The copy filmed here has been reproduced thanks to the generosity of:

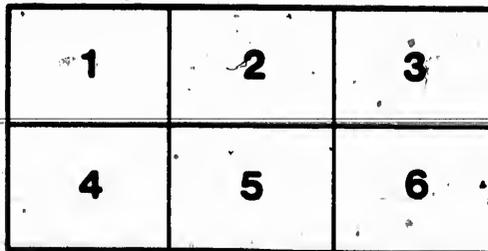

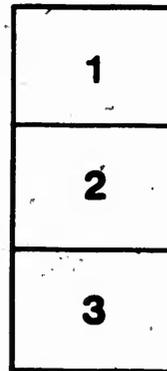

Library of the National Archives of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

La bibliothèque des Archives nationales du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

A PORTABLE LIGHT FROM OIL 800 to 2000 CANDLE POWER.

SOLE LICENSEE AND MANUFACTURER FOR THE DOMINION OF CANADA,

JAMES COOPER,

. 204 ST. JAMES STREET, MONTREAL, CANADA.

CANADIAN LIST
No. 1
1900

THE "WELLS LIGHT." (REGISTERED TITLE)
 WALLWORK & WELLS' PATENTS.

Patented May 23, June 25, July 23, 1889, and others applied for. PATENTED ABROAD.

This system of lighting which has taken years to perfect, may be described as one of the most important inventions of the present age. By its use a powerful light can be brought upon any scene in an incredibly short space of time. Two men can easily carry a complete apparatus of 3000 candle power, and one man, one of 800 candle power.

On Railroads, in large Engineering works (such as Sir Wm. Armstrong's, Sir Joseph Whitworth's, and hundreds of others in Europe,) at Docks, Ship Yards, on large Contract jobs, and in every variety of work where a powerful light is required, its success has been complete. Over 1000 being sold in 4 months in Europe last season, and with a steadily increasing sale.

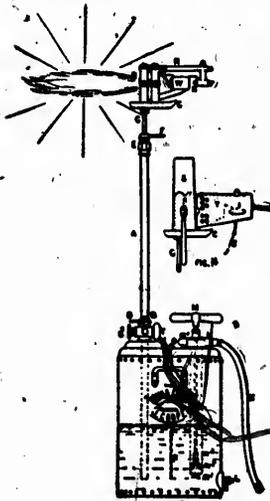

It has met with unqualified approval since its introduction here, and the manufacturers recommend them with the greatest confidence.

THIS LAMP throws no unconsumed oil spray about.

SHORT DESCRIPTION AND METHOD OF WORKING THE "WELLS LIGHT."

The light is produced by generating oil into gas by the heat of its own combustion, and burning it in a LARGE POWERFUL FLAME which needs no protection and will stand any weather.

Oil (Kerosene) is forced into the Tank through the hosepipe "K," by the pump "M," until it is two-thirds full, compressing the air already in the tank to about 20 lbs. pressure. The burner is then heated by burning a little oil in the cup "C," fig. 1, the heat being concentrated on the burner by the Chimney "S."

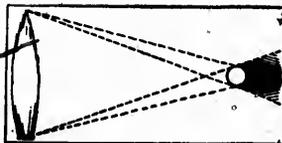

The Burner being heated, the valve "B" is opened, the oil is forced by the air pressure into the heated burner, where it is converted into Gas, which issues from the jet in a large powerful flame; the Chimney "S" is then removed, and the heat of the flame passing through the generating tubes continuously, turns the fresh ascending oil into gas. A few strokes of the pump every few hours is all that is required to renew the pressure—and oil or air can be pumped into the Tank while the light is burning.

The Tanks are made of best steel plate, and are very strong. The Pump is screwed into the tank top, and can easily be taken out for renewal of leathers, &c. A pressure gauge and sounding rod (for ascertaining the amount of oil in the tank) is fitted to each.

ILLUSTRATIONS SHOWING SOFTNESS OF "WELLS LIGHT" SHADOW AS COMPARED TO THE ARC LIGHT.

SHARP
 ARC LIGHT SHADOW.

SOFT
 "WELLS LIGHT" SHADOW

The "Wells Light" must not be confounded with another class of lamp driven by continuous supplies of air or steam, and which has to be fixed and connected to an expensive plant of Air Compressors or Boilers.

