manufactured by a separate concern in Ontario. They are finished, complete wheels, ready to put on the car. The manufacturer in Winnipeg or Vancouver pays a sales tax on the original cost of the wheel, plus freight over a distance of two or three thousand miles.

Mr. DUNNING: No, he does not pay sales tax on it at all. He buys it under a licence as a component of the car he will manufacture.

Mr. STEVENS: Yes.

Mr. DUNNING: And he imports it by the carload at the lowest possible rate, because he is taking advantage of the possibility of putting a great many wheels in one carload. It is a matter of what the wheel costs the manufacturer.

Mr. STEVENS: Yes, but it is obvious it will cost a great deal more after it is hauled three thousand miles. He pays a sales tax on the higher cost.

Mr. DUNNING: But how can we fix—

Mr. STEVENS: There can be no doubt that the further you haul an engine, or whatever the part may be, the taxed sales price will be that much higher.

Mr. DUNNING: The rubber in the tire comes from South America. The cost of getting it here is a component part no matter where it goes.

Mr. STEVENS: I know this is a difficult point, because I have been through this kind of argument before. However there is in it an element of fundamental justice which offers a challenge to the present method. At least it calls for study to see whether or not the cost of freight movement in Canada shall be included in determining the figure on which sales tax will be imposed. I admit that movement of an article from Hamilton to Toronto, Oshawa, Windsor, London, or other points in central Ontario would not cost very much. It is something that the manufacturer might be prepared to cover.

Mr. BENNETT: But it is in the cost of the article.

Mr. STEVENS: It is in it, yes, but it is small. But when you come to move all these articles—I think the hon. member for Ontario said there were about two hundred, did he not?

Mr. MOORE: Yes.

Mr. STEVENS: There are two hundred separate items which enter into the assembly. If they are moved within a radius of one hundred miles, to Toronto or to other points, the freight would not amount to very much. But when those two hundred items are moved across the continent to Vancouver, to Winnipeg, or Regina, then the freight becomes an important part of the cost, and imposes a handicap upon the western assembly plant which, I suggest, is quite unfair. I must say this is the first time I ever heard of lumber being moved to the east to make box shooks, because I believe we could secure in the east the kind of lumber required for that class of manufac-

ture as easily as it could be secured in the west. But whether it applies to lumber, or the matter now under discussion, the practice of imposing sales tax on freight within Canada might very well be discontinued. It would not be very difficult to bring that about. For instance, we may have a carburetor, a wheel or some engine part, the sales tax upon which could be figured upon factory cost at point of production, and upon a price plus freight to Oshawa or Vancouver.

Mr. DUNNING: Of the part?

Mr. STEVENS: Yes, of the part.

Mr. DUNNING: The hon. member must see immediately that he would upset the whole structure of manufacturing parts of a completed whole under licence, the principle being that the tax is levied on the finished manufactured article. Operations of various kinds are carried on under licence in order to give the department an opportunity to be sure that the tax is collected when the article is finally manufactured.

Mr. BENNETT: At the completed manufactured price.

Mr. DUNNING: Yes, at the completed stage of manufacture. It took years of development of the tax, as the hon. member must know, to arrive at the comparatively simple formula which now exists. May I point out that his suggestion would change the whole principle in that a carburetor manufacturer—and I do not know whether there are any in Canada—

Mr. BENNETT: Yes.

Mr. DUNNING: Yes. A carburetor manufacturer, for instance, would be a licensed manufacturer of parts in relation to, let us say, a plant at Oshawa. But he would be a manufacturer of the finished article in relation to a plant at Vancouver. The hon. member's imagination will indicate to him immediately the difficulty of trying to administer a situation like that. Either a manufacturer must be a manufacturer of parts which ultimately go into a completed whole, which is taxed, or he must be a manufacturer of a finished article which is taxed at his factory gate. I see no escape from one or other of the positions.

Mr. NEILL: When the manufacturer of a carburetor sells the article, is the tax payable on that article?

Mr. DUNNING: No; that carburetor could be shipped to a manufacturer in Vancouver, Oshawa or any other point, and there, wherever it was, enter into the taxable value of the completed article. That is the principle of the law.

[Mr. Stevens.]

Mr. ROSS (Moose Jaw): The question I am asking is this: We make Ford cars in this part of the country, and a certain sales tax is paid to the government. Then, in the city of Winnipeg Ford cars are assembled. Does the Ford car sold in the city of Winnipeg pay a greater tax to the government than the Ford car made at Ford, Ontario?

Mr. EULER: Yes, of course, because it sells for more.

Mr. ILSLEY: In Winnipeg it is an assembling operation.

Mr. ROSS (Moose Jaw): In Winnipeg it is an assembling operation?

Mr. DUNNING: That is a question of fact about which I cannot speak.

Mr. ROSS (Moose Jaw): The tax is on the car, in both places. There is a certain tax paid on a certain type of Ford car; what is it?

Mr. DUNNING: I shall get that information, but I do not have it just now.

Mr. BENNETT: It is eight per cent on the sales price.

Mr. ROSS (Moose Jaw): Yes, but the sales price at Oshawa is lower than the sales price at Winnipeg.

Mr. STEVENS: To the extent of the freight.

Mr. ROSS (Moose Jaw): Yes; so that there must be a higher tax paid by the consumer in Winnipeg than by the consumer at Ford, Ontario.

Mr. DUNNING: May I point out that under this amendment the Ford car, in either case, will not pay it.

Mr. ROSS (Moose Jaw): Possibly so, but I am getting at a principle. In one part of Canada we have a consumer paying a higher tax on an article on which a lower tax is paid in another part of the country. Is that right?

Mr. EULER: It seems to me that the principle is a simple one. Although I do not wish to prolong the discussion, may I explain what I mean? The sales tax is imposed on the manufacturer's sales price. If the manufacturer is located in Winnipeg the tax applies on the selling price of the product as delivered from the factory at Winnipeg. I take it that an assembly plant is a manufacturing plant. The car is not completed until it is ready for delivery to the customer. I take it that the Ford Company at Windsor sends its cars in what has been described as a

knocked-down condition to its assembly plant at Winnipeg, and I would say that the manufacturing operation is completed at Winnipeg. When the car is sold out of the manufacturing or assembling plant, whichever you choose to call it, all costs would be included, among which would be freight. On that price the tax must be paid, and there can be no escape from it. The law is definite that the sales tax shall be charged on the selling price, and if the article is finally sold in Winnipeg that selling price will finally include freight.

Mr. McGEER: There is one point to remember, namely that in the whole fabric of freight rates there has been a definite and a partly successful endeavour to balance up charges of freight so that those carrying long haul costs are not penalized on an exact mileage basis. If in the imposition of the sales tax, freight rates are included in the manufacturer's cost, he must of necessity impose a discriminatory or a heavier charge on western plants than on eastern or central plants where, because of shorter distances, freight rates are less. I cannot see any reason why in the levy of the sales tax there might not be an attempt on the part of the department to balance the sales tax so that a person buying the same article in western Canada shall pay approximately the same sales tax as is charged to a person buying that article in central Canada. The mere fact that there is some difficulty in working out such a problem is no good reason why the work should not be undertaken. It is being done by private industry and it seems to me that it could be done in this instance. One effective way of balancing the incidence of the sales tax would be to eliminate the item of freight in the total manufactured cost. This should not be a difficult thing to do.

Mr. DUNNING: What freight?

Mr. McGEER: Whatever freight enters into the cost. Supposing there is freight on an article coming from Oshawa.

Mr. DUNNING: From South America, from South Africa, wherever the materials come from to make up the goods.

Mr. McGEER: There should be no difficulty in that regard, because if those freights enter into the cost, they must be shown in detail in the statement of what makes up the cost. Certainly the internal freights from the manufacturing centres should not be difficult to segregate. As a matter of fact, in a great many instances you will find the manufacturers doing just what the hon. member for Kootenay East (Mr. Stevens) says should be done, namely, absorbing the freight. Under its present administration, this sales tax is going to add another discrimination against the west and the maritime provinces and give a further preference to the centralization of manufacturing in central Canada. That is the way in which the present method of administering the sales tax will work out and it is one of the matters that we shall have to face sooner or later.

Mr. DUNNING: I do not want to obstruct the passing of one of my own items, but I should like to direct the attention of the committee to the fact that we are discussing a special tax on automobiles. As I said a little while ago, this tax will not apply to any car valued at less than $650 ex manufacturer. Therefore, whatever my hon. friend has said has no application to the particular matter now before the committee. It seems to me to be improper that we should assume that manufacturers of automobiles are conspiring to collect as much as possible in the way of sales tax for the government. I think that is a ridiculous assumption. I am inclined to believe that they are trying to put their cars together and get them sold under conditions which will involve the levying of as little as possible in the way of sales tax. Obviously they can make no money out of the sales tax as such; they are merely collectors for the government. To adopt the assumption put forward from several quarters, one would have to believe that discrimination is created because the manufacturers have conspired together to add to the sales tax. I cannot believe that there is any other reason why a manufacturer should ship parts to western assembly plants than that of economy. If that method is cheaper, of course the quantum of sales tax would be one of the factors reduced by that process. This matter requires close examination such as was made by the tariff board of the whole structure of the tariff, the sales tax and the excise tax as they related to the automobile and other industries. It was partly upon this report that we acted in connection with this particular matter of a five per cent tax, which, I say again, does not affect any automobile valued at less than $650.

Mr. ROSS (Moose Jaw): These cars are made here and assembled in other places. The minister seems to think it would be a difficult matter to set a sales tax on these cars. There are only so many different types of automobiles made by each company and the department must have a list of these models and must know the amount of sales tax charged at the factory. I can see no reason why an identical amount cannot be charged in other places

in Canada for the same model of car. This centralized industrial area in this part of Canada has been charging other parts of the country excess prices for everything and surely the government should not act with them in placing higher taxation on these people. This is not necessary and the same rates could be charged in every part of Canada.

Mr. CAHAN: I think, as the minister says, we are getting far away from the issue raised in this resolution. For some months, two or three summers ago, I had something to do with the administration of the Department of National Revenue. My memory is clear that the sales tax was then levied in accordance with the statute. Section 86 of the statute states that there shall be imposed, levied and collected a consumption or sales tax of six per cent upon the sale price of all goods. The amount of this tax is now being increased to eight per cent. Paragraph (a) of the section reads:

(a) produced or manufactured in Canada, payable by the producer or manufacturer at the time of the delivery of such goods to the purchaser thereof.

Therefore, if commodities are sold at Oshawa or Toronto the sales tax of eight per cent will be computed upon the invoice prices.

Mr. YOUNG: What invoice prices?

Mr. CAHAN: The invoice price charged by the manufacturer or the producer for that commodity delivered at Oshawa. If any person wishes to obtain the commodity at the lowest possible price, all he has to do, if he is a resident of Vancouver, Victoria or Halifax, is to buy it at the price for delivery at the station where the commodity is manufactured.

Mr. ROSS (Moose Jaw): You would have to buy three cars.

Mr. CAHAN: Buy three cars?

Mr. ROSS (Moose Jaw): Surely.

Mr. CAHAN: No, not at all. You can buy any commodity for delivery and pay the sales tax on the minimum price for the sale of that commodity at the factory.

Mr. McGEER: How can you do that when you are assembling?

Mr. CAHAN: Just a moment, please. You can do better than that. Many commodities can be purchased for delivery at the place where the purchaser resides. In such cases the cost of transport from the place of manufacture to the place where the purchaser resides is paid for by the purchaser, as he must pay it, but in the case of a motor car he would pay very much less for transportation if he took his delivery near the place of his residence. In that case the manufacturer will sell to him and receive the price of sale, but the transportation charges will be cut down by reason of the fact that the manufacturer giving delivery to him at the place of his residence in any distant part of Canada will be able to transport in large quantities to that place of residence at a less cost for carriage than if it were one single package sent by freight or express, because in the transfer of large quantities from one part of Canada to another the transportation charges on goods in bulk are proportionately less than the transportation charges on single articles. The sales tax is levied and computed upon the purchase price, and is payable by the manufacturer or producer at the time of delivery of the goods to the purchaser. Therefore it is true that a purchaser residing near the factory may purchase at a price for delivery less than if he bought for delivery at a point 3,000 miles away. But if he buys for delivery at a point 3,000 miles away the sales price of the manufacturer will not cover all costs of delivery and insurance, and the cost to the purchaser will in such case include cost of transportation and cost of insurance. But it is a great advantage to the purchaser of many commodities to buy for delivery in his own town because in such case the manufacturers may arrange for transportation in large quantities, with the result that the individual unit is transported for very much less cost.

Mr. McGEER: The illustration just given by my hon. friend from St. Lawrence-St. George indicates something quite apart from the sale of automobiles. This sales tax is levied at the manufacturer's place. Cars go out to dealers in carload lots; they do not go out to individuals, and the question here is: can some way not be found whereby the tax on an automobile shall be somewhat the same in the maritime provinces and in the western provinces as it is here in central Canada? But quite apart from this whole question of assembling and complete manufacturing, one objectionable feature to any taxation is unequal taxation, and as this particular tax is being imposed there will be two effects: First, it will be a discrimination against the maritimes and the west and a preference in favour of central Canada; in addition, it will carry with it a burden of taxation on the user of the same commodity in the maritimes and in the western provinces that is not imposed on the user living in the central sections.

I quite agree that this question of unequal distances cannot be ignored entirely, but this house went very far in support of the principle I am now suggesting when the Maritime Freight Rates Act was passed under which a huge subsidy was paid out of the consolidated revenue fund to permit the haulage of freight from Halifax and Saint John in order to eliminate a geographical disadvantage. I quite agree that some problems of administration are involved in such an adjustment, but this is something which the minister should not dismiss just because of the difficulty. I think it is worthy of consideration.

Mr. McLEAN (Melfort): I would like to ask the Minister of National Revenue where the line is drawn between assembling and reassembling. I have listened to so many opinions from so many hon. members that I believe there is some confusion over what they are discussing. It seems clear to me that some are talking about assembling and others are talking about manufacturing.

Mr. EULER: The same thing.

Mr. McLEAN (Melfort): No. It is impossible for a manufacturer who is establishing himself in Winnipeg or Vancouver to avoid paying sales tax and excise tax on parts that enter into his product if he brings them in from all over Canada, but I do not think there is any such manufacturer in western Canada. It would be possible to do what the hon. member for Moose Jaw (Mr. Ross) suggests, namely, collect the same sales tax and excise tax on a car assembled in Winnipeg as are now collected on a car assembled in Windsor, if only the same manufacturers were making such cars and sending them out from Windsor. But if the manufacturer establishes himself in Winnipeg or Vancouver he does so simply to get lower costs than he would get in his own city. It becomes very important where the line is drawn between assembling and reassembling. The minister said that if a car was reassembled in Winnipeg there would be no additional charge added and there would be no tax, I understood him to say, on the freight from Windsor to Winnipeg.

Mr. YOUNG: Did the minister say that?

Mr. McLEAN (Melfort): Yes, he did. This is of a great deal more importance than appears on the surface because not only do we pay the thirteen per cent additional on automobiles, as was pointed out by some of my hon. friends, but this would apply also to other machinery that is shipped in a condition where it has to be reassembled before it goes to the ultimate consumer. It would apply to farm implements, for example, which are sent out in a condition where they have to be reassembled. I wish the minister would inform the committee—and if he has not the information before him now he can get it quite readily—just where the line is drawn between assembling and reassembling, say at Winnipeg, Regina or Vancouver, and where and how the sales tax and the excise tax making up the thirteen per cent are added, and whether they are added on stuff that is reassembled. I think if we had that information it would clarify the question.

Mr. EULER: It depends upon where the sale is made and upon the price.

Mr. ILSLEY: I have stated the principle that applies, and I cannot state it any more clearly. What I had better do, I think, is to find out just what is happening in reference to Ford cars and whether we regard what is happening in Winnipeg as assembling or as a manufacturing operation.

Mr. STEVENS: Will the item stand until we get that information? Otherwise—

Mr. BENNETT: May I point out that the question raised has no bearing upon the item now before us, although it has an important bearing upon an item just passed. I want to be able to give the information—

Mr. STEVENS: I was asking the Minister of National Revenue if the item stood.

Mr. DUNNING: Inasmuch as it is really my item I was trying to answer my hon. friend. The question which has been raised certainly does not apply to the resolution now before us; it would apply, I assume, to the one which we have passed. Be that as it may, I am anxious that the fullest information should be afforded; I should like to see if there is not some other item upon which we could give absolutely detailed information perhaps by eight o'clock this evening, and we can take up another item as the question is not properly applicable to this one.

Mr. STEVENS: We are on paragraph 4, Mr. Chairman, with reference to automobiles?

Mr. DUNNING: The special tax on automobiles.

Mr. STEVENS: That applies exactly the same.

Mr. DUNNING: No, because automobiles not more than $650 are exempt, and therefore the Ford car is exempt.

Mr. STEVENS: Most cars are more than $650, so the five per cent applies just the same as the sales tax; the same principle of discrimination is there.

Mr. McGEER: The situation is worse, because as a matter of fact the price of the manufacturer in the east is going to be under $650, whereas in the west the price will be over that amount, and carry the extra tax.

Mr. DUNNING: May I tell my hon. friend that that simply is not the case. I can answer that with great positiveness.

Mr. McGEER: Well, we pay the bills out there, and we happen to know some of these cases.

Mr. STEVENS: I frankly admit that the whole situation this afternoon perturbs me. I listened to the hon. member for St. Lawrence-St. George (Mr. Cahan), and I have no dispute with his review of the situation, but what we are seeking to evade or to avoid is this: Take a plant in Ontario; we have information from the hon. member for Ontario (Mr. Moore), in whose constituency is Oshawa, and who is extremely well informed, that that plant will draw from two hundred plants, and out of what it draws from those two hundred other plants it makes an automobile. Let us consider the case of a plant established at Vancouver, Regina, or Winnipeg, in the west, or in Halifax in the east, a considerable distance away from these two hundred plants, most of which are in Ontario. The western or the Halifax plant buys these parts exactly as the Ontario plants do, from the two hundred plants I have referred to; they haul all the parts to the west or to the east, and they pay a sales tax the same as Ontario, plus the difference in freight, plus a tax on the difference in freight.

Mr. McLEAN (Melfort): Surely it has always been that way.

Mr. STEVENS: That is so. If that is true—and it cannot be gainsaid—then, not by the handicap of geographical position, judged from the manufacturer's standpoint, but by act of parliament, by the imposition of a federal tax, the government is placing a handicap upon the western manufacturer. That, I submit, is not sound. What I wished a little while ago to draw to the minister's attention was that a sales tax or an excise tax such as this five per cent excise tax, wherever imposed in Canada, is supposed to bear with absolute equality upon all citizens no matter where they are. That is fundamental, and we are talking about fundamentals. If difficulties of administration offer obstacles, it is the duty of parliament to overcome those obstacles. If what the Minister of Finance (Mr. Dunning) and others have described as being the case is what exists in fact, it is almost impossible for a manufacturing plant to develop in the west. I have not forgotten the argument raised by the hon. member for St. Lawrence-St. George about the manufacturers shipping parts in bulk. That is merely a minimising of the manufacturing cost. It is all right as far as it goes. But why should parliament because of transportation handicaps, impose a larger sales tax rate or valuation in the west than they do in the east? As the hon. member for Moose Jaw (Mr. Ross) has well pointed out, take the case of a V-8 in Windsor and a V-8 in Vancouver. The western purchaser will pay, under those circumstances, substantially more in sales tax, even though the fullest advantage is taken of bulk carload shipments. I do not care what the method of handling is, whether it is a case of assembling or of shipping a car complete.

Mr. DUNNING: The hon. member says that the sales tax will be greater?

Mr. STEVENS: Yes, and the five per cent excise tax as well.

Mr. DUNNING: Well, we will find out. I can say positively, with respect to the excise tax mentioned in the item, that in connection with the Ford V-8 car it would not be so, because the sales tax would be non-existent at both points.

Mr. STEVENS: All right; the Ford V-8 may come under the $650 figure.

An hon. MEMBER: Take the Dodge.

Mr. STEVENS: Take the Buick, which is a very common car, and, as I have driven one for a great many years, I think it is a good car. I do not suppose there are any cars of that make which come under $650. Or we can take the Dodge, or the Chrysler, or a good many other cars; they would all come under the five per cent tax and the eight per cent tax. After all, we in this parliament dare not disregard the question of equity in taxation. I know the difficulties the department is up against, because I remember the way in which it struggled with this matter some years ago. But essentially I do not think this matter is very difficult, because all that would be necessary would be to say to the manufacturer that the question of transportation of parts need not be considered for sales tax purposes in the computation of the sales price, and that would end the matter.

Mr. DUNNING: But that is the present position.

Mr. STEVENS: No.

Mr. DUNNING: My hon. friend will permit me to answer him. He mentions the Buick car. The sales tax on a Buick car is the same, no matter where it is, because the sales tax is collected on the factory price, and the factory price is just at the one place.

Mr. ROSS (Moose Jaw): But if they were made at Regina—

Mr. DUNNING: Ifs and ands and buts bring us to this point: My hon. friend has just stated that the sales tax was assumed to be an absolutely equitable tax. A number of hon. members who have spoken have sat in this house all the years the sales tax has been in existence, and this is the first time I ever heard anybody claim that the sales tax could possibly be equal in its bearing on all citizens across three thousand miles of country. It is quite obvious that we have accepted, as this parliament accepted many years ago, the principle of the sales tax at the source as distinguished from the retail sales tax. The bearing of that tax could not possibly be equal on all citizens. The point at issue, as to whether it constitutes discrimination as between the east and the west, depends upon the source of raw material supplied. To the extent that a plant in western Canada would have access to raw materials of supply at a lower cost than a plant in the east, the advantage would be with the west. To the extent that the plant in the east had advantages in raw material or price costs over the plant in the west, obviously the advantage would be with the east. I would admit that at present I think—and I do not speak with the absolute knowledge that some members speak with—the balance of advantage is probably with the Oshawa or Windsor plant, because of the development of routes and the places from which raw material supplies come. But the things which enter into the car—the rubber in the tires, the asbestos linings, a thousand and one commodities—come from many parts of the world, and there are accumulated costs, as far as transportation goes, through the parts factories. The transportation costs from the parts factory to the automobile plant, as we use the term, also enter into the cost which becomes the basis of the final tax paid at the factory door when the car is going out. So far as the Canadian consumer of cars is concerned, the equity of the bearing of this tax, whether it be sales tax or this special extra tax, will be decided by the information which the Minister of National Revenue will have for us, I hope, by eight o'clock. That is to say, is there a lower tax payable on a car ex the factory door in Ontario than is payable on the same car which reaches, through one or more methods, the user of that car in any other part of Canada? That is a simple matter of fact. But I submit that when we go further, and try to demonstrate that this sales tax should be a tax bearing equally on all consumers, wherever they may be, we run absolutely counter to the fundamental of the tax itself, which is that it is a tax at the source, and that consequently its bearing must increase by distributing methods and distances and so forth throughout the country. I do not see how there is any escape from that.

Mr. STEVENS: The tax would not increase with distance. Surely if the tax is a tax at the source the tax would not increase by distribution. That is exactly our quarrel with this method of taxation.

Mr. DUNNING: But in its ultimate bearing on the consumer, of course, it would.

Mr. McGEER: How could it?

Mr. STEVENS: If the tax on a finished car was $100 in Oshawa it would not be any more at Vancouver, because the minister has already said that they do not tax on the freight on the finished product. But if the car is made in the west they do charge on the freight and on the materials which go into that car, which is a vastly different proposition.

Mr. ILSLEY: I have before me now the tariff board report on the cost of cars in all the important cities of Canada, and in every case the sales tax on a Ford tudor car is shown as $34.70. The cities enumerated are Halifax, Fredericton, Quebec, Montreal, Ottawa, Toronto, Hamilton, Windsor, Winnipeg, Regina, Calgary and Vancouver. The sales tax is shown as $34.70 on the same car.

Mr. STEVENS: But the minister will admit that those figures apply to cars which are finished here and shipped out as the finished product. Will the Minister of Finance, who knows something about this, tell us that the sales tax on a car produced in Regina is the same as the tax on the same car produced in Oshawa? General Motors have a plant at Regina, though it has not worked very much.

Mr. DUNNING: It has not worked for years.

Mr. STEVENS: Why? Because of handicaps, and this is one of them.

Mr. DUNNING: My hon. friend knows better than that. The answer is that the westen farmers have not had enough money to buy cars.

Mr. McGEER: They have bought plenty of cars.

Mr. STEVENS: The long and the short of it is that the plant was established in Regina to manufacture General Motors cars, but the sales tax on a car produced in Regina will be found to have been substantially higher, when that plant was running, than on a car produced in Ontario.

Mr. DUNNING: The tariff board made an exhaustive inquiry. The document from which the Minister of National Revenue quoted is a comparison of selling prices in 1935 of a Ford de luxe tudor in various cities of Canada and the United States. The various factors making up that selling price are given and in every case, as the Minister of National Revenue says, the sales tax factor is identical no matter for what city in Canada the price is quoted. I prefer to take the evidence of what I believe was a thorough inquiry, but again I will check it, or the Minister of National Revenue will check it, between now and eight o'clock, to find out what really is the situation. I have before me the information in regard to another make of car analyzed in exactly the same way, and with the same result all across the board. I used the Ford because that was the car about which the allegation was made.

Mr. ROSS (Moose Jaw): It is assembled in Winnipeg.

Mr. YOUNG: A long time ago I asked a simple question, but a great many other matters have intervened. I was not asking anything with regard to the manufacture of parts in the two hundred plants that have been mentioned; I asked this specific question: If a car is made in Windsor and is sent in a knocked down condition to Winnipeg, where it is finally assembled, would the price on which this special excise tax as well as the sales tax would be based include the freight from Windsor to Winnipeg? I am not just sure on that point. I understood the Minister of National Revenue to say no, but I understood the Minister of Trade and Commerce to say that it was included. As a matter of fact I think it actually is included. What has been said by the Minister of National Revenue and the Minister of Finance is, I think, quite true. I understand that the practice is not what the hon. member for Vancouver-Burrard thinks, but that the manufacturers redistribute that additional cost over all the consumers in Canada. I do not think we in western Canada actually do pay that extra cost, except our share of it, but that is the practice of the automobile people themselves and not of the Department of National Revenue. I believe the minister will find that to be the fact.

Mr. CAHAN: I suggest that on many of these commodities there is no additional cost. The difference in freight rates over short distances and long hauls must be taken into consideration.

Mr. DUNNING: Not by the department, in levying the sales tax.

Mr. CAHAN: No; but the manufacturer sets the price, and he sets the same price in all these cities, so apparently the eight per cent sales tax is paid on the same price whether you live in Winnipeg or Toronto. But the manufacturer can often do that without loss. I was interested in an undertaking in the west, and in purchasing machinery in England I found that the cost of freight from Liverpool to Montreal was exactly the same as the freight from Liverpool to Vancouver plus the railway freight over the mountain. I have seen freight bills showing the cost of transportation of certain commodities from Halifax to Truro. I do not know whether or not that condition exists at the present time, because it was some years ago that I was interested in such matters, but at that time it was cheaper to send the freight from Halifax to Montreal and back to Truro for delivery than to send it by ordinary local freight from Halifax to Truro. I remember the former member for Pictou, who is now in the senate, making similar calculations as between the long haul and the short haul. The fact is that the advantage given by the long haul to those who make use of it is of such tremendous importance that it must be taken into consideration if you are to consider the bearing of the cost of transportation.

Mr. DUNNING: In reply to my hon. friend from Saskatoon I would say that I have gone through each of these schedules, and they are all based upon the full delivered price not including taxes, freight or licence, and that figure is the same right across the board. The sales tax is also the same right across the board. Then there is a special municipal tax in Montreal; that is the only place where that cost enters. Freight, of course, varies right across the board depending upon the point of delivery and the licence factor also varies, though not markedly. It is $30 in Vancouver and as low as $15 in Windsor. The main factor of price differential

shown, that is from the factory on, is the factor of freight. There is no difference in the application of sales tax no matter where the Ford car is delivered, and inasmuch as it was in connection with the Ford car that the question arose—because it is the only car that is assembled, or whatever is done, at Winnipeg—it is quite apparent that whatever may or may not be the case with respect to freight rates, at least it does not enter into the matter we are now discussing because the sales tax applies on the factory price which is identical no matter where the tax is levied. I have the same information with respect to every automobile. I have gone through it, and I have found that while, of course, the amount of the sales tax varies in relation to the factory price of the car, in every case it is uniform right across the board throughout Canada, and the item which creates the difference is freight on the car, not sales tax on the freight.

Mr. NEILL: If the minister will add one remark to his statement he will satisfy me at any rate. He said that the sales tax was the same no matter where the car was sold; will he add "or no matter where it is assembled?" He told us early in the debate that the tax was levied upon the price at which the manufactured article is first sold. If it suits Ford to assemble at Winnipeg then the price he sells at there is different from the price he quotes delivered in Windsor plus freight. It might be held, and I think the minister indicated, that that is the price on which he assesses the eight per cent. In Winnipeg it would be higher on a car out of an assembling plant.

Mr. DUNNING: This is a comparison of selling prices in 1935 of a Ford de luxe Tudor at various cities in Canada and the United States—

Mr. NEILL: No matter where sold or assembled?

Mr. DUNNING: Each city is named separately, with the various items making up the price.

Mr. NEILL: Is it not all based upon the factory in Windsor?

Mr. DUNNING: No; it is the actual selling price.

Mr. NEILL: I am speaking of the case where the car is assembled at Winnipeg; it must take a bigger price.

Mr. DUNNING: My hon. friend forgets that I gave the various items, which showed that the freight is the variable item, with some slight variation for the licence. Perhaps someone can tell me what a Ford Tudor car costs in Regina?

Mr. ROSS (Moose Jaw): It costs $900 and something.

Mr. DUNNING: As I have indicated, $950. What is it in Vancouver—$996.70?

Mr. REID: No; it is over $1,000. I am quoting January prices.

Mr. DUNNING: This is $3.30 below $1,000. At any rate these are public documents; they were tabled in the house; it is easy by perusing them to find where the differences arise. I am not criticizing or commending the freight differentials, but I tell the committee that there is where the difference comes in, not in the sales tax.

Mr. STEVENS: That is not the point we have been debating at all.

Mr. DONNELLY: Is that the price on which the sales tax is collected? That is the retail price the minister is speaking of, not the price at which the company sells to the dealer.

Mr. DUNNING: The first item I read was $793 at the factory; the second was $34.70, both of them being identical across the board. The second item appearing in each case has a definite percentage relationship to the first, being the amount of sales tax actually payable with respect to that car in the whole of Canada.

Mr. DONNELLY: In each case that is the retail price to the consumer.

Mr. DUNNING: My hon. friend has not yet grasped the point. I will try again. The first item is the full delivered price not including freight, taxes or licence, $793 wherever you take the car. The sales tax is $34.70 wherever you take it. The freight varies all the way from $21 to Toronto and Hamilton, $47 to Halifax, $27 to Montreal, $103 to Winnipeg and so on.

Mr. CAHAN: That means the sales tax is never computed on the freight?

Mr. DUNNING: No; the sales tax is computed on the one item, the $793.

Mr. DONNELLY: You collect on the retail price, not the wholesale?

Mr. DUNNING: I am sorry my hon. friend does not yet grasp the point. It is the full delivered price not including taxes, freight or licence, $793 wherever you take the car, and the sales tax is $34.70 wherever you take it.

Mr. STEVENS: That is not six per cent on $793.

Mr. DUNNING: In 1935 the commissioner tells me that a five per cent discount from the manufacturer's price was allowed in calculating the sales tax.

Mr. STEVENS: That does not cover the point.

Mr. DUFFUS: I am almost sure that I am correct when I say that the sales tax is based upon the factory price less the dealer's discount, and that it is the same all over Canada no matter whether the car is sold retail or wholesale.

The CHAIRMAN: Shall resolution 4 carry?

Mr. STEVENS: No; the minister promised to look up certain matters.

Mr. DUNNING: In connection with another item, but I think the committee might extend me the courtesy of passing this one, in view of the fact that discussion has been tolerated on another all afternoon.

Mr. STEVENS: Surely the time has not arrived that the minister says he is tolerating a discussion.

Mr. DUNNING: No, I said that discussion has been tolerated.

Mr. STEVENS: Well, members of this house have rights, whether they sit on one side of Mr. Speaker or the other. The trouble with the minister—I am sorry to say this—is that he has persistently refused to see the point some of us have been trying to make. I admit that some of my friends in the east think we in the west are a little touchy on this theme, but the long and the short of it is that we have been trying for the last forty years to build up industries in western Canada and we are under a severe handicap right along the line, the chief one of course being the freight. But as long as the principle disclosed here to-day applies in the application of the sales tax, a handicap is imposed upon anyone who attempts manufacturing in western Canada as compared with those in the east, a handicap that is not incidental to either cost of machinery or transportation except in so far as the tax is applied on the cost of transportation in Canada.

I would like for a moment to get away from automobiles as an illustration. Let us take, for instance, farm implements; it has been amazing to me that the farm implement industry has not developed in western Canada. Now we have some idea of the additional cost imposed by taxation, and often a very few cents will either make or destroy an industry—

Mr. GOLDING: Is there a sales tax on agricultural implements?

Mr. STEVENS: I think there is; I am not sure of that. In any case—

The CHAIRMAN: With all due respect to the hon. member I think he is out of order in discussing farm implements.

Mr. STEVENS: Well, I think perhaps technically you are correct, Mr. Chairman. I said that I took them as an illustration, which is not entirely ruled out in discussion in this house. I was trying to get away from automobiles, about which the minister is a little worried and says that the committee has tolerated the discussion too long.

Mr. DUNNING: I did not say any such thing. I said that discussion has been tolerated this afternoon.

Mr. STEVENS: Well, I resent the suggestion that we should be described as being tolerated because we presume to discuss this item.

Mr. DUNNING: I did not describe the hon. member as being tolerated. My hon. friend is trying to put words into my mouth.

Mr. STEVENS: Well, let it pass. At the same time we are not entirely subject to the minister as far as our feelings go.

Mr. DUNNING: Allow me to have feelings too.

Mr. STEVENS: I am coming to this point; there is a thirteen per cent tax disclosed in this resolution, eight per cent sales tax and five per cent excise tax. There is no question that on cars assembled or in process of manufacture in western Canada there are imposed by the parliament sales and excise taxes upon the freight rate that goes into the movement of Canadian parts to the plant in the west. I submit that that is unfair. The finished product from the east may move to the west without any such imposition. We are not suggesting that there should be, but we are suggesting that the principle which applies to the finished product of an eastern factory should apply to the parts that go to a western factory, and that the incidence of sales tax in this instance should be equitable throughout the whole of Canada. Otherwise we impose a perpetual handicap on the development of industry in the western part of the country.

The minister quoted from a document to which I have not access. He says that it has been laid on the table of the house, but one copy among 245 members does not afford a very great opportunity to any member. May I ask the minister if it would be possible for hon. members to have copies of the report—

Mr. DUNNING: Would the hon. member be gracious enough to permit me to answer him?

Mr. STEVENS: Most certainly.

Mr. DUNNING: If my memory serves me correctly, the report comprises twenty-one volumes.

Mr. STEVENS: If one had access to those volumes he would perhaps be able to interpret them. The minister's interpretation of the document refers only to a car built in eastern Canada and could have no connection with plants that may be in existence in western Canada. It certainly does not apply to the Regina plant, which has had an unhappy record. There are two reasons why the plant in Regina should not have been successful; hard times was one of them and handicaps in assembling and manufacturing was another. There is a distinct handicap for any factory in western Canada, and the question regarding the Ford plant at Winnipeg has not been answered. That was the matter which brought me to my feet. A while ago we were assured that we would have an answer on the point, but we have not yet received it.

Mr. DUNNING: You will get it.

Mr. STEVENS: I protest against the application of the sales tax in an unequitable way throughout Canada.

Some hon. MEMBERS: Carried.

Mr. DUNNING: I do not intend to say "carried," because evidently some hon. members of the committee do not take my word when I say that the information will be produced fully, before the item is passed. It is only five minutes to six, and I suggest that we continue the discussion until six o'clock. I believe I indicated to the committee that my natural desire to pass the resolution had nothing to do with my willingness to bring down any further information, if there is any more, than is here contained. In asking that the item be passed I trust the committee did not deem me guilty of any discourtesy towards it. If I have shown a little impatience, I regret it. But I trust hon. members who are somewhat vigorous in their own speech will accord me the same privilege as they claim for themselves. After all, a minister of the crown has no less rights in discussion than any other hon. member. I claim no more, but I desire to take advantage of all the liberties enjoyed by my colleagues on the committee.

Paragraph 4 agreed to.

At six o'clock the committee took recess.

## After Recess

The committee resumed at eight o'clock.

Mr. DUNNING: If the chairman will call paragraph number 5, the Minister of National Revenue (Mr. Ilsley) will be permitted to give the information which he undertook to give before six o'clock.

The CHAIRMAN: We will call paragraph 5, Special War Revenue Act:

5. That schedule II to the said act, as enacted by section seventeen of chapter forty-two of the statutes of 1934, be amended by adding to paragraph (iii) thereof the following:—

Provided, also, that tax imposed under paragraph (iii) shall not apply to the goods mentioned therein, when sold to or immported by manufacturers of automobiles or chassis under the following conditions:—

(a) If less than ten thousand automobiles or chassis are manufactured or produced per annum and at least fifty per centum of the factory cost of manufacturing or producing them, exclusive of duties and other taxes, is incurred in the British empire;

(b) If ten thousand automobiles or chassis or more are manufactured or produced per annum and at least sixty per centum of the factory cost of manufacturing or producing them, exclusive of duties and other taxes, is incurred in the British empire;

Provided, however, that effective April 1, 1938, the words "sixty-five" shall be substituted for the word "sixty" in this paragraph.

Mr. ILSLEY: This afternoon certain questions were directed to the Minister of Finance (Mr. Dunning) and myself with regard to the payment of additional sales tax by reason of the fact that certain automobiles were assembled in Winnipeg instead of at Windsor. The particular automobile under discussion was the Ford. Information was given to the committee from a report of the tariff board to the effect that the sales tax on automobiles was uniform throughout the country, the model in question being the Ford de luxe Tudor, upon which the tax was $34.70 That information is correct. Some hon. members raised the question as to how such tax was reckoned, and one took six per cent on $793 which gave him a figure larger than $34.70. In order that there may be no doubt

as to how this figure is arrived at, I would inform the committee that $793 is the published or list price of the automobile. In order to arrive at the price at the factory door certain discounts must be considered. There is a dealer's discount of 21½ per cent as well as a further discount of five per cent which is of long standing and which, I believe, was originally a distributor's discount. Recently this discount has been discontinued as it has not been thought to be justified by the conditions of distribution in the automobile business. If 26½ per cent is taken off $793 and the tax of six per cent reckoned on what is arrived at, the tax will be shown as $34.70. I desire to make it plain that that is the sales tax which is passed on to the consumer in every part of Canada, whether he resides in Halifax, Montreal, Windsor, Winnipeg or Vancouver. There is no discrimination against any section of Canada or any city of Canada. There is no additional sales tax passed on to the consumer by reason of the fact that Fords are assembled in Winnipeg rather than being manufactured only in Windsor, Ontario.

There is one other point I should like to make clear. I tried to explain this afternoon that the sales price upon which the sales tax is computed is the price of a manufactured article at the factory door when the manufacturing operation is completed. I think I stated also that we have to decide whether an operation is merely an assembling one which the manufacturer carries on for certain profit or convenience, or whether it is a further manufacturing operation. I stated to the committee that I would ascertain whether we regarded the operation carried on by Ford at Winnipeg as an assembling or manufacturing operation. I now state to the committee that such operation is regarded as an assembling operation, and not as a manufacturing one. I think that answers the question.

Mr. BENNETT: The minister said six per cent; did he mean six or eight per cent?

Mr. ILSLEY: I was referring to what had happened up to the present. Of course, from now on the sales tax will be eight per cent and there will be the other taxes provided for in this resolution.

Mr. DUFFUS: What applies to Ford cars, obviously applies to all others. The opinion which I have obtained since the recess is substantially the same as that given by the minister. There is what is known as the factory list cost and then there is what is known as the dealer's list, which is also known as the billing cost. Upon that sum the sales tax is based. While I am on my feet I should like to point out that the argument made by the hon. member for Wood Mountain (Mr. Donnelly) is not correct. He stated that a dealer is not penalized for taking in a used car. The fact is that a dealer may have sold a new car in December for delivery in May and in the meantime he may have sold the car taken in, in exchange. It is not now possible for him to increase the sales tax on that used car. I claim that we as a parliament should reimburse the dealer for the two per cent sales tax where a sale has actually been made to the ultimate consumer, because it is not possible for him to increase the price accordingly.

Mr. MacKENZIE (Neepawa): Following up the discussion of this afternoon I have in my hand a letter received from a man in Manitoba in which he states that when he went out to buy a car he found the price increased by $28 because of the difference in sales tax. Would it be possible for this increase to amount to as much as that?

Mr. BENNETT: What was the price of the car?

Mr. MacKENZIE (Neepawa): No information was given. I know this man was driving a Pontiac last year.

Mr. BENNETT: That increase would be correct on a $1,400 car.

Mr. ILSLEY: It would depend upon the price of the car. If the hon. gentleman would like to communicate with me further and give me the name of the car and the price asked, I can go into the matter and tell him whether or not the statements made by the dealer are correct.

Mr. McGEER: I understand the sales tax is the same all over, but the reason it is the same is because the assembling plants in Winnipeg or Regina absorb it. This extra cost imposed upon these assembling plants because of the sales tax may be the reason for closing down the assembling plant in Vancouver. It is not so much the actual difference in the price of a car in the west; it is a question whether the imposition of a sales tax on a freight rate on parts going out to be assembled at these western points may in itself be sufficient to prevent the development of assembly plants there. All I would say to the minister is that there seems to me to be an opportunity to investigate possibly some field of administration to see whether an adjustment could be made so that there

would be no discrimination against manufacturing or assembling at western points. It may not be a matter that can be worked out, but I suggest that it may be worthy of consideration in the administrative program.

Mr. DONNELLY: We have just heard how the price of a car has been increased by $28, due to the sales tax, it is said. Such an increase on the wholesale price of a car would mean that the retail price to the consumer would be around $1,800 or $1,900 by the time the car got to Manitoba, paid freight out there, and the agent's commission. If that increase is due to the sales tax alone, it is collected on the retail price which the consumer pays.

Mr. ILSLEY: I have no knowledge that that increase is due to the sales tax alone.

Mr. RYAN: This afternoon the hon. member for Vancouver-Burrard (Mr. McGeer) made a statement that was not quite correct. He stated that the Maritime Freight Rates Act was passed to compensate for geographical difficulties. I cannot discuss that question on this resolution, but I will give a report of the Duncan commission to my hon. friend, and after he has read it I am sure that with his usual fairness he will be glad to withdraw that statement.

Mr. McGEER: I have read the Duncan commission's report through, and—

The CHAIRMAN: Order.

Paragraph agreed to.

On paragraph 5:

5. That schedule II to the said act, as enacted by section seventeen of chapter forty-two of the statutes of 1934, be amended by adding to paragraph (iii) thereof the following:—

Provided, also, that the tax imposed under paragraph (iii) shall not apply to the goods mentioned therein, when sold to or imported by manufacturers of automobiles or chassis under the following conditions:—

(a) If less than ten thousand automobiles or chassis are manufactured or produced per annum and at least fifty per centum of the factory cost of manufacturing or producing them, exclusive of duties and other taxes, is incurred in the British empire;

(b) If ten thousand automobiles or chassis or more are manufactured or produced per annum and at least sixty per centum of the factory cost of manufacturing or producing them, exclusive of duties and other taxes, is incurred in the British empire;

Provided, however, that effective April 1, 1938, the words "sixty-five" shall be substituted for the word "sixty" in this paragraph.

Mr. DUNNING: A word of explanation. The tariff board in reporting on the whole automobile industry stated in its report bearing upon this matter:

The board is of the opinion that the incentive for content supplied by the provisions of tariff item 438(c) could reasonably be supplemented by exempting from the tire tax such tires and tubes as are used for original equipment of automobiles produced by manufacturers, and having a British empire content as stipulated in the schedule.

That opinion the government concurs in, hence the paragraph now before the committee.

Mr. BENNETT: What I find a little difficult to understand—doubtless the minister will make it clear to me—is that first of all we are imposing a tax under paragraph (iii), section 17 of chapter 42 of the statutes of 1934, and then we say that the tax shall not be levied provided that the manufacturer makes less than 10,000 automobiles. If he makes more, then there is a different consideration.

Mr. DUNNING: There is a proviso.

Mr. BENNETT: Yes.

Provided, also, that the tax imposed under paragraph (iii) shall not apply to the goods mentioned therein, when sold to or imported by manufacturers of automobiles or chassis under the following conditions.

If he makes less than 10,000, and at least 50 per cent of the factory cost of manufacturing, exclusive of duties and other taxes, is incurred in the British empire, he does not pay any tax. If he manufactures more than 10,000 he has to have a sixty per cent content to escape the tax. If he makes 100 automobiles or chassis, then under paragraph (a) he escapes the tax.

Mr. DUNNING: Provided he has a fifty per cent British empire content.

Mr. BENNETT: Is not that exactly the opposite of what you want to do? You want to encourage the production of automobiles in this country, and the utilization of our own parts, giving employment to our parts-producing companies, but you say that they are exempt if they make less than 10,000 automobiles.

Mr. DUNNING: Provided—

Mr. BENNETT: Provided that fifty per cent of the content comes from the British empire. Well, that has been so for a long time.

Mr. DUNNING: This is giving the small automobile manufacturers, provided they come

up to the fifty per cent British empire content requirement, the same chance as the larger manufacturer would have. That is the idea of the board in making this recommendation. While the verbiage appears at first glance to be a little peculiar, I think when my right hon. friend examines it more closely he will find it carries out this idea.

Mr. COLDWELL: Have the 10,000 automobiles or chassis to be of one particular type or make or can they consist of all types made by one company?

Mr. DUNNING: All types made by a single manufacturer provided the content requirement is lived up to.

Mr. COLDWELL: If the government is giving a rebate of duty on account of tires of British content, should not that decrease the price of the automobile, if the tire on the original equipment is worth less on account of the reduction in duty? We hear so many complaints of the increased price of automobiles, and my observation has been that the price of tires is considerably less in the United States than in Canada.

Mr. DUNNING: We are not dealing at present with the tariff item. The tax which is referred to in this paragraph is a tax of two cents per pound by weight which tax now exists on tires, and three cents per pound on inner tubes. This is a cost reducing factor, taking it off under the conditions set out in the resolution. But as has been pointed out, there are other cost increasing factors. While it is perhaps premature to mention it, and while I do not desire to precipitate a debate on the tariff relating to automobiles, which we shall reach later, I should point out that the examination of the tariff board indicated that it would take some little time for the cost reducing factors to be really fully operative, but I will come to that later.

Mr. BENNETT: Is there any tax other than the tire tax covered by (iii) of schedule II?

Mr. DUNNING: No. Paragraph (iii) of schedule II relates entirely to the tire tax.

Mr BENNETT: The tire tax applied only in case of imported tires, did it not?

Mr. DUNNING: All tires.

Mr. BENNETT: I was not quite sure about that.

Paragraph 5 agreed to.

[Mr. Dunning.]

On paragraph 6:

6. That schedule III to the said act, being the list of articles exempted from the consumption or sales tax as enacted by section eighteen of chapter forty-two of the statutes of 1934 and amended by section seven of chapter thirty-three of the statutes of 1935, be further amended by adding to the said schedule the following:—

Materials, not to include lubricating or fuel oils or plant equipment, consumed in the process of the manufacture or production of taxable goods;

Crushed stone or crushed gravel to be used exclusively in the building or maintenance of provincial, county or township roads;

Printing paper and printing ink for use exclusively in producing quarterly, bi-monthly, monthly and semi-monthly magazines and weekly literary papers unbound;

Liver extract for use exclusively in the treatment of anaemia;

Goods enumerated in customs tariff items 695b and 696a.

Mr. MacNICOL: Take them up one at a time, Mr. Chairman.

Mr. DUNNING: I suggest, Mr. Chairman, that each one be taken separately to facilitate discussion.

6. That schedule III to the said act, being the list of articles exempted from the consumption or sales tax, as enacted by section eighteen of chapter forty-two of the statutes of 1934 and amended by section seven of chapter thirty-three of the statutes of 1935, be further amended by adding to the said schedule the following:—

Materials, not to include lubricating or fuel oils or plant equipment, consumed in the process of the manufacture or production of taxable goods.

Mr. DUNNING: This relates to an old bone of contention which, I know, will be remembered by many members of the committee. The consumable materials include driers, solvents and similar items which are used up completely in the process of manufacture of certain articles, but which, because they do not appear physically in the finished product, in the past have been taxable. By the granting of this exemption the administration of the sales tax will be simplified, and some double taxation will also be eliminated.

Mr. BENNETT: Yes, but this covers all materials. It reads, excepting lubricating or fuel oils.

Mr. DUNNING: "Consumed in the process of the manufacture or production of taxable goods." The department has considered this very carefully from the administrative standpoint, and is of opinion that consumable goods as defined here are now well enough understood, so that the clause can be administered in the spirit of the explanation I have just given.

Mr. MacNICOL: Take the case of cast-iron boilers made in a number of cities and towns in Canada. The boiler itself when complete will be subject to the sales tax?

Mr. DUNNING: That is right.

Mr. MacNICOL: Do I understand from this that all individual materials like cast-iron, crushed stone, sand, and everything else that enters into the manufacture, are exempt?

Mr. DUNNING: Cast-iron would be, of course, as a raw material. As to what would be considered consumable goods in that case it is pretty hard for me to say. There are thousands of items involved. Whether the sand, for instance, used in the foundry would be a consumable material might be a question. I assume it would not. It is only materials that are completely consumed in the process of manufacture.

Mr. MacNICOL: But the sand would be consumed in due course in the process of manufacture. After it has been used frequently it is no longer of any value.

Mr. BENNETT: It is not consumed, though.

Mr. DUNNING: There is a great deal of difficulty in distinguishing between this item of consumable materials and another item which is administered, called non-permanent equipment. I am advised that the sand would fall into the class of non-permanent equipment. It is still there when you get through.

Mr. MacNICOL: And the limestone that is used in the melting of the iron; it would be consumed.

Mr. DUNNING: The iron in question, being a raw material, entering into the finished article, would be manufactured under licence for that purpose, and would not be taxable.

Item agreed to.

Crushed stone or crushed gravel to be used exclusively in the building or maintenance of provincial, county or township roads.

Mr. GREEN: May I ask the minister why cities and municipalities are not given the benefit of this exemption? I take it that the idea is to promote the building and maintenance of roads, and surely cities and towns are entitled to just as much consideration as are the townships and counties of a province. This is particularly important in British Columbia, because we have no county or township roads there.

Mr. DUNNING: In connection with this item, my hon. friend from Vancouver-Burrard (Mr. McGeer) took it up with me, and I inquired into the situation. As regards the class of municipalities mentioned by my hon. friend for Vancouver South (Mr. Green), such municipalities already have exemption with respect to their own plants; that is to say, where they are in the business of manufacturing crushed gravel they are not subject to sales tax.

Mr. GREEN: Suppose they have no plant?

Mr. DUNNING: Supposing they have no plant, they are, and under this amendment as it now stands, would continue to be. There is some administrative difficulty in connection with the application of the sales tax to this class of commodity when used by public bodies. For instance, in the past provincial governments have not been taxed; there is a reason for that, of course. But on the other hand, if a contractor is working for a provincial government, and purchases gravel, it is necessary to apply the tax, and the same is true with respect to the other smaller as well as the larger municipal bodies. It is now thought that the tax can be administered with an exemption to the municipality and the county and the provincial government, even though contractors are doing the work. It sometimes happens that a purchase is made by the contractor for gravel from a pit owned, for instance, by the municipality. That, again, creates an administrative difficulty, and the Department of National Revenue believes that, having regard to all the factors, if the big city municipalities are exempt, and the smaller municipalities, counties and so forth are exempted under this new provision, it will be administrable and will bring a certain amount of needed relief in communities such as those referred to by my hon. friend. To go further: I understand the hon. member for Vancouver-Burrard will be asking now, what he has asked me privately, and what I think will be supported by the hon. member for Vancouver South, namely, to provide for municipalities other than those described in the amendment, the amendment being:

Crushed stone or crushed gravel to be used exclusively in the building or maintenance of provincial, county or township roads.

The other municipalities having their own crushing plants are already covered. The desire will be, doubtless, to have the exemption extended to include all gravel or crushed stone used by a municipality for the purpose of its roads or streets, regardless of whether the municipality has its own plant or whether it is operating through a contractor. The only objection to that is the difficulty of administrative dealing with contractors of a

municipality in relation to such matters. I have prepared an amendment, but really I have no very strong views on it; the administrative department is much more concerned than I am from the standpoint of revenue. The amendment is to substitute "crushed stone or crushed gravel purchased, produced or manufactured by any municipality exclusively for use in building and maintaining its roads or sidewalks, and not for sale." I should like an expression of view from the committee on that. The revenue involved is not considerable, but there is the fairly difficult problem of administration if the provision is widened to this extent.

Mr. GREEN: In British Columbia a large majority of the people live in municipalities or in cities, and it would be rank discrimination if they were not given that exemption. Is it the idea of the amendment that all gravel and stone used on municipal roads shall be exempt from sales tax?

Mr. DUNNING: The word "purchased" involves just that.

Mr. McGEER: I am trying to draw attention to the fact that an exemption has been extended on gravel used on provincial, county and township highways. I do not think there can be very much more difficulty in administering that tax if it is applied to a municipality than there will be in connection with a township. I notice that a number of townships in the east include places that normally would be municipalities. In the part of Ontario from which we have just returned there is a town called Kirkland Lake with a population of 18,000 which is within a township. If you are going to exempt what are obviously cities located within townships you can hardly be confronted with any administrative difficulties in a simple municipality, and you will straighten out this discrimination. I do not think it makes a great deal of difference to the municipalities, but as a matter of discrimination I think this amendment should be accepted.

Mr. ILSLEY: I would move the amendment to which the Minister of Finance referred.

Mr. DUNNING: This is not an amendment to the section before the committee but to the other provision already in the law with relation to municipalities.

The CHAIRMAN: The amendment reads:

Resolved, that it is expedient to amend the resolution proposing amendments to the Special War Revenue Act introduced on the first day of May, one thousand nine hundred and thirty-six, to provide that schedule three to the said act shall be amended by striking out the item reading as follows:

Crushed stone produced or manufactured by any municipality exclusively for use in building or maintaining its roads or sidewalks, and not for sale,

And substituting therefor the following:

Crushed stone or crushed gravel purchased, produced or manufactured by any municipality exclusively for use in building or maintaining its roads or sidewalks, and not for sale.

Mr. BENNETT: Cannot the minister accomplish his purpose by merely taking the item that is before the committee and adding a single word to make it read:

Crushed stone or crushed gravel to be used exclusively in the building or maintenance of provincial, municipal, county or township roads;

Mr. DUNNING: No, because there is already an item which requires to be repealed.

Mr. BENNETT: Then just rescind that provision. This amendment, as it stands, involves the consideration of many factors which I do not think should enter into this discussion. If you just add the word "municipal" after the word "provincial" and repeal the provision concerning their own plants you have the matter settled.

Mr. McGEER: All that would be involved now would be this: If a municipality made a contract which involved the use of crushed stone, under this item the municipality would have to buy that stone as a separate item in the contract, in order to avoid payment of the sales tax. If a contractor bought it and used it on a municipal road it would not be exempt under the proposed amendment, but if a contractor buys gravel to carry out a contract made with a township, a county or a province he is not required to pay the sales tax. I think the suggestion of the right hon. leader of the opposition is the happier one, because it would completely eliminate all suggestion of discrimination.

Mr. DUNNING: Of course the distinction is the one to which the hon. member for Vancouver-Burrard draws attention. Under the amendment as proposed the municipality would have to be the purchaser of the gravel. From an administrative point of view this would be much easier to administer if we had an exemption from sales tax on gravel purchased or produced by the municipality, instead of trying to dig out the actual gravel factor involved in a contract with a city. We admit at once that with respect to these smaller towns it is very difficult to apply the provision in the same way, and that is why we are asking for two separate sections. Surely it will not be a hardship on the larger muni-

cipality to buy its own gravel as a separate item in order that there may be the greatest ease in the administration of the sales tax rather than to have in each contract a separate item which will show the price of the gravel. Really that is the object of handling the matter in this way.

Mr. McGEER: There is the danger that a contractor supplying gravel to a city and at the same time supplying gravel for the construction of a building, which latter gravel would not be exempt, may not keep his accounts so accurately as to be able to separate the gravel, and may chisel on one or the other contract, so that he would not get the benefit of this exemption in his public business. Speaking with some knowledge of general administration in cities, I do not think there will be very much difficulty in meeting the situation where the amount of gravel to be used in the contract is sufficient to make the sales tax a factor, and I do not see any difficulty in meeting that situation.

Mr. STEVENS: May I point out to the minister that the only difficulty arises in this way, that in some provinces, notably British Columbia, they have no counties or townships; they use the term "municipalities." We have dozens of districts there which are termed "municipalities," but which are exactly the same as counties in Ontario or other eastern provinces.

Mr. DUNNING: They are called "municipalities," and the new amendment will cover them.

Mr. STEVENS: But why should they not be on exactly the same basis as a county? Perhaps we ought to call them "counties," but we do not. They are exactly the same as the county of Frontenac, the county of Carleton or any other county; they have just the same organization, but they are called "municipalities." The minister will please bear in mind that this does not affect only the large cities. Take the numerous small municipalities, as we call them, or what would be called towns in Ontario—

Mr. DUNNING: They would be exempt all the same; all they would have to do would be to purchase the gravel themselves, and they would be exempt.

Mr. STEVENS: Why should they have to purchase the gravel themselves while the county does not have to do so? Why could you not simply say "provincial, municipal, county or township roads," and this would cover the whole business.

Mr. DUNNING: But you do not get away from the administrative difficulty of which I spoke.

Mr. BENNETT: If the minister will look at his amendment I am sure he will realize that it does not accomplish the purpose he has in mind. He brings into this committee a resolution which exempts from all sales tax crushed stone or gravel to be used exclusively in the building or maintenance of provincial, county or township roads, wholly irrespective of by whom it may be purchased. That is the position. Now, what is suggested is that we add the word "municipality," and if there is difficulty about administration—

Mr. DUNNING: With but one qualification.

Mr. BENNETT: No; there cannot be even that. The government proposes to exempt from taxation any crushed stone or gravel used exclusively in the building or maintenance of provincial, county or township roads. Now we add a fourth class: municipal. As far as administration is concerned the proposed amendment complicates the matter. It means that unless they are in the business themselves they do not get the exemption.

Mr. DUNNING: No; in that case they merely require to purchase their gravel.

Mr. BENNETT: But they must sell it to the contractor. Suppose, as the hon. member for Vancouver-Burrard (Mr. McGeer) says, they call for someone to repair half a mile of street. He puts in his tender. Of course he adds the sales tax.

Mr. DUNNING: No; they call for tenders less the gravel, which they supply themselves.

Mr. BENNETT: Then, why say with respect to township, county and provincial roads that there is not going to be any trouble, and that there is because you add municipal? If it is good for three it must be all right for the fourth.

Mr. McGEER: Where could there be any difficulty in administering that tax where you exempt the provincial authority? I shall give a concrete example. We have about three large crushed stone and gravel companies in British Columbia. They supply gravel to one province, to the unorganized territories and to the cities, and in addition the same companies supply the bulk of the gravel used in all buildings. There could not be anything more comprehensive than the activity of the General Gravel Company. They are in every line of business. If the

same concern presents an administrative difficulty in the lesser activity of supplying gravel to a municipal road it cannot possibly be an administrative problem as great as that involved in its activity on the general provincial account. So there can be no justification for continuing the discrimination on the ground of administrative difficulty. It is something that is not of great importance, and if the suggestion of the leader of the opposition were accepted and the word "municipal" added and the other provision exempted, that would bring everything on the same basis.

Mr. DUNNING: All right; I at any rate am convinced, and as I am not the administrative department I can the more easily accede to the proposal. That would involve an amendment to the printed resolution inserting the word "municipal" after the word "county."

Mr. BENNETT: The amendment as it stands would be all right down to the substituted part.

Mr. DUNNING: The printed copy would then read:

Crushed stone or crushed gravel to be used exclusively in the building or maintenance of provincial, county, municipal or township roads.

If that is agreeable, the proposed amendment being withdrawn I will ask my colleague now to move:

That the item reading as follows in the existing law be now struck out:
Crushed stone produced or manufactured by any municipality exclusively for use in building or maintaining its roads or sidewalks and not for sale.

That would be entirely unnecessary after the insertion of the word "municipal."

Mr. MacNICOL: Would this item include stone and gravel used in the construction of street railways? For instance, in Toronto the Toronto Transportation Commission, I understand, builds the roadways and lays the tracks but does so at the expense of the city. Would this include gravel and stone used in that kind of work?

Mr. DUNNING: If it is used in the building or maintenance of a provincial, county, municipal or township road it would be exempt. The item does not mention railways but I do not anticipate that there would be any difficulty. It would be difficult for the department to claim that that part of the gravel which was under the street car tracks was taxable while the rest was not. As a practical matter I have no doubt about it.

Mr. BENNETT: What in practice is the fact now? Do they collect sales tax on that?

Mr. DUNNING: In practice such municipalities come under the other section.

Mr. BENNETT: I understood as an administrative matter that where contractors are working on some of our roads it was ruled by the department that they were not called upon to pay this tax, and in other cases they were. I want to know what the practice of the department is.

Mr. ILSLEY: Up to the present, if a contractor purchased the stone it was taxable, as in such cases it would not be sold to the province.

Mr. BENNETT: Suppose he used it on a provincial road, does he pay tax?

Mr. ILSLEY: Legally he was taxable.

Mr. BENNETT: Some, I think, escaped.

Mr. ILSLEY: There are some border line cases with which I am familiar.

Mr. DUNNING: There will not be any under the amendment.

Mr. ILSLEY: I see this difficulty under the amendment. The hon. member for Davenport (Mr. MacNicol) has raised the point whether stone and gravel purchased by a street railway company for use in its railway on a city street is taxable. I should say it was. If there is any administrative trouble about the matter we may have to reconsider it, because it is certainly the intention of the department to collect the tax in such a case. With the amendment first proposed that difficulty could not have arisen because the crushed stone would have to be sold to the municipality or be produced by the municipality before it was exempt.

The CHAIRMAN: The proposed amendment is:

Resolved, that it is expedient to amend the proposed amendment to the Special War Revenue Act, introduced May 1, 1936, to provide that schedule III of the said act shall be amended by striking out the item reading as follows:—

Crushed stone produced or manufactured by any municipality exclusively for use in building or maintaining its roads or sidewalks and not for sale.

Mr. DUNNING: That comes out, and the other in the printed resolution goes in.

Mr. BENNETT: Quite so.

Mr. MacNICOL: Would the Minister of National Revenue give me an explanation of what I am now about to say. As I understand it the Toronto Transportation Commission operates a street railway in the city of Toronto. It built the street railway, and has built the roadway.

Mr. ILSLEY: The city builds the roadway.

Mr. MacNICOL: No; the street railway built the roadway under and adjacent to its tracks, but did it for the city. As the transportation commission is a body operating under the control of the city, I would understand that gravel or sand required in their construction work would be exempt under this amendment. If not, why not?

Mr. ILSLEY: They would not be entitled to exemption, because they are purchasing material for the construction of a railway, not a roadway. The works the hon. member has mentioned do not constitute a highway belonging to the municipality. It is a railway, belonging to the commission.

Mr. MacNICOL: The railway is owned by the city, and the lines are on and form part of the highways.

Amendment agreed to.

Item as amended agreed to.

The CHAIRMAN: We now come to the item dealing with:

Printing paper and printing ink for use exclusively in producing quarterly, bi-monthly, monthly and semi-monthly magazines and weekly literary papers unbound.

Mr. NEILL: Reverting to the last item may I ask if the minister has put in the word "municipal"?

Mr. DUNNING: Yes.

Mr. MacNICOL: When I read the item the chairman has just read I think of the saying about locking the barn door after the horse has been stolen. That does not exactly fit this item; perhaps it would be proper to speak about putting the feed into the barn after the horse has died. In the trade agreement between Canada and the United States the government did crucify the printing industry, so far as the printing of United States magazines in this country is concerned. Some twenty-one American magazines that were printed in the city of Toronto are not now printed in Canada. I went to see two plants only recently, one in my own riding and one just outside it. One plant had been printing twelve American magazines, six of which have already been discontinued and the remaining six are being carried for a period of six months. The other plant which was printing a number of American magazines had a staff of seventy-three, but is now operating on a staff of forty. In the amendment the government seeks to help, but the help comes too late. To a certain extent the industry has already been killed.

Mr. DUNNING: No, no.

Mr. MacNICOL: Well, at least to the extent I have indicated, and I have mentioned only two plants. I know there are plenty of others. Now those plants are to receive concessions on printing paper and printing ink, but nothing under this item on the machinery required to do the printing. The two plants about which I have spoken had already purchased their machinery, while a third plant about which I know had recently purchased machines from New York, but hoping that the duties would be lowered in the budget they issued instructions not to ship the machines until after the budget was brought down. To their surprise, while the tariff did not go down the sales tax went up, and one machine cost them $160 extra. If the government had taken this action prior to or at the time they entered into an agreement with the United States perhaps the industry would not have been so seriously afflicted. While this may help some new business of the future, it does not help the industries which have already lost the printing of American magazines.

Mr. DEACHMAN: Does the item include farm magazines? It reads:

... producing quarterly, bi-monthly, monthly and semi-monthly magazines and weekly literary papers unbound.

Does that include farm magazines appearing weekly?

Mr. DUNNING: Yes, it does.

Mr. DEACHMAN: Would they come under "weekly literary papers unbound"?

Mr. DUNNING: I do not know whether the hon. member has in mind something beyond that which is in the minds of those of us who have the matter in hand, but certainly the intent of the item is to cover all farm magazines, so far as we know anything about them.

Mr. DEACHMAN: I am satisfied about that. On a strict reading I could not see that the item included the publications I have

mentioned, but I am satisfied with the minister's explanation. I am not trying to go beyond the terms of the item, but I wished to know if those magazines were included within its scope.

Mr. DUNNING: Yes.

Mr. BENNETT: Of course to me this is most iniquitous. In all the resolutions I cannot conceive of anything quite as bad. Confronted with a situation that admits into this country hundreds of thousands of American magazines of all types and kinds we are now stating that we are going to help the domestic magazines by giving them freedom from excise tax and freedom from a sales tax on ink. Then we turn to the tariff and say that we are going to make the Canadian people pay half the rebate of duties. In other words all Canadian taxpayers have to reward one set of publishers by paying half the amount of money they pay in, because there is a rebate of fifty per cent of the tax paid.

It is well known that before 1930 one publisher was buying his magazine paper from the United States. He paid a duty on that paper, and received a fifty per cent rebate, which we abolished.

Mr. DUNNING: Eighty per cent, was it not?

Mr. BENNETT: Eighty per cent, was it? I thought it was reduced to fifty per cent. Now, in view of what has transpired under the Canada-United States trade agreement we have all these magazines coming into Canada and making a desperate effort to get circulation in this country. Despite what has been said, we get nothing by way of revenue on advertising. An advertising charge in the way of taxation is nothing new; it is a customary procedure in many countries. Some of them make a flat advertising tax. We are losing half a million dollars, to begin with, which is a substantial sum of money.

We are now going further, and we say that we are going to relieve a certain type of publication, not the daily newspaper on its printing paper, and not the daily newspaper on its printing ink. We are going invidiously to pick out certain classes, and they are those who use the paper thus bought exclusively in the production of quarterly, bi-monthly, monthly and semi-monthly magazines, and weeekly literary papers unbound. How printing ink would be used on a literary paper bound would be difficult to understand. They might use it at first; I thought the hon. member for Huron North was coming to that point. I did not hear clearly what he said It strikes me that the item as it reads is not very clear. Does it carry the full rate of eight per cent, or half the rate?

Mr. DUNNING: The full rate.

Mr. BENNETT: We have raised the sales tax by two per cent on all other people who have to do with the production of magazines or papers. But within a selected group we have said that not only have we not raised it but we have taken if off altogether. The weekly newspaper in Canada has a harder row to hoe than has the magazine. I read of a magazine with a circulation of one-quarter of a million and we are now saying to them that if they will import their paper, we will saddle on the Canadian taxpayer fifty per cent of all the money they pay for duty. We say to them that on the ink as well as the printing paper they buy, we will free them from sales tax. A small weekly newspaper in some remote village with a circulation of 1,000 or 1,200 is forced to pay the regular sales tax. I think this is the most unfair discrimination in favour of one select group. Of course it is done because of the propaganda which was carried on throughout the country and with which we are all familiar. After what was done in 1930 I do not think a week passed when I was not attacked in some of these papers, and I suppose I shall continue to be attacked. However that is not a matter of importance. I suppose there will be a corresponding laudation of the government for all that it has done.

Mr. DUNNING: I shall feel hopeful for that.

Mr. BENNETT: The hon. gentleman has taken every means to secure it.

Mr. DUNNING: I think I am entitled to it.

Mr. BENNETT: If they are so ungrateful as to pass the hon. gentleman by, I will be amazed. Is the action the government is taking quite fair? Immediately this budget was announced certain ink producers in the United States began to try to sell their inks in Canada. These inks will be free of sales tax. Item 1060 shows a drawback of fifty per cent on paper of all kinds, when used by the publisher or printer in Canada in the production of periodical publications enjoying second-class mailing privileges. There are also other provisions with regard to ink, but for the moment I cannot turn them up. I protest against this as being most unfair discrimination in favour of a particular publisher.

Two Canadian paper manufacturers have endeavoured to produce the type of paper required for magazines. One company is the Howard Smith company and the other the Provincial company. Both companies have large mills and they have devoted themselves to the production of this type of paper. As their market in Canada is small, obviously there must be a slight difference between American and Canadian prices, but this is what one would expect. I do not know what this provision may mean to the Provincial mills, but I know they made extensive preparations to supply this paper. When we were considering the matter in 1930 Mr. Howard Smith came here and told the MacLean Company that he would supply their requirements in magazine paper, and I believe he did. This is a better class of paper than that used in newspapers. It is calendered to some extent and has a glossy surface. It has to pass through further manufacturing than the cheaper grades. I am leaving out the question of duty. Instead of reducing the duty by one-half, we are going to allow a rebate of fifty per cent. The Canadian companies were supplying the major part of the MacLean Company's requirements.

It strikes one as being a little odd that these people should not be willing to make some contribution to Canadian development. I am not unconscious of the attacks which will be made upon me in consequence of my saying this, but that will not deter me from doing what I consider to be my plain duty and pointing out exactly what this means. This concession has been obtained by the carrying on of a type of propaganda which, because of its character and extent, has been noteworthy in every part of Canada. It will be recalled that part of this propaganda was the indication of what this publisher had been able to accomplish in twenty-five years. It showed the small lean-to in which he had started twenty-five years ago and his present magnificent and very valuable plant. If this great accomplishment could be brought about in twenty-five years, surely he cannot complain that the country has treated him so badly. There is only one obvious answer. In my judgment this item will require much explanation to convince the average man that it is not clear discrimination against others, especially when it is coupled with the other item which places upon the taxpayers of Canada the sole responsibility of paying half the tax imposed upon importations of paper for the purposes of printing certain types of periodicals.

The CHAIRMAN: Shall the item carry?

Mr. BENNETT: I simply say, no.

Mr. CLARKE (Rosedale): Did I understand the minister aright when he said that the crushed stone and gravel used between the car tracks on the roadway—

The CHAIRMAN: I must tell the hon. member that that item has been passed.

Mr. CLARKE (Rosedale): I did not understand that we had passed to the next resolution. We are on paragraph 6 which covers crushed stone and gravel.

The CHAIRMAN: The crushed stone item has been carried.

Mr. CLARKE (Rosedale): But the whole paragraph has not. I am asking only for information.

Mr. DUNNING: At the commencement of the discussion we decided to carry each item separately, so I think the ruling of the chair is correct. However, if my hon. friend does not desire to reopen the discussion but wants only information, I think that can be given.

Mr. CLARKE (Rosedale): The portion between the two tracks of a street railway is used by the public and therefore I contend that the crushed stone or gravel used thereon should be exempt from the tax.

Mr. ILSLEY: I have given my opinion on that point. I am free to confess that the matter presents some difficulty and we may have to give it further consideration. My opinion, however, is as already stated to the colleague of the hon. gentleman.

Item agreed to.

Liver extract for use exclusively in the treatment of anaemia.

Mr. BENNETT: Other goods of the same type or class receive the same treatment, I believe?

Mr. DUNNING: This is in addition to the list.

Mr. McNIVEN (Regina): Would the minister give favourable consideration to including in this item the medicine known as glycine? This medicine is imported from the United States, the only place in the world where it is manufactured. It is used for the treatment of muscular dystrophy, a disease which afflicts young children. A number of children throughout Canada are suffering from this disease. There is one in the city of Regina; there are four in the province of Saskatchewan; there is one I know of in the province of Manitoba, and I have just received a newspaper clipping which indicates that there are twenty-four in the city of Toronto. The disease is incurable and it

attacks the muscles of young children. They are quickly converted into wheel-chair patients; they soon become bed patients and finally pass away.

This treatment or medicine, glycine, was originally controlled by one concern in the United States and the price was $50 per pound, but the Mayo clinic got control of it and reduced the price to $4.50 per pound. The treatment requires one pound per month, costing $4.50, and it is subject to a duty of thirty-five per cent and sales tax of eight per cent. In view of the fact that recovery is not possible, and that when a child is afflicted it requires treatment over a long period of years, which means a steady drain upon the financial resources of the parents, I think we might well include this medicine in the same category as liver extract, and the minister might agree to an amendment for its free admission and its exemption from sales tax when imported for the treatment of muscular dystrophy. I have already given much of this information to the minister, but I had not communicated to him the subject matter of the newspaper item which I received this morning. It is a statement from Doctor Barraclough, of the Hospital for Sick Children, Toronto, that the disease is incurable. The man in Regina whose child was afflicted wrote to Doctor Barraclough in the hope that there might be some further relief, but Doctor Barraclough's reply was that the disease was incurable, and that this medicine, glycine, afforded some relief. I would be very glad indeed if the minister under these circumstances would include glycine, giving it as favourable consideration as liver extract.

Mr. LEADER: In support of what the hon. member for Regina has just said, we have in Portage la Prairie a case of a child who is afflicted with this disease and has been declared incurable. The only source from which this medicine can be procured—I forget the name of it but the minister will perhaps remember—is from Rochester, Minnesota, from the Mayo brothers. I expect it is the same medicine that my hon. friend from Regina city mentioned a moment ago. I have already taken the matter up with the minister, and while he has not given me an entirely satisfactory answer I trust he will reconsider my request coming as it does now in conjunction with that of the hon. member for Regina City, and exempt this medicine at least from the application of the sales tax, if not the duty.

Mr. DUNNING: I think the circumstances related by the two hon. members who have just spoken are such as to arouse the sympathy of the committee to consider placing this medicine glycine on the list of articles exempted from sales tax. I may tell my hon. friend from Regina city that I have simply had no time or opportunity to check up thoroughly on the matter since he brought it to my attention. In connection with matters involving the use of a name such as this it is desired to check up very carefully. If, as I think will probably be the case, the committee would be sympathetic to doing something of the kind suggested, perhaps it might meet the case if it were understood that between now and the time the bill covering these matters comes up, we would endeavour to get all the particulars about this medicine, and if everything my hon. friends say is confirmed, we can include it in the bill. It would not be quite regular, but we could amend the bill in that manner.

Mr. BENNETT: Amend the bill.

Mr. DUNNING: That, I think, is more desirable than making the amendment here simply by inserting a name. I should like to make very sure about the matter. I would ask my hon. friend the Minister of National Health to give me his opinion on the question, but I do not believe he has ever heard of the medicine. I should, however, appreciate any scientific assistance that he can give me in the matter if it would facilitate our doing something along the line suggested.

Mr. POWER: To-morrow.

Mr. McNIVEN (Regina): I thank the minister very much. There is another matter to which I should like to direct the attention of the minister. I am informed that a device which is used for the extermination of gophers is exempt from this particular tax, but that the ingredients of the gopher poison which is used are subject to the eight per cent sales tax. The ingredients are strychnine and certain other commodities, all subject to the sales tax, while the completed preparation is exempt. Now, the gopher is a real western menace, and municipalities throughout the western provinces annually spend many hundreds of thousands of dollars in the extermination of the gopher. We are very anxious indeed that when the western crop does come it shall be preserved from the ravages of the gopher, and it would facilitate matters very much and be of real assistance to the municipalities if the ingredients going into the manufacture of this gopher poison could be exempted from the provisions of the sales tax.

Mr. ILSLEY: There is one very serious objection to granting the hon. gentleman's request; that is that the ingredients of this gopher poison are articles which are used for a great many other purposes, and administratively it would be very difficult to follow them. It would hardly be practicable to exempt them from the sales tax when used for this particular purpose, and I assume that all my hon. friend is requesting is that these ingredients be exempted from the sales tax when used in the manufacture of gopher poison. The fact that they can be used for so many other purposes would make a provision of that kind almost impossible to administer.

Item agreed to.

Goods enumerated in customs tariff items 695b and 696a.

Mr. MacNICOL: What about item 695b?

Mr. DUNNING: Item 695b covers handmade drawings, or sketches or designs, but not including patterns, viz: drawings, sketches or designs of wearing apparel, including boots and shoes, wall or floor coverings and table fabrics, wall or floor coverings and textile fabrics when imported in single copies of such drawing, sketch or design for use in the manufacture of wearing apparel, boots or shoes, table fabrics, wall or floor coverings or of patterns. The inclusion of this item in the list of exemptions is designed to simplify administration. The revenue is unimportant and is not worth the trouble. Item 696a covers educational moving picture films. Provision is currently being made in the customs tariff, and in the schedule of exemptions from the three per cent special tax, to have this film admitted to Canada free, incidental to an international convention in which it is expected that Canada will participate. While the convention does not specifically call for exemption from sales tax, the item is being included as appropriate in view of the fact that educational supplies such as textbooks and certain phonograph records at present enjoy exemption from sales tax.

Mr. BENNETT: When the bill is before the committee I should like the minister to give me an indication of the amount that is involved in this paragraph 6.

Mr. DUNNING: I think I can give that approximately now.

Mr. BENNETT: I do not ask for it now. It would be satisfactory when the bill is before us.

Mr. DUNNING: I see I have only some of the information available. I will give it when the bill is in committee.

Item agreed to.

Mr. DUNNING: I have a rather important amendment, Mr. Chairman; it will read:

Resolved, that it is expedient to amend paragraph 6 of the resolution, proposing amendments to the Special War Revenue Act, to provide that schedule III of the said act shall be amended by striking out the items reading as follows: lard, when produced in Canada; salt, when manufactured or produced in Canada; hops, when produced in Canada; and substituting therefor the following: lard, salt, hops.

At the present time, in connection with these three items, a discrimination exists in the levying of sales tax on imported salt when none is levied upon salt produced in Canada. The same is true with regard to lard and hops. The sales tax in these three cases becomes in fact really tariff protection, because it is levied upon the imported article and not upon the home produced article. It is thought desirable to eliminate a condition of that kind.

Mr. BENNETT: The minister has not overlooked what he has done in the tariff with respect to hops.

Mr. DUNNING: No, I have not overlooked that at all. It does not make any difference.

Mr. BENNETT: Does this mean an eight per cent tax on hops, or is it four?

Mr. DUNNING: With regard to the hops' item I might point out that the same practical result does not follow as follows in the two previous cases, because hops come in under licence, and in consequence do not pay a tax.

Mr. BENNETT: Does this take the tax entirely off them?

Mr. DUNNING: Yes.

Mr. STIRLING: It takes the sales tax off them.

Mr. DUNNING: At present there is no tax on the home produced article. By reason of the amendment there will now be no tax on the imported article.

Mr. BARBER: Does it mean that the tax still remains on the home produced article?

Mr. DUNNING: No.

Mr. CAHAN: As I understand it, the items in schedule III of the Special War Revenue Act are exempt from the sales tax, and the resolution now before the committee is to strike these several commodities out of schedule III?

Mr. DUNNING: No—if my hon. friend will permit me—to strike out the present language which confines the tax exemption to the home produced article and to include just the words of the commodities themselves, which will have the effect of making the articles free of tax whether they are imported or produced at home.

Amendment agreed to.

Paragraph as amended agreed to.

7. That schedule V to the said act, as enacted by section nineteen of chapter forty-two of the statutes of 1934 and amended by section nine of chapter thirty-three of the statutes of 1935, be further amended as follows:—

i. By inserting therein after the words "not to include" in the second line thereof the words "automobiles adapted or adaptable to passenger use."

Mr. BENNETT: After this amendment is made, how would it read?

Mr. DUNNING: It would then read:

Articles on which other excise taxes are imposed on importation by part XI of this act, not to include automobiles adapted or adaptable to passenger use, tires of rubber, including inner tubes—

And so forth. The reason for this change is that, as the Special War Revenue Act now stands, automobiles pay this three per cent special excise tax. No change in effect is being made on account of this wording; it merely continues to tax those items which would otherwise have been technically exempt on account of changes in the act incidental to the revision of the excise tax on automobiles.

Mr. BENNETT: That means that the three per cent tax will still be payable?

Mr. DUNNING: Yes.

Mr. BENNETT: The hon. gentleman read, after the words "automobiles adapted or adaptable to passenger use," the word "tires."

Mr. DUNNING: That is in the present act.

Mr. BENNETT: Will not some further action be necessary?

Mr. DONNELLY: That will mean that the duty on automobiles will be practically 20½ per cent?

Mr. DUNNING: Just a minute; wait till I get through. There will be no change at all in the treatment of "tires of rubber, including inner tubes . . . . trailers and other wheeled attachments." They still remain.

Mr. DONNELLY: I say that the duty of 17½ per cent and this special excise tax of three per cent will make the duty on automobiles 20½ per cent?

[Mr. Cahan.]

Mr. DUNNING: Yes.

Mr. BENNETT: Plus sales tax of eight per cent on the duty paid price.

Mr. DUNNING: Yes.

Item agreed to.

ii. By adding thereto the following:—
Goods enumerated in customs tariff items 695a, 695b, and 696a.

Mr. DUNNING: These are the same items I mentioned before in connection with the other amendment, but with one addition, and that is under paintings in oil or water colours. The inclusion of this item from the exemption list is designed to remove difficulties in bringing into Canada collections of paintings for exhibition purposes. While some of these paintings may incidentally be sold, most of them are reexported, and require orders in council in order to secure refunds of the tax paid upon reexports. The revenue aspect of granting this exemption is unimportant, but administratively it is important.

Mr. McNIVEN (Regina): May I ask the minister a question with regard to moving pictures and sound films? A large dealer in Saskatchewan, who has worked up a considerable business in the northern states, informs me that he has imported films from the United States into Canada, paid duty, then sent them back to the United States, where they were shown in schools and in community centres, and then, on bringing them back into Canada, has had again to pay duty on them. Or, on the other hand, he has had Canadian pictures and sound films made in this country and taken over to the United States, and when he was bringing them back into Canada, had to pay duty on them. Will this particular provision eliminate that difficulty?

Mr. BENNETT: He can get a refund by putting up a bond.

Mr. McNIVEN (Regina): These are films that are educational and are sent to schools and community centres.

Mr. ILSLEY: The proposed amendment has nothing to do with the matter that the hon. member for Regina (Mr. McNiven) has placed before the committee. The matters to which he has referred are matters of customs administration, and if he will give me the particulars I will look into them. At the moment I cannot say what general rules apply, but I am under the impression that the narrative of fact as related to the house is a trifle improbable.

Mr. BENNETT: I think not. If the films go out and come back again the dealer is, I think, allowed to put up a bond. In a case

that came under my observation, the film was imported once; then it went down to the United States to be used, and when it came back a second time, the customs authorities tried to collect double duty. This has been dealt with by an arrangement being made whereby the dealer puts up a bond. The film is just temporarily absent from the country; it comes back again, and that is all there is about the matter.

Mr. ILSLEY: Yes; it is a matter of procedure, or taking the proper steps, that is all. If the hon. member will tell me about those cases I will tell him just what his friends will have to do in future.

Item agreed to.

Materials for use in the manufacture of binder twine and fishing rope.

Mr. DUNNING: These items are being put on the exemption list from the three per cent special excise tax in order to exempt domestic manufacturers from a tax on raw materials which their competitors abroad are not compelled to pay.

Item agreed to.

Paragraph agreed to.

8. That any enactment founded on paragraphs one to seven inclusive of this resolution shall be deemed to have come into force on the second day of May, one thousand nine hundred and thirty-six, and to have applied to all goods imported or taken out of warehouse for consumption on and after that day and to have applied to goods previously imported for which no entry for consumption was made before that date.

Mr. BENNETT: We have amended two or three of these paragraphs, and I remember that on one occasion some difficulty arose in this connection. Perhaps "any enactment founded on paragraphs one to seven inclusive as amended" would be desirable, because that would represent the bill as it will come in founded upon the resolutions adopted by the house. The resolutions include not only those that were before the house when the hon. gentleman made his budget speech but also the amendments made in committee.

Mr. DUNNING: I thank the right hon. gentleman for his suggestion, and I will ask my colleague to move that the paragraph be amended to read:

That any enactment founded on this resolution as amended shall be deemed to have come into force on the second day of May—

And so on.

Mr. ILSLEY: I so move.

Mr. MacNICOL: As crushed stone and gravel will not likely be taken out of a warehouse but be taken rather out of a yard, a quarry or a pit, should not those words be added after the word "warehouse"?

Mr. DUNNING: There is no doubt about that; it is covered.

Paragraph as amended agreed to.

Resolution as amended agreed to.

Mr. BENNETT: Perhaps, when the bill is before the house, the Minister of National Revenue will give us some information as to the number of rebates that have been made in connection with crushed stone and gravel.

Mr. ILSLEY: Very well.

CUSTOMS TARIFF AMENDMENT

5. Resolved, that schedule A to the customs tariff being chapter forty-four of the revised statutes of Canada, 1927, as amended by chapter seventeen of the acts of 1928, chapter thirty-nine of the acts of 1929, chapter thirteen of the acts of 1930 (first session), chapter three of the acts of 1930 (second session), chapter thirty of the acts of 1931, chapter forty-one of the acts of 1932, chapters six and thirty-seven of the acts of 1932-33, chapters thirty-two and forty-nine of the acts of 1934, and chapter twenty-eight of the acts of 1935, be further amended by striking thereout tariff items 16, 28, 28a, 35, 79b, 83(a), 99c, 113, 142, 147, 168, 173, 178, 180a, 183, 199b, 200a, 206, 206a, 208h, 208i, 219d, 219e, 224, 259, 267, 267a, 267b, 268, 269, 270, 271, 272, 273, 274, 275, 284, 286, 288, 312a, 323, 326a, 362, proviso to 380(b), 404b, 409b to 409k inclusive, 409l, 409m, 409n, 409q, 410d, 411b, 412, 412a, 422a, 424, 427, 427a, 428a, 428b, 429(a), 429(g), 430, 430a, 431b, 431c, 435, 438a, 438b, 438c, 438d, 438e, 438f, 438h, 438i, 445a, 445f, 445g, 445k, 445m, 446a, 455, 462, 463, 473, 476a, 494b, 505, 513, 522, 522c, 523, 523a, 523b, 529, 529a, 532, 558b, 558d, 561, 564b, 567a, 569c, 569e, 584a, 584b, 587a, 603, 607 (part 2), 657a, 663c, 672a, 695, 695b, 698, 698a, 703, 718, 783, 802, 811, 813, 818, 821, the several enumerations of goods respectively and the several rates of duties of customs, if any, set opposite each of the said items, and by inserting the following items, enumerations and rates of duty in said schedule A:—

Customs tariff—9c. Horse meat, tripe and other animal offal, unfit for human consumption, and cereal meal, when for use exclusively in the feeding of fur-bearing animals: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. BENNETT: What are the importations under this item?

Mr. DUNNING: It is a new item.

Mr. BENNETT: I see it covers a combination of three items.

Mr. DUNNING: It is extracts from three items, in order to provide a free item for fox and animal feeds. I have an amendment

to qualify it to some extent; it is difficult to define. I will read the item as it will read as amended:

Horse meat, tripe, and other animal offal, ground or unground, unfit for human consumption; feeds consisting wholly or in part of cereals but not including baked biscuits; all the foregoing when for use exclusively in the feeding of bur-bearing animals or in the manufacture of feeds for such purposes.

Mr. STEVENS: May I draw the attention of the minister to a matter I spoke of the other night? I have no desire to put the minister to a great deal of trouble, because I appreciate the difficulty of explaining these items, but all through this new schedule as indicated by the resolution just read by the chairman, a great many items are repealed as they are in the present tariff; in many instances they are consolidated into a new item, and I have no doubt frequently the reading is considerably changed. It is quite possible that these changes will be far more significant than appears on the face of the resolution, and while I do not desire to put the minister to a great deal of trouble I think, as we go through the schedule, it would be well if he could explain the reasons why these various items were consolidated and just what has been brought into the new item. This is going to be a matter of some difficulty, but if it is approached in that way from the commencement, perhaps it will minimize the minister's troubles.

Mr. DUNNING: Since my hon. friend spoke of the matter the other evening I endeavoured to get a comprehensive exposition of the features to which he referred. In most cases I found that "consolidation" is not really the proper word to apply. This first case is one in point, where something which has been under a general item—

Mr. BENNETT: Or several items.

Mr. DUNNING: —or several items, is extracted and made subject to a definition such as the one here, "when used for feeds for fur-bearing animals;" that is made into a tariff item. That is true of most of the changes. But there are some fairly important exceptions, and if my hon. friend will look through the list provided in connection with the cases, such as the automobile schedule and the oil schedule, which originally were based upon reports from the tariff board, he will see that we have given in each case the tariff item presently applying to the item under consideration as well as the rates.

Mr. STEVENS: Yes, I notice that applies to a good many.

[Mr. Dunning.]

Mr. DUNNING: That applies to what might be called the major items. But in order to try to meet the situation outlined by my hon. friend I have three or four pages of these items extracted in order to provide a better definition. I am afraid handing them to my hon. friend would not be very helpful, except with the explanations which I have before me and which I shall be glad to give as we go along.

Mr. MacNICOL: In reference to this item there is a plant on Keating street, Toronto, employing, I believe, about one hundred and fifty to perhaps two hundred men, in continuous operation. I cannot say that I know very much about it, I wish the hon. member for Danforth (Mr. Harris) were present; he would be an authority on whether this item will increase or decrease employment in this line in Canada. Can the minister tell us whether putting all these articles on the free list will injure that plant or help it; will it increase or decrease employment?

Mr. DUNNING: I do not think it will have much effect on the Toronto plant one way or the other. Products of the kind named in the item now under consideration are, my notes say, available in Canada, but because of the transportation factor they are not available to the fur-farming industry in certain provinces.

Mr. BENNETT: Meaning the maritime provinces.

Mr. DUNNING: The maritime provinces; for instance fox and mink farms in Prince Edward Island cannot pay freight on offal from Ontario and Quebec abattoirs. Even in the face of the existing duties the fur-farmers of these provinces have, of necessity, because of the transportation factor, had to rely to a great extent upon feeds imported from the United States.

Mr. STEWART: Could the minister give the particulars of the imports?

Mr. DUNNING: Feed of this kind has come in under so many items that it has never been separately classified.

Mr. MacNICOL: What would be the effect in Ontario, because there are some fur farms in Ontario. Doubtless the plant on Keating street supplies the farms in Ontario that raise the animals to which these items apply. The question is what the effect will be on employment in that plant.

Mr. DUNNING: Does my hon. friend mean to say that there is in Toronto a plant employing over one hundred men manufacturing for fur-bearing animals this feed other than biscuits?

Mr. MacNICOL: I said that there is a plant on Keating street, Toronto, employing one hundred and fifty to two hundred men, handling carcasses of horses, grinding them up. I am not sure what they do with them, but a lot of this offal material is sold to farmers raising fur-bearing animals.

Mr. TUSTIN: Regarding the next item, cereal meal, I understand there is a great deal of dry bread brought in from the United States. Is dry bread included under this cereal meal as it is baked or ground?

Mr. DUNNING: In the amendment we have got away from the term "Cereal meal," because of complications of that kind. I shall read that part again:

Feeds consisting wholly or in part of cereals, but not including baked biscuits.

Practically the only thing excluded is baked biscuits, because it would be quite impossible to administer that in relation to other biscuit items, so biscuits are excluded. But any other form of feed for fur-bearing animals is included.

Mr. TUSTIN: I take it, then, that dry bread is allowed to come in free of duty for fur-bearing animals?

Mr. DUNNING: Yes.

Mr. BENNETT: This, it seems to me, is an item which may be of very great importance in Canada. If we get into the habit of discontinuing domestic production of feeds for any of our fur-bearing animals we are going to find ourselves in the position where, if the supply is cut off, we shall be in difficulty. There are in this country enough horses which are no longer useful to take care of that. But what I do object to is the provision in respect of cereals. It is always a matter of great concern to think that we are going to rely upon a preparation of food produced in a foreign country, and after we have completely exhausted our own supply by reason of competition, find that the price becomes immediately increased. I do not know that that is going to happen in this particular case, but I do know that this is of a class of items which has created a great deal of anxiety on the part of those responsible for tariffs. It would seem to be a most admirable thing to say to the fox farmers of Prince Edward Island, and the residents of that province who were so generous as to return the minister to parliament. It would be very, very wrong if that province were without reward for its efforts in that regard.

An hon. MEMBER: What about Nova Scotia?

Mr. BENNETT: Nova Scotia took no part in that. I know of one or two cases in which we have made just such concessions as these, and we found that the last state was worse than the first because local production was driven out by reason of competition from abroad under the free list. But if the minister states that the fox farmers now have to buy this feed from the United States, that gives the item a different significance in one province. However it does not overcome the difficulty in Ontario, for instance, which raises a substantial quantity of fur bearing animals on fur farms scattered throughout the province.

Mr. DUNNING: The fears of my right hon. friend I believe are not well founded. After a careful examination I find that while it is true that the province which I have the honour to represent produces the finest foxes in the dominion—

Mr. BENNETT: And the finest oats and wheat, I suppose.

Mr. DUNNING: —and is the province in which the commercial development of the industry was first commenced, it is also true that Prince Edward Island foxes are now found practically from coast to coast and are used for foundation stock for an industry growing almost in all parts of Canada, and nowhere more than in the middle west where it has been found that in some areas at any rate the climate is eminently suitable for the development of the industry. I am convinced that the fear which my right hon. friend has expressed as to the effect upon manufacturers of this material located in other parts of Canada will not be realized, because the prime factor with respect to ingredients of this kind is that of the freight. It is really an offal article, with the exception of a small inclusion of cereal meal, and that sort of thing. For instance, no imported article could possibly pay the freight and compete in the northern Ontario fox farms with the article which could be produced at certain of our Ontario abattoirs. The same is true across the country, with the possible exception of parts of northern coastal British Columbia and all three maritime provinces which at the present time, despite tariffs, find it more

economical to import the offal for fox feeding than to pay the transportation costs which would be inevitable on shipments of an article of low value from central Canada to the maritime provinces.

Mr. BENNETT: The special excise tax applies?

Mr. DUNNING: There are men in this chamber who know the industry better than I do. I am trying to make myself acquainted with the important factors in the constituency which, as my right hon. friend has pointed out, has done me the honour of returning me to this house. I do not pretend to know all about fox farming, but from such study as I have made of it I am convinced that this is a concession which will be of considerable value to an industry which is growing in importance, and which will not be harmed elsewhere.

Mr. BENNETT: Will this feed pay special excise tax?

Mr. DUNNING: Yes, it is subject to special excise tax.

Mr. STEVENS: Has the minister considered the possible effect upon Australian and New Zealand treaties? We gave both those countries some consideration in the free importation of frozen rabbits for fox feeding purposes. While that may sound more or less trivial the fact is that one of our great difficulties in making agreements with both countries was that of finding some concessions which could reasonably be made to them. This was considered a real concession.

Mr. DUNNING: It has not proven to be of any importance, whatsoever.

Mr. STEVENS: It has not?

Mr. DUNNING: No, it is negative.

Mr. STEVENS: As a matter of good faith, have they been notified?

Mr. DUNNING: Yes, they know about it.

Mr. CAHAN: Is it true that the maritime provinces cannot produce at reasonable cost the food required to feed the fur-bearing animals they are raising? That seems an astounding statement to make. I should like to know what proportion of this food comes from domestic production in the three maritime provinces, and what proportion is imported. I have been in almost every school section of the maritime provinces, and I cannot understand why they cannot produce this food economically so as to feed the foxes they are raising.

Mr. DUNNING: It is not that they cannot produce it, but rather that in the nature of things the proper food is an offal byproduct of another operation. It is a product of an abattoir. This is one of the uses for particular types of offal which are created in quantities capable of commercial development only in large scale abattoir operations. I think all hon. members who are familiar with the matter will confirm what I say in that regard. As is well known, large scale abattoir operations are not a feature of the commercial or industrial life of the maritime provinces. I assure the hon. member that to-day sufficient of these commodities is not available, and for that reason it is imported into the maritime provinces.

Mr. CAHAN: Does the minister say that all of it is imported?

Mr. DUNNING: The great bulk of it.

Amendment agreed to.

Item as amended agreed to.

Customs tariff—9(d). Baby chicks, n.o.p., each: British preferential tariff, free; intermediate tariff, 4 cents; general tariff, 5 cents.

Mr. BENNETT: This is an item in which there is a raising of the tariff, I suppose.

Mr. DUNNING: In this instance we have a specific duty instead of an ad valorem duty. It is difficult to apply a percentage of the value of baby chicks.

Mr. BARBER: What was the total protection last year?

Mr. DUNNING: There was last year a special valuation of thirty cents.

Mr. BENNETT: That was under section 43.

Mr. DUNNING: Yes, under section 43. In some years importations of baby chicks have reached large proportions. In 1930, 924,000 were imported, to the value of $116,000, and then they were made subject to a valuation for duty purposes amounting to thirty cents per chick. This involved payment of a heavy dumping duty and a decline in imports was noticeable. In 1931, 770,000 chicks

were imported, to the value of $90,000; in 1932, 24,000 valued at $7,000; in 1933, 5,400 valued at $1,600; in 1934, 3,200 valued at $875, and in 1935, 2,900 valued at $560.

Mr. BENNETT: They are used in the production of what are known as broilers?

Mr. DUNNING: Yes.

Mr. STIRLING: What is the effect of the change? Does it maintain the tariff at about the same rate?

Mr. ILSLEY: Perhaps I could answer that question. In the last three or four years the special value placed on baby chicks has operated almost as an embargo, because there was a thirty cent value on an article worth five cents or ten cents. The dumping duty was so high it was impossible to import them. When the trade agreement was made with the United States the value for duty purposes was cancelled and, if I remember correctly, the duty on baby chicks became 17½ per cent.

Mr. STIRLING: That is correct.

Mr. ILSLEY: That is a very low rate. The other rate was prohibitively high, but on the other hand 17½ per cent is very low, and is difficult to calculate.

Mr. BENNETT: What is the average invoice price on those?

Mr. REID: Ten cents.

Mr. ILSLEY: It varies.

Mr. BENNETT: I believe at one time they were down to five and six cents.

