## Technical and Bibliographic Notes / Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming are checked below.

- Coloured covers / Couverture de couleur
- Covers damaged / Couverture endommagée
- Covers restored and/or laminated / Couverture restaurée et/ou pelliculée
- Cover title missing / Le titre de couverture manque
- Coloured maps / Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black) / Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations / Planches et/ou illustrations en couleur
- Bound with other material / Relié avec d'autres documents
- Only edition available / Seule édition disponible
- Tight binding may cause shadows or distortion along interior margin / La reliure serrée peut causer de l'ombre ou de la distorsion le long de la marge intérieure.
- Blank leaves added during restorations may appear within the text. Whenever possible, these have been omitted from filming / Il se peut que certaines pages blanches ajoutées lors d'une restauration apparaissent dans le texte, mais, lorsque cela était possible, ces pages n'ont pas été filmées.
- Additional comments / Commentaires supplémentaires:

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured pages / Pages de couleur
- Pages damaged / Pages endommagées
- Pages restored and/or laminated / Pages restaurées et/ou pelliculées
- Pages discoloured, stained or foxed / Pages décolorées, tachetées ou piquées
- Pages detached / Pages détachées
- Showthrough / Transparence
- Quality of print varies / Qualité inégale de l'impression
- Includes supplementary material / Comprend du matériel supplémentaire
- Pages wholly or partially obscured by errata slips, tissues, etc., have been refilmed to ensure the best possible image / Les pages totalement ou partiellement obscurcies par un feuillet d'errata, une pelure, etc., ont été filmées à nouveau de façon à obtenir la meilleure image possible.
- Opposing pages with varying colouration or discolourations are filmed twice to ensure the best possible image / Les pages s'opposant ayant des colorations variables ou des décolorations sont filmées deux fois afin d'obtenir la meilleure image possible.

This item is filmed at the reduction ratio checked below / Ce document est filmé au taux de réduction indiqué ci-dessous.

10x	14x	18x	22x	26x	30x
12x	16x	20x	24x	/	32x

The copy filmed here has been reproduced thanks  
to the generosity of:

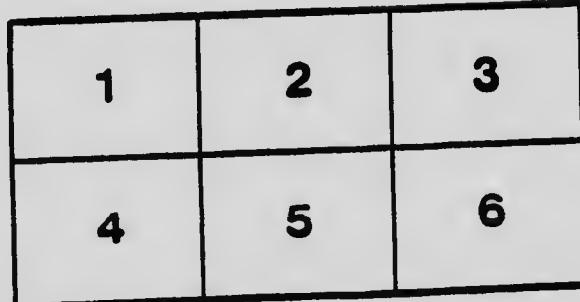

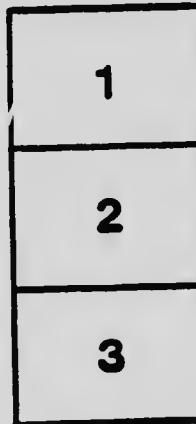

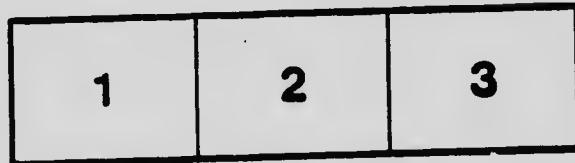

National Library of Canada

The images appearing here are the best quality  
possible considering the condition and legibility  
of the original copy and in keeping with the  
filming contract specifications.

Original copies in printed paper covers are filmed  
beginning with the front cover and ending on  
the last page with a printed or illustrated impres-  
sion, or the back cover when appropriate. All  
other original copies are filmed beginning on the  
first page with a printed or illustrated impres-  
sion, and ending on the last page with a printed  
or illustrated impression.

The last recorded frame on each microfiche  
shall contain the symbol → (meaning "CON-  
TINUED"), or the symbol ▽ (meaning "END"),  
whichever applies.

Maps, plates, charts, etc., may be filmed at  
different reduction ratios. Those too large to be  
entirely included in one exposure are filmed  
beginning in the upper left hand corner, left to  
right and top to bottom, as many frames as  
required. The following diagrams illustrate the  
method:

L'exemplaire filmé fut reproduit grâce à la  
générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le  
plus grand soin, compte tenu de la condition et  
de la netteté de l'exemplaire filmé, et en  
conformité avec les conditions du contrat de  
filmage.

Les exemplaires originaux dont la couverture en  
papier est imprimée sont filmés en commençant  
par le premier plié et en terminant soit par le  
dernière page qui comporte une empreinte  
d'impression ou d'illustration, soit par le second  
plié, selon le cas. Tous les autres exemplaires  
originaux sont filmés en commençant par la  
première page qui comporte une empreinte  
d'impression ou d'illustration et en terminant par  
la dernière page qui comporte une telle  
empreinte.