JAMES COOPER,

SOLE MANUFACTURER,
 204 St. James Street,

MONTREAL

THE "WELLS LIGHT." (REGISTERED TITLE.)
WALLWORK & WELLS' PATENTS.

STANDARD SIZES & PRICES.

No. 1. 800 CANDLE POWER.

FLAME 15 inches LONG; OIL USED $\frac{1}{4}$ GALLONS PER HOUR.

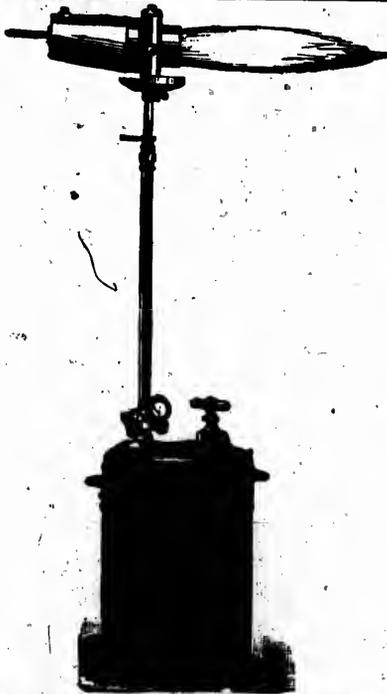

SIZE OF TANK $10\frac{1}{2}$ x 18 in.

WEIGHT WHEN FULL 75 Lbs. WHEN EMPTY 45 Lbs.

This small lamp being designed for extreme portability, has its tank made of thin galvanized plate. For many purposes the light is small, but for *Track Laying, Road Repairing and Excavating, Tunneling, Paving, Mining, etc.*, it is invaluable. It has only a single handle, and can be carried by a boy. It holds oil for 5 hours, but may be refilled while burning without putting out the light.

PRICE COMPLETE, - - \$75.00
EXTRA BURNER, - - 9.00

*I always send an extra burner with each lamp unless specially ordered otherwise.

No. 3. 2000 CANDLE POWER.

FLAME 24 in. LONG; OIL USED $1\frac{1}{4}$ GALLONS PER HOUR.

SIZE OF TANK 18 x 24 in.

WEIGHT WHEN FULL 240 Lbs. WHEN EMPTY 110 Lbs.

Tank of Steel Boiler Plate; two handles; can be carried by two men. Holds oil for 9 hours, but may be refilled while burning.

FOR ENGINEERS, IRON, FOUNDERS, BOILER MAKERS, ROLLING MILLS,
STEEL WORK, RAILROADS, TUNNELING, BRIDGE BUILDING,
BREAKDOWNS, COLLIERIES, COAL WHARVES, MINES,
DOCKS, HARBORS, SHIP YARDS, FORGES,
TANNERIES, BLEACHING YARDS,

and all kinds of Contractors' work, where a powerful portable light is required

It gives a pure white light, not dazzling or throwing intense shadow, like the Electric light.

PRICE COMPLETE, - \$100.00
EXTRA BURNER, - 10.00

*I always send an extra burner with each lamp unless specially ordered otherwise.

2000 of this size were sold in Europe last season.

200 of them working on the Manchester (Eng.) Ship Canal.

