The copy filmed here has been reproduced thanks to the generosity of:

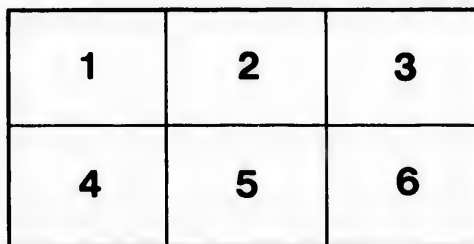

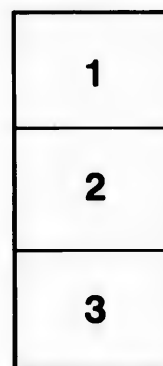

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol ➡ (meaning "CONTINUED"), or the symbol ▼ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole ➡ signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

PROTECT YOUR BUILDINGS!

Which may be done with one-fourth the usual expense by using

GLINES' PATENT SLATE ROOFING PAINT,

MIXED READY FOR USE.

Fire-Proof, Water-Proof, Durable, Economical and Ornamental.

AGENTS WANTED IN EVERY TOWN.

A roof may be covered with a very cheap shingle, and by application of this slate be made to last from 20 to 25 years. Old roofs can be patched and coated, looking much better, and lasting longer than new shingles without the slate, for

One-third the Cost of Re-shingling.

The expenses of slating new shingles is only about the cost of simply laying them. The Paint is FIRE-PROOF against sparks of flying embers, as may be easily tested by any one.

It stops every Leak.

And for tin or iron has no equal, as it expands by heat, contracts by cold, and never cracks nor scales. Roofs covered with Tar Sheathing Felt can be made water-tight at a small expense, and preserved for many years.

This Slate Paint is

Extremely Cheap.

Two to three gallons will cover a hundred square feet of shingle roof, while on tin, iron, felt, matched-boards, or any smooth surface, from two quarts to one gallon are required to 100 square feet of surface, and although the Paint has a heavy body it is easily applied with a brush.

No Tar is used in this Composition,

therefore it neither cracks in winter, nor runs in summer.

On decayed shingles it fills up the holes and pores, and gives a new substantial roof that will last for years. Curled or warped shingles it brings to their places, and keeps them there. It fills up all holes in Felt roofs, stops the leaks, and although a slow dryer rain does not affect it a few hours after applying. As nearly all Paints that are black contain tar, be sure you obtain our genuine article which (for shingle roofs) is

Chocolate Color,

when first applied, changing in about a month to a uniform slate color, and is to all intents and purposes slate. On

Tin Roofs

our red color is usually preferred, as one coat is equal to five of any ordinary Paint. For

Brick Walls

our bright red is the only reliable slate Paint ever introduced that will effectually prevent dampness from penetrating and discolored the plaster.

Orders solicited.

Correspondence invited.

WEATHER GUIDE.

The following Table (the result of many years' actual observation) is ascribed to Dr. Herschel. It is constructed upon a due consideration of the attraction of the Sun and Moon in their several positions respecting the Earth, and serves to show what kind of weather will most probably follow the entrance of the Moon into any of her quarters.

Moon.	Time of Change.	In Summer.	In Winter.
If New Moon, First Quarter, Full Moon, or Last Quarter, happens	Between midnight and 2 in the morning.	Fair.	Hard Frost unless wind be S. or W.
	Between 2 and 4 morn.	Cold with showers.	Snow & stormy.
	" 4 and 6 "	Rain.	Stormy & rainy.
	" 6 and 8 "	Wind and rain.	Stormy.
	" 8 and 10 "	Variable.	Rain if wind W. Snow if E.
	" 10 and 12 "	Showery.	Cold and high wind.
	At 12 Noon, and to 2 in the afternoon.	Very rainy.	Snow or rain.
	Between 2 and 4 after.	Variable.	Fair and mild.
	" 4 and 6 "	Fair.	Fair.
	" 6 and 8 "	Fair if wind be N. W. Rainy if S. or S. W.	Frosty if wind N or N.E. Snow if S. or S. W.
	" 8 and 10 "	Ditto.	Ditto.
	" 10 and midnight.	Fair.	Fair and frosty.

The nearer midnight any of the Moon's changes occur, the finer will be the weather during the succeeding week; the nearer noon any of those changes happen, the more foul and wet will be the weather that will follow.