Un des symboles suivants apparaîtra sur la  
dernière image de chaque microfiche, selon le  
cas: le symbole → signifie "A SUIVRE", le  
symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être  
filmés à des taux de réduction différents.  
Lorsque le document est trop grand pour être  
reproduit en un seul cliché, il est filmé à partir  
de l'angle supérieur gauche, de gauche à droite,  
et de haut en bas, en prenant le nombre  
d'images nécessaire. Les diagrammes suivants  
illustrent la méthode.

**ADVANCE CHAPTER OF THE ANNUAL REPORT ON THE MINERAL PRODUCTION OF CANADA DURING THE CALENDAR YEAR 1917.**

*(Tons used throughout this report are short tons of 2,000 pounds, except where otherwise stated.)*

## COAL.

The term "production" in the text and tables of this report is used to represent the tonnage of coal actually sold, or used, by the producer, as distinguished from the term "output," which is applied to the total coal extracted from the mine, and which includes, in some cases, coal lost or unsaleable, or coal carried into stock on hand at the end of the year.

The production of coal during 1917 was 14,046,759 short tons (12,541,749 long tons), valued at \$48,199,831, or an average of \$3.08 per ton, as compared with a production in 1916 of 14,483,395 short tons (12,931,003 long tons), valued at \$38,817,841, or an average of \$2.68 per ton, a falling off in production in 1917 of 436,636 tons, or a little over 3 per cent.

The average number of men employed during 1917 was 24,596, and total wages paid \$25,963,520, as compared with an average of 23,611 men employed in 1916 and \$20,884,238 paid in wages.

The values of the production in 1917 have, for all provinces been furnished directly by the operators. In 1916 and previous years, however, complete returns of values were not received from all operators, and the values placed upon the coal production in the provinces of Nova Scotia and British Columbia were partially estimated, or assumed.

The peculiar situation which exists in respect to Canada's fuel supply, viz.: That notwithstanding the enormous resources which Canada possesses in coal, over 50 per cent of our consumption is imported from the United States, has been pointed out and explained annually in these reports. The Canadian coal-fields are situated in the extreme east and in the western provinces, while the great central Provinces of Ontario and Quebec, the chief centres of population, are more easily and economically supplied with coal from the nearer coal-fields of Pennsylvania and Ohio. Further, there is no anthracite coal in eastern Canada and we have grown dependent upon the anthracite output of Pennsylvania for that most desirable of the domestic fuels, which is not only the chief domestic, or house fuel in Manitoba, Ontario, and Quebec, but is imported even into our eastern coal districts.

Such a condition of international trade attracts little attention during normal times, and it is only under conditions such as those that have been brought about by the great war that the importance of the situation and its possibilities are realized. In round numbers Canada produced during 1917 about 14 million tons of coal, of which 1.7 million tons were exported, and imported 15.5 million tons of bituminous coal and 3.3 million tons of anthracite. During the previous year, 1916, we produced in round numbers 14.5 million tons, exported 1.7 million tons, and imported 13 million tons of bituminous coal, and 4.5 million tons of anthracite, thus, while production fell off, the imports were considerably increased.

The total consumption of coal in 1917 was 33,123,735 tons, as compared with 29,863,856 tons in 1916, and 23,906,802 tons in 1915.

### Production of Coal by Provinces, 1917.

Province.	Average No. of men employed.	Wages paid.	Production of Coal.			Per cent of total quantity.
			Short tons.	Value.	Average per ton.	
Nova Scotia.....	10,283	10,406,170	6,327,001	19,416,737	3,068	45·04
New Brunswick.....	390	275,379	189,095	708,010	3,744	1·35

Alberta.....	8,350	8,906,315	4,736,368	14,153,685	2,90	33·72
British Columbia.....	5,126	5,945,176	2,433,888	235,716	3,383	17·33
Yukon Territory.....	13	11,500	4,872	29,282	6 00	0·03
Total.....	24,596	25,963,520	14,046,759	43,199,831	3 08	100·00

### Production of Coal by Provinces, 1916.

Province.	Average No. of men employed.	Wages paid.	Production of Coal.			Per cent of total quantity.
			Short tons.	Value.	Average per ton.	
Nova Scotia.....	10,851	8,161,297	6,912,140	18,514,662	2,68	47·73
New Brunswick.....	327	212,332	143,540	386,016	2,69	0·99
Saskatchewan.....	409	234,986	281,367	441,836	1,57	1·94
Alberta.....	7,060	6,813,209	4,559,054	11,386,577	2,50	31·48
British Columbia.....	4,949	5,454,913	2,584,061	8,075,190	3,123	17·84
Yukon Territory.....	15	7,500	3,300	13,200	4 00	0·02
Total.....	23,611	20,884,236	14,483,385	38,817,481	2 68	100·00