Mr. ILSLEY: I would have said ten cents but one of the officers says about fifteen cents.

Mr. BARBER: They are selling at five cents in California.

Mr. ILSLEY: This duty of four cents per chick is reasonably high or reasonably low, depending upon how you look at it.

Mr. BARBER: What protection was provided last year?

Mr. ILSLEY: I can figure that out for the hon. gentleman.

Mr. STIRLING: Is it 17½ per cent of thirty cents?

Mr. ILSLEY: We will follow that through.

Mr. DUNNING: There was a dumping duty.

Mr. ILSLEY: Last year, each chick would be valued at thirty cents. Then the tariff would be reckoned on the—

Mr. BENNETT: Five and one-quarter cents.

Mr. ILSLEY: The tariff rate would be reckoned on the thirty cents, the value for duty purposes. We have that, but that would be only the start of the amount. You would subtract the invoice price from the value for duty purposes. If the invoice price was ten cents, that would be twenty cents. You could not charge the whole twenty cents because that would be more than fifty per cent of the thirty cents. You could charge only fifteen cents of that.

Mr. BENNETT: You could only charge ten cents. The difference between thirty and ten is twenty, and fifty per cent of twenty would be ten.

Mr. ILSLEY: It is fifty per cent of the value for duty purposes, which, I think, is thirty cents. Therefore, the dumping duty would be fifteen cents plus 5¼ cents, or 20¼ cents. That would be the effective rate on the ten cent article, which would be a little over 200 per cent. In addition, there would be the three per cent import excise tax on the duty paid value, whatever it is by this time, and the six per cent sales tax, if it is not on the exempted list, and I do not believe it is. They would all have to be added and would increase the protection to that extent. I think it would bring it up to between 200 and 300 per cent. Last year we went down to 17½ per cent and now it is made four cents per chick, which is about forty per cent on a ten cent chick.

Mr. WOOD: I think the government are to be congratulated upon the very fair attitude they have taken with regard to baby chicks. It is not altogether a matter of protection or tariff for revenue; there is the question of the health of our flocks to be considered. If chicks were allowed to come in too freely they would be brought in from sections of the United States where the health of the flocks is not guarded. We have in Canada flocks equally as good as those in the United States; in fact I think this is characteristic of all our live stock. On the average I think our live stock in Canada is better than that in the United States. A four cent duty is fair and it will permit chicks to be brought in from special flocks when extra stock is needed. It must not be forgotten that there are certain prohibitive arrangements

between some of the provinces in connection with the shipment of chicks and it would hardly be fair to let them come in from the United States more easily than they could be brought in from another province. I believe this duty of four cents per chick meets with the approval of the chick hatcheries of Canada.

Item agreed to.

Customs tariff—16. Eggs in the shell, per dozen: British preferential tariff, 2 cents; intermediate tariff, 5 cents; general tariff, 10 cents.

Provided that, if any foreign country imposes on such goods the produce of the Dominion of Canada duties or charges more onerous than are prescribed by this item, duties equivalent thereto shall be imposed on the like goods imported into Canada from such country.

Mr. BENNETT: There are two questions I wish to ask in connection with this item. How are you going to impose the new duty—by order in council? Will this be taken as sufficient warrant for collecting a higher duty?

Mr. DUNNING: It is administrative, yes.

Mr. BENNETT: There is a rather important proviso:

Provided that, if any foreign country imposes on such goods the produce of the Dominion of Canada duties or charges more onerous than are prescribed by this item, duties equivalent thereto shall be imposed on the like goods imported into Canada from such country.

Mr. DUNNING: Yes.

Mr. BENNETT: That means that some action must be taken by someone so to do. I should think that would mean by parliament when no provision is made as to who is to take the action. When you say that additional duties shall be imposed, normally that means by parliament, unless you say that they are to be imposed by the governor in council. That is my first observation.

Second, I still think that a countervailing duty is a very dangerous thing to apply in a country such as Canada, having regard to our proximity to the United States. My first connection with countervailing duties arose from the export of coal from Lethbridge to Oregon and Washington. It will be recalled that the Americans provided in their tariff that if any country imposed upon coal from their country a duty which was higher than the American duty, then there should be corresponding increases in the American duty. We found ourselves excluded from that market by reason of the fact that we had put a duty on American coal in excess of the American duty on our coal. This is the difficulty, as I see it, in imposing countervailing duties in

connection with a country like the United States. They have a population of perhaps 130,000,000, whereas we have a population of only 11,000,000 at the most. We say that we have made up our minds as to what duty we shall place on some commodities, and we apply that duty. Then they have a duty which is not the same as ours. We say to them that if they impose upon goods from Canada charges more onerous than are prescribed by Canada, duties equivalent thereto shall be imposed upon the like goods imported into Canada from such country. Is that likely to have any effect upon them? From what we know of the conduct of their fiscal policy in years gone by can we say that it will not have some effect? I think it would have been better if the minister had taken a direct instead of an indirect course and provided a duty on eggs similar to the duty now prevailing in the United States on eggs from Canada. Otherwise we are going to have a separate tariff with respect to every country from which we might possibly import eggs. To take a direct course and provide for a British preferential, an intermediate and a general rate, possibly with the intermediate at ten cents, would have been the most simple way of dealing with the matter. In order to get over that, knowing that congress is not going to deal with tariffs this year, the president having so stated, we must at once impose by some method the higher duty upon eggs. This provision as it reads says, "shall be imposed." What is the length of time that you give them to think about it?

Mr. ILSLEY: We are treating it as almost meaning collect.

Mr. CAHAN: Then say so.

Mr. BENNETT: That is a very, very different thing. As it reads, it says "such goods the produce of the Dominion of Canada." Then you cannot put in "shall be collected," because that is permitting another country to make your tariff for you. In other words, when a collector has to impose his rate he has immediately to look at the tariff of the United States in order to collect his tax. There has been no imposition, and an imposition is necessary to found a tax. This is not an imposition. It says "shall be imposed." That means that some authority must impose it. I took it to mean the governor in council, which I think would be the proper authority to deal with the matter. It would be an anomalous situation, would it not, if you put yourself into the position of

saying to the collector of customs at a port of entry with respect to eggs coming in from the United States, "tax that at the rate fixed in the United States tariff."

Mr. ILSLEY: You do not tell him that at all. You tell him what to collect.

Mr. BENNETT: Collect what?

Mr. ILSLEY: We know the United States tariff and we tell him to collect that duty. We do not leave it to him.

Mr. CAHAN: But you have no authority to do so. The tax must be imposed before it can be collected.

Mr. BENNETT: There can be no collection without imposition. It is not a question of law or a technical matter at all. There must always be an imposition of a tax before its collection, and the imposition can take place in one of two ways; by the direct action of this parliament, or by action, having regard to the decision of the privy council in the Apollo Candle case, that celebrated case from Australia, deciding that there may be a delegation of that power, and the proper course I suggest would be by the governor in council. I am not making this part of my submission with any political motive at all; I am simply saying that there cannot be a tax unless it is imposed. A tariff is a tax, as everybody says, and there cannot be a tariff unless it is imposed. But the imposition of it involves the collection of the amount fixed by the imposing act. That would mean that there should be some authority here. The language struck me at once when I began to read it. It says "shall be imposed on the like goods." Somebody must impose the tax.

Mr. ILSLEY: Impose means place upon.

Mr. BENNETT: Yes, but it says, "shall be."

Mr. ILSLEY: That is what we are doing; we are placing the duties upon these goods.

Mr. CAHAN: We have to delegate the authority.

Mr. ILSLEY: It is future imposition.

Mr. BENNETT: Certainly. At this moment the government for a reason best known to itself has not seen fit to fix a higher tariff on eggs, but has said: We are going to adopt the American tariff—knowing that there will be no congressional tariff action this year. Therefore, we must collect on the basis of the higher tariff. But instead of saying that, the government say, "there shall be imposed." Now there is a period during which the United States, if their congress were dealing with tariffs, might modify or change that tariff. The result, of course, would be that the tariff would at once go down or go up, as the case might be. But when you say a tariff "shall be imposed," that contemplates action in the future, in futuro, not presently, and the power must be somewhere granted by this parliament. The proviso as it reads would leave the power where it rests, with this House of Commons and the Senate and the crown. If some power other than parliament is to exercise authority, that must be specified in the enacting statute. But this is silent in that regard.

I suggest to the minister that if he wants to make this proviso of any value at all—I am opposed to the plan as a matter of principle, because I am satisfied that it has always worked to our detriment—he should add words so that it would read "shall be imposed by the governor in council on the like goods imported into Canada from such country." That keeps our records clear. That puts Canada into the right place. That does not put us into the position of taking the tariffs of another country, and upon that telling our collectors to try to collect on a given figure which is fixed by the congress of the United States or by the parliament of Japan or Czechoslovakia. On the other hand, when we take action by order in council, we make allowance for the variations which may exist in various countries, and then we should at least be doing what the Liberal party has always pointed out should be done, namely, allowing parliament to have a little something to say about the question of tariffs. As it stands now, parliament is absolutely without authority. Somebody imposes a tariff, and I can find no authority by which he does it unless you provide the wording in the section itself.

Mr. ILSLEY: The whole difference between the leader of the opposition and ourselves is in the meaning of the word "impose." We have taken it that the word "impose" means place upon, and if we read it in that way—

Mr. BENNETT: That does not help you. It then would read "shall be placed upon."

Mr. ILSLEY: Provided that, if any foreign country places upon such goods the produce of the Dominion of Canada duties or charges more onerous than are prescribed by this item, duties equivalent thereto shall be placed upon the like goods imported into Canada from such country.

Mr. CAHAN: Who is to place them?

Mr. ILSLEY: We levy the duties. I submit that is all the authority we require. I understand thoroughly the point of the right hon. gentleman, but really I do not think the language needs alteration.

Mr. CAHAN: Would it not be far better to make it clear? It certainly is not clear, and I do not see, when there is a clear difference of opinion and a simple change would make the meaning clear, why that change should not now be adopted. Parliament itself can delegate its authority, but it must delegate its authority to some particular person or persons, and the power so delegated can be exercised only by the person or persons to whom the power is delegated. If a collector of customs at some port undertook to collect a higher duty because of the countervailing duties, I would not hesitate for one moment to bring an action to compel a return of those duties. You could make it clear by making this imposition of duties mandatory. And it is mandatory if you designate a person or persons to carry out the mandate, but I cannot understand how the mandate can be effective unless the persons are designated who are to carry out the mandate and exercise the power.

Mr. BENNETT: There is another argument and it might as well be made because from another ground altogether this proviso is valueless as it reads. It says: "Provided that if any foreign country imposes." Then it adds the words, "shall be imposed." That means a future action. It does not contemplate what the present position is at all. If you want to be exact about it; if you want me to make an argument which I think, although one is diffident about saying this, could be enforced by a court, the position is simply this, that you have an existing condition, a present duty, and you contemplate a future duty and future action by us. We know what the duty is in the United States at this minute, and the proviso should read: "Provided that, if any foreign country has imposed or imposes a duty in excess," because we are dealing with a future condition. I do not think there is any question about this at all.

Mr. ILSLEY: This is hair-splitting to quite an extent.

Mr. BENNETT: No, not as regards tariffs. In any taxing statute the law is very severe.

Mr. ILSLEY: It is quite clear that we are not referring to action to be taken hereafter by a foreign country in imposing a duty.

Mr. BENNETT: I would say, quite the opposite.

Mr. ILSLEY: Well, suppose I am right, for the sake of argument.

Mr. BENNETT: Yes.

Mr. ILSLEY: The next step which follows is this, that the word "imposed" does not refer to the legislative act at all; it refers to the collection of duty. What it means is that if another country is collecting from us a duty on our goods greater than we are collecting from it, we are to collect that duty. That is what all of us take it to mean.

Mr. CAHAN: But you cannot collect unless the duty is previously imposed by legislative power.

Mr. ILSLEY: This imposes it.

Mr. BENNETT: Well, it is always gratifying to find my Liberal friends making arguments like that. I never expected to live long enough to hear the Minister of National Revenue make the argument he made just now. Just listen to what he says: Duties equivalent thereto shall be imposed. I put it to this committee: Do they know of any way by which a duty can be imposed in this country except by this parliament, either directly or by delegation? It is the duties that are to be imposed, and now I am told: That is all right; we will just write a letter to the collector down there; he will collect the taxes, and that is all there is about it. All I can say is that if a man who paid those taxes came to me, I think I could demonstrate to the court that he had paid them improperly and we could get the money back.

Mr. DUNNING: When doctors disagree of course a poor layman has great difficulty, but I remember my right hon. friend's great objection to countervailing duties, which he mentioned earlier, and I also remember that when he came into office in 1930 certain countervailing provisions were on the statute books. I know he did not like them a bit. I was quite astonished that if they were of no effect he should continue to administer them for five months, in the language here used, because the language used in 1930 was precisely the same as this. I know my right hon. friend wanted to get rid of the provisions, because he did so at the earliest opportunity at a special session of parliament. But I think the fact, that in spite of their not being popular with the government of the day, and that government desiring to get rid of them,

they were administered successfully for five months, is surely a practical proof that the wording is reasonably satisfactory in operation.

As to the principle, my views on it are well known. I think there are certain commodities on which the two-way traffic is natural and possible. At certain seasons of the year a commodity may travel north, and at certain other seasons of the year, probably because of climate, it may travel south. In such cases I believe it desirable that we should indicate to our neighbours that we are prepared at all times to bring our tariff rates on such commodities down to the minimum level specified in our tariff, provided they will reciprocate by doing the same thing on the same commodity.

Mr. STEWART: Does the minister not think that the interpretation might be improved to some extent by using the words "is hereby imposed," making it an action of parliament instead of leaving it in the realm of uncertainty and using the words "shall be," which contemplate some action at a future time by some authority competent to impose a duty? The only authority, I submit that is competent to impose a duty is this parliament, either directly, by specifying that duty in the statute in the regular way, which is the open, courageous, manly way to act, or by delegating to the governor in council that power which parliament might exercise. It seems to me that if it is to be contended that the duty is now imposed, it would be well to say "is hereby imposed," or provide, as my leader has said, the authority of the governor in council. What is the objection on the part of the government to putting the matter beyond question, making it absolutely certain, taking to itself the power which it says here exists, which it says is hereby granted? It seems to me that everything points to the desirability of clearing up any uncertainty and of making it beyond question that a duty is legally imposed.

Mr. ELLIOTT (Middlesex): May I point out to my right hon. friend and to my hon. friend who has just spoken that this parliament, by passing this provision, is imposing duties equivalent to the duties imposed by the fereign country.

Mr. BENNETT: But it says, "shall be imposed."

Mr. ELLIOTT (Middlesex): Suppose the clause suggested by my hon. friend who spoke last were adopted: "is hereby imposed" or "are hereby imposed." We would be imposing it before the other country acts.

Mr. BENNETT: But it has acted. That is the trouble.

Mr. ELLIOTT (Middlesex): If at any time in the future there is imposed upon "goods the produce of the Dominion of Canada duties or charges more onerous than are prescribed by this item, duties equivalent thereto shall be imposed on the like goods."

Mr. CAHAN: By whom?

Mr. ELLIOTT (Middlesex): What can it possibly mean except that we would collect from their goods the same duty that they imposed upon ours?

Mr. CAHAN: That is what it means. But who is going to make the imposition?

Mr. ELLIOTT (Middlesex): This parliament is making it when it passes this item.

Mr. BENNETT: There is one thing about it. The Postmaster General inclines to the argument that this whole matter is dealing with future proposals. He says that this refers to a country imposing new duties which are in excess of ours.

Mr. ELLIOTT (Middlesex): Not necessarily.

Mr. BENNETT: Well, that is the way in which it was put a moment ago by my hon. friend.

Mr. ELLIOTT (Middlesex): If the duty is already imposed, surely this speaks from the present forward. There can be no doubt about what is meant.

Mr. BENNETT: Well, if I were drawing up the provision, I would have said, "any foreign country has imposed or imposes."

The CHAIRMAN: Carried?

Mr. BENNETT: No.

The CHAIRMAN: Is the item carried?

Some hon. MEMBERS: Carried.

Mr. BENNETT: Except that we are against it.

Item agreed to.

Customs tariff—28. Coffee, green, imported direct from the country of growth and production, or purchased in bond in the United Kingdom, per pound: British preferential tariff, free; intermediate tariff, 3 cents; general tariff, 5 cents.

Provided, that coffee, green, shall be entitled to entry under the British preferential tariff upon evidence satisfactory to the minister that such coffee has been produced wholly in the British dominions, colonies or possessions, and not otherwise.

Mr. BENNETT: This merely raises the general tariff to five cents?

Mr. DUNNING: There is no change in the wording. The only change in rates is the increase in the general tariff rate from three to five cents per pound. Empire countries now constitute by a considerable margin the chief source of supply, and by far the greater part of the remainder comes from countries enjoying either most favoured nation or intermediate tariff rates. Brazil, for instance, is under the intermediate tariff. It is deemed desirable to make a spread between the most favoured or the intermediate rate and that obtaining under the general tariff, in order that there may be some definite advantage to coffee producing countries in having the benefits of the Canadian intermediate tariff.

Mr. BENNETT: What countries would be affected by the general tariff on coffee? Brazil has the intermediate tariff.

Mr. DUNNING: I prefer not to enter into a public discussion, but some countries which now enjoy the intermediate tariff are, shall I say, internally disturbed and are speaking of changing their trade arrangements with other countries, not specifically Canada but including Canada.

Mr. BENNETT: Do they produce coffee?

Mr. DUNNING: Yes, and I believe that a difference between most favoured nation and intermediate tariff rates on coffee in those instances may help to maintain existing trade relations and, in fact, render possible better ones. I do not specify the situation any more closely than that, because I am not desirous of embarrassing exchanges which are now taking place.

Mr. BENNETT: I think a spread is always desirable.

Mr. DUNNING: There are exceptions, but in the main it is a useful thing to have.

Mr. CAHAN: Is the proviso attached to this item contained in the tariff as it now exists?

Mr. DUNNING: Yes, exactly.

Mr. DEACHMAN: There is one question I should like to ask in regard to this item. The rate is now five cents on coffee coming in under the general tariff.

Mr. DUNNING: No; it is three cents now.

[Mr. Bennett.]

Mr. DEACHMAN: The new tariff is five cents. Does that not tend to establish in Canada a price for coffee representing the foreign price plus the five cent duty? Therefore there will be a tendency on the part of countries trading with us under the intermediate or British preferential tariff to raise the price of their coffee to approximately the point reached under the general tariff. A tariff, I submit, arranged as this tariff is, tends to raise the price of coffee to the Canadian consumer and at the same time tends to give a definite and specific benefit to the countries exporting to us under the British preferential and intermediate rates. So then the Canadian consumer pays for coffee, a part of the price goes to the revenue of the country but a large part of it goes to help producers of coffee in countries trading with us under the British preferential or intermediate tariffs.

Mr. BENNETT: Having regard to the competition between Brazil and British preference countries?

Mr. DEACHMAN: I think so.

Mr. DUNNING: The best answer I can make to the fears expressed by my hon. friend from Huron North is to give the figures of our imports in order to show the very small quantity that will be affected by the increase. Last year our total imports amounted to 35,600,000 pounds. From British Africa we imported 10,170,000 pounds, under the British preference. From Jamaica we obtained 7,047,000 pounds, under the British preference. Brazil exported to us 6,935,000 pounds, and I mentioned that as coming under the intermediate tariff at the present time. Colombia exported 6,600,000 pounds, under the intermediate, most favoured nation tariff. From the United Kingdom we obtained 1,720,000 pounds, under the British preference.

Mr. BENNETT: That is in transit.

Mr. DUNNING: Yes. From Trinidad we obtained 811,000 pounds, under the British preference, and from Mexico, 775,000 pounds under the general tariff. That is the first instance of coffee coming under the general tariff.

Mr. DEACHMAN: Then why raise the general tariff by two cents if it is inconsequential?

Mr. DUNNING: I explained a moment ago that coffee is a very important item in regard to some countries being willing to enter into a trade agreement with Canada involving most favoured nation and intermediate tariff treatment. To continue: From Costa Rica we obtained 452,000 pounds, under

approximately the intermediate tariff; from Hawaii we received 377,000 pounds, and from Venezuela, 291,000 pounds, under a modus vivendi equivalent to most favoured nation treatment. So it will be seen that of our 35,000,000 pounds more than 34,000,000 pounds entered from those countries receiving either British preferential or intermediate tariff treatment. I think it is generally desirable to have some advantage in our tariff to offer countries with which we desire to make trade agreements. That is particularly the case in connection with tropical countries producing commodities such as coffee, and I am sure it will be of considerable advantage in negotiating with those countries.

Item agreed to.

Customs tariff—28a. Tea, imported direct from the country of growth and production, or purchased in bond in the united kingdom or in any British possession .... per pound; when in packages weighing five pounds, each, or less, the weight of such packages to be included in the weight for duty: British preferential tariff, 4 cents; intermediate tariff, 8 cents; general tariff, 8 cents.

Provided, that tea shall be entitled to entry under the British preferential tariff upon evidence satisfactory to the minister that such tea has been produced wholly in the British dominions, colonies or possessions, and not otherwise.

Mr. BENNETT: What are the changes in this item?

Mr. DUNNING: There is just a slight change in the wording, consisting of the insertion of the phrase "or in any British possession" after the words "united kingdom." This has been done to permit certain empire teas, produced in various British possessions in the Malay peninsula, to enjoy the benefits of the British preferential tariff which heretofore they have been unable to do because such teas have come to Canada by way, for example, of the island of Ceylon. Some of these teas, although entirely British in origin, are transshipped in the island of Ceylon, where they are assembled and prepared for shipment to the ultimate destination. A great deal of this assembling and preparation for shipment is done at Colombo, Ceylon, and under the item as it stood heretofore teas so prepared and reshipped could not qualify for the British preferential tariff because they were neither shipped direct from the country of growth or production nor purchased in bond in the United Kingdom, which were the only two exceptions. It is now proposed to regularize the tariff by including these words.

Item agreed to.

Customs tariff—28b. Tea dust, sweepings or waste, when imported by manufacturers of caffein, crude or refined, for use exclusively in the manufacture of caffein, crude or refined, in their own factories: British preferential tariff, free.

Provided, that tea dust, sweepings or waste shall be entitled to entry under this item upon evidence satisfactory to the minister that such tea dust, sweepings or waste has been produced wholly in the British dominions, colonies or possessions, and not otherwise.

Mr. BENNETT: The minister will observe that in the intermediate and general tariffs he has nothing at all. It is free under the British preferential tariff; is it free under the others also?

Mr. DUNNING: No; it will not be admitted under the other tariffs. The proviso covers that.

Mr. BENNETT: The other day the minister complained bitterly that when a certain government was in office it made no provision for intermediate and general tariffs with respect to cut flowers. This is exactly the same type of item.

Mr. DUNNING: But my hon. friend had the word "free' in the cut flowers item. This is an item which we intend shall come in only from British countries. It is an entirely new item, to provide free entry under the British preferential of tea dust or waste imported for use in the manufacture of caffein. Tea dust or waste is one of the great natural sources of the world's production of crude caffein. The latter already enters Canada free of duty for refining and further manufacturing, and under the new item it is proposed that the raw material shall be allowed similar free entry in order that crude caffein may be produced in Canada from tea dust so imported. I was going to call attention to the matter my right hon. friend has just mentioned, that the benefits under the item are restricted to the British preferential tariff, and therefore will apply only to tea dust sweepings or waste produced wholly in British countries.

Mr. BENNETT: If it comes from any other country, what is the duty?

Mr. DUNNING: Tariff item 28 will cover it, tea, n.o.p.

Mr. BENNETT: That would be a lower rate than the existing one, eight cents.

Mr. DUNNING: It is the heaviest tea rate.

Mr. BENNETT: No.

Mr. DUNNING: It will be ten cents a pound.

Mr. BENNETT: The n.o.p. item is not here.

Mr. DUNNING: No; it is in the tariff generally.

Item agreed to.

Customs tariff—35. Hops, per pound: British preferential tariff, 6 cents; intermediate tariff, 10 cents; general tariff, 16 cents.

Mr. BARBER: This is an item I am particularly interested in.

Mr. DUNNING: If my hon. friend will permit me, I have overlooked an amendment which comes at this point, in connection with tariff item 29:

Customs tariff—29. Coffee, green, n.o.p.: British preferential tariff, 2¼ cents per pound, plus 7½ per cent; intermediate tariff, 3 cents per pound, plus 10 per cent; general tariff, 5 cents per pound, plus 10 per cent.

This proposes the identical increase in the general tariff rate on coffee, green, shipped indirect, to accord with the increase under the budget on such coffee shipped direct. The spread between the two items has been only ten per cent additional on the former. Evasion on the new rate might be possible unless the duty is increased on the former. It is really an inconsequential increase. My colleague will move that.

Mr. ILSLEY: I move that.

Mr. BENNETT: The fact is when we were dealing with similar matters on another occasion the ground was taken that these should appear in votes and proceedings before they are here dealt with at all. It is a little difficult to follow them, and I think it is not desirable to have them dealt with now, because when the bill comes in we shall have an opportunity to do so. I am not raising the issue now. This is an item which increases duties, and while it is inconsequential it nevertheless increases the duties of the general tariff with respect to green coffee.

Mr. DUNNING: Yes, I admit it. I followed formerly the practice indicated by my right hon. friend, which I agree at once is desirable. But as a matter of fact there are so very few changes on this occasion that I do not think it will be embarrassing to the committee.

Mr. BENNETT: I am not suggesting it was.

Mr. DUNNING: There are not many changes from the list as provided in the tariff.

Amendment agreed to.

[Mr. Dunning.]

Customs tariff—35. Hops, per pound: British preferential tariff, 6 cents; intermediate tariff, 10 cents; general tariff, 16 cents.

Mr. BARBER: As I have stated, this is an item in which the district I represent is particularly interested. It is an industry which has existed in that district for over forty years, developed from a small acreage of about forty acres to some thirteen hundred acres at the present time. We boast to-day of having on the reclaimed area of the Sumas district the largest single hop garden in the world, six hundred acres. This industry has had difficulties. The product, as hon. members are perhaps aware, is consumed by the brewing industry. Although we have not produced one hundred per cent of what is consumed we have produced up to forty per cent, varying from year to year. We are in a position to produce sixty to eighty per cent.

If the minister had investigated this industry before reducing the tariff he would perhaps have had some information in regard to it. The consumers argue that certain importations are required in order to give the particular blend to the product. But we have gone to considerable trouble to ascertain the quality of our product, and some years ago a number of samples of British Columbia hops were submitted to the Brewers' Academy of New York, with the object of finding out if it was necessary to import foreign hops in order to give a particular blend to the product of the brewery. I have a copy of the report forwarded by that academy in New York clearly stating that the product from British Columbia was of the very highest grade and could be used one hundred per cent in the production of ale, stout and porter, and in the manufacture of lager beer to the extent of sixty-five per cent. We have been very anxious to have this product sold on the Canadian market. In the early days one grower in my district sold his product on the British market, but that cannot be done now because, owing to the British marketing act, they are permitted to import only fifteen per cent of the consumption, and so we are practically shut out of that market. We have been shut out of the American market for some time by a tariff of twenty-four cents a pound. The Canadian tariff, prior to 1930, was seven cents a pound. Hops were being imported from the United States, Czechoslovakia and other European countries at a very low price and affected the industry in our district very considerably. I want to say plainly to the minister that he could find out upon investigation that if it had not been

for the protection of sixteen cents a pound the five large producers in our district during the last two years would have been out of business, for the simple reason that the industry to the south of the line has been in a distressed condition. Producers who have been able to sell at all—a large number are still holding their crop—have been selling hops at as low as seven and a half to nine cents a pound. What that really means is this: It costs the grower in British Columbia one and three-quarter cents a pound to pick the green hops, and it takes four pounds of green hops to make one pound of dry, so that it will be seen that the price at which the product was sold south of the line did not amount to more than the mere cost of picking. I know of one case in Washington that was drawn to my attention recently. This grower was operating forty acres and he paid out fourteen and a half cents cash for every pound of hops produced last year. This did not include his family's labour, rental, depreciation, interest, storage and other charges, and that crop of course would have been sold at half that price.

Mr. DUNNING: That is not in Canada?

Mr. BARBER: That is in the state of Washington. In Canada the cost of production is a great deal higher. I think that if this matter were investigated by the tariff board, as it should be, the minister would find that cost of production will vary up to twenty-four cents a pound. With a protection of only ten cents a pound and 7½ cents a pound, under distressed conditions such as have obtained in the last two years one can imagine what would happen to the industry in Canada. I know representations have been made to the minister from perhaps one grower, because in the last three or four years the matter has come to my attention when I have brought it to the notice of parliament and the government. This particular grower insists that the tariff should be completely removed. Upon investigation the minister would find that this person is more of a dealer than a grower. He has sold every pound of foreign hops that have been sold in Canada in the last four or five years.

Mr. DUNNING: I have no such representations as have been mentioned by the hon. member.

Mr. BARBER: Those representations were made prior to 1930.

Mr. DUNNING: I have no such representations.

Mr. BENNETT: This matter did not go to the tariff board.

Mr. BARBER: I suggest that it was only a question of the minister running through the schedule and picking out something to add to the list of which the government is boasting. They talk about placing commodities on the free list, and so on. I suggest that the minister just ran through the list and picked out hops.

Mr. DUNNING: I am sorry the hon. member thinks that.

Mr. BARBER: A few nights ago the minister said something about reducing the burden of the tariff. In this instance what does the burden amount to? One pound of hops is used in one barrel of beer. He is reducing the burden of the tariff on the brewers, the most highly protected people in Canada. There is not much burden there, even if the rate were ten cents. If it were ten cents more it would not be too much. A reduction to ten cents a pound is not reducing the burden to a very great extent on a barrel of beer. Prior to the budget being brought down I indicated to the minister that before any action was taken with regard to hops the matter should be investigated by the tariff board. The hop growers are prepared to come before the board, and I suggest that would be the proper procedure. I will go so far as to say that if he will make some arrangements whereby the brewers would take the Canadian product, he can remove the tariff completely.

Probably he will recall that prior to 1930 this matter was brought to the attention of the government and placed before the then Minister of Agriculture (Mr. Motherwell) and other members of the government. I believe at that time some effort was made, but no agreement resulted. The only remedy was to take action through the tariff. If the minister could enter into an agreement whereby the production of Canadian hop growers would be used by brewers, the growers would not be greatly interested in the tariff.

Mr. BENNETT: At whose instance was this reduction made in the tariff.

Mr. DUNNING: At the instance of the brewers who use the hops, and who presented all sorts of evidence, in many cases from growers. It is not from a single grower.

Mr. BARBER: One grower.

Mr. DUNNING: No, not from a single grower. In connection with this item I had the curious experience of having representations against it which were afterwards specifically withdrawn by representatives of

the growers. But so far as the consumption of hops is concerned I was convinced that in spite of the higher duty there does not appear to have been any considerable diminution in the necessity for importing hops from certain other countries. I am advised that these imports are due to a particular flavour or some other quality which they bring about by mixing. I can assure the hon. member he was quite wrong when he suggested that I just went through the tariff and grabbed items here and there for the purpose of reduction. I do not think he really believes that; it was just a passing remark.

I listened to representations from both sides. The tariff was very much higher than when I left office previously. The people asking for the reduction represented the brewers of Canada, and of course they stated that they were manufacturing one of the most highly taxed commodities, a commodity which was taxed both federally and provincially. One can imagine the arguments they would use. I said we were mainly concerned about the hop growers, and they assured me positively that they had kept up the price and would continue to keep it up. They brought me proof of their activities in connection with malting barley, and certainly if there is any evidence which indicates that the Canadian hop consumers do not give a fair deal to Canadian hop producers, then the hon. member may call my attention to that fact and I can assure him my viewpoint would be changed, on production of such evidence. I am of opinion, however, that a duty of ten cents per pound under the intermediate tariff and sixteen cents under the general tariff may be considered a substantial duty, having regard to the fact that a considerable quantity of hops must be imported for purposes of correct flavouring.

Mr. BENNETT: There is no question about it.

Mr. DUNNING: Hops have been imported even under higher tariffs for that reason. Our imports amount to a million and a half pounds, even under high tariff regulations.

Mr. BENNETT: And that means a million and a half barrels of beer.

Mr. DUNNING: Is it a pound to a barrel?

Mr. BENNETT: Substantially so.

Mr. DUNNING: It is almost as much as the total Canadian production, which amounted to 1,765,000 pounds.

[Mr. Dunning.]

Mr. STIRLING: How much comes from Australia and New Zealand?

Mr. DUNNING: Practically none, in spite of the tremendous advantage they are receiving under the treaty. Importations have been very slight, despite the advantageous rates. Australian hops have not been seen in the Canadian market since 1930, with the solitary exception of a small importation of 20,000 pounds in 1933. From the information I have at my disposal I do not share the apprehensions of the hon. member for Fraser Valley, but I can assure him of sympathetic consideration of any evidence he may be able to produce at any time which would indicate that Canadian hop consumers have not treated Canadian hop producers fairly. The growing of hops is being developed in another part of Canada, not far distant from Ottawa, and I am advised that the industry is given considerable encouragement. Those growers, after first protesting against the change, came to me and said that they were quite convinced it would not be harmful to them.

Mr. BARBER: I think the minister is very fair, but there is another angle to the matter I should like to discuss.

Mr. DUNNING: Well, it is eleven o'clock and I do not suppose we can pass the item to-night.

Mr. BENNETT: No. In view of the discussions which have taken place, I think the matter should have gone before the tariff board.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

---

## Tuesday, May 19, 1936

The house met at three o'clock.

### CANADIAN AND BRITISH INSURANCE COMPANIES ACT, 1932

Hon. CHARLES A. DUNNING (Minister of Finance) moved the first reading of Bill No. 61 (from the Senate) to amend the Canadian and British Insurance Companies Act, 1932.

Motion agreed to and bill read the first time.

### PRIVATE BILLS

FIRST READINGS—SENATE BILLS

Bill No. 62 for the relief of Pedro Alfonso Baptista.—Mr. Jacobs.

Bill No. 63 for the relief of Louise Isabel Sutherland Chaplin.—Mr. Walsh.

Bill No. 64 for the relief of Clara Violetta Dodge Connolly.—Mr. Heaps.

Bill No. 65 for the relief of Marie Consuela Hill Montabone.—Mr. Bothwell.

Bill No. 66 for the relief of Lona Marie Vaughan Burnett Gravina.—Mr. White.

## WAYS AND MEANS

### CUSTOMS TARIFF AMENDMENT

The house in committee of ways and means, Mr. Sanderson in the chair.

Customs tariff—35. Hops, per pound: British preferential tariff, 6 cents; intermediate tariff, 10 cents; general tariff, 16 cents.

Mr. BARBER: When the committee rose last night I was discussing this item. I am interested in it from the standpoint of employment because it means a considerable amount of employment to those working in the industry in the district I have the honour to represent, and it is also of importance to neighbouring cities. In the harvesting season we employ in the industry about 3,000 people and hundreds are employed the year round. There is no branch of agriculture in which as much employment is afforded per acre as hop growing. I appreciate the remarks the minister made last evening with regard to encouraging this industry, and I hope he will do his best to see that Canadian hops are purchased by the consumers of this country.

There is just one other point I should like to raise. I notice that a little further on a grant is made by way of reduction of tariff to the brewers of the Irish Free State. It occurs to me that some years ago an agreement was entered into between Ireland and, I think, New Zealand, whereby there was a removal or reduction of the tariff on products of the brewing industry entering New Zealand, and on the other hand New Zealand hops were admitted into Ireland on more favourable terms. When the time comes to consider the empire agreements, perhaps Canada may be enabled to sell to the brewers of Ireland a certain quantity of our hops. I hope the minister will bear this in mind.

Item agreed to.

Customs tariff—79b. Flowers and foilage, natural cut, whether in designs or bouquets or not, n.o.p.: British preferential tariff, free; intermediate tariff, free; general tariff, 40 per cent.

Provided that, if any foreign country imposes on such goods the produce of the Dominion of Canada duties or charges more onerous than are prescribed by this item, duties equivalent thereto shall be imposed on the like goods imported into Canada from such country.

Mr. BENNETT: We on this side of the house have already said, in connection with another item, what we feel as to the sufficiency of the countervailing provisions. I observe also that the present tariff is free in respect of both British preference and intermediate. The Minister of Finance made some observations as to there being no provision for intermediate and British preference, and this schedule shows that these articles are free under both categories.

Mr. STEWART: What is the effect of the Canada-United States trade agreement on the tariff with respect to cut flowers? Would that put the item on the free list?

Mr. DUNNING: Under the intermediate tariff, yes.

Mr. STEWART: Which was free?

Mr. DUNNING: Which was free.

Mr. STEWART: And prior to that the duty was at what rate?

Mr. DUNNING: Forty per cent. It shows in the schedule.

Mr. STEWART: It is being restored to what it was before the Canada-United States trade agreement?

Mr. DUNNING: So long as the United States tariff remains at forty per cent, yes.

Item agreed to.

Customs tariff—83. Potatoes, as hereunder defined:—(a) In their natural state, per one hundred pounds: British preferential tariff, free; intermediate tariff, free; general tariff, 75 cents.

Provided that, if any foreign country imposes on such goods the produce of the Dominion of Canada duties or charges more onerous than are prescribed by this item, duties equivalent thereto shall be imposed on the like goods imported into Canada from such country.

Mr. STEWART: Would the minister inform the committee what was the rate of duty on potatoes that came into Canada before the Canada-United States trade agreement

Mr. DUNNING: Under the general tariff, seventy-five cents.

Mr. STEWART: Does this restore it?

Mr. DUNNING: It has that effect, so long as the United States duty remains at seventy-five cents.

Mr. STEWART: I do not suppose there is much use in further discussing this method adopted with respect to countervailing duty. Here is a case where, before the Canada-United States trade agreement, there was a rate of duty of seventy-five cents per hundred pounds

on potatoes. Under the provisions of the agreement they were put on the free list. Now it is desired to restore the protection to the rate of duty that existed prior to the agreement. I have no objection, as a matter of policy, to that; I think it is in the interests of the agricultural producers of this country that there should be some protection. But again I say, why not go at it in the straightforward way of imposing a duty, instead of taking this roundabout means? I wonder if the reason is that this government has been preaching reduction of tariff so long that it desires to conceal any case in which there is an increase in the tariff or an imposition of duty. We heard the minister talking about the consumer. Well, surely here the consumer is interested; a pretty substantial duty is imposed upon a very ordinary and common article of food, but this indirect, roundabout way is adopted, the method of countervailing duty. I can only repeat that I think it is not the straightforward way of doing it. We ought to be able to face a situation of this kind. When in the interests of Canadian producers a duty is desirable it ought to be imposed. Tariffs should be made here, by the Canadian people, in their own interest; they should not be controlled or regulated by the tariff or other action of any foreign country.

Item agreed to.

Customs tariff—99c. Raisins and dried currants, per pound: British preferential tariff, free; intermediate tariff, 4 cents; general tariff, 4 cents.

When in packages weighing two pounds each, or less, the weight of such packages to be included in the weight for duty.

Mr. STIRLING: What is the reason for this alteration?

Mr. DUNNING: It restores the position as regards Australian raisins to what it was before the expiration of the period. There was a lapse of, I think, one month during which the preference to Australia was reduced. This restores it.

Mr. BENNETT: The former government undertook to do this.

Mr. DUNNING: Yes. Parliament did not meet in time to act.

Mr. BENNETT: That is right.

Item agreed to.

Customs tariff—113. Cocoanut desiccated, sweetened or not, per pound: British preferential tariff, 3 cents; intermediate tariff, 6 cents; general tariff, 6 cents.

Mr. DUNNING: As regards this item, I am asking my colleague the Minister of Justice (Mr. Lapointe) to move an amendment striking out tariff item 113 wherever the said item, enumeration or rates of duty occur in such resolution. I ask this because I am a little concerned lest the reduction proposed on budget day in favour of desiccated cocoanut imported under the British preferential tariff worked to the disadvantage of the trade in cocoanuts under the same tariff between the West Indies and Canada. Representations have been made on behalf of certain of the West Indian colonies to the effect that this might be the result, and rather than dislocate the existing trade in whole nuts, I prefer to delete the item from the tariff proposals.

Mr. BENNETT: Item 113 is out altogether?

Mr. DUNNING: Yes, this item is out. The tariff remains as it is. This item will come out altogether, and the tariff will remain as it is in this respect.

Mr. LAPOINTE (Quebec East): I move that resolution No. 5 be amended by striking out tariff item 113 wherever said item, enumeration or rates of duties occur in the said resolution.

Mr. BENNETT: Does that involve any collection of duties, or matters of that kind?

Mr. DUNNING: No, I am advised that there is no difficulty in that connection. If any duties have been collected of course they will be refunded.

Mr. BENNETT: No, it will mean the collection of a larger sum. Under the British preference the rate now is 5 cents, and it was proposed to reduce it to 3 cents.

Mr. DUNNING: It will be just the opposite to what I said.

Mr. BENNETT: I assume that under such circumstances the crown would be powerless to secure the larger amount. While the resolution came into force on the first of May it is quite obvious that the amendment just moved cannot become effective until the bill is assented to, so that any importations at the lower rate will continue until such time as the statute is passed and assented to. As the minister knows, that is one of the penalties we pay for changing tariff items.

Mr. DUNNING: All that my right hon. friend has said is perfectly correct, but in this case I gather that the desiccated article comes from as far distant as Ceylon, fortunately, which rather helps to overcome the difficulty.

Amendment agreed to.

Customs tariff—142. Tobacco, unmanufactured, for excise purposes under conditions of the Excise Act, subject to such regulations as may be prescribed by the minister:—

(a) Of the type commonly known as Turkish:—

(i) Unstemmed, per pound: British preferential tariff, 20 cents; intermediate tariff, 40 cents; general tariff, 40 cents.

(ii) Stemmed, per pound: British preferential tariff, 30 cents; intermediate tariff, 60 cents; general tariff, 60 cents.

(b) N.o.p.:—

(i) Unstemmed, per pound: British preferential tariff, 40 cents; intermediate tariff, 40 cents; general tariff, 40 cents.

(ii) Stemmed, per pound: British preferential tariff, 60 cents; intermediate tariff, 60 cents; general tariff, 60 cents.

Provided that the duty under this item shall be levied on the basis of "standard leaf tobacco" consisting of ten per centum of water and ninety per centum of solid matter.

Mr. BENNETT: This is only a reduction in the British preference?

Mr. DUNNING: There is a considerable amendment both in wording and in rates. Perhaps I had better read my notes, in order that the committee may be fulled seized of the matter and so that there may be no misapprehension as to the effect.

Up to the present time unmanufactured tobacco enumerated under tariff item 142 has been free of duty upon all tariff. That is to say, it has been imported nominally free of customs duties, but immediately under the Excise Act became subject to excise duties of 40 cents per pound on unstemmed leaf and 60 cents per pound on stemmed leaf. To carry out an undertaking given to Southern Rhodesia under the conference agreements of 1932 it is now proposed first to establish a preference on both stemmed and unstemmed tobacco of the type commonly known as Turkish or Oriental, and second to transfer the duties from the excise to the customs realm. It will be remembered that when we were dealing with the excise amendments these excise taxes were cancelled. The proposal to transfer this item to the customs realm is of course inevitable if the undertaking to Rhodesia is to be carried out, since it would seem to be undesirable if not indeed impossible to provide preferential treatment in the excise field of taxation as distinct from the customs field.

It is proposed therefore, in brief, to divide the item in such a manner as to separate the so called Turkish type of tobacco from all other types and, in respect of the Turkish type, to reduce the British preferential rates of duty from 40 cents to 20 cents per pound on the unstemmed and from 60 cents to 30 cents on the stemmed. The requirements of the Canadian tobacco industry and therefore of the Canadian tobacco consuming public demand the use of a certain amount of the Turkish type of tobacco. It is estimated that the Canadian use of tobaccos of the Turkish type amounts to about 300,000 pounds per annum, all of which up to the present has been supplied from non-empire countries, chiefly Macedonia, Greece and Abyssinia. I do not suppose we are getting much from there just now, but this has been one of the few articles we have imported from that country. In recent years Southern Rhodesia has established quite a reputation for Turkish type tobacco, and the Union of South Africa is known to be producing tobacco of this type which has gained commercial favour. The Rhodesian product is finding acceptance in the British market, and in establishing the preference now proposed the government feels that it may be giving Southern Rhodesia a greater opportunity to cater to Canadian requirements in this particular product. There is no reason to feel that the preference now being granted under the British preference to Turkish type tobacco will react in any way whatsoever on the Canadian production of those types which Canada has demonstrated her ability to produce and sell. It is, however, confidently expected that empire sources of supply will fill the demand of this market and that by accepting tobacco from Southern Rhodesia Canada may make it possible for that country to provide a wider market than at present for certain Canadian commodities. I am assured that the change here proposed has no bearing whatsoever on the Canadian production of tobacco, which is of an entirely different type from that now being given a preference.

Mr. DONNELLY: The excise tax has been removed completely?

Mr. DUNNING: Yes.

Mr. BENNETT: My memory is that this is in accordance with the arrangement that was discussed with Southern Rhodesia—

Mr. DUNNING: Yes.

Mr. BENNETT: —but we declined to give effect to it until we were satisfied that by so doing we would not interfere with the production of Canadian tobacco. Once that was settled definitely we were prepared to give them a preference. I think that was the arrangement, if my memory serves me aright, and this is to give effect to it, as I understand it.

Mr. DUNNING: Yes.

Mr. BENNETT: They had our promise that as soon as we satisfied ourselves that Canadian interests would not be adversely affected we would bring about that change. The only difficulty was just how it was to be done. The cancellation of the excise tax and the transference of it to the customs tariff was the suggestion of one of the officers of the department, who doubtless is responsible for its being done in this way.

Mr. DONNELLY: What is the excise tax on ordinary tobacco?

Mr. DUNNING: It is 40 cents a pound.

Item agreed to.

Customs tariff—147.
(a) Ale and beer, when imported in bottles, per gallon: British preferential tariff, 30 cents; intermediate tariff, 50 cents; general tariff, 50 cents.
(b) Porter and stout, when imported in bottles, per gallon: British preferential tariff, 15 cents; intermediate tariff, 50 cents; general tariff, 50 cents.
Provided, that six quart bottles or twelve pint bottles shall be held to contain one gallon.

Mr. DUNNING: The only difference is in connection with the stout item, with which I dealt in the budget. The Irish Free State requested some consideration with respect to this product of Ireland, and in view of the balance of trade that exists between the two countries we were pleased to find a few commodities, even though only a few, on which we could give a preference to the Irish Free State.

Mr. CLARKE (Rosedale): Will that saving be passed on to the consumer, in the opinion of the minister? In some cases, in connection with some of these other items, the saving is retained by the dealer.

Mr. DUNNING: That is rather a difficult question for me to answer, in view of the fact that the sale of this commodity, as in the case of all other liquors, is under the control of the various provincial governments, and of course it would depend upon their action as to whether Guinness stout will become any cheaper to the consumer. That is what my hon. friend has in mind, I know, and I am informed that it is a very good article, especially for invalids like the hon. gentleman.

Mr. McIVOR: Mr. Chairman, I am opposed to this reduction, for very reasonable reasons. I think the tax on anything that tends to put on fat and does not develop muscle and brain should be as high as possible. Also, coming as I do from the Green Isle, I know that porter and stout do not tend to develop manhood and character. Not even an Irishman can carry much of it and be his normal self. Anything that tends to make a man or a woman less a man or less a woman should be taxed to the very highest point. I do not like to be "agin the government," but in this case I am convinced that the tax should not be reduced. If any of the hon. members wish to go out to-night and see our baseball game—

The CHAIRMAN: Order.

Mr. McIVOR: I was just going to use the illustration of athletes who get along without the use of stout. That is all I have to say, Mr. Chairman, because I do not believe in talking when I have finished.

Item agreed to.

Customs tariff—163a. Prune wine, not sparkling, when containing not more than thirty-eight per centum of proof spirit, per gallon: British preferential tariff, 25 cents.
Provided, that six quart bottles or twelve pint bottles be held to contain a gallon for duty purposes under this item.

Mr. STIRLING: Does this mean that it is a prohibited article under the intermediate and general tariff?

Mr. DUNNING: From any other country it will come under item 163. But we are advised that southern Ireland is practically the only producer of this article.

Mr. STEVENS: Do they grow prunes in Ireland?

Mr. DUNNING: My hon. friend is rather taxing the extent of my knowledge, but I gather it is not necessary to grow the prunes in a particular place to be able to make the wine there by some process which is peculiarly Irish.

Mr. STEWART: What will the rate be under the intermediate and general?

Mr. DUNNING: Fifty-five cents.

Mr. STEWART: No change.

Item agreed to.

Customs tariff—168. Malt flour containing less than fifty per centum in weight of malt; malt syrup or malt syrup powder; extracts of malt, fluid or not; grain molasses—all articles in this item upon valuation without British or foreign excise duties, under regulations prescribed by the minister: British preferential tariff, 25 per cent; intermediate tariff, 5 cents per pound and 30 per cent; general tariff, 10 cents per pound and 35 per cent.

Mr. GLADSTONE: I was hoping this item might not be reached until to-morrow. I wish to present the viewpoint of Standard Brands Limited of Guelph, manufacturers of

beverage malt and bakers' malt, by quoting from a letter I have received from them, as follows:

Under the new British preference rates malt extract for home brew use can be imported and pay a lower rate of duty and excise than the excise duty paid on domestic malt extract of the same type.

We pay a duty of six cents a pound on malt plus ten cents a pound on the syrup produced. In the manufacture of malt extract one and a quarter pounds of malt are required to produce one pound of syrup. Domestic manufacturer therefore pays on each pound of syrup: one and a quarter pounds at six cents equals seven and a half cents, and ten cents, making a total of seventeen and a half cents.

The importer pays twenty-five per cent on an average valuation of 7·77 cents—

Which figures are taken from Trade of Canada, 1935, page 198.

That amounts to 1·94 cents per pound plus excise tax, 16 cents, total 17·94 cents per pound.

But we pay in addition to the Department of Excise a supervision fee of $300 per month. Our production of duty paid malt extract during 1936 to date averaged 34,375 pounds per month. Supervision fee equals extra excise imposition of 0·901 cents a pound. Our payment therefore on a pound of syrup totals 18·4 cents as against the importer, British preferential, who pays only 17·94 cents, and is actually subsidized to the extent of almost half a cent a pound.

Imports from the United Kingdom under the old tariff rate have been not inconsiderable, as the annual reports of Trade of Canada show:

| Year ended Dec. 31 | Value |
|---|---|
| 1928 | $26,638 |
| 1929 | 52,339 |
| 1930 | 60,707 |
| 1931 | 34,395 |
| 1932 | 44,757 |
| 1933 | 35,927 |
| 1934 | 30,596 |
| 1935 | 23,023 |

We fear that since this trade prospered so under the old tariff rate it will be given a great stimulus under the new rate and that Canadian manufactures will be excluded from home-brew malt market in Canada. This will result in lowered volume and hence increased costs in our bakers' malt field, with increasing advantage to the United Kingdom manufacturers as compared to ourselves, so that eventually there will be no malt extract manufactured in Canada.

The imports shown above include both duty paid home-brew or beverage purpose malt and bakers' malt. We are left with twenty-five per cent protection on bakers' malt, and this is too little for the industry in consideration of the cheapness of coal and labour in the British isles as compared with our costs. But we have no protection, in truth we are paying more tax on domestic goods than on imported goods, in the beverage malt field. Our trade is divided about one-fifth beverage malt syrup and four-fifths all other malt syrup. Elimination from the beverage malt field would increase our costs on the other syrups quite considerably.

Mr. DUNNING: I have of course received a copy of the letter from which my hon. friend has just read, and I gave to the representation therein contained such consideration as could be given. The facts and figures upon which we base the proposal now before the committee I must say justify my taking the view that the Canadian manufacturer, as represented by the writer of this letter—there are in Canada only two which are known—will still be able to function even if this request of the British government be granted. There will still be a twenty per cent ad valorem duty against Great Britain under the amendment to the tariff now before the committee, that is if the excise is equated. The effective duty last year under the British preference was forty-seven per cent on these various malt derivatives.

Mr. BENNETT: Under the British preference, three cents a pound and twenty per cent?

Mr. DUNNING: Yes, by adding the specific duty evaluated in terms of ad valorem it amounted to forty-seven per cent on the value from Great Britain. The specific itself made 27 per cent on the value.

Mr. BENNETT: Three cents per pound.

Mr. DUNNING: Yes, and weighing all the factors we are of the opinion that this is a request which might well be granted. It does not come from any industrial or commercial concern, but is one of the requests of the British government which, I believe, has been under consideration by the Canadian government during the past three years. Our best judgment is that the ill effects feared by the Canadian industry, as indicated in the letter from Standard Brands, which was read, will not occur. Of course these things are a matter of opinion. Imports from Great Britain under the tariff as it existed last year were valued at $24,000; from the United States $17,000 worth was imported. The total Canadian production amounted to $622,000, which, I am advised, was divided between two firms.

Item agreed to.

Customs tariff—173. Books for the instruction of the deaf or dumb: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. BENNETT: There is no change in the item. Why do we have a separate item? It has always been free.

Mr. DUNNING: We have taken out the portion of the item referring to the blind, and are making it a new item.

Item agreed to.

Customs tariff—178. Advertising and printed matter, viz.:—Advertising pamphlets, advertising show cards, illustrated advertising periodicals; price books, catalogues and price lists; advertising almanacs and calendars; patent medicine or other advertising circulars, fly sheets or pamphlets; advertising chromos, chromotypes, oleographs or like work produced by any process other than hand painting or drawing, and having any advertisement or advertising matter printed, lithographed or stamped thereon, or attached thereto, including advertising bills, folders and posters, or other similar artistic work, lithographed, printed or stamped on paper or cardboard for business or advertisement purposes, n.o.p., per pound: British preferential tariff, 5 cents; intermediate tariff, 12½ cents; general tariff, 15 cents.

Provided, that on importations under the intermediate or the general tariff, the rate of duty shall be not less than: intermediate tariff, 27½ per cent; general tariff, 35 per cent.

Mr. MacNICOL: Would the 27½ per cent intermediate rate be on the pound price of the advertising matter, or the cost of the art or other work which enters into the production of the material mentioned in the item?

Mr. DUNNING: I am reading the small print in the item in an effort to answer the hon. member's question. In the item I find these words:

... produced by any process other than hand painting or drawing, and having any advertisement or advertising matter printed, lithographed or stamped thereon, or attached thereto.

There is no change in the wording in that regard. The change is in the rates, with a provision of a minimum ad valorem duty of 27½ per cent under the intermediate tariff. Prior to September, 1930, the rates were 10 cents, 15 cents and 15 cents per pound. Under the budget of September, 1930, there was added to the item a proviso that the minimum duty under the general tariff should not be less than 35 per cent ad valorem. Following the imperial conference of 1932 the British preferential rate was reduced to 5 cents per pound. The result of the extension of the intermediate rate to the United States on January 1 of this year was that imports of printed matter, n.o.p., from that country dutiable under this item paid a specific duty of 12½ cents per pound, but were not subject alternatively to any minimum ad valorem imposed.

An analysis of the imports from the United States under the item shows that, in the fiscal year 1935, had these imports been dutiable at the rate of fifteen cents per pound without any ad valorem, they would have paid $315,700 in duty. Actually however they paid duties of $373,800, on a declared value of $826,000. Thus the ad valorem incidence of the double rate on imports from the United States under the general tariff in 1935 was something over forty-five per cent. If we assumed that the same volume and value of imports enter at the existing intermediate specific duty of 12½ cents per pound, they would pay a duty to total $263,000, or 31·8 per cent ad valorem. In other words the ad valorem equivalent of the intermediate duty of 12½ cents per pound would be, on the volume and value of last year's imports from the United States, somewhat less than thirty-two per cent. However, the fact must be remembered that a specific duty on a poundage basis has a varying and unequal effect when spread over a wide field of printed matter, such as is covered by this item. It might represent a relatively high rate ad valorem on certain printed matter, and a ridiculously low rate on other matter. Having regard to the unequal incidence of a specific duty on the very great volume of goods covered by this item, and also the wide disparity existing between the intermediate and general tariffs, we desire to impose under the intermediate tariff a safeguarding minimum ad valorem of 27½ per cent, which I feel is not disproportionate to the minimum ad valorem of thirty-five per cent formerly effective under the general tariff on imports from the United States.

I should point out of course that the duty now proposed is not in any sense a double or compound duty, but is alternative in that the specific duty applies, except in those cases where it would have an ad valorem incidence of lower than 27½ per cent, in which event the minimum ad valorem becomes effective.

Mr. BENNETT: I have two observations to make. One is that this is an effort to secure some revenue from advertising which comes into this country from other countries. Having abandoned half a million dollars in revenue from advertising, we are now endeavouring to secure something by increasing the intermediate tariff on advertising such as is mentioned in the item. It will be observed that we are still continuing to secure something from illustrated advertising periodicals. The late government provided that, commencing at a twenty per cent advertising content, an increasing quantity of money should come into the exchequer from that source. That having been abandoned, the item we now have is to substitute in favour of those countries enjoying the intermediate tariff, which would mean the United States and other countries, a 27½ per cent rate instead of a thirty-five per cent rate which was paid on advertising from the United States at a time prior to the trade agreement. Because at that time advertising from the United States came in under the general tariff.

When the minister says that it meant a payment of forty-five per cent I cannot quite follow him, because the maximum to be paid was only thirty-five per cent; it did not matter what happened.

Mr. DUNNING: Not less than that.

Mr. BENNETT: Yes, not less than that; it is the maximum.

Mr. DUNNING: There was a higher duty previously.

Mr. BENNETT: Yes, I am trying to point that out. If computing a duty at fifteen cents per pound you did not get the thirty-five per cent, you imposed the thirty-five per cent rate. That is, if fifteen cents per pound was not the equivalent of the thirty-five per cent rate, you imposed that rate in the alternative.

Mr. DUNNING: But if it was more—

Mr. BENNETT: If it was more there was no rebate, that is all.

Mr. DUNNING: Yes, that is right.

Mr. BENNETT: So that so far as the 35 per cent is concerned you cannot tax it higher than that rate, and you must not tax it lower.

Mr. DUNNING: No less than the rate.

Mr. BENNETT: You must not tax it less.

Mr. DUNNING: Yes, but you may tax it more.

Mr. BENNETT: Unless 15 cents per pound amounted to more.

Mr. DUNNING: That was the condition.

Mr. BENNETT: That was not the condition in regard to some items however, because the value of goods was about $800,000, 35 per cent of which would be between $280,000 and $300,000.

Mr. DUNNING: They paid $373,000.

Mr. BENNETT: Yes, they paid $373,000; therefore there must have been a substantial body of goods which came in on which 15 cents per pound amounted to more than 35 per cent.

Mr. DUNNING: That is correct.

Mr. BENNETT: Which is not in the alternative, at all. It is a flat rate of 15 cents per pound which must be paid on all goods, if it is equivalent to 35 per cent of the value. But where it is less than 35 per cent of the value the addition has to be made up so that it will be 35 per cent. For instance, if we take an article worth only 10 cents per pound and compute 15 cents, the rate will be much more than 35 per cent. But if you take another article worth $10 per pound and add 15 cents to it you have to impose the 35 per cent rate. That is all there is to it.

Mr. DUNNING: That is the real difficulty, as I might point out to my right hon. friend.

Mr. BENNETT: It is only a question of administration.

Mr. DUNNING: If my right hon. friend will permit me—

Mr. BENNETT: It is only a question of administration. Under our arrangements with the United States what would happen would be that they would get their goods in for 12½ cents a pound under the intermediate tariff, as it stood, or until we make this amendment, but at not less than 35 per cent in any case.

Mr. DUNNING: Not under the intermediate.

Mr. BENNETT: Under the intermediate as it was prior to the first of January or whatever date it was. We now say that instead of getting their goods in at 12½ cents a pound there shall in no case be paid less than 27½ per cent ad valorem, as against the general tariff. That is the effect of it. There is a reduction of 7½ per cent as between the intermediate and the general. It still leaves us in the position of not receiving any revenue whatever from the largest body of advertising that comes into this country. I am not going over the ground again; I did it yesterday and two days ago, but we have now given up that enormous body of advertising as a source of revenue which last year yielded us half a million dollars.

Mr. DUNNING: I desire only to explain the reason for the item. I thought I had developed it, but apparently I did not do so completely. When we extended to the United States the intermediate tariff this was one of the items in connection with which a great change from the administrative point of view immediately took place. Under the general tariff there had been provided under the former government a rate of 15 cents per pound, with a rate of 35 per cent ad valorem. When that change was made no change was made in the intermediate column; the intermediate remained at 12½ cents per pound. Now this tariff per pound is applying on printed matter of all values, and just imagine the difference between the value of a draft of a simple advertisement, on the one hand, and a highly developed piece of art work for advertising purposes, on the other. Yet under the intermediate tariff both were taxed at so much per pound, regardless of the fact that the value of one might be and often was fifty to a hundred times the value of the other.

Representations were made to me by those in Canada who produce the finest type of lithographic work that their products should not be placed in quite the same class for duty purposes as the cheaper products of the printer's art. It just amounted to this, that on the finest type of art work the degree of tariff worked out ad valorem to slightly under five per cent, whereas with respect to advertising in bulk of the cheaper type it might well run up to and did go as high as from thirty to forty per cent. By the means adopted here, of a specific duty but with a minimum ad valorem, it is hoped to equalize that factor.

Mr. BENNETT: I followed the hon. gentleman; he need have no misapprehension in that regard. I only point out that we have reduced the duty payable on imports from the United States by 7½ per cent.

Mr. DUNNING: More than that.

Mr. BENNETT: It would be a little more having regard to value, but it still remains 12½ cents a pound; there is no change in that It used to be 15 cents a pound under the intermediate, so there is 2½ cents a pound less on advertising coming in from the United States, plus a reduction of 7½ per cent ad valorem, if the conditions mentioned were to obtain; that is, a minimum of 27½ per cent instead of 35 per cent. Now if our importations for the year ended March, 1935, from the United States, paying a minimum of 35 per cent and 15 cents a pound, were as large as the hon. gentleman indicated, not the whole $800,000 but a substantial part of it, I question whether ample protection has been given to the Canadian industry against the class of competition it has to meet. I recall pretty definitely that when we increased the rate it was in consequence of the advertising competition we had to meet; we made a minimum rate of 35 per cent as against the old rate, and that increase did have the effect of adding to employment in Canada and developing to no inconsiderable degree the artistic talents of Canadian workmen and workwomen in the various advertising agencies in the country.

The trade agreement, of course, necessitated our dealing with the intermediate tariff instead of the general. The United States had been on the general and are now on the intermediate, and dealing with the intermediate we have provided that they shall pay a rate of not less than 27½ per cent ad valorem; but the base rate, instead of being 15 cents a pound, as it was for the year ended March 31, 1935, has become 12½ cents a pound. So we have really done this: We have reduced the base rate from 15 to 12½ cents a pound on advertising coming in from the United States, which amounts to a considerable reduction, and then in addition we have said that in any event the duty paid on this advertising shall not be less than 27½ per cent of its value, whereas for the year ended March 31, 1935, the ad valorem provision was 35 per cent. The two together must mean a very substantial additional competition to be met by Canadians with a limited production as against the mass production of their great competitors.

Has the minister the figures of the United States imports as distinguished from other countries?

Mr. DUNNING: The imports from the United States for the last few fiscal years expressed in dollars are as follows: 1931, $2,044,000. There appears to be in my figures a jump to the year 1934, when the imports amounted to $649,000; there was an increase in 1935 to $826,000, and for the fiscal year 1936 an increase to $943,000.

Mr. BENNETT: Three months of 1936 would be under the agreement.

Mr. DUNNING: Yes, three months would be under the treaty and therefore not subject to the limitation which is now being imposed. Production in Canada amounted in 1934, the last figures we have, to $2,000,000 for catalogue production, and for printed advertising matter, $13,100,000.

Mr. BENNETT: I confess, Mr. Chairman, that I was more surprised at this item than at almost any other item with which I have had to deal in the tariff. The Canadian business in this one item amounts apparently to $15,000,000.

Mr. DUNNING: Enormous.

Mr. BENNETT: An enormous business. I could hardly credit it when it was first brought to my attention. I scarcely thought it possible that we were producing so much, apart altogether from newspaper advertising. Our production amounted to $1,250,000 or $1,500,000 a month. I think it would have been well to leave that intermediate tariff at 35 per cent, having regard to what our own experience was. I have heard the reasons adduced against it, but I doubt, and there is some reason for it in the figures the minister has given, whether this will be sufficient protection. For three months of the period for which the minister gave the figures the duty was 12½ cents a pound, without restriction, and it may well be that the steps now taken will tighten that up; I believe they will,

but whether or not it is ample for the maintenance of our $15,000,000 business, I cannot say. It did strike me, when I was looking at it, that it was questionable whether it was sufficient. I know that the minister is dealing with it from the point of view of what he thinks fair for the interests concerned, and if he thinks 27½ cents is ample he must have good reason for so thinking. But having regard to my own experience and the magnitude of the item, of which I had no idea until it was first brought to my attention, I doubt whether we are warranted in substituting for the old 35 per cent rate a 27½ per cent rate, added to the fact that we have made the poundage rate 2½ cents less against United States imports. That is my fear; I hope I may be wrong.

Mr. DUNNING: I have gone into the matter with some care, particularly having regard to the figures. As a matter of fact, there was a surprisingly small increase in the first three months relatively to what might have been expected.

Mr. BENNETT: It was $900,000 in the year.

Mr. DUNNING: Compared with $826,000 in the previous year. I find there are one or two things operating in connection with this item. One is the rising price level in the United States, which is of considerable importance, and another is the important psychological effect of our regulations that American printed matter shall have on it "printed in the United States." There is no doubt that this does have an effect—

Mr. BENNETT: A very marked effect.

Mr. DUNNING: A marked effect, yes. It has a marked psychological effect in the business. Having regard to the fact that there was $943,000 worth of imports out of a total business of $15,000,000, I felt, after examining all the factors, and not losing sight of the excise tax as an additional consideration, that this was fair; and I must say I have had no representations to the contrary from any of the interests affected since it became known that this proposal was to be made. By and large, I think it will hit the mark.

Mr. STEWART: I assume that the discrepancies in value for duty purposes on the poundage basis were not apparent prior to this change in the United States agreement.

Mr. DUNNING: Yes, because the government of which my hon. friend was a member, in dealing with the problem, adopted the principle which we are here reinstating in connection with the intermediate tariff.

Mr. STEWART: But under the tariff as it existed before the trade agreement with the United States, when this was put under the preferential rate, there was not such a discrepancy in the rate on the poundage basis as there has been since it has come under the preferential tariff.

Mr. DUNNING: Oh, yes; it immediately reverted to what it had been previously.

Mr. STEWART: While you had the poundage basis and the percentage rate, there was not the same difficulty as there has been since.

Mr. DUNNING: Of course not, because of the wide disparity in the value of the articles dealt with under the item.

Mr. STEWART: How long has that provision "printed in the United States" been in force in connection with advertising of this sort?

Mr. DUNNING: Many years; I cannot say how long. I do not remember personally when it was not in effect, but it has had a cumulative psychological effect.

Item agreed to.

Customs tariff—180a. Photographs for use only as news illustrations, under regulations by the minister: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. DUNNING: The only change is in the wording, which permits agencies to bring in news illustrations for the use of small newspapers. "Sent to the press" was the old wording—photographs sent to the press for use only as news pictures. The new item is photographs for use only as news illustrations.

Mr. BENNETT: It is not the plates, but merely the photographs.

Mr. DUNNING: Yes.

Item agreed to.

Customs tariff—180d. Photographs, paintings, pastels, drawings and other art work and illustrations of all kinds, whether originals, copies or proofs, for reproduction in periodical publications enjoying second class mailing privileges (other than daily newspapers): British preferential tariff, free; intermediate tariff, 10 per cent; general tariff, 25 per cent.

Mr. DUNNING: I have an amendment to offer. The change proposed in this item, as compared with the printed resolution in Votes and Proceedings, is the addition of a proviso which will explain itself:

Provided that goods which are entitled to entry free of duty or at a lower rate than as indicated in this item shall not be entered at the rates specified in this item.

The item itself is a rather confused one in its development. The intent of the budget

resolution was of course to provide relief rather than to add burdens, and we wish to be sure, by means of the proviso, that that will be the effect. I would ask the committee to note that the item is restricted in its operations to reproduction in periodical publications enjoying second class mailing privileges.

Mr. BENNETT: Other than daily newspapers.

Mr. DUNNING: These are the publications most vitally affected.

Mr. BENNETT: But why single them out as against the daily newspaper, which now does give us illustrations of important world events? Is this our publishers again?

Mr. DUNNING: My hon. friend will notice that item 180a immediately preceding deals with photographs for use only as news illustrations; they are free. The daily newspaper of course uses that—the ordinary newspaper. Paintings, pastels, drawings and other art work and illustrations of all kinds, whether originals, copies or proofs, for reproduction, are dealt with in this item and are intended for an entirely different class of publication.

Mr. BENNETT: The word "photographs" appears in both; that is the point.

Mr. DUNNING: Well, there are photographs and photographs. The amendment also drops the phrase "for daily newspapers," which eliminates the possibility of duplication of the two items.

Mr. BENNETT: It does eliminate those words?

Mr. DUNNING: Yes.

Mr. LAPOINTE (Quebec East): I beg leave to move the amendment.

Mr. BENNETT: The proviso is rather amusing—provided that goods covered by another item shall not be included in this. It is a rather amusing way of putting it, is it not? If you amend item 2 of the tariff and say, "provided that items under 1 and 3 shall not come under this item"—well, it is rather strange.

Mr. LAPOINTE (Quebec East): It has to be done only once to be of any use.

Mr. BENNETT: Quite so.

Mr. DUNNING: The qualification has appeared in one or two other places in the tariff in the past.

Mr. BENNETT: Yes, but it is an amusing way of putting it.

Mr. DUNNING: It has the effect of avoiding unexpected trouble in the way of an upward movement in some article when as a matter of fact a downward movement is really intended.

Mr. BENNETT: In that regard I was going to direct the minister's attention to this fact. He will observe that the general tariff is 25 per cent, which is the maximum under the present general tariff in any way that you may arrange the item. With respect to the intermediate there are three tariffs: one is free and the others are 22½ per cent. With respect to the British preference there are three—free, 15 per cent and 15 per cent. I take it that this is a consolidation of all, and they are all made free. That is what it looks like.

Mr. DUNNING: Extracts from them.

Mr. BENNETT: The extracts include some of the free?

Mr. DUNNING: That is the point.

Mr. BENNETT: And some of the 22½ and some of the 25?

Mr. DUNNING: That is the point.

Amendment agreed to.

Mr. BENNETT: That strikes out the daily newspaper? It no longer exempts the daily newspaper from the benefits of the item?

Mr. DUNNING: That is right.

Item as amended agreed to.

Customs tariff—183. Newspapers, or supplemental editions or parts thereof, partly printed and intended to be completed and published in Canada; comic and pictorial sections, non-advertising, to be inserted in or folded with periodical publications entered for mailing purposes as second-class matter: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. MacNICOL: It appears to me that this item should have been divided in two. The last part, "comic and pictorial sections, non-advertising, to be inserted in or folded with periodical publications entered for mailing purposes as second-class matter," should have come in under another item, perhaps coupled with 473a, which will be referred to later. After the budget was brought down I visited a number of printing and publishing houses in Toronto and got some information with reference to the last part of item 183. One printer told me that he had purchased many thousands of dollars' worth of machinery to print just the kind of articles that are mentioned in the last half of this item and which are now to be admitted free.

Mr. DUNNING: The pictorial sections, you mean?

Mr. MacNICOL: Yes. I have in mind a well known magazine, although I cannot at the moment recall the name of it. I was told that in the case of that magazine the front page, which includes the back page, will come in free under this item, and that were it not for this item those particular pages would be printed in this country. But as on the other side they print a great number of the front pages to be sent out as window displays, to attract public attention to the magazine, and all they have to do is to run off a few more copies, 1,500 or 2,000, and ship them into Canada to take care of the Canadian trade. That particular printer thought that this was a hardship to Canadian publishers, and it strikes me that way too. Again, if the original plates or electrotypes from which the articles in the last half of item 183 are printed were imported into this country, they would have to pay under item 473a, a 7½ per cent duty. It does not seem reasonable that the finished article should come in free while the electrotype or plate that is imported for printing in Canada will have to pay a 7½ per cent duty. The combination of those two items cannot do other than deprive Canadian workmen of employment. In fact I was told in the course of the conversation I mentioned that this item, in conjunction with the provisions of the Canada-United States trade agreement pertaining to the printing of American magazines, has resulted in the releasing in Toronto alone of 250 girls who were employed for binding, and in conjunction with this item an additional number of pressmen have been and will be laid off. I was in business for a long time, and I cannot see any other result of the adoption of this item than the reduction of employment in Canada. I know the minister does not want to do anything like that. I realize his sincerity and I am convinced that he, as much as anybody else, wants to provide work for Canadians. But here is a tariff provision which means reducing employment in Canada. I cannot see it in any other way. The American people themselves are convinced that it is going to work considerable benefit to them. I remember seeing a few days ago in one of the Toronto papers a dispatch from New York dated March 30 which had been republished in Toronto. One part of it reads as follows:

> One striking result of the recently initiated reciprocal trade agreement with the United States has been a tremendous increase in sales of American magazines in the dominion, one magazine alone showing a gain of 125 per cent over last year. As a consequence the advertisement of American products in Canada has increased proportionately, and it is expected that this will result in a corresponding stimulus to American sales of all kinds.

If that be true—and I have no reason to doubt it—an increase of American sales in Canada as a result of these glorified catalogues which are now flooding our market cannot fail to reduce employment in Canada. I suggest to the minister that the item be divided in two. Let the first part of it end at the words, "published in Canada," and then make a new item covering "comic and pictorial sections, non-advertising, to be inserted in or folded with periodical publications entered for mailing purposes as second-class matter," and place whatever the minister considers to be a reasonable duty against the importation of these comic and pictorial sections, because if these latter are published in Canada it cannot result otherwise than in providing employment in printing, in the production of paper and ink and whatever else is required to produce them. In all sincerity I put that to the minister. I believe every member wishes to increase employment in this country, although all do not see the problem in the same way. I have tried to demonstrate, however imperfectly, that the item as it now appears cannot but result in reduction in employment in Canada, but if it were divided, the latter half taken out and a duty placed on the matter therein referred to, employment in Canada would benefit. I do not know whether the minister can do anything at the present time, but I hope that if he cannot he will do something about it later.

Mr. BENNETT: I can cover what I have to say before the minister replies. I regret that he has not seen fit to alter this item. Few items gave more concern to the late government than this one. It involves the question: are we doing the young children of Canada a service by putting on the free list the Katzenjammer kids and the Jiggses and that form of illustration that is coming into this country? Like most public men I am not unmindful of the effect of the influence of such pictures upon children from five to eight or nine years of age. I once was talking to a distinguished public servant—by the party of my hon. friend he is regarded as very distinguished, and is still in the service of the state—who told me that he did not permit these supplements to be placed in the hands of his young children.

In 1930 or 1931, I forget which, when we dealt with this item we dealt with it as we did for two reasons. The first was that these supplements represent additions to the Sunday newspapers that I do not think the most case hardened member of this committee would regard as being the very best literature for the children on Sunday morning. I have listened to an exposition over the radio based

upon one of these coloured supplements, and while I am not an authority at all I have observed the effect upon children of the reading of them. Take one of these coloured supplements, for instance. It leaves an entirely wrong impression as to the relations between a man and his wife. It places a premium upon fraud, lying and deceit. These two Katzenjammer youngsters of whom you see the pictures are elevated to a position of great importance because of their ability to escape the just retribution of their own misconduct. And so it goes; I could give others as well. There are some, of course, that are quite the opposite, that have some value from the standpoint of teaching children the habits of wild animals and matters of that sort, but after much consideration this item was dealt with as indicated.

The duty we imposed amounted to 15 per cent, 22½ per cent and 22½ per cent. Now these supplements are to enter free when they come into this country prepared for use as supplements to our newspapers, which was the second point dealt with by my hon. friend for Davenport. The hon. member dealt with that question so fully that I am not going to attempt to repeat what he said, but there is no doubt as to what will be the result in regard to employment. There are weekly newspapers in Canada that print these coloured supplements themselves, but the greater number of them are syndicated from the United States, already printed; they are shipped here in great quantities and then folded in with the Sunday newspapers. There is also another supplement, reproduced on calendered paper—

Mr. DUNNING: Rotogravures.

Mr. BENNETT: Yes, rotogravures, which also would be covered by this item as it now stands, I take it. I do know that a substantial amount of revenue was derived from that source. I happen to know that one newspaper imported those supplements, printed the name of the paper upon them and added them to the Sunday issues, and that newspaper paid us substantial sums in the way of revenue. In a sense those are educational, in a general way, containing as they do pictures of current events of world wide interest, and broadly speaking I think they are to be commended. But when you get down to the others, I do not know whether Moon Mullins adds greatly to the store of knowledge of young and growing children. I am not an authority upon that—

Mr. EULER: You are pretty familiar with him.

[Mr. Bennett.]

Mr. BENNETT: I am. Fortunately I have reached an age when the formative period is past and it is not likely to be very injurious to me. If it were I should think it highly undesirable that I should be here. That, however, is the reason that governed in placing the duties on the items in this schedule.

Then there is the other question. Is it necessary to add to the profits of the Sunday newspapers by supplying employment to people out of Canada in order that Canadians may purchase these works of art under the circumstances indicated? I think not, and I did hope that the government would not attack that item at this time. It is just one more of those unconscious influences that are moulding the character of the next generation. If we look abroad and see the lack of discipline that obtains in some sections of this continent I think we will agree that there was never a moment of greater necessity for the imposition of those safeguards that were thought desirable in days gone by in order to shape, form and mould national character along lines that at least would reflect something of the genius of our civilization, the civilization that was built up by the generations that have now gone to their rest, rather than the idea that man owes no duty to his fellows and that an undisciplined horde constitutes a nation. I think that is a very improper conception; I know it is not shared by the minister, by the government, by the supporters of the government or by any hon. member in this house, but I cannot help thinking of the effect of this change. When we were putting on this duty I explained the matter at great length; as a matter of fact I think I took too much time, but in those days I said that we could not measure unconscious influences. All we can do is speculate, but we do know what the effect has been in some countries. Let me repeat that it cannot be good for youngsters to believe that there is merit in deception and fraud, as many of these pictures indicate, and that the reward of the deception of parents and of a lack of discipline is happiness, satisfaction and pleasure. That is all I have to say about it, but I feel very strongly though I am not directly affected by this change. I believe it is a bad thing for Canada.

Mr. DUNNING: Well, Mr. Chairman, with the sentiments expressed by my right hon. friend with respect to this matter I am quite sure there will be no disagreement in the committee. I am only compelled to point out to him again, however, as I have on former occasions, that although he did place a duty of 15 cents per pound against the Katzen-

jammer kids and all the other pictures of which he speaks and which he deems to be injurious to the morals and the proper intellectual development of our children—

Mr. BENNETT: I did not say the morals.

Mr. DUNNING: —there was no diminution in the supply of that kind of material. If we are going to approach this problem from, shall I say, the very lofty standpoint taken by my right hon. friend, we must choose other machinery than that of levying an impost upon this literature for the benefit of the treasury. Surely that is evident from the experience of the last five years.

It is said sometimes by the ladies that an old maid always knows a great deal more about bringing up children than a mother knows, and while I thought of that as my right hon. friend was speaking I did not think of it in any ribald sense at all; rather, speaking as a father, I was quite appreciative of the understanding displayed by the right hon. gentleman. It is rather difficult, you know, to raise children by the method of prohibition. I suppose my right hon. friend may be finding that out now. I venture to suggest to him that during his own youth the prohibited thing had a certain value in his eyes if he even became aware of its existence.

Mr. BENNETT: I had parents who saw that prohibition meant prohibition.

Mr. DUNNING: As long as the iron hand of discipline was on my right hon. friend prohibition meant prohibition, and by the time he attained to years of discretion the lessons then learned had become so ingrained that he has continued to follow them throughout his life.

Mr. BENNETT: That is the reason he sits here six hours a day.

Mr. DUNNING: That is the reason he is capable of doing so. However, my reason for rising to speak was not for this rather pleasant interchange, but to deal with the question the hon. member for Davenport (Mr. MacNicol) asked with respect to employment. I know the hon. member will not forget that the newspaper comes in free at the present time, because there was no duty under the intermediate tariff formerly effective, and once the United States obtained the privileges of our intermediate tariff newspapers from there came in free. That is one point. With respect to the inserts to which the hon. member referred, may I point out that representations are made to me by those interested in the printing of American magazines in Canada that the privilege of importing inserts will in some cases at least have the effect of retaining in Canada the printing work of certain magazines, and will also involve work for Canadians in the printing on the other side of a highly artistic insert and also the facing page. Indeed one of the objects of this proposal is to meet the representation that it would be helpful in retaining in Canada this printing work with respect to the magazines to which my hon. friend refers. I am referring now not to the pulp type of magazine, the low grade kind of which so much has been printed in recent years in this country, but the higher type of American magazine which has been printed here during the past few years and the printing of which in some cases at least may be retained in Canada by reason of the liberty to import the inserts, the remaining printing on the insert as well as the facing page being done in Canada as part of the arrangement for printing the magazine here.

Frankly I am not sure myself that it is altogether good to have the printing of all sorts of magazines brought into Canada. I know these things give a certain amount of employment, but there are other factors. Prior to 1930, before the duty was imposed, hon. members will remember how time after time in this house we were exhorted to put on a duty. What for? To keep out literature which was described many times in this house as derogatory to the building of character and as productive of a bad effect all round. In fact samples were produced here from time to time and we were told to impose a tariff in order that our young folk, and older folk too for that matter, should not be exposed to the slimy temptation of this sort of reading matter. Now, everyone knows that the introduction of the tariff did not achieve that end.

Mr. BENNETT: No, but we do know that the publishers in Canada struck out of the Canadian editions offensive sections published in their home editions.

Mr. DUNNING: Maybe they were not so bad, but I venture to say that my right hon. friend's cheeks would blush at much of the literature produced even in Canada during the past five years. Be that as it may, it is certain that the liberty to produce it here under the shelter of a tariff did have the effect of creating in a measure a vested interest in the production of that class of magazine in Canada. We must recognize that. We are hearing about it every day now. I am not inclined seriously to regard the future in that respect, particularly as under the general provisions proposed, of which this is one, the higher type American magazine will have some incentive to continue publication in Canada.

The advantage will not of course apply to those of the cheaper order, because they do not use inserts of the kind described.

Mr. MacNICOL: I have listened attentively to what the minister has said. During my survey among the printers I found support for item 178, which is already passed, and I am under the impression that the minister is confusing the remarks I made in reference to the last half of 183 with the endorsation he received from the printers of 178. During my survey a number of printers told me they had written to him, or proposed writing to him, in opposition to the last half of 183, whereas I have no doubt that some of them had also written endorsing 178. But in no print shop did I find any sentiment in support of the last half of 183. That is one reason why I did not rise when 178 was under discussion, because my information from the printers was generally in favour of 178.

Mr. MARCIL: I have had opportunity on several occasions of discussing the moral aspect of this matter. The economic side has been thoroughly discussed and explained. We are not interested just now in knowing the amount of revenue that will be received by the government—although heaven knows we need all we can get—but what we are chiefly interested in is to bar out the class of literature which should not come into Canada at all. There are two ways by which it reaches Canada, one through the post office and the other by railway or aeroplane. I should like to know what censorship exists over that class of reading matter. Is there real censorship in the minister's department or the Post Office Department to prevent that class of reading matter from coming in? No matter how high the tariff against it may be, people who are inclined to read that rubbish will pay the price to get it. In the interests of the younger generation it should be barred from the country. I discussed this matter many years ago with Mr. Hocken, who frequently made references to it in the house; I shared his views, and I know the house realizes that this is the greatest service we can render to the younger generation. I should like to know from the minister whether there is a real censorship, and under what department it operates, to keep this class of matter out of Canada.

Mr. ILSLEY: Item 1201 of schedule C of the customs tariff, which is the schedule of prohibited goods, reads as follows:

Books, printed paper, drawings, paintings, prints, photographs or representations of any kind of a treasonable or seditious, or of an immoral or indecent character.

[Mr. Dunning.]

This item is administered by the Department of National Revenue, the organization set up in the department being continued just as it has been during the past few years. This matter was dealt with when the estimates of the Department of National Revenue were before the house; but I do not know whether the hon. gentleman was present on that occasion.

Mr. MARCIL: How many publications have been barred, say during the last year?

Mr. ILSLEY: I would have to get that information.

Mr. MARCIL: Does the post office exercise any supervision? As far as I am concerned that is the important point. The question of revenue is secondary.

Mr. ILSLEY: There is a provision in the Post Office Act, with which I am not very familiar, but which empowers the Postmaster General to deny the use of the mails to such matter.

Mr. STEVENS: I agree with the Minister of Finance that perhaps it is impossible through the tariff to exercise censorship over the publication of certain types of supplements to newspapers and magazines. May I draw his attention, however, to what strikes me as an anomaly in the schedule? Under item 183, the one under discussion, we place on the free list newspapers, supplementary editions and comic and pictorial sections to be inserted. But, under item 473a, printing plates of all kinds for periodical publications enjoying second-class mailing privileges, and matrices, metal bases and copper shells therefor, carry an intermediate duty of 7½ per cent and a general duty of 25 per cent. It appears to me that these items represent a contradiction of the principle of tariff making, if I may so describe it. The finished product is admitted free, but the materials with which Canadian firms might and indeed do produce these publications carry a tariff. I am not suggesting that item 473a should be entirely on the free list, but I suggest, as did the hon. member for Davenport, that item 183 ought not to be completely free. I believe there is more in the question of employment than would appear on the surface. Men working in the printing trades in Canada have been having difficult times, just as have men in similar trades in the United States. There is no question about that. There has been a sharp falling off in newspaper circulation and commercial printing, so that printers generally in common with many other classes of workmen have been going through difficult

times. It does not appear to me that the admission of comic and pictorial supplements would be any contribution to the consumer of Canada, as is very often argued. In other words there would be no great loss if the present tariff were continued. On the other hand, without any doubt there would be a definite loss in employment. I have listened with care to the minister's views on the point, but I fail to appreciate the force of his argument, because I cannot see how there could possibly be as much printing along the lines he indicated, where partly printed sheets were shipped in and Canadian printers did the remainder of the work. I do not believe there would be anything like as much labour or employment as exists at present where these publications are produced substantially in Canada.

I shall admit frankly that there would be an inconsistency in the position I am now taking if one were dealing with the matter from the point of view taken by the leader of the opposition, because I am suggesting that we should allow matrices to come in under item 473a. That I suggest should be permitted until we are ready to clean house in connection with publications of this kind. On the other hand I should like to urge upon the minister that item 183 be returned to its former position. I have not read the treaty arrangements with the United States, but I do not believe this is one of the items. I do not think our friends to the south of the line would consider that in any sense we had violated the spirit of the treaty; certainly I would not wish that to be the case. It is highly desirable that we should stimulate friendly relations between these two neighbouring countries. But on both sides of the line I am sure it is recognized that where any action affects the employment of its people the country affected should have the right to control its position.

I do not believe anything one can say will alter the situation, but I have no doubt the minister is impressed with the views so happily put forward by the hon. member for Davenport, the leader of the opposition and other hon. members. I am adding my word in the hope that even yet the matter might be reconsidered and the duty left on this particular item.

Mr. DUNNING: Possibly without the intention to do so, the hon. member has helped me. Referring to item 473a he has refreshed my memory in connection with a review I made of the situation. I do not wish to be out of order in my observations, but the hon. member's remarks afford me an opportunity to develop my point respecting the employment aspect of the problem. There is no doubt in my mind that if we had made printing plates of all kinds for periodical publications free under the intermediate tariff, it would have been very helpful to the printing trade. But I am also sure it would have been very harmful to an industry which does employ a good deal of labour at this time in the production of the plates described in item 473a. The hon. member does not suggest I should do that.

Mr. STEVENS: No.

Mr. DUNNING: The hon. member does suggest that a duty should be put on the material mentioned in item 183.

Mr. STEVENS: Yes.

Mr. DUNNING: Viewed again from the standpoint of employment, my information is that there is only one plant in Canada producing this class of article, and that all other newspapers in the country have to import for insert purposes the material described in item 183. And remember, only one plant developed that class of business even in the five years during which the tariff prevailed at the former level. That being so the employment aspect of item 183 is indeed limited. On the other hand all newspapers in Canada are in competition with American newspapers containing supplements. This is an item which requires careful consideration from the point of view of many different kinds of employment. The hon. member is correct when he says it is not a treaty item, but it arises directly out of the operation of the treaty, because the adoption of the intermediate rate in so many cases brought about considerations which had to be taken care of. This was one of them, namely between the printing trade on one hand and those who produce lithographs, plates and so forth, on the other. I must say that by and large I have had very little complaint and some commendation with respect to the way in which this matter has been dealt with in the proposals now before the committee.

Mr. STEVENS: I appreciate the minister's observations. Would it be at all objectionable to him if the general tariff in this instance were restored? At present most of this business has been between Canada and the United States, but the general tariff has been there against other countries, and importations may start from other countries as to whose possibilities in this class of trade we have now very little knowledge. It might be well therefore to leave the duty under the general tariff until we learn something more about that future trade.

Mr. DUNNING: I would not have any material objection except that it would be ineffective for the reason that the only larger countries which are now under the general tariff, speaking from memory, are China, Mexico, Turkey, Greece, Abyssinia and Russia. The element of language enters into the possibility of importations under an item such as this, and while the intent behind my hon. friend's suggestion is sound, the practical effect of adopting it would I think be quite negligible.

Mr. MacNICOL: What is the minister's objection to dividing the item? I quite appreciate what the minister has said about newspapers with regard to the first half of the item, but what is the objection pertaining to periodicals under the last half?

Mr. DUNNING: I thought I had stated that. The importation of inserts is represented to me by those producing magazines in Canada as one of the factors which may help them to retain the printing in Canada of the higher type of American magazine, which is the type of magazine that uses inserts. Being produced in the United States a piece of art work for insert purposes can be shipped into Canada to be bound with the remainder of the magazine printed in Canada, and it involves in practically all cases some printing in Canada on the insert itself and on the facing pages. It is represented to me by some of those who produce these magazines in Canada that admitting these inserts under the conditions set out in the item may help to retain in Canada the work of printing some of these magazines. I think on the whole the item had better go through as it is. I must say that I have had very little difficulty from outside with regard to the item during the two weeks since it first became public.

Mr. MacNICOL: The minister has had some representations?

Mr. DUNNING: Oh, yes, but they have been pretty well divided. I was just asking the commissioner a moment ago. It apparently depends on the class of work the printer is engaged in whether he commends this item or one or the other part of it, or recommends that it be reconsidered. On the whole I think my hon. friend will find it is a pretty fair solution of a somewhat difficult technical problem.

Mr. WILTON: Is there any regulation in effect or are any efforts made to prohibit the bringing into Canada from the United States of communist or red literature which is being circulated widely throughout Canada? This kind of stuff is published in New York, shipped in here almost daily, and distributed throughout the whole of Canada, to the detriment of the youth of the country and Canada generally. It is literature of a type that is opposed to law and order, tends to drag down the best things we have, to wreck government institutions, and opposes almost everything that is good, and yet it is allowed to be circulated throughout the whole of Canada. In the city I represent handbills and various other types of printed matter, which comes in from the United States, are frequently distributed, usually at night, which is when they do their work, like rats in a hole, carrying on their nefarious work after dark. What is being done to protect Canadians against that kind of rotten literature?

Mr. ILSLEY: Mr. Chairman, the item in schedule C of the customs tariff which I read a few moments ago in reply to an inquiry of the hon. member for Bonaventure (Mr. Marcil) prohibits the importation of books, printed paper, drawings, paintings, prints, photographs or representations of any kind of a treasonable, seditious, immoral or indecent character, and if literature arrives at one of the custom houses of Canada and there is any reason for considering it treasonable or seditious, it is held and examined, and perhaps prohibited. As the hon. gentleman will appreciate, there is often disagreement as to whether a publication is of a treasonable or seditious character. What he considers treasonable or seditious might be regarded by one of his colleagues to the left as merely enlightening and educative, and for that reason the Department of National Revenue has difficulty from time to time in making decisions which meet with the approval of everyone. However, if the hon. gentleman will bring to my attention the publications he has in mind, or will send them to the office, we will make a ruling on them, and if we decide that they are treasonable or seditious they will be prohibited entry into Canada. But if they come in secretly or illegally, that is something the Department of National Revenue cannot control, and in such an instance would, I suppose be a matter either for the preventive service or for the police of the province in which the publication circulates. There are other provisions for the control of such publications, such as the provisions in the criminal code which prevent the publication of what are called seditious libels.

Mr. BENNETT: That is for domestic purposes.

Mr. ILSLEY: Yes, if they are published within the country and delivered by one person to another.

Mr. BENNETT: That is not what is meant by that.

Mr. ILSLEY: Perhaps I am wrong about that, but if they are published in the ordinary sense within the country it is a violation of the terms of one or more sections of the code. I believe also, though I cannot speak with much certainty as to this, that there is a provision in the Post Office Act which enables the Postmaster General to deny the use of the mails to certain types of literature such as the hon. member for Hamilton West (Mr. Wilton) has mentioned.

Mr. WILTON: There cannot be any doubt as to the class of literature I refer to being seditious. It prints "down with the government" and that kind of thing. I do not think there could be any doubt in the mind of any intelligent person that it is seditious. I am of opinion that perhaps it does not all come in regularly through the customs but finds its way through secret channels that have no right to exist, and a closer check-up on the part of the officials of the department or by the police responsible could stop it. That kind of stuff is being circulated, I think, in all our cities—I know it is in Hamilton,—and, as I have said, is usually distributed at night. From information I have received I know it is distributed from headquarters in New York not a stone's throw from Times Square, where in a basement they prepare, publish, and send out this rubbish to the various branches of the red element throughout Canada. It seems to me that an effort should be made on the part of the secret service to check-up on this kind of thing which is undermining and against the very best things we have in the country.

Mr. BENNETT: My attention was directed not long ago to an editorial in a weekly newspaper published in New York, an old paper, referring to His late Majesty King George V in terms so offensive that no decent British citizen could read it without a feeling of strong resentment. That one editorial of itself would undoubtedly have justified one, had one known of it before hand, in taking steps to prevent that issue from entering Canada. But inasmuch as the newspaper circulates and there is no repetition of anything of that kind, I think we are powerless to deal with the matter. I do not see how under the existing law we could. The minister is more familiar with it than I am, but I could not see any way of dealing with that particular situation. We could deny the publishers the privileges of the mails as a punishment for a past offence, but that is not the general principle of the law. The article was a most scurrilous one and I will show it to the minister some day. I have never seen anything quite as bad. I wonder what action we can take that will adequately deal with such offences, because we cannot prosecute under the criminal code or any other statute, though we could deny the publishers the mails as a punishment for having thus insulted us. But, as I say, that is not the general principle of the law. I am uncertain on that point and I was going to speak to the minister about it under this item.

Mr. NEILL: I would remind the minister that it is not only from abroad that seditious or immoral literature is circulated in Canada; there is a good deal of such literature originating in this country itself. As regards the latter literature it may be said that we can prosecute, but one of the greatest difficulties is to find out who publishes such matter. About ten years ago, as a private member, I succeeded in getting through the house a bill compelling all publishers to keep a record of those who had employed them to publish any article or pamphlet. The bill went through this house unanimously, the members understanding its purpose; but unfortunately it met an untimely death in the other chamber. I have seen in Canada literature which it would be a disgrace to anyone to read. We had a pretty shrewd idea of the town in which it was published but there was no way of bringing it home to the offenders because we could not find out who had printed it. In drafting the bill to which I have referred I followed the British law, which provides that for a period of six months the printer shall keep a record of all those employing him to publish any article, and if such article is found to be seditious or in any other way undesirable the publisher, as a means of avoiding liability himself, must disclose the identity of those for whom he has printed the offensive matter. There is a good deal of seditious literature published in British Columbia today, and it would be of assistance to the forces of law and order if it were known who published this literature. Sometimes it is actual print and sometimes it takes the form of mimeographed matter, but the law would apply in either case. If the government would introduce a bill, and the leader of the opposition would use his influence in another chamber to get it through, it would help to put a stop to the publication in Canada of such offensive literature.

Mr. DUNNING: I do not want to hold up the item, but what the hon. gentleman has said does come home with peculiar force when one is occasionally the subject, as I suppose all of us are at times, either jointly or individually of scurrilous and anonymous pamphlets. In the light of a recent experience I am impressed with what has been said. I should like very much to find out who was responsible for the printing of a certain elaborate pamphlet which was circulated throughout Canada. My right hon. friend is involved along with myself. I know he will not appreciate being in my company in such a publication—

Mr. BENNETT: The feeling is entirely mutual.

Mr. DUNNING: The feeling is entirely mutual, and the publication illustrates the point. I mention it only for that purpose and not to direct public attention to something not worthy of it. The writer had not the courage to sign his name or in any way to acknowledge authorship; in fact, he apparently took great pains to conceal his identity. That speaks for itself. It seems to me that we should ask ourselves what machinery we have or can create with respect to publications of that kind. I feel sympathetic to the remarks of my hon. friend, but so far as I am concerned it is not a matter of making law; it is a question of how to enforce it when once it is enacted. My legal friends tell me that there is a law with respect to the matter about which I have just been speaking, but obviously you must catch your hare before you can cook it, and in this instance it appears impossible to trace the authorship.

Mr. NEILL: The bill which I managed to get passed through this house was simple, because on the pamphlet the name of the person publishing it had to be printed.

Mr. DUNNING: But suppose he does not do that.

Mr. NEILL: The printers in the town are generally fairly well known, and when the publisher's name must appear on the pamphlet the discovery of the author is simplified.

Mr. DUNNING: But the kind of man we are speaking of would not obey that part of the law.

Mr. BENNETT: Because he has already committed a greater offence. Since the minister has mentioned this matter I may make a few observations. I agree with him; we should overhaul the law in that regard. There is a magazine that persistently attacks not only members of this house but others; it does so in the sacred name of liberty and of freedom of speech and of criticism, and it is circulated rather extensively. It is true that one of the proprietors was convicted and sentenced to a term in gaol, but nevertheless the magazine continues to be published. Nothing more libelous or false could be published than some of the references in that publication. I did not know anything about it until I received a letter from someone in British Columbia stating that he had read something in that magazine. I did not know what he meant and I asked him to send it to me. The assertion was that $1,300,000 had been given by a certain interest connected with the Montreal harbour bridge to one of the political parties; that the other political party was sharing equally in the spoils, and that I personally should have been punished because I permitted Gundy to sell bonds to the extent of $19,000,000 when the law said that only $6,000,000 worth could be sold. Obviously that sort of thing greatly incenses people. This gentleman wrote to me saying that he would like to have an explanation. The assertion I have cited was mild compared with other statements in the magazine. I remember someone showing me the document to which the minister has referred, a most scurrilous attack on the hon. gentleman. To write a letter to the newspapers denying this rotten sort of thing is only to provide the publicity which the author seeks.