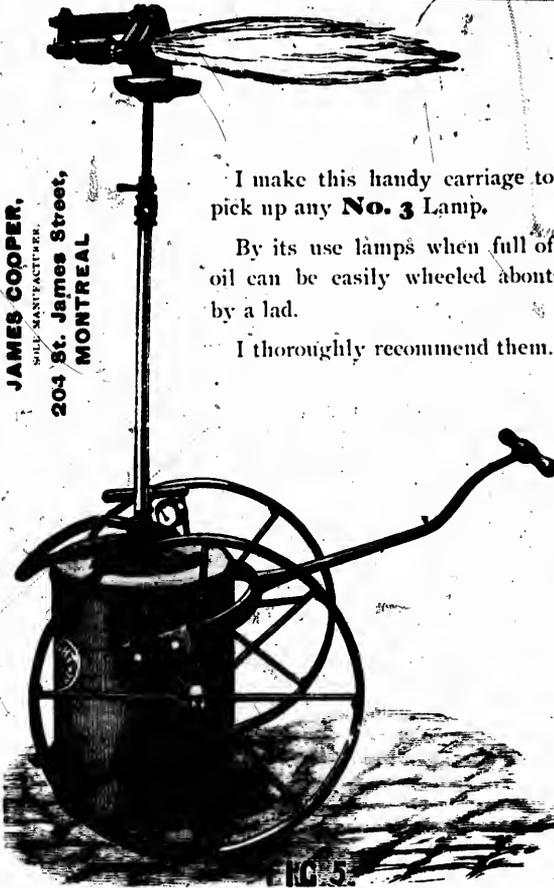

ALL LAMPS SENT COMPLETE with Chimney, Wind Guard, Spanners, Cleaners, and Card of FULL INSTRUCTIONS.

JAMES COOPER, SOLE MANUFACTURER,
204 St. James Street, **MONTREAL.**

THE "WELLS LIGHT."

CARRIAGE.

JAMES COOPER,
SOLE MANUFACTURER.
203 St. James Street,
MONTREAL

I make this handy carriage to pick up any **No. 3** Lamp.

By its use lamps when full of oil can be easily wheeled about by a lad.

I thoroughly recommend them.

FIG. 5.
PRICE.

CARRIAGE ONLY TO FIT ANY No. 3 LAMP, . . . \$16.00

EXTRAS AND SEPARATE PARTS.

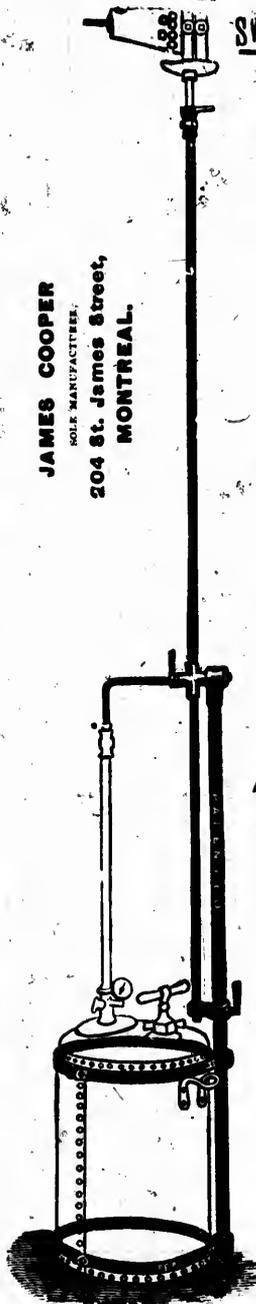

Full details of these for the "WELLS LIGHT," are given on pages 8 and 9, and are kept in stock by myself and my authorized Agents, and purchasers are cautioned to procure them from these sources only.

The Various Parts of the "WELLS LIGHT" are protected by a number of U.S. & Canadian Patents.

THE "WELLS LIGHT."

SWIVEL MAST.

JAMES COOPER
SOLE MANUFACTURER.
204 St. James Street,
MONTREAL.

This simple apparatus for raising the light 14 feet from the ground, is supplied complete as illustrated, to fix to any **No. 3** Lamp which when once put on need not be removed, as the mast can be lifted out and the lamp used in the ordinary way if required: The Burner swivels down for lighting and cleaning, and the arrangement will be found most valuable.

PRICE COMPLETE, (parts shown shaded in figure.) \$14.00.

The above includes a Special Lighting Bucket, shown on sheet of instructions.

ST.

The above includes a Special Lighting Bucket, shown on sheet of instructions.

BASE POST.

SPIKE POST.

THE "WELLS LIGHT"

ELEVATED ARRANGEMENTS

(WALLWORK & WELLS' PATENTS)
WITH

— LOWERING BURNERS. —

In these arrangements the burner is connected to the tank by our special flexible tube, and is raised and lowered by means of a wire windlass, for cleaning, &c. This can easily be done while the lamp is burning.

The burner can be disconnected, and put on to the tank, forming a portable lamp (as shown on page 3), if required, the post being left standing.

I make a special large size tank for these arrangements so as to run longer without attention.