### Comparison of Production, 1915 with 1916, and 1916 with 1917.

Province.	(i) Increase or (d) Decrease.			
	Years 1915 and 1916.		Years 1916 and 1917.	
	Short tons.	p. c.	Short tons.	p. c.
Nova Scotia.....	(d) 551,239	7·39	(d) 585,049	8·46
New Brunswick.....	(i) 16,149	12·68	(i) 45,555	31·74
Saskatchewan.....	(i) 41,193	17·16	(i) 74,145	26·39
Alberta.....	(i) 1,198,236	35·65	(i) 177,314	3·89
British Columbia.....	(i) 518,448	25·10	(d) 150,173	5·81
Yukon Territory.....	(d) 6,424	66·06	(i) 1,572	47·64
Total for Canada.....	(i) 1,216,372	9·17	(d) 436,636	3·01

It will be noted that the Provinces of Nova Scotia and British Columbia each showed a smaller production than the previous year, whereas in New Brunswick, Saskatchewan and Alberta, an increase is shown, the net result being a total falling off amounting to 436,636 tons.

The total production in 1917 includes 108,225 tons of anthracite, or less than 1 per cent of the total; 11,154,251 tons of bituminous, or 79 per cent of the total, and 2,784,283 tons of lignite, or nearly 20 per cent of the total.

The consumption of coal during the year includes approximately 5,428,423 tons of anthracite; 24,911,029 tons of bituminous, and 2,784,283 tons of lignite.

The total output, production and distribution of coal mined by provinces during 1916 and 1917 is shown in the following tables:—

**Production and Distribution of Coal Mined, by Provinces, 1917.**

A record of the monthly production of coal by provinces is given in the following tables which shows the decreased production in Alberta and British Columbia during the months of April, May, and June due to the strikes that took place in what is known as District No. 18, during those months.

The production in Nova Scotia, New Brunswick, British Columbia, and the Yukon is all bituminous coal, that of Saskatchewan all lignite, while the production in Alberta includes the three classes, semi-anthracite, bituminous and lignite. A record of the monthly production of these three classes of coal in Alberta will be found in the section of this report dealing with that Province.

A record of the monthly production of coal during a part of the year 1918 is also given hereunder.

**Monthly Production of Coal in Canada by Provinces, 1917.**

Statistics of the annual production of coal from 1881 to date are given in the following table:—

The total production of coal in Canada from 1785 to 1917, has been 268,499,334 tons; of this amount Nova Scotia is credited with 166,000,110 tons, or 61·8 per cent of the total; British Columbia 57,896,219 tons, or 21·6 per cent; Alberta 40,135,141 tons, or 15 per cent; Saskatchewan 3,179,571 tons, or 1·2 per cent; New Brunswick 1,156,128 tons, or 0·4 per cent, and the Yukon Territory 182,163 tons, or 0·05 per cent.

### Exports of Canadian Coal.

Statistics of the exports of coal according to the records of the Department of Customs are given in the following tables. The exports of Canadian coal in 1917 were 1,733,156 tons valued at \$7,387,192, or an average of \$4.26 per ton, as compared with exports in 1916 of 2,135,359 tons, valued at \$7,099,387, or an average of \$3.32 per ton. Besides Canadian coal exported there is also a small export of coal not the produce of Canada.

**Annual Export of Coal.**  
(IN SHORT TONS.)

Calendar year.	Produce of Canada.	Not the produce of Canada.	Calendar year.	Produce of Canada.	Not the produce of Canada.
1908 .....	1,729,833	102,071	1913 .....	1,562,020	66,566
1909 .....	1,588,099	161,098	1914 .....	1,423,126	83,137
1910 .....	2,377,049	150,859	1915 .....	1,766,843	59,690
1911 .....	1,500,639	133,943	1916 .....	2,135,359	62,783
1912 .....	2,127,133	46,706	1917 .....	1,733,156	47,328

**Imports of Coal.**

The total imports of coal of all classes in 1917 "entered for consumption" as per the published reports of the Department of Customs, were 20,857,460 tons valued at \$70,562,357, as compared with the total imports in 1916 of 17,580,603 tons valued at \$30,289,666.

Imports of coal into Canada are subdivided into three classes as follows: Anthracite, including anthracite dust; bituminous, round and run-of-mine; and bituminous slack such as will pass through a 4-inch screen.

The imports of anthracite in 1917 were 5,320,198 tons valued at \$28,109,586 or an average of \$5.28 per ton, exceed<sup>g</sup> by 749,383 tons, or 16.4 per cent the imports in 1916, which were 4,570,815 tons valued at \$22,216,363 or an average of \$4.86 per ton. The imports of bituminous coal of all classes were 15,537,262 tons valued at \$42,452,771, as against imports of 13,009,788 tons valued at \$16,073,303 in 1916. The increase in bituminous imports of 1917 over those of 1916, was thus 2,527,474 tons, or over 19 per cent.