I fear that the remedy suggested by the hon. member for Comox-Alberni would fall far short of adequacy, for the reason that in the very circulation of these mimeographed or printed copies the perpetrators are committing a greater offence than that of failure to indicate the name of the publishers. I am going to be perfectly frank about this. There is among political parties a habit of rejoicing in being able to circulate information and attacks of this sort, and that is the reason amendments are made to the law. Then we hear the cry of liberty and freedom. Attacks of this kind are not limited to any one party; do not think I am in any sense trying to attribute them to one party. But unless the people of this country are willing and prepared to take some steps to protect their rights, they may find them entirely disappear. That has been the history of other countries. The right is not the right of abuse; it is the right of free criticism. The right of free criticism is entirely distinct from the right of abuse—

Mr. DUNNING: Anonymous scurrilous abuse.

Mr. BENNETT: —of an anonymous kind. I do not wonder at the resentment expressed by the Minister of Finance; I saw enough of the details to know that I would have resented the pamphlet. But think what I have been subject to in the last five years as compared with that! At odd moments I have even been called a murderer.

Mr. DUNNING: Not as bad as that.

Mr. BENNETT: Oh, yes. Anonymous documents to which the hon. gentleman referred were circulated from one end of this country to the other charging me with the murder of a poor unfortunate man in Regina. That was quite a commonplace observation, and that sort of thing does make one wonder where law is. The late W. F. Maclean, who was in this house for many years, stated that we must do something to clothe the federal power with authority to carry on prosecutions for contraventions of federal statutes. In the United States they have their federal marshals, their federal courts, and their federal prosecutions as distinguished from state prosecutions.

Mr. DUNNING: One of Mr. Maclean's last speeches in this house was devoted to this subject.

Mr. BENNETT: Was it? I was not in the house at the time, but I recall his having very strong views about the matter. To mention one instance; take the statements made by Arthur Evans. Yet the province had the right to say whether he should be prosecuted; the province says that he is not to be prosecuted, and that is all there is about it; he goes free. It is true that nine others have been prosecuted and convicted. But this has nothing to do with the great and fundamental principle that if we are going to maintain rights we must enforce the law against those who try to deprive themselves and us of it in the name of liberty and freedom, because freedom does not mean licence, neither does liberty. Attacks of the kind referred to are being made in this country at the present time. I am sure that the very discussion which has taken place this afternoon will be the subject of lampoons and attacks that will be anonymously circulated from one end of the country to the other.

Mr. MARCIL: One great argument of the late Mr. Maclean had to do with the administration of the federal system and the weakness of its laws. The laws are passed here but they are put into force by the provinces. If the provinces take no action the law becomes a dead letter. That has been the great objection to the federal law as it now exists. As the leader of the opposition has said, at the present time the enforcement of federal laws rests largely with the provinces, and if a province takes no action that is the end of the story. I have often heard discussed in this house whether we should not have an officer, with something of the standing of the Lord Chamberlain in England, who would exercise general censorship all over Canada, and have authority from the dominon and the provinces to control theatres and matters of the kind to which reference has been made. There has always been this controversy between the provinces and the dominion. Of course it is primarily a matter for legal gentlemen to discuss, but undeniably it is one of the weaknesses of our federal system.

Mr. MacINNIS: If we go too far into censorship there is a danger of falling short of providing the protection that is essentially required. We should keep in mind that probably there is no country in the world where the government is more secure than in Great Britain, and there is no country in the world where freedom of speech and freedom of the press are so strongly established as in the British Isles.

Mr. BENNETT: Not that kind of speech.

Mr. MacINNIS: It seems to me that that fact is proof positive that very little danger need be feared from sedition or seditious utterances, whether by word of mouth or by the printed word. I am no more than any other member in favour of the circulation of what is termed communist or scurrilous literature in so far as it is scurrilous or libelous or misleading. I have had the distinction, which is possibly shared by very few members of this house, of having been opposed in the last election by a communist, so that perhaps I can speak with some little authority on the matter. As regards the point raised by the hon. member for Comox-Alberni (Mr. Neill) I think something should be done. I have in mind something that happened in the Ontario provincial election of 1934. The Cooperative Commonwealth Federation or some adherents of that party published a weekly paper for some few weeks at the beginning of that year. It went out of business, I believe, in February. But in June, during the campaign, an issue of that paper appeared, bundles of which were sent to all the Cooperative Commonwealth Federation committee rooms, although certainly neither the

federation nor any one belonging to it printed or paid for that paper. Those who did so had not the courage to put their signatures on it. They did it in order to mislead the electors. We were not altogether free from that kind of thing in British Columbia during the last election. I think that is of more importance than even seditious literature, because it is misleading and it deceives the very people who should be truthfully informed on the issues of an election. If something could be done to curb that sort of thing I should be glad to support it. But as regards banning things that we are not in favour of, just because we do not like them, I think we should go very carefully in that direction, because what is seditious to-day may not be seditious to-morrow.

Item agreed to.

Customs tariff—197d. Tissue paper made from mulberry pulp, not coated nor impregnated, when imported by manufacturers of stencils for duplicating machines for use exclusively in the manufacture of such stencils in their own factories: British preferential tariff, free; intermediate tariff, 10 per cent; general tariff, 25 per cent.

Mr. DUNNING: This is a very peaceful item. The mulberry pulp referred to is produced only in Japan for a special kind of duplicating paper.

Item agreed to.

Customs tariff—199b. Containers wholly or partially manufactured from fibreboard or paperboard, per pound: British preferential tariff, 1 cent; intermediate tariff, 1¼ cents; general tariff, 1½ cents.

Provided, that in no case shall the rate of duty under the intermediate or the general tariff be less than: intermediate tariff, 30 per cent; general tariff, 35 per cent.

Mr. McKENZIE (Lambton): Under the present intermediate tariff, containers enjoyed a protection of 1¼ cents a pound. That was not enough for the box makers or the carton manufacturers, so the item was increased to thirty per cent, which was quite a sizeable increase. The old rate under which manufacturers of boxes and cartons operated should be plenty of protection for them. This item is not so favourable to the men who manufacture articles which, in order to sell them, they must put into containers of this kind. It works a handicap on them because the thirty per cent duty almost invariably means thirty per cent additional costs. I have in mind, as relevant to this matter, a particular manufacturing concern that has to buy raw material upon which there is twenty per cent protection, and to put its product into boxes or containers on which there is thirty per cent protection. A competing article is brought into Canada in a finished state, in a container, and pays a duty of only 7½ per cent. Surely that is manifestly unfair, and I think there should be some way of putting it right.

Mr. WALSH: During the course of some remarks earlier in the session I drew attention to the fact that certain items of the tariff bore a specific duty, and certain items an ad valorem duty. This is one of the items I had particularly in mind, and I am glad that my hon. friend brought up his suggestion, which I want to emphasize. After careful investigation I am firmly convinced that the paper-box manufacturers of this country are overprotected at the present time. With this specific duty their protection was quite adequate at the prices for which paper-boxes and containers were selling when the duty was first imposed. To-day this same duty represents almost fifty per cent. The result is that the people who use these containers and boxes have to pay more than they would otherwise do. I would not favour reducing the duty sufficiently to admit paper-boxes or containers from another country; they can and should be manufactured in Canada. I feel that the Canadian manufacturer of paper-boxes is overprotected at the present time and is taking advantage of that overprotection with the result that the user of that material in Canada, who has to put his finished articles into those boxes, is paying almost fifty per cent more than he would pay if the duty were reduced to normal protection.

In connection with the adjustment of the tariff as a result of the agreement with the United States I have in mind a manufacturer who had the tariff on his finished article reduced by 2½ per cent. That does not sound very much, but I can assure the Minister of Finance that it meant a considerable amount to that particular industry. He is a manufacturer selling very close to the line, and when this additional advantage of 2½ per cent was given to his American competitor, in order to keep out the American product he had to reduce his price to the point where he could not make a reasonable profit. On top of that he is forced to pay a high price for containers in which to place his finished product.

I want to ask the Minister of Finance if it would not be possible to make this an ad valorem duty instead of a specific duty, and to make that ad valorem duty twenty-five per cent rather than what it is at the present time. This specific duty raises the price of these paper-boxes made in Canada by almost fifty per cent, and the manufacturers are taking full advantage of that to the detriment of other manufacturers who are forced to use these

containers. So I would ask the minister if he would give some consideration to that suggestion so that these people who have suffered because of the trade agreement with the United States might have their difficulties ameliorated to that extent at least.

Mr. WOOD: I should like to make a little contribution to this debate, and perhaps the minister could answer us all at the same time.

Mr. DUNNING: I will if I can keep it all in my head. Perhaps the hon. gentleman will allow me to clean up this point, because I am inclined to believe that his question may have a different bearing, and at times I get a little confused when I have too many things to remember.

This paper container item is one of the items resulting from reports of the tariff board on references by my predecessor in office. The committee must realize that there are paper containers and paper containers. Such a wide disparity in value had the effect last year, under a specific duty, of creating an ad valorem range as great as from five per cent to forty per cent. That was the actual condition revealed by the inquiry, that a tariff incidence of a specific duty, translated into ad valorem terms, on the articles actually imported showed a range as wide as from five per cent to forty per cent because of the wide range of values involved in containers wholly or partially manufactured from fibreboard or paperboard. What I bring to the attention of the committee to-day is the result of the investigation by the tariff board, at which representations were made both by the users of all classes of these containers and by the manufacturers. The only change suggested by the tariff board report is an ad valorem rate which will equalize the bearing of the specific rate now in force. The recommendation is as set out in the item, that while the duty should remain at 1¼ cents per pound by weight it should not be less than thirty per cent ad valorem.

My hon. friend from Mount Royal and my hon. friend from Lambton-Kent have in mind manufacturers of specific commodities who put them into some type of paper containers. Naturally, in drafting the tariff item, the tariff board had to have in mind the whole range of paperboard and fibreboard containers, and also the whole range of manufacturers using those containers, and I should point out that while I have heard the representations made this afternoon by the two hon. members, I do not think I have had any other complaints. I may have had one or two among the thousands of letters I have received, but there has been nothing which has impressed itself on my mind as a complaint with reference to the finding of the tariff board in connection with this particular item. The commissioner tells me that he knows of none at all. When I inform the committee that within the last two months I have had 3,261 separate communications with regard to the tariff, it will be seen that anyone who has had any complaint has been fairly active in supporting it by written representations and otherwise. If, therefore, the cases mentioned have to do with manufacturers of specific commodities which go into these containers I am sorry I cannot accept that view as against the considered opinion of the tariff board that heard all the interests affected.

Mr. WALSH: I have the complaint in my hand; it was more in connection with corrugated boxes and containers of that type. While the minister was speaking I was wondering whether the item could not be changed to bring it more into line with the type of tariff imposed upon textiles, a small specific duty and a balancing ad valorem duty, making it a combination item.

Mr. DUNNING: That is what it is.

Mr. WALSH: But the thirty per cent is too high. The Canadian manufacturer of these boxes, as far as my information goes, does not require more than twenty-five per cent protection, and at the present time he is getting fifty per cent.

Mr. DUNNING: Does my hon. friend's information come from the man who makes the boxes or from the man who fills them?

Mr. WALSH: It comes as a result of an investigation by a man who uses the boxes.

Mr. DUNNING: But it is his point of view.

Mr. WALSH: It is his point of view, but his point of view is that this manufacturer making these corrugated boxes made about four hundred per cent on them last year, which to my mind is pretty high. I feel that the user of these boxes as well as the manufacturer should get some consideration. We are all interested in lowering the price of commodities, and if the paper-box manufacturer is going to hide behind a high tariff —well, personally I am a tariff man as everyone knows; I believe in the tariff; I believe in protection, ample protection, but I do not believe in protection at such a level that the consumer pays more for his article as a result of that protection. In this case the paper-box manufacturer is being given too high a

premium, and we as consumers are paying for it. For that reason I should like to see it placed at a maximum of twenty-five per cent. I do not know what representations were made before the tariff board, I do not know what influenced them in their findings, but I am convinced that the information I have is correct; that the representations that I received from this manufacturer were made in good faith, and that he is anxious to get this amelioration. It is in the interest of his business, which at the present time is just running on the border line; it may mean to him the difference between a profit or no profit, and possibly a loss. I am making the suggestion that the protection should not amount to more than twenty-five per cent, which I feel is ample.

Mr. DUNNING: Now that my hon. friend has identified the commodity as the large, heavy corrugated box he has thereby defeated his own argument, for the heavy corrugated type of container is the type to which the thirty per cent ad valorem would never apply, because the weight factor involved would ensure that the specific duty would always produce a rate as high as or higher than the one he has just specified as a minimum. That was all developed before the tariff board. I may point out further that it is the old tariff rate; there is no change there. In fact, under the Canada-United States trade agreement there was a reduction of one-quarter cent a pound in favour of the manufacturer to whom my hon. friend refers. My hon. friend's suggestion of a reduction of the minimum ad valorem to twenty-five per cent would not help his friend, because the duty is now levied upon that particular commodity on a weight basis. Surely there must be a difference in the basis of value for duty between that large corrugated paper container and the little paper container which holds a tube of shaving cream. How could you possibly assess value for duty by the pound on paper containers for tubes of shaving cream as compared with the large corrugated paper container which takes, for example a dozen or score pairs of boots or shoes or things of that sort? That is why after a thorough and rather difficult examination the tariff board reached this conclusion. This very instance demonstrates the value of inquiry by some body outside this committee into matters of this kind. Of course all of us are affected by representations made to us by concerns or individuals. Hearing their side of it we naturally feel that an injustice is being done, and as members of the committee we voice our views. But this emphasizes the value of having in addition the guidance of an independent examining body which has examined all the parties interested, or all who care to appear. I do not want to be in the position of holding the tariff up, goodness knows, but when an independent examination has been made and the suggestion is made by the tariff board, following a reduction under the Canada-United States trade agreement, that what is required in this case is a qualifying ad valorem to equalize the bearing as between the heavy but cheap type of paper board container and the light but expensive type, then I am inclined to place reliance upon the body which heard the evidence and which discussed the matter with all the parties affected.

[Mr. Walsh.]

Mr. WOOD: I have been interested in this discussion primarily because it is refreshing to hear the hon. member for Mount Royal asking for the tariff to be lowered on one item at any rate. It is a pretty good indication that on the other side the high protection idea is at least beginning to crumble.

Mr. BENNETT: This is a tariff board item.

Mr. WOOD: I am also interested in the matter of containers. While tin cans may not come under this particular item, the same principle is involved. There is in my constituency an industry that has to pay 27½ per cent duty plus 3 per cent excise on containers in which its commodity is put up, while the Americans can send in their containers filled with the same product at 17½ per cent. That is something the minister might well look into. I do not see why our own people who are putting up this commodity should be discriminated against, in view of the fact that a reduction of tariff would reduce the cost. As the hon. member for Mount Royal ably pointed out, a high tariff does increase the cost of production; he has given that contribution to the discussion from that side and helped us to convince parliament that such is the case. What applies to paper cartons would also apply to tin containers or any other kind of container by which the Americans get an advantage of having their goods come in here at 17½ per cent while industries in this country have to pay 27½ plus 3 per cent.

Mr. DUNNING: I recognize the difficulty on that point.

Item agreed to.

Customs tariff—200a. Regenerated cellulose, and cellulose acetate, transparent, in sheets, not printed, and manufactures of regenerated cellulose or of cellulose acetate, n.o.p.: British preferential tariff, 20 per cent; intermediate tariff, 30 per cent; general tariff, 35 per cent.

Mr. DUNNING: It is just the addition of the letters "n.o.p.", made necessary because of the succeeding item.

Mr. BENNETT: Is that cellophane?

Mr. DUNNING: Yes.

Mr. BENNETT: What were the importations under this item?

Mr. DUNNING: They amounted to $148,000. There is a new item 696a which renders it necessary to create this "n.o.p." item.

Item agreed to.

Customs tariff—206. Dragon's blood; fuller's earth, in bulk only, not prepared for toilet or other purposes; litmus and all lichens, prepared or not prepared; musk, in pods or in grain; quassia juice; saffron, saffron cake, safflower, and extracts of; quinine, salts of; cochineal; ferment cultures to be used in butter-making: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. DUNNING: The only change in either rates or wording is the deletion of the reference to vaccine and ivory vaccine points. This is essential because of the next succeeding item. I have an amendment on the next succeeding item.

Item agreed to.

Customs tariff—206a. Biological products, animal or vegetable, n.o.p., for parental administration in the diagnosis or treatment of diseases of man, when manufactured under licence of the Department of Pensions and National Health under regulations prescribed by the Food and Drugs Act: British preferential tariff, free; intermedate tariff, free; general tariff, free.

Mr. DUNNING: The amendment is to cover veterinary products of the same type and intended for the same purposes in animals as the biological products in the printed item are intended for human beings.

Mr. BENNETT: Is that the correct description of the administration? Is it "parental"?

Mr. DUNNING: That is a typographical error.

Mr. BENNETT: I suggest the word "parental" is used improperly.

Mr. DUNNING: I understand "parenteral" is the correct word, and it means to give food other than through the alimentary canal.

Mr. ILSLEY: I move:

That tariff item 206a, as contained in resolution No. 5 of May 1, 1936, be amended by adding thereto the following words:—"; and biological products, animal or vegetable, n.o.p., for parenteral administration in the diagnosis or treatment of diseases of animals or poultry, when imported under permit of the veterinary director general."

Mr. DUNNING: When I saw the word "parental" in the item I made inquiries, because I was sure it was not the proper word. A check was made by the Department of Public Health, and it is shown that the word is not spelled correctly in the item.

Mr. BENNETT: Quite so.

Mr. DUNNING: I am informed that "parenteral" is the correct word.

Mr. McCANN: Yes, that is the correct word, and the process is known as parenteroclysis.

Amendment agreed to.

Item as amended agreed to.

Customs tariff—208h. Ethylene glycol, when imported by manufacturers of anti-freezing compounds, to be used exclusively in the manufacture of anti-freezing compounds in their own factories until September 1, 1936: British preferential tariff, free; intermediate tariff, free; general tariff, free.
Thereafter: British preferential tariff, free; intermediate tariff, 15 per cent; general tariff, 15 per cent.

Mr. BENNETT: This item will place ethylene glycol on the free list for four months. For whom is this done?

Mr. DUNNING: I am sure my right hon. friend knows the answer better than I do. The item has offered some difficulty for several years.

Mr. BENNETT: I know there has been difficulty for several years, but I should like to know whom this is for.

Mr. DUNNING: Offhand, I cannot say. The commissioner informs me that it is for the Canadian National Carbon Company. I was not aware of the fact myself.

Mr. BENNETT: We are making the concession for the months of May, June, July and August, and then we are going to impose the tariff.

Mr. DUNNING: Which has been done in each of the last three years.

Mr. BENNETT: I am asking because I thought the matter was settled. I thought the period of probation had passed.

Mr. DUNNING: No doubt my right hon. friend is familiar with the position taken by the British in that connection, under the conference agreement. Great Britain would not consider allowing a longer period than is provided under this item.

Mr. BENNETT: I do not understand it yet; I never did.

Item agreed to.

Customs tariff—208i. Animal glands and animal glandular organs, and extracts thereof, wet or dry (whether alcoholic or not), when imported by manufacturers of pharmaceutical or medicinal preparations for use exclusively in the manufacture of such preparations in their own factories: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. BENNETT: What is the difference between the two items. I must say that I find it difficult to follow these items, and I cannot understand why a new item should be prepared simply to change a single word, and then have put against it a duty of sixty per cent when it was free before. This item had a sixty per cent levy against it.

Mr. DUNNING: Yes, these very glands, because they were carried in alcohol. This entirely new item is inserted in the tariff for the purpose of facilitating the work now being carried on in certain Canadian universities and medical schools in the field of medical research. These activities may be illustrated by the research in biochemistry proceeding under the guidance of Doctor Collip at McGill university. Certain experimental work under the direction of Doctor Collip is being carried on, in conjunction with the activities of certain commercial laboratories whose facilities have been placed at his disposal. I have before me a technical description of the glands in question. The fact is that in the past they have been imported in ethyl alcohol, and because of that they carried a rate as high as sixty per cent.

Mr. BENNETT: Were they imported wet or dry, because if they were imported wet they were in alcohol, and if dry they were not?

Mr. DUNNING: I have before me a note which indicates that fractions were imported in preservative alcohol, and that the duty rate in such case was sixty per cent, sixty per cent and sixty per cent. While the alcohol is there purely as a preservative vehicle and is not used upon arrival, nevertheless the Department of National Revenue have ruled that a duty must be imposed upon a commodity in alcohol.

Mr. BENNETT: I am not going to take up the time of the committee in a long discussion, but I have always objected to the attitude of the department in this connection, and to the ruling that when you use a preservative you must tax the item so preserved at the rate prevailing for the preservative. I never could and still do not understand that ruling. The ethyl alcohol was used for purposes of preservation, but the department says: We are going to tax at the rate of sixty per cent, because the alcohol carries that rate. I say that the thing preserved is the thing being imported, not the preservative. But I must admit there was no use arguing with them.

Mr. DUNNING: Of course the attitude taken by the Department of National Revenue is that the alcohol could be and has been extracted.

Mr. BENNETT: But very seldom, at the present price of alcohol.

Mr. DUNNING: I can see my right hon. friend has been through the whole course of instruction from the administrative department which a Minister of Finance must take in these matters.

Mr. STIRLING: The new item gets over the difficulty?

Mr. DUNNING: Yes.

Mr. BENNETT: By putting them all on the free list. It is all right now, because it is all on the free list; that rectifies the alcohol, and everything else.

Item agreed to.

Customs tariff—219d, agreed to.

Customs tariff—219e. Chloropicrin, cyanides, or mixtures containing either chloropicrin or cyanide, for use in combating destructive insects and pests: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. DUNNING: I have an amendment to move. The purpose of the amending resolution is to include reference to a new fumigant to which attention has been directed by the Department of Agriculture since the budget was brought down. It is called ethylene oxide, and at this stage of the proceeding we insert those words. The new item is introduced in view of the fact that the dominion entomologist has suggested that it would be to the advantage of users of fumigants in Canada to have ethylene oxide included within the scope of the item. It is not made in Canada.

Mr. ILSLEY: I move:

That tariff item 219e, as contained in resolution No. 5 of May 1, 1936, be amended in wording to read as follows:—219e: Chloropicrin, ethylene oxide, or cyanides, or mixtures containing any of these, for use in combating destructive insects and pests.

Amendment agreed to.

Item as amended agreed to.

Customs tariff—224. Sealing wax: British preferential tariff, 15 per cent; intermediate tariff, 22½ per cent; general tariff, 25 per cent.

Mr. DUNNING: There is no change in rates or wording, but there is provision for the elimination of paraffin wax formerly in this item. It is now taken out and put into the gasoline and oil item.

Item agreed to.

Customs tariff—259. Lard oil and neat's foot oil: British preferential tariff, 15 per cent; intermediate tariff, 22½ per cent; general tariff, 25 per cent.

Mr. DUNNING: The same thing here, with the exception that sesame seed oil is taken out.

Item agreed to.

Customs tariff—259a. Sesame seed oil: British preferential tariff, free; intermediate tariff, 22½ per cent; general tariff, 25 per cent.

Mr. ILSLEY: I move, Mr. Chairman, that the words "sesame seed oil" in item 259a be amended to read as follows:

Sesame seed oil, crude.

Amendment agreed to.

Mr. BENNETT: Is there any importation to any extent, and where from?

Mr. DUNNING: About one thousand dollars' worth was imported, $466 from Japan and $314 from the United States.

Mr. BENNETT: What is this used for?

Mr. DUNNING: It is one of the important vegetable oils, and is used in combination with other vegetable oils, the commissioner advises me. I have a memory of sesame seed oil in some other connection.

Mr. BENNETT: Ruskin had something to say about it at one time, I remember.

Mr. DUNNING: Here is the dictionary definition:

Annual herbaceous tropical and subtropical plant with seeds used in various ways as food and yielding an oil used in salads and as laxative; its seeds; open sesame, magical or mysterious means of commanding access to what is usually inaccessible.

Item as amended agreed to.

Customs tariff—259b. Rapeseed oil, crude or refined: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. DUNNING: This is a new item which permits free entry under all tariffs of rapeseed oil, crude or refined. It was formerly an unenumerated commodity coming in under item 711. Under the Canada-United States trade agreement free entry was accorded to blown rapeseed oil, which is refined rapeseed oil further processed. Certain plants in Canada using rapeseed oil have expressed a desire to do the blowing themselves, and free entry is being provided.

Mr. BENNETT: Is there much of it used in Canada?

Mr. DUNNING: It is used as a base in lubricants.

Item agreed to.

Progress reported.

At six o'clock the house took recess.

---

## After Recess

The house resumed at eight o'clock.

## CRIMINAL CODE

### PROPOSED ABOLITION OF HANGING AS DEATH PENALTY

The house resumed, from Friday, March 13, consideration of the motion of Mr. Blair for the second reading of Bill No. 10, to amend the criminal code (death penalty).

Hon. ERNEST LAPOINTE (Minister of Justice): When this bill was last before the house for second reading I moved the adjournment of the debate for the purpose, as I intimated then, of trying to secure information from the various places where the method suggested by my hon. friend is in force, and also for the purpose of communicating with the attorneys general of the various provinces of Canada, because the administration of justice, including criminal justice, is under the control of the provinces.

We communicated with the five states of the American union where the method of lethal gas for the execution of condemned persons is in practice. These states are: Nevada, where they have had the system since February, 1924; Arizona, since November, 1933; Colorado, since 1934; Wyoming, since 1935; and North Carolina, since the early part of 1935. In every one of these states there is a central place of execution, namely, the main gaol of the state.

The method is not at all a complicated one nor is it expensive. It is administered by the government of the state itself and the guards in these prisons do whatever is necessary to carry out executions. This method does not require the services of any technical expert, for almost any guard in the prison is able to do what is necessary.

As to the humaneness of this method of execution, that of course is a question of point of view; but in those states where it has been

in practice the officials claim that it is a far more efficient and a more humane method than the other system. As to whether, as a deterrent, it is as efficient as the other, that again is a matter of opinion.

We also communicated with the various provinces, through the law officers, the attorney general or rather the deputy attorney general in every province, who answered our queries. They are to a large extent reluctant to express their opinions, though most of them would rather favour the change if it were proved to be more efficient and more humane. Some of the provinces would like very much to have only one place of execution. For instance, both the attorney general of New Brunswick and the attorney general of Nova Scotia strongly recommend that instead of having executions carried out in the various gaols in these two provinces they should be carried out at the penitentiary, which is in Dorchester, New Brunswick, for the maritime provinces.

Mr. BENNETT: It would be very unfair to the inmates of the penitentiary.

Mr. LAPOINTE (Quebec East): Maybe; that is one of the possible objections to the change and it would have to be investigated. I instructed one of the officers of the Department of Justice, Mr. Plaxton, to visit those places in the five states which I have mentioned. He has prepared a report giving all the details and the opinions of physicians who have something to do with executions, and on the whole I must say it is rather favourable to the change. This, however, would involve such a radical departure from the present law and practice in Canada that I am of the opinion that this matter should be thoroughly studied and further investigated, at least until the next session of parliament, so as to give public opinion in the country time to express itself respecting the question what it would be best for us to do.

Of course, if the change suggested by this bill were accepted, there would have to be one place of execution in the maritime provinces, one in Quebec and Ontario, and one in the west, and there is the objection to which my right hon. friend has just alluded. Then there is this other fact to be considered. As the situation is to-day, under our law, apart from the exercise of clemency where the federal government has to advise the representative of the crown, the death sentence is executed absolutely independently of anything that this parliament or the federal government may do. The matter is entirely under provincial jurisdiction. The province is responsible for carrying out the execution, the sheriff in every district being the responsible officer in charge.

There are in certain quarters many delusions as to the law and the practice. In days gone by and even this very year I have received as Minister of Justice letters from persons applying for the position of hangman, such persons evidently believing that it is a federal office; and if there were a vacancy some people would be quite willing to be appointed. We have nothing to do with that. The sheriff of each district where an execution takes place is entirely in charge. He retains the executioner, whoever he may be, and the executioner is not in any way connected with the federal authorities nor is he a federal officer. If a change were made, and if instead of having the executions in every district, they were to take place in the penitentiaries, arrangements of some kind would have to be made if the province were still to be responsible. I admit that I would prefer that the present system, as far as responsibility for carrying out executions is concerned, should remain under the provinces rather than be under the federal authorities, where the exercise or the refusal of clemency lies. I think it is a good thing that these two matters should be under different control.

All these considerations will have to be studied; every phase of the matter will need to be investigated. I would suggest that a committee of parliament should deal with the question, look into every consideration, if necessary hear witnesses, including experts. But obviously that could not be done this session, and I would suggest that my hon. friend withdraw his bill for this year and reintroduce it at the next session of parliament.

Right Hon. R. B. BENNETT (Leader of the Opposition): I am sure we have listened with great satisfaction to the observations of the Minister of Justice (Mr. Lapointe), indicating as they do that he has given a great deal of consideration to the subject matter of the measure that has been introduced by the hon. member for Wellington North (Mr. Blair). Under our constitutional system this parliament determines what acts constitute crimes, and this parliament awards the punishment for a violation of the statute which it thus makes. It rests with the provincial authorities to carry into effect any sentence that may be imposed, whether it be death or imprisonment or otherwise, but it is for the federal authority, on the one hand, to provide the penitentiaries, and, on the other, for the provinces to provide the gaols in which

imprisonment is made. That is one of the anomalies of our constitutional system.

The form which punishment for murder or any other offence punishable with death should take has been a subject matter of discussion, I suppose, ever since there has been law. There are two factors to be considered. One has to do with the punishment, which is determined by this parliament; the other has to do with the effect of that punishment upon society. One is intended to operate as punishment of an offender, the other as a deterrent against the repetition of such acts by other members of society. There is no doubt that the form which punishment takes has been regarded from the earliest dawn of history as important in determining the value of punishment as a deterrent. It will be recalled that in the very early days death was inflicted sometimes through stoning the offender to death, in other cases by beheading the offender. But hanging was always an ignominious form of death. Hence it was that when men in military service were convicted they pleaded that they should not be hanged but that they might be shot, because one was such an ignominious form of death as compared with the other. My reading induces me to believe that hanging is far, far more effective as a deterrent than any other form of punishment which has been devised. While the putting to death of a convicted criminal by suffocation, by asphyxiation or in a lethal chamber may indeed be a very humane method, with all deference I have to say that it is not humanity we are concerned about in the inflicting of punishment, it is the preservation of society from those who have offended against it, and the method of punishment that we resort to is not to find the most humane method by which to punish the offender, but in the same act to punish and to deter. I frankly say I do not know of any method that we have yet had upon the statute books of any country, that is more calculated to operate as a deterrent than is hanging. Whether we like it or not, that, at least, is the evidence of history, and it cannot lightly be disregarded. It arises from the ignominy that attaches to that form of punishment. For instance, in the days when a prisoner was beheaded, it will be recalled that very frequently the body was put in irons, taken to a near-by tree and suspended there, and left hanging as an example to all who might pass that way as to what was the ultimate reward of the felon. In some cases the bodies were quartered, and they were buried under conditions that we should regard as revolting, as for example, when a stake was driven through the corpse. One who reads the Calendar of Newgate will find there striking illustrations of the facts to which I allude.

I think we can derive some lesson from what the practice in England has been. There is no country in all the world in which there is a higher regard for law than there is in the British Isles, and to this day the punishment of the man convicted of murder is hanging. We adopted it when we founded our criminal jurisprudence. In one part of the United States they have followed the practice of hanging. I believe that in one state of the union they still shoot the offender, and there are countries in Europe in which the murderer is shot to death. As those will remember who have read a recent book published by the warden of Sing Sing, electrocution was introduced into the United States, as it has been into other states, and it has been found to work satisfactorily. Yet when one reads of it, and realizes the steps that are taken to make it effective, I think one will conclude that the method which is adopted as part of the criminal jurisprudence of Great Britain and is still followed here is the most satisfactory method, having regard to the second branch of the purpose of the execution of a criminal. So, when I heard the Minister of Justice make the observation he did, I felt that he properly reflects public opinion. There is such a thing as a maudlin sentimentality with respect to the criminal that has brought about a condition in society which is not to be desired. It must be recalled that those who are punished for sins against society and for crimes against the law are, in the words of a great authority, like the mad dog or the wild wolf. They are destroyed not because of resentment or because of any feeling of animosity against them, but because, by their conduct and actions, they have made it essential for society to destroy them in order to preserve itself, and in the effort to preserve itself it necessarily must have recourse to methods which sometimes are not, shall I say, the happiest or yet the most pleasant. Therefore I repeat that I heard with much satisfaction the observations of the minister.

I would not for a moment venture to make a suggestion to the hon. member for Wellington North with his wide knowledge as a physician and his earnest desire to save human suffering, but we must never forget the person who was killed. I recall, when we had to deal with capital cases, receiving petitions signed by tens of thousands of people pleading for clemency. The rule that, I think, is the sound one is that if a murderer has been convicted

by due process of law the sentence should not be interfered with by the executive, not having seen the witnesses, because you cannot tell the weight that is to be attached to the evidence of witnesss without having seen them, without having observed their demeanour and without being in any way able to appreciate the frankness or otherwise with which the testimony was given. But when we have to consider the question of the method to be pursued we must not forget that the murderer was not very careful about the method he selected to destroy his victim. We must not forget that those about whom we are so solicitous were not solicitous for those whom they destroyed. When they wreaked their vengeance, by murder dark and foul, they were not thinking of the pain they caused or the injury they did; they were not thinking of the sorrow they caused to those who survived. In this age there are always manifestations of our becoming victims of maudlin sentimentality and thinking in terms of the pain and suffering of one whom we are removing from society because of his offences against it, but at the same time I suggest that we should never forget those who have suffered because of the offences which have been committed.

I commend the minister for not endeavouring to change the established system at this time, and for deciding to await some stronger manifestation of public opinion than we have yet seen realizing that a practice which has been followed so satisfactorily in the country where law is more highly respected than in any other part of the world is a method from which we should not lightly depart in Canada, where it has been followed for so long. I am not unmindful of the other difficulties to which the minister has referred, and which are real ones. To establish a central point at which all criminals would be sent from two or three provinces would be to put the provinces to an increased expenditure, and that burden is already great in connection with the administration of criminal justice. In my opinion this would tend to lessen the value of the effect that attaches to the second branch of all punishment, namely as a deterrent against the performance of similar acts by others.

For that reason, Mr. Speaker, without going into the matter in any further detail from either the historical or any other standpoint, I must say that I am greatly pleased that the minister has taken the view he has expressed. I cannot but hope that when all the facts have been reviewed by the hon. member for Wellington North, having regard to the effect that it is always purposed to achieve by punishment, he will agree that, consistent with humane methods and the deterrent effects, hanging has served a great and useful purpose as a method of depriving of life one who has been convicted, usually for taking the life of another. It is true under our criminal code, there are other offences, notably treason and rape, for which death is the punishment, but usually the fact is that death is awarded as a punishment—automatically it is true—when the verdict has been that the accused is guilty of murder. It will be found that in the many years during which hanging has been the punishment imposed for murder in Great Britain and other parts of the British dominions it has been a satisfactory method of taking the life of a human being by process of law, alike for punishment and for deterring others from perpetrating similar acts.

Mr. J. S. WOODSWORTH (Winnipeg North Centre): Mr. Speaker, I cannot permit the observations of the right hon. leader of the opposition (Mr. Bennett) to pass without a protest. Twice he used the words "maudlin sentimentality." I suppose some of us will be classed as maudlin sentimentalists—

Mr. BENNETT: I had no personal reference at all.

Mr. WOODSWORTH: I am just suggesting that that great, sweeping phrase probably is sufficient to include almost anyone who differs from the view expressed by the right hon. gentleman, and I was going to say that in spite of that I feel that I want to say a few words with regard to this matter.

The right hon. gentleman spoke of hanging as being effective as a deterrent, and he mentioned the evidence of history. Well, I do not pose as a great student of history, but I say that the evidence of history is not in favour of the effectiveness of hanging as a deterrent. They used to hang people for sheep stealing, for robbery, for nearly a hundred offences if my memory serves me aright, in that old England of ours, and it was largely because hanging did not prove to be a deterrent that it was given up in the majority of cases.

Mr. BENNETT: No.

Mr. WOODSWORTH: The right hon. gentleman has his view with regard to that. He has read history, but he is not the only

one who has read history. Some of the rest of us may interpret that history in our own way. I do not profess to question the fine points of law as presented by the right hon. leader of the opposition, though I find that he can argue on both sides equally well. But I am not talking about law; for the moment I am talking about history, and, as the right hon. gentleman suggests, in times past we have had all kinds of punishment, boiling in oil, drawing and quartering and a great many others. I hope he does not suggest that we should return to barbarities of that kind. He has selected the one which has persisted, that of hanging. It is true that this practice exists in England, but it is also true that there have been committees of the British House of Commons which have protested against it and have advocated something else. I think that was indicated by my hon. friend from Wellington North (Mr. Blair) in his presentation of his bill. While I have a great regard for what is being done in England I do not think we in this country need follow everything that is done there. If there is a better way of doing things we should be willing to adopt that way. I do not think we should abandon the suggested change as with a sweep of the hand.

As to the attitude of the Minister of Justice (Mr. Lapointe), it is characteristically Liberal, that is, the kind of Liberalism we have here in Canada. Do nothing. Wait. Appoint a committee. That is what we are always being told. Do nothing. Wait. Appoint a committee. Do something later.

Mr. LAPOINTE (Quebec East): Know something before you act.

Mr. WOODSWORTH: All right, know something, but this matter has been discussed the world over for a great many years, and there is no particular reason why we should continually postpone action along almost every line. If the method proposed by this bill is more humane, why not adopt it? The leader of the opposition suggests that we should not adopt it because another method would not be as great a deterrent, would be emphasizing too much the humane side. I submit that the humane side of this matter is of the greatest importance, if punishment is to be a deterrent. People are getting sick of the idea of vengeance and retribution. I submit that the greatest thing we can develop in this country is a respect for law, and that the way in which the law has been administered and to a certain extent is being administered is not developing a respect for law. There is not the impartiality in the administration of law that we should have. Unless we develop a respect for law the whole foundation of our public life is undermined. I submit that criminals as a whole may be said to be either born or made.

Mr. BENNETT: We are dealing with murderers here.

Mr. WOODSWORTH: All right; all kinds of criminals are either born or made. It used to be considered that there were certain criminal types; there may be; I do not want to go into that. There may be criminal types, as stated some years ago by some outstanding criminologists. If that is the case then we cannot very well blame the criminals; they are criminally insane; we can put them out of the way in the most humane manner possible or shut them up. In my judgment instead of adopting another method of capital punishment we should abolish it altogether; that would be the best way, and that is not maudlin sentiment. In my judgment the great majority of criminals to-day are not born that way; they are made that way by social maladjustments.

An hon. MEMBER: Tut, tut!

Mr. WOODSWORTH: "Tut, tut," says someone. I would advise my hon. friend some evening to read that outstanding novel of the criminal world, Les Misérables, with its great character, Jean Valjean. It came to my notice as a youth many years ago, and I have never forgotten it and I hope I never shall. If some who lightly brush aside these matters would read a little more carefully the history of criminals, they would understand that to a considerable extent criminal instincts have not been inherited by these people, but criminal tendencies have been fostered by poor training in childhood and the difficulty later on of finding the way into a satisfactory manner of living in our society as it is to-day. Under those circumstances I urge that it is for us to do one of two things: If law breakers are criminal in type, to take steps to prevent criminals coming into the world. That is surely more sensible than allowing them to breed, knowing that they breed true to type.

Mr. BENNETT: Hear, hear.

Mr. WOODSWORTH: If some legislation were introduced to prevent so many of those of lower mentality from perpetuating themselves we would not have the difficulty we are having to-day. I know that doctrine is not acceptable to some hon. members in this house, but it needs to be stressed. It is

nearly twenty years ago since I had the duty of making some investigation of mental defectives for the governments of the three prairie provinces, and I had occasion then to trace a large number of case histories, as well as to a certain extent go into theoretical considerations. I discovered the enormous cost being imposed upon this country by the perpetuation of those who are unfit to develop into good citizens, as well as the enormous amount of misery entailed upon themselves and others. If, instead of concerning ourselves quite so much in getting some people out of the world, we should consider more carefully whether certain classes should be allowed to come into the world—

Some hon. MEMBERS: Hear, hear.

Mr. WOODSWORTH: I am glad to find a few hon. gentlemen saying, "hear, hear" to that. For those who are not born criminals, the thing to do is to arrange our social affairs so that they may not develop criminal tendencies. That is why I am so often on my feet advocating social changes. I think I am perfectly scientific in doing so. If instead of spending so much in the building of bigger and better penitentiaries, we spent a little more in providing work and recreation and decent surroundings we would not have anything like so many criminals.

The leader of the opposition suggested that society must destroy certain people in order to preserve itself. Of course society must seek to preserve itself; I quite agree that the statement is true in those general terms. But I submit that if we simply set to work to wipe out a few individuals who have proved dangerous to society we are not really curing the social evils which we find about us to-day. Capital punishment may be the last desperate remedy, if you like. But if my reading of history is correct; if we disregard the welfare of any considerable section of the community, it is not very long, as historical time is measured, before those people in some form or another take their revenge on society.

An hon. MEMBER: You cannot do it.

Mr. WOODSWORTH: I hear someone say, "you cannot do it." I know we can do a good deal more than we are doing to-day. I know there are many young fellows just on the verge of becoming criminals whom we could save if we set forth to save them; there is no doubt whatever in my mind as to that.

In closing, because I do not want to argue this matter, I want merely to protest against the observations of the leader of the opposition. If we are going to discuss capital punishment at all it seems to me we might discuss these broader issues as well. If we must resort to capital punishment it is all to the good to see that it is effected in as humane a way as possible. We are not out for vengeance on the poor fellow who has committed the crime. As to vengeance look at some of the photographs being circulated to-day showing the mutilations which took place in Ethiopia, that is if you want to get stirred up in that way, have all the vengeance you like, as in some of the southern lynchings. But surely we do not want that; the leader of the opposition does not want that. If the punishment is to be a deterrent, let it be effected as humanely as possible; place it on a high plane. If certain people may no longer be safely allowed in society and for that reason have to be either put out of life or put away where they can no longer endanger society, let it be done with dignity and mercy.

Mr. T. L. CHURCH (Broadview): Last week in Toronto one of these executions took seventeen minutes. Last year in Montreal a woman had her head torn off. There is a demand in the country to have the present system improved or to get a more humane system.

While this bill is before the house I also wish to register a complaint about an execution last week from which the press were excluded, the first time I have known this to be done. That is contrary to sections 1065, 1066 and 1067 of the criminal code, which relate to the place of execution, the persons who shall be present and the persons who may be present. Publicity is one element of the administration of justice.

Some more humane method should be adopted. The medical council and the judges should be consulted, and probably by next year the minister could find a way for Canada to carry out its executions as a federal authority instead of leaving them to the provincial authorities. The government of Canada now seems to be administered from the provincial capitals. Section 1067 relates to the persons who may be present, the latter including any justice for the district, and such relatives of the prisoner or other persons as it seems proper to the sheriff to admit. In this case they were out on the street walking up and down, and the sheriff had no discretion; he was instructed to exclude even the representatives of the four Toronto papers, something never done before. This inhumane method of execution is just another example of the fact that Canada is at the rear rank of the procession as far as any effort for law reform is concerned in the British empire to-day.

Mr. DANIEL McIVOR (Fort William): I am almost afraid to rise to speak on this question because of its bearing upon our life, and especially our criminal life. Forty years ago I debated this subject, that capital punishment should be abolished, and I have never heard a debating club win which took the side that capital punishment should not be abolished. Invariably the abolition of capital punishment is favoured. The hon. member for St. Boniface (Mr. Howden) used the argument against hanging that it was those who carry out the execution who were being punished. I have heard guards, coming out pale-faced after an execution, saying, "God pity men who have to witness a thing like that. I would rather resign my position than have to go through that again." I am not one who believes that hanging, or any mode of execution whatever it may be helps to make our country more law-abiding. I am convinced that the enforcement of law to a great extent depends upon the character and calibre of our judiciary. Our judges and magistrates, and even our lawyers represent the enforcement of law and order in Canada.

I am convinced that criminals are not born; they are made. Otherwise I could not preach the old gospel, and neither could I take part in constructing laws for the betterment of society. If I believed that criminals were born, not made, then I would lean towards the old doctrine of fatalism. I am convinced, too, that criminals might be used in a way better than that of simply putting them out of business by coarse measures. Medical science is always exploring and attempting to find ways to help humanity. I believe it would be a good thing if a person convicted of foul murder might have his life used for experimental purposes, so that young doctors could conduct their experiments for the betterment of humanity.

Hanging is perhaps the worst form of execution. When we condemn a vile murderer we often hear the statement that hanging is too good for him. But as I said, the form of execution does not help in the administration of justice. We like to live in the Old Testament days and observe the principle of an eye for an eye and a tooth for a tooth. But we are not living in Old Testament times, times when things were at a standstill. We are living in a new day when we regard human life as sacred. If a criminal is put out of existence, then he is just in hell a little sooner than otherwise.

Mr. H. E. WILTON (Hamilton West): Mr. Speaker, to a certain extent I believe I am qualified to speak authoritatively on the subject of hanging, not because I was ever hanged, or expect to be, but because it was my unfortunate duty on one occasion some years ago, while engaged in newspaper work, to witness a hanging. I assure you, sir, that any person who has witnessed a legalized killing of a human being by the method of hanging would have no desire to see a second one.

Even if the present system of hanging were continued there are certain conditions surrounding it which I suggest should be eliminated. At the hanging to which I refer the prisoner was brought from his cell and paraded from that point to the place of execution, during which time he passed his own open grave. That in itself was perhaps worse than the actual hanging. I know it seemed to take more out of the condemned man than did even the ascension to the scaffold and the actual hanging.

Hanging as I have known it from personal experience is cruel, barbarous and everything it should not be. While I am not suggesting that we should discard the death penalty, the fact is that we are in a complex situation when we attempt to follow the divine law which stipulates a life for a life, but reject the law which says, "Thou shalt not kill." However, as long as we take a life for a life I suggest that we should do it along lines no worse than we would adopt towards animals. The society for the prevention of cruelty to dumb animals surrounds its work with more humanity than do we, as human beings, in the disposal of human lives by hanging.

For example, if a man were to hang a dog I have no doubt public sentiment would rise in indignation and protest strenuously against his action. I should not be surprised if he were brought before a court and fined for cruelty to animals. At the hanging it was my unfortunate duty to witness the man was not pronounced dead until fourteen minutes after he had been dropped. Quite recently I read of a hanging in Toronto where seventeen minutes elapsed before the death pronouncement was given. I have before me a clipping from a Kitchener newspaper stating that a man had been fined in court for cruelty to chickens. These chickens had been deformed in some way, and he had not given them the proper attention.

The laws under which human society functions give greater protection to dumb animals than we as a government give to the men whom we condemn to death. If a man breaks

a law and as a result is condemned to be hanged, then that is the law of the land, but I have never been able to believe that the law has any right to add to that man's torture further than putting him to death, in whatever way is decided. As I said before, when bodies are not claimed by relatives and are buried in the courtyard or gaol yard prisoners are marched past their open graves. That in itself at least needs correction even though the present system remains. The system of putting human beings to death by hanging is barbarous; it is antiquated; it is cruel, and we as modern people trying to live up to modern conditions, priding ourselves on being a nation of modern people with modern ideas, still continue to follow this barbarous method of putting men to death by hanging when we have the evidence before us that it takes from fourteen to seventeen minutes, and sometimes longer, after the hanging before death is pronounced. As I said before, anyone who has ever witnessed the legalized killing of a human being by hanging will forever after be opposed to it on the ground of common humanity as something inhuman, barbarous, and not in keeping with modern civilization.

I have before me another clipping here, to the effect that a man in Toronto kept his dog in the basement of his house; the humane society, believing that that was not just the proper place to keep a dog, had the man brought into court where a conviction was registered against him on the charge of cruelty to animals, and he paid a fine. Every possible precaution is taken to protect dumb animals from suffering, to prevent human beings from inflicting on them torture of any kind, and still we as a people and as a government stand by and say nothing while the state puts men to death by a method that inflicts possibly more torture than any other yet invented. Whatever system is adopted it seems to me that there are several ways of executing the death sentence which would be more humane and more in keeping with modern conditions than by putting men to death by legalized killing through hanging.

I want to put myself on record as being absolutely opposed to the system of killing by hanging. So long as the laws of this land demand a life for a life, the death sentence should be executed in at least a humane way, in a way that is as nearly painless as possible, and not surrounded with any of the gruesome details which always accompany death by hanging.

Hon. J. E. LAWSON (York South): Mr. Speaker, at the very outset I want to make it plain that I realize that the legally trained mind probably approaches this problem from a very different viewpoint from that of the theologian as illustrated by my hon. friend from Fort William (Mr. McIvor) or from that of the medical man.

The point at issue in this bill is not the abolition of the death penalty. The point is: Shall we substitute the lethal chamber for hanging? The greatest deterrent to crime in any country is the certainty of prosecution if crime is committed, and the certainty of punishment if the prisoner is convicted on that prosecution. Once a man has been convicted of murder the death penalty must be imposed, and, as I stated, the point in this bill is not as to whether we shall have the death penalty, but as to the method by which the convicted criminal shall be put to death.

A considerable number of the members of this house dwelt upon the fact that life was not pronounced extinct for a given number of minutes after the criminal in question was hanged, but if we are to consider this matter on the basis of humanity the question as to how long a time may elapse between the actual dropping through the trap in a hanging and the pronouncement by a medical man of life being extinct has nothing whatever to do with the matter. What we are interested in is: How long does it take from the moment the criminal is taken from his cell, knowing certainly that he is going to be hanged, until unconsciousness is produced? I asked both the mover (Mr. Blair) and the seconder (Mr. Howden) of the bill as medical men, when they moved and seconded this bill, if they would tell me the length of time required to produce unconsciousness from the moment the man drops through the trap and the neck is broken, which we believe is the method by which hanging is executed, thereby putting upon the spinal column a pressure which in turn produces unconsciousness. But neither gentleman saw fit to answer that question. As against that I asked the length of time which elapsed from the time a condemned murderer is taken from his cell until unconsciousness is produced in a lethal chamber.

Mr. HOWDEN: On a point of order, Mr. Speaker, I should like to correct a remark which the hon. member made a moment ago. It is true that he asked me with regard to the time which would elapse before unconsciousness occurred, and I told him at the time that unconsciousness would probably immediately follow the dislocation or breaking of the neck.

Mr. LAWSON: I am quite willing to accept that.

Mr. HOWDEN: That is what I said before.

Mr. LAWSON: In that even I retract my statement in regard to the seconder of the bill. Quite frankly my recollection is that his answer at the time in the house was quite different. The answer he has now given is what he told me over a cup of tea one day in the cafeteria, but that is neither here nor there.

Mr. JACOBS: Oh, yes, it is there.

Mr. LAPOINTE (Quebec East): If my hon. friend from York South will permit me, I have statistics as to the time it takes before the sentenced prisoner is officially declared dead in executions by lethal gas, and I notice that it is about the same time as in hanging. Unconsciousness comes after one minute or about one minute, but it takes from twelve to fifteen minutes before the man is pronounced dead.

Mr. LAWSON: That is exactly what I thought.

Mr. SPEAKER: The hour for private bills having expired the house will revert to government orders.

## SUPPLY

The house in committee of supply, Mr. Sanderson in the chair.

### DEPARTMENT OF NATIONAL DEFENCE

Miscellaneous—adjustment of war claims—National Defence, $68,971.

Mr. MacNICOL: What does this include?

Hon. IAN MACKENZIE (Minister of National Defence): This includes about $29,000 for the historical section, and the remainder is for the adjustment of war claims: deferred claims for war service, gratuities, some amounts for headstones, and items generally of that sort.

Item agreed to.

National Defence—salaries, $441,082; contingencies, $52,600.

Mr. MacINNIS: This is a large amount for salaries. Perhaps the minister will tell us how many officers and men are concerned.

Mr. MACKENZIE (Vancouver): There is an increase of $10,263, which is more or less accounted for by certain new positions—aeronautical engineers—and various promotions within the service.

Mr. MacINNIS: Does this item cover the staff?

Mr. MACKENZIE (Vancouver): Yes, the civil staff, but not the military.

Mr. MacNEIL: Does this include salaries for any military officers?

Mr. MACKENZIE (Vancouver): No; it is for the civil staff of the National Defence department.

Mr. MacNEIL: Does it include provision for staff at district headquarters?

Mr. MACKENZIE (Vancouver): That is under the permanent force vote, the general vote.

Mr. BENNETT: This does not cover Brigadier Caldwell.

Mr. MACKENZIE (Vancouver): No. There is a variation from the estimates of last year. The vote for administration last year was separate, but the amount for administration will be found in the general vote for permanent force.

Mr. MacNEIL: Will the minister say what the policy of the department is in regard to defence?

Mr. MACKENZIE (Vancouver): That is a difficult question to answer, but I may tell the hon. gentleman at once that the policy of the department is not necessarily a policy that changes with a change of administration. Discussing the supplementary estimates of the department the other day, I said that the policy of the department was naturally and essentially concerned with the defence of the dominion. Those who have acted as technical advisers for many years and who have studied the question have said that the defence of Canada is concerned with four possible developments. In the first place there is the defence of our own coasts; second, the defence of our neutrality in the event of war between other nations; third, the possibility, which I hope is a very remote one, of Canada being compelled at any time to dispatch an expeditionary force in order to fulfil her obligations under the terms of the covenant of the league, and in the fourth place the possible dispatch of an expeditionary force consequent upon any contingent developments in relation to our position in the British commonwealth. In my own judgment, however, the position of the defence forces of Canada comes within the first two: that is, with reference to policies which should be adopted for the defence of our own coasts if necessary, and, second, for the defence of our neutrality, the defending of focal points of trade routes in case of war between other nations. Canada's defence policy is not in the slightest degree based upon aggression; it is essentially

a policy of defence. In the last few years, as a result of economic necessity and the stringency of the times, our defence forces have been to a certain extent inevitably neglected, and a very modest attempt is being made this year to get at least an efficient force. The duty of the minister in charge, no matter what party is in power, is, I submit, to see to it as far as possible that the defence forces shall carry out the purposes for which they exist.

Mr. MacINNIS: Having stated the functions of the department, perhaps the minister will tell us how much would be required to build up the department to the point where it would be adequate to defend the dominion under all circumstances.

Mr. MACKENZIE (Vancouver): That question is more difficult than the other.

Mr. MacINNIS: That is why I asked it.

Mr. MACKENZIE (Vancouver): That would depend upon the policy which might be adopted by whatever government was directing the affairs of the country. If the recommendations of some technical advisers were adopted, it would cost a very considerable sum of money to develop the naval forces to what is considered to be the proper stage of development; to develop the air force to a similar stage; and to reorganize our land forces in the way of mechanization and the acquisition of new equipment, and otherwise along the lines now followed by every part of the British empire, by Great Britain and the countries of Europe. I could not make an estimate because that would have to be determined by whoever was dealing with the question as conditions developed and circumstances changed.

Item agreed to.

Radio services—for the maintenance and operation of the Northwest Territories radio system, $229,400.

Miss MACPHAIL: Why does this come under National Defence?

Mr. MACKENZIE (Vancouver): Because it is carried out for the benefit of the public generally in the northland by the Royal Canadian Corps of Signallers. It is largely a service for the civilian population. Ever since 1923 when it was commenced it has been gradually developing, and in addition to the ordinary services carried out in this way, very valuable weather bulletins are flashed every day from these important points in the northwest to the daily journals in Canada and the United States.

[Mr. I. Mackenzie.]

Miss MACPHAIL: Why not put this item into the estimates of some other department? I think everyone is willing to vote the amount of money, but this does not seem to be the right place to have it.

Mr. MACKENZIE (Vancouver): If any other department of government in Canada can get the same efficiency in service I have no objection to having it transferred.

Mr. BENNETT: The answer is that it is carried on by the corps of signallers, which happens to be part of the militia services. But what I was asking is: At how many points is this service being maintained? There is one at Rockcliffe, and from there going west what have we until we get to Aklavik?

Mr. MACKENZIE (Vancouver): Herschel Island, Fort Norman, Fort Simpson, Cameron Bay, Fort Chipewyan, Fort Resolution, Aklavik, Fort Smith, Dawson City, Mayo Landing, Edmonton, Fort McMurray, Norway House, Fort Rae and Goldfields.

Mr. BENNETT: And is the east included in that vote?

Mr. MACKENZIE (Vancouver): It is only for training purposes in the east. This service is entirely in the northwest.

Mr. BENNETT: What about the one at Rockcliffe?

Mr. MACKENZIE (Vancouver): That is in another vote altogether.

Mr. MacINNIS: How many persons are there in that service?

Mr. MACKENZIE (Vancouver): There are sixty-eight other ranks and eight officers.

Item agreed to.

Cadet Services

Expenses and services in connection with the training of cadets; expenses of school teachers qualifying for cadet instructors' certificates; pay and allowances of permanent force physical training instructors at normal schools, et cetera, $150,000.

Miss MACPHAIL: I should like to ask the minister—this, I think, is about the fourteenth year, but we have brought the amount down from $500,000 to $150,000—what is the number of cadets in the different provinces?

Mr. MACKENZIE (Vancouver): Nova Scotia, 1,973; Prince Edward Island, 836; New Brunswick, 2,309; Quebec, 49,216; Ontario, 21,861; Manitoba, 1,914; Saskatchewan, 1,290; Alberta, 1,315; British Columbia, 1,659; making a total for all the provinces

of 82,373, or some 5,000 less than it was in the previous year, 1934. These figures are for the year ended August 31, 1935. The numbers under this vote have been decreasing in recent years.

Mr. MacNICOL: Has the department been making any effort to increase the numbers?

Mr. MACKENZIE (Vancouver): We are doing what we can, within the very limited appropriation we receive every year under this item.

Mr. MacNICOL: Ask for a larger appropriation and increase the numbers.

Mr. MACKENZIE (Vancouver): As was stated by one hon. member recently, this vote in 1928-29 was $500,000, but it has been decreasing, evidently as a result of certain persistent efforts by way of criticism. With all respect to the well known views of my hon. friend the member for Grey-Bruce (Miss Macphail), which were very well expressed in this house in 1927, I personally believe in this work. I think it is a wonderful work for the youth of Canada.

Mr. BENNETT: There is a resolution on this subject passed by the house.

An hon. MEMBER: Increase the grant, and get more.

Mr. COLDWELL: I have been wondering what is the justification for this expenditure. As one who has had considerable experience in charge of institutions where this particular work is being done, I believe that it is one of the most wasteful expenditures the dominion is making at the present time. As a matter of fact, in practically all the provinces and practically all classes of schools, physical training is given on more or less scientific principles, following particularly the Swedish and British systems. The training that cadets get has, it seems to me, very little to commend it. It is entirely, shall I say, supplementary, and is not regarded in some quarters as anything but a method of obtaining a grant from the federal government. Of course an effort is made on the day that an inspection is held to parade as many boys as possible, and to give them, shortly before, a certain amount of military training. But in my opinion the boys and girls who are receiving physical training apart altogether from military training are more thoroughly trained physically than could possibly be done through cadet drill. If the justification of this work is that you are training boys to participate in war on some future occasion that of course is a point of view which one can understand, but so frequently we are told the justification is that it helps the youth of the country to develop physique. As a matter of fact it does nothing of the kind. Physical training can be well looked after under the system in vogue in most provinces and in most schools, apart altogether from military drill. I would also point out that the poorest possible kind of physical drill is the military drill. It is not balanced. About all it requires is a blind and unreasoning obedience to orders which are given in rather a crisp and curt manner. In my opinion this does not tend to breed in an individual initiative and self-reliance; I think it does exactly the opposite.

There is another feature that I should like to draw to the attention of the house. In certain places military drill or cadet drill is made more or less compulsory. Boys whose parents are opposed to militarism are more or less forced either to take cadet drill or to suffer certain indignities. If I may recount my own experience, I have a son who has just attained his majority. He has never taken military drill; I have always objected to it. Yet in one of the collegiates in the city in which I live, that boy day after day was taken into the basement when the drill was being held and compelled to sit on the form and watch the other boys. In an institution of which I was the head a few years ago definite instructions were given to me that I was not to excuse boys from military drill unless they were physically unfit to take part in any form of drill. I may say that I personally challenged that ruling; my views were upheld by the Saskatchewan Department of Education, and the order was nullified. Nevertheless pressure is placed upon boys to take this cadet drill. In my opinion the grant that we are making for this purpose might be placed somewhere else in the estimates. If it is looked upon as being necessary for the development of our youth it could be utilized much more beneficially in the encouragement of other forms of physical exercise that are non-military and better balanced, and in the promotion of good sportsmanship in the playing fields of our schools, where, after all, the best kind of sportsmanship is developed.

Mr. BAKER: All I desire to say is that in my humble opinion this grant of $150,000 is worth two or three times what it costs in encouraging a spirit of loyalty to king and country in the hearts of our youth.

Mr. BETTS: I cannot help being impressed with the remarks of the hon. member for Rosetown-Biggar, particularly having regard to the fact that as recently as October 14 he caused his name to be placed on the ballot paper as Major James William Coldwell.

Mr. COLDWELL: I rise to a point of order. I should like to correct that statement; I did nothing of the kind. As a matter of fact, owing to my parents seeing fit to give me an unusual first name it appeared on the ballot paper in that way. When that name was given me I was too young to make an effective protest.

Mr. BETTS: I stand corrected. I have in my hand the official list of candidates, and there I find the name "Major." It strikes me that the hon. member for Rosetown-Biggar might have been well advised to steer clear of that unfortunate mistake, because I have not the least doubt that it won him very many votes. Speaking in my own behalf, and remembering the words of my hon. friend as to crisp and curt pronouncements, I have had the pleasure of listening to many crisp and very curt pronouncements by the hon. member, and I have admired them. I felt that the discipline, both mental and physical, which can be inculcated in no way as well as by military training, must have been enjoyed by the hon. member. For my own part I should like to say that I think this very moderate estimate is more than justified, and I should like to vote in favour of it.

Mr. DOUGLAS: Might I make just one observation in reply to the remarks of the hon. gentleman who just sat down, first with reference to the hon. member for Rosetown-Biggar securing any votes because of his Christian name. It happens that I campaigned in the hon. gentleman's constituency, and I am quite convinced that his people know him to be a confirmed pacifist, so they would not be likely to confuse his Christian name with any military title.

Now I should like to say a word with reference to the value of cadet training. For the past fifteen years I have been connected with boys' work in one form or another. I was a member of the cadet corps and later, for a number of years, a member of the militia. I have had contact with the boy scout movement, and the trail ranger and tuxis movement, as well as with a number of athletic clubs in different parts of western Canada, and if the object of this vote is merely the physical development of the youth of Canada, the encouragement of sportsmanship, loyalty and all those things we like to term Canadian, we could spend the money to much better advantage in a number of boys' movements such as boy scout work or athletic clubs rather than cadet training which, as has been said already, in a great many instances is spasmodic and irregular and often headed by men not altogether trained in the handling of young boys. I think this is simply a waste of money, spent as it is now.

Miss MACPHAIL: Whether or not it is true, it is being said that when teachers in training at the normal schools get their certificates as physical training instructors the certificates are from the Department of National Defence. I should like to know whether or not that is so.

Mr. MACKENZIE (Vancouver): I am informed that is correct.

Miss MACPHAIL: I think it is queer that the certificates should come from that department. Year after year—I really think this is the eleventh or twelfth time—I have argued at length and in detail against military training in schools, and I do not prospose to do so again. I am glad that other people who have come to the house are doing this, so I do not need to. However, I do feel that this $150—

Some hon. MEMBERS: It is $150,000.

Miss MACPHAIL: It might as well be $150, for all the good it does. I think this item should be deleted. I do not think cadet training is good physical training. I think it is poor mental training, and I believe the only kind of discipline that is of any use is self-discipline rather than the kind which comes from commands that are barked out. In looking over the figures a few moments ago I noticed that most of the cadets are being trained in the two central provinces of Ontario and Quebec. This training is not taken very seriously in any other part of Canada. I think there is a feeling throughout the country against this vote and against this method of physical training. I think the hon. member for Weyburn was quite right when he said that if we are to spend $150,000 on what we call physical training it should be spent in some other way. Let us vote it through the departments of education of the provinces and let it be spent for really physical training.

Therefore I move, seconded by the hon. member for Winnipeg North Centre (Mr. Woodsworth) that item 65 be reduced to $1.

Mr. CHURCH: Mr. Chairman, in speaking to this amendment and to the item, because I do not wish to have to make two speeches,

I may say that I have seen this vote for cadet services cut down from $500,000 to $150,000, which means that the government has accepted the policy of the pacifists in and out of this house. Formerly I belonged to a board of education. The last generation in the city from which I come were trained in the cadet movement, and if you look over the reports which I have seen with regard to these cadet services you will find that it is not a military organization any more than the boy scouts or the girl guides. It does help to imbue the cadet with qualities which to-day are necessary for success in life. Look over the gaols and prisons of this country to-day; look at the findings of judges, magistrates and juries throughout this country as to the lack of home training, discipline and training generally for the youth of to-day, and you will see the need for training of this kind. In the old days juvenile courts were never heard of. I do not like to disagree with the most estimable lady member for Grey-Bruce, but I am heartily in accord with this vote. I am sorry to see the board of education in Toronto, composed of pacifists, and everybody there who calls himself a doctor, oppose the cadet movement; the result has been that this movement has been practically abolished in that city, where they spend $11,000,000 or $12,000,000 on education.

What is this movement? We never would have had a militia in this country had it not been for the cadet movement. The history of the militia of Canada is wrapped up with the cadets and the schools. The qualities necessary for success in life are those which the average cadet develops, namely self-control, courtesy, manliness, discipline, love of country. As Pope says, "Worth makes the man." These qualities were fostered by the cadet movement. It was no more military than the show the board of education of Toronto put on last month at the arena, on, I am sorry to say Holy Thursday, a religious day. They dropped the cadet movement; it is now limited to the high schools and after hours; yet they put on a show ten times more military and far more objectionable than anything done under the cadet movement. The ground of the objection to this vote is the principle of pacifism. Militia and defence are necessary. It was the armed strength of the barons that made magna charta possible. The disarmament of the free is the tyrant's chance, now as in the days of King John and as in the case of Ethiopia. If this country wants to abolish the militia altogether the minister's department might as well be closed up. These estimates used to be about two and a half times this amount when I first came to the house. As one who has taken a great deal of interest in education I am absolutely opposed to dropping the cadet movement for some of the fads and frills in the public school system of this country to-day, and Ontario especially, where the cadet movement has been abolished and the board of education and others are shouting pacifism from the housetops.

People are relying upon the League of Nations; the League of Nations is dead and so is Locarno, a mass of ruins. We see the absolute failure of Woodrow Wilson's policy; fifteen years of his open diplomacy has placed our empire in a defenceless state. If the Italian army had come west up the St. Lawrence instead of going south to Ethiopia we should have known the necessity of a proper defence force. Here we are spending four and a half million dollars on the League of Nations, sending a deputation away next week, advisers and advisers to advisers, and all these people over there doing nothing on a joy ride. When the reports are made we never see them, but here hon. members object to a small vote of $150,000 for all the schools of this country from Vancouver to Halifax. The step taken of abolishing the cadets, by the board of education of Toronto is a mistake, a wrong step, and in the juvenile courts all over this country we see the results of the folly involved. I was at the Union station a few days ago and saw twenty-one young people brought back in custody from new Ontario, the district where some hon. members went last weekend. Formerly these young people would have been cadets, but this cadet work has been cut out during the last three or four years with the result that they have not had this training. Some of their parents are on relief; the boys did not want to hang round the house, so they went north to new Ontario to try to find jobs. Unable to get jobs they are cast into gaol as vagrants.

Two or three years ago they substituted for the cadets at the empire day exercises, what? They brought little children, six, seven and eight years of age, to the exhibition grounds; some of them had to walk and ride several miles. They were brought there to a dusty track and left there for hours, instead of having a proper cadet service in the schools and on the property to look after them. From what I have seen of this cadet movement it is not in any sense a military movement, but it teaches the qualities which I have named. I hope it will be restored; it will have to be if we are to have any better

discipline in the land. To-day there is not the discipline such as there was when you, Mr. Chairman, and I went to school. To-day the militia vote is so cut, that about all we have left to defend us, if the enemy came to our gates, is the girl guides and the boy scouts. I cannot understand what objection there is to this vote. It is so little, I do not think the city of Toronto gets anything from it, although it contributes over $80,000,000 to the revenue of this country. I do not see the hon. member for Parkdale (Mr. Spence) here; he was here a few minutes ago. He was one of the founders of the splendid Irish regiment and he knows how cadet training helps the initiative. The Irish race know what discipline is. They used to have a cadet corps in his unit; I do not think they have it now, but I know that if cadet services were restored we would have a lot more discipline than we have to-day.

One has just to read the reports of inspectors of the penal institutions of this country to see the need for this training. I had before me the reports in connection with another bill. If you cut out the cadet services altogether you destroy one of the best agencies for the inculcation, in the young people attending school, of the qualities I have named, qualities which are proper and necessary for success in life to-day as they were in the last generation. This matter has been discussed by the Ontario educational association, and many are thinking that we should get back to the old system, instead of substituting for it dances, physical exercises, acrobatic events, and so forth. I am not opposed to those things; they are proper under modern conditions, but they have taken forms which are far more military than were the cadet activities.

I hope the minister will next year have the opinions of various school boards and boards of education throughout the country, and will have cadet services restored. Then the militia will have a chance. This will be an economy in the long run, because there is no doubt that the average cadet went into the militia. The back-bone of the regiments in Toronto was a cadet movement in our city schools. The hon. member for Eglinton (Mr. Baker) was a cadet, and wore a uniform. He can tell us about the advantages of the cadet movement that has been abolished in public and high schools. I know many high school teachers in the city of Toronto. I was on the school board for some years, and I have learned of no agency which has contributed more to athletic and other developments than has the old system of cadet training which has been in operation for the last generation.

[Mr. Church.]

Mr. BAKER: I do not wish to add to the remarks of the hon. member for Broadview, who has immediately preceded me, but if I were moving an amendment—and I shall not do so, because I know it would be lost—I would move not to reduce the amount to one dollar but to double it to $300,000.

Mrs. BLACK: It is not my intention to say very much, but I must say that many speakers this evening have not spoken from practical experience. I speak from experience, because I have raised three boys to manhood. They have taken their places in the world as good, decent, law-abiding, middle-class citizens, the best class we have. Each of those boys had semi-military training and I attribute the fact that my boys have done comfortably well in the world to the fact that they were given semi-military training and discipline. With the cadet movement not only did they obtain military training, but they had manual training and development of the muscles of their bodies. They were brought up to respect their elders and to obey promptly and quickly when they were spoken to, far more so, I believe, than the boys and girls of to-day who do not have the opportunity of that training.

If I were to move an amendment I would not only double, but treble the vote. The future of Canada depends upon the boys and girls of to-day and those boys and girls, the men and women of the future, will be only what we make them, with the discipline which we can enforce.

Mr. MITCHELL: Does this vote include public and high school cadets only, or does it also include the Canadian officers training corps in the universities?

Mr. MACKENZIE (Vancouver): It does not include the officers training corps.

Mr. MITCHELL: Is there a separate vote for the Canadian officers training corps?

Mr. MACKENZIE (Vancouver): They come under the general training vote.

Mr. MacNEIL: I support the amendment, because from my experience I have learned that the expenditure of public money under the present method of cadet training is of no practical value. I have had experience in cadet corps, and have had an opportunity of comparing the results of cadet training with those of a proper system of physical training under other institutions. I have found that the results achieved under an up to date method of physical training are much greater. When one considers the problem from the

standpoint of national defence, he must conclude that physical training makes a greater contribution towards effective defence.

Time and again eminent military authorities have said that above all other considerations it is necessary to establish the correct physical training and development of our youth. I am not advancing my own opinions on this occasion, because the subject has been discussed by various organizations interested in educational problems. I refer to home and school federations, clubs and the like. There is a great body of opinion firmly opposed to cadet training, after careful observation of the results achieved.

I also refer to the opinion expressed by organized ex-service men. I had occasion to attend a conference of ex-service men, a representative body on the lower mainland of British Columbia. In that body were former officers, as well as men from the ranks. They examined the problem carefully and declared themselves as being opposed to cadet training because it has no practical value. They saw the boys under the command of instructors on the school grounds; they saw them controlled by antiquated drill methods, achieving no information of value in regard to military training, and certainly no training conductive to the true spirit of discipline, but rather the old spirit of discipline which tends to rob the young man of initiative and resourcefulness. Above all they saw that no definite effort was being made to develop these young men physically. The handling of a rifle or the obedience to words of command issued by a drill instructor trained in old methods has no definite value from the standpoint of physical training.

Those who have kept abreast of the requirements of military training to-day will realize that the methods employed are inadequate, and by no stretch of the imagination could it be said that these young men are being properly prepared for any military eventuality. Rather the spirit of the organization of cadet training is to place before them an entirely false ideal of militarism, something which constitutes a definite appeal to their vanity and is unsound in its very conception.

I suggest that at this time, when the country is confronted with such grave problems of youth, it is quite unnecessary to vote even $150,000 for cadet purposes. Rather I would suggest that, in so far as they are available, the moneys should be spent along educational and physical lines, which would more effectively cope with the serious problems of our times.

Mr. JACOBS: Was I correct when I understood the minister to say that of the cadet strength under authority of the federal power, about 50,000 of a total of 80,000 come from the province of Quebec?

Mr. MACKENZIE (Vancouver): There are 49,216 out of a total of 82,373.

Mr. BENNETT: I rise only to correct an evident misapprehension. The reduction of the vote came about because school districts with which the department had commitments declared that they did not wish to continue cadet training, and as a result of that we reduced the amount from time to time. It must be recalled that in the first instance there was a general statement of policy. The statement was that the government would supply a certain sum of money to take care of cadet training in school districts or other areas in which such training was considered desirable. The agitation against cadet training succeeded in having resolutions passed by several school boards discontinuing the training. I recall one or two occasions very vividly, but I cannot carry them all in my mind. As a result the vote was reduced. If my memory serves me correctly some commitments are still outstanding in those districts in which they have continued to earn the money to which they are entitled under arrangements made with them in days gone by. The minister will be able to correct me with respect to that. I do not know just what is involved in dollars and cents, but the reduction came about because hon. members to my left had more or less succeeded in their agitation to have districts abandon cadet training. For instance, I recall one district that used to have a keen interest in the cadet movement, but in response to the evident desire of the community the board concluded to abandon it, thereby releasing this government from making any payment in the final analysis, when the then existing arrangement terminated. Cadet training is no longer being carried on in that community, and the federal government does not make any contribution to it.

It will be recalled that this house was provided with evidence from some of the provinces to the effect that cadet training was being reduced, because it must be recalled that in connection with cadet training the schools and others responsible for its promotion are largely under provincial control. We supplement their efforts, and now that they no longer desire the corps a diminution of the grant has resulted.

No doubt there are hon. members in the committee who recall discussions which took place in days gone by, and circumstances which brought about a reduction of the vote. The hon. member from Toronto who seemed to think the reduction was a voluntary act on the part of the government of the day is quite mistaken in his view. It was brought about by an expression of public opinion in communities which were opposed to the continuance of the grants. To the extent to which that was effective, the grant was reduced, although I think reduction was made further than even that would warrant. I take it that the sum of $150,000 is necessary to meet the commitments to which we are committed. I am not speaking now with authority, but I think that must be so.

Mr. MACKENZIE (Vancouver): That is correct.

Mr. BENNETT: And as long as the organizations which I have mentioned continue to earn the grant, I think in view of the general declaration of policy that originated it we should continue to provide the money as we are doing here.

Miss MACPHAIL: I should like to ask the minister what explanation he has to offer for the very large number from Quebec, 49,000 out of a total of 82,000?

Mr. LAPOINTE (Quebec East): May I reply for my colleague? I think it shows most conclusively that this is not a military institution.

Mr. JACOBS: We are not war-conscious in Quebec.

Mr. LAPOINTE (Quebec East): After the debates in this house years ago, in which my hon. friend had almost convinced me, as she does every time she speaks, I met a personal friend of mine who is a member of the council of a very large educational institution in the province of Quebec, where they have a large number of cadets in training, and I asked him why they were strong for it. He said, "Because we have come to the conclusion that it is the best possible method of recreation, sport and physical training at the same time." Cadet training is very popular in all the educational institutions in the province of Quebec, and I can assure my hon. friend that if it were really in the nature of a military organization, as it is sometimes described in the house, some of the institutions I know would have quit cadet training long ago.

[Mr. Bennett.]

Mr. LAWSON: Mr. Chairman, though I have remained silent through several sessions when this question has been up for discussion, the apparent widening support for the cessation of cadet training in this country makes it incumbent upon me to express my views. The hon. member for Rosetown-Biggar (Mr. Coldwell) has pointed out to the committee, if I interpreted him correctly, that cadet training produces nothing but a blind and unreasoning obedience and is stultifying to the intellect of the youth of Canada. I would suggest to the hon. member that if he would like to see a demonstration he should go and watch a cadet corps drill in any industrial school or in any institution in this country where boys of feeble mind are put, and then go to one of the schools where there is a cadet corps of normal boys. I am confident that the difference in their behaviour, in their snappiness and esprit de corps, will convince the hon. gentleman that his conclusion is not well founded.

Miss MACPHAIL: Would he not know that without seeing their military training?

Mr. LAWSON: He might not have known it in view of his statement that military training merely produces a blind and unreasoning obedience. I suggest that it takes intelligence and ability and a rapid communication between the mind and the muscles through the sensory nerves to make a well drilled and snappy cadet corps.

I do not support cadet training because of any aspect of physical training. To me that is a mere incident. I put it upon much higher ground. In my opinion every Canadian citizen owes a duty at all times to serve the state in any capacity in which he reasonably can, and in times of war every Canadian citizen in my judgment owes a duty to the state to bear arms, if necessary, in its defence if he is physically able to do so. If that premise is sound, then I ask: Why not train our youth so that in case of necessity for defence they are efficiently and adequately equipped to render the best possible service to this country? No one desires more than I to avoid war, but I could not help admiring the sentiment which I heard expressed just last Sunday. I happened to be standing watching the garrison parade in the city of Toronto. Next to me was standing a mother, and as her boy went by in a cadet corps in the garrison parade she was affected, and her eyes filled with tears. I passed a remark that it was regrettable that in this world to-day we have nations which were apparently seeking to create war, and that this boy who was being well and efficiently trained might

have to serve the country. Her reply was, "How much better I would feel to have him serve than to have him a coward and not be willing to go." I am not expressing a maudlin sentiment; I am expressing a sentiment that, I think, should permeate the heart of every Canadian citizen. I have the greatest respect for those hon. members and any others who may hold views that we should not have military training, be it in the form of a cadet corps or a volunteer militia, but so far as I am concerned my only regret is that, if $150,000 is not sufficient to train every boy in this country who wants to be a cadet, we are not voting more money for that purpose. I have never been able to see where training a boy to bear arms, if necessary, makes him belligerent or warlike. I sincerely trust that there will not be reductions in this grant. Having regard to our recent experiences as to how ineffective a nation or a group of nations may be in preventing war unless they are prepared to back up their reasonable requests, it does seem to me that the best thing Canada can do is to have as many boys and men as possible trained in military manœuvres and to bear arms, if necessary.

Miss MACPHAIL: I would ask the Minister of Justice if the uniforms used by the cadet corps in Quebec are the same as those used in other parts of Canada, or is there a distinct uinform for that province?

Mr. LAPOINTE (Quebec East): I do not think there is any uniformity throughout Canada as to what uniform the cadets shall wear. The individual schools themselves select the uniforms.

Miss MACPHAIL: Is that true of all Canada?

Mr. MACKENZIE (Vancouver): Yes.

Miss MACPHAIL: Does the Minister of Justice not think that the payment of instructors has something to do with the demand for cadet training? The minister will tell us whether it is fifty cents a day up to a dollar or over, or the other way round.

Mr. LAPOINTE (Quebec East): I am afraid that when it comes to financial questions I cannot secure the information for my hon. friend.

Mr. WOODSWORTH: Just a word in response to the hon. member for York South (Mr. Lawson). Recently I read some extracts from a speech which was made by the Right Hon. Arthur Meighen in Washington on November 10. I do not want for a moment to have the house committee understand that Mr. Meighen's opinions are the same as my own or those we are advocating, but here are a few extracts from his speech that stood out in my mind at that time. He said:

> Civilization must end war or war will end civilization.

Again:

> War has lost its efficacy, it can bring only defeat and despair for both conquered and conquerors.

Again:

> The policy of the governments is dominated by fear.

And once again:

> There has to be found a substitute for armaments, something else that will bring security not only to one but to all.

It is considerations of that kind that make some of us speak against war. The hon. member for York South suggested that every citizen should be able to bear arms in defence of his country. Some of us believe that the method of defending one's country by means of arms is to-day useless.

An hon. MEMBER: I do not know of any other way of defending it.

Mr. WOODSWORTH: Perhaps later on in this discussion some of us will refer to that way. At any rate, the hon. gentleman must credit us with sincerity even if he does not think we have much intelligence.

Mr. LAWSON: On a point of order, there was nothing I said from which the hon. gentleman could draw the inference that I attributed to him or to anyone else insincerity or lack of intelligence. I specifically said that I had great respect for their opinion.

Mr. JACOBS: Both hon. gentlemen are out of order.

Mr. WOODSWORTH: I am glad indeed that the hon. gentleman does credit us with intelligence and sincerity.

Mr. STREIGHT: He didn't do that.

Mr. WOODSWORTH: Well, I credit the hon. member for York South with sincerity—

An hon. MEMBER: If not intelligence.

Mr. WOODSWORTH: His idea is that war is still the accepted and in the long run the final way of settling international disputes and that it is the effective way. We do not agree with that; we believe that there is another way. We think that if we are to depend upon war—

Some hon. MEMBERS: Order.

Mr. WOODSWORTH: What is the trouble with hon. gentlemen opposite?

Mr. JACOBS: We are discussing item 65.

Mr. WOODSWORTH: I believe it was understood there was to be a vote and hon. gentlemen flocked in and are disappointed because they think I am going to make a speech. I am not going to make a speech but I want to make one or two remarks. I would reaffirm that the reason we are opposed to war is that we believe it is ineffective. It would be disastrous to our country. And the reason we are opposed to these estimates is that we believe they are absolutely wasteful expenditures and valueless to effect the purpose they have in view, namely, the defence of Canada. I shall speak of that later in the evening or later in the discussion of these estimates. The suggestion is made by the hon. member for York South that every citizen if he were really a good one, should be prepared to bear arms. Some of us do not regard that as the only mark of good citizenship.

Mr. LAWSON: I did not say that or anything like it.

Mr. WOODSWORTH: Some of us believe that citizenship may be exhibited in a better way than that. Again, the hon. member for York South, referring to an old mother watching a parade—

Mr. LAWSON: I did not say old.

Mr. WOODSWORTH: Well, a mother watching a parade. She said that she would rather have her son serve than have him a coward, not being willing to go.

An hon. MEMBER: Hear, hear.

Mr. WOODSWORTH: Somebody says, "hear, hear." Well, it was the implication contained in that statement that I want to speak of. I resent it. The alternative to being willing to go to the front seems to be that one should appear to be a coward. I do not think that is the alternative at all. Other members have risen in their places and spoken about what their boys owe to military training. I have every reason to congratulate them upon their pride in their children, but some of us who have families have refused to allow our boys to take cadet training, and we do not think that they are inferior, I will not say to the sons of those who have spoken, but to other boys in the community. Surely we should be able to get through a debate of this kind without putting alternatives that are not true. I resent, and a great many people across the country resent, the idea that if a man does not want to go and fight he is necessarily a coward. I should hate to be a coward, but if another war broke out I should hope that not one of my boys would go to fight—and I do not want them to be cowards. I believe they may serve their country in better ways than by going, as a great many went, in my judgment unfortunately, to the battlefields of Europe, where they perished. I do not for one moment deny their heroism; I do not deny their idealism; I think it was magnificent. But I say that there may be heroism and idealism along another line which personally I think is more intelligent.

Mr. MacINNIS: What is the area comprised in military district No. 11?

Mr. MACKENZIE (Vancouver): The entire province of British Columbia, except, for the purposes of unemployment relief camps, the southern portion, which is under district No. 13, the Kootenay district.

Mr. MacINNIS: Upon what basis are cadet instructors paid?

Mr. MACKENZIE (Vancouver): They are paid $1 per senior cadet, a senior cadet being between fifteen and eighteen, up to a maximum of fifty-five thousand.

Mr. MacINNIS: The amount of money paid to instructors in military district No. 11 was only $614.45. Upon that basis there are approximately six hundred cadets or so, or more if there is a different rate for juniors. To whom is this money paid? For British Columbia it is $6,207.55. Who receives that?

Mr. MACKENZIE (Vancouver): Perhaps I had better read the list: Pay and allowances of the permanent force officers employed on cadet services, $6,675; pay and allowances, permanent active militia, instructors, employed on physical training, $51,000; corps instructors, instructing cadets, $55,000; in connection with qualified signallers, $2,700; pay of two civilian stenographers, $2,500; stores, equipment and supplies, purchase of No. 22 ammunition, $11,500; printing and stationery, $1,000; transport and travelling, general staff officers, $8,000; permanent force instructors in physical drill and cadet duties, $7,500; military members, executive council of the Strathcona Trust, $450; freight and cartage $1,500; grants to the Dominion of Canada Rifle Association, $500; telephone exchange service, $225; incidental expenses, including contingent allowances, $1,450; making a total of $150,000.

Mr. MacINNIS: Who are the individuals here who received: A. Bain, $2,080,50; W. Frost, $1,973.55; J. D. S. Wallace, $2,153.50? What functions did they perform for that monthly allowance?

Mr. MACKENZIE (Vancouver): I assume they were instructors, and the amounts represent annual pay and allowances.

Mr. MacINNIS: No; in another item instructors' allowance is shown as $614.45. Is that a different item, or what did the instructors receive?

Mr. BENNETT: The first two are regular instructors, and the others special ones.

Mr. MACKENZIE (Vancouver): Yes; they are regular instructors. There are others.

Mr. BENNETT: Where they do not pay them regular salaries.

Amendment (Miss Macphail) negatived: yeas, 8; nays, 109.

Item agreed to.

Contingencies, $28,800.

Mr. MacNEIL: Would the minister indicate just what this item provides for?

Mr. MACKENZIE (Vancouver): Telegrams, telephone calls, advertising and postage and other items for militia services, national defence headquarters, a decrease of $2,700 as compared with last year's vote.

Mr. MacNEIL: I notice in the auditor general's report dealing with this vote that provision is made for an expenditure on advertising. Will the minister explain what advertising is done by the Department of National Defence?

Mr. MACKENZIE (Vancouver): As I am informed, it is mostly to warn the public with respect to firing practice taking place on any of the training grounds, and also, occasionally, for tenders and other unforeseen advertisements.

Mr. MacNEIL: In what respect is money spent for examination fees, as is indicated in the auditor general's report?

Mr. MACKENZIE (Vancouver): I am not aware of anything of the kind, unless it may be for the examination, in some cases, of recruits.

Mr. MacNEIL: There are examination fees shown in the auditor general's report under the heading of contingencies. I wonder what examinations are set by the department.

Mr. MACKENZIE (Vancouver): I will find out. I have not that in my hand at the moment.

Mr. BENNETT: Who pays for the Military Gazette? I should know but I do not. Do we make any contribution? What is our relation to it?

Mr. MACKENZIE (Vancouver): My information at the moment is that we make no contribution, but I shall look into it.

Mr. BENNETT: It is said to be the organ of the militia forces of Canada.

Item agreed to.

Engineer services and works, $676,100.

Mr. DOUGLAS: Will the minister explain this?

Mr. MACKENZIE (Vancouver): The various items are: Repairs and upkeep of departmental properties, including minor construction, $500,100; new construction of barracks buildings and works, $165,000; new construction of rifle ranges and camp sites, $11,000; total, $676,100. There is a net decrease of $24,050 from last year's vote.

Item agreed to.

General stores, $1,838,400.

Mr. MacNEIL: Will the minister explain the reason for the substantial increase in this vote?

Mr. MACKENZIE (Vancouver): I will give the details: Clothing and necessaries, an increase of $19,325; miscellaneous stores, an increase of $52,050; artillery stores, an increase of $464,270; medical stores, an increase of $800; veterinary stores, an increase of $1,500; inspection stores and ammunition, increased by $4,400; dominion arsenal, increased by $23,257; a total increase of $565,731 and a decrease of $178,414, making a net increase of $387,317.

Mr. MacNEIL: What is the explanation of the situation at Lindsay? I understand that considerable sums are devoted to the upkeep of the arsenal at Lindsay, although the arsenal is practically closed down.

Mr. MACKENZIE (Vancouver): The reason, I understand, is that it is used as a storehouse for stores and equipment. There are four caretakers, I am informed, looking after the security of the stores.

Mr. MacNEIL: In connection with stores, what is the policy with regard to making war equipment available to civilian units? I notice from one of the sessional papers tabled this session by the minister that a general

order has been issued authorizing the district officers commanding to loan equipment to the Royal Canadian Mounted Police, the provincial police, and the city police. I should like to know to what extent that practice is carried out. It strikes me, as one having some practical experience, that it is a practice which should be deplored, something which should be condemned most vigorously. Evidently the order has been passed in anticipation of some civil disturbance or disorder, and I know of no more vicious practice than to turn over deadly war equipment to men who are not trained in the use of that equipment, for possible use at a time when only those who are cool-headed and calm should have in their hands death-dealing instruments. I think that matter should be fully explained by the minister, and an assurance given to the people of Canada that in the event of any disturbance some panicky individual shall not have the power to place in the hands of raw and untrained men rifles, machine guns, bombs and similar equipment which will do deadly damage to crowds.

Mr. STIRLING: Mr. Chairman, may I ask through you whether the hon. member has any evidence that such has been done?

Mr. MacNEIL: I am referring to the general orders which were tabled this session by the Minister of National Defence.

Mr. STIRLING: But the hon. member has no knowledge on his own account that this has been done, that lethal weapons have been put into the hands of those unfit to operate them?

Mr. MacNEIL: I am not suggesting that at this time I am producing any evidence. I am pointing to the general order tabled in this house, indicating that authority has been granted for the issue of weapons to untrained civic police.

Mr. MACKENZIE (Vancouver): I think my hon. friend has misconstrued what happened. I do not think this is the first occasion on which such action has been taken, and certainly there is no intention whatever of any indiscriminate issue of arms to untrained police forces or otherwise. I can assure my hon. friend that any arms issued to people other than the forces of national defence would be very carefully scrutinized. These will be issued and have been issued only where the request has been made, and only to people who are thoroughly trained, so I do not think the hon. gentleman need anticipate any indiscriminate use of these weapons. Certainly I would not encourage that in the slightest.

[Mr. MacNeil.]

Mr. MacNEIL: I am referring to general order No. 86 which is contained in sessional paper 55, under which the district officer commanding is authorized to issue arms and ammunition to the Royal Canadian Mounted Police, provincial police and municipal police to deal with civil disturbances. What assurance have we that if civil disturbances arise arms will not be issued indiscriminately?

Mr. MACKENZIE (Vancouver): I think the hon. gentleman can leave that to the discretion of the gentlemen responsible for maintaining law and order in the various provinces. I can assure my hon. friend that there will be no indiscriminate use of such arms or ammunition, but if any disorder should arise it is the duty not only of the forces of defence but of the mounted police and all other police forces to maintain law and order, and I am sure that is the only significance of the general order to which my hon. friend refers. I can assure him that there is no sinister motive at all. It is only to give the necessary discretion and authority to the district officer commanding in case any emergency might arise to issue these arms to what practically amount to trained troops.

Mr. MacNEIL: May I ask if, under this authority, the district officer commanding may issue machine guns to the city police at any point?

Mr. MACKENZIE (Vancouver): I can assure my hon. friend that there is nothing new in this order; the same thing has been done many times previously.

Mr. MacNEIL: Will the minister confirm or deny the rumour in circulation in the city of Vancouver at the time of the relief strike riots that militia units were standing to, anticipating serious disorder, and that field guns, machine guns and all that sort of thing were being made available by the military authorities during that crisis?

Mr. BENNETT: It is not fair to ask the minister that, for he was not responsible. The government which was responsible pointed out that if the province requested the use of the militia, then under the statute it was the duty of the dominion to make them available, and they would be available equipped in every way that might be necessary for the purpose mentioned by the statute.

Mr. COLDWELL: I was just going to say that I am inclined to agree with the hon. member for Vancouver North in regard to the danger of placing weapons, under any cir-

cumstances, in the hands of people who are not trained in their use. Only to-night I was reading the report of the royal commission which inquired into the relief riots in Regina last July 1, and apparently to a very large extent that regrettable incident was due not to the issuing of lethal weapons to certain people but to a mistake in connection with the blowing of a whistle. In that case someone had a whistle and apparently misused it or the signals were misunderstood, and in a few moments pandemonium ensued. So it will be seen how easy it is, in the midst of excitement, for someone to commit some overt act, and weapons in the hands of municipal police, for example, who are not particularly trained in their use, may become a danger to the community.

Mr. BENNETT: With respect to that matter it will be recalled that the commissioners found that it was subsequently, when the strikers moved off to another part of the community, that the disaster occurred to which attention has been directed. But it must not be forgotten that when the riot act is read certain consequences follow, and if the police of the country cannot be regarded as sufficiently trained to receive weapons why do they carry them around the cities every day? I do not know why, but they do. Policemen in the cities and everywhere are armed at night. To say that they are the only people who should receive these arms would be, in my judgment, to make the discretion one based upon sound intelligence, shall I say, for the district officer commanding can only supply weapons to (a) mounted police, (b) provincial police and (c) city police, all of whom are by law permitted to and do in fact carry arms.

Mr. COLDWELL: Some misunderstanding may arise with regard to the remarks of the right hon. leader of the opposition, particularly in connection with his reference to the reading of the riot act. That was one of the unfortunate features of the whole Regina situation on that occasion. I do not know whether the government is aware of this fact, but the riot act was never read and the warning was never given. I am not placing blame upon anyone, but I just want to make it clear that in that instance the riot act was not read and no warning was given.

Mr. BENNETT: That was not the point. The point was that the strikers had dispersed from their immediate location and moved to another place. The commissioners say that whatever justification may have existed in the first instance because of the misunderstanding of the whistle blasts, there can be no justification for what took place afterwards. They make that perfectly clear, and they say that at the pavilion which the strikers had abandoned there were found the staffs which apparently they had intended to use for the purpose of bashing the heads of those who might be endeavouring to enforce law and order. The question of the riot act being read did not arise at all, because these officers had warrants for the arrest of named people, and it was in the execution of that duty that the incident happened. A mistake by some policemen regarding a whistle brought about some measure of confusion, but the commission said that whatever might have been the confusion at this point there was no justification for what happened over at the other point when an attack was made upon the police by those who were subsequently found to be responsible for what took place.

Mr. COLDWELL: I did not rise to precipitate a debate on this subject this evening, particularly since I have no doubt that very few members of the house have had an opportunity of reading the report of the commission, so I do not think it would be fair to discuss the matter under this item, nor would it be in order to do so. But I should like to point out that in this instance the riot act was not read, and I think the right hon. leader of the opposition has either misread the report or has been misinformed regarding several matters in connection with it. When the proper time comes perhaps we can discuss this matter in more detail.

Mr. DOUGLAS: I do not propose to discuss the matter raised by the right hon. leader of the opposition—

Mr. BENNETT: I did not raise it. It was raised by the hon. member for Rosetown-Biggar.

Mr. DOUGLAS: Quite so; I meant the statement made by the right hon. gentleman. This is not the time or place to discuss the matter, but I do not think his remarks should be allowed to pass without its being said that the police were not attacked by the men. The place where the clubs were found was a long distance away from where the riot took place. I think this whole question is one to which the house ought to give some attention at the proper time, but the statement of the right hon. gentleman was misleading and, therefore, ought not to be left unchallenged at this time.

Mr. BENNETT: It speaks for itself.

Mr. MacNEIL: On this point I notice in the general orders tabled by the minister that rifle associations are being formed and that the men who join these rifle associations must

subject themselves to military discipline at times of civil disturbance or when any emergency may arise. May I ask in what way these rifle associations are equipped and to what extent the members are warned that in time of emergency they may be called upon to perform military duty under the direction of the officer commanding?

Mr. MACKENZIE (Vancouver): No new civilian rifle associations have been formed. The only new rifle associations are those attached to existing militia units, regimental associations. If there was an emergency and they happened to be called out they would not be called out by reason of their membership in any rifle association; it would be with their units, if such a regrettable thing took place. So there is no significance whatever in the formation of new rifle associations; it is purely in connection with the militia activities.

Item agreed to.

Non-permanent active militia, $2,358,100.

Mr. BENNETT: Does that provide for camps this year?

Mr. MACKENZIE (Vancouver): That is the ordinary vote of the non-permanent active militia. It could be broken down into:

Training, $1,588,800.
Grants to associations, $94,200.
Operational expenses of military properties, $252,844.
Salaries and wages, $422,256.

Mr. BENNETT: What about camps this year? What provision is made for them?

Mr. MACKENZIE (Vancouver): That comes under the first item I mentioned, training.

Mr. LANDERYOU: How many men are there in the militia?

Mr. MACKENZIE (Vancouver): There were 6,888 officers, and 41,873 men, totalling 48,761.

Mr. BENNETT: At what date?

Mr. MACKENZIE (Vancouver): That is as of December 31, 1935.

Mr. DOUGLAS: How does that figure compare with last year?

Mr. MACKENZIE (Vancouver): That is at the end of last year. I think there was a slight reduction, about 1,900 during the year.

Mr. LANDERYOU: Is this sum to pay them a wage?

Mr. MACKENZIE (Vancouver): No; there are training allowances for these summer camps.

[Mr. MacNeil.]

Mr. DOUGLAS: In comparison with the previous year I was wondering whether the number of men is smaller and if that accounts for the decrease.

Mr. MACKENZIE (Vancouver): I am informed that there is a reduction of between 1,900 and 2,000.

Mr. BENNETT: How many days' training in camps is provided for?

Mr. MACKENZIE (Vancouver): It depends upon the arm of the service. Artillery total twelve; engineers, twelve; machine gun battalions, twelve; cavalry and infantry, ten; army service corps and army medical corps, ten, and so on. These totals include part time in camp and part time training at local headquarters. There is a certain discretion left to the district officers commanding.

Mr. MacNEIL: I have in mind the frequent admonitions by the Minister of Finance that parliament must exercise the strictest economy; yet on the main estimates the total to be appropriated for the Department of National Defence, including the cost of buildings provided for under other headings, is something like $19,000,000. That does not include the items in the supplementary estimates. This is probably the third highest sum in the departmental expenditures. There is an increase in this year's expenditure in the main estimates of something like $1,779,000—

Mr. MACKENZIE (Vancouver): It is $1,775,000.

Mr. MacNEIL: I accept the correction gladly. I think it is high time we did some plain speaking about the manner in which public money is expended by the Department of National Defence, having in mind particularly the purpose of this expenditure as outlined by the minister. It is not many years ago since certain high officers attached to the British war office recommended drastic reorganization of the Canadian Department of National Defence. As far as I have been able to discover no steps have been taken to undertake such reorganization.

Mr. MACKENZIE (Vancouver): My hon. friend is scarcely correct in that. It is in process of being effected at the present time.

Mr. MacNEIL: Under whose recommendation is the reorganization being undertaken?