JANUARY.—We had the curiosity to look through a lot of old Almanacks the other day to see what work was recommended to farmers for January. One gave a dissertation on the importance of "Theory,"—another a discourse on "System," or "Science" in farming; but, as for "farm operations," it seemed as if such were not required. Now one great secret of successful farming, as in every other industry, is to prevent waste,—waste of food material, waste of labour, waste of implements, waste of manure, and, last but not least, waste of the manual and mental energy of the farmer himself. If January is a workless month, what a fearful waste there must be on the farm. And January is to be followed by February and March and a portion of April, during all which the farmer may idle, if he be not thoughtful and thrifty. Contentment, in such a case, is great loss, and men who have not provided themselves with farm work for the winter naturally turn to lumbering and such like work, leaving the care of the farm and stock probably to the female portion of the household. Herein lies one of the causes of the backwardness not only of Nova

Scotian, but of American Farming, for when the Farmer-Lumberer returns to his farm, he finds no preparation for spring work, many things have been neglected, and the spring is half over before the most necessary operations have well begun. Remedy: Let every farmer keep a sufficient quantity of live stock for fattening, &c., as shall afford him profitable work for the winter, in connection with other indoor farm work. In order to do this he must raise a very large supply of roots. The storing and caring for these will give him plenty of work to fill up the last months of the year. Then after Christmas he will find his fattening stock in need of much attention, and, ere his barn floor is fairly cleared up, it will be time to cut his cord-wood, to chop a new clearing, and so on. And his profits should come in, not as the price of logs or lumberman's wages, but as the proceeds of Easter Beeves and Fat Wethers. Spring will open with farm yard and boxes full of manure, and the whole farm will burst into a luxuriance that was never known before.

EAGAR'S Peruvian Bitters, Tonic, Appetizer and Temperance Stimulants.

FEBRUARY.—Farm work proper to this month consists of (1) caring for Live Stock. See that every animal has its regular supplies of food and water. Feed the best hay, because the animals are now entirely dependent upon what they get in the barn; give grain also and roots to all those that require it. Cattle-starving at this season is the most unprofitable operation in which a farmer can engage. (2) Chop and haul home cord-wood and pile it beside the wood-house; when this is done set to work and cut it all up and fill the wood-house. You will then be secure for the next twelve months against any demands upon the time of men or horses to provide fuel, and thus farm operations can

MARCH.—This is hot-bed month, and how to make a hot-bed is a secret worth knowing. Select a sheltered spot, protected from animals, lying to the sun, and near a well or water-butt. Build on this space a neat pile of manure, of such a size that when the frame is put on top, there will be a clear foot of manure outside all round. Cow manure will not heat at this season. Horse manure will not heat at this season, if the animal has not been feed upon oats or some kind of grain. Keeping these facts in view you can select your manure, or make such a mixture, as will give the degree of heat required. Spread over the manure, inside the frame, about four or five inches of very fine soil;

this should have been prepared in the Fall, and kept dry under cover all winter,—otherwise it is likely now to be in a hard frozen mass. The glass sashes are then to be put on and kept close till the hot-bed heats; the steam and heat will start the seeds of weeds, which may be allowed to grow. Air is then given, and when the heat modifies, weed and rake the surface and sow your spring seeds,—cauliflowers, cabbages, celery, tomatoes, &c., for the kitchen garden; and stocks, verbenas, petunias, asters, balsams, and such-like annuals for flower-garden ornament. The seeds will bear a good deal of heat before they emerge from the soil, but as soon as the first leaves begin to appear the flame must be aired daily, taking care to avoid cold draughts.

EAGAR'S Cholera Mixture, cures Cramps, Dysentery, Diarrhoea, etc.

APRIL.—Some seasons a good deal of useful spring work can be done in April, but usually we have to wait till May for seed-time, still it is the duty of the farmer to have all his winter's work finished before the first of this month; to have his tools and horses and men all ready, and his seed and artificial manures (if to be used) at hand. Manure under cover may be carted out on the frozen soil to where it is to be used. In fields seeded down with timothy last fall, it will now be time to sow clover,—a mixture of red and alsike is best for hay, as the white clover does not grow tall enough for cutting. required, the seed should be kept in a warm place so as to start the eyes, and whenever the ground is dry enough they may be planted. Peas and broadbeans may be sown at the very beginning of the month. Onions, parsnips and carrots also should be put in as soon as the ground is fit to give them the mere delicate seed-bed they require. Beets and mangold wurzel are usually sown at the end of the month or early in May. All gooseberry and currant bushes should be dressed, dug around &c., apple and pear trees gone over, and generally the whole kitchen garden and orchards thoroughly cared for. Remove the boughs from strawberry plants gradually, and make the flower garden neat and trim.