The bituminous imports in 1917 included: bituminous, round, and run-of-mine, 12,407,486 tons valued at \$33,712,894, or an average of \$2.72 per ton, and bituminous slack, 3,129,776 tons, valued at \$8,739,877, or an average of \$2.79 per ton. The value per ton of the imports during 1916 of bituminous, round, and run-of-mine coal averaged \$1.30 per ton and of bituminous slack \$1.06 per ton. There was, therefore, not only a very large increase in the imports of coal but the average price was more than double that of the previous year.

The record of the exports of bituminous coal to Canada as published in the Reports of Trade and Navigation at Washington differs in some years considerably from the Canadian record, in partial explanation of which it should be noted that the Canadian record represents coal "entered for home consumption". This entry may be deferred several months from the actual time of import, thus causing a difference in the monthly and yearly record. Furthermore, it is understood that the United States record includes a certain amount of coal used for bunkering lake steamers which would not be included as an import into Canada. The United States record shows exports of bituminous coal to Canada during the twelve months ending December, 1917, of 18,206,727 short tons, as against 13,260,181 tons in 1916; 9,356,889 tons in 1915; 10,271,409 tons in 1914, and 15,115,733 tons in 1913.

(a) Duty, 53 cents per ton. (b) Coal, anthracite and anthracite coal dust; duty free. (c) Duty 14 cents per ton.

In view of the attention being given at the present time to the importance of imports of coal to Canada, additional tables have been introduced as follows: Showing the monthly imports of bituminous and anthracite coal since 1913, such figures as are available for the first few months of 1918 being added to the record.

The United States record of monthly exports to Canada are also included for comparison.

(a) Total exports. Exports to Canada not separately stated, but will exceed 95 per cent of total exports.

**Consumption of Coal.**

The total consumption of coal in Canada estimated on the basis of production, imports and exports was in 1917, 33,123,735 tons which included 12,313,603 tons of Canadian coal and 20,810,132 tons of imported coal.

Statistics of the annual consumption are given in the following tables:—

**Consumption of Coal, 1913-14-15-16-17.**

In connexion with the records of consumption it may be of interest to record the very large percentage of Canadian coal consumption used by railway locomotives. During the twelve months ending June 30, 1917, the tonnage of coal used by locomotives amounted to no less than 9,788,424 tons.

The quantity of coal consumed by railway locomotives in recent years, as compiled from "Railway Statistics" published by the Department of Railways and Canals, is as follows:—

**Annual Consumption of Coal by Railway Locomotives.**  
(IN SHORT TONS.)

Year ending June 30.	Anthracite.	Bituminous.	Total.
1911.	6,444	6,768,903	6,776,347
1912.	5,374	7,732,938	7,738,312
1913.	4,662	9,040,963	9,045,625
1914.	5,271	8,268,186	8,273,457
1915.	3,691	6,673,445	6,677,536
1916.	4,899	8,672,455	8,677,354
1917.	4,900	9,788,524	9,788,424

**Nova Scotia.**

The production of coal in Nova Scotia in 1917 was 6,327,091 tons, as compared with a production in 1916 of 6,912,140 tons, showing a decrease of 585,049 tons, or 8·46 per cent.

The total sales of coal during 1917 were, 5,293,115 tons, of which 4,081,709 tons were sold for consumption in Canada; 353,142 tons for export to United States, 258,264 tons for export to Newfoundland and other countries.

The total quantity used by producers under colliery boilers, in coke ovens, and in steel plants, was 1,033,976 tons including 306,374 tons used in making coke for other commercial purposes, and 727,602 tons used in the operation of the collieries, or by workmen.

A considerable tonnage of coal reported as sold for consumption in Canada is also used in the manufacture of coke, the total coal charged to coke ovens in the Province during the year being 1,046,279 tons.

The Dominion Coal Company has for many years been the principal operator, the total production of this firm's collieries at Cape Breton and at Springhill being 4,372,078 tons, or over 69 per cent of the Province's production and equivalent to over 31 per cent of the total Canadian production. The Nova Scotia Steel and Coal Company produced 644,321 tons, or 10.2 per cent of the total; the Acadia Coal Company 441,477 tons, or 6.9 per cent; the Inverness Railway and Coal Company, 227,753 tons, or 3.5 per cent; the Maritime Coal, Railway and Power Company, 228,353 tons; and the Intercolonial Coal Mining Company, 207,739 tons.

For a number of years Nova Scotia mines, chiefly those of Cape Breton, have been shipping from 2,000,000 to 2,500,000 tons of coal to Montreal and other Quebec markets, via the St. Lawrence. During the twelve months ending September, 1917, however, only 339,374 tons of Nova Scotia coal were marketed in Quebec province, as against 1,114,337 tons in 1916, and 2,048,222 tons in 1915.