Mr. MACKENZIE (Vancouver): The reorganization of the militia has been under consideration for a number of years. The request for the reorganization became definite in 1932; it was submitted to a subcommittee

of the former government in 1933, because Canada at that time was making certain representations to the disarmament conference in Europe, and the suggestion was made that the strength of our militia forces should be reduced from the post-war figure of eleven infantry and four cavalry divisions to a composite strength of six infantry divisions and one cavalry. That recommendation has been endorsed by all the militia organizations, the defence association, the Canadian infantry association, the artillery association and, I think, every arm of the service, all these voluntary officers, men who have been giving such wonderful service to the militia of Canada. So far the full strength of what is known as the peace establishment has been reduced from a personnel of 135,000 to about 90,000. The actual strength of the non-permanent active militia is 48,761 as already stated. So far not very much has actually been accomplished along this line, but certain small units have been joined together and reorganization effected. The general policy will be to proceed with reorganization as soon as practicable.

Mr. MacNEIL: Nevertheless in these times of stress we are asked to vote this enormous sum, without any definite assurance that the purpose for which the expenditure is being made will be fully carried out. We have a headquarters staff here, some seventeen staff officers receiving salaries in excess of $96,000 in the aggregate. We have a number of military districts, each taking large sums of money for their upkeep. We have across Canada something like forty-four units of the non-permanent militia, some 5,643 officers for 36,368 men. According to the last report of the late Sir Arthur Currie with regard to the war establishments, in 1918 there was one officer for every twenty-four men. In the present Canadian establishment we have one officer for every seven men, and for the period of training in camp one officer for every five men. That, I think, has created the general impression in this country that much of this expenditure is devoted merely to the upkeep of a small military aristocracy, and it is difficult to discover what useful purposes they serve, either in providing defence measures for Canada or in making proper preparation for the future. I suggest that the time has come for drastic reorganization of this branch, and that we are not justified at this time in voting the expenditure suggested.

For that reason I move an amendment, seconded by Mr. Taylor (Nanaimo) as follows:

That vote No. 69 for the non-permanent active militia be reduced by the sum of $1,000,000.

Mr. MACKENZIE (Vancouver): I have only one word to say. Probably my hon. friend was not aware that this vote was reduced from last year. I informed him of the reduction effected. I think the committee should not accept his statement that these militia officers constitute a military aristocracy. I know no finer body of men in Canada than these who throughout the year give up four or five nights a week of their leisure and personal pleasure to training the youth of the dominion. There is no suggestion of a military aristocracy about these men. My hon. friend may be confusing the men who have made this their life work with those who are making this permanent contribution to the training of Canadian youth. Some of our unemployed in Winnipeg and Vancouver are among the finest boys we have in the militia. The boys in relief camps joined the militia, took drill and did wonderful service, and I say that is not constituting a military aristocracy or autocracy. They were Canadians binding themselves together in a proper way. There is another thing I want to tell the hon. member, and it is that year after year these militia officers have made contributions to help the men in training camps, because the allowance in the vote by parliament is entirely inadequate for effective training of a militia force for Canada.

Mr. CHURCH: I want to say a word or two about No. 2 military district. I am surprised at the mover of the resolution, because he has been a distinguished soldier. May I say that the officers, non-commissioned officers and men of the units in Toronto are having the utmost difficulty to get men into their ranks. In view of the cuts made on military expenditures they find it difficult to pay the necessary costs. This vote is only about half what it used to be. Last Sunday the Toronto units held a parade in which some 6,000 men and officers took part. Frequently they have put their hands into their pockets, as have the friends of the units, to provide the necessary maintenance charges. Non-commissioned officers do the same thing for the men. If they receive a few dollars pay, on many occasions they put it into a common fund to maintain the unit. If we are to have such a limited amount, possibly it would be more in order to wipe out the militia altogether. Let us depend upon pacifism, purely and simply, if we are to reduce the vote, because we cannot have proper equipment under the present one. We have only about fifty per cent of the proper equipment in the non-permanent militia today, and the non-permanent militia are the back-bone of the permanent forces. While

everyone appreciates what the permanent force is doing, we know the non-permanent militia consists of young men in business and they are sick and tired of such small support from parliament. The government spends more money in support of that which our friends to the left depend upon, namely the League of Nations, and we get no results. This is an item from which we get practical results. I am surprised to see that the vote is so small, because I know it is becoming difficult to raise money to carry on the work.

Mr. MacNEIL: I do not wish to be misunderstood by the minister and hon. members. I am not criticizing the conscientious, hard-working militia officers in the district, but I am suggesting that the organization is top-heavy. When I spoke of high salaries I was speaking of seventeen officers at headquarters receiving—

Mr. MACKENZIE (Vancouver): That is in the permanent force vote.

Mr. MacNEIL: And similar sums, proportionately, for the military districts. I say this, too, that the expenditure is being used for the maintenance of an elaborate military establishment which is not getting practical results, and I am viewing the matter in a practical light. I am not criticizing the conscientious militia officer, and I wish to say, too, that much of the training of which staff officers at headquarters speak in glowing terms is nothing more or less than a joke, and many of us know it because of our contact with militia units. It is not being carried out properly, or as it should be carried out in a militia camp.

Further, we are reverting to that from which we suffered in 1914, at the outbreak of the war, when we were ordered to go into active service with obsolete training methods. It was often admitted by eminent military authorities that the headquarters staff at that time were not fully abreast of modern warfare. I think that is true of the training which is going on in the non-permanent militia units at this time. It is pathetic to watch the parade of some of our non-permanent militia units, and note the physical development of the young men in them, realizing at the same time the expenditures being made on the gewgaws of military training and on obsolete methods of training, when it is apparent that these same young men could be assisted in other and more practical ways. It is because I feel that this money is not being expended in a way which secures practical value that I ask for a reduction by $1,000,000.

Mr. BENNETT: I feel it incumbent upon me to make some observations in view of the fact that my friend and colleague was in the Department of National Defence only a short time before the last election. The whole expenditure for national defence purposes was closely examined, on more than one occasion, by a committee of the cabinet, and it was the considered opinion of those who had the matter in hand that we could not adequately discharge our duty if we spent less than $10,000,000 a year. That opinion is not mine, nor yet that of any one man. It is the view arrived at after the closest analysis and scrutiny of every item. The real issue is: Shall we have any defence force in the country? Either we must not play with our defence force, to the extent of wasting money, or we must utilize it so that it will accomplish some purpose.

I would be the last man in the world to place my opinion against that of the hon. member for Vancouver North. He knows whereof he speaks; he risked his life for his country on the field of battle. But I do say to him that the reports which we received are at variance with the views he has expressed. First, the military units are not at strength; that is obvious. I believe, however, that the numbers trained in those units have reached a high state of efficiency, according to modern standards of training. I do not believe it is fair to say that obsolete methods have been used. On the contrary it is my belief that the methods of training adopted in Canada are the modern which have developed in the light of the last conflict, and the knowledge gained therefrom.

For instance, mechanized artillery and mechanized branches of the service are known to everyone. Our medical service is as fine as can be found anywhere in the world. Our signalling corps has as fine a reputation and has received as ample training in electrical and other fields of knowledge allied to signalling as is found in any country, having in view the small number engaged in the work. When it comes down to a question of training of engineers, machine gun units or infantry units, I believe the standards which have been adopted are those used by the best instructors in the world. In addition to that there is annual inspection, and while for monetary reasons the camps cannot be maintained for long periods of time, they are maintained for periods of ten days or two

weeks, and sometimes a little longer than that. The result has been that, according to my observation, the men have given an excellent account of themselves.

My friend from Vancouver North says that there are in this country various military divisions with district officers commanding. Can you have a district without a commandant? Can you get along without having someone in charge, and if you have a commandant, a D.O.C., you have every branch of the service represented, someone representing the engineers, someone representing the artillery, someone representing the medical services, the signalling corps, and so on. The engineering corps, for example, is a highly efficient corps. If you have any doubt about that, see what they did, for instance, at Calgary. There they undertook the work of constructing the barracks, laying it out and doing all that sort of work, doing it in a manner that has won the approval of the highest authorities; I do not know myself, of course. If we are going to have a service at all—and for my part I think we must, or say once and for all that we cease to be a community—if we are going to have it, as the minister has said, not for aggression, but purely as the nucleus of any defence it may be necessary for this country to resort to—and we all hope and pray to God that that may never be, but the facts stare us in the face—we must make these reasonable preparations for the defence of our country. I think the department does wonders in utilizing its money to the extent it does, in applying present day scientific methods to our military problems. I mention that because this is nothing new to me. I had the opinion which the hon. member for Vancouver North has expressed, and when we came into office I thought it would be possible to cut this item down substantially. I have no doubt that the minister has been through the very same experience. But what happens is that a committee of the cabinet closely investigates every item, and despite the attacks which may be made against those who are staff officers, they have a wide fund of knowledge and have given the benefit of it to successive governments, have recommended an improvement here and an improvement there, and the curtailment of expenditures when the minister has said that it was necessary to cut to the bone. We have done that, and I am told, not by these brass-hats to which reference is sometimes made, but by competent efficient men who have investigated these matters, that if we are going to maintain even a skeleton organization we cannot do it with less money than this $10,000,000. That is the considered judgment of those who have had to deal with this problem. I say that because, as I have indicated, it has been experience which has taught me. I know, and every man who lives in a community knows exactly what the militia does. I have been privileged to be associated with some of these organizations as honorary colonel, and the honorary colonelship has been offered for an obvious reason, a very obvious one.

Mr. SPENCE: If you didn't have the money, you wouldn't be an honorary colonel.

Mr. BENNETT: When I think of what I have seen with my own eyes, the amount of real sacrifice that has been made by men for no purpose in the world except their love of the work, not for swank, as someone has suggested, but because they are high-minded, public-spirited citizens who desire to do something for the welfare of their community, and have spent hours and days and weeks trying to train young men in the rudiments of self-control, self-reliance and self-respect, as Tennyson said, I am amazed at what has been done. Those three things, self-reliance, self-respect and self-control, constitute the basis of all the efforts we make in that regard, and after all that is a discipline very much to be desired. I have seen young men loose in their habits emerge, as a result of joining a militia unit and training for days and weeks and months, with those three qualities at least, self-respect, self-reliance, self-control, very apparent. That is what I have seen, and I am sure that I but voice the sentiments of many people when I say that there are families who look back with satisfaction upon what has been done for some wayward sons by the operation of these militia units. The officers have been—and I was glad to hear the hon. member for Vancouver North admit it to be so—self-sacrificing, thinking only of the welfare of the community in which their services have been given. The real truth is that we have not nearly enough money in this country to give the service that we should give. It is pared down now to the very bone, and I do not think it is possible, in the light of my own experience and observation to make the expenditure less and render service at all. When I compare our expenditure with that of other countries with our population in other parts of the world, I am amazed that we have accomplished as much as we have with the limited sums of money at our disposal. I think the committee would be well advised to

negative this amendment, because it is one that, if carried, would destroy the active militia of this dominion at one fell swoop, and that would be the end of it.

I have only one word more, and I apologize for taking up time in connection with an item of this kind. The report to which the minister has alluded is one which was made after the most careful investigation of every phase of the matter, and it must be remembered that in practice our units are not full, and the number of men that are affected is much smaller than the number that there might be under a reorganized force at strength The same considerations which influenced the organization of the territorials under Lord Haldane have been the governing factors in determining the strength of our active militia, and notwithstanding anything which may be said to the contrary the truth is that but for the active militia in this country in 1914 Canada could not have done what she did. That, I think, is admitted by every man who knows the story of our effort in that great conflict.

Amendment negatived: yeas, 10; nays, 62.

Item stands.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

## Wednesday, May 20, 1936

The house met at three o'clock.

### PRIVATE BILLS

REFERENCE OF CERTAIN PETITIONS TO COMMITTEE ON STANDING ORDERS

Mr. S. W. JACOBS (Cartier) moved:

That the petition of Joseph Paul George Marcoux and the petition of Adjutor St. Jean, presented on the eleventh instant, each praying for a bill of divorce, be referred, together with the report of the clerk of petitions thereon, to the standing committee on standing orders for the purpose of considering the suspension of standing orders 92 and 93 (3) (a) and (c) in relation thereto.

Motion agreed to.

### QUESTIONS

(Questions answered orally are indicated by an asterisk.)

HAMILTON, ONT., FEDERAL BUILDING

Mr. LENNARD:

1. When will the new federal building at Hamilton be ready for occupancy?
2. When do the leases expire on the several buildings now housing the various federal departments at Hamilton?
3. What rentals are being paid for the following buildings at Hamilton: (a) the Lennox building; (b) the McPherson building?

Mr. CARDIN:

1. It is expected the building will be ready for occupancy August 15, 1936.

2.

| | Lease expires |
|---|---|
| Space in Canadian National railway station (Post Office) | August 1, 1936 |
| Jolley Motor Garage (radio car) | August 1, 1937 |
| Lennox building, 16-22 King St. East (Taxation Offices) | On one month's notice |
| Duffield building (Post Office and Customs) | April 1, 1938 |
| 41 Stuart St. (National Defence) | August 1, 1940 |
| Commercial Club (Trade and Commerce and Immigration) | December 1, 1937 |
| Bruce building (Trade and Commerce) | October 1, 1936 |
| Pigott building (Labour) | On one month's notice |
| Pigott building (Radio and Pensions and National Health) | On one month's notice |
| Pigott building (Fruit Inspector, Agriculture Department) | July, 1, 1936 |
| Leavitt building (Department of Pensions and National Health) | July 27, 1936 |
| 242-246 James St. North (National Defence) | September 1, 1936 |

3. (a) Lennox building, rental $9,900 per annum; (b) McPherson (Duffield) building, rental, $20,000 per annum.

SUMMERSIDE, P.E.I., EXPERIMENTAL FOX STATION

Mr. BROOKS:

1. What sum was expended on the experimental fox station at Summerside, Prince Edward Island, in the fiscal year 1935-36?
2. How many breeding foxes were on the ranch at the 31st of March, 1936?

[Mr. Bennett.]

3. How many foxes were raised on the ranch in the fiscal years ending the 31st of March, 1933, 1934, 1935 and 1936?
4. How many fox pelts were sold in the fiscal years 1934-35 and 1935-36, and what was the average price received therefor?
5. How many men were employed on the ranch in the fiscal years ending the 31st of March, 1935, and the 31st of March, 1936?
6. Have any additional men been employed on the ranch since the 1st day of January, 1936?

7. If so, whom, when, at what salary, and for what periods?

Mr. GARDINER:

1. Experimental Farms vote, $14,921.67; Public Works Construction Act, $1,748.96.

2. 103.

3. 1933, 43; 1934, 77; 1935, 98; 1936, 171.

4. Total pelt crop 1934-35, 52, with average price $39.88—sold in fiscal year 1935-36. Total pelt crop 1935-36, 80, with average price of those already sold $37.61.

5. March, 31, 1935—3 full time unclassified men, 7 temporarily on construction work. March 31, 1936—3 full time unclassified men, 6 temporarily on construction work.

6. Two additional labourers and 1 graduate assistant.

7. C. Barlow—April 21, 30 cents per hour; R. Silliphant—May 1, 35 cents per hour; W. R. Inman, May 1, 50 cents per hour.

CRAB ISLAND, ONT., LIGHTKEEPER

Mr. LALONDE:

1. Is Crab Island (L'Ile Rosalie) situated in the Ottawa river near Montebello, a part of the province of Ontario or of the province of Quebec, and, in either case, for what reason?
2. Was there a lighthouse or a light on this island, as an aid to navigation, under the jurisdiction of the dominion government?
3. If so, in what year was it erected?
4. Who was the lightkeeper on January 1, 1936?
5. Was the lightkeeper a temporary or permanent employee?
6. Has he been dismissed from his position, and, if so, for what reasons, and who recommended his dismissal?
7. Who has been appointed his successor, and upon whose recommendation?

Mr. HOWE:

1. Crab Island (L'Ile Rosalie) is part of Ontario, being on the Ontario side of the boundary.

2. Yes.

3. 1912.

4. Alphonse Séguin.

5. Permanent.

6. No, he died.

7. Temporary arrangement only in effect. Civil Service Commission have been asked to make an appointment.

SASKATCHEWAN POSTAL SERVICES

Mr. COLDWELL:

1. Has one J. J. Martin a contract for carrying mail between Prince Albert, Saskatchewan, and Steep Creek post office?
2. How often is the mail delivered?
3. What amount is paid for this service?
4. Were changes in regard to Steep Creek, Fanford and Saskatchewan Forks post offices made at the request of the said J. J. Martin?

Mr. ELLIOTT (Middlesex):

1. Yes.
2. Twice per week.
3. $449.
4. No.

## QUESTIONS PASSED AS ORDERS FOR RETURNS

FARMS AND FARM OWNERSHIP

Mr. BLANCHETTE:

1. What is the total number of farm owners in the dominion?
2. How many farm owners are there in each province?
3. What is the total value of these farms in each province?
4. What category of farming has been found most remunerative for the past five years?
5. What category of farming has been found least remunerative?

Mr. RINFRET: Return tabled herewith.

LEGAL FEES—MR. SOMMERVILLE AND MR. WHITE

Mr. PELLETIER:

How much was paid to Mr. Peter White, K.C., and Mr. Norman Sommerville, K.C., since 1930 for legal fees and travelling expenses?

Mr. RINFRET: Return tabled herewith.

## NATIONAL HARBOURS BOARD

PROVISION FOR ADMINISTRATION AND CONTROL OF PUBLIC HARBOURS

The house resumed from Thursday, April 23, consideration of Bill No. 17, respecting the national harbours board—Mr. Howe—Mr. Sanderson in the chair.

On section 2—definitions.

Mr. MACKENZIE (Vancouver): I move the following amendment:

That section 2 of the bill be amended as follows:

(a) By striking out the word "transport" in the seventh line on page one of the bill and inserting in lieu thereof the words "the crown named by the governor in council to administer this act;"

(b) By striking out the words "under the various acts" in the thirteenth line on page one of the bill and inserting in lieu thereof the following: "to administer the harbours of Halifax, Saint John, Chicoutimi, Quebec, Three Rivers, Montreal and Vancouver by the acts."

Amendment agreed to.

Mr. LAPOINTE (Quebec East): I wish to refer to something which is rather of a personal nature. While I was away, on April 23, 1936, my right hon. friend the leader of the opposition, referring to the fact that he

had not proceeded to introduce a bill implementing the Gibb report, said at page 2085 of Hansard:

> But there never was submitted to council a draft bill in the sense of having finality, though there were discussions. I found, however, opposition among our own people as well as opposition from this side, led at that time by the present Minister of Justice (Mr. Lapointe), so that it would be absolutely impossible for us to get the bill through. When I say "impossible" I mean impossible in that sense.

I do not know where my right hon. friend gathered the idea that I was opposed to the bill or to the Gibb report. On the contrary I was in favour of it; I was hoping that this measure would be introduced by my right hon. friend in order that we would not have the responsibility of introducing it ourselves, and I expressed myself accordingly to my colleague from Quebec South. I am sure my right hon. friend could not find anywhere in Hansard or in private conversation anything that would justify this statement.

Mr. BENNETT: Mr. Chairman, when I made the statement it was based on information I received following a question which the hon. gentleman asked in this house as to whether or not it was the intention of the government to proceed to implement the Gibb report. My memory is that the hon. gentleman asked that question on more than one occasion. As there was a distinct cleavage of opinion to the right of the Speaker I naturally inquired as to what was the attitude of the opposition, and I was informed that my hon. friend the present Minister of Justice was opposed to it, and if we introduced it he could join with those who did not believe in it and the government would not be able to put it through. That was one of my reasons for making the statement I did. Apparently I was inaccurately informed, and I am very glad that the hon. gentleman was a supporter of the Gibb report and would have supported any bill that might have been introduced by the government to implement that report. It would have been a striking contrast to any evidence that we had of the willingness of hon. gentlemen opposite to support anything that emanated from the government during the five years we were in power.

Mr. LAPOINTE (Quebec East): My right hon. friend is not fair to me, because if he will recall I was the first in the house to rise and support his bill on radio broadcasting.

Mr. BENNETT: Yes, and ever since hon. gentlemen opposite have been trying to undo what was then done.

[Mr. E. Lapointe.]

Mr. LAPOINTE (Quebec East): Because my right hon. friend should have done better in carrying it out.

Section as amended agreed to.

On section 3—Board constituted.

Mr. MACKENZIE (Vancouver): I move the following amendment:

> That subsection 1 of section 3 of the bill be amended by inserting after the word "under" in the nineteenth line on page one of the bill the words "the direction of."

Amendment agreed to.

Section as amended agreed to.

On section 6—Board to have jurisdiction over certain harbours, works and property.

Mr. ISNOR: Before we take up section 6 I should like to direct the attention of the minister to section 4. It will be remembered that on April 22 I brought to the attention of the minister an amendment asking that a subsection be inserted directing that freight, wherever possible, should pass through Canadian ports. The exact wording was:

> The board shall so direct, provide and procure that all freight destined for export by sea which is consigned within Canada for carriage to National Railways either at point of origin or between that and the sea shall, unless it has been by its shippers specifically routed otherwise, be exported through Canadian ports.

In suggesting that amendment to the minister I do so not with any particular port in mind, but rather in order that our Canadian goods destined for export shall go through Canadian ports, and our workmen in those ports shall profit from the handling of those goods. My suggested amendment is not prompted by sectional pride, but is for the direct benefit of each and every one of the seven ports mentioned in this bill. Therefore I hope the minister is not going to pass over section 4 without giving this suggested amendment serious consideration. May I refer to the national ports survey report made in 1931-32, and deal with a few of the figures therein contained in regard to the shipments of grain alone. The report shows the exports of Canadian grain which went through Canadian and United States ports respectively, and gives the following figures:

| | Canadian Grain Exports | |
|---|---|---|
| Crop year: | Through Canadian ports bushels | Through United States ports bushels |
| 1926-27 | 159,400,000 | 137,458,000 |
| 1927-28 | 213,008,000 | 116,082,000 |
| 1928-29 | 263,177,000 | 139,870,000 |

The average for five years is 120,000,000 bushels shipped through the Canadian ports and 59,000,000 bushels shipped through American ports.

With figures like these facing us, the minister, in bringing into effect a new organization to administer our ports should consider every possible means of encouraging more freight traffic to go through our own Canadian ports. As I said, this is not a sectional cry at all but relates to every one of our ports.

I stated when I first introduced this amendment that the minister is no doubt familiar with all these figures. I could give a great many more, and I could read extracts from the press in various sections of Canada to support this contention. I could present resolutions from boards of trade in different parts of Canada, all having the same purpose of producing more work for the men in our Canadian ports. This seems to be an opportune time to bring such an amendment before this committee. The same provision is word for word in the Canadian National-Canadian Pacific Act, and I think it was put there for a purpose. It might be contended that the national harbours board has been created to look after just such matters as this. But by having this provision in the act it will have the tendency to draw their attention to it in a much stronger manner than if it were not there.

If it were not for prolonging the discussion I could go back, as other hon. members have done, to the British North America Act, 1867, and show why railways connecting the different parts of Canada were considered so important. I merely say that if they were important at the time of confederation they are just as important now in carrying our goods from end to end of Canada and transporting them for export through our own Canadian ports. I therefore trust that the minister will give my suggested amendment favourable consideration and that it will be accepted.

The CHAIRMAN: There is an amendment to section 6, moved by Mr. Mackenzie (Vancouver):

That paragraph (a) of subsection 1 of section 6 be amended by striking out the words "are now" in the forty-fourth line on page 3 of the bill, and inserting in lieu thereof the words "at the date of the coming into force of this act were."

Amendment agreed to.

Mr. GREEN: Before section 6 is carried may I ask the minister whether any provision is to be made in the bill enabling him to appoint local advisory councils? I think such a provision is of particular importance to the port of Vancouver, because that port is so far removed from Ottawa; there is bound to be delay in dealing with problems that arise in the port and it will be very difficult for the central board to keep in touch with conditions there without some local advisory board representing the different interests using the port. Then, our problems, as the minister knows, are those of a Pacific port in direct competition with the ports of Seattle and San Francisco, the problems are quite different from those of ports on the Atlantic and the St. Lawrence. Finally, our port has been developed by private interests to a much greater extent than have any of the other great Canadian ports. For these reasons I suggest that there should be some power under the act whereby the minister may provide for the appointment of such councils.

Hon. C. D. HOWE (Minister of Marine): There is nothing in this bill which prevents the establishment of local advisory councils if it should be found that they are necessary. But it was considered that the port manager would give all the necessary local contact, and that there would not be need for local advisory councils. But if the need becomes apparent I can assure my hon. friend that local councils will be established, which may be carried out under the terms of the bill.

To the hon. junior member for Halifax (Mr. Isnor) I may say in reference to section 4 that his proposed amendment received very careful consideration. Of course there can be no objection whatever to including the amendment in the bill except this, that the entire purpose of the bill is to do exactly what his proposed amendment asks. In other words, this bill covers the administration of seven seaports in Canada. The whole purpose of the ports and of the organization behind them is to attract outbound commerce for export through these ports, as well as imports inbound from foreign countries. Our organization is set up for that purpose, and every effort of every member of the organization must be directed to that purpose. My only objection to including the proposed amendment is that to state it in the bill might lead people to believe that there was no real purpose behind the bill which we have introduced. It would weaken rather than add to the purpose the hon. member has in mind.

Mr. ISNOR: The minister may believe that the suggested amendment is unnecessary, but I suggest it will do no harm. If it does no harm, why not include it? In my view it will do even more than create good feeling.

It will make people in the extreme eastern and western parts of the country realize that their interests are being safeguarded to a greater extent.

Mr. GREEN: If the minister finds it will be helpful to have a local advisory council at the port of Vancouver I understand he will provide for such council by bylaw under the present bill.

Mr. HOWE: Yes.

Mr. BENNETT: Under what authority in the bill?

Mr. HOWE: I may be mistaken, but I see nothing in the bill which prevents us from obtaining advice anywhere we like. I think there would be no great difficulty under the bill to secure advisers of any kind we wish.

Mr. BENNETT: I am afraid that is not quite sound.

Section 6 as amended agreed to.

On section 10—Acquisition of real estate or personal property.

Mr. MACKENZIE (Vancouver): I move:

That subsection (2) of section 10 of the bill be amended by striking out the words "acquired and held in the name of" in the thirty-seventh line of page 4, and by inserting in lieu thereof the words "vested in."

Amendment agreed to.

Section 10 as amended agreed to.

On section 13—Bylaws.

Mr. MACKENZIE (Vancouver): I move:

That section 13 of the bill be amended as follows:—

(a) by striking out the word "board" in the seventh line on page 6 of the bill and substituting in lieu thereof the words "governor in council";

(b) by striking out the word "board" in the second line on page 7 of the bill and substituting in lieu thereof the words "governor in council";

(c) by striking out subsections 2, 3, 4, 5, 6 and 7 thereof on page 7 of the bill and by substituting in lieu thereof as subsection 2 the following:

"(2) Bylaws made in accordance with the provisions of this act shall, when published in the Canada Gazette, have the same force and effect as if enacted herein."

Mr. BENNETT: I only direct the attention of the government to the fact that it has enacted in section 13, notably in paragraph (h), a provision to which most violent exception was taken in days past. That is, the governor in council is now authorized to prescribe a penalty "that may be imposed on any person violating any bylaw which the board is authorized to make under this act."

[Mr. Isnor.]

As a matter of fact the governor in council is at present authorized to make the bylaws. Although there have been changes in the main body of the section, paragraph (h) in my copy has not been changed, and it provides for a fine up to $500 or sixty days imprisonment. That is to be done by the governor in council, one of the matters to which most violent opposition was expressed in the last few years. I point out that in some way paragraph (h) should be amended because it says "any bylaw which the board is authorized to make."

Mr. CAHAN: The proposed amendment makes the change.

Mr. BENNETT: I did not understand it to do so. Does it cover all the sections?

Mr. DUNNING: Yes.

Mr. BENNETT: I was referring to the last copy on my file.

Mr. HOWE: There may be an error. The second change was not put in the last copy of the bill.

Mr. POULIOT: I do not find it worse than engaging the credit of Canada for millions of dollars by order in council.

Mr. CAHAN: Is it clear that the amendment to section 13 means that wherever the word "board" is found in the section as now printed, the words "governor in council" will be substituted?

Mr. HOWE: Yes.

Amendment agreed to.

Section 13 as amended agreed to.

On section 22—Recovery of penalties.

Mr. MACKENZIE (Vancouver): I move:

That section 22 of the bill be amended by striking out the words "moneys due and" in the fifth line on page 11 of the bill.

Mr. HOWE: This is to correct an error which appears in the old act. Obviously we cannot collect money under the criminal code.

Amendment agreed to.

Section 22 as amended agreed to.

On section 37—Powers of board.

Mr. MACKENZIE: I move:

That section 37 of the bill be striken out and the following substituted in lieu thereof:

37. (1) The board shall possess and be vested with all the powers, rights and privileges belonging to and possessed by or vested in each of the corporations at or before the coming into force of this act, or to which they, or any of them, may be or become

entitled, and shall be liable for all lawful claims against, and obligations of the said corporations.

(2) Nothing in this act contained shall prejudice or affect the rights of any person which may have existed at or before the coming into force of this act against any of the corporations or any action or legal proceeding taken to enforce such rights and such rights may be enforced by action against the board and any action or legal proceeding instituted before the coming into force of this act may be continued against the board.

Amendment agreed to.

Mr. HOWE: The hon. member for St. Lawrence-St. George proposed a further amendment which would make the board liable in tort. I had no personal objection to the inclusion of this amendment, but the law officers of the crown hold the view that it would make a decided change in the policy of the government in matters of this kind, and have advised very strongly against including the amendment.

Mr. CAHAN: Before the section as amended is carried, I move:

That section 37 of the bill be amended by adding the following subsections:

"(3) That the board shall become and be liable to be sued in tort, and that in the case of any such suit in tort, the same procedure shall apply as that which regulates the conduct of similar cases between subjects, including such matters as discovery, the receiving and paying of costs by the board, and the like.

(4) Service upon the board of any writ or process may be effected by personal service upon an officer or employee of the board at any of the harbours over which the board has jurisdiction.

Under the existing law the crown, that is to say, the government, cannot be proceeded against, either by petition of right or otherwise, for any alleged wrong on the part of its servants. The only remedy for any such wrong is against the individual employee of the government who is deemed responsible for the wrongdoing.

I suggest that when the government of this country, as in this case, undertakes the ownership, direction and operation of any great public utility, such as a railway, or undertakes the operation of elevators, warehouses, wharves or docks, the procedure by information and petition of right should be abolished or superseded, and the crown, as a litigant, should be liable to be sued in tort and be subjected to the same procedure as in ordinary cases between subjects, including, as I have suggested in the amendment, such matters as discovery, receiving and paying of costs and the like. In other words, that the crown, owning and operating public utilities, should be placed in the same position in the competent courts of the country as regards power and liability to sue and be sued as subjects of the crown inter se. I am strongly of the opinion that the crown, in respect of its administration of such public utilities, should be liable as any private commercial or industrial corporation is liable to be sued in tort for the wrongs which may be committed by its officers, agents or employees. Take the case of this public utility extending from the Atlantic to the Pacific administering the great harbours of Canada, operating railways and tramways, operating elevators and public docks; should not such organizations, when they through negligence of their servants commit wrongs, be liable to answer as other commercial and industrial companies must answer in the ordinary courts of competent jurisdiction of the country?

At the present time I do not wish to review the decisions, but it is perfectly clear that under this act as at present drawn, any damage which is done to shipping, domestic or foreign, at the wharves and docks operated by this company, any injury done to commercial men who are sending their teams and their agents to these warehouses and docks to conduct their ordinary business, any injury that is done to others by the negligence of the government or its employees or agents, cannot, as this bill is at present drawn, be the subject of an action for damages in the provincial courts of competent jurisdiction in Canada.

I might quote more than one opinion of eminent judges of this country who have suggested that this defence of acting for the crown should not be permitted as a defence with regard to the operation of these utilities, but a very late case is that of the Temiskaming and Northern Railway Commission, reported in 70 Ontario Reports, 1934, at page 701. The court of appeal of Ontario dealt there with a very simple case, and the decision of the court was rendered by Mr. Justice Davis, then of the court of appeal, and now of the Supreme Court of Canada. He suggested that this bar to the assertion of the civil rights of those who suffered from the wrongs committed by a railway owned by the crown and operated by its agents should certainly be abolished. In this particular case the court of appeal had to consider whether the commission apointed by the lieutenant governor in council of Ontario to administer a public undertaking, that is, this particular railway, in the right of the crown as representing the province, was not liable for the damages resulting from running

over a motor car and destroying it by the negligence of the operatives of the railway. Mr. Justice Davis, at page 70, said:

> The crown can do no wrong, and the immunity of the crown for the tortious acts of its servants and agents is well established as a constitutional rule of law. It is, like other royal prerogatives, not to be treated as personal to the sovereign, but as a constitutional right conferred on the sovereign upon principles of public policy for the benefit of the people. These prerogatives of the crown form part of the law and, generally speaking, are 'as ancient as the law itself."

And he refers to the case of The Queen v. McLeod, 1883, in the Supreme Court of Canada Reports. He proceeds:

> In recent years parliaments have assigned to ministers and civil servants vast powers of subordinate legislation and administrative business and have endowed them with many functions, sometimes judicial or quasi-judicial, and the subject of the right of action for tort against government departments has not only been before the courts for consideration but has been the subject matter of much inquiry and discussion both in England and in this country. There can be no doubt of the right of our legislature, by distinct enactment to limit or abolish this old constitutional immunity in respect of government business, but not only the wisdom of so doing, but the authority to do so is entirely a matter for the legislature. The court must administer the law as it finds it.

I wish to commend to the consideration of the government and of parliament the fact that in these days when the government is undertaking large and extensive public services, many of them in competition with commercial and industrial enterprises, it should assume the same liability for the torts or wrongs committed by their servants as must be assumed by other public companies which are not operated in the right of His Majesty, and by all private companies of every sort and description and kind. In order that this matter may be considered I desire to press the amendment which I have read, and which I had previously submitted to the Minister of Marine for the consideration of himself and his officers.

Mr. MACKENZIE (Vancouver): Mr. Chairman, I have just one brief reference to make to the amendment that has just been submitted. Even if everyone should agree with the general principles enunciated by the hon member for St. Lawrence-St. George (Mr. Cahan) I think it is highly improper to introduce the application of a general principle in a special act. If we were to carry out the recommendation made by Mr. Justice Davis in the case the hon. member has mentioned, that would be a matter of general government policy and would apply to all departments of government, and there is no precedent for introducing into special acts such as this, dealing with one particular department of government, a general principle applicable to all departments. If we were to make the particular principle my hon. friend advocates applicable here and not make other departments of government subject to its application, that in itself would constitute a discrimination in legislation. I agree very largely with some of the observations which the hon. member made and those which he quoted from Mr. Justice Davis, but this is not the way, I submit, to effect the application of the general principle which he advocates. I commend to the government the consideration of the general principle which is applied to all legislation. There is no discrimination in connection with this particular piece of legislation now before the committee.

Mr. BENNETT: I am unable to agree with the Minister of National Defence (Mr. Mackenzie), for the simple reason that this is a special form of legislation which deprives those who may have a right of action of that right of action against the Halifax harbour commissioners, the Montreal harbour commissioners, and other harbour commissioners.

Mr. MACKENZIE (Vancouver): Have they that right of action now?

Mr. BENNETT: I understand some of the harbour commissions have been sued in the courts because of negligence.

Mr. MACKENZIE (Vancouver): Not so far as I know.

Mr. BENNETT: It is my understanding that the harbour commissioners of Montreal were sued in connection with the movement of grain. Litigation went forward in the courts in my time. I can only say that. This is not an ordinary department it is a department which is competing with those who are operating utilities of the same kind. Suppose we have this case. The Cunard-White Star line have a dock upon which facilities have been established. Because of negligence a workman is injured. On the railway operated by the Montreal harbour board, or by their general manager, as it would be now, a workman is injured. In the one case the workman takes his action in the courts, and, if he establishes negligence, he succeeds. In the other case, where the railway falls under the provisions of this act, he can sue only by petition of right, which has to be printed and submitted to the Minister of Justice, and by him to His Excellency.

Mr. CAHAN: They cannot proceed even by petition of right.

Mr. BENNETT: As it stands now, on a tort he would not have the right to do that. Is that quite fair? Here are two enterprises being conducted side by side. Over here are the facilities on the dock of the Cunard-White Star line; over there is the terminal railway of the Montreal harbour. In the one case a workman is injured through negligence and he is able to bring his action; in the other case the workman is injured, perhaps by negligence even more abundantly clear, but he cannot maintain an action. The answer may be that he is taken care of under the workmen's compensation act or otherwise, but I think it is time this sort of thing was stopped. My colleague, the former Secretary of State (Mr. Cahan), referred to the judgment of Mr. Justice Davis in the Ontario court of appeal. In England they set up a commission headed by the late Lord Tomlin for the purpose of considering the matter. Certain recommendations were made and a bill was actually introduced in parliament, but it did not get through because of the pressure of other business. We passed a special act in this country between 1911 and 1917 under the government of Sir Robert Borden—the exact date I cannot recall—by which claims against the Intercolonial Railway could be litigated. Perhaps the Minister of National Revenue (Mr. Ilsley) will remember the date of the act which allowed the Intercolonial to be sued for certain classes of claims.

Is it not time that we made a little progress in this direction? If the crown has been guilty of negligence through its servants, why should not the crown be liable, just as the Cunard-White Star line or the Canadian Pacific would be liable? The only way to take a step forward is to do it now. We are setting up a utility to compete with other utilities; for instance, they operate cold storage depots, terminal railways, storage and elevator plants. In regard to what the Minister of National Defence has said, it will be recalled that the action brought in Quebec was in connection with certificates which had been forged by a servant of the harbour commission. The question was litigated, but the matter was settled before it was finally determined in the courts. I do not know whether a fiat was issued, but I do recall that the action was instituted in the superior court rather than in the exchequer court. Surely we are now in position to make an advance. I think the time has come when Canada can afford to step forward and do that which jurists in Great Britain, in Canada and other parts of the world have long regarded as the sound thing to do.

I am sure the Minister of National Defence would be the first to say that if one of his fellow citizens was injured on the docks of the harbour commission, he should have the same right of action as if he were an employee of the Canadian Pacific. It is time this discrimination was stopped. I think we should add to the bill to give it a more far-reaching effect. To do that would be not only a distinct improvement but would show that we are ready to take a step forward by giving to all employees who are injured the same right of action against their employers, whether they happen to be the government or a private corporation.

Mr. HOWE: The purpose of this bill is to unite several harbour commissions into one harbour board. We have made absolutely no change which will affect the individual corporations. In other words, the individual corporations were not liable in tort, and this corporation likewise will not be liable. I went into this matter very carefully with the law officers, because it seemed reasonable to me that these employees should be given the right of action, but I was told that to insert such a provision in a bill of this kind would be a complete departure from British law. If the principle that the king can do no wrong is to be abolished, it seems to me that this is hardly the place to do it.

Mr. BENNETT: It may not be desirable to do it in all cases, but it is a different thing where you are operating a utility. There is a difference between saying that the king can do no wrong and that three civil servants who comprise a commission can do no wrong. The title has been placed in the crown so that the crown will be free from the interference which might come about because of the imposition of undue taxation. That question actually arose. The hon. member for Halifax (Mr. Isnor) will recall that the city of Halifax had a case which went to the Supreme Court of Canada in connection with the imposition of a business tax on the lessee of a portion of the harbour front. The same question has arisen in Vancouver. It is a long cry from saying that the king can do no wrong—remember that this maxim had its origin in the birth of the law—to saying that these three eminent gentlemen can do no wrong in the conduct of harbour business. It seems to me that we are dealing with a matter in which there is more than a general

principle at stake. A utility is being administered for the public and it will tend to make the officials a little more careful if this is done. It is not as though the particular law to which the hon. gentleman referred were inflexible, because it is not. In nearly every age there has been a judge who has suggested that this should be done in a particular case with which he might be dealing. When he gave his judgment, Mr. Justice Davis was dealing with a publicly owned railway which was operating in a territory traversed by more than one road. He said that the publicly owned railway should be liable for tort or otherwise just the same as any ordinary railway. In this case, where you have a utility, does it not seem to be reasonable that we should make an advance now and not wait for some future time? It is not as though this were a monopoly, because down here there is the Anchor line, the Cunard line, and the Canadian Pacific steamships, and if they are negligent in the conduct of their business the employee has his right of action for negligence, while over there, where there is a warehouse or an elevator, because the employee happens to be under the direction of a general manager who is the servant of a commission which represents the crown, he cannot recover. It is not fair. It is a situation which arises because of modern developments. I think it was the last appointee to the Supreme Court of the United States, Justice Cardozo, who delivered recently a lecture on the judicial habit. In speaking upon that subject, he pointed out how desirable it is that judges should make their minds responsive to the changes that are taking place in civilization. The United States supreme court has always been moved by those considerations, notably in a great judgment of Chief Justice Marshall in earlier times. In England, in the case of Allen v. Flood, we find the House of Lords moved by those considerations. Now here is a great chance for the dominion of Canada to make a step foward, by making the crown, as an employer of labour in the operation of a utility, liable for damages in tort just as a private employer or corporation would be.

Mr. MACKENZIE (Vancouver): If I agreed with all that the right hon. gentleman said and all that the hon. member for St. Lawrence-St. George said, the proper procedure would be to change the general principle of the law and apply it to every department of government.

Mr. BENNETT: No.

[Mr. Bennett.]

Mr. MACKENZIE (Vancouver): Otherwise you would have in this legislation the application of a principle affecting one department of the crown in the Dominion of Canada and not affecting any other. Is not that correct?

Mr. CAHAN: No other department operates like public utilities.

Mr. MACKENZIE (Vancouver): Or in any other British country?

Mr. CAHAN: No, it is not.

Mr. MACKENZIE (Vancouver): My hon. friend seeks to apply a principle with respect to this piece of legislation that does not apply to any other department of the crown in Canada. They are not liable in tort for the operation of government railways.

Mr. BENNETT: But for the operation of their system they are liable in suit every day. I have sued them myself.

Mr. CAHAN: It was not so stated, but in previous discussions of this bill, as I have contended, to make it particularly clear that this property which is administered by the proposed board shall be free from taxation in the several provinces, we have declared by specific legislation that the property is vested in His Majesty in the right of the dominion, and consequently that the board should be deemed to be an agent of His Majesty in the administration of the act. But in fact this property is no more the property of the crown than Canadian National Steamships is the property of the crown. Every dollar invested in Canadian National Steamships was taken from the consolidated revenues of this country. Those ships are owned by the government as much as are these wharves and docks, yet because Canadian National Steamships is incorporated as a company it is liable to actions in tort, it is liable for damages which are due to the inefficiency and negligence of its officers and employees. Furthermore I suggest that the subsidiaries of the Canadian National Railways as at present constituted are liable to be sued in tort. I notice that the adviser of the minister is suggesting something to the contrary.

Mr. DUNNING: You must have very good ears.

Mr. CAHAN: Oh well, I could read by the movement of his lips what was being said. But I still differ. In large measure the Canadian National Railways in their operation are liable for the wrongs committed by servants, and so far as my memory goes, in every

case in which action was brought against its individual employee or servant because of a wrongful act committed by him in the service of the railway, and judgment was recovered, the government, recognizing this principle, assumed the liability and paid the judgment. That is so far as my experience goes, although it is not so very extensive. Now we have begun in a large way to operate through a department of government these public utilities. The minister who will assume, under the measure now proposed to the house, the office of Minister of Transport, will conduct the Canadian National Railways, a public utility, Canadian National Steamships, a public utility, the harbour board, a public utility, and certain other minor boards which may be regarded as public utilities. I say that when the government is entering upon the ownership and administration of these utilities in competition with many private services, it should assume, as other public corporations have to assume, and as all private corporations have to assume, the liability for wrongs done in the administration of a similar service. No other department of government conducts services of this extent and this kind.

Mr. MacLENNAN: Will the employees of the national harbours board have the benefits of the compensation laws?

Mr. HOWE: Yes. The government has a compensation act of its own which makes applicable to its employees the various provincial compensation acts. Every precaution which is taken by a private firm to protect its employees is taken by the government, not as a matter of compulsion but as a matter of grace.

Mr. CAHAN: But this amendment which I propose does not refer so particularly to employees. It simply means that if, driving down on a public wharf to go on board a steamship as a passenger, through the negligence of the operatives of the Montreal harbour railway my family and I are destroyed, there can be no action for damages, although I might have lost my life and the lives of my family by the negligence of the driver of the locomotive. It means that in the operation of large elevators such as we have, if through the negligence of the operators a steamship company lying alongside the wharf suffers damage to the extent of hundreds or even thousands or tens of thousands of dollars, it has no remedy whatsoever, although if it were lying alongside a private wharf, similar negligence on behalf of the owner of the private wharf would found a good claim for damages in the courts. I have nothing more to say. I have put this amendment before the committee, and I suppose it will be voted down, but I insist that it is a matter which should have received more careful consideration.

Mr. HOWE: The hon. member for St. Lawrence-St. George has strong sympathizers on this side of the house. It is solely because the officers see great difficulties ahead that his amendment has not been accepted, but if he will allow us to pass the other sections and hold this over for further consideration we shall be very glad to do so.

Mr. CAHAN: I am anxious to assist the minister in every way. Suppose that he proceeds: we will hold section 37 as at present amended.

Mr HOWE: Yes.

Mr. CAHAN: Subject to further consideration of the motion outstanding. Now the minister has a slight amendment to section 38—

The CHAIRMAN: An amendment to section 37 has been already carried.

Mr. CAHAN: Quite so, but before the section as a whole was carried I moved another amendment and I wish that amendment to stand, as the minister suggests.

Section 37 stands.

On section 38—Proceedings relative to construction of works in navigable waters under jurisdiction of the board.

Mr. DUNNING: I move that section 38 be amended by striking out the words "of transport" in the seventh line on page 14 of the bill.

Amendment agreed to.

Section as amended agreed to.

On section 39—Acts repealed.

Mr. DUNNING: I move that section 39 of the bill be struck out and the following substituted in lieu thereof:

39. The Quebec Harbour and River Police Act, chapter one hundred and sixty-nine of the revised statutes of Canada, 1927, and the acts mentioned in schedule "A" to this act, except sections fifteen, sixteen and seventeen of the Saint John Harbour Commissioners Act, 1927, chapter sixty-seven of the statutes of 1927, are hereby repealed.

Amendment agreed to.

Section as amended agreed to.

On section 40—Commencement of act.

Mr. DUNNING: I move that section 40 be amended by inserting after the word "act" in line 15 on page 14 of the bill the words "in whole or in part" and by inserting after the word "date" in the same line the words "or dates."

Amendment agreed to.

Mr. CAHAN: I should like to call the minister's attention to one matter that struck me. I refer to section 16, subsection 4, of the bill, on page 9:

> Such vessel may be seized and sold under any writ or warrant of execution or of distress issued by any court of record upon the judgment or conviction at the suit of the board against the vessel, the master, owner or person in charge thereof.

I would suggest for the consideration of the minister and his legal advisers that this should read "any court of competent jurisdiction" rather than any court of record, because we have many different kinds of courts of record in this country, and only a court of competent jurisdiction should be entitled to so proceed. I suggest that for the consideration of the minister before the bill comes up for final passage through this committee.

Mr. HOWE: I shall be glad to take that under consideration.

Section as amended agreed to.

On the schedule.

Mr. DUNNING: I move that the said bill be amended by adding thereto as schedule "B" thereof, the following:

Then follows the descriptive matter contained in the last reprint of the bill.

Mr. CAHAN: Do the descriptions remain the same in the new schedule "B"?

Mr. HOWE: There is just one change. We were requested to change the description of the north arm of Vancouver harbour, and hame made it read "the Indian arm—formerly known as the north arm." We consulted the geographical board and were advised that this description is correct. That is the only change.

Amendment agreed to.

On section 15—Rates and tolls.

Mr. ISNOR: I should like to ask the minister if, while considering the various amendments to this bill, he and his officers considered the establishment of free zones or free ports in connection with the activities of the harbour board.

Mr. BENNETT: What does the hon. gentleman mean by that?

Mr. ISNOR: Not exactly what a great many people have in mind. I certainly do not want to see free ports established which would bring about the erection of barriers between various provinces, or anything like that, but I do feel we could establish free zones. Consider the province of Nova Scotia, or the port of Halifax. I believe we could set aside a certain area in which goods could be landed and placed in warehouses or reshipped, as the case might be, which would mean very much additional labour so far as our harbour front is concerned. That is the free port or zone that I have in mind.

Mr. HOWE: The matter of free ports is something quite apart from this bill, and there would be no place for it in the bill even if the government were inclined to adopt the policy. It would require a great deal of legislation, apart from this.

Mr. ISNOR: My question was whether it was considered when the minister was dealing with the setting up of the harbour board.

Mr. HOWE: It really has nothing to do with the harbour board and it was not considered in that connection.

Mr. ISNOR: I do not know whether that answers the question. I believe it has a direct bearing in connection with the activities of the harbour board. As I understand it they are to create business for the various harbours mentioned in the bill, and if this is one way in which greater business can be procured for any one or all of these ports then I say it comes within the jurisdiction of this central harbour board to consider such an angle.

Mr. HOWE: The question of free ports is a matter of customs regulation, a matter of tariffs, and has nothing to do with the management of the ports.

Mr. ISNOR: No, but it has to do with the creation of business.

Mr. HOWE: If the customs department will create a free area we will administer it through our present machinery.

Mr. BENNETT: Section 15 was allowed to stand for a very special reason. Perhaps the minister will recall that we thought it was very arbitrary; I pointed out that if the Minister of Justice were on this side of the house he would regard it as such an arbitrary exercise of power as to shock his Liberal sensibilities. If he will look at it he will see

that the board may levy such rates and tolls as may be fixed by by-law. That is now done by the governor in council, though it was not at the time we were discussing it. Then the section proceeds:

> ... and may, with the approval of the minister, commute any rates or tolls so fixed on such terms and conditions and for such sums of money as the board deems expedient.

That is a wide power.

> (2) The rates and tolls on goods landed or transshipped in or shipped from any harbour under the jurisdiction of the board shall be paid by the consignee, shipper, owner or agent of such goods, and goods shall not be removed from the harbour until such rates or tolls are fully paid or security for payment accepted by the board.
>
> (3) No officer of customs shall grant a clearance to any vessel to leave—

And so on. The point we were making is that as it then read that left a large discretion in the hands of the board to levy these rates and tolls, and with the approval of the minister they could commute them. That was giving to the board a power of discrimination against which at times I have heard very strong protests in this house, in connection not with this legislation but with legislation somewhat similar. It invites pressure, and in view of the attitude taken by the government in respect to the rest of the bill it must be unsound. It is not so bad now, since it is to be done by by-law and not by the mere passing of a resolution, and that by-law will have to be passed by the governor in council, because the rates and tolls are as fixed by the by-law and that is fixed by the governor in council. So that part of the objection we made a few days ago has disappeared, to the extent that the responsibility is now that of the governor in council rather than of the board. But to permit them with the approval of the minister to commute or reduce tolls is but inviting pressure. For instance, take the case of Montreal and Sorel—not an imaginary case, but a real one—or Montreal and Quebec. During the last five years, in order to secure some traffic for Quebec, the harbour board there reduced the tolls to a rate lower than that which prevailed at Montreal, so that grain would be carried to Quebec harbour and stored there rather than at Montreal. That of course is well known. Also it is well known that the difficulty experienced as between those two ports existed in connection with Sorel, where additional elevator space is being constructed. Giving this power to the minister—it is really the power of the minister, because it is with his approval—to "commute any rates or tolls so fixed on such terms and conditions and for such sums of money as the board deems expedient" I think is something that if possible we should avoid. I pointed out the difficulties of placing that power in the hands of any minister, with political pressure as it is. I still think it is very much to be deprecated. For instance you might have a contest between Fort William and Port Arthur. It is difficult to imagine that, because the rates to those two points are the same and they do not come under this bill, but there might be difficulty as between elevator space further up in Burrard inlet and space lower down. These things happen. In the case I put, which is a real one, the conflict is between Sorel and Montreal, and the result of the action taken with respect to Quebec was that a good deal of difficulty arose, but because contracts had been made the rates were reduced at Montreal to meet them, and of course in the end the business was unprofitable. To clothe the minister with this power to say yes or no, notwithstanding what the board may say, is to create a situation which, as I pointed out the other evening, would be intolerable. But it is not quite as bad as it was the other evening, since power to make by-laws is taken from the board and the minister and given to the governor in council.

Mr. HOWE: The matter of preventing one port from competing with another by cutting rates is one against which we can hardly legislate. We hope to correct that by having all the harbours under the one control. But I think my right hon. friend will agree that there must be some method of commuting charges, in various special circumstances where a charge is levied that is not justified even though it is under a tariff. We are trying to avoid setting up an inflexible machine to run a business which is highly competitive. I hardly think we can get along without the power, but I assure my right hon. friend that it will be administered very carefully.

Mr. BENNETT: I quite appreciate the point the minister makes, I followed him the other evening when he said that we have endeavoured by consolidating all these harbours under one management to obviate competition arising between ports. But this is placing the minister in a position that I think is almost intolerable, being subject to the pressure of commuting rates that have been levied properly at one port, say Montreal, and then Sorel introduces a lower rate and gets more business and at once application is made to the board to reduce the rates now being charged with respect to transactions that have passed through Montreal elevators. The minister can say he has no power

under the statute. But under this section the board says: Well, you have; all you have to do is say yes, and Mr. Jones says it is very important for him at the next election that this should be done. I merely state the cold, stark reality of these cases. It is not from any personal experience of that kind, I assure the minister, because the cases to which I refer, the competition between Quebec and Montreal and that movement of a few million bushels of grain, arose long prior to 1934 or 1935. Of course it was expected under the judgment of the board of railway commissioners that grain would move in large measure into the Quebec terminal, but it did not, and they had to make it cheaper to store it at Quebec than at Montreal. I still think the section is a bad one, but the minister says: Trust me and we will see that it is properly administered, which is the usual excuse made for the exercise of arbitrary power.

Section agreed to.

Progress reported.

## WAYS AND MEANS

### CUSTOMS TARIFF AMENDMENT

The house in committee of ways and means, Mr. Sanderson in the chair.

Customs tariff—267. Crude petroleum not subjected to any other process than natural weathering and removal of foreign matter and water, when imported by oil refiners to be refined in their own factories:—

(i) ·8155 specific gravity (42·0 A.P.I.) or heavier at 60 degrees Fahrenheit: British preferential tariff, free; intermediate tariff, free; general tariff, free.

(ii) Lighter than ·8155 specific gravity (42·0 A.P.I.) at 60 degrees Fahrenreit, per gallon: British preferential tariff, ⅛ cent; intermediate tariff, ½ cent; general tariff, 1 cent.

Mr. ROSS (Moose Jaw): I wish to draw the attention of the committee to some facts in connection with this item. It has been changed in the schedule. At one time it covered all crude petroleum entering Canada, ·7900 and lower in specific gravity. At the present time the item is split into two sections, the first section specifying ·8155 specific gravity, or 42·0 A.P.I., or heavier, and the second section specifying lighter than ·8155 or 42·0 A.P.I.

Crude oils coming into Canada are received by the refiners who transform them into refined petroleum products. There are in this country two classes of refineries, the small refinery or distillation plant, described by some people as a skimming plant, and the large oil refineries which have distillation and cracking equipment in connection therewith. Crude oil, heavier than 40 or 42 A.P.I. is used by the larger refineries equipped with these cracking systems. Crude oil, lighter than 40 or 42 A.P.I., is used by the small refineries equipped with only the distillation or skimming process. The change in the item places a half cent tariff against crude oil used by the smaller refineries.

For many years the larger refineries in Canada have had the greater part of Canadian business, and in the last few years, when there have been excessive tariffs against the importation of petroleum products from the United States they have practically had the market to themselves. During that time the smaller refineries started up, because under the low freight rates for crude oil they could import light crude oil which carried a greater percentage of gasoline, kerosene and distillate when used only for distillation purposes, they could thereby sell gasoline distillate and coal oil at lower prices. The large refinery gets about the same amount out of the heavier crude oil, when the cracking process is used.

It is almost too long a story to go into in detail, but we know that the oil and gasoline business is of great importance to practically every primary producer in Canada. However, we are pretty well in the hands of a monopoly, so far as the oil business is concerned. Any industry we can get to compete with the monopoly should be encouraged as much as possible by any government holding office in Canada. The tariff change will place the small refiner in a position where he will have to pay one-half cent per gallon more on his high grade crude oil. That will not put him out of business, but when one goes into the history of the oil business he finds that a few years ago, in an endeavour to stop the importation of light crude oil into Canada a submission was made to the board of railway commissioners to have the crude oil freight rate split at 40 degrees gravity, so that the railways would be able to charge a higher freight rate on the high grade crude oil than on the low grade product, and thereby to a large extent, if not completely, shut out the importation of high grade crude oil by small refineries.

Judgment was rendered on the application, the main point of the decision being that because parliament recognizes all crude oil as crude oil, and because we do not differentiate between low and high grades, the board of railway commissioners could not see its way clear to make any split in the rates. I am not greatly worried about the half cent tariff imposed under the item, because I believe I know the purpose of it. Some of the smaller refineries have been importing oil which they claimed was light crude, when in

fact it was not. It was what is known as spiked crude. That is gasoline with a certain amount of crude oil placed therein, so as to lower the specific gravity and place it in the category of crude oil shipped in under the crude oil rate. We know that has been done in the past, and I believe it is the purpose of the government to endeavour to stop that practice, because I understand it is not a practical proposition to spike oil at 42 or over in face of a one-half cent tariff. I suggest, however, that when we put a half cent tariff on crude oil we are going in a roundabout way to accomplish our purpose.

The principle is that of placing a tariff on a raw product to endeavour to stop smuggling of the finished product across the border. In other words, the Minister of Finance might as well put a tariff on hides to prevent someone from smuggling shoes across the border. I am exercised about the change because I am afraid that the moment the differentiation is made in the customs tariff between high and low grade crude oils the railways, either of their own volition or at the instigation of the large refineries in Canada, will again appear before the board of railway commissioners and ask that the rate be changed. If that should come about and the rate is changed on the higher grade crude oil, of necessity this will put the smaller refiner in Canada out of business. I warn the railway companies now that if any such procedure is taken, and if they go to the board of railway commissioners asking for a change in the crude oil rate, or to put a higher rate on high grade crude I, or some other person, will go before the board at the same time and ask for a reduction in freight rates, at least in western Canada, on all petroleum products.

The railway companies derive tremendous revenue from the shipment of petroleum products consumed in the Canadian west. In 1935 the Canadian National Railways and Canadian Pacific Railway combined gathered a revenue of about $6,700,000 in western Canada on the shipment of this commodity. They have an exorbitant rate on all petroleum products, whether moving from the American boundary, from the refineries in the middle west, from the great lakes to the west or from Vancouver to the east. As a matter of fact, that is how the large Canadian refinery has its opportunity to charge excess prices in the west for petroleum products, and the reason is this: Crude oil coming north from Oklahoma, for instance, carries a freight rate now of fifty-four cents per 100 pounds. Gasoline from the same group 3 carries a freight rate of 9·77 cents per gallon.

Mr. BENNETT: From Oklahoma to where?

Mr. ROSS (Moose Jaw): To Regina or Moose Jaw. The small refiner must bring his crude oil in at that fifty-four cents freight rate, but the large refiner is in a much better position. I speak with knowledge because I happen to have a large refinery in my riding. They carry on a very large refining business, buying their crude oil. I believe they have control of the crude oil that enters the Dominion of Canada at Coutts, Alberta.

Mr. BENNETT: They own wells in the United States at Oklahoma?

Mr. ROSS (Moose Jaw): Yes; there is a pipe line that comes up close to Coutts, and from that point they import their crude oil for their refinery at Moose Jaw at a rate of 23½ cents per 100 pounds. There is another rate of twenty-six cents per 100 pounds, which is made, I believe, because they compete with a pipe line from Cut Bank. So the large refinery is paying half the freight rate that the small refinery pays to-day. Now, when a large refinery can bring its crude oil in at a freight rate of twenty-six cents per 100 pounds, and the only competition it has from the outside is on gasoline which carries a freight rate of 9·77 cents per gallon, hon. members will realize that the large refinery has a tremendous advantage on the Canadian business.

Since I came to Ottawa this year I have been in touch with the railways to see if we could not get a better freight rate from Fort William and Port Arthur and from Vancouver, in order to have more competition with the refinery in the middle west, but their claim is that if that were done all freight rates in the west would have to be lowered in correspondence with these long haul rates, and that the railways would lose a tremendous amount of revenue which they are getting to-day. I have not pressed the point and I do not intend to do so, unless some move is made by the railways and others to endeavour to raise the rate on high grade crude in order to try to shut off the small refinery in the west. As I said a moment ago, I think the oil business in Canada is a tremendous monopoly. I believe that sincerely, and I want to give the committee one or two figures which, I think, will show to some extent at least the advantage which is being taken of the people of Canada by this monopolist industry.

I asked the customs department yesterday or the day before to procure for me prices

on gasoline at certain points in the United States. I asked them to give me the export rate on gasoline of 64 to 66 gravity, out of New York, and the price they gave me was 6½ cents per gallon for 60 to 64 gravity and 6¾ cents per gallon for 65 and up. Those are all good gasolines. May I say, first, that there is a certain method of handling gasoline which is generally adopted. Either an export price is taken, or a tank car price in an internal market. Then, a set spread is allowed for the distributors between tank car and tank wagon and between tank wagon and filling station, or service station as it is called. These spreads are not the same everywhere, but they are very closely the same in most places.

In New York you take 6¾ cents per gallon as the export price for good gasoline. You add to that a spread of 3½ cents, which is the spread between tank car and tank wagon. You add to that an additional 3½ cents, which is the spread between tank wagon and service station through the pump. You add to that the tax in the state of New York of five cents per gallon. That gives you a price of 18·75 cents, or 18¾ cents per gallon. That is the exact price which the person in New York who pulls up at the service station pays for his gasoline.

Mr. MacNICOL: Imperial or United States gallons?

Mr. ROSS (Moose Jaw): United States gallons, but it makes no difference because I am going to give instances of what happens in each case.

In Chicago, if you wish to purchase a car of gasoline of 64 to 66 gravity you pay 5½ cents per gallon in the tank car. Chicago has a spread of three cents per gallon between tank wagon and tank car, and a spread of four cents between tank wagon and service station. The tax is four cents. That gives 16½ cents as the price per gallon of gasoline at the filling station in Chicago.

Now, we will take prices of gasoline in Canada, in Canadian gallons. I asked the customs department what the export price of gasoline was from California, and I found that it was five cents per gallon. I also found out the freight rates on gasoline. I found that if you wanted to ship gasoline from California through the Panama canal to north Atlantic ports it would cost eighty-five cents per barrel or just over two cents per gallon. The shorter haul by boat from California to Vancouver amounts to about one cent per gallon. To the price of five cents per gallon in California, there must be added one cent per gallon in Canada because five Canadian gallons are equal to six American gallons. In other words, a five cent American gallon is a six cent Canadian gallon. Add that one cent; add ont cent per gallon for freight, one cent for duty, four cents for the spread between tank car and tank wagon, four cents for the spread between tank wagon and the service station; add the tax of seven cents, and that totals up to twenty-three cents per gallon at the service station, but the actual service station price in Vancouver is twenty-nine cents per gallon, or a difference of six cents.

Go to Nova Scotia, to Halifax, and you will find that the export price of gasoline ex New York is 6·50 to 6·75 cents per gallon, depending upon the grade. Take it at 6·50 cents per gallon; transposing that to Canadian gallons you get a price of 7·80 cents per Canadian gallon. Add one cent freight, one cent duty, four cents for the spread between tank car and tank wagon, four cents for the spread between tank wagon and service station, eight cents for tax, and you have a price of 26·30 cents per gallon at the service station in Halifax, as against the price actually charged of 29·50 cents. This shows that American companies selling gasoline in Canada are charging the Canadian consumer from three to six cents per gallon more than they charge their own people in the United States. In the middle west we have a differential in the freight rate between the crude and the finished product that gives them an opportunity to do that, but on the coast there is not the same opportunity. This monopoly is so strongly entrenched in this country that anyone who tries to buck it is broken before he goes very far. That has happened to many companies in the past.

I am informed that gasoline can be purchased at Coutts, Alberta, duty paid, for 5½ cents per American gallon or 6·60 cents per Canadian gallon. The freight rate from Coutts to Moose Jaw is five cents per gallon, which makes a total of 11·60 cents. The posted price of gasoline in tank car lots at Moose Jaw is round 17·25 cents. In that part of Canada there is no distributing agency large enough to compete against these large companies, and they are taking full advantage of this fact from one end of the dominion to the other. In an effort to stop the bringing in of spiked crude, some time ago the customs department put into force regulations whereby any importer of high grade crude oil would have to show the name of the producer, the location of the well, the name and number of the well, the A.P.I.

gravity as the oil left the well or the end of the pipe line and the analysis of the oil in the car.

Mr BENNETT: Was that not done primarily in connection with water shipments that came into Montreal from Roumania and Russia?

Mr. DONNELLY: It was done in 1934.

Mr. ROSS (Moose Jaw): I am referring to spiked crude. I think the customs department had had some trouble with some of the smaller refineries which were importing this stuff from across the line.

Mr. BENNETT: I think it was originally in connection with water importations into Montreal.

Mr. ROSS (Moose Jaw): That may be, but I do not know. As I say, I feel that we have been in the hands of a monopoly and I am afraid that some people in this country will try to use this changed schedule in an effort to shut out the small refineries. Naturally I do not want to see that done as I believe they offer the only real competition to the large oil companies. A half cent per gallon will not shut them out although it will make some little difference. It may enable the customs department better to handle their business, but I do not know. I had intended to move an amendment to this item, but I shall not do so at this time. I do not believe my judgment is infallible; I may be wrong and these people may not be contemplating doing what I think they are. However I want to give warning that should there be a change in the freight rate on this high grade crude or should there be put into effect any regulations which would tend to stop the importation of this high grade crude oil, when the next budget is brought down I shall move an amendment. I want to serve warning on the railways of Canada and the large refineries that if they make any move towards raising the freight rate on this high grade crude, an application will be made to the board of railway commissioners to lower the freight rates on gasoline and petroleum products throughout western Canada

With the wide spread there is in gasoline prices, it is a wonder to me that Premier Pattullo of British Columbia is forced to look round for money to pay his interest charges. All he has to do is to step into the gasoline business and he will get all the money he needs at the present time. The people are paying a tremendous amount of money to the oil companies for no service at all; the companies are well paid in the price they get, without the six cents per gallon. As I say, I do not intend to move an amendment at this time, but I give warning that one will be moved another year if any change is made in the freight rates or the regulations of the department which would tend to stop the importation of light crude oil used by the small refiners.

Mr. DOUGLAS: I am very glad that the hon. member for Moose Jaw (Mr. Ross) has presented this case. He is to some extent an expert on gas, I mean in liquid form. I know he has presented the case much better than I could and because he has done so, it will not be necessary for me to deal with the technical side with which I am not quite so familiar. I want to approach this matter from another angle. Prior to the bringing down of the budget the cut-off point was 47·6, whereas it is now proposed that it shall be 42 gravity. This means that the light crude oil which hitherto came in free of duty will now be subject to a duty of one-half cent per gallon. The large refiners have cracking plants in which they can handle heavy crude oil, but scattered throughout Manitoba and Saskatchewan are a number of small refineries, really just skimming plants, which are not capable of handling the heavy crude oil. This change in the tariff will mean an increase in their raw material of about one-half cent per gallon, and I am told that this will mean an increase of one cent per gallon in the price of the gasoline they sell. I should like to quote from the Leader-Post of May 16 which contains an article by Mr. Grant Dexter, one of our brilliant young journalists in the west. He says:

> There are a number of skimming plants in operation in Manitoba and Saskatchewan. Some of the largest of them are farmers' cooperatives. The half a cent tariff on their raw material will mean at least a cent, possibly more, on the gasoline. More than that, it is feared that once parliament declares these light crudes not to qualify as bona fide crude oils, they will take the gasoline freight rate instead of the crude oil rate. The difference is more than four cents a gallon.

Mr. DUNNING: If my hon. friend will permit me, I should like at this point to point out something which will perhaps make the matter easier for him. This item does not involve a declaration by parliament that the lighter crude is not a crude oil. In fact, the two are kept together in the one item, crude petroleum.

Mr. DOUGLAS: I realize that.

Mr. DUNNING: It is a very important distinction.

Mr. DOUGLAS: I am merely pointing out what is thought in some quarters. This is not giving any licence to the railways to make that decision. Still there is fear that that will be done. It is feared to some extent in the district from which I come. We have at least half a dozen small refineries. I hold in my hand a sheaf of telegrams and letters which show that these people fear that very thing. That fear will have a twofold effect: first of all, upon these small refineries, and there are quite a number of them, which are owned by local business men, and into which, even in these bad years, they have put their extra bit of capital; they fear that these refineries will be subject to the half cent duty and be put out of business. As a result of the price spreads investigation we have heard a great deal in the past two years about monopoly and about getting away from monopoly, and in no way could we better get away from monopoly than by encouraging small business men to develop local industries. But apparently we are to go about the matter by placing a duty on light crude and not on heavy crude, and consequently perpetrating an act of favouritism in behalf of the large oil concerns while discriminating against these small refineries. The second effect has to do with the fact that many of these skimming plants are owned by farmers' cooperatives. They provide at as low a cost as possible gasoline for the farmers of southern Saskatchewan, who, as the Minister of Finance knows, to a very large extent are power farmers. This will mean for them an increase in the costs of farm production. It will mean that they must pay more for their gasoline, so that it will cost them more to put in their crop and more to take it off. It means more. It may mean that many of these small farmers' cooperative refineries that have been built through the years will now be put out of business.

What is the reason for the imposition of this duty? Two reasons are advanced. The first is that much of the crude oil coming into the country is not truly what is called light crude but is a synthetic crude or a freak crude; that a distillate has been put in and consequently this synthetic crude has a larger recovery than the pure heavy crude oil. With reference to that argument, it seems to me totally unfair that in order to get at the people who are shipping in a synthetic crude we are to penalize those who are sending in a pure crude. A more direct method would be better. An analysis of the oil could be demanded at the point of entry into the country; certain steps could be taken to prevent the incoming of synthetic crudes.

[Mr. Dunning.]

Mr. DUNNING: What steps?

Mr. DOUGLAS: As I suggested, an analysis of the oil could be required.

Mr. DUNNING: That does not help you.

Mr. DOUGLAS: That the analysis of the oil shall be, as the hon. member for Moose Jaw (Mr. Ross) suggested, the same as the analysis at the mouth of the well.

Mr. DUNNING: That does not help you.

Mr. DOUGLAS: Surely the Minister of Finance does not suggest that it is absolutely impossible to determine whether the oil is a free crude or a genuine crude.

Mr. DUNNING: Later my hon. friend will probably permit me to tell him.

Mr. DOUGLAS: Certainly. It would seem that a much more direct method could be found, one which would deal directly with those who are bringing in freak crudes, yet would not penalize the people who are bringing in genuine light crude oil. What we are about to do is, in order to get at one class of people, to punish another class of people and ruin a small industry which is growing up in local centres.

Another claim which is made is that these refineries have produced a lower grade of gasoline which is harmful to the cars and tractors of those who use it, although they are unaware of the fact. This could be overcome by the provincial governments requiring that the test of the gasoline be placed on the gasoline tanks, or that those handling gasoline should be compelled to post a notice of the analytical content of the gasoline they are selling. Again it seems to me that the more direct method would be the better one, rather than an indirect method which is going to place a burden not only upon those who deserve it, but upon those who are endeavouring to render a very fine service.

The placing of this half cent a gallon on this light crude oil is going to work a serious handicap on the small refinery and on the farmers' cooperatives. It would look to many people, whether the Minister of Finance agrees with us or not, as if it were a direct sop to the large oil concerns in return for the reduction in the duty on gasoline and distillate. It would look to many as though the voice may be the voice of the government but the hand is the hand of the large oil concerns.

Mr. DUNNING: That is pretty cheap.

Mr. DOUGLAS: I do not think so.

Mr. DUNNING: Oh, yes, that is pretty cheap.

Mr. DOUGLAS: This is apparent, that, as the hon. member for Moose Jaw said, there is already an oil monopoly. This half cent per gallon duty on light crude oil will make that monopoly complete. If any competition has grown up in the last few years, this half cent will do very much to remove it. The hon. member for Moose Jaw said that he is not prepared to move an amendment; he feels that it should be left until next year. I think, if it is left until next year, in all probability it will not be of much use; these small refineries that have recently grown up, some of them having been built as recently as last winter and this spring, will be put out of business. I feel that the time has come to take a definite stand on this item, and I think the members of the committee should consider it very seriously. With that in mind I beg leave to move, seconded by the member for Rosetown-Biggar (Mr. Coldwell) that this item be restored to its former level. I therefore move this amendment:

That the duty on crude petroleum lighter than ·8155 specific gravity at 60 degrees Fahrenheit, listed in item 267 (ii) be removed, and that this item be restored to the free list as heretofore.

Mr. DUNNING: I shall not at the moment raise any question of order with respect to the amendment which has just been moved. I am not sure as to its order. Possibly the hon. member who moved it might have been willing to listen to the facts from the point of view of the government and of the minister before reaching the conclusion that, as he expresses it, while the voice is the voice of the government, the hand is the hand of the big oil companies. However we are accustomed to that from that particular part of the house, and I will pass it by, except to say this—

Mr. BENNETT: It used to come from this side, though.

Mr. DUNNING —that if my hon. friend has been observant at all since the budget, he will find that more public criticism of the budget in relation to this petroleum schedule has come from the big oil companies than from anyone else, and that criticism is apparent all over the country. The schedule which is now before the committee, and the first item of which is under discussion, is a complete petroleum schedule, following the most exhaustive inquiry into the oil business which has ever been conducted in Canada, as I think the volumes comprising the board's report will testify. A serious effort has been made by the board to arrive at the facts regarding an industry which is most complex in its various aspects, and while I hold no brief for the tariff board I can say this, after a close study of the report, that I commend most highly both the manner in which the investigation has been conducted and the thorough manner in which it has been reported upon.

I fully expected someone to take the position which has been taken with respect to this single item of lighter crudes, because it is the one item in the schedule in connection with which there is an increase of duty. My hon. friend who says that the voice is the voice of the government while the hand is the hand of the oil companies takes no account, of course, of the fact that the duty in which the big oil companies are mainly interested, namely the duty on gasoline, has been reduced by this government from two and a half cents to one cent per gallon. He can cast reflections on the good faith of the government with respect to half a cent per gallon on certain crude oil, which is part of an item representing an infinitesimal proportion of the use of this commodity by Canadians, forgetting altogether the overwhelming evidence on the other side which is found in the fact that the duty on the article which is most truly competitive from the standpoint of most Canadian consumers has been reduced, as I say, from 2½ cents per gallon to one cent per gallon.

Now a word with respect to the facts, and I am going to speak very plainly, just as plainly as the legal requirement of confidence on the part of the tariff board with respect to certain information placed in their hands by the companies will permit. As is well known, the tariff board may accept and indeed may force from companies coming before it information which it treats in confidence because of its competitive nature, but it is at liberty to communicate that information to the minister. I have not the right to pass it on. I have the right, however, to tell this house the honest conclusions I have reached with respect to it. There are some facts, of course, that are public and that speak for themselves in connection with these small so-called refineries. They are not really refineries at all in any proper sense of the term. They do not undertake the refining process in connection with oil. The name "skimming plant" correctly describes them. That, however, is a legitimate operation if carried on in connection with a legitimate commodity recognized by Canadian law.

These plants are present mainly in one section of Canada, due to the peculiar combination of freight rate matters mentioned by my hon. friend from Moose Jaw. The majority of them have been guilty of defrauding the customs of Canada and have settled for very considerable sums for so doing. A number of cases in that connection are still pending, and I know I am within the mark in saying that over $50,000 is being collected from these companies as a result of their fraudulent practices in connection with the importation of what they described as crude oil and which, under the specific gravity test in the old tariff, it was not possible accurately to classify by means of the ordinary methods.

Mr. BENNETT: Crude oil in its natural state.

Mr. DUNNING: Crude oil in its natural state, but the gravity test as provided offered no means by which the customs authorities could accurately determine whether or not it was in its natural state.

Mr. MacNICOL: It was just bootlegged gasoline.

Mr. DUNNING: Bootlegged gasoline, under the guise of mixing it with a certain amount of crude oil. More than that: My hon. friends who speak for the small refineries as the great saviours of the consumers are not, I know, aware of the facts. The government is much more interested in the consumer than in either the big or the small oil refinery. That is why the government took care to introduce the possibility of the competitive element in connection with the finished product from outside the country, instead of depending upon a quasi industry—I do not know whether or not that is a good description—which in its turn, if it was honest, depended upon access to a very small proportion of the total production of crude oil in the United States. Less than 2½ per cent of the total production of crude in the United States is of this lighter variety which lends itself to the skimming process, and of that 2½ per cent only a very small proportion is geographically available, from a freight rate cost point of view, to plants located in the western part of the Dominion of Canada.

My hon. friend from Weyburn says these plants are owned by businessmen, who put their money into them. I will tell him what happened in connection with at least ten of those plants. Probably they were formed by local businessmen and farmers, but they were sold out to a concern called Petroleum Securities Limited, a holding company which owns ten of them at this moment and which, to my certain knowledge, is conducting a more profitable business than any other business in Canada with which I am acquainted. I can say that without revealing the figures which are on record, in a confidential way, in the hands of the tariff board; I can make that general statement, I think, without breaking any confidence. Why is that? It is because even in connection with natural light crude, freak crude if you will but natural crude, not only is the cost of the operation of skimming so much less than the cost of the operation of cracking; there is also, in the very nature of things, a much higher percentage of gasoline in the light crude than in the heavier crude which is the normal production of the United States from which we procure most of our crude oil.

My hon. friend regretted this half cent. Why, Mr. Chairman, for genuine light crude these people pay a premium amounting to many times this half cent. The half cent differential is not going to put any honest skimming operation out of business. My hon. friend need not fear that, but I will tell him what it does accomplish. It sets a dividing gravity point in the classification of crude oil for customs purposes which will absolutely end the business of bringing in doctored crude oil, bootlegged gasoline, or spiked crude oil, to use some of the descriptions given by hon. members. Why will it do that? Because this doctored crude oil just will not pay under that classification, that is all. My hon. friend says some way should be found, by analysis, to determine the dividing line. Well, Mr. Chairman, that is the way the tariff board is now recommending, and that is the way we have it here:

> Crude petroleum not subjected to any other process than natural weathering and removal of foreign matter and water, when imported by oil refiners to be refined in their own factories—

Then follow the two classifications:

> (i) ·8155 specific gravity (42·0 A.P.I.) or heavier at 60 degrees Fahrenheit—

The letters A.P.I. mean American Petroleum Institute and constitute the recognized method of classifying petroleum generally in use in the petroleum markets of the world to-day. and particularly in the United States. Then follows the second classification:

> (ii) Lighter than ·8155 specific gravity (42·0 A.P.I.) at 60 degrees Fahrenheit, per gallon ½ cent.

There we set up the dividing point, and we set it up because experience indicates that this

classification will have the effect desired, of preventing fraud on the Canadian customs in connection with the importation of crude oil. It will strengthen the administration materially. There is nothing sinister intended by way of either helping the large refineries to abolish the smaller ones or vice versa. After looking over the evidence that I have looked over and the confidential part of the tariff board report I do not know of any business in Canada in which I could engage to-day with promise of greater, more unreasonable profit than by engaging in the so called refining business with a skimming plant in western Canada under the tariff as my hon. friend would have it by his amendment. They can operate successfully under the shelter of the price structure which must be maintained by industries which require to instal much more expensive cracking machinery to deal with the heavier crudes. It is all too true that they can operate much more profitably by reason of the action of the big refiners in relation to the public which has been the subject of criticism in this committee tou-day. The big refiners have held a price umbrella over these skimming plants and made it possible for them to make inordinate profits. Even if that umbrella were not there, there is still room under the old tariff designation, restoration of which is proposed in the amendment moved by the hon. member for Weyburn (Mr. Douglas), for what I can only describe as extortionate profits on the part of those dealing with light or crude oils by means of the skimming process.

Nothing has given me more anxiety in dealing with the tariff as proposed in the budget than this petroleum schedule. It is one of the most important. Of course I recognize the kind of attack I am getting from my friends. I am being depicted in my hon friend's own constituency as the tool of the big refiners. And down here the big refiners are abusing the government and myself and claiming that we are putting that great industry out of business. We have no such intention. I am satisfied that the tariff board had no such intention, in the report which I commend to the study of hon. members. I appreciate the consideration of the hon. member for Moose Jaw (Mr. Ross) in the matter because I know how strongly he feels, but I will say this, and I have prepared it carefully so that there may be no misunderstanding of what I say; I propose to ask the tariff board to keep in touch with the developments which follow the changes in duty proposed in the petroleum schedule; particularly to keep informed as to the price situation and as to the performance of the major companies in rectifying the uneconomic conditions of distribution, and to study the relation of railway and other transportation to the petroleum industry. The changes proposed in the present schedule seem to call for price adjustments in all parts of Canada, except possibly the most populous parts of Ontario and Quebec, where of course other factors enter. If the results which we anticipate do not follow, then we shall expect to be able on the basis of information supplied by the tariff board to come to proper conclusions as to the course which ought to be pursued.

Even a cursory reading of the tariff board report, which has been tabled in the house—too voluminous, I know, for multiplication as to numbers, and too voluminous for very many hon. members to have studied or even to have had sufficient access to to permit of study—reveals that the board found it quite impossible to understand the distribution conditions in British Columbia to which the hon. member for Moose Jaw referred. And there are many other features. This is an industry which is vitally important to Canada, not only as affecting the consumers but also as an industry employing large numbers of people from one end of the country to the other. The government is very desirous that no injustice and no injury should be done to this industry by governmental action. But we are also anxious that to the facts which stand out in the tariff board report due heed should be given by all concerned. Personally I am convinced, after careful examination of information which, as I say, is not available in the tariff board report itself, that it is far better to deal on a sound basis with what I regard—yes, as a racket; and in that connection I want to make specific exception of the few farmers' companies—there are only very few outside of the combination of ten of which I speak, which have been bought up at fancy prices from their original owners and are now under the control of the holding company to which I have referred; outside of that group there are bona fide farmers' skimming plants in operation. I am convinced that by the action we are taking to-day we shall help materially to see to it that further developments along that line are bona fide and are not wrapped up with the kind of thing which has been going on and which as I say has resulted in the collection already of some $50,000 penalties for defrauding the customs of Canada.

I can say nothing further at the moment. I have a very great volume of information here and can only say once more that the

government approached the matter, as I am convinced the tariff board did, with the idea of doing a constructive piece of work from the point of view of the consumers of these products in Canada, and with a view to the best interests of the industry itself.

The CHAIRMAN: The amendment before the committee, moved by Mr. Douglas, relating to item 267, paragraph (ii) is as follows:

That the duty on crude petroleum lighter than ·8155 specific gravity at 60 degrees Fahrenheit, as listed in item 267 (ii) be removed, and that this item be restored to the free list as heretofore.

Mr. DUNNING: I am trying to look at the bearing of that upon the item.

Mr. BENNETT: It is within the item.

The CHAIRMAN: I am of the opinion that this amendment is out of order. Paragraph 552, page 164 of Beauchesne's Parliamentary Rules and Forms, 1927, states:

Though it is the function of the committee of ways and means to impose rather than to repeal taxes, examples of the repeal of taxation effected in this committee are to be found upon the journals. Proposals for the variation or modification of taxation can therefore be made in the committee; but these proposals must be grafted upon the financial scheme submitted by the government, and must not affect the balance of ways and means voted for the service of the year. Amendments, therefore, can be proposed to substitute another tax, of equivalent amount, for that proposed by the government, as, for instance, a proposal to substitute probate and legacy duty on real property as an alternative for an inhabited house duty, the necessity of new taxation, to that extent, being already declared on behalf of the crown.

And paragraph 556 on page 165:

The house can make amendments which diminish the amount of reduction of taxation, or postpone the day when the reduction takes place, although the amendments may increase to that extent the charges proposed to be levied upon the people.

So long as an existing tax is not increased, any modification of the proposed reduction may be introduced in the committee on the bill, and is regarded as a question, not for increasing the charge upon the people but for determining to what extent such charge shall be reduced.

My ruling therefore is that the amendment is out of order.

Mr. BENNETT: The Chairman having made a ruling I am bound to obey it, but it has very serious consequences, and should be more carefully considered by Mr. Speaker at a later date. It is apparent that in this house from time to time similar resolutions have been moved in committee. From what was said, however, I gather Mr. Chairman is of the opinion that the amendment could properly be moved when the bill is in committee. If that is so, then it is merely a matter of delaying the motion. Perhaps that is the proper course to pursue. While on the resolution it might be improper to move the amendment, certainly when the bill is in committee it is competent to move a resolution to reduce an item or even to make it free. The amendment is:

That the duty on crude petroleum lighter than ·8155 specific gravity at 60 degrees Fahrenheit, as listed in item 267, section (ii), be removed and this item be restored to the free list as heretofore.

Perhaps it might be clearer to say that the word "free" be substituted.

Mr. DUNNING: All that is necessary is to strike out the whole item.

Mr. BENNETT: Yes, but the sense of the amendment is quite apparent. There is authority, I believe, for the view that in committee of the whole house an amendment of this kind may be questionable. In some journals hon. members will find that similar resolutions have been made, but obviously, I submit with deference, when the bill reaches committee stage in the house there can be no doubt as to the right of an hon. member to move an amendment.

Mr. DUNNING: I am inclined to agree that it could be moved at the proper time, but I do not question Mr. Chairman's ruling.

Mr. MAYBANK: When I decided to speak upon this item I did not know that there might be an amendment before the committee. May I say that I regard with considerable dubiety any increase in the tariff such as is proposed. I might have questioned, for a time, as to whether I should have supported such an amendment as has just been ruled out, but after the manner in which the amendment was placed before the committee, if I had any doubts at all the mover of the amendment completely set them at rest by the manner in which he presented his argument. I feel, with the Minister of Finance, that the manner of the hon. gentleman who has just sat down, in presenting arguments against government measures, is not merely ungenerous, but typically ungenerous.

Mr. BENNETT: The hon. member should have been here in the last five years.

Mr. MAYBANK: Of course the objects during the last five years were entirely different objects to shoot at, and probably deserved all the darts that could be thrown at them.

Mr. BENNETT: Quite so; that is a general observation.

Mr. MAYBANK: I am glad that the leader of the opposition has spoken, because I tell him frankly that after the manner in which the country was handled by him in the last five years there would not be enough darts to be thrown at him that could properly stick. There are not enough darts.

Mr. BENNETT: So generous!

Mr. MAYBANK: The country was in a worse condition in the last five years than it was ever in before, or will be again.

Mr. STEWART: Like the rest of the world.

Mr. MacNICOL: Do not be so conclusive.

Mr. MAYBANK: If the right hon. member will undertake to give his reply in due course, well and good. What I am saying to him now, with all the force possible, is said as a result of an interruption which he had no right to make.

Mr. BENNETT: That is generosity!

Mr. MAYBANK: While he has been in this house a long time, and I have been in it only a short time, it may be just as well even at his time of life to learn what it is to be courteous.

Mr. MacNICOL: Is this not all out of order?

Mr. MAYBANK: And I would like to add this—

Mr. BENNETT: This is wholly out of order. If anybody but a supporter of the government did it, a question of order would be raised.

Mr. ELLIOTT (Middlesex): That is out of order.

Mr. BENNETT: The other evening the hon. member directed attention to the fact that the discussion was not relevant, and it happened to affect a member of the government. I now call upon the chair to apply the same principle.

Mr. LAPOINTE (Quebec East): That is out of order; it is a reflection on the chair.

Mr. BENNETT: No. I ask the chairman to apply the same rule.

Mr. LAPOINTE (Quebec East): Is it a reflection on the chair.

The CHAIRMAN: I am of the opinion that the first hon. member to be out of order is the leader of the opposition. I think the hon. member for Winnipeg South Centre, in some of his replies, was out of order, and also the hon. member for Davenport.

Mr. MacNICOL: I just objected to the abuse of the hon. member.

The CHAIRMAN: They are all out of order.

Mr. MAYBANK: If I may proceed I would simply point out that there are some people who desire to slap other persons, but they make certain that the other person's hands are tied and that he cannot slap back. I think probably that is already apparent.

With reference to the amendment and the attack upon the Minister of Finance, may I say that while I do not like the increase in the tariff, no person except one who was trying to be captious could make a statement such as was made by the hon. member, namely that while this was the voice of the government it was the hand of the oil companies. Of course that is nonsense.

Nevertheless I wish to point out the situation with respect to certain cooperative concerns in western Canada. I believe their plants may be described as skimming plants. I do not know whether they have been operating in some improper fashion; of course the confidential information to which the minister has referred is not in my possession. But I know that these cooperative concerns are dear to the heart of the farmer, and he receives great benefit from them. I think it must be admitted that a half cent duty will make a great difference to those cooperative enterprises.

But that is not my point. A couple of years ago the railway companies approached the board of railway commissioners asking for an increase in the freight rates on crude oil of a certain class, that is the class of oil with which we are now dealing. Their proposition was that as the crude oil in question is a little nearer gasoline the freight rate ought to be nearer the rate charged on gasoline. Substantially that was the argument adduced. The answer of the railway commission was in the negative, and the rate sought by the railway companies was not allowed. The reason was that there was not any classification of crude oils. Crude oil was simply crude oil, and the rate applicable was the rate on crude oil.

In the present instance we are making a division or a classification. If the case of the railway companies were being presented to-morrow for the first time, instead of in 1934, the judgment of the railway commission could not be given on the same grounds. In 1934 the commission said that they could not make a division and that crude oil was just crude oil. If the application were made to-morrow the commission could not make the same answer. Therefore I say that in the present instance we are making it possible for the railway companies to ask for an

increase in freight rates and, if we may judge from the past decisions, it is almost certain that the increase will be granted.

Mr. DUNNING: Has my hon. friend read the judgment in detail?

Mr. MAYBANK: Yes, and I think I am giving a fair interpretation of it. Of course I know it is open to other interpretations and that my own interpretation is not necessarily correct. I know that the railway commission is the body which is charged with the duty and is capable of interpreting its own judgments, but I think any person reading the judgment will see the danger to which I am referring, and the danger of my interpretation being right. That is the point. You cannot be certain until you are back inside that court again what interpretation will be put upon it, but there is that danger I have pointed out. If the railways make that application over again and get an increase in freight rates, the cooperative to which I have referred are definitely and finally out of business. That is the serious aspect of the situation. I am gratified by the explanation given by the minister, but I am wondering whether he could not go this much further and give this committee some assurance that we can count upon at least the same railway rate. I think we can stand half a cent on the tariff, but can the minister give us the assurance that we can count upon the same railway rate during this year, within which, as he says, this industry will be under constant observation. It seems to me that if we could be sure of that we would not need to worry, but with this danger hanging over some of these concerns the situation is very serious indeed. It is not simply putting half a cent on the tariff that we have to fear, but whether or not by reason of the division we thus make we may be leading to something which is much worse still. I would be very much happier if the minister could add to what he has already said by giving us some assurance along that line.

Mr. DUNNING: That is a fair question and one which, of course, gives concern. It is difficult to give such an assurance as my hon. friend from Winnipeg South Centre requests, but only for the reason that such matters are by law under the jurisdiction of the board of railway commissioners for Canada, but for the further reason that the rate affected is, of course, an international rate, a combination freight rate, and there are possibilities because of that fact. I would, however, point out that so far from the new tariff item providing greater grounds for distinction from the freight rate point of view, I am of opinion that it provides less ground than the tariff which it is replacing, for the reason that there are three separate crude oil items in the former tariff effective up to May 1, and existing at the time the ruling with which my hon. friend is familiar was given by the board of railway commissioners. That is to say, there was in the former tariff much greater ground in that the crude item was separated into three items with different rates of duty than there is when the crude is contained as it is in the new tariff in a single item. I could, of course, only argue as to what view the board of railway commissioners would be likely to take, but I can repeat again what I said so carefully a little while ago. I propose to ask the tariff board to keep in touch with the developments which follow the changes in duty proposed in the petroleum schedule, and particularly to keep informed as to the price situation and as to the performance of the major companies in rectifying the uneconomic conditions of distribution, and to study the relation of railway and other transportation to the petroleum industry.

My hon. friend can be assured of this, that there will be very keen interest on the part of this government in any application for a change of freight rates in respect of this particular item. I think he does not expect me to go further than that. It is difficult to indicate what action could be taken, but we are keenly interested, and I know that he and others in this committee will hold me responsible one year from now for whatever may have happened in the interval of a nature which does not conform to the statement I have just made.

Mr. PERLEY (Qu'Appelle): It is not very often that I find myself in accord with the hon. member for Moose Jaw (Mr. Ross), but I am inclined to agree very much with what, as a gas expert, he has stated this afternoon.

I was also very much interested in the statement made by the minister. I think every government meets with one difficulty when it comes to deal with tariffs, and that is the possibility of misunderstanding on the part of the consuming public.

Freight rates, as the hon. member for Winnipeg South Centre has said, no doubt enter into this question. As the minister has stated, the change in the tariff under the United States agreement was well received, and the farmers of the west thought they were going to get their gasoline cheaper, which is what they are primarily interested in, but they regret that the increase in the sales tax will practically absorb any reduction that may come about in the price of gasoline as a result of the Canada-United States trade agreement.

There is a feeling prevailing among the farmers of the west that this change in the tariff discriminates against the small refineries, of which there is a large number in Saskatchewan, as we all know. The system of refining by the small refineries is a skimming process, and is not conducive to getting the best results or as complete a separation as the cracking process used by the large refineries. The farmers of the west consider that the large companies have a decided advantage in that respect, and they believe that the cost to the consumer will be increased in the neighbourhood of one cent per gallon; that is the increased cost of gasoline and distillate put out by the small refineries.

But my chief purpose in rising this afternoon was to bring to the attention of the minister one or two protests that I have received from the west. I hold in my hand a resolution which was passed at a meeting of the Orangeville Cooperative Association Limited, which is an organization of the farmers in the district around Moosomin and Rocanville, a very large district. This is a very active organization, the president of which is Herbert C. Watson, and the secretary, George Burden. The resolution passed by this association on May 14, 1936, reads as follows:

Whereas the tariff on crude oil entering Canada from the United States has been changed from the cut-off point of 47·6 gravity to 42·0 A.P.I. gravity, or lighter, we protest this as being very unfair to the small refineries as it will increase the cost of production at least one cent per gallon on gasoline and distillate to them by having to pay this one-half cent per gallon tax. The major companies will still get theirs duty free and it appears like discrimination against the minor ones.

Mr. DUNNING: Could the hon. member tell me from what small refinery that particular farmers' cooperative obtains its supplies?

Mr. PERLEY (Qu'Appelle): I assume it is the refinery in Regina.

Mr. DUNNING: Is my hon. friend certain of that?

Mr. PERLEY (Qu'Appelle): This particular cooperative association operates in the eastern part of the province, and I am sure they get their gasoline and distillate from the refinery in Regina. I know in my own town of Wolseley it is delivered in tanks from that point.

Mr. DUNNING: I thought that as it was so far east it would likely come from Winnipeg.

Mr. PERLEY (Qu'Appelle): No, I think it comes from Regina. I know they all have their tanks delivering through that district from the Regina refinery. I have had several other protests from similar organizations and individual farmers, and I hope due consideration will be given to them and possibly some reduction made in the duty.

Mr. DUNNING: I should like to make it doubly clear that in my remarks this afternoon with regard to practices contrary to law I did not include the cooperative enterprises to which my hon. friend has reference, and particularly the one which we know of officially as the consumers' cooperative refinery at Regina. I did not include that one in the grouping of ten of which I spoke as being controlled by one holding company. However, it is indisputable that the profits are enormous, so much so that had the one-half cent per gallon duty been in operation it would have taken but a small proportion of the profits actually made. I believe the basis of this business is the passing of the profits along to the shareholder consumers.

Mr. BENNETT: Are they included in the importers of crude which really was a mixture of gasoline and crude?

Mr. DUNNING: We do not know of any instance in connection with the consumers' cooperative.

Mr. PERLEY (Qu'Appelle): May I say that the letter accompanying these protests did mention consumers' cooperative at Regina.

Mr. DUNNING: That is the source of supply in that case.

Mr. COLDWELL: Mr. Chairman, if abuses existed in connection with the ten refineries to which the minister has referred, it is unfortunate that this particular method has been adopted to rectify the condition. Those of us from western Canada who are not associated with the party opposite are interested in seeing that nothing is done to impose higher tariffs on the various commodities in use on the prairies and throughout Canada. It seems to me that this method of dealing with an alleged abuse is fundamentally wrong. I think the minister and the government must take some notice of the very widespread feeling that exists that Canada is in the hands of several large oil concerns, one of which, it is frequently stated —I have not the proof for the statement, although I have it on good authority—controls between seventy and eighty per cent of the oil business of the country. The people of Canada who are consumers of gasoline are puzzled by the very conditions which the minister noted a few moments ago in connection with the varying price levels in various parts of the country and the varia-

tions in prices referred to by the hon. member for Moose Jaw (Mr. Ross) in the central prairies and British Columbia and the Atlantic area and Ontario. I was glad to hear the minister say that the criticism which he made does not hold good with regard to the consumers' refineries cooperative association at Regina.

Mr. DUNNING: With respect to evil practices.

Mr. COLDWELL: These cooperative associations for the handling of gas and oil have grown up because the people using petroleum products desired to find some method of getting around this great monopoly. I should have liked to see this difficulty met in another way. The amendment has been ruled out of order, but I believe the minister would be well advised to consider a different method of handling this particular situation. He would be well advised from the point of view of the government, in which I am not particularly interested, and from the point of view of the creation of general harmony in the country in which we live, to reconsider this item carefully. I am quite sure that the fact that the people regard the country as being in the hands of a great petroleum and oil monopoly must of necessity make them draw conclusions which may not be always warranted. Our primary producers should be given the benefit of cheaper fuel oil and gasoline. I think ultimately these great monopolies in oil, farm implements—we are investigating this particular one at this time and are receiving very confusing information—the marketing of grain, and so on, will have to be controlled by the government instead of monopolies indirectly controlling the government through price levels and other means

Item stands.

Progress reported.

At six o'clock the house adjourned, without question put, pursuant to standing order.

---

## Friday, May 22, 1936

The house met at three o'clock.

### RULING OF MR. SPEAKER

WITHDRAWAL BY MEMBER FOR TÉMISCOUATA OF STATEMENT RULED UPON MAY 1

On the orders of the day:

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata): Mr. Speaker, in accordance with the rules of the house I bow to your ruling and withdraw the eight words objected to in my speech of April 27, namely, "before the matter was submitted to his colleagues."

### SMALL PROPERTY OWNERS

PROPOSED STUDY OF THEIR FINANCIAL SITUATION LOOKING TO EQUITABLE TREATMENT

On the orders of the day:

Mr. DAVID SPENCE (Parkdale): I should like to direct a question to the Secretary of State (Mr. Rinfret). I wish to ask whether the government have given consideration to the resolution introduced some time ago by the hon. member for St. Mary (Mr. Deslauriers) with regard to giving some relief to property owners in urban centres. The minister accepted the resolution at that time and said the government would give consideration to the problems of these people who find themselves in difficult circumstances. I know there are many cases of distress; many people are losing their homes because of high taxation and high interest rates. I assume the government have given consideration to this matter, but I should like to know definitely. I am asking this question to-day because I have a letter from a lady in my own riding telling me that her husband has been sick in bed for the last fifteen months, that she is forced to pay seven per cent on her mortgage, and that she is having some difficulty. I think some consideration should be given these people, and I hope something has been done by the government.