MAY.—The success of the farmer's year depends so much upon the month of May, and the work that can be then accomplished, that every hour should be highly valued. If any ploughing has to be done, let it be done at once; if manure has to be taken out for crops, don't wait for a more convenient season; if the weather is not all that can be desired, proceed nevertheless with your work, vary it to suit the state of the soil and the atmosphere. Men cannot fight against the operations of nature, but they can very often turn them to advantage by consideration and forethought. What has to be sown and planted this month? *Everything* except what has either been already committed to

soil, or is too tender to withstand the coldness of the soil, or the probable frosts of June. Such exceptional crops are hush beans, pole beans, corn, tomatoes, cucumbers, squashes; it is only in warm sandy soils that such things can be safely sown before the end of the month. Turnips also should not be sown in May. Finish all top dressing of grass lands, keep down weeds in gardens, give more air to frames so that the plants may grow strong and hardy, see that all fences are secure before you let out any cattle into the pastures, clear out cellars and sheds, whitewash buildings, and put the whole homestead into summer order.

EAGAR'S Cough Balsam.

JUNE.—The best rule for work on the farm in June is to do everything that was marked out for, but could not be accomplished in, May. Potato planting may still be done, and other root crops sown, at least during the early part of the month. But there are crops whose sowing and planting especially belong to June, such as Indian Corn, Bush Beans, Pole Beans, Cucumbers, and other heat-loving vegetables. Tomatoes may now be set out, also cabbages, cauliflowers, greens, &c.,

and turnips may be sown. Early turnips may be put in early in the month, but field turnips for a general crop should not be sown till the ground has been dry and warm long enough to give an opportunity for preparation of the seed-bed. In the flower garden, verbenas may be set out early in the month, and about the middle of the month other less-hardy bedding plants, such as geraniums, petunias, &c. Dahlias had better be kept under glass until the end of the month or beginning of July.

JULY.—Turnip sowing is about the only kind of "Spring Work" that now remains. Let the ground be thoroughly pulverised before sowing, which should never be done except during hot sunshiny weather. The turnip requires heat to start it, yet after the plants are well grown, they enlarge their bulbs most freely under the influence of rather cool wet weather. They do best in light soils, enriched by bone dust or other phosphatic manures. Mangels, potatoes, carrots, &c., will now require careful attention in the way of hoeing, cultivating, weeding, &c. The work of this month makes or mars the crop. Prepare for Haying, which will begin from the middle to end of July, according to the

locality, and the forwardness of the season. In the flower garden much attention must be given, and will be amply repaid, at this season. The flower borders have to be kept open by forking over with a spade or trowel, roses and other plants requiring rich nutriment should have frequent applications of liquid manure, and when insects appear (as they are certain to do this month) the plants should be syringed overhead with water to which a little petroleum has been added; for red-spider this is a sovereign cure, but then recollect that the petroleum may cause the leaves to drop if the dose be too large.

AUGUST.—Haying still continues; this is in fact the hay month with the majority of farmers. Whilst haying lasts, little can be expected in regard to other work. Every year improvements are spreading. Mowing machines are not rare now, and we hope soon to see every agricultural district in every County of the Province furnished with its mowing machines. But there are aids to haying quite as important. The "hay tedder" throws upon the horse an operation that is time-wasting and tedious when it has to be done by hand. Then if the

barn can be rigged with a pitching fork to work by horse power, there is another immense saving of manual labour. But, with all these improvements, do not hurry your hay making, do not get into a hay fever, but look calmly on, and see that every forkful of hay is quite dry before you put it into the barn. The time of hay harvest is also the seed-time for hay. If you have any land ready to be seeded down, do so as early in the month as you can. Timothy sown now will give a good crop of hay next season. But don't sow clover now; if you were to do so, the young plants would all be dead before spring.

SEPTEMBER.—Haying is done now, and there is a little lull in farm work. Yet there is still plenty of work to be done. Keep your turnips well hoed and cultivated. Potatoes that have been neglected in haying time require to be looked at now, and soon digging time comes round. Look well to the garden; "ill weeds grow apace." If strawberry beds were not planted last month, it is not too late yet; but do not longer delay. In wet weather look through your barns and arrange for the winter accommodation of your live stock. Orchards require to be looked after. The pleasantest of all operations are the gathering in of

the fruits of the soil, and the sending of produce to market. The fall Exhibitions are coming on. Prepare for them; have an eye to good samples, and don't grudge a few dollars to take your family and your finest stock and fruit to the county exhibition or the fruit growers' congress. New ideas are easily carried home, and their value cannot be counted in gold. As garden crops are taken up, clear away the weeds and stalks, and, as opportunity offers, dig up the ground roughly for the winter. The frost will pulverise the soil, and in spring time your early vegetables will have a good bed.