### New Brunswick.

The production of coal in New Brunswick in 1917 was 189,095 tons, as against 143,540 tons in 1916, showing an increase of 45,555 tons or 31.7 per cent. This is the largest production of coal that has been recorded for this Province.

Through the courtesy of the operators the department is permitted to publish a record of the production from individual properties, as shown in the accompanying tables:—

The coal producing areas include the Grand Lake coal-fields in Queens and Sunbury counties, and the Beersville area in Kent county. In the Grand Lake area the coal seams which vary in thickness from 20 to 32 inches are found at a depth of from 30 to 60 feet below the surface.

**Saskatchewan.**

The coal deposits of Saskatchewan furnish coal of the lignite variety only and the production in 1917 from 57 collieries was 355,445 tons valued at \$662,451, as compared with 281,300 tons valued at \$441,836 in 1916, an increase of 74,145 tons, or 26 per cent.

The 1917 production included 334,625 tons of coal sold and 20,820 tons used by producers for colliery consumption by workmen, or in brickmaking.

The output of coal comes chiefly from the vicinity of Estevan located on the Souris river, near the southeastern corner of the Province. Coal deposits exist for 75 or 100 miles in a northwest-southeast direction along the Souris river, on Big Muddy creek draining Willowbunch lake (only lately reached by a branch line of railway) and on the south branch of the Saskatchewan river, about 100 miles southwest of Saskatoon.

The annual production and the production by the principal operators in 1916 and 1917 is shown in the following tables:—

(b) Including a small quantity from the Turtle Mountain district, Manitoba.

## Alberta.

Lignite, bituminous and anthracite coals are all produced in Alberta.

In 1917 bituminous coal contributed 46.4 per cent of the total production, lignite 51.3 per cent, and anthracite 2.3 per cent.

The total production of coal in Alberta in 1917 was the highest recorded for the Province and amounted to 4,736,368 tons valued at \$14,153,685, or an average of \$2.99 per ton, compared with a production in 1916 of 4,559,054 tons valued at \$11,386,577, or an average of \$2.50 per ton.

There are many small operators in the Province, the number of names on the list being over 300. In 1917 there were 52 companies reporting a production in excess of 10,000 tons and the aggregate production by these firms was 96.1 per cent of the total for the Province. Thirteen of these companies reported a production exceeding 100,000 tons each, the largest operators being the West Canadian Collieries, Ltd., with 476,082 tons from Bellevue and Greenhill collieries; the Canadian Pacific Railway with a total of 433,728 tons from Bankhead and Lethbridge; and the North American Collieries, Ltd., with 384,807 tons from Lovettville, Coalhurst, Evansburg, Dodds, and Drumheller.

Of the total production 4,321,564 tons were reported as sales including 4,231,325 tons sold for consumption in Canada; 90,239 tons sold for export to United States; 414,804 tons were used by producers including 102,609 tons charged to coke ovens, and 312,195 tons used for colliery operation and by workmen.

The monthly production of anthracite, bituminous and lignite coals during 1917 and part of 1918 and the production of each of the larger collieries during 1917 and 1916 is shown in the following tables:—

## British Columbia.

The production of coal in British Columbia in 1917 was 2,433,888 tons, as compared with 2,584,061 tons in 1916, a decrease of 150,173 tons, or 5.9 per cent.

Of the total production in 1917, 1,933,944 tons were reported as sales, including 1,046,020 tons sold for consumption in Canada; 845,128 tons sold for export to United States, and 42,796 tons sold for export to other countries; 409,944 tons were used by producers, including 278,590 tons for making coke and 221,354 tons for the operation of collieries and by workmen. The production and distribution of the collieries on Vancouver island of the Crowsnest district, and of the interior at Nicola and Princeton, are shown separately in the following tables.

The three largest operators in the Province were: The Crows Nest Pass Coal Company, with a total production of 504,762 tons; the Canadian Collieries (Dunsmuir), Limited, with 690,111 tons, and the Western Fuel Company, with 714,533 tons. These three companies contributed 78.5 per cent of the Province's production.

\*This production is obtained by adding "Home Consumption" and "Sold for Export."

†52,935 tons of this amount were exported as sales without the division into "Home Consumption" and "Sold for Export."

### Yukon.

Coal production in the Yukon in 1917 was reported as 4,872 tons, all the product of the Tantalus mine of the Five Fingers Coal Company, near Whitehorse.

The colliery of the Northern Light, Power and Coal Company, on Coal creek, has not been operated during the past two years, and the mining equipment is now reported as having been dismantled and removed.

†Value not reported, but estimated.

### COKE.

The accompanying statistics cover only the production of coke in by-product and Beehive coke oven plants and do not include retort coke recovered by gas companies.