Right Hon. W. L. MACKENZIE KING (Prime Minister): The Secretary of State (Mr. Rinfret) is not in his seat at the moment, but I am sure he will take notice of the hon. gentleman's question and reply to it at another sitting.

Mr. SPENCE: I should be glad to have the Prime Minister give us some assurance in the matter.

### CANADIAN PACIFIC RAILWAY

DOCUMENTS RESPECTING $60,000,000 LOAN GUARANTEE BY GOVERNMENT

On the orders of the day:

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata): I should like to ask the Minister of Railways and Canals (Mr. Howe) if it would be possible to table at the next sitting a copy of the letter signed by the then Prime Minister on May 31, 1933, with regard to the $60,000,000 loan to the Canadian Pacific Railway Company, and also the memorandum and order in council passed in that connection during the following fall.

Right Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, as a matter of privilege I desire to say that when I stated that the letter to which reference has been made was shown to my colleagues I was not relying upon my memory. The record of the evidence given before the banking and commerce committee between the 6th of March, 1934, and the 14th of June, 1934, contains a clear statement that the letter was communicated to my colleagues before being written.

Mr. POULIOT: The right hon. gentleman does not deserve a prize for his good memory.

Mr. BENNETT: Mr. Speaker, as a matter of the privileges of the house, has it really got down to this? Has this to be tolerated? I put it to you, Mr. Speaker. I think you have done your duty as well as possible under the circumstances, but I ask again, is this sort of thing to be tolerated?

## CANADIAN NATIONAL RAILWAYS

### APPLICATION OF CANADIAN PACIFIC FOR PROVINCIAL CHARTER FOR ANGLIERS-NORANDA-CHIBOUGAMAU LINE

On the orders of the day:

Mr. RALPH MAYBANK (Winnipeg South Centre): Before the orders of the day are called I wish to ask a question of the Minister of Railways (Mr. Howe). Is the minister aware that the private railway interests which are planning an invasion of the territory now served by Canadian National Railways in northern Quebec are endeavouring to secure public moneys set aside for unemployment relief to carry out their projects? And will the minister state whether funds which come from the dominion treasury can be diverted to such purposes as the creation of facilities which would duplicate railway lines already owned by the dominion?

Hon. C. D. HOWE (Minister of Railways and Canals): In answer to the hon. member's first question, may I say that the government has no knowledge of that kind. In reply to the second question, there is no item in the federal estimates that can be used for the purpose the hon. member states.

## WAYS AND MEANS

### CUSTOMS TARIFF AMENDMENT

The house in committee of ways and means, Mr. Sanderson in the chair.

Customs tariff—267. Crude petroleum not subjected to any other process than natural weathering and removal of foreign matter and water, when imported by oil refiners to be refined in their own factories:—

(i) ·8155 specific gravity (42·0 A.P.I.) or heavier at 60 degrees Fahrenheit: British preferential tariff, free; intermediate tariff, free; general tariff, free.

(ii) Lighter than ·8155 specific gravity (42·0 A.P.I.) at 60 degrees Fahrenheit, per gallon: British preferential tariff, $\frac{1}{8}$ cent; intermediate tariff, $\frac{1}{2}$ cent; general tariff, 1 cent.

Mr. BENNETT: Mr. Chairman, I rise merely to make a few observations with respect to this item because it has been the subject matter of much discussion, and it is well that the circumstances under which the matter was referred to the tariff board should be upon record in Hansard.

It will perhaps be recalled that in October, 1930, the government of the day, having raised the tariff on gasoline and petroleum products, obtained from British American Oil Company, Limited, Canadian Oil Companies Limited, Imperial Oil Limited, and McColl-Frontenac Oil Company Limited an undertaking in the following words:

> The adoption of these recommended revisions will not result in any increase of prices to the retail consumer because of them.

Later the purpose for which that increase was made became apparent, although it was not fully apparent at the time. It was thought by some that it was done for the purpose of raising the price, but so far as that goes it is an illustration of the fact that raising the tariff does not necessarily involve an increase in the price of the product upon which the tariff is imposed. A statement to that effect will be found if one reads carefully the judgment of the tariff board. Beginning at page 183 you have the conclusions of the board upon the reference made by the Minister of Finance. On January 23, 1935, the former Minister of Finance, Mr. Rhodes, referred to the chairman of the tariff board by letter the application that had been received from the cooperative trading associations of Saskatchewan for a downward revision of the rates of customs duties on crude petroleum and its derivatives. Mr. Rhodes, after referring to the application that had been made, said:

> Crude petroleum and its derivatives are enumerated, as you are aware, in a number of items of the tariff schedule comprising roughly a group running from tariff item 267 to tariff item 275 inclusive.
>
> In the absence of a precise description of those particular derivatives of crude oil in which the applicants manifest an interest, I herewith refer to your board as reference No. 84 the group of items above referred to for inquiry and report in accordance with the terms of the Tariff Board Act.

In accordance with the reference then made the board not only received evidence at Ottawa, but also travelled as far west as Van-

couver and heard testimony at various points: at Regina, March 25-27, 1935; at Vancouver, May 20-21; at Calgary, May 27-29; at Saint John, June 17; at Halifax, June 20, and at Ottawa for the fortnight commencing November 19 and ending November 30.

The judgment of the board was delivered this year. The opening paragraph I propose to read, as well as a few other paragraphs, in order that the record may be complete. At page 183, chapter 13, the conclusion states as follows:

The customs duty of 2½ cents per gallon levied on importations of gasoline in September, 1930, was undoubtedly an emergency tariff necessitated by the chaotic conditions in the oil industry in the United States at that time. It was in the nature of a temporary measure pending a more mature consideration of the problem.

Then follows a record of the conditions in the United States during prior and succeeding years, the various movements of prices up and down, and the position at the end of 1934, when—

... the stabilization program enabled the integrated refiner to earn a fair profit. But the fixity and inflexibility of crude oil prices as compared with the changes and reductions in the market value of the products obtained from the crude oil seriously injured the non-integrated refiners.

Then there is a further reference to the conditions in 1934, showing the improvement during that year and indicating that the retail prices of gasoline were higher by about ten per cent, or 1¼ cents per gallon, because of the increased price of crude petroleum.

Unquestionably since the spring of 1935 conditions in the oil industry have definitely improved. Crude oil prices are at a level which would appear to permit the greater part of the current supply of oil to be produced at a profit without offering too much inducement for new drilling.

After reviewing further the conditions in the United States in the mid-continent field and the price structure of crude oil, upon which the production of gasoline depends, the board went into the question of the condition of the Canadian companies and of the profits which they had made, and at page 188 occur these words:

It will be remembered that the two main purposes of tariff protection, as stated by one of the major oil companies and quoted in the introduction of this report are:

(1) To regulate imports to such an extent as to permit Canadian industry to benefit by increased throughput, with the resultant advantages of mass production;

(2) To protect Canadian industry from competition from other countries where conditions of manufacture, distribution or economics differ from Canadian standards or conditions, whether this be due to unusual, unfair, unsound or unlawful practices.

[Mr. Bennett.]

It has already been shown that the chaotic conditions in the United States oil industry involving unusual and unlawful oil practices no longer exist, and that the industry as a whole is in an extremely sound position. The conditions of manufacture are not unlike those in Canada, except in so far as the refineries in many cases have a much larger capacity. But there are a number of refineries with capacities comparable to those in Canada which compete with the larger refineries and which operate in many cases, so far as their supply of crude is concerned, under conditions far less advantageous than do the large Canadian refineries.

There is necessity for protection against a refinery like the Royal Dutch Shell Company's refinery at Curaçao in the Dutch West Indies, which has a capacity of over 200,000 barrels per day, and whose costs are said to be lower than those of any refinery in the United States. Other items to be considered are the higher costs of materials and the higher equipment costs in refining operations. Prior to the Canada-United States treaty, the average rate of duty on refinery machinery was approximately 35 per cent, although this increased costs amounts to only a small fraction of a cent on a gallon of gasoline. Nevertheless the board sees no reason for the continuation of these protective rates on refining equipment which is so extensive and expensive.

The refineries in the prairie provinces pay extremely high freight charges on the crude oil which is transported to the refineries by tank car, but they have a freight advantage of over two cents by reason of the higher freight rates on gasoline.

Climatic factors involving more expensive buildings, the insulation of tankage, and the burying of pipe lines to a depth of six feet below the frost level, warrant a certain measure of protection. The fact that water transportation to Montreal and Toronto is unavailable for five months of the year thus necessitating large crude oil storage, must also be borne in mind as an item requiring protection.

So far as the first purpose of the tariff, as stated by the oil company, is concerned, the increase in the tariff in 1930 had the directly opposite result. Although the share of the market held by Canadian refineries increased approximately 15 per cent in 1934 as compared with 1930, the Canadian industry did not benefit by increased throughput with resultant advantages of mass production. The number of refineries increased from fifteen in 1930 to forty-two in 1934 and the percentage of capacity in operation declined from 72 per cent in 1930 to 55 per cent in 1934.

After dealing with the labour element, which the board states is not important, having regard to the value of the industry—the employment does not amount to more than 5,000 people—they point out that they have rewritten the schedule with a view to modernizing the phraseology in accordance with commercial usage, and deleting words and phrases which have become obsolete. I continue reading:

In the chapter dealing with the tariff history of the items comprising the petroleum schedule, it was pointed out that certain items are substantially the same, so far as wording

is concerned, as they were in 1884. As new products have been developed, additions have been made to existing tariff items, with the result that petroleum products are frequently classified with crude petroleum in the same tariff items, and there are overlappings in the specific gravities named in certain items.

The board then proceed to suggest new tariff items, and deal with them on the basis of the American Petroleum Institute rule, which is an arbitrary rule settled by the institute, and which has been found satisfactory as to specific gravity. After giving that, the question as to where the break should take place becomes important. The board give in exact words the reasons why the break was made at the point it was. I shall have something to say about that presently. To continue:

Under the existing schedule, the bulk of the crude petroleum imported by refiners is imported under tariff item 267a. The number of that tariff item has been altered to tariff item 267(i) and the words "in its natural state" have been deleted on the grounds that if an oil is crude petroleum, it must be in its natural state. The qualifying phrase "not subjected to any other process than natural weathering and removal of foreign matter and water" is added to assist the customs authorities in the administration of the two divisions of tariff item 267. When the crude oil comes from the well, foreign matter and water are usually removed before it enters the pipe line or storage tank.

It will be noted that in the existing tariff item 267a, crude petroleum ·7900 specific gravity (47·6 A.P.I.) or heavier is specified, whereas under the proposed tariff item 267(i), the upper gravity limit is ·8155 specific gravity (42·0 A.P.I.). Under the proposed tariff item 267(ii) crude petroleum lighter than this gravity when imported by refiners carries a rate of ½ cent under the intermediate tariff.

There are several reasons which seem to the board to justify a reduction of the gravity denoting the dividing line of demarcation between dutiable and non-dutiable crude oil for several reasons. In the first place the crude oil which is available in commercial quantities in the United States has an A.P.I. gravity of 40 degrees A.P.I. or less, and prices are posted for every degree change in gravity from, say, 25 degrees A.P.I. to 39·9 degrees A.P.I., and one price is posted for 40 degrees and above. The fact of the matter is that the higher gravity crudes are obtainable in comparatively small quantities, and the prices quoted for these oils are not necessarily based on any fixed ratio to the gravity as in the case of the oils having a gravity below 40 degrees A.P.I. As stated in a previous chapter, the price of crude increases 2 cents per barrel with each increase of 1 degree in the gravity. Fixing the dividing line at 42 degrees A.P.I., gives the refiners a margin of two degrees in gravity.

Secondly, the reduction of the gravity limit of crude petroleum, entitled to free entry for refineries, will prevent certain refiners from importing under the "Free" crude oil tariff item mixtures of gasoline or petroleum tops with crude petroleum. There has been considerable difficulty through mixtures of "tops" and crude oil dutiable under the present tariff item 267b, or crude oil and gasoline being invoiced as crude petroleum in its natural state under tariff item 267a. This can be done very easily when the gravity limit is 47·6 degreees A.P.I. (·7900 specific gravity) as at present. The limiting of free importations to 42 degrees A.P.I. gravity and heavier, would remove the possibility of evading the duty. The wording of the new item will also eliminate the practice of shipping mixtures and billing them for freight purposes as crude petroleum "in its natural state."

The third and most important reason, however, is that crude oils with a gravity above 42 degrees A.P.I. are in reality "freak" crudes which are not available in sufficient quantities to supply the market requirements of gasoline. The normal crudes below 40 degrees A.P.I. require expensive "cracking" equipment to obtain a similar quantity of gasoline to that obtained by a simple skimming process in the case of high-gravity crude oils.

For example, with a crude oil of 47·6 degrees A.P.I. the yield of gasoline by a "straight run" operation is as follows.

| | Specific gravity | A.P.I. gravity |
|---|---|---|
| 65%—"Straight run" gasoline.. | ·7389 | 60·0 |
| 35%—Gas oil, fuel oil and loss. | ·8851 | 28·3 |
| 100%—Crude oil.. .. .. .. .. | ·7900 | 47·6 |

On the other hand, a normal crude oil of 37·0 A.P.I. (·8400 specific gravity) will yield:

| | Specific gravity | A.P.I. gravity |
|---|---|---|
| 30%—"Straight run" gasoline.. | ·7389 | 60·0 |
| 70%—Stock to be cracked (and loss).. .. .. .. .. .. | ·8851 | 28·7 |
| 100%—Crude oil.. .. .. .. .. | ·8400 | 37·0 |

In order to obtain a 65 per cent yield of gasoline from the 37·0 A.P.I. crude oil, refiners must crack the 70 per cent stock in order to obtain the additional 35 per cent of gasoline to supplement the 30 per cent yield by the "straight run" process.

This proposed item covers all crude petroleum not otherwise specified.

I shall not read further, but I have read from the record because I believe it is desirable to point out that the difficulties to which the minister referred were not difficulties which have arisen recently, but were those which had arisen in 1934, and formed part of the cause operating in the mind of the minister who referred the matter to the tariff board. The difficulty did not arise in western Canada, in the first instance; it arose in eastern Canada in connection with a cargo of oil from Russia and subsequently a cargo of oil from Roumania. The oil was invoiced as crude petroleum in its natural state, when as a matter of fact it consisted of so-called crude oil

mixed with gasoline which had been refined in very excellent refineries, as the product clearly indicated, and it was only necessary to put it through a simple process to separate the gasoline content from the crude oil content of the importation.

I recall clearly having asked officials of the Department of National Revenue whether or not there was any method by which we could deal with the matter, and it was then learned for the first time that in some particulars the classification in the tariff had not been changed since 1884, and, as was suggested the other day, there was no method by which we might separate the contents of the so-called crude petroleum for purposes of duty. It became apparent that it was necessary to revise these classifications in order that fraud could not be practised upon the revenue collections by invoicing as crude petroleum a product which was more largely composed of gasoline than of crude petroleum. It was that circumstance which brought the matter first to the attention of the department. Subsequent investigations by the Department of National Revenue resulted in what was indicated by the Minister of Finance. But the cause which brought about the difficulty to which I referred was the importation by water of a petroleum product invoiced as petroleum in its natural state, when as a matter of fact it consisted of crude petroleum mixed with high class gasoline. That was one of the reasons which brought about the necessity for referring the matter to the tariff board.

The other reason was that complaints were made that the duty was enhancing the price. As is pointed out in the judgment of the board, it is quite clear that that could not have been the purpose of the imposition of the duty. The purpose was to deal with the chaotic condition which existed in the United States and to secure at no increase in price the necessary gasoline produced in Canada for Canadian consumption. Side by side with the increase in tariff it will be recalled that a new section was added to the tariff which enabled the governor in council to place upon the free list any commodity that had been increased in price by reason of an increase made in the tariff itself. I shall read from page 191 of the record what the board has to say on this point:

> Having carefully considered the various elements of cost which are higher in Canada than in the competing countries, the board has arrived at a schedule of rates which in its opinion, having regard to the return of normal conditions in the United States industry, will permit the Canadian refining industry to do business in an economic and efficient manner.

These are the words to which I wish to direct particular attention:

> The very wording of the pledge given in 1930 to the government by the major oil companies to the effect that the retail price to the consumer would not be increased because of the customs duties, implied that the companies did not require any more than one cent duty on gasoline because of differences in manufacturing costs here and in the United States. They needed the additional one and a half cents to protect the Canadian market against the chaotic conditions in the petroleum industry of the United States already described. If they required the increased protection on manufacturing costs, they would have had to increase prices to the consumer.

As a matter of fact they kept their pledge; there was no increase in the price of gasoline consequent upon the tariff. Any increases in gasoline prices that took place in this country were increases that marched side by side with the increase on crude oil as set out in the judgment of the board.

I make this statement because the tariff of 1930 was imposed for one purpose, and one only. It accomplished that purpose, and it did not thereby involve any higher price, as the board itself has found. There were no increases in prices by reason of the tariff. Such increases as did take place were increases in the cost of the raw material as reflected by the prices posted from time to time in the area from which the crude comes. The difficulty in this country is that we have not as yet discovered any pools of crude petroleum. We have what is called casinghead gasoline or naphtha, discovered in the Turner valley and produced in extensive quantities. It is a high grade product, so high grade in fact that at times you can fill your tank with it right from the well and drive your engine with it. But the quantity is not sufficient to supply the requirements even of western Canada, although the consumption of gasoline in this country last year as given in this report was, I think, only about 500,000,000 gallons, which of course is relatively a small quantity as compared with United States consumption, especially when we recall that one refinery of the Royal Dutch is capable of producing 200,000 barrels a day.

In my judgment the result of the new tariff proposals will be to protect, so far as this indicates that protection is necessary, the interests of those engaged in refining in this country. The minister referred the other day to the objections that had been made in Montreal and elsewhere with respect to the decrease in duties. I think those who were complaining overlooked one essential fact. The fact was not that the protection was not ample from the point of view of prices, but that it was not ample from the point of view of permitting a possible importation into this

country of gasoline from countries that were willing to sell it at almost any price. Remembering that Russia was not in the hands of private enterprise and that they were offering gasoline for sale in the city of Baltimore at as low, I believe, as three cents a gallon, in a tanker, and having regard to the fact that on a barter basis oil from Roumania was offered in this country at a very low price, what the president of McColl Frontenac Oil Company had in mind, if I can understand what he said, was—

Mr. DUNNING: It was a little difficult to understand.

Mr. BENNETT: Well, I read it in the light of just what this judgment says, that is, not that there was not ample protection with respect to competition on a price basis, but that chaotic conditions in the industry elsewhere might involve the importation into this country of gasoline at an invoice price so low as to make it impossible for the moment to compete with it here. I will give an illustration of what I mean.

Mr. DUNNING: My right hon. friend was very generous in interpreting the comment in that way. I mean he was generous to the man making the comment.

Mr. BENNETT: The reason I read the undertaking to which the McColl Frontenac Oil Company was a party in 1930 was to show that that must have been in the speaker's mind. I have no other reason for saying it, because I have not spoken to anybody about it, but it occurred to me that he gave the undertaking that the price would not be increased by reason of the tariff. Clearly, as was pointed out in the judgment of the board, it was the chaotic condition that prevailed and the sale at what may be called bankrupt prices of gasoline in Canada which made it impossible to carry on the sale of gasoline in this country with any stability unless there was some certainty as to the prices at which gasoline would be imported from countries where chaotic conditions prevailed. I recall its being brought to the attention of the government that between 1930 and 1934, a large concern in the United States, which had a great tank farm filled with gasoline, pledged to the bank, had been unable to meet its obligations; the bank had been compelled to take over the tank farm, and they offered the gasoline at a price that would liquidate their debt, and were content with that. The obvious result of such conditions was that unless we had imposed the duty we did, namely 2½ cents, a serious situation would have developed. To permit that gasoline to come into Canada without restriction would have meant for the moment a lower price to those who bought it. But there were those who were speculating in gasoline who were willing to buy it in tank cars, sold as it was at distress prices by reason of the bankruptcy of the concern owning it, and, by bringing it into Canada and selling it at a lower price, disorganize the price structure in this country.

The board has apparently given a tremendous amount of time and care and attention to this matter. Anyone who has any preconceived prejudices with respect to the oil industry, and will take the trouble to read this judgment, realizes why prices in Canada have varied from time to time. It is because we have no raw material from which we can produce our finished product. We can secure raw material only in three ways: by tank cars, by one pipe line only that comes into Canada, and by water. In the summer time water carriage is available to Montreal and Toronto, and ships do carry tank oil up to the refineries in Toronto and it is there refined, but for five months or more in the year that is not possible; therefore, except via Halifax and Vancouver, where you have water carriage the year round, you must depend entirely upon tank cars. It is stated in this judgment, touching a matter with which we in western Canada have some concern, that the higher freight rate on gasoline arises by reason of the lower rate on wheat; it is a compensatory tariff for the railways by reason of their carrying the wheat at a much lower rate than prevails in the United States for the transportation of similar grains over similar distances.

I read the comment to which the minister referred the other day as indicating that the higher tariff was not required for the purpose of protection in the sense of increasing the price to the producer, but solely for the purpose of preventing distress gasoline from finding a market in this country and thereby disturbing the stability of the whole structure. That was the ground on which the case was put to the government in 1930. It was for that reason that the undertaking was obtained that the oil companies would not increase the price by reason of the tariff, and, as the judgment points out, obviously the increased tariff serves no purpose if any duty higher than the cent a gallon is necessary for the purpose of maintaining the industry in this country. The adequacy of the protection—if you wish to use the word protection—at one cent a gallon is quite clear. The higher rate is for the purpose of protecting the industry

against sporadic inroads of the kind which came about by reason of chaotic conditions in other countries—at that time, in the United States. Anyone who has followed the history of the industry in the United States as set out in this single volume will realize how uncertain those conditions have been, and if you add to that difficulties that have arisen by reason of importations by water from the Black sea and Roumanian fields, you get a truer and clearer appreciation of the situation.

I followed with some degree of interest the statements made by the hon. member for Moose Jaw (Mr. Ross) who has apparently given the matter a great deal of consideration. I have no opinion with respect to the question of freight rates, but I do know it was because of the conditions to which I refer that this matter was referred to the tariff board in the hope that with improved conditions in the industry it would be made apparent that all that was aimed at by the government was not to increase the price of gasoline to the consumer, but to try to secure for him a steady, certain price that would not represent undue profit on the part of the producers. An effort was made to guard against destruction for the moment by spasmodic and sporadic inroads upon the market by those who were not permanent producers, but who were launching their products in the markets of this country for the purpose of raising money—not being a regular industry in that sense—by liquidation of bankrupt concerns, or by countries overseas attempting to realize needed money to meet their economic needs through taking advantage of trade and exchange difficulties.

Mr. BLACKMORE: Such investigation as I have been able to make in connection with this duty on crude oil leads me to express commendation of the Minister of Finance (Mr. Dunning) for the sincere effort he has made to help the consumers in the west. A great many people in the west have signified to me their appreciation of this action. I should like also to commend the minister for the statement he made the other day, which appears on page 3018 of Hansard, that he was directing the tariff board to follow closely the reactions which might follow from the application of this changed tariff. I believe that this is a very sound procedure and I commend the minister heartily for his action in that regard.

There is another matter to which I should like to direct the attention of the minister. In Alberta at the present time are two smaller companies which import gasoline. These companies are laying down gasoline in Calgary at such a price as would seem to indicate that they are perhaps making greater profit than should be made; consequently it might be a good thing if the minister would direct the tariff board to send a representative to Calgary to investigate this matter. I believe that this would be a good starting point. Once more I express my appreciation of the activities of the Minister of Finance in connection with gasoline prices.

Mr. COLDWELL: I should like to say just a word in connection with the point of view expressed the other afternoon by the right hon. leader of the opposition (Mr. Bennett). When speaking to this particular item on Wednesday last I suggested that in my opinion the method of handling the alleged abuses in connection with the importation of light crudes was fundamentally wrong. When the leader of the opposition was expressing his opinion very logically and very ably, I felt that he was emphasizing the point of view I had expressed that day.

Protective tariffs are brought into being in order to protect the price levels of certain classes of producers in Canada, but unfortunately other classes of producers are not protected from the chaotic conditions of the markets outside of Canada. The result is that a product produced in a protected market has to be sold under chaotic conditions abroad. Consequently there is opposition to this method of affording protection from unfair competition by means of protective tariffs. There is also an urge that the government of Canada should reciprocate in another form and assure the primary producers of Canada such prices for their products as will be equivalent to the prices guaranteed by the tariff to those who receive the benefits of it. That is what I intended to develop the other afternoon when six o'clock was called.

I believe the Minister of Finance is adopting an unsound method of dealing with the alleged condition in relation to certain refineries, which he outlined to the committee. The widespread use of this method of dealing with such situations will make the condition as far as the western producers are concerned one of confusion worse confounded. Whatever we may think of other features of the matter, I am thoroughly opposed to increasing the tariff as a means of dealing with this particular situation. May I emphasize again that in the best interests of understandings between all groups of people in the country, it would be wise for the government to consider a method of dealing with this particular matter different from the method proposed by the Minister of Finance at this time.

Mr. DUNNING: While I do not want to obstruct the passing of one of my own items, I should like to say that in my opinion the most important point made the other day in the discussion with respect to crude petroleum had to do not with the tariff but with the fears expressed by several members that advantage would be taken by the railway companies of the new classification in the schedule to introduce higher freight rates on the lighter crudes than prevail in connection with the other crude oils. It will be recalled that the other day I expressed some doubt as to whether that would be possible in the light of a judgment of the ralway commission already of record, especially in view of the fact that in the old petroleum schedule there were at least three separate crude items whereas in this tariff there is only the one item with two minor divisions. It was apparent to all who discussed this matter that any injury which might be done to the so-called small refiners, which I prefer to refer to as skimming plants, would be done not because of this half-cent rate in the intermediate tariff, but because of a possible increase in the freight rate which might be brought about as a result of the divided classification. In that connection I gave certain assurances with respect to the tariff board watching the situation during the coming year. I am in a position today to go a little further. The chairman of the tariff board received this morning a letter from Mr. L. J. Knowles, special traffic representative of the Canadian National Railways, from which I quote in part. Mr. Knowles says:

I have this morning discussed, by telephone, the situation with Mr. R. W. Long, our general freight traffic manager, and I am authorized by him to make the attached statement to you so far as the Canadian National Railways are concerned, and the substance of this statement may be used in any manner that you see fit, publicly or privately.

I had better read this statement because of its immediate interest. It is as follows:

So far as the Canadian National Railways are concerned, there need be no fear whatever that any attempt will be made to increase the freight rates on crude oil of the higher gravities—or even the lower gravities—from the Texas or Oklahoma oil fields to western Canada.

Of course, these rates are joint international rates, and the Canadian National Railways have no authority to speak for the United States lines, but we do not believe that they also will attempt to make any change in the rates on account of the differentation in the duty which has now been made by the Canadian government.

This assurance is given predicated on the understanding that the oil shipped from the Texas and Oklahoma oil fields to western Canada will be genuine crude oil in its natural state, for the following reason:

Last year the United States railways became so concerned about doctored crude oil (which is often a mixture of gasoline, distillate and crude oil) being shipped as crude oil at the low freight rates which were established originally on the heavy crude oil for use in cracking plants, that they determined to make a change in the freight classification which, up to some time last year, designated crude oil as crude oil and nothing else, so that under the freight tariffs it was possible to ship crude oil in its natural state, or crude oil not in its natural state, as crude oil.

With the cooperation of the American Petroleum Institute, and with the approval of the Interstate Commerce Commission, the United States freight classification, which also applies on international shipments, was changed to read as follows:

"Crude oil in its natural state, or crude oil which has been subjected only to natural weathering, settling or treatment for the removal of water and bottom sediment, and not blended with other products."

The very language we are using in the tariff item.

This designation is shown on page 285 of the consolidated freight classification No. 10, which both the United States and the Canadian lines are parties to.

The effect of changing the description as designated, is as follows:

Crude oil in its natural state, or which has only been subjected to natural weathering, and so forth, and not blended with other products, may be forwarded over the United States and the Canadian railways on bills of lading which will authorize the use of the rates on crude oil wherever they may apply in the freight tariffs in which the rates are published, which freight tariffs are subject to the governing clause of the consolidated freight classification No. 10.

Therefore, if the skimming plants in western Canada buy genuine natural crude oil and have it shipped to them from Texas and Oklahoma to western Canada, there will be no question that the rates which the Board of Railway Commissioners authorized in their decision, after an exhaustive investigation, will apply.

If, however, the shippers or receivers want to ship crude oil not in its natural state, that is, crude oil blended with other products, they can honestly describe it as crude oil not in its natural state on the bills of lading, and the rates applied will be the ordinary petroleum rates which apply on gasoline or gasoline mixed with other articles.

Of course, this means that crude oil not in its natural state will pay higher freight rates, but the fact is that this condition has been in effect now for over a year.

For example, crude oil in its natural state from Tulsa, Oklahoma, to Regina will continue to pay a rate of 53½ cents per 100 pounds, which was authorized by the Canadian railway commission in its decision.

If the shipment is offered as crude oil not in its natural state, that is, gasoline distillate and crude oil, it will pay a rate of $1.23 per 100 pounds, as the railway tariffs provide that a mixture of high grade and low grade articles take the highest rate on any article in the mixture.

This is a well known principle of railway rate making, which is recognized by both the Canadian railway commission and the Interstate Commerce Commission.

There is a further matter which should be mentioned in this connection, and that is, if any shipper or any receiver of crude oil not in its natural state, or blended with other products, wilfully and knowingly attempts to ship that particular kind of alleged crude oil as crude oil in its natural state, they will not only be subject to the additional ordinary rate between the proper crude oil rate and the petroleum products' rate, but they will be subject to prosecution under the Interstate Commerce Act or the Canadian Railway Act, or both.

The situation, therefore, as explained, is, so far as the freight rates are concerned, thoroughly cleared up, and no one need have any fear that, so far as the Canadian National Railways are a factor in the situation, there will be an increase in freight rates on crude oil from Texas or Oklahoma to western Canada as long as they are honestly shipping natural crude oil, no matter what the gravity may be.

Mr. DOUGLAS: If the railways can make this distinction between natural crude oil and oil that is not natural, why is it not possible for the customs department to make the same distinction?

Mr. DUNNING: I do not propose to embarrass either the customs officials or the railway officials by giving the information. Suffice it to say that cooperation between them is highly desirable, and the method of cooperation which we are prescribing in adopting the standard of division which we are adopting will facilitate it. My hon. friend will understand that it is rather important not to give information which might facilitate wrongdoing rather than otherwise.

Mr. COLDWELL: If the railways are handling the matter in this way, does not the tariff of half a cent become unnecessary?

Mr. DUNNING: I do not believe so. There must be a break point somewhere for administrative purposes, and that point can be expressed only in the difference in customs duty. There is little more I can say. I appreciate the contribution to the discussion made by the leader of the opposition. I think his historical statements were entirely correct except in one particular. I understood him to say that the importations of spiked crude or faked crude were by water.

Mr. BENNETT: The first shipment to which our attention was directed; the first one.

Mr. DUNNING: Yes; subsequently the shipments came by rail to various parts of western Canada, and we are hoping to have that situation fairly in hand. I cannot think of anything brought up the other day which has not been pretty fully discussed, and I suggest that we might carry the item.

[Mr. Dunning.]

Mr. BENNETT: I notice the classification of the railways is "not blended with other products." Might it not be well when the bill is prepared to add those words so as to make it abundantly clear that we have followed the suggestion of the railways?

Mr. CAMERON (Cape Breton): I was rather impressed at the last sitting by the statement made by the hon. member for Moose Jaw (Mr. Ross) with regard to the price spread in Nova Scotia and British Columbia as contrasted with the price in the central provinces. It would appear, if the figures placed on Hansard are correct, that the companies doing business in Nova Scotia, one of them a refining company, are really charging more at the tank than is justified by the figures submitted in the house.

Mr. DUNNING: I do not know whether my hon. friend was in the chamber subsequently to the remarks of the hon. member for Moose Jaw the other day, but because of what I find in the tariff board's report with respect to the distribution of gasoline, I undertook the other day to have the tariff board watch carefully during the coming year the effects of the changes we are now making, and also the transportation aspect to which I have referred. I used this language the other day:

I propose to ask the tariff board to keep in touch with the developments which follow the changes in duty proposed in the petroleum schedule, and particularly to keep informed as to the price situation and as to the performance of the major companies in rectifying the uneconomic condition of distribution, and to study the relation of railway and other transportation to the petroleum industry.

The Nova Scotia aspect is part of that reference in the report. In this revision we are making a complete and studied adjustment of the petroleum schedules from the tariff standpoint. During the first year that new schedule is in existence to my mind it is important that the body which has made this very admirable report on conditions should be in a position to ask for information, secure it, analyze it and if necessary be able to make a further report on the matter at a future session of parliament in case conditions arise which warrant that action being taken following the experience of the working of the new schedule.

Mr. MacLENNAN: As a result of this duty? As I understand it, the hon. member for Cape Breton North-Victoria (Mr. Cameron) is complaining with regard to the price charged for gasoline in Nova Scotia as compared with the price in central Canada.

Do I gather from the Minister of Finance that any further investigation will be confined to the conditions arising as a result of this duty?

Mr. DUNNING: No, it will not be confined in any way. The language I used was quite general, as to the performance of the major companies in rectifying the uneconomic conditions of distribution, of which this is one. I do not intend to restrict it in any way.

Mr. KINLEY: I understood the minister to say that this tariff item would have no effect on the ordinary importations of crude oil.

Mr. DUNNING: It should not.

Mr. KINLEY: I thought it was only for the purpose of determining what is crude oil for custom purposes by the specific gravity test. Crude oil coming in to the major companies will not be affected?

Mr. DUNNING: Only if they import light crude.

Mr. KINLEY: The specific gravity mentioned in the first paragraph is the specific gravity of ordinary crude oil?

Mr. DUNNING: Two degrees above it.

Mr. KINLEY: That allows for weather conditions, I suppose. In Nova Scotia we import crude oil by water, so that the freight rate problem does not arise. It is refined in Nova Scotia at tidewater and then sold in Montreal for less than it is sold in the province of Nova Scotia. I think there is a splendid opportunity for someone to go into the gasoline business in Nova Scotia, importing the gasoline from the United States and selling it at the pierhead. It seems to me that the competition which has existed in western Canada has had some little effect, because gasoline is being sold there for less than in Nova Scotia, where we do not have the same competition.

Item agreed to.

Customs tariff—267a. Crude petroleum, n.o.p., per gallon: British preferntial tariff, ¼ cent; intermediate tariff, ½ cent; general tariff, 1 cent.

Mr. DUNNING: This is the n.o.p. item.

Item agreed to.

Customs tariff—267b. Petroleum tops; blends of petroleum tops or petroleum products with crude petroleum; all the foregoing ·7249 specific gravity (63·7 A.P.I.) or heavier, at 60 degrees Fahrenheit, when imported by oil refiners to be refined in their own factories, per gallon: British preferential tariff, free; intermediate tariff, 1 cent; general tariff, 2 cents.

Item agreed to.

Customs tariff—268. Natural casinghead, compression or absorption gasoline, lighter than ·6690 specific gravity (80·0 A.P.I.) at 60 degrees Fahrenheit, when imported by refiners of crude petroleum for blending gasoline wholly produced in Canada: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Item agreed to.

Customs tariff—269. Products of petroleum, n.o.p.:—

(i) Lighter than ·8236 specific gravity (40·3 A.P.I.) at 60 degrees Fahrenheit, per gallon: British preferential tariff, ¾ cent; intermediate tariff, 1 cent; general tariff, 2 cents.

(ii) ·8236 specific gravity (40·3 A.P.I.) or heavier at 60 degrees Fahrenheit, per gallon: British preferential tariff, ⅓ cent; intermediate tariff, ½ cent; general tariff, 1 cent.

Item agreed to.

Customs tariff—269a. Petroleum oil known as engine distillate ·8017 specific gravity (45·0 A.P.I.) or heavier at 60 degrees Fahrenheit, per gallon: British preferential tariff, ⅓ cent; intermediate tariff, ½ cent; general tariff, 1 cent.

Mr. DUNNING: I should point out that there is a very considerable reduction on engine distillate, which I think should be acceptable. I am getting some telegrams which appear to indicate confusion of mind and the belief that the tariff on distillate has been increased, whereas under the intermediate tariff it is reduced from 2¼ cents to one half cent.

Mr. KINLEY: I have also had some telegrams expressing fear that the tariff had been raised on the oil we use in ships. Petroleum products are used a great deal to-day to supply the motive power for ships. What we use on the ships, however, is fuel oil, not crude oil, and the fuel oil comes in at the lowest level. It was a matter of concern to me, but I find that there is no change in that regard.

Mr. DUNNING: No.

Mr. KINLEY: Bunker oil has almost an international aspect. When it is a matter of price ships will go a long way to bunker, and I was glad to be assured that there would be no duty on fuel oil.

Mr. COLDWELL: I am wondering whether the communications the minister is receiving with regard to distillate have not their origin in circumstances somewhat different from those mentioned by the minister. I

know that I commended him with regard to this reduction, and as far as I have been able to find out it was pretty generally understood all over western Canada that the duty on distillate was lower. The information some of us have, however, is that where the area is more or less controlled by one of the larger companies it is very difficult indeed for the farmers to get adequate supplies of distillate.

Mr. DUNNING: This will enable it to be imported.

Mr. COLDWELL: We are hoping it will help the situation, but I think possibly some misunderstanding has arisen in that way.

Mr. BENNETT: The government have adopted in its entirety, as far as this schedule is concerned, the report of the tariff board?

Mr. DUNNING: Yes.

Mr. BENNETT: It has been completely adopted; is that correct?

Mr. DUNNING: Yes.

Item agreed to.

Customs tariff—270. Oil when imported by miners or ming companies or concerns to be used in the concentration of ores of metal in their own concentrating establishments, under regulations prescribed by the minister: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Item agreed to.

Customs tariff—271. Lubricating oils composed wholly or in part of petroleum:—
(a) Valued at less than 25 cents per gallon, per gallon: British preferential tariff, 1½ cents; intermediate tariff, 2¼ cents; general tariff, 2½ cents.
(b) N.o.p.: British preferential tariff, 12½ per cent; intermediate tariff, 17½ per cent; general tariff, 20 per cent.

Item agreed to.

Customs tariff—272. Refined petroleum jellies and oils, for toilet, medicinal, edible, or similar purposes: British preferential tariff, 15 per cent; intermediate tariff, 22½ per cent; general tariff, 25 per cent.

Item agreed to.

Customs tariff—272a. Petroleum greases and lubricating greases, n.o.p.: British preferential tariff, 12½ per cent; intermediate tariff, 17½ per cent; general tariff, 20 per cent.

Item agreed to.

Customs tariff—272b. Paraffin wax: British preferential tariff, 15 per cent; intermediate tariff, 22½ per cent; general tariff, 25 per cent.

Item agreed to.

[Mr. Coldwell.]

Customs tariff—273. Asphalt or asphaltum, solid or not: British preferential tariff, free; intermediate tariff, 10 per cent; general tariff, 10 per cent.

Mr. BENNETT: Was this covered by the report?

Mr. DUNNING: Yes.

Item agreed to.

Customs tariff—273a. Asphaltum oil for use only for paving purposes: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Item agreed to.

Customs tariff—274. Petroleum coke: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Item agreed to.

Customs tariff—275. Liquefied petroleum gases for heating, cooking or illuminating purposes, when imported in containers: British preferential tariff, 10 per cent; intermediate tariff, 15 per cent; general tariff, 25 per cent.

Item agreed to.

Customs tariff—284. Drain pipes, sewer pipes and earthenware fittings therefor, chimney linings or vents, chimney tops and inverted blocks glazed or unglazed, n.o.p.: earthenware tiles, n.o.p.: British preferential tariff, 25 per cent; intermediate tariff, 32½ per cent; general tariff, 35 per cent.

Mr. BENNETT: There is no change in this item?

Mr. DUNNING: It includes the n.o.p. item.

Mr. BENNETT: It just adds the not otherwise provided items?

Mr. DUNNING: Yes. That is rendered necessary because of the new item next following.

Item agreed to.

Customs tariff—286. Earthenware and stoneware, viz.:—demijohns, churns or crocks, n.o.p.: British preferential tariff, 25 per cent; intermediate tariff, 30 per cent; general tariff, 35 per cent.

Mr. BENNETT: What is the change there—just adding the n.o.p.?

Mr. DUNNING: Yes, because of the next succeeding item.

Item agreed to.

Customs tariff—288. Earthenware and stoneware, brown or coloured and Rockingham ware, n.o.p.; "C.C." or cream coloured ware, decorated, printed or sponged, n.o.p.; and all earthenware, n.o.p.: British preferential tariff, 25 per cent; intermediate tariff, 35 per cent; general tariff, 35 per cent.

Mr. BENNETT: These rates are exactly the same. What is the change in the item?

Mr. DUNNING: It includes the n.o.p. item. These are all as a result of item 288a. The three preceding changes are all necessary because of the presence of item 288a.

Item agreed to.

Customs tariff—288a. Chemical stoneware composed of a non-absorbent vitrified body specially compounded to resist acids or other corrosive reagents: British preferential tariff, free; intermediate tariff, 35 per cent; general tariff, 35 per cent.

Mr. BENNETT: This puts it on the free list under the British preference and leaves it as it is under the other tariffs?

Mr. DUNNING: This is a new item which accords the privilege of free entry for chemical stoneware under the British preference. These products are not of the type produced in Canada by such plants as that at Medicine Hat, Alberta, and the item is intended to cover earthenware, or so called stoneware of extremely fine quality, sometimes made of semi-porcelain with a very high finish, and of non-absorbent character. It is in wide demand in Canada for laboratory use in universities and research institutions and also in the industrial field. We are making this concession at the request of His Majesty's government in the united kingdom.

Item agreed to.

Customs tariff—288b. Hand forms of porcelain, when imported by manufacturers for use exclusively in the manufacture of rubber gloves in their own factories: British preferential tariff, free; intermediate tariff, 35 per cent; general tariff, 35 per cent.

Item agreed to.

Customs tariff—311a. Blackboards, solid, of slate or of paper composition: British preferential tariff, free; intermediate tariff, 10 per cent; general tariff, 25 per cent.

Mr. BENNETT: What is the point of this item?

Mr. DUNNING: This is a new item to effect a reduction on blackboards whether made of slate or of paper composition. They are not produced in Canada, and it is felt that the reduction to ten per cent under the intermediate and to free under the British preferential is advisable.

Mr. BENNETT: But they are made in Canada, are they not? I am familiar with the blackboard of paper made in Canada. I admit there is practically no slate blackboard made in Canada. Very often the blackboard in the school is painted on the wall itself. There is a paper blackboard sold by a well known firm in Canada.

Mr. DUNNING: That is not covered by this item. These are solid blackboards. We checked it up with the customs.

Mr. BENNETT: The ones I had in mind would roll.

Mr. DUNNING: Yes, thin things. They are not dealt with in this item.

Mr. COLDWELL: Is this not the stuff called hyloplate? That is papier-maché.

Mr. DUNNING: That is not covered by this item.

Mr. BENNETT: What are the importations under this item?

Mr. DUNNING: There has been no record of importations. Even the Canadian Manufacturers' Association do not claim that these articles are made in Canada, and I am sure they would make a claim if even a very few were manufactured.

Mr. MacNICOL: It is a good thing someone is defending the worker.

Item agreed to.

Customs tariff—312a. Asbestos in any form other than crude, and all manufactures thereof, when made from crude asbestos of empire origin, n.o.p.: British preferential tariff, free; intermediate tariff, 22½ per cent; general tariff, 25 per cent.

Mr. BENNETT: That adds "n.o.p.," I take it?

Mr. DUNNING: Yes. It is unchanged in rate.

Item agreed to.

Customs tariff—323. Silvered glass, bevelled or not and framed or not, n.o.p.: British preferential tariff, 22½ per cent; intermediate tariff, 30 per cent; general tariff, 35 per cent.

Mr. DUNNING: Same thing.

Mr. BENNETT: No change in rate.

Item agreed to.

Customs tariff—326a. Manufactures of glass n.o.p.: British preferential tariff, 15 per cent; intermediate tariff, 20 per cent; general tariff, 22½ per cent.

Item agreed to.

Customs tariff—326e. Articles of glass, not plate or sheet, designed to be cut or mounted; articles of glassware, when imported by manufacturers of silverware to be used in receptacles made of or electro-plated with precious metals, in their own factories: British preferential tariff, free; intermediate tariff, 10 per cent; general tariff, 22½ per cent.

Mr. DUNNING: This is a new item, a new wording. It puts together parts of several old items, as will be seen by what has gone before.

It represents the bringing of the description of this class of goods into conformity with modern industrial and commercial descriptions of the commodities dealt with.

Mr. BENNETT: The real fact is that it prevents glass from being classified as silver, which would be a sad blow to some of my friends in the customs department.

Mr. HEAPS: Is it possible for the customs department really to know whether goods of this kind are being imported for the purpose specified in this item? Goods may be imported in such a way that the slightest little addition will be made to take advantage of this item. I can see room for an enormous amount of difficulty and evasion.

Mr. DUNNING: "Articles of glass, not plate or sheet, designed to be cut or mounted" is a wording that has been in the tariff and has been administered in that form since 1906. Then:

... articles of glassware, when imported by manufacturers of silverware to be used in receptacles made of or electro-plated with precious metals, in their own factories.

They are really inserts of glass. Customs officials have had great difficulty in deciding whether some of these articles should be classified as silver or as glass. There will be no further doubt, with this item and another we shall come to shortly.

Mr. HEAPS: A piece of glass may be imported for the purpose specified in this item, and a minimum amount of work done on it to bring it under the description given. It is free from Great Britain, is it not?

Mr. DUNNING: Yes.

Mr. HEAPS: Suppose a piece of glass is imported having a value of $10, and about ten cents' worth of work is put on it in order that advantage may be taken of the free list. There is no specified amount involved here, and I can see a loophole for that kind of thing. It is quite possible that evasion might be practised in a wholesale way by importers of glass bringing these goods into the country, doing a very small amount of work on them—

Mr. DUNNING: They need not do any under this item.

Mr. HEAPS: But it says they are to be used for certain purposes. It does not specify the amount of use.

Mr. DUNNING: I am afraid my hon. friend does not understand the object. The wording "to be used in receptacles made of, or electro-plated with precious metals" is to permit the manufacturer to make a complete article, of which the receptacle is either silver or electro-plated, but the container within it is of glass. A sterling silver butter dish is an excellent illustration. The glass for that butter dish can be imported free under this item, and the glass itself need not be processed in Canada at all. It is not made here, of course, as my hon. friend knows.

Mr. HEAPS: Quite a bit of glass is made in Canada.

Mr. DUNNING: Not of this kind.

Mr. HEAPS: I know a firm out west which was doing some glass cutting.

Mr. DUNNING: There is no record of any manufacturer of this class of commodity in Canada.

Mr. BENNETT: My criticism is that the intermediate is too low.

Mr. DUNNING: If my right hon. friend examines the imports of last year—$57,000 from the United States, $23,000 from Czechoslovakia, $12,000 from the United Kingdom, $11,000 from Belgium, and $8,000 from Japan, —he will see that a number of countries are interested in this class of export to Canada.

Mr. BENNETT: There was a rate of 22½ per cent then.

Mr. DUNNING: But my right hon. friend will notice there is a spread of 12½ per cent between intermediate and general. It was that I had in mind.

Mr. BENNETT: But Czechoslovakia has the intermediate, and so has Japan.

Item agreed to.

Customs tariff—326f. Hollow shapes of glass, moulded, when imported by manufacturers of electric light fixtures to be used in such fixtures manufactured in their own factories: British preferential tariff, free; intermediate tariff, 15 per cent; general tariff, 32½ per cent.

Mr. DUNNING: There is an amendment.

Mr. ILSLEY: I move:

That tariff item 326f contained in resolution No. 5 be amended in wording to read as follows:

Hollow shapes of glass, moulded, when imported to be used by manufacturers of electric light fixtures in the production of such fixtures in their own factories.

Mr. BENNETT: Does that mean bulbs?

Mr. DUNNING: No, it is shapes.

Mr. BENNETT: Although a bulb is a hollow shape of glass. That is covered by another item?

Mr. DUNNING: Yes. It is the sort of thing that fits outside the bulb, not the bulb itself. The change is made in order not to confine the importation privilege to the manufacturers themselves; that is, the article may be imported for them. Representations have been made to the effect that there are many small manufacturers of these commodities who are not doing a large enough business to import their own, but there are institutions importing on their behalf and selling only to them. I think this is the item about which the hon. member for Westmount (Mr. White) spoke to me.

Amendment agreed to.

Item as amended agreed to.

Customs tariff—326g. High thermal shock resisting glassware: British preferential tariff, free; intermediate tariff, 25 per cent; general tariff, 32½ per cent.

Mr. DUNNING: This is an entirely new item, to afford reductions under the British preferential and intermediate tariffs on various types and kinds of glassware capable of resisting a high degree of heat. A good deal of this is ovenware and tableware of glass which is not produced in Canada. His Majesty's government in the united kingdom has asked particularly for a concession in duties with respect to the item, and after careful investigation we believe it is desirable on all accounts to grant it.

Mr. HEAPS: Has the minister any figures to show the importations under the item?

Mr. DUNNING: This is an entirely new item, and there is no data with respect to importations. It was formerly in a general item which is being split up so that in the future we may have information.

Mr. HEAPS: I understand there has been a reduction in the British preferential tariff and an increase in the general tariff.

Mr. BENNETT: The products under 326e and 326g are really in the same position. We do not produce high thermal shock resisting glassware in Canada. We have given a 10 per cent preference in item 326e, but we have given a 25 per cent preference against the United States, where both these items are produced, under item 326g. There is an inconsistency in the intermediate rates as compared with the preferential rates.

Item agreed to.

Customs tariff—326h. Fresnel or dioptric lenses, sections and globes: British preferential tariff, free; intermediate tariff, free; general tariff, 30 per cent.

Mr. HEAPS: In this item the intermediate rate is the same as the British preferential; in other words the British preference is almost wiped out by putting the intermediate on the preferential list.

Mr. DUNNING: Fresnel lenses are known generally as fresnel lights, and are used almost solely in fishing craft. Vessels of twenty tons are required to show lights at night. The hon. member for Queens-Lunenburg (Mr. Kinley) will call my attention to any inaccuracies in what I say with respect to fishing. It has been estimated that possibly two hundred or more fishing boats out of Lunenburg and other Nova Scotia ports are equipped with running lights carrying fresnel lenses. The lenses, sections and globes are specially moulded forms with horizontal ribs. They are not made in Canada, and it is proposed that they be made free under the British preferential and intermediate rates, the reason being that they constitute a consumer's item, and the articles come principally from the United States. It is simply a procedure of making a consumer's item free.

Mr. MacINNIS: I am puzzled when I read the figures in the old item. We find that under item 326h the tariff prior to May 1 stood at 15 per cent and 20 per cent under the British preferential, 30 per cent and 30 per cent under the intermediate and 32½ per cent and 30 per cent under the general. What do these figures mean?

Mr. DUNNING: The reason is that in the present instance we are making a new item dealing with specific commodities, namely fresnel or dioptric lenses, sections and globes. We make the new item because a difficulty in administration has arisen. The old description brought the articles into the country under two or three different classifications. We give the duties in the corresponding columns, and have attempted to give them under the old classification which involved two or three items. In some instances you would find a high duty, and it might be that the importations were infinitesimal in regard thereto. Nevertheless we find that we have to show them.

Mr. STIRLING: Item 326g is a single article.

Mr. DUNNING: Item 326h refers to sections and globes.

Mr. STIRLING: I was referring to the item dealing with "high thermal shock resisting glassware."

Mr. DUNNING: Formerly ovenware was under one item and tableware was under another. In the old tariff the description "high thermal shock resisting glassware" was not used.

Mr. BENNETT: What is the name of the glassware used for baking purposes?

Mr. HEAPS: Pyrex.

Mr. DUNNING: That is a trade name, and for that reason it cannot be used in a tariff schedule. The description "high thermal shock resisting glassware" would cover pyrex.

Item agreed to.

Customs tariff—346a. Zinc slugs or discs, when imported by manufacturers of electric storage batteries, for use exclusively in the manufacture of seamless cups or shells for such batteries, in their own factories: British preferential tariff, free; intermediate tariff, 10 per cent; general tariff, 25 per cent.

Mr. BENNETT: There is a material change in the item. I should think the business in connection with the item would be given to the United States when there is only a ten per cent spread between the British preferential and intermediate rates.

Mr. DUNNING: It comes from there to-day, of course.

Item agreed to.

Customs tariff—362. Articles consisting wholly or in part of sterling or other silverware, n.o.p.; manufactures of gold or silver, n.o.p.: British preferential tariff, 30 per cent; intermediate tariff, 37½ per cent; general tariff, 45 per cent.

Mr. HEAPS: I have always felt that the rates of 30 per cent under the British preferential and 45 per cent under the general tariff are altogether too high. There has been no change in rates, but I am just wondering, in view of the fact that a general reduction is being undertaken by the minister, whether it would not be well to reduce the rate to a point lower than that which has prevailed for a number of years. I notice that in the following item, namely that respecting nickel-plated ware, gilt or electro-plated ware, the rate is 17½ per cent under the British preference. I cannot see why there should be so great a difference between nickel-plated goods and goods such as are described in the item now under discussion. I suggest that the 30 per cent rate is too high a rate of protection to the manufacturers in Canada, for the very obvious reason that the price of silver is fixed on the international markets, and Canadian manufacturers pay no more for the material put into their products than is paid by manufacturers in the United States or other parts of the world, consequently on many occasions the class of silver imported does not come into competition with goods produced in Canada. I am referring particularly to very old silver, which could be classified as antique, and which is allowed free entry into the United States. I have often felt that goods a hundred years old might be placed in a category similar to that adopted in the United States. Has the minister given consideration to reduction of the British preferential rate?

Mr. DUNNING: May I deal with the last part first, namely the advocacy of admitting antiques free.

Mr. HEAPS: Silver antiques.

Mr. DUNNING: Only silver?

Mr. HEAPS: I am referring to only one item.

Mr. DUNNING: I thought the hon. member mentioned pictures.

Mr. HEAPS: No, I referred only to silver.

Mr. DUNNING: And furniture?

Mr. HEAPS: No, just silver.

Mr. DUNNING: It would have helped me very much if the hon. member had gone all the way, because I am resisting requests from people interested in obtaining private collections of various kinds of antiques. As a general rule, when importations of that kind are made for public institutions, refunds are given favourable consideration by the treasury board, on recommendation of the Minister of National Revenue. With regard to item 362 it will be noticed that there is no change with the exception of the addition of "n.o.p." The next item, "nickel-plated ware," formerly was in item 362, and we desired to make a reduction in the duty on nickel-plated ware, gilt or electro-plated ware, and hence extracted it from the precious metals. We are leaving the precious metals item where it is and reducing the duties on nickel or electro-plated ware.

Mr. BARBER: What is the duty under 362c?

Mr. DUNNING: The intermediate rate is 33⅓ per cent. That is subject to a further ten per cent deduction under the French treaty, which would apply to all countries having the most favoured nation relation with Canada.

Mr. HEAPS: Has the minister the figures of importations under this item for the last fiscal year?

Mr. DUNNING: Under the first item, that is the whole of the old item, which comprises both of the items at the bottom of this page, the total importations last year were $91,500.

Mr. HEAPS: Does that include Great Britain and the United States.

Mr. DUNNING: Everything. I can give them by countries if my hon. friend wishes it.

Mr. HEAPS: Oh, no.

Mr. BENNETT: As a matter of fact the tariff is not used for the purposes of price. The general tariff of 45 per cent was really to prevent the dumping into this country of the products of other countries when the price of silver was very low. That is why it was put there originally. The hon. member for Winnipeg North (Mr. Heaps) may be right as to the time having come to examine whether there is not stability in the matter of prices. I once bought in the United States a tankard which cost me 58 per cent of the price of it before I got through with it. I paid 45 per cent duty, and then the sales tax, and the three per cent, and I found that when the whole thing was reckoned up, although I never could quite understand it, it was nearly 58 per cent of the price of the article.

Mr. DUNNING: It was my right hon. friend's own tariff that was in effect?

Mr. BENNETT: Certainly.

Mr. DUNNING: Well, I do not think it was enough. I think he should have paid more.

Mr. BENNETT: I see my hon. friend has continued it. That is the worst of it.

Mr. DUNNING: I am quite sure, however, that the statement of my right hon. friend is correct with regard to permitting this country to become the recipient of silver in any form from other countries, and perhaps I may say, without divulging international confidences, that this matter of silver is not without its difficulties of administration at the present time, from the standpoint both of the United States and of Canada. Anything which would permit silver in any form to come in large volume into this country from another country would, I assure my right hon. friend, create very great difficulties for Canada and for the United States in administering the present international silver agreement, which is responsible for the maintenance of the price of that article. "My hon. friend from Silver" is in his seat, so that I speak with some diffidence in this matter, because I am afraid of opening up a lengthy debate.

Mr. HEAPS: Can the minister give the committee the total amount of goods manufactured in Canada under the two items just referred to

Mr. DUNNING: The production?

Mr. HEAPS: Yes.

Mr. DUNNING: Sterling silver hollowware, $134,000; sterling silver flatware, $175,000. The plated ware production is: hollow electro-plated ware, $1,150,000; flat electro-plated ware, $905,000. That is the Canadian production.

Mr. HEAPS: What were the total importations under both items?

Mr. DUNNING: $91,500 plus $1,330,000.

Item agreed to.

Customs tariff—362c. Nickel-plated ware, gilt or electro-plated ware, n.o.p.: British preferential tariff, 17½ per cent; intermediate tariff, 33⅓ per cent; general tariff, 45 per cent.

Mr. MacNICOL: Why is there so large a reduction of duties under this item? For all I know, what is left may be sufficient, but the reduction is very substantial from what it was. The point is that since this government came in, the duty on importations under this item from the United States has been reduced from 45 per cent to 33⅓ per cent.

Mr. DUNNING: We are satisfied that it should be sufficient.

Mr. MacNICOL: Are the manufacturers satisfied?

Mr. HEAPS: They never are.

Mr. MacNICOL: Well, after all they are the employers of labour in this country. They are not going round with their hat in their hand asking for somebody to put something in it.

Mr. DUNNING: I have not found that the test mentioned by my hon. friend is one that can safely be applied.

Mr. BENNETT: When it suits the hon. gentleman's purposes he uses it, when it doesn't, he does not.

Mr. DUNNING: Just like my hon. friend—

Mr. BENNETT: —would ? Yes.

Mr. MacNICOL: Are the workmen in the nickel-plated factories satisfied?

Mr. DUNNING: I have no reason to think otherwise.

Item agreed to.

Customs tariff—392b. Forgings of steel, rough machined and fitted or not, and handles of steel or of metal alloy in the rough, when imported by manufacturers of surgical and dental instruments for use in the manufacture of such instruments in their own factories: British preferential tariff, free; intermediate tariff, 27½ per cent; general tariff, 30 per cent.

Mr. BENNETT: Does steel for making shafts for golf clubs come in under this item?

Mr. DUNNING: No.

Mr. BENNETT: There are some anomalies in the tariff, and this happens to be one of them.

Mr. DUNNING: These are surgical items.

Mr. BENNETT: This relates to forgings of steel and handles of steel or of metal alloy in the rough, when imported by manufacturers of surgical and dental instruments. It is purely limited to that?

Mr. DUNNING: Yes.

Mr. BENNETT: The duty on the raw steel out of which golf club handles are made is higher than on the golf clubs, and it is a direct incentive to decreasing Canadian employment. One man with a small number of workmen in his particular place of business had to lay off two of them because clubs were brought in cheaper than the steel shaft out of which he was making them. He had been doing quite a little business. It seems to me that that is an item which might be corrected when the bill is before the house, because I do not think the minister desires to tax at a higher rate the shaft out of which the workman makes the club, than the club itself coming from the United States. I know little mistakes of that kind have crept in from time to time, and they should be remedied.

Mr. DUNNING: Perhaps my right hon. friend is not aware of the basic difficulty, which is that it is a conference item. The lowest rate to which it would be possible to bring it would be 25 per cent, in accordance with the British agreement, and I have felt that that is scarcely worth while.

Mr. BENNETT: Well, that would be substantial.

Mr. DUNNING: I have had, as I assume my right hon. friend has had, voluminous and pointed correspondence from the particular party interested.

Mr. BENNETT: Perhaps they are not the same people, because it was a friend who wrote to me about it, saying: Why this anomaly?

Mr. DUNNING: It is, of course, one of these anomalies. I think we might give consideration to the matter when the bill comes down, if my right hon. friend will take no exception to that procedure, bearing in mind that we cannot possibly go below the conference margin.

Mr. BENNETT: I know that.

Mr. DUNNING: The claim made to me was that it would have to come down to 12 and 15 per cent in order to give him a chance to live.

Mr. BENNETT: No. The rate on one is 30 per cent and the other is 35 per cent at the present time.

Mr. DUNNING: Quite. But I am speaking of the representations of the manufacturer concerned.

Mr. BENNETT: I am not familiar with them.

Mr. DUNNING: The representations of the manufacturer concerned were that he had to have a rate of 12 and 15 per cent in order to live. Inasmuch as under the British agreement there was no possibility of giving him less than 25 per cent, I did not take the representations as seriously as otherwise I would have done.

Mr. BENNETT: I would remove the cause for complaint by putting them on a parity, at any rate.

Mr. DUNNING: We can consider that. I will tell the commissioner to bear that in mind when the bill comes in.

Mr. BENNETT: It would remove one cause of complaint. We once had to do that, I remember.

Mr. DUNNING: There is no objection on my part except that it appeared to be inadequate to the alleged requirements of the industry in question.

Item agreed to.

Customs tariff—398a. Pipes and tubes of iron or steel, seamless, cold drawn, plain ends, polished, valued at not less than five cents per pound: British preferential tariff, free; intermediate tariff, 20 per cent; general tariff, 30 per cent.

Mr. MacNICOL: I assume this item relates to tubes used in the manufacture of agricultural implements?

Mr. DUNNING: No.

Mr. MacNICOL: Would not this item cover materials used in the manufacture of agricultural implements?

Mr. DUNNING: These are polished, seamless tubes, not made in Canada at all.

Mr. BENNETT: Is not this handing the business over to the United States? The British preferential is free, but the intermediate rate is only 20 per cent.

Mr. DUNNING: Great Britain paid 15 per cent under the old tariff and this is to increase the spread. Great Britain believes she can compete in this item.

Mr. KINLEY: What type of tubing is it?

Mr. DUNNING: Expensive seamless tubing, cold drawn, which is used mainly for dairy and creamery equipment.

Mr. MacNICOL: I understood from the item that the cold drawn would not be polished.

Mr. DUNNING: They must be polished.

Item agreed to.

Mr. DUNNING: I have a new item, No. 400, and I will ask my colleague to move the necessary amendment.

Mr. ILSLEY: I beg to move:

That schedule A to the customs tariff, as amended by resolution No. 5 of May 1, 1936, be further amended by striking thereout tariff item 400, the enumeration of goods and the rates of duties of customs set opposite thereto, and by inserting the following item, enumeration and rates of duties in said schedule A:—

400. Fittings and couplings of iron or steel, of every description, for iron or steel pipes and tubes; complete parts thereof: British preferential tariff, 20 per cent; intermediate tariff, 27½ per cent; general tariff, 30 per cent.

Mr. DUNNING: This is a new item which puts fittings and couplings together. There has been great difficulty in administering these different items.

Mr. EDWARDS: It is a case of when is a coupling not a fitting.

Mr. DUNNING: My hon. friend has stated it exactly.

Mr. MacNICOL: Would this cover malleable iron?

Mr. DUNNING: If they are made of iron or steel, malleable is merely a condition.

Mr. BENNETT: "Malleable" is a quality of iron. Should not this amendment be made when the bill is in committee, in view of the ruling made by the chair the other day with respect to another amendment?

Mr. DUNNING: It is not a change in rate.

Mr. BENNETT: It will be a new item; there is no item 400 here.

Mr. DUNNING: Perhaps I should give notice.

Mr. BENNETT: This would be sufficient notice for the purpose. The Chair ruled the other day that an amendment to reduce the tariff was not in order when moved to a resolution in committee, that it should be moved on the bill. In order to be consistent, we should follow the same course in this case.

Mr. DUNNING: I am content to have the item considered now and specially referred to in the bill, although I do not quite see the connection between the two incidents. There is no reduction involved here; it is just bringing pipes and couplings into the one item.

Mr. BENNETT: Why is it being done?

Mr. DUNNING: The commissioner of customs tells me that there is continuous difficulty in deciding what is a pipe and what is a fitting.

Mr. BENNETT: Then there is a change.

Mr. DUNNING: All we are doing in the new item 400 is to bring piping and fittings under the one item. We will note it for special reference when the bill is being considered in committee.

Customs tariff—404. (b) For the running gear of other vehicles, n.o.p.: British preferential tariff, 22½ per cent; intermediate tariff, 30 per cent; general tariff, 35 per cent.

Mr. BENNETT: I take it that this is to add the n.o.p.

Mr. DUNNING: On account of the succeeding item.

Item agreed to.

Mr. MacNICOL: In connection with item 409b and the succeeding items down to 409k—

Mr. DUNNING: With the consent of the committee, I should like to take together all the items in the farm implement schedule.

Mr. MacNICOL: That was what I was going to suggest.

Customs tariff—409b. Cultivators, harrows, seed-drills, horse-rakes, horse-hoes, scufflers, manure spreaders, garden seeders, weeders and complete parts of all the foregoing; British preferential tariff, free; intermediate tariff, 7½ per cent; general tariff, 25 per cent.

Customs tariff—409c. Ploughs; farm, field, lawn or garden rollers; soil packers; complete parts of all the foregoing: British preferential tariff, free; intermediate tariff, 7½ per cent; general tariff, 25 per cent.

Customs tariff—409d. Mowing machines, harvesters, either self-binding or without binders, binding attachments, reapers, harvesters in combination with threshing machine separators including the motive power incorporated therein, and complete parts of all the foregoing: British preferential tariff, free; intermediate tariff, 7½ per cent; general tariff, 25 per cent.

Customs tariff—409e. (i) Spraying and dusting machines and attachments therefor, including hand sprayers; apparatus specially designed for sterilizing bulbs; presure testing apparatus for determining maturity of fruit; pruning hooks; pruning shears; animal dehorning instruments; and complete parts of all the foregoing: British preferential tariff, free; intermediate tariff, 7½ per cent; general tariff, 25 per cent.

(ii) Fruit and vegetable grading, washing and wiping machines and combination bagging and weighing machines, and complete parts thereof; machines for topping vegetables, and machines for bunching and/or tying cut flowers, vegetables and nursery stock, and complete parts thereof; egg-graders and complete parts thereof, not including aluminum parts: British preferential tariff, free; intermediate tariff, 5 per cent; general tariff, 10 per cent.

(iii) Complete parts of aluminum for egg-graders: British preferential tariff, free; intermediate tariff, 15 per cent; general tariff, 30 per cent.

Customs tariff—409f. Hay loaders, hay tedders, potato planters, potato diggers, fodder or feed cutters, ensilage cutters, grain crushers and grain or hay grinders for farm purposes only, post hole diggers, snaths, stumping machines and all other agricultural implements or agricultural machinery, n.o.p., and complete parts of all the foregoing: British preferential, free; intermediate tariff, 7½ per cent; general tariff, 25 per cent.

Customs tariff—409g. Incubators for hatching eggs, brooders for rearing young fowl, and complete parts of all the foregoing: British preferential tariff, free; intermediate tariff, 7½ per cent; general tariff, 25 per cent.

Customs tariff—409h. Hay presses and complete parts thereof: British preferential tariff, free; intermediate tariff, 7½ per cent; general tariff, 25 per cent.

Customs tariff—409i. Scythes, sickles or reaping hooks, hay or straw knives, edging knives, hoes, pronged forks, rakes, n.o.p.: British preferential tariff, free; intermediate tariff, 7½ per cent; general tariff, 25 per cent.

Customs tariff—409j. Fanning mills; peaviners; corn husking machines; threshing machine separators, including wind stackers, baggers and self-feeders therefor; complete parts of all the foregoing: British preferential tariff, free; intermediate tariff, 7½ per cent; general tariff, 25 per cent.

Customs tariff—409k. Windmills and complete parts thereof, not including shafting: British preferential tariff, free; intermediate tariff, 7½ per cent; general tariff, 25 per cent.

[Mr. MacNicol.]

Mr. MacNICOL: Mr. Chairman, if I am not in order in what I am about to say, I hope you will tell me so. There is at present a committee investigating the prices of farm implements. Since the budget was brought down I visited a number of farm implement manufacturing plants and in every case I found them greatly distressed over the long list of items, which had been sent to them with a request for certain information in regard thereto. An implement manufacturer told me a few days ago that it would take his staff from four to six months to complete this schedule. He told me they had no staff to do this work and at the same time to carry on their own necessary work; if they are to do this they will have to engage additional help. It seems to me to be a pity that just when these industries are getting out of the depression they should be loaded up with all this extra trouble and expense.

The CHAIRMAN: Is the hon. member referring to a committee of the house?

Mr. MacNICOL: No, to a schedule of items that has been sent out to various implement manufacturers asking for certain information in connection with prices.

Mr. DUNNING: But by a committee of the house.

Mr. HEAPS: Under the direction of the house.

The CHAIRMAN: If the hon. member is referring to a committee of the house which is investigating the prices of farm implements he is entirely out of order, because that committee has not yet made its report.

Mr. MacNICOL: I am not referring to the report. I contend that the government has a sufficient and efficient staff of its own to gather most of this information. This staff should be used rather than worrying the overworked executives of the implement manufacturing companies who are trying to keep their plants going. I think it was unfair for the government first to cut down the duties on agricultural implements to 12½ per cent, then to appoint a committee, and before the committee reported, to make a further cut to 7½ per cent. I was looking up the debate on the budget of 1924, which was so disastrous and ruinous that many industries in this country were wrecked.

Mr. DUNNING: Which one was that?

Mr. MacNICOL: The ruinous and disastrous budget of 1924, before my hon. friend became Minister of Finance.

Mr. DUNNING: Perhaps I might be permitted to point out that following that budget, for some reason, this country and its industries enjoyed a greater measure of prosperity than had ever been known before.

Mr. SPENCE: That was not because of the reduction on farm implements.

Mr. MacNICOL: My conception of prosperity is entirely different from that of many hon. members on the government side. My conception of prosperity is this, that factories should be induced to open up and give men work; but the result of that budget was to close factories and throw men on the labour market of Canada, thus greatly increasing the emigration to the United States of trained Canadians. So that our opinions in that regard are far apart.

I was looking at the budget schedules of 1924, and I notice that the minister, so far as item 409c is concerned, has reduced the duty still lower than it was in that ruinous, disastrous budget of 1924. In 1924 the tariff on ploughs and certain implements was 10 per cent under 409c, but to-day it has been reduced to 7½ per cent. I submit in all fairness that it is about time the business men of this house and those who really wish to do what they can to provide employment were heeded a little more. I have no fault to find with the attitude of any other hon. member, but my background has been with thousands upon thousands of men for many years, and if I speak at all I try to speak on their behalf. If I do not present their views adequately it is because I have not the ability to do so.

Mr. DUNNING: You do very well.

Mr. MacNICOL: In the budget debate of 1924 the present Minister of Trade and Commerce (Mr. Euler) made a very good speech.

Mr. EULER: Thank you.

Mr. MacNICOL: I would thank the minister a lot more if in connection with the present budget he would do what he did in 1924 and encourage others on his side to stand up and support the view he took then in that famous address of his. I wish to quote some of the remarks he made—and curiously enough they appear at page 1924 of the second volume of Hansard of 1924:

> Then there are others like myself who believe that it is in the national interest that we should have diversified industries. I am willing to place agriculture first and to give a prominent place to all the industries that deal with the development of our natural resources; but I will also say that manufacturing must take a very prominent part in the essential industries of Canada if we want to build up a nation with an all-round development such as we ought to have. Such men believe that a tariff may be used to maintain and to encourage industry, even though sometimes it may be, apparently, at some slight sacrifice. They believe that if Canadian workmen are to be paid good wages, that will enable them to live decently and comfortably, in many lines of industry they cannot compete on an even basis with the underpaid workmen of foreign countries.

These noteworthy remarks of the present Minister of Trade and Commerce, who was a private member in 1924, are just as sound to-day as they were at that time. Good wages cannot be paid by the Canadian manufacturer unless he has a substantial sale in his own home market for the things which he produces; and unless he has some means to protect himself against the low wages of some countries and the tremendous output of mass production plants in the great republic to the south. The hon. gentleman continued—I am quoting only what bears on the point I am making:

> There are men—and I am one of them—who believe in a moderate tariff that will maintain Canadian industry. I believe in that as a wise policy. If that makes me a protectionist then I shall have to accept the designation. But I will also say that I do not particularly like the word "protection." In its original meaning it is beneficent and benevolent in its significance, but it has been so abused that it has acquired something of a sinister meaning.

I agree with the description of protection which the hon. gentleman gave on that occasion, and perhaps the word has been abused. I have always been of the opinion that if a tariff, the primary object of which is to provide employment, were carried into effect, there is no reason why the government could not regulate prices. I am not in favour of exploitation; I am not in favour of allowing manufacturers to charge exorbitant prices, and I see no reason why any government cannot protect the consumer, because the purpose of the tariff is not to permit the charging of exorbitant prices but to provide employment for Canadian workmen. I quote once more from the hon. gentleman's remarks:

> I do not favour a prohibitive tariff but I believe in a tariff that will enable legitimate industries to live if they are efficiently conducted. I believe in that sort of tariff also for another reason, namely, that it will give employment to our people.

In my opinion that is the primary purpose of a tariff, to give employment to people. I have gone around a number of implement plants and recently I have seen hundreds of men working in one branch of production or another, and I could not help feeling that it was my duty on every occasion to say a word on their behalf.

The government has at this session given considerable relief to our western farmers in more ways than one, and I support it in what it has been doing to make conditions better in the west. Quite a number of measures have been proposed, all of which I hope will result in better conditions there, because anyone who really knows anything about economics—and practically every member in this house does—knows that if the primary producer is not successful the whole country takes a backward step. If, therefore, the government does anything to improve conditions for the farmers it will have my support.

Going around industry, and with such knowledge as I have of industry, I find, as has been pointed out by other members, that the amount of agricultural equipment produced in this country is very small indeed in comparison with what is produced in the great factories of the United States. A few days ago I was going through the establishment of one large company. I have a thorough knowledge of industry, particularly of anything associated with iron and steel. I saw something that I had not realized before in connection with the agricultural implement industry, and that is the large number of jigs they have to use. I saw several large bins of them, and the estimate of the foreman was that they had 5,000 different jigs in that one plant for use in connection with drilling, pressing, or otherwise working up and getting ready the various items that enter into mowers, binders and all other agricultural equipment. In addition to that, they had a lot of equipment for the pressing of malleable iron. It appears that when the malleable iron parts used in various agricultural implements are received from the malleable iron plants, though perfectly constructed, they are not always true to shape and it is necessary to use dies to press them out. I counted over four thousand dies in one plant, and naturally these extremely costly dies and jigs are two of the reasons why agricultural implements may cost a little more to produce in this country than in the United States. Where an agricultural implement plant in Canada would use a die to press a thousand parts for a thousand implements the American plant would use a similar die to press perhaps fifty times as many, so naturally they can produce for less money. If the government really wants to do something for the farmers, and at the same time not destroy the agricultural implement industry, let it develop some plan whereby equipment, costly dies and jigs, such as that used by manufacturers, not only in the agricultural implement line but in other lines, may be obtained at low cost, just as the government provides seed grain and one thing or another for our farmers.

I have been over a good deal of Ontario recently, and I can see where the steel makers of Owen Sound and other centres, who make bolts, nuts, bar iron and one thing or another for agricultural implement plants, are going to have less work. They cannot have more work when we see paraded in United States newspapers articles stating that shipments of goods of this kind to Canada are increasing. Every thousand additional parts made in Chicago or some other United States city for Canadian farmers means less employment in this country, and so all along the line. I think every member of this house, if he is not thoroughly familiar with what is manufactured in his own riding, should make himself familiar with it, and on behalf of the workmen in his riding rise in his place and oppose the importation of goods similar to those made in his riding. Take the city of Yarmouth, in Nova Scotia. I do not know if the hon. member representing that riding is in the chamber at the moment, but in that city there is, I am informed, an excellent plant which makes the duck and canvas that goes on the binders, one of the best lines of canvas made anywhere. A completed binder brought into this country fully equipped with canvas and everything else just takes away that much work from the Yarmouth plant. If a thousand binders are brought in it means that just that amount of work is taken away from the men employed in that plant. Then, in Montreal they make the tubes and other articles to which I referred a few moments ago. To-day agricultural implement firms in Canada are buying a large part of their requirements from this Montreal plant, which I believe is called the Canadian Tube and Iron Company, or some such name. Every hundred men engaged in Pittsburgh making that line of material for binders to be shipped to this country will displace a hundred men in Montreal or some other Canadian city. I cannot see anything else to it, and so it goes with all these items.

In the town of St. Mary's, Ontario, a very fine little town, at one time they made a large line of agricultural machinery. They are not now making a full line but they are making a number of small lines of excellent material. That company formerly made binders, mowers, side delivery rakes of a very high grade, hay tedders, hay loaders and so on, but they have had to discontinue manufacturing many of these articles and whether or not they have as many men engaged to-day as they had ten years ago I do

not know. Certainly when they had to discontinue many lines the number of men employed must have been reduced. The same applies to plough makers in Woodstock Brantford, Aurora, Owen Sound and many other cities and towns in Canada. I know very well that nothing I can say can alter any of these items; the government appear determined to crucify this industry to a degree. I do not say that they are doing so intentionally or that their motives are not sincere. I will admit that they are sincere, but nevertheless the jobs of a great many workmen in this country are in jeopardy as a result of these nine or ten items pertaining to agricultural machinery.

I should like to see some government reverse this policy and do as the late President Roosevelt did when he introduced the tinplate industry into the United States. This is the way in which the story has been told to me; I cannot vouch for it, but I assume it is true. He sent for various steel and tin makers and asked them if they could roll steel to the gauge of tinplate. They said that they could. Then he asked if they could provide enough tinplate and galvanized iron to supply the market in the United States. They said that they could not, without a tariff. So he asked, according to the story, "What tariff do you want to enable you to manufacture tinplate and galvanized iron in the United States in order to take care of this market"? They told him how much they wanted. I do not recall just what the rate was, but the story is that he said, "Well, we will advance that higher. We are going to try to have American workmen supply the tinplate and galvanized iron used in this republic, but we will not allow you to exploit the American buyer." In that way it is said that the American tinplate and galvanized iron business became established.

I do not see any reason why we cannot prevent exploitation, nor can I see why the jobs of these fine, solid machinists, blacksmiths and fitters of one kind or another engaged in the production of the hundreds of lines of material that enter into the construction of agricultural implements should be jeopardized in this country merely because it is said that agricultural implements are too high in price. It is an easy matter to regulate the prices of agricultural implements without crucifying the industry, but it seems to me that is what this tariff will do. In order to encourage hon. members representing ridings in which there are substantial plants to take a stand on this issue, I want to read some newspaper comments on a speech delivered by the present Minister of Trade and Commerce (Mr. Euler) in connection with the budget of 1924. I quote from the Toronto Mail and Empire of May 10, 1924:

Mr. Euler: I say that is a policy which I cannot support—

Mark you, Mr. Chairman, the present tariff lowers the duties even further than was proposed in 1924 with regard to ploughs and the other machinery included under item 409c.

I say that is a policy which I cannot support, if the words of the Minister of the Interior reflect the considered policy of the government, and it is a policy against which I must protest in the interests of my constituents—

Mr. EULER: May I interrupt? I am not anxious to go into ancient history, twelve years ago, but will my hon. friend state what he is reading from, or what the reference is?

Mr. MacNICOL: It relates to the budget of 1924.

Mr. BENNETT: The death-knell of protection.

Mr. MacNICOL: Yes, I assume that is what it was.

Mr. EULER: Well, my hon. friend should know, because that is important.

Mr. MacNICOL: This present tariff is on the way to be the death-knell of industry.

—it is a policy against which I must protest in the interests of my constituents.

I would like to see other hon. members rise in their places and protest in the interests of their constituents. The hon. member for Trinity (Mr. Plaxton) should be on his feet, representing the large number of men who work for the Massey-Harris company. The minister continues:

I cannot make that protest either consistently or effectively by speaking one way and voting the other, and for that reason I propose to vote against the budget.

Continuing, the minister said:

Party allegiance should be something apart from tariffs, Mr. Euler believed. "If my views on the tariff do not let me call myself a Liberal, my lifelong conception of Liberalism has been incorrect."

I congratulate the minister on having said those words, and I should like to see other hon. members on the government side, representing not less than one hundred to one hundred and fifty substantial companies of this country whose businesses are going to be seriously affected by the lowering of these agricultural implement duties, rise in their places and use those noble words that the present minister used in 1924.

I want to say a word further about the workmen. A movement is commencing at present

through which I believe that workmen in the plants in Ontario and elsewhere will establish a defence of their jobs for themselves. There are so few who stand up and defend the worker and his job, which has been seriously affected by so many asking for the lowering of duties. I have in my hand a placard, addressed to the workers in the plants. I hope that before this year is out every industrial institution in Canada will plaster its shops from one end to the other with information to enable its workmen to do something on their behalf to understand the tariff. This placard reads:

Your Business

Your job depends on Canadian tariff rates preventing unfair competition from workers in other countries.

These tariff rates are set by the members of the dominion parliament at Ottawa.

Your member of parliament should know what the textile tariff means to you.

He is your personal representative. He votes for you when the tariff rates are decided.

Mr. DUNNING: Does my hon. friend approve that?

Mr. MacNICOL: Approve what?

Mr. DUNNING: That sort of thing?

Mr. MacNICOL: I approve workmen becoming conversant with what provides a job for them, and the defence of their jobs. I realize that if 20,000 workmen in the United States make goods for shipment into Canada which are now made and can be made in Canada, that displaces 20,000 workmen in Canada.

Mr. DUNNING: That, of course, is not at all the question I asked.

Mr. MacNICOL: And I approve the average workman becoming conversant with any information that will enable him to have a knowledge of what enables an employer to give him a job.

Mr. DUNNING: Will my hon. friend be good enough to tell me what institution posts that kind of notice in its plants, and will he place the whole notice on Hansard?

Mr. MacNICOL: Yes, I will place this notice on Hansard.

Mr. DUNNING: And the name of the concern?

Mr. MacNICOL: The name of the concern is not on it.

Mr. HEAPS: The organization that put it out?

[Mr. MacNicol.]

Mr. MacNICOL: I do not know the organization that put it out. But I do not see anything wrong. Why should not the workmen of this country become conversant with the benefits of the tariff? It is high time they did.

Mr. DUNNING: That is not making them conversant with it.

Mr. MacNICOL: Of course it makes them conversant with it, by directing their attention to the study of the tariff. I do not see anything wrong with that. I am not in accord with anything that gives any further trouble to the government in these trying times; on the other hand I am in favour of whatever will provide employment. My life has been different from that of many hon. members. I have associated with thousands of workmen for many years. I have seen many men laid off and taken on, and I have always made up my mind that I would raise my voice in support of anything that would provide more employment. Agricultural implements are only one line; I hope they can continue in existence, but if they cannot, I shall be sorry. The government know what happened to many plants in 1924. Someone said something about the good times that came after the tariff of 1924. I know that in September, 1924, a large delegation, manufacturers from all over, Toronto and elsewhere, came to Ottawa to attend what was called an unemployment conference. I do not remember who called it but they met here to try to suggest ways and means to provide employment.

Mr. REID: Where was my hon. friend last year when the industrial and international relations committee was sitting and I wanted Canadians hired on our ships?

Mr. MacNICOL: Well, I have been in the house right along: I am one who is generally in his seat.

Mr. REID: I have missed the hon. member out of his seat many times.

Mr. MacNICOL: The hon. member is out of order; he is talking about a committee I was on and a report which I supported, as I assume the hon. member did.

Mr. REID: The hon. member did not support it.

Mr. MacNICOL: In closing, I want to tell the minister that I do not question his sincerity in the action he is seeking to take; he is perhaps doing what appears to him best. On the other hand I hope he will grant my

sincerity from my background of long association with workers and my firm conviction that I should on all occasions do what I can to defend the employment of workers. I do know this, that when a plant has a thousand men working there are a thousand contented families. I was associated myself with a plant that formerly had nine hundred men on its payroll, and to-day, not as a result of anything the government did, that same plant has, I believe, about one hundred men. That is not a line of goods which has been affected by the tariff; this situation is due to conditions of the times, perhaps.

Mr. DUNNING: We are not guilty of that one?

Mr. MacNICOL: No; the minister will admit I have given him credit for many things, and I hope that whenever I can say a good word for what anyone is doing, irrespective of party, I shall do so. On the other hand what I have said is based upon my experience and observation of a number of agricultural implement plants, seeing what they are up against; they are trying to keep going but they fear that they may not be able to do so.

Mr. GOLDING: I have always been interested in hearing the hon. member for Davenport (Mr. MacNicol) discuss the different questions that come up in connection with our tariffs, and the interests of the workingmen. I suggest every hon. member should be interested in the working man and the agriculturist. Representing an agricultural constituency, I am aware of the situation in which the farmers find themselves. When one goes among these people it is most discouraging to find that they are scarcely able to make ends meet, to say nothing about being able to enjoy the comforts of modern conveniences, to which they are certainly entitled.

When the government take action of this kind in connection with the implement industry I am quite sure they have no intention of trying to injure the workman. They are attempting to better his position and also that of the agriculturist, who is engaged in the greatest industry in Canada to-day. If the hon. member who has just spoken is so concerned about the workman—and I am going to confine my remarks to the agricultural industry—then I think he ought to read the records of what happened after 1924, when the tariff was reduced. I am quite satisfied that if the reduction in tariff made at that time had thrown thousands of people out of work, as we are asked to believe, the government at this time would not be putting the duty back to where it was in 1930.

Mr. MASSEY: Would the hon. member permit an interruption.

Mr. GOLDING: Just a minute; I do not often speak in the house. The hon. member has said that we ought to have a reversal of the present policy. We had that in 1930, when the tariffs on these commodities were raised materially. We had an increase in the tariff on binders amounting to 300 per cent and in that on seed drills amounting to 233 per cent. We could go through a long list of items, showing a complete reversal of policy in 1930. I take it that the hon. member is concerned about the workmen, as I am. I have a keen interest because I spent most of my life in the industry. The report of the price spreads commission shows that the average number employed in the implement manufacturing industry for the years 1931, 1932 and 1933 was 3,878, whereas in the two years preceding 1931 the figure stood at 9,068. The average number employed in the nine full years between 1922 and 1930, was 8,780. According to the bureau of statistics in the years 1931, 1932, 1933 and 1934, the average number was 3,500. The average wages and salaries paid in the nine years between 1922 and 1930 is given as $1,206, while the average in the years 1931 to 1934 stood at $1,010. The average production for the nine years I have indicated is given as $31,723,000, and that for the latter period stood at only $7,457,000. In 1929 there were sixty-two plants operating and in 1934 only thirty-five.

The hon. member for Greenwood (Mr. Massey), in speaking a short time ago, indicated that 18,000 jobs were in jeopardy. To-day the hon. member for Davenport has asked why so many jobs should be jeopardized. I should like to place on record figures given to the price spreads commission showing the numbers employed in the industry. The hon. member for Greenwood said, "I say to-day that the jobs of 18,000 men are at stake. Yes, and how many more jobs are there at stake in industries which contribute raw material?" I take it for granted from the hon. member's statement that there are 18,000 jobs in the industry itself. The report of the price spreads commission indicates that in 1929 the total number employed in four of the largest agricultural implement concerns was 10,408, and in the ten smaller concerns, the sections of the industry which represents over ninety per cent of the production, 708 were employed, making a total for that year of 11,106. In 1933 there were 3,880 employed. When we refer to the number employed, what do we mean? First of all, we have the factory workers, and we find that in 1929, there were 7,276 employed, whereas in 1933 there were

only 1,989. In 1929 there were 172 employed in factory administration, and in 1935 there were 105. In 1929 there were 1,201 clerks employed, and in 1933 only 515. In 1929 the figure for selling, or for agents, is shown as 1,709·5 and in 1933, it is 832·6.

The table is interesting from the viewpoint of the worker. Hon. members who have spoken have shown great concern for the worker, and may I say that he is the man in whom I am interested. Further than that, I have a great interest in the farmer who, under present conditions, is scarcely able to exist. We find that in 1929 in the four large industries executives salaries averaged $7,394, and wages to workers averaged $1,219. What was the situation in 1933? In that year the executives still had the high average of $6,512, but the average for the factory worker, the man who produced the goods, was reduced to $837. If we take the figures indicating what happened between 1924 and 1930 and those for the period from 1930 to the time the figures were given to the price spreads commission we must agree that during the previous years the worker was in a far better condition than he was when a duty of twenty-five per cent existed. That must be the conclusion, if we are going to attribute it all to government interference with tariffs.

I submit that the figures are all against those who contend that the worker is going to lose his job if the tariffs on implements are reduced. So far as my personal experience is concerned, the best years the country had were when tariffs on implements were the lowest, and the best years the farmers had were when tariffs were the lowest. I am sure that the chief concern of the government is to help the worker and also to help the agriculturist. My hon. friend referred to what happened in 1924. He said tariffs were reduced and disastrous results followed. What are the figures? We find that, according to the bureau of statistics, in 1924 there were 6,700 employed in the implement business; 1925, 7,559; 1926, 10,091; 1927, 11,011; 1928, 10,867; 1929, 11,408; 1930, 7,405. Then we come to the time when the tariff was increased. If that was calculated to help the situation it should be reflected in the figures.

Mr. MacNICOL: Will the hon. gentleman repeat how many were employed in 1930, the first year of the depression?

Mr. GOLDING: There were 7,405.

Mr. MacNICOL: That was the first year of the depression. The hon. gentleman seems to forget all about the depression.

[Mr. Golding.]

Mr. GOLDING: I am not forgetting about the depression. I have been in this business for thirty-five years. In 1931 the number employed was 4,471; 1932, 2,758; 1933, 3,039; and 1934, 3,706.

Mr. MacNICOL: Improving.

Mr. GOLDING: That was the situation with reference to the employees. I want to be fair, but if the tariff itself was to be the means of providing these men with work, as was promised in 1930, it absolutely failed, and if a reduction in the tariff was calculated to throw men out of work, as we were told in 1921, the figures show that the very opposite happened. I remember the debates and discussions that took place in 1921 as to what would happen if these tariffs were reduced. But these figures tell the story better than any discussion on the platform or anywhere else.

Mr. MacNICOL: The hon. member recalls what happened in the election of 1925, I suppose?

An hon. MEMBER: 1935?

Mr. MacNICOL: In 1925.

Mr. GOLDING: I am not concerned with what happened in any election. I am citing these figures.

Mr. SPENCE: Oh, give us some figures of your own.

Mr. GOLDING: I could do that. Let us see what happened to capital. In 1924 the capital invested in the industry was, in round figures, $82,000,000; 1925, $81,000,000; 1926, $78,000,000; 1927, $88,000,000; 1928, $91,000,000; 1929, $103,000,000; 1930, $98,000,000. In 1934 it was $55,000,000. Let us consider the amount of wages paid after these "disastrous" tariffs were brought into effect in 1924. In that year—I am giving round figures—salaries and wages were $8,000,000; 1925, $9,000,000; 1926, $12,000,000; 1927, $13,000,000; 1928, $13,000,000; 1929, $14,000,000; 1930, $9,000,000; 1931, $4,000,000; 1932, $3,000,000; 1933, $3,000,000; 1934, $3,000,000. If anybody, in face of these figures, can stampede the industrial worker, he can do more than I would ever attempt to do or than I think anybody should attempt to do.

Mr. COLDWELL: I think one should provide some antidote to the speech of the hon. member for Davenport (Mr. MacNicol). In my opinion the reductions that have been made in the tariffs on farm implements are to be welcomed and the government is to be commended for having made them. I should

like to have seen implements put on the free list, and the hon. member for Davenport provided me on one occasion with what is perhaps the best argument which has yet been made in the house for such a proposal, in stating that the cost of a group of five implements at Hallock, Minnesota, was higher than the cost of the same implements at Emerson, Manitoba.

We have heard a great deal about the workers. The hon. gentleman who has just taken his seat (Mr. Golding) gave some very interesting figures regarding the salaries and wages of workers during a number of years. When I was a boy I was brought up in an atmosphere of political discussion, and the particular subject that was keenly debated in my boyhood days was Mr. Chamberlain's tariff reform proposals. I well remember it used to be said that we need not worry about a tariff because the foreigner paid the tax. Well, then I bought a ticket to Canada, and I found that in this protected country the people of Canada paid the tax. But here I encountered an entirely different argument, namely that it was necessary to have the tariff to foster our infant industries. That was twenty-six years ago, and apparently the argument still persists that we should have the tariff to protect industries which are infants and need some protection; that is particularly true, of course, of the agricultural implement industry. Yet we find that the industry is one of the largest in Canada and that a considerable percentage of its output is sold in foreign markets where it has to compete with that of other countries. Consequently, it seems to me, the industry should have reached the adult stage by this time and we might quite safely leave it alone.

Though I should like to have seen implements placed on the free list, I am not going to make a motion to that effect, as I did on another occasion, because I believe that the government is to be commended for having gone so far as to reduce the duty by 17½ per cent in one year, and that we should see exactly what the reaction will be in the next few months. I should like to point out that only industries which are well organized and have reached the stage of trustification can possibly maintain prices at a high level in the face of decreased protection, and it seems to me that implement companies have made a very serious mistake, from their point of view, in increasing the prices of their products when the tariff protection was reduced. I think, if this continues, the government should take the appropriate steps to see to it that advantage in this way is not taken of the present situation.

I do not propose to say a great deal more about the matter except that I know the figures given a few moments ago by the hon. member who immediately preceded me are correct, because I looked them up. I have noted one point. Whereas the managerial end of the industry maintained the salaries that were being paid, the ordinary, common run of the workers took very substantial cuts. I worked this out in connection with the four largest companies, and I find that fifty managerial employees received 2·57 per cent of the total wage bill in 1929 and 7·51 per cent in 1934. In the ten smaller companies the rate was something like nine per cent in 1929 and fifteen per cent in 1933.

Mr. DUNNING: Did that come about by increases?

Mr. COLDWELL: No; there were decreases.

Mr. DUNNING: Uneven decreases?

Mr. COLDWELL: Yes; the cuts fell more heavily upon the lower paid people. This fact was brought out by the price spreads inquiry: The more highly protected an industry, the worse the conditions in it. I do not say that this is true of the agricultural implement industry; I make that as a general statement. This has been found to be so in the textile industry. In connection with the discussion on crude oil I stated that the producers of western Canada had to buy in a protected market while they had to sell in markets where there was no protection. The producers of western Canada are not in a position to buy implements to-day. A short time ago the hon. member for Winnipeg North (Mr. Heaps) said that we should let antiques come in free. If things go on as they have been going, many of these producers in western Canada will have to import antique implements in order to obtain repair parts, and I suggest that they be allowed to come in duty free. I just rose to say we in this corner are glad to see the reductions and we hope they will be reflected in the price levels to our producers.

Mr. MASSEY: I had the privilege of speaking in this committee on May 5 in defence of the workers engaged in the farm implement industry. I spoke out of a deep sincerity of purpose and with some knowledge of the facts. Since that date I have listened to many discussions, both in and out of this chamber, relative to the points covered in my remarks. I have the highest regard for the integrity, honesty and well-meaning purpose

of those who speak in this chamber, and that which I have to say now is said out of that regard.

The hon. member for Huron-Perth (Mr. Golding) referred a moment ago to several matters in connection with the implement industry which to him appeared to be salient and important. He had perused some figures given him by the bureau of statistics, and he referred to other figures as well that told a story which he interpreted in the way he disclosed this afternoon. Again I say that I do not for a moment doubt the sincerity of purpose behind that interpretation and I know my hon. friend will not misunderstand me when I say that figures on paper, taken without knowledge of the facts behind them, are insidiously dangerous and may be terribly misleading. I heard the hon. member refer to 1924; I heard him refer to 1929; I heard him refer to 1930, and right up to and through 1936, without a single word of reference to world conditions. I heard him refer to implements in 1924 and to implements in 1936 as if he were speaking of the same implements. I repeat that it is very misleading merely to consider figures on paper without a knowledge of the facts back of those figures. There were low duties on farm implements in 1924, in 1926, and up to 1929; it is true that the business of Canadian companies increased, but the hon. member made no mention of the reduction in the duties on raw materials going into those implements.

Mr. GOLDING: I am in favour of that too.

Mr. MASSEY: The hon. member made no mention of the reduction in the duties on raw materials; he made no reference to the fact that a preference in duty was given to the manufacturers of farm implements by way of a reduction from 37½ per cent to six per cent as far as their raw materials were concerned. When the hon. member was referring to the increase in the business of Canadian companies, did he mention the increase in the business of other companies? Did he mention that that increase was out of all proportion to the increase in business of Canadian companies? It is very simple to attempt to defend an argument with figures on paper without reference to the facts. What percentage of increase in farm implement business did the Canadian companies enjoy compared with what was enjoyed by other companies?

Why did the hon. member challenge the figure of 18,000 which I gave as the total number of men engaged in the implement industry? I propound again that that figure is absolutely accurate, even in the face of the figures from the bureau of statistics quoted by the hon. member. These figures, I assume, do not include agents, agents' helpers and so on. Let me take a hypothetical case. Here are two men who are depending for their livelihood upon their jobs. Here is one man depending for his livelihood upon his job. Is not the principle involved in taking away the jobs of the two men exactly the same as that involved in taking away the job of the one man? What matter if it is 18,000 or 9,000, the principle is the same, so why debate the exact dimensions of the figure?

One cannot help being alarmed when he considers that this is an old and established industry, made up of various companies within it, which has made a magnificent contribution towards the development of this country but which is threatened to-day without a chance being given to it to make representations on its own behalf. I am not standing in my place here this afternoon for the purpose of taking up the time of this committee, for the purpose of objecting to what that one said or what this one said, or for the purpose of having some words of mine recorded on Hansard; I am here with all the earnestness of which I am capable to urge upon the government, as I did before, the fact that there are those who regard it as hopelessly unfair when the criminal is apprehended and sentenced before his trial.

Mr. KINLEY: That would not matter if he is a criminal.

Mr. MASSEY: Would you take the law into your own hands and say that he should be sentenced before his trial?

Hon. members were no doubt interested in hearing from the hon. member for Rosetown-Biggar the respective percentages of the earnings enjoyed by those who work with their head and their hands and those who work with their heads. The hon. member for Rosetown-Biggar (Mr. Coldwell) compared from memory the percentage of salaries paid compared with the total moneys paid by the implement industry in 1929, I believe, and in 1934. In 1929, it was two per cent, was it not?

Mr. COLDWELL: 2·5.

Mr. MASSEY: Compared with—

Mr. COLDWELL: 7·51.