OCTOBER.—Where roots are cultivated (and they ought to be on every farm to a much larger extent than they are at the present time in Nova Scotia), the farmer's chief work this month will be in taking up his root crops. We have said nothing about grain, because every farmer is likely to look after that, and harvest it carefully. But in regard to root crops there is a good deal of misconception. To take up and store roots successfully is a simple art when properly understood, but the frequent destruction of roots in the cellar shows that it is not always understood or carried out. Potatoes should be dug in dry

weather, and allowed to dry completely on the surface before being put together in heaps or in the cellar; the best way is to put them on a barn floor and exclude the light, otherwise they will become green and acquire a bitter taste and poisonous qualities. Mangels, turnips and carrots should be topped and the fine root fibres cut off. Before storing they should, in like manner, be exposed to dry air that the wounds may heal over; if put at once into the cellar, the wounded tissue will begin to ferment, and a large portion of the roots will be rotted by contact. If facts such as these are kept clearly in view, no farmer need lose his roots. Of course the cellar must be kept well aired and dry, and frost carefully excluded.

NOVEMBER.—Agricultural Societies are apt to forget that their arrangements for the following season, in regard to animals, are most profitably made at this time of year. Every Society keeps, or ought to keep, a sufficient number of male animals for the use of members. If the selection and purchase of these be deferred till spring time, large prices have to be paid, and the demand is usually so great that suitable animals cannot be obtained. For beef cattle, the Short Horn Durham breed is the best; their growth is more rapid than that of any other kind. For milk alone, Ayrshires are to be preferred, Devons make the best working oxen, they are quick, active, and easily fed. For domestic cows in the city the creamy Alderneys or Jerseys are most suitable. In King's County there are several breeders of pure Short Horns, such

as Mr. Chase, Mr. Bowser, and others. Pure Ayrshires are raised by the Messrs. Blanchard at Truro, Mr. Anderson of Halifax, Mr. Longley, of Paradise, and one or two others in different parts of the Province. The Messrs. Duffus, Mr. Black, and other Halifax gentlemen, have taken great pains to import and raise pure Alderney stock. The best Devon Herd in the Province is that of Colonel Laurie at Oakfield. In Yarmouth all these breeds are raised more or less extensively by the Messrs. Brown and other enterprising breeders. We mention these names in order that Societies and farmers wishing to see thorough bred stock of the different breeds may know where to find them.

County Courts.

By Chap. 18 of the Acts of 1874, provision has been made for the erection of County Courts, and for the purpose thereof the Province has been divided into SEVEN DISTRICTS, viz.:

District No. 1 embracing the County of Halifax.

District No. 2 embracing the counties of Lunenburg, Queens and Shelburne.

District No. 3 embracing the Counties of Annapolis, Digby and Yarmouth.

District No. 4 embracing the Counties of Kings, Hants and Colchester

District No. 5 embracing the Counties of Pictou and Cumberland.

District No. 6 embracing the Counties of Inverness, Antigonish and Guysborough.

District No. 7 embracing the Counties of Cape Breton, Victoria and Richmond.