Both domestic and imported coal are used in the manufacture of coke in Canadian coke oven plants.

In 1917, 1,379,038 tons of domestic coal, and 549,885 tons of imported coal were charged to coke ovens, from which was obtained an output of 1,231,865 tons of coke, thus averaging 0.639 tons of coke per ton of coal charged. Coke from by-product ovens comprised 74 per cent of the total.

In 1916, 1,501,835 tons of domestic, and 633,076 tons of imported coal were charged to coke ovens, from which was obtained an output of 1,448,782 tons of coke, thus averaging 0.679 tons of coke per ton of coal charged. Coke from by-product ovens comprised 69 per cent of the total.

The amount of coke sold, or used by coke producers in 1917, was 1,245,862 tons, as compared with 1,469,741 tons in 1916, a decrease of 223,879 tons, or over 15 per cent.

In addition to the tonnage sold or used by producers, there was imported during 1917, 970,106 tons of coke, while the exports totalled 23,595 tons. The Canadian consumption in 1917 was, therefore, 2,192,373 tons, an increase of 14,055 tons over the estimated consumption in 1916. The consumption of oven coke during recent years has been as follows: 1,285,228 tons in 1908; 1,449,369 tons in 1909; 1,581,832 tons in 1910; 1,677,188 tons in 1911; 1,981,832 tons in 1912; 2,186,170 tons in 1913; 1,509,068 tons in 1914, and 1,772,461 tons in 1915.

† Duty free.

The Nova Scotia coke was made at Sydney and Sydney Mines, the ovens formerly operated at Westville being idle throughout the year.

In Ontario the production came from the Algoma Steel Corporation plant at Sault Ste. Marie.

In Alberta the coke oven plants at Lille and Passburg were idle, while the plant at Coleman was operated throughout the greater part of the year.

In British Columbia coke was made by the Crows Nest Pass Coal Company at Fernie and Michel, and by the Canadian Collieries (Dunsmuir), Ltd., at Union Bay.

The coke production of the eastern provinces is used almost entirely in the iron and steel industry, while that of the western provinces is used chiefly by the copper and lead smelters, finding a market in the United States as well as in Canada.

### Coke Oven By-products.

The coke oven plants of the Dominion Iron and Steel Company at Sydney, and the Algoma Steel Corporation at Sault Ste. Marie, are by-product plants, and the recoveries of coke oven by-products in 1917 included 8,277,078 gallons of tar; 9,941 tons of sulphate of ammonia, together with important quantities of benzol, toluol, and solvent naphtha and naphthalene.

The imports of sulphate of ammonia in 1917 are reported as 566,969 pounds, valued at \$26,062 as against imports in 1916 of 293,096 pounds, valued at \$9,672, and imports in 1915 of 503,158 pounds, valued at \$14,637, and imports in 1914 of 763,597 pounds, valued at \$21,335.

Exports of sulphate of ammonia during the nine months ending December 31, 1917, were 8,047 tons, valued at \$693,377.

The export during the previous years has not been separately recorded.

**Classification of Persons employed in the Lignite, Bituminous, and Anthracite Coal-fields, Alberta,  
in 1916.**

### British Columbia.

The production of coal, in British Columbia in 1916 was 2,584,061 tons as compared with 2,065,613 tons in 1915, an increase of 518,448 tons, or 25 per cent.

Of the total production in 1916, 1,904,092 tons were reported as sales including 958,761 tons sold for consumption in Canada; 938,425 tons sold for export to the United States, and 6,906 tons sold for export to other countries; 679,969 tons were used by producers including 450,066 tons for making coke and 229,903 tons for the operation of collieries and for workmen.

The production of collieries on Vancouver Island, was 1,472,970 tons, of which 770,869 tons were so'd for consumption in Canada; 498,672 tons for export to the United States, and 6,906 tons for export to other countries, 55,436 tons were used in the coke ovens at Comox, and 141,087 tons were used in the operation of collieries and by workmen. Vancouver Island collieries produced 57 per cent of the production of the Province, while compared with the previous year there was an increase of 464,502 tons or about 46 per cent.

The production in the Crowsnest district was 988,188 tons of which 84,357 tons were sold for consumption in Canada, and 433,387 tons for export to the United States; 394,230 tons were used for making coke, and 76,214 tons were used in the operation of collieries and by workmen. This district contributed 38.2 per cent of the total in 1916, and the production exceeded that of 1915 by 36,899 tons.

The production of Nicola and Princeton, etc., was 122,903 tons, of which 103,535 tons were sold for consumption in Canada, and 6,366 tons for export to the United States; and 12,602 tons were used in the operation of collieries and by workmen. These areas contributed about 5 per cent of the total, and the production showed an increase of 17,047 tons, as compared with 1915.