Mr. MASSEY: —in 1934. I am not here to speak for the man who is an executive alone, not by any means. I worked up from the factory to an executive position in the implement industry and I felt that my salary

was far too low; in fact I knew it. There are those who hold positions of importance in the implement industry who, in my estimation, may at times have received salaries higher than should have been paid. I felt so at the time and feel so to-day. But I submit that it is unfair to the industry as a whole to take the percentage of salaries of executives in one year and to set that percentage beside the percentage of salaries paid in a year of deep depression, when naturally the number of those who are in factories and in other fields where wages are paid is reduced. In one company alone of which I know, $5,000,000 of so-called head office expense and other savings along that line was taken out per annum, in times of depression when hundreds are employed instead of thousands. The executives to whose salaries reference has been made this afternoon by the hon. member for Rosetown-Biggar have had reductions of ten, twenty, forty and perhaps fifty per cent, but the men are still there; for someone must conduct the executive responsibility of the business.

The question of foreign markets for the implement industry as a whole has been a most difficult one. Questions of exchange, questions of this, that and the other have come into the whole picture, making it necessary for some companies, if they wish to maintain their business in foreign countries, to change their method of distribution and perhaps of manufacture. Then the question is asked in this chamber: Why is it that if a Canadian company cannot compete in its own country it can compete in a foreign country? I had hoped that my attempt to make this clear, when I spoke in this chamber on May 5, had registered to stay; but the very fact that in the United States last year the volume of business was twenty times what it was in Canada, and the very fact that we are right next door to the United States, make a colossal difference to the one who manufactures and sells in Canada. But if one goes to some foreign country where sales are relatively small, where even large companies compete on the same basis as small companies, for the reason that their selling organization is not nearly so large proportionately in that country, then I postulate that the picture is entirely different.

We face in the implement industry in this country to-day a far different situation from that which prevailed in 1924 and in other years before 1929. As I say, the whole picture is changed. Millions upon millions have been spent by the implement industries in both this and other countries for the development of machines; millions have been spent in this and other countries for the maintenance of service, which has not been permitted in one iota to vary in its efficiency at all times even when sales were dropping and the bottom was falling out, and this not in Canada alone but to an even greater degree throughout the world. There has been a challenge to the industry to maintain itself through these years and the industry has done so.

I have the highest regard for the farmer and the keenest appreciation of his problem, and any measure which can be introduced on his behalf and for his benefit, which is not only in his interest but in the interest of the country as a whole, I endorse every time. But why is it there is always this fiendish glee in pursuing the implement manufacturer, who seems to be regarded by so many as the arch villain of the piece? Three dollars out of every hundred dollars spent by the farmer is spent for implements. I tried to point that out the other night. Why do we not pursue some of the other manufacturers who furnish the farmer with goods? In this chamber I read a list showing that articles in everyday use on the farm are priced per pound higher than implements are priced per pound, and an implement lasts anywhere from ten to fifteen or twenty years. I myself have serviced a binder cutting its forty-fifth crop. Why this relentless pursuit of the implement industry alone? Does the implement industry itself hold in its hand the key to the success of the farmer? Does this industry alone hold in its hand the key to his failure?

At six o'clock the Speaker resumed the chair and the house took recess.

---

## After Recess

The house resumed at eight o'clock.

## PRIVATE BILLS

### SECOND READINGS

Bill No. 62, for the relief of Pedro Alfonso Baptista.—Mr. Johnston (Lake Centre) (for Mr. Jacobs).

Bill No. 63, for the relief of Louise Isabel Sutherland Chaplin.—Mr. Casselman (for Mr. Walsh).

Bill No. 64, for the relief of Clara Violetta Dodge Connolly.—Mr. Heaps.

Bill No. 65, for the relief of Marie Consuela Hill Montabone.—Mr. Johnston (Lake Centre) (for Mr. Bothwell).

Bill No. 66, for the relief of Lona Marie Vaughan Burnett Gravina.—Mr. White.

## CRIMINAL CODE

### PROPOSED ABOLITION OF HANGING AS DEATH PENALTY

The house resumed from Tuesday, May 19, consideration of the motion of Mr. Blair for the second reading of Bill No. 10, to amend the criminal code (death penalty).

Mr. BLAIR: Mr. Speaker—

Mr. SPEAKER: I would direct the attention of hon. members to the fact that if the hon. gentleman speaks now he will close the debate.

Mr. J. K. BLAIR (Wellington North): Mr. Speaker, I will endeavour to be brief, for various reasons. In dealing with this question of the abolition of hanging and the substitution therefor of the lethal chamber, there are different theories of punishment that come to mind. The first is retribution; the next is the theory of deterrence; the next is the reformative theory; the next is the educational theory; the last is the theory of disapprobation, and sometimes there is restitution.

In dealing with this question previously we discussed the theory of retribution, and we did not hear anyone approve hanging for the purpose of retribution. That is the old theory, an eye for an eye and a tooth for a tooth, the theory that a man should be punished because he deserves punishment. That is looking backward, punishing a man as a fact and not for the benefit of the social order. We feel that this old dispensation has gone, and I was glad to note that hon. members did not approve that old theory of retribution. That was the theory which prevailed in Scotland when they massacred one another; it was the theory of the guillotine in France, when they beheaded one another, but that theory has now pretty well disappeared.

Then we come to the theory of the deterrent effect of punishment. The strange fact about punishment is that the more we progress in knowledge and intelligence the greater becomes the sphere of crime. Crime is the product of the social order, and it seems that the higher we rise in the social order the greater amount of crime we have. The tendency has been that though crime has become largely extended the severity of the punishment, broadly speaking, has decreased. At one time, not so many years ago, in Great Britain there were two hundred crimes for which people could be hanged. To-day there are only four or, practically speaking, only one, that of murder. The deterrent theory is perhaps the most important question to be considered. It has been suggested during this debate that we punish people for the benefit of the social order, and this theory is much to be preferred to that of retribution. We have a utilitarian motive, as Bentham expresses it; we punish for the purpose of preventing similar wrongs by others against the social order, so we think the deterrent theory is good. But that theory has to be watched carefully, because we can make errors in it. For instance, if the deterrent theory is beneficial, why not have all hangings in public squares, as was the case long years ago? That finally met with the disapproval of the public; we found that it was a detriment to the social order, so hangings were carried out in private places. I think that was a correct move to make.

The next question is whether we should punish so severely as to cause pain. I still have the utilitarian idea that pain has no beneficial effect. If we are not punishing for a purpose, then to inflict such punishment as to cause pain is a sin against humanity. If we can punish the victim and at the same time improve him; if we can punish him so that the punishment will bring about an educational reform, that might be different. I would not be opposed to punishment of that kind, but when we punish a victim on the edge of death, when no benefit can be derived, I think that policy is entirely wrong.

I have before me many expressions of opinion from different associations and organizations. I am not going to take time to read them all, but I should like to make some reference to a few. I have a communication from the Ontario sheriffs' association, as follows:

That in the opinion of the sheriffs of Ontario in convention assembled, the method of inflicting the death penalty in use in Canada is a relic of mediaeval days and the advance in humanitarian civilization calls for the substitution of a more human method. Furthermore in our opinion a central place in the province should be provided for imposing the death penalty, thereby ensuring and facilitating the proper administration of justice and materially reducing the considerable cost to the public of the present gruesome method.

This is from the Halifax Herald:

Here is a case where a man from another province invades a peaceful local community, murders and robs a respectable and almost helpless citizen, and sets fire to his house in the hope of concealing the crime, which he has now confessed. Notwithstanding his confession this man will still have to receive a formal trial. A jury will have to be summoned for the purpose, and very considerable cost incurred, most of which will fall on the ratepayers of a municipality which has been deeply sinned against instead of sinning. But there is worse than that to follow. If the

accused should be convicted, his execution will follow as an additional and most distressing burden on the officials of that municipality. This is conspicuously unfair and unjustifiable. There is no modern excuse for it. If a less sentence than that of death were imposed on this or any other criminal, the convict would at once be removed to a central penitentiary to undergo punishment. Only in the case of murder is the municipality compelled to provide for the execution of the court's sentence.

Then I have a letter from Arthur Ellis, the hangman. He says:

I would deem it an honour to be able to assist you or any other responsible party in the attainment of this humane reform. This question, I am led to believe, will come up for discussion at the interprovincial premiers' convention in Ottawa next week, but I am sure on account of it being of great importance it will be shelved to be taken up by some committee who really know nothing of the situation or of this serious matter....

Arthur Ellis trying to have hanging set aside!

I might refer to the experience of other countries. I have opinions from many other countries and from many states of the United States. Some of the states still approve hanging. The state of Connecticut changed to the electric chair, as did the state of New York. A number have changed to the lethal chamber.

I have letters from most of the provincial premiers approving the change in our method of punishment; the only one who seemed indifferent was Mr. Taschereau, of Quebec. His letter reads:

I am in receipt of your letter of March 26, regarding the best method of executing criminals.

I beg to state that I have no set opinion on this matter. Hanging is perhaps not a most humane method of executing criminals, but it is after all perhaps the best deterrent, and this, to a great extent, is what society has in view in instituting capital punishment.

I have a letter from Arizona, which has changed to the lethal chamber; a letter from Colorado strongly approving the lethal chamber; one from Wyoming; one from Nevada which I think I should read because some criticism was made of their methods. This is from the attorney general:

There was a great deal of discussion and quite a good deal of criticism of this method of inflicting the death penalty in such cases in this state when it was first adopted. This criticism resulted in quite a thorough investigation of the method and of its effect on those who were subjected to the death penalty by means of lethal gas, by prominent physicians both of this state and some of our neighbouring states. After quite a thorough and extensive examination by such physicians of the first few instances and first few persons who were subjected to this penalty, these physicians determined that this was the most humane method known by which the death penalty was inflicted.

I greatly appreciated the fact that the Minister of Justice (Mr. Lapointe) the other day spoke with some approval of this bill. I was glad to notice that the hon. member for Winnipeg North Centre (Mr. Woodsworth), the hon. member for Broadview (Mr. Church), the hon. member for Fort William (Mr. McIvor), and the hon. member for Hamilton West (Mr. Wilton) also spoke in favour of it. The hon. member for York South (Mr. Lawson) spoke to some extent in opposition, but still he made a statement which I think is helpful, as to the deterrent value of punishment. He said that the greatest deterrent is the certainty of prosecution and the certainty of punishment in case of conviction.

The leader of the opposition (Mr. Bennett) criticized this proposal and said:

We must not forget that those about whom we are so solicitous were not solicitous for those whom they destroyed. When they wreaked their vengeance, by murder dark and foul, they were not thinking of the pain they caused or the injury they did; they were not thinking of the sorrow they caused to those who survived. In this age there are always manifestations of our becoming victims of maudlin sentimentality and thinking in terms of the pain and suffering of one whom we are removing from society because of his offences against it, but at the same time I suggest that we should never forget those who have suffered because of the offences which have been committed.

I think the leader of the opposition was wrong in one or two of those statements. I think we should forget, if possible, the one who is gone. We should direct our attention to the social order to prevent a repetition of similar crimes. This idea of stirring up sentiment because of the killing has to do with the theory of retribution, which should not be present in our law courts or in our arguments on this matter. The leader of the opposition accused some of us who support this bill of maudlin sentimentality. That, I think, was a very unfortunate word, and I rose to correct him at the time. "Maudlin" comes from the French spelling of "Madeleine" which refers to the sympathy of Mary Magdalene. We have the approval of a higher authority than the leader of the opposition for the sympathy of Mary Magdalene. I hope I am one of the victims of that sentiment; I think it would be a good thing if many of us had more of the Magdalene's sentimentality and sympathy for the poor classes. I think the leader of the

opposition used that word without realizing the seriousness of its implication.

Now, Mr. Speaker, this bill has received much approval from most hon. members I would say, who have expressed their views. It has been suggested by the Minister of Justice that I should withdraw it until the matter can receive further consideration, and I think that is the proper method. This question should not be dealt with hurriedly; it is a serious matter and should receive due consideration. I am delighted to think that the Minister of Justice is prepared to give it such consideration. He has suggested that I bring it up at the first week of the next session. I am, therefore, glad to adopt his suggestion.

Bill withdrawn.

## WAYS AND MEANS

### CUSTOMS TARIFF AMENDMENT

The house resumed in committee of ways and means, Mr. Sanderson in the chair.

Mr. MASSEY: When the committee took recess at six o'clock I was speaking of some questions in the minds of many relative to the situation in regard to the farm implement industry, as a part of the whole picture of Canadian industrial and economic life. I have only a few more words to say, but to me they are exceedingly important and I hope hon. members will feel the same way.

One cannot remain long in this august chamber without realizing with crystal clearness that throughout this vast dominion we have a series of sections, the outward manifestations of which are found within those sections. One realizes there is a group here, another group here and another here across the dominion, possessing points of view peculiar to themselves and points of view which to them are exceedingly precious. It is difficult indeed, particularly for western farmers, to catch the point of view of the eastern industrialist. In turn it is difficult for the eastern industrialist to catch the point of view of the western farmer.

We are Canadians, and as such we are interested in the fullest and best for this Dominion of Canada. No one section is pitting itself against another or striving for any supremacy peculiar unto itself. It is to be sincerely hoped that, according to the sentiment so ably expressed on more than one occasion by the Minister of Finance, there will be built up within Canada a feeling of confidence in the country not only as a country but as a producing country, producing the products of the farm and those of the factory. It would seem to me that any step taken further to sectionalize this dominion, or further to give expression to the desire of one part to achieve for itself at the sacrifice of another, is after all that which must be regarded as definitely unfortunate. The eastern manufacturer finds it difficult to understand why the western farmer demands that certain things be done when, as a result of those very demands, the eastern workman realizes that his job is in jeopardy.

Those of us who take a keen interest in the affairs of the country—and that means all hon. members and many thousands of people outside this chamber—do not want to see injustice done to any one section. If—and this is only an assumption; I do not concede it for a moment—the implement companies have been unfair and have functioned in a manner which has brought about the exploitation of the farmer, then indeed those implement companies should be brought to task. Thus it was that when it was sounded from coast to coast that there was to be a committee to investigate the implement industry and to make a report, both sides of the house were satisfied. For, indeed, it was felt that the offspring of that body would be conceived and born in fairness. To-day I believe that committee still sits. To-day the tariff on farm implements has suffered its second reduction since the first of the year.

I postulate that this condition brings about an unfairness which is felt in the manufacturing east, while the primary producing west hopes that it may bring a reduction in implement prices and, judging from what has been said by hon. members, regardless of the effect on industry in the east. In all sincerity and deepness of feeling, speaking as one representing a constituency in which industrial workers make their homes, I ask that due consideration be given this great question, for indeed it is a great one. Nine thousand men engaged in industry—or is it 18,000? I say it is 18,000. Regardless of whether it is 9,000 or 18,000, let us say: "Here are 9,000 breadwinners"; "Here are 18,000 breadwinners"—what matter the number? The principle is the same. I would be remiss in the responsibility placed upon my shoulders if I failed to stand in my place and to raise my voice in urging the government to reconsider this tariff item.

Mr. LEADER: The hon. member for Greenwood who has just sat down has made an excellent speech in defence of the agri-

cultural implement industry. I should like to say a word for the farmers, for that inarticulate mass whose voice is very seldom heard, that mass of the Canadian people who have usually been the prey of implement manufacturing companies and other combinations that infest this land.

I do not for a moment doubt the sincerity of the hon. member. He is imbued with a desire to help the Canadian people, and especially that class which he represents. I, too, would be remiss in my duty if I did not have something to say for the people whom I represent. When he speaks so eloquently in defence of the manufacturing industry I feel that I want to say something about the farmer who must buy the implements from the companies that manufacture them. May I say that after the duty on agricultural implements had been cut in half, and when the announcement was made that the price of those implements had been increased, rather than reduced, not only the farmers but the townspeople were shocked.

I hold in my hand a telegram from the board of trade of the city of Portage la Prairie condemning the action of the industry in increasing its prices and asking that something be done. We expected that after the duty had been reduced to 12½ per cent we would get the benefit of the reduction. I do not intend to go into figures; that was done, I believe, by the hon. member for Huron-Perth (Mr. Golding). I wish to give figures of the prices of farm implements in my home town, Portage la Prairie, showing what we expected after the reduction, and what we got. I do not want to delay the committee any longer than is necessary, but I think it is very desirable that this information should be placed on Hansard. In the last column I am going to give what I call the "gyp" price of the different implements. The figures are as follows:

Farm Implement Prices

| | 1936 | 1935 Prices unwarranted less 12½ per cent | Increase |
|---|---|---|---|
| 6-foot binder complete | $242 00 | $197 75 | $44 25 |
| 7-foot binder complete | 266 00 | 217 00 | 49 00 |
| 8-foot binder complete | 274 00 | 224 00 | 50 00 |
| No. 6 corn binder | 243 00 | 199 50 | 43 50 |
| 10-foot hay rake | 58 00 | 48 15 | 9 85 |
| 5-foot mower | 95 50 | 76 55 | 8 75 |
| 5-foot oil bath mower heavy | 113 00 | 91 45 | 21 50 |
| 20 D disc drill | 242 00 | 202 15 | 39 85 |
| 24 D disc drill power left | 293 00 | 244 15 | 48 85 |
| 28 D disc drill power left | 346 50 | 289 20 | 57 30 |
| 17-tooth cultivator | 100 50 | 82 25 | 8 25 |
| 17-tooth cultivator power left | 116 75 | 96 45 | 20 30 |
| 11-stiff tooth cultivator power left | 146 25 | 125 35 | 20 90 |
| 8½-foot one way disc | 298 75 | 252 65 | 46 10 |
| Manure spreader | 184 50 | 152 70 | 31 85 |

Mr. GRAYDON: May I ask the hon. member whether the term "gyp" is a technical term, and if so, how is it spelled?

Mr. LEADER: I may tell the hon. member that when we have to pay more than we should, we claim that we are "gypped" out of so much money.

Mr. GRAYDON: Will the hon. member kindly answer the question that I put to him?

Mr. LEADER: I understood that I had given the answer, and I am afraid that if the hon. member cannot understand it I cannot do any better. The result of the high price of farm implements is that our factories are closed. I am not going into statistics, but that is the actual effect of high prices; no farmer can afford to pay them. The implement manufacturing companies close their factories and discharge their employees. The figures prove that; it is apparent to every hon. member. My hon. friend from Davenport (Mr. MacNicol), whom I must compliment upon his ability to defend his constituents at every opportunity, is concerned about the workmen. The reason the factories were closed and we had so much unemployment was that the implement firms would not reduce the price of their farm machinery, and, it being a non-perishable product, they were able to fill their warehouses full of it, hold up the price, close the doors, and wait till the farmers bought it. But they did not expect the depression to last as long as it has lasted, and perhaps in the long run they have suffered more than the farmers.

Mr. MASSEY: May I ask the hon. member the authority for the last statement he made? Or is it a personal opinion?

Mr. LEADER: No. Here are the figures: In 1930 there were 7,504 employees in the agricultural implement industry. In 1934 the number was 3,706. I think that proves that

when the factories closed their doors they discharged their employees and aggravated the unemployment situation.

Mr. MASSEY: The hon. member stated that the implement manufacturers were able to hold up the price of their implements and fill their warehouses, and therefore the farmer was not able to buy, which, of course, in my humble estimation, is a totally incorrect statement.

Mr. LEADER: I do not wish to make an incorrect statement. I am satisfied that the farmers were not able to buy the implements, and I know the factories did not continue to manufacture, because they could not sell, and if they did not continue to manufacture, I do not think they would be likely to retain their employees, although they did retain the majority of their executives.

Mr. SPENCE: Was not the depression the cause of that?

Mr. LEADER: I agree with my hon. friend to the extent that I think it had a great deal to do with the matter; that is, the depression among the farmers.

Mr. SPENCE: More than the farmers.

Mr. LEADER: Hon. gentlemen on the other side of the house fail to realize the depression in agriculture. When there is depression in agriculture there is depression all along the line. The agricultural industry is not in a thriving condition at the present time, and it needs farm implements. I think the best illustration of our condition is to tell the committee that last fall I was in a farmer's yard; the men were tinkering at an implement, and one of them said to the boss, "We will have to get another carload of hay." He said, "Surely the hay is not done yet." "No," said the other, "but we are out of haywire." That is the condition of the farm implements on the majority of the farms of western Canada. The farmers have patched them and patched them again, and tied them up with haywire until they are in such a condition that the farmer must either quit or buy new machinery. But the facts prove that the agricultural implement manufacturers decided to raise their prices and take advantage of the farmers in their dire necessity. That is my opinion, and I think I am justified in holding it.

I do not intend to offer many more observations. I thoroughly agree with the hon. member for Greenwood when he says that this is a big country and that we should be working in the interests of every one in it, and not for any particular class. The machine companies and the farmers are interdependent; the welfare of the one depends upon the welfare of the other, and instead of having strife with these or any other companies, we should work in cooperation. When the value of farm products went down as it did in 1930 and during subsequent years, why did the machine companies not reduce the price of their implements so that the farmers could continue to buy, and thereby assist in keeping the factories open and giving employment to the people of Canada? That is where the farm implement companies made a mistake, and now they are paying the price. I hope they have learned their lesson, and I invite the hon. member for Greenwood, who represents the agricultural implement industry, to—

Mr. MASSEY: May I again interrupt? I do not represent the agricultural implement industry. I speak for the workmen in that industry.

Mr. LEADER: The hon. member mentioned the industry so often in his speech that I thought he was making a special plea on behalf of it. I believe that he mentioned the employees as well. The hon. member for Rosetown-Biggar (Mr. Coldwell) is not always complimentary to the present government; yet he was big enough this afternoon to confess that they were marching in the right direction. He gave the government credit for the reduction in the duty on agricultural implements. I want to say that I concur most heartily in that remark of the hon. member and I want to congratulate the government upon reducing the duties on agricultural implements to 7½ per cent. I think this reduction was warranted and perhaps we could go further. In view of the attitude of the agricultural implement companies in increasing prices, notwithstanding the fact that the duties had been lowered, I think the government of the day would be justified in cutting the duty off entirely and putting these implements on the free list. We have had free entry into the United States for a considerable number of years, and if countervailing duties are wanted, why not have them apply to agricultural implements? In view of the attitude of the farm implement industry, I think the government would be justified in wiping out the duty altogether.

Mr. DEACHMAN: I rise to express my surprise at the presence in the House of Commons of the hon. member for Davenport (Mr. MacNicol). I know he is a kindly,

generous soul privately, but I am surprised at the views he holds and I doubt whether the constituency of Davenport will accept responsibility for him. He told us this afternoon that the tariff was lowered in 1924; that statement is quite correct. Then he proceeded to demonstrate how employment declined, how labour was without its reward and how industry was paralyzed. I have the figures before me and I propose to give them for the benefit of my hon. friend. In 1924 industrial wages in the Dominion of Canada stood at $559,000,000. I propose to give the figures for the succeeding years. The next year they stood at $596,000,000; then they increased to $653,000,000; they went steadily up to $755,000,000, and in 1929 they reached a climax of $813,000,000. There was an increase between 1924 and 1929 of $250,000,000. Then there came a change in the following year.

Mr. MacNICOL: Might I ask the hon. gentleman a question?

Mr. DEACHMAN: My hon. friend's question can come later; I want to give the full thread of this story. I think my hon. friend will find that it is really charming if he can only see it in the right light. There then came a change and the right hon. leader of the opposition (Mr. Bennett) came into power. He said that it was necessary to save the industrial fabric of the dominion. I am not sure that he was not thinking of the textile industry; he was getting his fabrics mixed. We will let it go at that.

What followed? Down to 1933 there was a decline in industrial wages in the dominion, the drop totalling $348,000,000. I do not here and now contend that the lowering of the tariff in 1924 was responsible for the expansion of industrial activity in the dominion during the next five years. I do not raise that contention at the moment, but I ask my hon. friend from Davenport to sit down and look at the history of that period. When he does that I challenge him to come before the House of Commons and say that because the government of that day lowered the tariff industry was paralyzed. Will he go back to the people in his own constituency of Davenport and tell them that? Does he think the people of that constituency will accept it? I wonder that he can look the Davenportians in the face after a speech of that kind and after he has told them that their industries were ruined.

Mr. MacNICOL: May I ask the hon. gentleman a question now?

Mr. DEACHMAN: I do not know of any other hon. gentleman in this committee who never for a single second yields to the suggestion of lower tariffs, but the hon. gentleman from Davenport never does. This afternoon in a moment of kindness the leader of the opposition suggested that at least in one item the tariff was too high. I am reminded of the words of Dryden, who spoke of one Shadwell of his day as follows:

> Shadwell alone, of all my sons, is he,
> Who stands confirmed in full stupidity.
> The rest to some faint meaning make pretence,
> But Shadwell never deviates into sense;
> Some beams of wit on other souls may fall,
> Strike through, and make a lucid interval;
> But Shadwell's genuine night admits no ray;
> His rising fogs prevail upon the day.

I should like to transpose that a little and say:

> Some beams of wit on other souls may fall,
> Strike through, and make a lucid interval;
> But Davenport's genuine night admits no ray,
> His rising fogs prevail upon the day.

Mr. MacNICOL: Now may I ask the hon. gentleman a question?

Mr. DEACHMAN: My hon. friend must wait until I have finished. The suggestion is that the agricultural implement industry was ruined by the advent of this policy in 1924.

Mr. MASSEY: Who suggested that?

Mr. DEACHMAN: The hon. member for Davenport suggested that. He was saying that all industries were paralyzed, so surely the agricultural implement industry must have felt the shock. From 1920 to 1924 the progress of that industry in the Dominion of Canada was in one direction. The number of employees decreased from 12,800 to 6,700. Then the tariff was changed in 1924 and the number of employees increased year after year. They increased to 7,500, 10,000, 11,000 10,000 and 11,000. The hon. member for Greenwood (Mr. Massey) suggested that the total number of employees was 18,000, but he was counting every man who goes out from the Massey-Harris company to sell a binder or to fix one in the field. He assumes that if agricultural implements are not made in this country, none will be bought, none will be sold and none will be serviced. I return for one moment to the question of what would have happened in 1924 if the policy of the hon. member for Davenport had been put into effect.

Mr. MacNICOL: There would not have been any delegations coming to Ottawa to ask for employment.

Mr. DEACHMAN: My hon. friend can follow me in just a moment. He is as a pillar of cloud by day and a pillar of fire by night. If what my hon. friend claims is correct, then in 1924 the advance made by

this industry would have been more rapid than it was under the Liberal government. Does my hon. friend contend that? Will he suggest that to the house?

Mr. MacNICOL: I contend that the lowering of duties in 1924 increased emigration and the number of delegations coming to Ottawa to ask for employment.

Mr. DEACHMAN: That is exactly what I want my hon. friend to say.

Mr. MacNICOL: You have it.

Mr. DEACHMAN. Does my hon. friend contend that the increase in the production of manufactured goods would have been greater in the Dominion of Canada between 1924 and 1929 than it was?

Mr. MacNICOL: Yes, if we had had an adequate tariff.

Mr. DEACHMAN: These are the figures. The total production stood at $2,695,000,000 in 1924 and it went up to $4,063,000,000 in 1929. Does my hon. friend say that it would have been still greater? Let me point this out to the committee. My hon. friends had the direction of affairs from 1930 to 1933 and they pushed the tariff up to the limit. There was no hesitancy or weakness on their part; they pushed the tariff up to the limit. What followed? Production dropped to $2,086,000,000 in 1933 from $4,063,000,000 in 1929. Yet my hon. friend says that it would have been higher if they had been in power. In other words, it would have risen to greater heights and crashed to greater depths and unemployment would have been greater. I ask my hon. friend to take that story back to Davenport. I ask him to admit what he ought to admit. He can answer me later; there will be lots of time to-night. He claims that if the tariff had been applied in 1924 we would have increased the volume of production and we would have had more men employed. A tariff cannot be made to do more than the tariff did in 1933, and production had crashed then to half what it was in 1929. It would have had further to fall and the destruction of the industry in this country would have been greater than it was.

I turn now for one moment from Davenport to Greenwood. I like my pleasant friend; never for a moment does he say an offensive word. But he stood in the house to-day as the one outstanding illustration of the failure of the policy of high protection in Canada. Why do I say that? That industry has been for years one of the key industries of this dominion. It has been held up as an industry which has developed as a result largely of protection. The protective tariff was first granted it because it was an infant industry and it was thought desirable to build it up in Canada. What followed? The hon. gentleman tells us that this infant industry was established some ninety years ago, and it has been followed by fairly high protection. The tariff got down to six per cent on binders a few years ago, and when the Massey-Harris company appeared before the tariff board, at the time the iron and steel schedules were under inquiry, the representative of the company did not ask for an increase in the duty; they were ready then for a tariff of six per cent. After all these years, what has happened to the infant industry? Old and experienced, with abundant capital and everything else, it comes before the house and declares that the infant industry day is gone; that the industry has passed that stage, and that now it wants something for its old age. Is that not a perfect example of the folly and uselessness of protection, when you pile tariff on tariff—

Mr. MASSEY: Will the hon. gentleman allow a question?

Mr. DEACHMAN: Not now, please; I should like to finish. My hon. friend from Greenwood says that he is worried about the worker. What worker? Is the man on the farm not a worker as well as the worker in the factory? What does the hon. gentleman plead for in this committee? He pleads for the idea that something shall be taken from the worker on the farm and something shall be given the worker in the factory. If it were possible to build up industry on that basis then his argument might receive consideration; but we have had fifty years of experience of high protection in Canada and we have found that in no single period in that time have we had real prosperity under high tariffs, whereas in every period when the tariff was reduced there has been an improvement in conditions.

My hon. friend appeals against sectionalism. I would ask him to put this test to himself. The farmer in western Canada to-day produces grain that must be sold in the open markets of the world. He has no protection on that product, for he must take the price which is determined by open competition with every other producer. In that position he is without help; and my hon. friend says that, in order to avoid sectionalism in Canada, we should put the tariff back on agricultural implements so as to allow the manufacturer of those implements to take something from that farmer. And that is to be done in order to avoid the building up of a spirit of sectionalism in Canada.

Mr. MASSEY: I rise to a point of order. I have the highest respect for the hon. member, but he cannot put words into my mouth. I did not say that in order to avoid sectionalism the duty should be raised from 7½ per cent, but I did say that the investigation which is going forward at the moment should have been completed in fairness to all parties. And that I repeat.

Mr. DEACHMAN: The hon. member may make any statement he likes, but the fact remains that the only basis upon which we can avoid sectionalism in Canada is the basis of fairness to all. We cannot take one industry and say that it is the spoiled pet, the darling of this House of Commons or of the dominion, and that we are going to give that industry a special privilege to enable it to charge the people of Canada higher prices, and then say to another industry in western Canada, the growing of wheat, an equally important industry, that they shall grow wheat though hampered by the fact that the necessary implements cost more. There is the situation. Both sections of the dominion, all classes, must be treated on an equal basis. You cannot stand on the ground of special privilege and make an appeal on that basis in the House of Commons.

My hon. friend says that he has a great deal of sympathy for the farmer. I do not doubt that for a moment. He feels for the farmer and thinks something ought to be done for him. I respond to that and say that I have a great deal of sympathy for the manufacturer of agricultural implements, and I contend that you cannot build up an agricultural implement industry in this country on the basis of exploited agriculture. The price of agricultural implements to-day is sixty-one per cent above the price of 1913; the price of farm products is practically the same. I want to see something done to improve the condition of the farmer, because only on the basis of an improved agriculture can we hope to have progress in Canada. On no other basis conceivable can you build up an agricultural industry in this country, and it is on that ground that I make this appeal. We must do the best we can to raise the status of agriculture, for until that is done your industries are in danger, and the one that is in greatest danger is the manufacture of agricultural implements. It cannot prosper unless agriculture is also prosperous.

Mr. MASSEY: Will the hon. gentleman answer this question? What was the price of wheat in 1915, 1916 and 1917 in western Canada?

Mr. DEACHMAN: The price of wheat was held at that time at an unduly low level because of government control. The price did not reach the level it would have reached had it not been for government interference. But when it comes to the other proposition, the interference is the other way.

Mr. MASSEY: At one point in his remarks there was a question which I was anxious to ask the hon. gentleman in order to have his reply on Hansard. He referred to the low duty of six per cent in 1924, and he did not say what the duty was to the manufacturer of agricultural implements on the raw materials entering into the product.

Mr. DEACHMAN: The answer is very simple.

Mr. MASSEY: Indeed it is.

Mr. DEACHMAN: I took part in the proceedings of the tariff board for two or three years and always contended for a reduction in the duty on raw materials where the duty on the finished product was relatively low, and if the Minister of Finance proposes to make further reductions in the duty on raw materials I shall be with my hon. friend.

Mr. MASSEY: Will the hon. gentleman answer the question I asked?

Mr. DEACHMAN: Repeat it.

Mr. MASSEY: What was the duty—

Mr. DEACHMAN: I cannot go into the details of all the duties. Does the hon. gentleman expect me to give him all the schedules?

Mr. MASSEY: The hon. gentleman's whole argument falls down completely, for the duty on raw materials entering into the manufacture of farm implements, at the time the duty on implements was six per cent, was a preference duty of six per cent.

Mr. MacNICOL: May I ask the hon. gentleman a question?

Mr. DEACHMAN: Delighted.

Mr. DUNNING: Perhaps I could clear up that point. I do not want to get in between the hon. member for Huron North and the hon. member for Greenwood, but on the issue of fact with respect to the duty on raw materials I may say that the duty is and has been for many years six per cent.

Mr. MASSEY: I would not dare to correct the Minister of Finance, especially when there sit beside him those who have the facts and

figures, but I reserve the right, in all deference, to disagree with the statement he has just made. I have not the facts before me but I should like to have the privilege of looking them up.

Mr. JOHNSTON (Bow River): I wish to say a word in defence of the western man and especially in support of my hon. friend from Portage la Prairie (Mr. Leader). There seems to be a great deal of controversy over this tariff question, and I want to commend the minister for this reduction, provided that it results in a reduction to the farmers. Possibly as a result of this committee's investigation there will be a reduction in the price of farm machinery, but unless that reduction is passed on to the farmers then I do not think any reduction in the tariff will amount to a row of beans. The tariff does not enter into the question to a very great extent unless in the final analysis the farmer gets the benefit. We have heard a great deal said about these prices, but unless these reductions are actually forthcoming and the farmer receives the benefit of them they will not mean a thing. We have even heard a great deal of sympathy expressed for the farmer during the last little while. Sympathy is all right, but it is pretty hard stuff to eat, especially in these hard times. Consideration has been shown for the manufacturer. I do not suggest for a moment that the manufacturer should not be allowed a reasonable profit, but I say that the profit of the agriculturist should be greater, and until this business is settled we are not going to get very far.

It has been suggested here, as a solution for unemployment, that we should revert to a back to the land movement so that the number of farmers will be increased and more grain will be raised that we shall not be able to sell, so the net return necessarily will be less. I think that is starting to work at the wrong end. Instead of our showing so much consideration for the manufacturer lest his prices be reduced a little, I think it would be only fair to have some logical solution such as that suggested by the hon. member for Huron North. Give the farmers a little more consideration and then they will be able to buy the machinery at the price asked by the manufacturer, the price which will allow the manufacturer a profit. I do not think the tariff enters into the question very much, though I should like to see the tariff reduced provided the farmer gets a proper return for his produce and prices are lowered. So, as I say, I commend the minister for this reduction, but I hope he will go a little further and, as a result of the investigation of this committee, see that the farmers get a square deal and a reduction in price for their farm machinery.

Mr. BENNETT: I should like to say just a word. I ask the Minister of Finance if he cannot find it possible to adopt a fairer attitude towards this matter than the one which has obtained so far. Does he not think, after having had the gasoline matter dealt with by the tariff board, it would be reasonable to have this matter also dealt with by that board? Where is a committee to get in a question of this kind? Where has a committee ever got in a matter of this kind? Only the other day it was admitted by the Minister of Trade and Commerce that a committee was no body to deal with a complex matter such as the marketing of our wheat, and that a royal commission would be better able to deal with that matter than a committee of the House of Commons. Do those who speak for the farmers here to-night think it is fair; would a farmer think it is fair; does any hon. member think it is fair, apart altogether from the question of whether the duty is too high or too low, for the government to say that parliament shall refer a matter to a committee and then, having suddenly made up its mind to take certain action, to reduce the duty by five per cent under what it was and still have the committee function, instead of referring the matter to the tariff board to deal with?

We have had several very important matters dealt with by the tariff board. To-day the minister was good enough to say that the gasoline schedule was, word for word, that recommended by the tariff board, and we have two or three other items of the same kind. The basis of goodwill between two sections of the country is the thought in the minds of both that they have been treated fairly. What I put to the minister is that they have not been treated fairly, and by "fairly" I mean both having been given the opportunity to be heard before any action was taken to prejudice the position of either. In this instance the farming community presented its case with great vigour, and the government of the day has taken this action after having pointed out that the matter might be left for the Minister of Finance to deal with in his budget. But there is still time to refer the matter to the tribunal which has been set up for that purpose.

When my hon. friends were talking as they were a few moments ago, about the price of wheat, I would remind them that to-day the farmer is receiving 87½ cents a

bushel for wheat that is being sold for 77½ cents a bushel. That is the position to-day. There is a fixed price of 87½ cents for the farmers' wheat, and that same wheat is being sold for 77½ cents.

An hon. MEMBER: What about 1932?

Mr. BENNETT: I am talking about to-day. How would the farming population like it if, to-morrow morning, parliament declared that this 87½ cents was wiped out; that there would be no longer any fixed price with respect to wheat and that the whole matter would be adjusted on the basis mentioned by the hon. member for Huron North, namely, the world market? Would they not say that was an unfair thing to do? Would these hon. gentlemen who have spoken to-night not say that? Would they not complain bitterly about any such action? I think they would, and properly so. All I suggest, without giving any expression of opinion as to whether this duty is high or low—I have refrained from that—is this: In all fairness why not leave this matter to the tariff board? This committee will get nowhere; it cannot possibly get anywhere with this question. No committee ever has got anywhere with a matter of this kind. Does the minister not recall the committee of this house that dealt with gasoline, when thousands and thousands of dollars were spent in the payment of auditors? To-day a committee is sitting. Since the committee began to sit we have been paying $50 a day for a lawyer and $50 a day for an auditor, I am informed. That makes $100 a day being paid out for an auditor and a lawyer, and does anyone suggest for a moment that they are ever going to be able to reach any conclusion which will be of value to this house or to this country?

This is the only suggestion I have to make, but I desire to impress it upon the minister with all possible force: We should treat these interests fairly, even as the farmers expect to be treated fairly with respect to the price that is fixed to-day for the wheat they sell. They would complain, and properly so, if their rights were taken from them in regard to that fixed price. So these implement companies have a right to present their case to the tribunal set up for that purpose. There is an excise tax of three per cent which to all intents and purposes amounts to an additional duty, making the total 10½ per cent, but of course conditions are vastly different from what they were in 1924. It will be recalled that the then president of one of the largest implement companies came to this city and presented his case on behalf of the workmen, not on behalf of the capital involved. That was his whole plea, the welfare of the men employed.

I am not here to add anything to what has been said by hon. members of this committee, nor am I going to attempt to rebut the statements they have made. I desire to urge upon the minister, however, that he give fair play; that we may do what is decent and right and fair with respect to all the industries of the country, not with respect to one but with respect to all, and that we shall not in connection with one say that we shall leave it to a board and in connection with another say we shall act in an arbitrary way. Let us create a feeling of confidence, alike in the east and in the west so that if the board finds, on a certain set of facts, that a certain condition exists and, in the terms of the tariff act, that a certain schedule would give all the protection necessary for the preservation of that industry in the country, then we know the exact situation; we have a clear and comprehensive view of it, just as we have in connection with gasoline based upon the report we heard this afternoon. But to have one section of Canada believe it is singled out for treatment entirely at variance with that accorded to another section is to create, on the one hand, a feeling of suspicion and distrust and, on the other, to give the agrarian in the west the idea that laws are made for him to impose his will upon particular people with respect to matters which are very dear to him and with respect to the prices of articles which he has to purchase. I say that is not fair and I am pleading for fairness. That is all.

In view of all that has been said it would be highly improper for me, because of the conflict of opinions and views, and what has been said with respect to the 7½ per cent and three per cent duty, to express an opinion as to the adequacy or inadequacy of this particular item. But I can see no reason why the agricultural implement business of this country should not be given an opportunity to present its case before the tribunal created by law to examine such matters, nor why a committee of the house, after the duty has been reduced by five per cent, should continue to pay a lawyer and an auditor $100 a day for the two of them when in the ultimate analysis they will not be able to make a single contribution to the solution of the problem. I submit that to the minister, and trust he will realize that, in doing so, I have no object except that, having lived in western Canada as long as I have, and knowing how the feelings of the western agrarian have been played on in the past, how he has been made to think of the agricultural implement makers as men who are lying in wait to snatch from him his hard-

earned money, I desire that a feeling of confidence should be restored, by both sides believing that the tribunal will give fair, complete and patient consideration and attention to every argument that can be adduced. If the government think it desirable to appoint counsel to represent the agrarian interest I would be content that this should be done. But to go ahead with the reduction of five per cent without notice or without a chance to be heard being given, while briefs were being submitted to a committee of the house, is at variance with the usual course, and to say now that the committee is to continue, and that the board that was created for the purpose of hearing evidence is not to hear it, is in my judgment to go a long way towards creating suspicion, unrest and distress and to increase the intensity of the feeling, if there be any, between those who toil on the soil in the west and those who produce agricultural implements in the east.

Mr. DUNNING: The questions addressed to myself I must of course endeavour to answer. The principle laid down by the leader of the opposition is one which has an appeal, and he put it in its most appealing form. I would, however, point out to him that the enactment of the tariff board legislation at no time was intended, even by himself, to take from the government of the day the responsibility and the opportunity of making such changes in the tariff as in their judgment were in the best interests of the people of Canada.

Mr. BENNETT: I do not suggest that it was.

Mr. DUNNING: In the case of the gasoline inquiry, to which reference has been made, we were fortunate enough to have a complete report available, so that parliament might be given that report and given the facts in great detail upon which the government based its proposal to parliament. In connection with certain aspects of the textile industry the same is true. With respect to a number of other proposals now before the committee, no recommendation of the tariff board is available, but the usual machinery of government, machinery which has functioned for many years in connection with the tariff, has been used upon which to base the judgment of the government as to what should be proposed to the house and to this committee. Perhaps my right hon. friend will permit me to say that his observations with regard to fairness should work both ways. That is, the principles which he lays down surely should apply with respect to the increase of the tariff by governmental action if they are to be applied to the decrease of it. May I remind him that in 1930, without any tariff board, without any expert advice, the tariff was raised to great heights on some three hundred items of the schedules, if my memory is correct.

With respect to the item under discussion—and I want to stay within the rules and stick to that item—the tariff was raised from the 6 per cent level at which it had stood for several years, a level from which, as the hon. member for Huron-Perth (Mr. Golding) said this afternoon, the Massey-Harris company did not request an increase before the tariff board prior to 1930; that tariff was raised by one act of the government of which my right hon. friend was the leader from six to twenty-five per cent. Then, on top of that twenty-five per cent came the additional three per cent special excise. It is true that my right hon. friend will say: We took an undertaking from the manufacturers that they would not increase prices.

Mr. BENNETT: Which undertaking they lived up to.

Mr. DUNNING: To which I believe they lived up to the letter. But that, may I point out, is not sufficient to meet the condition as between the primary producer and the secondary producer. When the primary producer has to bear the weight of constantly decreasing values for what he produces, what good is it to him to have an assurance that the things he buys will merely not be increased in price? What we must strive to bring about in this country—and I know my right hon. friend desires it as much as any of us—is a greater approach to parity between the return secured by our people engaged in primary production as compared with the return received by those engaged in other classes of production and in distribution. It is well known that things are out of balance not only in this country but in the country to the south and in many countries in the world. I agree with my right hon. friend when he says that these adjustments which must be made are far better approached from the basis of scientific analysis and examination than by appeal to the passions of the classes who are suffering from these extremes. I join with my right hon. friend in the belief that careful, consistent and steady examination should be made of these problems, not in the atmosphere of the hustings or even of parliament, but rather in the atmosphere which it has been sought to create by a tribunal such as the tariff board. I can speak for the government when I say that if the farm implement industry of Canada wishes to have the matter of farm implement duties referred to the tariff board it has only to ask for this and the reference will be made.

As to what this house is doing through the committee which is now investigating,—not the tariff on agricultural implements—I call the attention of the hon. member for Greenwood (Mr. Massey) to that—but the reason why immediately after a reduction in the tariff an increase in prices took place, is that not important? Hon. members representing the constituencies from one end of Canada to the other where these implements are bought and used would not be doing their duty by their constituents unless they insisted upon immediate action to find out why that increase was necessary. No adequate explanation has so far been given. It will be a good thing for the manufacturers of agricultural implements to place their facts before those men in this house who represent the farmers of this country. Surely nothing but good can come from a knowledge of the facts by the men who sit in this house representing the people of constituencies which use in such large measure the products of agricultural implement factories. I join with my right hon. friend in the belief that there has been too great a gap of misunderstanding between industry on the one hand and agriculture on the other, but I submit that before a committee of this house they can get together; they may at least agree on the facts. As far as the industry itself is concerned, it can have a reference to the tariff board at any time it applies to the present Minister of Finance for one. And the government will endeavour to see, in that connection as in all others, that the facts are brought out, in order that there may be made to this house a report in which all hon. members may have confidence because it has been produced in an atmosphere as little contentious and as non-political as possible.

I would point out, however, that the government have not gone the length of putting the duty on agricultural implements back to the point at which it was when the former Liberal government left office in 1930. Many supporters of this government believe that that should have been done. But in the light of prevailing conditions our best judgment was that the 7½ per cent rate which appears throughout the whole agricultural implement schedule was a proper rate at which to put the duty during this session of parliament. I fully expect, indeed I hope that the agricultural implement industry will apply for a tariff board reference. If they do, then by the time this house meets again we shall surely have available—at least I hope we shall—a mass of facts which are not a matter of dispute between members from this constituency and from that, but which may be agreed upon as facts, whatever may be the respective opinions of hon. members as to the policy which should be based upon those facts.

Mr. COLDWELL: The leader of the opposition made an appeal to hon. members representing agricultural constituencies, and particularly those from the western provinces. As the Minister of Finance has said, I think the appeal was very well directed. However I should like to draw the attention of the leader of the opposition to considerations which compel us to discuss this matter in the House of Commons and to make the representations that have been made not only from this corner but from other sections of the house.

I have before me two tables, one of which was compiled by the Searle Grain Company of Winnipeg, giving an index of prices paid, and values received, in western Canada between 1913 and 1935. Taking the index of No. 1 hard wheat for the year 1913-14 as 100, we find that in 1935 the price had fallen to 93. Of course that is considerably better than the relative index of 52 of 1933. We have to remember, however, that in 1935 the set price to which the right hon. gentleman referred was operative. On the other hand, taking 100 as the index figure of what the farmers bought in 1913-14 we find that it had risen in 1935 to 125, considering 147 articles farmers buy. Again, taking 100 as the index of the farmers' purchasing power in 1913-14, we find that in 1935 it had fallen to 74. The bureau of statistics index of farm implement prices shows them to be entirely out of line, because in 1935 farm implements were 54 per cent higher, on the average, than they were in 1913-14, and tools and hand implements used in agriculture were 76 per cent higher. Because of this condition pressure is quite properly brought to bear upon the government and private members to deal with the situation. It seems to me that in the light of these considerations the government has done the right thing in reducing the duty at the present time.

While one readily admits that implement manufacturers may be able and should have an opportunity to make out a case, nevertheless I believe immediate action has been required of this government and of this parliament. I place the figures quoted before the committee to show that it is not in a spirit of captious criticism that we urge the reduction in the prices of implements and the duties thereon, but because we believe that the prices charged for agricultural implements are quite out of line with those received for other commodities, particularly

remembering the reduced cost of basic raw material, and of labour involved in the production of farm implements. If we are wrong, then as the Minister of Finance has said, the companies should prepare their case and present it with the assurance that they will be given fair consideration.

Mr. BENNETT: There are two matters I should like to clear up—

Mr. GOLDING: Before the item carries—

Mr. SPENCE: I have been on the floor half a dozen times. Am I so small that I cannot be seen.

The CHAIRMAN: The hon. member for Huron-Perth has the floor at the moment.

Mr. SPENCE: All right; go to it.

Mr. GOLDING: Before the item passes there are two or three points I should like particularly to stress. The hon. member for Greenwood complains that I quoted figures from 1924 to 1930 and did not take into consideration the depression from 1932 to the present time. In answer to that I should like to say that the point which prompted me to rise this afternoon was the statement made by the hon. member for Davenport as to the "disastrous" results which followed the reduction of the tariff in 1924. That was my reason for quoting figures showing a comparison of the period between 1924 and 1930 with the period between 1930 and 1934. Under the circumstances I believe I was justified in quoting the figures.

I made reference to the 18,000 employees mentioned by the hon. member for Greenwood, employees whose jobs it was said would be placed in jeopardy by a reduction of the tariff. Speaking on that point the hon. member said that it did not matter whether there was 18,000 or 9,000. I suggest it is important that we be careful when we quote figures of that kind, because no hon. member should exaggerate. I do not question the sincerity of the hon. member for Greenwood, but I suggest he must take the figures as they are. The figures I quoted were those which were submitted to the price spreads commission and had reference to the four largest and ten smaller implement companies. Those figures showed that at that time there were only 3,880 people employed in implement factories representing about ninety-two per cent of the total production. In my opinion that is an important fact.

I believe there is and has been an effort to stampede the industrial worker by making him believe that any reduction in tariff is going to affect his position seriously, and in view of that we ought to be careful when we quote figures. The hon. member for Parkdale complained about my having quoted figures from the bureau of statistics and asked me why I would not quote my own figures. I contend that if from my place in the house I had quoted figures and when the hon. member had asked me what figures I was quoting, I had replied, "these are my own figures," he would have been one of the first to challenge them.

Mr. SPENCE: They might be just as reliable.

Mr. GOLDING: I suggest that when we quote figures supplied by the bureau of statistics, surely to goodness hon. members opposite cannot question them. They are the only figures which we can quote.

One further point is that if it is claimed the raising or lowering of tariffs will either help or ruin the agricultural industry, then I contend that the figures we have before us for the different periods of years show that reductions in tariffs help the industry, the employee and the working man. The hon. member for Greenwood has said: "Between 1930 and 1935 this company experienced a loss of $25,700,000." Was that loss sustained during a time when there was a lowering of duties or was it sustained when duties were being increased? The fact of the matter is, as the figures show, that the companies and the industrial workers suffered more after the tariffs were increased than they ever did under a reduction of tariffs. That is all I have to say on the matter.

Mr. SPENCE: At last I have a chance to say a word or two. After listening to the eloquent remarks of the Minister of Finance (Mr. Dunning), and of my honoured leader (Mr. Bennett), who is a wonderful debater, I am diffident about saying anything at all. Although I have some business ideas of my own which I try to express to the house, I find at times a great deal of difficulty in saying just what I think. That will not prevent me from saying some things that I think.

I do not agree with the hon. member for Rosetown-Biggar (Mr. Coldwell) that it was proper to reduce the duty on farm implements. In fact, the training which I have had in the business world leads me to think it is a bad thing either to lower or to raise duties, because to do so always puts some people in some lines of business into difficulties, so that if the government would stop tinkering with everything all the time, and let us go ahead, we should do better still.

We have listened in this house to economists of all kinds. I am a member of the

agriculture committee which is investigating the prices of farm implements. I am also one who tries to save the money of the country as he would try to save his own, and I protested against the system adopted in the first place by the committee. The first day we had a meeting we listened to some technical highly trained doctor—I assume he was an economist—who talked over our heads; I suppose nobody but a Rhodes scholar could have understood him. We followed that up the next day with something of a similar kind, from another branch of the service. I am not condemning these people, but this is what was done. In the first place we engaged counsel at $50 a day and expenses, which I do not think was too high. Then we engaged an accountant, also at $50 a day. I do not think we need either of these gentlemen. This has been going on since March 17. Then we have two or three committee reporters, receiving, I suppose, ten or fifteen dollars a day; we have literature coming from the committee to the house every day, and we have got nowhere yet. If that is the way in which the government carries on business it should go out of business.

Mr. DUNNING: Not the government; this house.

Mr. SPENCE: The house has very little to say. The government is doing this. We now have only four Conservatives on the agriculture committee; we have three or four economists. An economist is like a man who gets into a big barrel, looks out through the bung-hole and imagines he can stop the falls of Niagara or bring the sun and moon to a standstill. Too many of their suggestions are impracticable. In this house we ought to get down to business and stop talking economics all the time. Economy is much more important; it is one of the things I should like to see studied, and as a rule it is not considered by this government or, I assume, by some other government.

The hon. member for Portage la Prairie (Mr. Leader) said that the hon. member for Greenwood (Mr. Massey) had made certain remarks in the interests of his riding. My contention is that any remarks he made in the interests of his riding are equally in the interests of the farmers of this country. I am just as much interested in the farmers of Canada, and particularly of Ontario, as in the workers in any other industry. They have been good friends of mine, and they have no better friend than myself as regards looking after their interests; as far as I am concerned I shall always oppose any injustice to the farmer. But he must not expect everything; somebody else must also get consideration, because others have to live as well as he.

The hon. member for Davenport (Mr. MacNicol) remarked this afternoon that everyone representing an industrial riding should rise in his place and say something in protest against the lowering of duties on farm implements. When I was in this house in 1924 I took a strong stand on that particular matter. I advanced the argument that if the duty were lowered I was afraid this would result in driving the industrial workers out of cities like Toronto and Hamilton, in the vicinity of which I live, with the result that the people who grow commodities in the old Niagara peninsula, where I did much business, would have no one to whom to sell their stuff, because if you deplete the population of Toronto and Hamilton the farmer may as well quit growing vegetables and farm truck. It is just as much to the interests of the farmers as of any other class of the community that the industrialists should be kept busy. I tried at that time to show what would happen to the farmers, and I think my arguments were sound.

The other evening my hon. friend from Regina (Mr. McNiven) was quoting statements I made on May 1, 1924. He quoted me correctly but he did not go far enough. He quoted, as every other politician does, to suit himself, to make the other fellow look ridiculous. We all know that if the farmers are not prosperous, we in the industrial centres cannot hope for long prosperity. The same thing applies to farmers if industrial workers are unemployed, because if the people in the urban centres are without money to buy the products of the farm there is not much use growing them. So the system works both ways. What we need is cooperation in this country, and we are not getting it.

Mr. JOHNSTON (Lake Centre): The farmer is ready.

Mr. SPENCE: The extra few cents the farmers pay on farm implements because of a duty do not amount to anything at all, when spread over some years, compared with the advantages they receive by keeping the industrial worker employed and so enabling him to buy their commodities. May I say that the farmers might take better care of their farm implements, and not leave the harrow in one field, the plough in another and the binder in a third.

Mr. PERLEY (Qu'Appelle): How do you know?

Mr. SPENCE: I know because I have been in the hon. member's province of Saskatchewan and seen this. The farmers even in Ontario do the same thing. But in Saskatchewan the situation is much worse. I have been there and known men to forget where the cultivator was, where the thresher was, and everything else, and they could not find them in the spring or fall of the year when they needed them. If they took good care of their farm implements, all they paid in duties would be nothing compared with the saving in depreciation, and perhaps the country would not be in the difficulty they keep it in by growling about something all the time. I have a great deal of admiration for the hon. member for Huron-Perth (Mr. Golding), but I think without a doubt he had no conception of what is fair as between industry and the farmers. A farmer can exist better on a garden, if he grew something on his farm, than an industrial unemployed worker can do in a concrete back yard.

An hon. MEMBER: The hon. member forgets that the industrial worker, like the farmer, fares better under lower duties.

Mr. SPENCE: The industrial worker does not mind what he pays for commodities so long as he has the money to buy them with; that is the way the hon. member should feel, and the way all the country should feel, and we would all be happier. What the hon. member needs to do is to go home and get good friends with himself.

I believe in a tariff to keep the wheels of industry rolling, but I do not believe in manufacturers taking advantage of tariffs to extract too large a profit. I am opposed to that as vigorously as I am to free trade or to anything which will interfere with the industrial workers being kept in employment. My contention is that the government should control prices. When we gave protection to the plate-glass works at Hamilton against imports that came in cheaply from Belgium, they took advantage of that protection, and my right hon. leader (Mr. Bennett) cancelled the tariff. That can be done in the case of any industry which is trying to dig gold out of the people for nothing or is making an extortionate profit.

I am a great believer in my own figures. I think I can calculate as accurately as most economists. We know that figures do not lie, but liars sometimes figure. The statistical department is not always right. You can make figures mean anything, and perhaps I have done that myself. I think the Minister of Finance is just as good at figuring as I am.

Mr. DUNNING: But not as good at the other thing.

[Mr. E. E. Perley.]

Mr. SPENCE: I would have some difficulty in holding my own sitting round a table with him. I can remember back in 1924 when the Hon. Vincent Massey who is now High Commissioner for Canada in London was interested in the Massey-Harris company. I am not speaking disparagingly of him, but I can remember how he slept on the doorstep of the Right Hon. Arthur Meighen day after day and week after week in an effort to keep tariffs from being reduced. At that time you changed your views and you gave them a six per cent preference on the raw materials that went into the manufacture of farm implements. You fixed it up in that way. You did not put on any more duty, but you did it in another way. You always had a way of getting out of difficulties. I do not blame you for that as most of us do it as well.

At one time the Massey-Harris company was quite prosperous. That company is situated within a few yards of my former riding. I used to take in the whole of ward six but my good friend, the hon. member for Davenport, came into the house on redistribution. He redistributed me out of that part of the city of Toronto and took it to himself.

Mr. DUNNING: There ought to be a tariff against that.

Mr. LAPOINTE (Quebec East): That is not the only wrong thing he has done.

Mr. SPENCE: I can remember that at that time the Massey-Harris company employed about 4,000 people. Hon. gentlemen have been quoting statistics to show that there were only 3,500 men employed in all Canada. That is absolutely wrong. I agree with the statement made by the hon. member for Greenwood who said that 18,000 people were employed. I assume he takes in all the agents and those who go through the country to give service to the farmers, but, believe me, the agents earn their money. I know some of them sometimes drive twenty to twenty-five miles in order to sell a farmer a dollar's worth of stuff. They have to do that to keep him in good humour. All farmers and all business men are alike. I said that at one time the Massey-Harris company employed from 3,500 to 4,000 people. I knew hundreds of these employees because I lived in the vicinity of this plant for forty-five years.

The John Abel people came to Toronto from Woodridge and employed a great number of people, but they were finally forced to amalgamate with an American concern and call themselves the American Abel Company. They employed from 800 to 1,000 people, but they had to go out of business.

Their place was taken over by the American Rumley people who employ from fifteen to sixteen people to distribute tractors. That is all the good they are in this country. They are renting other parts of their building to other industries which are trying to make a living but are having a hard time. Only fifteen to twenty people are employed in this factory which at one time employed from 800 to 1,000. There is something wrong with the management of this dominion when that happens.

Mr. DUNNING: What is wrong is the fact that they are manufacturing something which is no longer used by the country. They are manufacturing these big tractors.

Mr. SPENCE: That is right. I think the hon. gentleman knows more about what is hurting the industries of Canada than anybody else. I recently took a trip through the west, but I assume the minister has been there more often than I have. I was driven through Regina by Senator Laird and we went down to the railroad siding and saw carloads of farm implements which had come in from all parts of the United States. These implements should not have been in this country at all. If our own manufacturers had been given proper protection they would have been able to manufacture these implements. Everybody in the west thinks he should buy stuff from the United States. They believe that by their doing so the country gets the benefit of the duty, whereas if they buy from a manufacturer in Canada, he gets a profit. They hate to think of anyone getting a profit. We cannot live without a profit, and that applies to retail business, wholesale business or manufacturing. There must be something wrong with the minds of men who hate to see someone make a profit, who would rather pay a duty and buy stuff from the United States.

We all can remember in 1924 when at least two to three hundred thousand people left this country to go to the United States. We did not realize that we had any unemployment at that time because these people could find jobs over there, but the situation is different to-day. They cannot find jobs in the United States and unemployment has been increasing ever since 1929. We lost a large number of highly educated men and women who went to the United States because they had no hope of getting anything to do in Canada. There was no hope for these people who had been educated at great expense to the country. They went to the United States and helped to build up the industries of that republic; we were just an incubator for the United States. Professional men particularly could get jobs quite easily in the United States, sometimes when even Americans could not. Canadians were appreciated and from 1921 to 1928 or 1929 we lost the best class of Canadian citizens.

I do not want to take up any further time because I know we should be conducting the business of the committee. However, since everybody else wants to talk, I am forced to say something or the people in my constituency will think I am dumb. I do not want to be considered a deaf mute, and I must say something at times or next year some of my friends will say that I am not on Hansard and I may not get any votes. However I do not think it will matter much if I never talk; I believe I will be elected just the same. We have a committee of the house investigating the high cost of farm implements and I think it was indiscreet of the government to reduce the tariff in the midst of that investigation. My leader has suggested that this matter be sent to the tariff board for consideration, so I suggest to the government that they forget what they have done and we will all forgive.

Items agreed to.

Mr. DUNNING: I have an amendment to offer in connection with item 409j to provide for the insertion of weighers for threshing machines.

Mr. ILSLEY: I beg to move that item 409j, as contained in the resolution of May 1, 1936, be amended to read as follows:

Fanning mills; peaviners; corn husking machines; threshing machine separators, including weighers, wind stackers, baggers and self-feeders therefor; complete parts of all the foreging.

Amendment agreed to.

Item as amended agreed to.

Customs tariff—4091. Traction ditching machines (not being ploughs) and complete parts thereof: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Item agreed to.

Customs tariff—409m. Internal combustion traction engines; traction attachments designed to be combined with automobiles in Canada for use as traction engines; complete parts of all the foregoing: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Item agreed to.

Customs tariff—409n. Portable engines with boilers, in combination, for farm purposes; horse powers; complete parts of all the foregoing: British preferential tariff, free; intermediate tariff, 15 per cent; general tariff, 25 per cent.

Item agreed to.

Mr. DUNNING: Following the last item, 409n, there is an amendment which deletes the weighers' item. That has been put into 409j.

Mr. ILSLEY: It affects 409r, which is not in this list. It deletes the word "weighers" from 409r. I move:

That schedule A of the customs tariff, as amended by resolution No. 5 of May 1, 1936, be further amended by deleting tariff item 409r the enumeration of goods and rates of customs duty set opposite thereto from the said schedule A.

Amendment agreed to.

Customs tariff—410d. Well-drilling machinery and apparatus, and complete parts thereof, of a class or kind not made in Canada, and seamless iron or steel tubing over 8 inches in diameter, for use exclusively in drilling for water, natural gas and oil, and in prospecting for minerals, but not to include motive power; well packers and complete parts thereof, for oil and gas wells: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. DUNNING: The only change is in wording; in the rates it is entirely unchanged. The change is in the final clause. In order to clarify administration and remove any doubt as to the meaning of the item, the phrase "well packers and complete parts thereof" is substituted for the phrase "packer rubbers." It is to make it clear that the item covers all tubes and well packers and parts thereof.

Mr. BENNETT: It seems to me to be difficult to interpret the item, taking the last words in relation to the whole.

Mr. DUNNING: The words, "for oil and gas wells"?

Mr. BENNETT: Yes. What does that cover? It says "not to include motive power."

Mr. DUNNING: There is a semicolon after the word "power." It is faint but it appears after that word, so that there is an additional clause, "well packers and complete parts thereof, for oil and gas wells."

Mr. POULIOT: We do not attach enough importance to punctuation in the tariff. There should be something special for periods; something special for semicolons; something special for commas, in order to please the most distinguished member of the house.

Mr. STIRLING: What happens to steel tubing under eight inches in diameter? Does that come under some other item, and is it free?

Mr. DUNNING: Pipes not more than 10½ inches in diameter n.o.p. come under item 397 of the tariff, and they are dutiable at 15, 27½ and 30 per cent.

Item agreed to.

Customs tariff—410i. (ii) Combustible gas indicators, for detecting explosive gases or vapours; methane detectors; carbon monoxide detectors and continuous indicators and recorders; carbon monoxide alarms; pyrotannic detectors for determining the presence and quantity of carbon monoxide in the blood; inhalators for use in reviving victims of carbon monoxide poisoning; pocket gas respirators, dust respirators, paint and lacquer spray respirators, fume and smoke masks, and hose mask outfits complete with face piece, harness, air line and air pump or blower, designed for the protection of firemen and industrial workers; special safety goggles, designed for eye protection of miners, welders, foundrymen and other industrial workers employed in hazardous work; complete parts of all the foregoing: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. BENNETT: This is merely life saving apparatus.

Mr. DUNNING: Yes.

Mr. BENNETT: It is taken out of other items.

Mr. DUNNING: Yes.

Item agreed to.

Customs tariff—411b. Cylinder stave saws, wheel type stave jointers, crozing and champhering machinery, and complete parts thereof: British preferential tariff, 10 per cent; intermediate tariff, 15 per cent; general tariff, 20 per cent.

Mr. DUNNING: This makes provision for parts.

Item agreed to.

Customs tariff—412. Machinery, being presses for use in the printing of newspapers, of not less value by retail than fifteen hundred dollars each, of a class or kind not made in Canada, and complete parts thereof, not to include saws, knives and motive power; mechanical deliveries or conveyors for use with newspaper printing presses: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. DUNNING: The addition is "mechanical deliveries or conveyors" for use with newspaper printing presses.

Mr. BENNETT: They carried 15 per cent, 27½ per cent and 35 per cent.

Mr. DUNNING: Yes, under item 427 of the tariff. They are now included with the rest of the machinery for printing.

Mr. BENNETT: That is an odd thing. It is all free but it is not to include saws, knives and motive power, but it is to include mechanical deliveries or conveyors for use with newspaper printing presses.

Mr. DUNNING: The fact is that conveyors are not made in Canada; the other items are. There is no change with respect to saws, knives and motive power, all of which are commonly produced in Canada, but I am advised that no conveyors of this type are made in this country.

Mr. BENNETT: Mechanical deliveries and conveyors? That is new to me. I have seen many made in Canada.

Mr. DUNNING: Not for printing presses.

Item agreed to.

Customs tariff—412a. Machinery and apparatus, n.o.p., viz.:—Gun and mould apparatus for making press rollers; machines and apparatus for making electrotypes and stereotypes; engraving machines and apparatus, including photo-engraving apparatus, and other plate-making apparatus, used in the manufacture of printing plates of all kinds; machines and apparatus for graining metal plates; machines and apparatus for sensitizing, grinding or polishing metal plates; machines and apparatus including cameras and camera equipment, lens, prisms, camera and printing lamps, screens, and vacuum frames for transferring by photographic processes, or direct, to plates or rolls for use in lithography, rotogravure and printing; shading apparatus; machines and apparatus for addressing and /or wrapping newspapers, magazines, periodicals, pamphlets and catalogues; machines and apparatus for embossing or stamping or producing embossed or engraved effects, book-binding, looping, stitching, sewing, gathering, inserting, bronzing, dusting, creasing, scoring, cutting, perforating, drilling, punching, slitting, re-winding, glueing, pasting, gumming, waxing, varnishing, carbon coating, patching, numbering, ruling, jogging, sheet piling, tying, bundling, tube-making, metal mounting, eye-letting, staying or stripping, reinforcing and box-covering; complete parts, not to include saws, knives and motive power; all the foregoing when for use exclusively by, and in their capacities as, printers, lithographers, book-binders, manufacturers of stereotypes, electrotypes and printing plates or rolls, paper converters, or by manufacturers of articles made from paper or cardboard: British preferential tariff, free; intermediate tariff, free; general tariff, 10 per cent.

Mr. BENNETT: What is added to that item?

Mr. DUNNING: It is amended in wording. It was last rewitten in May, 1930.

Mr. BENNETT: One part carries 15 per cent, 27½ per cent and 35 per cent and the other is free, 5 per cent and 10 per cent.

Mr. DUNNING: The rewording consists merely of the insertion in several places of words descriptive of the functions of certain modern pieces of equipment. The rates attached to the item have been revised to read free, free and 10 per cent. For many years under the intermediate tariff there has been a rate of five per cent, and while in the fiscal year 1935-36 this represented a revenue of possibly $25,000, it has been decided to forego this revenue and to make this wide range of equipment available free of duty under both the British preferential and the intermediate tariffs.

Mr. BENNETT: I see some items that certainly are made in Canada. Sheet piling, for instance; that is one of the things they have recently commenced to make in Canada.

Mr. DUNNING: I think this designates something quite different from the sheet piling my right hon. friend has in mind.

Mr. BENNETT: I would not think so.

Mr. DUNNING: If my right hon. friend means sheet piling in the ordinary sense of the term, which is piling used in driving in a harbour or something of that kind, it is different. This is a sheet piling machine for piling sheets of paper at the end of a press.

Item agreed to.

Customs tariff—422a. Concrete road-paving machines, self-propelling, end loading type, with a capacity of 21 cubic feet of wet concrete or more; concrete and asphalt road finishing machines; form graders; sub-graders; combination cable-controlled excavating and transporting scraper units; back-filling machines and equipment, mounted on self-propelling wheels or crawling traction, semi- or full-revolving boom and scraper type; steam or air driven pile hammers or extractors; well-points; truck turntables; all the foregoing of a class or kind not made in Canada, and complete parts thereof: British preferential tariff, free; intermediate tariff, 10 per cent; general tariff, 12½ per cent.

Item agreed to.

Customs tariff—424. Fire engines and other fire extinguishing machines and chassis for same; complete parts other than chassis parts: British preferential tariff, free; intermediate tariff, 30 per cent; general tariff, 35 per cent.

Mr. HEAPS: I note that under this item the British preferential has been reduced from 10 per cent to free. I should like to know how many fire engines were imported from Great Britain during the last fiscal year.

Mr. DUNNING: Our imports of fire engines last year amounted to $61,500.

Mr. HEAPS: Was that from Great Britain?

Mr. DUNNING: No, entirely from the United States.

Mr. HEAPS: Were there any importations from Great Britain?

Mr. DUNNING: No, but the British government asks for this consideration, evidently believing that British manufacturers can do

some business in Canada. I am advised that they lost several contracts by very narrow margins.

Mr. BENNETT: This reduction will close out the business at Woodstock, Ontario. That is why it was not made before.

Mr. DUNNING: I have inquired as to the point to which my right hon. friend refers, and I gather that they are not manufacturers at all; that they just assemble parts of fire engines which are brought from elsewhere. The total reported production for the whole of Canada, including everything falling within this item, parts and everything else, was only $200,000 last year.

Mr. BENNETT: Yes, because the demand for fire engines is not usually very great. A fire engine is not an article that is sold largely, but if I may speak subject to correction my recollection is that these engines were made at Woodstock, Ontario. The item was discussed many times, and we were led to believe that to put it on the free list as suggested would mean the end of that industry at Woodstock, whether it was assembling or otherwise. My understanding was that it was more than assembling, but perhaps the minister is right and I merely bring the matter to his attention.

Mr. ILSLEY: The Department of National Revenue investigated that plant recently and I am positively assured that it is nothing but an assembling plant.

Item agreed to.

Customs tariff—427. All machinery composed wholly or in part of iron or steel, n.o.p., and complete parts thereof: British preferential tariff, 10 per cent; intermediate tariff, 27½ per cent; general tariff, 35 per cent.

Item agreed to.

Customs tariff—427a. All machinery composed wholly or in part of iron or steel, n.o.p., of a class or kind not made in Canada; complete parts of the foregoing: British preferential tariff, free; intermediate tariff, 27½ per cent; general tariff, 35 per cent.

Mr. BENNETT: Those words "a class or kind not made in Canada' would mean that less than ten per cent of the Canadian consumption was made in Canada, I assume. The effect of that would be considerable, I should think.

Item agreed to.

Customs tariff—427e. Automatic machines for making and packaging cigarettes, not to include tobacco-preparing machines: British preferential tariff, free; intermediate tariff, 27½ per cent; general tariff, 35 per cent.

Item agreed to.

[Mr. Dunning.]

Customs tariff—427f. Machines for the manufacture of veneers and plywoods, viz.:—veneer clippers, veneer clipper knife jointers, veneer glue spreaders, veneer jointers, veneer lathes and veneer taping machines: British preferential tariff, free; intermediate tariff, 10 per cent; general tariff, 35 per cent.

Mr. STIRLING: There are several more items where the British preference has been reduced from a certain percentage to free. Does that mean that in all these cases the British government has requested free entry? Has the British government requested free entry in this large number of cases, and has this government acceded to that request?

Mr. DUNNING: With regard to item 427e, this is one of the items on which a reduction was requested by His Majesty's government in the united kingdom on the ground that a wider margin than had existed formerly would permit British producers of this highly developed, expensive, automatic machinery to cater to the requirements of Canadian users. With respect to 427f, this is an entirely new item, the consideration here being the development of an export market for veneer and plywoods of Canadian origin. This has materially increased the production of these articles, and there have been numerous requests from the producers of veneers and plywoods for some relief from the duty which so far has applied on practically each of these lines. Much of the machinery is automatic. It is all modern in type and quite expensive, and none of it is produced in Canada. It is represented to us, in connection with veneer making machinery, that the making of Canadian veneers is a developing industry and that we can assist it materially by admitting this machinery free of duty. In any event it is not made in Canada.

Mr. STIRLING: Has this long list of requests come in since the passing of the Canada-United States trade agreement? The minister has been saying in connection with many items which show a reduction in the British preference that this has been done at the request of the government of the united kingdom. Has that been the case since the passing of the Canada-United States trade agreement?

Mr. DUNNING: I am sure my hon. friend as a member of a former government will remember that these requests were fairly continuous. I cannot say as to whether or not these requests came in before the Canada-United States agreement or after it, but there were numerous requests before that, in any event. I do not think there is any connection in most cases.

Mr. STIRLING: The minister referred to the fact that in many cases the spread had practically disappeared, and I wondered whether the British government had made these requests in consequence of the agreement at which we have arrived with the United States.

Mr. DUNNING: Not in the case I quoted a few minutes ago.

Mr. BENNETT: The effect of this item will be to give Germany, the United States and other machinery producing countries a 10 per cent rate under the tariff as compared with free entry under the British preferential, whereas the former item gave Britain a 20 per cent spread as against the United States. Surely with this item as it now reads there will not be much chance for the free entry of goods from Great Britain.

Mr. DUNNING: I asked that question myself when the item was under consideration, and as a matter of fact it is practically certain that very little of this class of machinery can possibly come from Great Britain.

Mr. BENNETT: But a great deal will come from Germany.

Mr. DUNNING: Under the 10 per cent intermediate?

Mr. BENNETT: Yes. One of the complaints which were made was that with respect to this type of machinery Germany was in a significantly strong position and that, having regard to their present day costs of production, they could sell their goods in this country so cheaply that a 10 per cent duty did not amount to anything at all. That was the contention made by some of our Canadian producers with respect to certain types of machinery made in Canada, notably at Dundas.

Mr. DUNNING: There is no competition at all.

Mr. BENNETT: I know there is none in this particular item, but it cannot mean that there will be anything for the British manufacturer under the free item.

Mr. DUNNING: No; Great Britain is not competitive in this class of machinery. We are really making available to one of our own export industries the cheapest machinery of the type referred to.

Item agreed to.

Customs tariff—427g. Power-driven centrifugal oil purifiers or extractors, bowl or tube type, not to include motive power, when for use in the extracting and refining of fish oils: British preferential tariff, free; intermediate tariff, 10 per cent; general tariff, 35 per cent.

Mr. BENNETT: This is an item in which, if the principle mentioned by the hon. gentleman is to prevail at all, there is a singular departure from it. The intermediate rate has been increased by twenty-five per cent with respect to those nations which now enjoy the intermediate and which did not enjoy it before, and the spread between the British preferential and that is now only ten per cent. So they are ten per cent worse off than they were in respect to American competition before.

Mr. DUNNING: You are speaking of the British?

Mr. BENNETT: Yes.

Item agreed to.

Customs tariff—429. (a) Knife blades or blanks, and table forks, of iron or steel, in the rough, not handled, ground nor otherwise manufactured; and spoon blanks of iron or steel, in the flat, not further manufactured than stamped to shape: British preferential tariff, free; intermediate tariff, 7½ per cent; general tariff, 10 per cent.

Item agreed to.

(g) Razor blades; razors and complete parts thereof: British preferential tariff, free; intermediate tariff, 30 per cent; general tariff, 30 per cent.

Mr. LENNARD: I for one am surprised to find that on the item for razor blades the duty is the same, because razor blades, aspirin tablets, soap and several other articles were widely proclaimed by the Liberal party during the election campaign as articles on which the duty was too high, and they said that if they were returned to power it would be lowered. I do not for a moment advocate the lowering of the duty; I just draw attention to the fact that on razor blades it remains the same.

Mr. DUNNING: It is a conference item with an irreducible margin and could not be reduced at the present time.

Item agreed to.

Customs tariff—430. Nuts and bolts with or without threads, washers, rivets, of iron or steel, coated or not, n.o.p., nut and bolt blanks, or iron or steel, per one hundred pounds: British preferential tariff, 50 cents and 10 per cent; intermediate tariff, 50 cents and 20 per cent; general tariff, 75 cents and 25 per cent.

Mr. BENNETT: Is that only adding "n.o.p."?

Mr. DUNNING: That is the only change.

Item agreed to.

Customs tariff—430a. Hinges and butts, of iron or steel, coated or not, n.o.p.; hinge and butt blanks, of iron or steel, per one hundred pounds: British preferential tariff, 75 cents and 10 per cent; intermediate tariff, 75 cents and 27½ per cent; general tariff, 75 cents and 30 per cent.

Mr. DUNNING: The same thing applies; adding "n.o.p." is the only change.

Item agreed to.

Customs tariff—431b. Adzes; anvils; augers; bevels, n.o.p.; bits; braces; cantdogs; chisels; cleavers; crowbars; hand drills; files; hammers; hatchets; mallets, mattocks and eyes or polls therefor; nail sets; picks and eyes or polls therefor; planes; pliers; plumb bobs, n.o.p.; punches, n.o.p.; rasps; measuring rules and tapes of all kinds; saws, saw blades and hand saw frames; screw drivers; sledges; spirit levels; spokeshaves; squares, n.o.p.; thread-cutting taps, dies and stocks; track tools; vises, n.o.p.; metal wedges; wrenches; socket wrench handles and adapters and sockets therefor: British preferential tariff, 10 per cent; intermediate tariff, 35 per cent; general tariff, 35 per cent.

Mr. MacNICOL: If the minister will not think he has made a mistake in this item I would like to congratulate him upon leaving the duty as it was.

Mr. DUNNING: I have an amendment which may or may not disappoint my hon. friend. The intention, of course, was not to change the rate, but there was an intention to include a number of items for specific description. The prime purpose was clarification. For instance, as the item stood before, it included bits but not the braces used with the bits. The rewording in certain instances involved purely incidentally an increase in duty under the intermediate tariff. The votes and proceedings indicate those slight changes. Immediately after the budget, notification went to customs ports that although this item with an intermediate rate of 35 per cent now included within its wording the additional tools referred to, the rate of duty to be levied on the same when imported from the United States, for example, or France, with which countries we had agreements, would be the rate set out under schedule I of Canada's agreement with the United States. But fear has been expressed in certain quarters that in spite of the fact that the customs authorities have instructions to honour the agreement rates, the inclusion of these words in an item bearing a higher rate might lead to mistakes and the collection of the higher rate of duty at certain ports, particularly in the smaller centres. If this were to occur it would constitute a violation of the letter of our agreement with the United States and to some extent of the agreement with France, and rather than have any question arise now or in the future as to the maintenance of rates covered by agreement items it has been decided that the clarification be dropped and, therefore, there will be a motion to delete the item, which will leave the situation exactly as is.

[Mr. Dunning.]

Mr. ILSLEY: I move:

That resolution No. 5, being the resolution to amend schedule A to the customs tariff, be amended by striking thereout tariff item 431b wherever the said item appears.

Mr. BENNETT: That may make some confusion with respect to shipments that have been entered since May 1.

Mr. DUNNING: A direction went out immediately to collectors. If we delete it now the instructions they have to-day will involve the administration of the item just as it is in the tariff at present.

Mr. BENNETT: As it was before May 1?

Mr. DUNNING: In relation to the United States, yes.

Mr. BENNETT: Certainly that cannot be so with respect to the British preferential, because it makes all the items ten per cent, and some items were as high as thirty per cent.

Mr. DUNNING: That is true.

Mr. BENNETT: And with respect to the intermediate, which is the rate the United States now have, it means a reduction from forty-five per cent, which is the maximum they paid under the general tariff, to a minimum of twenty-five per cent on some items. That is clear. But what I cannot make out is the effect of withdrawing this item from the resolution. It is to leave the tariff rate as it was prior to May 1, 1936?

Mr. DUNNING: Right.

Mr. BENNETT: Then what happens with respect to invoices that have come through in the meantime?

Mr. ILSLEY: That would be subject to the amendment. The collectors were wired on May 1 as follows:

Until further instruction take all customs and excise entries presented on and after second instant subject to amendment. Notify outports by wire.

Therefore they will be adjusted to the rate which actually is the rate in force as determined by parliament.

Mr. STIRLING: I have not been quite able to follow the mechanics of this group of

items. Taking 431b, I understand the commodities which used to come in under four separate items enumerated on the right hand side have now been grouped into one item.

Mr. DUNNING: That is true.

Mr. STIRLING: Then are we dealing with the three other items?

Mr. DUNNING: It would be more correct to say it was widened to cover others.

Mr. STIRLING: So these items still remain in the tariff?

Mr. DUNNING: Yes.

Item as amended agreed to.

Customs tariff—431c. Machinists' or metal workers' precision tools and measuring instruments, viz.:—Calipers, micrometers, metal protractors and squares, bevels, verniers, gauges, gauge blocks, parallels, buttons, mercury plumb bobs, dividers, trammels, scribers, centre punches, pocket speed indicators, straight edges, key seat clamps and other clamps and vises used by toolmakers for precision work, precision tools and measuring instruments, n.o.p.: British preferential tariff, free; intermediate tariff, 10 per cent; general tariff, 15 per cent.

Mr. BENNETT: Apart from putting the British preference in operation with respects to this item the effect is to reduce the intermediate tariff by a spread of thirty-five per cent, which is more than the existing spread in some instances. What are the importations under this head?

Mr. DUNNING: It is an entirely new item.

Mr. BENNETT: It is not entirely new as far as being subject to taxation is concerned. These commodities have been subject to duty all these years, under four heads.

Mr. DUNNING: Yes, under four different items. In May, 1930, there was a first attempt to give a definite classification in the tariff to precision tools, and during the years intervening the field of use has greatly widened. Most of these tools are for use by metal workers and are not of a class or kind made in Canada. They are in essence instruments of production, in almost all instances quite costly, and, in many cases, of delicate construction. It is generally the case, especially among metal workers, that the craftsman owns his own precision tools; hence there is no escaping the fact that so far the duties have been a direct burden upon the workers, whether we regard him as a producer or a consumer. The item as reworded attempts to cover the field in a broad and rather generous manner, and the new rates of free, 10 per cent and 15 per cent, which may be regarded as revenue duties, represent material reductions under all tariffs, most of the tools having been dutiable formerly at 15 per cent, 25 per cent and 30 per cent; 15 per cent, 27½ per cent and 35 per cent, or 30 per cent, 37½ per cent and 45 per cent, under former items 431c or 436a or 362. It is an effort to get this class of precision tools into one group and to recognize that inasmuch as they are tools generally speaking supplied by the workman, there is no reason for a heavy duty on them.

Mr. BENNETT: The ones the heavy duty was on were made in Canada. For instance, squares were made in Canada. Bevels are, or at least were, made here. I cannot say whether they are just now. Straight edges and certain other types of tools were made in Canada.

Mr. DUNNING: On very careful inquiry we find they are not.

Mr. BENNETT: None of them, do you say?

Mr. DUNNING: Upon very careful inquiry I am advised that not one of these tools is made in Canada.

Mr. BENNETT: Then I must be mistaken, if the minister says that. I asked about squares, for instance, not long ago, and I was told that they were made in Canada. Apparently that is not correct.

Item agreed to.

Customs tariff—431d. Engineers', surveyors' and draughtsmen's precision instruments and apparatus, viz.: alidades, altazimuth surveying instruments; aneroid barometers, engineering, military and surveying; angle prisms; boards, military sketching; box sextants; clinometers; compasses; cross staff heads; curves, adjustable, irregular, railroad and ship; curvimeters; drafting instruments of all kinds, including fitted cases containing the same; dipping needles; drafting machines; heliographs; integrators; levels, tripod and hand or pocket types; levelling rods; liners, section; meters, portable, for hydraulic engineering pantographs; planimeters; protractors; parallel rulers; parallel ruling attachments; poles, ranging; pedometers and paceometers; plane tables, military and topographic; scales, flat and triangular; slide rules; splines; straight edges, steel and wooden; tacheometers; tallying machines, pocket; tee squares, steel and wooden; telemeters; theodolites; transits, tripod and hand or pocket types; triangles of all types; tripods for use with any of the foregoing instruments: British preferential tariff, free; intermediate tariff, 10 per cent; general tariff, 15 per cent.

Mr. DUNNING: The same explanation applies with the difference, of course, that these are engineers', surveyors' and draughtsmen's precision instruments.

Mr. STIRLING: They are not made in Canada?

Mr. DUNNING: No.

Mr. BENNETT: None of them?

Mr. DUNNING: No.

Item agreed to.

Mr. DUNNING: At this point a motion will have to be made with respect to customs tariff 431e, arising out of 431b. This amendment relates to measuring rules and tapes of all kinds, and it is just to reinstate these articles in the tariff at the old rate, as they were deleted by amendment to the former item. These are made in Canada.

Mr. ILSLEY: I move:

That schedule A to the customs tariff, as amended by resolution No. 5 of May 1, 1936, be further amended by adding the following item, enumeration and rates of duty in said schedule A:

"431e measuring rules and tapes of all kinds: British preferential tariff, 15 per cent; intermediate tariff, 25 per cent; general tariff, 30 per cent."

Mr. BENNETT: Those are made in Canada?

Mr. DUNNING: Yes.

Mr. BENNETT: I believe it was a rule I saw which was marked "made in Canada," and I was also of the opinion that a square was so marked, but apparently I am wrong in that. A T-square was the other one I had in mind. However, it would seem that I am wrong.

Amendment agreed to.

Item as amended agreed to.

Customs tariff—435. Locomotives and motor cars for railways, of a class or kind not made in Canada, and complete parts thereof, for use exclusively in mining or metallurgical operations: British preferential tariff, free; intermediate tariff, 15 per cent; general tariff, 20 per cent.

Mr. DUNNING: The only change is in the wording in connection with parts of mining locomotives.

Mr. BENNETT: The words "and complete parts thereof" are added?

Mr. DUNNING: Yes.

Mr. BENNETT: The duty is not changed.

Mr. LAWSON: Was there a higher rate on the parts previously?

Mr. BENNETT: They come under the n.o.p. item.

Mr. DUNNING: Under the basket item.

Mr. LAWSON: Carrying a higher rate?

[Mr. Stirling.]

Mr. DUNNING: They might be almost anywhere in the tariff, under a number of rates. If they were brass parts or steel parts they might fall into different categories.

Item agreed to.

Customs tariff—438a. Automobiles and motor vehicles of all kinds, n.o.p.; chassis for the foregoing; chassis for electric trackless trolley buses: British preferential tariff, free; intermediate tariff, 17½ per cent; general tariff, 27½ per cent.

Provided that machines or other articles mounted on the foregoing or attached thereto for purposes other than for loading or unloading the vehicle shall be valued separately and duty assessed under the tariff items regularly applicable thereto.

Mr. BENNETT: What is the purport of this item?

Mr. DUNNING: It is the major automobile item.

Mr. BENNETT: That is the one?

Mr. DUNNING: Yes.

Item agreed to.

Customs tariff—438b. Bearings, clutch release; bearings, graphite; bearings, steel backed babbit; bushings, graphited or oil impregnated; ceramic insulator spark plug cores, not further manufactured than burned and glazed, not printed or decorated and without fittings, commutator copper segments; commutator insulating end rings; discs of hot rolled steel, spun or forged, with or without centre hole, for disc wheels; distributor rotors, cam assemblies and vacuum control assemblies; door bumper shoes; electric wiring terminals, sockets, fittings and connectors; gaskets of metal and asbestos, composite; ignition contact points; keys for shafting; lenses for head; tail, dome, signal and cowl or parking lamps; lock washers; piston ring castings in the rough, with or without gates and fins removed; steel bolts capped with stainless steel; switches for lamps, and parts thereof; vulcanized fibre in sheets, rods, strips and tubing; all the foregoing being of a class or kind not made in Canada, when for use in the manufacture of the automobiles, motor vehicles or chassis enumerated in tariff items 438a and 424, or for use in the manufacture of parts thereof, or for replacement or repair of automobiles, motor vehicles or chassis enumated in tariff items 438a and 424: British preferential tariff, free; intermediate tariff, free; general tariff, 30 per cent.

Mr. DUNNING: There is an amendment to be moved to the wording. The tariff board suggests with respect to 438b an amendment in line 2 by striking out the words "steel backed babbit" and by substituting therefor the words "steel backed non-ferrous" and by striking out the words "not printed or decorated and" in line 5 and substituting therefor the words "printed or decorated or not." The board suggests that modern developments in the bearings industry makes advisable a reference to non-ferrous bearings rather than

merely to those of babbit metal, and also that since spark plug cores have an imprint made on them before they are fired in the kiln, it is advisable to change slightly the wording respecting printing and decorating of such cores. That is the reason for the amendment to 438b which I am asking my colleague to move.

Mr. ILSLEY: I move:

That tariff item 438b as contained in resolution No. 5 of May 1, 1936, be amended in wording by striking out the words "Steel backed babbit" in line 2 thereof and substituting therefor the words "steel backed non-ferrous" and by striking out the words "not printed or decorated and" in line 5 thereof and substituting therefor the words "printed or decorated or not."

Amendment agreed to.

Mr. BENNETT: What were the importations under this item last year, and from where did they come?

Mr. DUNNING: Does the right hon. gentleman mean the parts item?

Mr. BENNETT: It may have an effect on the Canadian parts industry.

Mr. DUNNING: Last year the total importations of automobile parts were valued at $19,600,000, in round figures. Parts of automobiles exported were valued at $3,224,000.

Mr. BENNETT: Has the minister an estimate of Canadian production?

Mr. DUNNING: The incomplete figures show approximately $25,000,000.

Mr. BENNETT: My concern about the item was that it has the effect of giving free entry to an enormous class of articles from the United States that paid all the way from 10 per cent to 35 per cent. The effect would be to displace production in Canada.

Mr. DUNNING: This item is of a class or kind not made in Canada.

Mr. BENNETT: It is intended to limit the whole production?

Mr. DUNNING: Yes.

Mr. BENNETT: Well, that settles that, because the effect of the 17½ per cent duty as now applied has been, with the sales tax and the excise tax, to increase the price of a certain type of automobile just about the difference in the sales tax, up to date. I made inquiries since we discussed the matter a few days ago.

Mr. DUNNING: You are speaking of the general question?

Mr. BENNETT: Yes, the general effect. This one touches only parts not made in Canada?

Mr. DUNNING: Yes. The board has been successful, in conference with elements concerned, in reconciling the differences between them, and I am advised that there is complete agreement with respect to the parts industry.

Mr. LAWSON: Are the items covered by item 438b dealt with in the report of the tariff board?

Mr. DUNNING: Oh, yes, entirely.

Mr. LAWSON: As well as those that are of a class or kind made in Canada?

Mr. DUNNING: Yes. It was necessary to review the whole in order to arrive at the distinction as to the parts.

Mr. LAWSON: So this is in pursuance of the board's recommendation?

Mr. DUNNING: Oh, quite.

Item as amended agreed to.

Customs tariff—438c. Ammeters; arm rest and wheel housing lining of indurated fibre, pressed to shape; annual ball bearings and parts thereof; axle housings, one piece welded, machined or not; carbureters and parts thereof; chassis frames, without forgings, castings or stamped brackets attached; cigar and cigarette lighters, including base and parts thereof; control ventilator gear box; cylinder lock barrels, with or without sleeves and keys thereof; dash heat indicators; fuel pumps and parts thereof; gasoline gauges and parts thereof; hinges, finished or not, for bodies; horns, and parts thereof; instrument bezel assemblies and parts thereof; instrument board lamps; locks, electric ignition, steering gear, transmission, or combinations of such locks, and parts thereof; mouldings of metal, with nails set in position, lead filled or not; oil filters and parts thereof; oil gauges and parts thereof; pipe lines, bent to shape and equipped with fittings or not, and tubing therefor, for fuel, air or liquid. for actuating hydraulic brakes; purifiers for air and parts thereof; purifiers for oil and parts thereof; radiator grills, assembled or not, but not polished or plated, and not to include finish or decorative moulding; radiator ornaments, unplated; radiator shutter assemblies, automatic; radiator water gauges; radiator shells, not plated, nor metal finished in any degree; shackles, bearing spring and parts thereof; speedometers, and parts thereof; spring covers of metal and closing strips or shapes therefor; stampings, body, cowl, hood, fender and instrument board, of metal, in the rough, trimmed or not, but not metal finished in any degree, nor welded, riveted, or otherwise further manufactured; starter switch assembly and parts thereof; steering wheels, and rims therefor; sun visor blanks of gypsum weatherboard; thermostats and parts thereof; throttle and spark buttons asemblies; vacuum tanks; windshield wipers and parts thereof; all the foregoing being of a class or kind not made in Canada, when imported by manufacturers of

the automobiles, motor vehicles or chassis enumerated in tariff items 438a and 424, for use as original equipment in the manufacture of such automobiles, motor vehicles or chassis: British preferential tariff, free; intermediate tariff, 20 per cent; general tariff, 30 per cent.

(1) Provided, that if the above articles are imported by a manufacturer of automobiles motor vehicles or chassis enumerated in tariff items 438a and 424 whose total factory output during the year in which importation is sought does not exceed ten thousand complete automobiles, motor vehicles or chassis, and provided that not less than fifty per centum of the factory cost of production of such automobiles, motor vehicles or chassis, not to include duties and taxes, is incurred in the British empire, the rates of duty under this item shall be: British preferential tariff, free; intermediate tariff, free; general tariff, 25 per cent.

(2) Provided, that if the above articles are imported by a manufacturer of automobiles, motor vehicles or chassis enumerated in tariff items 438a and 424 whose total factory output during the year in which importation is sought exceeds ten thousand automobiles, motor vehicles, or chassis, and provided that not less than sixty per centum of the factory cost of production of such automobiles, motor vehicles or chassis, not to include duties and taxes, is incurred in the British empire, the rates of duty under this item shall be: British preferential tariff, free; intermediate tariff, free; general tariff, 25 per cent.

Provided that from and after March 31st, 1938, the words "sixty-five" shall be substituted for the word "sixty" in the immediately preceding proviso;

(3) Provided that the governor in council may make such regulations, if any, as are deemed necessary for carrying out the provisions of this item.

Mr. DUNNING: I have an amendment on 438c. It is a case of wording only—if I may ask hon. members to follow this as they did the last item—by striking out the phrase "annular ball bearings and parts thereof" in lines 2 and 3.

Mr. BENNETT: My copy says "annual," anyway.

Mr. DUNNING: That ought to come out. By striking out the words "without forgings, castings or stamped brackets attached" in lines 5 and 6; that leaves it just "chassis frames." By striking out the words "nor welded, riveted, or otherwise further manufactured" in lines 33 and 34; that relates to metal stampings.

Mr. BENNETT: All these are said to be of a class or kind not made in Canada?

Mr. DUNNING: Yes. And then by amending the final clause of the main item to read as follows:

all the foregoing being of a class or kind not made in Canada, when imported for use in the manufacture of the automobiles, motor vehicles or chassis enumerated in tariff items 438a and 424, or for use in the manufacture of parts thereof, or for the replacement or repair of automobiles, motor vehicles or chassis enumerated in tariff items 438a and 424.

Mr. BENNETT: That is to make similar phraseology with the preceding item?

Mr. DUNNING: Yes. Then again, by inserting after the word "imported" in proviso (1), line 2, the words "for use as original equipment." And the same thing in proviso (2). That is a very important addition to the proviso.

Mr. BENNETT: What is the effect of it?

Mr. DUNNING: The effect of each of these I will deal with from my notes, if the committee permit. Annular bearings are recommended for deletion as they become the subject of a new item to be introduced a little later. The tariff board suggests that the descriptive clause attaching to chassis frames in the item of May 1 is probably unduly restrictive, and if insisted upon in administration might interfere seriously with the shipment of chassis frames to Canadian plants. It recommends, therefore, that the words referred to in the amending resolution be deleted, and also stampings, for much the same reason as in the case of chassis frames. The tariff board now suggests that it would be in the interests of the Canadian industry, with no adverse effect upon the consumer or any Canadian manufacturer, to delete the words named in the amendment. With regard to the final clause, the change is that the words "by a manufacturer of automobiles," etcetera. The board now recommends that the qualification be merely that these articles be imported for use in the manufacture of, instead of restricting the importation to the individual manufacturer. The idea is, of course, for existing industries to be in a position to service the parts. Then, with regard to the provisoes, the board now suggests that the provision of the proviso relates to parts used solely for the original equipment of the car, in view of the fact that the qualification on the basis of factory content could not properly be connected with other parts than those so used. These are all qualifications of verbiage, and interfere in no way with the general tenor and effect. They are all recommended by the board.

Mr. BENNETT: Yes. I was looking at the board's report. The effect of these, of course, will be to eliminate any possible drawbacks.

Mr. DUNNING: Yes, entirely.

Mr. BENNETT: That is one purpose. I recall that when the item was under consideration—

Mr. DUNNING: It takes the place of 1055.

Mr. BENNETT: Yes, this will take the place of that, and it must necessarily cover everything if it is to be effective.

Mr. DUNNING: Yes.

Mr. BENNETT: Am I right in assuming that the minister said a moment ago that the board had been able to reconcile the views of various producers and that this item is supposed to cover all the items regarding parts?

Mr. DUNNING: Yes. I do not think—

Mr. BENNETT: That is very important.

Mr. DUNNING: Of course there are other items to which the same thing applies.

Mr. BENNETT: Yes, of a class or kind not made in Canada.

Mr. DUNNING: They are parts of one whole, of course. I can hardly believe the professions of agreement I hear with regard to these items.

Mr. ILSLEY: I beg to move:

That item 438c, as contained in resolution No. 5 of May 1, 1936, be amended in wording as follows:

(1) by striking thereout the phrase "annular ball bearings and parts thereof" (lines 2 and 3);

(2) by striking thereout the words "without forgings, castings or stamped brackets attached" (lines 5 and 6);

(3) by striking thereout the words "nor welded, riveted, or otherwise further manufactured" (lines 33 and 34);

(4) by amending the final clause of the item to read as follows:

"all the foregoing being of a class or kind not made in Canada, when imported for use in the manufacture of the automobiles, motor vehicles or chassis enumerated in tariff items 438a and 424, or for use in the manufacture of parts thereof, or for the replacement or repair of automobiles, motor vehicles or chassis enumerated in tariff items 438a and 424."

(5) by inserting after the word "imported" in proviso (1) thereto, (line 2) the words "for use as original equipment."

(6) by inserting after the word "imported" in proviso (2) thereto, (line 2) the words "for use as original equipment."

Mr. BENNETT: What I cannot quite understand is why there should be the free item under the intermediate tariff if sixty per cent is produced in the British empire. Take the top of the page:

Provided, that if the above articles are imported by a manufacturer of automobiles, motor vehicles or chassis enumerated in tariff items 438a and 424 whose total factory output during the year in which importation is sought exceeds ten thousand complete automobiles, motor vehicles or chassis, and provided that not less than sixty per centum of the factory cost—

That is "and," not "or."