PRICE ON APPLICATION.

THE BASE POST

is a permanent arrangement for lighting large areas. The base which is sunk into the ground, is of cast iron, and the hollow tube drops into it.

It is admirably adapted for Railway and Foundry Yards, Docks, and all places where one class of work is carried on night after night.

It is arranged with Wrought Iron Tube, with cast iron base, standing 19ft. above ground, a bracket, pulleys, winch, wire, and special oil tube.

PRICE ON APPLICATION.

THE SPIKE POST

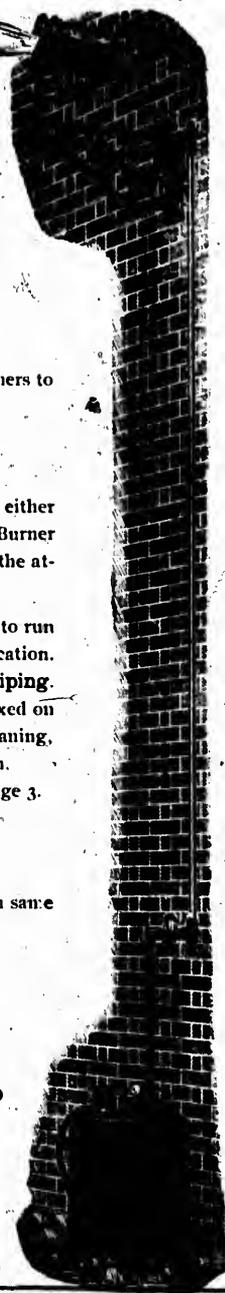

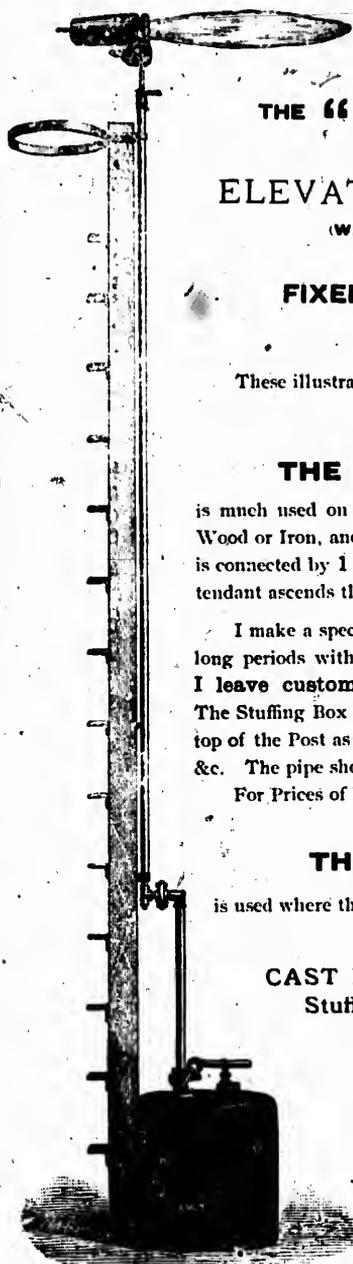

is a portable arrangement for lighting large areas. It consists of an iron tube, with side struts, which can be carried about and fixed in a few minutes.

20 ft. Wrought Iron Tube, with spike, struts, bracket, pulleys, winch, special oil pipe and wire, complete.

PRICE ON APPLICATION

FOR PRICES OF No. 3 LAMPS and BURNERS, to work with these Masts, see page 3.

JAMES COOPER, SOLE MANUFACTURER, 204 St. James Street, **MONTREAL**

THE "WELLS LIGHT."

ELEVATED ARRANGEMENTS

(WALLWORK & WELLS' PATENTS)

WITH

FIXED BURNERS AND LADDERS.

These illustrations show two methods of fixing elevated Burners to

"WELLS LIGHTS."

THE BRACKET ARRANGEMENT

is much used on **Railroads, and on Piers.** The Post may be either Wood or Iron, and must be provided with ladder or steps. The Burner is connected by 1 in. iron pipe to the tank on the ground, and the attendant ascends the ladder to start the Burner.