The three largest operators were the Crow's Nest Pass Coal Company with 910,886 tons, the Canadian Collieries (Dunsmuir), Limited, with 616,112 tons, and the Western Fuel Company with 625,562 tons. These three companies contributed over 83 per cent of the Province's production.

#### Coal Production by Districts in British Columbia, 1916.

### Comparison of Production, 1914 with 1915, and 1915 with 1916.

Province.	(I) INCREASE OR (d) DECREASE.			
	Years 1914 and 1915.		Years 1915 and 1916.	
	Short tons.	Per cent.	Short tons.	Per cent.
Nova Scotia.....	(I) 92,446	1.25	(d) 551,230	7.39
New Brunswick.....	(I) 29,342	29.92	(I) 16,149	12.68
Saskatchewan.....	(I) 7,808	3.36	(I) 41,193	17.16
Alberta.....	(d) 322,197	8.75	(I) 1,198,236	35.65
British Columbia.....	(I) 174,186	7.78	(I) 518,448	25.10
Yukon Territory.....	(d) 3,719	27.66	(d) 6,424	66.06
Total for Canada.....	(d) 370,506	2.72	(I) 1,216,372	9.17

It will be noted that, with the exception of the Yukon, the western provinces and also New Brunswick, have made substantial increases in production in 1916, whereas Nova Scotia has shown a falling off. The proportion of the total production contributed by the different provinces therefore shows some variations from the previous years. Nova Scotia

with a production of 6,912,140 tons, a decrease of over 7 per cent, is still the largest producer, being credited with 47·7 per cent of the total, as against 56·2 per cent in 1915. Alberta, with an increase of 1,198,236 tons over the 1915 production (equivalent to 35·6 per cent) is again the second largest producer with 31·5 per cent of the total. The British Columbia production increased by 518,448 tons, or 25 per cent and amounted to 17·8 per cent of the total. Saskatchewan with an increase of 41,193 tons, or 17·2 per cent contributed only 1·9 per cent of the total, and New Brunswick and the Yukon each less than one per cent.

The relative importance of the different provinces as coal producers for a number of years past is shown in the next table, in which is set forth the proportional contribution of each province to the total tonnage of coal produced in Canada. For the first time the coal-fields on the Atlantic sea-board have produced less than half the total, although from 1910 to 1915 the combined production of the western provinces has been only a little less than 50 per cent of the total.

#### Percentage of Production Contributed by Provinces.

Province.	1874.	1890.	1900.	1910.	1911.	1913.	1914.	1915.	1916.

\*Alberta and Saskatchewan were established as provinces on September 1, 1905. For the purpose of comparison, the coal production during the years previous to that date has been separated according to the present boundaries of these Provinces.

The production and distribution of coal mined, by provinces, during 1915 and 1916, is shown in the following tables. The total sales for consumption in Canada during 1916 were 10,701,530 tons, an increase of 874,818 tons over 1915. The sales for export to the United States were 1,451,075 tons, an increase of 120,357 tons over 1915, and the sales to other countries were 284,513 tons, a falling off of 12,830 tons from 1915. The total sales of Canadian coal were 12,437,118 tons, as against 11,454,773 tons in 1915. The quantity used by colliery operators in the manufacture of coke, steel or brick, etc., was 804,814 tons, while 1,241,463 tons were used in the operation of collieries and by workmen, both in excess of the quantities similarly used during the previous year. The total stocks reported at the end of December were 78,702 tons, as against stocks at December 31, 1915, of 171,205 tons and stocks at the end of December, 1913, of 500,477 tons.

Total.....				49,519,938	55,462,331		160,643,689

\*This production is obtained by adding "Home Consumption" and "Sold for Export."

†52,935 tons of this amount were exported as sales without the division into "Home Consumption" and "Sold for Export."

### Yukon.

Coal production in the Yukon in 1916 was reported as 3,300 tons, all the product of the Tantalus mine of the Five Fingers Coal Company, near White Horse.

The colliery of the Northern Light, Power and Coal Company on Coal Creek was idle throughout the year.

### Annual Production of Coal in Yukon Territory.

Calendar Year.	Short tons.	Value.	Average per ton.

Total.....	127,293	703,218	

\*Part of this production was mined in 1900.

## COKE.

The accompanying statistics cover only the production of coke in by-product and Beehive coke oven plants and do not include retort coke recovered by gas companies.

Both domestic and imported coal are used in the manufacture of coke in Canadian coke oven plants.

In 1916, 1,501,835 tons of domestic, and 633,076 tons of imported coal were charged to coke ovens from which was obtained an output of 1,448,782 tons of coke, thus averaging 0·679 tons of coke per ton of coal charged. Coke from by-product ovens comprised 69 per cent of the total.

In 1915, 1,425,172 tons of domestic and 431,221 tons of imported coal were charged to coke ovens from which was obtained an output of 1,200,766 tons of coke, thus averaging 0·647 tons of coke per ton of coal charged. Coke from by-product ovens comprised 66 per cent of the total.