—of production of such automobiles, motor vehicles or chassis, not to include duties and taxes, is incurred in the British empire, the rates of duty under this item shall be—

That means they come in free from the United States if sixty per cent is produced in the British empire. Is that quite fair?

Mr. DUNNING: Of course they got drawback formerly.

Mr. BENNETT: The test now for free entry from the United States is that sixty per cent is produced in the British empire. How can that be possible?

Mr. DUNNING: Sixty per cent of the car.

Mr. BENNETT; No; it says "not to include duties and taxes." It is not that way at all. Not less than sixty per cent of the factory cost of production. I am reading at the top of page 22. But for the purposes of reading, the other is the same. We are going to make this sixty-five per cent after March 31, 1938. The point I am trying to make to the minister is that I cannot understand why the test of free entry from the United States is that sixty or sixty-five per cent should be made in the British empire.

Mr. DUNNING: Of the whole automobile.

Mr. BENNETT: No, no.

Provided that not less than sixty per centum of the factory cost of production of such automobiles, motor vehicles or chassis, not to include duties and taxes, is incurred in the British empire, the rates of duty under this item shall be—

That is this great item here.

Mr. DUNNING: Yes.

Mr. BENNETT: And at the present moment it is free in the British empire. It is free already under the intermediate tariff for the whole of the items. Turn over the page:

Provided, that if the above articles are imported by a manufacturer of automobiles, motor vehicles or chassis enumerated in tariff items 438a and 424 whose total factory output during the year in which importation is sought exceeds ten thousand automobiles, motor vehicles or chassis, and provided that not less than sixty per centum of the factory cost of production of such automobiles, motor vehicles or chassis, not to include duties and taxes, is incurred in the British empire, the rates of duty under this item shall be....free....free....and twenty-five per cent. Free....17½ per cent....27½ per cent.

I can understand this last part of it:

438d. Front and rear axles; brakes; clutches, internal combustion engines; steering gears; magnetos; rims for pneumatic tires larger than thirty inches by five inches; trans-

mission assemblies; steel road wheels; and complete parts of the foregoing, all of a class or kind not made in Canada, when imported by manufacturers of automobiles, motor vehicles or chassis enumerated in tariff items 438a and 424 for use only in the manufacture of motor trucks or motor truck chassis....free....17½ per cent....27½ per cent.

A corresponding item with respect to automobiles, as the minister will remember—free, 17½ per cent and 27½ per cent.

Now, when we are dealing with parts, we say, provided that if you make sixty per cent in the British empire you can bring them in free from the United States.

Mr. DUNNING: Quite right.

Mr. BENNETT: It is sixty-five per cent in 1938?

Mr. DUNNING: That is right.

Mr. BENNETT: May they be made in the British empire and brought into the United States before they come here? What is involved in the right to come in from the United States is the sixty per cent made in the British empire?

Mr. DUNNING: Of the car, not of the parts.

Mr. BENNETT: I read it twice. The wording is the cost incurred in the manufacture of the car. If the car costs $1,000 at the factory and $600 of that cost was incurred in buying material from the British empire, the other $400 would come in free from the United States

Mr. DUNNING: Yes.

Mr. BENNETT: I am bound to say that, as I read it, it is not very clearly put.

Mr. DUNNING: Exactly the same as was done by drawback where fifty per cent was the qualification. Under this item the qualification is sixty per cent, with the proviso that they must jump to sixty-five per cent empire content on the date named.

Amendment agreed to.

Item as amended agreed to.

Customs tariff—438d. Front and rear axles; brakes, clutches, internal combustion engines; steering gears; magnetos; rims for pneumatic tires larger than thirty inches by five inches; transmission assemblies; steel road wheels; and complete parts of the foregoing, all of a class or kind nor made in Canada, when imported by manufacturers of automobiles, motor vehicles or chassis enumerated in tariff items 438a and 424 for use only in the manufacture of motor trucks or motor truck chassis: British preferential tariff, free; intermediate tariff, 17½ per cent; general tariff, 27½ per cent.

Item agreed to.

[Mr. Bennett.]

Customs tariff—438e. Parts, n.o.p., for automobiles, motor vehicles or chassis enumerated in tariff items 438a and 424, not to include wireless receiving sets, electric storage batteries, parts of wood, tires and tubes or parts of which the component material of chief value is rubber:—

(1) Brake linings, and clutch facings whether or not including metallic wires or threads:—

(a) when made from crude asbestos of Empire origin: British preferential tariff, free; intermediate tariff, 25 per cent; general tariff, 35 per cent.

(b) when made from crude asbestos of non-empire origin: British preferential tariff, 15 per cent; intermediate tariff, 25 per cent; general tariff, 35 per cent.

(2) Automobile and motor vehicle engines, stripped, n.o.p., and complete parts thereof, n.o.p.: British preferential tariff, free; intermediate tariff, 25 per cent; general tariff, 35 per cent.

(3) Parts, n.o.p., whether finished or not: British preferential tariff, free; intermediate tariff, 30 per cent; general tariff, 40 per cent.

Mr. DUNNING: There will be a change in this item which will be amended by inserting after the words "wireless receiving sets" in line three thereof, the words "die castings of zinc," and by inserting in subitem (3) thereof before the words "whether finished or not" the words "not electroplated." This is to ensure against an increase in the rates on zinc die castings which were dutiable under item 346 at 15 per cent, 22 per cent and 25 per cent, this being a raw material of the plating industry. Second, it is to ensure that electroplated parts shall continue to be dutiable under the existing item covering such goods.

Mr. BENNETT: The duty is raised 2½ per cent under the intermediate tariff. Is that a tariff board item?

Mr. DUNNNING: Yes, entirely so.

Mr. BENNETT: I do not recall having read the reasons they gave why it was necessary to raise the rate from 22½ to 25 per cent with respect to both these items.

Mr. DUNNING: This is the n.o.p. parts item and it is part of the general adjustment as between the parts manufacturer and the manufacturer of the completed automobile.

Mr. BENNETT: I realize that.

Mr. ILSLEY: I move accordingly.

Mr. BENNETT: I cannot see what point there is in increasing the item under the general tariff, having regard to what we have left under that tariff. Why should it be raised from 25 per cent to 35 per cent?

Mr. DUNNING: If my right hon. friend could assure me or could assure Canada that

all the countries now under the intermediate would remain there, then the situation would be different.

Mr. BENNETT: But there are very few left under the intermediate tariff.

Mr. DUNNING: I am speaking of those now under the intermediate; will they remain there?

Mr. BENNETT: That is a singular reason to give for raising the tariff on that particular type of automobile parts. I think the hon. gentleman will find that his argument is a little skimpy.

Mr. DUNNING: Not with respect to certain countries.

Amendment agreed to.

Item as amended agreed to.

Customs tariff—438f. Hot rolled strip of iron or steel with rolled or mill edge, not being of greater value than 2⅜ cents per pound, of a class or kind not made in Canada, when imported by manufacturers of automobiles, motor vehicles or chassis enumerated in tariff items 438a and 424 or by manufacturers of parts of automobiles, motor vehicles or chassis enumerated in the tariff items 438a and 424 to be used in the manufacture of such automobiles, motor vehicles or chassis, or parts thereof, in their own factories, per ton: British preferential tariff, free; intermediate tariff, $4; general tariff, $8.

Mr. BENNETT: There has been a great deal of discussion about this item, and perhaps the minister could give us a little statement with respect to it. I understand that manufacturers were endeavouring to make this particular class of steel in Canada.

Mr. MacNICOL: At Hamilton.

Mr. DUNNING: I have my notes on this from the tariff board report. This carries over into this schedule the existing item which was created by order in council, the rates being reduced to free, $4 and $8 per ton on certain hot rolled strip steel of a class or kind not made in Canada for the automobile industry.

Mr. BENNETT: At that particular time this steel was not made in Canada, but I understand since then it has been in process of manufacture.

Mr. DUNNING: Then this item would become inoperative. The words are in the item.

Mr. MacNICOL: Recently I went to Hamilton to see the rolling of steel which I was informed was to be used in the motor car industry. Has the minister had any report as to whether this has been successful?

Mr. DUNNING: We have heard rumours of the experiments which are going on. The moment this steel is manufactured, this item does not operate.

Mr. BENNETT: They sent an investigator over to the foundry in my time.

Item agreed to.

Mr. DUNNING: I have a motion to cover annular ball bearings which were eliminated from the previous item. This amendment is to create item 438h to cover annular ball bearings and parts thereof, when imported for use only as original equipment in the manufacture of goods enumerated in tariff items 438a and 424, under regulations prescribed by the minister: Free, free and free.

Amendment agreed to.

Mr. DUNNING: I have another motion to create a new item, 442, articles which enter into the cost of manufacture of the goods enumerated in the 409 group of items and in item 439c, when imported by manufacturers for use exclusively in the manufacture in their own factories of the goods enumerated in the aforesaid tariff items, under regulations prescribed by the minister: Five per cent, six per cent, six per cent. Provided that goods which are entitled to free entry or to a lower rate of duty than is mentioned in this item shall not be entered at the rate specified in this item. This amendment to the resolution is introduced for the purpose of widening the terms of the item to apply to the items enumerated in the farm implement group to include windmills. When this item was last amended the rate on windmills was free, 15 per cent and 25 per cent, and it was felt that articles entering into the manufacture of windmills should not receive a lower rate than applied to articles entering into the cost of manufacture of farm implements This amendment is proposed to rectify that situation because in the item which has passed the committee windmills are included with other farm implements. This will give the same privilege to the raw materials entering into the construction of windmills as is given to those entering into the construction of other farm implements.

Mr. BENNETT: In view of the fact that this item does not appear in the tariff schedules, perhaps it could stand. The minister could go on to the next item and we shall have a chance of looking at this one. It will be on Hansard and I can read it between now and the next sitting.

The CHAIRMAN: Shall the amendment stand?

Mr. DUNNING: It does not amend anything that is now before the committee. It is a new item and the Chairman will bring it back to our attention before we complete proceedings in committee on it. I can assure my right hon. friend, however, that the wording is not changed; it is solely for the purpose of giving the windmill manufacturer the same rate of duty on raw materials as the other farm implement manufacturers get.

Mr. BENNETT: Very well; I can look at it in the bill.

Amendment agreed to.

Customs tariff—445a. Electric head, side and tail lights, n.o.p.: electric torches or flashlights and complete parts therefor: British preferential tariff, 20 per cent; intermediate tariff, 30 per cent; general tariff, 30 per cent.

Mr. BENNETT: Are these made in Canada?

Mr. DUNNING: Yes.

Mr. BENNETT: What are the importations?

Mr. DUNNING: The total imports are $544,000, of which $521,000 came from the United States. Our own production of incandescent lights is $496,000.

Item agreed to.

Customs tariff—445f. Electric dynamos or generators and transformers, and complete parts thereof, n.o.p.: British preferential tariff, 25 per cent; intermediate tariff, 33⅓ per cent; general tariff, 37½ per cent.

Mr. BENNETT: What are the importations?

Mr. DUNNING: They amounted to $365,000, of which $275,000 came from the United States and $81,000 from the united kingdom.

Mr. BENNETT: What is our production?

Mr. DUNNING: Our production is $2,835,000.

Mr. BENNETT: There has been a good deal of discussion as to whether or not we should limit the importations to a greater extent than we have done, because of importations of secondhand dynamos from across the line, dynamos discarded by them and brought in here.

Mr. DUNNING: There is difficulty in connection with the whole matter of second hand equipment, and this we are endeavouring to watch.

Item agreed to.

[The Chairman.]

Customs tariff—445g. Electric motors, and complete parts thereof, n.o.p.: British preferential tariff, 25 per cent; intermediate tariff, 33⅓ per cent; general tariff, 37½ per cent.

Item agreed to.

Customs tariff—445k. Electric apparatus, and complete parts thereof, n.o.p.: British preferential tariff, 15 per cent; intermediate tariff, 25 per cent; general tariff, 30 per cent.

Item agreed to.

Customs tariff—445m. Flameproof electric switch gear, for use underground in coal mines, and complete parts thereof: British preferential tariff, free; intermediate tariff, 20 per cent; general tariff, 30 per cent.

Mr. STIRLING: What is the change?

Mr. DUNNING: The addition of "parts thereof"; there is no change in the rate.

Item agreed to.

Customs tariff—446a. Manufactures, articles or wares of iron or steel or of which iron or steel or both are the component materials of chief value, n.o.p.: British preferential tariff, 10 per cent; intermediate tariff 27½ per cent; general tariff, 35 per cent.

Mr. BENNETT: This is the basket item?

Mr. DUNNING: Yes.

Mr. BENNETT: With respect to iron and steel?

Mr. DUNNING: Yes.

Item agreed to.

Customs tariff—447a. Sand cast rolls and chilled cast iron rolls imported by proprietors of rolling mills for use exclusively in rolling iron or steel, or by manufacturers of paper for use exclusively in manufacturing paper in their own factories: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. DUNNING: I have an amendment which will read:

Sand cast rolls and chilled iron rolls for use exclusively in rolling iron or steel or in the manufacture of paper.

We do not restrict it to the manufacturers themselves who import the article, provided it is imported for use in the manufacture. It has been represented that the manufacturer very seldom imports these heavy sand cast rolls himself, because other processing has to be done in connection with them by an engineering firm, and the wording in votes and proceedings would limit it to the manufacturer.

Mr. MacNICOL: Only the manufacturer will import them?

Mr. DUNNING: An engineering firm can import them provided they are for use in the manufacture of these articles.

Amendment agreed to.

Item as amended agreed to.

Customs tariff—447b. Forged steel rolls, hardened and ground, imported by proprietors of rolling mills for use exclusively in rolling non-ferrous metals: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. DUNNING: I have an amendment to this item, which will now read:

Forged steel rolls, hardened and ground, when imported for use exclusively in rolling non-ferrous metals.

Take a steel manufacturer who is putting in a new mill. In this case the engineering firm building the mill for him will be able after this amendment, to import the rolls and incorporate them in the mill that is being built. I was advised by those interested that the wording here would compel the manufacturer obtaining the final equipment to import these rolls himself, though as a matter of fact he would have to ship them immediately to the engineering firm in order to have them incorporated in the equipment.

Amendment agreed to.

Item as amended agreed to.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

---

## Tuesday, May 26, 1936

The house met at three o'clock.

### CANADIAN RADIO COMMISSION

THIRD AND FINAL REPORT OF SPECIAL COMMITTEE

Mr. A. L. BEAUBIEN (Provencher) presented the third and final report of the special committee appointed to inquire into the operations of the Canadian radio commission and its administration of the Canadian Radio Broadcasting Act of 1932 and amendments, and the regulations made under authority thereof, as follows:—

Your committee held twenty-five meetings and heard thirty-seven witnesses, including three members of parliament, and after careful consideration of the evidence presented not only before this committee, but also before the 1932 and 1934 committees, we desire to endorse the conclusion reached in 1934, viz., that:

"It has been made evident to your committee that the establishing of national broadcasting in Canada presents many difficulties, for the correction of which time, experience and large expenditures of public money will be necessary."

1. It has been amply demonstrated that a commission of three cannot be moulded into a unit that can formulate and execute policies successfully. Evidence adduced before this committee has made it apparent that under the existing organization there has been lack of coordination in dealing with some major questions.

(a) After carefully reviewing the administration of radio broadcasting we have reached the conclusion that recommendation number one of the 1934 committee, viz.:—

"That in the opinion of your committee radio broadcasting could be best conducted by a general manager"

is justified in all respects, and your committee hereby endorses and repeats this recommendation.

2. We recommend that the Canadian Radio Broadcasting Act of 1932 be repealed and that a new act be substituted therefor, which will place the direction of broadcasting in the hands of a corporation with an honorary board of nine governors chosen to give representation to all parts of Canada, this board to operate through a general manager and an assistant general manager, who will be responsible to the board for the conduct of all business of the corporation.

Members of the honorary board of governors should be men of broad outlook, having a knowledge of the tastes and the interests of the listening public and who can make a definite contribution to the solution of the problem before the corporation.

The general manager should be appointed by the governor in council, upon the recommendation of the board of governors, and should be an executive of the widest experience in the field of radio broadcasting.

3. We recommend that the corporation be given substantially the powers now enjoyed by the British Broadcasting Corporation (see appendix attached), and, in addition, that it be given exclusive control over:—

(i) the character of all programs, political and otherwise, broadcast by private stations, and the advertising content thereof:

(ii) all wire line networks used for carrying broadcast programs.

4. Your committee is of the opinion that the corporation should enjoy the fullest possible freedom, in so far as its internal activities are concerned, including full authority to engage, dismiss and control its employees and fix their remuneration.

5. Your committee endorses the recommendation of the Aird commission in regard to the technical control of stations and reaffirms the views of that commission as set out in page 11 of their report, viz.:—

"Control

The Minister of Marine and Fisheries under the Radiotelegraph Act is the licensing authority for all classes of radio stations, which includes radio broadcasting stations and receiving sets, direct control over such technical questions as wavelengths, power of stations and the collection of licence fees should we consider, remain with this authority. In order to promote good reception conditions, it is most desirable that the radio activities of other departments of the government should conform

to the regulations and be subject to the authority of the Radiotelegraph Act. We are also of the opinion that the radio branch of the marine department should continue to carry on the service to broadcast listeners, which includes the suppression of inductive interference."

Certain of the technical duties now carried out by the department in regard to the radiotelegraph and radiotelephone stations in the dominion appear to be duplicated by the commission in the case of broadcasting stations and the preponderance of evidence presented before your committee was strongly in favour of the handling of all this work by the department.

6. We regard it as a fundamental requirement that complete cooperation be established and maintained at all times between the minister and the corporation, and that the minister before taking any action towards the authorizing of any new private stations, changing the power of such stations, assigning wavelengths and other correlated questions, shall first consult with and obtain the recommendation of the corporation to the end that if and when it is decided to extend the national system, the location and organization of private stations will be such as to permit of the efficient absorption of any or all of them into the national system.

7. We reaffirm the principle of complete nationalization of radio broadcasting in Canada. Pending the accomplishment of this, radio listeners will continue to be dependent on private stations for much of their entertainment, and your committee is of the opinion that the fullest cooperation should be maintained between the corporation and the private stations.

8. We desire to reaffirm the principle set out in the Canadian Radio Broadcasting Act of 1932 that in determining the compensation to be paid for the taking over of any private stations, no allowance shall be made for the value of the licence terminated by the taking over of such station, and that no person shall be deemed to have any proprietary right in any channel allotted, and that no person shall be entitled to any compensation by reason of the cancellation of the allotment of a channel or change in a channel.

9. Your committee recommends that the corporation immediately consider ways and means of extending national coverage, either by linking additional existing private stations to the corporation's network or by the establishment of new stations.

10. In order to provide for the establishment of new stations from time to time to give further coverage, it is recommended that the corporation be authorized to borrow from the government sums not exceeding a total of $500,000 under such terms and conditions as may be prescribed by the governor in council.

The interest and amortization charges on such loans as may be granted shall be a first charge on the revenue of the corporation.

11. Your committee recommends that power be given to the minister of marine to control the use of electrical apparatus, machinery, or any device which cause local interference with radio reception.

12. Your committee finds that during the last election there was serious abuse of broadcasting for political purposes and that lack of a proper control by the commission was apparent. The most glaring instance brought before the committee relates to the "Mr. Sage" broadcasts, in which offensive personal references were frequent and to which no proper or adequate political sponsorship was given. Some of these offensive broadcasts originated in the Toronto studios of the radio commission.

We also find that credit was issued to political parties in direct violation of the rules of the commission, which rules prescribe that all political broadcasts must be paid for in advance. Generally speaking from the evidence presented before your committee we are forced to the conclusion that there was a loose administration of commission affairs.

Your committee recommends that the following points be incorporated in the new legislation:

(i) That dramatized political broadcasts be prohibited.

(ii) That full sponsorship of all political broadcasts be required.

(iii) That the limitation and distribution of time for political broadcasts be under the complete control of the corporation, whose duty it shall be to assign time on an equitable basis between all parties and rival candidates.

(iv) That no political broadcasts be allowed on an election day or during two days immediately preceding same.

13. Your committee recommends that, as soon as it becomes possibles, to review, readjust or amend the contracts for wire line networks, consideration be given to the inclusion in such networks of the telephone line systems, particularly those owned by provincial governments of the prairie provinces.

14. Your committee recommends that, in the matter of news broadcasts, the closest possible cooperation should maintain between the broadcasting corporation and the Canadian press.

15. Your committee recommends that legislation be introduced in parliament at this session to give effect to these recommendations.

A copy of the minutes of proceedings and minutes of evidence adduced before your committee, together with exhibits and papers relative thereto, are herewith submitted with the report, for the information of the house.

All of which is respectfully submitted.

## Appendix to Report

### Synopsis of Powers of the British Broadcasting Corporation

(As set out in paragraph 3 of their charter of incorporation)

(a) To carry on broadcasting service.

(b) To acquire any undertaking, stations, plant, etc., for carrying on the corporation's work.

(c) To establish and maintain stations.

(d) To publish papers, books, magazines, etc.

(e) To collect news.

(f) To acquire copyrights in literary, musical and artistic works, gramophone records, etc.

(g) To purchase and acquire patent rights.

(h) To enter into arrangements with the government or other authorities subject to certain limitations.

(i) To establish and support pension schemes for employees.

(j) To purchase and lease real and personal property.

(k) To invest corporation money not immediately required.

(l) To borrow money.

(m) To sell or lease property.

(n) To do such other things as may be conducive to the objects of the corporation.

## MISCELLANEOUS PRIVATE BILLS

Third report of the standing committee on miscellaneous private bills—Mr. McPhee.

## VIMY RIDGE MEMORIAL

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I have the honour to inform the house that His Majesty the King has graciously accepted the invitation of His Majesty's government in Canada to unveil the Canadian war memorial at Vimy Ridge on July 26. I have also pleasure in stating that on the same occasion Canada will be honoured by the presence of the President of the French republic.

## CANADA AND THE UNITED STATES

REPORTED REQUEST FOR COMMISSION TO CONSIDER POLITICAL UNION

On the orders of the day:

Mr. H. E. WILTON (Hamilton West): Mr. Speaker, before the orders of the day are called I would appreciate the indulgence of the house in order to make a brief statement in reference to a newspaper report recently published to the effect that a member of the United States congress has asked for the appointment of a commission to consider the advisability of granting Canada the privilege of becoming a part of that country.

Some hon. MEMBERS: Order.

Mr. WILTON: Is that in order?

Mr. SPEAKER: Order.

## SMALL PROPERTY OWNERS

PROPOSED STUDY OF THEIR FINANCIAL SITUATION LOOKING TO EQUITABLE TREATMENT

On the orders of the day:

Hon. FERNAND RINFRET (Secretary of State): Mr. Speaker, at the last sitting of the house the hon. member for Parkdale (Mr. Spence) asked whether the government was taking any action in connection with the resolution regarding small property holders moved by the hon. member for St. Mary (Mr. Deslauriers) and passed by the house on February 27. In reply may I say that it was at that time and still is the opinion of the government that the question of granting relief or assistance to small property holders is primarily a municipal one. In the preparation of the budget and other government policies due consideration is being given to this class of Canadian citizens.

## CANADIAN NATIONAL RAILWAYS

CORRESPONDENCE WITH RESPECT TO RETIREMENT OF THE TRUSTEES

On the orders of the day:

Hon. H. A. STEWART (Leeds): Mr. Speaker, would the Minister of Railways and Canals (Mr. Howe) lay on the table of the house the correspondence between his or any department of the government and the trustees of the Canadian National Railways relative to the retirement of the trustees?

Hon. C. D. HOWE (Minister of Railways): Mr. Speaker, I had occasion to look at the very few letters that were interchanged on this subject and they are all marked personal and confidential. They are almost wholly from the trustees and very few from the Minister of Railways.

Mr. STEWART: Would the minister lay on the table any that are not marked confidential?

Mr. HOWE: There are none not marked confidential.

Mr. STEWART: The minister said "nearly all."

Mr. HOWE: I said they were nearly all from the trustees.

Mr. STEWART: I understood him to say they were nearly all marked confidential.

On the order being called:

House again in committe on Bill No. 17, an act respecting the national harbours board —The Minister of Marine.

Right Hon. R. B. BENNETT (Leader of the Opposition): Mr. Speaker, as a matter purely of the privileges of this house, can there be any such document as a letter marked personal dealing with a public question such as the retirement of trustees? I think there cannot. The view taken by the Prime Minister on one occasion with respect to a matter that came up at that time seemed to me to be sound, that marking a letter personal cannot make it personal if it is a communication touching a matter of public business, such, for instance, as the retirement of trustees. The matter is too serious to be disposed of in this way. Perhaps the Prime Minister might look into it, and I will do the same.

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata): Mr. Speaker, I rise to a point of order. The right hon. gentleman is out of order in speaking to the matter at this time after the house had disposed of the question raised on the orders of the day and had proceeded to an entirely different matter.

## BUSINESS OF THE HOUSE

Hon. C. H. CAHAN (St. Lawrence-St. George): Could we not defer until later in the day consideration of the harbour board bill?

Mr. HOWE: Just as my hon. friend likes.

Mr. CAHAN: I did not understand it was coming up, when I looked at the statement of the Prime Minister at the adjournment on Friday evening. I have no objection to the bill coming up later in the day, but there are one or two researches I should like to make before it does come up.

Right Hon. W. L. MACKENZIE KING (Prime Minister): May I say to my hon. friend that I understood it was not likely there would be much discussion on the bill at this stage and that he was prepared to proceed at any time. It will however be wholly agreeable to proceed with the bill after the dinner recess instead of at the present time.

Mr. CAHAN: When the bill came up the other day and I said that we were willing to take it up, I then had in mind a note I had received from the Minister of Railways from which I understood the government would accept the amendment which I proposed, or accept it with some slight changes, and I did not on that occasion bring my notes with me. I have been out of town in the meantime, and I should like to gather my notes together in order to discuss certain phases of the amendment which I moved.

Mr. MACKENZIE KING: Certainly.

## WAYS AND MEANS

### CUSTOMS TARIFF AMENDMENT

The house in committee of ways and means, Mr. Sanderson in the chair.

Customs tariff—462. Philosophical, photographic, mathematical and optical instruments, n.o.p.; speedometers, cyclometers and pedometers, n.o.p.; complete parts of all the foreging: British preferential tariff, 15 per cent; intermedite tariff, 25 per cent; general tariff, 30 per cent.

Mr. DUNNING: We are just adding n.o.p.

Item agreed to.

Customs tariff—462a. Photographic cameras and equipment for use by professional photographers and commercial photo-finishers in their own business, as follows:—

Cameras for professional purposes, for making negatives 4¾ inches by 6½ inches and larger, and the following accessories for use with such cameras: lenses, shutters, exposure meters, range finders, film and plate holders, lens hoods, lens boards, ground glass carriages, reducing backs, reversible adapter backs, lantern slide attachments, film sheaths, combination paper and plate holders, kits, carrying cases, camera stands, camera tripods, camera tripod tops, vignetters, diffusion discs, diffusion disc holders, colour filters, colour filter holders, polarizing screens, polarizing screen holders and backgrounds.

Printers, enlargers, heaters, dryers, mounting presses, print washers, automatic film processers, printing frames and tanks for developing, fixing and washing: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. POULIOT: Mr. Chairman, on this item, as on some others, the British preferential tariff has been decreased, and that is why I take this opportunity to give notice that I withdraw an order of the house, No. 43 on the order paper, being a motion in my name with regard to the British preferential tariff. Upon this item, sir, we may discuss the Canadian-British tariff and also trade at large. I shall try to be as brief as possible, but I wish to give a short review of what has happened in trade during the last five years.

On August 1, 1930, the total number of items in the customs tariff was 1,100, and on June 5, 1935, the number was 1,280. The first thing the late government did at the special session of 1930 was to increase the tariff, and according to Hansard of September 8, 1930, the then Prime Minister (Mr. Bennett) is quoted as follows, at page 4:

> The necessity for dealing with exceptional economic conditions with the resultant unemployment has induced me to summon you at an earlier date than would otherwise be necessary. Measures will be submitted for your consideration, including amendments to the Customs Act and the Customs Tariff, which it is anticipated will do much to meet the unusual conditions which now prevail.

Therefore, Mr. Chairman, high tariff was used as a cure for unemployment. At that session, 152 items of the tariff were increased and 11 decreased by parliament, and after those changes had been made the then Prime Minister was ready to go to England for the economic conference, and there was to be no more unemployment in this country. At the economic conference he spoke in his own way and told the British people what was the aim of his government. I find his speech in the official report of the imperial conference of 1930, starting on the first page of the annex. He spoke as follows:

> The Conservative party of Canada believes in, and employs, the principle of protection of the home producer of agricultural and fabricated products from harmful interference by world competitors. But it is not part of our policy to exclude from our markets foreign goods, so long as their importation does not threaten a reduction in the high standard of

living which our citizens enjoy. On the other hand, it is our declared policy to provide for the consumer a cheap market, by stimulating the growth of competing domestic industries to that point of development where they will be able, in fair competition with others beyond our dominion, to offer to the Canadian public products of like quality and at prices comparable to those prevailing in the larger markets of other countries.

And again, he said:

I offer to the mother country, and to all the other parts of empire, a preference in the Canadian market in exchange for a like preference in theirs, based upon the addition of a ten per centum increase in prevailing general tariffs, or upon tariffs yet to be created. In the universal acceptance of this offer, and in like proposals and acceptances by all the other parts of empire, we attain to the ideal of empire preference.

I do not think it is necessary to say anything more about it, since the matter was commented upon by my leader, the Prime Minister (Mr. Mackenzie King), who said at the time that it was absurd to ask the British countries to raise a wall of high tariffs against all other countries. Naturally such an absurd offer was declined by Great Britain and the other British possessions.

During the session of 1931, the government, then under the leadership of the present leader of the opposition, increased the tariff on 128 items by legislation and on two by order in council, and decreased the rates in respect of 55 items. These changes were not very successful; it was found that Canada could not live alone, so then it was decided to call an imperial economic conference to be held in Ottawa. Opening this conference as chairman, the right hon. gentleman, among many other banalities, said:

We have a common purpose. We have a supreme desire to achieve it. And there can be no group of countries in the wide world so capable of united action as are the countries which comprise the empire.

Therefore we are equipped and ready for the task. It would be folly to pretend it is not a great one. It would not be British to turn aside because it is. Great though it may be, grave as are the difficulties, we cannot hesitate.

That was said in a very firm tone. He continued:

We are bound in loyalty and self interest to go forward, knowing as we must that our success means the beginning of a new and greater prosperity for ourselves, the empire, and the world.

That was a great speech. The idea was to bring all British countries together and have new agreements passed. Some agreements were passed after the conference of 1932. In that year 150 items in the tariff were increased; one item was increased by order in council, and 144 items were decreased by parliament. These increases were mostly in accordance with the agreements signed by the different countries of the British empire. It will be remembered that Mr. Baldwin postponed his departure in order to sign something. This has been said already in the house and it must not be forgotten that on the day he was to leave nothing was ready. The papers said that the then Prime Minister shed tears because no papers had been signed. Mr. Baldwin waited one day more and finally signed some papers which had been carefully prepared by the members of the staff which had accompanied him. Those papers included the agreement which has been incorporated in our statute books.

This was a matter of give and take; we could not ship Canadian goods to Great Britain without taking British goods in return. I should like to direct the attention of the committee to page 2704 of Hansard of May 1, 1934. Hon. members will find there a letter from a Mr. English, Canadian trade commissioner, dated March 6, 1934, stating that the high commissioner did not think much of British exports to Canada. That was one of the mistakes made by the previous government. As the former Minister of Finance, Mr. Rhodes said last year, the first mistake was not to take advice or to obtain the necessary information before increasing the tariff. I should like to quote from page 3319 of Hansard of June 5, 1935:

Mr. Pouliot: I was told this afternoon that the government secured information from the tariff board in regard to the increases and decreases in duty that have taken place since 1930, but as the announcement of the appointment of the personnel of the board was not made in this house until February, 1933, may I ask the Minister of Finance who advised the government in regard to the increases and decreases in the tariff that took place from August 1, 1930, until the tariff board was appointed in February, 1933?

Mr. Rhodes: The government must take full responsibility for any changes it initiates, and I have no hesitation in saying that the government is quite prepared to undertake that responsibility.

The government took the responsibility, but it could give no compensation for the damages suffered. The letter from Mr. English shows that the trade was to be one-sided, according to the government of the day; that we were to ship Canadian goods to England but we were not to accept British goods in return. The letter speaks for itself. Letters were written by the then Prime Minister, copies of which are on file in returns, to the effect that all the members of the Department of Trade and Commerce located

in Great Britain were to be under the control of Mr. Howard Ferguson, the Canadian high commissioner.

To sum up. First of all, the previous government thought that Canada was self-supporting, that imports were not necessary, that Canada could be let alone. This was regarded by all the other nations of the world as absurd, and the government of the day tried to bring about some interimperial trade, neglecting completely the foreign trade of Canada. This also was found to be a mistake, and then what was done? They tried to secure better trade with all the other nations, and the then Prime Minister went to the world conference in London, where he met the representatives of sixty-three or sixty-four other states. That conference was unsuccessful. The right hon. gentleman was said to have saved the conference, but it died a natural death two or three days afterwards. It was a great success—the success of high tariffs. He used high tariffs as a remedy for unemployment, and at the same time we saw unemployment increasing by leaps and bounds in proportion to the increase in the tariff.

But there is something else. In 1934 the right hon. gentleman who is now leader of the opposition sent a telegram to Mr. Litvinoff, the Russian minister, inviting him to speak at the League of Nations at Geneva. But he alone did not send this telegram; it was a joint telegram signed by himself, Mr. Batoloff, Mr. Manuel Rivas-Vicuna, and many others.

Previously the government had passed—on February 27, 1931—an order in council which it is desirable—

The CHAIRMAN: Order. I would call the hon. member's attention to the fact that we are on item 462a, which has to do with photographic cameras and equipment for use by professional photographers and commercial finishers in their own business. I would ask him to confine his remarks to the item under discussion.

Mr. POULIOT: That is true, Mr. Chairman; but the different tariffs under this item will all be free when this schedule becomes effective. I am not however discussing so much the equipment for use by professional photographers as I am the abolition of the various rates of duty. That is the point, and my remarks will be very brief—I shall be through in five minutes. I have discussed the importance of lower tariffs for the benefit of this country, whether in connection with this item or any other, though I take advantage of the present item to make these few remarks. Not only that; this particular item is a part of the whole customs tariff and one can try to show the effect of one part in relation to the whole.

On January 30, 1935, the following question was put to the government:

> Did the Canadian delegation officially meet, in Geneva in September, 1934, Mr. Maxim Litvinoff, People's Commissary for Foreign Affairs of the U.S.S.R.?

The member for West Calgary (Mr. Bennett), then Prime Minister, answered, no. Another question was put:

> If so, did the Canadian delegation make any agreements with the Russian delegation, and, if it did, what are these agreements, particularly with regard to exportation of wheat and lumber to Great Britain?

The answer was also, no, according to unrevised Hansard of January 30, 1935. Therefore, after the right hon. gentleman, with the others, had invited Mr. Litvinoff to Geneva, he did not discuss with him such important matters as the wheat and lumber exports of Russia to the other countries of the world, which seems most extraordinary.

To show you, sir, that the way in which the Minister of Finance (Mr. Dunning) now deals with the tariff is much more sensible than the way the late government did, I will quote from an order in council which was passed on Friday, February 27, 1931:

> Whereas it is provided by section 2, chapter 3, of the 21 George V (second session)—"An act to amend the Customs Tariff"—that the governor in council may from time to time prohibit the importation into Canada of any goods exported directly or indirectly from any country not a contracting party to the Treaty of Versailles, and that any order prohibiting the importation into Canada of any goods from any such country shall be published in the next following issue of the Canada Gazette;
>
> And whereas the Minister of National Revenue reports that it has been established to his satisfaction that the Union of Soviet Socialist Republics was not a contracting party to the Treaty of Versailles aforesaid;
>
> And whereas the Minister of National Revenue further reports that, having regard to the documentary and other evidence that has been received by the various departments of the public service in Canada, it is in the public interest that the importation into Canada from the aforesaid Union of Soviet Socialist Republics of coal, wood pulp, pulpwood, lumber and timber of all kinds, asbestos and furs, should be prohibited; . . .

There is a conclusion in accordance with the foregoing. Well, it is pretty hard to accept the motive therein indicated. The fact that Russia was not one of the nations that signed the treaty of Versailles was not a reason for prohibiting the importation of Russian goods into Canada, because there were thirty-four other nations that did not sign that treaty. It was an insult and a defiance to them to say that Russian goods were forbidden entry into Canada because

Russia had not signed the treaty. It shows the childish way in which the government of that day was acting.

To conclude, sir. I am very much surprised at the importance which is attached to the remarks of the right hon. leader of the opposition. Since the beginning of the session he has not made a single constructive remark —not a single one. He reminds me of the fellow who drives his coach into the ditch. The present leader of the opposition drove the state coach into the ditch and last year used some small twine—the social legislation—to try to pull it out. The people have given to the present government a good rope for the purpose, but the coach is still there because the right hon. gentleman is in it and keeps on applying the brakes.

Mr. WILTON: I rise to a point of order. I would ask whether the direct attempt to abuse a member of the house is consistent with the item under consideration, or whether it is in order for the committee to listen to that kind of language.

Mr. POULIOT: Well, sir, I have just one thing to say.

Some hon. MEMBERS: Order.

Mr. POULIOT: It is that I regret very much having put the Minister of Finance in the same bag with the right hon. leader of the opposition. I remove the minister and I put in it instead the hon. member for Hamilton West (Mr. Wilton), to enjoy himself with the right hon. leader of the opposition.

Mr. BENNETT: Is there any reason why the provisions of this item should not extend to other than professional users of cameras? The difficulty of enforcing it seems to me very great; that is, differentiating between the professional user requiring equipment for professional purposes, and the private owner.

Mr. DUNNING: There was a very considerable examination, particularly on that phase of the matter, before the tariff board. It was on a reference, as my right hon. friend will probably recall; there was a consultation between the board and the administrative officials as to that phase of it, and apparently it has been found impossible to administer the item as at present worded. The size, for one thing, is important.

Mr. BENNETT: I was thinking of the accessories. I realize that cameras can be dealt with.

Mr. DUNNING: The Department of National Revenue, while acknowledging that it is not the easiest thing in the world, is prepared to endeavour to administer it. At the same time the tariff board, after a thorough investigation of the whole matter, thought it a desirable reform to bring about, and seeing that the administrative department is willing to try, I am inclined to let them do so.

Mr. BENNETT: That always has been the trouble.

Mr. DUNNING: Yes.

Mr. BENNETT: I think that was one of the principal reasons why the item was referred to the board.

Mr. DUNNING: That is true.

Mr. BENNETT: My memory is that it was not thought desirable—if I may be perfectly frank about it—to put small cameras, that is the ordinary cameras of commerce, on the free list; but it was represented, I think, to the late government that it was highly desirable that professional photographers should be able to secure the large sized cameras without having to pay a duty, because they were not made in Canada. I do not know whether they are made here now or not, but certainly they were not then. The difficulty I see arises not with the cameras but with the accessories.

Mr. DUNNING: Yes.

Mr. BENNETT: I must say that when I saw the item in the form in which the tariff board had put it, I was surprised that the department would take the responsibility of thus dealing with accessories. With reference to cameras it is easy to know to whom they are consigned, but in small communities accessories are often sold by the professional photographer in the community to those who may require them, and I suppose these photographers would continue to do so, although it says, "cameras for professional purposes, for making negatives," and then, "accessories for use with such cameras." I have no doubt, as the minister says, the officials have given the matter every consideration, that they realize the difficulty, and will take steps to overcome it.

Mr. DONNELLY: I just want to express my agreement with the leader of the opposition. For the life of me I cannot see how customs officials or anyone else can distinguish between a tripod that is to be used with a camera for making negatives 4¾ inches by 6½ inches, and one that is to be used with a small camera, and so make one free of duty and the other dutiable.

Mr. DUNNING: Of course the criticism of the hon. member (Mr. Donnelly) will apply

in connection with very many items of the tariff. It is frequently necessary for the department to rely upon a declaration with respect to the use of a particular article. If one refers to the verbatim transcript of the evidence taken by the board it becomes clear that none of the articles mentioned in this list is made in Canada. Even the accessories mentioned are not of a type manufactured in Canada.

Mr. BENNETT: Is that so with respect to all of them?

Mr. DUNNING: I understand so, yes. The Canadian manufacturers of the commodities mentioned in the application did not oppose the granting of this concession. What might be called the opposing elements came to an agreement on the general principles involved. They went into conference and actually agreed on the items.

Mr. BENNETT: Does that include everyone in the trade?

Mr. DUNNING: Yes.

Mr. BENNETT: Oh, well, I have nothing further to say if that includes the small interests—the druggist, for instance, who sells the supplies.

Mr. DUNNING: No—the manufacturers of the articles.

Mr. BENNETT: I am inquiring whether the consumer was consulted or not.

Mr. DUNNING: The consumer in this instance is the professional photographer. The professional photographer and the manufacturers of photographic supplies went into conference. I am free to say that I share somewhat the fear that the customs department may have difficulty with it. They are content, following a review of the evidence and the conclusions of the tariff board, to endeavour to administer the item, and we shall watch whether some change may be necessary as a result of experience. For the present we think this is a concession to the photographic industry that we can very well make in connection at any rate with that portion of their professional equipment which is not made in Canada.

Mr. STIRLING: Under the previous items where did the material largely come from which is covered by this new wording?

Mr. BENNETT: Rochester.

Mr. DUNNING: Well, more largely from the United States and Germany than anywhere else, although it was distributed over so many items of the tariff that it was difficult to trace with any accuracy.

[Mr. Dunning.]

Mr. BENNETT: Eastman's, of course, are the great kodak people of the world. To some extent they are rivalled by Germans. I thought they had a small plant at Toronto.

Mr. DUNNING: Not for manufacturing professional size cameras; just for the smaller ones.

Mr. STEVENS: In the schedules that we have before us as they appear in the votes and proceedings the old rates are indicated in the three columns to the right, and there I find five items referred to. Am I correct in assuming that those items are repealed and are now incorporated in item 462a?

Mr. DUNNING: No; the numbers of the old items, my hon. friend will note, are at the end. This is a case where previously the particular equipment in question was not separately classified for tariff purposes, but parts of it were contained within the items referred to by my hon. friend, and the effect of the item is to extract from the items so numbered the articles mentioned in this one. It has extracted a part from each of the ones mentioned.

Mr. STEVENS: I notice that items 288 and 427 are repealed.

Mr. DUNNING: No.

Mr. STEVENS: Well, they are, in this resolution that precedes it. The whole item is repealed.

Mr. DUNNING: There is an explanation of that.

Mr. STEVENS: The fact is that these items are repealed. At the moment I am not asking for an explanation—I will give the minister an opportunity of making one. But the fact that they are repealed is, I think, established by the resolution which we adopted or which we are now in process of considering. It will be noticed that item 288, for instance, is here referred to; the item we are considering, namely 462a, deals with photographic cameras, equipment, and so forth, and as far as I can see there is no reference in it to earthenware and stoneware, etc. Item 288 covers "earthenware and stoneware, brown or coloured and Rockingham ware; 'C.C.' or cream-coloured ware, decorated, printed or sponged, and all earthenware, n.o.p." This item is repealed, yet we see it is referred to here as in part going into this item. I will cite one or two more. The next item 427, also repealed, reads as follows:

All machinery composed wholly or in part of iron or steel, n.o.p., and complete parts thereof.

Then we turn to item 446a, which is also referred to and which is repealed. That item reads:

Manufactures, articles or wares, of iron or steel or of which iron or steel or both are the component materials of chief value, n.o.p.

Then item 462, directly referring to this item, or the item preceding it, is also repealed.

Philosophical, photographic, mathematical and optical instruments ...

This is something that I think should be very carefully considered. We are here dealing with photographic instruments, yet we find three important items, covering machinery, earthenware, and so forth, repealed, and apparently indicated in the schedule as being now covered in this new composite item. I sometimes fear that the committee by its action in approving the repeal of an item may be doing something the importance of which it is not fully aware. That is why when we began the consideration of this schedule I suggested to the minister that we should have very full information on the items that are being repealed and dealt with in this way. I know from past experience that sometimes when items in the tariff are brought together for better administration, into a supposedly composite item the result is a very important change in the tariff which perhaps passes without knowledge or full consideration.

Mr. BENNETT: But here we have put in a new item, 288, for Rockingham ware.

Mr. STEVENS: What puzzles me is why it should be attached to this item.

Mr. BENNETT: It is not.

Mr. DUNNING: This is one of those cases where the result of giving the kind of information which has been given in the committee—I think probably I started it in 1930—is to confuse the mind of even as industrious an investigator as the hon. member for Kootenay East (Mr. Stevens). I congratulate him on the extent of his researches, but I have to inform him that he has not gone quite far enough. The items here dealt with under 462a were formerly dutiable under each of the items to which he referred, and which are shown in the sixth column in the schedules as they appear in the votes and proceedings, but dependent upon the kind of material involved and the special matters with which we are dealing. There are other items in the list of tariff amendments with which we are dealing which relate to the same items, and which bring about other changes. My hon. friend will see, if he traces it through a little further, that the repeal of an item is followed by a substitution of something which completely takes its place but in a divided form.

Mr. BENNETT: Preceded in this case by 288.

Mr. DUNNING: Yes. I know of no better way to do it, or in which I could show in a list forming part of the schedule the particular kind of complication which I am now endeavouring to explain. If I endeavoured to print it I am afraid it would take a volume—

Mr. STEVENS: I am not asking that.

Mr. DUNNING: —because the explanation may differ on each item.

Item agreed to.

Customs tariff—463. Magic lanterns and slides therefor, n.o.p.: British preferential tariff, free; intermediate tariff, 20 per cent; general tariff, 25 per cent.

Mr. BENNETT: Just adding "n.o.p."

Item agreed to.

Customs tariff—473. Plates for printing in two or more colours, including electrotypes, nickeltypes and all engravings on steel or other metal, for use exclusively in printing, n.o.p.: British preferential tariff, free; intermediate tariff, 15 per cent; general tariff, 20 per cent.

Mr. DUNNING: Just adding "n.o.p."

Item agreed to.

Customs tariff—473a. Printing plates of all kinds for periodical publications enjoying second class mailing privileges, and matrices, metal bases and copper shells therefor: British preferential tariff, free; intermediate tariff, 7½ per cent; general tariff, 25 per cent.

Mr. DUNNING: There is just a slight change in wording in this item. If members of the committee will follow the wording of the item as it appears in the votes and proceedings they will see it:

Printing plates of all kinds for periodical publications enjoying second class mailing privileges, the pages of which are regularly bound, wire stitched or otherwise fastened together, and matrices, metal bases and copper shells therefor, but not to include printing plates and other articles covered by tariff item 475.

The intent is to clarify for administrative purposes the reduction here provided for, and to make it clear, as it was formerly in the tariff, that it applies to wire stitched or bound publications.

Mr. ILSLEY: I so move.

Mr. BENNETT: I suppose this is another of the items about which the open letter is addressed to myself. This excludes the daily newspapers?

Mr. DUNNING: Yes.

Mr. BENNETT: Or any other publication that is not bound. As it stood, any periodical enjoying second class mailing privileges, which includes of course weekly newspapers and trade journals not bound or not issued periodically, would come within the provision. As it stands now there is a limitation to wire stitched or bound publications. The rate is now 7½ per cent as distinguished from the old rate of 15 per cent. As a matter of fact since the old rate was 20 per cent from the United States, it is a reduction from 20 to 7½ per cent.

Mr. DUNNING: That is right. It is according to the agreement.

Mr. BENNETT: Affording by this method what they call "freer competition" for the Canadian magazine against its competing American brother. That is the effect at any rate.

Amendment agreed to.

Mr. STEVENS: May I crave the indulgence of the committee a moment further? I have been turning these items up. I do not do this to harass the minister, but his answer just now might leave the impression that I was frivolous in my observation—

Mr. DUNNING: Oh, not at all! I am sorry if I conveyed that impression.

Mr. STEVENS: For instance I cannot understand the repeal of item 622. I have sought to understand these items by the references to them in these lists. Item 622 refers to trunks, valises, hat boxes, carpet bags, tool bags, and baskets of all kinds. That item is repealed. But in the schedule with which we are now dealing it appears in conjunction with photographic cameras. I submit that I could not do otherwise than look at the item in conjunction with this new item in the new schedule, and for the life of me I cannot see the relation. The minister may be able to answer and say it appears somewhere else, but I looked up some of the leather items and I cannot locate it within these several hundred items.

Mr. DUNNING: There is no repeal of item 622.

Mr. STEVENS: Well, it appears in that form here. It is not in the list of items dealt with in the schedule.

Mr. DUNNING: No.

Mr. STEVENS: Why does it appear here in the sixth column?

Mr. DUNNING: Part of the new item was formerly under 622.

[Mr. Dunning.]

Mr. STEVENS: Item 622 refers to trunks, valises, hat boxes and so on. Can anyone tell me what that has to do with photographic supplies?

Mr. DUNNING: We will see what we can do.

Mr. STIRLING: It has reference to kits and carrying cases, which are mentioned in the new item.

Mr. DUNNING: The old item 622, which still remains in the tariff, is a container item, covering containers of all kinds such as trunks, valises, hat boxes, carpet bags, tool bags and baskets of all kinds. The item now under discussion contains these words:

... accessories for use with such cameras; lenses, shutters, exposure meters, range finders, film and plate holders, lens hoods, lens boards, ground glass carriages, reducing backs, reversible adapter backs, lantern slide attachments, film sheaths, combination paper and plate holders, kits, carrying cases,—

Formerly, these cases would have been dutiable under item 622, but it was not necessary to repeal item 622 to provide a separate classification for the articles in question. Item 622 was and still is an n.o.p. item.

Item as amended agreed to.

Customs tariff—476a. Glassware and other scientific apparatus for laboratory work in public hospitals; chairs and tables for surgical operating purposes, and complete parts thereof; infant incubators and complete parts thereof; electro cardiographs and complete parts thereof, and sensitized film and paper for use therein; apparatus for sterilizing purposes, including bedpan washers and sterilizers but not including washing nor laundry machines; all for the use of any public hospital, under regulations prescribed by the minister: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. DUNNING: Item 476a has been in the tariff for many years, and in the present instance the rating is unchanged. However there are one or two changes in the wording. The existing provision for surgical operating tables has been widened to include surgical operating chairs for hospital use. Further, the item has been widened to include cardiographs and films therefor. Neither cardiographs nor films have previously been mentioned in the tariff. Cardiographs have been subject to free entry, under item 696, when for use in public hospitals, but the specially prepared film for use in the expensive equipment has been dutiable, as ordinary equipment, under item 187. Film of this kind is not made in Canada, and the item has been reworded to cover, as I have indicated, not only cardiograph machines but the film to be used in connection therewith. The

third amendment to the wording entails the inclusion of the words "infant incubators and complete parts thereof." These are extremely expensive pieces of modern hospital equipment, and often play a vital part in saving the lives of prematurely born children. Formerly they were ruled dutiable as electrical apparatus, n.o.p. They are now made free of duty under all tariffs, when for use in a public hospital. I believe that is a complete explanation.

Mr. BENNETT: I thank the minister for his explanation. I had occasion to bring the matter to the attention of the department only recently, and I wished to be perfectly certain that the words would cover the cases to which the minister has so kindly referred. This is particularly true with respect to the chairs he mentioned, and the cardiograph films and machines.

Item agreed to.

Customs tariff—494b. Cork blocks, boards, planks, slabs, rods or tubes, produced from cork waste or from granulated or ground cork, when for use in Canadian manufactures: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. DUNNING: The rating is unchanged. The only change is to alter the wording of the item so as to include "rods or tubes, produced from cork waste or from granulated or ground cork" used in the manufacture of cork products.

Item agreed to.

Customs tariff—505. Sawn boards, planks and deals planed or dressed on one or both sides, when the edges thereof are joined or tongued and grooved, n.o.p.: British preferential tariff, 17½ per cent; intermediate tariff, 22½ per cent; general tariff, 25 per cent.

Sir GEORGE PERLEY: Why is there a change in the wording of the item?

Mr. DUNNING: It is in consequence of the inclusion of the next item, and possibly it would facilitate matters if we discussed items 505 and 505a together. They are really parts of the one whole. The only change in item 505 is the addition of the letters n.o.p. Item 505a is an entirely new item in the Canadian tariff schedule. Up to the present hardwood flooring, if jointed or tongued and grooved, has been dutiable under item 505 at 17½, 22½ and 25 per cent; finished in any other manner they were given exactly the same rates, but were placed under item 506. By virtue of the Canada-United States trade agreement all hardwood flooring imported from the United States, and therefore from any most favoured nation country, is now dutiable at 20 per cent. For many years the hardwood flooring manufacturers in Canada have sought a classification for their product in the Canadian tariff schedule, their plea being that the value of their product, and its importance in relation to the total value of our woodworking production, warranted a classification by itself. Further they have contended that the absence of a classification has made it difficult to trace imports and to secure reliable statistical data regarding trade. The present item, which has been framed to cover all hardwood flooring of beach, birch, maple and oak, however manufactured, meets the requirements of the flooring industry for recognition of their product in the schedule. The rates shown are those at present existing under items 505 and 506, namely 17½ per cent, 22½ per cent and 25 per cent.

Mr. BENNETT: What about the 20 per cent?

Mr. DUNNING: The intermediate rate which remains at 22½ per cent interferes in no way with the undertaking given the United States under the recent agreement to the effect that hardwood flooring imported from that country will be dutiable on importation into Canada at the rate of 20 per cent.

Mr. BENNETT: That is a preference of 2½ per cent for their flooring.

Mr. DUNNING: Yes.

Mr. STEVENS: Where is the 20 per cent mentioned?

Mr. DUNNING: In the Canada-United States treaty.

Mr. STEVENS: It does not appear in the tariff?

Mr. DUNNING: No.

Mr. BENNETT: Does that mean that other countries also enjoy the 20 per cent?

Mr. DUNNING: Any most favoured nation.

Mr. BENNETT: Then this item in the tariff would refer only to those countries which are not most favoured nation countries?

Mr. DUNNING: Yes.

Mr. BENNETT: There would be very few of them producing hardwood flooring.

Mr. STEVENS: No country with the intermediate tariff would be producing it.

Mr. BENNETT: Possibly Russia would.

Mr. DUNNING: The manufacturers desired a classification of their product, and thanked us for it, as a matter of fact. May

I point out that we must have a rate in the schedule, notwithstanding the fact that we have an agreement with the United States covering the item.

Mr. BENNETT: Was it a bound item?

Mr. DUNNING: In the agreement it is a bound item for three years, but at the end of three years if we fall back on the intermediate tariff it should be 22½ per cent, in the judgment of those who have studied the matter.

Mr. BENNETT: So far as I can see, at 22½ per cent the item would not affect any country at all, because it is an intermediate tariff.

Mr. DUNNING: In a practical way that is correct.

Mr. STIRLING: Will the 20 per cent appear in the office consolidation and receive a number? How will the customs officers know about it?

Mr. DUNNING: As a matter of information, the departmental officials advise me they are endeavouring to work out an office consolidation of the tariff which in the nature of things would involve five instead of three columns, brought about because of the necessity on the part of the public of knowing tariff rates under the French treaty, the United States treaty and others.

Item agreed to.

Customs tariff—505a. Hardwood flooring, tongued and/or grooved, or jointed viz.:—beech, birch, maple and oak: British preferential tariff, 17½ per cent; intermediate tariff, 22½ per cent; general tariff, 25 per cent.

Item agreed to.

Customs tariff—522. Rovings, yarns and warps wholly of cotton, not more advanced than singles, n.o.p.: British preferential tariff, 12½ per cent; intermediate tariff, 15 per cent; general tariff, 22½ per cent; and per pound: intermediate tariff, 3½ cents; general tariff, 4 cents.

Mr. BENNETT: Did the tariff board report on the item?

Mr. DUNNING: Yes. I would suggest that any discussion might be had on items 522 to 529a, because they are the subject of the tariff board report mentioned by the leader of the opposition, to which I made reference in the budget speech.

Mr. BENNETT: It was a long hearing in which representatives from Great Britain appeared before the board.

Mr. DUNNING: The hearing stretched over two years.

[Mr. Dunning.]

Mr. BENNETT: Yes, I knew it was more than a year, but I did not know it was quite that long. Am I right in assuming that the report of the board has been adopted in every particular in these several items we are now considering? If not, in what particulars has there been a change? And am I right in assuming that the reason for the change has been that the British preferential tariff is no longer on the basis of a specific rate?

Mr. DUNNING: The right hon. gentleman is correct in that understanding, and correct also with regard to the report of the tariff board down as far as item 529a. The tariff commissioner advises me that 522c and 529 are exceptions to the remark I made a moment ago, but they are necessarily subject to the considerations which influenced the tariff board in their report on these other items, and are directly related. That is the situation as far down as item 529a.

Item agreed to.

Customs tariff—522c. Rovings, yarns and warps wholly of cotton, including threads, cords and twines generally used for sewing, stitching, packaging and other purposes, n.o.p.; cotton yarns, wholly or partially covered with metallic strip, generally known as tinsel thread: British preferential tariff, 15 per cent; intermediate tariff, 22½ per cent and 3½ cents per pound; general tariff, 25 per cent and 4 cents per pound.

Item agreed to.

Customs tariff—523. Woven fabrics, wholly of cotton, not bleached, mercerized nor coloured, n.o.p., and seamless cotton bags: British preferential tariff, 15 per cent; intermediate tariff, 20 per cent and 3½ cents per pound; general tariff, 25 per cent and 4 cents per pound.

Item agreed to.

Customs tariff—523a. Woven fabrics, wholly of cotton, bleached or mercerized, not coloured, n.o.p.: British preferential tariff, 20 per cent; intermediate tariff, 22½ per cent and 3½ cents per pound; general tariff, 27½ per cent and 4 cents per pound.

Item agreed to.

Customs tariff—523b. Woven fabrics, wholly of cotton, printed, dyed or coloured, n.o.p.: British preferential tariff, 22½ per cent; intermediate tariff, 27½ per cent and 3½ cents per pound; general tariff, 32½ per cent and 4 cents per pound.

Item agreed to.

Customs tariff—529. Embroideries, lace, nets, nettings, bobinet, n.o.p., fringes and tassels, wholly of cotton: British preferential tariff, 20 per cent; intermediate tariff, 27½ per cent and 3½ cents per pound; general tariff, 30 per cent and 4 cents per pound.

Item agreed to.

Customs tariff—529a. Lace embroideries wholly of cotton, not coloured, imported by manufacturers for use exclusively in the manufacture of clothing in their own factories: British preferential tariff, 7½ per cent; intermediate tariff, 12½ per cent; general tariff, 20 per cent.

Mr. BENNETT: The specific duty on all these items was reduced 25 per cent, I think, in 1935. I am not sure whether cottons were reduced 25 per cent or 33⅓ per cent, but there was a reduction on them, and that was pending receipt of the report from the tariff board.

Mr. DUNNING: They were reduced by one-third.

Mr. BENNETT: Pending receipt of report from the board, and the board took that fact into consideration, I fancy, when they recommended that the balance of the specific duty imposed against British goods be removed entirely. I have not had time to read the report of the board, because it only came in, as the minister remembers, about the time the budget was delivered.

Mr. DUNNING: I received it only a very short time before.

Mr. BENNETT: In the language of one of the hon. gentleman's predecessors, the two seemed to synchronize.

Mr. DUNNING: Perhaps I might be permitted to mention one point that arises there; my right hon. friend could possibly help me. The law respecting the tariff board requires the minister to lay on the table of the house, within, I think, fifteen days after receiving it, any report from the tariff board. I do not know what was the experience of my right hon. friend or of his finance minister, but there are many occasions, it seems to me, upon which it would be quite undesirable to lay such a report on the table of the house until the action of the government with respect to the report was made known to the house in the form of the budget itself. I can well imagine circumstances of very grave embarrassment, particularly with respect to hearings respecting the rights of other nations under treaties and things of that sort, if this requirement has to be rigidly observed. I do not say that it was a great embarrassment at this time—

Mr. BENNETT: I should think not.

Mr. DUNNING: I should prefer to have had some of these reports available to myself earlier than they were available, but I was by law compelled, in advance of the budget, to lay the reports on the table of the house within fifteen days after receiving them. I doubt very much the general advisability of that provision. I know, of course, it is desirable and the law intends that the information shall be made available to the house upon its receipt from the board.

Mr. BENNETT: The real reason of it, as I think my hon. friend will see if he reads the debates of that time, was that it was believed, especially by those who then sat to the left of the Speaker, to be highly desirable that the public should have all the information possible with respect to these matters.

Mr. DUNNING: I agree entirely.

Mr. BENNETT: And that the judgment of the board should be treated as a judgment of the court and should be known, as far as that might be possible, by everybody at the earliest possible moment. There is no provision in the Tariff Board Act, as I recall it, and I speak subject to correction, for the publication of the report if the house is not in session. There might, of course, be publication from the knowledge of the parties to the controversy that the court had thus decided their case, but so far as the minister is concerned the provision with respect to laying on the table within fifteen days applies only when the house is in session. The argument that was then used I found it difficult to answer, and I find it difficult to answer now. The argument, as I recall it, was this: that the report of the board should be laid on the table of the house as soon as possible after the opening of parliament in order that the house may be seized of all the circumstances connected with the adjudication. But the public has known it ever since the judgment was given, just as the public knows the result of, let us say, an appeal to the privy council. In that case it knows it on the morning the committee delivers its judgment, but the formal judgment, which is that of the king in council, does not come until after the report has been made by the judicial committee to the king, and has been approved by the king in council. What happens when a judgment of the tariff board is delivered, and the board suits its own convenience as to the study it gives to the matter, is that it then becomes a matter of public knowledge.

Mr. DUNNING: Not under part I.

Mr. BENNETT: That refers to applications to the board initiated by the minister, but I am talking about cases where, as in this case, the parties made application to the

board. It will be recalled that in the textile case, for instance, they made application to the board. They applied first to the minister to refer the case to the board, but he did not do it of his own motion, and then the parties applied to the board through the minister. As the minister himself pointed out the other day, the finance minister has certain rights. He can decide whether or not he will refer any question at all to the board. In this instance, if my memory serves me, and I have not read the case recently, they applied to the minister to refer it to the board.

Mr. DUNNING: And he did so under part I.

Mr. BENNETT: Under part one, of course, there is no public judgment delivered, but the report goes back to the minister.

Mr. DUNNING: I have no trouble except with references other than under part I.

Mr. BENNETT: There would be no difficulty when the house was not in session, and the difficulty in this case, I take it, is that the minister did not have a longer time than fifteen days within which to consider the report before tabling it. That is a short way of putting the difficulty. I will look up the act, but my recollection of the discussions that took place in the house at the time is that if the report of the board to the minister was delivered while parliament was in session the minister was required to lay it on the table within fifteen days after that in order that the house might be seized of it, and the argument was that the house should become informed of the whole situation before the budget was delivered.

It is not incumbent upon the minister to follow the findings of the board at all. He can do as he pleases, as he pointed out the other day. But the argument was that the house should have the opportunity fully to acquaint itself with the report made to the minister in order that when the budget was delivered they might know to what extent his judgment was influenced by the finding of the board. I think that was the argument that was made, but the minister himself was not then in the house. His honoured colleague who sits to his left perhaps will inform him as to the attitude taken by his own friends at that particular time. I think the act meets this as far as it is possible to do so, having regard to all the circumstances.

The minister referred to another matter the other day, the extent to which the private operations of business concerns should become known to competitors. He stated that he had to meet this question in connection with one of these cases—I believe it was the gasoline inquiry. I think it is fair to say that in practice this board has carried out its work with a good deal of satisfaction to those who have had occasion to have recourse to it. It takes time to establish the smooth running of an institution such as this, but I believe in the main it has given very patient consideration to every case referred to it and to the applications made under part II of the act.

Mr. DUNNING: I apologize for taking up time, but this is a matter of some considerable importance. I made the reference I did to the fifteen days because of the fact that we are here by virtue of the Tariff Board Act grafting a new branch on to a very old institution, the institution of the budget in accordance with British plan and British tradition of what a budget should be. We all know how carefully guarded the budget is and must be if we are to avoid speculation on the part of the public, informed or uninformed. The traditional secrecy surrounding what is to be contained in the budget is, I take it, a matter of vital importance to our system.

Mr. BENNETT: Ours is better than the corresponding British one.

Mr. DUNNING: I think it is. If one could visualize the gasoline report of the board being brought down in this house two or three weeks before the budget, one could also visualize the volume of speculation of an unhealthy kind which might take place.

Mr. BENNETT: Forestalling, as they call it in England.

Mr. DUNNING: I believe we would be into the American system of tariff making, that is unless it became known that the government was not likely to accept recommendations from the tariff board. In such a case the usefulness of the tariff board would be impaired. If it were known that the government was very likely to accept recommendations from the tariff board, if public confidence in that board had grown to such a point that in almost every case the government accepted its report, then the tabling of a report in advance of the budget would be tantamount to advertising in advance a change in the scale of taxation on the date the budget was to be brought down.

Mr. BENNETT: I think the previous government adopted every recommendation made.

Mr. DUNNING: I think probably they did. I bring this forward not by way of creating a controversy or of announcing any proposal to change the law, but as a matter for consideration, arising out of my experience of the last few months, particularly in connection with the preparation of the budget. It is true there is a difference between the method of publicity followed under the present Tariff Board Act and the method of publicity followed in connection with the tariff advisory board, when the party to which I belong was previously in power. The method then followed was of maximum publicity in respect of the hearing and the evidence, but the judgments of the board were never made public. Advice was given by the board to the minister of finance of the day.

Mr. BENNETT: In some cases it was not a matter of record.

Mr. DUNNING: In some cases it was not a matter of record. I am not debating at the moment the relative merits of the different methods. It is obvious that there is quite an essential difference with regard to the treatment of the report from the standpoint of publicity. I just want to leave this with the committee, as I believe the committee and the membership of the house generally is desirous of building up a more scientific approach to our settlement of tariff questions in this house. This matter can never be divorced from politics, as politics is of the essence. We hope to develop a system which will mean an informed public and particularly an informed membership of this house without impairing the necessity of careful protection against abuses which can so easily arise in connection with leaks or possible leaks with respect to the budget.

Mr. BENNETT: There is a distinct difference between a reference to the board by the minister without an application and a reference made in consequence of an application.

Mr. DUNNING: Right.

Mr. BENNETT: It is also different when parties to trade agreements make applications to the board. It does seem to me that if the act is not sufficiently broad, we could deal by regulation with the difficulty to which the minister has directed attention. I shall look this up myself, but at the same time I desire to express the deep regret of all of us who sit on this side that when the act was introduced in the house the hon. gentleman was not a member. The words which he has used this afternoon were almost identical with those used in the introduction of a measure which I regret to say met with such stalwart opposition from the hon. gentleman who sits to his left.

Mr. DUNNING: My right hon. friend will not let me be non-partisan.

Mr. BENNETT: Oh, yes, delighted. Is there any question of French cotton lace under this item? This matter had not been finally determined at the time we left office.

Mr. DUNNING: We have carefully observed all our trade agreement commitments.

Item agreed to.

Customs tariff—532. Clothing, wearing apparel and articles made from woven fabrics, and all textile manufactures, wholly or partially manufactured, composed wholly of cotton, n.o.p.; fabrics wholly of cotton, coated or impregnated, n.o.p.: British preferential tariff, 25 per cent; intermediate tariff, 30 per cent; general tariff, 35 per cent; and, per pound: intermediate tariff, 1½ cents; general tariff, 4 cents.

Mr. HEAPS: I assume this item deals with clothing. I have received requests from some of my Scotch friends in the city of Winnipeg for the reduction of the duty on Highland costumes. These people feel that an injustice is being done to the Scotch folk in this country because of the tariff on Highland costumes. I think it was the Minister of Finance who permitted bagpipes to come in free of duty in 1930, and my Scotch friends in Winnipeg feel that if bagpipes can come in free of duty, Highland costumes should also come in free of duty. Where these costumes are brought in for personal use only I think they should be given the same privilege as is given at present to the bagpipes.

Mr. DUNNING: My hon. friend's concern for his Scottish constituents does him credit indeed, but his knowledge of Highland costumes is surely limited when he imagines that such costumes are made of cotton.

Mr. HEAPS: I did not say that.

Mr. DUNNING: This item reads, "composed wholly of cotton."

Mr. HEAPS: Under what classification would Highland costumes come?

Mr. DUNNING: I am inclined to think they would come under the corresponding item in the woollen schedule, which is not before us.

Mr. BENNETT: This does not touch the woollen schedule?

Mr. DUNNING: No. I have a suggestion to make to my hon. friend. The race to which he belongs is engaged largely in the clothing business, and I am surprised that the warmness of heart which he has professed towards the Scotch race should not be reflected in the clothing industry. I am surprised that Scottish costumes have to be imported when there are so many engaged in the business of manufacturing clothing here. I should think a special effort would be made to meet the need and the desire of the Scottish people for the tartan and the kilt and other goods manufactured of wool—which is entirely out of order on this item.

Mr. HEAPS: I appreciate very much what the minister has said, but he ought to know, if he knows his Scotch friends at all, that they prefer to have costumes that come from Scotland. Someone says it depends on the price. I think there is something in the letter I received. These people prefer to have costumes that come right from Scotland. It seems to me that when clothing of this kind comes under the schedule this item might apply. I suggest that the minister should give to these costumes the same consideration as was given to bagpipes a few years ago. However, I will discuss the matter with some of my friends, to see whether these costumes cannot be manufactured in Canada.

Item agreed to.

Customs tariff—558b. Rovings, yarns and warps wholly of artificial silk or similar synthetic fibres, produced by chemical processes, not more advanced than singles, not coloured, with not more than seven turns to the inch, under such regulations as the minister may prescribe: (a) produced from cellulose acetate: British preferential tariff, 5 per cent; intermedate tariff, 30 per cent; general tariff, 35 per cent.

Provided that, in no case, shall the duty under the intermediate or the general tariff be less than, per pound: British preferential tariff —; intermediate tariff, 28 cents; general tariff, 28 cents. (b) n.o.p.: British preferential tariff, 20 per cent; intermediate tariff, 30 per cent; general tariff, 35 per cent.

Provided that, in no case, shall the duty under the intermediate or the general tariff be less than, per pound: British preferential tariff —; intermediate tariff, 28 cents; general tariff, 28 cents.

Mr. DUNNING: This item and item 558d are both tariff board items, and we might discuss them together, because they are definitely interrelated.

Customs tariff—558d. Rovings, yarns and warps wholly or in part of artificial silk or similar synthetic fibres produced by chemical processes, n.o.p., including threads, cords or twist for sewing, embroidering or other purposes, not to contain silk; artificial silk yarns wholly or partially covered with metallic strip, one pound of which shall contain not less than 10,000 yards; under such regulations as the minister may prescribe: (a) produced wholly from cellulose acetate: British preferential tariff, 7½ per cent; intermediate tariff, 30 per cent; general tariff, 35 per cent.

Provided that, in no case, shall the duty under the intermediate or the general tariff be less than, per pound: British preferential tariff—; intermediate tariff, 28 cents; general tariff, 28 cents.

Mr. BENNETT: The tariff board gave a good deal of time, apparently, to the consideration of these items. I am bound to say that from a reading of the item, and knowing the facts as presented, it does seem that the protection afforded the Canadian industry is reasonably light at the present time. The effect is greatly to lessen it, almost up to the danger point. I am not certain about that, but, that is my information strengthened by my memory of it in the past, together with inquiries I have made and a casual glance at the report of the board. However, the board has reported upon it.

Mr. DUNNING: I have here extracts from the report of the board bearing on that point, if my right hon. friend desires to have them.

Mr. BENNETT: If it is in the report I can read it.

Item agreed to.

Customs tariff—561. Woven fabrics wholly or in part of artificial silk or similar synthetic fibres, produced by chemical processes, not to contain wool, not including fabrics in chief part by weight of silk, n.o.p.: British preferential tariff, 30 per cent; intermediate tariff, 40 per cent; general tariff, 45 per cent; and, per pound: British preferential tariff—; intermediate tariff, 40 cents; general tariff, 40 cents.

Mr. DUNNING: This is also a tariff board item.

Mr. BENNETT: There is an increase in the ad valorem duty and an elimination in the specific.

Mr. DUNNING: Yes, a balancing up of all the factors.

Mr. BENNETT: I think it might be well to say at this particular time that all these textile tariff duties placed on the books in 1930 were really emergency measures to meet an exceptional situation, as explained at that time. It will be recalled that the United States adopted the principle of an ad valorem and a specific duty with respect to woollens when they desired to encourage their industry, and the only difference between us was that we were undertaking to do it gradually, taking

off a third one year, a third the next, and then a third. In the meantime the board was considering the matter and recommended that it be all taken off in 1935-36, instead of taking it off in the manner originally intended. My memory is that only one-third was taken off last year, 1935, and that is as far as it got. Did that third apply to both rayon and cotton goods, or only to cottons?

Mr. DUNNING: Only to cottons.

Mr. BENNETT: As regards the woollens, we took off 25 per cent.

Mr. DUNNING: Yes, that is right; you have a most remarkable memory.

Mr. BENNETT: I just happened to remember that.

Item agreed to.

Customs tariff—564a. Irish poplin, composed wholly of silk and wool, not exceeding twenty-five inches in width, imported in the web in lengths of not less than five yards each, under such regulations as the minister may prescribe, by manufacturers of neckties, scarves or mufflers for use exclusively in the manufacture of such articles in their own factories: British preferential tariff, 20 per cent; intermediate tariff—; general tariff—.

Mr. DUNNING This is the Irish item.

Mr. BENNETT: It will be free under the intermediate and general.

Mr. DUNNING: No; they cannot come in at all under this tariff item.

Mr. STEVENS: If they were offered for entry by the United States or any other country, would they not come under some n.o.p. item? If so, what item?

Mr. DUNNING: Item 555 in the woollen schedules.

Mr. BENNETT: Irish poplin would not be in the woollen schedules.

Mr. DUNNING: Yes; it is 73 per cent wool.

Mr. BENNETT: Is there no tariff at all?

Mr. DUNNING: Not under this item. It would throw them automatically into the n.o.p. woollen item, where it is intended that they should be, coming from other countries.

Mr. DONNELLY: What will be the tariff under 555?

Mr. DUNNING: Thirty-five per cent and thirty cents per pound. This is a real concession to the Irish; we shall all be wearing Irish poplin ties in this house next year.

Item agreed to.

Customs tariff—567a. Clothing, wearing apparel and articles, made from woven fabrics and all textile manufactures, wholly or partially manufactured, n.o.p., of which the component of chief value is artificial silk or similar synthetic fibres produced by chemical processes: British preferential tariff, 25 per cent; intermediate tariff, 35 per cent; general tariff, 50 per cent; and, per ounce: British preferential tariff—; intermediate tariff, 5 cents; general tariff, 7 cents.

Mr. BENNETT: Is this the same as the board's report?

Mr. DUNNING: No, this is not the board's report but is consequent upon it.

Mr. BENNETT: It is the item to which the minister had reference a moment ago.

Mr. DUNNING: Yes.

Item agreed to.

Customs tariff—569c. Hat braids, of a class or kind not made in Canada, whether woven, knitted or plaited, not exceeding six inches in width, imported for use exclusively in the manufacture of hat bodies or shapes, but not for use in the ornamentation of trimming of such bodies or shapes, under regulations prescribed by the minister: British preferential tariff, free; intermediate tariff, free; general tari, free.

Mr. DUNNING: This changes the width of braid from four to six inches; that is all.

Item agreed to.

Customs tariff—569e. Miners' safety helmets for use exclusively in mining operations, firemen's helmets and sand-blast helmets, of a class or kind not made in Canada: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. BENNETT: These specifically named articles were never dutiable.

Mr. DUNNING: It is unchanged in the rating but there is a change in the wording. Whereas the existing item refers only to miners' safety helmets, the new wording covers firemen's helmets and sand-blast helmets. These types of helmets are life saving equipment. In the past, firemen's helmets particularly, because of non-classification in the tariff, paid relatively high rates. These are all of a class or kind not made in Canada and it is proposed to make them free under all tariffs.

Item agreed to.

Customs tariff—603. Fur skins, wholly or partially dressed, n.o.p.: British preferential tariff, 10 per cent; intermediate tariff, 15 per cent; general tariff, 15 per cent.

Provided that, the duty on hare or rabbit skins under the general tariff shall not be less than, per dozen: general tariff, 72 cents.

Mr. DUNNING: This is unchanged in wording or rates but it no longer provides for specific duties under the intermediate tariff on dressed rabbit skins.

Mr. BENNETT: I understood the minister to say it did not affect Australian exports.

Mr. DUNNING: No. The Australians have not really raised the point and they have not been able to do anything under the rabbit skin preference. They did not send us dressed skins at all.

Mr. BENNETT: What will happen under the intermediate tariff if it is desired to import a thousand rabbit skins from the United States? What would be the rate?

Mr. DUNNING: Fifteen per cent flat.

Mr. BENNETT: Without any rate per dozen?

Mr. DUNNING: Yes. They do not come from the United States. The chief source is Belgium.

Item agreed to.

Customs tariff—607, part 2: Leather, as hereunder described, but not to include suedes, Cabrettas, Spanish capes or African capes, when imported by manufacturers of gloves or leather clothing, for use exclusively in manufacturing gloves or leather clothing in their own factories. viz.:—(i) made from sheepskins: British preferential tariff, 5 per cent; intermediate tariff, 7½ per cent; general tariff, 20 per cent.
(ii) n.o.p.: British preferential tariff, 5 per cent; intermediate tariff, 15 per cent; general tariff, 20 per cent.

Mr. DUNNING: I have had a lot of trouble with this item. I will tell the committee frankly what it was. The case is a curious one. Prior to the Canada-United States trade agreement there was a reference to the tariff board by my predecessor in office of a request from glove manufacturers for a reduction in the duty from 20 per cent to 10 per cent. The coming into effect of the Canada-United States agreement automatically placed the duty on these leathers at 7½ per cent, and immediately, of course, the applicants for a reduction to 10 per cent withdrew their application, having secured under the Canada-United States agreement a rate less than they were applying for.

Mr. BENNETT: Which was applicable to other countries.

Mr. DUNNING: That left the matter more or less up in the air. There was made available to me the information which the tariff board had collected on the matter prior to the date of the withdrawal of the application, and on that basis we endeavoured to do the best we could with the question. Since the item as drafted has been published we have had further representations which move me to ask the committee to change the item to read as follows:

Leather, consisting of beef-cattle hides, horse hides, and sheep skins, but not including suedes, Cabrettas, Spanish capes or African capes, when imported by manufacturers of gloves or leather clothing, for use exclusively in manufacturing gloves or leather clothing in their own factories: British preferential tariff, 5 per cent; intermediate tariff, 15 per cent; general tariff, 20 per cent.

Mr. STEVENS: That is the same reading as the old item.

Mr. DUNNING: As the old item in the tariff, yes, but it is an adjustment of the rates. It is a matter of weighing the relative merits of the contentions of the glove leather manufacturers and of the glove manufacturers, and as between different types of leather in relation to the same ultimate commodity, and I think the suggestion I am now making represents a fair weighing of the whole situation.

Mr. STEVENS: What are the rates?

Mr. DUNNING: The rates are 5, 15 and 20 per cent.

Mr. STEVENS: This raises the intermediate tariff to 15 per cent?

Mr. DUNNING: Yes, on some kinds of leather.

Mr. BENNETT: Yes. It becomes a new item, then, altogether?

Mr. DUNNING: It is an amendment, and goes back in wording to the existing tariff item.

Mr. BENNETT: Yes, but the horse hide item is the item about which there was much discussion. The hon. gentleman knows that.

Mr. DUNNING: Yes.

Mr. BENNETT: The old rate on it from abroad under the general tariff was 20 per cent, but under the intermediate it is only 7½ per cent.

Mr. DUNNING: Yes.

Mr. BENNETT: That is now going to be doubled.

Mr. DUNNING: On the intermediate.

Mr. BENNETT: Is that quite fair? I put it to the minister in this way: Before the late government went out of office I received many communications about this glove item. It has not been satisfactory in recent years.

Mr. DUNNING: That is right. It has been a mess.

Mr. BENNETT: Yes, and it was proposed to try to have the tariff board straighten it out, but they were busily engaged with other and more important matters and it never went to them. As the item stands now, on this document that is before us, the votes and proceedings, there is no change from our general tariff, but that general tariff was increased only a short time ago—I forget what year it was—to 20 per cent. Horse hide became very important for the manufacture of a particular type of heavy glove in this country. I do not know to what extent it is used, but the representations made to the late government were that it was used not only for making gloves but also for making certain types of garment, to what extent I do not know. As the matter stands now, it is proposed to make the rate for n.o.p. 20 per cent.

Mr. DUNNING: Horse hide is in n.o.p. as the item is printed in the votes and proceedings.

Mr. BENNETT: Yes; that is what I am talking about, as it is printed in the votes and proceedings. Horse hide from the United States would pay 15 per cent, which is 5 per cent less than it paid before, but it is twice what the intermediate rate is, and there are certain countries enjoying favoured nation treatment from Canada that can supply horse hide, but they are some distance away and the transport increases the cost. I submit to the minister, since he is rewriting this item, that 15 per cent is a higher rate than the glove business of the country should stand under the intermediate tariff, in view of the fact that they always found the item to work a great hardship upon them.

Mr. DUNNING: That is, the glove manufacturers?

Mr. BENNETT: Yes; I am talking about them, because this is the raw material of the glove manufacturers. I am dealing now only with the raw material, and our country does not supply sufficient for our requirements.

Mr. DUNNING: Well, very close to it. The importations were very small.

Mr. BENNETT: The reason was that we increased the tariff, according to their contention, too high, thus making the price a prohibitive one when the material was converted into gloves, and they complained very bitterly that they were losing a part of their business because they could no longer continue to manufacture that particular type of glove out of horse hide. That is the reason I say to the minister that I think the rate could easily stand at the intermediate rate that he originally proposed, namely, 7½ per cent for other than n.o.p. items, the same as sheep skins. If I thought we could supply the necessary horse hide I would not raise the question, but in Canada we do not kill horses; we ship them out. I think, if the minister will look into the matter carefully, he will find that in this country the production of horse hide for glove manufactuirng is really negligible.

Mr. DUNNING: Oh, it is definitely growing.

Mr. BENNETT: The point is that we ship the horses out of the country because our people do not take kindly to horse-meat; that is the short way of putting it; there are countries where horse-meat is used, and so has a value; and we have shipped from the country the horses, which of course include the hides, and have to buy back the hides. This is one of the cases in which we have to buy back the raw material for glove manufacturing. In view of the general attitude of the government towards the raw material item, I suggest that this item does not bear close analysis in the light of what has been done with respect to other industries. I think it is only fair to say that the representations made to the late government were that horse hide is produced in only one tannery in this country.

Mr. DUNNING: That is not so now.

Mr. BENNETT: Not so now? Well, if the hon. gentleman will look into the matter he will find that the change has taken place in the last twelve or fifteen months.

Mr. DUNNING: My information is that a number of tanneries which formerly were not engaged in this activity have developed it during the past two years, so much so that, though my right hon. friend may have forgotten it, the glove manufacturers in making their application to the tariff board did so with respect to sheep skin and did not ask for a reduction with respect to horse hide. In going into the matter, I was astonished at this. They made no application for a reduction in duty on horse hide.

Mr. STEVENS: They did not ask for an increase, though.

Mr. DUNNING: They are not getting an increase. Remember their application was with respect to a tariff which was then, with respect to horse hide, twenty per cent under the general tariff, and they did not ask for any reduction with respect to horse hide but

wholly with respect to sheep skin. The importations, of course, are not much of a guide, as the leader of the opposition says, because they apply to a period when the tariff was twenty per cent against the countries from which the horse hide comes. But the importations were very small. The total importation of all these leathers, sheep skins and all the rest, was only $31,500 in the last year of record.

Mr. STEVENS: Would that fact not suggest that the existing rate of 7½ per cent was sufficient?

Mr. BENNETT: That is just what I was going to say.

Mr. DUNNING: If figures mean anything this appears to work in reverse, because I have before me the figures for the first three months of 1936, under the Canada-United States trade agreement, under which the 7½ per cent rate was in effect, and I find that importations amounted to $226 in January, $735 in February, and $364 in March. For one quarter of the year under the new tariff the total imports appear to be $1,325.

Mr. BENNETT: Of course that is not the season.

Mr. DUNNING: No, but I gather that the imports are fairly steady. Be that as it may, it confirms an anomalous situation which appears all through my examination of this question. I have tried to strike as nearly as I could a fair balance, having regard to the fact that the glove manufacturers apparently were satisfied with twenty per cent on leather and did not include horse hides in their application. The examination I have given to the matter mainly centred, of course, round the question of sheep skins, which were the chief item of contention before the tariff board.

Mr. STEVENS: Would the minister object to saying who made the application for an increase in the intermediate tariff?

Mr. DUNNING: Oh, I must have had half a dozen representations, some through members of the house. I cannot recollect the names of the concerns; there is one tanner at Kitchener, another at Cobourg, another at Toronto, and another in Barrie; I have a particular memory of the Barrie one. So many communications come in I do not carry them all in my mind.

Mr. STEVENS: That is good enough.

[Mr. Dunning.]

Mr. DUNNING: There was something from Vancouver, but I do not remember the name of the concern. I tried to settle the question fairly having regard to the representations from all quarters.

Mr. BENNETT: I think that to double the intermediate tariff on this item is not fair. I tried to look up such memoranda as I kept about such matters when communications came before the government. Last August complaint was made about the reduction of duty on gloves and the increased duty on horse hides. It must be remembered that the duty on gloves has been reduced, and with that there was an increase in the cost of the raw material. The glove manufacturers believe that is unfair. I tried to look up the various notes I had made personally; I do not keep systematic notes, but as these various matters came before me I used to try to keep a note of them, and they went to the Department of Finance, and sometimes from there to the tariff board. But I think that to double this intermediate tariff item is not quite fair, notwithstanding what the minister says. As late as last year the horse hide production in this country was limited practically to one tannery. If the minister will be good enough to look the matter up, before these resolutions are presented in a bill, I think he will satisfy himself that the production of domestic horse hides for glove purposes is limited practically to one Canadian concern. That was so last year at any rate, or was so represented to us by those who apparently spoke with a good deal of authority, namely the glove interests of the country, because the item has given everyone a good deal of difficulty. Then the item of these fancy leathers used for women's fancy shoes caused a good deal of difficulty, and the same is true as regards the suede item. Then you get into the heavier class. The calfskins item never caused any trouble, but horse hides have been a constant source of difficulty, arising largely because, on the representations made to us, this commodity is controlled by one crowd who ask just any price they please; they always asked a price which was that at which the commodity could be brought in from abroad with the duty added, the duty from the United States being 20 per cent. Since we have given the intermediate tariff to the United States why should we double the duty on this item?

Mr. DUNNING: The intermediate tariff bore a strange relationship to the general tariff when the one was 7½ per cent and the other jumped to 20 per cent.

Mr. BENNETT: But the reason was obvious; it was to endeavour to secure the tanning of these horse hides in our own country. That was the original purpose. The minister has doubtless received protests. I have received communications, sometimes including copies of letters sent to the minister, objecting to the doubling of this duty—

Mr. DUNNING: From the very people who are also on record as not asking for anything in connection with horse hides when they were subject to a duty of 20 per cent.

Mr. BENNETT: But the difficulty is this: Since the Canada-United States trade agreement was made they were satisfied with the 7½ per cent and did not want any more. Now they ask: Why should the minister double the rate? When the intermediate tariff has been accorded to a country and the granting of that tariff has not greatly interfered with the domestic trade, at least has not interfered to the extent of injuring it, why should we suddenly jump the duty up 100 per cent, when one particular concern is the one greatly affected by it? That is the problem I put to the minister, and if he will look into the matter between now and the time the bill is in committee I think he will find the facts exactly as I have stated. Those were the representations made a year ago, and there is nothing to induce me to believe tanning is going on in Canada to any considerable extent to change the situation, because it happens that the raw material for tanning is not available at many of the spots which have been mentioned.

Mr. STEVENS: I would point out that the item also includes cattle hides and sheep skins.

Mr. BENNETT: That is right, as it is amended.

Mr. STEVENS: It is not only leather made from horse hides but leather made from cattle and sheep skins, so what we are really doing is doubling the duty in the intermediate column on what is distinctly a raw material for a very important manufacturing industry, not only leather gloves but leather clothing. Leather is now largely used for windbreakers in men's coats, which is quite an important article in the colder sections particularly in the west, where men working out in very cold weather commonly wear a leather-lined coat. Leather for all that will now be 15 per cent under the intermediate tariff. This seems to me an extraordinary action. Would the minister object if I asked him to lay on the table the communications from the different manufacturers who asked for the increase?

Mr. DUNNING: I do not think I should do that, with respect to tariff matters.

Mr. STEVENS: Without such information it is a little difficult for one to discuss the item intelligently. One gets a certain amount of information of which one is perhaps not absolutely sure, and while I do not wish to embarrass the minister I do not see why a manufacturing concern asking for an increase of duty should object to the reasons being given, particularly on an item of this kind, which is sweeping in its character.

Mr. MacNICOL: In reference to horse hides, would the increased duty not give a better price to farmers or anybody else selling horse hides?

Mr. DUNNING: I doubt that. It is a matter of opinion at present, but I doubt it.

Mr. MacNICOL: It should give a better price to the farmer.

Mr. BENNETT: I had overlooked the matter of sheep skins, to which the hon. member for Kootenay East directed attention. That is all going to be in the item under discussion?

Mr. DUNNING: Yes.

Mr. BENNETT: No separation.

Mr. DUNNING: No; we have gone back to the old rate, and we went back to it because of representations since received from all quarters.

Mr. BENNETT: Does the new duty not touch the New Zealand situation?

Mr. DUNNING: No.

Mr. BENNETT: Because we made a special arrangement with New Zealand and Australia in regard to sheep skins, if the minister will remember.

Mr. DUNNING: Yes.

Mr. BENNETT: I have not made inquiries to ascertain the effect upon the arrangement with Australia and New Zealand.

Mr. DUNNING: This helps both of them. They would not protest, because it increases their margin.

Mr. BENNETT: What is the duty from Australia and New Zealand?

Mr. DUNNING: It is covered under the ordinary British preferential item.

Mr. BENNETT: The matter was under discussion, I remember, but was it ever consummated.

Mr. DUNNING: No, not on this item.

Mr. BENNETT: My memory was that there was something special about sheep skins. However, I have not the information with me.

Mr. DUNNING: There may have been in connection with sheep skins, but not sheepskin leather.

Mr. STEVENS: Item 599 is the one referring to hides and skins, raw.

Mr. BENNETT: Yes, that is it. All I can say is that in doubling the intermediate rate the minister has gone too far.

Mr. DUNNING: Between now and the time the bill is introduced I shall give the matter further consideration. I must say that although the item is small it has given me more trouble than other items involving twenty times the amount of trade. My first information was, as the right hon. gentleman has said, that only one concern was interested. After that, however, I received representations from others I have mentioned, and some I cannot recollect, to the effect that they were definitely interested.

Mr. BENNETT: I did not say that they could not tan horse hides if they wished, but my information is that there is only one business engaged in that work.

Amendment agreed to.

Item as amended agreed to.

Customs tariff—618a. Comb blanks of hard rubber, not further manufactured than pressed and vulcanized, when imported by manufacturers of hard rubber combs for use exclusively in the manufacture of such hard rubber combs in their own factories: British preferential tariff, free; intermediate tariff, 7½ per cent; general tariff, 10 per cent.

Mr. DUNNING: This item is changed in neither rates nor wording, and is merely transferred from the orders in council section to the list of permanent classifications.

Item agreed to.

Customs tariff—657. Mouthpieces of hard rubber in the rough, aluminum pipe fitments, pipe bowls moulded from briarwood dust, and briarwood bowls not further processed than frazed, when imported by manufacturers of tobacco pipes for use exclusively in the manufacture of such pipes in their own factories: British preferential tariff, free; intermediate tariff, 15 per cent; general tariff, 25 per cent.

Mr. DUNNING: This is a new item, requests for which have been made by a company which purposes manufacturing tobacco pipes in Canada. The enumeration covers component items which cannot be secured in this country. They have been dutiable at higher rates, and it is proposed that the rates be reduced.

Item agreed to.

Customs tariff—657a. Cinematograph or moving picture films, positives, one and one-eighth of an inch in width and over, n.o.p., per linear foot: British preferential tariff, 1½ cents; intermediate tariff, 3 cents; general tariff, 3 cents.

Mr. DUNNING: This is an n.o.p. item.

Mr. BENNETT: What relation has the item to the resolution having to do with the imposition of an additional tax?

Mr. DUNNING: None whatever.

Mr. BENNETT: And there is no change in the rate?

Mr. DUNNING: No.

Item agreed to.

Customs tariff—663c. Soya beans, soya bean oil cake and soya bean oil meal, when imported by manufacturers of animal and poultry feeds or of fertilizers for use exclusively in the manufacture of animal or poultry feeds or fertilizers in their own factories: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. DUNNING: There is an amendment to move, by which we strike out the word "exclusively" in the third line of the item. This is done to simplify administration, as suggested by customs officials.

Mr. ILSLEY: I move:

That the word "exclusively" in the third line of customs tariff item 663c be deleted.

Amendment agreed to.

Mr. BARBER: I notice the word "inedible" in item 663d. I have had communications stating that—

Mr. DUNNING: If it will help the hon. member, may I say that I have an amendment to item 663d which will cover the point he is about to raise.

Mr. BENNETT: I suppose the minister has seen the discussions which have been taking place with respect to soya beans, and the establishment of the industry in Canada.

Mr. DUNNING: Yes.

Mr. BENNETT: There has been a good deal of press discussion. I shall not take time to repeat what I said on the budget, nor shall I outline the hundreds of derivatives produced from soya beans. With the exception of coal tar, I believe there is no other single sub-

stance from which can be produced so many derivatives. I had hoped that that might have had the effect of bringing about the development of the industry to some extent in Canada. The area within which it can be successfully carried on is limited, because of climatic conditions, but of its value there never has been the slightest question. The action of putting it on the free list simply means that we shall not become producers. About ten thousand acres were sown in soya beans in this country.

Mr. DUNNING: And half of that for forage.

Mr. BENNETT: Part of that for ensilage. It is said that it makes excellent food to be placed in silos and is well suited for feeding requirements of milking cows.

Mr. DUNNING: It is rich in proteins.

Mr. BENNETT: Yes. I do not think the government is fair to the Canadian people when it puts soya beans on the free list at a time when an effort is being made successfully to cultivate them. It is clear that they could be cultivated in the whole of the Niagara peninsula. In a small way cultivation is being carried on in the Chatham area, but there has never been that control so essential to success. It would seem quite clear from reports I have seen that soya beans could be produced successfully in the Niagara peninsula. This is equally true of some parts of Quebec—

Mr. DUNNING: Quebec, do you say?

Mr. BENNETT: Yes, so I am told. Before we left office representations were made to us that the people interested were satisfied that soya beans could be produced in those sections, and they were going to do something about it.

Mr. DUNNING: As a food, possibly, but not as a berry.

Mr. BENNETT: Does the minister say that the ripening of the bean would not be possible?

Mr. DUNNING: I think not.

Mr. BENNETT: I am not expressing an opinion on the point. I recall that twenty-five or thirty years ago the statement was made that corn could not be grown in North Dakota, but I have seen the corn belt move steadily northward. The seed has been improved, and the corn has been acclimatized to the territory in question. I have no doubt that soya beans could be grown successfully in the Niagara peninsula of Canada. From the evidence presented to me, that was my conclusion. So far the production has not had an opportunity to pass the experimental stage, but once a grain is found to grow in this northern climate, whether it be wheat or any other agricultural product, usually it is of a high quality. I had hoped we would find an opportunity to replace unsuccessful and unprofitable products with one so widely used, and one which has so many possibilities. However, placing soya beans on the free list will end any advantage that may be gained, and will give a corresponding advantage to our friends to the south.

Mr. DUNNING: Like my right hon. friend, I am more or less a worshipper at the shrine of the soya bean. I regard it as the most remarkable product of the field, and in that statement I do not believe I am going too far. I would point out, however, that the tremendous range of commodities which can be manufactured from the soya bean, contrasted with the very small development of the growing of the mature bean in this country, causes us to weigh the advantage of the possibility of some day growing enough soya beans with the other advantage of making a commodity available to the Canadian people, not only for stock food, but for the hundred or more uses to which the soya bean can be put, in order that Canada may have such advantages as may arise from the use of the byproducts. After all the years in which experimentation has taken place, only ten thousand acres were grown in Canada last year.

Mr. BENNETT: It is only a few years, you know.

Mr. DUNNING: I remember it at least twenty years ago.

Mr. BENNETT: It was only talked about twenty years ago.

Mr. DUNNING: We experimented with it on our experimental farms twenty years ago, right here at the experimental farm at Ottawa.

Mr. BENNETT: In 1916.

Mr. DUNNING: My right hon. friend may remember that the great war brought the soya bean into world prominence about 1916, and in Canada many of its derivatives were developed as a result of intensive research work done in connection with war materials.

Mr. BENNETT: Undoubtedly that is so.

Mr. DUNNING: Still, in spite of the opportunity and the value of the product we were able to get up to only 10,000 acres in the whole of Canada last year, 5,000 acres of

which were grown for feed, and not for the maturing berry because it had not been found possible to mature it. On the other hand, all those engaged in feeding cattle or in the special feeding of any kind of animals require the by-products of the soya bean, and can make good use of them in developing the secondary products of the farm. The uses of it are so very, very wide that we think, on balance, it is better to make available the soya beans to Canadians, and trust to the genius of Canadian farmers and plant breeders to develop a hardy variety suitable for commercial production on our Canadian farms, and we can deal with that question when it arrives. Nothing would please me better than to be faced in this house with the question, generated by the successful commercial production in Canada on Canadian farms of the soya bean.

Mr. ROSS (Moose Jaw): Why develop the industry artificially?

Mr. DUNNING: I am not proposing to develop it artificially. I should like whatever publicity attaches to my remarks to be directed towards encouraging Canadian people and Canadian farmers to investigate this most remarkable plant, and so far as my words have any influence, to stimulate experiment and research on the part of Canadian farmers in connection with the production of the soya bean. But at the present time I think the balance of advantage is distinctly on the side of those who require the use of this product, having regard to the fact that it cannot be grown commercially in Canada. Why, even the United States is not producing more than a small portion of its requirements of soya beans in spite of the fact that it has a much larger area suitable for its production than has Canada.

Mr. MacNICOL: Do soya beans enter the United States free?

Mr. DUNNING: I cannot answer that offhand.

Mr. BARBER: I mentioned the words "inedible" and "edible," because it has come to my attention that bakers in some parts of the country are using a certain amount of soya bean flour, up to ten per cent, to mix with wheat flour, in baking, and in one case, in the baking of Crispy bread the percentage is somewhere round eighteen per cent. I want to point out that this is becoming a competitor with wheat flour and will perhaps affect that very important crop of wheat which we produce in Canada.

Mr. DUNNING: When we pass item 663c I shall move an amendment to item 663d to eliminate the word "inedible."

[Mr. Dunning.]