Section 3 of said Act provides that there shall be one Judge for each district, who shall reside in the district for which he is appointed, and hold office during good behaviour; every Judge shall be a Barrister of at least seven years' standing. Section 4 provides for the holding of Courts. Section 5 provides that the sittings of each Court shall continue so long as business shall require, except in cases where the same Judge is to hold a Court elsewhere. Section 6 prescribes the practice as to notices of trial, &c. Section 7 regulates the holding of Chambers. Section 8 provides for the appointment of a Clerk for each County; and Section 9 provides for the appointment of a Deputy Clerk. Section 10 prescribes the mode and manner of adjournment when a Judge cannot attend, and as to how another Judge may be called on. Section 11 prohibits every Judge from practising as a Barrister, on pain of forfeiture of his office. Section 12 prescribes the oath to be taken by the Judge. Section 13 provides that the practice, forms and mode of procedure, when not specially provided for by said Act, shall be according to the practice of the Supreme Court. By Section 14 it is enacted that no County Court shall have cognizance of any action wherein (1) title to land is brought in question, or (2) the validity of any devise, bequest, or limitation is disputed, [some slight exceptions to this], or (3) for crim. con., seduction, or (4) breach of promise of marriage, or (5) any action against any Justice of the Peace for anything done by him in the execution of his office. Section 15 enacts that, except as above, said Courts shall have jurisdiction and hold pleas in all actions *ex contractu*, when the debt or damages claimed do not exceed \$400; and in all actions of tort where damages claimed do not exceed \$200; and in actions on bail bonds to a Sheriff in any case in a County Court, whatever the penalty may be; and all appeals from Magistrates shall be to the County Courts. Section 16 requires that every plea, replication or other pleading relating to the title to land shall be verified by affidavit that the same is not vexatiously pleaded, nor for delay, nor to oust the jurisdiction of the Court. Section 17 prescribes for the change of venue on its being shown that the cause can be more conveniently tried in some other County Court. Section 18 regulates the mode of issuing and serving process, and the time of return of writs shall be the same as in the Supreme Court; when the Sheriff is a party to a cause the Coroner acts in his place. Section 19 declares that the powers of the Clerks of the County Courts shall be the same as those of the Prothonotaries

H. H. FULLER and CO., Hair Cloth from 10 in. to 30 in. wide. See Adv. page 3.

Every year increases the popularity of this valuable Hair Preparation; which is due to merit alone. We can assure our old patrons that it is kept fully up to its high standard; and it is the only reliable and perfected preparation for restoring

GRAY OR FADED HAIR

to its youthful color, making it soft, lustrous, and silken. The scalp, by its use, becomes white and clean. It removes all eruptions and dandruff, and, by its tonic properties, prevents the hair from falling out, as it stimulates and nourishes the hair-glands. By its use, the hair grows thicker and stronger. In baldness, it restores the capillary glands to their normal vigor, and will create a new growth, except in extreme old age.

IT IS THE MOST

Economical Hair Dressing ever used,

as it requires fewer applications, and gives the hair a splendid, glossy appearance. A. A. Hayes, M.D., State Assayer of Massachusetts, says, "The constituents are pure, and carefully selected for excellent quality; and I consider it the Best PREPARATION for its intended purposes."

Sold by all Druggists and Dealers in Medicines.

PRICE ONE DOLLAR.

Buckingham's Dye, FOR THE WHISKERS.

As our Renewer in many cases requires too long a time, and too much care, to restore gray or faded Whiskers, we have prepared this dye, in ONE PREPARATION; which will quickly and effectually accomplish this result. It is easily applied, and produces a color which will neither rub nor wash off. Sold by all Druggists.

PRICE FIFTY CENTS.

MARGESON'S CALCULIFUGE

CURES

**Gravel, Stone in the Bladder, Dropsy,
and all Diseases of the Kidneys.**

DIRECTIONS.—One wineglassful in as much water,
each morning, noon and night.

In all ordinary cases one bottle is sufficient, except for a
beast, when two or three may be required.

The Proprietors can highly recommend this medicine, as
it has been the means of curing over 200 persons before
placing it on sale, where it now can be had for **\$1.50** per
bottle. ADDRESS,

R. C. MARGESON & CO.
HALIFAX, N. S.

CERTIFICATES.

CHEZZETCOOK, March 3, 1873.

MESSRS. R. C. MARGESON & Co.—*Dear Sirs:* Please accept this testi-
mony from one who has been suffering for upwards of five years from
Gravel and Stone in the Bladder; and was advised by my friends to try
your Calculifuge. I did so, and am happy to say that after using the
two bottles you sent me last summer, it *entirely cured me*. I passed five
stones the size of small peas, and upwards of a wine-glassful of smaller
ones and gravel, and will send them to you by the first chance. I would
advise all that are suffering with the same complaint, to secure your
valuable medicine at once, as it has been the sole means of curing me. I
will take pleasure in giving all the information I can to any that will
call to see me at my house.

I remain yours,

ANDREW CRAWFORD.

HALIFAX, July 28th, 1873.

MESSRS. R. C. MARGESON & Co.—*Dear Sirs:* It is a pleasure to add
my testimony to the virtues of your Medicine. My little daughter, three
years old, was a great sufferer with Urinary Retention, sometimes four
days at a time. Her sufferings were intense; all medicine failed to give
her much if any relief. I procured a half bottle of Margeson's Calculi-
fuge. After taking three doses, she got relieved, and is now as well as
ever. This you can make known in the papers if you choose, as others
may be afflicted in like manner.