I make a special large size tank for these arrangements so as to run long periods without any attention. Prices furnished on application. I leave customers to supply and fix the posts and piping. The Stuffing Box must be taken off the Lamp Stand Pipe and fixed on top of the Post as shown, so that the Burner can be removed for cleaning, &c. The pipe should be arranged with plugs for cleaning as shown.

For Prices of Lamps and Burners to work in connection, See page 3.

THE POST ARRANGEMENT

is used where the light is required on a wall, and is fitted up in same way as Post Arrangement.

CAST IRON BRACKET, including Gland, Stuffing Box, Wrought Iron Socket Pipe, with Set Screw and "T" Connection.

PRICE, - - - \$12.00

I leave customers to find and fix their own piping, which is quite a simple matter.

For Prices of Lamps and Burners to work in connection, See page 3.

JAMES COOPER,

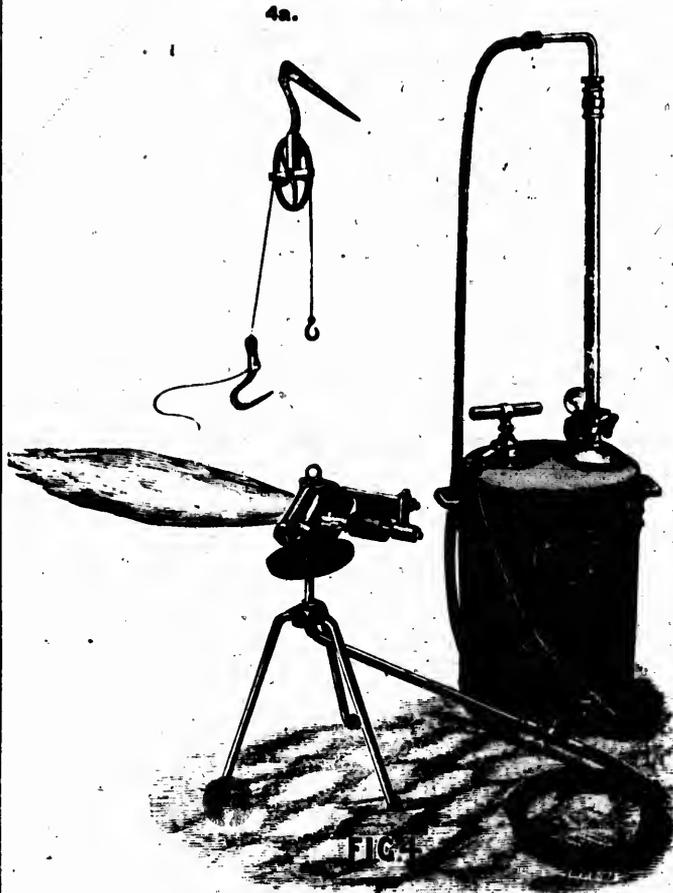

**SOLE MANUFACTURER,
204 St. James Street,**

MONTREAL

WELLS LIGHT

WALWORTH & WRIGHT PATENTS, 1882

Arrangement for Heating or Lighting.

This arrangement as an adjunct to our ordinary lamps will be found very useful for many purposes.

The Burner can be swung up to a wooden pole or beam, or lowered below the level of the lamp, and is thus rendered practically independent of the tank.

For use in dry docks or up and down the side of a ship during building, it is invaluable.

For heating quickly is is often very useful, and saves the lengthy and troublesome operation of lighting a fire under the work.

For Builders' use it will in many cases be found more serviceable than our iron mast arrangements, as the burner can stand anywhere on a scaffold, while the tank remains in a secure position.

PRICES.

Tripod burner, with brass gland to drop any sized burner in, telescope tail pipe, with 10 ft. of special flexible oil hose and couplings.....	\$14 00
Snatch block 4a, with hook and spike, and 20 ft. of flexible wire.....	5 00

LONGER LENGTHS of special oil piping supplied if requested.

FOR PRICES OF LAMPS AND BURNERS TO WORK IN CONNECTION, SEE PAGE 3.

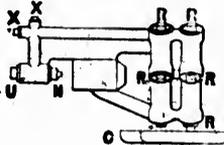

JAMES COOPER, SOLE MANUFACTURER, 204 St. James Street, **MONTREAL.**