Mr. WOOD: I should like to make a few comments in connection with the possibilities of the soya bean industry. First of all I would commend the minister for the action he has taken in regard to the tariff on soya beans. Many farmers have endeavoured to produce soya beans on farms in Canada, and in spite of the fact that we have had a tariff as high as fifteen per cent the price of soya beans at the mills is, I believe, only seventy cents, which is a price that really does not compensate the farmer for growing soya beans even in that section of Ontario in which I happen to live. It would be wise, I think, to recommend to the government and the Department of Agriculture to investigate the possibilities of developing a variety of soya bean that would mature earlier. I believe that in the southern portion of Canada at least the soya bean industry could be developed. We know what has taken place in connection with the development of a particular type of wheat, which has pushed the borders of our wheat growing area up into the northern portions of our provinces. I believe that in connection with developing the production of soya beans in Canada we could get a variety that would mature earlier, and then we might develop in this country a new branch of agriculture that might become profitable in itself and at the same time stimulate industry. As has been pointed out by the right hon. leader of the opposition (Mr. Bennett), who made a splendid argument in favour of this particular product, its derivatives can be put to a remarkable number of uses in fabricating accessories for the motor car. Mr. Ford has made an exhaustive survey of the uses of this product, and it is generally conceded that there is a bushel and a half of soya beans in every Ford car. Now, if we can produce our Ford cars in Canada, this might be worth considering.

Mr. BENNETT: Is that bushel and a half for the duco?

Mr. WOOD: Yes, various products, compositions, varnishes and celluloid. The soya bean is also often used in the manufacture of printers' inks, chocolate drinks, and many other things that we use in Canada. Earlier in the session I made a comment on soya beans and spoke largely from my own experience of what has happened amongst farmers I have known who have attempted to raise soya beans. Their efforts in many cases have been disappointing, but if the government would concentrate through the Department of Agriculture on trying to develop a variety

that would grow more successfully in Canada —and I believe they are working to that end now—there would be the possibility of establishing in this country another branch of agriculture that would be very much worth while.

I am led to believe that Germany alone imports about one million tons of soya beans. It is one product of which there has never been overproduction in any of the agricultural countries of the world. The densely populated countries of China and Manchuria, where they use a large portion of their own production of soya beans for feed, are those nations that are also exporting the most soya beans. Even in Great Britain the imports annually amount to 200,000 tons. We import something like 2,500 tons. I am quite sure the minister is following only sound business methods in not trying to penalize through the tariff the people who are using soya beans. If you impose a tariff, I doubt whether it would increase the price, because we already have a substantial duty and the price of soya beans is only seventy cents.

I am almost inclined to accept the view that the growers of soya beans are being exploited. Because of the varied use to which soya beans can be put it seems unfortunate that the price received will not pay the cost of production. No farmer can afford to produce these beans at seventy cents per bushel, considering the amount of work involved in raising them. There are certain sections in western and southwestern Ontario where the land is not too good for general farming purposes, but it would be suitable for the raising of soya beans. The soil is quite light and adapted to this particular crop. I was talking last week to one of my constituents in the township of Burford who told me that he had not attempted to harvest his crop of soya beans because the price which he would receive would be less than the cost of production. The beans have to be dried and sent to the factory in the proper condition. The beans may have been a little late in ripening and perhaps it would be possible to obtain a variety which would ripen earlier. I commend the minister for the stand he has taken in this connection as I believe there is a future for the soya bean. I want to make this comment because earlier in the session I spoke a little adversely of the attempts being made to encourage the growing of soya beans.

Mr. BENNETT: The minister had not spoken then.

Mr. WOOD: I commend anything that is being done in this connection on the experimental farms.

Mr. LOCKHART: We have heard much in this house about the overproduction of wheat and the growing of soya beans seems to offer relief from that overproduction. I should like to direct the attention of the minister to a letter which I received from a business man who travels extensively in the northern part of Manchuria. He had received a copy of the comments which I made in this house in the early part of the session in connection with soya beans and he wrote me to state that there were different varieties of soya beans grown in that part of Manchuria where the climate is similar to that in western Canada. He felt that these varieties of soya beans could be grown in western Canada and in the province of Ontario. It seems to me that this is one of the greatest fields of investigation which could be undertaken by the Department of Agriculture in an effort to relieve overproduction in connection with other grains.

Mr. DUNNING: I shall be glad to direct the attention of the Minister of Agriculture (Mr. Gardiner) to the remarks of my hon. friend. I know, as possibly other members of the committee know, that at our experimental farms all across Canada, and especially those in the west, experiments are being made in soya bean production. Seed has been brought from the regions to which he refers, but anything which will help to carry along this work is worth pressing to the limit.

Mr. STEWART: Does the minister not think taking off the duty will be inclined to discourage the growing of soya beans?

Mr. DUNNING: It will not make any difference and we are not taking the duty off.

Mr. STEWART: You took it off under the Canada-United States agreement.

Mr. DUNNING: It never was on.

Mr. STEWART: You bound it to be free for three years.

Mr. BENNETT: There was a duty.

Mr. STEWART: No matter what the experiments are, the government has tied its hands not to put on a duty for three years.

Mr. DUNNING: On the beans, yes.

Mr. STEWART: That does not offer very much in the way of encouragement to undertake production during that time. What is

the use of experimenting if our farmers are not going to be able to produce? What is the use of experimenting if they are going to have to compete with countries which can produce under more favourable conditions? It seems to me that agricultural production is the one branch of production with which the minister ought to be particularly concerned. We are told that good soya beans can be grown in Ontario and other parts of Canada.

Mr. DUNNING: And that is a reason for putting on a duty?

Mr. STEWART: This is a new industry as far as Canada is concerned, and I submit that that is when protection is needed, not when the industry is established. Protection should be given in the early stages when endeavours are being made to produce in commercial quantities. The tying of the hands of the government not to put on a duty for three years practically paralyzes any experimentation along these lines.

Mr. DUNNING: Soya beans have been free for many years and there is no suggestion on the part of anyone as to what tariff would be adequate to promote commercial production in Canada. The items with which we are dealing cover soya bean products and the encouragement of the use of soya bean products in this country will benefit one thousand times more farmers than could be benefited by any duty on soya beans. I think my thousand is a very limited estimate. Experiments are being carried on at practically every experimental farm, and I believe at most agricultural colleges, and we are encouraging the use of soya bean products in Canada. My hon. friend says that we have agreed to allow soya beans to come in free from the United States for three years, but that is a short time in plant hybridization and the accustoming of plants to our Canadian environment. There are a number of subsidiary industries based upon the soya bean which have been helped by the free importation of the bean. This bean cannot be obtained in this country in commercial quantities at all; it cannot be obtained even in experimental quantities. I think the course taken is a sound one, having regard to the experience of the past.

Mr. STEWART: I am afraid it is not likely to be.

Mr. BENNETT: I am afraid I must join issue with the Minister of Finance. He said that a thousand farmers would benefit to one—

Mr. DUNNING: A thousand to one, as compared with putting a duty on the beans.

[Mr. Stewart.]

Mr. BENNETT: Does he not realize that he is displacing grain products with soya beans imported from another country? He is displacing grain products used in the finishing of cattle.

Mr. DUNNING: What grain products?

Mr. BENNETT: Barley, for one. I listened with great care to the discussion which took place in this house a few years ago when it was suggested that we should do something to encourage the greater use of barley in Ontario, in view of the distressed economic conditions facing the barley producers because of difficulty in finding a market for their product. It was suggested that barley, as well as oats and wheat of certain grades should be used for finishing purposes. All these are used for the very purpose for which we are now going to introduce these commodities from other countries for our assistance. The duty that was imposed in times past on this oil meal and soya bean flour was 15 per cent, 25 per cent, and 25 per cent. They are now to be free. Item 663d refers to soya bean oil meal and soya bean flour, inedible, when imported by manufacturers of glues or adhesives for use exclusively in the manufacture of such glues or adhesives in their own factories, and this is all free. The item above that is with respect to animal feeds and fertilizers, and fertilizers paid a duty. Certain others were free. I put this question to the minister, first with respect to the last item. We are displacing the commodities that have heretofore been used in the production of glues, with an imported commodity called soya bean oil meal. Now the glue industry in Canada has been a substantial one and it has done a considerable export business with—I am speaking again from memory—Great Britain, notably. We are now to use an article imported from some other country for that purpose instead of using our own animal product for the production of glue. In the second place, for finishing purposes, we are told that this is a thousand to one shot in favour of the farmer because we have displaced his barley, wheat, oats and, in some cases, corn and substituted therefor an imported commodity called soya bean oil.

Mr. DUNNING: My right hon. friend has not been so unfair this afternoon.

Mr. BENNETT: That is not unfair; it is absolutely the fact. If soya bean meal is used for finishing purposes on the farm, where heretofore it has not been used—

Mr. DUNNING: That is the point.

Mr. BENNETT: Yes, and the hon. gentleman said that it would be a thousand to one in favour of the farmer.

Mr. DUNNING: Comparing the maintenance of the present position of the article—free—with putting a duty on it.

Mr. BENNETT: I am pointing out that the very moment, by increasing importations, you substitute some other feed for the feeds now used, that very moment you lessen the consumption of the Canadian grain product; that is all. I have listened many times in this house to the case made in connection with this question, and notably the strong demand from western Canada with respect to barley. Take, for instance, any kind of feed, such as fox food, which the hon. gentleman regarded as important; but perhaps I should not deal with that; the item has already carried. I say, however, that to the extent you replace grain, whether barley, wheat, oats, rye or corn, which is used for feeding purposes on the farm, with an imported product, whether soya bean meal or Indian corn from some other country, to that extent you lessen the possibility of the Canadian farmer being able to continue making a profit on his farming.

Mr. DUNNING: I defer to my right hon. friend's legal opinion at any time—

Mr. BENNETT: Not any opinion of mine on farming.

Mr. DUNNING: —but having had some experience in feeding stock, I beg to differ with him on the practical question of feeding and to tell him that if to-day I were finishing fat stock and were at the same time growing wheat, oats, barley and the other normal cereal products of the west, for results in the form of beef attained quickly I should want to inject if I could some soya bean element into the feed which I was giving the stock. And I should not think I was doing myself any harm as a grower of wheat, oats, barley and flax because I had sense enough to inject a quantity of another element, which I could not grow on my farm, for the purpose of producing far quicker results in the form of beef. That is a matter of practical feeding.

Mr. WOOD: The remarks of the leader of the opposition have been quite interesting to me. I appreciate his legal qualifications and his ability to argue and to make a speech. But I do not consider him an authority on feeding cattle. The point which the minister mentioned is a very important one; there is such a thing as a balanced ration. We have had considerable experience in Ontario in connection with the barley propaganda and I will tell the committee frankly what my views are on this question. When I get into conversation with any of my neighbours over the barnyard fence and am told that the government is recommending that the farmers go into hog production or barley production or some other line, I generally reply that if there is propaganda to encourage a particular form of production the farmers will be well advised to turn round and go the other way. That has been my experience. When the government tries to force production along any particular line, the general result is overproduction with consequent chaos in the industry. When you feed cattle you want more than barley and oats. As the Minister of Finance has said, if you are to be a successful stockman you must balance your ration with proteins. I am quite satisfied that the government is adopting the right course, because this by-product of soya beans is very valuable, containing about forty-four per cent protein, whereas oil-cake meal, which is a byproduct of flaxseed, has a protein element of thirty-five per cent, and the very best product of cottonseed meal contains about forty per cent. In proportion to value as a feed, soya beans at the present market price are by all means the cheapest product, so that if you increase the price to one class of farmer you are penalizing another group of farmers. We are not asking for protection for soya beans or anything else. In this dominion we have cheap lands and we have a resourceful people sprung from the old pioneer stock, people who know how to do things. We believe that the principle of merit should be recognized in society, whether in politics or in any other calling; and if we can convince industry that it is in the best interests not only of the consuming public at large but of industry itself to market reasonable products and not to inflict high prices on the public, then we shall have progress and a condition of affairs which will make for a more equal distribution of the wealth of the country and the satisfaction of life. I commend the minister for the way in which he is trying to pilot this legislation through. We as farmers are not asking for any particular privilege; all we want is a square deal. We say: Get off our backs and we will raise soya beans or wheat or anything else without protection. But we cannot continue to carry on our backs the load of exotic industry and our own load as well.

Mr. MacNICOL: Does the hon. gentleman object to western farmers receiving a bonus on wheat?

Mr. WOOD: Let me be frank with the hon. gentleman; he has asked a plain question and I will give a plain answer. I absolutely refuse

to bonus anybody. If you go into any particular kind of business and you cannot carry that business on, for heaven's sake get out of it and let somebody into it that will. That is my point.

Mr. DUNNING: Before this discussion gets general, may I suggest that it is soya beans we are now dealing with?

Mr. BENNETT: I am greatly indebted to the hon. member for Brant (Mr. Wood) for his appreciation of my knowledge of law and my ignorance of other matters, but no man who practises law successfully—I do not say I have done so—can remain ignorant of many, many things. He would be a very poor lawyer if, living in western Canada, he did not know anything about feeding, and he would be a poorer one if he did not know of the protein content of cottonseed meal and of cotton cake and various other protein products that are used in feeding cattle.

An hon. MEMBER: Not many lawyers know that.

Mr. BENNETT: Oh, yes, all the lawyers in this house from western Canada know that, as does the odd one from this part of the country. Knowing that, I want to put this single question to the hon. gentleman. The city of Brantford is near the constituency he represents, or it is a part of his constituency.

Mr. MacNICOL: And let the workingmen there have a chance to live.

Mr. BENNETT: The market it has afforded to the farmers of Brant county is known to every man who has studied anything of the economic history of this country. The same holds good of other counties. The hon. gentleman has now told the committee that all that is wanted is just a chance to sell products on merit and merit only. One of the occasions on which my hon. friend the Minister of Finance had to take a position that was to some extent at variance with that point of view was in connection with the New Zealand treaty, in respect of butter. I judge from what the hon. gentleman has said that no duty on eggs is necessary and that the duty on butter is something which the farmers of this country deeply resent. I trust the Minister of Finance will remember that the hon. member for Brant, speaking as a typical Ontario farmer, regards it as highly improvident and improper to maintain a duty on butter or eggs or potatoes or garden truck or farm products of any kind; all that is wanted is a chance to grow and sell them to the workingmen of Brantford and other communities adjacent thereto, communities that would not exist if what he regards as this wrong principle of giving some little assistance to industry, because of conditions in Canada to which reference has so frequently been made, were not followed. Those who say that the farmer does not derive any benefit from the tariffs of this country fly in the face of the known evidence that has been produced times without number. This is not the case, of course, when you deal with the vast wheat fields of the western plains, but when you deal with the situation in eastern Canada, whether it be with regard to the softer wheats produced in Ontario, or the products of the farm and the garden which find a ready market in the nearby great cities and among the workingmen who congregate there, it is evident that the tariff has had such a stabilizing effect upon the east that the farmers of the west have been crying aloud to have a market at home like that; if they only had such a market how much better off they would be, how well-to-do they would be.

Mr. DUNNING: Soya beans. May I respectfully suggest soya beans?

Mr. BENNETT: As far as the soya bean item is concerned, to the extent to which it is used it will displace some commodity which otherwise might be used in the same manner. But the soya bean protein content could not be called upon to take the place of ensilage corn, because on the analyses the products proved to be entirely different. We were not asking that at the moment a duty be placed on the soya bean. What we were pointing out was that the hon. gentleman himself made light of this matter until he heard the minister take a serious attitude, and now the minister is a broadminded statesman. The hon. member for Brant is the same hon. gentleman who, a few weeks ago, when the budget was on, said that soya beans were something about which the less said the better.

Mr. DUNNING: Not on the budget, the Canada-United States agreement.

Mr. BENNETT: Pardon me, my hon. friend is right; on the Canada-United States agreement. If the hon. member for Brant reads his remarks on that occasion and compares them with his observations this afternoon after the minister had spoken, he will realize how, in the words of Burke, "leaders of light and leading have been able to induce their followers to follow their lead." That, of course, is something very much to be desired; it is favourable to solidarity and helpful to discipline, which is always desirable.

Mr. DUNNING: The right hon. gentleman will recall, I think, that the hon. member spoke after me on a former occasion and did not agree with me then.

Mr. BENNETT: The hon. minister had not widened his vision on that occasion to the extent he has done to-day; he was in charge of that Canada-United States agreement to hardly the same extent that he is in charge of this measure, and that broad vision which has manifested itself this afternoon to the hon. member for Brant had not then become apparent. He was merely dealing with the matter in a narrower sense. Now, with a broader view and a wider vision, the hon. member for Brant is persuaded that the course suggested by the Minister of Finance is the right one, and I congratulate him upon such an admirable evidence of discipline, so good for the solidarity of his party.

Mr. WOOD: I recommend that same broad vision to the leader of the opposition himself.

Mr. BENNETT: I have great hope that if the hon. gentleman lives long enough and follows public discussions closely enough he will adopt many of the suggestions that have been made from this side this afternoon.

Item as amended agreed to.

Customs tariff—663d. Soya bean oil meal and soya bean flour, inedible, when imported by manufacturers of glues or adhesives for use exclusively in the manufacture of such glues or adhesives, in their own factories: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. DUNNING: I think, Mr. Chairman, you have the amendment, which is to strike out the word "inedible."

The CHAIRMAN: I have not received the amendment.

Mr. BENNETT: So you strike out the word "exclusively" in both 663c and 663d?

Mr. DUNNING: No, not in the second one. It is stricken out in 663c but not in 663d; and "inedible" is stricken out in 663d.

Mr. BENNETT: Is it not as difficult to administer in one case as in the other? That is the reason I asked.

Mr. DUNNING: No. Glue and mucilage, you see.

Mr. BENNETT: One is glue and mucilage and the other is not.

Mr. STIRLING: The removal of the word "inedible" hardly meets the contention raised by the hon. member for Fraser Valley (Mr. Barber), does it?

Mr. DUNNING: No, it does not, because the use of soya beans and soya bean products for human food and so forth is and always has been dutiable under the tariff. It is only for such special purposes as this that it has ever been free.

Amendment agreed to.

Item as amended agreed to.

Mr. DUNNING: I move that the committee rise, report progress and ask leave to sit again. If it is thought desirable we may take up the harbours board bill after recess.

Mr. BENNETT: Do you want to sit again this day?

Mr. DUNNING: This day, yes. I move accordingly.

Progress reported.

At six o'clock the house took recess.

---

## After Recess

The house resumed at eight o'clock.

## NATIONAL HARBOURS BOARD

### PROVISION FOR ADMINISTRATION AND CONTROL OF PUBLIC HARBOURS

The house resumed, from Wednesday, May 20, consideration in committee of Bill No. 17, respecting the national harbours board.—Mr. Howe.—Mr. Sanderson in the chair.

On section 37—Amalgamation.

Mr. CAHAN: Mr. Chairman, when the committee had this bill under consideration on Wednesday last the amendment which I then moved to section 37 was held over for further consideration. That amendment reads as follows:

That section 37 of the bill be amended by adding the following subsections:

(3) That the board shall become and be liable to be sued in tort, and that in the case of any such suit in tort, the same procedure shall apply as that which regulates the conduct of similar cases between subjects, including such matters as discovery, the receiving and paying of costs by the board, and the like.

(4) Service upon the board of any writ or process may be effected by personal service upon an officer or employee of the board at any of the harbours over which the board has jurisdiction.

I call the attention of the committee to the fact that this bill by section 3, subsection 3, provides that:

(3) The board shall have the capacity to contract and to sue and be sued in the name of the board.

But there is no express provision that the board may be sued in tort. Therefore a claimant who suffers damage from wrongful acts of the board, its officials or employees, is left in doubt as to whether he shall proceed by action against the board or by petition of right against the crown. On the second reading of the bill I suggested that such doubts should be removed, and in the committee I moved the amendment which I have just read, for the purpose of removing those doubts.

It is established by many judicial decisions which are binding upon the courts of this country that an action in tort does not lie against the crown, except under special statutory authority. In the memorandum prepared by the Deputy Minister of Justice, dated April 27, which the minister laid upon the table of the house at my request, I find that the deputy minister reports as follows:

In the debate on the second reading I notice that Mr. Cahan raised the question as to whether or not this harbour board as an agent of the crown would be liable in case of tort. As to this I may say that a servant or agent of the crown cannot be sued in tort with or without incorporation for a limited purpose if he is merely given the capacity to sue and be sued. In other words, such a provision does not give a right of action against the servant or agent of the crown for any act done by him as such servant or agent.

Then, after reciting certain decisions, the deputy minister proceeds:

The decisive question in all these cases is whether under the terms of the legislation the relationship of principal and agent or of master and servant exists as between the crown and the corporate body concerned, and it is necessary in this connection to inquire whether the purposes for which the corporate body has been created are such as are required and created by the government of the country and, therefore, are to be deemed part of the use and service of the crown.

But no doubt is left in this bill as to the relationship of this harbours board with the crown, inasmuch as section 3, subsection 2, provides that:

(2) The board shall be a body corporate and politic and be and be deemed to be, for all the purposes of this act, the agent of His Majesty the King in his right of the Dominion of Canada.

And by section 10, subsection 2, it is provided that all property acquired or held by the board shall be vested in His Majesty in his right of the Dominion of Canada.

I think it is clear, therefore, that this national harbours board is not liable to any action in tort, such as for negligence, nuisance and the like, except possibly on a petition of right under the very much restricted provision of section 19(c) of the Exchequer Court Act.

In recent years we have made progress in this respect. A few years ago it was asserted that the king could do no wrong, and without limitation or restriction no action in tort could be brought against the crown, because of the royal prerogative. But in connection with the government railways, which then did not comprise the Canadian National Railways, in 1910, by chapter 26 of the statutes of that year, a limited right of action was given against the government railways, but the amount of the claim was limited to $200.

In 1913, by chapter 20, section 1, of the statutes of that year, parliament gave a limited right of action against the government railways, claims being limited to $500, and the same provision appears now as part of chapter 173 of the revised statutes, the act relating to government railways. Section 86 of that statute reads:

86. Subject as hereinafter provided, any claim against His Majesty arising out of the operation of the government railways, and not exceeding in amount the sum of $500, for damages alleged to be caused by negligence, or made payable by statute, may be sued for and prosecuted by action, suit or other proceeding in any provincial court having jurisdiction to the said amount over like claims between subjects.

(2) Any such action, suit or other proceeding may be commenced and prosecuted to judgment in the same manner and subject to the same rules of practice and procedure and to the same right of appeal as nearly as may be as in like cases between subjects.

(3) The said court shall have the same jurisdiction to order or adjudge the payment of costs either by plaintiff or defendant as in like cases in the said court between subjects.

Later there was a decision, The King v. Armstrong, reported in 40 S.C.R. 229, decided in 1908. An action arose to recover damages from the crown in consequence of a broken switch at a siding on the Intercolonial railway. Action was brought by the widow of the deceased, and in that case a decision was given for the claimant. But among those practising the legal profession in the dominion considerable doubt arose as to the application of that judgment, and so in the year 1910 the Exchequer Court Act was amended by a statute enacted as chapter 19 of the statutes of 1910, to include within the jurisdiction of the Exchequer Court of Canada the following:

19. (f) Every claim against the crown arising out of any death or injury or loss to the person or to property caused by the negligence of any officer or servant of the crown while acting within the scope of his duties or employment upon, in or about the construction, maintenance or operation of the Intercolonial railway or the Prince Edward Island railway.

This clause extended the jurisdiction of the Exchequer Court of Canada; so that since 1910 action lies for damages for death, injury or loss to personal property arising out of a negligence of any officer or servant of the crown, while acting within the scope of his duties in connection with the management and operation of the Intercolonial railway. This clause creates a right of action against the crown, and is unlimited as to the amount of claim.

We find that the term "Intercolonial railway" is defined by chapter 173 of the revised statutes as follows:

83. All railways, and all branches and extensions thereof, and ferries in connection therewith, vested in His Majesty, under the control and management of the minister—

And the minister is defined as the Minister of Railways and Canals—

—and situated in the provinces of Quebec, Nova Scotia and New Brunswick, are hereby declared to constitute and form the Intercolonial railway.

Therefore actions for damages of the nature and kind I have mentioned may be brought in request of the Intercolonial railway, and the claims may be unrestricted as to amount.

Of course, this extends the Exchequer Court Act. In the discussion Wednesday last I had in mind the difficulties which have arisen in relation to the railway known as the harbour board railway, operated by the harbour board of the city of Montreal. It is clearly not a part of the Intercolonial railway, under the terms of the section I have read, and therefore in cases of negligence in the operation of that road which give rise to actions for damages they may not be brought under the provision of section 19 of chapter 34, which I have read. Moreover, the railways included in the Intercolonial railway are those which are under the management of the Minister of Railways, and the harbour board railway does not come under his administration.

Then, again, a discussion arose with regard to the Canadian National Railways. At the time I had not my notes in hand, and therefore I was unable to do more than to say that the various railways held by the Canadian National Railways, by reason of the Canadian National Railways holding the stock of those roads, are subject to actions under contract or in tort, or otherwise, exactly the same as the Canadian Pacific Railway is subject to such actions.

If hon. members will look at the Canadian National Railways Act, chapter 172 of the Revised Statutes of Canada, first enacted as Chapter 13 of the statutes for 1919, they will find section 12 providing that the name Canadian National Railways may apply:—

As a collective or descriptive designation of all lines of railway or railway works under its control, without, however, affecting the rights or liabilities of any of the respective corporations, including His Majesty, for any of their respective acts or admissions.

This clearly creates the inference that while some of those constituent railways were brought under the Canadian National Railways by reason of the Canadian National Railways holding the stock of the constituent or subsidiary company, nevertheless each of those companies was liable as theretofore for all actions in contract or in tort, as in the case of the Canadian Pacific Railway.

Section 33 of the same act provides that,—

Actions, suits or other proceedings by or against the company in respect of its undertaking or in respect of the operation or management of the Canadian government railways may, in the name of the company, without a fiat, be brought in and may be heard by any judge or judges of any court of competent jurisdiction in Canada, with the same right of appeal as may be had from a judge sitting in court under the rules of court applicable thereto.

2. Any defence available to the respective corporations, including His Majesty, in respect of whose undertaking the cause of action arose shall be available to the company.

3. Any court having under the statutes or laws relating thereto jurisdiction to deal with any cause of action, suit or other proceeding, when arising between private parties shall, with respect to any similar cause of action, suit or other proceeding by or against the company, be a court of competent jurisdiction under the provisions of this section.

In respect, therefore, of the companies constituting the Canadian National Railways, which appear in the schedule to the Canadian National Railway Act, the prerogative of the crown is no defence in actions for tort. This refers to the thirty-one railways enumerated in the schedule to that act. Therefore it is hardly a conclusive argument to suggest that what we are asking in the amendment is special and unprecedented legislation dealing with one branch only of government properties, namely the harbours board as it will be constituted under the bill now before the committee.

The provision respecting the Canadian National Railways which I have just read clearly discloses that all the constituent members now operated by the Canadian National Railways, except the three railways, if my memory serves me correctly, namely the Transcontinental, the Intercolonial and the Prince Edward Island line, are all liable to actions in tort in exactly the same manner as is the Cana-

dian Pacific Railway. That is so by reason of what I might call a special enactment of the parliament of Canada. I suggest, therefore, that it is only equitable and just that parliament, in reconstituting the seven harbour boards under one act the declaring that the new board, the consolidated board I may call it, shall be empowered to make contracts and to sue and to be sued, should go further and declare that this great public utility, which is now being consolidated, should be liable to actions in tort in exactly the same manner, to the same extent, and before the same provincial courts of competent jurisdiction, as the Canadian Pacific Railway is liable, as all companies owning and operating docks in the various harbours of Canada are liable, and as all railways which are specially incorporated and operated under the general Railway Act of Canada are at present liable. It was with this in view that, upon consultation with the right hon. leader of the opposition (Mr. Bennett), I moved this amendment, which I think is worthy of all consideration, and which might properly be dealt with in this act because it is an act relating to all these harbours in just the same way and to the same extent as the Canadian National Railway Act deals with a large number of companies, now between thirty and forty in number, which are constituted as parts of the Canadian National Railways.

Mr. LAPOINTE (Quebec East): Although I am free to admit that I have a good deal of sympathy with most of the views expressed by my hon. friend (Mr. Cahan), I will give one or two reasons why I have to join with my hon. friend the Minister of Railways (Mr. Howe) in opposing this amendment.

The special way of dealing with the crown as a litigant has come to us through many centuries, and is based upon the theory, first, that the king is not responsible for his negligence nor for the negligence of his officers or agents, and, second, that the king cannot be brought against his will before his own courts except through special statutory provision.

My hon. friend has fully and ably presented the arguments which are usually set forth on behalf of those who think that the crown should be held responsible in tort as are ordinary citizens. He has quoted the remarks of Mr. Justice Davis, then on the bench of Ontario, now a justice of the Supreme Court of Canada, in which Mr. Justice Davis said that he had to apply the doctrine as it is, though he expressed the view that it should be repealed and that the crown should be considered just like any other litigant with regard to torts as well as with respect to contracts which the crown may have entered into with its subjects.

Sir Lyman Duff, Chief Justice of Canada, expressed the same view quite recently in the case of Dubois v. the King. In the case of the Temiskaming and Northern Ontario Railway Company an automobile had been destroyed by a train of the railway company, and although the courts of first instance had assessed the damages against the company, which is the crown, really, in the right of the province of Ontario, that decision was reversed on appeal because of no responsibility attaching to the crown.

I must, however, call the attention of the committee to the fact that if the accident had taken place on the public property of the Dominion of Canada, if it had been caused by the negligence of one of the servants or officers of the crown on a dominion public work, the victim or his representatives would have had a claim against the crown under the Exchequer Court Act, section 19(c), to which my hon. friend has referred. That section gives jurisdiction to the exchequer court to hear and determine every claim against the crown arising out of any death or injury to the person or to property resulting from the negligence of any officer or servant of the crown while acting within the scope of his duties or employment upon any public work.

Mr. CAHAN: That action in the case of a government railway such as the Intercolonial would properly have come under section 19(f), would it not?

Mr. LAPOINTE (Quebec East): Yes. There is a special provision for the Intercolonial railway and the Prince Edward Island railway, which applies now to the Transcontinental as well, but I mean any public work of any kind.

Mr. CAHAN: I do not like to interrupt the hon. gentleman, but I say that very great difficulties have arisen with regard to the meaning and application of "public work."

Mr. LAPOINTE (Quebec East): Yes, I know that.

Mr. CAHAN: So that at the present time it is very difficult for a lawyer to advise what is a public work within paragraph (c) of section 19, to which the hon. gentleman has referred, and that was one of the points I was very anxious to clear up.

Mr. LAPOINTE (Quebec East): So far as I can remember, Mr. Justice Duff and Mr.

Justice Mignault in a certain case—I cannot recall the name at the moment—decided that the definition of "public work" as it is given in the Expropriation Act—

Mr. CAHAN: And Public Works Act.

Mr. LAPOINTE (Quebec East): —should be applied.

Mr. CAHAN: The Supreme Court of Canada with another personnel decided just the contrary.

Mr. LAPOINTE (Quebec East): That is what we call the glorious uncertainty of the law. The interpretation of "public works" in the Interpretation Act will be very broad and will include harbours, ports and all public properties which would be under this bill.

In England, as well as here in Canada, eminent authorities have shared the views of my hon. friend and of the right hon. leader of the opposition (Mr. Bennett) in thinking that there should be a change, more particularly because of the wide scope which government activities have taken during the last few years. Governments are undertaking all sorts of works which formerly were confined to private activity, and the old maxim makes the claims of injured parties more difficult of presentation. While the authorities agreed that some action should be taken, they found also that it is very hard to obtain agreement as to how this should be done. In 1921, Lord Birkenhead, then Lord Chancellor, appointed a committee to study this question. This committee was quite representative, its membership including Lord Hewart, Lord Chief Justice of England, as chairman; Lord Hanworth, Master of the Rolls; Mr. Justice Rowlatt; Mr. Justice Hill; the then Attorney General, Sir Douglas Hogg, now Lord Hailsham; the Solicitor General, Sir Thomas Inskip, who has since been given a very high position in the government of Great Britain; Sir Patrick Hastings; the Right Honourable Sir Leslie Scott, and many other very eminent legal gentlemen. In order to show just how important this matter was considered to be, I should like to read from a letter sent by Sir Claud Schuster, Permanent Secretary to the Lord Chancellor, to the Attorney General, dated November 16, 1921. He first stated that the Lord Chancellor was glad to learn that the Solicitor General and the Attorney General concurred in the view that a change should be effected in the position of the crown as litigant and then he went on to say:

> So great a change, however, would require very careful consideration and many points of detail would arise, upon which reservations and limitations would be required. Further the change would affect different departments in different ways, and would render it necessary in some cases to substitute an alternative machinery for that which was abandoned.
>
> The Lord Chancellor thinks that any such bill as is contemplated could only be prepared under the supervision of a body of persons experienced in the subject matter, who would have the opportunity of hearing and considering any representation which those principally affected by the change might desire to put forward.

In 1924, Lord Haldane, who succeeded Lord Buckmaster as Lord Chancellor, wrote the committee stating that everybody was in favour of the change and that all that was required from them was merely the drafting of a bill which would be acceptable and which would surround the change to be made with all necessary safeguards and precautions. This bill was drafted and I have a copy in my hand. It is quite long, consisting of thirty-one sections which cover thirty-two pages. The mere reading of it shows how tremendously important this change was considered to be by the legal authorities in Great Britain. I should like to call the attention of my hon. friend to the change he suggests in his amendment. The subject is liable for discovery and must disclose or produce all documents in his possession relating to the matters of the suit. The same rules would be made to apply to the crown itself, except that the crown would have the right to refuse to divulge documents on the ground that it would be contrary to public interest. This matter was fully considered by the committee in England and they drafted section 20, which is divided into four subsections. Perhaps I had better read this section in order to show that the same precautions would have to be taken in anything we do, even with regard to litigation concerning harbour properties or concerning anything relating to the boards. This section reads:

> Nothing in the provisions of this act shall operate to impose on any officer of the crown any obligation in the case of any crown proceedings to make discovery of documents on oath, but provision may be made by rules of court for authorizing the court to make orders requiring the crown, subject to the provisions of this section, to make and deliver to the other party to the proceedings, by such officer of the crown as the court may by the order direct, a list in the prescribed form of such documents, not being documents the existence of which it would be contrary to the public interest to disclose, relating to the matters in question as are or have been in the possession, custody or power of the crown.

That is only one of the subsections. The other subsections prevent the filing or even communicating of documents which it would

be against the public interest to disclose. Oral evidence is covered by this subsection:

Subject to the provisions of this section, a person who is required by an order made in any crown proceedings to answer interrogatories on behalf of the crown shall not be bound to answer any question if objection is taken in the affidavit made in answer to the interrogatories that it would be injurious to the public interest that the question should be answered.

It has always been the prerogative of the crown not to be compelled to disclose or divulge documents which it is against the public interest to disclose or divulge. Under the amendment of my hon. friend all this would disappear and everything would have to be made public. Might I refer to some other precautions which I think it would be well to take in any measure that would do away with the prerogative. For instance:

(a) Where in any proceedings against the crown any such relief is sought as might in proceedings between subjects be granted by way of injunction or specific performance, the court shall not grant an injunction or make an order for specific performance, but may in lieu thereof make an order declaratory of the rights of the parties;

I believe that an injunction against the crown in a matter of public interest would be a dangerous thing. In a bill of this kind it would be necessary, I think, specifically to repeal the prerogative of the crown. I do not think we could do so without mentioning it, and that is what was done in the draft bill in England:

The provisions of this part of this act shall have full effect notwithstanding any right, privilege, or prerogative of the crown, rule of law, or enactment to the contrary, which existed or was in force immediately before the commencement of this act.

There are special provisions for execution of judgments and costs against the crown, or received by the crown, which also seem to require special consideration in any amendment of this kind.

There is another feature to which I would call attention, and it is this: If we took this action only in connection with this particular legislation, it would be doing something which would be discriminatory in its effect. In this bill we establish an agency to administer seven harbours in Canada; but there are many more harbours, and if my hon. friend's amendment were adopted, the rights of someone who might be injured on harbour property at Montreal or Halifax would be different from the rights of a person injured on public property in connection with the harbour at Churchill, for instance, or Port Colborne, or Fort William, and many other places. So that this would establish a difference in treatment in connection with the various harbours in Canada.

Again, if my hon. friend's amendment were adopted, the crown would be sued in accordance with the ordinary procedure and before any court. I am not quite sure whether it would not be better if we did away, as I think we should, with the petition of right, fiat and all the special formalities surrounding litigation against the crown. I am not clear, however, whether we should not retain the exchequer court as the tribunal where all these actions for or against the crown should be instituted and heard. I am not sure that it would be a good thing that many of these cases should be heard by juries, as they would be, instead of by the exchequer court, where long jurisprudence guides the judges; and it would certainly make for greater uniformity in the law and the jurisprudence if these actions continued to be heard in the exchequer court.

There is another feature of the amendment to which I would direct attention, though it is one that might be easily changed. My hon. friend, in his amendment, proposes that:

Service upon the board of any writ or process may be effected by personal service upon an officer or employee of the board at any of the harbours over which the board has jurisdiction.

Possibly it would not be desirable, in important actions, if the writ or process were held to have been regularly served in the event of copies having been left in the hands of a doorkeeper or of a watchman at the gate of one of the harbour properties.

Mr. CAHAN: I might have made it more definite had I known what officers you were likely to appoint at the ports.

Mr. LAPOINTE (Quebec East): As I say, that is something which might be easily adjusted. My hon. friend from Winnipeg North Centre is not present or he would say that the suggestion I am going to make is a typically Liberal suggestion, but this is, as I think I have shown, a momentous change. If we make it let us do it well. If they have taken the trouble in England to appoint a committee of the best legal men there, who have taken years to report and to draft a bill, a bill which is not even now on the statute books of Great Britain, I think this would be a queer way of changing what has been not only a tradition but the practice of centuries, without looking at every phase of the matter and surrounding the change with all the guarantees and means of protection which might be necessary.

Of course, I am going to vote against my hon. friend's amendment, though with some diffidence, because as I have said I believe that the method is an antiquated one and should be changed, but it should be changed all along the line and not only with respect to a particular part of the public property of Canada. I may say on behalf of my department and, I believe, of the government that before next session we shall prepare a bill which will cover not only the harbours but all public property. We shall try to meet the wishes of my hon. friend, and we believe it would be better to enact general legislation doing away with the petition of right, and doing so with respect to all claims for torts and injuries against the crown in future.

The CHAIRMAN: The amendment has not yet been read.

Mr. CAHAN: It was read in the house on Wednesday and debated.

The CHAIRMAN: It has not yet been read by the chair. It is moved by Mr. Cahan:

That section 37 of the bill be amended by adding the following subsections:

(3) That the board shall become and be liable to be sued in tort, and that in the case of any such suit in tort, the same procedure shall apply as that which regulates the conduct of similar cases between subjects, including such matters as discovery, the receiving and paying of costs by the board, and the like.

(4) Service upon the board of any writ or process may be effected by personal service upon an officer or employee of the board at any of the harbours over which the board has jurisdiction.

Mr. CAHAN: There is very little I can add to what I have already said. The Minister of Justice has suggested that there should be a general revision of the law dealing with petitions of right, so as to enable claimants in tort to litigate their rights as against the crown in respect of all activities of all departments of government. I am pleased indeed to learn that the government will undertake the consideration of such a general provision as that, but the very sweeping nature of the provision suggested seems to indicate that it will be years before such a measure is likely to be formulated.

Mr. LAPOINTE (Quebec East): Oh, no.

Mr. CAHAN: In the meantime I would be quite content with some form of amendment such as is made in the Canadian National Railways act, which I read, which provides that actions, suits and other proceedings may be brought against any constituent members of the Canadian National Railways. That as drafted deals with particular activities and is expressed in a very few sentences. I may say that the draft which I made and proposed as an amendment on this occasion was taken by me almost in toto, if I remember, from a lecture or other dissertation given not long ago by Lord Hewart, who was a member of the committee to which the hon, Minister of Justice has referred. We cannot, however, obtain uniformity in such matters, because in respect of actions for tort the law is not the same in the various provinces of Canada. For instance, as the hon. Minister of Justice will recognize, the law respecting common employment and acts of negligence arising out of common employment is different in Quebec from what it is in the other provinces of Canada, although the right hon. leader of the opposition suggested to me the other day that in one of the western provinces they had adopted a law similar to the civil code of Quebec. We cannot expect uniformity in such proceedings, but I suggest that, as we have proceeded in the case of the Intercolonial railway and the Prince Edward Island railway, as we have proceeded in connection with the Canadian National Railways, we could with clear justification adopt an amendment to this bill which is confined in its application tc the National Harbours board as created by this bill. There is grave necessity for such an amendment. I know that it is difficult to rely upon memory after years have elapsed, but there was a time, five or six years ago, when my mind was quite clear in respect to causes of action arising against such a board as the Montreal harbour board. But I think I am right in saying that after this bill is passed any practising lawyer in the province of Quebec will have very considerable difficulty at times in determining whether the right of action exists against the harbour board, or whether the action should be by petition of right, and when counsel comes to consider the question as to whether there is a petition of right in respect of the negligence or nuisance, he will find it very difficult indeed to determine whether, under the restrictive provision of section 19, of chapter 34, revised statutes, clause (e), a right of action exists. I say that without attempting to labour the question.

Mr. LAPOINTE (Quebec East): Has my hon. friend considered 19(c)? I admit that under (f) that will apply only to the railways, but (c) concerns any public work.

Mr. CAHAN: It is (e), is it not? I am referring to (e) of the original act.

Mr. LAPOINTE (Quebec East): Yes, I know, but (c) would cover it.

Mr. CAHAN: Would you please read (c)? Section 19(c) provides that the exchequer court shall have exclusive and original juris-

diction to hear and determine the following matters:

(c) every claim against the crown arising out of any death or injury to the person or to property resulting from the negligence of any officer or servant of the crown while acting within the scope of his duties or employment upon any public work.

Mr. LAPOINTE (Quebec East): That is right. That is (c) now.

Mr. CAHAN: This is what I took, section 19 (c) of chapter 34 of the revised statute. I was mistaken in referring to it as (e), but I accept the correction, of course. I think very great difficulty arises under that clause, as in order to ascertain what is any public work and what is employment upon a public work we have had the Supreme Court of Canada on one occasion declaring that a public work was a work defined as a public work by the Public Works act or by the Expropriation act, and then we had a different personnel of the Supreme Court of Canada declaring that the definitions of the Expropriation act and of the Public Works act were not sufficient to define with accuracy what is a public work. Then we have again this case arising: At first there was a suggestion that an accident occurring on the Intercolonial was under certain conditions an accident occurring on a public work, that is, that the Intercolonial railway was a public work, and the supreme court decided accordingly, but that decision gave rise to so many protests that the parliament of Canada was asked by the Department of Justice in 1910—I think that was when the hon. gentleman was Minister of Justice—

Mr. LAPOINTE (Quebec East): No.

Mr. CAHAN: No? The parliament of Canada was asked—

Mr. BENNETT: That was in consequence of the Armstrong case.

Mr. CAHAN: Quite so, but there was so much protest against the Armstrong decision that parliament was asked to make a special enactment with regard to the Intercolonial railway and the Prince Edward Island railway. Parliament having made a special enactment with regard to the Intercolonial railway and the Prince Edward Island railway, which are government railways, it left a clear presumption that in clause (c), to which the hon. gentleman refers, the term "public work" did not apply to railways. After that date, while I was practising law, I do not think there was a lawyer in Montreal who was giving attention to those matters who would give a firm opinion that negligence on the harbour railway was negligence upon a public work within the meaning of clause (c). There are very grave difficulties about the matter, I suggest, and there is no reason in the world why every labourer or other person crossing this railway, if he suffers injury from negligence, should be placed in a position where it is very doubtful whether he has a cause of action or not. It is to remove that doubt and confusion that I am suggesting this amendment. If there is to be a general revision I trust it will take place soon, but I cannot see why we should to-day wait upon a general revision any more than in 1910 we declined to wait for a general revision, or in 1919 in connection with the Canadian National Railways, or any more than we declined to wait on several other occasions for a general revision of the Petition of Right Act and of the statutory jurisdiction of the exchequer court.

Mr. FINN: I regret exceedingly that I was not in the committee when the hon. member for St. Lawrence-St. George (Mr. Cahan) proposed his amendment. I have not a copy of the amendment before me, and it seems impossible to get it. For that, of course, the hon. gentleman is not to blame. The port of Halifax is involved in the question raised by my hon. friend. I was not quite able to catch his meaning in his general statement in connection with rights of action, whether or not they would lie without obtaining a fiat by bringing an action against the railway as a public work or by bringing an action as you would against an individual, by simply issuing a writ and serving it. As it seems to be the only way I can find out, I would like to ask the hon. member just what that point is, not to raise any objection or criticism but just in order to be informed. I regret that I was ill and not in the committee the other day when the hon. gentleman brought the matter up.

Mr. CAHAN: The amendment which I proposed and the explanation of it will be found on page 3001 of Hansard.

Mr. FINN: I do not have Hansard before me. I came down to this seat where I am now in order to be able to hear the hon. gentleman.

Mr. CAHAN: I think the issue is clearly stated in the memorandum prepared by the Deputy Minister of Justice and laid upon the table of the house, namely that while this bill states in express terms that the harbours board may make contracts and may sue and be sued, that provision does not permit of the

harbours board being sued in tort, as, for instance, for nuisance or negligence. It was with a view to having that clarified, and to make it clear that the board can be sued in tort, although it is declared by the bill to be the agent of the crown, that this amendment was suggested.

Mr. FINN: May I ask, is it only in reference to actions in tort? My hon. friend admits that action is possible by fiat being granted by the attorney general or the Minister of Justice at the present time?

Mr. CAHAN: I think it is a matter of grave doubt. It will depend upon the nature and locus of the negligence complained of.

Mr. FINN: That could be defined only in the statement of claim.

Mr. CAHAN: If the hon. gentleman will read the opinion of the Deputy Minister of Justice to which I referred it will be quite clear to his mind, if he accepts the statement of the deputy minister, which I think may be accepted without doubt, that under this bill no action in tort can be brought against the harbours board. I was suggesting that provision should be made that such action could be brought. In other words, no such action will now lie against the board.

Mr. FINN: Taking for granted that no action will lie, I accept that although I have not read the opinion of the deputy minister; I believe his judgment is superior to mine. Unfortunately I have devoted more time to politics than to law, and therefore I am not as good a lawyer as I might have been. But I would like to ask my hon. friend: If the statement he makes is correct that there is doubt as to the right of bringing action for a wrong, which is a tort, does it not lie within the jurisdiction of the Minister of Justice or Attorney General of Canada to grant a fiat to permit a writ to issue for that purpose?

Mr. CAHAN: Unless there is a clear statutory provision authorizing such a claim by petition of right it is not within the discretion of the Minister of Justice or of the governor in council to grant a fiat on such a petition. There must be statutory authority somewhere.

Mr. BENNETT: The Minister of Justice I think overlooks the fact that in England they have no exchequer court. We have an exchequer court in Canada and my colleague has pointed out that special legislation has been enacted conferring jurisdiction upon that court to deal with certain claims which may arise against the Canadian National Railways. Now, is that not the very sort of thing which should be done with respect to actions in tort against this board? It would seem to me by analogy that is the very thing which should be done. The reason the English draft bill was so long was because it had to provide an entirely new code of procedure for dealing with actions against the crown. Such procedure has not heretofore been provided since the abolition of the old court of exchequer chamber. The proceedings contemplated under our Exchequer Court Act in actions brought in that court against the Canadian National Railways are not actions triable by a jury, but actions that are tried in consequence of the power being conferred upon that court to consider them. And as that court has its own rules and regulations it is not necessary to have a long bill concerning the procedure in that court.

I am not going over the ground that I went over the other evening when I gave an illustration in which I referred to a man working on a dock, and crossing over to a railway. In one case there was liability, and in the other there was not. There was action against the shipping company but no action against the operators of the railway. But I just put this case to you, Mr. Chairman, and then I shall have concluded all I have to say:

1. We have created a corporation for the purpose of dealing with the harbours. Nominally that corporation would be liable to action, because it is one of the implied powers of a corporation to sue and be sued. That is a statutory provision.

2. However we have said that that corporation is the agent of the crown, and as a consequence of that declaration the deputy minister has given the opinion that no action for tort would lie against the board.

3. We having deprived the board of the ordinary implied powers of a corporation, by reason of declaring it to be an agent of the crown, it would be nothing more than right or proper that the law, in view of all the minister has said, should confer jurisdiction upon our exchequer court, to determine actions regarding persons or property to the same extent, in the same way, by the same form of procedure and in the same limitations as parliament, in consequence of the Armstrong case, conferred upon the exchequer court by statute in 1910. That is all I desire to say.

I can readily understand the minister not desiring to enact a general law at this time in view of the fact that if he does so he has to make a choice between conferring an open power upon the exchequer court over existing rules and regulations covering procedure, and following the British proposal and by a legislative act which confers the jurisdiction to

sue for tort also providing the method of procedure which shall be followed in enforcing the right. I can also understand the minister's hesitancy in singling out this particular class of case, to the exclusion of others. But that unwillingness or doubt is answered by the fact that in 1910 a former government enacted the section to which reference has been made, in consequence of the Armstrong case. Parliament having thus conferred jurisdiction upon the exchequer court—not an ordinary court as was at first suggested, but the exchequer court—it would be a reasonable and proper thing to say that for actions of tort this corporation, which we have deprived of the obligation incident to action being brought against it, could be sued just as we have declared that the Canadian National Railways could be sued.

My hon. friend and colleague fully appreciates the difficulty, but there is not the slightest difficulty in the suggestion as he put it to-night. I will put it in this way: A corporation deprived of the obligation of being sued, because it is made an agent of the crown by the statute creating it, should not be placed in a position where it is not liable for negligence in connection with a railway, when the liability attaches to those who operate the very facilities that now are under the control of the corporation only perhaps a few feet away. I think, instead of our waiting for a general law, this might be a proper case in which to exercise our jurisdiction as we did in 1910 in the railway case, and it would be a step forward in creating an obligation that is co-extensive with a right. That is, if we have limited the power of this corporation, as we have done, then let us at least say that by so doing, having conferred extraordinary rights upon it with respect to taxation and matters of that kind, we are not going to put the unfortunate person injured by the operation of the railway, or a workman injured by the operation of the property, in a position different from the one he would be in if he worked for another corporation which was not an agent of the crown and had not these limitations imposed upon it. If the government has made up its mind that the legislation should not be enacted, then of course it is idle further to waste time in discussion. But at least it is our duty to place our position on record as concisely as possible.

Mr. LAPOINTE (Quebec East): I am grateful to my right hon. friend for his remarks, because they will help when we are to arrive at a decision upon what course is to be followed in connection with general legislation concerning the matter. But I am afraid the course suggested does not lessen the present difficulty. My right hon. friend seems to be of opinion that all these actions should be kept before the exchequer court.

Mr. BENNETT: I said that could be done.

Mr. LAPOINTE (Quebec East): Yes. If they are retained there, then the only thing that will remain is the petition of right, because at the present time there is no doubt—and in this I differ from the hon. member for St. Lawrence-St. George—that the recourse exists under section 19 of the Exchequer Court Act. I admit that there has been for a time a difference of opinion among members of the judiciary, but the decisions of 1934 and 1935 are to the effect that public works are broad enough to include what my hon. friend has in mind, and that the definition of the Expropriation Act should be accepted.

With regard to the Canadian National Railways my hon. friends say: Well, the Canadian National Railways can be sued before all courts. Yes, but the exception was made and kept with regard to those sections of the railway which were the property of the people of Canada, when the absorption or amalgamation was brought about.

Mr. CAHAN: They are all the property of Canada, but three of them are vested in His Majesty.

Mr. LAPOINTE (Quebec East): Yes; but my hon. friend knows, too, that when the Grand Trunk became the property of Canada through special legislation it was private property at the time and it was thought better to leave to that company the law under which it had operated before. But care was taken not to include the Intercolonial railway and the Prince Edward Island railway, railways which had always been the public property of Canada, and even now, except in connection with the small claims to which the hon. member referred, one has to apply for a petition of right. So I believe the whole matter will have to be considered as a whole, and revised. I repeat that so far as I am concerned I share the view that this procedure should be changed. There is not the same reason to-day as existed in former days for the retention of this special procedure with regard to crown litigation.

Mr. BENNETT: The crown was not engaged in business then.

Mr. LAPOINTE (Quebec East): It may have been to a very limited extent, but not to the extent it is to-day—for good or for bad, I do not know. However I think we might very well wait for the special legislation.

Mr. FINN: It seems to me that in connection with legislation placed before the house there should be some clear understanding as to the rights of individuals in actions of tort, or in other actions. I never could see clearly, and I cannot see clearly to-day, why the crown should stand in any different position from that of an individual in reference to an action for tort. An individual is less able than the crown to stand any damages, and I think the crown should stand the gaff just the same as the individual.

So far as the Intercolonial railway is concerned, there is not that broad and generous construction given it that should be given under section 145 of the British North America Act. That railway was gobbled up by legislation which was brought down, not by hon. gentlemen at present opposite nor by the present right hon. the leader of the opposition, but by their party under Sir Robert Laird Borden, for whom I have a great respect. He brought down the railway act of Canada of 1919, which came into effect in so far as the Intercolonial railway was concerned. Under that legislation it was provided that the moment the Grand Trunk became part of the Canadian National railway system the Intercolonial railway should become part of that system and subject to the railway commission.

So to-day there is a multiplicity of reasons why in any legislation that passes through this house with reference to the national harbours of Canada, or the Canadian National Railways, or any other property of the crown, there should be clarity so that there would not be the necessity of appealing to the courts from time to time, giving members of my own profession exorbitant fees at the expense of the public and in many instances at the expense of the government itself which after all falls heavily upon the people of this country. Speaking as perhaps a junior senior member of the profession, though not perhaps as a junior member of this house, I think that in enacting this legislation to-day, in view of what has been stated, and I think correctly, by the right hon. the leader of the opposition (Mr. Bennett), and by the former Secretary of State, the hon. member for St. Lawrence-St. George (Mr. Cahan), we should know what we are doing and have it expressed in unmistakable legal phraseology,—I am sorry he does not represent a Nova Scotia seat for then he would be nearer to the hearts of the people of that province, just as my right hon. friend the leader of the opposition would be nearer the hearts of the people of the province in which he was born if he represented a New Brunswick constituency—

Mr. BENNETT: Hope yet.

Mr. FINN: Well, hope deferred is never lost. I hope my right hon. friend has not any misgivings that he may not be able to represent again the constituency he now represents, but if it is a case of the wanderer's return we shall be only too pleased to see him come down to the maritime provinces.

Mr. LAPOINTE (Quebec East): Including Halifax.

Mr. FINN: Including Halifax.

The CHAIRMAN: Order.

Mr. FINN: Mr. Chairman, I do not know whether your remark is addressed to myself or to the Minister of Justice.

The CHAIRMAN: It is addressed to the hon. member for Halifax.

Mr. FINN: I feel highly honoured. As I said, Mr. Chairman, there does not seem to be any clarity with regard to this legislation or with regard to your ruling. This bill respecting the national harbours has been brought down by the Minister of Marine, who is soon, under other legislation, to become Minister of Transport. He is not a member of the legal profession, but we have had the opinion of the Deputy Minister of Justice and of the right hon. leader of the opposition, who has referred to the Armstrong case. I do not know whether he meant the Armstrong defeat in Nova Scotia in 1925, or the Armstrong case in which a judgment was handed down either by the Supreme Court of Canada or by the Exchequer Court, and by the way it seems to me that all cases which other courts do not desire to handle are passed on to the exchequer court as a sort of left-handed compliment. I do not expect that the Minister of Marine should be able to answer legal questions because he is not a lawyer, although if he was one I am sure he would be a good one because he is a good engineer; but before we pass this bill and send it up to the other chamber, where there is astuteness, I think we should at least know what we are doing and where we are going, so that when they come and knock at the door we may know what they are going to say to us when they come in.

Hon. C. D. HOWE (Minister of Marine): Might I say just one word of reassurance from a layman to the other laymen of the committee? I am reasonably sure of this, because I got a report on it from an officer of the Department of Justice. The legal position of Montreal harbour and of every other harbour under this legislation will be exactly what it was, is now and has been ever since the harbour boards were created.

Mr. CAHAN: That is not so. In reply to that I would refer to the act relating to the harbour commissioners of Montreal, chapter 48 of the statutes of 1894 which, by section 21, subsection 4, provides:

> The corporation may institute and defend all suits, actions and proceedings in any court of justice in respect of the said property and the land comprised within the harbour as fully as can be done by proprietors holding lands by valid title, or as might be done by or on behalf of Her Majesty in respect of the bed or beach of the river St. Lawrence.

That is an entirely different position from anything contained in the present bill.

The CHAIRMAN: Shall section 37 pass?

Mr. FINN: Mr. Chairman—

The CHAIRMAN: Order.

Mr. FINN: I would like to ask the chairman of the committee in what way I am out of order. I would like to know the reason.

The CHAIRMAN: The hon. member is not out of order providing he confines his remarks to section 37.

Mr. FINN: I had not started to say anything before I was called to order. If I am to observe the rules of the house, the rules of the house should be properly interpreted. When the Minister of Marine speaks as one layman to another, he is not speaking to hon. gentlemen who are of the legal profession. But this is a legal question. If it were a medical matter that was before the house we should look to members of the medical profession for guidance, and in legal maters we should look to the legal profession. When this question is raised by the former Secretary of State (Mr. Cahan) and by such an astute lawyer as the right hon. leader of the opposition (Mr. Bennett), I think it is worthy of consideration on the part of the government and on the part of the Minister of Justice (Mr. Lapointe). I understand I am confined by the ruling of the chairman to the discussion of section 37, and I want to say that it seems to me that the further we get into this, the more confused we are. Whether the confusion comes from the chair or from the floor, I do not know, but I think we should have an opinion from the Minister of Justice.

Mr. LAPOINTE (Quebec East): I have given it twice.

Mr. FINN: All I can say is that we get one opinion from one court, and another opinion from another court, and that is why there is so much litigation in Canada and other countries. That is why in the United States the NRA is higher than the American flag ever flew. We should deal with these actualities from a legal standpoint and suggestions of a reasonable kind at least should be looked into and the bill held up in order that an intelligent interpretation may be made of the clauses and a further opinion obtained from the Deputy Minister of Justice, but whether that would be worth while I am not at the moment in a position to say. I have not had an opportunity of reading the other opinion, nor have I had an opportunity of seeing the amendment moved by the hon. member for St. Lawrence-St. George. I want to say—and I say it quite kindly—that there must be some sort of understanding in this house between hon. gentlemen. A few moments ago I was not permitted to see the amendment moved by the hon. member. When I sent a message to the Chairman I was told I could see it if I went up to the table. I do not think any hon. member should be placed in that position.

The CHAIRMAN: The hon. member for Halifax is entirely out of order. I read the amendment from the chair.

Mr. FINN: I could not hear it.

The CHAIRMAN: Is the committee ready for the question? The question is on the amendment.

Amendment (Mr. Cahan) negatived.

Section 37 agreed to.

On section 16, subsection 4—Vessel may be sold.

Mr. CAHAN: Last Wednesday I directed attention to this subsection and the hon. gentleman said that he would take into consideration the suggestion I made in connection therewith. This subsection reads:

> Such vessel may be seized and sold under any writ or warrant of execution or of distress issued by any court of record upon the judgment or conviction at the suit of the board against the vessel, the master, owner or person in charge thereof.

My suggestion was that the words "court of record" should be changed to "court of competent jurisdiction." The tariff board is a court of record, but we would hardly expect such process to issue out of that board. There are so many courts of record that I think this subsection should be restricted in some way.

Mr. LAPOINTE (Quebec East): There is no objection to that. I move that the words "of record" in subsection 4, of section 16 be struck out and replaced by the words "of competent jurisdiction."

Amendment agreed to.

Subsection as amended agreed to.

Section as amended agreed to.

Bill reported.

Hon. C. D. HOWE (Minister of Marine): With the unanimous consent of the house, I would move that the bill be now read a third time. The other chamber is anxious to receive this bill.

Mr. R. E. FINN (Halifax): Mr. Speaker, before this motion carries I should like to say that because of illness I was unable to be in the house when this bill was last being considered. I got out of a sick bed to come to the house the other afternoon when the bill was to be considered and I was informed on arrival that it was going to stand over for a fortnight. Only late this afternoon I learned that it was to come up to-night. The other day the Minister of National Defence (Mr. Mackenzie) moved an amendment which I read in Hansard, and my hon. colleague, who is not in the house—

Mr. BENNETT: Yes, he is here.

Mr. ISNOR: Yes, I am here.

Mr. FINN: Well, all I can say is that two minds think alike. I can see that my right hon. friend is pleased that my colleague is here, and I am also pleased, but I would say to my hon. colleague that I had no knowledge that he was going away. So far as I am concerned it is immaterial to me whether he goes or stays.

Mr. SPEAKER: I do not think the hon. gentleman's remarks are relevant.

Mr. FINN: Of course, one may digress for a moment, but what I was going to say was that my colleague moved or suggested an amendment the other afternoon. It was the afternoon I came into the house in order that I might have an opportunity if necessary to support him in that amendment. But as I had already pointed out on a previous occasion, the amendment he then proposed would possibly conflict with sections that were already in the transcontinental act, and it might be well therefore not to proceed with it. I had not had, nor have I had an opportunity to consult with him or to discuss with him the subject matter of that amendment; all I know is that it was unceremoniously rejected. My colleague and I represent a constituency which is affected by this bill now before the house, for Halifax is one of the great eastern gateways of Canada. We should, therefore, be negligent in our duty if we did not see to it that the interests of these ports are protected with respect to the movement of traffic over Canadian territory and over Canadian lines to Canadian ports.

As regards the amendment that was moved by the Minister of National Defence, I read it in Hansard; in fact, I am under the impression that there were two. I am not quite sure just what was meant by these amendments, or whether they were in substitution for the amendment proposed by my colleague from Halifax, or whether they dealt with the same subject matter. The amendment which my colleague proposed was offered for the purpose of clarity and to protect the interests of our eastern ports, as I believe the Minister of National Defence would wish to see them protected, as well as the western ports of this great dominion. Before the motion for a third reading is put, I should like, with the permission of the chair, to ask the Minister of National Defence what was the purport and meaning of the amendments that were submitted by him to the committee.

Mr. W. A. WALSH (Mount Royal): When this measure was first introduced, if I remember correctly, I commended the Minister of Marine (Mr. Howe), though the commendation was to some extent qualified. It is not my intention at this time to make a speech on the bill, but before the bill finally passed the house I wanted to crystallize a few thoughts that were in my mind.

There is one point I wanted to emphasize and it is this: I can read in this measure a certain degree of assurance that the new commission which is to be appointed is to be a body of civil servants or a body created from members of the present civil service. I do not think that is a commendable action as far as the government is concerned, and I want to voice my opinion against that action. I also wanted to take exception to section 3 whereby these members are to be appointed by the governor in council and shall hold

office during good behaviour for ten years. It was my intention at one stage, as the Minister of Marine knows, to move an amendment which would provide that we strike out, in the fifth line of that section, all the words after "governor in council" down to the end, and substitute therefor the words "who shall hold office during pleasure." I do not see why in a bill of this sort three men should be appointed for a definite period of time instead of a commission being created to hold office during pleasure. The Minister of Marine is not at all certain even in his own mind that the three men whom he might select for this commission are going to be—

Mr. HOWE: On a point of order, how does the hon. gentleman know what is in my mind?

Mr. WALSH: I put it in this way: It is quite possible for even the Minister of Marine to make a wrong selection in connection with appointments to this commission: These men, it is assumed, are appointed for a period of ten years. During that time a new government might come into power to whom these men would not be acceptable: then we should have to put through this house a measure to get rid of them. We have the same difficulty at the present time in connection with the board of trustees for our railways. They were appointed for a definite period, and probably the Minister of Railways wishes at this time that that had not been done. In Hansard of 1931 is shown the attitude that was then taken on this matter by no less a person than the present Prime Minister (Mr. Mackenzie King). In no uncertain terms he condemned the appointment of the commissioners for a fixed period of time. I shall not read his speech, which was at great length and may be found on page 2704 of Hansard, of June 16, 1931. He condemned most heartily appointments of this sort to a commission similar to this one, and yet we have the government which is now led by him bringing in legislation of the same kind. I cannot understand such action. I am very much opposed to any body of men being appointed by this house as commissioners for a period of ten years, binding the appointments on the present government and on future governments which may hold office during that period.

Mr. DUNNING: This is a new light, surely.

Mr. BENNETT: That is the present Prime Minister.

Mr. WALSH: I am referring to remarks which were made in this house in 1931 by the present leader of the government, when he took the same exception to similar appointments that I am taking to the appointment which is going through the house to-night. This emphasizes how the complexion of things changes according to the side of the house on which one finds oneself. If, as I hope, I may have the good fortune some day to be sitting on the right of the Speaker, I hope I shall not turn about face upon a matter of this kind.

I desire also to refer to a certain omission from the bill. We have heard it suggested, I believe by the minister himself, that it was his idea to have appointed, under the control of the commission, port managers. There is no mention of that in this bill. I contend that in a measure so vastly important to certain sections of Canada, particularly to the district I happen to represent, when a change of this sort is to be brought about, when port managers are to be appointed, there should be embodied in the bill some reference to such appointments and a clear definition of the duties of the appointees. I do not find any reference to this in the bill, and it follows that no duties are clearly or specifically defined. I do not know whether it was a point that was overlooked by the Minister of Marine, or whether it was deliberately omitted from the bill with some particular or peculiar motive in mind. I am not prepared to fathom the depths of wisdom that underlie the bill itself, but on this matter I feel that the house is entitled to have included in the bill something which will guarantee the integrity of our ports more surely than they are guaranteed by the measure that is now about to be passed.

I am a little concerned about the ultimate future of the port of Montreal. I feel that there are certain omissions from the bill and certain features of it that ultimately will jeopardize that port. I am sorry that there are not more members for the Montreal district present in the house. I should like to have heard their expressions of opinion as to whether they consider the bill in its present form quite satisfactory and not endangering in any way the future of our great national port. If Montreal is in danger—and I feel that it is being endangered by this bill—our national life is also to some extent affected. If the power and authority to control the ports of Canada were being placed in the hands of an independent commission, I would say that possibly that was a step worthy of some consideration. The bill does not do that. It pretends to do it, but in reality the power is centralized under the authority of one individual, and I for one do not want to entrust the future of the port of Montreal to even the present Minister of Marine, for whom I have the greatest esteem. I do not

think any one man, particularly a man so actively engaged in politics, should be vested with control of such vital interests as the national ports of Canada, and I refer particularly to the district of Montreal. To my mind the appointment of these three commissioners, presumably three civil servants, and the putting into their hands of certain authority, simply means that it will be impossible for them to act without having consulted with and received the approval of the minister. Then there is no mention in the bill of a port manager. He might be a mere puppet; he might be a glorified office boy; he might be anything at all.

There is nothing in this bill that either suggests or assures to me as a member from Montreal that the port is going to be satisfactorily managed under the conditions set up by the bill. I hope that when it is returned to this house we shall find some amendments have been added which will definitely provide for a port manager and clearly define his duties, rights and privileges. I hope also that this bill, before it comes back to this house, will be so amended that the power now placed in the hands of the Minister of Marine will be vested in some other authority. I should like to see this bill further amended so that the commissioners who are to be appointed will not be three men taken from the present civil service of Canada, but will be men of independent thought who have not been, as yet, members of the civil service.

I express these views before the bill receives its third reading in order to place myself on record as being unalterably opposed to certain features of it, and for the definite reason that it jeopardizes the prosperity and possibly the very existence of the port in which I am vitally interested, namely the port of Montreal, as well as the other national ports of Canada.

Motion agreed to and bill read the third time and passed.

## WAYS AND MEANS

### CUSTOMS TARIFF AMENDMENT

The house in committee of ways and means, Mr. Sanderson in the chair.

Customs tariff—663e. Sea-weeds or sea-plants, charred, whether powdered or not, for use exclusively in the feeding of animals: British preferential tariff, free; intermediate tariff, 25 per cent; general tariff, 25 per cent.

Mr. BENNETT: What is that about?

Mr. DUNNING: It is powdered kelp used for stock feeds, and the British government is interested in a concession on that item for Great Britain.

Mr. BENNETT: Northern Scotland.

Mr. DUNNING: Yes.

Item agreed to.

Customs tariff—695. Paintings in oil or water colours and pastels, valued at less than $20 each, n.o.p.: British preferential tariff, 15 per cent; intermediate tariff, 2½ per cent; general tariff, 25 per cent.

Mr. DUNNING: Just "n.o.p." added.

Item agreed to.

Customs tariff—695b. Hand-made drawings, sketches or designs, but not including patterns, viz.:—drawings, sketches or designs of wearing apparel, including boots and shoes, wall or floor coverings and textile fabrics, when imported in single copies of each such drawing, sketch or design for use in the manufacture of wearing apparel, boots or shoes, textile fabrics, wall or floor coverings, or of patterns: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Item agreed to.

Customs tariff—696a. Educational moving picture films of all widths, silent or sound, positive or negative, and sound discs or records designed for use with such films, when certified by the minister as entitled to exemption from customs duty under the convention for facilitating the international circulation of films of an educational character; subject to such regulations as the minister may prescribe: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. DUNNING: This is requested by the Department of External Affairs in order to bring Canadian customs practice into line with the provisions of the convention facilitating the international circulation of films of an educational character.

Item agreed to.

Customs tariff—698. All articles specially designed for the use of the blind, whether for educational, recreational, industrial, personal or other purposes, when for blind persons and imported by, or on the order or certificate of, the Canadian National Institute for the Blind, or other bona fide institution or association for the blind: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Mr. BENNETT: There is no change in this item, is there? It has always been free.

Mr. DUNNING: It is an entirely new item. Certain articles have always been entitled to free entry, and this is bringing all such articles into one item.

Item agreed to.

Customs tariff—703. (a) Travellers' baggage, under regulations prescribed by the minister: British preferential tariff, free; intermediate tariff, free; general tariff, free.

(b) Goods valued at not more than $100 included in the baggage accompanying residents of Canada returning from abroad after an absence from Canada of not less than forty-eight hours and acquired by them for personal or household use or as souvenirs or gifts, but not bought on commission or as an accommodation for other persons or for sale, under regulations prescribed by the minister: British preferential tariff, free; intermediate tariff, free; general tariff, free.

Provided that a resident of Canada shall not be entitled to the exemption herein granted within a period of four months from the date of the last exemption allowed, nor shall the exemption be allowed on alcoholic beverages in excess of one quart, or on tobacco in excess of fifty cigars, two hundred cigarettes and two pounds of manufactured tobacco.

Mr. DUNNING: There is no change in (a), but we should discuss (b) which is the $100 matter.

Mr. MALLETTE: I should like to suggest to the minister that he direct his department, before the next session of this honourable house, to make an investigation for the purpose of finding out whether it would not be possible to extend the scope of that arrangement. As it is now Canadian tourists returning from abroad, so long as they have been away forty-eight hours, are permitted to bring into Canada duty free certain goods to the amount of $100. Besides those, quite a number of tourists leave Canada for less than forty-eight hours, for instance, people who go to the United States for an afternoon. They do not go very often, but certainly their number is greater than that of tourists who cross the Atlantic, or who go to the United States for a fortnight to enjoy the sea breezes at Atlantic resorts. These are poor people who journey for a day to the United States, and it seems to me that perhaps they should be given a little consideration, say in the next budget. I do not say that they should get the $100 exemption. but perhaps they might get a certain allowance. I understand, of course, that might lead to certain difficulties in the border cities, but at the same time the poorer class of tourists who go across for an afternoon or perhaps twenty-four hours should be given a little consideration.

Mr. DUNNING: In connection with an item of this kind the government will, of necessity, watch its operation with great care during the first year. I gather that my hon. friend is suggesting such a course with a view to considering any possible change which experience might dictate at the next session of parliament. I assure him that preparations are being made to watch very carefully the working of this arrangement.

Mr. WHITE: I would like to ask the minister why it is that this exemption is being proposed. Has it any relation to the recent trade agreement with the United States?

Mr. DUNNING: Oh, yes.

Mr. WHITE: Because the minister knows that American tourists in Canada or elsewhere have enjoyed for a great number of years, for several decades, the privilege of importing free articles purchased abroad. Was this item put in by the government on its own initiative, or is it related to the trade agreement with the United States?

Mr. DUNNING: My hon. friend will perhaps remember that at the time of the negotiation of the Canada-United States trade agreement there was a supplementary note from the Canadian government to the American government, one of the undertakings of which note was that such legislation as is now before the committee would be introduced. My hon. friend is quite correct when he says that American tourists returning from abroad have had this privilege for some time, under fairly strict regulations, and there is overwhelming evidence that the ability to sell to American tourists visiting Canada $100 worth of goods which could be taken back free of duty has been of great advantage to Canada. Canada is anxious that that privilege to returning American tourists should be continued, and undoubtedly its prospects of continuance are improved by the fact that we are acting in a similar manner in regard to Canadian tourists visiting the United States.

Mr. BENNETT: This is not quite the same.

Mr. DUNNING: No, it is not quite the same as the American regulation.

Mr. MacNICOL: The wording of paragraph (b) is not like the regulations pertaining to Americans returning to the United States. This paragraph says, "acquired by them for personal or household use." The American regulations as I read them do not include articles for household use.

Mr. DUNNING: I have the wording of the American regulation.

Mr. MacNICOL: I have it before me. Section 39 provides that:

No exemption is allowed in any case unless the articles claimed to be exempt were purchased or otherwise acquired merely as an incident of the trip.

Certainly household goods would not be an incident of the trip. I made a bit of a survey among Canadian merchants and manufacturers as to their opinion in reference to item 703.

Mr. DUNNING: I am afraid the hon. member is not reading the substantive part of the American regulation. It is as follows:

Provided further that up to but not exceeding $100 in value of articles acquired abroad by such residents of the United States for personal or household use or as souvenirs or curios, but not bought on commission or intended for sale shall be admitted free of duty;

Provided further that residents of the United States shall not take advantage of the exemption herein granted within a period of thirty days from the last exemption claimed.

That is the substantive portion of the present United States regulation in that regard.

Mr. MacNICOL: I had not read the next regulation; the minister is correct.

Mr. BENNETT: They may do this eleven times a year.

Mr. MacNICOL: Is there any regulation in the United States act for a forty-eight hour period?

Mr. DUNNING: No.

Mr. MacNICOL: Their act provides for a thirty day trip, one trip within thirty days.

Mr. DUNNING: Yes, and ours is one every four months.

Mr. MacNICOL: I think that is an improvement on their act. If a motorist brought back a motor radio in his car, would it be considered as household effects, and would he be permitted to bring it in?

Mr. ILSLEY: If it were included in the baggage of a returning Canadian tourist, and if it were for personal or household use, or a souvenir or gift.

Mr. MacNICOL: Then the returning motorist may bring back a radio in his car. Two radio manufacturing companies have informed me that would do serious damage to their business, and would result in a reduction in their sales. I have no doubt people in Canada will appreciate this privilege; as a matter of fact I want to get a motor radio myself, and while I would rather buy in Canada, yet if I happened to be across the line I cannot say whether I might buy one or not. Do our regulations permit shipments in bond?

Mr. ILSLEY: No.

Mr. MacNICOL: The tourist will have to bring the article back with him?

Mr. ILSLEY: Yes.

Mr. MacNICOL: Under the American regulations they may ship in bond; they do not have to carry the articles back with them.

Mr. BENNETT: But they have to make a declaration.

Mr. MacNICOL: Then could a tourist bring back $100 worth of cigars and cigarettes?

Mr. ILSLEY: No; there is a stipulation in the item.

Mr. DUNNING: The item states what they may bring.

Mr. MacNICOL: A person may bring back $100 worth of goods.

Mr. ILSLEY: There is a proviso in the item which deals with cigars and cigarettes.

Mr. MacNICOL: While there is nothing I can say to stop the regulation I cannot help feeling that it will result in material loss in sales on articles which could be purchased in Canada.

Mr. COLDWELL: I do not believe the regulation will be as costly to Canadian industry as some people believe. I am of opinion that it will save many people from making false customs declarations. Many of the goods which will be purchased are now entering Canada but are not being declared, and in all probability the amount brought in under the new regulation will be so small or so relatively negligible that it will not be of great importance. People will not feel that by bringing articles into the country contrary to regulation they are doing something clever, and in view of the price levels of the two countries, in many respects comparable, I do not believe evils will result which hon. members to my immediate right seem to fear. Speaking on behalf not only of a large number of people in western Canada but of many whom I have met in eastern Canada, may I say that the regulation has been received with great favour. In view of the heavy tourist traffic entering Canada we are liable to be the gainers, because if we do not reciprocate in some way in this connection pressure sooner or later

would undoubtedly be brought to bear upon the American government to discontinue the privilege extended to tourists returning to their country. The matter has already been discussed in the United States, and in all probability this concession might save the people of Canada a valuable asset in American tourist purchases in this country.

A few moments ago reference was made to radios. I believe the majority of radios installed in automobiles and purchased in Canada are produced by foreign companies, many of which are American. To my mind the whole tariff situation in this dominion is one which cannot command support of intelligent Canadians. Actually we are protecting American owned factories in Canada from American owned factories in the United States, and American owners of Canadian factories benefit to the extent of the increased prices equal to the duty charged by Canada. To my mind the regulation represents a step in the right direction; it is welcomed by a great number of people, and I should like parliament to go even one step further and allow the privilege of importing $100 of personal goods to people who can cross the border for only twenty-four hours, or who cannot own an automobile or purchase a ticket to go abroad.

Mr. STIRLING: I wonder if the minister can tell us whether he has made any computation as to the loss in revenue that Canada will suffer?

Mr. DUNNING: We do not know; we have no means of arriving at what the results will be. That is the reason why in a reply I made a few moments ago I indicated that the Department of National Revenue was making special preparations to check the operation of this provision, so that we shall have information in future.

Mr. WALSH: Several municipalities have what are known as sales or turn-over taxes. Of course some people do not think this particular clause is of great significance, but to a large city like Montreal, when we have a condition where tourists going to the United States in considerable numbers are permitted once every four months to bring back $100 worth of goods, a considerable amount of purchasing power is directed into another channel. The result is that not only do the merchants suffer, but the sales tax collected in the city of Montreal, upon which we depend to help pay our way, is being lost. Is the government making any effort to reimburse such cities for the losses they are suffering or to collect a tax from individuals on the amounts purchased to remit to the municipalities or provinces, as the case may be? This matter is of great importance to the larger centres. Has the government anything to say in connection with that phase of the $100 regulation?

Mr. BENNETT: Before the minister answers may I ask this question: Does the $100 pay any sales tax, and does it pay the three per cent excise tax?

Mr. DUNNING: No, neither of them.

With regard to the question raised by my hon. friend from Mount Royal (Mr. Walsh), there is no provision, as I think he knows, for any remission to the municipalities, but when he speaks of any business lost by his city I may say, without having statistics on which I can rely, that I am fairly certain that no city benefits more from the exemption which applies to American tourists returning to their own country than does Montreal. I know from correspondence with merchants in that city that they were very anxious that nothing should be left undone by the Canadian government to preserve for them what they regard as a valuable privilege. They were afraid some months ago, when rumours were circulated about what was going to happen to the privilege accorded to American tourists returning to their own country, and from no city in Canada have I received more representations than from Montreal that the government of Canada should go as far as possible to prevent this privilege to United States citizens being withdrawn, because of the great value it was to the merchants of that city.

Mr. WALSH: I quite appreciate that fact, and I do not want to minimize the amount of revenue obtained by the merchants of Montreal from the tourist trade. It is an important and considerable item, and I quite appreciate that fact. But when the previous government was in office prior to October, 1935, I hardly think that this question of the $100 exemption was raised by the United States. I think it has been raised as a result of the trade agreement. I want to point out to the Minister of Finance through the Chairman, one important fact.

Mr. DUNNING: Before my hon. friend leaves that point, I would say that certainly the $100 exemption was under discussion between the governments of the two countries before we came into office.

Mr. WALSH: But as a result of the negotiations for the trade agreement.

Mr. DUNNING: Yes, of course.

Mr. WALSH: I think it was the negotiations for the trade agreement that raised the point because this exemption granted to returning American tourists has been in effect for a considerable time and there has been no question of doing away with it.

There is one feature of this trade which, I think, should be emphasized and brought to the attention of the Minister of Finance. Purchases made by Americans visiting Canada are of a different category from purchases made by Canadians in the United States. For instance, Canadians going to the United States purchase boots, clothing, wearing apparel and goods of that kind, but Americans for the most part purchase quite differently when they come to Canada.

Mr. DUNNING: There is a very wide range of purchases.

Mr. WALSH: There are major exceptions; there is no doubt about that, but generally Americans purchase, not the products of our factories, but other products of Canada, whereas Canadians go into the United States for the most part to purchase products of their factories, and in that way our working men in this country lose to a certain extent. I do not want to overemphasize a point that might be minor. I do not want to cry havoc in the midst of depression or anything of that sort.

Mr. DUNNING: What does my hon. friend suggest we ought to do?

Mr. WALSH: When the department is giving careful consideration to this enactment which it is suggested they are going to do during the next year, I think attention should be paid to the peculiar features of this interchange of trade carried on by American and Canadian tourists returning to their respective countries in order that the actual effects in connection with the purchases which are made on either side of the border may be noted, so that we may see if there is any difference between purchases made by American tourists in Canada and those made by Canadian tourists in the United States.

Mr. DUNNING: No doubt there is.

Mr. WALSH: And see if our factories are being jeopardized to any extent by purchases made in the United States by Canadian tourists; if there is an overbalance in purchases as between the two countries.

Mr. POULIOT: May I ask the hon. gentleman what experience he has had of purchases made by Americans in Canada and by Canadians in the United States?

Mr. WALSH: I would not like to take up the time of the committee by relating my personal history in answer to that question.

Mr. POULIOT: A very easy answer. Just listen to the hon. gentleman, who is a professor in Montreal. He says that Americans who come here do not buy any goods from our factories but that Canadians who go to the United States buy goods from American factories. What evidence has he of that fact? He knows very well that tourists buy knick-knacks in every country.

Mr. WALSH: I said, "buy the products of American factories," not "buy goods from American factories."

Mr. POULIOT: What is the difference? The hon. member is splitting hairs.

Mr. WALSH: I have not many left to split.

Mr. POULIOT: Do we see any American tourists coming here to buy our raw products? Do they buy and carry back in their cars hides, or flour, or grain, or hay, or straw? No. Our hon. friend is a young man. He comes to this house, and every time he speaks he is a depository of the revealed truth; he is a professor in Montreal. Now he says something very vague, very obscure, something that no one understands, but it comes from him and it must be very deep, just as deep as the deep sea because he said it. It is most interesting because it is so obscure, and if anyone understood what he did mean, it would be zero, nothing.

Mr. BENNETT: It may well be that because of the increased cost of production in the United States this item will not be as serious as it might have been some years ago, but on the other hand the United States did not grant any such concession until after they had, if my memory serves me aright, a population of upwards of fifty millions of people, and successive Ministers of Finance in this country have concluded that it was not possible for us to venture upon the same course without running too great a risk from the introduction of free goods. It will be recalled that during the last few years a bill was introduced in congress to take away this privilege from tourists returning from countries which did not reciprocate, and one of the members from Buffalo in a speech indicated the extent to which the United States market had been lessened by Canadian importations and importations from other than transatlantic countries. I was very much surprised at the extent of this; it was very great. But there had never been any serious threat

of the abrogation of the privilege because to abrogate it in respect to Canada alone would be unthinkable, and the abrogation has been more sought after in regard to even Great Britain and France and Germany than in regard to Canada.

But we have to contemplate this situation. We have, for instance, one cent a pound duty on sugar. It is quite clear that it would be highly profitable from the standpoint of the family budget for many people to import their sugar from the United States to the extent of one hundred pounds, costing $5, because it would escape the payment of one cent a pound to the revenues of this country, and there would be no sales tax and no three per cent excise tax upon it. It would be free of all those duties. There are other items in the same category.

Mr. DUNNING: Will my hon. friend tell me the relative prices of sugar in the two countries?

Mr. BENNETT: I cannot say what the price of sugar in the United States is this week, but it was cheaper there than it was here because we had a one cent tax. That was one of the reasons. I have not the advertised retail prices for sugar in United States towns, but it is to some extent cheaper than in Canada. That is not a matter of very great importance for the moment; it is only an illustration of an item upon which one cent per pound revenue would be lost if the sugar can be brought in. A farmer might bring in only 200 pounds of sugar which would represent an expenditure of something in the vicinity of $10, but this would mean a loss of revenue to this country of $2. The government has not seen fit to repeal that tax of one cent per pound despite all that was said during the elections. That tax still remains as does the three per cent tax, despite all that was said about it. These goods are to come in free of that one cent per pound tax, free of the three per cent tax and free of the eight per cent sales tax. Every $100 worth of goods brought across the line will be free of $8 in sales tax. There are some items exempt from this sales tax, but it will be recalled that they are very few in number. The minister pointed out the other day that there were very few items exempt from the sales tax either partly or in its entirety.

To that extent I think this is a very difficult time to yield to the desire which is always in the mind of every man who travels in another country to bring back goods free of duty. I repeat that we are all glad to know that when you return from another country no question will arise as to the value of your goods. There will be no necessity of keeping invoices or matters of that kind as long as you can satisfy the customs officers that the goods you bring in are worth under $100. As the hon. member for Rosetown-Biggar (Mr. Coldwell) has said, this will result in perhaps a clearer appreciation of the obligations made. There will be no foreign declaration, it is true, but one must not forget what this freedom from sales tax, from the excise tax of three per cent and from the specific taxes will mean. In some items there will be a sales tax of eight per cent, an excise tax of three per cent, and a specific or ad valorem tax of twenty per cent. This might mean a total of $8, plus $3, plus $20, or a total of $31 on $100 worth of goods brought into Canada after a stay of forty-eight hours in a foreign country.

I have been concerned about this. I pointed out in the budget debate that there is nothing new in this matter. A gentleman who was finance minister longer than anyone else in this country was pressed on many occasions to give effect to these proposals. My memory is that the United States proposals have been in force for upwards of thirty years; they were put into effect when their population was over 50,000,000. When this was first done Canada was not particularly concerned; it was more to deal with overseas purchasers. But the situation was changed when tourists began to come into this country in large numbers. It will be recalled that there is a certain type of blanket which is made in this country and which is purchased in large quantities to be taken back to the United States. There are other articles indigenous to Canada.

Mr. DUNNING: Such as furs.

Mr. BENNETT: That is one item I had in mind.

Mr. DUNNING: And china.

Mr. BENNETT: That is much less the case now than it was at one time.

Mr. DUNNING: And linens.

Mr. BENNETT: Since linens have come in free under the British preferential from northern Ireland they have been imported in substantial quantities. I only point out that when Mr. Fielding decided that this privilege could not be granted, he did so for reasons to some extent similar to those I am giving now, although they were more strongly presented at that time by those who discussed the matter with him. Succeeding ministers of finance were confronted with the

same problem, but they felt that they could not accede to the requests for the reasons I have indicated.

From one standpoint I believe that this is an opportune time to enact such regulations. The cost of production of certain commodities is higher than it has been for some time and there will be no incentive to purchase. There are other commodities which can be purchased for the same price and there will be some incentive where there is a specific tax on items such as sugar. The freedom from the three per cent tax is something and the freedom from the ad valorem or specific tax will be substantial. I think the average duty last year on taxable items from the United States and other foreign countries was something in the vicinity of seventeen per cent. That is my memory; I may be under the mark and it may be nearer twenty per cent, although I believe the figure was 17·86 per cent. That was arrived at after taking the figures for a limited number of months. This means that this much revenue will be lost on every $100 worth of goods brought into Canada. While one is delighted to think he can spend forty-eight hours in another country, whether it be Great Britain, France or the United States, and be able to bring back a tankard which does not cost over $100 without paying any duty of any kind, without paying any sales tax or excise tax—

Mr. DUNNING: It amuses me to hear of my right hon. friend bringing in tankards.

Mr. BENNETT: It amuses me too, but it did not amuse me when I had to pay a fifty-eight per cent tax. At any rate, the volume of goods coming in will be very much limited at first.

Mr. DUNNING: It has been so far.

Mr. BENNETT: The reason for that is quite simple. The people have not the cash with which to buy goods. When one buys in this country he can sometimes buy on credit, but when he spends forty-eight hours on the other side, he has to pay his hotel bill and pay cash for any goods he purchases. In certain sections of the country the people have not the money with which to buy, but conditions may change.

As I say, if only half a million people each purchase $100 worth in a year, this means the enormous volume of $50,000,000. It is amazing how rapidly it counts up. Only half a million people, crossing a border 3,000 miles long, buying $100 worth each in 300 days, excluding Sundays and holidays, means that a tremendous volume of trade is affected. Fifty million dollars worth of trade bears an appreciable relation to the entire import trade from the United States during recent years. That is the reason why I ventured to mention the matter in the way I did. I felt that we could not form any estimate by mere conjecture, but the fact remains that if only half a million people cross the border and decide to make purchases amounting to $100 each during the year, the revenues of the country will be tremendously affected. The instruments of production, whether they relate to cotton, clothing, radios, electrical appliances, groceries or food, will be affected also as from the very nature of things, their being produced in the United States, it will be cheaper to buy them there. I say again that this privilege is something we would all desire to have, but I do not think our economic condition is such as to warrant our being able to grant it at this time.

Mr. DUNNING: I think the observations of the leader of the opposition are very much to the point, but there are one or two considerations which I might mention in addition to the one to which he referred. The rising cost of commodities in the United States was very much in the mind of the government. We also considered the fact that because such articles did not pay a sales tax in this country it did not follow that they were free of taxes in another. If I remember rightly there are at present state sales taxes in the states of New York and Pennsylvania. I have not in mind the exact rate levied—

Mr. BENNETT: Two per cent in New York city and two per cent in New Jersey.

Mr. DUNNING: These factors will tend to operate, of course; but in the main it appeared to us to be the time at which we could make this concession, especially having regard to the great desirability of retaining the United States concession in its present form. When it is said, and said truly, that the United States concession to its own citizens has been in effect a great number of years, I would call attention to the fact that it has been seriously hampered by restrictive regulations, until comparatively recent years. It is only in comparatively recent years that we have seen notices in Canadian stores reminding American visitors of their right to return with $100 worth of goods. Formerly the restrictions were of such a hampering kind as to render the privilege not nearly so useful and available to returning Americans as it is to-day.

Mr. BENNETT: The thirty day limit has been in force for some time.

Mr. DUNNING: For a long time. We ask the committee to accept this provision and, as I said before, we are making all arrangements possible to check carefully and completely the manner in which it works. So far we are astonished at the comparatively small degree to which the privilege is made use of.

Mr. BENNETT: Is there any understanding on the part of Americans that they will regard this as satisfactory? I have some reason for asking the question. As our concession was not as generous as theirs, an effort might be made to demand that we should make it so, or they would make theirs as restrictive as ours, on the one hand, as to the period of time within which one had to stay in the country, and on the other as to the number of times in a given year. It must be remembered that the insertion of the forty-eight hour privilege necessitates the Canadian expending money in the United States, which is a factor with respect to invisible balances; and in the second place, the limitation as to three times a year, as against eleven on their part, may afford an opportunity, which some members of congress living in nearby cities have sought, to press that the arrangement should be reciprocal.

Mr. DUNNING: We have no indication of dissatisfaction, and there was no undertaking on either side that the concessions should be either reciprocal or identical. Both countries recognized the different conditions that prevailed on either side and have recognized the right, indeed the necessity, of each being free in the matter.

Mr. STEWART: I should like to have from the minister an explanation of his statement that care was being taken to check up these imports. Is it intended to take an inventory of the goods imported so that they may be classified, and will there be a detailed declaration or something of that sort to enable the department at the end of the year to give statistics covering the different classifications, in regard to food and clothing, for instance?

Mr. DUNNING: That is what is contemplated. So far nine different groupings are being worked out to give the information required. It is impossible to make it applicable to every individual item of the tariff, but so far as groupings can be arranged to give information upon which judgment can be exercised as to the manner in which the arrangement is working, that is being done now.

[Mr. Dunning.]

Mr. STEWART: And the returning tourist will have to make a declaration more or less in detail.

Mr. DUNNING: Yes.

Mr. WHITE: The returning tourist will make his declaration to the frontier officer, who will note the kind and value of the goods declared to him and make a return to the customs house which he serves, and for statistical purposes this information must be compiled.

Mr. DUNNING: That is right.

Mr. LAWSON: Under paragraph (a) of the item with respect to travellers' baggage, under regulations to be prescribed by the minister, are there regulations now in existence or are these regulations still to be prescribed? In either event, is the $100 covered by paragraph (b) of the item in addition to that prescribed by regulations under paragraph (a)?

Mr. DUNNING: The (a) item appeared only because of the redrafting of the whole item consequent on the inclusion of (b). There is no difference at all in the treatment accorded under what is described as (a). It is already in the tariff and is being administered under regulations which have been in existence for a considerable time, and there is no change in what is contemplated under (b).

Mr. LAWSON: With respect to (b), goods valued at not more than $100, included in the baggage accompanying residents of Canada returning from abroad, does that mean that each member of a family returning may bring back a maximum of $100 worth, assuming that they are all returning together?

Mr. DUNNING: That is correct, but they cannot pool it. If my hon. friend has a large family, he could not take them all over and buy a car and pool the $100 for each member of the family.

Mr. LAWSON: There is something else to which I would call attention. Under the last proviso clause limiting the quantities or values of particular goods that may be brought in, there is a provision that exemption shall not be allowed on alcoholic beverages in excess of one quart. Is it not now illegal, by the law of every province of Canada, for a private individual to import alcoholic beverages? If so, I want to suggest something in that connection.

Mr. ILSLEY: That is correct. Under the provincial laws it is illegal for an individual to have in his possession liquor other than that purchased from a liquor commission.

Mr. LAWSON: I fear then that this provision may be the cause of a good deal of difficulty, which I am sure the minister does not wish to see arise. I have always regarded customs officers as law enforcement officers. I am not suggesting by that that they should be policemen and arrest people for offences other than those under the Customs Act; but I have always thought it their duty if, for instance, I were bringing in something which it was illegal for me to have, to prevent me from entering the country with that article. I would have an opportunity of leaving it or going on at my hazard. I have known cases in the past where customs officers have reported to the provincial or local police that in their opinion breaches of provincial law were being made. Here we are providing for each Canadian returning to this country a declaration form, and unquestionably, I take it, there will be printed on that form a copy of these very provisions for the guidance of the returning tourist. I am sure the average layman is not aware of the fact that it is illegal for him to have in his possession in any province liquor not purchased from the provincial liquor commission, and surely he is going to be misled by a statement specifically contained in a dominion law, from which he will draw the conclusion that it is quite right and proper for him to bring in a quantity of alcoholic beverages not exceeding one quart.

Mr. DUNNING: My hon. friend said that he had a suggestion.

Mr. LAWSON: My suggestion is this, alternatively, that in view of the fact that it is illegal according to the law of every province to have liquor in one's possession, surely the words are entirely superfluous. Why not cut them out entirely? You gain nothing by putting this in, and you deceive the Canadian public. The minister shakes his head, but—

Mr. DUNNING: The hon. member says that we gain nothing by putting it in.

Mr. LAWSON: Not by putting it in. I think the Minister of National Revenue (Mr. Ilsley), who is a lawyer, will agree with me—

Mr. DUNNING: Oh, as a lawyer, yes.

Mr. LAWSON: —that if it is illegal for any person to have in his possession in Canada alcoholic beverages not purchased from the liquor commission of the province in which he has them, then obviously your customs official at the border would confiscate alcoholic beverages in the possession of any person endeavouring to import them, or warn him that he must not bring them into the country. Therefore I say that if you leave that provision in, you may be the cause of deceiving some lay mind. In any event I am unable to see where you gain anything by having these words in the exempting proviso.

Mr. ILSLEY: In reply to the hon. gentleman who has just spoken, let me point out the language of the proviso. It is as follows:

> Provided that a resident of Canada shall not be entitled to the exemption herein granted within a period of four months from the date of the last exemption allowed, nor shall the exemption be allowed on alcoholic beverages in excess of one quart.

That proviso has no necessary connection with any other legislation. It has no necessary connection with the legislation passed by the various provinces. All this says is that from this time on we do not propose to allow them to bring in a hundred dollars' worth of liquor. We do not, as a revenue matter, propose to do that, and we have to put that proviso in. So far as we are concerned the exemptions shall not extend to more than one quart of liquor. If the importation of that quart is prohibited by some other law, that is something with which we are not dealing in this particular legislation. The law of a province or any other law of this parliament that deals with the importation of liquor is another matter; it may last a long time or it may last a short time. But our revenue provision, the negative or restrictive provision, enacts that in exercising their right to this $100 exemption travellers shall not expend that full one hundred dollars in liquor; they shall be limited to one quart. Of course if the provinces have an objection to this quart of liquor coming in they may undertake to prosecute, or they may indicate that it is their intention to regard this as an infinitesimal thing, as a mere trifle. If it be their intention to prosecute or to take exception to the admission of this liquor, the returning Canadian cannot bring it in while their law and their attitude remain what they are. But our position is just that we limit that exemption on liquor to a quart.

Mr. LAWSON: It requires no legal argument of the Minister of National Revenue to convince me as to what the provision means. I realized what it meant as soon as I read it. But I say that you are handing to the average man coming back to this country, who is not a lawyer, something to read which he thinks tells him what is legal and what is illegal for him to do in respect to bringing goods into Canada. He reads that he cannot bring in more than a quart of liquor. Does he not naturally infer that he can bring in a quart? I suggest that the department gains nothing

by pointing out to people that qua dominion government you can bring it in, when in truth and in fact, because of the laws of the provinces, you cannot bring it in at all.

Mr. ROSS (Moose Jaw): The provinces may change the law any time.

Mr. LAWSON: That would be easy to provide for.

Mr. WHITE: If the clause were omitted, even though a question were raised by the United States government, in view of the fact that we have these provincial laws, it surely could be satisfactorily answered. The whole point of the Minister of National Revenue is met by striking out the words "in excess of one quart," and simply prohibiting the importation, even to that extent, of alcoholic liquor.

An hon. MEMBER: If that item were struck out and any one of the provinces of Canada changed its law in regard to the importation of liquor by any body other than a liquor commission, I take it that a hundred dollars' worth of liquor could come in.

Mr. LAWSON: No; there would still be a complete prohibition left against bringing in any liquor. If you struck out the words, "in excess of one quart," your section would read, "nor shall the exemption be allowed on alcoholic beverages or on tobacco in excess of fifty cigars," and you make it perfectly plain to anyone who reads it.

Mr. WILTON: There is already evidence that this $100 exemption clause is detrimentally affecting Canada. Canadian newspapers are carrying Buffalo merchants' advertisements opposite railway advertising offering reduced rates from Ontario points into Buffalo on Fridays and Saturdays. The Buffalo business men advertise special bargains and inducements, and as a result Canadians are flocking over in great numbers for the week-ends. The railway companies of Canada, combined with the business men of Buffalo advertising in Canadian papers, are certainly making it hard for our business men.

Mr. DUNNING: Canadian business men have been doing that for years in connection with the American tourist.

Mr. WILTON: It is only recently that Buffalo business men have been advertising in Canadian newspapers offering Saturday bargains.

Mr. LAWSON: I suggest that the minister consider striking out the words, "in excess of one quart."

Mr. ILSLEY: We have considered it.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.