In 1914, 1,038,235 tons of domestic, and 503,312 tons of imported coal were used to produce an output of 1,015,253 tons of coke, showing a return of 0·658 tons of coke per ton of coal charged. Coke from by-product ovens comprised 67 per cent of the total.

The amount of coke sold or used by coke producers in 1916 was 1,469,741 tons as compared with 1,170,473 tons in 1915, an increase of 299,268 tons or over 25 per cent.

In addition to the tonnage sold or used by producers there was imported during 1916, 757,116 tons of coke, while the exports totalled 48,539 tons. The Canadian consumption for 1916 was therefore 2,178,318 tons, an increase of 405,857 tons or nearly 23 per cent over the consumption in 1915. The consumption of oven coke during recent years has been as follows: 1,285,228 tons in 1908; 1,449,369 tons in 1909; 1,581,832 tons in 1910; 1,677,188 tons in 1911; 1,981,832 tons in 1912; 2,186,170 tons in 1913; 1,509,068 tons in 1914, and 1,772,461 tons in 1915.

†Duty free.

In Nova Scotia coke was made at Sydney, and Sydney Mines, the ovens at Westville being idle throughout the year.

In Ontario the production came from the Algoma Steel Corporation's plant at Sault Ste. Marie.

In Alberta the plants at Lille and Passburg were idle, while one plant at Coleman was in operation part of the year.

In British Columbia coke was made by the Crow's Nest Pass Coal Company at Fernie and Michel, and by the Canadian Collieries (Dunsmuir) Limited at Union Bay.

The coke production of the eastern provinces is used almost entirely in the iron and steel industry, while that of the western provinces is used chiefly by the copper and lead smelters, finding a market in the United States as well as in Canada.

In Nova Scotia at the close of 1916 there were 697 ovens in operation, and 109 idle. The ovens formerly operated at Stellarton (45) and Londonderry (97) are not included amongst those idle, being regarded as abandoned. The Dominion Iron and Steel Company had 547 of its 620 ovens in operation. All these ovens are of the Otto-Hoffman by-product type, from which are recovered tar, sulphate of ammonia, and gas. The gas is used in the company's steel plant operations, and the sulphate of ammonia in the crystallized state is disposed of to the trade. The crude tar is sold to the Dominion Tar and Chemical Company, who have a plant close at hand for the separation of a variety of coal-tar products. All the ovens of the Nova Scotia Steel and Coal Company were in operation at the close of the year. The surplus gas from the Bauer ovens is used for the production of steam for the power generating plant.

In Ontario the Algoma Steel Company's Koppers Regenerative By-Product ovens, at Sault Ste. Marie reported now as numbering 104 in place of 110, as formerly, were in operation most of the year, none being idle on December 31. At the Sault Ste. Marie plant, crude tar, crystallized sulphate of ammonia, and gas are recovered. Benzol, toluol, and other hydro-carbons were recovered by the Toronto Chemical Company, a branch of the Dominion Tar and Chemical Co. The latter company also takes the tar, which is treated for the separation of coal-tar products.

In Alberta, all of the Western Canadian Collieries' 50 Bernard ovens at Lille, all of the Leitch Collieries' 101 Mitchell rectangular ovens at Passburg, and some of the International Coal and Coke Company's 216 Beehive ovens at Coleman, were idle throughout the year. The latter company had 120 ovens in operation on December 31.

In British Columbia at the end of the year the Crow's Nest Pass Coal Company had only 24 of its 454 Beehive ovens, at Fernie, idle, and 30 of its 486 at Michel, idle; its 240 Beehive ovens at Carbonade have been idle for some years and are now regarded as permanently abandoned. The 240 Beehive ovens at Hosmer were idle throughout the year. On

Vancouver island the Canadian Collieries (Dunsmuir), Limited, in 1915 rebuilt and placed in operation 100 ovens at Union Bay, and all were in operation at the end of 1916.

The exports of coke in 1915, as per Customs record, were 48,539 tons, principally from British Columbia, as against exports in 1915 of 35,869 tons.

#### Coke Oven By-Products.

Coke oven by-products were recovered at Sydney, N.S., and Sault Ste. Marie, Ont. The 1916 recoveries included 9,012,202 gallons of tar; 11,040 tons of sulphate of ammonia, together with important quantities of benzol, toluol, and solvent naphthas. In 1915 the recoveries were 7,365,931 gallons of tar, and 10,448 tons of sulphate of ammonia.

The imports of sulphate of ammonia in 1916 are reported as 293,096 pounds valued at \$9,672, as against imports in 1915 of 503,158 pounds, valued at \$14,637, and in 1914, of 763,597 pounds valued at \$21,335.

Exports of sulphate of ammonia are not separately recorded.
